Company Overview

From the first delivery of equipment back in 1930 to the recently commissioned small hydropower plant at Catuiran, ANDRITZ has been providing high quality electro-mechanical equipment to the Philippines since the earliest days of national hydropower development. In 2009, when ANDRITZ received some large rehabilitation orders for Ambuklao, Magat, and Pantabangan, an office was established in Manila to support the growing market. Since then, ANDRITZ has been providing technical services, training and spare parts to existing plants, as well as providing technical assistance for developing new ones. In the last five years, ANDRITZ has also received orders for small hydro projects.

In total, the company has installed or rehabilitated more than 50 units in the country, with a combined capacity of about 1,600 MW.

Product Name	Product Description
Synchronous Condensers	With ANDRITZ Synchronous Condensers to a secure and stable grid.
Penstocks and gates	Design for hydraulic steel structures.
Turbines	Different turbine types - Pelton, Francis, Kaplan, bulb and pump turbines
Valves	Valves for safety, maintenance and shut-off as well as flow and pressure regulation.
Generators	Compact design, high efficiency and long life characterize the generators.
