# WeatherSTEM

Virginia Tech

The Virginia Tech WeatherSTEM Unit is an integration of weather sensors, the data gathered and stored by the sensors, and a dynamic display of the data in a website that showcases the current weather, weather forecasts, data mining tools, lessons & activities, weather notifications, and more!

Station Page

The station page is a web portal that serves live weather data and sky images collected from the WeatherSTEM Unit.

Data

All data gathered by the sensors on the WeatherSTEM Unit are stored and can be mined in a variety of ways.

Personalize

Personal accounts provide access to customizable weather notifications and alerts sent to a variety of devices.

Learn

A growing library of lessons and activities contains an integration of the data and sensors into STEM-based curriuculum.
