

KERA(SOFT) AV[®]

**freedom in a monthly
contact lens**

Kerasoft AV is the brand new monthly soft disposable contact lens dedicated to patients with Keratoconus, irregular cornea & cross linked patients.

KeraSoft AV's design moves away from the traditional form of prismatic stabilisation.

This new design incorporates Freeform stabilisation in order to increase stability and reduce the overall thickness of the lens.

freedom in a monthly contact lens

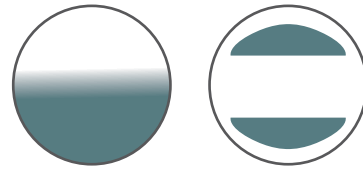

why choose KeraSoft AV?

The KeraSoft AV design incorporates Peripheral Balancing Zones (PBZ) which interacts with the top & bottom lids allowing for fast & effective stability. These also aid in the ability to produce a healthier lens option which is thinner & allows better drapage & comfort over corneal irregularities.

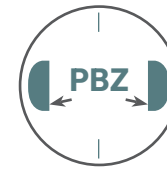

features & benefits

- Patients have the freedom of a monthly lens
- Freeform Stabilisation settles into position quickly reducing distortion
- Thinner design & healthier option
- Increased stability & comfort
- Easy fit system, reducing chair time
- Adjustable design for improved fit

standard stabilisation

freeform

adjustable design for improved fit

With our easy fit system there are three design options which allow you to enhance the lens geometry to fit the overall cone shape, thus reducing your overall chair time.
