Company Overview

Enertech Systems Industries, Incorporated, is a Filipino corporation established in 1978. It was founded by Engineer Guillermo C. Simeon who capitalized on his expertise in the design and fabrication of boilers and pressure vessels.

Enertech is the leading boiler maker in the Philippines; providing the needs of the industries in terms of EPCC, operation, maintenance, parts & servicing of boiler systems, accessories and auxiliaries. We also offer boiler leasing, repairs, rehabilitation, commissioning, installation, and audit.

Product Name	Product Description	Photo of Sample Product
COMBI BOILER	The Enertech Biomass Fired Combi Boiler is the ideal alternative to the high operating cost oil fired boilers. In areas where biomass fuels such as agricultural waste are available, the net savings from the lower fuel cost will enable users to recover the investment in less than a year.	
KALDERA BOILER (EKB)	The first Filipino-designed biomass-fired boiler is a simple, compact, tube-designed pressure vessel supported by two sets of outside suspension or gallows-frame with a girder on top, and bricks insulating the sufficiently-sized furnace. Waste heat conditions and the volume of waste heat gases vary with each different source or application.	

CLASSIC BOILER	Enertech CLASSIC 3-pass Wet-back Packaged Firetube Boiler is the company's flagship product because of its high performance and durability. It is suitable for firing Bunker C oil, Diesel oil and LPG. It is available in capacities from 10 to 1500 boiler horsepower (150 to 23,500 kg/h), with operating pressures of up to 300 psig.	
ANZEN BOILER	The ANZEN Boiler is an economically priced model available in capacities from 20-1500 HP (300-23,500kg/hr.) with a standard design pressure of 150 PSIG; also available for design pressures of up to 300 PSIG. The ruggedly-built unit is fully automatic and has been proven in the field to be very reliable. ANZEN Boiler is equipped with a simple but well-designed pressure atomized burner, with models for light oil, heavy oil and gas firing	
BORGY BOILER	The Enertech Borgy Portable Hot Water Boiler, horizontal, firetube, self-contained, package type, fully automatic operation, factory assembled ready for connection to water, fuel, process, drain, and electric connection. Convenient lifting and transport as all system components are in one carry all structure. Capacities from 6 to 30 Bo. HP (94 to 470 kg/hr)
