At least half of the attendees were from big businesses in either the dairy or soy technology areas. There were also about 12-13 soyfoods manufacturers. The smallest soymilk plant from Alfa-Laval or STS is 2,000 liters/hour. A full-scale plant is 20,000 to 40,000 liters/hour. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

2512. Holmes, Charlotte Van Gundy. 1985. T.A. Van Gundy's work with ice cream. Conducted by William Shurtleff of Soyfoods Center, Jan. 31. 1 p. transcript.
• ***Summary:*** "After the Van Gundy family moved to Ontario, California, they made ice cream and all other types of foods from soybeans at home; these were not commercial products.

"In about 1933 mama and my brother went to a household show in Los Angeles and they served soybean ice cream in vanilla, avocado, carrot, and maybe carob flavors.

"But those products were not available commercially. Shortly after that Father passed away; he wore his heart out. He worked 18 hours a day and just wore himself out.

At the end a Jew came in through Mr. Landis and supposedly put in $60,000 to carry on the project. Instead, he put it in his own pocket, absconded with the money and left us flat broke.

"T.A. Van Gundy did not learn the ice cream from anyone. He invented it himself. For two years we had no dairy prods in the house. He planned to put his ice cream on the market but everyone said he was crazy to think of such a thing. Soybeans were cattle feed.

"My brother started the bea-nut butter. Now there are lots of them." Address: California.

2513. Rakosky, Joseph, Jr. 1985. Work with The Glidden Co. and Central Soya (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 23. 1 p. transcript.
• ***Summary:*** Discusses Dr. Dale Johnson, Dave Erickson of Swift, Gunther Products, Dr. Harry Miller, Dr. Lou Sair and Griffith Laboratories, Endre Sipos.

Follow-up letter of 3 May 1985. He recalls that Glidden sold a product [whipping agent] named Premium Albusoy that was made by Gunther Products, since Glidden no longer made such products. Note: Ed Meyer says the product was named New Albusoy. Address: 5836 Crain St., Morton Grove, Illinois 60053. Phone: 312-966-7660.

2514. *Australian Dairy Foods.* 1985. Soy report: Six new soy drinks expected. Soy products will enter market. Feb. p. 48.
• ***Summary:*** The first Australian soy drink last year was "Golden Life," a "sport food" launched by Martin Pharmaceuticals in Tetra Brik cartons. Also concerns: Anders Linder of STS-Soya Technology Systems, Rajasoya, Vital, Soyvita, Granose. Address: Australia.

© Copyright Soyinfo Center 2014

2515. Boyer, Robert A. 1985. Reminiscences: Automotive design–Oral history project. Dearborn, Michigan: Henry Ford Museum and Greenfield Village. 130 p. Accession #1673.

• ***Summary:*** This is the transcript of an interviews conducted by Dave Crippen of the Henry Ford Museum on 7 Feb. 1985 at Mr. Boyer's home in Dunedin, Florida. It covers all aspects of Boyer's work with soybeans at the Ford Motor Co., including: Growing up in Royal Oak, Michigan; his father worked in the accounting department of the Ford Motor Co. at Highland Park, Michigan (p. 1). Boyer's first meeting with Frank Campsall (p. 2). Growing up at the Wayside Inn (the oldest hotel in America, in South Sudbury, Massachusetts, p. 1-6). Attending high school in Framingham, Massachusetts (p. 6). First meeting with Henry Ford when the two ice skated together on the mill pond behind the Wayside Inn (p. 7). Moving to Dearborn in Sept. 1927 to attend Ford's Trade School (p. 7-11). Early work at the chemical plant (quarter-size model of Iron Mountain plant) in Greenfield Village (p. 12-13). Ford's trip to Germany [Peace Ship to Europe, in 1915 during World War I?] crystallized a lot of his thinking. The Great Depression and the origins of his chemurgic thinking. In 1934 the first National Chemurgic Conference was held at Dearborn Inn; Boyer was in charge of the program. Mr. Irenee DuPont attended and Mr. Ford spent a lot of time with him. Before that, the DuPonts and the big banks did not trust Ford. (p. 14). Opening of Greenfield Village in late 1929 on the 50th anniversary of Edison's first successful light bulb (p. 15). Chemical experiments on truckloads of farm crops using a retort; Frank Calvert (p. 16-19).

Experiments starting in about 1933 using hexane as a solvent to extract the oil from soybeans; the Ford Extractor (p. 20-23). Boyer's group wanted to get pure protein from soybeans. So "in the lab we developed our own process for extracting the oil... We used hexane solvent, like dry cleaning. We'd flake the beans and run them through a pipe that was full of hexane on an angle with a screw in it." Hexane solvent is "distilled out of petroleum. It has a very narrow boiling point–66º centigrade. The Ford extractor... got quite a lot of attention. We built it across the street from the chemical plant. It was about 150 feet away. Mounted it all by itself because everybody was afraid of fire." A roof was built over it but no walls. It was probably built in about 1933.

In 1933 at the World's Fair [sic, the Ford Exposition of Progress] in New York City, Boyer's group had a glass model (on a table) of this extractor that used hexane solvent.

Note: Ford boycotted Chicago's A Century of Progress Exposition which opened in 1933, in part to call attention to the company's 30th anniversary; he held his own "industrial fair," first in Detroit and then in New York, in late 1933. *Business Week* described it as "the greatest industrial show ever held." Some 2.3 million people attended the two-week show in New York.

A working model of the Ford extractor, using hexane solvent, was at the Chicago World's Fair, starting in mid-1934, in the Ford Industrial Barn. "They would never let you do that today. Too dangerous."

Research on purified soy protein and soy plastics with formaldehyde; Bakelite (p. 24-25). Use of soy oil for foundry core binders for casting the Ford V-8 engine block; thus, the soy experiments are now commercialized. Building a 50 ton/day extractor (p. 26-27). Spinning soy protein fiber like rayon, based on spinning milk protein in Italy. Using the fibers to make wrinkle resistant synthetic wool, a suit of clothes for Henry Ford and others, overcoats, neckties, felt hats. "We also found that these fibers blended in very well with rabbit fur for making men's felt hats. So the Hat Corporation of America took all the fiber we could make. It wasn't very much and they would blend it in with rabbit fur. And they actually had them [the men's felt hats] on the market." Rabbit fur is very expensive (p. 29-36). Ford's suit of clothes contained 65% wool and 35% soy fiber. Boyer leaves Ford Motor Co. in 1943. Problem with fiber was tensile strength, especially wet strength. Ford's interest in this fiber work, and his fitness at age 75 (p. 37-38). Ford "was not a true vegetarian but he was pretty close" (p. 38). Edsel Ruddiman's work with foods (p. 39-47). Boyer and Ruddiman attend American Soybean Assoc. soybean conference in Washington, DC [in Sept. 1932] where they saw "leather-like products that the Chinese make" [yuba]. Boyer tried unsuccessfully to use the idea to make "synthetic leather." USDA's experimental farm in Holgate, Ohio, where many soybeans sent back by W.J. Morse were tested (p. 40-42). Work with soybean milk (p. 43-46). The executive dining room in the Engineering Laboratory. Henry Ford invited Boyer to lunch there about 6 times (p. 45). Development of soy ice cream; lipoxidase enzyme inactivation (p. 45-46).

Visits to Battle Creek, Michigan and Dr. John Harvey Kellogg (p. 47). Boyer's work was with industrial products; the plastic car and structural plastics with hemp, flax, and phenol formaldehyde (soya protein Bakelite resin) (p. 47-64, 70). Making trunk lids using a hydraulic press (p. 50). Ford's famous axe demonstration on a trunk lid (p. 50-52). Lowell Overly and Joe Stewart (p. 53-56, 61, 78-79). Boyer drives the plastic car home (p. 63). Ford's aim with the plastic car: to provide industrial markets for farmers (p. 65). World War II stops plastic car development (p. 65-66). Contract to build an airplane wing of plastic (p. 66-70). The plastic lid and car contain little or no soy (p. 70). Fiberglass and the Chevrolet Corvette (p. 71). Plexiglas and the B-24 bomber made at Willow Run (p. 72). Edsel Ford's death of stomach cancer in the spring of 1943 and its effect on his father, Henry (p. 73-74). Ending work with soy fiber (p. 74).

Boyer leaves Ford in 1943 and goes to work for Drackett

© Copyright Soyinfo Center 2014

Co. in Cincinnati, Ohio. Wife needs to leave Detroit. After 1943 Boyer's career really takes off. Dr. Gangloff (p. 75-77). Use of soy fiber by Drackett in felt hats. "We sold them a lot of fiber and we decided to build a bigger plant." Building a protein plant and a fiber plant in Cincinnati big enough to supply the hat company's demands and larger "than we needed just to supply our fiber operation." They also had a big operation in Cincinnati for high-impact (not structural) plastic (p. 78-80). Drackett's marketing people knew how to market Windex and Drano "but they had no feeling for the soybean operation. So when Mr. Drackett died, they sold the whole soybean plant to Archer-Daniels-Midland (ADM, p. 81-83). Before Mr. Drackett died, Boyer's division had developed commercial soy products, and Drackett was making money on the plastic (phenol formaldehyde plus hemp) and the fiber (p. 81). Use of soy protein as a paper coating (p. 83). ADM finally closes the old Drackett protein plant and sells it to Central Soya, which used the million bushel elevator capacity for storage (p. 83-84).

Shortly after Mr. Drackett died, Boyer left Drackett to work on his edible soy fiber, where he owned patents. "If we can make a fiber from soy protein that resembles the outside of a sheep, why not make a fiber that will resemble the inside (p. 84-86). Idea of building an edible soy protein plant is in Cincinnati, with Mr. Drackett's approval (p. 87). Boyer tries to find companies to license rights to his landmark patent: Virginia Carolina Chemical (Taftville, Connecticut, p. 88); Swift & Co. (p. 89-92); Unilever, which was interested in peanut protein in Africa and at Port Sunlight near Liverpool (p. 92-94, 112-13); General Foods and Nabisco (Fairmont, New Jersey research lab) (p. 94, 99). Unilever and Swift pay licensing fees of $20,000 a year plus consulting fees. General Mills and Ralston Purina (p. 94-95). Why Swift dropped its interest (p. 95-96). General Mills and Bacos (p. 96). Patent expires in 1971 after 17 years (p. 96). Worthington Foods (p. 97). Ralston Purina was getting into protein. In about 1956-58 they "had bought Procter & Gamble's protein plant in Louisville [Kentucky], which was making industrial protein for paper coating" (p. 98). Worthington Foods was too small to make their own soy protein fibers, so Ralston Purina made it for them (p. 78-80). Ralston Purina's great success with edible soy protein and their small conflict: pet food vs. human food (p. 100-01). From 1961 to 1971 Boyer was receiving licensing fees / patent royalties from Ralston Purina, Worthington, and General Mills (p. 102). General Mills and Bacos (p. 103-04). Ralston Purina's patent lawsuit against Far-Mar-Co. Ralston won $8 million. Boyer testified as an expert witness (p. 104-05).

Boyer remarries and retires in 1971 (p. 102, 105, 107). Subsequent work with Miles and Worthington; the Morningstar Farms line (p. 105-08). Companies now spinning soy protein fiber (two in the Netherlands, one in Japan, one in Australia). Ford Foundation was not interested in his work with soy protein for Third World nations (p. 110). Central Soya bought the ADM plant that was located in Chicago (p. 113-14). Kellogg's Corn Soya breakfast cereal (p. 114-15). Worthington's Soyloin Steaks; all early Kellogg and Worthington vegetarian products based on wheat gluten (p. 119). When Worthington bought Battle Creek they got their lady research director; she worked at Worthington until she was quite elderly. Boyer visited her in her lab at Battle Creek several times (p. 119-20. Note: Josephine F. Williams was in charge of the lab and product development at Battle Creek, where she worked closely with Dr. John H. Kellogg. She kept similar positions at Worthington Foods, according to Ron McDermott). Henry Ford as a soybean pioneer and visionary. The soybean is now America's No. 2 cash crop and also our second largest earner of foreign exchange. "That really started from Ford. When we first started in 1931, hardly anybody ever heard of the soybean, and Henry Ford's penchant for publicity publicized the soybean... He certainly made it popular and made people become aware of it. Today it's darned important." He should be remembered as the "Father of the Soybean." "I always thought it would be nice if they would rebuild the [Soybean] laboratory [in Greenfield Village] or restore it like it was when we were doing the soybean work and give it the real credit that it deserves..." (p. 120). After Henry Ford died in 1947 his family wanted no part of any of his pet projects. They completely eradicated the old Ford company (p. 121). Henry Ford was deeply interested in the welfare of American farmers. His tractors and Model T were of great use to them (p. 121). Origins of Ford's interest in chemurgy; William Hale and Dow Chemical Co. in Midland, Michigan; the first three chemurgic conferences in Dearborn, Michigan, in May 1935, 1936, and 1937 (p. 122-27). Ford and Ruddiman establish a complete canning line for good-tasting green soybeans on the outskirts of the Ford estate. The equipment was quite expensive. When World War II threatened, Ford gave it to Michigan State University to teach canning to students. (p. 129-30). Boyer's personal impressions of Henry Ford (p. 128-30). Address: 632 Edgewater Dr. #731, Dunedin, Florida 33528.

2516. **Product Name:** Granose Soya-Franks: Vegetarian Soya-Sausages.
Manufacturer's Name: Granose Foods Ltd. (Distributor). Made in West Germany by DE-VAU-GE.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1985 February.
Ingredients: Water, vegetable oils, onions, egg protein, wheat protein, soya protein, spices, seasonings, salt, gelling agent (guar gum, carob gum), wheat flour, glucose, apples, smoke flavour, oat-flakes, breadcrumbs, herbs, milk protein, soya sauce.
Wt/Vol., Packaging, Price: 200 gm cellophane wrapped pack. Retails for £1.06.

© Copyright Soyinfo Center 2014

How Stored: Refrigerated or frozen.
Nutrition: Per 100 gm.: Calories 272.
New Product–Documentation: Food Report (Lehmann). 1985. Feb. The company says that these are just the first of some 20 new products planned for introduction this year.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by DE-VAU-GE, was introduced in Feb. 1985.

Label sent by Granose. 1990. July 11. 2 by 5.5 inches. Red, brown, green, yellow, and black on white.

2517. **Product Name:** Granose Chicken Style Curry.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1985 February.
Wt/Vol., Packaging, Price: 425 gm can for £0.89.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Food Report (Lehmann). 1985. Feb.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in Feb. 1985.

2518. Phillips, Roland L.; Snowdon, David A. 1985. Dietary relationships with fatal colorectal cancer among Seventh-Day Adventists. *J. of the National Cancer Institute* 74(2):307-17. Feb. [36 ref]
• ***Summary:*** "Associations between fatal colon or colorectal cancer and frequency of use of meat, cheese, milk, eggs, green salad, and coffee, as well as percent desirable weight, are described with the use of 21 years of follow-up for 25,493 white California Seventh-Day Adventists... Egg use was positively associated with risk of fatal colon cancer in both males, particularly for colon cancer during... Overweight (percent of desirable weight ò 125) was associated with an increased risk of fatal rectal cancer in both sexes combined (RR = relative risk = 2.8) and colon cancer in males only (RR = 3.3)... These three factors may explain a substantial portion of the colorectal cancer mortality differential between Adventists and U.S. whites (62% for males; 30% for females)." Address: Dep. of Biostatistics and Epidemiology, Loma Linda Univ. Schools of Medicine and Health, Loma Linda, California 92350.

2519. *Vibrant Life*. 1985. Serial/periodical. Hagerstown, Maryland. Review and Herald Publishing Association. Published by the Seventh-day Adventist Church. Vol. 1, No. 1 Jan/Feb. 1985. Frequency: Bimonthly (every 2 months).
• ***Summary:*** Preceded by *Life and Health*, and before that by *Pacific Health and Temperance Advocate*. A magazine about health and Christian life. Address: USA.

2520. Kahn, E.J., Jr. 1985. Profiles (soybeans). The staffs of life. V. The future of the planet. *New Yorker* 61:50-56, 60-66, 68-85. March 11.
• ***Summary:*** This wide-ranging overview of the soybean, from earliest times to the present, is well written though a little patchy and scattered. Among the topics it discusses: Soybeans as a relief food. Ted Hymowitz, Benjamin Franklin, and tofu. The Shah of Iran switching to soybean oil. The attempt by the Hunt Brothers of Texas to corner the soybean market. The Nixon soybean shock. Soybeans in Brazil and Manchuria. The origin of the soybean in China and Japan. Soymilk and Dr. Harry Miller. The dissemination of the soybean to Europe and America. How the soybean became popular in America; William Morse and the USDA. Henry Ford's work with soybeans and William Atkinson. Dwayne Andreas and ADM. "There is no question in my mind but that the soybean is the fundamental future of the planet," Dwayne Andreas says.

Also discusses amaranth, the winged bean, IBPGR, loss of genetic diversity, and water shortages. The article closes with a quotation from Monkombu Sambasivan Swaminathan, the director general of the International Rice Research Institute in the Philippines: "We live in this world as guests of green plants."

2521. Ballard, Bob. 1985. Ah-Soy! and Great Eastern Sun (Interview). *SoyaScan Notes*. March 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ah-Soy was launched at the NNFA show in Atlanta, Georgia, in the summer of 1984. Initial flavors were vanilla, chocolate, and original (plain). It was made by Saniku Foods in Japan and imported via Mitoku. Carob flavor was introduced in the fall of 1984. Vanilla is now the best seller because it is the most unique. The product is a "fantastic success." The four flavors account for 15-20% of Great Eastern Sun's total sales from 1,100 products. GES only sells to distributors [i.e. it is a master distributor].

Sales reports for the period 1 Nov. 1984 to 25 Feb. 1985 show the following number of units sold (there are 30 units/per case): Vanilla 210,000 units. Original/plain 110,000. Carob 105,000. Chocolate 100,000.

Other GES soyfoods that sell well: Mellow white miso (made by American Miso Co.), 35 lb tub, #9 best seller by dollar volume. Onozaki rice miso, 11 lb tub, #20 best. Mellow white miso, 15 lb tub, #20 best. Instant miso soup from Japan (ranking unknown). This month's sales are annualized. The company is now doing $4 million/year in sales. They used to import freeze-dried tofu; the FDA forced them to change the name to "dried tofu." Shurtleff notes that he prefers the term "dried-frozen tofu."

Another best seller (about #3-5) is their White Cloud Rice Syrup It is made from rice with sprouted barley for malt. Address: Great Eastern Sun, 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730 or 704 252-3090.

2522. Lipkin, Martin; Uehara, K.; Winawer, S.; Sanchez, A.; et al. 1985. Seventh-day Adventist vegetarians have a quiescent proliferative activity in colonic mucosa. *Cancer Letters* (*Shannon, Ireland*) 26(2):139-44. March. [28 ref] Address: 1-3. Memorial Sloan-Kettering Cancer Center, New York, NY 10021; 4. Loma Linda Univ., Loma Linda, California 92350.

2523. Spuehler, J.; Howie, B.; Shultz, T.D. 1985. Dietary nutrients and plasma and urinary hormone levels in premenopausal Seventh-day Adventist (SDA) vegetarians (Abstract). *Federation Proceedings* (*FASEB*) 44(3):768 (Abst. #2084). March.
• ***Summary:*** "Specific nutrients may modify hormonal balance and contribute to breast cancer etiology. This study investigated relationships between nine dietary nutrients and plasma urine hormone levels. Ten SDA vegetarian and 10 SDA non-vegetarian women were studied." Urinary unconjugated estrone, estradiol-17Beta (E2) and estriol, as well as plasma E2, dehydroepiandroestrone-sulfate (DHEA-S), prolactin and progesterone were determined by RIA The non-vegetarians consumed significantly more protein, total and saturated fats, oleic and linoleic acids, and cholesterol than the non-vegetarians. The vegetarians consumed more crude fiber. Hormonal status between the two groups did not differ significantly. The data presented "suggest a possible relationship between hormonal balance and dietary milieu." Address: Depts. of Biochemistry and Nutrition, School of Medicine, Loma Linda Univ., Loma Linda, California 92350.

2524. Stich, Hans F.; Hornby, A.P.; Dunn, B.P. 1985. Beta-carotene levels in exfoliated mucosa cells of population groups at low and elevated risk for oral cancer. *International J. of Cancer* 37(3):389-93. March. [35 ref]
• ***Summary:*** 55 lacto-vegetarians (members of the International Society for Krishna Consciousness–Hare Krishna, all abstainers from alcohol and tobacco) and 28 vegetarians (members of the Seventh-Day Adventist Church, all abstainers from alcohol, tobacco, and meat) participated in the experiment and were compared with 61 representatives of a "Western" lifestyle pattern (heavy consumers of alcoholic beverages; 64% consumed the equivalent of at least 1 bottle of wine or 7 bottles of beer per week, and all were non-smokers). Discusses the possible involvement of the low levels of beta-carotene were found in the oral mucosa of heavy alcohol drinkers in increased sensitivity towards the carcinogenic and genotoxic activity of cigarette smoking plus alcohol consumption. Address: Environmental Carcinogenesis Unit, British Columbia Cancer Research Centre, 601 West 20th Ave., Vancouver, BC V5Z 1L3, Canada.

2525. **Product Name:** The Gardenburger.
Manufacturer's Name: Wholesome & Hearty Foods.
Manufacturer's Address: 1416 S.E. 8th St., Portland, OR 97214. Phone: 503-796-0109.
Date of Introduction: 1985 March.
Ingredients: 1993/06: Mushrooms, onions, rolled oats, brown rice, lowfat mozzarella cheese (part skim milk, salt and vegetable rennet), cottage cheese (nonfat milk, enzymes and culture), egg white blend (egg whites, olive oil, tapioca starch, vegetable gum, natural flavoring), cheddar cheese (whole milk, cultures, salt, enzymes & vegetable color), bulgur wheat, natural seasonings & spices (no salt added).
Wt/Vol., Packaging, Price: 10 oz box.
How Stored: Frozen.
Nutrition: Per patty (2.5 oz = 71 gm): Calories 126, protein 6.67 gm, carbohydrate 19 gm, fat 2.6 gm (percent of calories from fat 18.5%, unsaturated 1 gm, saturated 1.6 gm), cholesterol 6 mg, sodium 191 mg, potassium 193 mg, fiber 2.3 gm.
New Product–Documentation: East West. 1987. June. p. 65. East West. 1988. Oct. p. L-3. Lundberg Rice Showcase. No added salt, and no soy. "Served in restaurants, airlines, hospitals, sports arenas, schools, and business cafeterias throughout the United States."

Time magazine. 1991. March 4. p. 65. To the roars of the roars of the herbivores: Entrepreneurs." Discusses the Gardenburger. Developed by Paul Wenner, the president of Portland's Wholesome & Hearty Foods Inc., this meatless competitor of the hamburger contains mushrooms, onions, oats, brown rice, low-fat cheese, egg whites, bulgur wheat, walnuts, and seasonings pressed into a patty and baked. It contains only half the calories and one-fifth the fat of an ordinary hamburger. "Wenner expects to sell 8 million patties this year."

Talk with Richard Gross. 1991. Sept. 3. This product is made in Portland. The flavor and texture are so-so, but the maker claims to have sold 10 million of them. It it sold baked and frozen. On his literature he writes "Soy free." But the product contains saturated fat and cholesterol. It is meatless but it is not vegetarian since it contains cheese.

Dispatch (Columbus, Ohio). 1992. Sept. 1. "Worthington Foods sued over Veggie Burger name." Paul Wenner, age 45, is a vegetarian who in 1984 "ran the Garden House restaurant in Gresham, Oregon, when his line of veggie burgers was born. He said he began making Gardenburgers commercially in March 1985 with a production run of 800 patties."

Product with Label purchased at Lucky Foods supermarket in Lafayette, California. 1993. June 9. 7.5 by 6 by 1.5 inches. Paperboard box. Red, yellow, green, and brown on tan. Full color photo of a grilled patty resting on a lettuce leaf topped by 2 onion rings and 2 tomato slices. "Four gourmet meatless patties. No soy! No preservatives. No MSG." Price: $3.39. Company address is now 2422 S.E.

© Copyright Soyinfo Center 2014

Hawthorne, Portland, Oregon 97214. Phone: (503) 238-0109.

Product with Label (new design) purchased at Safeway supermarket in Lafayette, California. 1994. May 18. Price: $2.99. Frozen. Note that the price for 10 oz of Gardenburger (4 patties) is the same as the price for 12.8 oz of Green Giant Harvest Burgers (4 burgers). The product name is now "The Original Gardenburger." New label design shows a black outline sketch of a boy scout-like person in a yellow square. "It's meatless, low fat, soy-free and tastes terrific." Gardenchef Paul Wenner. Soyfoods Center Taste Test. 1994. May & June. We like the flavor, texture, and appearance of this product the best of all frozen meatless burgers sold today in supermarkets.

Note: This is the earliest commercial product seen (Sept. 2000) made by Wholesome and Hearty Foods.

2526. *Grocer* (*The*) (*England*). 1985. Soya milk spearheads move into yogurt, ice cream. April 6. p. 23.
• ***Summary:*** Michael Cole, managing director of Soya Health Foods of Trafford Park, Manchester, reports that he is selling about £3 million worth of his new Sunrise soya milk each year, and producing 46,000 gallons a week in half-liter aseptic Tetra Pak cartons. Major grocery chains have shown great interest in the product. Most competing soya milks are imported to England. Cole imports only his soya beans–from Canada. His company's biggest competitor is Granose, which is selling through Safeway and other outlets.

Cole presently has to feed his okara, a by-product of soymilk production, to pigs. "But in the next few weeks we will be installing a vegetarian sausage and burger plant which will take care of that."

Cole is a former health food shop owner who has all been involved in the marketing and manufacturing side of the trade, not only in England but also in India and America.

A large photo shows Cole standing next to stacked cartons of his Sunrise Soya Milk. The caption reads: "'Soya yogurt possible–Michael Cole."

Note: This was the article that led to the founding of Genice in Wales. Ray Pierce, who was with Classic Ices in Wales at the time read the article, learned that Michael Cole of Soya Health Foods Ltd. was planning to make a soy ice cream, then contacted Cole and offered to work with him in developing the product. It became Classic Ice's first non-dairy ice cream. Seeing its potential, Ray and Irene Barclay left Classic Ices and started Genice. Address: Manchester, England.

2527. Kass, Monica. 1985. High-tech soymilk pouch creates market success: Stand-up retortable pouches for soymilk boom in natural-food stores, break into supermarkets. *Packaging*. April. p. 36-37.
• ***Summary:*** On the cover of the magazine and the first page of the article is a large color photo of Westbrae Natural Cocoa-Mint Malted. On the second page is a color photo of ten brands of soymilk in stand-up gussetted retort pouches, the type of soymilk packaging now most popular in America. "Marusan Ai and San-iku Foods are two Japanese companies currently processing and retort packaging soymilk for export to the USA. Marusan forms the retort pouch from multilaminate rollstock supplied by Toyo Seikan Kaisha Co. (Toyo Seikan is licensed by Doy-n-pak [Doypack] to produce the material.) And San-iku Foods retorts soymilk in preformed pouches, also made from the Doy-n-pak patented lamination.

"Sources say the fact that Doy-n-pak's design patent on the stand-up, gusseted pouch runs out this fall has prompted some scrambling among American materials suppliers who see the potential of the stand-up pouch and want to establish market position with the pouch.

"American companies importing soymilk in the preformed retort pouch include Westbrae Natural Foods and Great Eastern Sun. Eden Foods Inc. was the first company out with soymilk in the rollstock formed pouch. Structural differences between the two pouch varieties are minimal. The rollstock-formed square-cornered pouch must be opened with a scissors and is somewhat narrower in shape than the round-cornered preformed pouch which has an easy-open feature.

"Lamination for both pouch types consists of an outer layer of PET laminated to nylon, aluminum and an inner layer of polyolefin film that meets FDA food contact material requirements.

"Processing methods Marusan and San-iku use to adapt soymilk to American tastes differ, but both companies retort pouches up to 250ºF giving them an unlimited shelf life.

"Graphics reflect positioning: The real difference between the various retorted soymilks is in positioning. Eden Foods is strictly interested in promoting the product for its nutritional benefits. Great Eastern Sun's soymilk appeals to health-conscious consumers with an eye on trends. And Westbrae has two soymilk varieties. One is a plain soymilk, targeted for the health-conscious crowd. The other is a line of dessert-type malted drinks–'fun' products the company is targeting at younger consumers."

Note: This is the earliest document seen (Sept. 2011) with the term "high-tech" (or "high tech") in the title in connection with soyfoods–in this case soymilk, historically a low-tech product.

2528. **Product Name:** [Sahm Yook Soymilk (Plain)].
Foreign Name: Sahm Yook Dou Ru.
Manufacturer's Name: Sahm Yook Korean Foods.
Manufacturer's Address: 320 Panjeong-ri, Jiksan-myun, Chunwon-gun, Choongchungnam-do 333-810, South Korea.
Date of Introduction: 1985 April.
Ingredients: Soy milk, high fructose corn syrup, corn oil, rapeseed oil, salt.
Wt/Vol., Packaging, Price: 200 ml foil retort pouch

© Copyright Soyinfo Center 2014

(Doypack). Retails for 230 Won (6/90).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Eric C. Fehlberg. 1990. March 8. The Seventh-day Adventist food company in South Korea, Sahm Yook Foods, now makes soymilk (only plain, no flavors) packaged in Tetra Brik cartons and foil Doypack (Doynpack). The company was established in about 1978, and it began to make soymilk in May 1985. After launching soymilk, the company began to grow dramatically, as that product grew. Last year they built a very large, new soymilk plant (based on Adventist technology) and they are now about the 2nd or 3rd largest soymilk maker in Korea.

Label (Foil retort pouch). Sent by Eric Fehlberg. 1990. May 24. 4 by 6.75 inches Red, yellow, dark green, and light green on silver. Front panel says "Soy Milk" and an illustration shows 3 yellow soybeans in a green pod. The back panel shows the package being immersed in boiling water or heated in a microwave oven. So this package is probably sold during the cold months.

Form filled out and label sent by C.Y. Yoon, General Manager, Sahmyook Korean Foods. 1990. June 23. Note that on the envelope the company name is printed Sahmyook Korean Foods, but the brand name is typed 4 times on the form as Sahm Yook. The address on the envelope is 320 Panjung Jiksan Chunwon Choongnam, Korea. The soy milk in a foil retort pouch was introduced in April 1985. The same product with the same ingredients was launched in a Tetra Brik carton in July 1987. All four of the company's soymilk products contain no sugar (sucrose), chemical flavorings, or preservatives.

A brief company history. In 1981 they purchased a 31,313 square meter plant to make foods using wheat gluten. In 1984 they installed a soymilk processing plant, then began to sell soymilk starting in April 1985. Concerning prices, there are 720 Won to 1 U.S. dollar. Thus the Tetra Brik soymilk (200 ml) retails for the equivalent of US$0.31.

Leaflet for Sahm Yook soymilk products (7.5 by 10 inches, color photo). 1990. Shows 5 packages of soymilk and a glass of soymilk surrounded by fresh green vegetables and mikan oranges.

2529. **Product Name:** Loma Linda Golden Chik-Nuggets (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1985 May.
Ingredients: Soy protein concentrate, soy protein isolate, corn oil, water, wheat gluten, egg whites, potato flakes, artificial flavors, whole wheat flour, salt, natural (vegetable) flavors, dried yeast, dextrose, onion powder, spices, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). Breader: Bleached wheat flour, salt, yeast, sugar, oleoresin paprika, leavening (sodium acid pyrophosphate, monocalcium phosphate, sodium bicarbonate), hydrogenated soy oil, mono and diglycerides, nonfat milk, whey. Batter: Water, corn flour, modified food starch, leavening (sodium acid pyrophosphate and sodium bicarbonate) and spice.
Wt/Vol., Packaging, Price: 12 oz paperboard box.
How Stored: Frozen.
Nutrition: Per approximately 5 pieces (3.0 oz–85 gm): Calories 230, protein 15 gm, carbohydrate 17 gm, fat 11 gm, cholesterol 0 mg, sodium 630 mg, potassium 200 mg.
New Product–Documentation: Food Report (Lehmann). 1986. Feb. The vegetarian product is chicken flavored.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1985.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

2530. Snowdon, David A.; Phillips, Roland L. 1985. Does a vegetarian diet reduce the occurrence of diabetes? *American J. of Public Health* 75(5):507-12. May. [24 ref]
• ***Summary:*** A study of 25,698 Seventh-day Adventists found that they had about half the risk of dying from diabetes (as the main cause of death) compared with all U.S. whites. Within the male Adventist population, vegetarians had a substantially lower risk than non-vegetarians of dying from diabetes. "Within both the male and female Adventist populations, the prevalence of self-reported diabetes also was lower in vegetarians than in non-vegetarians. The associations observed between diabetes and meat consumption were apparently not due to confounding by over- or under-weight, other selected dietary factors, or physical activity." Address: 1. Asst. Prof., Div. of Epidemiology, School of Public Health, Univ. of Minnesota, Stadium Gate 27, 611 Beacon St., S.E., Minneapolis, MN 55455; 2. Prof., School of Health and School of Medicine, Loma Linda Univ., Loma Linda, California.

2531. STS–Soya Technology Systems. 1985. Containers for soymilk (Leaflet). 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 2 panels each side. Each panel: 30 x 21 cm. Also published in Chinese. [Eng; Chi]
• ***Summary:*** Color photos show carton containers (Tetra Brik, Combibloc, Pure Pak), plastic bottles (incl. Remy/Serac Aseptic UHT), glass bottles, cans, and plastic bags (Prepac/UHT, Doypack/Toyo Seikan standing pouch/retort sterilized). Brands include Granose, Marigold, GranoVita, Soy Moo, Magnolia, No Cow, Vegemil, Vitamilk, Amofood, Milho Verde, PureHarvest, Yeo's.

Note 1. Milho Verde is made by Pennone–Produtos Alimenticios Ltda., Av. Adolfo Pinheiro 1247, Sao Paulo, Brazil. Their factory is at another address.

Prepac is at 62 Rue Pasteur, 94800 Villejuif (a commune in the southern suburbs of Paris), France. Address:

2539. Snowdon, David A. 1985. Diet and ovarian cancer. *J. of the American Medical Association* 254(3):356-57. July. [6 ref]
• ***Summary:*** This letter to the editor reports "the results of some preliminary analyses relating diet to the risk of fatal ovarian cancer. These findings are from a population of 16,190 white California Seventh-Day Adventists women who completed a dietary questionnaire in 1960... The strongest and most consistent relationships between diet and risk were observed for egg and fried food consumption. Women who ate eggs (i.e., fried or nonfried) three or more days each week had a three times greater risk of fatal ovarian cancer than did women who ate eggs less than one day per week. Women who ate fried foods five or more days per week had 2.9 times greater risk of fatal ovarian cancer than did women who ate fried foods less than three days per week." Address: Univ. of Minnesota, Minneapolis.

2540. **Product Name:** GranoVita Soya Drink [Unsweetened White, Sweetened White, Coconut, Strawberry, or Carob].
Foreign Name: GranoVita Soja Drink (Ungesuesst, -, Kokos, mit Erdbeer-Geschmack, Caroba).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1985 August.
Ingredients: Water, soybeans, cane sugar, sea salt, natural flavorings.
Wt/Vol., Packaging, Price: 500 ml and 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml: Calories 50, protein 3.6 gm, fat 2.3 gm, usable carbohydrates 3.6 gm, linoleic acid 51%, sodium 58 mg.
New Product–Documentation: STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Red and green on white. "Made purely from plants. Free of cholesterol. Rich in protein (Rein pflanzlich. Cholesterinfrei. Eiweissreich)." This product is marketed mainly in West Germany. Note the absence of a chocolate flavor in the German health market. Label. 1987. 500 ml Tetra Brik carton. In German, Dutch, and French. The unsweetened is orange and red on white. "Pure and from plants. Rich in protein. Cholesterol free." Neuform certification symbol. In Nov. 1989 the coconut retails for DM 1.69.

Manufacturer's brochure. 1989? "GranoVita Soja-Drinks und -Desserts... ein erfrischender Genuss [a refreshing enjoyment]." 6 pages, with many color photos. Describes the products (with a photo of each) and how they are made. All 5 are in 500 ml Tetra Brik cartons and 2 white are in liter cartons. A table compares the composition of cow's milk containing 3.5% fat with sweetened white. Note, per 100 gm: Cholesterol: 11 mg vs. 0 mg. Protein 3.3 gm vs. 3.6 gm. Calories 64 vs. 55. Fat 3.5 gm vs. 2.8 gm. Saturated fatty acids: 64% vs. 16%. Polyunsaturated fatty acids: 4% vs. 60%.

Form filled out and Labels sent by DE-VAU-GE. 1990. June 11. Labels for 500 ml Tetra Brik cartons in unsweetened, strawberry, plain (sweetened), and coconut, and for 1 liter cartons in unsweetened and plain (sweetened). All were apparently launched in 1985.

2541. **Product Name:** [GranoVita Soja Dessert {Pudding Gelled with Carrageenan} (Vanilla, Strawberry, or Chocolate)].
Foreign Name: GranoVita Soja Dessert (Vanille, Erdbeer, Schoko).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.

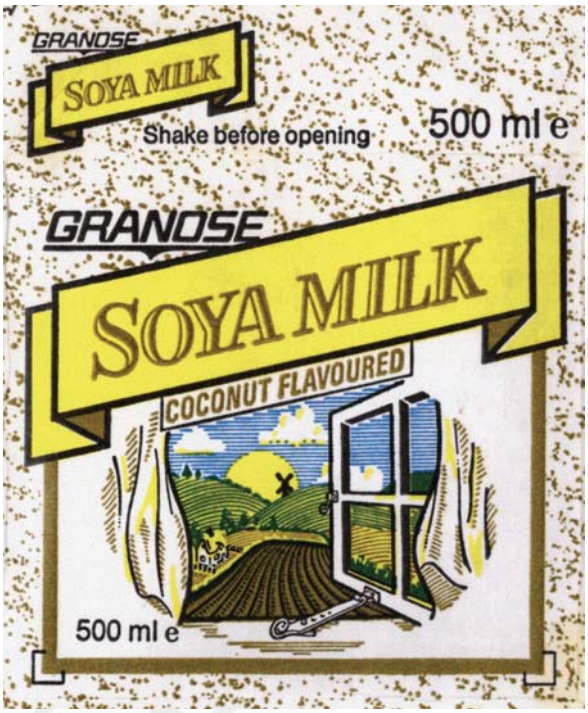
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1985 August.
Ingredients: Vanilla: Water, soybeans, cane sugar, modified starch, fructose, vegetable gums, sea salt, natural aromas.
Wt/Vol., Packaging, Price: 500 gm Tetra Brik Aseptic carton. Retails for DM 2.45 (1/90).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Vanilla, Per 100 gm: Protein 3.1 gm, fat 2.9 gm, usable carbohydrates 10.0 gm, calories 79.
New Product–Documentation: Lindner. 1987. Interview. Color photo of 500 ml Tetra Brik carton. Three Labels (cartons). 1988. Each is one unique color plus red and green on white. The unique color for vanilla is yellow, for strawberry is pink, and for chocolate is brown. Front panel illustration of a dish of pudding. "Pure vegetable protein (Rein pflanzlicher Eiweissträger), cholesterol free." Ingredients and nutritional analysis are listed in German, Italian, French, and Dutch.



Manufacturer's brochure. 1989? "GranoVita Soja-Drinks und -Desserts... ein erfrischender Genuss [a refreshing enjoyment]." 6 pages, with many color photos. Describes the products (with a photo of each of the 3) and how they are made.

Form filled out and 3 Labels sent by DE-VAU-GE. 1990. June 11. They started making this product in 1985.

2542. **Product Name:** Granose Soya Milk [Sugar Free, Plain/Dairylike, Organic; Coconut, Chocolate, Strawberry, Banana, Carob].
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in West Germany by DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1985 August.
Ingredients: Coconut: Water, dehulled soya beans, raw cane-sugar, coconut powder, sea-salt.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml: 70 calories. Fat fractions: polyunsaturates 39%, saturates 15%.
New Product–Documentation: STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Orange and green on white. "100% Vegetable. Rich in protein. High in polyunsaturates." Use by 7/84.

Spot in Food Trade Review. 1986. June. Granose Foods Ltd. (UK) launched new strawberry soya milk in 500 ml Tetra Paks. Ad in The Vegan. 1986. Summer. p. 17. "Why does Granose Soya Milk flow so smoothly? Well, its the natural choice." Shown in 500 ml and 1,000 ml. Sugar free or sweetened with raw cane sugar.

Photo and Spot in The Vegetarian (UK). 1986. Sept/

Oct. "Granose strawberry flavoured soya milk. Absolutely delectable–pure strawberry essence, no artificial flavour or colour so its not bright pink!"

Label. 1987. Gold, yellow, brown, blue, and green. Illustration of sunrise seen through a farmhouse window.

Soyfoods (ESFA). Granose Foods Ltd. has launched a strawberry soya milk, made from soya beans, pure strawberry essence, raw cane sugar, sea salt, and natural vegetable flavoring. Presented in 500 ml "Tetra Paks," it has a 6-month shelf life unopened.

Ad in The Vegan. 1988. Summer. p. 16. "Granose Soya Milk [Banana flavoured with no added sugar]."

2543. Leneman, Leah. 1985. Tomorrow's world [soyfoods]. *Vegetarian* (*The*) (*England*). July/Aug. p. 21-24.
• ***Summary:*** There are now 8-9 brands of soya milk sold in Britain. "It is a shame that most people's introduction to tofu is in the form of Morinaga silken tofu which... is now found in most health food stores. Silken tofu is pleasant and nutritious, but is much softer than regular tofu and is therefore much less versatile. Following recipes meant for firm tofu with it can be frustrating.

"*Granose* is the first big-name health food manufacturer to feature a line of tofu-based products (imported from Denmark). Two of the three tinned convenience meals seem to me less than ideal. The tofu adds nothing special to either the Tofu and Tomato Sauce nor to the Tofu in a Savoury Bean Sauce; they might just as well have used tvp. However, the Chinese-Style Tofu is really excellent, with a nice balance of tastes and textures, including the cubes of tofu–just about the nicest tinned convenience meal around.

"The first national distributor of tofu (to the best of my

© Copyright Soyinfo Center 2014

knowledge) was *The Regular Tofu Company...* Like all other national distributors, their tofu is vacuum-packed, which considerably lengthens its shelf-life... *Paul's Tofu* (The Old Brewery, Wheathampstead House, Wheathampstead, St. Albans, Herts.) produces another vacuum-packed firm tofu, which is available in London and South-East England...

"*Bean Machine* (Station Road, Crymych, Dyfed) produces not only tofu but also a range of 'soysage' foods made from okara... They also make 'Soyannaize,' a dairy-free dressing. *Duchesse* All-Natural Tofu Dressing and Dip (made by St. Giles Foods Ltd, St. Giles House, Sandhurst Road, Sidcup, Kent DA15 7HL) is another mayonnaise-type product..."

She is writing The International Tofu Cookery Book for Routledge & Kegan Paul. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

2544. Mitz, Bea. 1985. The joy of soy. *Total Health* (*California*). Sept. p. 55-56.
• ***Summary:*** An overview that contains photos of products made by Legume (Tofu Stuffed Shells Provencale), Loma Linda (Ocean Fillets, Griddle Steaks), Worthington Foods (Tofu Topper), Eden Foods (Edensoy), plus Tofutti and Tofulite (made by Barricini).

2545. Gardiner, Doris Kloss. 1985. Jethro Kloss, his work with soyfoods (Interview). *SoyaScan Notes.* Oct. 21. Conducted by William Shurtleff of Soyfoods Center. Followed by letter of 17 Jan. 1986.
• ***Summary:*** Jethro Kloss definitely made commercial soy ice cream in chocolate and vanilla flavors. He made it himself and sold it in Washington, DC. "My aunt, Promise Kloss Moffett, recalls how he would put it in the ice chips and sawdust to keep it cold. They had a concession stand somewhere down on Pennsylvania Avenue near the White House. My uncle Eden recalls selling lunches there commercially to the public. They included soy ice cream, soy coffee, and sandwiches. He does not recall exactly when or for how long they sold these food products."

Jethro had so many interests that he didn't stick with one idea long enough to make it a real success. He was so creative and had so many ideas, but he was rather like a Gypsy.

"When I was about 9-12 years old I recall vividly that Jethro had a soybean bread baked commercially. It was his recipe. He used to send me to the bakery in Takoma Park, Maryland, to pick it up. The particular bread recipe is found on page 645 of *Back to Eden* and was made using soy bean milk instead of water. It is delicious!

"During the years 1939-1941, Jethro and his wife lived in the Butternut Apartments near Walter Reid Hospital, on the border between Washington, DC, and Takoma Park, Maryland. My grandmother (Jethro's wife) would sometimes go across the street to do 'special duty' nursing at Walter Reed. She died in 1944." Address: Back to Eden Books, P.O. Box 1439, Loma Linda, California 92354. Phone: (714) 796-9615.

2546. **Product Name:** Provamel Soya Drink [Carob, or Honey & Malt].
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1985 October.
Wt/Vol., Packaging, Price: 250 ml, 500 ml, 1000 ml.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: CSP form filled out by Simon Bailey. 1988. Sept. 28. All made with organic soybeans. Adds honey & malt flavor. The importer in England is Vandemoortele (UK) Ltd., Ashley House, 86-94 High St., Hounslow, Middlesex TW3 1NH. Phone: 01-577 2727.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. The carob and the honey & malt flavors were launched in Oct. 1985.

2547. Jacobs, Barbara; Jacobs, Leonard. 1985. Flour power! Cooking with seitan, the delicious natural food from grain. *East West Journal.* Oct. p. 38-44. [1 ref]
• ***Summary:*** This excellent, pioneering, in-depth article on wheat gluten and seitan was excerpted from the Jacobs' forthcoming book *Cooking with Seitan*, which was not published until May 1987. The article discusses the history of seitan in East Asia and America, the seitan industry and market in America and major manufacturers, the nutritional value and cost compared with other protein sources, and how to make seitan at home. It also gives four recipes.

In the USA about 2,500 lb of seitan are made commercially each week, or about 125,000 lb/year. The largest manufacturer, Upcountry Seitan (in Lenox, Massachusetts, started 3½ years ago by Win Donovan, and now owned and operated by Sandy Chianfoni) makes 600 lb/week of seitan. Ron Harris of Grain Dance Company in San Francisco has been making seitan for the past 8 years (i.e. since about 1977) and is currently selling 250 lb/week. Michael Vitti of Rising Tide Natural Market in Long Island, New York, has been making seitan commercially for 6 years (i.e. since about 1979). Yaron Yemini of Creative Kitchens in Miami, Florida, has been making seitan for 3 years (i.e. since about 1982). He now makes about 120 lb/week.

Barbara Jacobs first tasted seitan about 16 years ago (i.e. in about 1969). "Seitan was introduced to the U.S. natural foods industry about sixteen years ago when a Japanese variety, shrink-wrapped and quite dry and salty, was first imported. There had been several other varieties available from vegetarian groups, primarily the Seventh Day Adventists and the Mormons. Chinese restaurants [in America] have also been preparing wheat gluten for many

© Copyright Soyinfo Center 2014

years. The Chinese call it *mien ching*, or *yu mien ching.* Chinese restaurants often refer to it as 'Buddha Food,' claiming that it was developed by Buddhist monks as a meat substitute. There is also a dried wheat gluten available in Oriental food markets called *fu* by the Japanese and *k'ao fu* or *kofu* by the Chinese." Address: Massachusetts.

2548. Melby, Christopher L.; Hyner, G.C.; Zoog, B. 1985. Blood pressure in vegetarians and non-vegetarians: A cross-sectional analysis. *Nutrition Research* 5(10):1077-82. Oct. [7 ref]
• ***Summary:*** In a study of 250 Seventh Day Adventists, the blood pressure of 125 vegetarians (114/71) was significantly lower than the blood pressure of 53 non-vegetarians (122/74). However when "blood pressure were adjusted for the covariates of age, sex, and body mass index, there was no significant difference in blood pressure between the two groups. Further analyses revealed that the lower blood pressure in the vegetarians appeared to be best explained by their lower body mass index." Address: Dep. of Physical Education, Health, and Recreation Studies, Purdue Univ., West Lafayette, Indiana 47907.

2549. Kloss, Eden P. 1985. Re: Jethro and Eden Kloss selling soy products in Washington, D.C., in about 1930. Letter to William Shurtleff at Soyfoods Center, Nov. 15. 1 p. Typed, without signature.
• ***Summary:*** "I remember helping my father, Jethro Kloss, prepare quick lunches which we sold to passersby on Pennsylvania Avenue, near the White House. We had a space allotted to us where we parked our small trailer equipped to serve the people, and when the workers poured out of the government buildings at noon, many would stop and buy our lunches.

"Some things had to be prepared before, of course, like the ice cream, which was quite a process, for we made the soy cream directly from the raw soybeans. They were soaked (over night), then parboiled, cooked about two and a half hours, ground in a mill, put into sugar bags, and the cream squeezed out with water. This rich soy milk was then used to make the ice cream. I don't recall the exact recipe (any more), but I remember he used egg whites in those days (later he used agar-agar) with honey for sweetening, and made the ice cream in strawberry, chocolate and vanilla flavors. We froze it with a hand-powered freezer and put the ice cream in metal containers and packed them in ice with salt to take in the trailer.

"We made sandwiches with various nut meats, lettuce and sliced tomatoes. We also served soybean coffee kept hot with a gas hot plate we had in the trailer. Our soy cream for the coffee was kept sweet on ice." Address: c/o Promise Joy Kloss Moffett, Route 1–Box 194, Hagerstown, Maryland 21740. Phone: (301) 739-1546.

2550. *Dispatch* (*Columbus, Ohio*). 1985. Food Company picks president [Worthington Foods]. Nov. 25. p. 8D.
• ***Summary:*** "Dale E. Twomley will become the president of Worthington Foods Jan. 1 [1986], succeeding Allan R. Buller, who retires at the end of the year. Twomley, 46, a vice president of the natural food company since 1983, has been responsible for corporate planning and strategy, marketing, sales and distribution. He holds a doctorate in administration from the University of Maryland and served for five years as the dean of the school of business at Andrews University, Berrien Springs, Michigan. He became a director of the company in April

"Buller, 68, became president three years ago when the company was purchased by local investors from a division of Miles Laboratories. He joined the company in 1945 as assistant manager. He will continue to be secretary-treasurer and a director of the company."

2552. **Product Name:** [PHAG Soya Dessert (Chocolate, Vanilla, Strawberry)].
Foreign Name: PHAG Soja Dessert (Choco, Vanille, Fraise).
Manufacturer's Name: PHAG Sàrl (Produits Hygièniques Alimentaires Gland) (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: La Ligniere, CH-1196 Gland, Switzerland. Phone: 022/64 11 18.
Date of Introduction: 1985 November.
Ingredients: Chocolate: Water, cane sugar, soybeans, defatted cocoa, modified starch, fructose, thickener, natural aroma (vanilla), sea salt.
Wt/Vol., Packaging, Price: 500 gm Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Chocolate: Per 100 gm.: Protein 3.5 gm, fat 1.7 gm, carbohydrate 13.0 gm, calories (kcal) 77 (325 kJoules).
New Product–Documentation: Letter from Remy Mayer of PHAG. 1990. Oct. 2. This product was introduced in Nov. 1985. His company distributes the product, which is made by their sister company DE-VAU-GE in Lueneburg, Germany. The strawberry flavor is no longer sold.

Labels sent by Mayer. 1991. Jan. 24. 500 gm Tetra Brik Aseptic cartons. Chocolate: Dark brown, tan, red, and green on white. "Pure and made from plants. Ready to use. It can also be used as a pastry filling. 100% from plants. Contains no coloring agents."

2554. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Part I. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]
• ***Summary:*** "In 1971, a unique group of people settled in the Tennessee backwoods to live an alternative lifestyle, committed to living collectively off the land. The community of 200 people came to be known as The Farm and over the years grew to 1,500 residents, gaining international and domestic fame for its community ideals, lifestyle, alternative technologies, [midwifery], and vegetarian diet based on soybeans. Soy technologies practiced and developed on The Farm became the seed for many tofu and tempeh shops that sprang up around the world in the years that followed. Community members started the first [sic, sixth] commercial soy ice cream company, and the first soy 'deli.' Some went on to start several of the major tempeh shops across the United States and Canada and others helped start a network on international soy programs in underdeveloped countries. Innovative recipes developed by Farm members led to the publication of three cookbooks which have made a large contribution to the growing acceptance of soybeans and tofu in the American diet.

"When The Farm was first settled in 1971, most of the people were already vegetarians. There were a variety of reasons for their personal choices: (1) an unwillingness to kill in order to live (feelings which stemmed from religious beliefs similar to the Buddhist religion, as well as pacifist attitudes deepened during the Vietnam War); (2) a growing awareness that meat was too costly to produce and that if more people at lower on the food chain there would ultimately be more food to go around in the world; (3) evidence of the healthful benefits of a vegetarian diet; (4) a belief that the dairy industry practiced cruel and exploitive methods on animals and a reluctance to support that system.

After the community was established, the entire membership decided to adhere to a complete vegetarian [vegan] diet devoid of all animal products, including eggs and dairy. They wanted to create a self-sufficient community, eating primarily what they grew on the land. They also wanted to be an example of how people could eat foods lower on the food chain to help create a larger supply of food in the world. During the search for a nutritionally sound vegetarian diet, they settled on soybeans as the main form of vegetable protein, as soybeans have one of the highest and most complete protein contents and are more versatile than any other vegetable protein. Many of the members had already been eating tofu and other soy products before The Farm, but acquiring these foods in the middle of the Tennessee woods was not an easy job. Soybeans were readily available, as they were used as local cattle food, but the challenge was how to create healthy and appetizing foods from them. Besides the Asian population and some Seventh-day Adventists, there weren't many people in the U.S. at the time actually eating soybeans, let alone trying to use them as the main source of protein.

"There were not many physical resources available as the people arrived with few possessions, lived in buses and tents, and had little capital to work with (a typical Third World situation). Some people owned Corona hand mills and occasionally ground soybeans to make fresh milk or tofu, using the recipe in the Seventh Day Adventist's Ten Talents cookbook. Fearn Instant Soya Powder was purchased and used for making soymilk, tofu, yogurt, and 'soy butter.' Just a few families owned pressure cookers so people cooked large communal pots of soybeans, taking turns 'watching the pot,' since they boiled them for 16 to 20 hours, to be sure they were digestible.

"By 1972 the Farm had its own flour mill that ground soybeans into full-fat soy flour and soy grits. The community was then able to make fresher soymilk, and tofu, as well as add soy flour to baked goods for added protein. They developed a curded soy flour base that was spiced and used as a sandwich spread, and they also baked soy flour 'souffle.'

"During these early days while the diet was still being worked out, the young children were given eggs for their protein source. Margaret Nofziger, the Farm's dietician, wanted to provide the babies and young children with a soy formula as a weaning food. She asked Alexander Lyon, a Farm member with a Ph.D. in microbiology, to research how the community could make the formula. He began an extensive research both in libraries and through correspondence. Fortunately, there were studies available about the uses of soy for human food consumption. Alexander, (Dr. Lyon) contacted Dr. Hesseltine and Dr. Wang of the Northern Regional Research Center in Peoria, Illinois, and Dr. Steinkraus of Cornell University in New York. These researchers provided a treasure of information to Dr. Lyon and to the soy technicians that followed. Other scientists who should be credited for their early and helpful research are Dr. Harry Miller with Loma Linda Foods and Malcolm Bourne with Cornell University.

"All of the information gathered by Dr. Lyon led to the start of the Farm Soy Dairy in 1972. After learning the basic processes involved in soy milk preparation, Alexander began collecting used equipment that could be adapted for the use of making soymilk. The original soy dairy was very small, with a production capacity of 20 gallons of soymilk a day, and expanded over the years as the soy technicians were able to find and add new equipment to their dairy. This dairy became a cross between a Japanese tofu shop and

© Copyright Soyinfo Center 2014

American ingenuity. The Farm Soy Dairy had no capital to start operations and no investors beside the Farm itself. Cash was hard to come by and as with all other commodities on the Farm, the products were distributed freely to community members. For these reasons, the soy technicians had to be creative and imaginative in how they obtained equipment and how they adapted such equipment to their needs. Over the years, they went to auctions, scrap metal yards and used restaurant equipment houses. They bought, bartered and traded for their equipment. They designed their own systems in their welding shop and then re-designed them to make improvements and to increase production. They became a school, learning as they went along. In 1975, Laurie Sythe Praskin, one of the early workers in soy dairy, succeeded Dr. Lyon in managing the operation. Over the next 4 years, with David Handel and Michael Halpin as equipment developers, weekly production increased to 800 gallons of soymilk, 600 lbs. of tofu, 80 gallons of soy yogurt, and a varied amount of soy ice cream." Continued. Address: 17969 Oak Dr., Los Gatos, California 95030.

2555. *SoyaScan Notes.* 1985. Chronology of soybeans, soyfoods and natural foods in the United States 1985 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. 2. The soybean crushing industry begins a year of major restructuring as the big get bigger and two pioneers drop out. Ralston Purina announces that it has sold six of its soybean crushing plants to Cargill, Inc. A seventh at Memphis was closed. This removed the company from the soybean commodity business. With this transaction Cargill passes ADM to become America's largest soybean crusher.

Jan. 3. "Myth or Miracle: Debunking the Tofutti Fad," by Mark Medoff published in *Whole Life Times.* The first exposé of Tofutti, which contains very little tofu. Jan. 13 Medoff appears on the Gary Null Show, Natural Living, to discuss his findings for 1 hour on prime time radio.

Jan. 12. A.E. Staley Manufacturing Co. announces that it is basically getting out of the soybean crushing business. It has sold five of its six soybean plants (having a combined crushing capacity of some 275,000 bushels daily) to Independent Soy Processors Co., which is closely affiliated with Archer Daniels Midland. Staley was unable to sell its Decatur facility, which ceased operations indefinitely in Jan. 1984. With this transaction ADM has probably regained a slight lead as America's largest soybean crusher.

Jan. 14-26. Soybean Utilization Workshop held at Soyafoods Research Center in Gannoruwa, Peradeniya, Sri Lanka, sponsored by the Sri Lanka Soybean Project and INTSOY. 24 representatives from 12 developing countries participate. The world's first event of its kind (*Soyanews*, Dec. 1985).

Jan. 25-27. Natural Foods Expo at Anaheim. Soy ice creams steal the show. Tofu standards are debated heatedly at Soyfoods Association board of directors meeting on Jan. 28, especially by Ralston Purina attorney. Board decides funds are too limited to try to hire an executive director for SAA. Jan. 31. Paul Obis, founder and editor of *Vegetarian Times*, is seriously considering buying *Soyfoods* magazine from Doug Fiske. He makes a firm offer in late March.

Feb. "Designer Beans," an excellent overview of the U.S. soyfoods movement and its gourmet connections by Sandy MacDonald, published in *New Age* magazine.

Jan. American Soybean Association introduces SIS (Soybean Information Service), a computerized database focusing on soybean production and marketing, and oil and meal. The earliest record is 1958.

Feb. 21. *Tofutti and Other Soy Ice Creams: Non-Dairy Frozen Dessert Industry and Market*, by Shurtleff and Aoyagi published by The Soyfoods Center. Two volumes, 352 pages. This is the first study of the rapidly emerging soy ice cream market, and of Tofutti.

Feb. 27. "Tofu Products May Be In, but Its Fans Wonder if There's Tofu in the Products" by Trish Hall published in *The Wall Street Journal.* Second major exposé on so-called "tofu ice creams" (such as Tofutti and Gloria Vanderbilt Glace), which contain only a token amount of tofu, as a marketing gimmick.

March 13-14. The theme of the Feb. 27 *Wall Street Journal* article picked up by the NBC evening news and the Today Show. Very positive coverage for tofu. Gary Barat of Legume, David Mintz of Tofu Time, and Gloria Vanderbilt each speak about tofu.

March 22. *The Book of Tempeh*, extensively revised second edition by Shurtleff and Aoyagi, published by Harper & Row. New bibliography (374 entries), history chapter, and list of tempeh producers.

March 26. Soyfoods Association's Tofu Standards (7th draft) presented to eight senior officials at the U.S. Food and Drug Administration's Center for Food Safety and Applied Nutrition, in Washington, DC, by Tom Timmins (Head of SAA Standards Committee), Gary Barat (President of SAA), Steve McNamara and Tom Donegan (SAA Food & Drug attorneys). The FDA group hears an hour long presentation on tofu, the standards, and the Soyfoods Association of America.

March. Soyarella (later renamed Soy Mozzarella), a tofu-based cheese, is introduced. It becomes an instant hit. Distributed by Neshaminy Valley Natural Foods of Huntingdon Valley, Pennsylvania, it is labeled as "non-dairy," yet it melts, and it tastes like cheese. Shrouded in secrecy, its manufacturer is unknown and the ingredients are questionable. It is sold in large blocks and labeled at individual stores.

March. American Soybean Assoc. launches a campaign among its members to write USAID and encourage them to cancel support for U.S. programs (such as INTSOY) aiding soybean production in Third World nations. The campaign is

© Copyright Soyinfo Center 2014

successful.

April 1. INTSOY signs a new cooperative agreement with USAID. Their work will henceforth focus on soybean utilization. The shift toward utilization began in 1983 and all work on soybean production and varietal development stopped in Aug. 1986.

April. *Tempe: An Annotated Bibliography,* compiled by Siagian and Sofia in Indonesia. Containing 273 references, it is the first bibliography to introduce the extensive Indonesian-language research on tempeh, the majority of which has been published since 1980.

April 15-16. International Symposium on Tempeh held in Jakarta, sponsored by the Indonesian Ministry of Health. 113 people attend.

April. Central Soya buys Griffith Laboratories' line of protein products.

May 31. Barricini Foods acquires Farm Foods, which then becomes a trade name for Barricini's natural / health foods line of non-dairy frozen desserts, including the pioneering product, Ice Bean, and Barricini Tofulite.

May. Morinaga, one of Japan's largest dairy companies, establishes Morinaga Nutritional Foods, Inc., a subsidiary with offices in Los Angeles, to focus on promoting their long-life silken tofu in America.

May. At the 6th Annual Natural Foods Merchandiser Merchandising Awards, soyfoods do well. Miso Mustard by American Natural Foods and Malteds by Westbrae win gold medals. Ah Soy by Great Eastern Sun wins a silver.

May. Soft Tofu Cheese, a non-dairy cream cheese cultured in miso, launched by Simply Natural, Inc.

June. Tofu Topper launched by Worthington Foods.

June. Ralston Purina publishes its 1985 Consumer Attitudes Monitor. Soy Protein in Foods, based on a nationwide survey of 628 adults. Indicates positive attitudes toward soy protein and soyfoods.

July 19. Shamrock Capital, a private company headed by Roy Disney, buys Central Soya, a publicly owned corporation. Agreement to buy was announced April 2.

July. Soy Supreme, spray-dried tofu powder, launched by Oberg Foods Div. of St. Peter Creamery.

July. Asian Symposium on Non-Salted Soybean Fermentation held at Tsukuba, Japan.

July 31. Tofu Time's sales of Tofutti increased more than sevenfold last year to $17,114,886 as compared with $2,361,391 for the previous year. Net income increased nearly 100-fold to $2,006,451.

July. New Gallup survey on vegetarianism of 1,033 Americans shows that millions are eating less meat and tens of millions agree with the move away from meat. 72% disagree with what used to be the standard notion: "The vegetarian diet is just a fad that will pass." A majority (52%) believe that "no one really needs to eat meat more than once or twice a week."

Aug. The DE-VAU-GE soymilk plant in West Germany starts production. Built by STS, with 4,000 liters/hour of soymilk capacity, they make Granose and GranoVita brands of soymilk.

Aug. Lightlife Meatless Tofu Pups (hot dogs) introduced by Tempehworks / Lightlife Foods of Greenfield, Massachusetts. The product sold nearly $250,000 in the next 10 months.

Sept. Soyfoods Center introduces SOYA, a computerized bibliographic database on soybean utilization, history, nutrition, processing, marketing, and production. Contains 18,500 references from 1100 B.C. to the present.

Sept. 30. Fearn Natural Foods in Illinois sold by Louis Richard to Modern Products, Inc. in Milwaukee.

Sept. 30 to Oct. 4. Tropical Soybean Workshop held at the International Institute of Tropical Agriculture (IITA), Ibadan, Nigeria. Proceedings are published in 1987 as Soybeans for the Tropics. Also this year IITA established a soybean utilization unit.

Sept. Tofulicious, a tofu-based non-dairy ice cream launched by Eastern Food products of Minneapolis. It was developed in conjunction with the University of Minnesota and funded by the Minnesota Soybean Research and Promotion Council. By 1986 it has become the first soyfood product in recent times to be actively promoted by state soybean associations, who sell it at many state and county fairs... where it is a big hit. Through Tofulicious many soybean growers begin to warm up to soyfoods.

Oct. 8th Draft of the Tofu Standards finished, incorporating extensive suggestions from FDA. Compiled by William Shurtleff.

Oct. Mori-Nu brand aseptically packaged tofu introduced by Morinaga Nutritional Foods.

Oct. Cream of the Bean Soygurt, a cultured soymilk yogurt, launched by Cream of the Bean, Inc.

Nov. Kikkoman introduces a long-life tofu in a foil retort pouch, imported from Japan. Poor quality causes the product to be withdrawn. It was re-introduced later.

Dec. Tofu Time starts exporting Tofutti to Japan. The first order by Daiei (a large retailer) of tubs for their parlors, is $350,000. This may be the first major export of a soyfood product (not including ingredients such as soy protein isolates) to Japan.

* The International Institute of Tropical Agriculture (IITA) in Ibadan, Nigeria, starts a program to promote processing and utilization of soybeans in Nigeria and throughout Africa. Continued.

2556. Hirayama, Takeshi. 1985. Mortality in Japanese with life-styles similar to Seventh-Day Adventists: Strategy for risk reduction by life-style modification. *National Cancer Institute Monograph* No. 69. p. 143-53. Dec. Fourth Symposium on Epidemiology and Cancer Registries in the Pacific Basin. [1 ref]

• ***Summary:*** Japanese with life-styles similar to those

Address: Dep. of Preventive Medicine, Univ. of Southern California School of Medicine, 2025 Zonal Ave., Los Angeles, California 90003.

2558. *SoyaScan Notes.* 1985. Development of the book *History of Soybeans and Soyfoods* (Overview). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1980 Oct. 22. First Table of Contents for Soyfoods History. I started this book because Nahum Stiskin of Autumn Press refused to let us use material from our tofu and miso books in our next book, titled *Soyfoods,* and it's hard to write the history portions of soyfoods. Inspired by Dr. Harry W. Miller and Henry Ford.

Dec. 9. Start to put bibliographic records on 3 x 5 inch file cards.

1981 March 13. Add chapters on Nutrition, National Soybean Processors Assoc., T.A. Van Gundy.

April 26. Add Society for Acclimatization, Li Yu-ying, Horvath, Lager.

May 15. Make Overview into four chapters. Add Soybean Chronology, Sri Lanka, History of Soybean Production, Asian History, Berczeller, USDA.

May 30. Change book title to History of Soyfoods and Soybeans from Soyfoods History.

June 6. Make Chronology Chapter 1. Make History of Soybean Production a separate chapter. Add McCay, Soyfoods Producers in the West (Listing of companies), changed title from Soyfoods History to History of Soyfoods.

August 21. Four Soybean Processors (Staley, ADM, Ralston Purina, Central Soya), Hymowitz, Bureau of Plant Introduction.

Oct. 8. Cargill, Co-op Processors, drop Hymowitz, Soybean Production Pioneers, put Soy oil ahead of soy flour, change the order of many chapters.

Nov. 3. Change title to *History of Soybeans and Soyfoods.* Put soy nuggets [fermented black soybeans] before miso.

Nov. 7. Set up first 3+2 character cataloging codes for Soyfoods Center library and documents, e.g. Hym-81.

1982 Jan. 2. Brief History of Fermentation East and West.

Feb. 2. Macrobiotics and Soyfoods, Kikkoman.

March 21. K.S. Lo and Vitasoy. Relocate East Asian pioneers at end of Pioneers section.

June 18. Separate Fermented Tofu and Fermented Soymilk.

July 22. Separate Soy Oil and Meal from Hydrogenated Soy Oil Products.

Aug. 21. Put all country histories together.

Oct. 25. Start using % instead of percent in Margarine chapter.

Nov. 13. D.W. Harrison.

Nov. 19. Decide to do separate chapter on Lecithin. Retitle each country from "History of Soyfoods in X" to "History of Soybeans and Soyfoods in X."

1983 Jan. 1. Switch from 3-letter codes to 4-letter. Hymo-73.

April 17. Changed "at" to KW = (keyword) on cards.

May 5. Dr. Fearn.

Nov. Added Cereal-Soy Blends at Flour chapter, Iowa State University, History of Soyfoods and Health Foods in Los Angeles.

1984 March. Meals for Millions, SFM-Rodale.

Sept. 22. Added 12 chapters on individual countries. Divided hydrogenation into 3 chapters: Oil, margarine and shortening. Change book's subtitle to "Past, Present, and Future." Structure it into four volumes.

Oct. 31. Completely restructure Soybean Production chapter into 16 parts. Discuss each by decade.

Dec. 26. Ice Cream.

1985 Jan. 19. Change ModProt to ProtMod, ProtIsol, etc.

March 8. Add PPC = Pioneering Protein Companies: Glidden, Rich Products, Gunther, Griffith Labs, I.F. Laucks. 9th. Add the Chemurgic Movement and US Regional Soybean Industrial Products Lab: Industrial Uses of Soybeans. United Nations, History of World Food and Protein, Hunger and Malnutrition.

April 17th. Redo outline, giving each company its own line and bibliography, like Adventists. Print outline vertically. Address: Director, Soyfoods Center, Lafayette, California 94549. Phone: 510-283-2991.

2559. **Product Name:** Natural Touch Spicy Chili.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1985 December.
Ingredients: Water, wheat gluten, red beans, tomato paste, soybean oil, spices, food starch, yeast, garlic, onion, sea salt,

© Copyright Soyinfo Center 2014

fruit juice concentrate.
Wt/Vol., Packaging, Price: 20 oz can.
How Stored: Shelf stable.
New Product–Documentation: "Ready to heat and eat."
Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

[Nor]*

2563. **Product Name:** Millstone Vegeburger (Meatless Burger).
Manufacturer's Name: Loma Linda Foods Inc.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1985.
Ingredients: Wheat gluten, water, whole wheat flour, hydrolyzed vegetable protein, oat flour, soy flour, dried yeast extract, onion powder, caramel color, salt, garlic powder, thyme, celery powder.
Wt/Vol., Packaging, Price: 19 oz can.
Nutrition: Per 3.8 oz.: Calories 110, protein 20 gm, carbohydrate 3 gm, fat 2 gm, cholesterol 0 mg, sodium 450 mg, potassium 75 mg.
New Product–Documentation: Loma Linda took over the Millstone line from Millstone Foods Inc. (Box 323, Penryn, CA 95663. Phone: 916-663-3302) in 1985. Label sent by Loma Linda Foods. 1988. Oct. 5. 11 by 4.25 inches. Green, yellow, black, and white. A color photo of the ready-to-serve dish is on the front panel.
Bowles. 1987. Total Health. Aug. p. 24. Called Information. 1988. Sept. 22. No listing for Millstone in Penryn or Sacramento, California.

2564. **Product Name:** Millstone Burger-Like.
Manufacturer's Name: Loma Linda Foods Inc.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1985.
Ingredients: Water, textured soy protein, soy sauce, salt, onion powder, caramel color, garlic powder, cumin, sage, celery powder, thyme.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 4 oz.: Calories 90, protein 13 gm, carbohydrate 8 gm, fat less than 1 gm, cholesterol 0 mg, sodium 440 mg, potassium 430 mg.
New Product–Documentation: Loma Linda took over the Millstone line in 1985. Label sent by Loma Linda Foods. 1988. Oct. 5. 11 by 4.25 inches. Green, yellow, black, and white. A color photo of the ready-to-serve dish is on the front panel.

2565. **Product Name:** Millstone Burger Mix (Dry Mix).
Manufacturer's Name: Loma Linda Foods Inc.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1985.
Ingredients: Flavored textured soy protein (soy flour, natural [vegetable] flavors, salt, spices, caramel color), rolled oats, dehydrated onion, egg whites, garlic powder, spices (basil, parsley, dill weed).
Wt/Vol., Packaging, Price: 4.5 oz can.
How Stored: Shelf stable.
Nutrition: Per 1 oz.: Calories 90, protein 10 gm, carbohydrate 12 gm, fat less than 1 gm, cholesterol 0 mg, sodium 370 mg, potassium 35 mg.
New Product–Documentation: Loma Linda took over the Millstone line in 1985. Label sent by Loma Linda Foods. 1988. Oct. 5. 11 by 4.25 inches. Green, yellow, black, and white. A color photo of the ready-to-serve dish is on the front panel.

2566. **Product Name:** Millstone Meatless Loaf (Dry Mix in Can).
Manufacturer's Name: Loma Linda Foods Inc.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1985.
Ingredients: Flavored textured soy protein (soy flour, natural [vegetable] flavors, salt spices, caramel color), rolled oats, dehydrated onion, egg whites, vegetable mix (carrots, celery, tomato, spinach, red peppers, green peppers), garlic powder, spices (basil, parsley, dill weed).
Wt/Vol., Packaging, Price: 4.5 oz can.
How Stored: Shelf stable.
Nutrition: Per 1 oz.: Calories 90, protein 10 gm, carbohydrate 12 gm, fat less than 1 gm, cholesterol 0 mg, sodium 380 mg, potassium 290 mg.
New Product–Documentation: Loma Linda took over the

Millstone line in 1985. Label sent by Loma Linda Foods. 1988. Oct. 5. 11 by 4.25 inches. Green, yellow, black, and white. A color photo of the ready-to-serve dish is on the front panel.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

2567. **Product Name:** Millstone Bacon-Like Bits.
Manufacturer's Name: Loma Linda Foods Inc.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1985.
Ingredients: Soy flour, soy oil, salt, natural (vegetable) flavor, artificial colors.
Wt/Vol., Packaging, Price: 6.5 oz can.
How Stored: Shelf stable.
New Product–Documentation: Loma Linda took over the Millstone line in 1985. Label sent by Loma Linda Foods. 1988. Oct. 5. 11 by 4.25 inches. Green, yellow, black, and white. A color photo of the ready-to-serve dish is on the front panel.

2568. **Product Name:** Millstone Nut Meat.
Manufacturer's Name: Loma Linda Foods Inc.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1985.
Ingredients: Water, peanuts, soy flour, corn flour, onion powder, salt.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 71 gm.: Calories 150, protein 7 gm, carbohydrate 6 gm, fat 10 gm, cholesterol 0 mg, sodium 280 mg, potassium 260 mg.
New Product–Documentation: Loma Linda took over the Millstone line in 1985. Label sent by Loma Linda Foods. 1988. Oct. 5. 11 by 4.25 inches. Green, yellow, black, and white. A color photo of the ready-to-serve dish is on the front panel. Loma Linda also makes three Millstone products that contain no soy: Wheat Fries, Vege-Beans, and Breading Meal.

• ***Summary:*** "In the early 1900s Southern and Northern California Seventh-day Adventists were actively working in the areas of diet and health. Some of their efforts resulted in the formation of the Loma Linda Sanitarium and Loma Linda College of Medical Evangelists.

"Loma Linda Foods began in 1906, supplying bakery goods for the sanitarium, the college, and the small community of Loma Linda. It made a variety of baked stone-ground, whole-wheat breads, health cookies, and fruit crackers.

"Demands from residents for the bakery goods grew quickly. They liked the life-style and diet and came to rely on the company for its products. By 1907 increased production required the construction of a separate building, a small white-frame structure located on Anderson Street across from the railroad station in Loma Linda.

"Now there was room for the production of foods similar to Dr. Kellogg's original line of foods as well as experimentation with new lines. Breakfast cereals, meat analogs from soybean and wheat, soy milk, and canned tofu were added, and bakery items became less important over the years.

"In 1933 the name was officially changed to Loma Linda Foods and by 1935 delivery routes brought the firm's products to stores within a 125-mile radius. Since working space was cramped and Loma Linda Foods wanted to concentrate on production of the breakfast cereal, Ruskets, the decision was made to relocate. The company opted for a site next to La Sierra Junior College near Riverside, with the promise of student employment cinching the move. In Nov. 1938 the first section of the present plant began operation."

"Before the relocation sales had totaled $60,000 a year. Sales increased rapidly during World War II, almost doubling during the first 6 months of 1943. Annual sales now total several million dollars..."

"Loma Linda Foods' association with Dr. Harry Miller provided a major impact on its growth. In January 1951 the company took over his International Nutrition Laboratories, Inc., in Mt. Vernon, Ohio. Dr. Miller donated the sales profit to form the International Nutrition Research Foundation at the Arlington plant near Riverside. Under his direction the foundation did much to establish soy foods as a scientifically recognized source of superior vegetable protein for human needs.

"By 1966 the company was producing six types of soy milk, which now accounts for 70% of its market. In the late 1960s Loma Linda Foods adopted a further innovation in the vegetarian protein foods field–spun protein fiber, which it now manufactures."

"From humble beginnings Loma Linda Foods has now grown to employ 250 people in its two plants and to carry a line of 70 products."

Large photos show: (1) The original building and staff in 1925; over the doorway is written "Loma Linda Food Co. Bread and Health Foods. Wholesale Only." (2) The present facility at 11503 Pierce Street, Riverside. Address: California.

2574. Leeds, Anthony R. ed. 1985. Dietary fibre perspectives: reviews and bibliography 1. London: John Libbey. viii + 358 p. Bibliographical editor Alinson Avenell. Foreword by Denis P. Burkitt. 25 cm. [997 ref]
• ***Summary:*** This is one of the most interesting and comprehensive books published to date on the subject of fiber in human diets. Contents: Foreword, by Denis P. Burkitt. The authors and editors. Introduction by A.R. Leeds. Part I: Reviews. 1. Fiber and the large gut, by G. Roth and

© Copyright Soyinfo Center 2014

C. Leitzman. 2. Dietary fibre and blood lipids in man, by Patricia A. Judd and A. Stuart Truswell. 3. Dietary fibre and gallstones, by Patricia A. Judd. 4. Fibre and diabetes–new perspectives, by David B. Peterson. 5. Dietary fibre in obesity, by Marcin Krotiewski and Ulf Smith. 6. Dietary fibre supplements and weight reduction, by Kjeld R. Ryttig. 7. Fibre and mineral absorption [phytic acid], by Barbara F. Harland and Eugene R. Morris. 8. Fibre and food products, by Peter R. Ellis. Index.

Part II: Bibliography. 9. Dietary fibre in human nutrition: a bibliography to 1977, compiled by Hugh C. Trowell, with Foreword by K.W. Heaton. Subject index. Author index. Addendum. 10. Dietary fibre in human nutrition: a bibliography for 1978-1982, compiled by Alison Avenell, Anthony R. Leeds, and Hugh C. Trowell–1978 = 481 references, 1979 = 528 references, 1980 = 480 references, 1981 = 657 references, 1982 = 610 references.

Part III: Indexes to Part II. Structure of subject indexes 1978-1982. Then there is a subject index and an author index to the bibliographies for each year from 1978 to 1982.

The worldwide bibliography to 1977, compiled by Trowell, was first published in 1979 by John Libbey (London) for Kellogg Company of Great Britain Ltd. (which see for details).

In the Foreword, Denis P. Burkitt (now at The Old House, Bussage, Near Stroud, Gloucestershire, England) begins by noting: "Nothing more dramatically illustrates the phenomenal growth of interest in dietary fibre which has been witnessed during the last 15 years than the explosive increase in scientific publications on the subject. Within a decade the annual rate of publications on the subject rose a remarkable 40-fold."

Fibrim soy fiber is mentioned in chapters on "Fibre and the Large Gut," "Dietary Fibre and Blood Lipids in Man," "Fibre and Diabetes," and "Fibre and Mineral Absorption." Address: Dep. of Food and Nutritional Sciences, Queen Elizabeth College (Univ. of London), Campden Hill Road, London W8 7AH, England.

2575. Loma Linda Foods Inc. 1985. Millstone Foods product catalog. Riverside, California: Loma Linda Foods. 4 panels.
• ***Summary:*** See next page. In 1985 Loma Linda began making the following ten products under the Millstone label. A color photo shows each can: Tender cuts. Vegeburger. Burger-like. Wheat fries. Nut meat. Meatless loaf. Breading meal. Bacon-like bits. Vege-beans. Burger mix. A description of each product is given as well as the weight and number of cans per case, but no prices. 2576. McDougall, John A. 1985. McDougall's medicine: A challenging second opinion. New Century Publishers, Inc. 220 Old New Brunswick Road, Piscataway, NJ 08854. xi + 308 p. Illust. Index. 23 cm. [980* ref]
• ***Summary:*** A very influential book by a physician advocating a natural, vegan diet (no animal foods) and lifestyle. Dr. McDougall graduated from Michigan State University, where he earned both undergraduate and medical degrees. He moved to Hawaii for postgraduate training at the University of Hawaii. He had a private medical practice in Hawaii for over 10 years and was Assistant Medical Professor at the University of Hawaii's School of Medicine. By 1987 he was living in California and was Medical Director of the McDougall Program at the Seventh-day Adventist St. Helena Hospital and Health Center (in the Napa Valley), P.O. Box 50, Deer Park, CA 94576. Phone: 707-963-6365. His medical work has focused on the prevention and treatment of disease through the use of proper diet and lifestyle.

Contents: 1. Why a challenging second opinion. 2. Cancer. 3. Osteoporosis. 4. Atherosclerosis. 5. Heart Disease. 6. Hypertension. 7. Diabetes. 8. Arthritis (incl. gout, osteoarthritis, rheumatoid arthritis, purines, and uric acid [p. 234-37]). 9. Urinary Disease. Epilogue. Underlying and Repeating Themes. How to Choose a Doctor. The Elimination Diet. Address: San Rafael, California (1/88).

Millstone products - natural wholegrain goodness, are especially prepared with your health and well-being in mind.

No harsh spices, animal fats or preservatives are used. Millstone's rich and hearty flavors are a blend of nature's finest ingredients.

Millstone recipes are available by writing to:
Loma Linda Foods, Inc., 11503 Pierce Street, Riverside, CA 92515

BURGER-LIKE

Burger-Like is a seasoned all soy product, juicy and tender. Excellent in chili, stuffed peppers, tacos, spaghetti sauces and more.
Case pack - 12/19 oz.

NUT MEAT

A delicious nut-flavored, "meatless" loaf. Open both ends of can, loosen with a knife and push out of the can. Use cold in sandwiches, salads or as cold cuts. Serve hot in casseroles or with a variety of sauces.
Case pack - 12/19 oz.

TENDER CUTS

Juicy, tender, whole wheat, gluten steaks in tasty broth. For easy entree, just bread, brown, and serve with gravy.
Case pack - 12/19 oz., 12/50 oz.

VEGE-BEANS

Delicious white beans, cooked in its own homemade tomato sauce. Ready to serve, Vege-Beans can be heated or enjoyed right out of the can.
Case pack - 12/19 oz.

VEGEBURGER

Delicately flavored, ground wheat gluten. Vegeburger has endless uses, sandwiches, loaves, casseroles, anywhere ground meat is called for.
Case pack - 12/19 oz., 12/50 oz.

WHEAT FRIES

Tasty and tender chunks of gluten simmered in a savory broth. Wheat Fries is delectable in stews, kabobs, sweet and sour, and casseroles. Save broth for gravies, soups, or stews.
Case pack - 12/19 oz., 12/50 oz.

MILLSTONE

2580. Skinner, Sherlyn; Martens, Richard A. 1985. The milk sugar dilemma: Living with lactose intolerance. Medi-Ed Press, P.O. Box 957, East Lansing, MI 48823. 193 p. [13 ref]
• ***Summary:*** A continuation of high lactase activity to adulthood is limited to persons of northern and western European ancestry and some nomadic tribes of Africa. The approximate incidence of lactose intolerance in various ethnic groups is as follows: African blacks 97-100%, Dravidian Indians (India) 95-100%, Orientals 90-100%, North American Indians 80-90%, Central/South American Indians 70-90%, Mexican Americans 70-80%, North American blacks 70-75%, Mediterraneans 60-90%, Jews 60-80%, Central & Northern Indians (India), 25-65%, Middle Europeans 10-20%, North American Caucasians 7-15%, Northwestern Indians (India/Pakistan) 3-15%, Northern Europeans 1-5%.

Contents: About the authors (autobiographical). Foreword. Preface. 1. Lactose intolerance: A case history, the origin of lactose intolerance, congenital lactose intolerance, primary acquired lactose intolerance, incidence of lactose intolerance, secondary lactose intolerance, other case examples, why did lactose intolerance appear, symptoms of lactose intolerance, diagnosis of lactose intolerance, the trouble with tests, the do-it-yourself test (lactose challenge, lactose-free test), conclusion, counter-point, living with lactose intolerance. 2. Digestion. 3. Good nutrition without lactose. 4. The lactose-restricted diet. 5. Setting your lactose level. 6. Shopping for foods. 7. Dining away from home. 8. Lactose-free food products. 9. Recipes. 10. Appendices.

Soyfoods that are mentioned include Isomil, Nursoy, Prosobee, Soyagen and Soyamel (made by Worthington Foods), Tofutti, Tofree. Pages 90-91 discuss soymilk. Address: 1. Nutritional consultant, Gastroenterology Associates, East Lansing, Michigan; 2. Clinical gastroenterologist (M.D.), East Lansing, Michigan.

2581. Plenty Canada. 1986. The Soya Centre (Calendar). Castries, St. Lucia.
• ***Summary:*** This is the head of a calendar, 8½ by 11 inches. On the top three-fourths of the page is a large black-and-white photo of the Soya Centre, looking from the outside in through two open doors–on each of which is written "Soya Beans" in large diagonal letters, above an illustration of a soya bean plant. Inside are about 10 local black people. On the back right is a food retail counter and snack bar, staffed by several women. On the back wall is a blackboard with a price list and menu written on it in chalk.

On the bottom quarter, in large black letters is written "The Soya Centre" in an arch. A laughing Santa Claus on the left is holding the word "The." Below the arch is written the Center's address: "19 Grass St., Castries, St. Lucia. Tel: 26421." To the right of the arch is a line drawing of a dove, and below it: "With the Compliments of Plenty Canada and the Staff of the Soya Centre." The calendar itself is missing.

Talk with Maya Clarke of Ontario, Canada. 1998. June 25. Maya worked for 7 years as a nutritionist and soyfoods instructor/technician for Plenty Canada at this Soya Centre in St. Lucia. She remembers this calendar well but does not have a copy. "There could possibly be one in the Plenty archives" at Lanark, but she is not too sure. Plenty made a calendar like this for two years, and this was the first of the two. It was designed by Plenty and printed in Castries (the capital city, by the person who prints *The Voice* newspaper) in December 1985 and presented on 1 Jan. 1986 as a New Year's gift to the Center's popular customers and friends. The calendar had a photograph as the head, then one page for each month below. The soya bean plants on the two big doors were painted by a Rastafarian man named Papa. Many of the people shown in the picture, the same as those who came to the Centre, were Rastafarians, who are vegetarians (very important) and consider themselves members of the lost tribe of Israel. They esteem Marcus Garvey, who they consider one of their forerunners. Note: *Webster's Dictionary* (1985) defines Rastafarian (derived from *Ras Tafari*, the precoronation name of Haile Selassie), a word first used in 1955, as "an adherent of Rastafarianism." The latter word, first used in 1968, is defined as "a religious cult among black Jamaicans that teaches the eventual redemption of blacks and their return to Africa, employs ritualistic use of marijuana, forbids the cutting of hair [it is worn in long braids called dreadlocks (first used in 1960)], and venerates Haile Selassie as a god."

The Soya Centre, which was constructed specifically for this purpose by the team just before Maya (John Baranni and Christine Kilgour from Plenty with local labor), was located in the middle of a black ghetto in Castries, and there were lots of social problems in the area. In the back of the Centre was a soyfoods factory. The factory was used to train all the people who subsequently opened up soyfoods businesses in St. Lucia. "What went on with soyfoods in St. Lucia was very significant–much more so than what happened in Jamaica, etc. At any given time, up to ten local people worked (for pay) at the Centre. The Centre was self-sufficient, so the money from the foods they sold went to pay the workers. Two guys would start very early in the morning (about 4:00 a.m.) to make soymilk and tofu. Then a crew of ladies would come in about 7:00 a.m. and use the tofu and soymilk to make second generation products from soymilk, tofu, and okara–such as "bakes" (like a little doughnut) and "accras" (like a fritter, in which the traditional salt cod was

© Copyright Soyinfo Center 2014

replaced by okara). The use of okara made the products more affordable. Tempeh was made at time, but it did not catch on as well as tofu and soymilk, and it was somewhat hard to get the spores. "Tofu caught on almost immediately "The local people just took it up; they just seemed to know what to do with it." Soymilk ice cream was one of the most popular products. Soymilk, imported soy flour, and okara were use to make little breads. Many people would bike or walk to the Centre to buy tofu in bulk over the counter–which was also a snack bar. The Centre was both a business and an education/ training center. Many local Seventh-day Adventists came to cooking classes at the center, and Maya also taught classes in their churches, schools, and homes. Maya remembers that one day a 13-year-old kid named Sooner knocked on the door of the Center at 7 o'clock in the morning and said to her: "I want to know everything there is about soyfoods." She happily invited him in, and began to teach him. For a while there was a "Comments Book" at the Centre; in it people wrote soy poems and soy songs–some of which Maya still has.

At one time some 10-12 soyfoods businesses were started in St. Lucia by local people who had first trained at Plenty Canada's Soya Centre. About 6 of those businesses are still in operation. A good example is La Soyarie. The reasons the others did not survive had nothing to do with local acceptance of soyfoods; they failed largely for reasons related to money or business management skills.

St. Lucia is a very small (27 miles long) independent country; It was granted self-government by the British in 1967 and attained independence on 22 Feb. 1979. The population is about 160,000 (1998). About 90% of the population is of African descent, with a small minority of Europeans and a few Carib Indians. Bananas are the chief crop. The official language is English, but Creole is the language most widely spoken. It is largely an oral culture.

Note: This is the earliest calendar seen (Oct. 2001) that mentions soy. Address: 19 Grass St., Castries, St. Lucia. Phone: 26421.

2582. Amatos, Christopher A. 1986. No fat in sight at Worthington Foods: The new president's goals–crack the mass market he sees developing for his company's product lines of fatfree substitutes and double 1985 sales of $30 million by 1990. *Dispatch* (*Columbus, Ohio*). Feb. 16. p. C1. Business section.

• ***Summary:*** President Dale Twomley thinks that Worthington's future lies in avoiding fat–both the corporate and the animal kind."

"A fertile market can produce many opportunities, and Worthington Foods plans to pursue most, if not all, of them. The company plans to encourage grocers to put more of its products in the main food aisles vs. the specialty sections; supply products to the ever more health-conscious fast-food industry; license its protein production technology to overseas interests; develop its institutional sales operation, and complete at least one major acquisition this year...

"The company has had three successful years under new ownership... Profits last year were slightly under $1 million with per share results for the 265-employee firm growing to $1.98 from $1.43.

"Worthington Foods was started in 1939 by Dr. George T. Harding Sr. in the basement of a white Colonial house on Proprietors Rd. Harding, a Seventh Day Adventist, saw a business opportunity in supplying food for hospital patients and church members, many of whom adhere to a meat-free diet. At that time, the company developed the process of spinning soy protein...

"In 1970, Worthington Foods was acquired by Miles, which at the time was interested in the health-related food market and introduced the Morningstar Farms brand to the product line. One of Morningstar's most successful products is a cholesterol-free egg substitute now called Scramblers.

"Miles' interest in the company waned, however, when it was bought [in late 1977] by Bayer A.G. Ltd., the German chemical concern. So, the company's founders arranged a leveraged buyout, which was completed in October 1982...

"While Worthington Foods still relies on the religious market for about 50 percent of its sales, that's not where the company is putting its emphasis."

A sidebar titled "Demographics, health concerns cook up ready market" notes that Worthington made the cover of *Time* magazine on 26 March 1984; the subject was cholesterol.

Photos show: (1) Dale E. Twomley (portrait). (2) Women packaging Morningstar Breakfast Patties in paper trays as they come out of automated fryer. (3) Employees operating food equipment. Address: Dispatch business reporter.

2583. *Dispatch* (*Columbus, Ohio*). 1986. Demographics, health concerns cook up ready market [for Worthington Foods]. Feb. 16. p. 1C. Business section.

• ***Summary:*** When cholesterol became the subject of a cover story in *Time* magazine on 26 March 1984, the publicity was a major boon to Worthington Foods–for cholesterol has become Worthington's "main engine of growth." Worthington Foods produces 3 major lines aimed at the meatless market. Of these, the Morningstar Farms line is the best known. "Its Scramblers egg substitute is sold in virtually every major grocery and is the leading product of its type in the country... Any of the Worthington Foods products deemed to be appropriate for the mass market will be formulated and repackaged under the Morningstar Farms label...

"A large component in the company's marketing plan is based on the country's aging population and increased health consciousness and concern about cholesterol, said Franklin D. Poston, director of marketing. By the year 2000, the over-

© Copyright Soyinfo Center 2014

50 age group will have grown 23 percent, compared to a 14 percent growth in the general population, he said. 'The older you get the more concerned you are about cholesterol,' he said."

2584. *East West.* 1986. The best & worst natural foods. East West's first annual awards. March. p. 83-86.
• ***Summary:*** "Frozen non-dairy desserts. Best hard-serve product: Rice Dream by Imagine Foods of Palo Alto, California. Leaves all the soy products with their squabbles about tofu content and soy isolate use in the dust." Address: Massachusetts.

2585. Robeznieks, Andis. 1986. Frozen foods: Nutritious and convenient [Worthington Foods, Legume, and Walker & Wilks Tofoods]. *Vegetarian Times.* March. p. 39-41.
• ***Summary:*** Ed Walker, a long-time teacher of transcendental meditation, has been testing his recipes for the past 8 years on groups of meditators. Tofoods currently has 3 entrees and will add 5 more this year. Last year Center for Science in the Public Interest evaluated 360 frozen entrees for taste and nutrition. Two by Legume, Inc. were in the top five: Tofu Bourguignon and Sesame Ginger Stir-Fry.

• ***Summary:*** Contains 15 glossy color photos with descriptions of the process and showing key parts of the DE-VAU-GE soymilk plant in Germany.

2587. *Tomorrow's Foods: Nutrition News from Worthington Foods.* 1986. Tracking the Adventist consumer: Trend toward a simpler, meat-free diet. Spring/summer. p. 3.
• ***Summary:*** See next page. "Seventh-day Adventist consumers remain in the forefront of a sweeping U.S. lifestyle change toward a simpler, meat-free diet.

"Half of a national survey group of SDA households indicated their consumption of meat had declined in recent years, while fewer than 5 percent said they were eating more meat.

"However Adventist consumers appeared to be cutting back rather than cutting out meat consumption entirely. Survey results showed that more than half of Seventh-day Adventists eat meat one or more times a week." Address: Worthington, Ohio.

2599. **Product Name:** Crispy Chik (Breaded) [Patties, or Chunks].
Manufacturer’s Name: Worthington Foods, Inc.
Manufacturer’s Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1986 April.
Ingredients: Chik pieces: Textured vegetable protein (soy protein isolate and concentrate), egg whites, soybean and/or corn oil, flavorings (hydrolyzed vegetable protein, onion powder, turmeric, spice extractives), monosodium glutamate, carrageenan, niacinamide, etc. Batter: Water, wheat flour, corn flour, salt, leavening (sodium acid pyrophosphate, sodium bicarbonate), monosodium glutamate, paprika, spices, corn starch, onion powder, dextrose, garlic powder, turmeric, yeast, nonfat dry milk, hydrolyzed plant protein, eggs. Breading: Bleached white flour, yeast, sugar, salt.
Wt/Vol., Packaging, Price: Patties: 10 oz (284 gm) paperboard box. Chunks: 12 oz (340 gm) box.
How Stored: Frozen.
New Product–Documentation: Leaflet with coupon. 1986. “New! Crispy Chik.” Expires Dec. 31, 1986.

Vegetarian Meal Plan. 7th ed. Appendix A.6-27.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. 8 by 4 by 1¼ inches. Red, black, and golden brown on white. “A breaded vegetable protein product. Completely meatless. Microwaveable. Heat and serve convenience.” Package

© Copyright Soyinfo Center 2014

design is copyright 1987. The main ingredients are now: Patties: Textured vegetable protein (soy protein concentrate and isolate), egg whites, wheat flour, soybean oil, corn oil, corn flour, salt, whey, partially hydrogenated soybean oil, sugar, yeast leavening (sodium acid pyrophosphate, sodium bicarbonate), nonfat milk, natural and artificial flavors from non-meat sources, monosodium glutamate, spices, vegetable gum, celery, onion, garlic, niacin, iron, etc.

Soyfoods Center product evaluation. 1990. July 21. Too salty if served by itself. The photo on the package looks better than the actual product. When microwaved, they do not brown. When heated in an oven, they are too dry. Deep fried, they are good but still somewhat dry. Package design: Excellent.

2600. **Product Name:** [Sahm Yook Soy Cool (Plain Soymilk)].
Foreign Name: Sahm Yook Soy Cool.
Manufacturer's Name: Sahm Yook Korean Foods.
Manufacturer's Address: 320 Panjeong-ri, Jiksan-myun, Chunwon-gun, Choongchungnam-do 333-810, South Korea.
Date of Introduction: 1986 May.
Ingredients: Soy milk, high fructose corn syrup, raw cream, salt, vitamin C.
Wt/Vol., Packaging, Price: 200 ml foil retort pouch (Doypack). Retails for 200 Won (6/90).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Form filled out and label sent by C.Y. Yoon, General Manager, Sahmyook Korean Foods. 1990. June 23. The product was introduced in May 1986. Ingredients are listed in English.

Label (Foil retort pouch). Sent by C.Y. Yoon. 1990. June 23. 4 by 6.75 inches Red, yellow, dark green, and light green on silver. Front panel says "Soyalac" and an illustration shows 3 yellow soybeans in a green pod. The back panel shows the package being heated in a microwave oven. So this package is probably sold during the cold months. Note that this product contains dairy cream.

2601. *Madison Survey and Alumni News* (*Madison, Tennessee*). 1986. Edwin M. Bislaski: Obituary. 68(2):4. April/June.
• ***Summary:*** Born on 1 Feb. 1903 in Lancaster, Pennsylvania, he died on 11 April 1986 in his home at Bancroft, Michigan, at age 83. He came to Madison in 1931 to pursue the pre-medical course. "Later he became director of sales and then manager of Madison Foods. As director of sales for the food factory, he was in large part responsible for the wide distribution of Madison Foods through the technique of employing 'Health Educators' who distributed Madison Foods door to door and gave health lectures in communities all over the United States. He continued his work at the food factory until 1952."

In 1952 he and his wife, Eunice, adopted four sons and moved to Hot Springs, Arkansas, where he opened a healthfood store.

"In 1963 the family moved to Bancroft, Michigan, where Mr. Bisalski taught science in high school and pursued higher teaching certification at Michigan State University, which he obtained in 1967."

2602. **Product Name:** Natural Touch Loaf Mix (Meatless Entrees).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1986 June.
Ingredients: Textured soy protein concentrate, egg white solids, dehydrated vegetables (onion, bell pepper, garlic), corn starch, natural flavors from vegetable sources, fructose, sea salt, caramel, vegetable gum, spices.
Wt/Vol., Packaging, Price: 4.6 oz.

• ***Summary:*** Seventh-day Adventists make Marmite, but Vegemite has most of the market. Includes recipes.

2606. Kuratsune, Masanori; Ikeda, M.; Hayashi, T. 1986. Epidemiologic studies on possible health effects of intake of pyrolyzates of foods, with reference to mortality among Japanese Seventh-Day Adventists. *Environmental Health Perspectives* 67:143-46. Aug. [9 ref]
• ***Summary:*** Broiled fish is a very common dish in Japan and is considered to be one of the major sources of mutagenic pyrolyzates of proteins ingested by the Japanese. Japanese who consume broiled fish twice or more weekly are 33% more likely to die of cancer and 67% more likely to die of stomach cancer than all Japanese. Broiled fish has the highest risk of any food of causing cancer in Japan.

Approximately 10,000 Adventists live in Japan. Good vital statistics existed on 6,742 of these. They have less overall cancer and less stomach cancer than Japanese in general. Address: 1. 2608. Mitchel, Diana. 1986. Re: New developments with soymilk in Australia. Letter to William Shurtleff at Soyfoods Center, Sept. 1. 2 p. Handwritten.
• ***Summary:*** (1) Castle Trading (Ranwick, NSW) are now selling non-sweetened fresh soymilk in 2 litre containers at $3.00 Australian. (2) Biogenic (owned by Russels-Russels, which is owned by a New Zealand health chain) are selling 1 litre Tetra packs sweetened with honey at $3.40 each. (3) Sanitarium Health Food Company, a Seventh-day Adventist chain, are producing their own soya milk. It is apparently nice and cheap. (4) Soyfoods Australia P/L [Pty. Ltd.] at 14/2 Paton Place, Manly Vale (Phone: 02-949-7314) are producing soy milk "and have just spent $100,000 on equipment that is quite unsophisticated in comparison to the English equipment I was thinking of buying. Anyhow, they are contracting to sell fresh soya milk to all Coles supermarkets in NSW in plastic bottles." (5) Quite a few brands are selling in NSW, including: "Simply Better" (24-B Braeside Drive, Braeside, VIC 3195. Phone: 03-580-8505); Light Foods (37 Richards St., Hindmarsh, SA 5007); Earth Angel Soy Foods (Mt. Waverley, Victoria). Address: Squirrels on the Park, P.O. Box 4, Surry Hills 2010, NSW, Australia.

2609. Leiss, Richard S. 1986. Use of spun soy protein fibers at Worthington Foods (Interview). *SoyaScan Notes.* Sept. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Worthington is still spinning soy protein isolates. They are using them all internally in meat analogs' they do not sell spun fibers to anyone. Loma Linda is also spinning soy protein fibers. Richard was told this by a Loma Linda employee while attending the AOCS short course in Hawaii in May. Address: Director, R&D, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

• ***Summary:*** Fischer has been involved with soy since 1960. He formed Soypro International in 1963. Before that he was with the Soybean Council of America. Address: Iowa.

2613. Miller, Clarence. 1986. Harry Miller, Willis Miller, and their work with soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 24. 2 p. transcript.
• ***Summary:*** Clarence Miller, M.D., Dr. Harry Miller's eldest son, lives on the grounds of the St. Helena Hospital and Health Center.

The main purpose of this visit is for Shurtleff to pick up a copy of a manuscript on the life of Dr. Harry W. Miller written by Mr. Herbert T. Ford, 531 Sunset Dr., Pacific Union College, Angwin, California 94508. Phone: 707-965-2047.

Ford is in PR and a good writer. He interviewed Dr. Harry Miller in 1958. Raymond Moore later plagiarized this work. Ford does not have a copy of this manuscript. Clarence has the best original, which is a carbon copy.

The BIG picture in China. High level contacts are the key to getting somewhere in that country.

Harry's full name was Harry Willis Miller. His son Willis was named Harry Willis Miller, Jr.; he was generally called "Willis."

In Feb. 1948 Dr. Miller went to China for a few weeks and stayed in Shanghai with Clarence who, who had been there since 1946. Then back to states. When other Adventists had to vacate to Hong Kong the church asked Harry to go back to Shanghai. He stayed about 6 months after Dec. 1940 to early 1950. The Communists took over 14 Adventists hospitals in China.

Dr. Miller and his wife and group established the FIRST Adventist presence in China, in 1903. There were 4 physicians and 2 nurses. Maude was a physician. So they were of great historical significance.

The quality of medical care in Adventist hospitals in Asia is slipping dramatically, according to Clarence. He says: "My interest is in improving our medical activities."

Willis Miller started working with Bob Fischer about 3 years ago. They developed a mobile unit. Can ship these units to foreign countries. There are Now there are three other principals.

Dr. Thrasher is interested in having a soymilk plant as a student industry at an Adventist college in Thailand. This is the strongest interest Clarence found in Asia.

Miller Memorial Foundation. Clarence wants to set this up in Miller Farms contracts. The money would be used to advance Adventist health care activities.

Bob Fisher has traveled a lot outside the US in past years. Willis is a very competent soymilk engineer. Bob runs the business.

Their future has promise. Fisher went to China at the invitation of a corporation or group of entrepreneurs in Peking. Maybe interest in Shanghai via Dr. Yeung (spell?). Now at Kettering.

Clarence wants to reestablish Harry's original plant 50 years later. He wrote Mr. Milne, who is 90 some years of age and colleague of Harry, now in Hong Kong doing medical work. Has names of 5 people in Shanghai, settled on a few promising investors. One is a SDA businessman, in the cotton business. President of Rawcot International. Owns lots of cotton land.

In the early 1960s Dr. Miller went to Hong Kong, had a home there at the SDA college at Clearwater Bay, and was working with Longway and Milne to raise money to build the 2 hospitals. He had many old friends from Hong Kong. He wanted to have a little soy dairy at the college. It was established but did not take off. Chinese students see themselves as scholars, not domestic workers.

While Harry was in Hong Kong, Sally Awe, who lives in Hong Kong and is the heiress of the Tiger Balm Fortune, suggesting that she build a soymilk plant in Hong Kong for the use of the Chinese people. Dr. Miller encouraged her but his main interest was in the 2 hospitals. It never happened.

Dr. Miller's last surgery was in 1973, when he was 94 years old. From 1961-62 to 1973 he did only goiter operations–his specialty.

© Copyright Soyinfo Center 2014

Dr. Miller's first West Coast distributor, in early 1940s, was Joseph Lessin & Co. which later became Kahan & Lessin. It wasn't until 1941 that the plant in Mt. Vernon, Ohio, actually started to make any soyfoods. Harry basically didn't have a dime to his name when he returned to US in 1939 because he had been a missionary all the time. His brother Clarence, who lived in Chiff? City, Ohio, loaned him $5,000 to pay for the 150 acre farm that Harry bought in Mt. Vernon, Ohio. Harry then flew back on the Clipper to the Philippines and did thyroid surgery. He left half the money there for the Church and brought home $20,000.

Adventists developed Miller Memorial Sanitarium and Hospital in Cebu City, Philippines. He made only 2 trips to the Philippines to do thyroid surgery and each time came back with $20,000. He was only there a few weeks but would do 10-12 operations a day. They were all lined up and ready to go.

This manuscript by Herbert Ford did not come from Mr. Ford but from Mr. Milne in Hong Kong, out of a pile of papers that he said Dr. Miller left with him. Address: P.O. Box 97, Deer Park, California 94576. Phone: 707-963-7446.

• ***Summary:*** A graph (p. 4, from Klikx 1978) shows the steady decline in fiber consumption by humans over the last 100,000 years. "In more recent history, the concept that *coarse* foods of plant origin help to combat constipation goes back to Hippocrates [famous Greek physician, lived ca. 460-377 B.C.] in the 4th century B.C., who commented on the laxative action of the outer layers of cereal grains, an observation repeated over 1,000 years later (9th century A.D.) by the Persian physician Hakim. Shakespeare referred to the action of cereal bran in his play *Corialanus* in 1610."

In the early 19th century Sylvester Graham (*Lectures on the Science of Human Life*, 1829) and J. Burne (*Treatise on the Causes and Consequences of Constipation*, 1840) in the U.S. and in the late 19th century and at the dawn of the 20th century Allinson in Britain extolled the virtues of whole grains in improving health by combating constipation.

"The history of dietary fiber and health in the first 50 years of the 20th century reveals occasional interest, but very few scientific publications. Fiber was relegated to being the cinderella of nutrients. It may be well to remember that these were the days of major discoveries in vitamins, minerals, and all other digestible nutrients. Somehow the concept that a group of substances practically indigestible by human GI enzymes could be important to health did not appeal to nutritionists, physiologists, and physicians in those days.

"In the 1920s, McCarrison (1921) drew attention to the good health of tribesmen in North India, which he attributed to the consumption of whole grains little tampered with by modern technology. In the same decade, John Harvey Kellogg was extolling the virtues of whole grains in the U.S. The convictions of the latter culminated in the development of the breakfast cereal industry. Cowgill and Anderson in the 1930s published well-controlled research which proved that 'fiber' was responsible for the laxative action of wheat bran. At the same, the British surgeon Albuthot Lane... recognized the 'dangers' of stagnant fecal content in the colon. His first reaction was to remove (!) the colon surgically, but fortunately he subsequently appreciated that the administration of bran was altogether simpler, safer, and equally effective. In the late 1930s, Dimock, a young British physician, reported his careful studies on the effectiveness of bran in treating constipation and, in the late 1940s, Walker of South Africa was one of the first to appreciate the properties of plant fibers and to study them in a truly scientific manner.

"In the years that followed, some epidemiological correlations, by Cleave in Britain (1956 to 1966) and Trowell in Africa, with his book, *Non-Infective Diseases in Africa*, attributed protective effects to unrefined carbohydrates and 'bulky' foods. This, we could say, is the early history of fiber." Address: 1. M.D., Unit of Geographic Pathology, St. Thomas Hospital Medical School, London, England; 2. D.Chem, PhD, Consultant in Nutrition Research, Los Altos, California.

2623. Calkins, Beverly M. 1986. Consumption of fiber in vegetarians and nonvegetarians. In: Gene A. Spiller, ed. 1986. CRC Handbook of Dietary Fiber in Human Nutrition. Boca Raton, Florida: CRC Press, Inc. 483 p. See p. 407-14. Chap. 8.2. [42 ref]
• ***Summary:*** A review of the literature reveals that vegetarians consume 86% more fiber than nonvegetarians. The fiber fractions that are significantly different between the two groups (for calorie-adjusted intake) are cellulose and pectin. The fraction which is consistently greater among Seventh-day Adventists (SDAs) than non-SDAs is lignin.

The SDA church has about 600,000 members in North America. About 50% of SDAs follow a lacto-ovo-vegetarian diet, and all abstain from drinking alcoholic beverages and

© Copyright Soyinfo Center 2014

from smoking. They also tend to avoid caffeine-containing beverages, rich, highly refined foods, and hot condiments and spices. About 60% of the SDA population are adult converts; the rest were raised in the church-recommended lifestyle as children of SDA parents.

A large table (p. 408-09) summarizes 18 studies, from 1958 to 1984, comparing the fiber intake of vegetarians and nonvegetarians. Address: D.H.Sc., Post-Doctoral Fellow, Epidemiology Dep., Johns Hopkins Univ., Baltimore, Maryland.

2625. Green, Harvey. 1986. Fit for America: Health, fitness, sport, and American society. New York, NY: Pantheon Books. xvi + 367 p. Illust. Index. 28 cm. [250+* ref]
• ***Summary:*** This is a serious and sympathetic study of the American quest for perfect health in the period from 1830 (a watershed year in this as in so many other aspects of American culture) to 1940. The author suggests that the pursuit of physical perfection is a way to compensate for the experience of social failure. The Strong Museum, where he works, is the only major U.S. museum devoted entirely to documenting life in Victorian America [1837-1901]. The author has MA and PhD degrees from Rutgers University, New Jersey, and is presently also an adjunct professor of history at the University of Rochester, in New York.

Contents: Preface. Acknowledgments. Part I: Millennial dreams and physical realities, 1830-1860. 1. Health, medicine, and society. 2. Spices and the social order. 3. The springs (and shocks) of life. 4. "Bad air" and the "movement cure." Part II: The price of civilization, 1860-1890. 5. The sanitation movement and the wilderness cure. 6. The new "American nervousness." 7. Electricity, energy, and vitality. 8. "Muscular Christianity" and the athletic revival. Part III: Regeneration, 1890-1940. 9. Living the strenuous life. 10. Old-time quiet in a breathless age. 11. Dietetic righteousness. Epilogue. Notes. Picture credits.

Contains many interesting photos. Address: Deputy director for interpretation, Strong Museum, Rochester, New York. Home: Palmyra, New York.

2626. Lacey, Robert. 1986. Ford–The men and the machine. Boston and Toronto: Little, Brown and Co. xix + 778 p. Plus 48 pages of plates. Index. 24 cm. [450* ref]
• ***Summary:*** Contains a chapter titled "Food for Thought" (Chap. 13, p. 220-236 + photos at end) plus extensive endnotes, a 23-page bibliography, and a good map of Dearborn and Detroit. An insightful, very well researched, and slightly irreverent overview of Ford's work with soybeans and attitudes toward diet and health.

Henry Ford had a distrust of doctors. He blamed a doctor for his mother's death and for the operation that marked the end of his wife's childbearing in the 1890s. In Nov. 1932 he was admitted, at age 69, to the Henry Ford Hospital for a hernia operation. It was the first medical operation of his life. The next morning he insisted on getting up, against doctor's orders, and sitting in a chair beside his bed. Persisting with his own therapy, a week after the operation he declared himself ready to go home. Five days later he was back at work, totally cured. To his surgeon's amazement he remained cured. "It was not long before postoperative ambulation became one of the new features of treatment at the hospital."

"Old Henry Ford had always believed that we are what we eat. Dietary reform had been one of the radical new strands of thought swirling through Michigan in his youth, thanks to the Seventh Day Adventists' Western Health Reform Institute, founded in Battle Creek in 1866."

© Copyright Soyinfo Center 2014

Henry Ford was a pioneer in employing Negroes and treating them fairly. William Perry, his first black worker, was employed in 1914. "By the early 1920s there were more than 5,000 blacks working for Ford and by 1926 there were double that number–a tenth of the entire work force. The Ford Motor Company employed more blacks than all other car companies put together... But Ford never paid a man more, or less, on account of his skin. Henry Ford's black employment policy was genuinely ahead of its time."

Henry Ford had been thinking in terms of chemurgy and villages for many years. "As early as 1916 he had formed a company with Edsel, 'Henry Ford & Son Laboratories' to carry out 'mechanical, botanical and chemical research.' Henry had a notion that alcohol could be distilled from vegetable matter for use as a tractor fuel, thus making the farmer totally self-sufficient, and he hired his old school friend, Dr. Edsel Ruddiman, away from his university researches to work on this. He set Dr. Ruddiman up in a corner of the Dearborn tractor plant, and here the chemist analysed all manner of vegetable produce from the ever-growing acreage of the Henry Ford farms." One of the crops he analyzed was soybeans. Ford's interest in the soybean was not primarily in its nutritional value but rather in the potential that it held for use by industry.

Of the several Western prophets who popularised the soybean, Henry Ford was the first to try growing and harvesting the crop on a major scale, using farm machinery extensively.

"Chemurgy, a technological child of populism, sprang from the woes of American farmers in the 1920s and 1930s. As unemployment grew, there were fewer and fewer customers to purchase the abundant crops grown by farmers. Surpluses resulted and the glut sent prices plummeting. Chemurgy was based on the "hope that modern science might be able to teach farmers to produce more than just food. If the agricultural sector was producing more than people could eat, while the industrial sector was languishing, it seemed obvious that the two should get together... the latest developments in chemistry suggested that this was where the future lay. Wood was providing the raw material for the miraculous new fibre, rayon... Both the technology and ideology meshed with the causes dearest to Henry Ford's heart, and it turned out that he had been a chemurgical pioneer all the time without realising it, since the coil cases of the 1915 Model T had been constructed from a plastic based on wheat gluten. As the chemurgical movement gathered strength in the early 1930s, its champions found a ready audience in Dearborn, and in 1935 the Dearborn Inn became the site of America's first chemurgical conference, under the sponsorship of Henry Ford." The first conference, and the second, held at the same location the next year, were, "like all enterprises associated with Henry Ford, a curious blend of vision and nostalgia."

In an attempt to maintain the chemurgic spirit, Henry Ford appeared in 1939 in a silklike soya-bean tie while wearing a soya-bean suit.* (Footnote: *The suit was more fragile than its woollike texture suggested; its tailor gave Henry Ford firm orders not to cross his legs in public.)"

Lacy is an Englishman, who writes non-fiction company histories. A Ballantine Books edition (832 p., 18 cm) was published in 1987. Address: England.

2627. Land, Gary. ed. 1986. Adventism in America: A history. Grand Rapids, Michigan: William B. Eerdmans Publishing Co. ix + 301 p. Series: Studies in Adventist History, Vol. 1. 22 cm. [925* footnotes]

• ***Summary:*** Contents: Preface. 1. The Millerite movement, 1830-1845, by Everett N. Dick. 2. Sectarianism and organization, 1846-1864, by Godfrey T. Anderson. 3. Years of expansion, 1865-1885, by Emmett K. VandeVere. 4. The perils of growth, 1886-1905, by Richard W. Schwarz. 5. Shaping the modern church, 1906-1930, by Gary Land. 6. The church under stress, 1931-1960, by Keld J. Reynolds. 7. Coping with change, by Gary Land (Discusses church growth especially in the Third World, the denomination's strong cultural conservatism with respect to beards, long hair, dress and rock music, the Association of Adventist Forums (established in 1967 outside the church organization) and its quarterly journal *Spectrum*, racial adaptations, the women's issue, theological debates, debate over righteousness by faith, debate over Ellen White and her borrowings / plagiarism, Ronald L. Numbers's Prophetess of Health (1976), Walter Rea's work showing that an alarmingly large portion of White's work was borrowed (but mention of his book *White Lie* is carefully omitted), the Sanctuary Doctrine, Adventism in transition, from sect to church, summary).

Appendix 1. Seventh-day Adventist statements of belief. Appendix 2. Seventh-day Adventist membership statistics. Notes. Bibliographical essay. Contributors.

Appendix 2B, titled "World Membership by Geographical Region," shows the following regions to have the largest number of members of the SDA church in 1979: Africa 757,986, North American 585,050, South American 558,395. Asia 523,648, and Interamerican (Central America and the Caribbean) 515,226. Worldwide church membership in 1979 was 3,308,191. It had grown from 5,440 in 1870, to 67,131 in 1900, to 245,220 in 1925, to 756,712 in 1950.

Each of the chapters in this book was written by a Seventh-day Adventist with a PhD in history. It is not uncritical and there are none of the typical providential explanations that appear in most Adventist histories. Considerable attention is given to Dr. John Harvey Kellogg and Battle Creek Sanitarium. The second and last volume, which is planned to be topical, may never be published. Prof. Ronald Numbers, now in the History of Medicine Department, University of Wisconsin at Madison, organized the project years ago, but when he left Loma Linda University it got stalled for many years until

© Copyright Soyinfo Center 2014

he finally persuaded Gary Land to bring at least the first volume to completion. Prof. Numbers was fired from Loma Linda University, but in exchange for receiving one year's severance pay he wrote a letter of resignation. Address: Prof., History Dep., Andrews Univ., Berrien Springs, Michigan.

2628. Ludlow, Rose Budd. 1986. Total health and food power: Principles of healthful living and outstanding vegetarian recipes from Glendale Adventist Medical Center. Santa Barbara, California: Woodbridge Press. 239 p. Illust. Recipe index. 23 cm.

• ***Summary:*** Section 1 of this book consists of 18 chapters on Seventh-day Adventist principles of healthful living. Part 2 contains more than 200 vegetarian recipes from the Glendale Adventist Health and Medical Center. Soy-related recipes include: Soybean waffles (p. 118). Corn chowder with imitation Baco-Bits (p. 127). Lemon juice-soy mayonnaise (with soy milk powder, p. 149). Gado-gado salad (with fried tofu, p. 165). Tofu salad deluxe (p. 171). Chinese-style sautéed tofu (p. 185). Fried tofu patties with eggs and vegetables (p. 192). Leafy Chinese tofu (p. 196). Soy-cheese patties (with tofu, p. 206). Soy-cheese scallops (p. 207). Tofu balls or cutlets (p. 210). Tofu balls with tartar sauce (p. 210). Tofu with mushroom sauce (p. 211). Tofu and brown rice casserole (p. 212).

Many recipes also use meatlike products made by Seventh-day Adventist food companies; a list is given on p. 174. These include Soyameat (p. 162), Meatless Chicken (p. 167), Nuteena (p. 200, 213), Vege-Burger (p. 211, 214). Address: Consulting Dietitian, Formerly, Director of Dietary Service, Glendale Adventist Medical Center, Glendale, California.

2629. Madison College Alumni Association. 1986. A pictorial history of Madison College, a school of divine origin 1904-1964. Madison, Tennessee. viii + 269 p. Illust. 28 cm.

• ***Summary:*** Several articles about Madison from other publications (e.g. Hastings 1938; Holman 1941) are reprinted in this book. Pages 42 gives a history of "The Madison Food Factory." There are photos of the outside and inside of the building on pages 43 and 46. "In a letter dated March 10, 1907, directed to the directors of the Nashville Sanitarium and Southern Union Conference Committee, Ellen G. White wrote: 'It would be a great advantage to the school in Madison if a food factory were put into operation in connection with the work of the school.'

"About this same year a large flakefood factory was built at Edgefield, near what is now known as Edenwold. The people of the South had not yet become conditioned to the eating of health foods; so the factory became a white elephant on the hands of the owners. It passed from hand to hand without success. [One of the operators was Jethro Kloss.] After much discussion on the part of the school faculty a decision was made to purchase the plant, dismantle it and bring it to Madison. It was opened in 1918. The plan was to begin in a small way and to educate the workers, step by step, in the new industry. Mr. and Mrs. Andrew Wheeler were in charge of the work, under the direction of Mrs. Druillard, who had had years of experience in other institutions.

"The purpose of the Food Factory was to produce foods that would be suitable substitutes for meat in the dietary of the vegetarian and others whose health required the elimination of animal products. Consequently most of the foods manufactured were rich in protein. The foods were made from such products as soy beans, peanuts, and gluten. Some of the trade names developed were Zoyburger, Yum, Mock Chicken, Nu-Steak, Not-Meat, Vigoroast, and Ches-O-Soy. A cereal substitute for coffee was Zoy-Koff.

"Some of the men who played an important part in the later growth and development of the food factory were Joe Hansen, C.H. Dye, T.A. McFarland, Captain Calvin Bush, Edwin Bisalski, George Norris, Leslie Brooks, John Brownlee, H.M. Mathews and Frank Holland. Of this group, H.M. Mathews and John Brownlee played a very important part in experimentation and development of the foods. Dr. P.A. Webber and Ulma Doyle Register did outstanding work in research to develop better texture, more palatability, and greater nutritional value. Mr. E.M. Bisalski was outstanding in the experimentation and development of the foods. During his term as manager of the Factory, great expansion took place. A practically new plant, with one section four stories in height was constructed in 1941. Car loads of products were shipped to jobbers in Chicago, Boston, New York, and other large distributing centers until Madison products were found in all states and Canada.

"In August of 1964 Madison Foods was sold to Worthington Foods, Inc. Worthington, Ohio. The same products that had been produced in the past were continued to be available under the Madison label and brand names used in the past. Mr. K.P. Stepanske was appointed manager. The food factory was operated on the Madison Campus until 1972 when it was moved to Worthington, Ohio (p. 42).

Elder Julius Gilbert White, a nationally-known health lecturer, came to Madison and delivered a 10-day series of lectures on health, with the use of illustrated slides. This led to the development of many health institutes and short courses at Madison from 1932-1940 (p. 44).

"Vegetarian Cafeterias: Another type of health work carried on by the Madison school was the operation of a treatment room and vegetarian cafeteria in Nashville. Workers drove back and forth each day from the school to Nashville. It was started in rented quarters in 1917. In 1922, because of advancing rents, a new building was constructed on a permanent location at 151 Sixth Ave. North. A successful work continued for over a decade. Advancing trend of business in the center of the city made the location

© Copyright Soyinfo Center 2014

undesirable and the business closed out and the building was sold. The Birmingham [Alabama] cafeteria was started in 1920. An eighty-seven acre farm purchased as a rural base supplied vegetables and farm produce.

"In 1920 the Louisville treatment rooms were making good progress and opened a cafeteria.

"In December of 1920 a group of workers opened a city cafeteria in the cities of Knoxville, Memphis, and Chattanooga. These were among the early beginnings of this type of work in our denomination." A photo shows the Vegetarian Cafeteria and Treatment Rooms, 151 6th Ave., Nashville, Tennessee (p. 45).

There are photos of each graduating class. Pages 126-173 are biographical sketches, usually with a photo, of Madison "Personalities," including E.A. Sutherland, Bessie DeGraw Sutherland, Percy Magan, Nellie Druillard, Frances L. Dittes (1891-1979) and her sister Florence, Dr. Ulma Doyle Register, Dorothy Mathews, William Cruzen Sandborn, and Mable H. Towery.

A sample student menu is given (p. 265). Breakfast includes "Fried Soyburger," and dinner includes "Soyburger Patties." "At the noon and evening meals toasted Soyburger sandwiches, chocolate soy milk, and soy buttermilk are always available." Cow's milk is also available at all 3 meals. Address: Madison, Tennessee.

2630. Phillips, Roland L.; Snowdon, David A. 1986. Mortality among Seventh-day Adventists in relation to dietary habits and lifestyle. In: R.L. Ory, ed. 1986. Plant Proteins: Application, Biological Effects, and Chemistry. Washington, DC: American Chemical Society. ix + 285 p. See p. 162-74. [23* ref]

• ***Summary:*** "This report summarizes 21 years of mortality follow-up for 25,000 California members of the Seventh-day Adventist church." They have a "marked reduction in risk of fatal large bowel cancer, coronary disease, stroke, diabetes and nontraffic accidents. Compared to Adventists who heavily use meat the vegetarian Adventists have a substantially lower risk of fatal coronary disease, fatal diabetes and death from any cause, especially among men. Among Adventist men who use few animal products (meat, milk, cheese, eggs) the risk of fatal prostate cancer is one third that of Adventist men who heavily use such products. Moderate use of coffee is associated with an increased risk of fatal large bowel cancer among both sexes and an increased risk of coronary death and all-cause death among males." Address: Loma Linda Univ., School of Medicine, Center for Health Promotion, Loma Linda, CA 92350.

2631. Elmer, Vickie. 1987. Loma Linda Foods Inc. consolidates for growth. *Daily Commerce* (*Los Angeles, California*). Feb. 2. Also in Press-Enterprise (Riverside, CA). Jan. 26.

• ***Summary:*** Loma Linda Foods was founded in October 1906. Company sales now top $20 million a year, growing at 7% annually. Worthington sales top $30 million, and grew last year by 13%. Loma Linda Foods plans to shut down its plant in Mount Vernon, Ohio, and move it to Riverside in late 1987. Mr. Alejo Pizzaro is now company president. Address: Riverside, California.

2632. Lease, Carol Ann. 1987. Firm's bread and butter comes from meatless foods. *Dispatch* (*Columbus, Ohio*). Feb. 18. p. 2. Neighbor news section.

• ***Summary:*** "The inside of the Worthington Foods plant at 900 Proprietors Rd. looks like any meat packing plant... The only difference is, there's no meat at Worthington Foods," now in its 48th year with about 270 employees. Discusses the company's history and 3 product lines. "Meat rationing during World War II gave the company a shot in the arm as people turned to Choplets when they couldn't get pork chops.

"Worthington Foods still makes some peanut-based products, but most of its no-meat meats today are made from soy protein. The work of Robert Boyer, a Michigan researcher, enabled the company to spin soy into a substance resembling muscle fiber."

David Schwantes, manager of marketing communications, said the Morningstar Farms line is in about 70% of U.S. Supermarkets. James Remer, director of manufacturing, said Scramblers, which are made from egg whites, also is the company's fastest-growing product. Schwantes said that "a 1985 Gallup poll turned up 6 million vegetarians in the United States. That's a five-fold increase since the last time they asked the question in 1979.

"According to the National Institutes of Health, he added, one in four households has someone on a low-cholesterol diet, whether self-imposed or recommended by a doctor...

"The company also is to break ground this spring on a 80,000-square-foot storage facility on Sinclair Rd. and is expanding manufacturing activities into second-floor areas of its Proprietors Rd. plant that now are being used for storage. All this growth is not happening without problems. The sanitary sewer line serving the plant, for example, is at capacity. Last year, a clog in the line caused sewage to back up in the basements of homes on E. Stafford Ave. The city has suggested that Worthington Foods put in a pumping station to pump the sewage to another line or that a new sewer line be built on Proprietors Rd. to serve Worthington Foods exclusively. The latter would cost an estimated $525,000."

• ***Summary:*** Meat substitutes or analogs have lower fat and cholesterol than meat, and the sort of, kind of, maybe taste like meat. Address: Washington, DC.

2637. Loma Linda Foods. 1987. Loma Linda product catalog. Quality foods since 1906. Riverside, CA 92515.
• ***Summary:*** See page after next. Lists 36 VP [vegetable protein, canned or dry mixes] products, all shelf stable, and 13 frozen food products. All are vegetarian. The products are grouped into categories, which are not named. For each product is given: Product, code, and how packed (e.g., 12/14 oz.).

The VP products are: Nuteena. Proteena. Vegelona. Sandwich spread. Sizzle franks. Linkettes. Big Franks. Little Links. Dinner Cuts. Tender Rounds with Gravy. Swiss Steak with Gravy. Tastee Cuts. Stew Pack. Vege-Burger, Redi-Burger. Fried Chicken with Gravy. Chili Beans. Green Soybeans. Soybeans Boston Style. Vege-Scallops. Tender Bits. Savory Dinner Loaf. Patty Mix. Chicken Supreme. Ocean Platter. Vita-Burger Chunks. Vita-Burger Granules. Gravy Quik. Krispy Quik Breading Mix. Loma Linda Wheat Bran. Loma Linda 7 Grain–Crunchy. Loma Linda 7 Grain–No Sugar. Ruskets. Breakfast Cup (free of caffeine). Soyagen Powder. Savorex (savory vegetable-yeast seasoning).

Frozen foods: Sizzle Burger, Meatless Bologna. Savory Meatballs. Chik–Nuggets. Chik–Patties. Meatless Fried Chicken. Meatless Chicken. Meatless Roast Beef. Meatless Salami. Meatless Turkey. Griddle Steaks. Ocean Filets. Meatless Corn Dogs.

At the bottom of the last page we read: "Loma Linda Foods' commitment to quality, health and customer satisfaction began in 1906 and continues as we develop new recipes, modify existing ones, and explore new processes in technology; all in search of excellence.

"At Loma Linda Foods our mission goes beyond the marketing of textured vegetable proteins and infant formulas. Instead, we consider ourselves to be in the healthful living business. Equal with this mission is the responsibility to educate the public in healthful and economical living and to provide the health foods and beverages needed for this quality lifestyle. We trust that Loma Linda's extensive product range will continue to be your #1 choice whenever the occasion calls for a delicious meatless adventure." Address: Riverside, California.

FROZEN FOODS

SIZZLE BURGER

Pre-cooked frozen patties with an outstanding flavor and texture. They make quick, easy and great tasting burgers.

Code #0/004/0 **Packed: 12/30 oz. (1 lb. 14 oz.)**
Code #0/005/0 **Packed: 6/75 oz. (4 lb. 11 oz.) (Institutional)**
Code #0/007/0 **Packed: 12/10 oz.**

MEATLESS BOLOGNA

Flavor and texture make this a perfect meatless sandwich. Ready-to-serve luncheon also tastes great with a savory gravy served over mashed potatoes.

Code #0/008/0 **Packed: 12/8 oz. (Deli Slices)**
Code #0/012/0 **Packed: 4/64 oz. (4 lb. Roll)**

SAVORY MEATBALLS

Vegetable Protein Savory Meatballs are pre-cooked, ready to heat and serve. This versatile product makes meal planning quick, easy and delicious.

Code #0/016/0 **Packed: 12/10 oz.**
Code #0/019/0 **Packed: 6/80 oz. (5 lb.) (Institutional)**

CHIK - NUGGETS

Tasty chunks of chicken-flavored goodness are great as a hot hors d'oeuvre or an easy-to-fix entree. Try them for school lunches and picnics with tangy barbeque or sweet & sour sauce.

Code #0/022/0 **Packed: 12/12 oz.**
Code #0/025/0 **Packed: 6/4 lbs.**

CHIK - PATTIES

Discover the golden goodness of tasty Chik-Patties. These thick chicken-tasting patties are generously coated with crispy-crunchy breading. Serve Chik-Patties in the sauce of your choice, or serve crisp in bun with lettuce and tomato.

Code #0/024/0 **Packed: 12/10 oz.**
Code #0/029/0 **Packed: 6/75 oz. (4 lb. 11 oz.)**

MEATLESS FRIED CHICKEN

This frozen fried chicken-like entree can be heated in a pan or the oven, and served with a variety of savory sauces. It is also delicious cubed in salads or in sandwiches.

Code #0/023/0 **Packed: 12/8 oz.**
Code #0/026/0 **Packed: 6/80 oz. (5 lb.) (Institutional)**

MEATLESS CHICKEN

These ready-to-eat, all vegetable protein slices are mild and deliciously flavored to your taste. A new idea for chicken salads and soups.

Code #0/031/0 **Packed: 12/8 oz. (Deli Slices)**
Code #0/033/0 **Packed: 4/64 oz. (4 lb. roll)**

MEATLESS ROAST BEEF

Hearty roast beef flavor without the animal fat makes these not just good-tasting, but good for you, too! A healthy alternative that works great in grinders and sandwiches.

Code #0/036/0 **Packed: 12/8 oz. (Deli Slices)**
Code #0/038/0 **Packed: 4/64 oz. (4 lb. roll)**

MEATLESS SALAMI

These spicy, cholesterol-free slices are perfect for any meal. Try them with scrambled eggs or hash browns, in luncheon salads, or in your favorite casserole recipe.

Code #0/041/0 **Packed: 12/8 oz. (Deli Slices)**
Code #0/043/0 **Packed: 4/64 oz. (4 lb. roll)**

MEATLESS TURKEY

A soy protein delicacy with mild turkey flavoring. A must for your Christmas and Thanksgiving holiday recipes.

Code #0/046/0 **Packed: 12/8 oz. (Deli Slices)**
Code #0/048/0 **Packed: 4/64 oz. (4 lb. roll)**

GRIDDLE STEAKS

Rich and hearty in a tasty, tender, meatless steak. It's pre-cooked, so just heat and serve, Great fried or barbecued, too.

Code #0/051/0 **Packed: 12/10 oz.**
Code #0/055/0 **Packed: 6/80 oz. (5 lb.) (Institutional)**

OCEAN FILLETS

Fillets with a mild white fish flavor and texture. They're ideal for main entrees, sandwiches and salads.

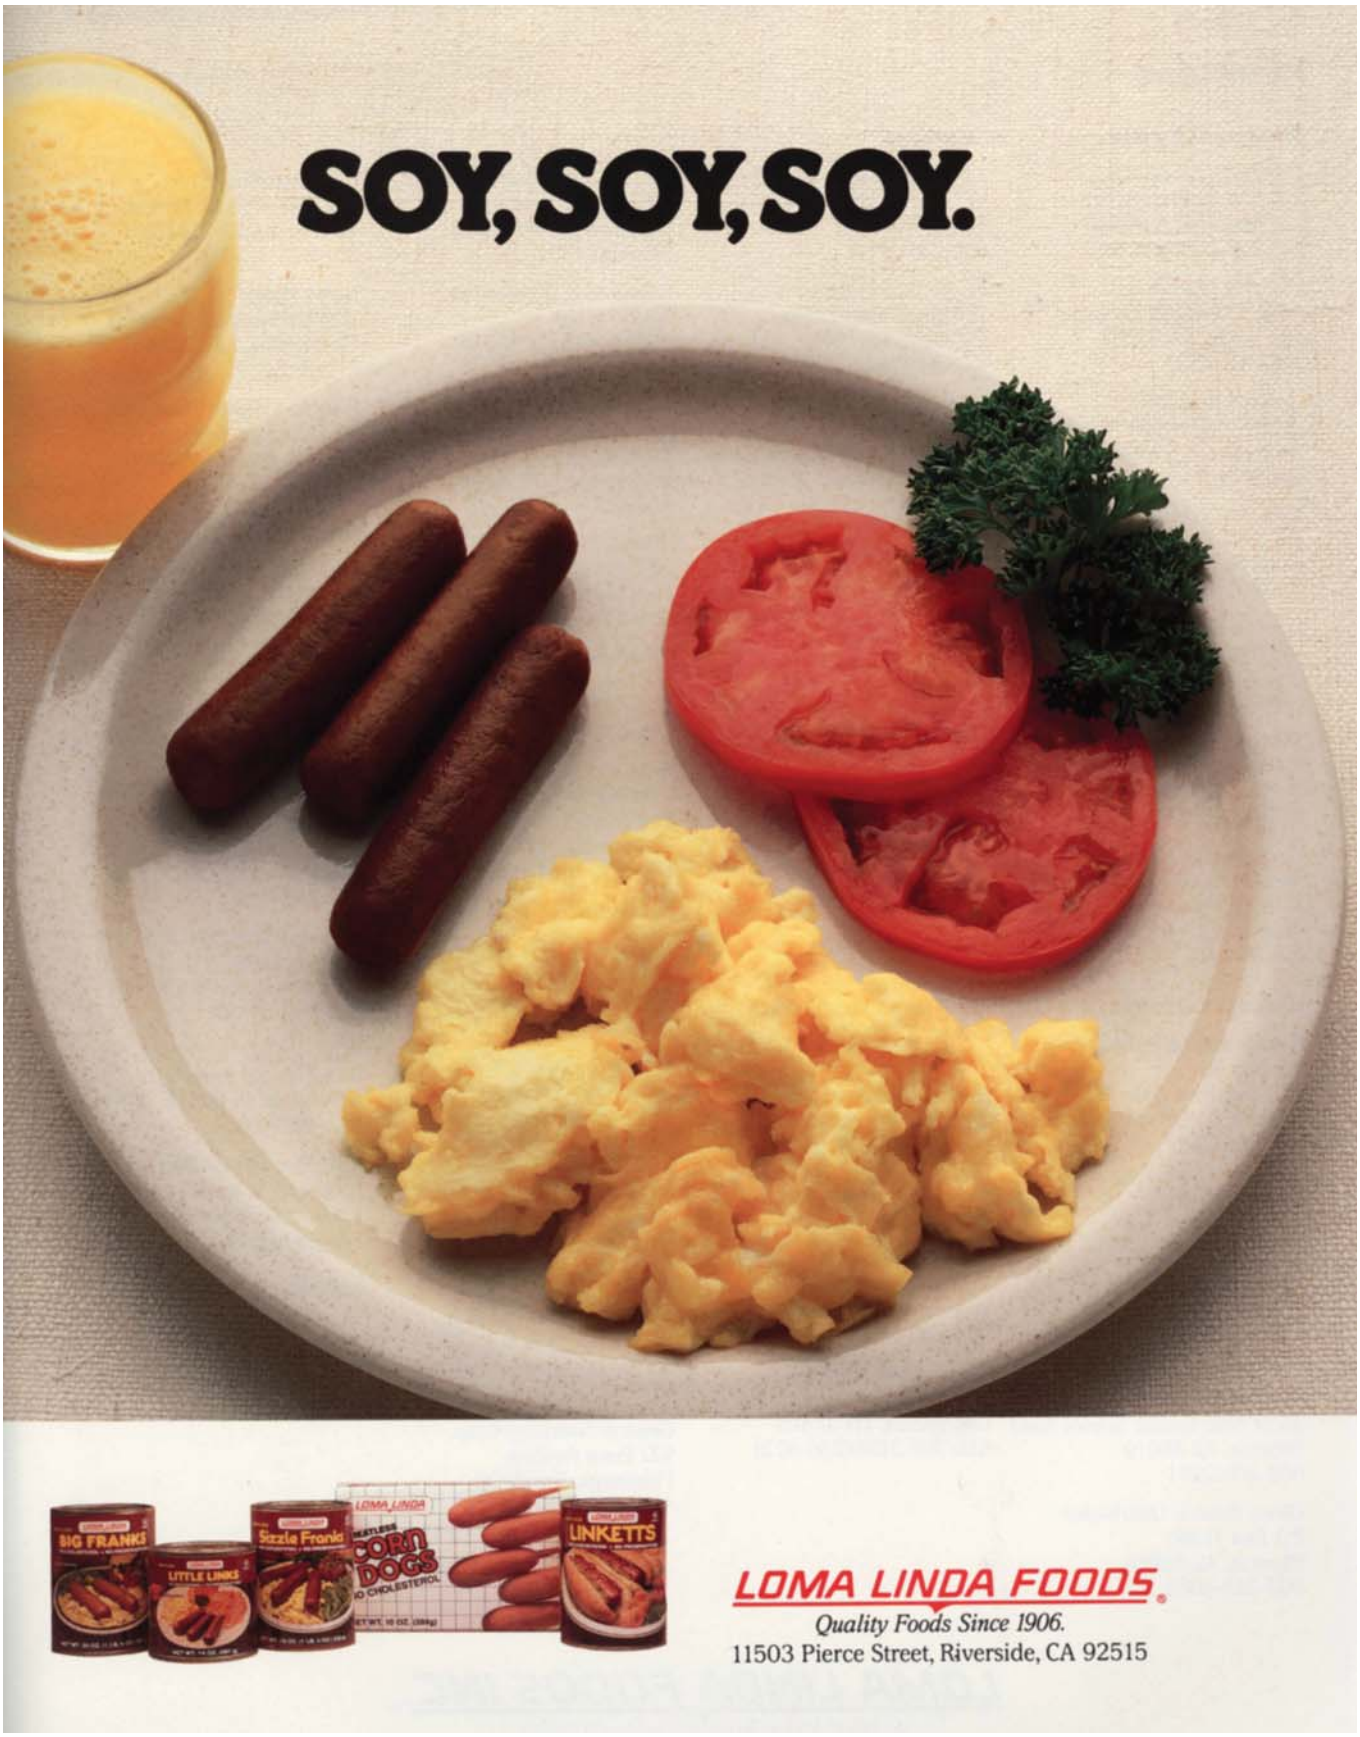
Code #0/061/0 **Packed: 12/10 oz.**
Code #0/065/0 **Packed: 6/80 oz. (5 lb.) (Institutional)**

MEATLESS CORN DOGS

Drenched with a delicious corn bread batter, these Big Franks can be served hot with relishes or dips. Kids love 'em.

Code #0/070/0 **Packed: 12/10 oz.**
Code #0/072/0 **Packed: 6/50 oz. (3 lb. 2 oz.)**
Code #0/075/0 **Packed: 1/90 oz. (5 lb. 3 oz.) (Institutional)**

Loma Linda Foods' commitment to quality, health and customer satisfaction began in 1906 and continues as we develop new recipes, modify existing ones, and explore new processes in technology; all in search of excellence.



At Loma Linda Foods our mission goes beyond the marketing of textured vegetable proteins and infant formulas. Instead, we consider ourselves to be in the healthful living business. Equal with this mission is the responsibility to educate the public in healthful and economical living and to provide the health foods and beverages needed for this quality lifestyle. We trust that Loma Linda's extensive product range will continue to be your #1 choice whenever the occasion calls for a delicious meatless adventure.

Tastes Great . . . Naturally!

Shanghai in 1936, and in Mt. Vernon, Ohio, in 1939. Second, Vitasoy was not founded until 1939, and production began in 1940. The 50th anniversary should be celebrated in 1989 or 1990. Third, less than half of the 1.2 million units capacity of the new plant is used for soymilk. Address: P.O. Box 77321, San Francisco, California 94005.

2640. Zobler, Kathleen K. ed. 1987. First International Congress on Vegetarian Nutrition: Abstracts. Loma Linda, California: Loma Linda University Medical Center. 40 p. Held 16-18 March 1987 in Washington, DC. No index. 22 cm. [62 ref]

• ***Summary:*** Contents: Introduction. Continuing education information. Exercise program. Program. Poster sessions. Abstracts–Program participants: Monday 16 abstracts, Tuesday 14, Wednesday 7. Abstracts–Poster session participants: 31 abstracts.

This pioneering congress was a joint effort of eight Seventh-day Adventist universities and health care organizations, with support from three Adventist food companies (Worthington Foods, Loma Linda Foods, and Sanitarium Foods) plus S.E. Rykoff/Sexton. Publication of the abstracts in this small book, potentially very interesting, was extremely poorly done. The type is so small and often weak that it is virtually illegible. No editor or publishing body is listed. What a shame.

Fortunately, however, the papers were published in the Sept. 1988 Supplement of the *American Journal of Clinical Nutrition* 48(3):707-927.

2641. *INTSOY Newsletter* (*Urbana, Illinois*). 1987. INTSOY to expand contacts with Ugandan soyfoods company [Africa Basic Foods]. No. 35. p. 3. April.

• ***Summary:*** In January 1986 INTSOY director Harold E. Kauffman and utilization program leader Alvin I. Nelson met in Washington, DC, with Dr. D. Warren Harrison, founder of ABF. Discussions focused on how the two groups could work together to increase use of soyfoods in Uganda. ABF is receiving strong support from both President Yoweri Museveni and Prime Minister Samson Kiskekka of Uganda. ABF has remained in continuous operation since its founding in 1965 despite several years of political and social turmoil in Uganda. In 1983 it employed about 50 people and used 2-3 tons of soybeans a day. At the invitation of the prime minister, Harrison is spending a year in Uganda to work on expanding the soyfoods operation.

2642. **Product Name:** Sanitarium Health Foods So Good: The Non-Dairy Soy Drink (Soymilk).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia.
Date of Introduction: 1987 April.
Ingredients: Soya isolate, vegetable oil, maltodextrin, sugar, mineral salts [incl. calcium] (332, 229, 340, 504, 509), vitamins (101, 301), water added.
Wt/Vol., Packaging, Price: 250, 500, or 1,000 ml in Combibloc Aseptic carton.
How Stored: Shelf stable.
Nutrition: Water 86.4%, soya extracts 4.1%, vegetable oil 3.5%, maltodextrine 3.3%, sugar syrup 1.7%, mineral salts and vitamins. Percentage of RDA per 600 ml: Calcium 700 mg/100%, vitamin B-12 1.8 mcg/90%, riboflavin 1.0 mg/65%, iron 3 mg/30%.

New Product–Documentation: Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update. This company makes its own brand, which is economically priced. Label (photocopy). 1987, undated. "The non-dairy soy drink. Cholesterol free. Lactose free. Long lasting." Manufacturer's catalog. 1989. "Juices and Drinks: The newest introduction into this drink category is So Good, a soy-based drink which is designed as an alternative to milk. This is particularly popular with those who have a lactose sensitivity and a need to reduce the cholesterol intake. It is made to a Sanitarium-inspired formula from soy isolate (the protein component in the soya bean) and has the distinct advantage of having a calcium level equivalent to that of cow's milk."

The Supermarket Circle. 1988. "So Good was awarded a 'Golden Sial' award or 'Food Oscar' at the AIDA-SIAL '88 International Oscars, judged in Paris on June 10. The Oscars is a bi-annual competition between 16 nations, including Canada, Great Britain, Italy and the USA. Each country presents products in 7 food and beverage categories: Grocery, alcoholic drinks, non-alcoholic drinks, dairy, deep-frozen, meat/poultry and delicatessen.

"The retail trade in each country nominates the representative products. With outstanding sales success since its launch by Sanitarium in 1987, Australia's retailers

© Copyright Soyinfo Center 2014

nominated So Good to represent the country in the 'non-alcoholic drinks' category."

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. A color illustration on the front of the package shows a glass of soymilk by a bowl or cereal on a table in front of a window facing a stylized rural landscape with the sun rising behind rolling hills. Green. blue, brown, and white. Subtitle: "The non-dairy soy drink. Cholesterol-free. Lactose-free. Long lasting."

Technique Laitiere & Marketing. 1988. No. 1034. Nov. p. 61. Gives nutritional composition. p. 65 So Good is an Australian soymilk product which won the 1988 SIAL gold medal (SIAL d'Or 88). SIAL is the International Food and Dairy Exhibition in Paris.

Sanco News. 1988. Dec. "Now the world thinks we're as good as gold: The Gold Food Oscar for So Good."

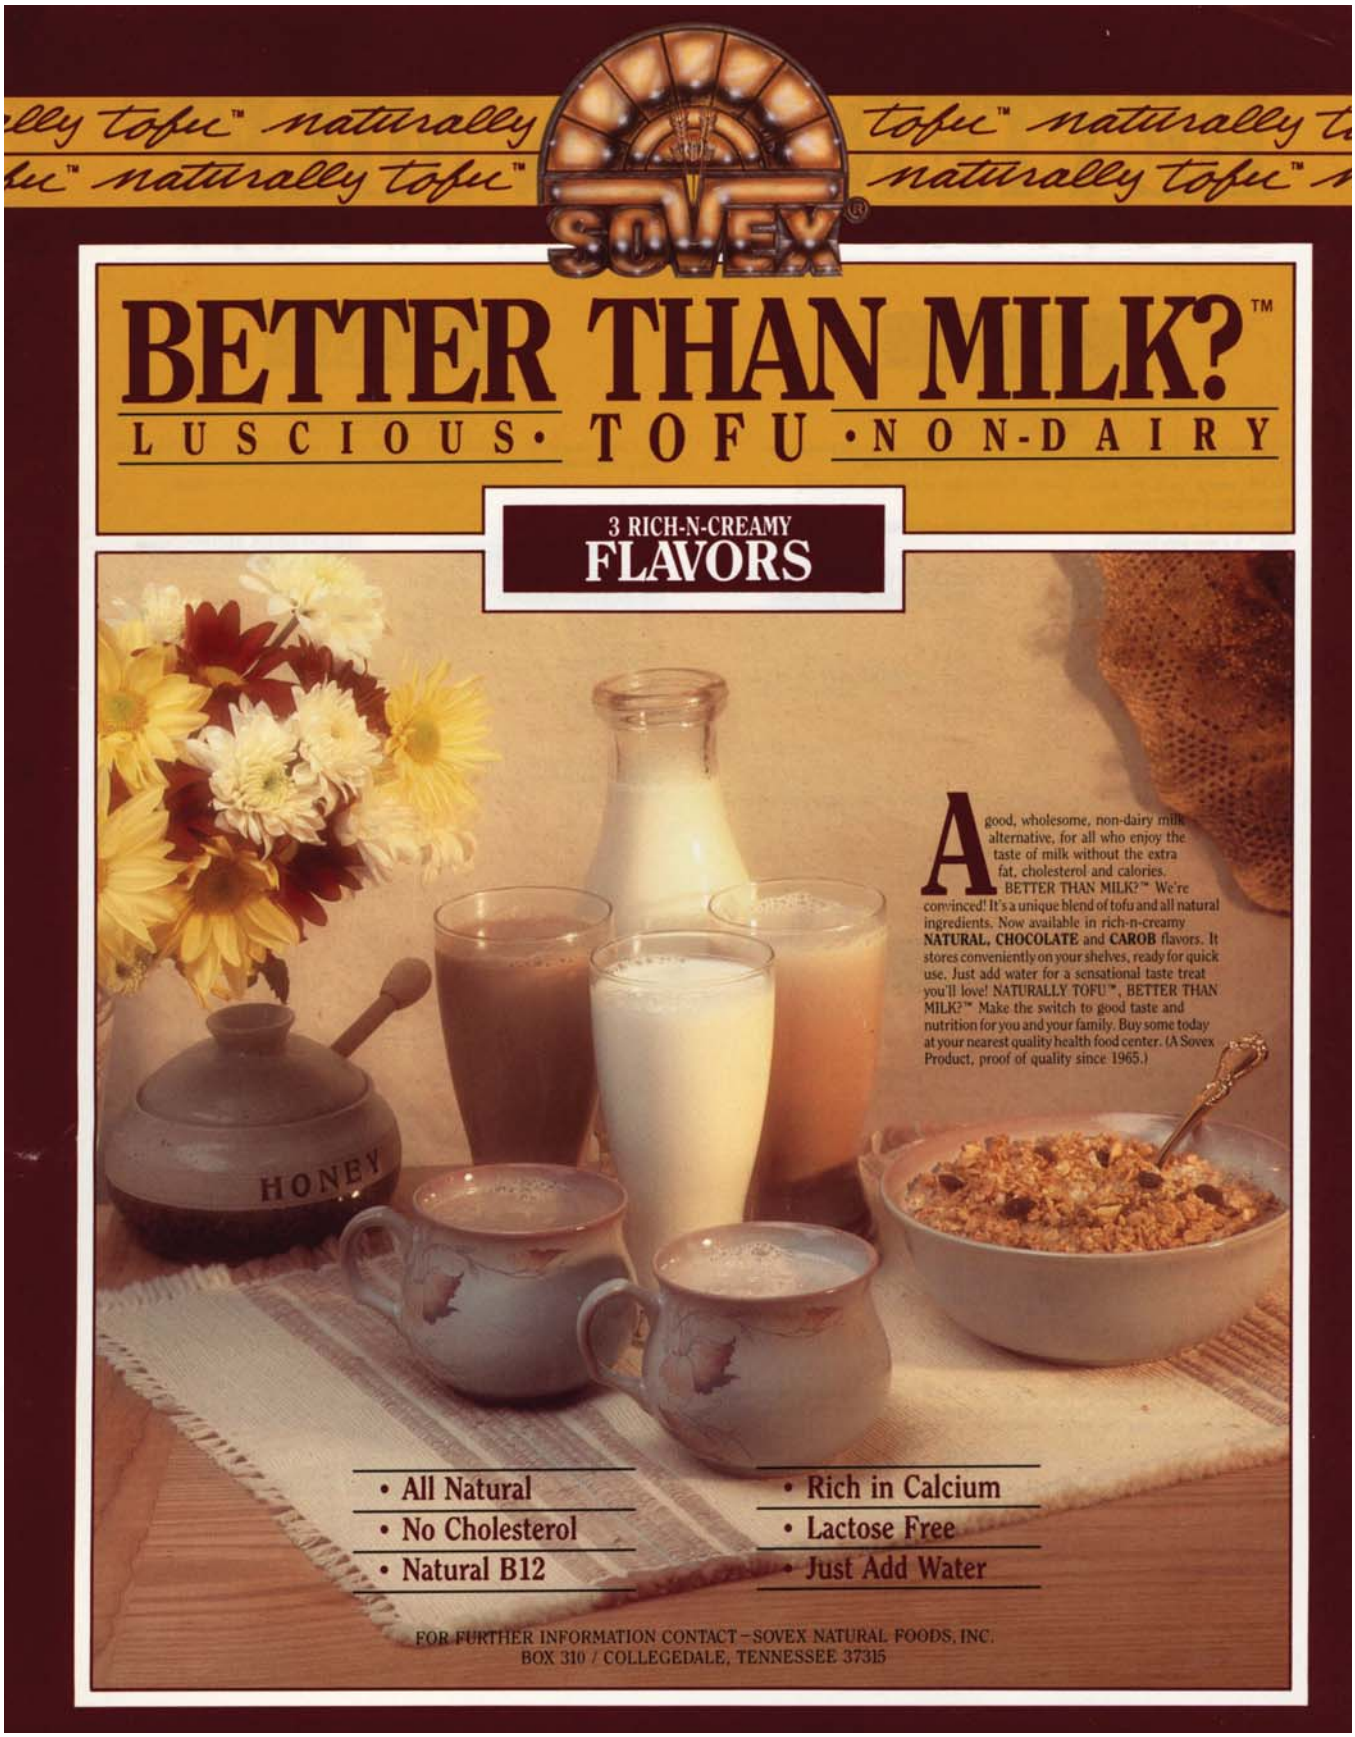
Talk with Eric C. Fehlberg, director International Health Food Assoc. 1990. March 7. So Good has had remarkable success in the past few years. Sanitarium Food Co. was the first to make soymilk in Australia. It caught on rapidly, and soon prompted 4-5 competing brands to be launched, but none of them have sales nearly as large as So Good. The main problem has been the company's inability to produce enough to keep up with demand. It was launched in April 1987. In Oct. 1989 they sold 1,738 long tons (2,240 lb/ton). The equipment used to produce the soymilk is Adventist technology, not that purchased from Alfa-Laval, STS, etc. Originally the product was packed under contract by a nearby dairy company in Combibloc cartons. After a year or so they purchased their own Combibloc packaging machine. Sanitarium Foods has a very strong research lab.

Sanitarium Nutrition Education Service. 1990. April. "So Good." This 4-page leaflet gives a clear explanation of each ingredient used, plus nutritional and other information.

According to competitors, in 1991 Sanitarium's So Good was Australia's leading soymilk product. But the fact that it is made from soy protein isolates rather than whole soybeans is considered a drawback by the natural foods market. Sun Gold is another major soymilk product.

2643. **Product Name:** Better Than Milk? (Powdered Tofu-Soymilk Blend) [Natural, Chocolate, or Carob].
Manufacturer's Name: Sovex Natural Foods, Inc. (Marketer-Distributor).
Manufacturer's Address: 9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320.
Date of Introduction: 1987 April.
Ingredients: Natural: Maltodextrin, soy oil, calcium carbonate, dehydrated tofu, sodium caseinate [from cow's milk], sea salt, natural flavor, cyanocobalamin (vitamin B-12).
Wt/Vol., Packaging, Price: 27 or 21 oz can with reusable plastic lid.
How Stored: Shelf stable.
Nutrition: Per 8 fl. oz (liquid): Calories 90, protein 2 gm, carbohydrates 10 gm, fat 5 gm, cholesterol 0 mg, sodium 120 mg, lactose 0 mg.
New Product–Documentation: See next page. Ad in Natural Foods Merchandiser. 1987. June. p. 20. "Better than milk?" Ad in Bestways. 1987. July. p. 9; Sept. p. 12. 8½ by 11 inches. Color. "Tofu naturally. Luscious tofu non-dairy. 3 rich-n-creamy flavors. Rich in calcium. Just add water."

Ad in Natural Foods Merchandiser. 1989. Sept. p. 50. "Better than milk?"



Label sent by Maryann Brkich of Walnut Creek, California. 1992. Oct. 14. 6.75 by 13 inches. Brown, yellow, white, and black. Photo of a glass of milk and a small bottle of milk on a breakfast table next to a bowl of cereal. "Naturally Tofu. Delicious Tofu Non-Dairy. Rich-n-Creamy Natural. Makes 8 quarts. All natural. No cholesterol. Natural B-12. Rich in calcium. Lactose free. Just add water. Scoop inside." The 21 oz can now retails for $8.95. Sovex is now at Box 2178, Collegedale, Tennessee 37315.

2644. Vandemoortele, Philippe. 1987. Editorial. *Soyfoods* (*ESFA*) 1(2):2. April. [Eng]
• ***Summary:*** "Since Alpro Belgium pioneered a new soymilk six years ago, many things have changed. The new soya milk with a nice taste and a high nutritional value of 3.6% protein attracted a lot of consumers. In a few years, the total European market increased from 500,000 litres to the today's estimation of 15 million litres. But also the number of producers grew and companies such as Celnat (France), Sapov (France), Soya Health Food (England), Soyana (Switzerland), DE-VAU-GE (Germany) and recently Cacoja (France) started to produce soya milk. The total capacity of the 4 largest producers amounts to 60 million litres which is 4 times more than the market volume...

"We are on the verge of a boom for soyfoods. Manufacturers will need the technology to make quality soymilk, tofu and other soyfoods... But this will not be enough; marketing is essential to make sure that our products fill a need and please the consumer."

2645. Jacobs, Barbara; Jacobs, Leonard. 1987. Cooking with seitan: Delicious natural foods from whole grains. New York, NY: Japan Publications. 256 p. Foreword by Aveline Kushi. Index. 26 cm. [16 ref]
• ***Summary:*** "Seitan is cooked and flavored gluten that has been extracted from [high-gluten] wheat flour. It is very rich in protein, while being extremely low in fat and calories... The traditional Japanese way of seasoning seitan is to cook it in a broth using kombu sea vegetable, natural soy sauce, and fresh ginger root. This... is the one taken for granted as the 'standard seitan flavor' by commercial seitan makers and most people who are familiar with seitan. Many other mixtures of seasonings can be added to the basic seitan broth. Several earlier books on wheat gluten have been

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

written, generally by Mormons.

This book offers you the history, nutritional information, a variety of preparation techniques, and hundreds of recipes that will allow you to convert wheat into a delicious and nutritious food. Especially suited for vegetarians who are interested in high-protein substitutes for animal foods.

Contents: Acknowledgments. Introduction: About wheat gluten, gluten, commonly asked questions about seitan. Getting started. Creating seitan from wheat flour (at home in 30-40 minutes). Using the seasonings. Additional methods of cooking. Appetizers. Soups. Main dishes and casseroles. Side dishes. Salads. Sauces, dressings and marinades. Condiments. Sandwiches. Desserts. From the pantry. Sample lunch and dinner menus. Appendix: 1. All about saving and using wheat starch. 2. Storing uncooked seitan. Storing cooked seitan. 4. Commonly encountered problems and some solutions. Nutritional information. Questionnaire for readers. About our ingredients (discusses natural soy sauce, and soymilk). Glossary (includes fu [dried gluten], miso, natural soy sauce or shoyu, soymilk, tamari, tofu). Bibliography.

Recipes containing soyfoods include: Miso soup with fu and wakame (p. 79). Miso-lemon dressing (p. 171). Tangy miso-tahini sauce (p. 180). Tofu spread with variations (p. 181). Seitan-tofu paté (p. 181-82). Tofu "feta cheese" (p. 192-93). Miso-tahini sauce or spread (p. 209).

When Michio and Aveline Kushi started the Seventh Inn Restaurant in Boston in 1971, they introduced seitan, a food that George Ohsawa had popularized in Japan, especially among macrobiotic people. Yumie Kono taught the chefs, one of whom was Lenny Jacobs, how to make seitan (p. 5).

The Introduction (p. 17-18) states: "Seitan is a food with a long history. Although not widely known in the West, it was traditionally eaten in China, Korea, Japan, Russia, the Middle East, and probably many other countries that grew wheat. In America, the Mormons and the Seventh Day Adventists made gluten and used it on a regular basis... The name *seitan* comes to us from the Japanese, who have prepared cooked wheat gluten for hundreds of years... Some natural foods industry insiders think seitan will become the 'tofu of the '80s.'

"Seitan was introduced to the U.S. natural foods industry about sixteen years ago [1970] when a Japanese variety, shrink-wrapped and quite dry and salty, was first imported. There had been several other varieties available from vegetarian groups, primarily the Seventh Day Adventists and the Mormons. Chinese restaurants have also been preparing wheat gluten for many years. The Chinese call it *mien ching*, or *yu mien ching.* Chinese restaurants often refer to it as 'Buddha Food,' claiming that it was developed by Buddhist monks as a meat substitute. There is also a dried wheat gluten available in Oriental food markets called *fu* by the Japanese and *k'ao fu* or *kofu* by the Chinese."

In the USA, about 130,000 pounds of seitan are made each year. The market is growing rapidly. Current U.S. seitan manufacturers are: 1. Upcountry Seitan in Lenox, Massachusetts, the largest known producer in America, which makes about 600 lb/week and distributes it in 6 states. The company, started about 3½ years ago (counting from Jan. 1987, i.e. founded in about mid-1983) by Win Donovan, is now owned and operated by Wendy Rowe and Sandy Chianfoni. They get a yield of 1.33 (i.e. 90 pounds of flour result in 120 pounds of seitan). 2. Rising Tide Natural Market in Long Island, New York. Michael Vitti has been making seitan for 6 years. About 1/3 of his production is bought by another company for use in making sandwiches. 3. Grain Dance in San Francisco, California. Ron Harris has been making seitan for 8 years and is currently selling 250 lb/week in 8 oz. packages. 4. Creative Kitchens in Miami, Florida. Yaron Yemini has been making seitan for 3 years. and has seen a 5-fold increase during this time. He now makes 120 lb/week. His yield is 0.7. 5. The Bridge in Middletown, Massachusetts. The company was founded in March 1981 by Roberto Marrocchesi and Bill Spear. They were making seitan by Oct. 1982. Steve Lepenta now makes 400 lb of cooked seitan each week and claims that sales have doubled in the past two years. 6. Maritime Foods in Portland, Maine. Rosemary Whittaker makes 50 lb/week of seitan. 7. Real Foods of Towson, Maryland. Sharon Warren has been making seitan for 6 years and now makes 150 lb/week.

Reviewed by Linda Elliot in East West. June 1987, p. 94. Note: Talk with Lenny Jacobs. 1990. Sept. 10. There has been little growth in the U.S. seitan industry since the book was published in May 1987. Problems with price and quality. If seitan is frozen, after defrosting it can become spongy and soggy. Address: Massachusetts. Phone: 617-232-1000.

2646. Kissinger, D.G.; Sanchez, A. 1987. The association of dietary factors with the age of menarche. *Nutrition Research* 7:471-79. [29 ref]

• ***Summary:*** In a study of 230 white, non-Hispanic girls from southern California, menarche was found to start 6 months earlier for meat eaters than for vegetarians. And those who use meat analogues had menarche 9 months later than those who did not use meat analogues. "These results are consistent with the hypothesis that diet affects the age of menarche... These data point to a vegetarian lifestyle as an important factor in retarding the onset of menarche among well nourished girls." Address: 1. Center for Health Promotion; 2. School of Health, Dep. of Nutrition, Lomon Linda Univ., Loma Linda, California 92350.

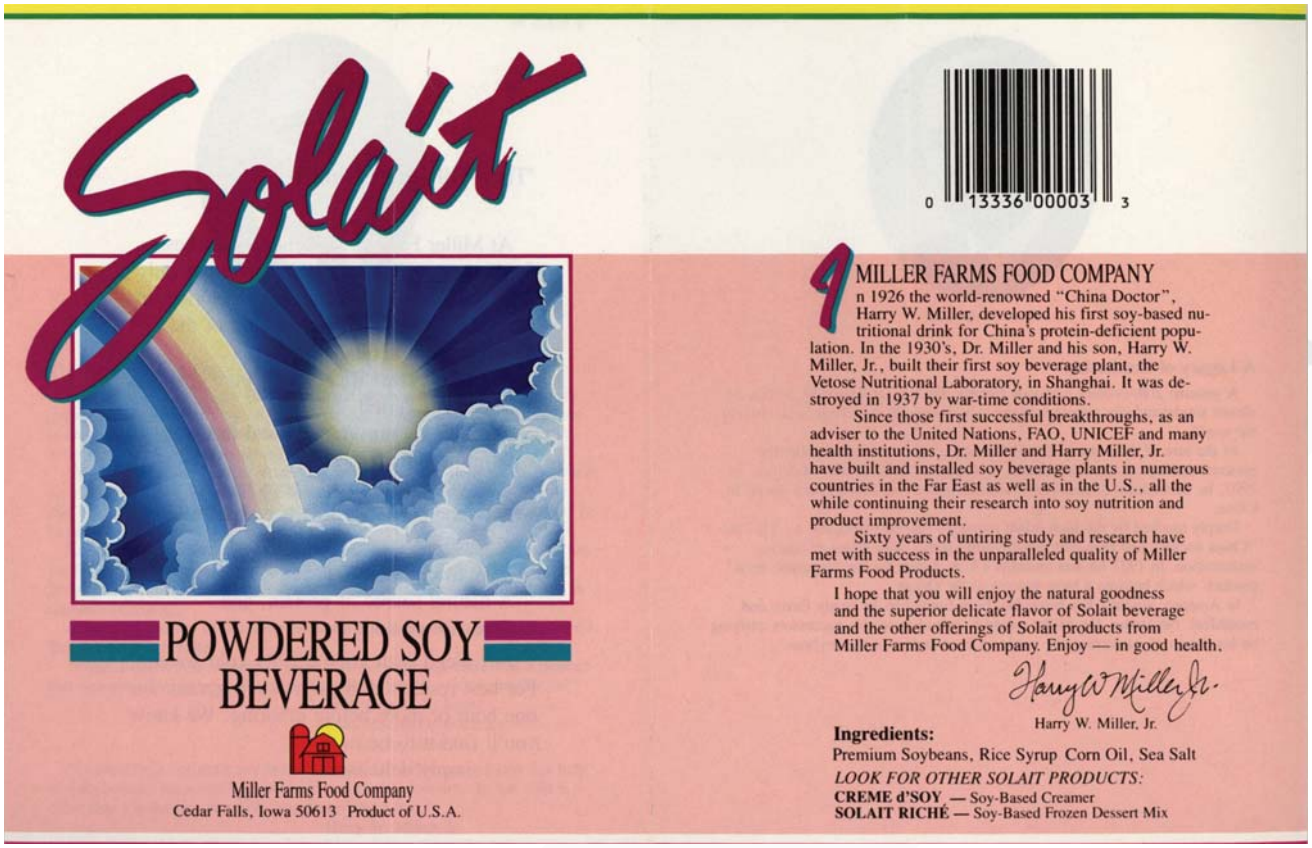
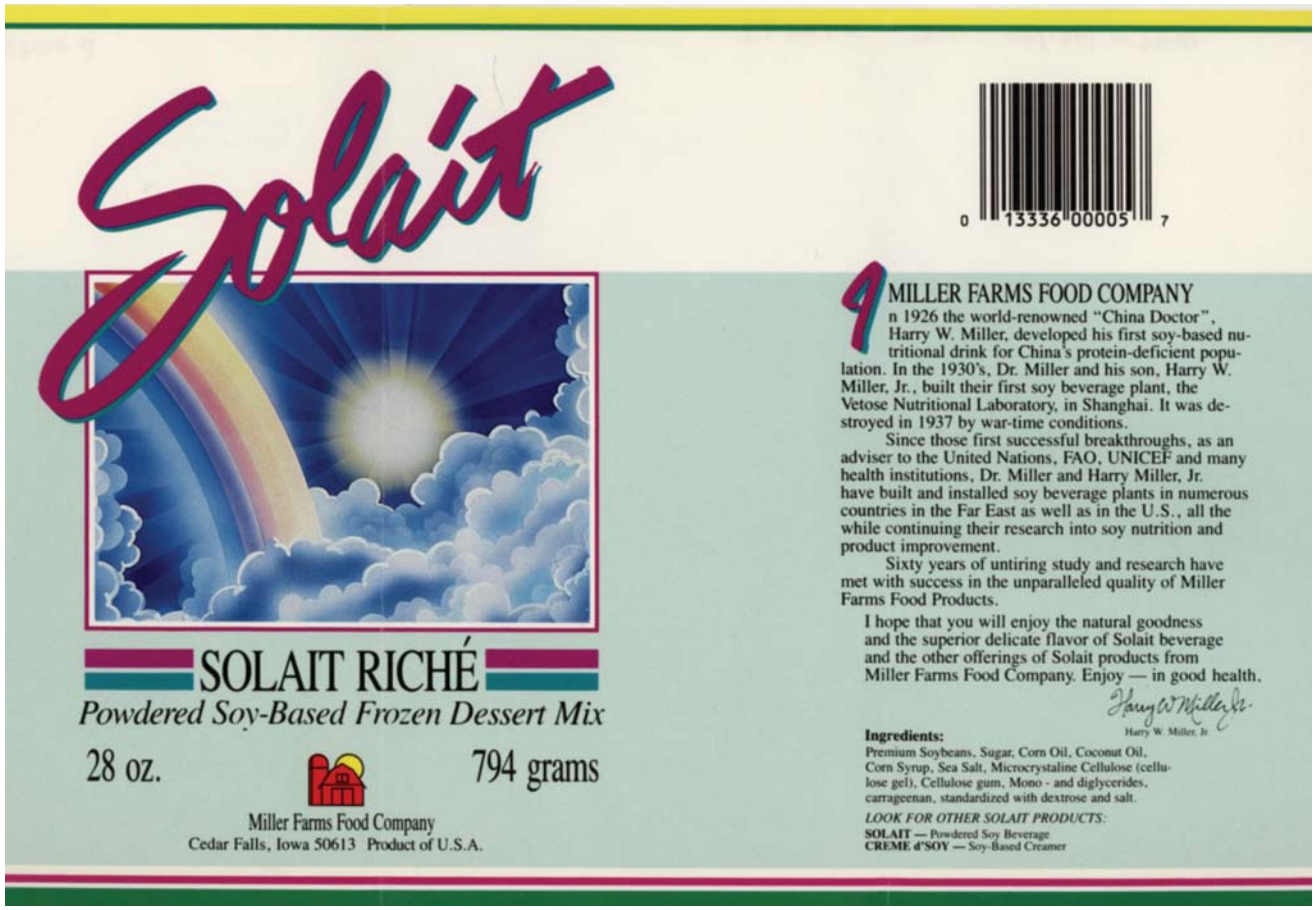
• ***Summary:*** The article focuses on modern soy protein products. Most tables are long outdated. He seems to be largely unaware of the many developments with consumer soyfoods in the USA during the past ten years. Address: Prof., Horticulture, Ohio State Univ.

2649. Probber, Jonathan. 1987. The soybean eaters: Everybody is a suspect. *New York Times.* June 24. p. C1, C6. Living section.
• ***Summary:*** Central Soya has $1,370 million annual sales. L.D. Williams, head of the chemurgy division, recalled the early 1970s. "Positioning textured soy protein as an extender was a mistake which set the industry back. The cost saving image just didn't fly." Dan Reuwee of the American Soybean Assoc. notes: "We haven't done much in this country on promoting soy foods, because the livestock industry is our biggest customer. We don't want to promote meat substitutes."



Worthington Foods Inc. (of Worthington, Ohio) has yearly sales of $34 million. The Morningstar Farms line accounts for 55-60% of total sales, has grown at 15-18% over the past 4 years, and is sold in 80% of U.S. supermarkets. Their market is divided between those age 50 and over having cholesterol concerns and those age 25 to 40 who don't eat meat.



William Shurtleff is director of Soyfoods Center, a "clearinghouse for information on soy products" in Lafayette, California. He believes that tofu will follow the same growth pattern that yogurt did in the USA, building slowly then growing rapidly when larger food companies begin to apply their marketing clout. Tofu is a $75-$100 million/year industry growing at about 15% a year, according to Shurtleff.

2650. **Product Name:** Solait Riché (Powdered Soy-Based Frozen Dessert Mix).
Manufacturer's Name: Miller Farms Food Co., Inc.
Manufacturer's Address: 314 Main St., Cedar Falls, IA 50613. Phone: 319-277-8600.
Date of Introduction: 1987 June.
Ingredients: Premium soybeans, sugar, corn oil, coconut oil, corn syrup, sea salt, microcrystalline cellulose (cellulose gel), cellulose gum, mono- and diglycerides, carrageenan, standardized with dextrose and salt.
Wt/Vol., Packaging, Price: 28 oz (794 gm).

soy beverage plant, the Vetose Nutritional Laboratory, in Shanghai. It was destroyed in 1937 by war-time conditions." Address: 314 Main St., Cedar Falls, Iowa 50613.

2652. Moll, Lucy. 1987. Guess what? Veg diet lauded by scientists. *Vegetarian Times.* June. p. 6.
• ***Summary:*** "An estimated 500 experts converged on Washington, DC, this spring to ponder an increasingly appreciated subject: vegetarian nutrition.

"A testament to vegetarianism's growing stature and acceptance, the First International Congress on Vegetarian Nutrition [sponsored by Loma Linda Medical Center and several other Seventh-day Adventist affiliated organizations] brought together scientists, medical doctors, and dietitians from as far away as India and Sweden.

"'Vegetarianism has gotten a bad rap for many years,' said Johanna Dwyer, professor of medicine and community health at Tufts University Medical School and director of the Frances Stern Nutrition Center."

"Here are some of the findings: Vegetarians are less likely than meat eaters to be obese, become diabetic, develop kidney stones or gallstones, have high blood pressure, or die from cancer of the breast, colon, prostate or ovary.

"It's a myth that the vegetarian diet stunts the growth of children. On the average, vegetarian children tend to be shorter and lighter than their meat-eating counterparts but certainly are in normal range.

"Children on a strict vegan diet sometimes risk health problems. The vegan diet tends to contain excess bulk and is void of vitamins B-12 and D. As a result, some children do not receive enough calories and may become deficient in these vitamins.

"Vegetarians may absorb zinc, iron and calcium less efficiently than meat eaters. But conflicting data suggest that poor food choices, rather than inherent defects in the diet, may be the cause of less-than-optimal mineral status.

"An overriding conclusion of the congress was that additional research on vegetarian nutrition is sorely needed. The organizers believe new research will be stimulated by the congress and expect about one scientific paper on vegetarian nutrition a month."

2653. Medoff, Marc. 1987. Whole frauds in the news. Have they no shame department: Tofutti and Coca-Cola promotion. *Whole Life.* June/July. p. 49-50.
• ***Summary:*** "Talk about unholy alliances; the new team of Diet Coke and Tofutti has got to be one of the most sickening combinations of junk food we've seen in years. Insulin shock anyone?... the gruesome twosome. Talk about a one way ticket to Sugar Shock City." It is also alleged that Mintz learned how to make soy ice cream from Country Life, a Seventh-day Adventist restaurant in New York.

2654. **Product Name:** [PHAG Soya Drink (Without Sugar, Strawberry, Sweetened)].
Foreign Name: PHAG Soja-Drink (Sans Sucre, Fraise, Avec Sucre).
Manufacturer's Name: PHAG Sàrl (Produits Hygièniques Alimentaires Gland) (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: La Ligniere, CH-1196 Gland, Switzerland. Phone: 022/64 11 18.
Date of Introduction: 1987 July.
Ingredients: Without sugar: Water, soybeans, lecithin (as emulsifier).
Wt/Vol., Packaging, Price: 0.5 liter and 1.0 liter Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3.6 gm, fat 2.8 gm, carbohydrate 1.7 gm, calories (kcal) 46 (196 kJoules).
New Product–Documentation: Letter from Remy Mayer of PHAG. 1990. Oct. 2. The 2 sugarless products were introduced in July 1987 in 0.5 liter and 1.0 liter cartons. The strawberry soymilk was introduced in Sept. 1987 in a 0.5 liter carton. It is no longer on the market. The sweetened soymilk was introduced in Dec. 1987 in a 0.5 liter carton. His company distributes the product, which is made by their sister company DE-VAU-GE in Lueneburg, Germany.

Labels sent by Mayer. 1991. Jan. 24. Unsweetened 0.5 liter and 1 liter Tetra Brik cartons. Red and orange on white. "Pure and made from plants (Purement végétal–Rein pflanzlich). Contains magnesium. Rich in vitamin E. Linoleic acid 51% (of lipids), linolenic acid 7%." All text is in French and German. These labels are similar in design to the DE-VAU-GE labels.

Leaflet (6 by 8.25 inches, color) sent by Mayer. 1991. Jan. 24. "The vegetarian alternative" (l'alternative végétale; die pflanzliche Alternative). PHAG soya-drink. The front shows 3 milk shake-like glasses with fresh fruits and yogurt. The back shows 7 of the company's soy drinks and desserts.

Pamphlet (6 by 8.25 inches, green and red on white, 4 pages) sent by Mayer. 1991. Jan. 24. "PHAG Soja Drink." 2 pages are in French and 2 in German. Describes the product by answering questions: Who uses it? Is it pure and natural? Is it a fresh product? Can it be used in cooking? Why is it packaged like it is? The ingredients for the sweetened (incl. 3% non-refined cane sugar) product are listed, then the nutritional composition.

2655. **Product Name:** Natural Touch Mexican Entrees: Vegetarian "Beef" & Cheese Burritos, Bean & Cheese Burritos, Cheese Enchiladas.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1987 July.
Ingredients: Vegetarian "Beef" & Cheese Burritos: Vegetable protein (wheat gluten, soy protein concentrate),

soybeans and/or corn oil, egg white solids, calcium caseinate (milk protein), soy isolate, natural flavors (from vegetable sources), carob, onion, sea salt, garlic, spice, mild cheddar cheese, white colby cheese, flour tortillas (flour, water, vegetable shortening, sea salt, baking powder). Includes Hot Green Chili Sauce and Mild Red Chili Sauce.
Wt/Vol., Packaging, Price: 15 oz.
How Stored: Frozen.
New Product–Documentation: See next page. 19832a" Ad in *Vegetarian Times.* 1987. Aug. Inside front cover. Full-page color. "Olé! Finally true south of the border flavor in all-natural entrees! Try new Mexican Entrees from Natural Touch–four savory combinations made with real cheeses, whole pinto beans and vegetable protein. They're meat-free, but sizzling with more natural flavor than you can shake a sombrero at. You'll find them in your store's frozen-food section." Across the bottom is a 25¢ coupon on any Natural Touch Mexican Entree.

Leaflet. 1987. New Mexican Entrees. Lists ingredients.

2656. **Product Name:** Natural Touch Mexican Entrees: Bean, Vegetarian "Beef" & Cheese Burritos.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1987 July.
Ingredients: Beans (water, pinto beans, butter, onion, sea salt), vegetable protein (wheat gluten, soy protein concentrate), soybean and/or corn oil, egg white solids, calcium caseinate (milk protein), soy isolate, natural flavors (from vegetable sources), carob, onion, sea salt, garlic, spice, mild cheddar cheese, white colby cheese, corn flour tortillas (flour, water, vegetable shortening, sea salt, baking powder). Includes Hot Green Chile Sauce and Mild Red Chile Sauce.
Wt/Vol., Packaging, Price: 19.5 oz.
How Stored: Frozen.
New Product–Documentation: Ad in Vegetarian Times. 1987. Aug. Inside front cover. Full-page color. "Ole. Finally true south of the border flavor in all-natural entrees." Leaflet. 1987. New Mexican Entrees. Lists ingredients.

2657. Blix, Glen. 1987. Re: Shutting down the soymilk plant in Mt. Vernon, Ohio (Interview). Conducted by William Shurtleff of Soyfoods Center, Aug. 18. 1 p. transcript.
• ***Summary:*** In mid-July 1987 the old brick soymilk plant in Mount Vernon, Ohio, which had been built by Dr. Harry Miller with his own hands, was finally shut down. It has not yet been sold. Earlier in the year the soymilk that had been made in Mt. Vernon started to be made at the Loma Linda Foods plant in Riverside, California. Address: Loma Linda Foods, 11503 Pierce St., Riverside, California 92515.

2658. Kavanagh, John. 1987. ANF [Australian Natural Foods] hopes for a soy cash-cow. *Business Review Weekly* (*Sydney, Australia*). Aug. 21.
• ***Summary:*** This publicly owned biotechnology company was launched two years ago. "Now it appears to be turning back on its high tech potential to enter the cut-throat beverage market... This week ANF launches Excel, Australia's first fresh soymilk product. ANF will produce 100,000 liters/week at its Sydney factory during the initial phase and hopes to take production up to 500,000 liters a week." United Dairies will handle distribution. David Glasheen is working on a number of new soy products including tofu, yogurt, and custard. Most of the soymilk products now available are imported. Sanitarium's So Good, aimed at the mass market, is doing well.

2659. Bowles, Willa Vae. 1987. The soy revolution! *Total Health.* Aug. p. 24-29. See followup in Oct. issue, p. 55. [1 ref]
• ***Summary:*** Soybean exports during the last fiscal year amounted to $11,000 million. They help keep the U.S. trade deficit, almost $170,000 million in 1986, from rising even higher. Tofu mixed 50/50 with any nut butter makes a fluffy spread for added protein and reduced fat and calories.

2660. Euler, Gary L.; Abbey, D.E.; Magie, A.R.; Hodgkin, G.E. 1987. Chronic obstructive pulmonary disease symptom effects of long-term cumulative exposure to ambient levels of total suspended particulates and sulfur dioxide in California Seventh-Day Adventist residents. *Archives of Environmental Health* 42(4):213-22. July/Aug. [89 ref]
Address: 1. School of Allied Health Professions, Loma Linda Univ., Loma Linda, California.

2661. Kauffman, H.E. 1987. Trip report: Zimbabwe, Swaziland, Uganda, Zambia, and Nigeria (July 5–24). INTSOY, University of Illinois at Urbana-Champaign. 17 p. Aug. Unpublished manuscript.
• ***Summary:*** An extremely valuable look at current developments with soybeans and soyfoods in each of these 5 countries, where interest is strong and there are many new activities. In Zimbabwe a Southern Africa Soybean Workshop was held in March 1986. Proceedings should be ready soon. In Zambia a Soybean Processing Workshop will be held on 12-16 Oct. 1987 and a soyfoods recipe book has just been published. In Uganda Africa Basic Foods is thriving. In Nigeria a soybean utilization program may be started. There is extensive activity with low-cost extrusion cookers.

Concerning Swaziland: The economy is tied very closely with that of South Africa which surrounds it on three sides. Maize (corn) is the dominant crop and food of the country. John Pali is a soybean agronomist with the Government of Swaziland. "Interest in soybeans in Swaziland began after the return of two participants in the 1982 INTSOY utilization short course. A survey at that time

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

showed that 30 percent of the children under 5 years of age in the country were stunted in growth. They began promoting the use of soyfoods by the home economics section of the Ministry of Agriculture. Eventually the cropping systems program of USAID began working with the home economics section to promote soybeans in the rural areas. In 1986, Dale Allen, a commercial farmer, began growing soybeans. He is now investing in an INSTA PRO 600 extruder to become the first commercial processor of soybeans. There is a significant interest in soy as a food in Swaziland, and a growing poultry industry will require increased protein meal...

"Dale Allen had 20 acres of soybeans this season... Dale has ordered a used INSTA PRO 600 through INSTA PRO in England." Address: Director, INTSOY, Univ. of Illinois at Urbana-Champaign.

2662. Kauffman, Harold. 1987. Recent developments at INTSOY (Interview). *SoyaScan Notes.* Sept. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In July Dr. Kauffman visited 5 African countries. He will send Soyfoods Center his trip report. There is lots of activity with and interest in soyfoods, including extrusion cooking. INTSOY will hold a workshop on soyfoods in Zambia this October. They are discussing with USAID the establishment of a Soybean Utilization Network for Africa. Karl Weingartner's future at IITA is uncertain but he may get funding from AID. IITA's director would like to see the soy project there continue. Africa Basic Foods' sales have increased 500% this last year, including sales into Kenya. Dr. Harrison is back in Washington, DC. Rob Wynstra started as editor of the INTSOY Newsletter on 21 Feb. 1986. Address: Director, INTSOY, Univ. of Illinois: 113 Mumford Hall, 1301 W. Gregory Dr., Urbana, IL 61801. Phone: 217-333-6422.

2663. Karas, Thomas. 1987. Tofu in Germany, Soyastern, and Heuschen (Interview). *SoyaScan Notes.* Sept. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soyastern started making tofu in about December 1983, and is now the largest tofu manufacturer in West Germany. They now make 4,000 kg/week and sell it for DM 5/kg. Their other tofu products include Tofu & Herbs, Smoked Tofu, Paprika Spiced Tofu, Tofu Burgers. A Tofu Mayonnaise will be launched soon. Company is growing at 40% a year. Second largest in Germany is Yamato Tofuhaus GmbH. Heuschen in the Netherlands in the largest in Europe. They use Sermi, a new coagulant, which may be lactic acid, for their tofu is sour but inexpensive, DM2/kg. All other Dutch tofu companies except Morgenstond have quit; they can't compete with Heuschen's prices. DE-VAU-GE now makes their own soymilk. They used to buy from Alpro. But they buy tofu from Heuschen. Address: Soyastern Naturkost GmbH, Osterather Str. 26, 5000 Cologne/Koeln 60, West Germany.

2664. Ascrizzi, Lynn. 1987. The little soybean miracle [at the Kersey Children's Home in Nigeria]. *55-Plus* (*Waterville, Maine*). Sept. 30. p. 5.
• ***Summary:*** For several years the staff of the International Institute of Tropical Agriculture has worked with the Kersey Home in Ogbomosho (northeast of Ibadan) in western Nigeria, teaching women how to plant, grow, and prepare soybeans in many practical ways. Children who come to the Kersey clinic suffer from kwashiorkor and marasmus, due to protein and calorie deficiencies. They are started on soymilk and within 12-21 days show remarkable improvement. Mothers and guardians attend weekly classes on the use of soybeans in making soups, soymilk, and other dishes. According to an article in IITA research briefs, "...mothers learn to add soy flour or paste to boiling water before adding yam flour... When the women leave the clinic and return to their villages, they continue with the soy program and also teach it to other women in the villages." IITA was started by the Ford Foundation, The Rockefeller Foundation, and the Kellogg Foundation. In recent years it has been taken over by a New York organization called the International Institute of Education.

2665. Miller, Harry, Jr. 1987. Early work with soyfoods in China. Current work with Miller Farms Food Co. and Solait (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 15. 2 p. transcript. [1 ref]
• ***Summary:*** He is now writing a book on his lifelong work with soyfoods around the world. Note: Unfortunately (as of Aug. 2013), that book was never published and apparently even the location of the manuscript is unknown.

"The Shanghai company was named Vetose Nutritional Laboratories. Its main products were soymilk, called 'Vetose Soya Milk.' On the bottle the name was printed only on the tops. Glass blowers blew the milk bottles in Shanghai. The tops were a wide mouth Crown closure that went on a milk bottle. The only flavor we had was the 'Acidophilus Vetose.'

"The soymilk ice cream was only made for the staff and patients at our institutions, the Shanghai Sanitarium and Hospital, and the Shanghai Sanitarium Clinic down town. It wasn't for sale, and wasn't advertised; we just called it 'Soy Ice Cream.' We just had it for parties etc. at the hospital. The Henningsen Produce Co. in Shanghai had a big ice cream plant; they used to make it for us at that time. Now they are in White Plains, New York (Phone 914-694-1000). They have an R&D plant in Omaha, Nebraska. Their biggest business was frozen egg whites and dried eggs. Now they are affiliated with a Chinese company in Shanghai.

"At first we made some meat analogs for our missionaries all over China. We went down to the Buddhist restaurant (I spent an awful lot of time down there) and we made gluten steaks that also contained tofu. Product name was 'Min-Jing.' My mother came back to the US for a

© Copyright Soyinfo Center 2014

vacation. While she was at the Washington Sanitarium and Hospital, the business manager asked her if she could help them make a new meat analog. They served it at the hospital. They had a little food processing plant there, and they started to make them there and can them. She showed them how to make the tofu. This happened in 1934-35. Ed Meisler or Misler (pron. MAI-zler) came out and specialized in making meat analogs. We also had a pure gluten analog with no tofu. By adding tofu we got a better grain and elasticity and it was a better vehicle for certain flavors.

"Also we took yuba, rolled it, added flavoring (duck, chicken, 2 or 3 flavors), cooked it in HVP. We were not selling these as products. They were mostly for Sanitarium use. Diet is the biggest problem that any hospital had in East Asia. My father brought out two top chefs to develop a dietary for our hospitals. We finally had 16 hospitals in China.

"We also made Nut-Mete (Dark or Light) from peanuts and starch, adopted from Battle Creek. That's about it for Shanghai meat analogs.

"I used to know Jethro Kloss. I used to play with his boys. I am not sure whether or not he ever had a company making commercial soy products. But I think in Pennsylvania some place he did have. Not on a big scale. Maybe kitchen type. I think his products were not commercial. I know he did not have a food processing plant in Takoma. He had a couple of kids in Washington Missionary College.

"I don't like the name Willis. The kids at school used to pronounce it like 'Will Ass.' Now everybody calls me 'Harry Junior.' My son is Harry III." Willis always calls his father Dr. Miller. I promise to do it this way.

"I'm working with a woman writer. We're going to bring out a book like China Doctor. I've started to work on it. Dad and the older folks would go to restaurants, but the chefs were guarded and would not reveal their recipes. The next day I'd go down, a kid of just l2 years old. They called me *Hsiao Mi Lai* meaning 'small rice.' My father's name in Chinese meant 'Rice.'" Willis is dictating it. He has now got stuff down on paper. Ivan is doing the work. "It will probably be out early summer next year. Its mainly about my work with soy."

"You see what happened, Bill. Most of Dad's time was spent with his medical work. But he was so interested in this that when I finished my pre-medical work he said, `Son, I think you better stay on foods.' That's what I followed. I was at SDA colleges: EMC = Andrews Univ. for l year then Washington Missionary College for 1 year then La Sierra College. I finished at Atlantic Union College. All undergraduate. Did some mechanical drawing and engineering too. Dad would tell me what he wanted. I worked out the formulas, made the machinery to do it, and his work was primarily gathering information in the field. I followed up and did the detailed work.

"I have a 4-foot long box of papers of our correspondence, on all these little plants he put in. He would ask me to design it. I would, and send him the designs.

"I'm now living in Cedar Falls." Note: In an apartment? Where is the 4-foot file?

"We've had a marvelous reception for Solait. It is powdered only. Just the natural flavor. We demoed it to Worthington Foods and Loma Linda Foods. Sold lots at Adventist Camp Meetings. We're working on an ice cream dry mix, but it's not perfect yet. We make Solait from soybean, corn oil, rice syrup, and a touch of sea salt. No stabilizers or artificial flavors.

Willis will send Soyfoods Center Solait and a label. "Its been on the market now for about 4 months. It's a Miller Farm Foods product."

Follow-up: Call Bob Fisher. Encourage the book. Please send a label. What was the introduction date of Solait. Ask him: Where is the 4 foot file of papers? Address: c/o Miller Farms Food Co., Cedar Falls, Iowa.

2666. Lindner, Anders. 1987. The world soymilk market and Soya Technology Systems (STS) (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 7 p. transcript.

• ***Summary:*** This far-ranging and very interesting interview discusses new soymilk developments in India with Noble House Great Shake, Godrej, and Amrit, and in Germany with DE-VAU-GE's big plant. Ultrafiltration offers an innovative new way to automate tofu production, already being tested by Island Spring. Major competitors for soymilk equipment (especially Alfa-Laval) are discussed, and details on the four plants that STS has sold in Germany, India, France and USA (Island Spring). A step by step description of the STS soymilk process is given. STS and Danish Turnkey Dairies were recently purchased by APV Baker, a big British baking equipment company.

Concerning the four plants that STS has sold: "Our biggest and most successful plant was sold to DE-VAU-GE, a Seventh-day Adventist food company in Lueneburg (near Hamburg), Germany. They started production in August 1985 and make Granose and GranoVita brands soymilk, sold mainly in the UK and West Germany, but also in Scandinavia and France. The plant is running at full capacity, which is 3,000 liters per hour of finished soymilk (3.5% protein), or 50,000 liters a day. They currently only make two products. Labels for the UK market read Granose Soya Milk (4 flavors) and Granose Soya Dessert (3 flavors of custard puddings gelled with natural carrageenan, a seaweed extract). Both products are packed in half liter or liter aseptic Tetra Brik cartons. The plant is doing very well, selling all it can make. This is the only one of the four that has started operation.

"We have also sold a plant to Island Spring (Vashon, Washington), which may be the next to start production. The

© Copyright Soyinfo Center 2014

capacity is also 3,000 liters/hour of soymilk base.

"Amrit in India should be in production by mid-1988. Their plant has the same basic capacity as the plant in Germany, but since their soymilk will contain only 2.25% protein, the actual output will be 6,000 liters per hour, which is larger than Germany. They will make both beverages and foods, mainly a paneer type cheese. The beverages will contain Indian flavorings.

"Our fourth plant is in France, but I am not allowed to divulge the name of the company until the product is on the market. They plan to make only liquid soymilk.

"Alfa-Laval installed their first European plant (a small one) in France this year, billing it as the "soymilk development center of Europe, the first plant on the continent" as if our large DE-VAU-GE plant did not exist."

Note: By 1987 STS had still sold only four soymilk plants. Address: STS, Singapore.

2667. Lindner, Anders. 1987. The world soymilk market and Soya Technology Systems (STS) (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 7 p. transcript.

• ***Summary:*** "On 21 Oct. l987 Anders Lindner, on a trip of the USA, visited the Soyfoods Center (SC). The following interview was conducted by William Shurtleff.

"SC: STS started five years ago, and in that time you have traveled the world, visiting every potential customer, and sold four soymilk plants. What major changes or trends have you seen in the world soymilk market during that time?

"STS: You must look at one region at a time. In the United States there is definitely an increased interest in and awareness of soymilk. Soyfoods are relatively well known. In Europe there has been a big increase in the number of enquiries about soymilk from all countries. The number of larger companies that have contacted us has also increased.

"Africa is still a dark continent as far as soymilk goes, with the possible exception of Nigeria, where we have a number of quotations pending, awaiting approval for foreign currency. This could take time.

"Looking at Asia, in India there was almost a frenzy of interest several years ago and we still get enquiries every week. The government gave permission to build many new soybean crushing plants. Soybean production is now over a million tons, and it is still not enough. So the price of soybeans is rising, which raises soymilk prices. But I'm not as optimistic about the future of soymilk in India today as I was 6 months ago. India's first major soymilk plant, established by the Noble Soya House group in Bhopal, has not been as successful as everyone had hoped it would be. Two of India's best known companies, the Great Eastern Shipping Company (also called the Bhiwandiwalla Group) and Godrej, backed the new company, which greatly bolstered public confidence in the project. Each owned 24% of the private limited company and the rest was publicly owned. Great Eastern provided financing and put a number of their very best people in the top management positions. Godrej, which is *the* marketing company in India par excellence, provided distribution and marketing. They specialize in soaps. Alfa-Laval supplied the plant and Kibun sold their technology know how. Production began in January 1987 and it had all the signs of being a very, very good project. Their soymilk, named Noble House Great Shake, comes in four flavors (chocolate, strawberry, mango, and American ice cream flavor, basically a vanilla) in 200 ml Tetra Brik cartons. I have heard it said that the products were not well formulated, the timing was poor, the prices were too high, and the products were marketed as a clearly Western-style of foreign product. The project got lots of big media publicity, but much of it was not favorable, we are sorry to say. Today the plant runs only about 2 hours a day.

"We have sold a plant to Amrit Soya and Protein Foods Ltd., owned by the Amrit Company, an old company. They are in Ghaziabad, Uttar Pradesh, on the outskirts of New Delhi and are expected to start production in mid-l988. This will be India's largest soymilk plant with a capacity of 6,000 liters/hour.

"Back to Asia, when we established STS we located ourselves in Southeast Asia, thinking that with the large consumption of soybean drinks there it would be quite simple to sell plants to make soybean milk as well. But that has not been the case. I find the food processing companies there extremely conservative. Our strategy now is to show the companies in East Asia that our concept works in the USA and Europe.

"China has been a disappointment. They seemed to be more interested in soymilk plants a few years ago.

"So generally speaking, the climate has gotten better, especially in Europe and the United States.

"SC: Has your strategy or basic approach for selling STS soymilk plants changed during this period?

"STS: Yes, it is changing now. We are expanding our product range by offering processes for other soymilk-based foods. Formerly we thought of ourselves as selling primarily liquid soymilk. Now we are offering process lines for tofu, ice cream, dressings, dips, spreads and other dairy analogs, plus what we call 'semi-products.' These are non-consumer, industrial food type products such as concentrated soymilk or curds for use as ingredients by food processors. We are investing in R&D on these. I think we will find new uses for our soymilk base, including new ways of making traditional products, dairy analogs, powdered products, and truly new products.

"SC: Have you made any major technological developments?

"STS: Yes. we are now offering an ultrafiltration system as part of our soymilk system. This is an important technological innovation. It allows you to concentrate soymilk by removing water without adding

© Copyright Soyinfo Center 2014

heat (thus preserving the good flavor of the product) or to remove certain components from the soymilk, such as oligosaccharides or perhaps trypsin inhibitors or lipoxygenase enzymes, using membranes. More important, it can help in automating tofu production. The soymilk base goes into the ultrafiltration plant, where it is concentrated. Coagulant is injected into the line and mixed. Rectangular cakes of tofu are chopped off as they come out the exit end. Luke Lukoskie at Island Spring has been a pioneer in developing these processes using a pilot plant, with an ultrafiltration unit, that we loaned him. This technology seems to have a very promising future for processing soymilk in the West, and for making soya panir (fresh curds) in India. There is not enough cow's milk in India to go around, and most of it is sold in the cities. I think soya panir will undersell dairy panir in India.

"SC: Which company do you feel is your strongest competitor?

"STS: Our main competitor everywhere is Alfa-Laval. After that, but much less, some of the Japanese companies such as Marusan-Seikensha and Mitsubishi. Given that we had just installed the largest soymilk plant in the Western world for De-Vau-Ge in Germany, I was surprised to note that Eden Foods in America chose Marusan-Seikensha without ever contacting us at all. Marusan seems to have only one English speaking person in the entire company, Mr. Tominaga. Mitsubishi competed with us selling systems in India and Nepal. Takai never seems to be in competition with us. Vandemoortele is no longer supplying systems, though the huge plant they built in Ambatolampy, Madagascar (35 million liters/year capacity) is still in operation. The company, Lalasoa SA (Societe Anonym) is run by a woman named Regina.

"SC: Could you tell us a little about the four plants that you have sold?

"STS: Our biggest and most successful plant was sold to De-Vau-Ge, a Seventh-day Adventist food company in Lueneburg (near Hamburg), Germany. They started production in August 1985 and make Granose and Granovita brands soymilk, sold mainly in the UK and West Germany, but also in Scandinavia and France. The plant is running at full capacity, which is 3,000 liters per hour of soymilk base (4.7% protein). This is 4,000 liters per hour of finished soymilk (3.5% protein), or 50,000 liters a day. They currently only make two products. Labels for the UK market read Granose Soya Milk (4 flavors) and Granose Soya Dessert (3 flavors of custard puddings gelled with natural carrageenan, a seaweed extract). Both products are packed in half liter or liter aseptic Tetra Brik cartons. The plant is doing very well, selling all it can make. This is the only one of the four that has started operation. we have also sold a plant to Island Spring (Vashon, WA), which may be the next to start production. The capacity is also 3,000 liters/hour of soymilk base. Amrit in India should be in production by mid-1988. Their plant has the same basic capacity as the plant in Germany, but since their soymilk will contain only 2.25% protein, the actual output will be 6,000 liters per hour which is larger than Germany. They will make both beverages and foods, mainly a panir type cheese. The beverages will contain Indian flavorings." (Continued). Address: STS, Singapore.

2668. Lindner, Anders. 1987. The world soymilk market and Soya Technology Systems (STS) (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 7 p. transcript.

• ***Summary:*** Continued: Our fourth plant is in France, but I am not allowed to divulge the name of the company until the product is on the market. They plan to make only liquid soymilk.

"Alfa-Laval installed their first European plant (a small one) in France this year, billing it as the "soymilk development center of Europe, the first plant on the continent" as if our large De-Vau-Ge plant did not exist.

"SC: Do you see any innovative or low-cost packaging for soymilk on the horizon.

"STS: All of our plants use or will use aseptic Tetra Brik cartons. The Indian plant has also purchased a Prepac aseptic plastic bag machine, like that used to package Sipso soymilk, but aseptic. Thus it needs no refrigeration. (Prepac is a French firm; Sipso was India's first commercial soymilk, made by Pantnagar Soymilk Products (P) Ltd.). The big advantage of aseptic bags is that they cost about half as much as Tetra Brik cartons. Disadvantages are consumer handling, transportation, outer wrapping cost, leakage problems, and the shelf life is not as long (which is not really a problem).

"SC: What basic soymilk systems do you sell and how much does each cost? With and without building. With and without packaging.

"STS: Our basic plant is 3,000 liters/hour of soymilk base (4.7% protein content). There are many variables that each customer can choose to have or not have, which affect the price. On average this plant costs about $1.5 million (US) including the building and silos but without packaging machines. Three aseptic Tetra Brik machines to package this dairylike soymilk in 250 ml cartons will add another $1.5 million to the cost, for a total of roughly $3 million. The most expensive components are the aseptic packaging machines, the UHT plant, and the decanter/centrifuge.

"SC: Does STS have any plans to get into smaller, less expensive systems?

"STS: Not at the moment. No.

"SC: In the USA soymilk is 3.4 to 5 times as expensive as cow's milk per unit volume. How can people in Third World countries afford this?

"STS: Cow's milk is relatively much less expensive in the USA than in most other countries, and especially Third World and Asian countries. In many countries, cow's milk is

© Copyright Soyinfo Center 2014

simply not widely available. In Nigeria several dairy plants are now being rebuilt for making soymilk. In India, packaged soymilk and cow's milk sell for about the same price. The soymilk is less expensive to produce but the packaging raises the cost a lot. Thus there is a big interest in selling soymilk unpackaged (as from a kiosk cooler dispenser) or packaged in bulk, as in the aseptic 1-20 gallon bag-in-the box, for institutions. A school could order one or two 20-gallon packs a day at very low cost. The equipment is made in California (by Scholle) and Australia. For developed countries, aseptic packaging looks like the wave of the future.

"SC: What is the biggest problem in selling soymilk to Third World countries, acceptability or lack of capital?

"STS: The latter. For example, in Sri Lanka we did acceptability tests among 5,000 primary school children and 95% either liked it or liked it very much. In addition to lack of government funds to build the plant, there was in-fighting among several government departments as to which would be in charge of the project. The government urged us to find a private party to build the plant, and they could sell the soymilk to the government. But that is a slow process.

"SC: Could you outline the main steps in the STS soymilk process?

"STS: Let me show you our color slide show of the De-Vau-Ge plant. This process is a continuous one with computerized monitors at all key points. Soybeans from the silos are screen, cleaned, steamed, dried, cooled, and dehulled. The hulls are removed by aspiration, and the cotyledons are destoned. In the continuous-process enzyme inactivation unit, the cotyledons are blanched for several minutes at atmospheric pressure in boiling water containing a little sodium bicarbonate. The blanch water is drained off and beans are then ground with hot water and a fresh dose of sodium bicarbonate in two sequential colloid mills (made by the Swiss firm Fryma Maschinen AG). A decanter / centrifuge (made by Siebtechnik GmbH) is used to separate the soymilk base (4.7% protein) from the okara fiber. The base is then run though the first deodorizer, which strips away volatile off-flavors using a vacuum, then thru a plate heater to inactivate trypsin inhibitor, and finally into batch formulation tanks. Premixed flavors and/or oil and nutrients are added, and the mixture is run through an homogenizer into storage tanks. Then comes the UHT (Ultra High Temperature) plant, followed by a second deodorizer, aseptic homogenization, and into an aseptic buffer tank before the final aseptic packaging.

"SC: What are the features of the STS system that you feel make it preferable to other competing systems?

"STS: First, the quality of our product. Second, the turnkey concept: we offer the whole system, from storage of soybeans to packaging of soymilk, from one source company. We are the only company that does that. Our prices seem to be about the same as our competitors.

"In terms of the process, the Alfa Laval system does not dehull the soybeans. we think dehulling makes a better quality product, but it takes additional equipment, which costs more money. For liquid soymilk, Alfa uses indirect UHT treatment with plate heat exchangers, whereas we prefer direct UHT using steam injection, which we feel gives longer production hours, less protein precipitation and scaling, and better flavor. Alfa talks of its oxygen-free, vacuum grinding; our process is similar, but we don't feature it.

"SC: What was of interest on your recent world trip?

"STS: Many things. At the World Congress on Food and Nutrition in Singapore I was amazed to see how many presentations were on soyfoods. And roughly a third of the booths at the Expo were soy-related.

"SC: Anything else?

"STS: Yes. Ownership of our company recently changed hands. As you know, Danish Turnkey Dairies, our parent, was owned by the Danish Sugar Corporation, which also owned Pasilac, a dairy equipment manufacturer. In March 1986 DTD and Pasilac were merged.

"Now APV is a huge British food engineering company, active worldwide. In February they bought Baker, a big British baking equipment company, to form APV-Baker. There is also APV-Crepaco. In May l987 Pasilac-DTD and its subsidiaries (including STS) were taken over by APV-Baker. The new firm may be called APV-Pasilac. A major purpose of this trip to the U.S. is to meet APV people involved with soy." Address: STS, Singapore.

• ***Summary:*** There are 3 major soymilk producers in Europe: (1) In Belgium, Alpro, an affiliate of the Vandemoortele Group, has a plant that produces 10,000 tonnes/year of "soy juice" (*jus de soja*). Alpro's head, Philippe Vandemoortele, is head of the European Soyfoods Association. (2) In France, Cacoja, affiliate of the agricultural cooperative of Colmar, has recently had an ultramodern plant constructed at Issenheim in Bas-Rhin. A good photo shows the soymilk production system. (3) In West Germany, DE-VAU-GE is expected to soon produce as much soymilk as Alpro.

Also discusses the Edensoy venture in the USA. Most of these companies are run by young men, average age 35.
Address: France.

2674. Praskin, Laurie. 1987. Recent developments with soyfoods in Guatemala (Interview). *SoyaScan Notes.* Nov. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** El Centro de Soya, the soy dairy at Solola, is up and running as a commercial enterprise. They are making tofu, most of which is sold to Seventh-day Adventist vegetarian restaurants that cater to tourists in Panajachel, Guatemala City and Antigua (a big tourist center and the former capital of Guatemala). In the community of Solola, they spend a lot of time teaching people how to cook with the products, which they offer at a discount to community members. This has spurred a big increase in sales of tofu and soymilk to the community. A new product in 1987 is Paletas de Soya (Soy Sticks or soymilk popsicles) made with their own popsicle machine. The only flavor is chocolate. Two employees and one independent broker with carts sell them. Agostine Xoquic is manager of the dairy. Amado Del Valle is project coordinator of the whole program, including the agricultural parts, the demos, and the dairy. They make soymilk but only for those who bring a container to the dairy.

Amado and his partner Felipe are making tempeh, which is sold to restaurants. The business is still subsidized; Plenty pays the salaries of Amado and Augustine, and also buys new equipment. But profit from the sale of soy products pays dairy employees' salaries and operating expenses. And they do make a little "profit." They are also now running a soyfoods training center/demo program. In Quiche they have a home demo program, and women grow soybeans and make soymilk and tofu at home. The main thing is adding ground soybeans to corn to make tortillas.

After Plenty had to leave Guatemala in 1980, the Soy Dairy continued making tofu and soy ice cream, without outside funding, until 1983. Larry McDermott visited in April 1985 and production started again in mid-1985.
Address: 17969 Oak Dr., Los Gatos, California 95030. Phone: 408-353-2649.

2675. Bailie, Ira E. 1987. The First International Congress on Vegetarian Nutrition. *J. of Applied Nutrition* 39(2):97-105. Fall.
• ***Summary:*** "Many studies have shown that vegetarian diets meeting the recommended dietary allowances for nutrients lead to decreased risk for many diseases, including breast, colon and prostate cancer, hypertension, cardiovascular disease, diverticular disease, osteoporosis, gallbladder and renal calculi, arthritis, and diabetes mellitus. Lacto-ovo-vegetarian diets can easily supply all nutritional needs. Absolute vegetarian diets with no animal products run a significant risk of vitamin B-12 deficiency. Omnivorous diets low in cholesterol and saturated fat and high in complex carbohydrates and fiber confer benefits similar to vegetarian diets.

"The first International Congress on Vegetarian Nutrition was held in Washington, DC, March 16-18, 1987. Co-sponsored by several Seventh-Day Adventist institutions, the meeting was attended by more than 400 registrants and speakers, including over 30 physicians, representing an international spectrum. Many attendees, both speakers and registrants, were not Seventh-Day Adventists." Johanna Dwyer delivered the keynote address. Address: Turlock Medical Clinic, 105 E. Main St., Turlock, California 95380.

2676. **Product Name:** Solait Creme d'Soy (Powdered Soy-Based Creamer).
Manufacturer's Name: Miller Farms Food Co.
Manufacturer's Address: 314 Main St., Cedar Falls, IA 50613. Phone: 319-277-8600.
Date of Introduction: 1987 November.
Ingredients: Premium soybeans, corn oil, rice syrup, sea salt.
Wt/Vol., Packaging, Price: 24 oz (680 gm).
How Stored: Shelf stable.
Nutrition: Per 1 oz. powder or 4 oz. liquid: Calories 220, protein 4 gm, carbohydrates 8 gm, fat 15 gm, sodium 70 mg, calcium 25 mg.
New Product–Documentation: Talk with Harry W. Miller, Jr. 1987. Oct. 21. Leaflet. 1987. "Solait. Powdered Soy

Beverage." Product is not yet available. Label. 1987. Oct. 14.5 by 6.5 inches. Purple, green, red, yellow, and blue on white. Illustration of sun and rainbow above clouds. "No cholesterol. No lactose. No animal fat." New Product News. 1988. Dec. 9. A shelf-stable creamer.

Talk with Miller Farms. 1991. Dec. 3. Solait and Creme d'Soy are still on the market.

2677. *SoyaScan Notes.* 1987. Chronology of soybeans, soyfoods and natural foods in the United States 1987 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. Westbrae moves the production of Malteds to California from Japan.

Jan. The Soy Plant, a tofu cooperative in Ann Arbor, Michigan, files for Chapter 7 bankruptcy. It is soon purchased by Bruce Rose of Rosewood Products, Inc.

Feb. *Soya Newsletter,* a 12-page, bimonthly publication costing $96/year, is launched by Soyatech of Bar Harbor, Maine. Publishers are Peter Golbitz and Sharyn Kingma, former owners of Island Tofu Works. The publication quickly proves itself to be the world's best English-language publication on soyfoods. By October, paid circulation tops 900 in 20 countries.

Feb. American Soybean Association petitions the U.S. Food and Drug Administration to require food manufacturers to be more specific in labeling food products that contain highly saturated imported tropical fats (palm, palm kernel, and coconut oils). The petition includes results of a supermarket survey of 1,555 foods containing vegetable oils. 43% of the labels list multiple choice or generic vegetable oil ingredients which hides from the consumer the fact that the products contain highly saturated tropical fats. Imported tropical fats displace the equivalent of oil derived from 171 million bushels of soybeans. Herewith begin the great "Fat Wars" of 1987-88.

Feb. Lite Lite Tofutti introduced by Tofutti Brands, Inc. This non-dairy frozen dessert contains only 90 calories per 4-ounce serving. It soon becomes a big hit.

Feb. Ah Soy in Tetra Brik cartons launched by great Eastern Sun.

Feb. Options trading on futures for soybean oil and meal opened on Chicago Board of Trade.

March 4. The Federal Grain Inspection Service rules that soybean oil may be used to control grain dust in elevators. This voids the Barnham patent and opens up a large potential new market for soy oil, which is in surplus.

March. Great Shake soymilk launched by Noble Soya in India. Sold in Tetra Brik cartons in mango, strawberry, and chocolate favors, it is the country's most heavily promoted soymilk to date, but gets off to a slow start.

March 16-18. First International Congress on Vegetarian Nutrition held in Washington, D.C., sponsored by eight Seventh-day Adventist universities and health care organizations, and three SDA food companies, plus S.E. Rykoff/Sexton.

March. *Vitasoy Vitabrations,* a newsletter, starts being published by Vitasoy USA.

March 31. Hong Kong Soya Bean Products Co. Ltd., makers of Vitasoy, move into a large new plant (370,000 square feet costing $20 million) in the New Territories. Sales of Vitasoy in 1987 is projected to be 126 million packs.

April 1. Tempehworks, Inc., America's first major tempeh producer from Greenfield, Massachusetts, changes its name to Lightlife Foods, Inc. In recent years, Tofu Pups have become the company's bestselling product.

April. Stir Fruity, a non-dairy, nonfermented, soy-based yogurt, is introduced by Azumaya Inc. of San Francisco. Shelf life problems cause the product to be withdrawn, causing Azumaya to set aside plans for an $800,000 radio ad campaign in northern California. The product is soon back on the market, but in limited distribution and with little promotion. Yet during this year, Azumaya probably passed House Foods & Yamauchi to become America's largest tofu producer.

April. *Healthy Times,* a bimonthly newsletter, starts being published by Morinaga Nutritional Foods of Los Angeles, makers of Mori-Nu long-life silken tofu, for members of the Mori-Nu Health for Life Club. By Aug. 1988 circulation is up to 10,000; A subscription costs $3 a year.

May 26. Tofutti Brands Inc. and Coca-Cola launch Cheater's Delite, a major joint promotion featuring a 90-calorie scoop of Lite Lite Tofutti and a 1-calorie glass of Diet Coke, special labeling and couponing on 3 million bottles of Diet Coke, 5 weeks of heavy advertising in New York, New Jersey and Connecticut, and a Caribbean cruise sweepstakes.

June. Dr. Jane Gleason of the University of Illinois goes to Sri Lanka to spend a year studying its soybean and soyfoods industries.

July 1. Ralston Purina Co. of St. Louis, Missouri, establishes Protein Technologies International as a wholly-owned subsidiary to focus on sales of soy protein for food uses. The company's sales of soy protein products were $139.8 million in 1986.

July. Victor Food Products in Toronto, Canada's largest tofu manufacturer, declares bankruptcy. The main cause: Overexpansion, trying to grow too fast.

Aug. The Barat Bar, an upscale chocolate bar containing spray-dried tofu instead of dairy products, is launched by Legume Inc. and extensively promoted. It soon becomes a big hit.

Aug. Brightsong Foods of Petaluma, California, ceases operations. Richard and Sharon Rose resign to found a new company, Rose International, which will be a tofu development, marketing, and consulting company, rather than a manufacturer.

Sept. 24. San-J International of Richmond, Virginia,

© Copyright Soyinfo Center 2014

dedicates the first tamari brewery ever built outside of Japan. The 40,000 square foot facility with a capacity of 1 million gallons a year is located in Varina, Virginia. San-J tamari was first imported to America in 1979.

Sept. 28. Plenty Soya Centre, run by Plenty Canada, opens in Kandy, Sri Lanka. They will sell as many soyfood products as possible at a reasonable cost.

Oct. 6. Anti-cholesterol campaign starts. The U.S. Federal Government and more than 20 health organizations issue the nation's first detailed guidelines for identifying and treating people whose blood cholesterol levels are more than 200 mg per deciliter. The guidelines signal the beginning of a nationwide health promotion campaign designed to reduce blood cholesterol to safer levels. This signals exciting new opportunities to market cholesterol-free soy-based alternatives to meat.

Nov. *Kikkoman Taste*, a stylish full-color "quarterly intercultural forum for the exchange of ideas on food," published by Kikkoman Corp. in Tokyo. Its focus is on shoyu in international cuisine.

* During this year of the great vegetable oil wars, the ASA launched an all-out no-holds-barred campaign to educate Americans of the health dangers of tropical fats (palm and coconut oil; which succeeded) and to require such products to be clearly labeled (which failed).

* This year the world's population passed 5 billion. It is increasing by a record 80 million people a year, so that every 3 years the equivalent of one United States' full of people is added to the population of planet Earth. Continued.

Address: Dep. of Biochemistry, School of Medicine, and the Dep. of Nutrition, School of Public Health, Loma Linda Univ., Loma Linda, California 92350.

2680. *Vegetarian Times.* 1987. A look back at 1987. Dec. p. 7-8.
• ***Summary:*** This was the year of the calcium pill and the fish oil supplement. In March, nutritionists from all over the world met in Washington, DC, at the first international vegetarian congress sponsored by Loma Linda University. Junk foods continued to proliferate as Coca-Cola bottlers teamed up with Tofutti to create "Cheater's Delite," a 91-calorie dessert combining Lite Lite Tofutti and Diet Coke (Ugh!). The beef industry sponsored a $30 million ad campaign "Beef. Real food for real people." Cybill Shepherd, one of the stars, was quoted by Family Circle as saying, "I've cut down on my fatty foods and I'm trying to stay away from red meat." Rock star Chrissie Hynde of the Pretenders formed the vegetarian/animal-rights organization Reprieve! with British author Peter Cox. Obis adds in interview on Oct. 28: Cox, as head of Reprieve!, is very flashy and excellent at promoting a cause. His goal is to eliminate meat from the British diet by the year 2,000. In the U.K. the vegans and the vegetarians fight one another and have lots of hostility toward each other.

2681. **Product Name:** Granose Vegetable Margarine (Dairy Free; Low in Salt).
Manufacturer's Name: Granose Foods Ltd. (Marketer-Distributor). Made in England by Eilers & Wheelers.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1987.
Ingredients: Soyabean oil (minimum 65%), vegetable oils partly hydrogenated, water, salt, emulsifiers, soya lecithin, mono and di-glycerides extracted from palm oil, flavouring, citric acid, vitamin A, colour, beta-carotene, vitamin D (vegetable source).
Wt/Vol., Packaging, Price: 250 gm plastic tub.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Energy 750 kcal (calories), oils, partly hydrogenated, minimum 80 gm, polyunsaturates min. 36 gm–45%, saturates max. 16 gm–20%, salt max 1 gm.
New Product–Documentation: Form filled out and Label sent by Adrian Peck of Granose Foods Ltd. 1990. June 13. States that the product, made by Eilers & Wheelers, was introduced in 1987. "Soya" is not mentioned on front panel. Label. Green on ivory. "High in polyunsaturates. Low in saturates. Low in cholesterol. Contains no animal products. Lactose free. Low in sodium."

2683. **Product Name:** Loma Linda Vegetein Taco Mix (Textured Wheat and Soy Protein).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515. Phone: 800-442-4917 or 714-687-7800.
Date of Introduction: 1987.
Ingredients: Soy protein concentrate, wheat gluten, partially hydrogenated vegetable oil (cottonseed, soybean),

© Copyright Soyinfo Center 2014

natural (vegetable) flavors, whole wheat flour, artificial color.
Wt/Vol., Packaging, Price: 7 oz paperboard box.
How Stored: Shelf stable.
New Product–Documentation: See next page. Talk with Iris Ram. 1988. Sept. 27. This product was introduced in 1987. This is a Mexican taco filling like chorizo.

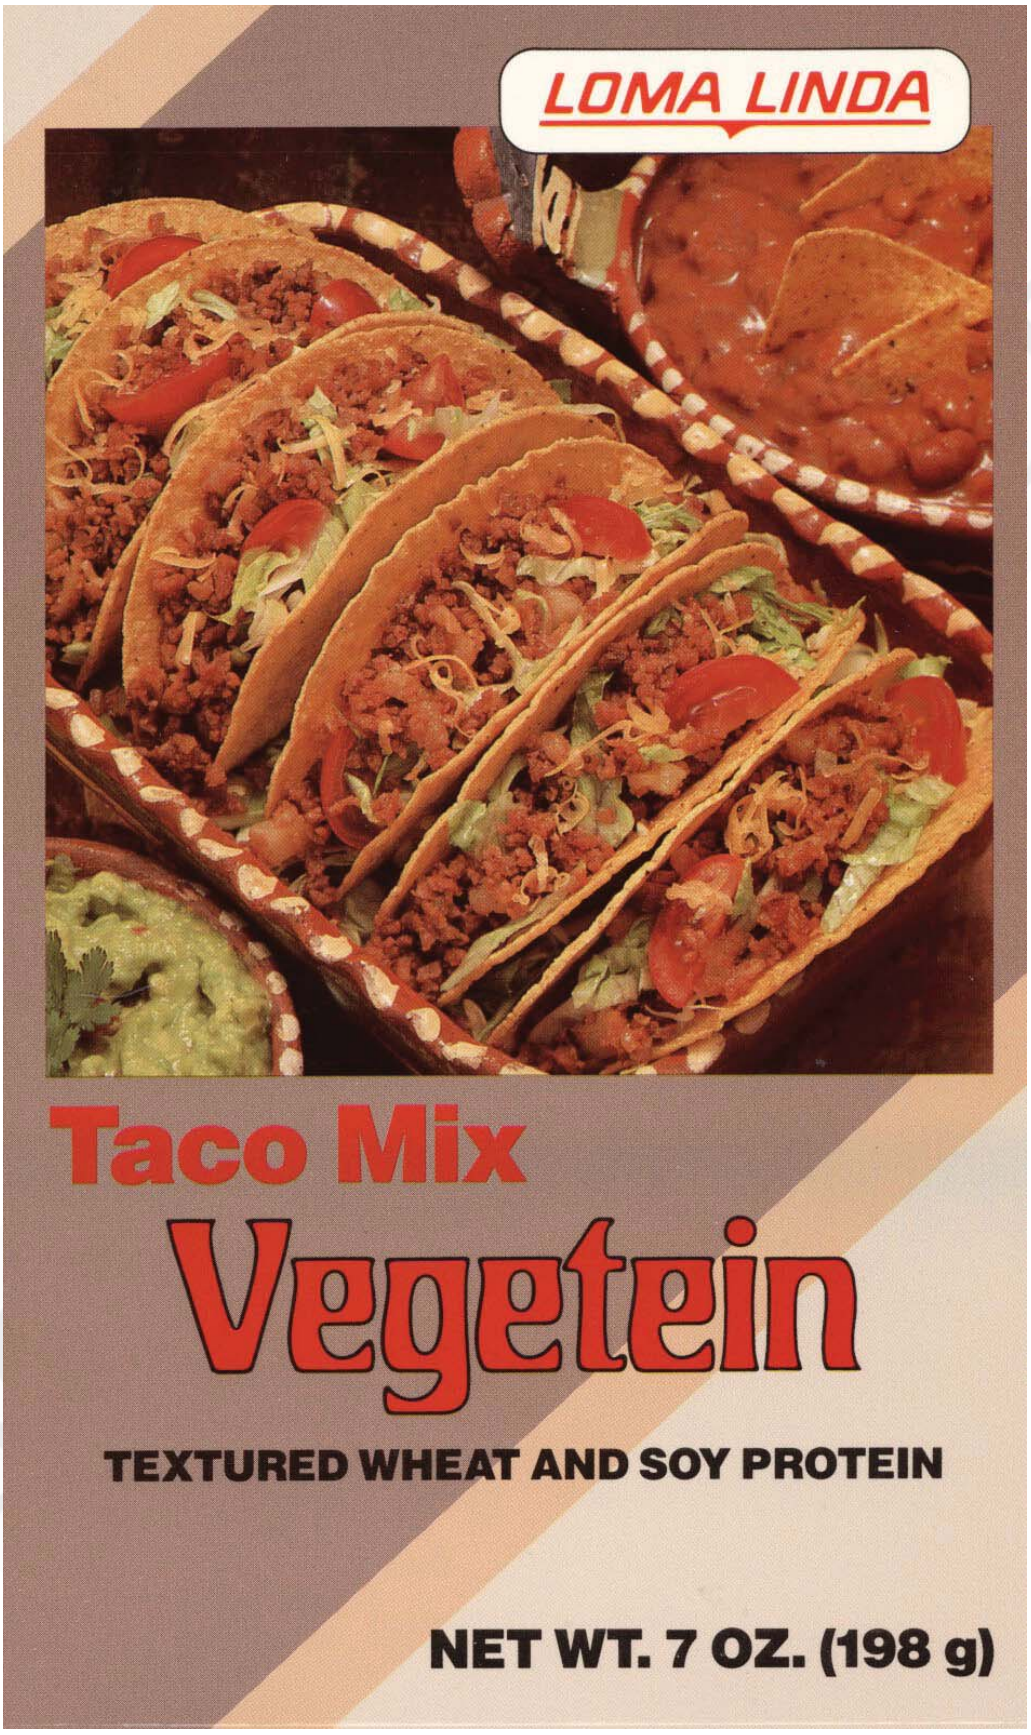
Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1987.

2684. **Product Name:** Loma Linda Unflavored Vegetein (Textured Wheat and Soy Protein).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515. Phone: 800-442-4917 or 714-687-7800.
Date of Introduction: 1987.
Ingredients: Soy protein concentrate, wheat gluten, partially hydrogenated vegetable oil (cottonseed, soybean), caramel color, whole wheat flour, artificial color.
Wt/Vol., Packaging, Price: 7 oz paperboard box.
How Stored: Shelf stable.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1987.

2685. **Product Name:** Loma Linda Chorizo Flavor Vegetein (Textured Wheat and Soy Protein).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515. Phone: 800-442-4917 or 714-687-7800.
Date of Introduction: 1987.
Ingredients: Soy protein concentrate, wheat gluten, vegetable shortening, natural (vegetable) flavors, whole wheat flour, spice, artificial color.
Wt/Vol., Packaging, Price: 7 oz paperboard box.
How Stored: Shelf stable.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1987. "Basic preparation instructions: Add ½ cup water to 1 cup Chorizo Flavored Vegetein and allow to set for 10 minutes."

2686. **Product Name:** Loma Linda Chicken Flavor Vegetein (Textured Wheat and Soy Protein).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515. Phone: 800-442-4917 or 714-687-7800.
Date of Introduction: 1987.
Ingredients: Soy protein concentrate, wheat gluten, natural (vegetable) flavors, vegetable shortening, whole wheat flour, artificial flavors, spices, artificial color.
Wt/Vol., Packaging, Price: 7 oz paperboard box.
How Stored: Shelf stable.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1987.

2687. **Product Name:** Loma Linda Spicy-Chik Mini-Drums (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1987.
Ingredients: Mini-Drums: Soy protein concentrate, soy protein isolate, water, corn oil, wheat gluten, egg whites, potato flakes, spices, artificial flavors, salt, whole wheat flour, natural (vegetable) flavors, dextrose, dried yeast, onion powder, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). Breader: Bleached wheat flour, salt, yeast, sugar, oleoresin paprika, leavening (sodium acid pyrophosphate, monocalcium phosphate, sodium bicarbonate), hydrogenated soy oil, mono and diglycerides, nonfat milk, whey. Batter: Water, corn flour, modified food starch, leavening (sodium acid pyrophosphate, sodium bicarbonate), spice.
Wt/Vol., Packaging, Price: 4-oz. packet contains 20 pieces.
How Stored: Frozen.
Nutrition: Per approximately 5 pieces (3.0 oz–85 gm): Calories 230, protein 14 gm, carbohydrate 15 gm, fat 13 gm, cholesterol 0 mg, sodium 640 mg, potassium 180 mg.



New Product–Documentation: Chicken flavored.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1987.

2688. **Product Name:** [Nutana Soja Drink].
Foreign Name: Nutana Soja Drik.
Manufacturer's Name: Nutana (Distributor). Made in West Germany by DE-VAU-GE.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1987.
Ingredients: Water, soybeans, cane sugar (3%), salt (0.1%), natural aromas.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm: 53 calories, protein 3.6 gm, fat 2.1 gm, carbohydrate 4.9 gm.

Manufacturer's Name: Westico Foods.
Manufacturer's Address: West Indies College, Mandeville, Jamaica.
Date of Introduction: 1987.
Ingredients: Gluten, soya pulp (okara), soya flour, vegetable oil, salt, onion powder, garlic powder, sausage flavoring, soya sauce.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Form filled out and Label sent by Westico. 1990. June 28. Westico Foods is a Seventh-day Adventist institution. This product was introduced in 1987.

2692. Beilin, Lawrence J.; Margetts, Barrie M. 1987. Vegetarian diet and blood pressure. *Bibliotheca Cardiologica* 41:85-105. [84 ref]
Address: Univ. Dep. of Medicine, Royal Perth Hospital and NH and MCR Research Unit in Epidemiology and Preventive Medicine, Univ. of Western Australia, Perth, Western Australia.

2693. Cody, George. 1987. History of naturopathic medicine. In: Joseph E. Pizzorno and Michael T. Murray, eds. 1987. A Textbook of Natural Medicine. Vol I. Seattle, Washington: John Bastyr College Publications. 24 p. [50* ref]
• ***Summary:*** Contents: Introduction. A brief history of early American medicine with emphasis on natural healing: 1800-1875, professional medicine (College of Philadelphia [Pennsylvania], Benjamin Rush), Thomsonianism (Samuel Thomson), the eclectic school of medicine, Wooster Beach (a person) and the eclectic school (Worthington, then Cincinnati, Ohio), the hygienic school (Sylvester Graham and William Alcott), homeopathy, rise and fall of the non-allopathic sects, American influence, Russell Trall, Holbrook, Sylvester Graham. The beginnings of "scientific medicine:" Foundations with monies from Carnegie and Rockefeller foundations, medical education in transition, Flexner report, pharmaceutical industry, the new "sects" (osteopathy, chiropractic, Christian science). The founding of Naturopathy: Benedict Lust arrives in USA in 1892 from Germany, Lust purchases term "naturopathy" from Scheel in 1902, the Germanic influence (Vincent Priessnitz, Johann Schroth, Father Sebastian Kneipp, Arnold Rickli, Louis Kuhne, Henry Lahman, F.E. Blitz, Adolph Just, Theodor Hahn), the convergence with American influences (A.T. Still, B.J. Palmer, Henry Lindlahr, John H. Tilden, Elmer Lee, John Harvey Kellogg, Sidney Weltmer, Bernarr McFadden [Macfadden], Shelby Riley). Twentieth century medicine: The metamorphosis of orthodox medicine (comparing 1875 and 1920), the halcyon years of naturopathy (progressive health era, 1900 to 1920, Morris Fishbein, Gaylord [sic, Gayelord] Hauser healed by Lust in 1920s, death of Lust in Sept. 1945 at Yungborn in Butler, New Jersey, emerging dominance of AMA medicine, osteopathy, chiropractic, Jethro Kloss and *Back to Eden*). Modern rejuvenation (counter-culture of the late 1960s, alternative medicine gains respect but naturopathic educational institutions dwindle to one, the National College of Naturopathic Medicine, John Bastyr College formed in 1978). The book has two bibliographies: General (21 refs), and naturopathic (29 refs).

Concerning Hauser (p. 20): "During the 1920s, Gaylord [sic, Gayelord] Hauser, later to become the health food guru of the Hollywood set, came to Lust as a seriously ill young man. Lust, through the application of Nature Cure, removed Hauser's afflictions and was rewarded by Hauser's lifelong devotion. His regular columns in *Nature's Path* became widely read among the Hollywood set." Address: Faculty Member, John Bastyr College, Jurisprudence.

2694. Numbers, Ronald L.; Butler, Jonathan M. eds. 1987. The disappointed: Millerism and millenarianism in the nineteenth century. Bloomington, Indiana: Indiana University Press. xxiv + 235 p. Illust. selected by James R. Nix. Index. 25 cm. [300+* ref]
• ***Summary:*** This is an edited collection of scholarly essays on the history of the Millerite movement in America. The Seventh-day Adventists grew out of the Millerites. References are given at the end of each chapter. Prof. Numbers organized a conference in the mid-1980s and this book grew out of that conference. Dedication: "To Vern Carner from his friends."

Contents: 1. Foreword. Acknowledgments. Introduction. 1. Millerites: A shadow portrait. 2. William Miller: Disappointed prophet. 3. Joshua V. Himes and the cause of Adventism. 4. The Millerite Adventists in Great Britain, 1840-1850. 5. The Millerite use of prophecy: A case study of a "striking fulfilment" [fulfillment]. 6. Millerism and madness: A study of "religious insanity" in nineteenth-century America. 7. Millerism and evangelical culture. 8. The abolitionist-Millerite connection. 9. "The wind sweeping over the country": John Humphrey Noyes and the rise of Millerism. 10. Had prophecy failed? Contrasting perspectives of the Millerites and Shakers. 11. The making of a new order: Millerism and the origins of Seventh-day Adventism. Appendix: The Disappointment remembered: The recollections of Luther Boutelle, Hiram Edson, and Henry B. Bear. Contributors. A portrait (illustration, painting) shows William Miller. Address: 1. Prof. of the History of Medicine and the History of Science, Univ. of Wisconsin, Madison; 2. Riverside, California.

2695. Ringstad, J.; Fønnebø, V. 1987. The Tromsø Heart Study: Serum selenium in a low-risk population for cardiovascular disease and cancer and matched controls. *Annals of Clinical Research* 19(5):351-54. [32 ref]
• ***Summary:*** "High serum selenium concentration may protect against cardiovascular disease and cancer." Address: Inst. of Community Medicine, Univ. of Tromso, Box 417, N-9001 Tromso, Norway.

2696. Shurtleff, William; Aoyagi, Akiko. 1987. Soymilk industry and market: Updates from 1984 to 1987. Lafayette, California: Soyfoods Center. 17 + 59 p. Index. 28 cm. [165 ref]
• ***Summary:*** This 1987 update to the Soyfood Center's two-volume 1984 *Soymilk Industry and Market* has two parts: (1) Year in Reviewing, describing key events and trends each year from 1984 to 1986. (2) A bibliography of soymilk from January 1987 to late 1987, based on records in the SoyaScan database; at the end is a 10-page index. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2697. World Neighbors. 1987. Soybeans: Part 1, Let's grow them. Part 2, Let's eat them (Color filmstrips). 5116 North Portland Ave., Oklahoma City, OK 73112-2098. Accompanied by a 6-page narration.
• ***Summary:*** The filmstrips ($20 for 2) were photographed in East Africa and developed with the cooperation of Ilonga Research Center, Tanzania, and Kawanda Research Center and Africa Basic Foods Inc., Uganda. They show techniques being used at that time by World Neighbors' assisted programs in the area. Part 2 shows how to make soy flour from soybeans boiled for 10 minutes, and to use it in unleavened bread or snacks (1 cup soy flour with 3 cups wheat flour), or porridge. The leaflet also describes how to make soy sprouts and cook whole dry soybeans (with salt for several hours; poor technique). Address: Oklahoma City, Oklahoma.

2699. Worthington Foods, Inc. 1987? Worthington: Building for a healthier tomorrow. Worthington, Ohio. 12 p. Undated.

• ***Summary:*** Includes a concise history of the company (p. 4-5): "Worthington Foods began operations in 1939 with the introduction of two peanut-based products to meet a growing demand for convenient, flavorful vegetarian foods.

"Today Worthington Foods is recognized worldwide as a leader in the development and production of foods and beverages for health-conscious consumers.

"Launched under the name of Special Foods, Inc. by Dr. George T. Harding, Sr., the company grew within two years to annual sales of $20,000.

"Dr. Harding hired current Worthington Foods chairman James L. Hagle in 1941 to manage the fledgling vegetable protein business. Sales jumped to $80,000 during the 29-year-old manager's first year.

"Choplets, one of the company's early products, was so much in demand during the meat rationing of World War II that shipments were made to customers even before cans had a chance to cool after production.

"By the end of the war, annual sales neared $500,000, and Special Foods had become Worthington Foods, Inc. Production facilities were moved from a small two-story, wooden house (see photo) to a new concrete block building across the street.

"Allan R. Buller, now president, came to Worthington

© Copyright Soyinfo Center 2014

Foods in 1945 after completing a tour of military duty. He soon became general manager.

"A short time later, Warren E. Hartman joined Buller and Hagle to expand the company's product development and quality control. The Worthington line was broadened, and sales continued to climb.

"In the early 1950s, Worthington Foods accomplished a major technological breakthrough which revolutionized the manufacture of vegetable protein products. Robert Boyer, a former researcher for the Ford Motor Company, introduced Hartman, Hagle and Buller to the process of spinning soy protein fibers.

"Actually Boyer had been trying to produce a synthetic fiber resembling wool. Although he was not able to develop a suitable synthetic wool, Boyer did produce a vegetable protein substance similar to muscle fiber. His work resulted in the development of meat-like products resembling lamb, beef and chicken.

"Boyer's new materials did not lend themselves to processing under high temperatures normally used in canning. This led to the manufacture of frozen vegetarian products.

"Since many of the small health food stores selling Worthington products were not equipped with freezers, the company provided these stores with frozen food cabinets. This bold marketing stroke vaulted Worthington Foods years ahead of its competitors to become the first company offering frozen meet analogs.

"Worthington Foods also grew during the 1950s and '60s through the acquisition of other food companies. First came the wheat protein products of Dr. Harry Miller. Miller's Cutlets later became known as Vegetarian Cutlets.

"Worthington Foods next purchased the Battle Creek Food Company founded in 1869 by world-famous Dr. John Harvey Kellogg. This acquisition–including its line of Kaffree Teas–pushed Worthington's sales over $1 million in 1960. Four years later, Worthington took over the Madison Foods plant in Madison, Tennessee.

"By the late 1960s, interest in soy protein products heightened as the nation faced a meat shortage and meat prices spiraled upward. Recognition of Worthington Foods as a leader in the development of meat analogs led to take-over inquiries from a number of major companies.

"Company directors decided in early 1970 that Miles Laboratories offered the best blend of financial resources and management philosophy. After the merger, Worthington Foods became the center of protein research, development and production for the parent company's worldwide operations.

"Under Miles Laboratories, the Morningstar Farms brand of cholesterol-free foods was introduced. This marked the first time textured vegetable protein products had been marketed nationally through supermarkets.

"During its 12 years as a division of Miles Laboratories, Worthington Foods doubled the size of its research and development facilities; and construction of a new plant tripled production capacity.

"On October 15, 1982, Worthington Foods once again became an independent operation. The company was repurchased from Miles Laboratories by a group of Seventh-day Adventist investors, including its founder, Dr. George T. Harding, Sr.

"The reacquisition and financial restructuring of Worthington Foods was organized primarily by three men who had been instrumental in the early years of the company–James Hagle, Allan Buller and Dr. George Harding, Jr.

"Worthington Foods continues to emphasize the process technology and product innovation that has distinguished it from its competitors for nearly half a century. In recent years, the company has broadened its base to encompass a variety of health-oriented food and beverage products.

"In 1983 Worthington Foods launched its third brand line, Natural Touch. Developed to be free of any artificial additives, preservatives or colors, the Natural Touch line represents a major thrust into the all-natural foods market.

"Food science and technology have advanced remarkably over the past four decades to allow even more convenient, healthful and flavorful products. Capitalizing upon these advances, Worthington Foods has remained steadfast in its heritage of promoting good health through better nutrition."

Photos show: (1) The 2-story home which became the first Worthington Foods factory in 1939. (2) Ground-level view of the front of Worthington Foods factory in 1950. (3) One can each of Choplets, Instant Soyamel, and Worthington Burger. (4) An inside view of part of the Worthington factory.

Two pages (p. 6-7) show various Worthington products and their packages. One page each is devoted to: New management (with photos). Photo of operating staff. Brief bios of operating staff. Directors and officers (portrait photos and bios).

Note: An earlier edition of this booklet was published in 1984. The cover title was "Worthington: Building for a healthier tomorrow." Address: Ohio.

2700. Hosken, Bob. 1988. Adventists and longevity. *Record* (*Warburton, VIC, Australia*). Jan. 16. p. 4-5.
• ***Summary:*** This journal is published by Signs Publishing Co., Warburton, Victoria 3799, Australia. Address: Dep. of Home Economics, Newcastle College of Advanced Education, New South Wales, Australia.

2701. Chollet, Laurence. 1988. Magic beans: Soy foods multiplying. *Record* (*Hackensack, New Jersey*). March 7. p. B-3, B-4.
• ***Summary:*** This story is based on a news release from Soyfoods Center showing the number of new soyfoods

© Copyright Soyinfo Center 2014

products introduced each year. According to Bill Shurtleff, who compiled the report: "In 1976, 78 new products were introduced; last year, 330 products were introduced, making it by far the biggest year for soy food products,..."

Bonnie Liebman, director of nutrition for the Center for Science in the Public Interest, says that "all fats have been implicated in breast and colon cancer." Soy foods are free of cholesterol and generally low in saturated fats, but they are often high in unsaturated fats.

"Soy foods tend to be a little more expensive than their meat and dairy counterparts"–whether hot dogs, entrees, ice cream, or cheesecake. Mentions: Tofu Entrees from Legume, Inc, Lite Lite Tofutti, Tofutti's Better than Cheesecake. A large photo shows packages of Tomsun Tofu, Jofu, Ice Bean, Legume Classic Lasagne, and five Worthington meatless products: Luncheon Slices, Prosage Links, Vegetarian Pie, Wham (meatless ham), and Meatless Chicken.

2702. Abersold, Vance. 1988. New developments in soymilk, Stephen Story, and Great American Foods in Salt Lake City (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** His soymilk was launched in Feb. 1987. It is selling very well to the people who are allergic to dairy products and to vegetarians. Its features are the best taste (because of a new process, and the lowest price, since it is sold dry primarily by direct mail). He got interested in 1981 when he was involved with Roy Brogue at the company Meadowfresh Farms (no longer in existence) in Salt Lake City, Utah, developing whey-based milks. The company was Mormon and the products used in food storage programs because they last far longer than powdered milk. But he grew interested in soymilks because whey-based milks are high in lactose and because of a big breakthrough in tofu and soymilk development made by Steven Story, a student of Dr. Clayton Huber at Brigham Young University, Dept. of Food Science and Nutrition. Huber was the head food nutritionist on the NASA Space Program. Huber fought the dairy industry when Meadowfresh was launched, and prevailed in every suit in every state. Story also made breakthroughs on whey-based milks. He is a genius at food development, and is now a consultant in Salt Lake City (Tel. 801-298-0188) doing developmental work for food companies. Vance got into this because of long-time undiagnosed serious allergies to milk products.

Story was a one-third owner of Great American Foods which started in about 1986 in Salt Lake City, as a division of Magic Mill (which makes stone mills), which is in turn a part of the SSI corporation. They produce the product (plus many other products, such as whey-based diet drinks/liquid meals), and presently sell it to Abersold and to Sovex. Sovex retails it for about twice as much as Abersold under the brand "Better than Milk." Magic Mill also sells its own Magic Mill Soy Milk. Steve is presently dissolving his partnership. He does not know of anything that Story has published. His product Sno-e contains a small amount (about 1%) of sodium caseinate, but in the extraction process all of the allergens are removed so it can be called "non-dairy." One of his goals is to develop a second product that does not contain any sodium caseinate. Yet the sodium caseinate in the present product is a key to the flavor. Address: 2730 Morley Way, Sacramento, California 95864.

2703. Davis, Bob. 1988. Light Foods and the tofu hot dog market in America (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are three major companies making tofu hot dogs for the U.S. market (not including Loma Linda and Worthington, which use isolates rather than tofu): Light Foods, Bob's company which originated the idea, has about 40% of the market, especially the West Coast. Lightlife Foods (formerly Tempehworks) has about 40%, especially East Coast, and Yves (from Canada) has about 20% nationwide.

Bob still has bad feelings about the way Lightlife Foods took away his East Coast market. Originally, Tempehworks was Light Foods' master distributor for tofu hot dogs on the East Coast. Then for about 6 months Tempehworks stopped paying for the product they were receiving. (They eventually paid later). Suddenly they dropped the Light Foods tofu hot dogs and came out with a competing product of their own, named Tofu Pups. It was quite similar except that it was free of egg whites. Tempehworks told many distributors and retailers that Light Foods was going or had gone out of business, as a way of getting them to switch products. Davis received letters from 35-40 stores and many customers asking why he went out of business or why he started making Tofu Pups. Shortly thereafter Tempehworks changed its company name to Lightlife Foods, not much different from Light Foods. This combination of events destroyed the market for Light Foods' tofu hot dogs on the East Coast. They had no East Coast distribution for 6 months. Light Foods considered litigation, but didn't have the money. Now Light Foods is coming out with a new meatless hot dog containing no egg whites. Address: 12125 East Brookview Dr., Grass Valley, California 95945. Phone: 916-273-2218.

2704. Nordquist, Ted. 1988. New developments with tofu and soymilk in Sweden (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ted is working with three of Sweden's largest food companies: (1) Semper AB, the country's largest milk company, used to be an independent milk research company. Semper now makes an infant formula, and two flavors of soy drink for adults, both from soy protein isolates. The later is poor tasting. Semper is now wholly owned by Arla, the Swedish milk company. (2) Karlshamn Oliefabrik, Sweden's largest oils and fats company, that is also the

© Copyright Soyinfo Center 2014

largest manufacturer of ice cream and margarine. They used to be a soybean crusher, but now they import their oil. Karlshamn has the Swedish franchise for Ralston Purina. They have a newsletter The Soybean Magazine that they use to market Ralston's products. They import isolates, which Semper buys for use in their infant formula (Soja Semp) and adult soymilks. (3) Trensums Musteri, a juice company owned by Mark Jungstrum, who owns the only 3 Combibloc machines in Sweden. He packages Knorr soups in them. The resources are unlimited. The present focus is on developing a natural soy base free of beany flavor and evaluation the economics of the product. From this base they will make a line of products, including dairylike products and non-beany tofu. Ted has a contract with Trensums to receive a 2% commission on all soy products made in the new plant, since he basically developed the plant, which is inside the Trensums Musteri juice factory located in the south of Sweden, near Karlshamn. He also has a contract with Semper. Semper supplies Karlshamn with all their milk products. Roughly 12 million crowns ($2-3 million) has already been invested in soy equipment and R&D at this plant in Tingsryd, which produces about 4,000 liters/hour of soymilk.

This project began in 1983, when Luke Lukoskie came to Ted with a proposal to cooperate with Alfa-Laval, since Ted was the only tofu maker in Sweden, where Alfa-Laval is located (in Lund). Luke had a contract with Alfa-Laval to develop tofu and other soy products. He wanted a continuous tofu making process. Alfa-Laval had a plant installed in his former factory, which burned down. At one point Lukoskie was considering a lawsuit against Alfa-Laval. In 1984 Alfa-Laval began moving the soy development operations from Lund to Singapore. At the time they had sold one plant to China, with plans to sell 2 more if the first proved successful.

Ted met with the people from Talmo Gordon, who were planning to build a soymilk plant in Ludvika, funded with government money, but dropped the idea after Semper and Ted showed them that their concept was not feasible. The owner of the plant in Tingsryd is an expert at product development, including foods such as mushroom soups in German Combibloc that cannot be done in Tetra Pak. So Ted left his cooperation with Alfa-Laval and started developing with him in Tingsryd. They signed a contract. Ted goes there for 3 days a week. The sales of Aros grew 70% last year, in part because of new labels. All products are doing well. He makes an average of 2,000 kg (4,400 lb) of tofu per week. By vacuum packing his tofu then pasteurizing it at 95ºC for 45 minutes, then quick cooling it in water at 4-6ºC, he gets a shelf life of 85 days at 4ºC under ideal conditions vs. 30 days shelf life if it is not vacuum packed. None of Sweden's three big supermarket distributors carry his tofu, so he distributes to supers himself. The three distributors that serve the country's 65 health food stores do not have refrigeration. There are no tofu companies yet in Norway, Denmark, or Finland. Of all of Aros sales, 55% is regular tofu, followed by marinated tofu (*Tofu Marinerad*) 15%, then three other products. Nutana makes a canned tofu (made entirely from isolates) in cubes in a sauce. Lima Foods sells a bottled tofu. There are 8 million people in Sweden.

Tomsun is trying to register the trademark Jofu (their nonfermented soy yogurt) in Sweden. This may upstage Ted's attempt to trademark Sofu for soymilk and wipe out his trademark on the term "Tofu."

Semper is interested in having the new soy base be low in oligosaccharides so that their infant formula does not cause flatulence. The following oligosaccharide levels have been found in European soymilks: Alfa-Laval's plant in Colmar, France, that uses ultrafiltration 0.02 gm/liter; Alpro in Belgium 0.28 gm/liter; Alfa-Laval's pilot plant in Sweden 0.43 gm/liter; the STS plant built for DE-VAU-GE in Germany 0.58 gm/liter. By using ultrafiltration to make tofu you can both remove the oligosaccharides and reduce the water content. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

2708. Crippen, Dave. 1988. Henry Ford and the plastic

© Copyright Soyinfo Center 2014

car. John Harvey Kellogg and the Battle Creek Sanitarium (Interview). *SoyaScan Notes*. April, and May 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Crippen's main interest is the history of automotive design. Ford R. Bryan is a volunteer who works with him. Crippen visited Robert Boyer and taped 8 hours on the history of the plastic car. He also taped an interview with Lowell E. Overly, the man who designed the car. He died about a year ago and he was quite old at the time of the interview. [Note: Fred Hapgood, author of a 1987 *National Geographic* article on soybeans, said that Overly destroyed the car because both Henry Ford and soybeans proved embarrassing]. Neither interview has been transcribed. The 72 page interview with Bob Smith and Donald Sullivan was done by Don Baut of the Dearborn Historical Museum. Dave also has two books on the Chemurgic movement written by a chemist [William J. Hale] from the Dow Chemical Co.

He grew up in Battle Creek, Michigan. During World War II the U.S. Army took over the Battle Creek Sanitarium and renamed it Percy Jones Hospital. Jones was a hero who was a quadruple amputee, and it became a center for amputee rehabilitation. It is still a center for various U.S. governmental activities. Kellogg died almost penniless. His brother, Will Keith, who built the corn flake empire, never tried to help his brother, John Harvey, in later life.

Update on the 8 hours of interviews conducted by Dave Crippen with Robert Boyer. 1993. Sept. 26. According to Ford Bryan, these tapes have now been transcribed and added to the series of "Reminiscences" now in Acc. 60, at the Research Center of Henry Ford Museum and Greenfield Village. It is Mr. Bryan's impression that Mrs. Boyer, together with her son, plans to have a biography of her husband Robert Boyer published in the near future. Address: Research Center, Henry Ford Museum & Greenfield Village, P.O. Box 1970, Dearborn, Michigan 48121. Phone: 313-271-1620.

2709. Keville, Kathi. 1988. Back to Eden's Jethro Kloss. *Vegetarian Times*. May. p. 67-69.
• ***Summary:*** Soyfoods are an integral part of Kloss' dietary philosophy. He was born in 1863 on a farm (called the Garden of Eden, by the way) near Manitowac, Wisconsin, one of 11 children. A typhoid epidemic spawned Kloss' career as a natural healer. He was firm in his belief that substituting soy products for dairy products is essential to good health.

Back to Eden was published when Kloss was 76 years old.

Move Over, Tofutti–Kloss "began what might have been the first natural foods fast-food stand, based largely on soyfoods. That was in the 1930s when the Kloss family was living in Washington, D.C. To reach influential Washingtonians, Kloss parked a small trailer on Pennsylvania Avenue, by the White House and Capitol buildings. There he sold vegetarian quick lunches to government employees. Soy bread sandwiches were filled with nutmeats, lettuce and sliced tomatoes. Favorite snacks were strawberry, chocolate and vanilla ice creams made directly from raw soybeans. (The beans were soaked and ground, then milk was pressed out of them.) Hot soybean coffee, with soybean cream, was served...

"Jim Taft, vice president of research for Farm Foods, an offshoot of The Farm community in Tennessee and producers of soy-based 'Ice Bean,' said he made his first batch of soy-milk 20 years ago, using the *Back to Eden* recipe. Taft said he was extremely influenced by Jethro Kloss. 'He was very popular among my friends. I read his book from cover to cover. I can't remember where I got my first soy ice cream recipe, but I think it was a combination of *Back to Eden* and *Ten Talents* (by Frank J. and Rosalie Hurd, whose recipes are also based on Seventh-day Adventist principles).'" The recipe for Soy Ice Cream that Taft remembers using is given. It calls for 1 tablespoon agar-agar, cold water for soaking, 2 quarts soymilk, 2 lbs. barley malt sweetener (powdered form), ½ pint soy margarine, and crushed fruit, fruit juice, or vanilla (optional).

2710. Mills, Paul K.; Beeson, W.L.; Abbey, D.E.; et al. 1988. Dietary habits and past medical history as related to fatal pancreas cancer risk among Adventists. *Cancer* 61(12):2578-85. June 15. [46 ref]
• ***Summary:*** In human populations consuming soybeans, the connection between pancreatic enlargement and protease inhibitors observed in animals has not been seen. In fact, incidence of pancreatic cancer is reduced in these groups. Address: Dep. of Preventive Medicine, School of Medicine, Loma Linda Univ., Loma Linda, California 92350.

2711. Fay, Jocelyn. 1988. Loma Linda Foods completes consolidation. *Gleaner* (*Portland, Oregon*). July 18. p. 12.
• ***Summary:*** "With the expansion of its factory in Riverside, California, almost complete, Loma Linda Foods, Inc., plans soon to have all of its employees working under one roof. Infant formula production will move in July or August from Mount Vernon, Ohio, to the Riverside factory, which produces meat analogs. The company has enlarged its Riverside plant, leased additional warehouse space, and made a major investment in new equipment during the past 3 years in preparation for the Mount Vernon closing. 'We are using company profits to finance a good portion of the approximately $5 million our consolidation is going to cost us,' says Alejo Pizarro, Loma Linda Foods president... Most of Loma Linda Foods' $5 million investment has been for equipment."

"Pizarro ways the 82-year-old company is 'actively working on the expansion of current product lines and the introduction of new products.'... The Board may eventually decide to lease the Ohio factory but has no plans to sell it."

© Copyright Soyinfo Center 2014

2712. Lease, Carol Ann. 1988. Worthington Foods to move house, create museum. *Dispatch* (*Columbus, Ohio*). July 20. p. 16. Neighbor news section.
• ***Summary:*** "Worthington Foods plans to open a museum in the house in which the company was founded nearly 50 years ago. The city's Municipal Development Commission decided last week to recommend to the City Council that Worthington Foods be allowed to move the house at 811 Proprietors Rd. across the street to what is now a parking lot next to the company's offices." A photo shows the house in which Worthington Foods started.

2713. **Product Name:** [Sahm Yook Soymilk (Plain)].
Foreign Name: Sahm Yook Dou Ru.
Manufacturer's Name: Sahm Yook Korean Foods.
Manufacturer's Address: 320 Panjeong-ri, Jiksan-myun, Chunwon-gun, Choongchungnam-do 333-810, South Korea.
Date of Introduction: 1988 July.
Ingredients: Soy milk, high fructose corn syrup, corn oil, rapeseed oil, salt.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton. Retails for 220 Won (6/90).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Eric C. Fehlberg. 1990. March 8. The Seventh-day Adventist food company in South Korea, Sahm Yook Foods, now makes soymilk (only plain, no flavors) packaged in Tetra Brik cartons and foil Doypack/Doynpack. The company was established in about 1978, and it began to make soymilk in May 1985. After launching soymilk, the company began to grow dramatically, as that product grew. Last year they built a very large, new soymilk plant (based on Adventist technology) and they are now about the 2nd or 3rd largest soymilk maker in Korea.

Label (Tetra Brik carton). Sent by Eric Fehlberg. 1990. March 12. 2.5 by 3.25 by 1.5 inches carton. Red, yellow, dark green, and light green on white. Front panel says "Soy Milk" and an illustration shows 3 yellow soybeans in a green pod.

Form filled out by C.Y. Yoon, General Manager, Sahmyook Korean Foods. 1990. June 23. Note that on the envelope the company name is printed Sahmyook Korean Foods, but the brand name is typed 4 times on the form as Sahm Yook. The address on the envelope is 320 Panjung Jiksan Chunwon Choongnam, Korea. The soy milk in a foil retort pouch was introduced in April 1985. The same product with the same ingredients was launched in a Tetra Brik carton in July 1987.

2714. Euler, Gary L.; Abbey, D.E.; Hodgkin, J.E.; Magie, A.R. 1988. Chronic obstructive pulmonary disease symptom effects of long-term cumulative exposure to ambient levels of total oxidants and nitrogen dioxide in California Seventh-day Adventist residents. *Archives of Environmental Health* 43(4):279-85. July/Aug. [67 ref]
Address: 1. Epidemiologist, Kern County Health Dep., Bakersfield, California; 2. Prof., Depts. of Biostatistics and Preventive Medicine, Loma Linda Univ., Loma Linda, California 92350.

2715. Schnell, Hannelore. 1988. Kleine Bohne, ganz gross [Small bean, very big]. *Natur* (*Munich, West Germany*). Aug. p. 75-83. [3 ref. Ger]
• ***Summary:*** Discusses soymilk, tofu, soy sauce, miso, tempeh, Soyastern, Svadesha Tofurei, Alpro, and DE-VAU-GE. Concludes with a detailed discussion of newly recognized potential dangers with HVP products. Vegetable seasonings made by companies such as Maggi may contain carcinogenic chloropropanols, such as dichloro propanol. Maximum limits on these are now being established.

2716. *Adventist Review* (*Hagerstown, Maryland*). 1988. Division notes 100 years of German literature ministry. Sept. 8. p. 20 (p. 972).
• ***Summary:*** The Hamburg area contains two important Adventist institutions: the Hamburg Publishing House, established in 1895, "and the well-known De-Vau-Ge health food factory, launched almost 90 years ago.

With 300 employees and a turnover (sales) of DM80 million ($47.2 million) in 1987, the food factory is the largest institution of the Euro-Africa Division. Director M. Makowski says the company's goal is to reach a turnover of DM 100 million ($59 million) in 1990.

"One thousand different food products are made at De-Vau-Ge, 500 of which are sold under the label 'GranoVita.'

"The food factory also produces 4,228 quarts (3,844 liters) of soymilk every hour. a European record. De-Vau-Ge holds an 11 percent share of the market, making it the most important one in the 'Neuform' health food stores association."

2717. Schwartz, Jack. 1988. History of the health foods industry in America (Interview). *SoyaScan Notes.* Sept. 25. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Jack founded the magazine *Health Foods Retailing* in about 1938 in New York. But the real expert on the history of this industry is Frank Murray, who lives in Manhattan (Business: 212-613-9700; Home 212-924-0063). He has done extensive research in the field and has written a book on the history of this industry [*More than One Slingshot*], published in 1984. He has copies of back issues of magazines and many records. Frank worked for Jack at Syndicate Magazines. They published *Better Nutrition* starting in about 1939, then *Today's Living* in about 1948; both are still published. In 1981 he sold the company to a large British firm, a subsidiary of British General Electric. They discontinued or ruined many of the best publications.

Another early and important health food publication was

© Copyright Soyinfo Center 2014

Nature's Path, published by Benedict Lust in New York City, starting in 1925.

Early and important soy products were Joyana, Bob Hoffman's Protein Powder and about 10 years later a similar product from Joe Weider, and a line from Battle Creek Foods.

Another pioneer to talk with is Sam Reiser, who founded Balanced Foods, the largest natural food distributor in America. A cousin, he was in the industry since about 1939 and was a major pioneer. Phone: 201-944-4639 in Fort Lee, New Jersey. Address: 27 Highland Ave., Larchmont, New York. Phone: 914-967-7556.

2718. Boff, Vic. 1988. University of Texas Library's Todd & McLean collection on health and fitness. Health food pioneers (Interview). *VegeScan Notes.* Sept. 26. Conducted by William Shurtleff of Soyfoods Center. [5 ref]
• ***Summary:*** The University of Texas at Austin has one of the largest collections of periodicals, books, papers, and memorabilia on the health foods movement and industry in America. It is in the Todd & McLean Collection, occupying 8,000 square feet. Contact Dr. Terry Todd in Austin (Phone: 512-471-4890. Gregory Gym 33, Univ. of Texas, Austin, TX 78712). The library is on the third floor of the gym. Prof. McLean is no longer living. They have an especially good collection of Bernarr Macfadden's publications.

Vic is an old timer in the health food industry. He worked closely with Dr. Benedict Lust (he wrote for him starting in 1936) and knew Bernarr Macfadden. Lust was an M.D. (licensed in Florida), ND, and DC. Coming to America from Germany, he was the founder of Naturopathy in America, located on Lexington Ave. in New York. He died in 1942. Lust published *Nature's Path* (a popular periodical that started in the early 1900s and was continued by his nephew or son, John Lust, who passed away recently), and *Naturopath*, a professional publication for naturopathic physicians, starting in the 1930s until he died. Lust had two sanitariums in Florida and New Jersey, doing hydropathy and chiropractic. He was a major figure, a great man, but had constant opposition for the local medical associations and societies. Macfadden was tremendous in the advancement of natural foods and natural healing in this country. Boff has all Physical Culture magazines from 1898 to the 1940s. Macfadden and Lust were on good terms with each other. Macfadden was more involved with physical fitness; his slogan was "Weakness is a crime." He promoted sunshine and fresh air, physical therapy and hydrotherapy; he was put in jail for trying to do away with bathing suits that covered the whole body. He had a huge publishing operation. Otto Carque was a great natural foods pioneer in California, probably in Los Angeles. He was interested in soyfoods. Even in the early days, many of the health foods pioneers advocated the soybean because many of them were vegetarians and the soybean is a great substitute for meat. Loma Linda and Kellogg were also a major forces. Address: Brooklyn, New York. Phone: 718-648-5254.

2719. Murray, Frank. 1988. History of the health foods movement in America (Interview). *SoyaScan Notes.* Sept. 26. Conducted by William Shurtleff of Soyfoods Center. [5 ref]
• ***Summary:*** Frank entered the health foods industry in 1963, when he went to work for Jack Schwartz at Syndicate Publications, publisher of *Health Foods Retailing* magazine. His book, "More than One Slingshot" (1984) was a history of the NNFA, written for them and not released commercially. But it was also a history of the health foods movement in America. Important health foods publications included *Health Foods Retailing* (founded in April 1936 by Lelord Kordel and sold several years later to Jack T. Schwartz, who remained publisher until Feb. 1982), *Better Nutrition* (now in its 50th year), *Let's Live*, and *Prevention.*

The University of Texas has a large collection of periodicals, books, and memorabilia on health and physical fitness, including figures such as Bernarr Macfadden. For details contact Vic Boff in Brooklyn, an old timer in the industry. Back issues of Health Foods Retailing (in a small, digest format) can be found at Communication Channels Co. in Atlanta, Georgia (Phone: 800-241-9834).

Joe Weider has always been in California, and is still alive. He publishes many weight lifting magazines.

In the 1960s the main soyfoods products he remembers were from Loma Linda Foods, Worthington, and Fearn Soya Foods. Address: New York. Phone: 212-613-9700.

2720. *American J. of Clinical Nutrition.* 1988. First International Congress on Vegetarian Nutrition. 48(3S):707-927. Supplement. Sept.
• ***Summary:*** These are the proceedings of a congress held in Washington, DC, USA, on 16-18 March 1987. This pioneering congress was sponsored by Loma Linda University Medical Center (California); Adventist Health Systems/United States; Seventh-day Adventist Hospital Association; San Joaquin Community Health Center; Loma Linda University; Andrews University; Departments of Health of the North American and South Pacific; Divisions of Seventh-day Adventists; Seventh-day Adventist Dietetic Association.

Program chairpersons were Kathleen K. Zolber, PhD, RD, and Patricia K. Johnston, DrPH, RD. Guest editors were Patricia B. Mutch, PhD, RD, and Patricia K. Johnston, DrPH, RD. Publication of these proceedings was made possible by Pacific Health Education Center, Bakersfield, California.

This congress received support from SE Rykoff/ Sexton, plus three Seventh-day Adventist food companies (Worthington Foods, Loma Linda Foods, and Sanitarium Foods). Many of the individual papers are cited separately.

2729. **Product Name:** Granose Soya Yogert (Soymilk Yoghurt) [Peach Melba, Blackcurrant & Apple, Apricot, and Strawberry].
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in southern England by Bridge Farm Dairies. Made since late 1990 in Clwyd, Wales, by Genice Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1988 September.
Ingredients: Peach melba: Soya milk (Water, dehulled soya beans, sea salt), Mauritian raw cane sugar, peaches, raspberries, stabilisers, maize starch, guar gum, pectin, Bulgarian cultures, natural flavouring.
Wt/Vol., Packaging, Price: 125 gm plastic cup with foil lid.
How Stored: Refrigerated.

© Copyright Soyinfo Center 2014

Nutrition: Per 100 gm.: Energy 73 Kcal (calories) or 288 k.J., protein 3.0 gm, carbohydrate 11.45 gm, fat 1.8 gm, cholesterol 0.0 gm.

New Product–Documentation: The Vegan. 1988. Summer. p. 16. The product launch has been delayed until early July by a change of name–from Soya Yogart–following a challenge from a competitor. A black-and-white photo shows the label of Granose Soya Yogart.

Form filled out and four Labels (cups & tops) sent by Granose Foods Ltd. 1990. June 13. States that the product (spelled Yogert), made by Bridge Farm Dairies, was introduced in Sept. 1988. It has never been made by DE-VAU-GE. It is Ultra Heat Treated The shelf life is 15 weeks. The product is sold mainly to the health food trade. It now comes in the four flavors shown above. A color illustration on the foil lid shows the main fruit used in a white square with a blue border against a pastel background. The name of the fruit is written along the bottom of the square. A "Best before" date is stamped atop each lid. The front of the cup contains a similar but more elaborate drawing. "Best served chilled."

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. Granose Soya Yogert was made by Genice starting in late 1990 in 4 flavors–peach melba, strawberry, apricot, and blackcurrant & apple. Granose became part of the Haldane Foods Group in Jan. 1991.

• ***Summary:*** "Vegetarian diet patterns and their effects on health have been the subject of increasing scientific interest in recent years. From a limited state of knowledge reviewed in 1962 by Hardinge, Crooks, and Stare (1) that covered virtually all known research, we have reached a significantly more sophisticated level of understanding. Being a vegetarian today is not automatically suspect of producing malnutrition as it often was only three decades past. Evidence for specific health advantages of vegetarian diets in reducing risks of chronic disease has accumulated especially in the past decade. Yet concerns for certain types of vegetarian diets have also been well-documented...

"The second keynote speaker for the congress was to have been Roland L Phillips, whose careful epidemiologic studies on vegetarian populations and chronic diseases alerted nutrition scientists of the potential health benefits associated with some vegetarian dietaries. Tragically, just before the opening of the congress, Dr Phillips died in a sailplane accident. In recognition of the major contribution that he made to the study of vegetarian populations, these proceedings are dedicated to the memory of Roland L Phillips. His brilliant approach to complex research questions and his steadfast objectivity were traits that will be sorely missed by the research community." Address: 1. Dep. of Home Economics, Andrews Univ., Berrien Springs, Michigan; 2. Dep. of Nutrition, Loma Linda Univ., Loma Linda, California.

2737. Mutch, Patricia B. 1988. Biographical sketch of Roland L. Phillips. *American J. of Clinical Nutrition* 48(3S):708. Supplement. Sept. Proceedings of the First International Congress on Vegetarian Nutrition. Held 16-18 March 1987 at Washington, DC.
• ***Summary:*** A photo shows Dr. Roland L. Phillips (1937-1987). He received his MD degree in 1964 from Loma Linda University. "After receiving his Doctor of Public Health degree from Johns Hopkins University [in Baltimore, Maryland], he served from 1971 to 1987 as Professor of Epidemiology at Loma Linda University [in California]. Here he was principal investigator and director of the Adventist Health Study that began in 1974... Roland was, in the view of his colleagues, one of the foremost cancer epidemiologists in this country, best known publicly for his research in cancer and lifestyle." He died tragically on 8 March 1987 in a sailplane accident. Address: 1. Dep. of Home Economics, Andrews Univ., Berrien Springs, Michigan.

• ***Summary:*** Contains an interesting history of early research in this field, starting with the ancient Greek belief that good athletes should eat a lot of meat. During the mid-1800s, Liebig, the preeminent physiological chemist of his time, promoted the concept that energy for all muscular movement was produced by the oxidation of protein. But from the mid-to-late 1800s on, vegetarians repeatedly showed their superiority in endurance exercise, from bicycling to walking. The key to endurance for an athlete is to consume 70% of calories in the form of carbohydrates. Address: Dep. of Nutrition, School of Health, Loma Linda Univ., Loma Linda, California 92350.

• ***Summary:*** Bone mineral content and bone density were determined using a Norland single-beam bone densitometer. Vegetarianism and protein intake were positive contributors to bone health. Phosphorus was a negative contributor. Current calcium was not a significant contributor. Address: Dep. of Nutrition, School of Public Health, Univ. of North Carolina, Chapel Hill, North Carolina 27514.

2747. Freedman, Alix M.; Gibson, Richard. 1988. Brand news–Philip Morris's bid for Kraft could limit product innovation: Consumers and rivals fear dominance of shelf space and advertising media. Don't expect a drop in prices. *Wall Street Journal.* Oct. 20. p. A1, A6.
• ***Summary:*** Three years ago General Foods was acquired by Philip Morris. Now the cigarette giant is bidding $11 billion for Kraft Inc., which owns some of America's best known brands

A pie chart shows 1987 sales for the new company which has two parts and six segments: (1) Kraft Foods $9.9 billion, including: Consumer foods $4.5 billion (Kraft, Miracle Whip topping, Parkay margarine, Velveeta cheese, Breyer's ice cream, Breakstone dairy products, Frusen Gladje, Budget Gourmet frozen dinners, Tombstone pizza), Food service and ingredients $3.0 billion, International Foods $2.3 billion. (2) Philip Morris $27.7 billion, including: Brewing $3.1 billion (Miller, Lite, Matilda Bay wine coolers), General Foods $10.0 billion (Maxwell House coffee, Birds Eye frozen foods, Jell-O, Entenmann's, Oscar Meyer meats, Post cereals, Ronzoni), Cigarettes $14.6 billion (Malboro, Benson & Hedges, Virginia Slims).

A table shows the most profitable consumer food companies, with annual sales (in millions of dollars) and operating profit margin for each, in descending order of operating profit margin (earnings before taxes, interest and depreciation as a percentage of sales), as follows: Kellogg ($3,793, 21.2%), Ralston Purina ($5,868, 16.3%), Heinz ($5,244, 15.7%), Hershey Foods ($2,434, 15.0%), RJR Nabisco (food operations only; $9.420, 13.7%), Campbell Soup ($4,869, 12.7%), Quaker Oats ($5,330, 12.0%), General Mills ($5,179, 12.0%), Borden ($6,514, 11.7%), Pillsbury ($6,191, 11.1%), Kraft ($9,876, 9.5%), General Foods (Philip Morris; $9,946, 8.1%), Sara Lee ($10,424, 7.7%).

In 1984 Kraft acquired Celestial Seasonings, the herbal-tea company, then aggressively extended the line to include many new flavors, and put the brand on mixed seasonings, salad dressings, and even cosmetics. This proved to be a blunder, so last year Kraft sold Celestial (barely profitable despite $38 million in sales) to a management group. Address: Staff reporter.

2748. **Product Name:** Loma Linda Nuteena (Meatless Luncheon Loaf or Cold Cuts Prepared from Raw, Ground Peanut Butter and Soy Flour).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1988 October.
Ingredients: Water, raw peanut butter, soy flour, rice flour, corn flour, natural (vegetable) flavors, salt, onion powder, L-lysine, DL-methionine, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 19 oz (538 gm) can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: 1988: Per ½ inch slice (2.4 oz–67 gm): Calories 160, protein 8 gm, carbohydrate 5 gm, fat 12 gm, cholesterol 0 mg, sodium 120 mg, potassium 200 mg.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. The ingredients are now: Water, raw peanut butter, soy flour, rice flour, corn flour, natural (vegetable) flavors, salt, onion powder, L-lysine, DL-methionine, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). This product was introduced in 1963. But note that a canned product named Nuteena was also available in June 1934. It is not clear whether or not it contained soy in 1934.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. The ingredients are the same as those shown above. The soy flour is probably textured.

Note: This product was first introduced in 1949, but did not contain textured soy protein at that time.

2749. *Dispatch* (*Columbus, Ohio*). 1988. Worthington Foods to build Zanesville unit. Nov. 12. p. 9D. Business section.
• ***Summary:*** "Worthington Foods Inc. will construct a frozen foods manufacturing plant in Zanesville, Ohio, early next year. The Worthington-based company has signed a letter of intent to purchase 12 acres in the Zanesville Industrial Park, where it will build a 50,000-square-foot plant. The project will cost about $10 million, said Dale E. Twomley, president and chief executive officer at Worthington Foods. Twomley said the company... plans to begin production in the fourth quarter of next year. Initially, the plant will employ 40 to 50 people and manufacture Scramblers, the company's frozen egg product. 'But we may do some future expansion there later,' Twomley said."

2750. Amrit Protein Foods Ltd. 1988. Display ad: An investment in Amrit–an investment in prosperity. *Times of India* (*The*) (*Bombay*). Nov. 21. p. 11.
• ***Summary:*** Amrit Protein Foods Limited, "An exciting new venture," is promoted by Amrit Banaspati Co. Ltd. Amrit Protein equity issue opens 12 Dec. 1988.

"A complete line of fitness foods: Health and fitness are making big headlines these days. And to meet the growing demand for a new generation of fitness foods, Amrit Protein will manufacture a wide range of products–Soya Milk, Soya Milk Beverages, Soya Dessert, and High Quality Soya Paneer."

"Proven technology from world leaders:" Amrit has purchased its soymilk making system from STS–Soya Technology Systems–a division of the world renowned Danish Turnkey Dairies.

"Big success in the West! Products based on this technology have been a phenomenal success in the West. In fact, a plant set up as recently as 1985 near Hamburg has substantially increased its capacity [DE-VAU-GE, Lueneburg, West Germany].

"Products backed by extensive research:" The products are a result of extensive market research; they have been thoroughly tested in consumer taste trials.

"The market is ready and waiting:... Amrit Protein will open up a whole new dimension in the Indian consumer market.

"And you have an opportunity to share our bright future: To meet a part of the finance required for the project, Amrit Protein is making a public issue of 24,70,000 Equity Shares of Rs. 10 each for cash at par." The names and logos of the three Indian companies managing the issue are given.

The bottom half of this horizontal ad is a cartoon illustration with many stylized adults and children admiring the various uses of soy protein products such as tofu cubes on a dish and a dessert in a tall-stemmed glass. Address: Amrit Nagar, G.T. Road, Ghaziabad 201 009 (U.P.) [Uttar Pradesh].

2751. *Washington Post–Health* (*weekly magazine supplement*). 1988. The healthful lives of Adventists. Nov. 22. p. 7.
• ***Summary:*** Seventh-day Adventists are healthier than most Americans according to a study presented last week by Jan W. Kuzma at the American Public Health Association's annual meeting. Kuzma is a professor of vital statistics at Loma Linda University in California. "Kuzma found that a 35-year-old male Seventh-day Adventist was likely to live to be 82, nine years older than the average California white male. For females, the advantage was 7.6 years longer."

2752. Kloss, Jethro. 1988. Back to Eden: A human interest story of health and restoration to be found in herb, root, and bark. Revised and expanded second edition. Back to Eden Publishing Co., P.O. Box 1439, Loma Linda, CA 92354. xxviii + 1007 + 20 p. Illust. Index. 21 cm. Kloss Family Heirloom Edition. Index.

• ***Summary:*** One of the most creative and original sources of early soyfoods recipes, which include "Soybean Cream" and "Soybean Ice Cream." This revised edition contains all essential material from the original text of this classic work on healing herbs, home remedies, diet, and health, but it has been reorganized, re-typeset and re-indexed to make it easier to use and more contemporary. Three hundred pages of natural health information have been added. Old terms have been explained and updated. There are also 16 pages of photographs and 16 pages of new of family recollections by Jethro Kloss' daughter (especially interesting), son, and granddaughter. These add greatly to the story of his life and work. For example, his daughter, Promise, states (p. xv):

"Next the Klosses became interested in the self-supporting work being conducted in the south and they visited some of the schools in North Carolina and Tennessee. About 1911 they sold the sanitarium in Minnesota and moved to Fountain Head, Tennessee, where their youngest daughter, Naomi, was born in 1913. Here they bought a 250-acre farm, built a large house and barn, and raised many kinds of fruits and vegetables. They also raised Shetland ponies for a time.

"A later development in good health was his creation of a significant health food manufacturing operation in Amqui, Tennessee after receiving a request from the owners to take charge of their food factory. While he was operating this factory he would be up at two, three, or four o'clock in the morning; as early as necessary to build the fires for the steam cooker or the large oven and whatever else needed to be done to have everything in readiness for the workers to begin the day processing, canning, or baking. When that big oven was hot, he would often pop into it some special weekend treat for his family–some delicious health coffee cake or raisin buns like no one else could make, for he was an excellent baker.

"Before this factory was sold to the Nashville Agricultural Normal Institute, he was shipping health foods all over the United States and Canada. It was also during this time and at this place that he originated many new health food recipes. This establishment later became a part of what has since become the well-known Madison College near Nashville, Tennessee."

Photos show: (1) Portraits of Wilhelm and Sofia Kloss, parents of Jethro Kloss. They had 11 children, born between 1848 and 1868. Jethro was the 9th child, born April 27, 1863. (2) Jethro Kloss in 1900 as a young minister, healer, and teacher. (3) Jethro Kloss with Carrie Stilson, his first wife whom he married in 1901. Tragically she died in 1905. (4) Promise Kloss, born to Carrie and Jethro in 1903, shown as a young girl with her father. (5) Amy Pettis Kloss, Jethro's second wife. They were married in 1907. (6) Children of Jethro and Amy: Lucille Kloss (1908-1929). Eden Pettis Kloss (1910-). (7) Naomi Joan Kloss at 17 months of age. Jethro's youngest child, she was born in 1913. (8) In 1907 Jethro and Amy opened this comprehensive health and medical center in St. Peter, Minnesota, which they named The Home Sanitarium. (9) Jethro Kloss giving a hydropathy treatment at The Home Sanitarium; it was open from 1907 to 1912. (10) Amy operating the women's hydropathy treatment room. (11) Manufacturing malta, the great cereal syrup from pure wheat starch and barley. (12) In 1915, from their food factory in Nashville, Tennessee, the Klosses shipped foods throughout the United States and Canada. Here 4 people are seen working at a table. (13) Patients, family and friends enjoyed health foods caned by the Klosses in this outdoor "factory," which was a commercial enterprise as well. (14) This interesting illustration shows an aerial view of the Nashville Sanitarium-Food Factory with a train and 3 sets of train tracks in front. (15) A 1920 advertisement for utensils (such as 2 hand grinders for flour or nuts) sold by the Jethro Kloss Health Food Company in Brooke, Virginia. (16) Menu for a demonstration vegetarian dinner given by Jethro Kloss at the Dodge Hotel in Washington, DC, on March 27, 1933. "Sprouted soy beans" are on the menu. "The pumpkin pie and strawberry sundae were made with soy milk" (p. xvii). (17) A 1926 photo of Promise Kloss (Moffett) at age 23. (18) A 1935 snapshot of Jethro's only son, Eden Pettis Kloss. (19) Jethro's daughter, Promise, with typewriters won in typing contests during the 1930s. (20) Proud grandfather, Jethro, holding his only grandchild, Doris Joyce, in 1929. (21) Jethro's youngest child, Naomi Kloss Engelhard, mother of Doris Joyce. (22) "Promise Kloss Moffet, Jethro's first child, shares food preparation tips with Doris Joyce, his granddaughter, in 1934. (23) "A group of letterheads dating back to 1904 showing some of the variety of enterprises engaged in by Jethro Kloss during his lifetime." 1922 Feb. 27–Jethro Kloss Health Foods Company (Brooke, Virginia). Undated–Brookside Mercantile Company (Brooke, Virginia). Undated. Branch of the Battle Creek (Mich.) Sanitarium (Superior, Wisconsin). A full line of Battle Creek Sanitarium Health Foods. J. Kloss & Co. Grove Contractors, Farmers and Truck Farmers. Jethro Kloss Publications (Washington, DC). Back to Eden Magazine. Jethro Kloss, Medical Evangelist. (24) Promise Kloss Moffet, with a large, framed photograph of her father, Jethro Kloss, on her 80th birthday, Aug. 16, 1983. (26) Great-grandchildren of Jethro Kloss: Stephen Kloss Gardiner. (27) Nancy Kloss (Bramlett).

The book has been published continuously by the Kloss family since 1946.

Contents: Section I: Natural health. 1. Personal experiences. 2. Soil preparation and farming. Section II: Herbs for healthful living. 1. History of herbal medicine. 2.

© Copyright Soyinfo Center 2014

Herbs. 3. General directions for preparation and use of herbs. 4. Tonic herbs. 5. Herbs used to treat disease. 6. Medicinal trees. 7. Specific herbs for various medical problems. Section III: Treating diseases with herbs. Treating diseases with herbs. Special notice. Section IV: Your body and its needs. The digestive section. 1. The importance of good nutrition. 2. Carbohydrates. 3. Fats. 4. Protein. 5. Mineral elements in the body. 6. Vitamins. 7. Water. 8. Fresh air, exercise, and sleep. Section V: Your foods. 1. Fruits. 2. Vegetables. 3. Fiber (to "help keep you regular"). 4. Oatmeal. 5. Nuts. 6. Breads and refined flour. 7. Meat and vegetarianism. 8. Milk. 9. Salt. 10. Garlic. 11. Healthful diets. 12. Obesity. 13. Fasting and healthful eating. Section VI: Food preparation. 1. Useful hints to preserve vitamins. 2. Kloss's favorite health recipes. 3. Cooking under steam pressure. 4. Aluminum cooking utensils. 5. Baking and breads. 6. Preparing wholesome desserts and beverages. Section VII: Effects of polluted and adulterated foods on the body. 1. Adulteration of food. 2. Health-destroying foods. 3. Dangers from disease in animals. Section VIII: Water and good health. 1. History of water cure. 2. Using water to preserve health. 3. Water's effects and use in treatment. 4. Water's effects on sickness. 5. Baths and water treatments. 6. Compresses and fomentations. Section IX: Skills in caring for the sick. 1. Nursing. 2. Massage. 3. High enemas. 4. The value of charcoal. Appendix: Glossary of old-fashioned medical terms. Glossary of medical properties of herbs. General tables.

A press release accompanying the new revised, 2nd edition notes: Back to Eden was written by Jethro Kloss during the 1920s and 1930s, with help from Promise and Eden, his daughter and son. It was first published in 1939, when the author was 76 years old. It has since sold more than 3 million copies. Kloss died in 1946 after retiring to Tennessee. Message Press, a small business in a rural community not far from Chattanooga, continued to publish Back to Eden for more than 25 years after his death, under the direction of Promise, his daughter. Unfortunately in 1967 the copyright expired during the confusion attendant to the illness and death of the book's country publisher. Promise's attempt to renew the copyright in Jan. 1968 was too late. In 1971 other publishers pirated Back to Eden. Address: Loma Linda, California.

2753. *SanCo News* (*Sanitarium Health Foods Co., Australia*). 1988. Now the world thinks we're as good as gold: The Gold Food Oscar for So Good. Dec.
• ***Summary:*** "So Good was honoured at the 1988 AIDA-SIAL International Food Oscars held recently in Paris. As one of only 5 products representing Australia, So Good won a Gold Oscar by winning its category for the world.

"A total of 16 countries participated in the competition. An international panel of judges evaluated hundreds of products based on their uniqueness, appeal and sales performance. So Good won the 'non-alcoholic beverages' category thereby establishing itself as the best new product, in its category, in the world for 1988."

"The international award has created many enquiries about So Good from interested parties around the world." Address: Wahroonga, Australia.

2754. **Product Name:** AdeS (Soymilk) [Natural, Chocolate, Orange, or Apple].
Foreign Name: AdeS {Alimento de Soya Liquido Sabor Natural}.
Manufacturer's Name: Alimentos de Soja S.A. (A de S).
Manufacturer's Address: Plant: La Cocha, Tucuman, Argentina; Offices: Avenida Vélez Sarsfield 1744 (1285), Buenos Aires, Argentina. Phone: 760-0307 or (541) 21-8228 (8964). Fax: (541) 21-9632.
Date of Introduction: 1988.
Ingredients: Spring water, whole selected soybeans, sugar, authorized flavors, pectin (as an emulsifier), and added vitamins A and D.
Wt/Vol., Packaging, Price: 200 ml and 1 liter Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Alimentos de Soja in Argentina. It had a capacity of 4,500 liters/hour and began operation in 1988. Plant: Ruta Prov. 344 Km 7.5, Dto. La Cocha, 4162 Pola. Tucuman, Argentina. Office: Suipacha 570, 3rd floor "B", Buenos Aires 1008, Argentina. Address:

Note: This company is owned by Lic. Alejandro Gutiérrez Herrera, a wealthy landowner who negotiated to buy the Alfa-Laval plant with Italian aid money. When the money never came, he purchased the plant out of his own pocket. Business is said to be good and a second plant is being considered. The sales manager in 1989 was Ricardo Shaw.

SoyaFoods. 1991. Spring. p. 6-7. "AdeS Alimentos de Soja–Soya beverages from Argentina." See in-depth story on the product and company. The earliest product seen containing soymilk and fruit juice.

Product with Label (Natural) brought by Marina Li, from Oaxaca, Mexico. 2004. April 2. Aseptic Tetra Brik carton. Blue, green, white, yellow, red, and black on white. Ingredients: Water, selected soybean seeds, sugar, salt, natural flavors, thickener, soy lecithin, vitamins A & D. The product is now made by Unilever de Mexico, S.A. de CV., Tepalcapa No. 2 Col. Rancho Sto., Domingo, Tutitlán, Edo de México, C.P. 54900. Made in Mexico. Logo: Seal of approval, American Soybean Association.

Color photo brought by Marina Li from Ipanema, Rio de Janeiro, Brazil. 2006. April. Shows many Tetra Brik cartons of AdeS on the shelves of The Natural "a quilo" with lots of vegetarian options–Rua Barao de Torre, next door to Hostel Ipanema. On the same shelves are many cans of Soymix.

© Copyright Soyinfo Center 2014

AdeS flavors include uva (grape, berry), maça (apple), chocolate, laraja (orange), and pêssego (peach).

Visit with Carlos Planes (of Buenos Aires, Argentina) at Soyinfo Center in Lafayette, California. 2012. Feb. 23. He brought this colorful sell sheet in a scrapbook. 5 x 6 inches. Written across the bottom: The drink that is full of Energy. A photo shows 10 cartons of Ades–Two sizes with 5 flavors each: Natural, mandarin orange / tangerine, pineapple, apple, and orange.

2755. **Product Name:** [GranoVita Organic Tofu Vegetable Patties {Meatless}].
Foreign Name: GranoVita Bio-Tofu Gemuese Bratling.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1988.
Ingredients: Organic tofu (water, organically grown soybeans, calcium chloride), whole soybean product, vegetable oils and fats in changing amounts, fine bread crumbs (*Paniermehl*), mushrooms, paprika, carrots, leeks, wheat protein [gluten], sunflowerseeds, wheat grits, oat flakes, soy sauce, onions, egg protein, herbs, seasonings (*Wuerzmittel*), spices (*Gewuerze*).
Wt/Vol., Packaging, Price: 125 gm vacuum pack poly bag, 3 pieces per bag. Retails for DM 2.98.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Protein 13.1 gm, fat 10.2 gm, usable carbohydrates 19.5 gm, calories 222. 1 BE (Broteinheit, or diabetic exchange) = 61.5 gm.
New Product–Documentation: Label sent by Anthony Marrese. 2.75 by 5 inches. Red, green, white, and black on yellow. "Contains no flesh. Simply fry on both sides in a pan." A photo shows three ready-to-eat patties on a plate with green peas, potatoes, a tomato, and parsley. Exklusiv Neuform certification symbol.

Label sent by DE-VAU-GE. 1990. June 11. Date for GranoVita Tofu-Gemuesebratling given as 1988.

2756. **Product Name:** [GranoVita Organic Tofu Sausage (Seasoned, or with Vegetables)].
Foreign Name: GranoVita Bio-Tofu (Gewuerzrolle, or Gemueserolle).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1988.
Ingredients: Seasoned: Organic tofu (water, organically grown soybeans, calcium chloride), water, vegetable oil, egg protein, paprika, seasonings, spices.
Wt/Vol., Packaging, Price: 200 gm poly sausage chub, inside a cellophane bag.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Protein 10.1 gm, fat 5.8 gm, usable carbohydrates 20.3 gm, calories 173. 1 BE (Broteinheit, or diabetic exchange) = ca. 60 gm.

New Product–Documentation: Manufacturer's brochure. 1989? "Bio-Tofu for the High Quality Kitchen." p. 4-5. A color photo shows the Labels of both flavors. Form filled out and Labels sent by DE-VAU-GE. 1990. June 11. These products were introduced in 1988. Labels. 2 by 4.75 inches. Self adhesive. Red, green, yellow, black, and peach (or greenish yellow) on white. Each contains an illustration of a pagoda on the front. "Practically cholesterol free. Gluten free. Contains no flesh. To prepare, pan fry or grill." Neuform certification symbol.

2757. **Product Name:** [GranoVita Green Rye & Cheese Patties].
Foreign Name: GranoVita Gruenkern Kaese-Bratling.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk

© Copyright Soyinfo Center 2014

GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1988.
Ingredients: Water, vegetable oils and fats in changing proportions by weight, green rye, cheese, fine bread crumbs, onions, egg protein, seasonings (Wuerzmittel), soy sauce, sea salt, spices (Gewuerze).
Wt/Vol., Packaging, Price: 3 patties weigh 125 gm.
Nutrition: Per 100 gm.: Protein 10.9 gm, fat 11.6 gm, usable carbohydrates 29.3 gm, calories 265. 1 BE (Broteinheit, or diabetic exchange) = 41 gm.
New Product–Documentation: Form filled out and Label sent by DE-VAU-GE. 1990. June 11. This product was introduced in 1988. Label: 2.75 by 5 inches. Red, blue, green, white, black and yellow-beige. "Contains no flesh. Simply fry on both sides in a pan." A photo shows three ready-to-eat patties on a plate with Brussels sprouts, potatoes, and parsley. Exklusiv Neuform certification symbol. A new version of this, probably introduced in 1990, is named GranoVita Gruenkern Käsebratling in Champignonsauce mit Gemuese-Reis; the patties come in a mushroom sauce with vegetables and rice.

2758. **Product Name:** Granose Vegetarian Wholefood Kitchen: Soya and Mushroom Burgers.
Manufacturer's Name: Granose Foods Ltd. (Distributor). Made in Denmark by Nutana Helsekost.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1988.
Ingredients: Soya protein, maize oil, mushrooms, water, wholemeal breadcrumbs, egg protein, onions, wheat flour, sea salt, vegetable flavouring.
Wt/Vol., Packaging, Price: 225 gm paperboard box.
How Stored: Frozen.
Nutrition: Per 100 gm.: Energy 250 Kcal (calories), protein 11.5 gm, carbohydrate 23.6 gm, fat 12.8 gm, cholesterol 0.0 gm.
New Product–Documentation: Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the frozen product, made by Nutana, was introduced in 1988 and uses soya flour as the main protein ingredient. Label. 8.5 by 4.25 by 1 inch. Paperboard box. Blue and white on gray. Photo on front panel shows a sliced, ready-to-eat burger on a plate with ketchup, green beans, and fried potatoes. "No artificial colours or preservatives... Do not re-freeze once thawed." Back panel: "Cooking instructions: Direct from freezer, shallow fry in oil for 4 minutes each side or grill for 10 minutes each side. Serving suggestion: Serve with sauteed potatoes and vegetables or garnish in a wholemeal bun."

2759. **Product Name:** Granose Soya Margarine (Dairy Free).
Manufacturer's Name: Granose Foods Ltd. (Distributor). Made in Denmark by Nutana Helsekost.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1988.
New Product–Documentation: Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Nutana, was introduced in 1988.

2760. **Product Name:** Granose Soyagen: Soya Milk Powder (For Adults).
Manufacturer's Name: Granose Foods Ltd. (Importer-Marketer). Made in West Germany by DE-VAU-GE.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England. Phone: 0923-672281/2.
Date of Introduction: 1988.
Ingredients: (1990): Soya proteins (instant), corn oil, malt, starch, calcium carbonate, vegetable emulsifier: lecithin, sea salt, natural flavourings, vitamins E, B-1, B-2, B-12.
Wt/Vol., Packaging, Price: 350 gm box.
How Stored: Shelf stable.
Nutrition: Per 100 gm.: Protein 21 gm, fat 26 gm, carbohydrate 45 gm, calcium 420 mg, phosphorous 200 mg, iron 3.5 mg.
New Product–Documentation: Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that product was introduced in 1967. Made by DE-VAU-GE. Address on label is Stanborough Park. Label. 1990. 5.5 by 8 by 1.75 inches. Paperboard box. Black, red, yellow, and dark green on white and light green background."Contains no animal produce. Lactose free. Gluten Free. The vegetable Lactose-free composition of Granose 'Soyagen' Soya Milk Powder makes it easy to digest and suitable for people with an allergy to cows' milk." 2764. Alimentos Granix. 1988. Todos los días... Granix [Every day... Granix] (Portfolio). Avda. San Martin 4625 (C.P. 1602), Florida, Buenos Aires, Argentina. Eight inserts. Manufacturer's catalog. [Eng; Spa]
• ***Summary:*** *See next two pages.* Granix, founded in Argentina in 1938, manufactures healthful and natural foods. Today the company employs over 700 people and is expanding rapidly. It has two food plants in Argentina–in Florida and Bradero–with a combined surface area of 11,000 square meters. A fleet of 65 vehicles distributes the products.

The company's food product lines include: Crackers and biscuits, breakfast cereals, textured soy proteins, packed grains, spaghetti, and bakery products.

The 8 documents enclosed in this portfolio include: Great Plain crackers (*Granagua*). Unsalted crackers (*Sin Sal*). Bran Plus crackers (*Salvado*). Wheat Plus crackers (*Integrales*). Granix (in Spanish and in English). Address: Buenos Aires, Argentina. Phone: 760-0307.

2765. Walton, L.R.; Walton, J.E.; Scharffenberg, J.A. 1988. How you can live six extra years. Santa Barbara, California: Woodbridge Press Publishing Co. 121 p. No index. 22 cm. [93 endnotes]
• ***Summary:*** Health and longevity secrets enjoyed by the Seventh-day Adventists for a century could add six to twelve years or more to your own life. Based on university research. You can use these health practices to reduce your risk from killer diseases. Contains recipes and tables.

This is an unusual book, in that Chapter 1 (for example) contains page after page of statistics about the superiority of the diet and lifestyle of Seventh-day Adventists without citing the sources for these statistics. Moreover the contents of the 1988 edition appears to be the same as that of the 1981 edition.

Figure 2 is titled "Coronary death rate for Adventist men with various dietary habits compared with the general population." Total vegetarian Adventists (vegans) have only 14% the general coronary death rate, lacto-ovo vegetarians have 39% the general rate, and Adventists who eat meat have 56% the general rate."

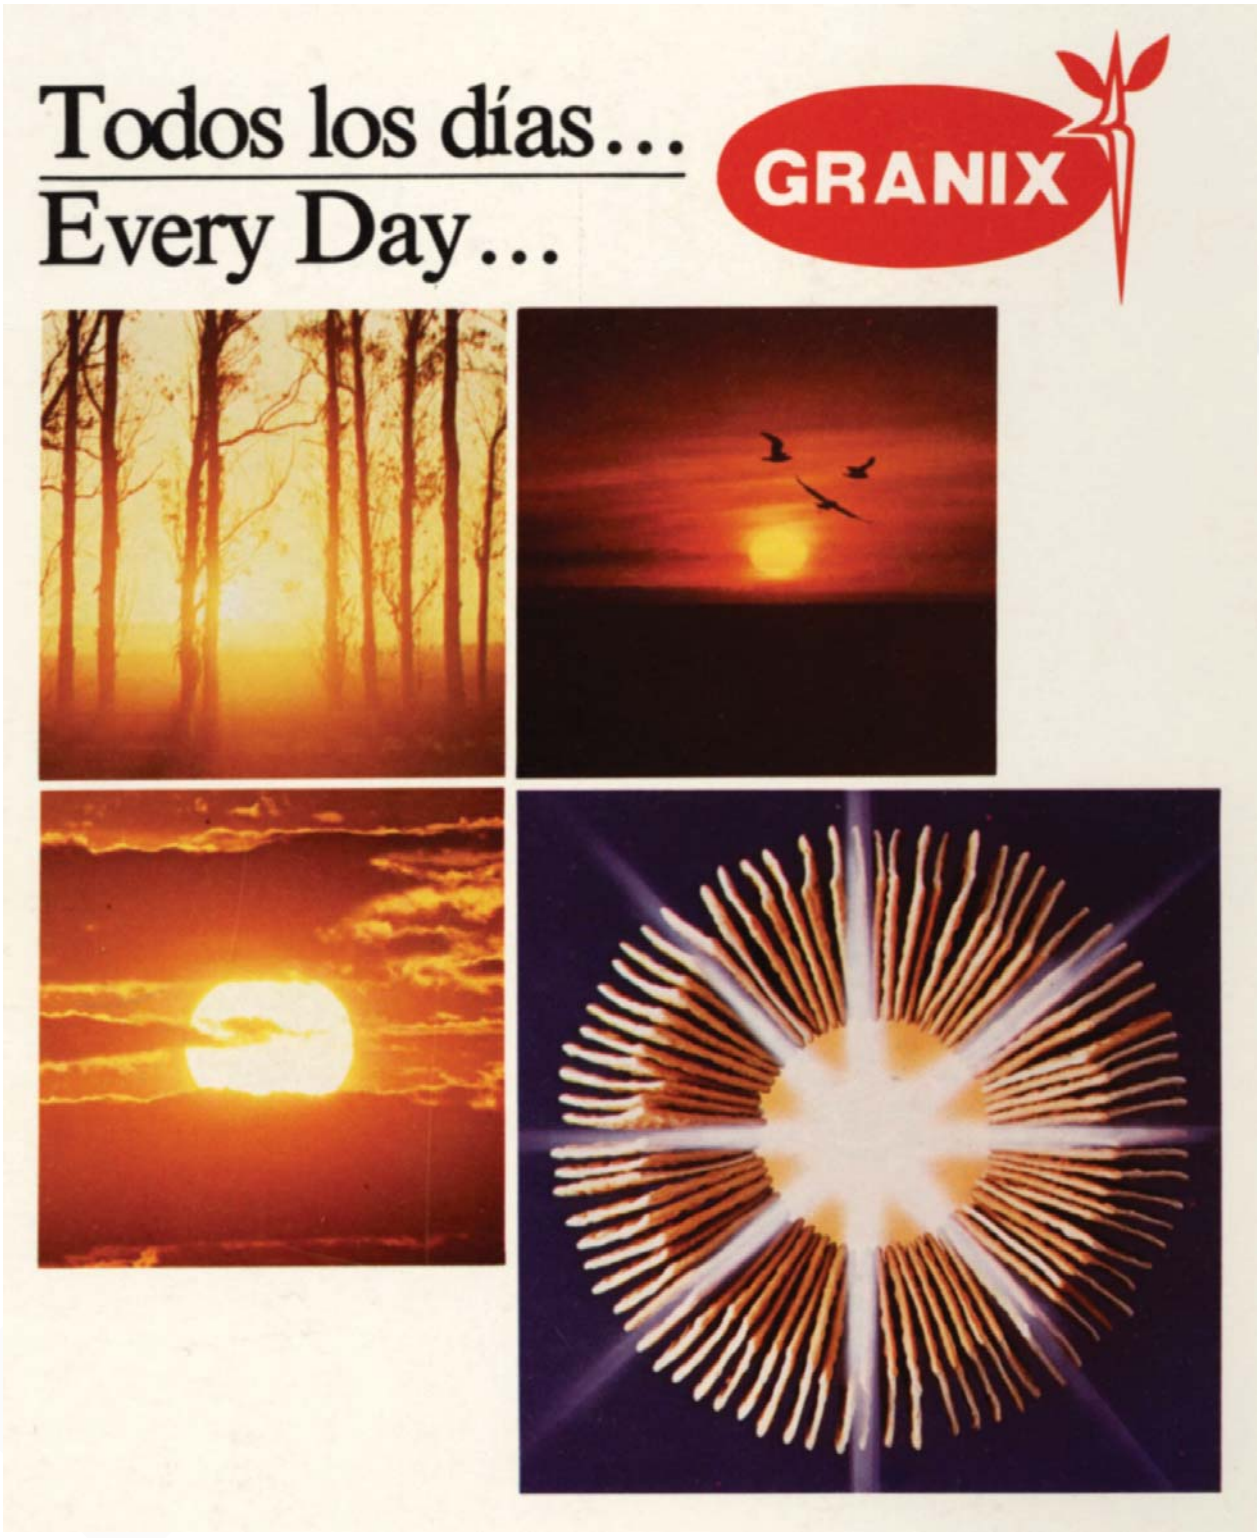

Table 1 shows that Adventist men have a life expectancy of 77 years versus 71 years for California men. Adventist women have a life expectancy of 80 years versus 77 years for California women. Table 24 summarizes the Adventist lifestyle: No tobacco or alcohol. Vegetarian diet (which may include milk and eggs). No pork or pork products. Avoid caffeine, spices and spicy foods, hot condiments. Emphasize: Whole grains, fruits, nuts, vegetables, as fresh and naturally served as possible. Fresh air. Exercise. Enjoyment of nature. Trust in divine power.

Recipes include Scrambled tofu (p. 97). Chicken-style Soyameat with gravy sauce (p. 97). Soyannaise (with Soyagen powder, 107). Tofu salad dressing (p. 112). Address: 1. Attorney at Law, Bakersfield, California; 3. Bakersfield, California–M.D., Assoc. Prof. of Applied Nutrition, Loma Linda Univ., Loma Linda, California.

2766. **Product Name:** [Nutana Tofu with Chili Beans].
Foreign Name: Nutana Tofu Chili Boennegryde.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1988?
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.

background.

2767a. **Product Name:** . Morningstar Farms Country Breakfast: Scrambled Egg Product, Buttermilk Pancakes, and Vegetable Protein Links.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085.
Date of Introduction: 1988.
Ingredients: Breakfast Links: Textured vegetable protein (wheat gluten, soy isolate and concentrate), egg whites, soybean and/or corn oil,
partially hydrogenated soybean and cottonseed oil,...
Wt/Vol., Packaging, Price: 6.8 oz (191 gm) tray with plastic wrap..
How Stored: Frozen.
New Product–Documentation: Package with Label sent by Dr. Walter Wolf. 2000. Aug. 5. Copyright date is 1988. "Ready in just 3 min. Microwavable."

2768. Madden, Stephen. 1989. Have a heart [Phil Sokolof and National Heart Savers Assoc. denounce tropical oils]. *Fortune.* Jan. 16. p. 117.
• ***Summary:*** "Phil Sokolof, the multimillionaire owner of Phillips Manufacturing Co., a building supply manufacturer in Omaha, Nebraska, is giving food company executives a bad case of angina. Sokolof serves as president, and bankroller, of the National Heart Savers Association, an organization committed to lowering America's cholesterol. The group recently took out full-page ads in several big newspapers–including the New York *Times* and the *Wall Street Journal*–to pressure food companies to eliminate coconut and palm oils from their products. Such oils are linked to high cholesterol levels, which in turn can lead to heart disease.

"Sokolof's ads weren't subtle. They named ten products he says are "poisoning America" with their high concentrations of the two tropical oils. The offenders included Sunshine's Hydrox cookies, Nabisco's Triscuit crackers, Carnation's Coffee-mate, Procter & Gamble's Crisco [shortening], Kellogg's Cracklin' Oat Bran, and Pepperidge Farm's Goldfish crackers. Goldfish too? Say it ain't so, Phil.

"Sokolof, 66, began his cholesterol-busting crusade 22 years ago, after he had a heart attack. He has spent more than $2 million of his own money to publicize the dangers of cholesterol and to persuade food companies to use healthier ingredients like corn and soy oil."

2769. *LEC Newsletter.* 1989. Whole raw soybeans texturized. 13(1):7-8. Jan.
• ***Summary:*** Until now, the manufacture of textured plant proteins has required the use of defatted oilseed flours which have received little or no heat treatment. Some years ago Hank and Mark Sterner, while employed by Meals for Millions, developed an innovative LEC, the design of which was subsequently taken over by the Korean Inst. of Science and Technology [KIST] in Seoul. Paul Allred, of Riverside, California, is a retired Seventh-day Adventist who has worked extensively on extrusion processing with Wenger equipment in Mexico. He directed a project in Navojoa, Mexico, which now uses several X-25 extruders to make standard textured soy protein products. Recently Mr. Allred observed that the Sterner screw design permits texturization of oilseeds without removal of the oil. The resulting product has a typical textured soy protein structure and a pleasant roasted soy flavor. The extra oil in the product makes it much more palatable directly from the extruder. Allred recently made parts for a Wenger extruder located at Africa Basic Foods in Uganda. He believes these will enable that machine to texturize whole (undefatted) soybeans. Address: Colorado State Univ., Ft. Collins, Colorado.

2770. Worthington Foods, Inc. 1989. History of Worthington Foods: 50th anniversary banquet, 22 Jan. 1989 (Color videotape). 900 Proprietors Rd., Worthington, OH 43085-3194. 45:10 minutes. VHS.
• ***Summary:*** A fascinating and professionally-done story of this pioneering company's first half century.

Note: This is based on a 12-minute video into which historical slides and live speeches were integrated. The banquet was held in Worthington, with all the company's employees. Don Davenport's company in Southern California did most of the video production, in conjunction with the Adventist Media Center in Thousand Oaks, California. The latter has a TV program titled Lifestyles Magazine, which showed the video as a feature on Worthington. All shared the cost, with Worthington paying about $17,000, plus an additional $10,000 to get the expanded version. Address: Worthington, Ohio. Phone: 614-885-9511.

2771. Boeddeker, Ralph. 1989. Mit Tofu 100 Millionen Mark Umsatz: Das Reinheitsgebot fuer Deutsche Wurst ist gefallen–Naturkost-Hersteller rechnen mit Zuwachs [With tofu, sales of 100 million German marks: The standard of purity for German sausage has fallen–Natural-foods producers count on growth]. *Welt am Sontag* No. 7. p. 33. Feb. 12. Sunday. [Ger]
• ***Summary:*** Describes the very successful soymilk plant sold by Soya Technology Systems (DTD) to DE-VAU-GE in Lueneburg, West Germany. Michael Makowski, healthy looking, in his 50s, and managing director of the company, introduces a meatless banquet and explains that he has been a vegetarian for 30 years. The future for this producer of vegetarian foods looks very bright. Meatless sausages or those extended with soy are seen as becoming increasingly popular. The company is now approaching the 100 million

© Copyright Soyinfo Center 2014

mark sales level and employs 350 men and women. It is in the top 10 of the 70 manufacturers of natural foods in Germany, with a market share of about 10%. Each year it ships about 15,000 tons of natural foods from Lueneburg to the country's roughly 2,700 Reformhaeuser (natural/health food retail stores). The company makes an assortment of 300 vegetarian food products, mostly from cereal grains and soybeans. The latter, grown in the USA, Brazil, and China, offer many possibilities. They can be fashioned into spread for bread, milk, or tofu.

Makowski sees the market for tofu, which resembles Quark, as especially promising. It can be nicely seasoned with spices such as paprika, curry, soy sauce, and/or herbs, and made into meatless sausages. The Reformhaeuser pioneered in introducing non-dairy margarine, whole-grain bread, and Muesli to Europe. Makowski sees the next wave as being tofu boom products. A photo shows the company's 3-level soymilk plant that produces 20 million liters a year in 500 ml and 1 liter containers.

Note added by Anders Lindner, head of STS: Up to now the plant has produced soymilk and desserts. Soon they will also start to produce tofu sausages, yogurt, and pâtés.

Mr. Makowski, eyeing the big potential market for tofu products, is a bit worried that the big food heavyweights such as Unilever, Nestlé, Kraft, etc. might enter this market. When the sale of tofu products begins, DVG's sales are expected to exceed DM 100 million. Address: Lueneburg, West Germany.

2772. Stanton, Russ. 1989. Loma Linda Foods sold to Dutch firm but plans to return to health products. *Press-Enterprise* (*Riverside, California*). Feb. 22. p. F-1, F-3.
• ***Summary:*** "The company employed about 140 workers at its plant across from Loma Linda University's La Sierra Campus in southern Riverside [California], and had annual sales of about $20 million. The acquisition by N.V. Verenigde Bedrijven Nutricia (United Nutrition Cos.) of Amsterdam was completed earlier this month, but not announced until yesterday." A photo shows the Loma Linda Foods building in the La Sierra area of Riverside.

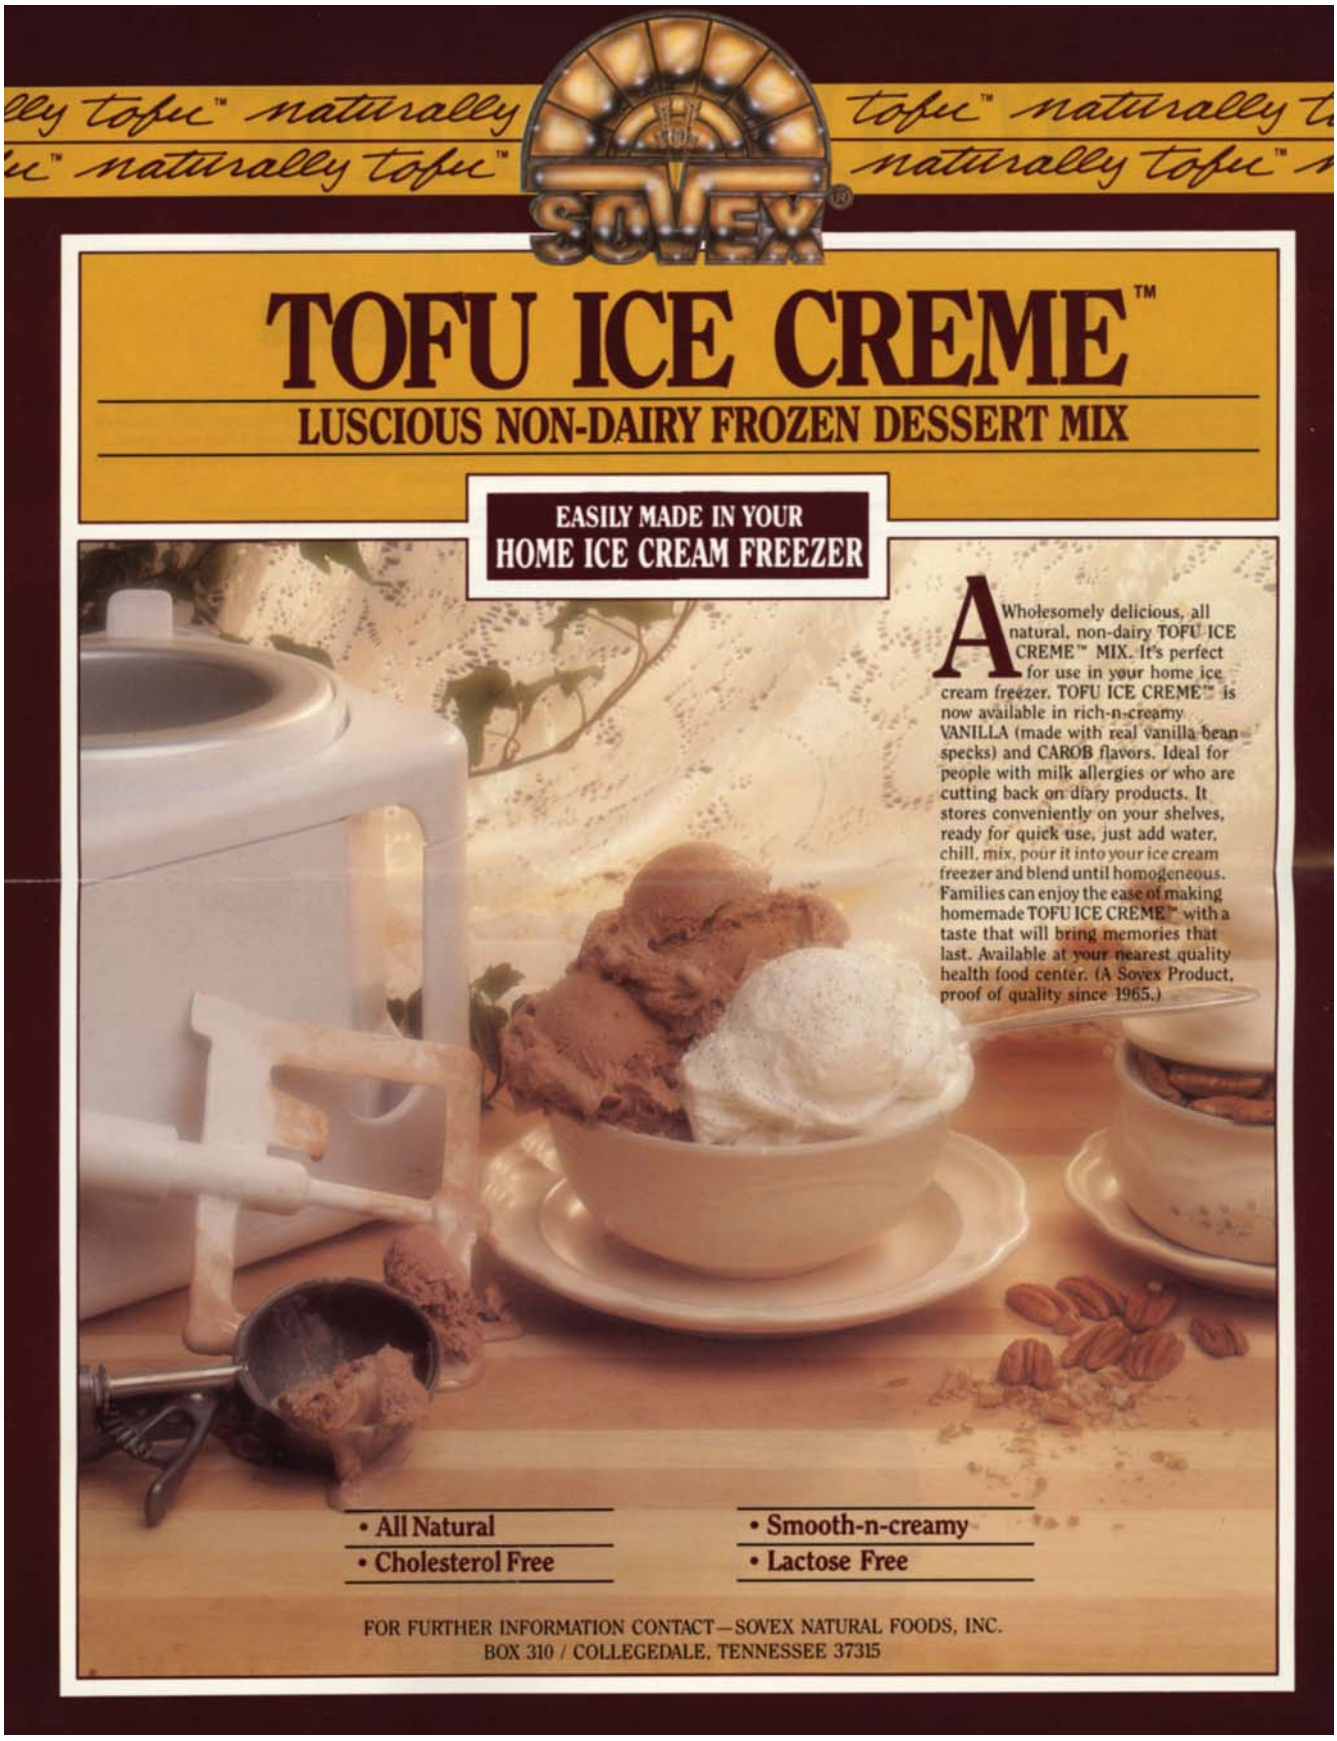
2773. Loma Linda Foods, Inc. 1989. [Loma Linda Foods acquired by Nutricia N.V. of the Netherlands] (News release). 11503 Pierce St., Riverside, CA 92505. 1 p. Feb. 23.
• ***Summary:*** "As of February 9, 1989, Loma Linda Foods, Inc., manufacturer of Soyalac products was acquired by Nutricia N.V. Verenigde Bedrijven. Nutricia is an international company specialized in medical nutrition and Infant Formulae. Presently they are marketing leader in clinical nutrition in Europe and are the second largest manufacturer of Infant Formula in Europe.

"Loma Linda Foods, Inc., expects that the affiliation with Nutricia will benefit the present line of Soyalac products." Address: Riverside, California. Phone: 714-687-7800.

2774. **Product Name:** Naturally Tofu Ice Cream (Frozen Dessert Mix) [Vanilla, or Carob].
Manufacturer's Name: Sovex Natural Foods, Inc.
Manufacturer's Address: 9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320 or 615-396-3145.
Date of Introduction: 1989 February.
Ingredients: Vanilla: Crystalline fructose, soy oil, maltodextrin, corn syrup solids, tofu, sodium caseinate, natural vanilla and vanilla bean, sea salt, soy lecithin, cellulose, guar, xanthan and carrageenan gums.
Wt/Vol., Packaging, Price: 16.7 oz can. Retails for $4.99 (4/89).
How Stored: Shelf stable.
New Product–Documentation: See next page. Talk with Sovex. 1989. Feb. 28. The product was first sold commercially in mid-Feb. 1989. The name is Naturally Tofu Ice Cream. There are 2 flavors. Leaflet. 1989. April. "Sovex–The granola people. New items introduction: Naturally Tofu Ice Cream." Lists the ingredients for both flavors.

Products with Labels (Vanilla, and Carob) and leaflet sent by Sovex. 1993. Oct. 12.

2775. Widmer, Myron. 1989. GC sells LLF [Loma Linda Foods] infant formula division for $21 million. *Adventist Review* (*Hagerstown, Maryland*). March 2. p. 6-7 (p. 214-15).
• ***Summary:*** "In a move that radically alters the shape of Loma Linda Foods of Riverside, California, the General Conference Corporation has sold LLF's Infant Formula Division for $21.5 million to the Holland-based company of N.V. Verenigde Bedrijven Nutricia, a diverse food company with annual sales of $350 million and Europe's second-largest producer of milk-based infant formula.



"The sale, effective February 10, 1989, culminated months of negotiations and gave Nutricia ownership of the Soylac [Soyalac] and I-soylac [i-Soyalac] patents, all production facilities in both Mount Vernon, Ohio, and Riverside, and the name 'Loma Linda Foods.'

"The church continues to own patent rights, on-hand inventories, and the equipment for all other LLF products, from meat analogs to its soymilk and gravy mixes."

"The church already has formed a new company–LaLoma Foods, Inc.–that will concentrate solely on producing vegetarian health foods."

"The new LaLoma Foods is renting office space (about 2 miles from its former headquarters) where the staff operates under the continuing leadership of Alejo Pizarro, former president of Loma Linda Foods... The sale contract includes a provision requiring Nutricia-owned Loma Linda Foods to return the name Loma Linda back to the church without charge if LLF chooses a new company name.

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

"The sale of the Soyalac division brings to a close 38 years of infant formula production by the Adventist Church at the Mount Vernon site. Nutricia's plans for the Mount Vernon plant are not clear at the present, as the newly constructed $5 million infant formula plant at the Riverside site will begin production soon.

Why sell? 1. Competition: LLF's market share has been declining for several years and now stands at less than 1%. 2. Product Liability": LLF has been unable to purchase the $100 million product liability policy recommended by legal consultants. LLF recently has carried a $20 million policy. 3. Stringent (Government) Regulations. 4. Retirement Plan: LLF began to turn the corner on profits in the past 4 years (with a cumulative gain of approximately $4 million), and thus was being forced to create a new retirement plan for its employees. 5. Technical Personnel: LLF has had difficulty in attracting technically and scientifically qualified personnel in both its Research and Development and Marketing departments because of the denominational wage scale. 6. Unique Contribution Gone.

"Of the $21.5 million realized from the sale,... $5 million will be used to pay off LLF's indebtedness (primarily accrued from the construction of the new infant formula plant at Riverside), and the remainder will be available to fund the cost of the new production facility for LaLoma Foods." LaLoma's new address is 12155 (9B) Magnolia Ave., Riverside, CA 92505; phone 714-351-4300.

Photos show: (1) The tall Loma Linda Foods plant in Riverside, California. (2) William Murrill (of the Adventist General Conference, and former LLF board chairman), and Alejo Pizarro.

2776. Stanton, Russ. 1989. Dutch firm to expand Loma Linda Foods. *Press-Enterprise* (*Riverside, California*). March 11. p. H-1, H-3.
• ***Summary:*** "The Dutch company that acquired Riverside-based Loma Linda Foods last month plans to greatly expand the size of the health-food maker beginning next year, the company's new president [43-year-old Cornelis Rumpff] said yesterday... Nutricia acquired Loma Linda Foods for its soybean-based infant formula operations, which accounted for about 60% of the company's $20 million in sales last year. Loma Linda Foods' liquid and powder formula are sold under the Soyalac and I-Soyalac labels... The Dutch company's first order of business, Rumpff said, is to complete a $5 million infant formula processing line that the company's previous owner, the General Conference of the Seventh-day Adventist, started in 1987 but didn't complete."

"In Europe, Nutricia sells infant formula, baby foods and cereals, Chocomel, a chocolate milk drink popular among teenagers, and clinical nutrition products to hospitals for patients with special dietary needs. In 1988, Nutricia earned $24 million (U.S.) on sales of $430 million (U.S.)"

2777. *Pacific Union Recorder* (*Westlake Village, California*). 1989. Loma Linda Foods sells infant formula division. Continued availability of meat analogs assured while company seeks new manufacturing site. March 20. p. 5. [1 ref]
• ***Summary:*** "The company was turned over to N.V. Verenigde Bedrijven Nutricia (United Nutrition Cos.) of Amsterdam in early February. Most of the 100 workers who served at the plant will continue working under an agreement which allows for conditions similar to those that they already had. The company will not operate on Saturdays. Including sales representatives and staff at Mr. Vernon, Loma Linda Foods had employed about 170 people."

"Loma Linda Foods was one of Riverside's largest private companies, according to the Riverside *Press-Enterprise.* It was established in 1906 in Loma Linda and moved to Riverside in 1938."

salt, carrageenan, vitamin B-12 (cyanocobalamin), natural flavor.
Wt/Vol., Packaging, Price: 8 oz or quart Tetra Brik Aseptic cartons, 27 or 12 to a case.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Sovex. 1989. Feb. 28. The company plans to launch this product in late March 1989.

Letter to *Veggie Life* by Genevieve Gowman. 1993. Nov. p. 6. "Unfortunately I didn't realize how deceitful the term 'non-dairy could be. This drink contains casein, which is a milk protein... Please inform your readers of this." The magazine answers: "According to FDA guidelines, a product can contain up to 2 percent casein and still be labeled 'non-dairy.'" The Natural flavor contains only 0.37% casein; the Chocolate, Carob, and Natural Light flavors do not contain casein.

Note: In response to this concern about caseinate, by March 1995 Sovex had removed caseinate from their product.

2781. Spitzler, Andrew C. 1989. Tasty tofu tailored to tempt trier's tongues: Silver Spring pair test market new dishes for national campaign. *Washington Business Jouranl* (*McLean, Virginia*). April 3. p. 1, 33.
• ***Summary:*** Edward H. Walker and Andrew J. Wilks (shown in a photo) of Tofoods hope to make tofu into a household and institutional dietary staple. "Tofu is often ridiculed as being rubbery, tasteless and just plain unappetizing...

"Tofoods is seeking about $2 million in venture capital to market its products to retailers and institutions such as hospitals and elderly service organizations. So far, the two partners have commitments for $500,000... The idea for Tofoods came to Walker and Wilks while they were co-managing a restaurant at a health resort in the Catskills...

"The pair raised $300,000 from friends, family and themselves, relocated to Silver Spring and formed Tofoods in 1986. During 1986 and 1987 they test-marketed the frozen dinners they had developed. People responded well to such frozen entrees as sweet and sour tofu, tofu teriyaki and barbecued tofu. Tofoods sold $100,000 of their products in 44 states, mostly in kosher and natural food markets." One company watching Tofoods progress is 50-year old Worthington Foods Inc. of Worthington, Ohio, the largest manufacturer and distributor of soyfoods in the USA, with $50 million is sales last year.

2782. Hartman, Warren E.; Leiss, Richard S.; Updegraff, Robert S. Assignors to Worthington Foods, Inc. (Worthington, Ohio). 1989. Fiber/tofu food product and method for making the same. *U.S. Patent* 4,818,558. April 4. 4 p. Application filed 4 Aug. 1987. [6 ref]
• ***Summary:*** Monofilament proteinaceous or polysaccharide fibers are dispersed in an aqueous vegetable protein extract from which is coprecipitated a fibrous tofu curd. Address: 1-2. Worthington, Ohio; 3. Powell, Ohio.

2783. **Product Name:** Granose Sweet Sensation (Soy Ice Cream) [Vanilla, Raspberry Ripple, Tutti Fruitti, Black Cherry].
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.
Manufacturer's Address: Howard Way, Newport Pagnell, Buckinghamshire, MK16 9PY, England. Phone: (0908) 211311.
Date of Introduction: 1989 April.
Ingredients: Organic soya milk (water, dehulled organic soya beans); raw can sugar; corn syrup; vegetable oil; vanilla bean extract; emulsifier; vegetable mono-diglycerides; Stabilisers: locust bean gum, guar gum, xanthan gum; Natural colour: Annatto.
Wt/Vol., Packaging, Price: 750 gm paperboard box.
How Stored: Frozen.
New Product–Documentation: See next page. Form filled out and 4 Labels sent by Granose Foods Ltd. 1990. June 13. In Jan. 1989 Granose's entire factory and offices were moved from Stanborough Park in Watford, to Howard Way in Newport Pagnell. The frozen product, made by Genice Ltd., was introduced in 1989. Label. 7.5 by 5 by 2.5 inches. Paperboard box. Photo of product in a wavy-edged glass next to fruit or flowers on front panel. The box background is white printed with diagonal colored lines. "A delicious non dairy frozen dessert, made with organic soya milk and other natural ingredients." Side panel: "Contains no artificial colours or preservatives." Talk with Neil Rabheru of Unisoy. 1990. July 2. Much of Genice's success comes from products sold under brands other than its own.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. In April 1989 Sweet Sensation, another non-dairy frozen dessert, was launched for Granose Foods in a 3/4 liter pack composed of a rectangular plastic tub in a cardboard sleeve, in 4 flavors–tutti fruitti, black cherry, raspberry ripple, and vanilla. Genice made this product for Granose before and after Granose was acquired by the Haldane Group.

2784. Kingma, Sharyn. 1989. FDA proposal allowing health related claims on food labels in limbo: Many companies take advantage of agency's slow pace. *Soya Newsletter* (*Bar Harbor, Maine*). Jan/April. p. 13.
• ***Summary:*** Since 1938 the rules for regulating information concerning health or disease on food labels has come from the Federal Food, Drug and Cosmetic Act (21 U.S.C. 321 et seq.), which states that it is illegal to make therapeutic claims about food products.

In 1984, FDA had to deal with its first health-related claim on the label of a food product from a major manufacturer. The Kellogg Co. was advertising label claims

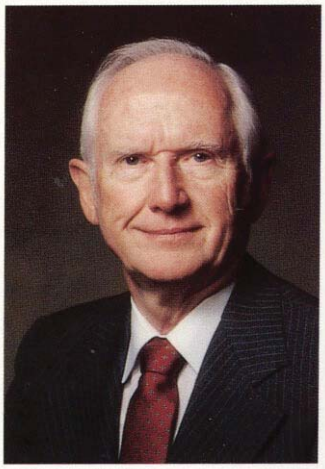
© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

for a bran cereal, saying that the product could reduce the risk of certain cancers. The claims were supported by both scientific evidence and the National Cancer Institute. Because FDA took no legal action against Kellogg, a wave of health-related messages began to appear on food labels.

In Aug. 1987 FDA published proposed rules in the Federal Register. Almost 600 comments were received. The latest draft was submitted in Sept. 1988 to the Office of Management and Budget (OMB).

2785. **Product Name:** Natural Touch Dinner Entrée.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1989 April.
Ingredients: Vegetable protein (wheat gluten, soy protein concentrate), soybean and/or corn oil, egg white solids, calcium caseinate (dairy protein), soy isolate, natural flavor, yeast extract, carob, onion, sea salt, garlic, spice.
Wt/Vol., Packaging, Price: 9 oz box.
How Stored: Frozen.
New Product–Documentation: See next page. Glossy color leaflet (single sided). 1989. April. 8.5 by 11 inches. Shows the carton on a cutting board and the entree on a plate with a baked potato and succotash. "All natural goodness."



2786. Worthington Foods, Inc. 1989. The tradition of healthy choices. 900 Proprietors Rd., Worthington, OH 43085. 29 p. 29 cm. Undated.
• ***Summary:*** See page after next. This document was published to celebrate Worthington Foods' 50th anniversary. It contains the best history of the company seen to date.

Contents: Mission statement. A tradition of excellence. Mainstream America eats healthier. Southern fried flavor... zero cholesterol: The story of Morningstar Farms Country Crisps from soybeans to shoppers. The "heart-wise" choice. Good taste plus good nutrition (A graph shows that the number of vegetarians in the USA has increased from 1 million in 1978 to 6.2 million in 1986 a six-fold increase). The good taste of natural living (the Natural Touch line, launched in 1984). Directors and officers. A history of Worthington Foods (p. 13-27).

Black-and-white photos show the following early Worthington canned products: Proast, Choplets, Choplet Burger, Worthington Veja-Links (Vegetarian, Smoke Flavor, Skinless), Miller's MC Vegetarian Main Course, Worthington Soyamel.

"The breakthrough" Spun soy fiber (p. 21): Perhaps the single most innovative development in the history of the company started the day Robert Boyer paid an unannounced visit to Worthington Foods. He walked into Buller's office, introduced himself and opened an attache case full of samples wrapped in tinfoil. Buller almost jumped out of his chair. Remembering that day, he says, 'I imagine my eyes got pretty big, because he had several products there that looked very much like meat, and I realized they weren't meat.' One looked like ham, one like beef and one like lamb. When he tore one apart, it looked like the fibers of meat. Then he put it in his mouth and chewed it. Although it had the texture of meat, it tasted 'horrible.' But Buller got excited about the possibilities of what he was seeing and called Hagle in to have a look. After chewing a piece, Hagle asked Boyer, 'Can you make it taste like anything?' Boyer assured them that he could and that it was the alcohol used to extract the protein that had given it the horrible taste. A different extraction method could produce a different product."

James L. Hagle

Allan R. Buller

"Boyer was invited to work in the Worthington laboratory with Kelly Hartman, and Worthington eventually licensed his patents and hired Boyer as a consultant. Out of this relationship, a whole new line of products developed. Worthington was too small to go into the business of crushing soybeans and disposing of the oil, or of purchasing the protein extrusion or spinning equipment. So Boyer negotiated with Ralston-Purina to set up a pilot plant to make the protein for Worthington. As it turned out, Ralston-Purina made the protein, did the spinning, and Worthington bought the output and put it into new products.

"When the new Ralston-Purina plant was operational, it had the capacity of 10,000 pounds a day. Worthington was not ready for this kind of volume, but working out these difficulties involved Jim Hagle in further negotiations with executives of a large corporation. Finally, Worthington agreed to take all the production, and sales took off. The products–White Chik, Beeflike, Prosage, Stripples, and Holiday Roast (with a plastic wishbone)–were all hits.

"Hartman remembers those days as his most exciting and challenging with the company. It was a delicate problem getting other companies, like Ralston-Purina, to do a part of the research and production cycle without stealing Worthington's thunder. Many corporations got involved

A History of Worthington Foods

Worthington 50 1939 Fifty Years In Good Nutrition 1989

Special Foods turned a burned-out, two-story house into its first manufacturing site.

Worthington Foods, Inc. began production in a burned out two-story house in 1939. Although the hole in the center of the roof had been repaired, the blackened beams still showed. The front room on the first floor had been replastered, but in the other rooms the lath remained exposed. The tangle of pipes overhead in the basement made the 7-foot clearance even more unmanageable. Under foot, the floors were uneven.

Whoever happened to be handy lugged 125-pound bags of peanuts up and down stairs of that house. The boiler in the basement and the roaster on the second floor exposed workers to debilitating heat. Gluten was rinsed with a garden hose and gluten steaks were ladled out of kettles by hand. Cans were packed and labels brushed on one can at a time, by hand.

MORE THAN JUST A FOOD COMPANY

The company's founder, Dr. George T. Harding III, then 34, was a psychiatrist, and medical director of the Harding Sanitarium in the central Ohio community of Worthington. Why would he start a food company? It was not primarily to make a profit. He had two other concerns in mind.

The first was nutrition. At the sanitarium—opened by Seventh-day Adventist George T. Harding II in 1919 to provide total care of the body, mind and spirit—nutrition was emphasized and vegetarianism encouraged. The kitchen baked and sold whole wheat bread to the community. The sanitarium also purchased "health foods" from Battle Creek Foods in Michigan and Madison Foods in Tennessee. These included soy and peanut-based meat substitutes, called "nut meats," developed originally by Dr. John Harvey Kellogg, brother of the Battle Creek cereal magnate, to provide a completely balanced non-meat diet. But these foods were expensive for the sanitarium to provide for its patients. Harding also believed they could be made more appealing to non-vegetarians.

His second concern was the growth of the Seventh-day Adventist community in Worthington. Since most of the employees of the sanitarium were unmarried nurses, the church-operated elementary school had only eight students. Harding and other parents wanted to attract young families to the community so that the church school, in particular, would flourish.

Returning from a visit to Madison Foods in 1938, Harding said, "There is no reason we can't have a food company here in Worthington." And in 1939 when the company had begun to operate, he and his wife, Mary Virginia, "felt like we had really accomplished something. Finally, we had young families moving to the community and enlarging the church and the school. At that time, these were bigger goals than making money. We thought if we could just make the company exist, we would be doing real missionary work."

and took a license because they wanted to be on the cutting edge of technology. Hartman says, 'We had vice presidents sticking out our ears, coming here trying either to buy us or get in on the know-how.'

"Almost every major university in the country was interested in what was going on. Hartman says the experimental products were called a lot of good things and a lot of bad things, too. The products were called 'phony-bologna,' 'fake steaks' and 'sham ham.' Government agencies also became interested, including the Agency for International Development and the United Children's Fund."

"The first to offer frozen meat analogs." One of Worthington's new products that contained spun soy fiber was named Wham. The company that manufactured a meat product named Spam sued Worthington for infringing on their product name. A skillful presentation by Jim Hagle before the company's officers and attorneys at their headquarters in Chicago, Illinois, led to the withdrawal of the lawsuit. "Another problem with the new line of products was that they did not can well. The products deteriorated in flavor and texture under high temperatures. Freezing was the obvious answer, but this required big changes. The company had to purchase trucks for frozen delivery. In addition, at that time many stores were not equipped for frozen foods, so Worthington supplied these stores with food freezers. It was a costly but profitable venture because it increased sales volume tremendously. Thus Worthington Foods became the first company to offer frozen meat analogs. And in October, 1963, a series of television, radio and newspaper advertisements featuring the new frozen foods was introduced. All these developments caught the attention of a number of major food companies." Address: 900 Proprietors Road, Worthington, Ohio 43085. Phone: (614) 885-9511.

2787. Worthington Foods, Inc. 1989. 50 award-winning recipes. 50 years in good nutrition. 900 Proprietors Rd., Worthington, OH 43085. 97 p. Illust. Index. 18 x 26 cm. Spiral bound.

• ***Summary:*** This book was published to commemorate Worthington's 50th anniversary. The first 10 pages contain nutritional information. The rest of the book is meatless recipes, most from the individual homemakers (whose names, city, and state are given), some from the kitchens of Morningstar Farms. Each recipe uses at least one product made by Worthington Foods. The most widely used product is Scramblers (cholesterol-free egg substitute based on egg whites, 18 recipes), followed by Vegetarian Burger (7 recipes), and Chic-Ketts (5 recipes). A nutrition analysis is

© Copyright Soyinfo Center 2014

given with each recipe, and many recipes are accompanied by a color photo of the finished dish. Other products used in the book are Choplets, Crispy Chik Patties, Diced Chik, Fri-Chik, FriPats, GranBurger, Meatless "Beef" Style, Meatless "Chicken" Style, Meatless Corned "Beef" Slices, Meatless Smoked "Turkey" Slices, Numete, Prime Stakes, Prosage, Stakelets, Super-Links, Tuno, Vegetable Skallops, Vegetable Steaks, Veja-Links, Wham (like ham), Natural Touch Spicy Chili, Breakfast Links, Breakfast Strips, and Grillers. Address: Worthington, Ohio.

2789. Skain, Betty; Bacha, Sarah Miles. 1989. Healthy expansion planned: Worthington Foods appoints 2. *Dispatch* (*Columbus, Ohio*). July 17. p. 8C. Business section.
• ***Summary:*** "Product development and expansion are on the agenda at Worthington Foods Inc., which has named two new vice presidents, William T. Kirkwood and Ronald L. McDermott, to assist with the projects. As vice president of finance and chief financial officer, Kirkwood will be responsible for financing Worthington Foods' expansion into Zanesville, Ohio, where a new plant is under construction. It will open in June 1990. The manufacturer of cholesterol-free foods will produce its egg substitute product at the plant, Kirkwood said.

"McDermott, vice president of scientific affairs, will be responsible for Worthington Foods' research and development and its quality control departments... McDermott previously was in charge of product development for pediatric nutritionals at Ross Laboratories. He earned a doctorate in food science and nutrition from The Ohio State University."

2790. Rumpff, Barbara; Rivera, Esther. 1989. Loma Linda Foods' infant formula line sold to N.V. Nutricia of the Netherlands. New company, La Loma Foods, soon to be sold (Interview). *SoyaScan Notes*. July 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Loma Linda Foods wanted to start marketing a cow's milk based infant formula, and they were discussing marketing a product made by Nutricia, a Dutch company, which already made Nutri-Soja and Nutri-Soja Plus, two soy-based infant formulas. Nutricia is the second largest infant formula company in Europe behind Nestlé and one of the world's largest companies in clinical nutrition.

In Feb. 1989 the tables were turned and Nutricia ended up buying Loma Linda's infant formula line (Soyalac) as well as both the Riverside and Mt. Vernon, Ohio food factories. Loma Linda decided to sell because of liabilities and stiff competition. Cornelius Rumpff came to head the Nutricia operation in Riverside. The General Conference (GC) of Seventh-day Adventists (the Church, which owns and operates Loma Linda Foods), spun off a new company named La Loma Foods, to market Loma Linda's food line (mostly meat analogs), which was to be made by Nutricia for 18 months until La Loma could build a new plant. But by July 1989 the GC had decided that instead of building a new plant (an expensive project), it would sell La Loma Foods and its food line. Bids would be open during the month of July. It was hoped that another Adventist company would buy the company; both Worthington Foods and Australia's Sanitarium Foods (which had managed Loma Linda Foods for 4-5 years and saved the company from going under) were expected to bid. The infant formula business had been roughly 75% of Loma Linda's total business. The takeover has been low key, not widely publicized. All the formulas and liquids had been made in Ohio. But at one time Loma Linda had made a decision to consolidate the two plants. The Mt. Vernon, Ohio, plant was shut down then reopened because the Riverside plant was not finished in time. Address: 1. Loma Linda Foods, Div. of Nutricia N.V., Riverside, California; 2. La Loma Foods, 12155 Magnolia Ave., Suite 9-B, Riverside, CA 92503. Phone: 714-351-4300 (LLF).

2791. *Adventist Review* (*Hagerstown, Maryland*). 1989. GC seeks buyer for La Loma Foods. July 20. p. 6 (p. 758).
• ***Summary:*** "Less than 5 months after the General Conference (GC) sold Loma Linda Foods' (LLF) Infant Formula Division, the GC is now receiving purchase offers for the newly formed meat analogues and soy milk producer–La Loma Foods."

"In May, Worthington Foods, Inc., of Worthington, Ohio, an independent meat analogues producer owned by Adventist businessmen, proposed to purchase La Loma Foods. The multimillion-dollar offer calls for an up-front payment for the assets and an annual royalty payment based on a percentage of sales to Adventist customers over 10 years. If La Loma is sold to Worthington, the La Loma name would be discontinued and all production would be consolidated at Worthington's new plants, currently under construction in Zanesville, OH.

"On June 30 the GC Executive Committee, after a lengthy discussion, decided by a 28 to 19 vote that La Loma Foods should be offered for sale... 'At least 3 other groups are interested in making proposals,' says William Murrill, GC undertreasurer and La Loma Foods board chairman."

"The former meat analogues and soy milk division

© Copyright Soyinfo Center 2014

generated between $8 and $9 million in sales for 1988, or approximately 40% of combined sales."

2792. Blix, Glen. 1989. Preparation and use of dry soy products and nutritional beverages. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 234-36.
• ***Summary:*** "In modern times, the dairy industry has pioneered the techniques of beverage drying. First with drum driers and more recently with spray drying technology." A pioneer in the production of commercial soymilk was Dr. Harry Miller. In the mid-1930s his soy dairy delivered soymilk to customers in Shanghai, China. World War II necessitated his return to the USA, where he set up a soymilk plant in Ohio. "Spray drying equipment was added to the plant in the late 1940's. This produced a product definitely superior to those other experimenters had obtained using soy flour. In the United States, both liquid and powdered soy milks still are being produced using methods which differ little from those originated by Miller...

"In the United States approximately 25% of the 1.1 billion dollar infant formula market is comprised of soy-based products. Of this amount over 17% is in the powdered form. These numbers indicate that soy milk is being utilized by many infants who do not require it to combat allergy since only 7% to 10% of all infants fall into this category... Infants raised on soy milk formulas often find it difficult to make a later transition to cow milk, and thus either refuse to use milk (placing them at nutritional risk) or demand an adult soy beverage substitute. This fact, coupled with a multitude of other factors, has contributed to a proliferation of soy beverages in recent years...

"The market for an adult soy beverage in the United States is difficult to determine but best estimates indicate that it approached 8 million liters in 1987. The bulk of this amount was made up of aseptically packaged ready to drink milk (7.2 million liters) with the balance comprised of reconstitutable powder."

The high fat content of powdered soymilk can lead to problems with oxidation and the resulting off-flavors. Vitamins C, E, and A can be added as antioxidants. Vitamin A should be used with a nitrogen flush to greatly reduce its decline over time.

The most familiar soy powder product is soy isolate. In 1983 the American Soybean Assoc. estimated that 80 million lb of isolate were produced in the USA, and projected that by 1987 usage of isolates would reach 100 million lb. Those projections have proven to be too optimistic. Address: School of Public Health, Loma Linda Univ., Loma Linda, California.

2795. Stanton, Russ. 1989. Adventists seek buyer for La Loma Foods. *Press-Enterprise* (*Riverside, California*). Aug. 1, Tuesday. [1 ref]

• ***Summary:*** "The owner of La Loma Foods Inc. [The General Conference of Seventh-day Adventist] has decided to sell the Riverside [California]-based maker of meat substitutes and other health food products after receiving an unsolicited offer for the company from its largest competitor... The move comes about 2 months after Ohio-based Worthington Foods Inc. made an undisclosed offer for La Loma. Worthington, which sells its products under the Morningstar Farms and Worthington labels, is the nation's largest maker of meat substitutes and other health food products."

"La Loma, which has about 70 employees, has seen sales improve 15 to 20% this year, [company president Alejo] Pizarro said. The non-meat business had 1988 revenue of about $9 million. Pizarro said the church was hoping La Loma will fetch around $10 million."

"The church sold La Loma's parent, Loma Linda Foods Inc., to a Dutch company last Feb. In the interim, N.V. Verenigde Bedrijven Nutricia (United Nutrition Cos.) has allowed La Loma to continue making its more than 70 non-meat products at the La Sierra area plant. Nutricia purchased Loma Linda Foods for its soybean-based infant formula operations."

2796. Laboyrie, David. 1989. The Australian soymilk market and Australian Natural Foods Holdings Ltd. (Interview). *SoyaScan Notes.* Aug. 17. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Approximately 8 million liters/year of soymilk are presently sold in Australia. His company, Australian Natural Foods, has 3 basic soymilk products. The first, sold to the health food market, is Aussie Soy, which was launched in June 1987 and now has about 60% of the health food market, around 2 million liters a year. It is in a Tetra Pack container. The other two (Excel and VitaFresh) are designed as milk alternatives, and are fortified with vitamins and calcium. But after about 3 months, calcium fortification (with calcium phosphate and calcium chloride) has an definite undesirable thinning effect on most of the soymilk with the formation of a thick layer of sediment settling to the bottom. They sell through supermarkets, and have a much smaller market share. Sanitarium Foods dominates that market, producing about 100,000 liters/week, or 5.2 million liters/year. David's company makes their soymilk from whole soybeans rather than isolates, and promotes it as such.

Excel was originally launched in Aug. 1987 as a fresh product but it was discontinued in June 1988 due to distribution problems and short shelf life. It is now sold in supermarkets in a UHT pack in plain flavor only. They also make another product (similar to Excel) under another brand for another company. It is called VitaFresh. It has the same settling problem. The existing formula does not contain tri-polyphosphate. They think there is still a big market for fresh soymilk in Australia, but they need either a dairy distributor or a 28-day shelf life. Address: Australian Natural Foods Holdings Ltd., 80 Box Rd., Taren Point, NSW 2229 Australia. Phone: 02-526-2555.

2797. Rivera, Esther. 1989. La Loma Foods, formerly Loma Linda Foods, purchased by Dr. Lin Martin (Interview). *SoyaScan Notes.* Aug. 21 and 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On August 10 the board of directors of La Loma Foods announced that Dr. Martin, a dentist from Riverside, a Seventh-day Adventist, and an owner of Health Food Express (a direct mail company in Fresno, California), won the bidding with an offer of $9 million to purchase La Loma Foods. He must make a down payment $1 million by Oct. 1 at which time the final transition period should end. He beat out Worthington Foods (which came in third) in the bidding. The deal should be finalized by the end of September. He intends to proceed with the company's former plans to stay in the Riverside-San Bernardino area and to move into a 60,000 square foot food processing plant there. With this sale, La Loma has become a private company with no connection to the Seventh-day Adventist (SDA) church. The

2799. Brown, Peter J. 1989. From bean to bun: The saga of the soy dog. *Soya Newsletter* (*Bar Harbor, Maine*). July/Aug. p. 1, 12-15.
• ***Summary:*** A look at the tofu hot dog market in America–but with no statistics on the market size or individual products. The major players are Light Foods Inc., White wave Inc., Lightlife Foods Inc., and Northern Soy. An estimated $2 billion worth of meat- or poultry-based hot dogs (1.5 billion lb in 1987) are sold in America. America's first tofu hot dog, Tofu Light Links, was introduced in 1983 by Robert Davis of Light Foods in St. Louis, Missouri. White Wave, which sells Healthy Franks made by a co-packer and aimed at the mainstream market, has just moved into a 24,000 [actually 23,000] square foot plant with almost 50 employees. Company sales are expected to top $3 million in 1989. Lightlife sells to the kosher/pareve market. Last fall East West Journal picked Northern Soy's Not Dog as the best meatless hot dog in America. The keys to success are flavoring, use of vegetable gums, retention of juiciness, and pricing.

Worthington Foods, with more than 350 employees and $75 million is sales, has been marketing meatless meatlike products for decades. They now have 120 such products and the basic goal is to be a close as possible to the real thing. Earlier this summer the *New Bedford Standard-Times* conducted a taste test among young children at a summer camp. The soy hot dog was the second most expensive of the entrants and the kids disliked it, describing it with terms such as "sooooo gross." Address: Contributing editor.

2804. Franklin, Peter D. 1989. Worthington Foods chooses New York ad agency. *Dispatch* (*Columbus, Ohio*). Sept. 26. p. 6C. Business section.
• ***Summary:*** Out of 25 agencies that sought the company's advertising account, Worthington Foods has selected Partners & Shevack, Inc. (of New York), which has total billings in the $150 million range. Since 1986 Worthington's $2.5 million account has been with Fahlgren & Swink.

"Partners will begin work Sunday on new consumer, trade and professional advertising campaigns that will concentrate on the print media, particularly magazines."

2805. *Adventist Review* (*Hagerstown, Maryland*). 1989. Granose Foods opens new factory: Growth from bakery to Britain's major health food manufacturer. Sept. 28. p. 20-21 (p. 1036-37).
• ***Summary:*** The brand new factory is at Newport Pagnell, Buckinghamshire, England–30 miles away from its former location at Stanborough Park, on the outskirts of London, near Watford, Hertfordshire. The founder is said to be J. Heide, who, a hundred years ago, came to London from Germany to start a new life. With help from his uncle, he became a master baker. He soon joined the small group of members of the Seventh-day Adventist Church. "In 1899 John Hyde (as he soon became known) was living over his bakery at 332 Portbellow Road in east London with his wife" and four children. He worked hard to make bread that tasted better and was fresher than anyone else. He and his brother delivered their loaves late at night or early in the morning.

"John soon learned about health foods and the church's teaching that God is honored in a healthy body as well as in a healthy mind and spirit. Samples from the Sanitarium Health

© Copyright Soyinfo Center 2014

Food Company in Battle Creek, Michigan, found their way to Britain, and in 1899, with the blessing of the church, John went to the United States to learn how to make the foods. He spent six months with Dr. John Harvey Kellogg, who was president of the medical college in Battle Creek, superintendent of the Battle Creek Sanitarium (with its health food company) and member of more than a dozen medical societies and associations,..."

"Kellogg created the formula for a gluten biscuit. The Battle Creek Sanitarium Health Food Company also produced Granola, a cooked preparation of wheat and oats to be used as a breakfast food. Granose flakes, Granose biscuits, Protose, and Bromose were among their strangely named products.

"Imported know-how: John Hyde took the production know-how back to Britain, where he put it into operation. Adventists purchased a flour mill at Salford, near Redhill, Surrey, and formed the International Health Association Ltd. Hyde imported used plant equipment from Battle Creek and purchased other items locally.

"But the road to success was not to be easy. Before the advent of electricity, candles were used for lighting. This practice led to a fire that burned down the factory in 1900.

"In 1907 the association moved to Stanborough Park, an idyllic 75-acre estate on the outskirts of London, near Watford, Hertfordshire. In 1926 it became Granose Foods Ltd."

John Hyde, the baker, worked many years for Granose Foods. He eventually had 13 children–a baker's dozen. The name of each is given. "Almost all his children became employees of the Adventist Church."

Why did the factory move? Over the years, the SDA church leadership sold off portions of the valuable estate surrounding the Granose food factory; as new houses were built, the factory became a "noncoforming user" in a residential zone. Income from a recent sale of 10 more acres at Stanborough Park helped to pay for the new plant and the 3 acres of land on which it was built.

A photo shows the ribbon-cutting ceremony on July 9. Present were: (1) "Eric Fehlburg, who coordinates the activities of 52 Adventist health food companies worldwide, with $300 million in receipts, from church headquarters in Washington, D.C." He believes that Granose has a bright future but believes that, since the 3 acres is already too small, Granose should purchase 20 acres somewhere else. Note: Why did they not buy more land on which to build the new factory? Apparently for lack of money. (2) Peter J. Archer, age 50, who left school at age 16 and got a job sweeping the yard for Granose. He has been the manager of Granose since 1984, and he and his team have turned the company around (after years of indifferent sales) and appear to be on a path of continuing growth. "Granose is my life," says Archer. A small photo shows Archer and Fehlberg shaking hands.

Granose products include "Ravioli, Nuttolene, Vegecuts, Mock Duck, Burger Mix, Sausfry, Soya Wieners, a variety of soymilks, and more than 100 other products. The latest, Sweet Sensation, is a soy ice cream. With the assistance of De-Vau-Ge in Germany, Granose supplies a tremendous demand for nondairy products. The company sells 656,000 gallons (2.5 million liters) of soymilk a year. From the Nutana factory in Denmark, Granose imports and distributes five different packs of nondairy margarine containing oils, but no whey. Tue Westing and marketing manager Inge Kjeldal of Nutana were present at the opening."

2806. **Product Name:** [Tofu Line Chili Con Tofu].
Foreign Name: Tofu Line Chili Con Tofu.
Manufacturer's Name: Aros Sojaprodukter KB. Distributed in Sweden exclusively by Nutana.
Manufacturer's Address: Bergsvagen 1, 190 63 Orsundsbro, Sweden. Phone: 0171-604-56.
Date of Introduction: 1989 September.
Ingredients: Incl. tofu & chili.
Wt/Vol., Packaging, Price: 500 gm.
How Stored: Frozen.
New Product–Documentation: Talk with Ted Nordquist of Aros in Sweden. 1990. May 18. This product was introduced in Sept. 1990. Starting about 2 years ago, all the company's products are sold under the "Tofu Line" brand.

Manufacturer's leaflet. 1990. At gott och må bra (Eat well and feel good). Shows color photos of the labels of the company's 5 main entrees (including this new one) plus natural tofu.

• ***Summary:*** "Definitions. Rather than attempting to categorize vegetarians on the basis of what is included in the diet, it may be more meaningful to group them on the basis of the major reason which has provided the impetus for elimination or reduction of animal products from their regular dietary pattern. This allows vegetarians to be placed in 3 rather broad categories: economic/ecological, religious/philosophical and health oriented."

"The modern religious vegetarian movement was born through the efforts of William Cowherd in Manchester, England, in 1809. Under his leadership, his congregation pledged themselves to abstain from alcohol and flesh food. This vegetarian movement was soon brought to America. In 1817, the Reverend William Metcalfe and a group of his parishioners landed in Philadelphia [Pennsylvania], bringing with them their belief in a vegetarian lifestyle. This movement was aided by converts such as Sylvester Graham

© Copyright Soyinfo Center 2014

and John Harvey Kellogg. A New York convention, called by Metcalfe in 1850, laid the framework for the American Vegetarian Society."

"In the Western industrialized world, by far the largest reason for choosing a vegetarian diet is health concerns... In a recent survey, the USDA determined that 80% of the American public felt a vegetarian life style to be more healthy and that 40 to 50 million Americans had actually reduced their consumption of red meats for that reason. In a just completed random sampling of 100 college and university food service directors in the United States, 62% indicated that a conscious effort was made to provide a vegetarian alternative at each meal. Forty-six percent stated that this policy had been adopted within the last 5 years. An additional 37% indicated that it was their practice to provide at least occasional vegetarian meals. Only 11% said that they did not make any attempt at accommodation."

"Total sales of meat analog products in the United States in 1985 amounted to some 50 million dollars. This... does not take into account the textured vegetable proteins used to extend the more traditional meat products." Address: Loma Linda Foods, Inc., 11503 Pierce St., Riverside, California 92515.

• ***Summary:*** Although the Chinese had produced a type of isolated soy protein product (tofu) since the tenth century A.D., western research on the isolation of soy proteins began in Germany 1883, when Meissl and Boecker introduced the terms soy casein and soy albumin. Similar work was published in 1898 by Osborne and Campbell at the Connecticut Agricultural Experiment Station in the USA. In 1903 Oscar Nagel of New York described in detail how he produced "soy casein" and discussed it potential applications as a commercial product. Since that time, the United States has been the world leader in soy protein research and production.

The world's earliest known commercial food product made from isolated or concentrated soy protein was Albusoy, introduced in 1939 by the Soya Products Division of the Glidden Co. in Chicago. This was an enzyme-modified isolated soy protein product used as a whipping agent. Many of the earliest soy protein products were used like Albusoy in whipping applications. Soyco, launched in 1944 by Soybean Products Co. in Chicago, was a hydrolyzed soy protein whipping agent used as an egg white substitute. Rich's Whip Topping, introduced in March 1945 by Rich Products Corporation in Buffalo, New York, was used as an alternate for whipped cream. In 1947 Archer Daniels Midland Co. introduced Nutriwhip, the Borden Company debuted Soyco, and Central Soya Co. launched Soy Albumen, all whipping agents.

In 1951 the first patent for spun soy protein fibers was issued to Robert Boyer, formerly a soy researcher at the Ford Motor Co. In 1952 the first soymilk based on soy protein isolate, Soyamel, was introduced by Worthington Foods. Isolates soon replaced soy flour in non-dairy infant formulas worldwide. In 1959 the first food-grade soy-protein concentrates were introduced by Griffith Laboratories.

The 1960s put modern soy protein products on the map. In 1960 the Boyer patent and its 1954 revision started the high- tech meat analog industry when Worthington Foods launched Fri-Chik, a meatless drumstick. In 1961 and 1966 conferences on soy protein foods were at the USDA Northern Regional Research Center in Peoria, Illinois. Many of the 276 attendees at the second conference were pioneers in the field. A major theme at both was that protein malnutrition was the world's most widespread deficiency disease. In 1966 General Mills introduced Bac*O's, meatless fried bacon bits made from spun soy protein fiber. At a May 1968 Conference on Protein Rich Food Products from Oilseeds held by the USDA in New Orleans, Louisiana, oilseed proteins were increasingly seen as the answer to the "protein crisis." Also that year International Action to Avert the Impending Protein Crisis, a United Nations publication, recommends soybeans as the single most promising protein source to close the "protein gap." In Nov. 1969 General Mills launched its second bacon analog, Bac-o-Bits, this time made from textured soy flour. Frozen Bontrae meat analogs were sold to the foodservice trade. This pioneering work nationwide by one of America's largest food companies indicated to the U.S. food industry that the time for soy protein foods of the future had arrived.

In 1971 Dr. K.K. Carroll at the University of Ontario, Canada, published the first modern study showing that even

© Copyright Soyinfo Center 2014

in fat-free diets, animal proteins raise serum cholesterol and soy proteins lower it. Many subsequent studies worldwide confirmed these important results.

During the 1970s soy protein products entered the mainstream. In Jan. 1970 W.T. Atkinson, assignor to the Archer Daniels Midland Co., was issued a key patent for a "Meat-like protein food product," which was soon widely sold under the registered trademark TVP. In Feb. 1971 textured soy protein products were authorized for use as meat extenders in the U.S. National School Lunch program, opening up a huge potential new market for TVP type products. The amount of products used jumped from 8.5 million lb dry weight in 1971-72 to 87.5 million lb in 1976-77. Also in 1971 the Food Protein Council (renamed the Soy Protein Council in Dec. 1981) was established as a trade association for major soy protein manufacturers.

In March 1973, as meat prices skyrocketed, beef-soy blends containing 25% hydrated textured soy flour began to be introduced to U.S. supermarket chains, marketed for their lower price and higher nutritional value. Predictions of huge future markets (which failed to materialize) were published. In Nov. 1973 the first World Soy Protein Conference was held in Munich, Germany, attended by over 1,000 people from 45 countries. In late 1974 Miles Laboratories/Worthington Foods launched the Morningstar Farms line of meat analogs based on spun soy protein fiber nationwide at U.S. supermarkets. In Aug. 1975 Japan Vegetable Protein Food Association was founded to promote modern soy protein products, primarily soy protein isolates. In Oct. 1976 seminars on the use of soy protein for foods and meal for feeds were held in Moscow, sponsored jointly by three U.S. groups. More than 200 Soviet officials attended. In May 1978 The Keystone Conference on Soy Protein and Human Nutrition was held at Keystone Colorado. Sponsored by Ralston Purina Co., it presented a new view of soy protein quality. In Jan. 1978 the International Soya Protein Food Conference was held in Singapore; 400 people from 24 countries participated. And in Oct/Nov. 1978 the World Conference on Vegetable Food Proteins was held in Amsterdam, The Netherlands; More than 1,000 people attended.

In 1980 soy protein products were approved for use as a beef extender by the U.S. Armed Forces. That same year the World Conference on Soya Processing and Utilization was held in Acapulco, Mexico. In Aug. 1980 Archer Daniels Midland Co. entered the soy protein isolate market with its purchase of Central Soya's isolate plant. Then in April 1985 Central Soya bought Griffith Laboratories' line of protein products. And in Feb. 1986 Central Soya purchased the Staley protein line, including Mira-Tex, Procon, and Textured Procon brands. In July 1987 Ralston Purina Co. of St. Louis, Missouri, established Protein Technologies International as a wholly-owned subsidiary to focus on sales of soy protein for food uses. The company's sales of soy protein products were $139.8 million in 1986.

But during the 1980s the total market for soy protein products grew very slowly, if at all. In 1984 Dr. Walter Wolf of the USDA Northern Regional Research Center estimated U.S. production as follows: Soy protein concentrates 36,000 tonnes (metric tons), soy isolates 41,000 tonnes, textured soy flour 43,000 tonnes, and textured soy concentrates 4,000 tonnes. The segment showing greatest growth appeared to be that of soy protein isolates, of which Ralston Purina/Protein Technologies International in the largest manufacturer.

Still there is widespread hope that, with the growing concern over dietary cholesterol, the low cost of soy protein relative to meat protein, the inevitable widening of this cost gap in the years to come, and the increasingly positive consumer attitudes toward soy protein products shown in polls, the market for these products will soon begin to realize its long-forecast potential.

This is the most comprehensive bibliography ever published on modern soy protein products. It is also the single most current and useful source of information on this subject available today, since 53% of all references (and most of the current ones) contain a summary/abstract averaging 68 words in length.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 37 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 15 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 651 commercial soy products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, and a bibliometric analysis of the composition of the book (by language, document type, year, leading countries, states, and related subjects) are also included. 2811. Holzapfel, Robert. 1989. The Farm in Tennessee and seitan made with miso (Interview). *SoyaScan Notes.* Oct. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Book Publishing Co. at The Farm is planning to publish a book on seitan. There are two ways of making seitan: from wheat flour or from gluten flour. The former method is very wasteful of the nutrients in wheat, befouls the sewage system with wheat starch, takes a long time, and gives a lower yield of final product. The method using gluten flour gives no waste, and is quick and easy. Two companies in America that make or sell gluten flour are Arrowhead Mills (Hereford, Texas) and Nature's Harvest (A Seventh-day Adventist company in Michigan).

To make seitan, mix 3 cups water with ½ cup miso and garlic granules or powder to taste. Stir this into 4 cups gluten flour in a bowl. Mix until it becomes elastic, then knead until a uniform loaf is formed. Tear off chunks and shape into patties. Bake on a tray at 350ºF for about 10 minutes on side, until nicely browned and savory. The resulting product has the texture and taste of meat. Address: President, The Book Publishing Co., P.O. Box 99, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: 615-964-3571.

2812. Lietzke, Ron. 1989. Worthington Foods sues to protect trademark. *Dispatch* (*Columbus, Ohio*). Oct. 21. p. 8D. Business section.
• ***Summary:*** "Worthington Foods Inc. has filed a $6 million lawsuit against Kellogg Co., alleging the Battle Creek, Michigan, company illegally is using its 'Heartwise' trademark for a new breakfast cereal." Worthington contends it has used the term since 1987 to promote a line of cholesterol-free foods sold under Morningstar Farms brand. "Although it has not secured trademark status from the U.S. Patent and Trademark Office, Worthington Foods claims it under a common law provision that is based on its usage over the years, the court documents said...

"Court documents filed by Kellogg said the company is spending $40 million to market Heartwise cereal in the first year...

"Heartwise cereal is being marketed by Kellogg for its reported ability to lower blood cholesterol levels because it contains a grain from India called psyllium."

2813. Kraft, Raymond C. 1989. Remembrances of Dr. Harry Miller and his work with soyfoods (Interview). *SoyaScan Notes.* Oct. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** On 22 April 1990 the Mount Vernon Academy, the Seventh-day Adventist high school that both he and Dr. Miller attended at different times, will celebrate the 50th anniversary of Dr. Miller's return to Mt. Vernon, Ohio, in the fall of 1939, to start the International Nutrition Laboratory, his soymilk plant, with a memorial to Dr. Miller. It may be a bust and/or a plaque, with exhibits. In the fall of 1939 Dr. Kraft was a senior at that school; now a physician who will be age 67 in April (2 generations behind Dr. Miller), he worked for Harry Miller at his Mt. Vernon soyfoods plant from January to September 1941. Dr. Miller bought 140 acres on which to build his plant and house, and to grow soybeans. He grew his own soybeans there from the first spring. In 1940 Dr. Miller's son, Clarence, had just finished college. He went to Mt. Vernon from Takoma Park to get the bookkeeping records for Dr. Miller's business in order.

Dr. Kraft has several strong recollections. "First, when he fired me on the first of September, I asked him if there was anything wrong with my work. He said 'No, not a thing. It's time for you to go back to school.' Second, he was a man who never knew the meaning of the word 'menial.' He would come out to the factory at 3:30 or 4:00 in the morning to do whatever needed to be done; sweeping the floor, grinding beans, cleaning out the spray drier, shoveling coal into the boiler, digging ditches. Then he worked at his medical profession (surgery and hospital) during the day and at 7:00 or 8:00 P.M. he'd be back in the factory again until 10:00 or even midnight. He had an inexhaustible supply of energy. He was a quiet, self-effacing man. He was not a public speaker, and didn't relish publicity–quite like General George C. Marshall."

The 4 main soy products that Dr. Kraft remembers the company selling when he began work there were Soyalac (the principal one, sold mostly for allergenic babies), probably Soyagen for general usage, (both liquid and spray dried; but he is not positive that they were making Soyagen), Soybean Sandwich Spread (made from the mash left over after making soymilk; he does not remember if the product contained additional soybeans), and Canned Green Soybeans.

All this was only 2 years after Dr. Miller started the farm in Mt. Vernon. "He was the first to produce soybeans in Knox County, Ohio, for food use. He had to go out and almost brow-beat the farmers into growing the soybeans for him. They would do it only on the condition that he contracted the entire crop." Address: 500 Cohasset Square, Suite 23, Chico, California 95926. Phone: 916-345-9500.

Lima France (via Bonneterre; full-page color ad, p. 8), Laboratoires Heuprophax (full-page ad, p. 18; Sojacithine), Alré (full-page ad, p. 21; Soja Cao, Soja Fruits, Sojacao Gluten, Soja-Vita. This company, in business since 1934, is a division of Heuprophax Laboratories in Nanterre, France), Aliments de Regime & Alre (p. 30), Bioforce (p. 34-35), Bonneterre (p. 36), Celnat (full-page ad, p. 41-42), Creation (p. 44, Soyalet and Soyavit brands of soyfoods), Diétetique et Santé (p. 50, Gerblé), Heuprophax Laboratoires (p. 64), Innoval (p. 68), Jonathan-France (p. 72), Naturavit (p. 73), Laboratoires Marins (p. 76, Soyal soy lecithin), Lima-France (p. 80), Nature et Progres (p. 88, organic certifiers, their logo looks like a round yin-yang (*t'ai chi*) symbol with one white circle in it), Provamel (p. 98, Izegem, Belgium; 4-page color insert shows products), Société Soy (half-page ad, p. 99; tofu specialists), Pur Aliment (p. 100, Pural brand; Seventh-day Adventist broker of many soyfood products), Soy (Société Soy, p. 112). Address: Paris, France.

2815. Leatherhead Food Research Assoc. 1989. Vegetarianism and the consumer: Implications for the UK food industry. Leatherhead Food Research Assoc., Randalls Rd., Leatherhead, Surrey, England. vi + 118 p. Oct. No index. 30 cm. Price: £2,700. [2 ref]

• ***Summary:*** Contents: Foreword. List of 27 tables. List of 16 figures. Management summary. 1. Introduction: Scope of the research, aims, objectives, research method. 2. Profile of consumers reducing / excluding meat / meat and fish from their diet: Definitions, levels of reduction/exclusion of meat/meat and fish consumption, demographic profile, length of time following current eating pattern. 3. Reasons for reduction/exclusion of meat consumption: Summary of reasons for change amongst adults, reasons for change by demographic profile of adult consumers, summary of reasons for change amongst children, reasons for change by eating pattern of consumers. 4. Future potential of vegetarianism and reduced meat consumption: Consumer intentions, reasons for change. 5. Implications for food consumption habits of the exclusion of/reduction in meat and fish consumption: Changes made to in-home consumption patterns by consumers avoiding meat completely, changes made to in-home consumption patterns by consumers reducing consumption of meat, changes made to out-of-home food consumption patterns by consumers avoiding meat, changes made to out-of-home food consumption patterns by consumers who had reduced meat consumption. 6. Trends in consumption of meat and fish: Introduction, meat, fish. 7. Trends in consumption of meat and fish alternatives: Introduction, vegetables, salad and fruit, alternative protein sources, animal-derivative-free products, overview of vegetarian product introductions to the UK, development of vegetarian products within the catering market, development of novel vegetarian products worldwide. 8. Consumer purchasing criteria for vegetarian food: Introduction, distinctiveness of product, retailer and manufacturer preferences, level of healthy eating concern, level of reaction to food 'scares', level of environmental concern. 9. Conclusions.

In the section on "Alternative protein sources" the subsection on "Meat imitations" states that Realeat Vegebangers, Cauldron Foods Tofu Burgers, Granose Soya Franks and Spicy Links, Protoveg Sosmix, Direct Foods Smokey Snaps, Marks & Spencer Vegetable Cutlets are all on the market (p. 72). Realeat was the pioneer in introducing vegetable burgers (Vegeburgers) and frozen burgers to the health-food trade; they were introduced to supermarkets in about 1986/87. The Vegeburger brand, now owned by Haldane Foods, includes Cheese Vegeburger, Vegebangers, and ready meals. Companies that have introduced vegetable burgers in the last four years include Direct Foods, Vegetarian Feasts, Granose Foods, Tivall, Cauldron Foods, Booker Health Foods, Brewhurst, The Dietburger Company, Realeat, Birds Eye Walls, and supermarket brands. In 1987 Cauldron Foods launched a range of three varieties of tofu burger in vacuum packs; cheeseburgers were launched by both Realeat and The Dietburger Company. In April 1988 Birds Eye Walls launched its Steakhouse vegetable burger and Granose Foods launched four varieties of frozen burgers, incl. Soya & Mushroom, and Nut & Sesame varieties. Tesco introduced a vegetarian burger under its own brand; it was made by Tivall from soya and wheat. In 1989 Realeat (Haldane Foods) introduced a microwaveable Quarter Pounder Burger. In 1985 Granose Foods launched Soya Franks, a meatless sausage. Realeat launched Vegebanger, which includes soya. In 1986 Direct Foods launched a soya-based Sausage Slice and Tivall introduced vegetable protein sausages. In 1987 The Dietburger Company launched an all-vegetable frozen dietbanger and Granose Foods launched Vegetarian Spicy Links. In 1988 Goodlife Whole Foods launched Herb Bean Bangers and Spicy Bean Bangers; Buss Foods introduced a vegetarian sausage, Realeat introduced a frozen Vegebanger, and Granose Foods added a vegetarian sausage to its Wholefoods Kitchen range (p. 76). Address: Leatherhead, Surrey, England.

The industry matures: From rebellion to leadership. 4. The impact of legislation and regulation by Peter J. Semper. 5. The role of science: Research, development, and credibility. 6. Product category sales trends (Soyfoods is not listed as a category). 7. Retailing: The interface with the consumer (Health food chains: General Nutrition Centers, Great Earth Vitamins, Nature Food Centres, Fred Meyer Nutrition, Nutrition World). 8. Manufacturing: A multitude of market shares. 9. Distribution: Consolidation, stability, and efficiency. 10. Regions. 11. Factors for the future. Appendix 1. Organic farming labeling legislation. Appendix 2. Examples of advertising.

Gross retail sales for this industry exceeded $3.5 billion in 1988. This study gives a good look at the structure of the market, and contains a brief historical overview of the industry. It contains many tables, graphs, and maps. None of these relate to soyfoods. A graph of "Natural Products Industry Sales" shows total retail sales to have grown from about $250 million in 1970 to $3,550 million in 1988, a 14-fold increase in 18 years. Of the 1988 total, $2,390 million (67%) is sold by independents (natural and health food stores), $679 million (19%) by the mass market (supermarkets), and $477 million (13%) by non-supermarket chains (such as General Nutrition Centers). The major natural products in the mass market (with sales in 1988) are yogurt $1,200 million, bottled water $800 million, granola bars $200 million, and herbal teas $70 million. "These 4 product categories add up to more than $2,200 million, which is more than double the sales we tracked for all grocery products sold through the natural products industry."

History: The notion of natural or health food products has been around for almost as long as the United States. Two of the early pioneers were Sylvester Graham and John Harvey Kellogg. Graham, who admonished Americans to stop eating meat, "gained both fame an notoriety in the early 1800s in claiming that 'a single pound of rice absolutely contains more nutritious matter than 2½ pounds of the best butcher's meat.' Graham died in 1851, at the ripe old age of 57. A year later, John Harvey Kellogg was born. He lived to be 91, and attributed much of his longevity to his [vegetarian] diet based on fruits, nuts and whole grains. From his Battle Creek Sanitarium, Kellogg concocted whole wheat meals, which found their way into the mass market. And subsequently, became more refined and less healthy."

The natural foods industry is based on two basic beliefs, both expressed by Graham and Kellogg. "The first is that certain foods or nutrients can be used medicinally. That is, the right foods can be used to help cure disease or to enhance vitality or performance... The second maxim dear to the natural foods industry is that food is better and intrinsically healthier when eaten most closely to its original state in nature. The ideal food is that which is unprocessed, unrefined, and even uncooked in some instances."

"The industry matures: From rebellion to leadership. Since World War II, food production in America can be explained by the concept of the Hegelian dialectic. One concept or practice (a thesis) inevitably evokes its opposite (an antithesis), and the two interact to form a new concept (synthesis), which in turn becomes a new thesis. "Throughout the 1950s and 1960s, food became ever more mass produced, processed, homogenized and inexpensive... as the power of the food conglomerates reached their peak some 20 years ago, the antithesis was being articulated by such visionaries as Adelle Davis, Gayelord Hauser, and Linus Pauling. "It's probably no accident that this antithesis caught on and became a movement in the late 1960s and early 1970s, when a significant segment of the Baby Boom generation was protesting everything else.

"Through the 1980s, a synthesis has been evolving. The food giants have become more aware of health issues and the natural foods industry has adopted and adapted technologies to allow greater production of food, while retaining its intrinsic values."

During the 1960s and 1970s this industry was divided into two camps, often at odds with each other. One sold "health foods" and the other "natural foods." The health food industry, which had started in the 1930s and focused on the first maximum that food can be used as medicine, focused most of its attention on vitamins, herbs, and some traditional health foods such as wheat germ and brewer's yeast. "In the late 1960s the natural foods faction emerged. Its followers were primarily concerned about food [rather than vitamins or supplements] and its purity... Products were defined essentially by what they did not contain: chemical pesticides, preservatives, food colorings, refined sugars and flours and, frequently, any animal products. Vegetarianism was an important part of the natural foods movement."

During the 1970s the industry was nurtured more by idealism than business acumen. When Natural Foods Merchandiser began surveying industry retailers in 1979, "nearly a quarter of them could not tell us their gross profit margin and a significant number did not even accurately know their gross sales. A high percentage didn't care...

"A decade later, the only thing that remains constant is the idealism, but today it is frequently blended with sound management and creative marketing...

"How did the industry accomplish this transformation? It happened in several evolutionary stages. First and foremost, the impetus for growth came from consumers. Economists use the term *demand pull* when describing conditions in which consumption dictates sales growth and pricing. In this case, the entire natural products industry was virtually dragged kicking and screaming into the mainstream by consumers. They demanded the natural products, and then they began demanding that these products be marketed

© Copyright Soyinfo Center 2014

properly.

"Then between 1975 and 1982 a new wave of retailers entered the scene. They ran better, cleaner businesses and broadened the market. "Health" and "natural" principles were integrated. Industry sales grew remarkably during the 1970s, from about $250 million in 1970 to $1,850 in 1980, averaging about 20% a year for the decade. The number of outlets quadrupled. "At the same time, the supermarkets started setting up health food sections. On the west coast, two regional chains–Raley's in northern California and Fred Meyer in Oregon–had successfully introduced health foods as early as 1971. Their continued success, along with heightened media attention, prompted Safeway to begin a program in 1980 (another motivation was that Raley's was generally leading Safeway in market share wherever the two chains competed). Since Safeway at that time was the nation's largest grocery chain, its leadership encouraged other supermarkets to follow suit. Drug stores and discount stores, such as K-Mart, also entered the field.

"Meanwhile, there was strong expansion from the existing health food retail organizations, primarily the major chains such as General Nutrition Centers (GNC), Great Earth International and Nature Food Centres."

By the end of 1982, this expansion had peaked. There was a 4-year shakeout which lasted from early 1983 until late 1986. The industry lost a net of 1,500 health and natural food stores, and the vast majority of these were small health food stores. "The number of segregated natural foods sections declined from a high of 2,700 in 1985 to approximately 1,400 today."

Surviving retailers emerged stronger. A resurgence began in 1987. In the fall of that year Surgeon General C. Everett Koop issued a report stating that cholesterol levels exceeding 200 were associated with a high risk of heart disease. This was considerably lower than the previous acceptable cholesterol limits and immediately plunged a quarter of the American people into a risk group. Consumers began visiting natural foods stores to buy low-fat, low-cholesterol foods, some based on tofu and other soyfoods. Also, foods such as oat bran, canola oil, and niacin were shown to actually lower serum cholesterol levels.

"Probably the biggest boost the industry has ever received... came in March of this year, when CBS '60 Minutes' ran a segment on the potential dangers of apples treated with Alar (daminozide) to young children. Retailers reported being overwhelmed by consumers clamoring for organically-grown foods of all types.

"In many ways, the industry is 20 years old. Many of the leading companies in the industry were formed within the past 20 years, including Tree of Life, Nature's Way, Twin Lab, Celestial Seasonings, R.W. Knudsen & Sons, Mrs. Gooch's, Bread & Circus and Whole Foods Markets." Address: Boulder, Colorado. Phone: 206-642-3586.

2818. Lietzke, Ron. 1989. Hospital has a heart-to-heart. Cereal maker to promote Riverside's health messages. *Dispatch* (*Columbus, Ohio*). Nov. 2. p. 2G. Business section.
• ***Summary:*** The Riverside Methodist Hospitals group in Columbus, Ohio, owns the registered service mark "Heartwise," and has used it for years to promote a variety of programs on how to reduce the risk of heart disease. Now the Kellogg Co. in Battle Creek, Michigan, is spending $40 million to launch Heartwise breakfast cereal, which has a high soluble fiber content from a grain component called psyllium. Kellogg has agreed to print the hospital's health messages on millions of its boxes.

"Worthington Foods, a producer of soy-based foods and meat substitutes, has filed a $6 million lawsuit against Kellogg, alleging the cereal maker is illegally using the 'Heartwise' trademark. Worthington Foods has used it since 1987 to promote a line of cholesterol-free foods sold under the Morningstar Farms label.

"'Our dispute is with a cereal company, Kellogg, and is not with our good neighbor, Riverside Hospital,' Worthington Foods President Dale E. Twomley said yesterday." However Worthington and the Riverside hospital group have been at odds over use of the trademark.

2819. Rivera, Esther. 1989. La Loma Foods, formerly Loma Linda Foods, purchased by Worthington Foods (Interview). *SoyaScan Notes.* Nov. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The General Conference (GC) had accepted the offer by Dr. Martin, who had a given period to come up with the funds and finalize the deal. He was unable to raise the full amount. He asked for an extension but the GC didn't grant him any more time. So the bidding was opened again. The second bidder didn't change his bid, but Worthington Foods came up with a new proposal for all cash up front. The GC accepted Worthington's bid. So on 10 Dec. 1989 La Loma will become Worthington's property. On Dec. 8 the La Loma office in Riverside will close. Their contract with Nutricia expired on Aug. 31. On Dec. 11, Worthington begins their contract with Nutricia, which is making the products now. Nutricia owns both the Riverside and the Mt. Vernon plants. Basically Worthington purchased the food equipment, the product formulas and trademarks, and the potential accounts. The big question is how many of the former Loma Linda products Worthington will be discontinued, since Worthington has many very similar products. La Loma has many concerned consumers and distributors. What will happen to their "Labels for Learning" program? And their archives? They are scheduled to meet with Worthington marketing people on Dec. 20. Worthington or the GC will probably do a news release. Elder Wm. Murriel (pron MUR-ul) at the GC (phone: 301-680-6000) is chairman of board of La Loma. Address: La Loma Foods, Riverside, California.

2820. **Product Name:** Tofu Salad.
Manufacturer's Name: Cedar Lake Foods.
Manufacturer's Address: P.O. Box 65, Cedar Lake, MI 48812. Phone: 517-427-5143.
Date of Introduction: 1989 November.
New Product–Documentation: Cathy Tardosky. 1989. Whole Foods. Nov. p. 49.

2821. Fraser, Gary E.; Babaali, Hossein. 1989. Determinants of high density lipoprotein cholesterol in middle-aged Seventh-day Adventist men and their neighbors. *American J. of Epidemiology* 130(5):958-65. Nov. [32 ref]
Address: Dep. of Epidemiology, Loma Linda Univ., Loma Linda, California 92350.

2822. Tardosky, Cathy C. 1989. Soyfoods entrees: Nutrition for the '90s. *Whole Foods.* Nov. p. 48-53.
• ***Summary:*** Lists (with photos) many second generation soyfood products. Retailers say that demand for soyfoods is on the rise. Many store owners are quoted, speaking very positively of the category. Worthington Foods is now in its 50th year of vegetarian food production, with a total of 45 different entrees under the Worthington and Natural Touch labels. "The Natural Touch line was developed in the early 1980s as the interest in products went more toward the natural segment of the market."

2823. Nieman, David C.; Underwood, B.C.; Sherman, K.M.; Arabatzis, K.; Barbosa, J.C.; Shultz, T.D. 1989. Status of Seventh-Day Adventist vegetarian and non-vegetarian elderly women. *J. of the American Dietetic Association* 89(12):1763-69. Dec. [46 ref]
• ***Summary:*** 23 SDA vegetarian women (mean age 72.2) and 14 SDA non-vegetarian women (71.1 years) were studied. Results from analysis of 7-day food records showed that the vegetarians consumed significantly less cholesterol, saturated fatty acids, and caffeine, but more carbohydrate, dietary fiber, magnesium, vitamins E and A, thiamin, pantothenic acid, manganese and copper than non-vegetarians. The vegetarians had significantly lower serum glucose, low-density lipoprotein cholesterol, and total cholesterol levels.

2824. *SoyaScan Notes.* 1989. Major soy-related company acquisitions and mergers worldwide 1970-1989 (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1970 March–Miles Laboratories of Elkhart, Indiana (most famous as the maker of Alka-Seltzer) acquires Worthington Foods of Worthington, Ohio (most famous for its Morningstar Farms line of meat alternatives), making it a wholly owned subsidiary.

1973 Jan. 15–ADM acquires 50% of British Arkady Holdings Ltd. and its subsidiary British Arkady Co. Ltd. of Old Trafford, Manchester, England.

1977 (late)–Bayer A.G. of Germany (makers of Aspirin) acquires Miles Laboratories of Elkhart, Indiana; as part of the deal they Worthington Foods, a subsidiary of Miles.

1979–Bunge Corp. acquires Lauhoff Grain Co. of Danville, Illinois.

1982 Oct. 15–Worthington Foods is repurchased from Miles Laboratories by a group of three Seventh-day Adventist investors in a leveraged buyout. During the 12 years under Miles, sales increased five-fold. Sales volume in 1983 was an all-time high. The company employed 250 people.

1983 April 21–Hybritech Seed International, Inc., a wholly-owned subsidiary of Monsanto Company, purchases the Jacob Hartz Seed Co. of Stuttgart, Arkansas.

1983–House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1985 May 31–Barricini Foods Inc. acquires Farm Foods (makers of Ice Bean soy ice cream) of Summertown, Tennessee.

1985 March–British Arkady acquires Direct Foods Ltd.

1986 Feb.–British Arkady acquires Vegetarian Feasts Ltd.

1986 Dec. 1–White Wave acquires Soyfoods Unlimited, Inc. of San Leandro, California. It is White Wave's first acquisition.

1987 Aug.–British Arkady acquires Haldane Foods Ltd. and Regular Tofu Co. Ltd. It also acquires Vegetarian Cuisine Ltd. in 1987.

1987 Oct.–The Ferruzzi Group in Ravenna, Italy, acquires Central Soya Co. in Ft. Wayne, Indiana.

1987 Dec. 31–ADM acquires the rest of British Arkady Holdings Ltd. so that it now owned 100%.

1988 Jan.–The British Arkady Group acquires Haldane Foods.

1988 Feb.–Westbrae Natural Foods (of Berkeley, California, maker of soymilk) is merged with and becomes a wholly-owned subsidiary of Vestro Foods, a publicly traded company in City of Commerce, Southern California. Most of Westbrae's top management decides not to stay with the company.

1988 Sept.–Haldane Foods Group acquires Realeat Foods Ltd.

1989 Feb.–Haldane Foods Group acquires Saucemasters Ltd. It also acquires Genice Foods Ltd. in March 1989.

1989 Feb. 16–Edward Lowe of Michigan, the inventor of Kitty Litter, purchases the majority of shares in INARI Ltd. from Len and Irene Stuttman; but they. kept a minority ownership in the company.

© Copyright Soyinfo Center 2014

1989 April–Huegli Naehrmittel A.G. acquires Yamato Tofuhaus Sojaprodukte of Tuebingen, Hirschau, West Germany. Note: This is the earliest record seen (Feb. 2013) that mentions Huegli in connection with soy.

1989 April 22–Lima Foods of Belgium acquires Jonathan P.V.B.A. of Belgium.

1989 Sept.–Lima Foods of Belgium is purchased from Vibec by Euronature (pronounced as in French, YU-ro na-TYUR), a large international food company headquartered in Paris, France.

2827. **Product Name:** [GranoVita Organic Tofu Spread (With French Country Herbs, Tomato, Vegetables, or Green Pepper)].
Foreign Name: GranoVita Bio-Tofu-Pastete (Kraeuter der Provence, Tomate, Gemuese, Gruener Pfeffer).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1989.
Ingredients: Bio-Tofu (water, bio-soybeans*, calcium chloride), water, onions, plant oils and fats in changing proportions, bio-soy flour*, lecithin plant emulsifier, seasonings, provincial herbs. * = Organically grown.
Wt/Vol., Packaging, Price: 160 gm glass Jar. French Country Herbs retails for DM 2.98.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Calories 240, protein 4.4 gm, usable carbohydrate 4.8 gm, fat 22.1 gm.
New Product–Documentation: Label for French Country Herbs sent by Anthony Marrese. 1989. 5 by 8.5 by 1.5 inches. Self adhesive. Green, red, and black on white. Color illustration shows a pagoda and gate. Exklusiv Neuform certification symbol. "French style spread for bread. Made purely from plants." Also received as a tiny (25 gm) package of Granovita Sandwich Pastete: Hausmacher Art. "Sojamehl" (Soy flour) is a minor ingredient in it. It retails for DM 0.75.

Manufacturer's brochure. 1989? "Bio-Tofu for the High Quality Kitchen." p. 4-5. A color photo shows the labels of all 4 flavors. Each contains the pagoda and a color photo. The tomato has a delicate flavor, the vegetable is spicy, and the green pepper is fiery.

2828. **Product Name:** [GranoVita Organic Tofu Patties (Curry, Greek-Style, French Country Herbs, Green Pepper)].
Foreign Name: GranoVita Bio Tofuletten (Curry, Griechische Art, Kraeuter der Provence, Gruener Pfeffer).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1989.
Ingredients: Curry: Organic tofu (water, organically grown soybeans, calcium chloride), vegetable oil, water, egg protein, whole wheat, spices, carob bean meal as a plant-based thicker, honey.
Wt/Vol., Packaging, Price: 125 gm vacuum pack poly bag, 3 patties per bag. Retails for DM 2.98.
How Stored: Refrigerated.
Nutrition: Curry. Per 100 gm.: Protein 10.3 gm, fat 27.1 gm, usable carbohydrates 11.5 gm, calories 331.
New Product–Documentation: Label for Curry sent by Anthony Marrese. 1990. Jan. 2.75 by 5 inches. Red, green, gold, and black on white. "Contains no flesh." An illustration (line drawing) shows a pagoda at the top of the label and a pan containing the patties at the bottom. Exklusiv Neuform certification symbol.

Manufacturer's brochure. 1989? "Bio-Tofu for the High Quality Kitchen." p. 4-5. A color photo shows the labels of all 4 flavors.

Form filled out and original Labels (for Curry, French Country Herbs, and Griechische Art) sent by DE-VAU-GE. 1990. June 11. These products were introduced in 1989.

Form filled out and new Labels sent by DE-VAU-GE. 1990. June 11. The product was introduced in 1989. New Label for curry. 5 by 8.5 by 1.5 inch paperboard box. Black, gold, red, green, and orange on white. A stylish color photo on the front panel shows the dish ready to serve next to rice, garnished with 2 slices of tangerine and a spring of mint. At the top of the front panel: "The whole foods kitchen for the gourmet" (Die Vollwertkueche à la Gourmet). The subtitle is "In curry-fruit sauce with pumpkin seeds & rice. A ready-to-heat menu for 1 person. Enjoy without flesh." The box contains two pouches: one with the tofu cubes and curry-fruit sauce; the other with the rice and pumpkin seeds. The back panel shows how these can be heated in either a water bath, a cooking pot, or a microwave oven. Ingredients: (1) Organic tofu cubes: Organic tofu (water, soybeans*, calcium chloride), vegetable oil, water, egg protein, raisins, spices, wheat, plant thickener (carob seed meal), spices, honey. (2) Curry & Fruit Sauce: Water, milk, fruits (peaches, apricots, pears), cream, paprika, vegetable oils and fats in varying

amounts, wheat flour, rice flour*, spices, seasonings, sea salt, plant thickener (carob bean seeds). (3) Water, natural rice, pumpkin seeds (Kuerbiskerne), vegetable oil, sea salt. * = certified organically grown (aus anerkanntem kontrolliertem biologischen Anbau). Weight: 350 gm. Per 350 gm portion: Protein 20.3 gm, fat 33.0 gm, carbohydrates 54.2 gm, fiber 6.7 gm, calories 595, 1 BE = 77 gm. Exklusiv Neuform certification symbol.

2829. **Product Name:** So Good Soya Milk [Regular, or Sugar-Free Organic].
Manufacturer's Name: Haldane Foods Ltd. (Importer-Distributor). Made in Australia by Sanitarium Foods.
Manufacturer's Address: 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.
Date of Introduction: 1989.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton. Retails for £0.69.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Haldane Foods Group catalog and price list. 1989. Oct. 2. This product is listed in both documents under the Haldane Foods Ltd. product line. A color photo in the catalog shows the label (1 liter carton). It has black lettering and vertical stripes on a white background. On the front panel is am impressionistic sketch of a snow-capped mountain in the distance with several soybean plants growing in the immediate foreground.

Talk with Philip Marshall of Cauldron Foods. 1990. July 9. Haldane's soymilk used to be called Sojal. They may have lost the fight over the name. It is very likely that the Haldane group has this product made by some company outside of the group. They do not have the equipment needed to make a quality soymilk. There is no connection with Sanitarium Foods in Australia.

2830. **Product Name:** [Nutana Tofu–Oriental-Style].
Foreign Name: Nutana Tofu Oriëntaal.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1989.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Black-and-white photo of the can and label sent by Eric Fehlberg. 1990. May 24. A photo on the front panel shows cubes of tofu in a sauce with mushrooms and other vegetables.

2831. Sabaté-Casellas, J. 1989. Anthropometric parameters in public school students and Seventh-day Adventist vegetarian and meat-eating students. DrPH (Doctor of Public Health) thesis, Loma Linda University, Loma Linda, California. *
Address: Loma Linda Univ., Loma Linda, California.

2832. **Product Name:** Sanitarium So Good: Flavoured Non-Dairy Soy Drink [Strawberry, Jaffa {Chocolate & Orange}, Honeycomb, or Caramel].
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia.
Date of Introduction: 1989.
Ingredients: Jaffa: Water (80.0%), soya isolate (3.7%), sugar (3.7%), vegetable oil 3.2%, maltodextrin 2.8%, fructose (1.7%), mineral salts, vitamins, flavours, food acid, colour.
Wt/Vol., Packaging, Price: 250 ml Combibloc Aseptic carton. Retails for $0.75 (10/93, Walnut Creek, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 250 ml.: Calories 178 (or 750 kJ), protein 8.0 gm, fat 8.0 gm, carbohydrate (total 19.7 gm, sugars 13.7 gm, lactose 0 gm), cholesterol 0 gm, sodium 137 mg, potassium 350 mg. Provides 40% of the Daily Allowance of calcium and 35% of vitamin B-12.
New Product–Documentation: Letter and Labels sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1989.

Sanitarium Nutrition Education Service. 1990. April. "So Good." This 4-page leaflet gives a clear explanation of each ingredient used, plus nutritional and other information.

Product with Label (Jaffa and Strawberry flavors) purchased at Diablo Oriental Foods in Walnut Creek, California. 1993. Oct. 11. Each retails for $0.75. 3 inches by 3 inches by 1.87 inches thick. Jaffa: Brown, reddish brown, orange, pink, blue, and red on white. Illustration of a large glass of pink soymilk with a straw in it. Beside it is an orange and two squares of chocolate. Behind it is the morning sun rising over purple mountains and green fields. Front panel: "Long lasting. No cholesterol. No lactose." Back panel: "So Good is an excellent source of protein. A 250 ml serve of So Good supplies 8g of vegetable protein. Another quality product from the Sanitarium Health Food Company–the people who believe that food should not only taste good, it should be good for you." Side panel: "So Good has no cholesterol, no lactose, and as much calcium as milk. Quality Guarantee: If you are not satisfied with this product, please send the top of the pack with your complaint to SRL Consumer Services... or to the nearest Sanitarium State office." Soyfoods Center taste test. Excellent. No beany flavor at all.

• ***Summary:*** Continued: "Many Christian groups were at the forefront of the burgeoning vegetarian movement. The Bible

© Copyright Soyinfo Center 2014

Christian Church, founded by William Cowherd in 1809 in Manchester, England, played a major role in advocating and furthering the cause of vegetarianism. Members believed that Christ's teachings of mercy should be extended to animals as well as to people. They also believed that a vegetarian diet was healthier than one based on meat and that Christians have a duty to maintain good health in order to do God's work. Members of this group later formed the Vegetarian Society in 1847-the first secular vegetarian organization in the West. They disseminated information in the form of essays and lectures and taught that the adoption of vegetarianism would lead to universal brotherhood, an increase in happiness, and a more civilized society. This group still exists and is presently known as the Vegetarian Society of the United Kingdom.

"The movement was carried on into the 20th century by vegetarian societies working at the grass-roots level, religious groups such as the Seventh-Day Adventists, and prominent figures such as George Bernard Shaw and Mohandas Gandhi. Vegetarian organizations formed in most Western countries, and newsletters, books, and other publications promoting the diet became common. In 1908 the International Vegetarian Union was formed, with its main function being to organize conferences at which vegetarians from around the world meet and share information. The union continues to be active today.

"This orderly but gradual progression might have continued indefinitely had it not been for the social upheavals of the 1960s and 1970s. At this point in time, a variety of influences converged that had major implications for the course of vegetarianism: a new awareness of the importance of diet in maintaining health, an interest in Eastern philosophy and religion, a concern over the degradation of the environment through human 'progress,' a politically active stance in support of the rights of oppressed groups, the emergence of the peace movement, and a utopian belief in a perfectible society. All of these social trends provided pathways for new converts to the vegetarian cause. Out of this melange, the modern era of vegetarianism emerged." Address: 1. Dr., Dep. of Sociology, Univ. of Nebraska, Lincoln, NE 68588; 2. San Diego, California.

2834. Bull, Malcolm; Lockhart, Keith. 1989. Seeking a sanctuary: Seventh-day Adventism and the American dream. New York, NY: Harper & Row. 319 p. *
• ***Summary:*** In the opinion of Prof. Ronald Numbers, this is "the best book that has ever been written on Adventism." The authors are ex-Adventists. It is scholarly, yet playful in its challenging interpretations. Address: England.

2835. Kuzma, Jan W.; Lindsted, Kristian D. 1989. Determinants of long-term (24-year) diet recall ability using a 21-item food frequency questionnaire. *Nutrition and Cancer* 12(2):151-60. [7 ref]
• ***Summary:*** 216 people, half of whom were vegetarians, were asked to recall accurately their food habits of 24 years ago. The authors compared 21 key food items reported in 1960 with the same data reported in 1984. Recall ability was highest for persons with stable diets. Vegetarian status, education, and church attendance were the other significant determinants of exact recall. Address: School of Public Health, Loma Linda Univ., Loma Linda, California 92350.

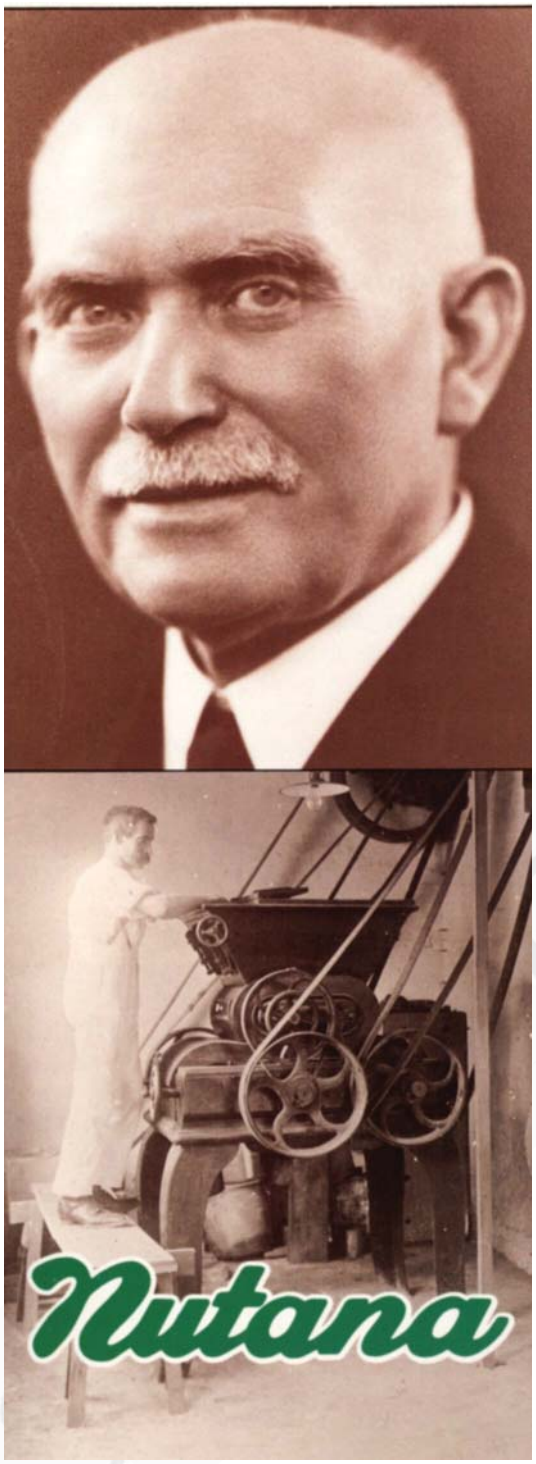
2858. Nutana. 1989? Nutana. A company rooted in nature. Bjaeverskov, Denmark. 8 p. Undated. Manufacturer's catalog.
• ***Summary:*** "Nutana was founded under the name 'Den Sanitære Fodevarefabrik' (The Sanitary Foodstuffs Factory) in early 1898. The founder was the visionary chief physician Carl Ottosen, who after studying at the famous Battle Creek Sanitarium in the USA took the initiative of setting up the present-day 'Nordisk Filantropisk Selskab' (Nordic Philanthropic Company), one of whose aims was and is to promote health. This led first to the setting up of 'Skodsborg Badesanatorium' (Skodsborg Hydro) and then to the founding of 'Den Sanitære Fodevarefabrik,' whose main task was to supply healthy, vegetable foodstuffs to the Hydro."

"The products were sold partly by the company direct and partly through 'Sana,' Denmark's first health food shop... Den Sanitære Fodevarefabrik has changed its name to Nutana and is now Northern Europe's largest producer of health food."

Nutana imports, processes, markets and exports more than 300 different products. Administration, production, and the main warehouse have been situated at Bjaeverskov in Central Zealand, Denmark, since 1967. In Norway, Nutana Norge was founded in 1946. In Sweden, Svenska Nutana was added in January 1987. In Finland, Finn-Nutana Oy was founded in 1978. "Nutana: The green alternative throughout Scandinavia." Address: Bjaeverskov, Denmark.



2859. Nutana. 1989? Nutana. Ringstedvej 531, DK-4632 Bjaeverskov, Denmark. 12 p. Undated. Manufacturer's catalog.
• ***Summary:*** The cover is a semi-abstract painting of ears of golden wheat in the foreground and rolling green hills and trees behind. The booklet contains many color photos. Contents: Nutana builds on a healthy idea. The

Green alternative. Current control of raw materials and development of products. Effective production. Nutana: The green Danish kitchen–lasts from morning till night. Sales to supermarkets, health food shops, catering, and export. Nutana now and in the future.

Nutana products are being sold in more than 3,000 shops in Denmark. Address: Bjaeverskov, Denmark. Phone: 45 3 67 00 19.

© Copyright Soyinfo Center 2014

2860. Nutana. 1989? Nutana–A company with its roots in nature (Leaflet). Ringstedvej 531, DK-4632 Bjaeverskov, Denmark. 3 panels each side. Each panel: 30 x 21 cm. Undated. Manufacturer's catalog.
• ***Summary:*** See next page. A color photo on the cover shows a huge field of ripe wheat, with a centered inset of vegetables and beans. "Nutana's objective is to promote health by producing and marketing vegetable foodstuffs and disseminating knowledge about health. Since 1967 the administration, production, and main stores have been situated in Bjaeverskov in central Zealand."

From Nutana's Green Kitchen come 18 frozen entrees, which are listed (in English) and shown in a color photo (with Danish labels). None have a soy-related product name. The five best-sellers are Celery Burger (100,000 units in 1988), Lentil Burger, Sesame Burger, Beetroot Burger, and Vegetable Gratin. Address: Bjaeverskov, Denmark. Phone: 45 33 67 00 19.

2861. Sanitarium Health Food Co. 1989? Sanitarium: The people who believe food should not only taste good, it should be good for you! 148 Fox Valley Rd., Wahroonga, NSW 2076, Australia. 8 p. Undated. Manufacturer's catalog.
• ***Summary:*** Contents: Background. Manufacture. Retail. Export. Products.

In the late 1800s a group of immigrants from the USA, all of whom were members of the Seventh-day Adventist Church, decided to make their living by distributing health foods. At first they imported a selection of products from Battle Creek, Michigan, then famous for its sanitarium. The first products arrived in Melbourne in 1897. They included Granola, Caramel Cereal, and gluten products. But when demand outstripped supply, in late 1897 a baker, E.C. Halsey, was persuaded to migrate to Australia to start up a manufacturing plant similar to the one he had operated in Battle Creek. On Nov. 8 he arrived in Sydney en route to Melbourne, totally unaware of what he was starting. The records show that the St. George's Bakery was rented in Melbourne in 1898. The production of Caramel Cereal and Granola commenced immediately.

In 1898 the group moved to larger premises in Cooranbong, a rural area south of Newcastle in New South Wales, and adopted the name Sanitarium Health Food Company. With Halsey in charge, production commenced in a large defunct sawmill in 1899. After a period of uncertainty, the Company grew and expanded until today, it has manufacturing plants in all states of Australia, in both islands of New Zealand, and in Papua New Guinea. In about 1906 the company's first retail shop opened in the Royal Arcade, Sydney. Many of the early shops included a vegetarian restaurant. Today the company operates some 70 retail shops. It also has an export division in Sydney. In 1935 the Australasian Food Research Laboratories were started. Located on the spacious grounds of the Cooranbong plant, they new employ a staff of nearly 40 people. Photos show the original Cooranbong factory, early products (incl. Nut Meat, Protose, Weet-Bix, Corn Flakes, and Marmite yeast extract), and today's food factories at Cooranbong, Victoria, and Palmerston, North New Zealand.

Product lines include Cereals (The company's leading product is Weet-Bix, the most popular breakfast cereal in

© Copyright Soyinfo Center 2014

Australia and New Zealand. It was first manufactured under the Sanitarium name in the mid-1920s, and comes in the shape of little biscuits. Other well known brands are Granose, Bran-Bix, and Sanitarium Skippy Cornflakes), Juices and Drinks (So Good, a non-dairy soy drink, is the newest introduction), Spreads (such as peanut butter and Marmite), Muesli Bars, Specialty Lines (such as dried fruits), Canned Protein Foods (all vegetarian, such as B-B-Q Links, Tender Bits, Vegetarian Rediburger, and Nut Meat), and Sundried (incl. TVP products, and Caffex coffee substitute); a color photo shows all of these.

The name and address of the company's head office, export division, and various food factories and retail outlets is given. Address: Wahroonga, NSW, Australia.

2862. Broom, Maria. 1990. Serulada Spiritual Foundation in Uganda, and soybeans (Interview). *SoyaScan Notes.* Jan. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This foundation is a spiritual, vegetarian community of about 200+ people who live on the land at Sseesamirimbe, near Masaka, Uganda. They grow a lot of soybeans and eat them as such; they do not do any processing, but are interested in making tofu, soymilk, and tempeh. Maria gave them three Soyfoods Center books on these subjects. She has visited the community twice, for 1 month each time. They have been together for about 15 years, have an African spiritual master named Bambi Baaba, but their spiritual practice resembles East Asian practices. They have a city address too: P.O. Box 5374, Kampala, Uganda.

Maria visited Dr. D. Warren Harrison of Africa Basic Foods. He hopes to contact the community and teach them more about soyfoods. Address: 1728 Linden Ave., Baltimore, Maryland 21217. Phone: 301-462-5370.

2863. Worthington Foods, Inc. 1990. Worthington Foods: Direct delivery price list. Effective February 5, 1990 (Leaflet). Worthington, Ohio. 6 p. Each single sided.
• ***Summary:*** These products are divided into the following categories: Worthington dry. Worthington canned. Natural Touch beverages. Natural Touch confections. Natural Touch dry & canned. Natural Touch frozen. Worthington frozen. La Loma dry. Miscellaneous. La Loma gravies. La Loma cereal. La Loma canned. La Loma beans. Millstone. La Loma frozen. Meat substitute–miscellaneous. Bush's Best products. Emes. Amberwave Foods–frozen. LaFane's Food Enterprises. Sovex. P.A. Pickles. Southeast Territory only–bulk items. Address: Ohio.

2864. Fehlberg, Eric C. 1990. Seventh-day Adventist health food companies in Europe (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter dated 24 May 1990 clarifying details.
• ***Summary:*** There are three major Seventh-day Adventist (SDA) food factories in Europe, each owned by the church: DE-VAU-GE in West Germany, Nutana in Denmark, and Granose in England. There are smaller factories in Spain, and Switzerland. All these companies are owned by the SDA church. The leading Adventist food companies, ranked in descending order of annual sales, are: 1. DE-VAU-GE, established 1899 in West Germany. They are by far the biggest in Europe. They manufacture a total of 257 products. DE-VAU-GE began making its own tofu in Jan. 1986; before that it purchased tofu from a Belgian soymilk company [Note: actually from Heuschen-Schrouff in the Netherlands]. When Michael Makowski took over as managing director in about 1972-73, company sales were about US$3-4 million. By 1983 sales were about $18 million. Since then growth has been fantastic. 1989 turnover was DM 84 million (US$49 million). This is due to both excellent management and the German interest in natural, health, and vegetarian foods. 2. Nutana, est. 1898 in Denmark. They are about half the size of DE-VAU-GE. Under the management of Bent Nielsen, who was there until 3 years ago, the company grew rapidly. Since 1987 growth has flattened, but there is great potential for future growth. 3. Nutana in Norway (Nutana Norge), formerly Dagens Kost, est. 1970. They were established as a marketing company for Nutana, Denmark, and they sell all the soyfoods made by Nutana, Denmark. They also manufacture 55 products, but they import and wholesale 321 products. All of the imports come from European Adventist companies. 4. Granose Foods, est. 1899 in England. They manufacture 39 products and distribute 98 more (mostly from Nutana or DE-VAU-GE). They have been a manufacturer since 1899, and they built a new food plant in 1989. Their business is now growing rapidly. 5. Nutana in Sweden (AB Svenska Nutana) was renamed in 1987. It was formerly named Edakost Food Company, Sweden, est. 1970. 6. Nutana in Finland, formerly Finn-Nutana, est. 1979. 7. Pur-Aliment, est. 1928 in France. They are not a food manufacturer; purely marketing. 8. PHAG Food Factory (Fabrique de Produits Dietetiques), est. 1895 in Switzerland. The small factory produces 40-50 tons of food a month. 9. Granovita Spain, was founded and began manufacturing in about Aug. 1985 in Valencia, Spain. They do not produce any soyfoods at all, but they market soy products made by DE-VAU-GE in West Germany and by Nutana in Denmark. 10. Nutana in the Netherlands, founded in 1986. They are presently selling all the products produced by Nutana of Denmark as well as 5 other products: Vitanex (Sandwich cream), Rondolettes (Chickenlike or beeflike flavor), Snackers (Soy sausages), Boulettes (Dinner balls).

The Austrian Food Company, founded in 1976, was a restaurant rather than a food manufacturer; it was closed in 1987.

Granose and DE-VAU-GE were both importing foods from Loma Linda in the USA. But now that Loma Linda has been sold to Worthington Foods, it is not clear what will happen to these imports. Today, the various Nutana companies are independent, but there is much talk of bringing Nutana in Norway and Holland together with Denmark. Nutana has always been behind the expansion of SDA food work in the Scandinavian countries. Using the common name Nutana greatly facilitates marketing.

The European food companies have grown at different rates, largely dependent on the effectiveness of each company's management. The trend has been generally up. The highest growth rates in the past 5 years have been shown by Granose in England (though it started from a smaller base), followed by DE-VAU-GE in West Germany. Pur-Aliment and Nutana have had a bit of a struggle.

All of these companies pay a portion of their profits back to the church. They are encouraged to pay about 20% of profits back to the church, but some pay almost 50%. This is similar to the dividends paid by secular companies. Fehlberg believes that tofu will be the growth food of the future; it has great growth potential that has not yet begun to be realized. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

2865. Fehlberg, Eric C. 1990. Recent Seventh-day Adventist work with soymilk (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** So Good soymilk from Australia has had remarkable success since it was launched in April 1987. Sanitarium Health Food Co. was the first to make soymilk in Australia. It caught on rapidly, and soon prompted 4-5 competing brands to be launched, but none of them have sales nearly as large as So Good. The main problem has been

© Copyright Soyinfo Center 2014

the company's inability to produce enough to keep up with demand. It was launched in about April 1987. In Oct. 1989 they sold 1,738 long tons (2,240 lb/ton, thus 3,893,120 lb). The equipment used to produce the soymilk is Adventist technology, not that purchased from Alfa-Laval, STS, etc. although in the last 6 months Sanitarium Foods purchased a pilot plant from Alfa-Laval which they plan to use in their laboratory. Originally So Good was packed under contract by a nearby dairy company in Combibloc cartons. After a year or so they purchased their own Combibloc packaging machine. Australia started to make soymilk after DE-VAU-GE in West Germany. The latter is very happy with their STS system, and Fehlberg is now seriously considering ordering one or two more turnkey soymilk plants for other countries in the near future. Sanitarium Foods has a very strong research lab.

The Seventh-day Adventist food company in South Korea, Sahm Yook Foods, now makes a Tetra Pak soymilk. The company was established in 1978, but did not begin food production until Sept. 1981. It began to make Sahm Yook Soy Milk in May 1985. Only a plain soymilk is produced–no flavors. After launching soymilk, the company began to grow dramatically, as that product grew. Last year they built a very large, now soymilk plant (based on Adventist technology) and they are now about the 2nd or 3rd largest soymilk maker in Korea. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

2866. Fehlberg, Eric C. 1990. Thoughts on Loma Linda Foods, its acquisition by Worthington Foods, and the health foods industry in America (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Worthington Foods purchased Loma Linda Foods (LLF) from the Seventh-day Adventist Church in Jan. 1990. Loma Linda Foods, unlike most other Seventh-day Adventist companies worldwide, tended historically to target its products to Seventh-day Adventists. Within North America there are very, very few respectable SDA businessmen. That is the problem. "Loma Linda has been working since 1906 with their eyes blindfolded. Too often, instead of using a businessman to head the program, the men in their wisdom have elected to install a broken down minister, and expected him to make a roaring success of it."

A very good businessman, George T. Chapman from Australia, ran LLF from 1938 to 1963. The company did very well financially under his leadership. Since 1963 the company has had a series of managers who lacked business experience; the result was ongoing financial problems. In June 1984 Mr. Fehlberg went from his position at the General Conference to Loma Linda where he turned the company around. Fehlberg ran LLF for about 2 years, during which time it went from a substantial loss to a very profitable company. Mr. Pizzaro was brought in Nov. 1984 and has kept it profitable. He is a very conservative man with a background in banking. He was able to hold LLF together but was not inclined to take the risks to make it really take off.

The church first wanted to sell off the infant formula part of the company because of the high cost of liability insurance. The FDA are really down on infant formula foods. If anything goes wrong, there is no end to the strife. LLF had one small recall due to a small shortage of vitamin A–from dissipation. It was very expensive. Fehlberg understands that but does not understand at all and strongly disagreed with the sale of LLF. "I talked myself hoarse on the committee opposing the sale but I didn't win. I am not happy that it ended up in the hands of Worthington Foods. Their financial report over the past 5 years is not that strong. The last year has not been a healthy year. I hope they can survive. Loma Linda will definitely help them survive by giving them a lot of extra new sales with no extra administration or marketing costs. Now that they have a monopoly, they may relax their standards. I believe that once the 5-year non-compete term expires, you'll get an influx of products into the United States from Adventist companies overseas that will make it very difficult for Worthington to operate–unless they can improve things. Fehlberg prefers the flavor the Australian meat analogs, which are less highly flavored and easier to digest.

Fehlberg feels that the USA is 20 years behind many other countries (Australia, West Germany, Japan) in food processing and storage techniques, largely because of Food and Drug Administration (FDA) restrictions. One area where the USA lags behind is in retorting of food products in plastic film containers. We tend to retort foods too long, and do not have foods retorted in sausage-type pouches (e.g., tofu sausages), which require no refrigeration. The FDA is afraid of botulism in such protein foods, so they require that the foods be frozen. In Australia, West Germany, and Japan these foods are refrigerated, but Adventist tests show they can be stored at room temperature for 6-12 months, or more. If Worthington's frozen meatlike products could put in plastic containers made of this special film (which is available in America) there would be major cost savings in factory storage, transportation, and retail storage. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

2867. Fehlberg, Eric C. 1990. Recent organizational changes in Seventh-day Adventist international food and development work (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** 2-3 years ago his organization's name was changed from World Food Service to International Health

© Copyright Soyinfo Center 2014

Food Association. The former name implied that the company was a foodservice organization. The association is composed of all Seventh-day Adventist (health) food companies worldwide. The organization's logo is a circle of the world, with a sheaf of wheat in orange, and with IHFA under it in red. It is part of the General Conference of the Seventh-day Adventist Church.

Seventh-day Adventist World Service (SAWS), the Church's relief and development program, emphasized the relief work more that the development. This organization is now named ADRA (Adventist Development and Relief Agency); its focus for the last 6-8 years has been more on long-term development than relief. Development helps to prevent the problem from recurring. There is no Adventist health food company presently in South Africa; a company was there once but it has been discontinued. One is still operating in Nigeria but it has problems. IHFA works closely with Dr. D.W. Harrison in Uganda, though the business is not church owned. He needs a good businessman to help him run that show. Now he spends a few months in Uganda, then has to return to the USA to his medical practice to earn some money to help keep it going. A new organization is starting in Kenya; it will be run by a very competent black businessman. He is not directly connected with the church. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

2868. Fehlberg, Eric C. 1990. Re: Enclosing pamphlets. Letter to William Shurtleff at Soyfoods Center, March 7. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Enclosed are some pamphlets, outlining our food work world wide. I have also sent, under separate cover, two samples from our overseas factories." Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904-6600.

2869. *Post-Dispatch* (*St. Louis, Missouri*). 1990. Peanut butter turns 100. March 12. Food section. p. 1, 4FW.
• ***Summary:*** According to the Peanut Advisory Board, a St. Louis [Missouri] physician (whose name is unknown) invented peanut butter in 1890 as an easy-to-chew, easy-to-digest substitute for meat. He ground roasted peanuts into a paste and spread it on bread; the result was a hit with his elderly patients whose teeth were so poor they could not eat meat.

We know that the unknown St. Louis doctor worked with George A. Bayle Jr., owner of a St. Louis food products company, who packaged and sold the new health food as Bayle Peanut Butter.

Also according to the board, at about the same time, Dr. John Harvey Kellogg developed peanut butter as part of his search for vegetarian foods for patients at his sanitarium in Battle Creek, Michigan. According to the Kellogg Company archives, Dr. Kellogg and his brother Will Keith (W.K.), roasted the peanuts then put them through grain rollers to make peanut butter. W.K. Kellogg established Sanitas Nut Co., which supplied peanut butter and other foods to the sanitarium and local grocery stores. But Dr. Kellogg later decided that roasted peanuts are not wholesome, and changed the formula to use steamed peanuts. Steamed peanut butter never caught on. A few years later, Joseph Lambert, one of Kellogg's employees, received the first patent for a peanut grinding machine.

Peanut butter became better known to the American public in 1904 when it was displayed and sold at the Louisiana Purchase Exposition (St. Louis World's Fair). C.H. Sumner recorded that he sold $705.11 worth of peanut butter to fairgoers.

A group interested in peanuts met in St. Louis in March 1990 to celebrate the centennial of the invention of peanut butter. "After lunch the group moved to the History Museum in Forest Park, where Suzanne Corbett, a St. Louis cooking teacher, expanded on peanut history and demonstrated some of her favorite peanut recipes... On display were three antique Bayle Co. of St. Louis peanut butter tins from the private collection of Shirley and Don Zork [of St. Louis; as of June 1995 phone number is unpublished]. One of the decorated tins [with handles on them] from the turn of the century suggested: 'A sandwich a day keeps your children at play.' Another claimed: 'The contents of this package is equal to 2½ pounds of beef steak or 2½ dozen eggs.' The tins were made with a lid and a wire handle so that children could use them for toys after the peanut butter was eaten."

Contains six peanut butter recipes.

2870. Karas, Thomas. 1990. The tofu industry and market in West Germany (Interview). *SoyaScan Notes.* March 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soyastern/Dorstener Tofu Produktions (DTP) makes about 7,000 kg/week of tofu. Thomas thinks DTP is still the largest tofu manufacturer in West Germany, but he is not sure. In the natural foods trade, the other big competitor is Yamato; DTP is definitely larger than Yamato. He is quite sure that DTP produces more tofu than TKW. TKW has a big tofu plant and large scale equipment (they are a machine manufacturer) but they don't seem to sell much because they don't use organically grown soybeans, which are absolutely necessary to sell tofu.

He thinks DTP is also bigger than Hensel, but he is not sure. Heirler does not make regular (firm) tofu. Instead, they make special soy products, especially soy yogurt and silken tofu, plus some Tofu Pastete. Heirler is mainly a distributor of dairy products, and the biggest distributor of fresh natural foods in West Germany. He distributes the whole fresh program, including produce/vegetables, and soy products

© Copyright Soyinfo Center 2014

exclusively to the Reform Houses. He does not distribute to natural food stores (Naturkostlaeden, Biokostlaeden). The company does about DM 50 million in sales/turnover a year in West Germany, and about DM 10 million in other countries. Heirler's tofu is made by a dairy company named KMK (Kurhessische Molkerei Kassel) in Kassel. The dairy products he distributes are made in the same plant. The brand name is Soja Soft. KMK also makes tofu for Hensel, but KMK does not sell its own tofu. Heirler and Hensel work together. Heirler distributes the Hensel tofu. Originally Hensel tofu was made by Yamato, then Auenland, then Soyastern, and now KMK. Heirler has always wanted Hensel to expand their line of tofu products. But Hensel is very conservative and slow to act, so Heirler introduced its own line. Hensel is an old soyfoods manufacturer.

So the big 4 tofu makers in West Germany, in descending order of size, are probably Soyastern, Yamato, Heirler, and Hensel. But this will soon change because of DE-VAU-GE (DVG), and Huegli-Heirler-Yamato. DVG does not yet make their own tofu. They buy it all from Heuschen-Schrouff in the Netherlands. Soyastern has sold them tofu in the past. However in about June 1990 they will start to make their own, and they will probably become a big force in the market because they sell a lot of tofu now and they have excellent distribution to the Reform Houses. About 89% of their products are sold to Reform Houses. Martin Evers is the only distributor of DVG products to natural foods stores. DVG is a very big company and is very slow in making decisions.

When Huegli bought Heirler and Yamato, Heirler put half of the money he got from the sale back into Heirler and half into Huegli in the form of stock. Mr. Heirler is now on the board of directors of Huegli. Thomas talked with Mr. Heirler at length in Dec. 1989. His thinking is very much oriented toward the open market in Europe after 1992. Huegli is basically a producer for the Reform House market. His two brands are Neuco and Cenovis. The tofu used in the Neuco tofu salads is not yet made by Yamato; it is probably made by Witte Wonder in the Netherlands.

So West Germany's two biggest tofu company's will probably soon be DVG and Yamato-Heirler-Huegli. With the opening of Europe in 1992, some companies will decentralize/regionalize their business for reasons of ecology and freshness. Soyastern is too big for this. The other is the path that Huegli-Heirler-Yamato are taking, by merging and trying to distribute and sell products throughout Europe. Heirler is the perfect company for expanding distribution outside of Germany. They may be the best in Europe for refrigerated distribution; they also have a little frozen distribution. They now distribute some to Switzerland, Belgium, Austria, and East Germany. After 1992 this distribution will grow rapidly. Address: Bochumerstr. 92-104, D-4270 Dorsten, West Germany. Phone: 2362-26801.

2871. Storup, Bernard. 1990. The soymilk market in France (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** By far the biggest seller of soymilk in France in Alpro/Vandemoortele, whose plant is in Belgium. They sell an estimated 7-9 million liters/year of soymilk in France.

The biggest soymilk manufacturer in France is Cacoja (pronounced KA-ko-jah). They make an estimated 2.5 to 3 million liters/year. Cacoja's original brand name was Bioforme. They changed their brand name to BioSoja in the fall (Sept. or Oct.) of 1989. Unfortunately BioSoja is a brand owned by another soyfoods company (which notified Cacoja of the problem, and Cacoja chose to ignore it), so they will almost certainly be obliged to change the brand name once again! [to Formoja]. Cacoja was actually not their own name; it had been sold to a distributor, and they got into legal problems with that distributor, bu they are still using the name as their company name. Their plant is still in Issenheim. This company is making so many mistakes that it is hard to imagine how they can survive. In part, this is because they are a cooperative and in part because they have so much money that they can afford not to be careful. For them, every day is a jackpot!

Société Soy presently makes 70,000 to 100,000 liters/month. In 1990 they expect to produce 1.5 million liters, because they will soon introduce their own Tetra Pack line under the brand Biosoy.

The third and fourth largest soymilk manufacturers in France are probably Triballat and Innoval. Both make about the same amount, an estimated 500,000 liters a year. But this is a rough guess since they do not give out figures. Innoval's soymilk is very good quality.

Cacoja, Triballat, and Innoval all have big financial problems. They have large, expensive, automated, computerized factories and very low production. They have too much invested for the size of the market. They may produce only 1 day a week. They have no real leaders in the companies so the people are not really motivated by what they do. Its a pity, because they have two of the most interesting factories in Europe. They hope to private label soymilks for supermarkets.

It appears that Sojadoc sells their soymilk only in Spain (none in France), so it is very difficult to tell how much they are making or what they are doing. They were supposed to move their complete factory in Clermond-Ferrand, and now we do not know where they are.

DE-VAU-GE started to sell their soymilk in France, but they stopped. They now sell their soymilk mainly in West Germany, Belgium, and the Netherlands.

Thus soymilk consumption in France is presently estimated to be about 11 million liters/year, whereas production is about 3 million liters/year. Both figures are very small compared to the 2,000 million liters of cow's milk.

© Copyright Soyinfo Center 2014

Bernard would estimate that soymilk consumption in France is presently growing at 25% a year. Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 St.-Chamond, France. Phone: 77.31.23.66.

2872. Hansen, Asger Somer. 1990. The soymilk market in Europe (Interview). *SoyaScan Notes*. March 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are no statistics published on soymilk in Europe. The soymilk that is made can be used in either of two ways: (1) Aseptically packaged (typically in Tetra Brik cartons) for consumer use as a beverage or pudding-like dessert; (2) Soymilk base is used as an ingredient in other foods or to make "processed tofu," which is made by ultrafiltration rather than by coagulation. Alpro is definitely the largest manufacturer with output estimated at 18-24 million liters/year. DE-VAU-GE is second biggest with about 12 million liters/year in the form of long-life packs (beverages and desserts). DE-VAU-GE will soon start to make tofu, which will be used mostly as an ingredient in their foods (sausages, etc.). In Asger's opinion these are very good products. Finally there is Cacoja, Triballat, and some smaller companies making a total of about 5 million liters/year. This gives a rough estimate of 35-40 million liters/year of soymilk made in Europe.

The growth rate of this market during the past 2 years has been slow, maybe 5-10%. "The real growth area has been in processed foods with tofu as a main ingredient. That's where I see the growth happening, in foods like dressings, egg-free mayonnaise, sausages, etc."

Cacoja sells "soymilk base," which is sold from the factory in tankers. Last time he talked with customers, they were not satisfied with the quality of the product. The capacity is only 1,500 liters/hour. The Adventists are considering a soymilk plant in the USSR.

Anders Linder left DTD on 1 Nov. 1989. He was asked to leave because the company was not making enough money, and because the company has new management under APV. He is now living at Domsten, Helsingborg, in Sweden. DTD's name is now APV-DTD, part of APV-Pasilac. Asger is in charge of the Soya Technology Div. Two other people are employed by this division with him (Elizabeth Gibson). John Davies is in Hong Kong. Address: Technical Manager, Danish Turnkey Dairies Ltd., Soya Technology Div., 2 Europaplads (P.O. Box 146), DK-8100 Aarhus C, Denmark. Phone: (86) 12 4155.

2873. *Battle Creek Enquirer* (*Michigan*). 1990. Who really invented peanut butter? March 29. *
• ***Summary:*** Diane Dickey of the Kellogg Company says: "Dr. John Harvey Kellogg developed several foods between 1895 and 1905. One of the foods invented in 1895 was peanut butter–that's what the records show. A product similar to peanut butter shows a Kellogg patent dating back to February 16, 1887. Nuttose was a canned 'nut butter' developed by Kellogg. It had a consistency similar to brick cheese and served as a meat substitute.

"According to Kellogg Company archives, Dr. Kellogg and his brother, W.K. Kellogg, bought 10 pounds of peanuts, roasted them in the oven, put the nuts in a pillow case to remove the hulls, weeded out the husks and then put the remaining material through grain rollers.

"W.K. Kellogg, the business manager of the Sanitarium, opened Sanitas Nut Company and supplied food like peanut butter to the Sanitarium and local grocery stores. But after a while, John Kellogg changed the formula decided to steam-boil the peanuts instead."

2874. DTD Soya Technology Div. 1990. APV soymilk technology (Leaflet). Europaplads 2, P.O. Box 146, DK-8100 Aarhus C, Denmark. 3 panels each side. Each panel: 30 x 21 cm. March.
• ***Summary:*** This glossy, full-color leaflet, Anders Lindner's last project before leaving DTD/STS, describes: "Our products and services: Hardware, software, turnkey plus, some products made from soymilk base (yogurts, ice creams, tofu products, etc.). Our business is soymilk plants: About ourselves (APV DTD belongs to the APV-Pasilac Group), about soymilk." A color photo shows 4 flavors of Big Sipp soymilk. Soymilk processes and products. Progress of a typical project (2 flowcharts). On the back panel, 9 small color photos show commercial products made from soymilk, including Nasoya creamy tofu dressings, Nayonaise, GranoVita Bio-Tofu-Pastete (spread), and Tofuletten (liked sliced luncheon meats). Address: Aarhus, Denmark. Phone: +45 86 12 41 55.

2875. Price, Caroline. 1990. Food for thought: Natural food is more than nuts and berries. It also makes dollars and cents for state firms. *Michigan Business* 7(3):24. March. Section 1.
• ***Summary:*** Apple Valley Market, a natural foods and vegetarian supermarket in Berrien Springs, Michigan, is operated by Andrews University and employs about 100 people. They sell no meat or meat products in the store and offer more than 500 bulk food items. The store makes its own bread, which it distributes widely.

Wysong Medical Corp., a 10-year-old company based in Midland, Michigan, makes foods and supplements for animals and people.

The last section is about Eden Foods and American Soy Products. Soymilk is Eden's best-selling product. Ron Roller, vice president and general manager of Eden Foods, says the company sells about 100 truckloads of soymilk each month, has 83 employees, and does over $20 million in sales annually–from all products.

2876. Pusateri, Donald J.; Roth, W.T.; Ross, J.K.; Shultz, T.D. 1990. Dietary and hormonal evaluation of men at

© Copyright Soyinfo Center 2014

different risks for prostate cancer: plasma and fecal hormone-nutrient interrelationships. *American J. of Clinical Nutrition* 51(3):371-77. March. [61 ref]
Address: Depts. of Biochemistry and Nutrition, School of Medicine, Loma Linda Univ., Loma Linda, California and the Dep. of Nutritional Sciences, Univ. of Vermont, Burlington, VT.

2877. Ross, Jane K.; Pusateri, D.J.; Shultz, T.D. 1990. Dietary and hormonal evaluation of men at different risks for prostate cancer: fiber intake, excretion, and composition, with in vitro evidence for an association between steroid hormones and specific fiber components. *American J. of Clinical Nutrition* 51(3):365-70. March. [50 ref]
• ***Summary:*** Intake of dietary fiber and fecal fiber excretion were investigated for 3 days among 53 Seventh-day Adventist men: 18 non-vegetarians (MVs), 20 lactoovovegetarians (LOVs), and 15 vegans (Vs). The diets and stools were analyzed for neutral detergent fiber (NDF), hemicellulose, cellulose, lignin, and pectin. Vegans consumed and extracted significantly more of all fiber components than did LOVs or NVs. LOVs ate more of all fiber components (except cellulose) than did omnivores and excreted more NDF, hemicellulose, and cellulose. Dietary lignin was positively correlated with testosterone binding in the vegan group. There were significant relationships for all groups combined between lignin and water-insoluble binding of estrone, estradiol-17Beta, and testosterone. Further research is needed to clarify relationships between fiber components, steroid-hormone metabolism, and risk of prostate cancer.

Recent evidence indicates that diets high in complex carbohydrate and fiber but low in fat are helpful in preventing or treating various gastrointestinal diseases, diabetes, obesity, cardiovascular disease, and cancer.
Address: Dep. of Nutritional Sciences, Univ. of Vermont, Burlington, VT, and the Depts. of Biochemistry and Nutrition, School of Medicine, Loma Linda Univ., Loma Linda, California.

2878. Lindner, Anders. 1990. Re: The soymilk market in Europe. Letter (fax) to William Shurtleff at Soyfoods Center, April 4 and April 26. 3 p. [Eng]
• ***Summary:*** The following figures contain many guesstimates. The only countries in western and eastern Europe where significant amounts of soymilk are produced are Belgium, West Germany, France, England, and Switzerland. The following are the seven largest soymilk manufacturers in Europe, ranked in descending order of size:

1. Alpro/Vandemoortele, Belgium. Capacity: 35 million liters/year. Present output: 25 million liters/year. Growth: Believe so, but don't know how much.

2. DE-VAU-GE (DVG), West Germany. Capacity: 20 million liters/year. They are running their plant at full capacity, but as Adventists I think they don't work on Friday afternoon or Saturday, they close down during the summer, and they send one road tanker of soymilk each week to Granose in England, where it is made into soy yogurt. So they probably end up making about 12 million liters a year of soymilk in long life packs. Soon some of their soymilk will be made into tofu. Growth: Would if they could, but they can't with the line they have, which they bought from DTD/STS for DM 4 million. DVG is making an excellent profit on their soymilk products, that's for sure. This is in part because they have the Neuform chain at their disposal.

3. Cacoja, France. Capacity: 11 million liters/year. Believed to be running at full capacity. Growth: Planning a new line but no decision yet as far as I know. I think that Cacoja produces more than 1 million liters/year. They visited DTD/STS a year ago to discuss a second line. The first one had a capacity of 2,000 liters/hour or approximately 5 million liters/year.

4. Soya Health Foods Ltd., Manchester, England (Sunrise Soya Milk). Capacity estimated at 8 million liters/year. Actual production not known.

5. Soyana, Switzerland. Capacity and production not known. Soyana has consistently refused to allow us to visit them. Even our Indian client who wanted to discuss purchase of their Dahi dessert recipe was given the cold shoulder. I think that they have their own soymilk plant, but I'm not sure. Why shouldn't they, when they have plenty of products in Swiss shops.

6. Galactina, Switzerland. Capacity estimated at 6 million liters/year. Most is used for products other than liquid soymilk. They sell limited amounts of soymilk, definitely less than 1 million liters/year packed in Tetra Brik Aseptic at the Thun Dairy in Switzerland.

7. Schoeller in Nuremberg, West Germany. Capacity not known. Soymilk used in ice cream production. There are also soymilk producers in Italy [Crivellaro], and Spain [Proti].

"Total size of European soymilk market in 1989 estimated at 50 million liters. Some is in the form of dairy analog products. Alpro and DE-VAU-GE have about 70% of the market, including bulk distributed product. Growth rate over the past few years 10–15%.

"General observations of the European soymilk industry and market: The dairy industry in France was the first to go into soymilk to offer alternatives to consumers who prefer 'non-dairy dairy type products'. The soymilk-based ice cream of West Germany's Schoeller may start a trend for the rest of the European ice cream industry. There has been no equivalent to the U.S. Tofutti boom in Europe so far. Major liquid food companies do not at present see soymilk as a significant product for Europe but follow the trends and do some development, just in case.

"The future? It is necessary to make a distinction between Eastern and Western Europe. Western Europe has a surplus food production in general and surplus dairy

© Copyright Soyinfo Center 2014

milk production in particular. The health aspect alone, i.e. soymilk without improved palatability, will not significantly increase soymilk sales in Western Europe. The removal of dairy production subsidies in the EEC in the years to come, especially after 1992, may give an incentive to the big names in the food industry to develop soymilk into mainstream market products. There is EEC legislation on imitation dairy products and soymilk is mentioned as an example, but currently different member countries use their own laws.

"Many Eastern European countries have food shortages but lack money and entrepreneurship to venture into an unknown product like soymilk on their own. Furthermore, in these difficult markets, western companies with soymilk technology do not seem to find it worth the effort to first educate on the advantages and uses of soymilk and then to promote and arrange financing before they can hope to sell a soymilk processing plant. The new Eastern Europe with market economies now evolving gives hope for the future in general, but I couldn't make any guesses about soymilk.

"It is the aim of EEC to dismantle the agricultural subsidies. This will effect dairy production and new cheaper protein sources will be sought by the food industry. Soymilk definitely has a chance of 'growing up' when this happens.

"STS-Soya Technology Systems Limited no longer exists. It was the decision of APV's CEO to close it down as an independent company when the big APV reorganization took place. When we moved to Denmark we became DTD-Soya Technology Division. Now Danish Turnkey Dairies has itself become a division of the APV Pasilac Ltd and the official name is DTD-APV Pasilac Ltd (the result of mergers and takeovers!). Asger Somer Hansen now handles soymilk activities within the APV group and works in DTD-APV Pasilac Ltd.

"John Wilson still works at Alfa-Laval in Lund as far as I know–at least he did 2 years ago. Alfa-Laval also has another soymilk person, a young woman.

Note: Lindner, the managing director of Soya Technology Systems from May 1982 until Nov. 1989, has a good grasp of the world soymilk market. Address: P.O. Box 19002, S-250 09 Helsingborg, Sweden. Phone: 42-92776.

2879. Worthington Foods, Inc. 1990. La Loma (list of products): Revised April 6, 1990 (Leaflet). Worthington, Ohio. 1 p. Single sided.

• ***Summary:*** These products were formerly made by Loma Linda Foods (California). For each of the 49 products is given: Code. Description. Number and size of units per case. Address: Ohio.

2880. Burns, Arthur. 1990. Brief history and recent developments with Tivall in the USA, Israel, and Europe (Interview). *SoyaScan Notes*. April 17. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The key man on the history of Tivall in Israel is Moshe Ribosh, the company's export manager (Phone: 011-972-4-858-700; Fax: 04-858-798). The company uses a new technology to make these meatless entrees. They refer to their products as "Third Generation Products" because of the advanced level of technology used in processing; Worthington or Loma Linda entrees were "Second Generation." The "green folder" (8.5 by 11 inches, with a green field of wheat on the cover) is now outdated. He will send a current one and a corporate brochure. To taste samples of his products, contact California distributors: Freestone Sales in Benicia (707-747-0233) or Howell Mountain Distributors in Angwin (related to Seventh-day Adventists).

Tivall started importing its products to the USA in late 1987 (test market) and early 1988. They entered the U.S. market using Intermilo (in Hackensack, New Jersey) as an importer and sales center. Later they set up Tivall, USA, Inc. to do all the importing; Intermilo is no longer relevant. The company now has 6 items (described in the new brochure) that contain soy as a major ingredient–with more to come.

The company sells about equal volumes to the retail and the foodservice markets. All products are kosher (Circle U) and Bethedas (Hasidic certification, with a symbol resembling a fleur de lis). The packaging is the same for each product in various segments. The retail market consists of kosher, health foods, and supermarket (small) segments. The foodservice market consists of the college and university segment, the business and industrial caterers, some kosher foodservice, and a little health care.

Concerning Israel, Tivall started as a very small company on Kibbutz Lochamei Hagetaot, at M.P. (Mobil Post, like rural free delivery) Ashrat (formerly transcribed Oshrat), Israel. The focus has always been producing kosher meatless entrees. They avoid use of the term "vegetarian" which connotes "Berkeley dropouts and twig eaters." The term meatless now attracts widespread interest. The growth of the products in Israel is phenomenal, with average annual nationwide sales of about $4 to $5 per capita. Note: With a 1989 Israeli population of 4.5 million, this would represent $18-$22.5 million sales a year. The company is doing very well financially. It is wholly owned by the members of the kibbutz. It is roughly resembles a U.S. limited partnership. It is not the only major business on the kibbutz; he thinks it started as an industrial kibbutz and they still do industrial products plus other food products.

Tivall sells a lot of product to Europe but since it is much closer they prefer to go through agencies rather than having a sales office there. The line is sold in France under the Gourmet Vert label, in England under Tesco Tivall, and in Germany Gourmet Garten. So the major export markets are these 3 European countries plus the USA. Address: President, Tivall, USA, Inc., 9633 E. Bexhill Dr., Kensington, Maryland 20895. Phone: 301-946-8855.

2881. Marshall, Philip. 1990. The soymilk industry and

© Copyright Soyinfo Center 2014

market in the UK (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The two brands of soymilk with the largest shares of the UK soymilk market are both imported: Provamel, the best-seller, is imported from Alpro in Belgium. Granose Soya Milk is imported from DE-VAU-GE in West Germany.

There are four soymilk manufacturers in the UK. The largest is probably Unisoy Milk 'n' By-Products Co. in Stockport (Cheshire County near Manchester). Their quality is excellent, almost as good as Alpro's. The people who founded Unisoy were formerly involved with Soya Health Foods Ltd. The founder, who had the money, died before production started. [Note: Neil Rabheru (see interview, 1990 July 2), founder of Unisoy, says the previous 2 statements are not true.] Unisoy started making soymilk about 4 years ago, and today their biggest product is own-label soymilk, packed in Tetra Brik by a contract packer, and sold to Sainsbury, a large chain/multiple retailer in the UK. Unisoy does not and will not make tofu. The company is not very strong. The person in charge is Neil Rabheru, of Indian extraction, a very nice man. He recently sold the company for a relatively small sum.

Second largest soymilk manufacturer is Soya Health Foods in Trafford (Sunrise brand, founded by Michael Cole and Mr. Arora, a Sikh / Indian). It was the Indian connection that resulted in the formation of Unisoy some years ago. Third may be the Regular Tofu Co., a division of Haldane Foods (Arkady/ADM), which produces Sojal Soya Milk. The Sojal brand was the property of another company in France, which originally produced the product for them using a soymilk powder made in Sao Paulo, Brazil (by Norsul, Agro-Nippo Productos, or ITAL?). Haldane no longer has the product produced in France but they still use the Sojal brand, and still has the product produced by another company (in what country is not known) and it is probably now made from whole soybeans rather than soymilk powder. [Note: The only soymilk listed in Haldane's Oct. 1989 catalog is So Good Soya Milk (organic or non-organic); Sanitarium Foods in Australia makes a product by the same name].

Fourth is Plamil, which contracts with some other company to have its soymilk made from soy protein isolates. They are quite a small company, ethically based, into vegan foods and marketing strategies from the 1960s and 1970s. Fifth is Itona (pronounced ai-TOW-nuh), which makes a soya milk of some description, but they are not really in the mainstream of the soymilk market. They probably make their soymilk from soy protein isolates and it is sold in cans–every other brand is in Tetra Pak or Combibloc. Address: Owner, Cauldron Foods Ltd., 149 South Liberty Lane, Ashton Vale Trading Estate, Bedminster, Bristol BS3 2TL, England. Phone: (0272) 632835.

2882. Vandemoortele, Philippe. 1990. The soymilk industry and market in Europe (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Philippe estimates that Alpro has about 70% of the fluid soymilk market (not including infant formulas) in Europe. In 1984 in Brussels Michael Martin of the American Soybean Association estimated the size of the European soymilk market to be 9-10 million liters/year. Philippe thinks that figure was too high; it was probably about 6 million liters. Now it is about 30 million liters/year in all of western Europe. The growth rate for soymilk production over the past 2 years has been about 20% a year.

The second largest soymilk manufacturer in Europe is DE-VAU-GE, with roughly 15-20% of the market. The rest are very small, with a combined percentage of only 10-15%. Third may be Triballat and fourth may be Cacoja. Together these two may be producing 1 million liters per year, but that is just a very rough guess. Innoval just started so they have not had time to do anything. Unisoy in England is very small. Soya Health Foods Ltd. (Sunrise brand) is almost out of business in soymilk. Galactina is limited to Switzerland, and they produce mainly tofu, not soymilk.

Looking at Cacoja and Triballat, they are completely different types of companies. Cacoja is a classical cooperative that has no experience in or organization for commercializing consumer products. So they have to co-pack, i.e. make products for other companies. Triballat is a small but very active dairy company, with a good sales and marketing organization in France. They are used to making and selling their own consumer products. Their Sojasun soy yogurt is a good-tasting, fresh product. It has been quite successful for a soya food, although compared with dairy products it is nothing.

There are have always been may negative things about soymilk in Europe. 1. The retail price of soymilk is very high compared to basic cow's milk, usually 2-3 times as high. In the USA the price of both cow's milk and soymilk are higher, but the ratio is similar. 2. The taste of soymilk is a big problem, although it is steadily getting better. 3. Cow's milk is a very traditional, widely accepted product in Europe. 4. The dairy lobby and its employees are very powerful in Europe and recently they have been attacking soymilk on issues such as its calcium content being lower than that of cow's milk. Doctors have been taught and teach their patients that cow's milk is a perfect product. Only a minority, but a growing minority, are opposed to the use of cow's milk. 5. The many European government regulations hurt soymilk. There are many taxes, such as a Value Added Tax (VAT) on soymilk that are not imposed on cow's milk since soymilk is considered in some countries to be a juice. Every country has a VAT system. The Netherlands, Belgium, and France had an 18% VAT on soymilk versus 6% on milk, but that changed 1 year ago so it is no longer a basic problem. In Belgium there is now a 6% VAT on both soymilk and cow's milk.

The two things needed to make the soymilk market grow

© Copyright Soyinfo Center 2014

are better taste and a better image of soymilk (compared to cow's milk) as a food that is good for one's health, and dissemination of the information showing the health benefits of soymilk over cow's milk. The quality of soymilk products is steadily improving and should continue to do so, not through discovery of any new basic principles but through many small adjustments.

The opening of Europe in 1992 will have little or no effect on soymilk. Competition is already international. The need for a multitude of packages in the various languages will not change; Alpro presently packs soymilk in more than 100 different Tetra Brik cartons! This includes both their own brands and those of companies for which Alpro private labels. This is both complicated and expensive. One possible change may be that governments will work faster to establish soymilk terminology. Now soymilk has no name! It can be called "soya juice, soya drink, soya beverage," but it cannot be called "soymilk." As long as it has no name, no regulations or standards can be made that effect it. Philippe would like to see the term "soya drink" or "soya milk" adopted. The latter was tolerated in the UK but it will probably be forbidden.

Philippe sums up the overall situation as follows: "I always repeat, there is more enthusiasm about soyafoods than turnover and certainly no profit. Alpro has lost money every year that it has been in business." He thinks DE-VAU-GE must also be losing money on its soymilk operation. "How can you make money when you invest $3-4 million in a factory that is making only a few million liters of soymilk a year? DE-VAU-GE is a very large company and they do well largely because they have a sort of monopoly in the German Neuform (Reform House) organization. An organization controls all of the Neuform stores, and it is linked with both the producers and the sales people. They all together pay money for this organization to help each other. If you want to make soymilk in Germany and deliver it to these stores, you cannot, because everything is protected. The competition now comes from the independent *Biolaeden."* Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium. Phone: (056) 43 22 11.

2883. Vandemoortele, Philippe. 1990. Early history and recent developments at Alpro N.V. in Belgium (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter (fax) on 30 May. 1990.

• ***Summary:*** N.V. Vandemoortele (the N.V. is written first in Flemish, but often last in English) began research on new soy products (mostly soy protein isolates and concentrates) in 1973. The goal was to find a way to bring soya beans to the consumer. They bought and sold soy protein products but never manufactured any. In May 1975 research on soymilk began. From 1975 to 1979 they were basically doing pioneer research. In Dec. 1979 they began production of soymilk, but they did not pack or sell it; it was just to get their new plant running. Famalac was a potential/fictitious product name that was described in a brochure, but the product was never sold commercially. This soymilk was produced at a plant located at Zuidkaai 33 in Izegem on a piece of land located next door to the main N.V. Vandemoortele facilities (whose official address was Prins Albertlaan 12). In Jan. 1980 Vandemoortele began to make its first commercial soymilk product (GranoVita Soja Drink in plain and carob flavors, packed in 500 ml Tetra Brik cartons) which was private labeled (co-packed) for DE-VAU-GE, a large Seventh-day Adventist health food manufacturer in West Germany. This was Alpro's first customer.

N.V. Alpro (named simply Alpro in English), was founded in June 1980. Alpro then purchased the land on which it was located from N.V. Vandemoortele. During 1980 Alpro became a truly independent producer, now also doing their own sterilization and packaging. It was Philippe Vandemoortele's idea to start Alpro.

His grandfather began to import soybeans in 1934 from Manchuria, and he started a small crushing plant. Philippe has always been interested in soya (he read a lot) and he wanted to go back to the use of soybeans for human consumption in the form of soyfoods rather than as isolates, concentrates, etc. While researching new developments in soymilk processing, he learned that new methods for making soymilk had been developed in other countries such as the USA [at Cornell University and University of Illinois], Brazil, etc. His company, which had many engineers and R&D staff, was the first soymilk manufacturer in the western world to invest in a pilot plant and then in a factory to make soymilk using the new technique. In the beginning, Alpro designed and built its own soymilk equipment.

At that time it looked like Alpro's main business would be selling this equipment to Third World countries to provide a practical solution to their nutritional and protein problems, especially for infants. In 1982 Alpro signed a contract to sell a soymilk plant to Lalasoa SA in Madagascar. The plant, which cost US$11 million, began operation in Jan. 1984 and it is still in operation. This was the only plant Alpro ever sold to a Third World country.

[Note: Alfa-Laval, which developed soymilk equipment, sold its first major piece of soymilk equipment (a VTIS sterilizer) to Yeo Hiap Seng in 1967, and its first complete soymilk line to Lam Soon (Ace Canning) in Kuala Lumpur, Malaysia. The latter began making soymilk in Dec. 1979, exactly the same year and month that Alpro began.]

The reason for the lack of sales of soymilk plants to Third World countries was mostly politics and lack of organization in those countries. It was not a problem of the resulting soymilk being too expensive. Another problem was that Alpro had only a single product to promote (the turnkey plant). So in Aug. 1984 the company decided to return to its basic business, producing foods, rather than idealistically

© Copyright Soyinfo Center 2014

trying to sell technology (soymilk plants) to the Third World. "In the beginning, we at Alpro had never imagined that there would be a market for soymilk in Europe. Almost nobody wanted the product. There was no interest, except among motivated health-food people. Everybody else in Europe thought the product tasted lousy."

In the early 1980s, while focusing on its Third World plants, Alpro also made soymilk for the European market. The main reason for making this soymilk was to demonstrate what the Alpro equipment could do. In Jan. 1981 Alpro began making and private-labeling Granose Soya Drink in plain and carob flavors for Granose, a Seventh-day Adventist food manufacturer and distributor in England. In March 1981 Alpro launched Soyamel (plain with vitamins), the first of its own soymilk brands, sold only in drug stores and pharmacies (chemie stores). It was followed in Dec. 1982 by Provamel plain and chocolate drinks, and the company's first pudding-like dessert (in chocolate flavor); the Provamel line was sold in health food stores. Next, in March 1984, came Alpro Soya Drink in plain and chocolate flavors, sold only in supermarkets (multiples). All the above were sold in 500 ml Tetra Brik cartons. Then in Nov. 1984 Alpro launched Sunsoy for the export market. It was sold in both 250 ml (plain, carob, or strawberry) and 1 liter (plain) Tetra Brik cartons. All four brands still exist, although Soyamel sales are small. Statistics on the sales of each brand are confidential. Alpro launched its first pudding-like soymilk dessert under the Provamel brand in about 1984, in chocolate and vanilla flavors. The concept, though based on a similar dairy product, was a first for soymilk.

Alpro continues to private label soymilk for anyone who can pay for it. The company's philosophy on this point has not changed over the years. "We are a producer, and as such we try to produce as much as possible, otherwise we could not pay for our research and fixed costs. We would like to sell as much of our own brands as possible, but if we do not private label for other companies, our competitors will do so instead."

In 1984 Alpro had planned to build a new soymilk plant in Ghent with a capacity of 40 million liters/year, but this plan was delayed. Instead they ended up building a new soybean cleaning and dehulling system. Finally Alpro did build a new plant at Vlamingstraat 28, in Wevelgem, near the French border. They started construction in June 1988 and they plan to be moved in completely by June 1990. The plant cost about US$15 million and its capacity is about 45 million liters/year, which is more than the present total European and American soymilk markets. It is a complete plant with packaging, sterilizing, and several lines. It is the biggest soymilk plant in the western world. Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium. Phone: (056) 43 22 11.

2884. Buono, Mark Anthony; Setser, C.; Erickson, L.E.; Fung, D.Y.C. 1990. Soymilk yogurt: Sensory evaluation and chemical measurement. *J. of Food Science* 55(2):528-31. March/April. Kansas Agric. Exp. Station, Contribution No. 89-355-J. [13 ref]

• ***Summary:*** Fermentation significantly reduced the beany flavor of soymilk. Soymilk with added fructose got the highest taste panel score. Also published as American Soybean Association Human Nutrition Highlights 1/91. Address: 1. Kellogg Company, 235 Porter St., Battle Creek, Michigan 49016; 2. Dep. of Foods & Nutrition; 3. Dep. of Chemical Engineering; 4. Dep. of Animal Sciences & Industry. Last 3: Kansas State Univ., Manhattan, Kansas 66506.

2885. Buono, Mark Anthony; Erickson, L.E.; Fung, D.Y.C.; Jeon, I.J. 1990. Carbohydrate utilization and growth kinetics in the production of yogurt from soymilk. I. Experimental methods. *J. of Food Processing and Preservation* 14(2):135-53. April. [11 ref]

• ***Summary:*** If soymilk is to be used as an ingredient in human foods, it is important that the concentration of carbohydrates (mainly stachyose) that can cause flatulence be reduced and that the objectionable beany flavor typically associated with soy products also be reduced. This paper focuses on the key measurements made during soymilk fermentation. The growth and sugar utilization of *Lactobacillus bulgaricus* and *Streptococcus thermophilus* were measured in soymilk. Use of equal weights of the two pure cultures was found to be superior to a 1:1 cell number ratio for the mixed culture inoculum. Concentrations of stachyose and sucrose were followed by high performance liquid chromatography (HPLC). Address: Food Science Graduate Program, Durland Hall, Kansas State Univ., Manhattan, KS 66506; Buono is presently at the Kellogg Company, Battle Creek, Michigan.

2886. **Product Name:** Granose Country Delight: Organic Soya Dessert [Orange, Apricot & Nectarine, Peach & Papaya, or Strawberry & Guava].
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in southern England by Bridge Farm Dairies.
Manufacturer's Address: Howard Way, Newport Pagnell, Buckinghamshire, MK16 9PY, England. Phone: (0908) 211311.
Date of Introduction: 1990 April.
Ingredients: Peach & papaya: Organic soya milk (Water, dehulled soya beans, sea salt), raw cane sugar, peaches, vegetable oil, papaya, stabilisers, modified starch, guar gum, pectin, agar, citric acid, natural flavouring, colour (Annatto).
Wt/Vol., Packaging, Price: 125 gm plastic cup with foil lid.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Energy 398kJ/95 kcal (calories), protein 1.3 gm, carbohydrate 14.7 gm, fat 3.8 gm.
New Product–Documentation: SoyaFoods (ASA, Europe).

1990 1(1):3. "Granose too are introducing a soya dessert called Country Delight in 3 flavours..."

Form filled out and four Labels (cups & tops) sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Bridge Farm Dairies, was introduced in 1990. It is now sold in the four flavors shown above. A color illustration on the foil lid shows the main fruits used against an ivory background. The name of the fruits is written in a banner rectangle below the word "Granose" and above the term "Country Delight." A "Best before" date is stamped atop each lid. The front of the cup contains a similar but more elaborate drawing. "Best served chilled."

Granose leaflet distributed at Helfex. 1990. April. "Ingredients list for new products."

Letter from Granose. 1990. July 11. This is an Ultra Heat Treated product with a 15-week shelf life. It was launched in April 1990 and is not an ice cream.

2887. **Product Name:** Brazil Roast Mix.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Howard Way, Newport Pagnell, Buckinghamshire, MK16 9PY, England. Phone: (0908) 211311.
Date of Introduction: 1990 April.
Ingredients: Brazil nuts, textured soya protein, rolled oats, oat flour, pea bran, potato flour, dried onion, hydrolysed vegetable protein, spices, dried mushrooms, sea salt, chives.
New Product–Documentation: Granose leaflet distributed at Helfex. 1990. April. "Ingredients list for new products."

2888. Sanitarium Nutrition Education Service. 1990. Information for health professionals. Sanitarium So Good Non-dairy Soy Drink. Sanitarium Health Food Co., P.O. Box 249, Wahroonga, NSW, 2076, Australia. 8 p. April. 30 cm. [3 ref]
• ***Summary:*** Contents: Introduction. Ingredient description. Nutritional analysis. Suitability for special diets. Directions for use. So Good for babies. Typical nutritional profiles. Nutritional aspects of So Good. Address: Wahroonga, Australia. Phone: (02) 487 1711.

2889. Sanitarium Nutrition Education Service. 1990. So Good (Brochure). Sanitarium Health Food Co., P.O. Box 249, Wahroonga, NSW, 2076, Australia. 4 p. April. 30 cm.
• ***Summary:*** Contents: The amazing soya bean. The So Good story. Package size. Nutritional information. Ingredient description: Soya isolate ("extracted by sequential treatments of soya flour with alkali and acid solutions"), maltodextrin (derived from wheat or corn starch which is partially hydrolyzed with enzymes and/or acid; it contributes dextrose), corn syrup solids, sugar (sucrose; white / unflavored contains 1.6%, flavored 3.6%, lite 0%), vegetable oil (sunflower oil; it accounts for 3.4% of the fat level in So Good (white), 3.2% in the flavored varieties, and 0.7% in So Good Lite. All So Good products are free of cholesterol and lactose), vitamins and minerals ("The addition of vitamins and minerals is aimed at providing an equivalent level to that of full cream dairy milk.") Note that a major problem in fortifying soymilk with calcium is how to keep it from coagulating; So Good uses calcium chloride [509] and calcium oxide [(529]), flavors and colors (Flavored products use a combination of natural and artificial flavors. For example, Jaffa flavor uses natural orange and artificial chocolate flavors, plus Sunset Yellow color).

Nutritional analysis. Suitability for special diets. Directions for use. So Good for babies (So Good white is not recommended for babies under the age of 12 months; So Good Lite is not recommended for babies under the age of 2 years because of the low fat content). Gives five recipes. Address: Wahroonga, Australia. Phone: (02) 487 1711.

2890. Snowdon, David A. 1990. Early natural menopause and the duration of postmenopausal life: Findings from a mathematical model of life expectancy. *J. of the American Geriatrics Society* 38(4):402-08. April. [19 ref]
• ***Summary:*** Menarche is the time of the start of menstruation, and menopause is the time of its permanent cessation. Each is strongly and universally dependent on age. Data for this study were derived from a study of 5,287 naturally postmenopausal Seventh-day Adventists observed during 1976-1982. "For natural menopause before the age of 47 years, each one year decrease in age at menopause was associated with a 0.53-year increase in postmenopausal life (P = .04) and a 0.47-year decrease in the age at death (P = .04). For natural menopause at the age of 47 years and older, however, each one-year decrease in age at menopause was associated with a 0.99-year increase in postmenopausal life (P = .03) and only a 0.01-year decrease in the age at death (P = .85). Overall, these findings argue against the possibility that the association between age at menopause and age at death in this study was due to the relation of age at menopause to the duration of postmenopausal life." Address: Div. of Epidemiology, School of Public Health, Univ. of Minnesota, Minneapolis, MN 55455.

2891. Unti, Bernard. 1990. Vegetarian roots: A most unlikely group gave vegetarianism its start in America. *Vegetarian Times.* April. p. 52-57, 82.
• ***Summary:*** The foundation of American vegetarianism was laid in 1817 by English immigrants of a fundamentalist Christian sect, the Bible-Christians, who were disciples of William Cowherd (1763-1816). The only qualification for membership in the Bible-Christian Church was adherence to a meatless diet for 6 months. One convert, William Metcalfe (1788-1862) became Cowherd's most fervent supporter. In 1809, after renouncing meat and alcohol, Metcalfe joined Cowherd in his mission of reform. In 1817 Metcalfe and 41 church members sailed from England to America, where they

© Copyright Soyinfo Center 2014

settled in Philadelphia and built a church. There Metcalfe preached his vegetarian gospel twice every Sabbath. Painted on an interior wall of the church were the words of the apostle Paul: "It is good neither to eat flesh nor to drink wine" (Romans 14:21).

Metcalfe wrote numerous pamphlets on vegetarianism, as well as a longer treatise, *Abstinence from Animal Flesh* (1821), the first book on vegetarianism published in the United States. The Bible Christians were also the first Christian group in the USA to advocate abstinence from alcohol. Membership in the church grew but never exceeded 100 people. During an 1829 lecture visit to Philadelphia, Sylvester Graham met with the Bible-Christians, received their literature, and undertook a detailed study of diet and physiology. Soon he was recommending a vegetarian diet to the thousands who attended his lectures all across America.

After hearing that the Bible-Christians in England had established the Vegetarian Society of Great Britain (still in existence as the Vegetarian Society of the United Kingdom), Metcalfe founded the American Vegetarian Society. His co-founders included William Alcott and Dr. R.T. Trall. The new society, under Metcalfe's direction, published *The American Vegetarian and Health Journal*, America's first periodical concerning vegetarianism, from 1850 to 1854, when the society could no longer afford to pay its bills. Soon after the journal folded, Metcalfe returned to England, where he lectured, then died at age 75.

In America, Metcalfe's work was continued after some delay by Henry S. Clubb (1827-1921), a charter member of the Vegetarian Society of Great Britain. He immigrated to the United States, worked as a journalist and abolitionist, and in 1876 became pastor of the Bible-Christian Church in Philadelphia. A sturdy man with a white flowing beard and good health, he revived the American vegetarian movement, which had faded during the Civil War, reorganized the Vegetarian Society of America, and from 1888 onward edited its publication, *The Vegetarian* (later renamed *Food, Home, and Garden*).

Clubb now "threw his energy into building America's vegetarian movement. For instance, he worked to help vegetarians set up societies in other cities; by the mid-1890s there were viable vegetarian societies in Kansas City, Missouri, St. Louis, Minneapolis [Minnesota], Boston [Massachusetts], Pittsburgh [Pennsylvania], Chicago [Illinois], Washington, DC, and other cities. In conjunction with the world's fair [Columbian Exposition at Chicago] in 1893, Clubb helped to organize a Vegetarian Congress, which attracted delegates from all over the world.

"Clubb was acquainted with all the major health reformers of his day, and he was a key figure in linking the first generation of American health reformers (many of them Bible-Christians) with the new generation of vegetarian advocates led by John Harvey Kellogg, M.D. Kellogg's Battle Creek Sanitarium and similar institutions would become magnets for hundreds of thousands of people seeking to explore the benefits of a vegetarian diet.

"Clubb continued working well into his 80s. By 1916, however, he had become too feeble to conduct services outside his home, so the church members assembled there. He died in 1921 at the age of 94... One year after Clubb's death, the Bible-Christian Church disbanded."

Photos show: William Metcalfe, Rev. Henry S. Cobb [sic, Clubb], and Bernard Unti. A sidebar describes Unti's work at the American Anti-Vivisection Society (since 1985) and his interest in its library and the history of the humane movement and vegetarianism. He has been a vegetarian since age 8. He studied history and worked in Switzerland to promote a vegetarian health hotel there. He buys and collects old and new books on animal welfare/rights and vegetarianism. Address: Executive Director, The American-Anti-Vivisection Society, Suite 294 Noble Plaza, 801 Old York Rd., Jenkintown, Pennsylvania 19046-1685. Phone: 215-887-0816.

2892. *SoyaScan Notes.* 1990. New Trend: Large European food companies, and agricultural- and dairy cooperatives now launching and actively promoting innovative new tofu and soymilk products: Mostly dairylike and meatlike products (Overview). May 8. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Jan. 1980 Vandemoortele N.V., one of Europe's largest oilseed crushers, located at Izegem, Belgium, began to make its first commercial soymilk product (GranoVita Soja Drink in plain and carob flavors, packed in 500 ml Tetra Brik cartons) which was private labeled (co-packed) for DE-VAU-GE, a large Seventh-day Adventist health food manufacturer in West Germany. This was Alpro's first customer. In June 1980 Vandemoortele created Alpro N.V. to take over this production. The company quickly became Europe's leading soymilk producer and by 1990 had about 70% of the European soymilk market. Their new soymilk plant, costing about US$15 million and having a capacity of 45 million liters a year, opened in Wevelgem in June 1990.

In June 1984 Migros, Switzerland's leading retail food chain, launched 5 tofu products: Natural Tofu, Tofu Snack with Spices, Spicy Tofu Spread, Diced Tofu with Cream, and Tofu Bolognaise. In 1985 they introduced Tofu with Mushrooms and Gravy, followed in 1986 by Canned Tofu Kashmir (with Curry and Fruits), Tofu Spread with Cheese (in a Tube), Tofu Chocolate Crème, and Tofunaise (in a Tube), then in 1987 by Seasoned Tofu. In 1986 Migros, a 61 year old cooperative with 1.4 million members, had net sales of 3,166 million Swiss francs. The tofu was made by a Migros company named Conserves Estavayer in Estavayer-le-Lac, near Zurich.

Galactina is a well established Swiss company (located in Belp) that has made a soymilk named Naga Sonda for

© Copyright Soyinfo Center 2014

enteral tube feeding since 1980. In 1981 they launched the product in liquid Tetra Pack. They entered the tofu market in 1984 with Galactina Tofu, then in 1985 added three types of Seasoned Tofu (Gourmet Diced with Soy Sauce & Spices, Provencale with Herbs, and Jardiniere with Vegetables), followed in 1987 with Tofu Spread and 1988 with Tofu Burger and Tofu Salads. All were marketed very attractively.

In Aug. 1985 DE-VAU-GE, one of Europe's oldest and largest producers of vegetarian health foods, began operation of its new soymilk plant (purchased from STS/DTD) in Lueneburg, West Germany. By 1990 they were Europe's second largest soymilk manufacturer, with 15-20% of the market. They also sold many tofu products and were planning to produce tofu in the near future.

In 1985 Laiteries Triballat, a large French dairy products company (mostly cheese, located at Noyal-sur-Vilaine, Brittany) introduced Sojasun, an innovative cultured soymilk yogurt in 4 flavors, two with bits of fruit and two with fruit puree. In Oct. 1988 and early 1989 they promoted the product extensively on French television and in German print media. Sales in several western European countries were said to be good.

In 1986 Parmalat, the Italian dairy giant, introduced a soymilk named Soialat. By 1989 they had created a subsidiary named Parma Soia, which sold three lines of more than 20 soy products. The Campi di Soia line (containing soymilk, soy pasta, sauce, and sprouts) was sold at supermarkets. The Nature Soy line was imported, and the Erboristeria line was for the health food market.

In Jan. 1987 Cacoja, a newly-formed affiliate of the Coopérative Agricole de Colmar (CAC), began production of soymilk and soy desserts at its new, fully-automated plant (with an ultrafiltration system) at Issenheim, France. Purchased from Alfa-Laval, the plant cost 11 million French francs and had a capacity of 1,500 liters/hour of soymilk containing 4% protein. By 1990 Cacoja was Europe's third largest soymilk producer.

In Sept. 1987 Rayner Burgess Ltd., a large British Food company that specializes in an array of unique condiments, purchased Cauldron Foods Ltd., Britain's second largest tofu manufacturer, and the largest marketing its products to the Caucasian and health-food trades.

In Jan. 1988 British Arkady, a large British food conglomerate owned by Archer Daniels Midland Co. (Decatur, Illinois) acquired the Haldane Foods Group, and made it part of British Arkady's Health Foods Div. The Haldane Foods Group was put together by acquisition of Direct Foods Ltd. (founded 1980, acquired by the Group in 1985), Vegetarian Feasts Ltd. (founded 1984, acquired 1986), Haldane Foods Ltd. (founded 1983, acquired Aug. 1987), Vegetarian Cuisine Ltd. (founded 1985, acquired 1987), Regular Tofu Co. Ltd. (founded 1983, acquired Aug. 1987), Realeat Foods Ltd. (founded 1984, acquired Sept. 1988), Saucemasters Ltd. (founded 1988, acquired Feb. 1989), and Genice Foods Ltd. (founded 1988, acquired March 1989). Self-proclaimed as "Europe's leading healthier food group, most of these companies make tofu or soyfood products.

In April 1989 Huegli AG, a leading Swiss food company, purchased 75% ownership in Yamato Tofuhaus GmbH, one of West Germany's leading tofu manufacturers. At about the same time, Huegli purchased Horst Heirler, the country's leading distributor of fresh products.

Also in April 1989 Lima N.V. of Belgium, one of Europe's earliest natural foods companies, purchased Jonathan PVBA, Belgium's leading tofu manufacturer.

In Sept. 1989 Innoval (formerly Sojalpe), an acquired affiliate of Les Silos de Valence (a large 5,000-member cereal cooperative in Rhone Alpes, France), began to produce tofu, soymilk, and liquid soy concentrate (with an ultrafiltration unit) at a modern new plant, with a capacity of 2,000 liters/hour, purchased from Alfa-Laval at a cost of 20-21 million French francs.

In Feb. 1990 Euro-Nature, a French investment fund, purchased 97% Lima N.V. of Belgium.

In early 1990 Avo Feinkost GmbH, a large West German spice from Osnabrueck, launched the Sofit line of soy products, including various meatlike products, dressings, and salads.

2894. Nordquist, Ted. 1990. Soy ice cream in Sweden and Europe (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This week Ted introduced the "absolutely best-tasting soymilk-based ice cream in the world. Called Tofu Line Glass in vanilla and chocolate flavors, it tastes like old fashioned ice cream made from cream. The vanilla is better than its dairy counterpart." Four-color brochures and labels have been printed. Ted makes the soymilk at the rate of 4,000 liters/hour at Trensums Musteri, a juice company located in Tingsryd, located 20 or 30 minutes miles to the north of the southern seaside city of Karlshamn. Both Tingsryd and Karlshamn are located in Blekinge County. Its a very high-tech soymilk. This is the first product to come out of Ted's years of collaboration with Trensums. Ted buys the soy base from Trensums and ships it by tank truck to Winner (pronounced Vinner), one of Sweden's largest ice cream producers; it is a division of Karlshamn in Karlshamn. He sells the soy base to Winner. Winner makes the ice cream, and sells it back to Ted. It is hard-packed in 3/4 liter octagonal cartons (each has 8 sides with the top and bottom flat). Ted then sells the ice cream to AB Svenska Nutana, a

© Copyright Soyinfo Center 2014

Seventh-day Adventist distributor and marketer in Rimbo, Sweden. Nutana has exclusive sales rights in Sweden. Ted is now working on exports to Finland and Japan.

Ted and his coworkers are only interested in high-volume products. He hopes to sell in Sweden at least 400,000 liters/year of the new ice cream, made from 200,000 liters of the liquid mix. This is 9,000 liters/week, or 30 pallets/week. In addition, he hopes to export the product to other Scandinavian countries and to Japan and perhaps the continent.

It is quite surprising that, whereas there are many soy ice creams in America, there are only 2 others in Europe. One is made by Schoeller, which is one of Europe's largest ice cream producers. They bought an Alfa-Laval system that transforms whole soybeans (using the Illinois method, without separation of okara) into soymilk which they then spray dry and use to make a soy ice cream. "The samples of the ice cream and powder that they sent to Semper in Sweden were a total catastrophe."

Unisoy in England, run by Neil Rabheru, an Indian man, also makes a soymilk named Unisoy Gold and a soymilk ice cream named Maranellis Ice Supreme. They have been out since about mid-1989. It is fortified with calcium and vitamins to be as close as possible to dairy milk. Ted thinks it tastes fantastic, but the ice cream doesn't come close to Ted's. The owner of the company came to Sweden and tried to sell Ted his ice cream and aseptically packed soy base. Address: Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

2895. Nordquist, Ted. 1990. The soymilk market in Scandinavia (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The most popular soymilk in Scandinavia is that imported under the Nutana brand and made by DE-VAU-GE in West Germany. It is sold in an aseptic package. Nutana, located in Rimbo, Sweden, and owned by the Seventh-day Adventists, is a wholesaler and distributor for vegetarian products. Some Alpro soymilk is imported to Sweden but there seems to be less and less of it because Nutana has a very active marketing organization in Scandinavia. Within Scandinavia, Sweden is by far the biggest market for soyfoods. The population sizes are Sweden 8.3 million, Denmark 5.07 million, Finland 5.0 million, Norway 4.2 million, and Iceland 251,000. Alpro's soymilk dessert, in vanilla and chocolate flavors, is selling well.

The soymilk market in Scandinavia is, at most, 150,000 liters/year. It is growing slowly. This is still too small to be interesting or to pay for printing aseptic packages for a soymilk product. The minimum order for a Tetra Brik carton is 200,000 units, and the normal economical order for one single package is about 350,000 to 400,000 units. The labels are so expensive that he would not want to buy more than a 2-year supply. So he would not start until he can sell at least 200,000 liters/year. The cost of aseptic cartons is a major problem for soymilk makers in Europe. All are struggling. Aros will be interested in the next 2-3 years. His first product will probably be a "cooking milk" rather than a milk for drinking. He may work with the milk company Semper to produce a children's "Välling" (pronounced VEL-ling). This is a very popular breakfast product for both children and adults, usually made from powdered milk plus oats or wheat. It is sold as powder which is mixed with water and heated on the stove to make a sort of thick milk. They have developed a soy-based counterpart that tastes better than its dairy counterpart.

Ted's long term goal is to have his fresh soymilk beat powdered cow's milk on the market. His soy-base is so neutral or bland in taste that it can be used in place of powdered milk in ice creams, margarines, etc. That is his basic marketing strategy. As 1992 approaches and subsidies are eliminated over the next 2 years, 8,000 Swedish farmers are projected to loose their jobs from competition from the Continent. In Sweden there is a tremendous surplus production of milk and dairy products, as well as meat, wheat, barley, and oats. In Sweden, the dairy farmer presently gets almost 2 crowns/liter for his milk. That milk is retailed for 5.90 Swedish crowns/liter, but it would cost 6-8 crowns/per liter if it were not subsidized by the Swedish government. What is not sold as a liquid is spray dried, and sold at a low price to companies like Karlshamn to make ice cream and margarine. The price will go up as the subsidies are eliminated–all over Europe. Ted can produce liquid soymilk at 1.10 crowns/liter without subsidies. So Ted wants the farmers which would otherwise go out of business to start growing a new soybean that grows well in Sweden. Ted would buy those soybeans, make soymilk, and use it in Sweden in place of powdered milk, and export it as a premium product at a higher price.

Ted's soymilk system started with some ideas that he got from Alfa-Laval in Lund–the concept of starting with unsoaked, whole soybeans. They exchanged this for Ted's information on tofu. They have never been successful in making a bland soymilk like the one Ted makes today. Ted left Alfa-Laval in 1983-84 and went to Trensums. He has worked with Mark Ljungström (pronounced YUNG-strum) at Trensums for 6 years. Mark has built the machinery (using mostly Alfa-Laval equipment but with pieces from other suppliers) and Ted has the processing concepts. This has been repeatedly tested, changed, re-run, etc. until now it is a unique, excellent system. During the past 2 years, Arla (the Swedish milk company, and Semper, their development subsidiary) and Karlshamn (the Swedish fat company, that uses 90% vegetable oils) have entered the project. In the fall of 1989 Arla decided the leave the project because the new director of Semper new nothing about soya. So now Ted/Aros, Trensums, and Karlshamn are working together. Address: Aros Sojaprodukter, Bergsvagen 1, S-19063

2896. Nordquist, Ted. 1990. The tofu market in Scandinavia (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** There are three tofu manufacturers in Sweden. Aros in Sweden is the biggest. Aros started making commercial tofu in Feb. 1981. By 1983 production had grown to 500 kg/week and they began vacuum packaging. By 1984 they were making 800 kg/week, and by Jan. 1985 tofu production had grown to 1,750 kg/week. In early 1987 they introduced the Tofu Line brand for all of their soy products, and they emphasize this brand in their marketing. Now they use about 900 kg/week of soybeans (with a yield of 2.2 or 2.3) to make about 2,000 kg/week of tofu. Much of this tofu is used in second generation products. Sales are growing in the regular chain stores, but sales to health food stores have been dropping over the past few years. Many health food stores are going out of business. There was a lot of negative publicity about their high markups on some products, some questionable products (such as shark's liver oil touted as a cure for cancer), and the fact that the largest chains were owned by pharmaceutical companies that were making big profits. Aros produces 90-95% of all tofu sold in Sweden, Norway, and Finland. The rest consists of imports: a little bottled tofu from Lima in Belgium and canned tofu from Nutana in Denmark. Growth of the tofu market over the past few years has been slow. The main growth has been in second generation products. Over the past 6 years, 99% of Ted's energy has gone into the soy-base project and this has prevented him from working on tofu.

But now many exciting things are starting to happen with tofu in Sweden that make its future look bright. Hans Klimming is the chief cook for the largest conference center in Gothenburg (Göteborg), which serves 1,500-2,000 lunches or dinners at a time, is now serving lots of tofu–and promoting it strongly. He employs a Thai cook who is developing the dishes using Aros' tofu. Klimming has gone to Dagab, Sweden's largest wholesaler for restaurants and hospitals, and urged them to sell tofu throughout Sweden. Ted is now working with Klimming to develop a cookbook containing bulk tofu recipes. Klimming has also gone to Sweden's strongest supermarket chain, ICA (each store is a franchise, 99% owned by the owner), and asked them to publish and carry this cookbook in 1½ to 2 years. Presently Aros' regular tofu is sold only in a few ICA and Konsum stores in Aros' own distribution area–where they deliver themselves.

The second tofu maker in Scandinavia, Urten's Tofu in Soeborg, Denmark, is a fairly small company that supplies Nutana in Denmark with their tofu. Nutana in Denmark is a huge industrial plant that makes mainly frozen foods but sells them primarily in Scandinavia, especially Sweden. They have 2 canned tofu products and last year they introduced a frozen dish containing tofu cubes. Urten's Tofu also sells tofu as such on a fairly small scale. Nutana does not sell any tofu as such. Urtekraemmeren in Copenhagen, which owns Urten's Tofu, is mainly an importer of biodynamic products. Making tofu is a small side business for them.

Aros sales are continuing to grow, even though Ted is spending most of his time away from the business with Trensums. Address: Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

2897. Whitford, Harry M., III. 1990. Recent developments with soyfoods in Europe (Interview). *SoyaScan Notes.* May 18 and 31. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Harry is an American. He was an AFS student in Germany. He left California in Oct. 1980 and has lived in West Germany since then. He is now married to a German lady. His new consulting company will try to help European soyfoods companies develop products for mainstream markets. In Europe the diet is generally more diverse and healthier, with less meat and more cereal grains than the USA. Thus there is less motivation for consumers to use soyfoods and (except in the UK) less interest in vegetarian diets. So marketing is the key to selling soyfoods; they must be developed and marketed to sell primarily because they are good tasting and only secondly because they are healthful.

Thomas Karas is saying that Soyastern is trying to merge with Yamato but actually Soyastern is totally bankrupt and Karas is trying to convince Huegli to buy it.

DE-VAU-GE buys about 5,000 kg/week of tofu from Heuschen-Schrouff. The latter uses a secret coagulant which they claim is natural. The tofu has a 6-month shelf life and a pH of 4.0. It is hard like rubber. Harry thinks that after the tofu is pressed and cut, it is soaked in a lactic acid solution (Takai told him this) then pasteurized. Heuschen-Schrouff controls the Chinese food supplies, and that is where they make most of their money. In Chinese markets, their tofu is sold in open buckets. All of their tofu is sold very inexpensively at a very small markup. He thinks they make 50,000 kg/week.

From a producers viewpoint, the German tofu market is the most saturated in Europe, except perhaps for the Netherlands; there are too many producers. There is almost no water-packed tofu in Europe, except that made by one small company in Dusseldorf, and a little sold in bulk floating in water in buckets; the rest is all vacuum packed. The typical tofu company gives its tofu a 5-6 week shelf life because that is what consumers expect–but it rarely stays fresh that long, and is often sour. The only company in Europe Harry knows of that pasteurizes is Heuschen-Schrouff. DE-VAU-GE is now making its own tofu–a colleague of his saw it. They copied a Takai carousel curding machine. They use it only in their second-generation products–they do not sell any as plain tofu. Address: Eurosoy

2899. Andersen, Thomas. 1990. History of pioneering work with tempeh and tofu in Denmark (Interview). *SoyaScan Notes.* May 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Thomas, a native of Denmark who speaks flawless British English (in part because of his extensive travels), got interested in macrobiotics in about 1982-83 and, looking for work, traveled to London to study at the Community Health Foundation (founded in 1976 to teach macrobiotics). There from Simon Brown (the expert on soyfoods, who taught classes on how to make tofu and tempeh), Jon Sandifer, Roger Green (presently in Australia), and Andrew Leech, he learned how to make tempeh. There was a small commercial tempeh shop in the kitchen of the Community Health Centre; it started after the kitchen's closing time. He returned to Denmark and in 1985 he started the country's first tempeh shop, named Thomas Tempeh, located on Tagens Vej in Copenhagen. He had two problems. First, since many of his customers were interested in macrobiotics, they did not want the tempeh frozen, and it had a shelf life of only 8 days fresh. Second, the market was very small. So Thomas realized that if he wanted to survive working with soyfoods, he would have to make tofu as well as tempeh.

The two earliest tofu companies in Denmark were Dansk Tofu (owned by Ted Goldberg and some other guys) and Soy Joy in the Valby district of Copenhagen. [Note: Tofu Denmark in Valby was started in March 1982 by Per Fruergaard from Christiania]. The owners of Soy Joy were very idealistic. They never got a packaging machine for their tofu; they just delivered it in bulk in water, which the Danish health authorities, who are very strict, did not like. They were only in business for about 3-6 months. In late 1985 Thomas bought most of the tofu equipment owned by Dansk Tofu, which had been in business for about 1 year. The company was owned by Ted Goldberg, and they had stopped making tofu about 6 months earlier. At this time, Dansk Tofu simply disappeared. And now Thomas started making tofu and marinated tofu, still at Tagens Vej. On 1 Jan. 1986 he moved the business to Soendergade in the city of Toelloese, Denmark. The business was still named Thomas Tempeh. He quickly expanded his product line to include Tofu Pâtés and Smoked Tofu. All of his products were always made with organically grown soybeans. Then he ran into problems with the health inspectors. They did not like the fact that he was making tofu and tempeh in the same place, that he was smoking the tofu himself, and that there were problems with the tofu pasteurization. Moreover, Thomas was overworked (18 hours a day) and undercapitalized. He and one employee were making 500 kg/week of soy products. So in September or October 1986 he sold his business to Urtekraemmeren (pronounced ur-te-KRAH-mer-en), which had previously imported soyfoods from Japan but had never manufactured any.

Then Thomas went to Switzerland to help out with a tofu factory named Berner Tofurei, located in Bern and owned by Infinity, a macrobiotic group. In about Dec. 1986 Urtekraemmeren moved their newly acquired tempeh and tofu company to its present location in Soeborg, Denmark, and renamed it Urten's Tofu, and stopped making tempeh since the health inspectors didn't want tofu and tempeh to be made in the same room. Tempeh was selling, but not enough to justify buying a separate room and equipment for it. In April 1988 Thomas returned to Denmark and began to work as a tofu maker for Urtekraemmeren at Urten's Tofu, the company he had founded. The company was in bad shape: there were constant problems with the health inspectors, the equipment was old and bad, a long pressing time led to bacterial contamination, etc. In late 1988 or early 1989 Urten's Tofu started selling their tofu to Nutana, a large manufacturer of vegetarian foods owned by the Seventh-day Adventist church. This was a turning point in the history of the business. In about May 1989 Thomas told Urtekraemmeren that if they invested in new equipment he could make the company successful. They liked the idea so Thomas went to the SIAL food fair in Paris, met Takai, and bought their largest pressure cooker (220 liters), new pressing tables, a pasteurizing tank, etc. The next big development came in Sept. 1989 when Urten's Tofu got their tofu into the Irma supermarket chain in Denmark. Then tofu began to sell better on the health foods market as well. Thomas, Tom Kristoffersen, and one other man now make the tofu at Urten's. But it is hard work and wages are low. There are no tofu books in Danish.

Today Urten's Tofu is the only tofu company in Denmark. They make, on average, 750 kg/week of tofu (range: 500 to 1,500 kg/week). Their three products are tofu, marinated tofu, and tofu pâté. Production is growing nicely but varies widely from week to week.

A new tofu company named Oy Soya Ab is now being starting in Ekenäs, Finland, by people there who import macrobiotic foods from Japan. One of the people is named Elizabeth. Thomas will work as a consultant for this new company. Address: Urten's Tofu, Hoeje Gladsaxe Torv 2, DK-2860 Soeborg, Denmark. Phone: 31 67 41 90.

* = 2 decanter centrifuges per system to boost the protein yield. The systems made before 1984 were for more traditional soymilk. Those made afterwards no longer require that the soybeans be soaked, and the "new" soyabase line in designed primarily for producing a non-beany soymilk, but it can be easily adjusted to give a traditional soymilk. "Soybase" is the product that comes out of the Soyal soyabase line after grinding, separation in one or more decanters, and deactivation of enzymes like trypsin inhibitors. This base is more concentrated than soymilk (9-12% solids/dry matter) and is what is used as the raw material for any soy-based product. "Soymilk" is a blended drink, often containing sugar, and standardized to a protein level required by the market. Soybase would only be run through an ultrafiltration unit to (1) remove phytic acid and oligosaccharides, or (2) to remove moisture and increase the percentage solids, as to make tofu. ** The plant owned by the Dairy Co-op in France is secret, but the base it produces will be used mostly for research on calf milk replacers and on replacing cow's milk in certain dairy products. This dairy does not have any products on the market. Address: R&D manager, Alfa-Laval East Asia Pte. Ltd., 11 Joo Koon Circle, Singapore 2262. Phone: 86 22 711.

2902. Krieger, Verena. 1990. Re: The soymilk market in Switzerland. Letter (fax) to William Shurtleff at Soyfoods Center, May 31. 5 p.

• ***Summary:*** Soyana in Geneva is the only soymilk maker in Switzerland; their production figures are confidential. Galactina Ltd. in Belp makes soymilk powder, but it is used only in Galactina baby foods. PHAG Sarl in Gland is Switzerland's oldest distributor of soymilk and soymilk products; they sell 2,800 liters/week of DE-VAU-GE soymilk. Biorex AG distributes soymilk imported from Alpro in Belgium. Address: Bruchmattstr. 24, CH-6003 Lucerne, Switzerland. Phone: 041-22 50 34.

2903. **Product Name:** [Tofu Line Soymilk Ice Cream (Vanilla, or Chocolate)].
Foreign Name: Tofu Line Glass (Vanilj, Choklad).
Manufacturer's Name: Aros Sojaprodukter KB.

© Copyright Soyinfo Center 2014

Distributed in Sweden exclusively by Nutana.
Manufacturer's Address: Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.
Date of Introduction: 1990 May.
Ingredients: Completely vegetarian chocolate ice cream: Water extract of whole ground organically grown soybeans, sugar, fruit sugar, palm oil, cocoa powder, emulsifier 471 (mono- and diglycerides from vegetable oil), salt, stabilizer E410 (fruit seed flour), E412 (guar gum powder), E407 (carrageenan), vanilla.
Wt/Vol., Packaging, Price: 0.75 liters = 400 gm.
How Stored: Frozen.
Nutrition: Vanilla: Per 100 gm.: Calories 190, protein 3 gm, fat 11 gm (of which 2 gm polyunsaturated), carbohydrates 23 gm (of which 22 gm sugar).
New Product–Documentation: Interview with Ted Nordquist. 1990. May 18. Contains details on the product, which is made in conjunction with Trensums Musteri and Winner (a division of Karlshamn, and the second largest ice cream maker in Sweden).

Manufacturers brochure (Full color, 30 cm). 1990. Sveriges första helt vegetabiliska glass (Sweden's first completely vegetarian ice cream). 4 p. A photo (p. 1) shows the two products in their octagonal containers. Page 2 asks "Why vegetarian/non-dairy (*vegetabilisk*) ice cream?" Page 3 asks "Why soya?" and gives 10 reasons. The rear cover contains brief information about both Aros and AB Svenska Nutana.

Letter (fax) from Ted Nordquist. 1990. Oct. 2. Sales of the new Tofu Line ice cream are about 9,000 liters/week. Hemholmen-Ingman OY in Finland (the country's second largest dairy, which sells 2 million liters/year of dairy ice cream) will begin selling with an order of 35,000 liters/week in a semi-trailer starting about Oct. 16-21. About 17% of Finns are lactose intolerant. It's going well.

Talk with Ted. 1990. Nov. 23. In June 1990 this ice cream was first produced for sale but it was not widely distributed until the end of September. Dagab is the main distributor to hospitals. Ted's ice cream sales are now almost the equivalent of $1,000,000/year. The goal is to sell 22,000 liters/week by Aug. 1991 in Sweden. Concerning prices, inexpensive Swedish dairy ice cream retails for 9 marks/liter, Ted's while soy-based Tofu Line is 17 marks/liter and superpremium dairy Mövenpick (made in Switzerland) retails for 24 marks/liter. To restaurants, low priced dairy ice cream is 55 crows compared with Tofu Line at 60 crowns.

Labels given by Ted Nordquist. 1990. Nov. 23. The label and plastic container are octagonal, 5.25 inches across. Each is brown, red, green, black, and white with the vanilla on parchment beige and the chocolate on light chocolate background. In the center is a small illustration of one green pod filled with yellow soybeans surrounded by green leaves. "The healthy vegetable ice cream." Nutana's name appears prominently in green near the bottom. Ingredients and nutritional composition are listed in a self-adhesive label on the bottom of the container.

Soyfoods Center product evaluation of vanilla and chocolate flavors. 1990. Nov. 23 in Alameda. This is the best vanilla soy ice cream that Akiko and Bill Shurtleff have ever tasted. It represents a major breakthrough in producing soymilk with no beany flavor, and has the potential to revolutionize soymilk and dairylike products worldwide.

Spot in SoyaFoods. 1991. Spring. p. 4. "Tofuline Ice Cream." This completely vegetarian ice cream is made by Aros Sojaprodukter of Orsundsbro, Sweden. Free of milk products, cholesterol, and lactose, it was launched last year and is available in 0.75 liter hexagonal packs in two flavors, vanilla and chocolate. "The product was developed using new soya milk technology using a 'dry bean method' and is being sold in Sweden and Finland."

Ad in Health Food Business (England). 1992. July. p. 7. The product is now named Swedish Glace (which see), and the label is in English. The manufacturer is Winner. Available from Foundation Foods, Chantry Place, Headstone Lane, Harrow, Middlesex, HA3 6NY, England.

2904. Lindner, Anders. 1990. Re: Consumption of soymilk in Europe, by country and per capita. Letter (fax) to William Shurtleff at Soyfoods Center, June 19. 1 p.
• ***Summary:*** The following figures are my guesstimates for the amount of soymilk consumed in major European countries. Most of the soymilk produced in Belgium [by Alpro] and Germany [by DE-VAU-GE] is consumed in other countries. Note: The large consumption in the U.K. is due to both its large total population and its large population of vegetarians and vegans. The latter do not consume milk or other animal products.

Country (Population)–Soymilk consumption in million liters–% of total–liters per capita per year

United Kingdom (56.7 million)–20 million liters*–40% of total–0.35

West Germany (60.2 million)–10 million liters–20% of total–0.17

France (55.8 million)–6 million liters**–12% of total–0.11

Belgium (9.9 million)–3 million liters–6% of total–0.30

Netherlands (14.7 million)–2 million liters–4% of total–0.14

Switzerland (6.5 million)–2 million liters–4% of total–0.31

Scandinavia*** (22.8 million)–2 million liters–4% of total–0.088

Italy (57.4 million)–1 million liters–2% of total–0.017

Austria (7.6 million)–1 million liters–2% of total–0.13

Spain (39.8 million)–1 million liters–2% of total–0.025

Others**** (24.3 million)–2 million liters–4% of total–0.082

Total (355.7 million)–50 million liters–100%–0.14

© Copyright Soyinfo Center 2014

* Neil Rabheru, founder and director of Unisoy, the largest soymilk manufacturer in the UK, estimates that 18-20 million liters/year of soymilk are consumed in the UK. ** Bernard Storup of Société Soy, a large soymilk maker in France, estimates consumption of soymilk in France to be much higher, about 11 million liters. Storup's estimate is probably more accurate. *** Scandinavia = Sweden (8.3 million), Denmark (5.0 million), Finland (5.0 million), Norway (4.2 million), Iceland (0.25 million).

**** Others = Portugal (10.2 million), Greece (10.0 million), Ireland (3.7 million), Luxembourg (0.369 million), Malta (0.358 million).

Highest per capita consumption: United Kingdom 0.35, Switzerland 0.31, Belgium 0.30, West Germany 0.17, Netherlands 0.14, Austria 0.13, France 0.11. Lowest per capita consumption: Italy 0.017, Spain 0.025. Address: P.O. Box 19002, S-250 09 Helsingborg, Sweden. Phone: 42-92776.

2905. Menzies, John. 1990. Re: Harry Miller's work with soymilk in East Asia. Plans by the South China Island Union Mission of Seventh-day Adventists to set up a health food company in Hong Kong and Taiwan. Letter to William Shurtleff at Soyfoods Center, June 20. 2 p. Typed, with signature on letterhead.

• ***Summary:*** After his soyfoods plant in China was destroyed, Dr. "Harry Miller retreated to Taiwan along with the Nationalists and later set up a soya milk plant associated with the Taiwan Adventist Hospital which has long since gone. I am not even sure when the soya milk operation was discontinued. Unfortunately the only industries set up in Hong Kong were hospitals.

"Recently I was asked by the South China Island Union Mission of SDA's to set up a health food industry in Hong Kong and Taiwan... My background is food technology and I have worked for Sanitarium in Australia and New Zealand for a number of years.

"Initially we will import various products from our sister institutions around the world and where possible re-pack under our own label. This will allow us to get a feel for the market so in the near future we will know what sort of a manufacturing plant to set-up (i.e. soyamilk, vegetarian, or cereal). It looks like we might even have an opportunity to set up a manufacturing base in one of the specially administered regions in communist China." Address: General Manager, Food Div., South China Island Union Mission of Seventh-day Adventists, 40 Stubbs Rd., 2nd floor, Hong Kong. Phone: 838-3991.

2906. Uruma, Masao. 1990. Re: History of San-iku Foods' work with soy in Japan. Please wait. Letter to William Shurtleff at Soyfoods Center, June 22. 1 p. Typed, with signature on letterhead.

• ***Summary:*** He will be gone for several weeks, attending the SDA General Conference in Indianapolis, Indiana, and will return to Japan on July 18. Then he will have time to check through the company's soy product history so that he can provide more accurate information. He has talked with a co-worker who used to associate with Dr. Harry Miller a long time ago. He will also provide historical information. Address: San-iku Foods, Sodegaura Machi, Chiba Ken 299-02, Japan.

2907. **Product Name:** Veggie Burger (Shipped from the USA to the Soviet Union as a Dry Mix).
Manufacturer's Name: Archer Daniels Midland Co.
Manufacturer's Address: 4666 Faries Parkway, Box 1470, Decatur, IL 62525. Phone: 800-637-5850.
Date of Introduction: 1990 June.
Ingredients: Textured soy protein concentrate, natural flavors, seasonings.
How Stored: Shelf stable.
New Product–Documentation: Peter Golbitz. 1990. Soya International. April/June. p. 10-12. "Soya Interview: Dwayne Andreas, CEO Archer Daniels Midland: Soybean Ambassador." Peter Golbitz. 1990. Soya International. April/June. p. 14. "ADM unveils new veggie burger: Over 50 million served." "Originally developed by ADM's wholly-owned subsidiary in the United Kingdom, British Arkady, over fifty million servings of the veggie burger, along with soy sausages and meat analog mixes, were sold in the U.K. last year. According to Ron Ferrari, sales manager of ADM's Protein Specialties Division, the veggie burger was developed to meet the demands of vegetarians..."

Archer Daniels Midland Co. 1990. "Annual report." "ADM has introduced its veggie burger, an all-vegetable protein food product based on soy protein concentrate. This innovative, cholesterol-free, reduced calorie product also contains dietary fiber and appeals to the vegetarian market. Early indications of good acceptance in the U.S. and U.S.S.R. suggest that this product has global potential..."

Stewart Reeve. 1991. *Soybean Digest.* Dec. p. 40a. "Fast food delight." "The product has already proven itself in an export market. ADM introduced a similar product trademarked as the Veggie Burger to the Soviet Union in October 1989 at a food trade show in Moscow. Shipped as only the dry mix, Veggie Burgers are sold in Soviet grocery stores as the mix or served in restaurants as burgers. The Petina restaurant in Moscow now sells 4,500 Veggie Burgers a day, Lensch reports. The Veggie Burger is tailored to the tastes of Soviet consumers. 'For example, the Soviet Union product has 10% fat content rather than the 5% the U.S. has. They're looking for calories,' he explains."

Talk with Lee Lensch of ADM. 1991. Dec. 16. Initial commercial sales began in June 1990. Although Realeat and British Arkady developed the Vegeburger in the UK using TVP (textured soy flour), ADM reformulated it in the USA using textured soy protein concentrate. Worthington Foods

© Copyright Soyinfo Center 2014

has a registered trademark on the name Veggie Burger in the USA only, so that is why ADM named its product Harvest Burger–after extensive talks with Worthington in the spring of 1990. The Veggie Burger made in the USA with textured soy protein concentrate is not currently sold in the UK. Kees Touw, who is in charge of all international sales for this product, would know why it is not sold–but it is probably because British Arkady or Haldane has their own line of products. Maybe one of their products is now made with textured concentrates.

2908. Brown, Peter J. 1990. Worthington Foods acquires La Loma foods. *Soya International* (*Bar Harbor, Maine*). April/June. p. 13.
• ***Summary:*** In Jan. 1990 Worthington Foods purchased the La Loma Foods line from Loma Linda Foods for approximately $6 million. Worthington's 1989 sales were $62 million, up 29% over 1988. The La Loma line is expected to increase Worthington's sales by up to 15% a year. The company has now four different food lines and brands: La Loma, Worthington, Natural Touch, and Morningstar Farms. The latter accounts for most of the company's sales, and Worthington states that Morningstar Farms products can be fond in 90% of America's food markets.

2909. Loma Linda Foods. 1990. For sale: Soy milk plant located in Ohio (Ad). *Soya International* (*Bar Harbor, Maine*). April/June. p. 27.
• ***Summary:*** The plant, being sold by Loma Linda Foods of Riverside, California, includes 122 acres of land, 26,000 square feet of plant and warehouse building, 14,400 sq. feet of office building and laboratory, 3,600 sq. feet of raw material storage building, equipment including a retort line, three residential properties, and a large storage area and garage building. "The plant is a cost efficient operation under local management."

Note: This plant was built and started by Dr. Harry Miller in 1939. Loma Linda is consolidating their soymilk production operations in Riverside, California. Address: Riverside, California.

2910. **Product Name:** Multigrain Cutlets.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 800-628-3003.
Date of Introduction: 1990 June.
Ingredients: Water, textured vegetable protein (wheat gluten, soy protein concentrate), red wheat flakes, barley flakes, oatmeal, rye flakes, triticale flakes, white wheat flakes, millet, guar gum. Broth: Water, flavorings (hydrolyzed vegetable protein).
Wt/Vol., Packaging, Price: 20 oz (567 gm) can. Retails for $2.65 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Soya International. 1990. April/June. p. 23. Contact: Don Michalenko.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19.

2911. **Product Name:** Veelets.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 800-628-3003.
Date of Introduction: 1990 June.
Ingredients: Textured vegetable protein (wheat gluten, soy concentrate, soy isolate), egg whites, wheat flour, corn flour, soybean oil, corn oil, modified food starch, partially hydrogenated soybean and cottonseed oil, natural and artificial flavors from non-meat sources, leavening (sodium acid pyrophosphate, sodium bicarbonate), calcium caseinate, salt, onion, mono- and diglycerides from vegetable sources, garlic, caramel color, paprika, niacin, iron (as ferrous sulfate) vitamin B-1 (thiamine), vitamin B-6, vitamin B-2 (riboflavin), vitamin B-12.
Wt/Vol., Packaging, Price: 10 oz paperboard box.
How Stored: Frozen.
Nutrition: Per 2.5 oz (71 gm): Calories 230, protein 14 gm, carbohydrate 12 gm, fat 14 gm, cholesterol 0 mg, sodium 390 mg, potassium 120 mg.
New Product–Documentation: Soya International. 1990. April/June. p. 23. Contact: Don Michalenko.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. 8 by 4 by 1.25 inches. Red, black, and yellow on white. Paperboard box. Front panel states: "A vegetable protein product. Completely meatless. Lightly breaded. Delicious as an entree or sandwich. Microwave in minutes. 4 patties. No cholesterol. No MSG added. No animal fat." Package design is copyright 1990.

Soyfoods Center product evaluation. 3½ inch patties are lightly breaded and pre-fried. Flavor, texture and salt level are very good. Package design: Excellent.

2912. **Product Name:** Golden Croquettes.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 800-628-3003.
Date of Introduction: 1990 June.
Ingredients: Textured vegetable protein (wheat gluten, soy concentrate, soy isolate), egg whites, cracker meal, rice, soybean oil, corn oil, partially hydrogenated soybean and cottonseed oil, potatoes, nonfat dry milk, natural and artificial flavors from non-meat sources, onions, salt, sucrose, parsley flakes, celery, niacin, iron (as ferrous

© Copyright Soyinfo Center 2014

sulfate), vitamin B-1 (thiamine), vitamin B-6, vitamin B-2 (riboflavin), vitamin B-12.
Wt/Vol., Packaging, Price: 15 oz paperboard box.
How Stored: Frozen.
Nutrition: Per 3.75 oz (106 gm): Calories 280, protein 19 gm, carbohydrate 20 gm, fat 14 gm, cholesterol 0 mg, sodium 890 mg, potassium 230 mg.
New Product–Documentation: Soya International. 1990. April/June. p. 23. Contact: Don Michalenko. Product with label purchased from Craig Klatt at Adventist Bookstore, Pleasant Hill, California.

2913. Muso Shokuhin. 1990. [Pure heart: Muso general catalogue]. Otedori 2-2-7, Chuo-ku, Osaka 540, Japan. 88 p. Printed 1 July 1990. 30 cm. [Jap]
• ***Summary:*** This strikingly beautiful, full-color catalog, pictures and describes Muso's natural-food macrobiotic products in Japanese for the Japanese market–although the title is written only in English. Includes many kinds of miso, shoyu (incl. Marushima Shoyu), black soybeans, yellow soybeans, kinako [roasted soy flour], seitan (in a jar from Marushima, p. 41; the product name is written as "Seitan" in large roman letters, then in smaller letters in katakana), San-Iku Foods canned products (Gluten Burger, Gluten Meat, Linketts, Soyees, Snack Joe; p. 41), yuba, gomoku nimame (cooked whole soybeans), many kinds of sea vegetables and related products, San-Iku Soyalac (8 different products), Marusan soymilk (5 different products; 3 are named mineral tou-jyan; the latter is the Chinese term for soymilk), macrobiotic books. Address: Osaka, Japan. Phone: 06-942-0343.

2914. Rabheru, Neil. 1990. Brief history of Unisoy Milk 'n' By-Products Ltd. (Interview). *SoyaScan Notes.* July 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Neil, who founded this company, was born in Tanzania. One of his parents was of Indian origin (born in India). He arrived in the UK in 1972 and went to work for a very large electronics company. By the mid-1980s he had cornered himself into a very specialized field of environmental testing and performance of defence equipment. The next step up in the organization was a long way away, so having run out of excitement in life, he began to look for more rewarding work. While doing a little import/export work he met an Indian named Mr. John Patel [pronounced puh-TEL] who suggested to him that they start a company to make soymilk, soy ice cream, and burgers. Mr. Patel did not have any money. The company was founded in June 1985. Before anything else happened, Neil became very concerned over irregularities in Mr. Patel's financial

© Copyright Soyinfo Center 2014

activities, and decided to discontinue his involvement with Mr. Patel. A few days later Mr. Patel died unexpectedly on 5 Nov. 1985. On Nov. 10-12 Neil selected the location for his new plant, then he raised the necessary startup capital from five venture capitalists in high tax brackets, but he was the company's only executive. Neil was never in any way involved with Michael Cole or with Soya Health Foods Ltd. (which is still owned by Mr. Arora, a Sikh) despite what others have said. Jan Freeman is presently involved with Unisoy.

In May 1986 Unisoy began to make its first product, White Wave Soya Milk (plain/unsweetened, or sweetened with raw cane sugar) at their present address. Before this time, the soymilk market in the UK was "very stagnant and boring, with limited growth. There was a very high price differential between dairy milk and soya milk. Soymilk packaging was poor. The ratio of the volume of business to the number of brands on the market was too high. Too many brands were fighting for too small a market. There was tremendous brand loyalty, promoted in part by the wide range of product tastes. That was Unisoy's biggest problem. So Unisoy decided to crash the price barrier, and develop some nice packaging and a better tasting, much creamier product." To learn how to make soymilk, Rabheru did an extensive study of the literature. He found many conflicting opinions but agreement on some basic points. To help resolve these, he consulted with Dr. H.L. Wang at the USDA Northern Regional Research Center in Peoria, Illinois. He developed a unique process, purchased a soymilk plant from Taiwan, modified it with steam injection and instrumentation to suit his application (he has an engineering background), developed soymilk products, ran taste tests, and continued improving his process. Unisoy's main competitors in the soymilk market at that time (and still today) were Alpro/Vandemoortele and Granose. Unisoy has taken over virtually all of the market share of Soya Health Foods Ltd., mostly because of better quality and lower price.

In May 1987 Unisoy introduced White Wave Soya Yogart, a line of products were yogurt-like desserts in fruit flavors with a shelf-life of 10-11 weeks with aseptic packaging. This was followed by Unisoy Carob & Banana Organic Drink (Aug. 1988), Unisoy Gold soymilk (March 1989), Maranellis Ice Supreme (soy ice cream, May 1989), and Unisoy Soy Yogart (Aug. 1989). All the previous soy ice creams and yogurts in the UK had contained soy protein isolates, since the manufacturers did not know how to make soymilk with a high protein levels. Even today, all the soy ice creams in the UK are made from soya isolates. Unisoy makes a special rich soymilk used specially for making their ice cream.

Over the years Unisoy steadily improved its soymilk process with numerous innovations. They now make excellent quality soymilk without dehulling the soybeans, without adding any oil or lecithin, and using only 1-2 people to operate the largely automated plant.

In Dec. 1988 Neil sold the company to Daisy Dairies Ltd. This cooperative group of companies has their head office in Hyde, Cheshire, and they also have fresh milk, UHT, catering, and ice cream manufacturing divisions, plus now Unisoy. He would prefer not to comment on the effects/results of the sale. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

2915. Rabheru, Neil. 1990. The soymilk industry and market in the United Kingdom (Interview). *SoyaScan Notes*. July 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are only two significant manufacturers of soymilk from soyabeans in the U.K.; Unisoy and Soya Health Foods Ltd. Plamil Foods Ltd. buys soy protein isolates from Protein Technologies International, then subcontracts with a dairy to have these mixed with water and other ingredients, according to Plamil's formula, to make a soymilk. As far as he knows, Plamil has never purchased soybeans to make soymilk and has never had their own plant. Haldane used to import its soymilk from France. This soymilk was made, not from soybeans but from some kind of a spray-dried formulation. Then Unisoy started supplying Haldane, but that contract came to an end when Haldane was acquired by another company. Neil thinks they are now importing again, probably from France, not from Australia. Haldane's imports are very small. Neil has never heard of Itona Products Ltd. in Wigan, Lancashire [although they are still in business in 1990].

Of the soymilk made in the Unisoy produces well over 50%. Approximately 18-20 million liters of soymilk are sold and consumed in the UK each year. It is the biggest soymilk market in Europe, and it is growing at the rate of roughly 15-26% a year. "The growth has been phenomenal, and the bulk of the growth in the European soymilk market seems to have been in the UK." But he doubts very much that it is growing faster than 26% a year. The estimated market shares by company are: Alpro/Vandemoortele 51%, Granose 15-17%, Unisoy 15-17%, and others (Plamil, Soya Health Foods, Haldane, etc.) 15-19%.

In terms of outlets, Granose is sold only in health food outlets. Unisoy's best-selling and most profitable line is its four soyamilk products. White Waves sugar free has long been the best selling single product, but it is rapidly being overtaken by Unisoy Gold (fortified with vitamins and minerals), which has been a phenomenal success. The bulk of Unisoy's soyamilk sales is in national multiples/grocery chains. Of all Unisoy's products, about 65% of sales is in multiples and 35% in health food stores. Plamil has its own clientele; its products are very popular among vegans. Soya Health Foods Ltd. has been able to survive largely because of their soy ice cream, which was one of the first ones on the market in the UK [after Sojal and SoyBoy Soymilk Ices from

© Copyright Soyinfo Center 2014

the Regular Tofu Co.] and the most widely available brand for a long time. Soyamilk is a very small product for Soya Health Foods Ltd. now.

Alpro/Vandemoortele did the pioneering work in getting soymilk into British multiples (supermarkets). In about 1982 Safeway (which has its origins in America), became the first multiple (supermarket chain) to sell soymilk in the UK. They sold the Alpro/Vandemoortele line but they sold only a small quantity. Safeway has always purchased its soyamilk from Vandemoortele. Michael Cole of Soya Health Foods Ltd. also deserves a good deal of credit for the growth of soymilk in the UK. He did the early work in getting British-based supermarkets, large chain stores, and normal grocery stores interested in carrying soyamilk. By late 1985 Cole was selling large amounts of his aseptically packed Sunrise Soya Milk to multiples, including Tesco. "Cole did the solid job of marketing and bringing soyamilk into the perspective it is in now. Then he left Soya Health Foods in mid- to late-1987." He started his own consulting company. Today every multiple in the country, including the large chemist chains (drug stores) are now offering soyamilk to the consumer.

Unisoy exports their soymilk to the Netherlands, Italy (to Parma Soia), and Ireland. It is also sold in Portugal. It used to be sold in Belgium. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

2916. Tabuchi, Ichiro. 1990. [Re: History of Soyalac soymilk production by San-iku Foods in Japan]. Letter to William Shurtleff at Soyfoods Center, July 4. 1 p. Handwritten, with signature on letterhead. [Jap; eng+]

• ***Summary:*** In 1948 Mr. Tabuchi visited Dr. Harry W. Miller and studied at his soymilk plant in Mt. Vernon, Ohio. During this period, Dr. Miller visited Nihon San-iku Gakuin (a Seventh-day Adventist school located at Chiba prefecture, Sodegaura-cho) almost every year and earnestly advised the people there to make soymilk. In about 1957-58 they started to make soymilk at a tofu plant that was owned by Mr. Ueda. They bottled it in 180 ml dairy milk bottles, which they sold with their tofu. It was a small scale operation and it didn't last long.

In 1959 at the Food Department of Nihon San-iku Gakuin, they set up a tofu manufacturing plant and started to make soymilk in 180 ml milk bottles for the school's lunch program. Several years later they started to make canned soymilk for general consumers. In order to help introduce the soymilk to the school, Dr. Miller lived on the school campus for 2 months. He taught and gave orientation to the students.

In 1970 San-iku Foods became independent from the San-iku Gakuin Food Department and started to make and sell infant formula. Address: San-iku Foods, Japan.

2917. Manrique, Jorge. 1990. Re: Gránix soy products introduced in Argentina, with date and name of each. Letter to William Shurtleff at Soyfoods Center, July 13. 1 p. Typed, with signature on letterhead.

• ***Summary:*** Lists six Granix (Gránix) soy products introduced from 1978 to 1986. "We are also enclosing product labels and a product catalog. If you are interested in prices, please contact Carlos Ruiz, Granix Sales Manager, Fax No. (541) 756-2629." Address: Production Manager, Av. San Martin 4625 (C.P. 1602), Florida, Prov. de Buenos Aires, Argentina.

2918. Klatt, Craig. 1990. Best-selling Worthington and Loma Linda food products in Northern California (Interview). *SoyaScan Notes.* July 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This store has a large selection of meatless products made by these two Adventist companies. Of the canned products, Worthington's (and the store's) best-seller by far is FriChik (based on spun soy fibers), followed by Vegetable Skallops (with artificial seafood flavor; originally developed by Battle Creek Foods of Michigan), then Veja-Links or Burger. Loma Linda's most popular canned product by far is Big Links (like a Polish sausage), followed by Vege-Burger.

Of the frozen products, Worthington's best-seller is Smoked Turkey Slices, followed by Stripples (like bacon), while Loma Linda's best-seller is Corn Dogs (based on their Big Franks), followed by Fried Chicken. Loma Linda has tended to follow Worthington in terms of new product development and introduction. Craig has heard for reliable sources that spun soy protein fibers are quite similar to plastic fibers in that they are hard to digest and have a scouring effect on the digestive system. They also seem to cause large amounts of flatulence. His store is working to carry products with a "cleaner" list of ingredients, which are less highly processed, such as those made by Cedar Lake. Address: Manager, Adventist Book Center, 2300 Nourse Rd., Pleasant Hill, California 94523. Phone: 415-685-4300.

2919. Wiesner, Evelyn. 1990. Early Worthington labels and dates that commercial products were introduced (Interview). *SoyaScan Notes.* July 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The early Worthington labels did not have a brand name on the front panel. Only the product name was given. Starting in the 1950s, Worthington Foods started to phase in the brand name "Worthington" on the front panel. Since then, the brand has always been simply "Worthington." The company has never kept a systematic collection of its labels, nor of the dates that new products were introduced. However the company does have binders from the 1950s and 1960s containing 10-20 labels on sheets with plastic covers; they were used for presentation to customers. These labels are not dated.

Information on new product releases can also be

© Copyright Soyinfo Center 2014

found in the various Worthington publications, such as the Chopletter: The Magazine of Worthington Foods News and Views (started April 1948), Tomorrow's Foods Today (started 1969), and The Healthy Appetite (started Feb. 1992). Address: Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

2920. Fleming, Diana J. ed. 1990. Country Life vegetarian cookbook: Delicious recipes from the kitchen of the Country Life vegetarian restaurants. Family Health Publications, 13062 Musgrove Highway, Sunfield, MI 48890. 190 p. Index. 23 cm.

• ***Summary:*** This book contains the most popular vegan recipes from Country Life vegetarian restaurants. In 1966 the first Country Life Restaurant opened its doors in Grand Rapids, Michigan. Today the 15 Country Life Restaurants, though all independently owned and staffed by Seventh-day Adventists, "share a common commitment to serve delicious, wholesome, 100 percent vegetarian food. They are also dedicated to furnishing educational programs, to ministering to the needs of the community, and to providing a relaxed, Christian atmosphere as a refuge for customers from the stresses of the work-a-day world." A list of the addresses and phone numbers of the 15 County Life restaurants (10 in the USA, 3 in Europe, and 2 in East Asia) is given on page 4.

"Soy or nut milk" is called for in many recipes throughout this book. Soy-related recipes include: Soy-oat waffles or pancakes (p. 20). Carob-banana tofu topping (p. 25). Tofu-pineapple "cottage cheese" (p. 28). Soy raisin puffs (with cooked whole soybeans, p. 35). Fluffy soy-corn muffins (p. 36). Scrambled tofu (p. 38). Chipped tofu (p. 39). Tofu cheese rarebit (p. 40). Tofu potato latkes (p. 41). Soy whipped cream (#1-#3, p. 60-61). Tofu whipped cream (p. 61). Tofu orange whipped cream. Tofu cheesecake (p. 66). Carob tofu cheesecake. Tofu loaf (p. 73). Kidney bean and tofu pie (p. 83). Pasty (filled with frozen tofu, p. 84). Soybean creole (p. 88). Tofu balls (p. 93). Lasagne (with crumbled tofu, p. 94). Stuffed shells (with tofu, and soy mayonnaise or soy sour cream). Eggplant Parmesan (with tofu). Tofu cacciatore (p. 96).

Stir fry vegetables (with tofu, p. 103). Tofu foo young (p. 105). Oriental medley (with tofu, p. 106). Walnut cheese spread (with tofu, p. 108). Gluten and broth. Teriyaki sauce (with soy sauce, p. 111). BBQ sauce (p. 112). Tofu "egg" salad (p. 118). Thousand island dressing (with soy mayonnaise, p. 120). Olive dressing (with soy base, or Soyagen, p. 121). Soy mayonnaise (#1 with soy milk, #2 with soy base, #3 with Soyagen, p. 123-24). Tofu mayonnaise (p. 125). Aioli or garlic mayonnaise #1 (with soy milk). Soy sour cream (p. 126). Soy margarine (#1 and #2). Tofu cottage cheese. Tofu tomato stars (p. 135). Sour cream potatoes (with soy sour cream or mayonnaise, p. 139). Tofu gumbo soup (p. 146).

Soy milk (#1 from soy beans, #2 from soy base, p. 149). Soy base (from soy flour, p. 150). Basic nut milk (with cashews, walnuts, filberts, or Brazil nuts, and honey or dates, p. 151). Cashew-pear milk (p. 152). Half and half (with cashews and almonds). Almond milk supreme... plus many other nut and fruit milks.

One innovative ingredient in many recipes is "Lecithin-oil slicker: This is a replacement for products such as Pam, a food release spray. Pour 6 parts oil, not olive, peanut or sunflower, into a jar with 1 part liquid lecithin. Cover tightly and shake well. Keep at room temperature. Do not use lecithin granules. Measure oil first then use the same utensil to measure lecithin to help prevent sticking of lecithin on utensil."

At the end of the book are several very interesting chapters: "The protein myth: When too much of a good thing is a bad thing," by M.G. Hardinge and W.C. Andress. One very interesting table (taken largely from G. Bunge 1902) shows that the longer it takes for a baby animal to double its birth weight, the lower the protein content of the mother's milk. Humans, with 1.4% protein in the milk, take 180 days (the longest). Cats, with 9.5% protein in the milk, take only 7 days (the shortest). A second chapter is titled "Dietary fat–good or bad?," by Bernell E. Baldwin. Address: Michigan.

2921. Shurtleff, William; Aoyagi, Akiko. 1990. Soymilk in Europe: The industry and market, commercial products, publications, and history. Lafayette, California: Soyfoods Center. 261 p. July 17. Indexes. 28 cm. [763 ref]

• ***Summary:*** Since the mid-1980s, the soymilk industry and market in Western Europe has been booming, and the future looks very bright. Many large companies with plenty of capital and marketing expertise are entering the market, product quality and diversity is steadily improving, and consumers are showing and increased interest in nutritional protein beverages that are free of cholesterol and lactose, and low in saturated fats.

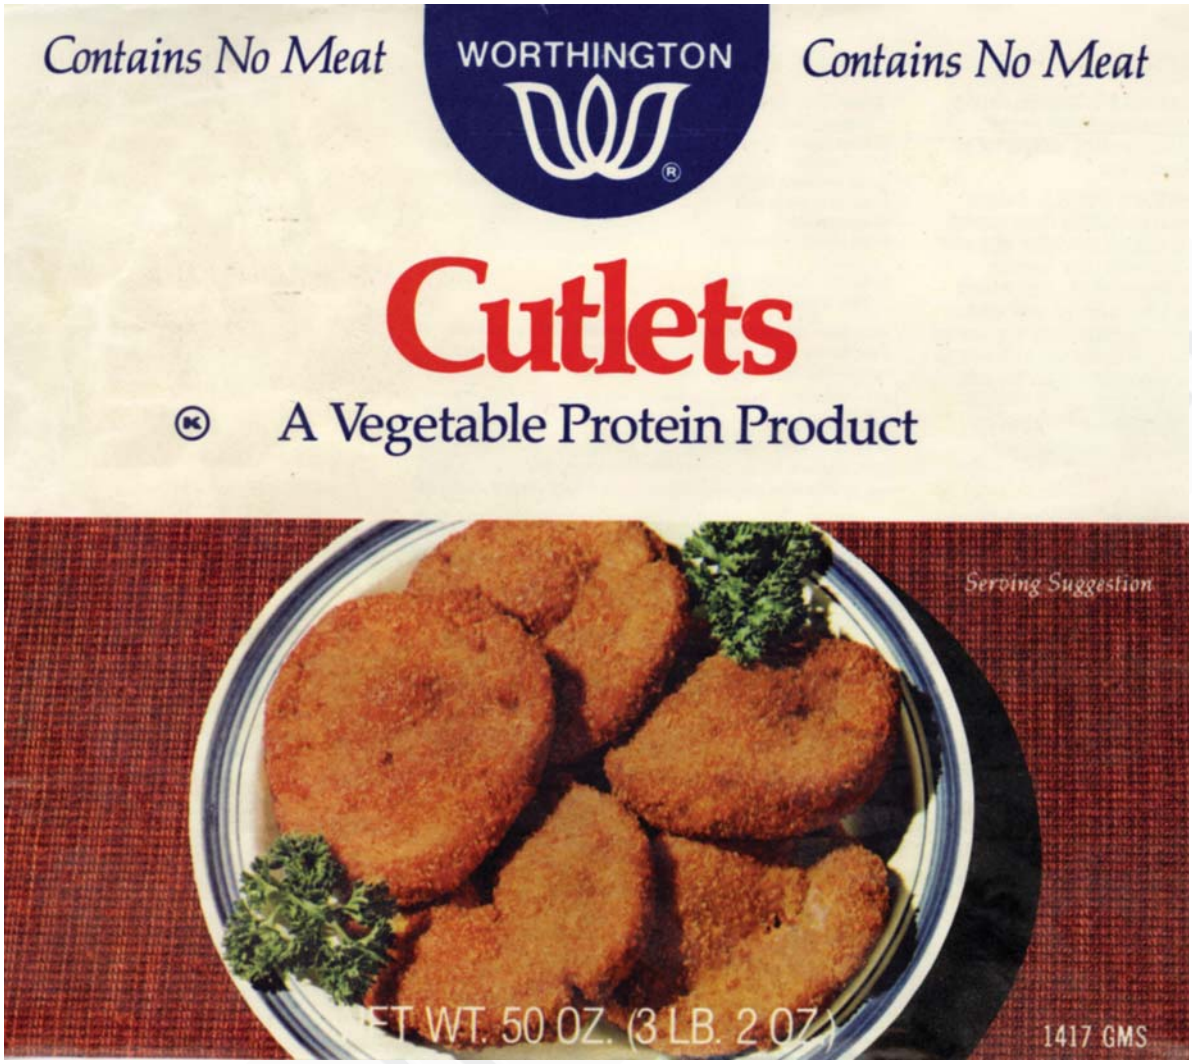
Soymilk production and growth rate: Production of soymilk in western Europe as a whole is estimated to have grown to 30–42.5 million liters/year (7.9–11.2 million gallons/year) in 1990, up from only 6-10 million liters/year (1.59–2.64 million gallons/year) in 1984, a roughly fivefold increase in 6 years. This represents an average compound growth rate of about 30% a year.

Estimates of total market size (not including infant formulas): Philippe Vandemoortele, managing director of Alpro, Europe's largest soymilk manufacturer, estimates the adult soymilk market in Europe to be 30 million liters/year. Asger Somer Hansen, managing director of DTD/STS, one of Europe's two largest suppliers of soymilk plants, estimates 35-40 million liters/year. Anders Lindner, managing director of DTD/STS until late 1989, estimates 42.5 million liters/year, plus an additional 7.5 million liters/year that are made into dairylike products such as soy puddings, yogurts, ice creams, and cheeses.

© Copyright Soyinfo Center 2014

Leading countries: The largest soymilk market in Europe is clearly in the UK, because of its large population of vegetarians and vegans (vegans do not consume milk or any other animal products), its large total population, its large number of soymilk manufacturers and marketers, the fact that soymilk is now sold in many UK multiples/supermarkets, its relatively long history of soymilk production, and the fact that many soymilk products bear the generic name "Soya Milk" on the front panel. The first commercial soymilk in England was Solac, launched in 1912 with great fanfare and publicity by the Solac Company/Synthetic Milk Syndicate. Roughly 40% of all soymilk consumed in Europe is consumed in the UK, and per capita consumption is also highest there. The second largest market is probably France, with West Germany a very close third.

Leading manufacturers: Two companies (Alpro in Belgium and DE-VAU-GE in West Germany) dominate the market with an estimated 70% market share, and that percentage is not likely to decrease. Competition is fierce and increasing. Alpro, which began making soymilk in 1979 and now produces about 21 million liters/year, is building a new plant at Wevelgem, Belgium, which is scheduled to begin operation in June 1990. Costing about US$15 million, it will have a capacity of 45 million liters/year. DE-VAU-GE's plant, which was built by DTD/STS and began operation in August 1985, now produces about 12 million liters/year but has a capacity of 3,000 to 4,000 liters/hour of finished soymilk. Other manufactures with the year they started making soymilk and their current estimated annual production in liters/year: Unisoy (UK, 1986) 3 million; Cacoja (France, 1987) 3 million; Soyana (Switzerland, 1985) 2.5 million; Société Soy (France, 1975) 1.2 million; Soya Health Foods (UK, 1985) 1 million; Galactina (Switzerland, 1969) 1 million; Triballat (France, 1989) 0.5 million; Innoval (France, 1987) 0.5 million; Crivellaro (Italy, 1989) 0.5 million. Other smaller producers include Plamil (UK, 1965), Haldane (UK, 1984), Itona (UK, 1964), and Ralston Purina España (Spain 1984).



Price: The retail price of soymilk is 2-3 times as high as that of cow's milk.

Packaging: Virtually all European soymilk and soymilk-based products are now sold in Tetra Brik Aseptic cartons. But with the growing concern about and legislation concerning disposal of solid wastes, one very big potential danger lies on the horizon for soymilk–that aseptic packaging will be increasingly banned, as it already has been in the state of Maine in the USA after Sept. 1990. If the manufacturers of aseptic packaging do not find a truly recyclable package or establish a workable system to recycle their current packages, soymilk could be in for hard times.

Soymilk trends in Europe: Though soymilk production has increased fivefold since 1984, it is still minuscule compared to cow's milk. The flavor of soymilk continues to be a major problem for most Europeans. Features/benefits attracting Europeans to soymilk are its freedom from cholesterol and lactose, and the fact that its production places less of a burden on the environment and on factory-farmed dairy cows. Most of the soymilk in Europe is sold to the natural/health food trades via health food stores and (in German speaking countries) Reform House chains. Only in France and the UK (plus a little in Belgium) is it also marketed as a mainstream product through supermarkets. A small amount is consumed by Asian-Europeans and Seventh-day Adventists. Organically grown soybeans are used in a large and increasing percentage of European soymilk. In the UK, innovative natural sweeteners (such as apple juice) have also started to be used. Private labeling: Many large European natural/health food manufacturers and/or distributors now sell soymilk under their own brand. Alpro produces many private-label brands. This practice is much more common in Europe than in the USA. Medical Soy and Parma Soia in Italy are two recent additions to this growing list. Soymilk is widely exported across national boundaries within Europe. This will probably not change much after 1992. Many large companies have entered the market since 1985 with large automated plants, but many of these are running at a small percentage of their capacity–and thus are losing money. Because of the surpluses of cow's milk in Europe, there are many regulations (including value added taxes and labeling restrictions) against "imitation dairy products." These differ from country to country and will probably become less severe after 1992. These practices are much more restrictive in Europe than in the USA, although also in the USA soymilk is not allowed to be labeled "soymilk." European dairy magazines (unlike their counterparts in America) continue to view soymilk with fear and criticism, even ridicule, at the same time that many large European dairy companies are jumping into this new market that shows future promise–which the European cow's milk market seems not to. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2922. **Product Name:** Choplets.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: Worthington, Ohio.
Date of Introduction: 1990 July.
Ingredients: Textured vegetable protein (wheat gluten, soy protein concentrate), caramel color. Broth: Water, flavorings (hydrolyzed vegetable protein, spice extractives), yeast extracts, dextrose, salt, soybean oil, caramel color, monosodium glutamate.
Wt/Vol., Packaging, Price: 8 oz, 17 oz, and 30 oz can. 20 oz can retails for $2.75 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. 20 oz (567 gm) can. The ingredients are now: Textured vegetable protein (wheat

gluten, soy protein concentrate), caramel color. Broth: Water, flavorings (hydrolyzed vegetable protein, spice extractives), yeast extracts, dextrose, salt, soybean oil, caramel color, monosodium glutamate.

Note: This product was first introduced in Oct. 1941, but did not contain textured soy protein at that time.

2923. **Product Name:** Cutlets.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 800-628-3003.
Date of Introduction: 1990 July.
Ingredients: 1990: Textured vegetable protein (wheat gluten, soy protein concentrate), caramel color. Broth: Water, flavorings (hydrolyzed vegetable protein, spice extractives), yeast extract, dextrose, salt, soybean oil, caramel, monosodium glutamate.
Wt/Vol., Packaging, Price: 50 oz (1417 gm) can. Retails for $6.25 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. Red and blue on white. The ingredients are now: Textured vegetable protein (wheat gluten, soy protein concentrate), caramel color. Broth: Water, flavorings (hydrolyzed vegetable protein, spice extractives), yeast extract, dextrose, salt, soybean oil, caramel, monosodium glutamate.

Note: This product was first introduced in 1960, but did not contain textured soy protein at that time.

2924. Fehlberg, Eric C. 1990. Re: Seventh-day Adventist health food companies worldwide. Letter to William Shurtleff at Soyfoods Center, Aug. 17. 4 p. Typed, with signature on letterhead.
• ***Summary:*** "Nutana of Holland do not manufacture the five products that are listed in my letter of May 24. Each of the products does contain soya as an ingredient, and it is my understanding that they are manufactured by Nutana of Denmark.

"Nutana of Norway, established in 1970, and you are right, it was formerly known Dagens Kost, but was renamed

© Copyright Soyinfo Center 2014

Nutana Norge, in 1982. In Norway they are strictly a marketing branch and do not manufacture any foods at all."

Sahm Yook Foods is the official name of the Korean Food Factory.

Alimentos Colpac is the official name of the food factory in Navojoa, Sonora, Mexico; it was established in 1969. The Montemorelos Branch is known as Alimentos Integronaturales y Panificadora la Carlota; it was established in 1981.

Granose Foods Ltd. of England moved from Stanborough Park, Watford, Herts, to Howard Way, Newport Pagnell, Bucks., in Jan. 1989. The official opening date was 9 July 1989.

PHAG (of Switzerland) is written in all upper-case letters; it is not an abbreviation of anything.

Glaxo Ltd. India has nothing to do with the Seventh-day Adventist church.

DE-VAU-GE was primarily responsible for setting up the Adventist food industry in Spain and the Kolett's brand is packed specifically for the Spanish market. DVG has two brand names which are manufactured for the reform or natural foods market in Europe: Granovita and Bosen. The products under the Bosen label were originally made in their bakery.

Pan American Health Service in Honduras still produces soymilk. Mountain View College in the Philippines is still making meat analogues and perhaps soya milk–but only for their own use. Bandung College (now called Bandung Academy) in Indonesia is still in operation and they may be making soya products. Two years ago they wanted very much to start a food factory, but it did not happen. The Hong Kong Hospital is still operating and they still manufacture small amounts of food, basically for their own use. South China College has a long history. It was established in 1903 as Bethel Girls' School, but underwent several name changes and changes of location due to political turmoil and the Sino-Japanese war of 1937, followed by the violence of the Second World War.

"Eventually it was re-established at Clear Water Bay in Kowloon, in 1958 and a college curriculum introduced in 1962. Its name was changed to South China Union College in 1964. In 1981 they officially adopted its name and has been called Hong Kong Adventist College since then. It still operates today, and possibly manufactures small quantities of food, basically for their own use." Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904.

2925. Fehlberg, Eric C. 1990. Re: Dr. Steven Youngberg and the Pan American Health Service. Letter to William Shurtleff at Soyfoods Center, Aug. 17. ½ p. Typed, with signature on letterhead.

• ***Summary:*** "Pan American Health Service was established by Dr. Steven Youngberg. He is over 70 today, and still operates the health service and still produces soyamilk. His brother indicates that he is quite an authority on soyamilk and protein. At present they are caring for more than seventy orphans in Honduras, where their daughter continues the program while they are in America. This is run by an Adventist, but not owned by the church. His U.S.A. address is: P.O. Box 888, Keene, Texas 76059. Telephone: 817-611-2646.

"The Honduras address is: Apartado 191, San Pedro Sula, Honduras." Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904.

2926. Shemer, Michael. 1990. Re: Tivall. Letter to William Shurtleff at Soyfoods Center, Aug. 26. 1 p. Typed, with signature on letterhead. [Eng]

• ***Summary:*** Tivall was established in 1984 and started to produce meat analogs in 1985. Today, Tivall is the world's largest producer of meat analogs.

Note 1. Below the word "Tivall" on the letterhead is written: "Vegetarian food products grown with nature's goodness." Note 2. Many industry analysts believe that Worthington Foods is the world's largest manufacturer of meat analogs. Address: PhD, Director of R&D, Kibbutz Lochamei Hagetaot, Mobile Post, Oshrat 25220, Israel. Phone: 04-858700.

2927. **Product Name:** Midland Harvest Harvest Burgers (Frozen) [Original, Taco, Italian-Style, or Sausage-Style]. **Manufacturer's Name:** Harvest Direct, Inc. Made in Decatur, Illinois, by Archer Daniels Midland Co.

© Copyright Soyinfo Center 2014

Manufacturer's Address: P.O. Box 4514, Decatur, Illinois 62525. Phone: 800-637-5850.
Date of Introduction: 1990 September.
Ingredients: Water, soy protein concentrate, partially hydrogenated corn and/or soybean and cottonseed oils, isolated soy protein, methylcellulose, natural flavors, onion powder, salt, maltodextrin, modified corn starch, corn syrup solids,...
Wt/Vol., Packaging, Price: Four 3.2 oz patties per 12.8 oz pack. Retails for $1.99 (12/91, Illinois).
How Stored: Frozen.
Nutrition: Per 3.2 oz.: Calories 140, protein 16 gm, carbohydrate 7 gm, dietary fiber 4 gm, fat 4.5 gm, cholesterol 0 mg, sodium 350 mg, potassium 450 mg.
New Product–Documentation: Talk with Richard Gross, owner of Nature's Oven, Florida. 1991. Sept. 3. Concerning ADM's new Harvest Burger (a name used only in the USA, called Vege Burger in the USSR and Veggie Burger, made by British Arkady in the UK and sold elsewhere in Europe), Richard finds its texture too tough and chewy (like the sole of a shoe), the flavor a little bit off, and he dislikes their use of methylcellulose as an ingredient (a binder) in the product; it is wood pulp processed with caustic soda and other chemicals, and there is a residue–it is not really natural as ADM claims.

Stewart Reeve. 1991. *Soybean Digest*. Dec. p. 40a. "Fast food delight." The first test market for this product began in April 1990 in 7 grocery stores, 2 cafeterias, 2 restaurants, and a hospital in four cities in central Illinois.

Two leaflets distributed at Natural Products Expo East in Baltimore, Maryland. 1993. Oct. "How vegetarian are they...?" A color bar chart shows that Harvest Burger contains no animal-based ingredients, Garden Burger from Wholesome & Hearty contains four (low-fat Mozzarella, cottage cheese, egg white blend, cheddar cheese), and Griller from Morningstar Farms (Worthington Foods) contains two (egg white, calcium caseinate). "How do 'vegetarian' patties stack up?" Comparing the 3 types of burgers mentioned above (90 gm serving), Harvest Burger is lowest in fat (4.5 gm), in calories (140 gm), and in cholesterol (0; tied with Griller). Garden Burger has the lowest percentage of calories from fat (26%) and the most cholesterol (11.4 mg). Griller contains the most fat (9.8 gm), the most calories (197), the highest percentage of calories from fat (45%), and the most fiber.

Talk with Lee Lensch of ADM. 1994. March 4. In April 1990 ADM started its first "public tasting" of the Harvest Burgers (as frozen patties) in Decatur, Illinois. It took until September 1990 to get packaging for the product, and that month ADM made its first shipment, to Super Value supermarkets in Minneapolis, Minnesota, with Indianapolis being the real focus test market. So ADM sold directly to a supermarket chain, not to a food distributor. In Jan. 1991 the four frozen Midland Harvest products first really hit the grocery store shelves in Indianapolis as a test market. For details, see interview with Lensch (4 March 1994).

Package with Label sent by Dr. Walter Wolf of Peoria, Illinois. 2000. Aug. 5. The package is copyrighted "ADM 1990."

2928. Mayer, Remy. 1990. Re: Soy products introduced in Switzerland, with date and volume of each. Letter to William Shurtleff at Soyfoods Center, Oct. 2. 1 p. Typed, with signature on letterhead.

• ***Summary:*** PHAG has never manufactured the PHAG Soja-Drink. The company was a distributor for a Belgium supplier, and now for its sister company DE-VAU-GE in Lüneburg, Germany. Details on 6 drinks and 1 dessert are given. PHAG is officially written in capital letters; it is an abbreviation of Produits Hygièniques Alimentaires Gland. Address: PHAG Sàrl, Alimentation naturelle, 1196 Gland, Switzerland [Suisse].

2929. Boyer, Nancy. 1990. In memory of Robert Boyer (Interview). *SoyaScan Notes*. Oct. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Robert Boyer, died on 11 Nov. 1989 of prostate cancer. He was Henry Ford's top man with soybeans and soyfoods, and the inventor of spun soy protein fiber. Nancy is thinking seriously of having the story of his life written. She feels that his work is not that widely known or appreciated. During his last years, Robert's eyesight failed him. He took a course in writing one's autobiography. He started writing the story of his life from his childhood, but did not get very far with it because his poor eyesight prevented him from writing very much and because he did not feel comfortable dictating on tape. She has a box of his collected publications and unpublished writings. On his 80th birthday, her daughter did a silent video for him of his life. Dave Crippen from the Ford Archives (Henry Ford Museum, Dearborn, Michigan) interviewed Boyer in Florida for about 8 hours on tape about his life and work. These tapes are now being transcribed and should be available to her and the public in 6-8 months. Nancy has unnumbered copies of the tapes. Robert attended

Worthington Foods' 50th anniversary. Soyfoods Center encourages her to hire a professional writer to work with her to write the story of her husband's life. Address: 632 Edgewater Dr. #731, Dunedin, FL 33528. Phone: 813-734-2415.

2930. Shurtleff, William. 1990. America's earliest known tofu manufacturer discovered: Wo Sing & Co. was making tofu in San Francisco in 1878 (News release). Soyfoods Center, P.O. Box 234. Lafayette, CA 94549. 2 p. Oct. 29. [2 ref]

• ***Summary:*** "In Jan. 1848 gold was discovered in California. By 1850 there were still only a few hundred Chinese in California. Then in 1852 the Chinese joined the Gold Rush. They called California the 'Golden Mountain.' By 1852 there were 20-25,000 Chinese in the golden state, and by 1860 there were 30-50,000. The 1880 census found 75,132 Chinese in California, comprising 8.6% of the state's population.

"These Chinese immigrants, mostly young men from Kwangtung province in southern China, and more specifically from the area around Canton, almost certainly brought soybeans with them to America, and they probably made tofu (which they called *daufu, dow-foo, or doufu*) using those soybeans. But, until now, no one has been able to prove the existence of any Chinese manufacturers of tofu or other soyfoods in America before 1899. During this year Walter C. Blasdale, an instructor in chemistry at the University of California, Berkeley, reported in the *USDA Office of Experiment Stations, Bulletin* No. 68 that Chinese in San Francisco were making 'bean cheese,' both fresh and fried, as well as fresh curds.

"After years of searching, William Shurtleff, Director of the Soyfoods Center in Lafayette, California, has discovered a tofu manufacturer in San Francisco, California, in 1878. According to the Wells Fargo and Co. *Directory of Chinese Business Houses*, published in San Francisco in 1878, Wo Sing & Co. was making fermented tofu and regular (non-fermented) tofu at 708½ Dupont St. in San Francisco. The name of the company and its products were written in both Chinese and English. Tofu was translated as 'Bean Cakes.' This was the earliest known tofu shop in the western world (as of Oct. 1990).

"In the same Wells Fargo directory published in 1882, a second Chinese tofu manufacturer appeared. Sam Sing was making fermented and regular tofu at 615 Dupont St., basement, in San Francisco. Wo Sing was still in business at the address given above.

"The earliest known Japanese-run tofu manufacturer in America was Hirata Co. in Sacramento, California. They began making tofu in 1895.

The oldest existing tofu maker in America today is Quong Hop & Co. of South San Francisco. Founded and still run by the same Chinese-American family, they began making tofu in 1906 in San Francisco.

"The two oldest existing Japanese-American tofu companies are probably House Foods & Yamauchi Inc. of Los Angeles and Aala Tofu Co. of Honolulu. Both trace their origins back to 1923 in Hawaii...

"The first five Caucasian-run tofu companies in the western world were all run by Seventh-day Adventists in America. In Nov. 1929, T.A. Van Gundy of La Sierra Industries in Arlington, California (near Riverside), introduced his La Sierra Soya Cheese...

"The sixth Caucasian-run tofu company in America, and the first of the new wave of Caucasian tofu makers, was the Welcome Home Bakery and Tofu Shop in Corvallis, Oregon, founded by Alec Evans. In March 1975 he started making 'Tofu.'

"The earliest document seen (Oct. 1990), written by an American, that mentions tofu appeared in 1770 when the famous Benjamin Franklin wrote a letter on Jan. 11 from London to John Bartram in Philadelphia...

"The Soyfoods Center would like to offer a $100 reward to anyone who can find a tofu manufacturer in North America or Europe before 1878."

Shurtleff of Soyfoods Center.

• ***Summary:*** Soy protein isolates have been the big unfulfilled promise in the U.S. food industry during the last 2 decades. Since 1975 Clyde has been a wholesale distributor for ADM. Today only 2 companies in America make regular isolates: ADM and Protein Technologies International. ADM was weakest in isolates until they purchased the Central Soya line. ADM also bought Grain Processing Corporation's Pro-Fam line and closed it down to get rid of excess industry capacity. Then ADM hired Roger Kilburn away from Ralston Purina to improve the flavor of ADM's isolates. This upset Ralston greatly. Ralston Purina spun off Protein Technologies International primarily to make it available for sale; everyone in the industry knows this.

In recent years there has been a little resurgence in isolates for several reasons largely related to the rise in casein prices: (1) With the rise of free enterprise and economic flux in Eastern European countries, they are being used increasingly to extend meats; the problem for western suppliers is getting paid. (2) The Chernobyl nuclear disaster, which took place on 26 April 1986 in the Ukranian SSR, wiped out the Polish dairy industry. Casein prices rose and isolates filled part of the void. (3) Worldwide, the price of nonfat dry milk (NFDM) and casein has been very high since about 1986 due to short supplies. Casein has traditionally been more expensive than isolated soy protein, in part because it is more functional (it melts and binds water well) and most people like the taste better. Within a period of several years, the price of casein rose from $0.90/lb to $2.50/lb. Egg protein costs $4 to $5 per pound. All of these things helped the U.S. isolate industry. In the U.S. the main problem is the obnoxious meat labelling requirements. For example, if isolates are injected into ham, it must be sold as "Smoked pork ham with soy protein isolate product." The labeling problems are caused in part by the fact that USDA is staffed largely by veterinarians.

The main applications for soy protein isolates in America are in infant formulas (roughly 50% of the total), muscle powders (35%), diet beverages that are supposed to suppress appetite, and other (health food candy bars, etc., 15%). The use of isolates in meat products is very small.

Most isolates are not very bland and not very functional. PTI's are more bland than ADM's. The bulk of Clyde's isolate sales are for muscle powders, which are used to make shakes. The only isolate thick enough to work in a shake is the one with the most sodium proteinates, which has the poorest flavor.

Even textured soy flour (TSF/TVP) has not been very successful in food uses; Clyde sells several million pounds a year of it, but the industry is very sleepy. It is used mostly in spicy Mexican foods (mainly burritos, to add chunky texture), and pizza toppings (since labeling is not a problem). It is used in school lunch programs and by the military in meatloaf and braised beef. Seventh-day Adventist food companies buy quite a bit and repackage it. By far the biggest use of TSF is in pet foods. In California, what is commonly called the "Brigg's Amendment" (Food, Drug and Cosmetic Law, California code, Article 7, Section 26595-26599, "Hamburger and imitation hamburger," became effective in July 1974), effectively prevents the use of TSP in hamburger, even in restaurants. Ground beef or hamburger containing any extenders (such as TSP), binders, or added water must be called "imitation hamburger." If imitation hamburger is sold or served in a restaurant, a list of its ingredients must appear on the menu. Mr. Briggs, a state legislator from Orange County, had a friend with some hamburger stands. This law is enforced, in practice, only with respect to hamburger patties, and especially when the price of hamburger rises; 80-85% of all ground beef is sold in the form of patties. It is not enforced when the ground beef is "cooked in a recipe" as in spaghetti sauce, taco filling, meat loaf, and sloppy joe mix. In these cases regulators do not enforce the law that requires the product to be called "imitation hamburger" if bread crumbs, rolled oats, or a soy protein product are added.

Concerning ADM's Veggie Burger, there are 4 kinds that come in dry form: Herbs & Spices Style, Curry, Meat-Style, and Gyros-Style. They were introduced about 4 years ago. ADM also makes pre-cooked, frozen patties.

Soy flour has two main applications: (1) As a replacer for non-fat dry milk (NFDM), usually sold mixed with whey and used in baked goods. Kraft makes one popular brand. (2) In calf milk replacers (CMR). Calva in Modesto makes lots of CMR using soy flour; not much soy protein concentrate is used in CMR. The key consideration is the "per pound protein basis." Meat protein costs $6/lb and soy flour protein costs $0.35/lb. Labeling regulations are the main barrier to more widespread use. Not much NFDM is used in breads today in America. Soy flour is more expensive than wheat flour, but it holds more water, and slows staling–two major sales points. Address: Basic Foods Co., 1211 E. Olympic Blvd. #204, Los Angeles, California 90021. 2934. Gardiner, Doris Kloss. 1990. The saga of *Back to Eden* after the original copyright expired in 1967 (Interview). *SoyaScan Notes.* Nov. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In 1967 Jethro Kloss' famous book *Back to Eden* was being published by The Message Press, run by the Hiatt family in the sleepy little town of Coalmont, Tennessee. Sales for the last few years were quite small. The book retailed for $6.98 and was available only in a hardcover edition with no illustration on the cover–as it always had been. That year (1967) the copyright to the book expired, after 28 years. Because of a complex set of circumstances, both the publisher and the Kloss family forgot to renew the copyright in time. Mr. Hiatt had died in Dec. 1967, and his

© Copyright Soyinfo Center 2014

wife was involved in a romance and remarriage that year. At that point the rights to the book legally went into the public domain.

In 1971 John Lust of Beneficial Books in New York published *Back to Eden* (692 p.). Doris went to talk to him, requesting that he stop publication. He refused. Mr. Lust is no longer living but his son bought the business in about 1985 and continues to publish the book. Two other companies also published the book. One went out of business (for other reasons), and another kindly ceased publication as soon as Doris asked him to.

When the Kloss family found out what had happened, they were very upset. In the summer of 1971 Doris and her close friend and relative, Promise, went to Tennessee to ask Mrs. Hiatt, their publisher if she would come out with a new paperback edition, but her life situation had changed and she did not want to. Doris and Promise decided to publish an expanded Kloss family edition of the book. That year they bought the rights, from Adventist-run *Review and Herald* publishing company, to a color illustration by Harry Anderson showing a man and woman seated by an idyllic river, surrounded by birds and animals, in the Garden of Eden. They would use this illustration on the cover of the new book. Promise Kloss Moffett wrote her recollections of her father, and many photos were added in the middle.

In the early 1970s Doris met Howard Weeks, who was a minister in the Seventh-day Adventist church and was vice president of public relations and development. They both lived in Loma Linda. He retired and decided to start a publishing company, Woodbridge Press, to publish academic works. Doris trusted him and asked him if he would publish the authorized Kloss Family edition of *Back to Eden.* He didn't really want to since it was not an academic work, but he felt sorry for the family so he said he would–out of kindness–if Doris and her husband would put up all the money needed for publication, about $50,000. Doris agreed and also offered to do all the initial work free of charge for 16 months. Weeks established an affiliate of Woodbridge Press named Lifeline Books just to publish this one title–the first book Weeks had ever published. The first run of 10,000 copies, printed in Nov. 1972, sold out in 2 months. The second printing was 30,000, the third, 50,000 copies, and the fourth in late 1973 was 100,000 copies. Originally Weeks seemed to Doris like a gift from heaven. But by the third printing things began to get strange as sales of the book increased and Weeks saw he had stumbled across a gold mine. He applied for registered trademarks on terms such as "Original Kloss Family Edition," "Jethro Kloss," and "Back to Eden," explaining to Doris that he was doing this to scare their competitor, Mr. Lust of Beneficial Books. By 1974 Doris realized that Weeks was not treating her fairly and she hired a lawyer to initiate litigation. In 1975 Weeks dissolved Lifeline Books and started publishing *Back to Eden* by Woodbridge Press.

On 5 May 1985, after 11 years of litigation with Howard Weeks of Woodbridge Press, ending in arbitration, Doris finally got full rights to the book. All contracts were rescinded and Weeks was prevented from having anything to do in any way with *Back to Eden.*

In 1981 Doris obtained rights to the book, founded Back to Eden Books to publish it, and added recollections by herself and her uncle Eden (Jethro's son). Doris' father was Harry C. Engelhard. In 1971, in order to identify herself with her grandfather, she adopted "Kloss" as her middle name. Eden Kloss died in 1989. Promise is now age 87, very healthy and doing very well. Address: Back to Eden Books, P.O. Box 1439, Loma Linda, California 92354. Phone: (714) 796-9615.

• ***Summary:*** The risks of leukemia and myeloma associated with cigarette smoking were evaluated in a cohort study of 34,000 Seventh-Day Adventists. Although Adventists do not smoke by church proscription, many are adult converts who smoked cigarettes prior to their baptism into the church. Ex-smokers were twice as likely to get leukemia and 3.01 times as likely to get myeloma as non-smokers. The more cigarettes smoked, the greater the risk. Address: 1,3-5. Dep. of Preventive Medicine, School of Medicine, Loma Linda Univ., Loma Linda, California 92350.

2939. Roberts, Peter. 1990. History of Direct Foods Ltd. and Compassion in World Farming. Part I (Interview). *SoyaScan Notes.* Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Peter was born in 1924 in the UK. His father was a doctor. By the 1950s, while he and his wife Anna were running a dairy and chicken farm, Little Barnett Farm, in the village of Froxfield, Hampshire, England, they became increasingly concerned with the cruelties inherent in both intensive factory farming, and traditional dairy farming–the separation of the calf from the cow, the marketing of the unwanted bull calves and the worn-out dairy cows, etc. So in about 1958 he and his wife stopped eating meat. They switched to a lacto-vegetarian diet, which they still practice. Their 3 children are now also vegetarians.

As they changed their farming practices to treat their animals more kindly, they found that farming became more and more uneconomical. Peter wrote an article for a local paper, the Squeaker, concerning the many problems with factory farming. He received many favorable replies, stating that the animal welfare organizations in the UK seemed to be concerned mostly with dogs and cats, but that much work needed to be done to protect factory farm animals. So in about 1961 they sold their farm. Peter worked briefly as a lime quarrier, then in 1967 he and Anna founded a pioneering organization named Compassion in World Farming (CIWF) to address the increasing problems with factory farming that he had experienced first-hand, and to get some decent standards for farm animals. Their main goals were to get rid of: (1) battery cages for chickens, (2) dry sow stalls (known in America as "gestation stalls") for pigs, and (3) veal crates for veal calves. Their strategy was to educate consumers as to how the food they were eating had been produced. They encouraged consumers either to switch from animal products grown on factory farms to those raised by free range farming methods, or to become vegetarians. Many members got upset as they learned about factory farming, decided to stop eating meat, and began to ask CIWF about alternatives. So the Roberts began to search for a good-tasting, nutritious, and reasonably priced protein alternative to meat sold in a convenient form. They got 3 samples of modern soy protein products (all dried) from the USA and found TVP made by ADM to be the best. When they wrote to ADM enquiring about marketing rights in the UK, the reply asked "How many million dollars can you put into it? We foresee a big future in Britain." That response killed the project temporarily. In 1965 The British Arkady Co. Ltd. (Arkady Soya Mills) had started to sell ADM's TVP in the United Kingdom, but Peter hadn't heard of Arkady at the time. About 4-6 months later a sales rep from British Arkady approached Peter, said he had been referred by ADM, and asked what Peter had in mind. Peter said he would like to retail TVP, especially in the health food area, especially in Britain but not restricted to Britain. Arkady offered to supply Peter but would not offer any exclusive arrangement. Arkady agreed not to compete with Peter, saying they were interested only in selling to food manufacturers, not to the retail market. Peter accepted and in 1969 placed a trial order of about 10 lb of beef chunks or mince. The Roberts called their product Protoveg (pronounced PRO-toe-vej), registered the trademark (though the registration was unsuccessfully challenged by Mapleton's Foods, a large British health food company), and sold it in 9 different flavors and textures: beef chunks, beef mince, ham chunks, ham mince, pork chunks, pork mince, natural (unflavored) chunks, natural mince, and Smokey Snaps (which resembled bacon bits). They packed it in 4.5 oz. double cellophane bags with a label between the two bags, developed a recipe leaflet and order form, and distributed it via their Compassion in World Farming and via Beauty Without Cruelty (Lady Dowding's anti-fur-trapping group). The 4.5 ounces yielded 1 pound of hydrated product; the mince hydrated in 2 minutes and the chunks in 15-20 minutes.

The product was instantly successful, which surprised the Roberts. The trustees of CIWF decided it would not be possible (for legal and financial reasons) to establish a commercial branch of the organization, so the Roberts used the money they had left after selling their farm then buying a house, and in Aug. 1969 established Direct Foods Ltd., a private company owned by Peter and Anna and run as a mail order business out of their new home in Greatham (5 miles from Petersfield), Hampshire. The health food shops in the UK were selling alternatives to meat, such as canned meatlike products made by Worthington Foods and Granose, but textured soya proteins were not available. TVP was tasty and nutritious, it looked and tasted like meat, and it was much less expensive than the canned products or meat. Direct Foods started advertising in some magazines, such as *The Vegetarian* and various health food publications. Next they began to sell to health food shops. Continued. Address: Compassion in World Farming, 20 Lavant St., Petersfield,

Haunts (Hampshire) GU32 3EW, England. Phone: 0730 64208.

2940. Roberts, Peter. 1990. History of Direct Foods Ltd. and Compassion in World Farming. Part II (Interview). *SoyaScan Notes.* Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In about 1970 Direct Foods launched 20 more convenience (add water, cook, and serve) vegetarian protein products, all were TVP-based alternatives to meat sold under the Ranch House brand. These included Curry, Stew, Goulash, Bolognese, Vegetable Mince, Soysage, Seasavour, Sizzleberg, Sosmix, Savoury Macaroni Mix. etc. All were vegan products except the bolognese, which contained milk powder, but even the milk was soon eliminated, so that all products were vegan. etc. Anna wrote three cookbooks, with even more recipes: (1) *The Earth Shall Feed Us* (1976; now out of print); (2) *The Protoveg Cookbook* (1984, which sold about 8,000 copies via mail order and health food shops; now out of print); and (3) *The Magic Bean* (April 1985, published and distributed more widely by Thorsons). These were sold in both health food stores and regular bookstores.

At this time British Arkady was making a product named Banger Mix (a "banger" is a sausage), made with soya protein and pig fat. Peter asked them to replace the pig fat with a hardened vegetable oil. The Roberts named the resulting product Sosmix. Introduced in about 1970, it was a dry sausage mix and soon became their best-seller. Because Sosmix became such a success, British Arkady invited Direct Foods to market Arkady's new vegetarian Burger Mix. Direct Foods accepted and again the product did well. Shortly after that, in about 1972, Brewhurst Health Food Supplies Ltd., the biggest health food distributor in the UK, asked if they could distribute the Direct Foods line of products. Direct Foods appointed Brewhurst as their first distributor, but did not give them an exclusive distributorship. This was a major breakthrough; sales tripled almost immediately. Soon Direct Foods appointed other distributors, and exporters, that exported to Jamaica, Malta, and Greece. So Direct Foods remained a product developer, marketer, and mail-order house.

In 1973 British Arkady started making TVP in England, then in 1974 they were acquired by ADM, largely because ADM had seen the rapid growth of the European TVP market, especially among food manufacturers. Most of Arkady's TVP was being sold to food manufacturers (for use in canned stews, etc.) and institutional foodservice, not to retailers.

The Roberts continue to run their growing business out of their home. The kitchen was the weighing room, the lounge was the dispatch room, and the rest of the house became the warehouse. There was no room left for the Roberts. Moreover, with a steady stream of delivery trucks coming down their narrow country dead-end road, they began to have problems with the town planning authorities. So in about 1974 they rented a warehouse for Direct Foods in Petersfield, about 5 miles away from Greatham–and breathed a sigh of relief at home. At this time their best-selling products were Sosmix, Protoveg Beef Chunks, and Beef Mince. Sales began to grow rapidly. For a short while, Brian Welsby's Haldane Foods did the mixing of the Ranch House line of products under contract.

In about 1976 and 1977 Direct Foods participated in its first exhibition, the huge Ideal Home Exhibition, which runs for a month every spring at Olympia in London. They served samples of Sosmix, which was an entirely new product for the British public, and it was a great success. Long lines of people were attracted by the smell, then won over by the ease of preparation, low price (less than half the price of eat sausage), and health benefits of this meatless sausage.

Direct Foods' first competitor was Itona (pronounced ai-TOE-nuh), which by 1978 had started buying TVP from Arkady and selling it as Itona TVP. Itona had purchased other soy products (probably soy flour) from Arkady before this. At one stage, they tried to make an agreement with Arkady which would have forced Direct Foods to buy from Itona, but this did not work.

Another strong competitor was Real Foods in Edinburgh, Scotland. They sold flavored TVP in 50 kg paper sacks to health food shops so that the shops could weigh out any amount the customer desired. This approach lowers the price of TVP to the consumer but in the end hurts the market due to lack of recipe information. After a while Real Foods disappeared.

In about 1979 the Roberts started their own health food store, named The Bran Tub, in Petersfield. In England a "bran tub" is sort of like a "lucky dip" where kids dive for presents.

Over the years Direct Foods had many problems with local regulators concerning labeling–but won in every case. One thought Protoveg was misbranded because the label said it was a vegetarian product but it contained salt–which was a mineral not a vegetable! Another tried to outlaw the term Sosmix because it sounded too much like sausage. The most important was when the public health authority took Direct Foods to court claiming that the term "Vegetable Goulash" was a contradiction in terms since "goulash" typically contained meat. Peter argued the 4-hour case himself and his victory set a major precedent. Representatives from many large food companies were present in the courtroom, and they congratulated Peter afterwards.

In March 1985 the Roberts sold Direct Foods (which was making good money) to British Arkady. Arkady had tried to sell their Arkady TVP to the retail trade through the Cash and Carry chain but had failed–at considerable expense to Arkady. Now Arkady wanted to buy either a majority share in Direct Foods or buy the entire company. Peter knew that if he said "no," Arkady was in a position to

© Copyright Soyinfo Center 2014

undercut Direct Foods and take away much of their market share. A major loss of market share would be a disaster, since Direct Foods' sales would then drop below the steadily rising threshold needed to cover their overhead and make a profit. Moreover, the Roberts wanted to spend more time concentrating on their animal welfare work through Compassion in World Farming. During the period from 1969 to 1985 Peter had devoted about 2/3 of his work time to CIWF and 1/3 to Direct Foods. Direct Foods was run mainly by Anna Roberts (who put in about the same amount of time as Peter), her sister, and her sister's husband, Bob Howe, who was production manager at the mixing and packaging warehouse. At the time of the sale Direct Food had 18 employees and was buying 30 tons a week of TVP from British Arkady. Address: Compassion in World Farming, 20 Lavant St., Petersfield, Haunts (Hampshire) GU32 3EW, England. Phone: 0730 64208.

2941. *SoyaScan Notes.* 1990. Europe's 20 largest tofu and soymilk companies (Overview). Dec. 23. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** The following summary is a combination of information from two sources: First, numerous interviews conducted by William Shurtleff of Soyfoods Center during 1990. And second, informed estimates by one of Europe's most knowledgeable soyfoods industry insiders. We give the ranking, company name, country, products (Tofu, Milk = Soymilk, Other), and number of metric tons of soybeans used per month.

1. Alpro. Belgium. Milk. Unknown.
2. Sojinal. France, Milk & Other. 417.
3. Heuschen-Schrouff. Netherlands. Tofu. 200.
4. DE-VAU-GE. Germany. Milk & Tofu. 100.
5. Aros Sojaprodukter. Sweden. Tofu, Milk & Other. 92.2.
6. Unisoy. England. Milk. 47.0.
7. Soya Health Foods. England, Milk. 45.0.
8. Soyana. Switzerland. Tofu & Milk. 32.0.
9. Société Soy. France. Tofu & Milk. 30.0.
10. Cauldron Foods. England. Tofu. 20.0.
11. Haldane Foods/Regular Tofu Co. England. Tofu & Milk. 10.9.
12. Galactina. Switzerland. Tofu, Milk & Other. 10.0.
13. Soyastern / Dorstener Tofu. Germany. Tofu. 9.3.
14. Dragon & Phoenix. England. Tofu. 8.0.
15. Jonathan P.V.B.A. / Lima Foods. Belgium. Tofu. 6.0.
16. Triballat. France. Milk & Other. 5.6.
17. Innoval. France. Milk. 5.6.

Crivellaro. Italy. Milk. 5.6.

Plamil. England. Milk. 5.6.

Paul's Tofu. England. Tofu. 4.7.

2942. Araki, A.M. 1990. [Re: A brief history of tofu shops in Fresno, California]. Letter to William Shurtleff at Soyfoods Center, Dec. 31. 2 p. Handwritten. Followed by phone interview on 8 Jan. 1991. [Jap; eng+]

• ***Summary:*** "It was difficult for me to collect this information. For some people I talked to it was a sensitive issue, like coming out of the internment camps after World War II back into white society. Since the generations have changed, I had to talk with many people. I came to the USA in Aug. 1920 and settled in Fresno that month. At the time in Fresno there were two tofu shops in Japantown: Yokota Tofu-ten (run by Yuichi Yokota, located on Fargan Alley, which was back-to-back with E Street; Yokota's postal address was on E Street), and Nakaoka Tofu-ten (run by Mr. Nakaoka on Kern St.). He is not sure of the shops were named "Tofu-ten" or "Tofu-ya," but he prefers "Tofu-ten because it has a higher class sound (more *jôhin*).

The owner of Nakaoka Tofu-ten died in about 1922. His wife re-married to Mr. Zenkichi Nagahama, who took over the company, renamed it Nagahama Tofu-ten, and ran it at the same location for about 20 years until 1942, when he was sent to an internment camp. He did not re-start the company after the war; he was too old.

Right after World War II, in about 1945, the first tofu shop in Fresno was started by a man who came from the Los Angeles area; although he was a Japanese, he had a big body and blue eyes. But he didn't last for long. After that he company was run consecutively, at the same location, by Joe Hashimoto, Sakae Tôkubo, Dr. Wilkinson (an M.D. and Seventh-day Adventist; he was a very famous surgeon and he made tofu himself at his shop on E Street), and then the two Goto brothers. After the war, the younger Goto brother immigrated to the U.S. from Japan. (Sometimes we call those new first-generation Japanese shin-issei). The same shop on E Street, which has been in business the longest, is now in its third generation, run by Musashi [Brad] Kubota."

He is not sure when the first tofu shops started in Fresno. However his father arrived in Fresno in 1911 and had a shop across the street from the Nagaoka tofu shop on Kern Street. He thinks Yokota was there at the same time, since the house in which Mr. Yokota lived in 1920 (he built it himself) was quite old, dating from about that period. His tofu shop was in the front of his house, facing the street.

There were some Chinese-run tofu shops in Fresno during this period but he does not remember any details concerning them. Address: Nichi Bei Times, Fresno Branch, P.O. Box 11489, Fresno, California 93773. Phone: 209-237-6779.

2943. Bloyd-Peshkin, Sharon. 1990. Patching together our past: Vegetarianism is on the rise, spurred on by a patchwork of philosophies. *Vegetarian Times.* Dec. p. 30-36, 38-40. No. 160.

• ***Summary:*** Discusses the main forces and people leading to a rise in vegetarianism. "Let's not beat around the bush–we all know what the image of vegetarians was in 1974 when

© Copyright Soyinfo Center 2014

Paul Obis began a four-page, black-and-white newsletter called *Vegetarian Times.* Vegetarians were long-haired, blue-jeaned, peace-loving, laid-back, anti-establishment, back-to-nature *hippies*... Vegetarianism was primarily associated with the counterculture.

"Sixteen years later, *Vegetarian Times* is a full-color, glossy magazine read by hundreds of thousands of people coast-to-coast... There simply is no typical vegetarian. Vegetarians include people as different from one another as Mister Rogers, U.S. Rep. Andrew Jacobs (D-Indiana) and Michael Jackson.

"In the past 16 years, many factors have contributed to the tremendous increase in the number of vegetarians in this country and to their diversity. Eastern spiritual philosophy, the back-to-nature movement, environmental awareness, animal rights, and an awareness of the connection between diet and health all became parts of American culture during these years, and all have fostered a greater interest in vegetarianism." Each of these five main factors is examined one by one.

"Within the Seventh-day Adventist Church, which has always endorsed a vegetarian diet, the '70s and '80s were a time of growth and of increasing adherence to vegetarianism. The religion grew to more than 6 million in 1990 from about 2.5 million members in 1974... There is a much greater commitment to a vegetarian diet among Seventh-day Adventists [now]."

A sidebar looks at the strong influence of The Farm in Tennessee, founded in 1970 by Stephen Gaskin and friends. The farm popularized soyfoods (thru Farm Food Co. and The Book Publishing Co.) and a vegan diet. By 1981 the community had 1,200 members, but today it is down to about 250. Other sidebars include: (1) Attorney Jim Mason, co-author of *Animal Factories* (Crown, 1980), and founder in 1979 of *Agenda,* a quarterly newsletter linking the various emerging animal rights organizations. (2) Helen and Scott Nearing. Dr. (psychiatrist) Neal Barnard, founder in 1984 of Physicians Committee on Responsible Medicine to create a dialogue about animal research within established medical circles. Harvey & Marilyn Diamond, authors of the *Fit for Life* books, which sold almost 3.5 million copies, making it the top-selling health and diet book of the 1980s.

2944. Dacosta, Yves. 1990. Lait de soja et tofu [Soymilk and tofu]. APRIA/CDIUPA, 1 avenue des Olympiades, 91300 Massy, France. 102 p. Dec. No index. 30 cm. Series: Actualités Scientifiques et Techniques en Industries Agro-Alimentaires. No. 45. [85 ref. Fre]

• ***Summary:*** Contents: Preliminary remarks. 1. Production of soymilk and tofu: Principles of production, the soybeans, cleaning/washing, soaking, grinding, cooking the slurry (*bouillie*), extraction of the soymilk, coagulation, separation of curds and whey, pressing the curds, removal of the tofu from the mold, cutting and packing the tofu, the need for water in a tofu ship, variations in production, storage and preservation of soymilk and tofu after their production, yuba, production of tofu from seeds other than soybeans.

2. Applications/uses of soymilk and tofu: Products: Soymilk and soymilk products (soymilk, sweetened soy beverages, dairylike soymilks, soy-based infant formulas, powdered soymilk, concentrated soymilks, soymilk mixed with other animal or vegetable milks, soy ice creams and frozen desserts, fermented soymilk products such as soy yogurt, various soymilk desserts [such as custards], sauces, dressings, and mayonnaises made from soymilk), tofu and tofu products (smoked tofu, fried tofu [*tofu frit*], marinated tofu, fermented tofu, breaded tofu, tofu mayonnaise and sauces, tofu spreads for bread, tofu sausages, pâtés, or biscuits/pancakes [galettes], tofu quenelles, quiches, fritters, raviolis, pizzas, mixed salads, prepared dishes (*plats cuisinés*), or sandwiches, tofu cakes, cheesecakes, or tarts, tofu desserts, ice creams, or chocolate bars), preparations based on okara (sausages, pâtés, croquettes, burgers, special breads or biscuits), the nutritional arguments for soymilk and tofu (rich in proteins, lipids, absence of cholesterol and lactose, low in sodium, an excellent ingredient in "light foods" [aliments allegés]).

3. A quick look at the major enterprises making and or selling soymilk, tofu, or their products in selected countries: France (Cacoja, Innoval, Soy [Société Soy], Sojadoc, Triballat, Celia, Celnat, Lima-Andiran, Maho Distribution, France-Proteines-Services), Great Britain (Plamil Foods Ltd., Itona Products Ltd., Soya Health Foods Ltd., British Arkady Co. Ltd. [subsidiary of ADM; incl. Haldane Foods Ltd., Regular Tofu Co., Tofeata Tofu], Granose Foods Ltd., Cauldron Foods, Dragon and Phoenix, Paul Jones (Tofu Shop), Full of Beans Soyfoods, Birchwood Health Products, White Waves, The Bean Machine Co-op Ltd., St. Ivel, St. Giles Foods Ltd., Yu's Tofu Shop, Tousoy Ltd., Allied Foods Ice Cream Co., Nexus Foods, Vegetarian Feasts, Unisoy Milk and By-Products Ltd.), Germany (DE-VAU-GE Gesundkostwerk GmbH, Soyastern Naturkost GmbH, Nuxo-Werke Rothfritz), Netherlands (Heuschen-Schrouff, Linn Oriental Products, Solnuts B.V., Manna Natuurvoeding), Belgium (Alpro, Jonathan P.V.B.A., Lima Foods, De Hobbit, Seven Arrows), Switzerland (Conserves Estavayer S.A., Soyana, Galactina), Sweden (Trensums Musteri, Aros Sojaprodukter), Italy (Crivellaro), Spain (Zuaitzo), USA, Japan, Hong Kong, Taiwan, Singapore. Bibliography.

Note: A great deal of the information in this report is taken, without permission or adequate citation, from books published by the Soyfoods Center in California. The statistics and dates given for the European, American, and Asian markets are taken almost completely from Soyfoods Center books. In some cases where the author relied on these books published more than 2 years ago, the information is presented as if it were current, whereas it is actually out of date and no longer correct. Dacosta's book, which might

© Copyright Soyinfo Center 2014

be called a "review of the literature," contains little or no new information. However his bibliography, based largely on a search of the CDIUPA database, with some original references, is quite good.

APRIA stands for Association pour la Promotion Industrie Agricole. APRIA administers CDIUPA. Address: Conseiller d'Entreprises, France: 47, rue Guersant–7015 Paris, France.

2945. Flinders, Carol. 1990. Food grows up. *Vegetarian Times.* Dec. p. 71-74, 76-78. No. 160.
• ***Summary:*** A brief history of changing vegetarian food and diets, plus some recipes. "Getting started these days as a vegetarian doesn't mean eating the heavy, high-fat dishes of 16 years ago. Today's vegetarian meals are simple, reflecting the cook's talent and the particular treasures that are available from the garden or market." Protein was the sacred cow.

There are sidebars on: Frank and Rosalie Hurd, authors of *Ten Talents* (1968), and Mollie Katzen, author of *Moosewood Cookbook* (Ten Speed Press, 1977). Address: California.

2946. Fraser, Gary E.; Phillips, R.L.; Beeson, W.L. 1990. Hypertension, antihypertensive medication and risk of renal carcinoma in California Seventh-day Adventists. *International J. of Epidemiology* 19(4):832-38. Dec. [36 ref]
• ***Summary:*** This longitudinal study of 34,198 non-Hispanic white California Seventh-day Adventists identified incident cases of renal carcinoma (kidney cancer) over 6 years of follow-up. Frequent consumption of salad vegetables and fruit may be protective against this cancer. Address: Dep. of Public Health and Preventive Medicine, Loma Linda Univ., Loma Linda, California 92350.

2947. Shurtleff, William; Aoyagi, Akiko. 1990. Tofu & soymilk production. 2nd ed. Lafayette, California: Soyfoods Center. 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. Dec. 11. 28 cm. [223 ref]
• ***Summary:*** Contains many new advertisements, plus changes on the copyright page, on page 14 (Soyfoods Association in now located at Bar Harbor, Maine), and rear cover of both paperback and hardcover editions (new ISBN for each). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2948. **Product Name:** [GranoVita Organic Soya & Fruit Dessert with 6-Grain Cereal {Cultured Soy Yogurt} (Strawberry, Cherry, Peach-Maracuja)].
Foreign Name: GranoVita Bio-Soja-Frucht-Dessert mit 6-Korn-Getreide {Soja-Joghurt} (Erdbeer, Kirsch, Pfirsich-Maracuja).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1990.
Ingredients: Organic soya drink (Water, soybeans*) with fruit preparation sweetened fruit juice concentrate, naturals aromas and colors, 6-grain mixture (barley*, oats*, rye*, wheat*, rice*, buckwheat*), vegetable thickener, yogurt cultures. * = Organically grown.
Wt/Vol., Packaging, Price: 150 gm plastic cup with peel-off foil lid.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Protein 3 gm, fat 2 gm, usable carbohydrates 13 gm, calories 82. 1 BE (Broteinheit, or diabetic exchange) = 92 gm.
New Product–Documentation: Talk with Alpro. 1990. April 17. DE-VAU-GE is developing a soy yogurt. Form filled out and Labels sent by DE-VAU-GE. 1990. June 11. This product was introduced in 1990. Note: Maracuja is name (in English, German, French, and Dutch) of a tropical fruit (*Passiflora alata*) that has a tart flavor; it can be eaten raw or made into drinks or sherbets. The peel-off foil lid, which is red or orange and green on a silver-white background, contains a color illustration of the fruit(s) used. "With yogurt cultures–free of milk components/constituents. Sweetened only with fruit juice concentrate." The plastic cup is red, green, and black on white. Exklusiv Neuform certification symbol. "Refreshing, made from plants (pflanzlich), with the nutritional riches of the soybean. The full sweetness of the fruit, natural aromas, and the mild acidification with special yogurt cultures impart the fine, fruity taste. A mixture of cereal grains, high in fiber, makes this an ideal dessert. Store at below 10ºC. With at least 70% dextrorotary L(+) lactic acid. Contains no preservatives."

2949. **Product Name:** [GranoVita Heideland Organic Tofu & Grain Dumplings].
Foreign Name: GranoVita Heideland Bio-Tofu Getreide Kloesschen.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1990.
Ingredients: Organic tofu (Water, organically grown soybeans, calcium chloride), onions, rye flakes, fine Graham bread crumbs (*Graham-Paniermehl*), egg protein, rolled oats, soy sauce, herbs, seasonings (*Wuerzmittel*), sea salt, spices (*Gewuerze*), garlic.
Wt/Vol., Packaging, Price: 6 dumplings weigh 250 gm.
Nutrition: Per 100 gm.: Protein 10.4 gm, fat 3.6 gm, usable carbohydrates 14.3 gm, calories 132. 1 BE (Broteinheit, or diabetic exchange) = 84 gm.
New Product–Documentation: Form filled out and Label sent by DE-VAU-GE. 1990. June 11. This product was

© Copyright Soyinfo Center 2014

introduced in 1990. Label: 2.5 by 4.5 inches. Self adhesive. Green, red, yellow, and black on white. Illustration of two red-roofed traditional houses among trees and bushes. "Contains no flesh. To prepare: Simply drop into lightly salted, boiling water and allow to simmer for about 10 minutes. Recommended in the context of a natural whole foods diet (*Im Rahmen einer Vollwerternährung zu empfehlen*)." Exklusiv Neuform certification symbol.

Note: In German, *Heide* means "heath, moorland, or moor." Thus Heideland refers to the moorland around Lueneburg where DE-VAU-GE is located.

2950. **Product Name:** [GranoVita Heideland Small Vegetarian Sausage With Organic Tofu].
Foreign Name: GranoVita Heideland Vegetarische Wuerstchen mit Bio-Tofu.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1990.
Ingredients: Water, vegetable oils and fats in changing proportions by weight, organic tofu (Water, organically grown soybeans, calcium chloride), onions, egg protein, wheat protein (gluten), soy protein, plant thickener agar-agar, spices (*Gewuerze*), natural aromas, rolled oats, seasonings (*Wuerzmittel*), garlic, sea salt, fermented rice flour, smoke.
Wt/Vol., Packaging, Price: 6 dumplings weigh 200 gm.
Nutrition: Per 100 gm.: Protein 10.6 gm, fat 30.9 gm, usable carbohydrates 5.7 gm, calories 343. 1 BE (Broteinheit, or diabetic exchange) = 210 gm.
New Product–Documentation: Form filled out and Label sent by DE-VAU-GE. 1990. June 11. This product was introduced in 1990. Label: 2.5 by 4.5 inches. Self adhesive. Green, red, yellow, and black on white. Illustration of two red-roofed traditional houses among trees and bushes. "Contains no flesh. Simply heat or fry. Practically cholesterol free. Recommended in the context of a natural whole foods diet (Im Rahmen einer Vollwerternährung zu empfehlen)." Exklusiv Neuform certification symbol.

Note: In German, *Heide* means "heath, moorland, or moor." Thus Heideland refers to the moorland around Lueneburg where DE-VAU-GE is located.

2951. **Product Name:** [GranoVita Heideland Vegetarian Bread Spread With Organic Tofu].
Foreign Name: GranoVita Heideland Vegetarische Brotbelag mit Bio-Tofu.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1990.
Ingredients: Water, vegetable oils and fats in changing proportions by weight, paprika, organic tofu (Water, organically grown soybeans, calcium chloride), onions, egg protein, olives, wheat protein (gluten), soy protein, plant thickener agar-agar, spices (*Gewuerze*), natural aromas, rolled oats, seasonings (*Wuerzmittel*), garlic, sea salt, fermented rice flour, smoke.
Wt/Vol., Packaging, Price: 160 gm.
New Product–Documentation: Form filled out and Label sent by DE-VAU-GE. 1990. June 11. This product was introduced in 1990. Label: 2 by 2.5 inches. Self adhesive. Green, red, yellow, and black on white. Illustration of two red-roofed traditional houses among trees and bushes. "Contains no flesh." Exklusiv Neuform certification symbol.

Note: In German, *Heide* means "heath, moorland, or moor." Thus Heideland refers to the moorland around Lueneburg where DE-VAU-GE is located.

2952. **Product Name:** [GranoVita Organic Tofu Grain Dumplings in Mushroom & Cream Sauce with Green Rye & Vegetables].
Foreign Name: GranoVita Bio-Tofu Getreidekloesse in Champignon-Rahmsauce mit Gruenkern-Gemuese.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1990.
Ingredients: Dumplings: Organic tofu (water, organically grown soybeans, calcium chloride), onions, rye flakes, fine bread crumbs (*Paniermehl*), egg protein, rolled oats, soy sauce, herbs, seasonings (*Wuerzmittel*), sea salt, spices (*Gewuerze*), garlic. Mushroom & Cream Sauce: Water, cream, milk, onions, butter organically grown rice flour, wheat flour, lemon juice, lecithin (vegetable emulsifier), carob flour (vegetable thickener), spices (Gewuerze). Green Rye & Vegetables: Water, corn, green rye, carrots, paprika, onions, wild rice, vegetable oil, spices (Gewuerze).
Wt/Vol., Packaging, Price: 350 gm.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Protein 13.5 gm, fat 21.1 gm, carbohydrates 47.8 gm, calories 435. 1 BE (Broteinheit, or diabetic exchange) = 88 gm.
New Product–Documentation: Form filled out and new Labels sent by DE-VAU-GE. 1990. June 11. The product was introduced in 1990. Label: 5 by 8.5 by 1.5 inch paperboard box. Black, gold, red, green, and orange on white. A stylish color photo on the front panel shows the dish ready to serve on a black plate with a green sprig, red tomato, knife and fork nearby. At the top of the front panel: "The whole foods kitchen for the gourmet" (Die Vollwertkueche à la Gourmet). "A ready-to-heat menu for 1 person. Enjoy without flesh." The box contains two pouches: one with the tofu dumplings and sauce; the other with the grain and vegetables. The back

panel shows how these can be heated in either a water bath, a cooking pot, or a microwave oven. Exklusiv Neuform certification symbol. There are three other similar products in this line.

2953. **Product Name:** [GranoVita Greek Vegetable Stew with Organic Tofu, Brown Rice, and Wild Rice].
Foreign Name: GranoVita Griechischer Gemuesetopf mit Bio-Tofu, Naturreis- und Wildreis-Beilage.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1990.
Ingredients: Stew: Paprika, water, mushrooms, onions, organic tofu (water, organically grown soybeans, calcium chloride), vegetable oils, egg protein, tomato pulp, organically grown rice flour, olives, seasonings (*Wuerzmittel*), soy sauce, sea salt, guar flour (plant thickener), spices (*Gewuerze*), herbs, garlic. Rice: Water, brown rice, wild rice, vegetable oil, sea salt.
Wt/Vol., Packaging, Price: 350 gm.
Nutrition: Per 100 gm.: Protein 13.6 gm, fat 16.0 gm, carbohydrates 61.7 gm, fiber (Ballaststoffe) 4.0 gm, calories 445. 1 BE (Broteinheit, or diabetic exchange) = 68 gm.
New Product–Documentation: Form filled out and new Labels sent by DE-VAU-GE. 1990. June 11. The product was introduced in 1990. Label: 5 by 8.5 by 1.5 inch paperboard box. Black, gold, red, green, and blue on white. A stylish color photo on the front panel shows the dish ready to serve on a black plate with a green sprig, mushroom, knife and fork nearby. At the top of the front panel: "The whole foods kitchen for the gourmet (Die Vollwertkueche à la Gourmet). A ready-to-heat menu for 1 person. Enjoy without flesh." The box contains two pouches: one with the vegetable & tofu stew; the other with the grain and vegetables. The back panel shows how these can be heated in either a water bath, a cooking pot, or a microwave oven. Exklusiv Neuform certification symbol. There are three other similar products in this line. One of these, GranoVita Gruenkern Käsebratling (Green Rye Cheese Patties in Mushroom sauce with Vegetables & Rice) contains soy sauce as its only soy-based ingredient.

2954. **Product Name:** Granose Vegetarian Spicy Links.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1990.
Wt/Vol., Packaging, Price: Glass jar.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Color photo of package in *Linda McCartney's Home Cooking.* 1990. p. 18. The label is red, white, and black on green.

2955. **Product Name:** Granose Vegelinks.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1990.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Color photo of package in *Linda McCartney's Home Cooking.* 1990. p. 18. "Wheat protein frankfurters and sausages in brine." A photo shows numerous frankfurters in a bowl.

2956. **Product Name:** So Good Soycreem: Non-Dairy Cream Alternative.
Manufacturer's Name: Haldane Foods Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.
Manufacturer's Address: 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England.
Date of Introduction: 1990.
Ingredients: Organic soya milk, vegetable oils, corn syrup, emulsifier (vegetable mono-diglycerides), stabilisers (xanthan gum, locust bean gum, guar gum), natural colour (beta-carotene).
Wt/Vol., Packaging, Price: 120 gm plastic cup.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Energy 1827 Kjoules / 437 Kcal (calories), protein 3 gm, carbohydrate 12 gm, fat 36 gm (of which polyunsaturates 47%, and saturates 23%), sodium 0.1%.
New Product–Documentation: Label sent by Leah Leneman of Scotland. 1992. Jan. 2. 2.75 inch diameter foil cup lid and 2.5 inch high cup. Yellow, white, gold and light green on green. Illustrations of yellow daffodils and a butterfly on foil lid. Lid: "High in polyunsaturates. Low in saturates. Cholesterol free." Cup: "Soycreem is a new, cholesterol-free alternative to cream, made without animal fats or milk derivatives. Pour over desserts in the same way as fresh cream. (Not recommended for use in coffee.) Suitable for vegetarians and vegans."

Talk with Ray Pierce of Genice. 1994. Feb. 10. In 1990 chilled So Good Soycreem was launched as a non-dairy alternative to dairy double cream, but low in cholesterol, high in polyunsaturates, and low in saturates. It was made for Haldane in a little beige plastic pot with a green foil lid, packed at the Genice plant. It contains a trace of cholesterol because law requires that it contain 36% oil, including some palm oil. In 1991 a shelf-stable UHT version (completely sterilized, with a 9-month shelf life), now named Granose Soya Creem, was launched in a 225 ml Combibloc pack, made for Genice by a large dairy in Ireland which had Combibloc packaging equipment. The chilled So Good Soycreem was discontinued.

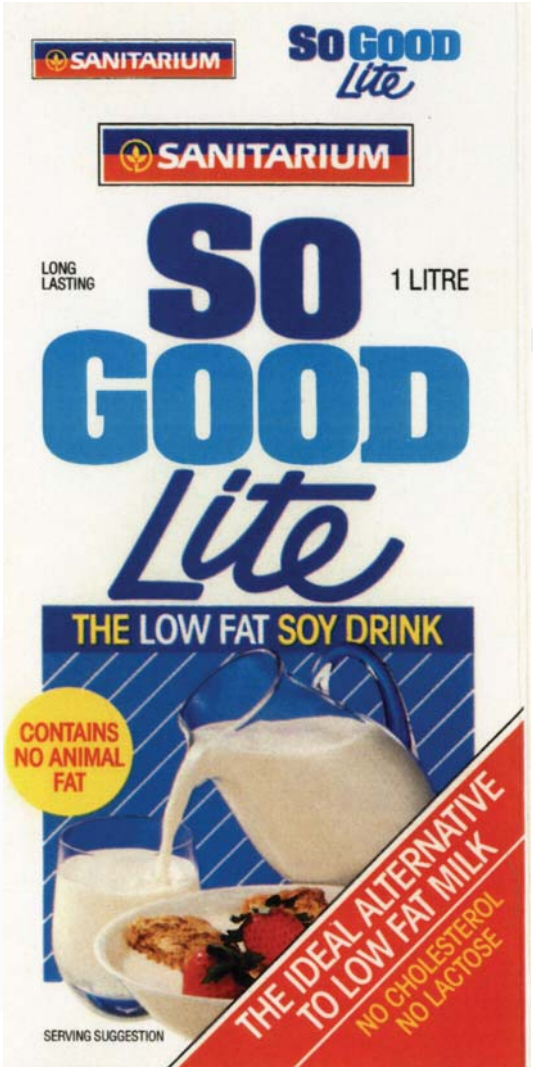
2957. Kellogg's Frosted Mini-Wheats and Tofu Crunch (TV advertisement). 1990. Television broadcast. *
• ***Summary:*** Talk with Art Mio. 1990. March 9. "There is a TV commercial that has been running for the past month or so. It shows the husband sitting at the husband sitting at the breakfast table with a bowl of cereal in front of him. His elbow is on the table and his jaw is resting in the palm of his hand. His head is tilted and he looks like he is very sad, dejected, or upset. Right to the side of the couple is a big cereal box, in big letters is written "Tofu Crunch." It's a health commercial. The message is that you don't have to have bad tasting food in order for it to be healthy. Try sugar-coated Kellogg's Frosted Mini-Wheats. The media already considers tofu a 'yuck' food. How many clippings have you seen that say 'Tofu needs a good PR agency.'"



2958. **Product Name:** [Vege Ham {Meatless Ham}].
Foreign Name: Vegehamu.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1990.
New Product–Documentation: Letter from San-iku Foods. 1990. June. This product was introduced in 1990.

2959. **Product Name:** Sanitarium So Good Lite: The Low Fat Soy Drink.
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia.
Date of Introduction: 1990.
Ingredients: Water (88.0%), soya isolate (4.0%), maltodextrin (3.3%), corn syrup solids (3.1%).
Wt/Vol., Packaging, Price: 1 liter Combibloc Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1990.

Sanitarium Nutrition Education Service. 1990. April. "So Good." This 4-page leaflet gives a clear explanation of each ingredient used, plus nutritional and other information.

Note: This is the earliest commercial soymilk product seen (July 2013) with the word "Lite" on the front panel (one of two products).

2960. British Nutrition Foundation Task Force on Complex Carbohydrates in Foods. 1990. Complex carbohydrates in foods: Report of the British Nutrition Foundation's task force. London: Chapman and Hall. 165 p. 30 cm. [508* ref]
• ***Summary:*** "Complex carbohydrates, defined as starches plus non-starch polysaccharides, rather than 'fibre', was chosen as the title and subject for the Report for various

reasons: (1) The US Senate Select Committee on Nutrition and Human Needs (1977) had concluded that the intake of complex carbohydrates should be increased as one of its Nutritional Goals. (2) The DHSS Committee on Medical Aspects of Food Policy (1984) had recommended that a reduction in total fat in the diet could be achieved by an increased consumption of 'fibre-rich' carbohydrates (e.g., bread, cereals, fruit, vegetables)... (p. 1).

"The popular term, dietary 'fibre', previously defined as 'any substance of plant origin which is undigested by human alimentary enzymes' (Trowell et al. 1972), has been avoided as far as possible in the Report" (p. 2).

Brief history to 1985: "The value of 'fibre' in the diet was even recognised by the Greeks. Hippocrates, in the fourth century B.C., commented 'To the human body it makes a great difference whether the bread be made of fine flour or coarse, whether of the wheat with the bran or the wheat without the bran.'

"In the nineteenth century, [Sylvester] Graham and [John Harvey] Kellogg in the United States and Allinson in

© Copyright Soyinfo Center 2014

Britain, tried to draw attention to the importance of 'fibre' in the diet, all with limited success.

"Modern interest in carbohydrates and health began with Surgeon Captain Cleave's exposition of 'The Saccharine Disease.' Under this title, Cleave (1966) brought together a variety of conditions characteristic of the Western World which he thought were due to consumption of refined carbohydrates. This hypothesis was then developed by Burkitt and Trowell (1975) who suggested that it was the diets of Africans which protected them from most of the chronic non-infective diseases characteristic of Western culture. They suggested that many Western diseases were due to lack of 'fibre' in the diet rather than to the direct ill-effects of refined or 'fibre'-depleted foods. At about the same time, Painter (1975) presented his evidence that diverticular disease could be successfully treated with bran. A full account of the contribution of the contribution made by the early 'pioneers' of the 'fibre' hypothesis has been given by Trowell (1985)." Address: London.

2961. Ellen G. White Estate. 1990. The complete published writings of Ellen G. White on compact disc. Silver Spring, Maryland.
• ***Summary:*** On this CD-ROM are found all of the published writings of Ellen G. White, plus a few key writings about her, such as the 6-volume *Biography of Ellen G. White*, by Arthur L. White (1981-86). The entire contents of this CD-ROM is available on the Internet, or can be purchased for $179.00.

Talk with Tim Poirier, Associate Director of the Ellen G. White Estate. 1997. May 8. To make this CD-ROM, the full text of all of Ellen G. White's writings was keyed into a computer in ASCII format by a conversion company outside the USA; tags were inserted appropriately to identify fields, chapters, etc. for searching. The Ellen G. White Estate also worked with a Imode Retrieval Systems (in New York, New York), which specializes in making CDs and their search engines. Imode has a DOS engine and a Windows application named Personal Librarian. Tim still works with Imode. Address: Seventh-day Adventist Church World Headquarters, 12501 Old Columbia Pike, Silver Spring, Maryland 20904-6600. Phone: (301) 680-6552.

2962. Haldane Foods Group Ltd. 1990. They've every occasion to choose So-Good (Leaflet). Newport Pagnell, Bucks., England. 1 p. Single sided. 29 cm.
• ***Summary:*** See next page. On the top half of this attractive color leaflet, a photo shows a So Good brand Strawberry Bombe next to a whole strawberry on a black lacquerware surface. On the bottom half, accompanied by text, photos show four products (each launched in 1990) in the center: Strawberry Bombes, Tofu Delights (non-dairy frozen dessert bars), and two flavors of Tofu Dessert (ice cream style). The text reads: "From teatime afters, to exotic desserts, to treats. The So-Good range of non-dairy soya ice products from Haldane gives your customers every occasion to buy. Especially as the packaging is so appealing, the reputation so tasty and the products being so well advertised to your market..." Address: Howard Way, Newport Pagnell, Bucks MK16 9PY, England.

2963. Kolster, Uwe. 1990. Die gesunde Sojakueche: Koestlich und abwechslungsreich essen [Healthy soya cooking: Delicious and varied food]. Falken Verlag GmbH, 6272 Neidenhausen/Ts, Germany. 112 p. Illust. Recipe index. 21 cm. [Ger]
• ***Summary:*** This recipe book calls for the use of many DE-VAU-GE (GranoVita) products. Address: Germany.

2964. McCartney, Linda. 1990. Linda McCartney's home cooking. New York, NY: Arcade Publishing, Inc. (a Little, Brown company). England: Bloomsbury. 174 p. Illust. Index. 25 cm.
• ***Summary:*** As of 1994 this is said to be the world's best-selling vegetarian cookbook. It contains more than 200 recipes and many full-page color photos, uses TVP (both chunk and granular styles) in at least 22 recipes, mostly main dishes, including: Turnovers (p. 65). Beefless pie (p. 85). Beefless rice casserole (p. 86). Beefless stew (p. 86). Burgers bourguignonne (p. 89). Chili non carne (p. 94-95). Festive roast with savoury stuffing (p. 98). Lentil and steaklets stew (p. 104). Linda's lasagna (p. 104-05). Madras onion curry (p. 105). Maine sauerkraut (p. 105). Meatless loaf (p. 106). Mexican loaf (p. 108). Mince and aubergine casserole (p. 109). Moussaka (p. 109-10). Oriental beefless casserole (p. 115). Shepherd's pie (p. 120). Simple beefless hash (p. 120). Sour cream steaklet chunks (p. 121). Spaghetti sauce bolognaise (p. 149). Stuffed and broiled mushrooms (p. 125). Stuffed peppers (p. 126).

Linda and Paul (of Beatles fame) McCartney have been married since March 12, 1969, are vegetarians and very active in the field of animal welfare. Linda, born in Scarsdale, New York, USA, has been a committed vegetarian for twenty years, during which time she has lived in England. She is also a world-famous photographer. Her color photo appears on the cover. TVP is more popular among consumers in the UK than in the USA. Pages 18-19 show a color photo of many meatlike products and their packages–including Protoveg Sizzles, Protoveg 5 Grain Burgamix, Tivall Vegetarian Schnitzel, Sausage, and Burger, Fritini Vegetable Pattie Mix, Realeat Vege Burger Mix, Dietade Low-Salt Vegetarian Gravy Mix, Granose Vegetarian Spicy Links, Sausalatas, Vegelinks, and Sausfry, Friggs Vegetable Gravy Powder, and Worthington Wham, Bolono, GranBurger, Vegetarian Fillets [fish alternatives], Stakelets, and Stripples. Page 43 gives a brief description of soya beans and soyfoods. Address: England.

THEY'VE EVERY OCCASION TO CHOOSE SO-GOOD.

From teatime afters, to exotic desserts, to treats. The So-Good range of non-dairy soya ice products from Haldane gives your customers every occasion to buy. Especially as the packaging is so appealing, the reputation so tasty and the products being so well-advertised to your market. Then of course, they know that they can indulge in So-Good ices as often as they like because there's no lactose or animal fat to worry about. So they'll buy more, and come back for more, on more occasions.

Of course, they'll also be buying So-Good brands from you because they think they're absolutely delicious. In every event, we're sure they'll be your most successful frozen assets.

SO GOOD

2965. Peanut Advisory Board. 1990. The official peanut butter lovers' centennial cookbook: A collection of America's favorite peanut butter recipes. Atlanta, Georgia: PAB. viii + 85 p. Illust. Recipe index. 22 cm.

• ***Summary:*** This book begins with a brief history of peanut butter. "First sold in 1890, peanut butter is still America's #1 sandwich spread. It's consumed daily by 40 million Americans, a remarkable 800 million pounds per year–double the amount 25 years ago. Ninety percent of all American homes have a jar in their pantry.

"There are many claims to where and when peanut butter was invented. Africans ground peanuts into stew as early as the 15th century; the Chinese have crushed peanuts into creamy sauce for centuries. Civil War soldiers dined on 'peanut porridge.' But these uses bore little similarity to peanut butter as it is known today.

"In 1890, an unknown St. Louis [Missouri] physician encouraged the owner of a food products company, George A. Bayle, Jr., to process and package ground peanut paste as a nutritious protein substitute for people with poor teeth who couldn't chew meat. The physician apparently had experimented by grinding peanuts in his hand-crank kitchen meat grinder. Bayle mechanized the process and began selling peanut butter out of barrels for about 6 cents per pound. Since Bayle already was baking and selling crackers, that is how most Americans first tasted the sandwich and snack spread that eventually would become America's favorite." A black-and-white photo shows 3 early cans of "Bayle Quality Original Peanut Butter," each with a handle, like that of a pail, on top.

Note: The Peanut Butter Board has no documentation for the statement that George Bayle was encouraged to make peanut butterin 1890, nor does the Board know when Bayle first started to manufacture it. In fact, a memo dated 1 May 1964 from RTK of the *St. Louis Post Dispatch* states: "Origin and first use as a health food by a St. Louis doctor in 1890. No proof at this time, but research is being done on it by the peanut growers, etc." A follow-up letter dated 19 Jan. 1971 from N.E. Williams, Assistant Librarian of the *St. Louis Post Dispatch*, to Mr. Ray O. Hammons of the College of Agriculture, Tifton, Georgia, states: "Enclosed is a copy of the only evidence of the origins of peanut butter in St. Louis in our files. We had an inquiry in 1964 concerning this, and we found nothing more, nor did the researchers seeking this history." See also Dec. 1921 obituary for George A. Bayle.

"At about the same time, Dr. John Harvey Kellogg in Battle Creek, Michigan began experimenting with peanuts as a vegetarian source of protein for his patients. His brother, W.K. Kellogg, was business manager of their sanitarium, the Western Health Reform Institute, but soon opened Sanitas Nut Company which supplied foods like peanut butter to local grocery stores."

On 4 Nov. 1895 Kellogg applied for a patent titled "Process of Preparing Nutmeal," which was issued to him on 13 April 1897. It described "'a pasty adhesive substance that is for convenience of distinction termed "nut butter."... The moist and brown product is soft and pasty like butter and is somewhat less digestible than the meal, owing to the greater amount of free oil it contains. It is used as a substitute for butter, either for table use or for shortening in cooking. It is, in fact, a good substitute for animal fats. It has a slightly nutty flavor and is palatably agreeable, beside being far more nutritious than butter.' However their peanuts were boiled (rather than roasted) and their pasty concoction never became very popular."

"One of their employees, Joseph Lambert, had worked with the Kelloggs to develop food processing equipment. He began selling his own hand-operated peanut butter grinders in 1896. Three years later, his wife Almeeta published the first nut cookbook, 'The Complete Guide to Nut Cookery' and two years later the Lambert Food Company was organized. They continued to sell peanut butter until 1908 when they turned their attention solely to manufacturing machinery.

"George Washington Carver's contributions: George Washington Carver began his research into peanuts in 1903 at Tuskegee Institute–research that would lead him to discover improvements in horticulture and the development of more than 300 uses for peanuts (including shoe polish and shaving cream). His first publication in 1925 introduced Americans to 105 peanut recipes, from peanut soup to coffee. For his work in promoting its cultivation and consumption, Carver is considered the father of the peanut industry.

"The world was first introduced to peanut butter at the Universal Exposition of 1904 in St. Louis, when C.H. Sumner sold $705.11 of the treat at his concession stand. Peanut butter's popularity soon spread. Krema Products Company in Columbus, Ohio, began selling peanut butter in 1908–and is the oldest peanut butter company still in operation today!...

"Peanut butter was sold in tin cans at the beginning of the century, but the demand for metal skyrocketed during the first World War and manufacturers soon switched to glass jars.

"Beginning in 1922, Joseph L. Rosefield began selling a number of different brands of peanut butter in Alameda, California. These peanut butters were 'churned' like butter and therefore smoother than the gritty peanut butters of the day.

In 1928 Peter Pan brand peanut Butter was introduced by Swift & Co. In 1933 Rosefield launched Skippy brand peanut butter in California; In 1935 he added the first chunk style peanut butter to his line. Reese's peanut butter cups were also introduced in the mid-1920s. Address: Peanut Advisory Board, 1950 North Park Place #525, Atlanta, Georgia 30339. Phone: (404) 933-0357.

manual, including a vegetarian meal plan. 7th ed. (Three-ring binder with dividers). Seventh-day Adventist Dietetic Assoc., P.O. Box 75, Loma Linda, California 92354. xv + 644 p. Index. 29 cm. In a 3-ring binder with tabbed dividers. Index. 30 x 29 cm.

• ***Summary:*** This comprehensive guide to planning, selection, and coordination of vegetarian diets, in the form of a three-ring binder with dividers, was edited by Georgia Hodgkin, M.S., R.D.; Susan Maloney, M.S., R.D., was the managing editor. Previous editions were published in 1960, 1965, 1970, 1975, 1978, and 1982. Each chapter has an author and a reviewer. References are found at the end of each chapter.

Contents: Introduction. Normal nutrient needs. Nutrition for pregnancy and lactation. Pediatric diets. Gastrointestinal diets. Renal diets. Cardiac diets. Diabetic and related diets. Mineral modified diets. Diet for acute care. Nutrition and immunity. Nutritional support and enteric feedings. Geriatric and rehabilitation diets. Test diets. Nutrition and drugs. Nutrition for exercise and weight control. Appendixes (11) including: Ingredients of selected vegetable protein foods. Nutrient composition of selected vegetable protein foods (both prepared by Yansee Wong). Addresses of selected Seventh-day Adventist hospitals (16 hospitals). Selected vegetarian cookbooks (15 citations). Selected books concerning a vegetarian diet (7 citations). Tables (79 tables). List of figures (10 figures). Address: Loma Linda, California.

2967. Sanitarium Health Food Co. 1990? Our story (Leaflet). 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia. 2 panels on each side. Each panel 30 x 21 cm. Undated.

• ***Summary:*** This glossy, color leaflet gives a brief history of the company, interspersed with many color photos. The company's export division is at Hudson Ave., Castle Hill, NSW 2154, Australia.

"The fascinating history of the Sanitarium Health Food Company started in the late 19th century when a group of highly motivated immigrants from the United States decided to make their living by distributing health foods that they had imported from Battle Creek, in Michigan, USA. Battle Creek was famous then for its Sanitarium, the health retreat based on a Swiss model, where the rich and famous from all parts of the United States and Europe came for a relaxing health holiday. One of the draw cards of this place was a breakfast cereal and health food manufacturing plant, the purpose of which was to supply food to the institution as well as to the neighbouring districts.

"A selection of these products was sent to Melbourne, Australia, in 1897, but before too long the demand for these unique foods outstripped the availability. Local production was inevitable...

"The name, Sanitarium Health Food Company, was adopted in 1898."

Photos show: (1-4 on front panel) Weet-Bix in a white bowl. A man on a bicycle pedaling a wheeled cart in front of him; on it is written Sanitarium Health Food Co. A modern factory with a company flag flying over it. Veggies in a wrap on a plate. (5) The old Battle Creek Sanitarium. (6) A hand pouring a pack of So Good Soymilk. (7) A very old photo showing an early food factory along the banks for a river. (8) An aerial view of a modern food factory. (9) A bottling line. (10) A breakfast table on which Sanitarium breakfast food products are served. (11) A Sanitarium food delivery truck. (12) Packages of the leading Sanitarium food products: Weet-Bix. Corn Flakes. Weet Bix Hi-Bran. Puffed Wheat. Weeta Puffs. Good Start. Ricies (rice cereal). Honey. Peanut Butter (Smooth or Crunchy). Crunchy Granola. Caffex. Golden Toasted Meusli. So Good (soymilk). Vegetarian Sausages (canned). Vegetarian Bologna (canned). Address: Wahroonga, Australia. Phone: (02) 487 1711.

2968. Sanitarium Health Food Co. 1990? Product range. 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia. 6 p. Catalog. Undated. 30 cm.

• ***Summary:*** Product lines include: Flake biscuit range (incl. Weet-Bix ["Australia's favourite whole wheat malted breakfast biscuits"], Corn Flakes, and Muesli). Loose cereal range. Sundry cereal range. Drinks and beverages (incl. So Good soymilk). Spreads (peanut butter and marmite). Legumes, grains, seeds (incl. soya beans in 500 gm bag). Dried fruits. Nuts. Mixes (such as nuts & raisins). Canned vegetarian meals (24 meatlike products, 3 of which are dry TVP in boxes). Misc. foods (incl. natural lecithin and lecithin granules).

The company also has an export division at Hudson Ave., Castle Hill, NSW 2154. Address: Wahroonga, Australia. Phone: (02) 487 1711.

2969. **Product Name:** Sanitarium Health Foods Soya Beans (Dry in Poly Bag).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 146 Fox Valley Rd., Wahroonga, NSW 2076, Australia.
Date of Introduction: 1990?
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 500 gm poly bag.
How Stored: Shelf stable.
New Product–Documentation: Sanitarium catalog. 1990. Product range.

Manufacturer's Name: Bruno Fischer GmbH (Importer-Distributor). Made in France.
Manufacturer's Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.
Date of Introduction: 1991 January.
Ingredients: Water, soybeans* (9%). * = Organically grown.
Wt/Vol., Packaging, Price: 1 liter glass bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter/Order for the book *Tofu & Soymilk Production* from "Bruno Fischer jun [Jr.]." 1979. Oct. 7. He is located at Taunusstrasse 13, 5000 Köln [Cologne] 91, West Germany. Phone: 02 21 / 83 26 51.

Talk with Bruno Fischer, who calls from Germany. 1993. Nov. 25. He sells soymilk, which he introduced in Jan. 1991, in glass bottles in Germany. In the unique sterile-filling process, developed by Alfa-Laval and Bosch, the soymilk is first UHT sterilized, then packed and sealed in sterile bottles. It is sold non-refrigerated with a 9-month shelf life. He does not make this soymilk; he imports it from a soymilk maker in France.

He is a Seventh-day Adventist who is the fifth generation of a family of butchers. His family quickly stopped making pork products and closed their shop on Saturday, the Sabbath–which was formerly their busiest day. Now he is gradually switching the company from meat products to alternatives. On 7-8 Oct. 1979 he visited Shurtleff and Aoyagi in Lafayette, California.

Labels sent by Bruno Fischer GmbH. 1994. Jan. 6. On each bottle are two labels, each 6 by 3.75 inches. The front label has white letters with dark blue borders on a pastel blue and green background. Four small square drawings show that this soymilk can be used like milk, drunk from a glass, poured on Muesli, or used in cooking. "Made purely from plants. No added sugar. Versatile–use like milk." The back panel gives the product name and ingredients in six languages. By each name is the flag of that country.

Product with Label sent by Bruno Fischer. 1998. April 15. Soja Drink–Natur. No added sugar. Ingredients and nutritional value are given in five languages, each with the flag of that country by the product name: German, English, Italian, French, and Dutch. Talk with Bruno Fischer. 1998. May 14. This product was named Soja Drink from the beginning; The name Tônyû was used only in-house. The current milk is made from organic soybeans grown mostly in southern France. The resulting soymilk is the highest in mono- and di-saccharides, and in lactones of any European soymilk. Bruno thinks that his is the only soymilk in the Western world today that is sold in a glass bottle. This is the kind of environmentally-friendly container that his customers at natural food stores in Germany want; Tetra-Pack is a symbol of an environmentally unfriendly container. The bottle and cap are steam sterilized, then filled with UHT-treated soymilk in a sterile environment. The filling plant is at Rugensburg; the bottles are then shipped to a storehouse at Saarbruecken, on the Saar River near the French-German border. Sold in a brown 1-liter glass bottle, this soymilk has a shelf life of 1½ years. It is made from soybeans that are dry-dehulled. Bruno has been in the plant where it is made and seen the whole process.

2977. Sabaté, Joan; Lindsted, K.D.; Harris, R.D.; Sanchez, A. 1991. Attained height of lacto-ovo vegetarian children and adolescents. *European J. of Clinical Nutrition* 45(1):51-58. Jan. [40 ref]
• ***Summary:*** Normal growth and development are documented in populations consuming large amounts of soy protein. Address: 1-2. Dep. of Epidemiology; 3. Dep. of Pediatrics; 4. Dep. of Nutrition. All: Loma Linda Univ., Loma Linda, California 92350.

2978. *Adventist Review* (*Hagerstown, Maryland*). 1991. Granose Foods sold. Feb. 14. p. 6.
• ***Summary:*** "A long chapter in the history of the Adventist Church in England closed last month with the sale of Granose Foods Limited in Newport Pagnell, England. The Adventist-owned health food company had served the British Isles with wide assortment of health food products for 92 years.

"The British Arkady Company Limited purchased Granose for £5.5 million (US$11 million), reports Ray Dabrowski, Trans-European Division communication director.

"The British Union Conference (BUC) Executive Committee took an action to sell Granose last October after three years of stagnant sales. In the three-year period, from 1988 to 1990, sales increased from £4.2 million (US$8.3 million) to £4.9 million (US$9.6 million), representing an 11 percent growth for the whole period and well under the national inflation rate.

"Eleven years ago Sanitarium Health Foods of Australia took Granose under its wing–giving it an infusion of cash and equipment. However, the Australian company later withdrew because of financial reasons.

"As part of redevelopment proposals for Stanborough Park, Granose moved into new facilities at Newport Pagnell in 1988. Even with new facilities, however, the sales did not increase significantly. Also, accrued interest on the £1.9 million (US$3.8 million) loan made to the company for the relocation contributed significantly to the company's operating loss of £122,000 (US$244,000) for 1989."

2979. McDermott, Ron. 1991. New developments at Worthington Foods (Interview). *SoyaScan Notes.* Feb. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron was at Loma Linda Foods for 4 years, and before that at Ross Laboratories for 9 years. When Worthington Foods acquired Loma Linda Foods, it got all the

© Copyright Soyinfo Center 2014

meat analogs and the Soyagen soymilk, which is sold only in dry form to adults. Now Worthington has Soyagen and Soyamel brand soymilks. The last production of Loma Linda brand products in Riverside was completed under contract by Nutricia at the end of August, 1990. Then the unique and necessary equipment was taken to Worthington, Ohio, in the fall and set up there. Since December, Worthington has been working to bring the formulas back into production. A number of similar products were discontinued. Even after these were eliminated, Worthington still has a line of 180 products! This includes all Worthington products! The Morningstar Farms line accounts for the great majority of sales. The canned meat analogs account for about 20% of total Worthington sales. The rest is sales of frozen Worthington products, the Natural Touch line, beverages, etc. The best-selling product in the Natural Touch line has been the okara patties.

Nutricia had decided to consolidate their soymilk production in Riverside and to sell their old soymilk plant in Mount Vernon, Ohio. In fact, they set up a soymilk production line in Riverside, but they had problems with the aseptic part of it. But within the last 2 months they have decided to consolidate soymilk production at Mt. Vernon instead.

Jim Hagle, chairman of the board of Worthington Foods, died on 18 Oct. 1990 at age 78 at his home. Alan Buller has taken his place as chairman of the board. Dale Twomley is now president and CEO of Worthington Foods. Bob Clark (who came from Haagen-Dazs-Pillsbury) is the new vice president for marketing and Steve Dunson is vice president for corporate strategy & planning. Address: Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

2980. Nordquist, Ted. 1991. Changes in structure and ownership at Aros Sojaprodukter in Sweden (Interview). *SoyaScan Notes.* Feb. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** On 31 Dec. 1990 Ted sold Aros. He now owns one-third of the new corporation named Aros Sojaprodukter AB. Eric Kennhed owns one-third and Blekinge Invest (which owns 100% of Trensums Musteri, a juice company) owns the other one-third. There is a five-person board of directors, and Ted is CEO.

He is trying to find companies to license his new technology and process for making soybase. He has a contract that offers a commission of 3% of the sales of each product for the first year after production starts, plus reimbursement for all travel if it leads to the signing of a licensing contract.

Anders Lindner is now part of Ted's group. William Shurtleff introduced and recommended Ted to him. Anders recently did a soymilk market study for Vitasoy in Australia.

2983. *SCOPE* (*Loma Linda University, California*). 1991. Loma Linda University: "a miracle that should open the eyes of our understanding"–Ellen White, April 6, 1906. Jan/March. p. 6-13. [4 ref]
• ***Summary:*** An excellent and inspiring history of Loma Linda University with a very detailed chronology, starting in 1905.

2984. Fehlberg, Eric C. 1991. The sale of Granose Foods to the Haldane Foods Group and British Arkady Ltd. (Interview). *SoyaScan Notes.* April 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The sale of Granose took effect from 1 Jan. 1991. At the time of the sale, Granose was doing very well financially. The only year that they didn't break even or make a profit was 1990. At the beginning of 1990 they moved from their old building into the new one; the expenses connected with the move took up most of their profits. In all other recent years they have been making good money, and a portion of that money has been contributed to the church. Mr. Fehlberg cannot understand why the church would sell such a thriving company.

But the board of the directors of the British Union of the Seventh-day Adventist church got an offer (which was a little bit of back-door work) that was too good to refuse, so they looked at it in their committee meeting and decided to accept it. They have a good understanding of all aspects of the company. This is the second long-established Seventh-day Adventist food company that has been sold by the church during the last 2 years. Loma Linda Foods was sold to Worthington Foods in Jan. 1990. Most of the employees of Granose have stayed with the company after the sale. Peter Archer, the former general manager, has stayed but is no

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

longer the general manager. He is now marketing manager. The church no longer has any involvement with Granose at all.

We cannot say that these two sales are the start of a trend, but he is quite sure that the four Scandinavian Adventist food companies (Nutana in Denmark, Sweden, Norway, and Finland) will be the next to be sold. Nutana-Sweden is in considerably better financial shape than the other three, and Nutana-Finland is in pretty good shape. Nutana in Denmark and Norway are losing money and are very much in trouble. But he thinks that can easily be corrected if they get their costing straight and price their products based on their real costs. The man who has gone in to make these changes, Jan Paulsen, has as good a chance of succeeding as anyone, but he works out of London, England and does not have a much time for the health food work. He feels that the church should not be in the business of selling healthy foods. He influenced the board of the British Union in their decision to sell of Granose.

After the Scandinavian Nutana companies, the Egypt Food Factory, run by Mokhtar Nashed in Helipolois, Cairo, Egypt may well be the next to go, probably within the next few months. They used to make soymilk but he thinks they no longer are making it. Their products are "sub-standard" but still good. Superbom in Brazil is also having a hard time because of the adverse exchange rate and the desire to borrow money from the church. Superbom Chile is also having some problems.

But many of the Adventist food companies definitely will not be sold by the church in the foreseeable future. In fact, in the Far Eastern Division, a new food company in Hong Kong, run by Mr. Menzies, is scheduled to start selling products in early June of 1991. A new company is also starting in Thailand. Sahm Yook in Korea is also very successful, as is DE-VAU-GE in Germany and Sanitarium Foods in Australia. The food companies in Central America (Mexico, Costa Rica) and the Caribbean (Trinidad) are all doing well.

There are various administrative "Unions" within the Seventh-day Adventist Church. There are 4-5 unions in North America, 4 in Australia, many in South America, etc. The South American ones report to one central office in Brasilia, Brazil. The Central American food companies report to Miami, Florida. Sometimes a company manager and the head of the Union (a church official to whom he reports) have different ideas of what needs to be done at the company. These two men live in two different worlds, yet both have input in running the company. This can be a cause of business problems. The Mormon church owns some food companies and has the same type of problems. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

2986. Ullmann, Daniel; Phillips, R.L.; Beeson, W.L.; Dewey, H.G.; Brin, B.N.; Kuzma, J.W.; Mathews, C.P.; Hirst, A.E. 1991. Cause-specific mortality among physicians with differing life-styles. *J. of the American Medical Association* 265(18):2352-59. May 8. [54 ref]
• ***Summary:*** This study compares the mortality of medical school graduates from Loma Linda University (LLU, 4,342 graduates) and the University of Southern California (USC, 2832 graduates) with each other and with that of contemporaneous white, American men. The LLU graduates had a risk similar to that of USC graduates for fatal cancer (with a mortality ratio, MR, of 0.92) but half the risk of fatal atherosclerotic disease, with an MR of 0.58 for coronary heart disease and 0.66 for cerebrovascular disease. "The overall mortality rate of LLU physicians was only 75% as high as that of the USC physicians and only 56% as high as that of the U.S. male population at large. We attribute this reduced mortality mainly to the low cardiovascular mortality rates, which may be accounted for by the life-style of the substantial proportion of Seventh-day Adventists among the LLU graduates." Address: 1. Depts. of Preventive Medicine and Medicine, School of Medicine, Oregon Health Sciences Univ., 31812 S.W. Sam Jackson Park Rd., Portland, OR 97201-3098; 2-3. 2987. *Dispatch* (*Columbus, Ohio*). 1991. Food company VP focusing on planning. May 27. p. 1D. Business section.
• ***Summary:*** "In response to health-conscious consumers, Worthington Foods will roll out new breakfast products the end of this month. The breakfast sandwiches and meals are additions to the company's Morningstar Farms line, said Stephen D. Dunson, recently promoted to vice president for planning and operations at the company. The new products will be test marketed in Columbus."

2988. Messina, Mark J. 1991. Update on soy and cancer prevention research (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Aside from Mark's article titled "Commentary: The role of soy products in reducing risk of cancer," published in the *Journal of the National Cancer Institute* 83(8):541-46 (17 April 1991), there will be no other proceedings published. Much of what the participants had to say has already been published. The conference brought the people and ideas together for the first time. Dr. Stephen Barnes was the co-author and chairperson of the workshop, and his work was the motivation for the workshop.

© Copyright Soyinfo Center 2014

Mark has almost finished writing a new paper which will be a review of all the literature on the role of soy products in reducing the risk of cancer. This review will contain many studies not mentioned in the article cited above, including about 20 animal studies. The initial animal research was very disappointing. K.K. Carroll, for example, in 1975, found no difference between soy protein and casein in protecting against cancer. The epidemiological work is inconclusive, and soy is limited to a minor role in Chinese, Japanese, and some Seventh-day Adventist studies. So, even if soy was protective, it would not get much attention in these studies. The literature seems to indicate that soy is most protective against colo-rectal cancer and against breast cancer. One basic problem is that case-control studies are often not very supportive of diet-cancer relationships; they are often done in homogeneous populations with a narrow range of dietary differences. For example, Japanese and Chinese have low fat and high soy consumption, while Europe and the USA are the opposite. This is a big problem for the field because even today much of our understanding of diet-cancer relationships is based on these international variations in cancer compared to the FAO data. We don't have that for soy; we just have a series of case-control studies, though they are generally suggestive of a protective effect. The animal studies show mixed results. Of the 4 studies on soy and mammary cancer, for example, 2 show a protective effect and 2 do not. So we need to look deeper for the cause of these differences. It looks like the isoflavones are the most likely candidates to be the effective protective agents. The protease inhibitors are extremely potent chemopreventive agents; they really work. Whether or not there is enough in soybeans to make a difference is a big question. There may be enough, but it is a difficult question to answer. The isoflavones are absorbed, you can measure them and their effects. They clearly can exert physiological or biological effects. If some of the proposed studies are funded, in the next two years we will learn a great deal about these compounds.

Mark feels that his new review of the literature may launch this as a whole field of serious research, and may stimulate much new investigation in this new field. A new case-control study, titled "Dietary effects on breast-cancer risk in Singapore just published in *The Lancet* (18 May 1991, p. 1197-1200), was so supportive of a protective effect of soy against cancer that it alone will stimulate more thinking about this area. The authors of that study did not set out to look solely at soy, but they noted that not many epidemiological studies have been conducted on soy. Those that have, have been quite supportive in showing a protective effect against cancer.

In about 2 months, NCI will be giving out some money for further study of the isoflavones in soybeans, to see how they are metabolized and their other effects. If things go well, with good results over the next 2 years, they might be in a position to do a human intervention study to look seriously at the effect of soy in preventing or curing cancer. Address: Diet and Cancer Branch, National Cancer Inst., 9000 Rockville Pike, EPN–Room 202, Bethesda, Maryland 20892-6130. Phone: 301-496-8573.

2989. **Product Name:** [GranoVita Organic Whole-Grain Tofu Ravioli].
Foreign Name: GranoVita Bio-Vollkorn Tofu-Ravioli.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1991 June.
Ingredients: Pasta shell: Whole wheat flour, egg, mineral water. Filling: Bio-Tofu (water, soybeans*, calcium chloride), sea salt, fine bread crumbs, Parmesan cheese, spices. * = Organically grown.
Wt/Vol., Packaging, Price: 250 gm poly pouch. Retails for DM 2.98 (6/91, Hamburg, Germany).
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Protein 12.8 gm, fat 4.8 gm, usable carbohydrates 36.5 gm, calories (kcal) 240 (1021 kJoules).
New Product–Documentation: Label sent by Anthony Marrese of Hamburg. 1991. June. 6 by 7.5 inches. Poly pouch. Red, light green, and dark green on white. Illustration of a plate, spoon, and pot surrounded by green and red vegetables. "Vegetarian. Contains no meat."

2990. Lindsted, Kristian; Tonstad, S.; Kuzma, J.W. 1991. Body mass index and patterns of mortality among Seventh-day Adventist men. *International J. of Obesity* 15(6):397-406. June. [50 ref]
Address: School of Public Health, Loma Linda Univ., Loma Linda, California 92350.

2991. Toufexis, Anastasia. 1991. Playing politics with our food. *Time*. July 15. p. 57-58.
• ***Summary:*** "While the Food and Drug Administration reforms labels, the Agriculture Department drags its feet, thanks to its cozy relations with the meat industry... 'Everything in nutrition is political...' Part of the grocery garble stems from America's hodgepodge system of food regulation. Three federal agencies have jurisdiction. The FDA oversees all items sold in supermarkets except for meat, poultry and any products that are more than 2% meat. These products are monitored instead by the U.S. Department of Agriculture. Food advertising, meanwhile, falls within the bailiwick of the Federal Trade Commission... Unlike its sister regulatory agencies, the USDA is obliged to promote as well as police agricultural products. Nutritionists are quick to point out that the department is responsible for regulating most of the fattier–unhealthier–elements of the diet. But its mandate to promote the consumption of beef, pork, dairy products and eggs gets in the way of its concerns for

© Copyright Soyinfo Center 2014

American health..."

The Secretary of Agriculture is Edward Madigan, a former Congressman from the Illinois farm belt, who took office in March 1991 and is strongly committed to food producers rather than consumers. "The most glaring example of this bias involves a foiled attempt to revise the USDA's dietary guidelines. In 1958 the department introduced its 'basic four' food-group chart, which divided food into four major categories: milk, meat, vegetables and fruits, and bread and cereals. The groups were quickly branded into the brain of every American schoolchild as of equal importance.

"But as research into heart disease, cancer and nutrition proceeded over the past 35 years, the chart emerged as seriously misleading, more of a political construct than a guide to healthy eating. It overemphasizes meat and milk–a credit to the influence of those industries, whose lobbyists have been active and generous in Washington [DC].

"To better reflect current nutritional knowledge, the USDA began redrawing the chart three years ago. The result: the 'eating-right pyramid.' While the new guide keeps the basic four food groups, it dramatically shifts the dietary balance. Cereals and grains, fruits and vegetables are stressed by being placed in the broad lower area of the pyramid; meat and dairy products occupy a narrower upper portion; and fats and sweets are consigned to the 'use sparingly' tip.

"Unhappy with the new geometry, the meat and dairy industries began pressuring Secretary Madigan to prevent the pyramid from being publicly disseminated. One month after he took office, just as the pyramid was going to press, Madigan caved in... Consumer activists cite other instances that expose the USDA as industry's captive. New York University's Nestle relates how the department pressed for changes in the language of the 1988 Surgeon General's *Report on Nutrition and Health,* which she helped write. 'It was very clear to me that the report was not going to say "eat less meat."' In fact, when the report came out in 1989, it advised the public only to 'choose lean meats.'"

The 1980s were a decade of deregulation as the Reagan administration tried to get government off the back of business. "Industry and government grew cozier. A watershed occurred in 1984 when Kellogg's introduced a new marketing campaign for its All-Bran cereal. The company actually got the National Cancer Institute to agree to put a message on its package stating that diets high in fiber (and low in fat) may reduce one's risk of cancer. The FDA was horrified by this implied product endorsement. Under FDA rules, any product marketed with a claim that it prevents disease is subject to testing for safety and efficacy as a drug...

"Before long, food slogans were so out of hand that individual state regulators felt compelled to step in. Attorneys from nine states, including New York, California, Texas and Florida, formed a task force that became known as the 'food police.' They brought dozens of suits against manufacturers for misleading labels and ads, levied fines and seized goods...

"Suddenly, the gospel of deregulation lost its allure, and the idea of uniform national standards came to be regarded as a form of salvation...

"Congress, prodded by a coalition of 25 consumer and medical organizations, came up with the 1990 Nutrition Labeling and Education Act. Faced with a clearly popular bill, the President felt compelled to go along."

2992. Nordquist, Ted. 1991. New developments with Aros Sojaprodukter AB in Sweden (Interview). *SoyaScan Notes.* Aug. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Aros plant has been moved from Örsundsbro (just southwest of Uppsala) to Tingsryd in the south of Sweden. Aros is working with Trensums Musteri, a juice company located in Tingsryd, located 20 or 30 minutes miles to the north of the southern seaside city of Karlshamn. Both Tingsryd and Karlshamn are located in Blekinge County. Ted and his family will continue to live in Örsundsbro, but his office and the company administration will be moved to Enköping, about 15 minutes from his home. He will continue to commute to Tingsryd when necessary. The company is now getting ready to sell soymilk equipment to interested buyers.

Nutana in northern Europe is now being sold and Ted's company is trying to buy it. Ted first learned (in Copenhagen, Denmark) that Nutana was going to be sold from Jon? Olsen, the marketing director for Danska Nutana. Only recently did he learn that it could be sold to a company other than Hundedogs? Adventista. Address: CEO, Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

2993. Drosihn, Bernd; Hess, Albert; Nagel, Christian. 1991. The tofu industry and market in West Germany (Interview). *SoyaScan Notes.* Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bernd is in the USA with Albert Hess of Das Tofuhaus. They just had a nice visit to Northern Soy in Rochester, New York. Svadesha Vegetarische Feinkost bought Byodo Naturkost in April 1991 and is now in financial trouble because the owners do not understand the tofu market; they are trying to sell Byodo, which is now also having trouble.

Since Huegli bought Soyastern and Yamato, the two companies have steadily lost market share. For the past two years, Soyastern's quality has been very poor, and they have sometimes been unable to fill orders–but that has improved somewhat since they were bought by Huegli (a Swiss company). In 1988 Soyastern alone had 35-40% of the German tofu market, and now it is 20-25%. Soyastern's actual output of tofu stayed about constant but the market

© Copyright Soyinfo Center 2014

as a whole is growing well. Yamato has always been well organized. Another problem is that Huegli is seen by natural food store owners as a "big food company" and these owners do not want to support such companies by buying from them.

Roughly 20 tonnes/week of tofu are now made in Germany, and that is growing at 10-15% a year. Of total sales, roughly 35% is plain tofu and 65% is tofu products. There are many more tofu products. Tofu and tofu products now have much more shelf space in food stores, and many stores that used to carry only one brand of tofu now carry 3-5. Roughly 90% of the tofu sold in Germany is made with organically grown soybeans; Hensel is one major company whose tofu is not organic. A rapidly growing proportion of these organic soybeans are now grown in Europe. The main countries supplying organic soybeans for tofu in Germany, in descending order, are: USA, France, Austria, Hungary, and Germany (the latter grows 20-30 tonnes/year). Some smaller companies (such as Taifun, Albert Hess of Das Tofuhaus, and Christian Nagel) have all been growing well. The largest tofu manufacturers in Germany are: (1) Huegli with 40% of the German tofu market–composed of Soyastern, Yamato, and KMK–is by far the biggest; they also have some brands in the Reform market, and in canteens. Hensel, which has strong connections with Huegli, is not a manufacturer; their tofu is produced at KMK (Kurhessische Molkerei Kassel) in Kassel, which is owned by Huegli. In early 1990 Huegli purchased Heirler, the biggest distributor of fresh health foods in West Germany, and also a brand name in 2,000 Reform Houses in Germany; (2) DE-VAU-GE (GranoVita brand), with 10% of the market, is big in the Reform market; (3) Christian Nagel Hamburg Tofu Manufaktur, 7-8%; (4) Geestland in Bremerhaven, 7-8%; (5) Das Tofuhaus in Lautersheim, 7-8%; (6) Taifun; (7) Svadesha; (8) Soto. Bernd's company is still small but he now makes much more tofu than tempeh, and his sales are growing fast. He got his tofu equipment from Tofurei Jutta Schoenemann near Nuremberg–which was run by a housewife and her husband. They bought their equipment in Japan, made 100-200 kg/week of tofu, and went out of business about 2 years ago. He is not aware of any companies that have gone out of business during the past year, although Svadesha and Byodo are having a hard time.

A major change is that KMK is now producing the tofu for Soyastern and Yamato. Yamato's plant will be closed at the end of this year. It is less expensive for Huegli to produce all of their tofu at one place. Thus by early 1992 KMK will be the largest tofu plant in Germany. It is not clear what will happen to Klaus Gaiser; he does not want to move away from Tuebingen. Thomas Karas is probably living in Cologne; he was very lucky to be able to sell his company to Huegli though he had debts of about 1 million marks. Huegli assumed only one-fourth of these debts. Soyastern's two main sources of capital (one bank and the man who sold him the chicken factory) took over one-fourth of the debt. Another one-forth was taken over by his supplier of soybeans, and Thomas took on the last one-fourth himself.

The price of tofu in the USA is much lower than in Germany, except for Heuschen-Schrouff tofu, which is sold in Asian food stores. Tofu sold in Asian food stores in Europe is generally much less expensive than that sold in natural food stores. Huegli is trying to recover the market share they have been losing by selling their tofu less expensively; this will probably bring down all tofu prices in Germany–but Bernd hopes it does not fall to the American level.

The organic German Soyfoods Association has had a struggle. People are now encouraging Klaus Gaiser to establish an association of all soyfoods manufacturers in Germany. Another big question is how soyfoods manufacturers will relate to the unified European Community in 1992. Address: 1. Founder and president, Viana Naturkost GmbH, Cologne; 2. Owner, Das Tofuhaus; 3. Owner Hamburger Tofu Manufaktur. All: Germany. Phone: (02233) 41323 or 221-121175.

2994. Bloyd-Peshkin, Sharon. 1991. The health-fraud cops: Are the quack busters consumer advocates or medical McCarthyites? *Vegetarian Times*. Aug. p. 48-59, 88.
• ***Summary:*** William Jarvis, PhD, is founder (in 1977) and president of the NCAHF (National Council Against Health Fraud). He is convinced that orthodox medicine has all the answers, and that everything else (including chiropractic) is quackery. So they are quackbusters. Like the American Medical Association (AMA), Jarvis' group opposes nonconventional treatments–such as optometry, acupuncture, midwifery, chiropractic, etc. He is a professor of preventive medicine at Loma Linda University in southern California. A photo shows Jarvis. Address: Assoc. editor, Vegetarian Times.

2995. **Product Name:** Granose Vegetarian Wholefood Kitchen Vegetarian Sausages.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1991 August.
Ingredients: Water, textured defatted soya flour (defatted soya flour, iron, thiamin, riboflavin, vitamin B-12), hydrogenated vegetable oil, rusk, stabiliser (methyl cellulose, of plant origin), sea salt, hydrolysed vegetable protein, herbs, spices, colour (beetroot red).
Wt/Vol., Packaging, Price: 270 gm paperboard box.
How Stored: Frozen.
Nutrition: Per 100 gm.: Energy 190 kcal (calories; 790 kJ), protein 6.9 gm, carbohydrate 12 gm, fibre 4.5 gm, fat 13 gm.
New Product–Documentation: Part of label sent by Leah Leneman. 1992. Jan. 2. 6.5 by 3.75 by 1.12 inches. Black, blue, white, and yellow on gray. Color photo of browned sausages on a plate with sliced tomatoes, green beans, and

© Copyright Soyinfo Center 2014

sliced browned potatoes. "Individually frozen sausages of seasoned soya protein. Six sausages. No artificial colours or preservatives."

2996. **Product Name:** Naturally Tofu Ice Cream (Frozen Dessert Mix) [Strawberry].
Manufacturer's Name: Sovex Natural Foods, Inc. (Marketer-Distributor).
Manufacturer's Address: 9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320 or 615-396-3145.
Date of Introduction: 1991 August.
Ingredients: Crystalline fructose, soy oil, malto-dextrin, corn syrup solids, tofu, sodium caseinate [from cow's milk], natural strawberry flavors, beet juice powder, sea salt, soy lecithin, cellulose gum, guar gum, xanthan gum, carrageenan.
Wt/Vol., Packaging, Price: 16.7 oz can. Later 22 oz can.
How Stored: Shelf stable.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1992. December. Soyfoods 2000 (Special supplement insert, p. 5). Shows 2 cartons of Tofu Ice Cream mix (vanilla and strawberry flavors). Talk with Sovex. 1992. Nov. 30. The strawberry flavor was introduce in about the summer of 1991.

Notice on side panel of Better than Burger? package. 1993 Oct. "Have you tried Naturally Tofu products: Better Than Milk? Ice Creme?"

Product with Label (Strawberry) and leaflet sent by Sovex. 1993. Oct. 12.

2997. Rabheru, Neil. 1991. New developments with Unisoy, soymilk, and Haldane Foods in England (Interview). *SoyaScan Notes.* Sept. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Unisoy was acquired by the Haldane Foods Group on 21 Dec. 1990. This has proved to be a very positive development for Unisoy. It is a great honor and very satisfying for Neil to be part of the same team with Dwayne Andreas and Peter Fitch, because both are very forward looking, energetic, and supportive men. The company now makes only soymilk. Other companies in the Haldane Foods Group now make the other soy products that Unisoy used to make–which is more efficient. For example, Genice Foods Ltd. makes soy margarine, yogurts, and ice creams. Unisoy plans to expand into a larger plant, probably at a new location. That phase, which will begin within 12 months, will involve an investment of £3 to £4 million. He is presently meeting with APV in connection with a new soymilk plant. Unisoy has not launched any new products since mid-1990. Neil has been too busy absorbing the Granose line into his production. Unisoy is now making all the soymilk that Granose used to buy from DE-VAU-GE, to use in continuing the Granose line of products that contain soymilk. Thus the Unisoy/Haldane now makes the profit that DE-VAU-GE used to make.

The acquisition of Granose by the Haldane Foods group was the most brilliant move one can imagine. 90% of the products that Granose was buying from other companies can be manufactured within the Haldane Foods Group. Granose's best products included their margarine, soymilk, ice cream, and yogurt. Peter Fitch deserves the credit for this stroke of

© Copyright Soyinfo Center 2014

genius.

The Haldane Foods Group now sells 4 soymilk brands, all now made by Unisoy: So Good (which used to be purchased from DE-VAU-GE; Sanitarium Foods in Australia only registered their brand in Australia and New Zealand), Granose, Unisoy, and White Wave. Neil believes that Unisoy makes the best-tasting soymilk in Europe today. Recently there was an independent magazine survey of all soymilks on the market and the Granose brand made by Unisoy won first, second, sixth, and ninth places. The UK soymilk market is extremely competitive and the prices are much lower relative to cow's milk than they are in the USA. On average at all retail outlets, cow's milk retails for about £0.50 per liter versus £0.59 to £0.79 per liter for soymilk. Thus soymilk in the UK retails for about 38% more than cow's milk.

Note: In the USA, cow's milk retails for about $0.72/liter and soymilk retails for about $1.86/liter or about 2.6 *times* as much as cow's milk. The current exchange rate is 1.79 U.S. dollars = 1 British pound. Thus U.S. cow's milk would sell for £0.40/liter (20% less than British cow's milk) and soymilk would sell for £1.04/liter (about 45% more than British soymilk).

In the UK most of the soymilk is sold in the multiples (supermarkets) in half liters (500 ml) cartons, and that is where the greatest growth is. There, soymilk is only about 20% more expensive than cow's milk. (Note: In the USA very little soymilk is sold in supermarkets.)

In the UK, Provamel (made by Alpro in Belgium) has about 42% of the total soymilk market. The four brands made by Unisoy have about 35-37%. The remaining 21-23% is divided among Sunrise, Plamil, and a few others. There is very strong soymilk brand loyalty in the UK.

Unisoy increasingly refers to itself as "the soyamilk division of Haldane Foods Group." The "Milk 'n' By-Products Ltd." part of the name will be dropped very shortly.

The last part of the soyfoods market that the Haldane Foods Group will attempt to capture is tofu, since Cauldron Foods has a very big lead on Haldane in this market. The Granose line of dry mixes used to compete directly with the Haldane Food Group's Hera line. Now all these products are made at one location.

The relationship between ADM, British Arkady, and the Haldane Foods Group has changed. The Haldane Foods Group is no longer part of British Arkady; both are now on the same level on the organization chart, and both report directly to ADM's European headquarters (ADM International Ltd. in England; John R. Mahlich, managing director). Peter Fitch used to work for British Arkady before the Haldane Foods Group was formed. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

2998. McDermott, Ron. 1991. New developments in the Loma Linda Adventist Health Study, vegetarianism in America, and Worthington Foods (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** A third phase of the Loma Linda Adventist Health Study is planned in order to further investigate some of the findings from the second study. For example, new evidence has shown that Seventh-day Adventists (SDAs) who consume larger amounts of nuts (such as walnuts, almonds, etc.) have lower incidence of heart disease. This seems contradictory since nuts have a high fat content. Gary Fraser at Loma Linda, the current principal investigator (PI), is now writing a grant proposal to NIH (National Institutes of Health). NIH sees this as a unique opportunity since SDAs are the only large organized group with a significant number of vegetarians.

Ron attended the second International Congress on Vegetarian Nutrition. Whereas the first congress in 1987 emphasized the *adequacy* of a vegetarian diet (i.e. it is safe and adequate; you can live on it without fear), the second one in 1992 emphasized the *benefits* of a vegetarian diet (it is healthier than the standard American diet and can protect you from diseases such as heart disease and cancer). This represents a major step forward. The proceedings will be published and the main articles should appear soon in the *American Journal of Clinical Nutrition.*

Worthington now has a professional public relations (PR) agency. They can up-link onto a satellite and send a video to various TV news companies. Worthington feels an increasing need to find the best way to communicate their message in a way that people can really hear and accept it.

Worthington has been doing a lot of focus groups related to meat consumption among 3 groups of people. (1) The meat restrictors, comprising 40% of the U.S. population, are trying to cut back on red meat consumption; most of them replace it with poultry; (2) The vegetarians; (3) Morningstar Farms users. The goal to is find out how Worthington can best communicate its message to each segment, label and package its products, etc. For example, what is the effect of writing "meatless" versus "vegetarian" on a package. Worthington has found that vegetarians are now much more accepting and less critical of people who are partial vegetarians but still eat some flesh foods. Most people become vegetarians for health reasons, but they soon add other reasons such as ethical reasons related to eating animals or to protect the environment. Address: Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

2999. Dinshah, H. Jay; Dinshah, Freya. 1991. How Jay and Freya got involved with the vegetarian and vegan movements in the USA (Interview). *VegeScan Notes.* Oct. 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jay's father, who was from India, was a

© Copyright Soyinfo Center 2014

vegetarian teacher in America. He specialized in color therapy, but vegetarianism was very much a part of his life and teachings. He raised his whole family as lifetime lacto-vegetarians. Jay learned about veganism when he was about age 23 and soon after that, in 1957, he became a vegan. Jay got involved with vegetarianism as a movement through a book by Geoffrey Rudd titled *Why Kill for Food.* He imported copies to the USA from England and sold them. In May 1960 he published the first issue of Ahimsa–which is still being published. Jay founded the American Vegan Society in 1960 (which he believes is the second oldest existing American national vegetarian society after the American Natural Hygiene Society [ANHS]. Note: For a differing view, see K. Akers. 1991. Re: The oldest vegetarian society in America), then the North American Vegetarian Society (NAVS) in the early 1970s. Jay helped to organize the North American Vegetarian Society, which was created with two goals: (1) To bring about a complete renaissance of the vegetarian movement in the United States and Canada, and (2) To organize the 23rd Congress, which was held 16-28 Aug. 1975 at the University of Maine, Orono, Maine.

Freya, a lifetime vegetarian, has been a vegan since 1959, and the Secretary of the American Vegan Society since 1960. Married to AVS President H. Jay Dinshah, she is an accomplished author, lecturer, and teacher.

Jay is quite interested in the history of vegetarianism, but is too busy working to educate people about vegetarianism now that he doesn't have the time to historical research. He feels vegetarians owe a great debt of gratitude to Seventh-day Adventists for their pioneering work in vegetarianism and health foods. He has a lot of books on vegetarianism but all are in boxes for lack of space. Address: American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey 08328. Phone: 609-694-2887.

3000. Register, U.D. 1991. Work with vegetarian diets at Loma Linda University (Interview). *VegeScan Notes.* Oct. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Mervyn G. Hardinge did pioneering work with vegetarian diets at Harvard Univ. with Dr. Fredrick J. Stare. Dr. Hardinge has retired from Loma Linda University but he still lives in the area.

There is now a vast body of medical research on Seventh-Day Adventists based in part on two large SDA Health Studies. These are mostly epidemiological studies on a large number of vegetarian and non-vegetarian Adventists. The first study started in 1960 and the second in the mid-1970s. Contact Dr. Paul Mills, or Dr. Gary Fraser at the closely related Center for Health Research, both at Loma Linda University. More than 180 studies have been published.

The Seventh-day Adventist Dietetic Association is still active (Box 75, Loma Linda, California 92354. Phone: 714-824-4599. Contact Georgia Hodgkin).

In about 1970 Dr. Register gave a speech on vegetarian diets in California. Following that speech there seemed to be a rapid rise of interest in vegetarianism among nutritionists and dietitians. Then he spoke to the Michigan Dietetic Association, the Massachusetts Dietetic Association, and the American Dietetic Association. At each speech he distributed various publications on vegetarianism, such as Dr. Hardinge's articles, 3 weekly diet plans, etc. The talk was published in March 1973 on the *Journal of the American Dietetic Association.*

Concerning Ellen G. White's teachings on vegetarian diets, Dr. Register thinks that her view is most clearly expressed in her book *Counsels on Diet and Foods.* She felt that "the original diet" for humans was the one described in the Bible in Genesis, consisting of grains, fruits, nuts, and vegetables. It was contrary to God's plan to have the life of any creature taken. But in the chapter titled "Extremes in Diet" she discusses the potential dangers of going to a total vegetarian diet too rapidly. She said that the time may come when we will have to dispense with milk and eggs in the diet, but we must wait until the Lord prepares the way. Part of this preparation may have been the discovery of vitamin B-12 and dissemination of the knowledge of its importance to those who consume no animal products. Most Adventists are lacto-ovo-vegetarians. He is now conducting a study on the levels of methylmalonate and homocysteine in the blood of 19 total vegetarians [vegans]; six of them have low serum vitamin B-12. There is a substance called methylmalonate, and in order to metabolize it the body needs a B-12-dependant enzyme. Elevated levels of methylmalonate in the urine indicating a low serum level of vitamin B-12 and a metabolic limitation. Other studies on people who were unable to absorb vitamin B-12 properly showed that they developed elevated levels of homocysteine in the blood and urine.

Note: Homocysteine is a naturally occurring amino acid not found in proteins. When methionine loses its methyl group, it becomes homocysteine. Methylmalonate is an important intermediate in fatty acid metabolism. Address: Dep. of Nutrition, Loma Linda Univ., Loma Linda, California 92354. Phone: 714-824-4365.

3001. McDermott, Ron. 1991. Early history of Loma Linda Foods and other companies acquired by Worthington Foods (Interview). *SoyaScan Notes.* Oct. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** After Worthington purchased Loma Linda Foods, 2 pallets loaded with storage boxes of old Loma Linda records and documents arrived. Ron, who used to work at Loma Linda in the early 1970s, has been going through these carefully for the past 6 weeks. There are some very interesting materials from both the Loma Linda history and the product manufacturing viewpoints. He is trying to save and file valuable materials (such as letters from Dr.

© Copyright Soyinfo Center 2014

Harry W. Miller), and discard what is not important.

When he is done with this, Worthington will have, in addition to its own history and that of its decade of work with Miles Laboratories, a wealth of information on the history of Loma Linda Foods, International Nutrition Research Foundation (INRF, started by Harry Miller and given to Loma Linda Foods), Battle Creek Foods, and Madison Foods, all filed in their archival vault.

The goal of the World Food Service in Washington, DC, is to disseminate the best product formulas and technology worldwide to Adventist food companies. Address: Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3002. Mills, Paul. 1991. The Center for Health Promotion at Loma Linda University (Interview). *SoyaScan Notes.* Oct. 31. Conducted by William Shurtleff of Soyfoods Center. [2 ref]

• ***Summary:*** The Center for Health Promotion at Loma Linda University was established in 1983 by Dr. Richard H. Hart, a physician graduate of Loma Linda, who is still the director. He also had a Doctor of Public Health degree from Johns Hopkins University. It has a strong clinical orientation, focusing on lifestyle intervention activities. For example, they have 6-7 different programs aimed at people who want to change one or more aspects of their lifestyle. They have programs in smoking cessation, weight reduction (using the Optifast program), stress reduction, alcohol and drug recovery (called Clear View), executive fitness (wellness type programs in which they bring in corporate executives based on contract). The Center is an independent for-profit, client-oriented institute within the university. Address: Loma Linda Univ., Loma Linda, California 92354. Phone: 714-824-4496.

3003. Mills, Paul; Beeson, Larry. 1991. Seventh-day Adventist health studies (Interview). *VegeScan Notes.* Oct. 31. Conducted by William Shurtleff of Soyfoods Center. [2 ref]

• ***Summary:*** Two major epidemiological studies on Seventh-day Adventists (SDAs) have been conducted by Loma Linda University. In 1958 two researchers at Loma Linda University, Richard T. Walden and Frank R. Lemon, wanted to gather information on lifestyles among SDAs. So they collected addresses, probably starting with church directories or the mailing list of the *Pacific Union Recorder* (a church periodical). In 1958 they mailed out a very short (3 inches long) and simple demographic questionnaire, asking only questions such as the name, date of birth, place of birth, sex, and education etc. for each person in the family. No questions concerning "exposure" or lifestyle (diet, frequency and amount of meat or dairy product consumption, exercise) were asked. From the response, they identified about 58,000 SDA individuals in California.

Then in 1960 Dr. E. Cuyler Hammond, an American Cancer Society administrator, obtained a random sample of 1 million people across the USA and sent them a 4-page dietary/lifestyle questionnaire. Waldon and Lemon got this 4-page questionnaire from Dr. Hammond, added 2-3 Adventist-specific questions at the end (such as age of baptism into the church, etc.), then in 1960 sent it to their list of 58,000 SDAs. Of those, about 25,000 SDAs (17,000 females and 8,000 males) were willing to participate and responded by filling out the lifestyle questionnaire and returning it. The researchers gathered incomplete death certificate statistics from 1958 and 1959; it is not clear who funded this first phase of the project. Then from 1960 to 1965 they did intensive "death certificate ascertainment." All the "tracing" was done by hand, without computers, with phone calls once a year to each person to ascertain if they were living or dead; if they were dead Walden and Lemon wrote to Sacramento for a death certificate. In 1965 the funding ran out. Then Dr. Phillips and Dr. Kuzma got extra funding from NIH to continue following that cohort/group through 1980. After 1965 "record linkage" was conducted using computers with the State of California death certificate files.

This first major epidemiological study of chronic disease in Seventh-day Adventists was called the "Adventist Mortality Study." It ran from 1960 to 1980. Initially funded and administered by the American Cancer Society, it studied all causes of death in 1 million Americans, including 25,000 SDAs in California who participated. Recently, additional funds were obtained by Loma Linda from an outside organization to update the mortality data for the SDA group through 1986–by ordering death certificates from those who died from 1980 to 1986.

In about the mid-1970s Loma Linda University School of Health published an undated 2-page leaflet titled "Summary of Results of Adventist Mortality Study–1958-65." (It as re-issued in 1981, unchanged except that it was now dated.) It states that "During the period 1958-65 a study was conducted by Loma Linda University among approximately 50,000 California Seventh-day Adventist church members. [Note: 25,000 of these SDAs did not fill out the 4-page questionnaire, but the causes of their death were ascertained from death records.] During this eight year period all deaths among Adventists were identified and the cause of death was determined." Graphs on the leaflet shows that, compared with non-Adventist Californians matched for age and sex, Adventists age 35 and over have (among other things) only 20% as much lung cancer, 13% as much liver cirrhosis, 55% as much coronary heart disease, 53% as much stroke, 55% as much diabetes, 13% as much suicide, and 72% as much breast cancer. The life expectancy for all California men and women at age 35 was 71 and 77 years respectively, whereas for SDA men and women at age 35 it was 77 and 80 years respectively.

© Copyright Soyinfo Center 2014

The second major epidemiological study on SDAs, funded by the National Institutes of Health (NIH) and conducted by Loma Linda University, is called the "Adventist Health Study" or "New Cancer Incidence Study." It started in the 1974 and was designed and implemented by Dr. Roland L. Phillips of the Department of Biostatistics and Epidemiology, Loma Linda University. He worked most closely with Dr. Jan W. Kuzma.

One major aim of this study was to determine which components of the SDA lifestyle may account for their lower risk of death from many different diseases not strongly related to smoking or drinking. Adventists have a high interest in health; many are vegetarians and make frequent use of unrefined foods. Other possible factors that might influence the low death rates are high educational background, good medical care, and less stress and anxiety.

This study was conducted solely on 34,198 SDAs throughout California. Dr. Phillips had these Adventists fill out a much more detailed questionnaire than the earlier 4-page questionnaire, specifically on dietary habits as they may be related to cancer incidence–that is newly diagnosed cancers. Only 4,000-5,000 SDAs in the second group were also in the first group. Roughly half of the SDAs are vegetarians, mostly lacto-ovo-vegetarian, and none of them smoke or drink alcoholic beverages. An important part of the study involved comparing cancer in Adventists and non-Adventists, including non-smoking non-Adventists. He obtained millions of dollars throughout his career to keep that study going. 1982 was the last year for which cancer incidence data was gathered, due to lack of funding from NIH. It is not clear why NIH discontinued the funding and efforts to determine why give a vague response. Thus no new data has been gathered since 1982, but Loma Linda had staff in the field until 1985 analyzing hospital cancer records for those people who were hospitalized up to 1982. And Loma Linda continues to analyze the data that was gathered up to 1982.

A number of popular articles resulted from the results of the second study, for example a March 1984 article in *Saturday Evening Post* titled "The Church Whose Members Have Less Cancer."

Paul has a bibliography titled "Bibliography of Health-Related Studies on Seventh-day Adventists Worldwide," which contains about 200 references. A great many of the citations in that bibliography are from the two studies discussed above.

The Center for Health Research, directed by Dr. Gary Fraser (who is both a cardiologist and an epidemiologist), was established as a research resource for all faculty within School of Public Health–not just of the epidemiology and biostatistics people who had traditionally done most of the research in the School of Public Health. They are not presently conducting any large or long term studies except for Dr. Fraser's work described above. But Dr. Fraser has just gotten a grant from the National Institute on Aging to do some studies of longevity in vegetarians using the data from the two major studies discussed above. Address: 1. Assoc. Prof. of Epidemiology, Dep. of Preventive Medicine; 2. Data manager, Adventist Health Study. Both: Loma Linda Univ., Loma Linda, California 92354. Phone: 714-824-4496.

Recipes are given for Salad marinade, Strawberry muesli, and Cauliflower in sauce. Address: Lueneburg, West Germany.

3005. **Product Name:** Granose Tofu Paté [Tomato, Herb, or Mushroom]. Relaunched and renamed Granose Vegetarian Patés in late 1992.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Howard Way, Newport Pagnell, Buckinghamshire, MK16 9PY, England. Phone: (0908) 211311.
Date of Introduction: 1991 October.
Ingredients: Incl. organic tofu, vegetable oils and fats, spices and seasonings.
Wt/Vol., Packaging, Price: 200 gm squeezable tubes.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: SoyaFoods (ASA, Europe). 1991 2(2):7. "Tofu pate's from Granose." The patés have a shelf life of 9 months unopened and will keep for up to 4 weeks refrigerated after being opened.

Spot in SoyaFoods. 1992. Autumn. p. 5. "Vegetarian Cheese Spreads and Patés in a Tube." The launch of Granose's 3 new cheese spreads "coincides with the relaunch of Granose Vegetarian Patés, with improved recipes and smoother textures." Soya flour is now used in place of tofu.

The name of one of the three flavors has been changed to Italian Style Tomato, and the tube has been reduced in size to 150 gm. One tube retails for £1.15.

3006. McDermott, Ron. 1991. New developments with Worthington Foods, Seventh-day Adventists, and vegetarianism (Interview). *SoyaScan Notes.* Nov. 5. Conducted by William Shurtleff of Soyfoods Center. Address: Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3007. McDermott, Ron. 1991. The use of wheat gluten in foods by Seventh-day Adventist food companies (Interview). *SoyaScan Notes.* Nov. 25, and 23 Oct. 1992. Conducted by William Shurtleff of Soyfoods Center.

Summary: Most of the early meat alternatives made by Seventh-day Adventist food companies were based on wheat gluten, or wheat gluten and peanuts. His recollection is that Worthington Foods first used wheat gluten in Choplets, introduced in 1941. He is sure that Choplets contained wheat gluten from the day they were launched. Before Fry-Chik, an early Worthington product containing spun soy protein fibers, introduced in about 1965, most of Worthington's products were based on wheat gluten. In 1968-70 Worthington developed a new generation of products containing wheat gluten; the first of these was Prosage (rhymes with "Sausage"). For the first time, fresh (not dried) wheat gluten was combined with spun soy protein fibers and textured soy protein concentrates to give improved texture, flavor, and

© Copyright Soyinfo Center 2014

nutritional value (through protein complementarity). Later the spun soy protein fiber was removed but the textured concentrate remained. Miles Laboratories, which bought Worthington in March 1970, did a lot of further development on Worthington's products; Breakfast Links, Breakfast Patties, etc. Morningstar Farms Breakfast Patties, a meatless sausage, which are an improved version of Prosage, were introduced to the mass market in 1974, still featuring the gluten-soy combination. In 1979 Morningstar Farms Grillers (a meatless hamburger patty based on gluten and soy; the Worthington equivalent is FriPat) were also introduced into the mass market, again featuring the gluten-soy combination. More than any other company, Worthington took gluten-based products to new levels of sophistication, with improved flavor, texture, and nutritional value, by combining gluten and soy protein using proprietary techniques. In the early 1980s the gluten-soy combination came to be used in a host of Worthington's products.

Today, of Worthington's 180 products, approximately 90% contain wheat gluten. Many of the products contain a combination of textured soy protein (soy concentrates or flour or spun soy protein fiber) or soy protein isolates with the gluten. The process by which the soy and wheat are combined and the desired texture is developed is proprietary information. Whereas many companies would use only textured soy protein, Worthington prefers the soy-gluten combination for the 3 reasons given above.

The technical aspects of gluten use are interesting. In the Seventh-day Adventist (SDA) companies, there was a gradual evolution from the process requiring the washing of flour and dough (to wash the starch out, yielding fresh gluten), to the use of dry vital wheat gluten, which causes much less pollution into the sewage system.

Ron will look in Worthington's extensive files to try to find out when John Harvey Kellogg, Worthington Foods, and Loma Linda Foods first used wheat gluten in a commercial food product.

Trudy Cravens at Worthington is now developing a computerized database of their products, which they call an "elimination list." For example, if someone wanted to eliminate wheat from their diet, they could print a list of all products in which neither wheat nor gluten was an ingredient. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

• ***Summary:*** This full-page, color ad, with a 30 cent coupon, shows color photos of prepared Okara Patties, Harvest Bake, and Kaffree Roma (a toasted grain beverage). Address: Worthington, Ohio 43085.

3009. Lindsted, Kristian D.; Tonstad, S.; Kuzma, J.W. 1991. Self-report of physical activity and patterns of mortality in Seventh-day Adventist men. *J. of Clinical Epidemiology* 44(4/5):355-64. [47 ref]
• ***Summary:*** "The Adventist Mortality Study provides 26-year follow-up through 1985 for 9,484 males who completed a lifestyle questionnaire in 1960." Moderate activity was associated with a protective effect on cardiovascular and all cause mortality using two types of mortality. For all cause mortality, moderate activity was protective to age 95.6 years, and for cardiovascular mortality it was protective to age 91.5 years. Address: School of Public Health, Loma Linda Univ., Loma Linda, California 92350.

3010. Mohr, Teddric J. 1991. Since 1866: Battle Creek Adventist Hospital. Battle Creek, Michigan. 15 p. Illust. 28 x 14 cm.
• ***Summary:*** This booklet commemorates the hospital's 125th anniversary. It opened in Battle Creek, Michigan, on 5 Sept. 1866 under the name Western Health Reform Institute in response to the foresight and urgings of Ellen G. White. It was a small 2-story frame building with a 10-bed capacity; Patients were charged $5-7 per week for room, board, and medical care. Initially, it was under the medical leadership of Dr. Horatio Lay, an Adventist physician who specialized in hydrotherapy. James and Ellen White encouraged John Harvey Kellogg to enroll in medical school and provided financial support for his studies. In 1875, at age 23, John Harvey graduated from Bellevue Hospital Medical School, then recognized as the nation's leading medical teaching institution. He took over as head of the Institute on 1 Oct. 1876, at which time it contained only 20 patients. In 1876 Kellogg had renamed the organization Battle Creek Sanitarium. He explained that the new name, a variant of "sanitorium," would come to mean a "place where people learn to stay well."

The San reached its peak of development in 1928 with the completion of the Twin Towers addition. During this "grand hotel" era the staff numbered 1,800 and the San could accommodate 1,500 patients with its 32 buildings located on 27.5 acres of land. Dr. Kellogg called his medical philosophy "biologic living." Focusing on caring for the "whole person" (body, mind, and spirit), he espoused regular exercise, abstinence from smoking and drinking, plenty of fresh air and sunshine, the total elimination of meat from the diet, and the importance of whole grains–practices we consider enlightened today.

"Over the years, and especially in the 'roaring twenties,' the San guest list read like a virtual who's who of medical professionals, business leaders, sports legends, and entertainers. Henry Ford, John D. Rockefeller, J.C. Penney, President William H. Taft, Thomas Edison, Will Durant, Johnny Weissmuller, William Jennings Bryan and Amelia Earhart were just a few of the rich and famous who put themselves in the capable healing hands of Dr. Kellogg and

© Copyright Soyinfo Center 2014

the Battle Creek Sanitarium."

Also discusses the development of peanut butter and Granose Flakes, Lenna Cooper (one of the founders of the American Dietetic Association) and Dr. David Paulson (founder of the Hinsdale Sanitarium), W.K. Kellogg and the Sanitas Nut Food Co.

"As the principles of wholistic health care became accepted throughout the world, many new institutions arose, copying the techniques and therapies started by Dr. Kellogg and practiced at the San. The incentive for people to travel all the way to Battle Creek for treatment diminished. With the onset of the Great Depression in the '30s, the average number of patients fell from 1,300 to 300 and the San began to experience financial troubles.

"In 1942, after nearly a decade in receivership, the San twin tower complex was sold to the government to serve as an Army surgical and rehabilitation hospital.

"Yet the San continued to operate, moving its operations that same year into the nearby Fieldstone Building, which had been purchased by Dr. Kellogg in 1913. Though not as grand or large as the twin towers building, the facility was unique in its own right, as the largest fieldstone building in the United States. The San remained there until 1972."

"Today, there are 568 Adventist health care facilities operating in 88 countries and the Adventist Health System includes some of the most prominent hospitals in the U.S., such as Loma Linda University Medical Center, Kettering Memorial, Florida Hospital and Hinsdale Hospital... Battle Creek Adventist Hospital, has become southwest Michigan's leading provider of mental health and addiction treatment." It has the capacity to treat over 150 people on an inpatient basis. Address: Battle Creek, Michigan.

3011. Rucker, Chris; Hoffman, Jan. 1991. The Seventh-day diet: How the "healthiest people in America" live better, longer, slimmer–and how you can too. New York, NY: Random House. 232 p. Foreword by John Scharffenberg, M.D. Index. 24 cm. [46 ref]

• ***Summary:*** This book introduces the Seventh-day Adventist low-fat vegetarian diet and health principles without their religious underpinnings but with many quotations to the writings of Ellen G. White, an Adventist pioneer. For example, concerning what is now called atherosclerosis, she wrote in 1896: "Both the blood and the fat of animals are consumed as a luxury. But... these should not be eaten. Why? Because their use would make a diseased current of blood in the human system.

Adventists, whether vegetarian or not, are less likely to get cancers of the breast, ovaries, bladder, prostate and pancreas than the rest of the U.S. population. Male Adventists live an average of 8.9 years longer than non-Adventists, and women 7.5 years longer. And the differences between vegetarian and nonvegetarian Adventists provide some of the best evidence of the health advantages of a vegetarian diet. For example, studies show that whereas nonvegetarian male Adventists get only 56% as much heart disease as the U.S. average, vegetarian Adventists who eat eggs and dairy products get only 39%; and those who avoid all animal products 12%.

Page 105 notes that a major study involving more than 25,000 Adventist adults over a period of 20 years indicated that an Adventist woman aged 25 will, on average, live to age 88, which 9 years longer than her non-Adventist counterpart, and an Adventist man aged 25 will, on average, live to age 84, which is 12 years longer than his non-Adventist counterpart. Moreover, "It appears that the earlier one embraces the complete Adventist life-style, the greater quality of life and longevity once can expect."

In a section titled "Guide to creating your own meatless roast" (p. 116-17), tofu, shredded soy cheese, and soy flour are listed as protein sources. Soy-related recipes include: Pesto tofu manicotti (p. 121). In the "Natural Foods Shopping Guide" (p. 207) descriptions are given of Soyagen, soy cheese, soy milk, and tofu.

3012. Loma Linda University, School of Public Health. 1992. Bibliography of health-related research studies among Seventh-day Adventists. Loma Linda University, Loma Linda, California 92350. 10 p. Unpublished manuscript. Updated: 1 Jan. 1992. [208 ref]

• ***Summary:*** This bibliography gives access to a vast body of medical research on the health of Seventh-day Adventists, worldwide, who do not smoke or drink, and 50% of whom are vegetarians–mostly lacto-ovo. Most of these publications have appeared in peer-reviewed journals. Address: Loma Linda, California.

3013. *Health Food Business* (*London*). 1992. Haldane Foods is facing a German food invasion. Jan. p. 5.

• ***Summary:*** Haldane Foods finds itself battling with the very church from which it purchased Granose Foods in Jan. (or Feb.) 1991. With that multi-million pound deal, Haldane established itself overnight as Britain's major health food manufacturer. At the time, Peter Archer was managing director of Granose. "But now the German equivalent of Granose Foods [DE-VAU-GE], owned by the German branch of the Seventh Day Adventists, is launching itself in the UK against Granose with a range of similar products.

"The Germans have not only set up a UK company, but have also convinced Nigel Phillips, the Haldane Foods marketing and sales director, to become its managing director!"

A large color photo shows Graham Keen in front of the Granose offices and sign. He has joined the Haldane Foods Group as Sales and Marketing Director. For the previous 14 years he was sales director of Northumbrian Fine Foods.

launches 34 products and signs exclusive six-month deal with Brewhurst. Jan. p. 5.
• ***Summary:*** GranoVita UK will be launching 34 products in its first wave in Dec. 1991. In Jan. or Feb. 1992 they plan to add another dozen or so products to their line. Nigel Phillips, the company's managing director, is putting soya milk products at the forefront of GranoVita's launch. "The majority of the business Granose used to do with Germany was soya milk based. Once this was switched to the UK (after Haldane purchased Unisoy), then GranoVita felt they must compete in the UK." GranoVita has given sole distribution rights to the independent health food trade to Brewhurst for 6 months.

3015. Persky, Victoria W.; Chatterton, R.T.; Van Horn, L.; Grant, M.D.; Langenberg, P.; Marvin, J. 1992. Hormone levels in vegetarian and non-vegetarian teenage girls: Potential implications for breast cancer risk. *Cancer Research* 52(3):578-83. Feb. 1. [75* ref]
• ***Summary:*** "Previous studies have suggested that hormonal factors associated with early age at menarche, late age at menopause, and late age at first full-term birth increase the risk of breast cancer in women. Cross-cultural studies have indicated that high-fat westernized diets may also be associated with increased breast cancer risk."

This study found that vegetarian diets in girls are associated with increased levels of DHS (dehydroepiandrosterone sulfate); it is present in both phases of the menstrual cycle, independent of other risk factors, and consistent with an increasing body of literature suggesting that DHS may be protective against cancer risk. Address: Epidemiology/Biostatistics Program, School of Public Health, Univ. of Illinois at Chicago, Box 6998, Chicago, Illinois 60680.

3016. Moulton, LeArta. 1992. Gluten malt is said to have therapeutic properties (Interview). *SoyaScan Notes.* Feb. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** A woman (Rev. Grace Gordon, who sounded a bit cranky) has been calling her for 2 years telling her how gluten malt (consumed as a drink for 3-4 months) gets rid of wrinkles and makes one's natural hair color come back. Shirley, who owns a health food store, told her that an elderly nurse at Loma Linda Hospital in California is giving this gluten malt drink to patients who are very sick. Since she started taking it, she is less tired than usual. It is not a commercial product and it is not malted. It is a raw gluten-flour milk shake. One can make it at home as follows: Mix 3/4 cup gluten flour (not high gluten wheat flour; she buys 50 lb at a time of an Australian brand), 2½ cups of water, ¼ cup of nonfat dried milk, ¼ teaspoon Red Star active yeast (not nutritional yeast), ¼ teaspoon vinegar, 1 tablespoon lecithin (typically soy lecithin). Whirl in a blender. Add a natural sweetener to taste, then (if desired) carob powder and/or fruits (such as melon). Address: Provo, Utah. Phone: 801-377-2239 (in 1990).

3017. Lee, C.H. 1992. Re: Companies presently making soymilk in Australia. Letter to William Shurtleff at Soyfoods Center, Feb. 17–in reply to inquiry. 1 p. Typed, with signature.
• ***Summary:*** Sanitarium Health Food Co. (Wahroonga, NSW) makes So Good. Berrivale Orchards Ltd. in Berri, SA, makes Soypreme. Dairy Farmers Co-OPerative Ltd. in Wetherhill Park, NSW, makes Sungold. Tixana Pty Ltd. in Campsie, NSW, makes Soybev and Soy Kink. Queensland Soybean Food Products Pty. Ltd. in Brisbane, QLD, makes an unknown brand, and Blissquik Food Products in Townsville, QLD, makes Wonder-Vite Soymilk Drinks (plain or flavoured). Address: Owner, Blissquik Food Products, P.O. Box 197, Garbutt [37 Hammett St.], Townsville, QLD, Australia.

3018. Hodgkin, Georgia E. 1992. Re: Diet Manual. Letter to William Shurtleff at Soyfoods Center, Feb. 20–in reply to inquiry. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "Yansee Wong's section of the Diet Manual was completed with the first listing of completed sections which was August 24, 1989. The project was voted at the Board meeting in February 1988. In talking with Yansee, she remembers turning in her rough copy around Christmas which would have been Christmas of 1988.

"You ask if the list is exactly as it was in the previous edition. It is not. I will send xerox copies of the 1982 edition, 1978, 1975, and 1971 revisions as well as the first edition, 1960 list of ingredients.

"The list of ingredients from the first edition is enclosed along with the title page of that manual." Address: Ed.D., R.D, Past President, Seventh-day Adventist Dietetic Association, Box 75, Loma Linda, California 92354.

3019. McDermott, Ron. 1992. Update on Worthington Foods (Interview). *SoyaScan Notes.* Feb. 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Second International Congress on Vegetarian Nutrition will be held in Arlington, Virginia from 28 June to 1 July 1992. It is sponsored by Loma Linda University. Worthington sees a rapid growth of interest in vegetarianism, both professional and popular, in America.

1992 will be a watershed year in Worthington's history in terms of sorting out strategies, technologies, and approaches to the market. That will be followed by many new product launches.

Worthington had manufacturing problems with its line of tofu products. Their plant is now running at 150% of capacity, so they didn't have space for the tofu products. It was frustrating for the sales force and all concerned not to be able to put the necessary effort into the tofu products. Zoning

© Copyright Soyinfo Center 2014

restrictions in Worthington prevent them from expanding the size of the "footprint" on their property. They do not own any other land in Worthington, but they are about to start a second plant in the Zanesville area, about 50 miles to the east. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3020. Lebowitz, Michael. 1992. America's best sources of information on Dr. John Harvey Kellogg (Interview). *SoyaScan Notes.* Feb. 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** As an antiquarian and former owner of Mt. Zion Books, Michael used to collect documents and material related to Dr. John Harvey Kellogg, but he sold (at cost) the entire collection, about 1,500 books to James Nix at the Loma Linda University Library. James is a superb source of information on this subject, and many other subjects related to the history of Seventh-day Adventism. He keeps much of what he knows in his head, but he travels a lot and thus is sometimes hard to get hold of. Michael had some catalogs and price lists from the 1930s and 1940s, but he recalls that there were also 4-5 pages of catalogs (both food and medical) in the back of some of Kellogg's larger books.

Jeff Reich in Sandpoint, Idaho, reprints many of Kellogg's old works and he owns many of Kellogg's books.

The University of Michigan also has a very complete collection of Kellogg materials.

There is also a Seventh-day Adventist man named David Lee in Loma Linda (P.O. Box 1844) who has studied Kellogg's material, made different synopses, and put them in his own booklet form, which he publishes privately. He is a wealth of information. He has studied that period of Adventist history, especially when they were starting to develop a medical school and how they went against their own belief system. Jim Nix would know how to contact him.

Lenny Jacobs has heard that there is a Kellogg library in Battle Creek, Michigan, maybe at the Kellogg Company (of breakfast cereal fame). Address: Chiropractor, Mt. Zion, West Virginia 26151. Phone: 304-354-6141.

3021. *Healthy Appetite* (*The*). 1992--. Serial/periodical. Worthington, Ohio: Worthington Foods, Inc. Vol. 1, No. 1. Feb. 1992. Frequency: Biannual. *

• ***Summary:*** Continues: *Tomorrow's Foods Today.* Address: Worthington, Ohio.

3022. Kushi, Michio. 1992. Introduction to *Culinary Treasures of Japan,* by John and Jan Belleme. 16 p. Jan. Unpublished manuscript.

• ***Summary:*** This manuscript, which was published in a condensed form in the actual book, tells the story of Mitoku and their work to export traditional Japanese natural foods to the Western world. Michio Kushi was instrumental in getting Mr. Akiyoshi Kazama involved in this work. Mr. Kushi, who became a World Federalist after World War II, came to the U.S. in Nov. 1949 to study at Columbia University. He continuously sought ways of establishing world peace, and increasingly came to believe that a proper diet is the basis for health, happiness, and peace.

In April 1966 the author's wife, Aveline, opened a small store named Erewhon in Boston. Michio began to search for a Japanese source for foods that Erewhon would sell. He was introduced to Mr. Kazama (who lived in Tokyo) through a Japanese friend, Mr. Obayashi, who resided at that time in New York City. Michio felt that Mr. Kazama understood his desire for foods of high quality. So Mr. Kazama "began his search for food producers and manufacturers who were sincere and willing to supply the kind of quality we requested. I know that for him, at that time, it was a great gamble. It was also a painstaking and slow step-by-step process."

Mr. Kazama was born on 1 Feb. 1930 in Yamanashi prefecture. He graduated from Waseda University in Tokyo, then was selected to study business in the United States. After arriving in Chicago, Illinois, he was drafted by the U.S. government to serve in the American Army in Korea and in Japan from 1956 to 1958. Upon his return to Japan, he settled in Tokyo where he became an import agent for a German company dealing in optics and electronics. After the Kushis contacted him, he became involved in the emerging natural food business. [He founded a company named Mitoku. Mi = Michio. To = Tomoko (Aveline's given name in Japanese). Ku = Kushi].

In 1968 Mr. Kazama made his first shipment of Japanese natural foods to Erewhon; the order was worth $3,000. The Kushis first met Mr. Kazama in Boston in 1970. Over the years, the volume of Mitoku's exports steadily grew, and expanded to Europe, Australia, and the Middle East. Today Mitoku ships its products to about 35 countries. Approximately 40% of Mitoku's exports go to America, 40% to Europe, and 20% to Australia and other regions. Annual sales are about $10 million. Among the major suppliers are Sendai Miso Shoyu Co. Ltd., Hatcho Miso Co. Ltd., Hagoromo Miso, Ltd., Hanamaruki Miso Co. Ltd, San Iku Foods Co. Ltd.

Distributors of Mitoku's products include the following: In the USA: Westbrae Natural Foods Inc., Great Eastern Sun Inc., U.S. Mills Inc., Tree of Life Inc., and Shojin Natural Foods (Hawaii). In Canada: Koyo Foods Inc., Flora Distributors Ltd., and Timbuktu. In Costa Rica: Distribuidora de Productos Macrobioticos S.A. In England: Sunwheel Foods Ltd, Clearspring Natural Grocer, Meridian Foods Ltd. In France: Celnat, Tama. In Belgium: Lima N.V. In the United Arab Emirates: Emirates Trading & Marketing Est. In South Africa: Key Health. In Austria: Naturkostladen, Lebenszeichen. In Switzerland: S'lotusbluemli, Terrasana, Futonhaus. In Sweden: Kung Markatta. In Norway:

© Copyright Soyinfo Center 2014

Alternative Import. In Finland: Makro Bios. In Portugal: Armazens Da Matinha. In Spain: Kunga. In Italy: La Finestra Sul Cielo, Probios S.R.L., Dalla Terra al Cielo, Solo Natura. In Israel: Tivoli Ltd. In Australia: Pureharvest. In New Zealand: Enso. In Singapore: Nature's Best. In Yugoslavia: General Export. In Japan: Seibu Department Stores Ltd., Tokyu Department Stores Ltd. Among the countries reached indirectly through trans-shipment are Hungary, reached through Austria, various South American countries reached through the United States, and other countries such as Poland, Czechoslovakia, Iceland, Andorra, Ireland and the Caribbean Islands.

As Mitoku developed its international operations, Mr. Kazama hired many students from Western countries, including Blake Rankin (USA), Ferro Ledvinka (Italy), Christopher Geoffrey Dawson (New Zealand, starting 1979), Robbie Swinnerton (England), Terrie Adams (USA), and Michelle Harbroun (France).

"For the past 10 years, Mitoku has echoed and supported the macrobiotic perspective with its motto 'Isshoku-Dogen.' These words, though they have been forgotten in the last few centuries by the very people in the health care field who should remember them well, mean literally 'medicine and food have the same source,' and can be translated as 'food *is* medicine.' This saying has been used and known as part of the ancestral heritage of wisdom transmitted from generation to generation for several thousand years in Oriental countries such as China, Korea and Japan.

"In an attempt to preserve Japanese traditions, Japan has instituted a 'Living Treasures' program granting official recognition and support to [living masters in] various cultural areas such as theater, music, dance, sculpture, carpentry, weaving... and arts and crafts. Ironically, though, Japan has not granted the same official recognition to its traditional methods of food processing and production in spite of the fact that increasingly large numbers of people throughout the world are now appreciating traditionally processed Japanese food products and have become aware of their important health benefits. The Japanese traditional arts of producing miso, soysauce, tofu, natto, amazake, rice vinegar, sake, mirin, condiments and pickles as well as cooking methods and preparation are unique among the culinary practices of the world... These foods are also works of art... It is my hope and recommendation that official recognition and support be granted by the 'Living Treasures of Japan' to those who have dedicated their life to the traditional art of food production and processing in spite of the hardships and commercial disadvantages they are compelled to face in business competition and present-day economical conditions." Address: 62 Buckminster Rd., Brookline, Massachusetts 02146.

3023. Loma Linda University, Dept. of Nutrition, School of Public Health. 1992. The Second International Congress on Vegetarian Nutrition: Program (Brochure). Loma Linda, California 92350. 3 p.
• ***Summary:*** The Second International Congress on Vegetarian Nutrition will be held in Arlington, Virginia (at the Crystal Gateway Marriott, near Washington, DC) from 28 June to 1 July 1992 (Sun-Wed). It is sponsored by Loma Linda Univ. For details contact Pat Johnston, Dep. of Nutrition, School of Public Health, Loma Linda Univ., Loma Linda, California 92350. Among the many big names in the field who will be making presentations are: T. Colin Campbell, Dean Ornish, Johanna Dwyer, Gary Fraser, James Whorton, Vernon Young, and many others.

The first international congress, a landmark event, was held on 16-18 March 1987. The American Dietetic Assoc. now has a vegetarian practice group. Address: Loma Linda, California.

3024. **Product Name:** Fromage de Soy (Soy Cheese with Casein).
Manufacturer's Name: Nutrition Specialties International, Inc.
Manufacturer's Address: Riverside, California. Phone: (909) 781-4401.
Date of Introduction: 1992 February.
Ingredients: Soy base (organic soybeans, filtered water), canola oil, casein, sea salt, calcium phosphate, sodium phosphate, natural non-dairy flavors, citric acid, carrageenan.
Wt/Vol., Packaging, Price: 8 oz. or 5 lb.
How Stored: Refrigerated.
New Product–Documentation: Anders Lindner. 1992. Spring. SoyaFoods (ASA, Europe). 3(2):6-7. "Soyafoods at Natural Products Expo West." The 12th annual Natural Products Expo West took place at the Anaheim Convention Center, from 10 to 13 April 1992. Interesting new products include: Fromage de Soy (soya cheese alternative in 6 flavors) from Nutrition Specialties International Inc./ Ltd., headed by Mr. Patrick E. Cochran. Profits go to the International Nutrition Research Foundation Inc., a Seventh-day Adventist organization promoting a rational, healthy, dietary and life-style.

Note: This product was renamed Soy Gourmet in early 1993.

3025. Perry, Patrick. 1992. Diet for a longer life. *Saturday Evening Post* 264(1):26, 28, 91. Jan/Feb. [1 ref]
• ***Summary:*** Discusses the health benefits of Seventh-day Adventists' vegetarian diet.

3026. **Product Name:** Natural Touch Garden Pattie.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1992 February.
Ingredients: Textured vegetable protein (soy protein

© Copyright Soyinfo Center 2014

concentrate, wheat gluten), mushrooms, egg whites, water chestnuts, onions, corn oil, carrots, cooked brown rice, green and red bell peppers, rolled oats, calcium caseinate, black olives, soy sauce (water, soybeans, salt), corn starch, onion powder, natural flavors from vegetable sources, soy protein isolate, spices, garlic powder, celery extract.
Wt/Vol., Packaging, Price: 9.5 oz (269 gm) box contains 4 patties.
How Stored: Frozen.
Nutrition: Per 1 pattie (67 gm): Calories 120, protein 11 gm, carbohydrate 8 gm, fat 4 gm (percentage of calories from fat 34%, polyunsaturated 2 gm, saturated 1 gm), cholesterol 0 mg, sodium 300 mg, potassium 160 mg.
New Product–Documentation: See next page. Ad in Natural Foods Merchandiser. 1992. Feb. p. 27. "Natural Touch introduces something completely new in vegetarian patties. Vegetables. New Natural Touch Garden Pattie is the first vegetarian pattie with real garden vegetables." This ad carefully avoids mentioning the main ingredient in the product–textured soy protein concentrates–which hardly have a "natural" image.

Talk with Worthington Foods. 1992. Feb. 10. This products was introduced about 1 week ago. The tofu version of this product has been discontinued. Leaflets sent by Evelene Callahan of Worthington Foods. 1992. Feb. 11. List ingredients and nutritional information.

3027. Kurata, J.H.; Nogawa, A,N,; Abbey, D.E.; Petersen, F. 1992. A prospective study of risk for peptic ulcer disease in Seventh-day Adventists. *Gastroenterology* 102(3):909-09. March. *
Address: Dep. of Family Medicine, San Bernardino County Medical Center, California.

3028. Prevedell, Donna. 1992. Soybeans: So organic? These farmers substitute management for pesticides to fill market niches. *Soybean Digest.* Mid-March. p. 38-39.
• ***Summary:*** Glen Spray and his brother Rex have been growing soybeans organically for 20 years on their 700 acres of their farm in Mt. Vernon, Ohio. They earn $10.50 to $12.00 a bushel and get yields of 50 bu/acre, "The Organic Crop Improvement Association reports only about 90,000 soybean acres, less than 0.2% of the U.S. total, were farmed organically in 1990. Why so few farmers are willing to devote so few acres to highly profitable organic soybeans is a mystery to veteran organic growers. From Nebraska to Ohio they routinely raise 40- to 60-bushel per acre crops, earn 15% to 100% over market prices and spend less on inputs than their mainstream neighbors. And they do it with the same machinery and practices found on conventional farms." Spray notes that 50 years ago all farmers grew their soybean organically. On level ground, they use a 4-year rotation of corn, soybeans, wheat or oats, and red clover. Aside from bedding from the cattle barn, no commercial fertilizer or lime has been applied for 2 decades. They plant Amsoy and Vinton varieties for the white hylum and higher protein content required by the tofu market. Details of the crop cycle are given. Four other farmers growing organic soybean can be found in Edgar, Nebraska.

3029. Kushi, Aveline. 1992. The origin of seitan and how it came to America (Interview). *SoyaScan Notes.* April 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Aveline thinks George Ohsawa coined the term "seitan," but Aveline is not sure when he coined it. Since he died on 23 April 1966, he probably coined it in the early- to mid-1960s. She first heard the term from George Ohsawa, she thinks in the early 1960s while she and Michio were still living in New York; they moved to Massachusetts in 1963. Shortly after hearing about seitan, she bought some canned gluten-based meatlike products made by Seventh-day Adventist food companies, probably in New York. She does not remember how, where, or when she first learned to make seitan. Beginning shortly after her last son was born in 1964 in Boston, she taught many of her macrobiotic students how to make seitan starting with high-protein wheat flour. She taught seitan-making in almost all of her cooking classes, and she taught how to use the starch like kuzu as a thickener to make creamy soups. Starting in about 1984-85 she started to use the starch, together with rice syrup, to make sweet dumplings for desserts.

The first seitan imported to America was made by Marushima Shoyu Co. on Shodoshima in Japan. George Ohsawa went to visit the company, talked with Mr. Mokutani (who is still the chairman, and a close friend of the Kushis, and a great admirer of Ohsawa), and showed him how to make it. Marushima began to make seitan commercially in the late 1960s. It was imported to America by Muso Shokuhin at about the same time the first miso and shoyu were imported. She thinks it came in small jars, and was so salty that she used it as a seasoning in place of soy sauce in stews (such as soybean stews) or cooked it with vegetables; this cooking made it softer. She is not sure which Japanese company (Muso or Mitoku) exported this seitan to America, or which American company imported it, but it probably started to be imported in about 1969.

Concerning wheat gluten, about 15 years ago, the Kushis, through Mr. Kazama, convinced a Japanese manufacturer of dried wheat gluten (*fu*) to make the product from whole wheat flour. Since that time it has been imported to America by various importers of macrobiotic foods.

Follow-up talk with Aveline. 1992. July 8. She has just talked with Lima Ohsawa (age 93) by phone in Japan. Lima has no recollection of ever making seitan in a cooking class in America, or of ever teaching anyone in America how to make it. Initially Aveline thought she might have learned to make seitan from Lima, but after talking with Lima she thinks she may have learned to make it herself by trial and

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

error, after she moved to Boston. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6869.

3030. Johnson, Lawrence A.; Meyers, D.J.; Burden, D.J. 1992. Soy protein's history, prospects in food, feed. *INFORM* (*AOCS*) 3(4):429-30, 432, 434, 437, 438, 440, 442-44. April. [54 ref]

• ***Summary:*** "This is the second part of a review that chronicles the individuals and the historical and economic factors noteworthy in the development of soy protein as food and feed ingredients." Contents: Introduction. Early Western food uses (whole and defatted soy flour, enzyme-modified isolated soy proteins as whipping agents, whipped toppings, cereal-soy blends). Soy flour and grits. Protein concentrates and isolates (Griffith Laboratories, Central Soya Co., Mead Johnson and Co., Central Soya). Dairy analogs (Dr. Harry W. Miller, Loma Linda Foods, Mull-Soy and Borden, Vitasoy, Edensoy, Worthington Foods and Soyamel, Prosobee and Mead Johnson, Rich Products and Chill-Zert, Tofutti). Spun fibers (Robert Boyer and the Ford Motor Co., Temptein, Worthington Foods, Bontrae, Bac*O's, Bac-O-Bits, Miles Laboratories, Morningstar Farms). Textured soy protein and meat analogs (W. Atkinson, ADM and TVP, General Mills and frozen Bontrae, the U.S. School Lunch Program). Nutritional advances in soy products. Today's world soybean and soy protein production (consolidation among manufacturers of modern soy protein ingredients: ADM, Cargill, Central Soya Co., Protein Technologies International, A.E. Staley Mfg. Co.). Future of soy protein products.

Tables show: (1) Soy meal consumption in the USA by type of animal: Poultry 41.1% of total 18.9 million metric tons, swine 27.4%, beef cattle 9.0%, dairy cattle 9.0%, other livestock 9.5%, human food 3.2%, industrial 0.5%. Thus, industrial (nonfood, nonfeed) uses for soybeans presently comprise no more than 0.5% of the protein produced from soybeans grown in the United States. (3) U.S. companies supplying protein in 1948-50 versus 1990 (industrial and edible flours, concentrates, and isolates). 23 companies then vs. 5 in 1990.

Note: Talk with Ed Milligan of EMI by phone. 1992. May 5. This article contains some misleading information. It refers to an article by Ken Becker written in 1971. In 1958-59 USDA developed a laboratory prototype of flash desolventizing. In 1959 they contacted EMI corporation in Des Plaines to commercialize the flash desolventizing system for production of light-colored, edible soybean flakes, for soy flour and grits, with a maximum PDI (protein dispersibility index). At that time Ed Milligan was just a newly hired member EMI, which undertook the project. Ed designed and installed the world's first commercial flash desolventizing system for Honeymead Products Corp. in Mankato, Minnesota, in 1960. Note that this system was used to make food, rather than feed. All but 2 systems have been used exclusively to make foods. All such systems produce a flake with a very light color and controlled PDI, whereas a DT (desolventizer-toaster) produces a golden colored flake. He is leaving for India in a few weeks to commission EMI's 22nd such unit. He has designed, installed, and started every one of the 22. Address: Center for Crops Utilization Research, Iowa State Univ., Ames, Iowa 50111.

3031. Worthington Foods, Inc. 1992. First quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 3 panels each side. Each panel: 22 x 9 cm. Address: Worthington, Ohio. Phone: (614) 885-9511.

3032. Buchmeier, John E. 1992. A sticky subject. *Heritage Battle Creek.* Spring. p. 58-61.

• ***Summary:*** An interesting, documented history of the origins and early history of peanut butter. The best available documentary evidence indicates that this popular and versatile food was developed in 1893 by John Harvey Kellogg at the Seventh-day Adventist Sanitarium in Battle Creek.

Richard W. Schwarz, in his book titled *John Harvey Kellogg, M.D.,* states that "Shortly after 1890 he [Dr. Kellogg] had a quantity of roasted peanuts ground up into a paste for use by patients who had difficulty in masticating nuts or peanuts (which are a legume) well enough to digest them properly. Later he decided that roasting caused the fat content to begin to decompose, irritating the digestive organs. From that time forward the sanitarium made its peanut butter from steam-cooked rather than roasted peanuts. Kellogg also devised a variety of nut butters, which he claimed were 'sweeter, more palatable, and more digestible' than regular butter. Making no attempt to secure patents which would let him control the production of either peanut butter or any of his nut butters, he announced that he believed that they were products that 'the world ought to have; let everybody that wants it have it, and make the best use of it.'

Bernice Lowe, in *Tales of Battle Creek,* states that peanut butter was on the menu of the Battle Creek Sanitarium as early as 1893. "The Atlanta-based Peanut Advisory Board says that a St. Louis [Missouri] doctor is responsible for peanut butter's debut in 1890. But the board does not have a name for the inventor. Dr. J.H. Kellogg was issued two patents for the invention of peanut butter. On 4 Nov. 1895 he filed an application for a patent on titled "Food Compound" (No. 567,901) which was granted on 15 Sept. 1896. Also on 4 Nov. 1895 he filed an application for a patent titled "Process for Preparing Nutmeal" (No. 580,787) which was granted on 13 April 1897.

A photo shows a can of "Nut Butter" (the caption says that it contains peanut butter) made by the Sanitas Food Co. of Battle Creek. Note: Several key questions remain: (1) In what year did Kellogg introduce peanut butter as a

© Copyright Soyinfo Center 2014

commercial product? (2) Where was the product sold? At retail stores, or only at the Battle Creek Sanitarium, or only by mail order from the Sanitarium? (3) How much of the product was sold? Address: Battle Creek, Michigan.

3033. Lindner, Anders. 1992. Soyafoods at Natural Products Expo West. *SoyaFoods* (*ASA, Europe*) 3(2):6-7. Spring.
• ***Summary:*** "The 12th annual Natural Products Expo West took place at the Anaheim Convention Center, from 10 to 13 April 1992. Some 900 exhibitors and 40 seminars with expert speakers attracted 12,000 visitors... Some 35 companies exhibited soya foods in Anaheim."

Interesting new products include: Edamame (frozen green soybean in the pod) from Miyako Oriental Foods. Fromage de Soy (cheese alternative in 6 flavors) from Nutrition Specialties International Ltd. (headed by Mr. Patrick E. Cochran; profits go to the International Nutrition Research Foundation Inc., a Seventh-day Adventist organization promoting a rational, healthy, dietary and life-style), Shedd's Willow Run soya margarine from Van den Bergh Foods (Mic-Ellen Associates Ltd.). The Vitasoy–Nasoya Group had a large stand at the show headed by Yvonne Lo and John Paino. White Wave Soyfoods Inc. and the SoyFoods Association of America sponsored a lecture titled "Vegetarianism and Soyfoods" by Michael Klaper, M.D. The Association represents about 30 companies within the soyfoods industry. Address: Director, Lactasoy Agency, Helsingborg, Sweden.

3034. *SoyaFoods* (*ASA, Europe*). 1992. Helfex '92. 3(2):4. Spring.
• ***Summary:*** "The International Health Food Exhibition, Helfex '92, was held at Wembley, London on 26 and 27 April. Over 160 companies concerned with health, diet, fitness and nutrition exhibited and several new soya products were launched.

"The Haldane Foods Group displayed their new range including a new Light Soya Milk, a new Soya Creem, a vegetarian cheese spread, burger and sausage mixes, and 6 new varieties of tinned products. JRJ Trading (The Redwood Company) had an interesting and tasty range of tempeh-based products including dips, spreads, patés and vegetarian rashers. Soya milks and desserts from Granovita, Haldane, Sojasun (Triballat), Vitasoy were also on display. Berrydales' No Cream Ices, made from fresh organic tofu and soya milk, introduced their new 4-pack which will allow consumers to purchase four different ices in one pack. Plamil Foods launched a new non-dairy chocolate bar, *Martello* and Marigold Health Food, manufacturers of canned braised tofu and other delicacies, also had a stand."

3035. Stoltz, Garth "Duff". 1992. A taste of cereal. *Heritage Battle Creek.* Spring. p. 46-57. [5 footnotes]
• ***Summary:*** This excellent two-part article documents the history of 101 cereal manufacturing companies (makers of breakfast cereals), that started in Battle Creek, Michigan. Part I is a history and part II is a table that lists the 101 companies alphabetically by company name. For each company is given the name, date of legal incorporation, products, and notes (such as succeeded by, dissolved, renamed, moved to, etc.).

The Battle Creek cereal boom was in its heyday during the years 1900-1905. Battle Creek became the home and center of America's breakfast food industry primarily because of three men, all great persuaders: Dr. John Harvey Kellogg, surgeon, health evangelist, and food inventor; Charles W. Post, shrewd capitalist and hypnotic advertiser; and Will Keith Kellogg, Dr. John Harvey Kellogg's younger brother. C.W. Post was the person most responsible for starting Battle Creek's food "gold rush" shortly after the turn of the century, but it was Will Keith who eventually made the greatest impact on the cereal business. Some important pioneering cereal companies, listed in chronological order, are: The American Cereal Co. of Chicago, Illinois, founded in 1888, made Zest flaked cereal. As part if a conglomerate of seven cereal companies, it became Quaker Oats in 1906.

Battle Creek Health Food Co. was founded in 1895 with C.W. Post as treasurer and primary stockholder; it dissolved in 1903.

Postum Cereal Co., founded by C.W. Post, started manufacturing "Postum Cereal Food Drink" on 1 Jan. 1895, and was incorporated on 26 Oct. 1896. Other early products included "Grape Nuts Food." The company was purchased by General Foods in 1929. General Foods was succeeded by Phillip Morris Co. in 1985, which merged with Kraft Foods to become Kraft General Foods in 1989–It is still manufacturing foods in Battle Creek.

Battle Creek Cereal Food Co., founded in 1897, made cereal coffee. It was succeeded by Cream of Cereal Co. in 1901.

The A.B. Barnum Cereal Co., founded in 1898, made Grain-O cereal coffee. It was succeeded by Grocer's Specialty Mfg. Co. in 1902.

Battle Creek Sanitarium Health Food Co. was incorporated in 1898 (However health food products, including cereals, were manufactured in the Battle Creek Sanitarium Bakery from 1877. The foods were produced not only for the patients at the San but also for former patients who ordered the products through the mail.) The company, whose name was changed to Battle Creek Sanitarium Food Co. in 1901, made health foods, corn flakes, Granose, Granola, and Caramel Cereal Coffee. It was succeeded by the Kellogg Food Co. in 1908 (it made nut butters, cereals, and meat substitutes); the name was changed to Battle Creek Food Co. in 1921.

Sanitas Nut Food Co. was founded in 1899 by Dr. John Harvey Kellogg. It made "Sanitas" corn flakes, nut butter, and health foods. It merged with the Battle Creek Sanitarium

© Copyright Soyinfo Center 2014

Health Food Co. to become the Kellogg Food Co. in 1908. It began operating in July 1908 with Dr. J.H. Kellogg owning all but 2 of its 15,000 shares of stock. Soon all the company's products were sold under the trade name "Kellogg's."

The Battle Creek Toasted Corn Flake Co. was founded in 1906 by Will Keith Kellogg, with much of the financing from C.D. Bolin, a St. Louis insurance executive; this was his first company run independently from his brother, Dr. J.H. Kellogg. It made Corn Flakes, after Will Keith convinced his brother to relinquish Sanitas' rights to the product. The company name was changed to the Toasted Corn Flake Co. in 1907, the Kellogg Toasted Corn Flake Co. in 1909, then the Kellogg Co. in 1922. The Kellogg Co. is today one of America's leading manufacturer's of breakfast cereals.

In this list of 101 cereal manufacturers we find two companies founded by Joseph and Almeda Lambert, who pioneered commercial production of peanut butter in America. No. 60 is the Lambert Nut Food Co. Date of legal incorporation: 1900. Products: Products: Peanut butter crackers, nut products, and machinery for making nut products. Notes: Name changed to Lambert Good Food Co. in 1901. No. 59 is The Lambert Good Food Co., Date of legal incorporation: 1901. Products: Same as above. Notes: Moved factory to Marshall [Michigan] in 1902; dissolved in 1930. No. 60 is another Lambert Co. The name was changed to the Lambert Good Food Company in 1901.

An endnote (p. 57) concerning the legal date of incorporation states that "companies often existed before they actually filed legal papers. Conversely, companies filed legal papers of incorporation and then never progressed beyond that stage to manufacture a product."

Contains many photos of cereal boxes, plus J.H. Kellogg, C.W. Post, W.K. Kellogg, and the Sanitas Nut Food Co. in 1901. Illustrations (line drawings) show the Postum Cereal Company factory in 1903 and John T. McCutcheon's cartoon of 1903 from the Chicago Tribune. Founding dates are the dates of legal incorporation.

Page 5, "About the contributors," notes that the author "is the official historian and archivist of the Battle Creek Sanitarium and Seventh-day Adventist Church in Battle Creek. He is founder and president of the Adventist Historical Society and a member of the Board of Directors of the Historical Society of Battle Creek. He serves as Vice-President of the national Adventist Historic Properties and is responsible for three historic properties and the Sanitas SDA Museum Building in Battle Creek. As a result of his interest in the health food industry originated by the Seventh-day Adventists in Battle Creek, Stoltz has an extensive collection of cereal and health food company memorabilia."

Talk with "Duff" Stoltz. 1999. Jan. 23. The first 50 entries were compiled by Ross Coller, a Battle Creek historian, who gleaned them from articles of incorporation in old city newspapers. Duff compiled the remaining entries.

Address: Battle Creek, Michigan.

3036. Worthington Foods, Inc. 1992. What's a tasty burger doing in a magazine like this? (Ad). *Vegetarian Times.* May. p. 3.
• ***Summary:*** A full-page, color ad, with a $1.20 coupon. "Surprise? Don't be. It's Grillers from Morningstar Farms." In the top half of the page is a color photo (close-up) of a meatless burger with lettuce and sliced tomatoes, between buns. Color photos across the bottom also show the front panels of: Cholesterol Free Breakfast Patties. Cholesterol Free Breakfast Links. Cholesterol Free Breakfast Strips.

This ad also appeared in the Sept. 1992 issue (p. 5), and in the May 1993 issue (p. 29). Address: Worthington, Ohio 43085.

3037. *Natural Foods Merchandiser.* 1992. Accredited nutrition program for physicians announced. June. p. 22.
• ***Summary:*** A newly accredited program called the Institute for the Advancement of Nutrition Education and Research, which aims to further physicians' knowledge about nutrition and health, was unveiled at Natural Products Expo West in April.

"The Institute's founder, Michael Klaper, M.D., made the announcement during his seminar called Soyfoods and Vegetarianism. Klaper is a nationally known author and lecturer on the nutritional advantages of a plant-based diet."

"The Institute's flagship course, a three-day intensive seminar entitled Let Food Be Your Medicine, has been accredited by the American Academy of Family Practice and the College of Family Physicians of Canada. The courses will be offered at various locations throughout North America.

"Staff members of the Institute include Klaper; Neal Barnard, M.D., assistant clinical professor at George Washington University School of Medicine; John McDougall, M.D., medical director of the McDougall Program at St. Helena Hospital... and Paulette Eisen, associate director, educator, author and co-founder of the Institute for the Advancement of Nutrition Education and Research. For more information contact the Institute for the Advancement of Nutrition Education and Research, 2611 Vanderbilt #2, Redondo Beach, California 90278. Phone: 310-318-8092. Fax: 310-318-8092."

3038. Dawson, Sue. 1992. New product introductions aimed at heart, sweet tooth. *Dispatch* (*Columbus, Ohio*). July 1. p. 6H. Food section.
• ***Summary:*** "Worthington Foods, which has been making an egg substitute called Scramblers for many years [since about 1979], is introducing another substitute called Better 'n Eggs. It is available both in frozen and refrigerated varieties.

"The new product has a different formula and less fat than the old one. Although the label lists zero fat and cholesterol (rounding down is allowed when the amount of fat is less than half a gram per serving), the product does contain corn oil. Eight ounces of the frozen product sell for around $1.19, while the 16-ounce packages of refrigerated retail for around $2.19."

3039. Worthington Foods, Inc. 1992. Second quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 3 panels each side. Each panel: 22 x 9 cm. Address: Worthington, Ohio. Phone: (614) 885-9511.

3040. *SoyaScan Notes.* 1992. Two TV ads by The Kellogg Co. depict tofu negatively, as if it symbolized a food used only by health nuts (Overview). Aug. 22. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** In one Kellogg TV ad, a wife gives her husband a Nutri-Grain Bar. He asks: "Is it tofu?" She says no. Another Kellogg cereal ad also uses tofu in much the same way.

3041. Nordquist, Ted A. 1992. Re: Overview and details on new developments with AB Winner and with Aros in Sweden. Letter to William Shurtleff at Soyfoods Center, Aug. 26–in reply to inquiry. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "I formed Aros Sojaprodukter AB in August of 1990 with Erik Kennhed, a business man from Eskilstuna, Sweden. I was VD or President with 51% to his 49%. Aros AB bought soybase from Trensums Musteri AB and sold it to Winner AB. Winner made Tofuline ice-cream and sold it to Aros AB. Aros AB in turn sold Tofuline to Ingman Foods, Finland, Nutana in Sweden, Nutana in Denmark and Nutana in Norway. Since I designed the soybase plant for Trensums, I had an exclusive contract with them on soybase. I worked with Winner to develop soy-based products, the ice-cream was the first.

"I did not have time for tofu. I sold Aros Sojaprodukter KB to Trensums and moved the Tofu plant to Trensums in July of 1991. Trensums Musteri AB is owned by Blekinge Invest and is situated in Tingsryd, about 30 minutes by car from Karlshamn where Winner is located.

"Then in August of 1991 Nutana in Denmark and Norway went bankrupt. Winner had about 100,000 dollars of ice-cream in stock. Trensums and Winner did not like my powerful position while I, according to the contracts, had no financial liability. I just took the profits. So they started talking to each other about me, or more specifically about Aros Sojaprodukter AB. Blekinge Invest forced Erik to sell his 49% to Blekinge Invest for a song, threatening him with possible losses if both Winner and Trensums decided to drop soya altogether. Once they bought out Erik I was next.

"I reached an agreement with Winner and Blekinge Invest in April of 1992. I sold my shares to Blekinge Invest who now owns 100% of Aros Sojaprodukter AB and KB. I work as a consultant for Winner until the end of this year.

© Copyright Soyinfo Center 2014

"Aros AB (Trensums) delivers soybase only to Winner. Winner sells Tofuline ice-cream directly to Nutana Sweden and Ingman Foods in Finland. They sell via their own Winner name to England.

"AB Winner, 374 82 Karlshamn, Sweden. Tel: 46-454-82000. Fax: 46-454-11375. International sales contact is Leif Andersson. President is Håkan Johnsson.

"Aros Sojaprodukter AB, Box 112, 36201 Tingsryd, Sweden. Tel: 46-477-11920. Fax: 46-477-18034.

"Aros (Trensums) does not want to actively sell soybase. They are happy to sell only to Winner AB. There is no President, but Jan Hallberg, vice-president of Trensums handles the paper work. Aros Tofu is off the market. Dansk Tofu is now sold in Sweden and Norway.

"Winner is in the process of being sold. The plot thickens!

"Anders Lindner, Erik Kennhed and I look on in interest as all this unfolds."

Note: Attached are photocopies of three Tofuline soy ice cream labels, sold by Nutana in Sweden. Address: President, TAN AB, Eningbölevägen 54, S-740 82 Örsundsbro, Sweden. Phone: +46 171 605 68. Fax: +46 171 604 56.

3042. *Dispatch* (*Columbus, Ohio*). 1992. Worthington Foods sued over Veggie Burger name. Sept. 1. p. 2E. Business section.

• ***Summary:*** "An Oregon company that makes hamburgers out of vegetables has filed a $500,000 trademark infringement lawsuit in federal court against Worthington-based Worthington Foods Inc. Wholesome and Hearty Foods Inc. of Portland, Oregon, calls its product a Gardenburger and claims Worthington Foods has infringed on the trademark with a product called Garden Pattie, which was introduced in February" [1992].

Paul Wenner, age 45, owner of the Portland company, is a vegetarian who in 1984 "ran the Garden House restaurant in Gresham, Oregon, when his line of veggie burgers was born. He said he began making Gardenburgers commercially in March 1985 with a production run of 800 patties."

3043. Worthington Foods, Inc. 1992. Natural Touch: Where great taste comes naturally (Ad). *Natural Foods Merchandiser.* Sept. p. 61.

• ***Summary:*** A full-page, color ad. "Natural Touch products are regularly promoted with 40¢ coupons in full-page, 4-color ads appearing in *Vegetarian Times, New Age Journal, Body, Mind and Spirit, Delicious,* and *The Utne Reader* (Over 80% of the readers of these magazines shop in natural food stores regularly)."

A large photo shows a meatless patty on a bed of lettuce on a plate. Other small photos show the front of four Natural Touch packages. Address: Worthington, Ohio 43085.

3044. Amatos, Christopher A. 1992. Worthington Foods sees healthy future. *Dispatch* (*Columbus, Ohio*). Oct. 3. p. 1D. Business section.

• ***Summary:*** After Miles Laboratories purchased Worthington Foods (a manufacturer of meat and egg substitutes) in 1970, they installed high-speed, high-volume equipment, but they were never able to achieve the economies of scale needed to make money. According to Dale E. Twomley, Worthington Foods' president and CEO, "They never saw black ink the whole time they owned us–12 years–and we saw a profit the first year" after the current management team bought back the company from Miles in 1982. The new setup gives Worthington much greater versatility and the flexibility to make 150 different products in one plant.

"Worthington, which earlier this year conducted its first public stock offering, is about to complete a new facility in Zanesville, Ohio, that will allow it to dramatically increase production of a new egg substitute, as well as make better use of its facility at 900 Proprietors Rd."

"One line that will be affected by the Zanesville facility is Better 'n Eggs, an egg substitute that Worthington is rolling out nationwide to compete with the market leader, Egg Beaters. Capacity restraints limit Better 'n Eggs production to 5 gallons a minute at the Proprietors Road facility, Twomley said, noting that production at Zanesville will be 25 gallons a minute.

"The new facility is expected to be operating during the first quarter of 1993. Better 'n Eggs, made up of 98 percent egg whites, complements the company's Scramblers egg substitute, which is 80 percent egg whites. Better 'n Eggs has zero percent fat, while Scramblers contains 3 percent.

"Worthington isn't saying much about other plans for the new plant, but more news is expected later this month. Twomley said it will play a role in the company's annual growth plan of 15 percent in revenues and 20 percent in net income... In 1991, Worthington's revenues were $70.2 million and net income was $2.8 million, or 77 cents a share. The company's stock, after hitting the market at $12 a share, has been trading in the $10 range recently. Yesterday it closed at $10.25, up 25 cents."

3045. Nix, James R.; Davis, Jean. 1992. Good sources of information in Battle Creek, Michigan, on early Seventh-day Adventist work with health reform, vegetarianism, and soyfoods (Interview). *SoyaScan Notes.* Oct. 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The people who are working on restoring the original Sanitas Nut Food Co. building in Battle Creek are a good source of information. This large and sturdy 3-story building (with 18-inch-thick lower walls) was constructed in 1901 by Will Keith Kellogg for his brother Dr. John Harvey Kellogg. It was used for producing early health foods, then later W.K. used it to produce Corn Flakes. The oldest existing Kellogg food factory, it is located right across the

© Copyright Soyinfo Center 2014

street from the current Adventist hospital in Battle Creek. It operated for 13-14 years as a cereal company, then the company got too big and moved; Dr. Kellogg last used the building as a hospital. Adventist Historic Properties, a division of the church, has purchased the building and is raising money to restore it and put an Adventist health and heritage museum into it. The City of Battle Creek is also creating a cereals museum which, in some sense will compete with this one. The Kellogg Co. is funding the latter museum.

In Battle Creek there are people who are very much into the history of the Adventist health food work such as: (1) Garth "Duff" Stoltz, who has taken the lead in restoring the building, has done extensive on the early food companies. He works as head of security for the Battle Creek Adventist Hospital. Phone: 616-964-7121. He has lots of information in his head and he has a lot of source material, including a huge collection of early food product packages, but it is not systematically organized. He is extremely busy with a full-time hospital job plus work on the new museum and as president of the local Adventist Historical Society. He is very good in providing leads and sources. He came to Battle Creek 10-15 years ago, became enthralled with early Adventist history, and started collecting. (2) Jean Davis. Phone: 616-964-3955. She is interested in documenting early SDA church history and early Battle Creek history. She has less interest in the health and food work but she is very detailed and meticulous, and an expert on SDA history in Battle Creek. She has extensive files of early Adventist-related documents. A housewife, she and her husband Glen have made this their hobby for 20 years. She does not publish.

In Battle Creek, Stoltz and others are working on an article on the history of all the various 100+ food companies (both Adventist and non-Adventist) that were started in Battle Creek, cloned after Kellogg. Mary Butler and Duff Stoltz are taking the lead on that project. For sources, they use the two Michigan University Libraries and the Willard Public Library in Battle Creek. Address: 1. Assoc. Univ. Archivist, Vernier-Radcliffe Library, Heritage Collection, Loma Linda, California 92354; 2. Battle Creek, Michigan. Phone: 714-824-4550 or 616-964-3955.

3046. **Product Name:** GranoVita Vegetable Frankfurters.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1992 October.
Ingredients: Water, vegetable oils and fats, onions, egg protein, wheat protein, soya protein, spices, seasonings, sea salt, gelling agents (guar gum and carob gum), wheat flour, glucose apples, smoke spice, okara, oat flakes, bread crumbs, herbs, milk protein, soya sauce.

Wt/Vol., Packaging, Price: 200 plastic tube. Retails for £1.65.
Nutrition: Per 100 gm.: Energy 1,121 Kjoules / 265 Kcal (calories), protein 9.3 gm, carbohydrate 3.2 gm, fat 23.9 gm.
New Product–Documentation: Label sent by Anthony Marrese. 1994. May. The manufacturer's name and address do not appear on the product, which is imported to England by "GranoVita UK Ltd., 34/36 Bromham Road, Bedford MK40 2QD, England. Produce of Germany." Label. 2 by 5½ inches. Red, black, green, and yellow on white. An illustration shows vegetables under a tree on a grassy hillside with the moon rising. "Suitable for vegetarians. Important–Please remove skin before cooking." Best used by 10 Oct. 1992.

VAU-GE in Germany.

3047. Shurtleff, William; Aoyagi, Akiko. comps. 1992. Bibliography and sourcebook on Seventh-day Adventists' work with soyfoods, vegetarianism, and wheat gluten, 1866-1992: Detailed information on 835 published documents (bibliographic), 602 commercial food products, 207 unpublished archival documents, 158 original interviews (many full text) and overviews. Lafayette, California: Soyfoods Center. 407 p. Subject/geographical index. Author/company index. Language index. Printed Oct. 15. 28 cm. [1606 ref]

• ***Summary:*** This is the most comprehensive book ever published on the work of Seventh-day Adventists (SDAs) with soyfoods, vegetarianism, or wheat gluten. In each of these closely-related areas SDAs have been the pioneers and leaders over a period of 70 to 130 years, and they have had the good fortune to be able to watch their visionary ideas gain increasing worldwide acceptance. Moreover, they have founded and successfully run many pioneering food companies that have transformed their ideas into commercial products and made them available to consumers worldwide.

The scope of this book includes all known publications, commercial food products, and archival documents, plus many original interviews, from earliest times to the present, worldwide. Thus it is also the single most current and useful source of information on this subject available today, since 83% of all references (and most of the early and current ones) contain a summary/abstract averaging 131 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 33 different document types, both published and unpublished; every known foreign language publication on the subject–including 55 in German, 25 in Spanish, 23 in French, etc.; extensive translations of many of the Japanese and European works; 158 original Soyfoods Center interviews and overviews never before published. Thus it is a powerful tool for understanding the development of these subjects and related products from their earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 17 years, the bibliographic records in this book feature (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 602 commercial food products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

3048. Worthington Foods, Inc. 1992. Third quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 3 panels each side. Each panel: 22 x 9 cm.
Address: Worthington, Ohio. Phone: (614) 885-9511.

3049. Morton, Charles. 1992. Update on Madison College (Interview). *SoyaScan Notes.* Nov. 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** A self-supporting group of which he is a part is starting to grow herbs on former Madison College land. He runs an herbal medicine correspondence course with about 350 students studying at home. They teach what the Bible says about herbs and what Ellen G. White says about herbs. She taught extensively about herbs. He feels that most people, including Seventh-day Adventists (SDAs) do not realize that Jethro Kloss was a Seventh-day Adventist as well as an SDA minister. Dr. Philip S. Chen's daughter is still alive in California. He publishes a newsletter that reaches about 900 Madison College alumni.

Late last year and in early 1992, the SDA church tore down all the Madison College buildings except for two–because they were old. The food factory was demolished several years ago and the library was torn down in Jan. 1992. The laundry, and the gym / classrooms are still standing and operating. Everything is new. The church still owns the land, which is now only several hundred acres. They have a 280-bed hospital (where herbs are used extensively), and a vegetarian cafeteria. The old vegetarian cafeteria in Nashville is still there. It is self-supporting and called Country Life–the oldest Country Life in the business. It is run by Mr. Wilson, a black man. Address: Madison Alumni Assoc., Box 5843, Madison College, Tennessee 37116-5843. Phone: 615-868-1974.

3050. Paolucci, Danny. 1992. Work with Swan Foods Corp. in Miami, Florida. The sad story of Robert Brooks and Mary Pung, founders of Swan Foods (Interview). *SoyaScan Notes.* Nov. 5. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Danny grew up in Miami. He became a vegetarian in 1970 at age 18, and soon began to buy

© Copyright Soyinfo Center 2014

10-pound bags of soybeans, which he pressure cooked. "They made me feel great." He went to practice Rinzai Zen with Sasaki roshi in Los Angeles at Cimarron Zen Center, the city center for lay practitioners at 2505 South Cimarron St., Los Angeles, California 90018. It is the mother temple for all Sasaki roshi's centers nationwide (Mt. Baldy monastery; Ithaca, New York; Jemez hot springs, New Mexico, etc.). There he was the head cook (*tenzo*) for 18 months during 1972-74. He cooked for an average of 10 people/day and he served many recipes (such as soyburgers) based on cooked whole soybeans. He also made his first batch of tofu (curded with lemon juice) while tenzo; he learned from a recipe in *The Soybean Cookbook* (a blue book) by Dorothea Van Gundy Jones. When he served the tofu to Sasaki roshi, the roshi said "Not so good; it's sour." One person at Cimarron who wanted to start a tofu company as a Zen Center business was Gentei (Sandy Stewart); but he couldn't do it because the Japanese had a tight grip on the market.

After leaving Mt. Baldy, Danny returned to his home town of Miami. He worked for a while in the produce section of one of the chain grocery stores; he needed money. The idea of starting a tofu company stayed in his mind. In late 1977, when he heard that Robert Brooks and Mary Pung had been running Swan Foods for about 1 year in Miami, he went over and said he would like to work for them. He soon became their production manager–despite his complete lack of experience. Robert would pay the employees using fistfuls and huge rolls of cash. Later Danny found out that Robert was dealing drugs. The business was not making money because no one was marketing the products, and there were far too many products. Also many of the products (including refreshing teas) spoiled very quickly due to a junky old refrigeration system that was not strong enough; even after it was replaced, the new system could not prevent widespread spoilage. Basically, they lost money every day on almost every product they made. Nobody in the company knew what they were doing; no one was "steering the ship." Mary was working on a cookbook, that was never published. Mary and Robert were both doing a lot of new product R&D, and playing with a clam-jaw-type vacuum packager. One worker, Jimmy Wilks, was an original partner. He invested $50,000 of his inheritance in the business and it was quickly all gone; his family never forgave him. Actually he left before Swan Foods went bankrupt because of an accident in the plant. One day, while he was working near the pressure cooker, the top blew off and he was covered with scalding-hot soy slurry. His coworkers dumped him into the cooling tank, where the water cooled him off. His burns were not that bad; he left the company more out of shock than for medical reasons. He later worked at Popeye's Health Foods in Miami.

Danny was hired just after Wilks left to manage the plant. Danny's stepfather, Marias, who is a financial analyst, was thinking of buying Swan Foods as it was near bankruptcy. Robert Brooks wanted $100,000 for the company. Marias went over their books and found that they lost something like $200,000 during the brief life of the business. Marias and Danny waited until Swan Foods went out of business. Danny bought all equipment that had not been sold. He also cleaned out the office, and kept any interesting documents–which he still has. Robert bought a moped and moved into Coconut Grove (Danny does not know whether or not Mary was with him), rented a room somewhere, and just buzzed around. "He was really wacked out." He may have had big debts and was hiding from his debtors. Danny still has a file on Swan Foods. He may still have some product sheets and recipes.

Danny thinks that Robert and Mary were never married. Mary (who was about age 23 in 1977) got pregnant, but Robert didn't want the baby, and wouldn't marry her. It was a boy who they named Osland (perhaps spelled Aslan, Ausland or Auslan). They were Premmies, and devotees of Guru Maraji. Dick McIntyre of Swan Gardens was also a Premmie and is still an active devotee in Miami. Five years ago Mary contacted Danny. 3-4 years ago she was a down-and-out alcoholic living in shelters for the homeless–completely destitute. She was probably arrested in Miami many times for prostitution and drugs. What a tragedy. Danny has no idea how to reach her, but he thinks she still lives in the greater Miami area.

After Swan Foods went under, Danny, financed by Marias, started Sunshine Soy Company, Inc. (see separate interview). Address: 2219 S.W. 59th Ave., Miami, Florida 33155. Phone: 305-266-0830.

3051. *Food Business* (*Chicago, Illinois*). 1992. Meatless goes mainstream. Nov. 23. *

• ***Summary:*** This cover story discusses the trend toward vegetarianism among mainstream Americans. It notes that: Morningstar Farms Grillers, a meatless burger made by Worthington Foods, are sold in 95% of U.S. grocery stores and supermarkets. Sales of soyfoods are expected to top $1.4 billion by the year 2000. In a survey of what is "in" among teens, 28% of respondents said that vegetarianism is "in," compared with 22% a year ago. A National Restaurant Association study found that the trend toward reducing meat consumption peaked in the over-65 age group. In a 1992 poll, 12.4 million adult Americans considered themselves vegetarians, almost double the number in 1985. One in five restaurant patrons won't even go to a restaurant unless there is a vegetarian option on the menu. One British company [Haldane Foods] sells 70 million packaged soyburgers a year in the U.K.

3052. **Product Name:** Tofu, Okara (Fresh, or Dry), Soysage, Okara Burgers.
Manufacturer's Name: Wesner's Tofu Farm.
Manufacturer's Address: West 14505 Coulee Hite Rd., Spokane, WA 99204. Phone: 509-467-7253.

© Copyright Soyinfo Center 2014

Date of Introduction: 1992 November.
New Product–Documentation: Talk with Roberta Wesner, co-owner. 1992. Nov. 17. She and her husband, Bruce, who are Seventh-day Adventists, started selling these products on 11 Nov. 1992. They sell about 100 lb/week.

3053. Soyfoods Assoc. of America. 1992. Soyfoods 2000: Merchandising soy products into the next century (Ad). *Natural Foods Merchandiser.* Dec. 16-page color special supplement, 8½ by 11 inches, inserted after p. 28.
• ***Summary:*** Contains full color ads by Morinaga Nutritional Foods, Inc. (Mori-Nu Tofu, Firm and Extra Firm), Lightlife Foods, Inc. (5 types of tempeh, Tempeh Burgers [Lemon Grill, American Grill, Barbecue Grill], Tofu Pups, Vegetarian Chili, Sloppy J, Foney Baloney, Fakin Bacon, Lean Links), Worthington Foods, Inc. (Natural Touch Okara Pattie, Garden Pattie, Dinner Entrée, Lentil Rice Loaf), Sovex Natural Foods, Inc. (Better Than Milk, Tofu Ice Cream [Vanilla or Strawberry], Good Shepherd Spelt, Millet-Rice Flakes, For Goodness Flakes!), Vitasoy (U.S.A.) Inc. (Light Vanilla, Original, and Cocoa soy drinks).

Contains black-and-white ads by White Wave, Inc. (Five Grain Tempeh, Meatless Tofu Steaks, Soya A Melt Soy Cheeses [Regular or Fat Free] and Singles, Lemon Broil Tempeh, Amaranth Tempeh, Teriyaki Burgers, Organic Tofu, Dairyless Non-Dairy Yogurts, Tempeh Burgers, Sea Veggie Tempeh, Meatless Healthy Franks, Snack'n Savory Tofu), Cemac Foods Corp. (Unbelievable brand Cheesecake; based on nonfat baker's cheese; contains no soy, no fat, no cholesterol), Solait International Ltd. (Solait Powdered Soy Beverage), Tofutti Brands, Inc. (Lite Lite Tofutti, Tofutti Cuties, Land of the Free [Non-dairy frozen desserts, free of fat and sugar, sweetened with fruit juice], Tofutti Egg Watchers, Better than Cream Cheese, Sour Supreme [Non-dairy sour cream], Premium Tofutti, Tofutti Soft Serve Mix), Sharon's Finest (TofuRella), American Natural Snacks (Soya Kaas), Great Eastern Sun (Miso Master brand misos), The Macrobiotic Wholesale Company, Turtle Island Foods, Inc. (Keep It Simple Stirfry–Diced Marinated Tempeh), Betsy's Tempeh (Tempeh), Quong Hop & Co. (The Soy Deli–9 Tofu Burgers, 3 Savory Baked Tofu, Pacific Tempeh, 3 Tempeh Burgers, 7 fresh water packed and vacuum packed tofu), MYCAL Group (natural dehulled soybean flakes).

Articles and sidebars include: "Welcome to the future: Soyfoods 2000." "Soyfoods Association names new executive director" (Virginia Messina, whose photo is shown). "Soyfoods Association mission statement." "The modern evolution of soyfoods," by Michael Whiteman-Jones and William Shurtleff (Shurtleff's photo is shown). "Unraveling the soyfoods merchandising mystery," by Michael Whiteman-Jones. "Research shows soyfoods may help prevent cancer," by Mark Messina, PhD (whose photo is shown). "Key reasons to buy soy: Environmental, nutritional, economic."

This attractive insert was coordinated by Franke Lampe and edited by Lisa Turner, both of NFM.

3054. Havala, Suzanne. 1992. Vegetarian congress recap. *Vegetarian Journal* (*Baltimore, Maryland*) 11(6):11. Nov/Dec.
• ***Summary:*** A 1-page summary of the second International Congress on Vegetarian Nutrition, which was "held in Arlington, Virginia, from June 28th to July 1st, 1992, as a joint effort of Loma Linda University and Medical Center and the Seventh-day Adventist Dietetic Association. Over 400 people from around the world convened, including researchers from Australia, Canada, England, Norway, Germany, the United States, and the Netherlands.

"The first significant event cited by the program chair was the creation of the Vegetarian Nutrition Dietetic Practice Group within The American Dietetic Association (ADA). The establishment of this group signifies recognition by ADA of vegetarian nutrition as a specialty area within the field of nutrition. Other notable additions to the program included presentations by Steven Lewis, special representative from UNICEF, speaking about world hunger issues, and Joan Gussow of Columbia University, speaking about vegetarianism and the environment. The choice of both topics demonstrates that the scientific community is becoming more aware of and interested in global food issues and the interrelatedness of food choices and the health of people and the planet.

"Possibly the best-received presentation at the Congress was Dean Ornish's session, 'Can Lifestyle Changes Reverse Heart Disease?'" Dr. Ornish presented strong evidence, based on his years of investigation on this subject, that they can.

3055. Mergentime, Ken. 1992. Retrospective: A century of natural products. The evolution of an industry. *Natural Foods Merchandiser* 13(11):1, 26-28, 30. Dec. [3 ref]
• ***Summary:*** An interesting history of today's natural products industry. The estimated number of retail stores selling natural products has grown from 150 in 1938, to 1,000 in 1960, to 6,500 in 1981, to 10,100 in 1991. Sales of natural products in the USA have grown from $1,900 million in 1980 to $2,900 million in 1986, to $4,640 million in 1991.

Health reform teaching began with Sylvester Graham in the 1830s, but the natural food manufacturing industry really began in the late 1800s in Battle Creek, Michigan. Two of the pioneers were Dr. John Harvey Kellogg and his brother Will Keith Kellogg–who in 1906 broke away from Dr. Kellogg and took Kellogg's Toasted Cornflakes mainstream.

The first health food stores (Martindale's in Philadelphia, Pennsylvania, and The Original Health Food Store in New York owned by Benedict Lust, M.D.) started in the mid-1920s and early 1930s. An early periodical was *Nature's Path*, published [1925-1953] by Dr. Lust. A key to

© Copyright Soyinfo Center 2014

the industry's establishment and growth was the acceptance and popularization of vitamins. Early health food companies included Sherman Foods in 1924, Fearn Soya Foods in 1925, El Molino Mills and Naturade in 1926, Ener-G Foods and Orjene (the first natural personal care company) in 1928. *Health Foods Retailing*, the industry's first trade publication, began in 1936 and continued until 1987. In about 1929 Andrew Rosenberger started a health food store named Nature Food Centre; the store is still open today–along with 101 others along the Eastern seaboard between Maine and Virginia. The publicly-owned chain, based in Wilmington, Massachusetts, now grosses nearly $50 million a year.

A sidebar discusses Anthony Berhalter of Chicago, Illinois, who in 1936 organized a consumer group named the American Health Foods Association. In the spring of 1937 in Chicago he organized America's first health foods convention, with 150 attendees, 10-15 booths, and many lecturers. At this meeting the National Health Foods Association was born. It was later renamed the National Dietary Foods Association, then the National Nutritional Foods Association (NNFA).

World War II spurred interest in vitamins and nutrition. A government program was called Vitamins for Victory. "By 1945, vitamins and supplements had become the most profitable product in health food stores. By the end of the decade the industry was, literally, quite healthy.

During the 1950s stores such as Lindberg Nutrition (Lindberg's Nutrition Service) became a beacon for retail innovations; it eventually grew into an 11-store chain.

"In 1952 a man named Joe D. Nichols, M.D., opened new doors for the industry when he presented a paper called Concept of Totality, in which he outlined a healing philosophy centered on the ideas of preventative medicine and nutrition, while considering environmental and psychological factors. This was the foundation of holistic medicine as we know it today. Nichols founded Natural Foods Associates (NFA) in 1953 to educate and change the eating habits of Americans. In 1954, he unveiled *Natural Food & Farming* magazine as forum for nutritional education and the fledgling organic industry...

"The ensuing decades saw a fundamental shift in consumers' perceptions of health and nutritional needs resulting in a phenomenal growth period for the natural products industry. Beginning in the mid to late 1960s, as the Baby Boom generation began to come of age, a new generation of well-educated consumers became aware of a need for natural foods... By the mid 1970s and early 1980s, the industry saw the migration of products, such as yogurt, granola and rice cakes, into mainstream markets."

Photos show: A health food store inside the Battle Creek Sanitarium in the 1870s. The Sanitarium at the height of its prosperity in 1903. 3057. Coon, Roger W. 1992. The great visions of Ellen G. White. Hagerstown, Maryland: Review and Herald Publishing Association. 157 p. No index. 23 cm. [58 + 200+ footnotes]
• ***Summary:*** In Volume 1, Chapter 7 is titled "The health reform vision: 'The cure.'" It contains a long, detailed discussion of the context for this vision of 6 June 1863, the vision itself, and Ellen G. White's response to it.

Note: Each of Ellen White's first three health visions is described earlier, in a separate record, at the date that it happened. (1) 1848 autumn. (2) 1854 Feb. 5. (3) 1863 June 5 or 6. Address: Highland, Maryland.

3058. Health & Heritage Museum. 1992. The Health & Heritage Museum (Leaflet). Battle Creek, Michigan. 3 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** This Seventh-day Adventist museum is housed in the building formerly occupied by the Sanitas Nut Food Co., Battle Creek's oldest existing Kellogg cereal factory, built in 1901. In 1914, due to soaring demand for its products (especially toasted flaked cereal), the company moved to a larger factory constructed south of the Kalamazoo River. "When the cereal cookers were moved out of the building, hospital beds were moved in and the Sanitas Nut Food Company spent 50 years as a hospital surgical and obstetrical annex. In 1990 the building was purchased by Adventist Historic Properties."

The museum is open to the public, free of charge, on Saturdays, 2-5 P.M. It contains early cereal and Sanitarium memorabilia.

Note: According to *The History of Adventist Historic Properties, Inc.* (p. 13): "On December 29, 1989, the trustees [of the AHP] signed a contract to purchase for $36,000 the former Sanitas Nut Food Company building in Battle Creek. Funds for the down payment came from Duff Stoltz's parents, Mr. and Mrs. Garth H. Stoltz, of Bradford,

Pennsylvania. This three-story building, with its massive masonry walls and solid concrete floors, was constructed in 1901 by W.K. Kellogg for his older brother, J.H. Kellogg, M.D., to house the food factory of the Battle Creek Sanitarium." Address: 169 W. Emmett St., Battle Creek, Michigan 49016. Phone: 616-968-7386.

3059. Numbers, Ronald L. 1992. Prophetess of health: Ellen G. White and the origins of Seventh-Day Adventist health reform. A revised and enlarged edition. Knoxville, Tennessee: University of Tennessee Press. lxviii + 335 p. Illust. Index. 21 cm. [400+* ref]

• ***Summary:*** Included in this revised paperback edition of the 1976 original hardcover edition, is a very interesting "Preface to the Revised Edition" (p. xix-xxiii, by the author) plus two new chapters–also extremely interesting in that they open a window into the soul of the Seventh-day Adventist (SDA) church.

One is the "Introduction: The Historian as Heretic" (p. xxv-lxviii), by Jonathan M. Butler, a friend and an American church historian; it is a history of the response to this book by the SDA church and by Prof. Numbers' parents. The book created an uproar in the SDA church. Prof. Numbers' father thought the book was "satanic" and he was divorced from his wife, in part because of the book. His maternal grandfather had been president of the International Adventist Church and many of his relatives were quite well known in the church. The main point is that a true believer often lacks the critical qualities of a good historian.

The second new chapter is an "Afterward: Ellen White on the Mind and the Mind of Ellen White" (p. 202-27) by Prof. Numbers and his wife (who is a clinical psychologist); it is on the psychology of Ellen White. Address: Prof. of the History of Medicine and the History of Science, Univ. of Wisconsin, Madison.

3060. Numbers, Ronald L. 1992. The creationists. New York, NY: Alfred A. Knopf. xvii + 458 p. + [16] unnumbered pages of plates. Illust. 25 cm. *

• ***Summary:*** This is a history of creationism in America. The Seventh-day Adventists have played a major role in initiating and sustaining the creationist debate. Basically, they started it. Some 25-30% of this book is Seventh-day Adventist history. The author looks most carefully at those creationists who possessed or claimed to possess scientific credentials, and how they dealt with matters of evidence, etc. He consciously stays away from making scientific, religious, or philosophical judgements, and makes only historical judgments. Address: Prof. of the History of Medicine and the History of Science, Univ. of Wisconsin, Madison.

3061. **Product Name:** Solait (Powdered Soy Beverage) [Original flavor].
Manufacturer's Name: Devansoy, Inc. Renamed Devansoy Farms by July 1994.
Manufacturer's Address: 202 West 7th St., P.O. Box 885, Carroll, IA 51401. Phone: 1-800-747-8605.
Date of Introduction: 1993 January.
Ingredients: Aug. 1994: Soybeans, brown rice syrup, sunflower oil, calcium carbonate, sea salt, natural flavor, lecithin.
Wt/Vol., Packaging, Price: 3.8 oz foil pack makes 1 quart. 26 oz can makes 6 quarts. Or 60 lb nitrogen flush bag.
How Stored: Shelf stable.
Nutrition: Per 1 oz. powder or 8 oz. liquid: Calories 135, protein 6 gm, carbohydrates 13 gm, fat 7 gm, sodium 145 mg, calcium 50 mg.
New Product–Documentation: This product was introduced in May 1987 by Miller Farms Food Co. located at 314 Main St., Cedar Falls, IA 50613. The company later changed its name to Solait International Inc. By April 1992 the company name was Solait International Ltd., P.O. Box 885, Carroll, Iowa 51401.

Ad (full-page, black-and-white) for "Solait Powdered Soymilk" in Soya Bluebook. 1993. Sept. p. 58. The company name is now given as Devansoy, Inc. located at 202 West 7th St., P.O. Box 885, Carroll, Iowa 51401. Phone: 1-800-747-8605. Talk with Bev Tierney of Devansoy. The company changed its name from Solait International Inc. to Devansoy, Inc. in Jan. 1993. The president is now Elmer Schettler. They make only one product–Solait Powdered Soy Beverage–however in about June 1992 they started selling soy flour, tofu powder, and textured soy flour made by other companies.

Ad (¼ page, blue, black, and white) in Natural Foods Merchandiser. 1994. July, p. 16 and Aug., p. 12. "New. Delicious, nutritious, and 100% Devansoy." the product advertised is Solait "Milk of the Sun" instant soy beverage, from Devansoy Farms, Carroll, Iowa. For information call 1-800-747-8605.

Product with Label sent by Beverly Tierney of Devansoy Farms. 1994. Aug. 22. Stand-up foil retort pouch containing powdered soymilk. 3.5 by 6.75 inches. Dark blue, light blue, orange, green, and black on white. Logo shows a farmhouse and barn in a field. with the sun rising over a hill. "Solait. 'Milk of the Sun.' Instant soy beverage. Devansoy Farms, Carroll, Iowa. Original flavor. Quick. East. Delicious. Low fat. Cholesterol free. Lactose free. 100% natural. Makes 1 quart."

News release sent by Devansoy Farms. 1994. Aug. 22. "More than a milk substitute, Solait 'Milk of the Sun' is a tasty ingredient for all cooking and baking needs." Elmer Schettler is president of Devansoy Farms.

Recipe booklet titled "Cooking with Solait" sent by Devansoy Farms. 1994. Aug. Contains 8 pages of recipes by various chefs.

3062. **Product Name:** Soy Gourmet (Soy Cheese with

© Copyright Soyinfo Center 2014

Casein) [Cheddar, Mozzarella, Chili Pepper, or Herbs & Garlic]. Previously named Fromage de Soy (Feb. 1992).
Manufacturer's Name: Nutrition Specialties International, Inc.
Manufacturer's Address: 1660 Chicago Ave., Suite P-11, Riverside, CA 92507. Phone: (909) 781-4401.
Date of Introduction: 1993 February.
Ingredients: Soy base (organic soybeans, filtered water), canola oil, casein, sea salt, calcium phosphate, sodium phosphate, natural non-dairy flavors, citric acid, carrageenan.
Wt/Vol., Packaging, Price: 8 oz. or 5 lb.
How Stored: Refrigerated.
Nutrition: Per 1 oz.: Calories 50, protein 5 gm, carbohydrates 5 gm, fat 1 gm, cholesterol 0 mg, sodium 198 mg, potassium 15 mg, calcium 170 mg.
New Product–Documentation: Two-page leaflet from Natural Products Expo West. 1993. Feb. "New update effective January 1993." The company's president, Patrick Cochran, has over 23 years experience in the specialty foods industry. Note: According to one industry observer, this product is made by Phil Leisac & Sons of Portland, Oregon.

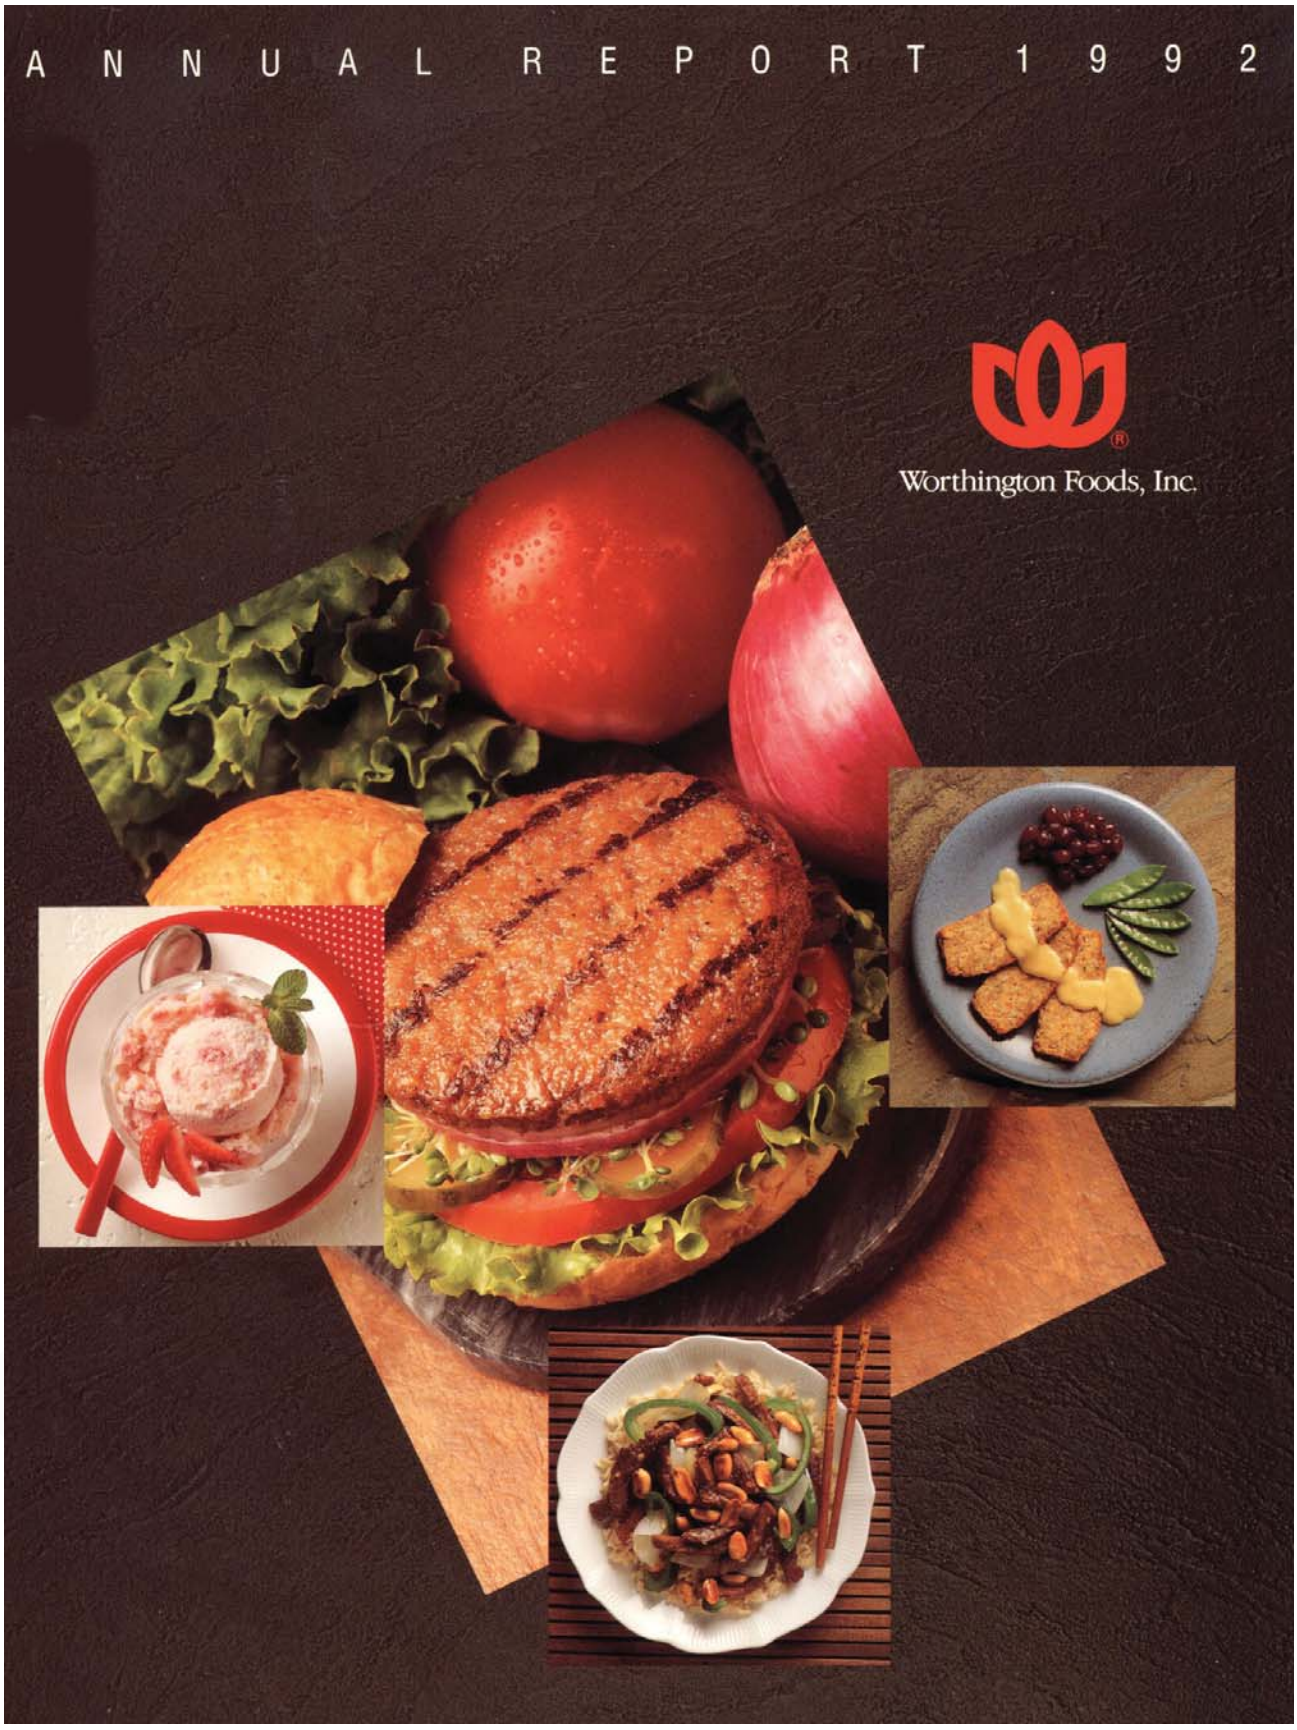
Leaflet (8½ by 11 inch, brown and black on beige) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 1994. March 10-13. "Soy Gourmet. Simply the best! The gourmet quality non-dairy cheese alternative made from organically grown soybeans... Less than one ounce of fat per serving." "We do not use spray-dried or modified tofu products as many of our competitors do." The company address has changed to Suite P-13 from Suite P-11. The ingredients have also changed–more casein is used than canola oil: Soy base (organic soybeans, filtered water), casein [dairy milk protein], canola oil, sea salt, calcium phosphate, sodium phosphate, natural non-dairy flavors, citric acid, carrageenan. A new size is 20 lb. Note: This brochure claims that the product is non-dairy even though it uses casein as a major ingredient.

Talk with Patrick Cochran, owner of NSI. 1994. April 19. This product line was launched in March 1993 at the Natural Products Expo West in Anaheim. It no longer claims to be non-dairy. It is sold refrigerated. Patrick was formerly with Loma Linda Foods. This is still the company's only product line. The source of the company's soymilk is confidential.

Talk with Kevin Cross of Stonecrest Natural Foods. 1998. Nov. 13. Kevin now owns this Soy Gourmet product line. He bought the company–a small L.A. firm that just didn't have the finances to get the product going. They were about to go under, so Kevin's company basically just bought the inventory and the label/brand. They had it in some supermarkets in the Los Angeles area. It has always been sold mostly in the Los Angeles area, in Ralph's, Whole Foods, Wild Oats, Pavilions, etc., and at Andronico's in northern California. It has an upscale-looking label with gold foil around it. He plans to introduce a "Rice Gourmet" line of cheese alternatives next month.

3063. Worthington Foods, Inc. 1993. Annual report 1992. 900 Proprietors Rd., Worthington, OH 43085. 16 p. 28 cm.
• ***Summary:*** See next 2 pages. This is the company's first annual report to shareholders since it went public. "Sales: Total sales reached $75.6 million in 1992, an increase of $6.3 million or 9% percent over 1991. Sales gains were recorded in each of the Company's four national brands."

"Earnings: Net income for 1992 was $2.8 million, an increase of 9.1% over 1991."



On the inside rear cover, the Company's four product lines are described and the logo for each displayed.

"Since 1939 Worthington Foods has been owned by a growing number of investors." "Common Stock: We successfully completed an initial public offering of 1,750,000 common shares on April 16, 1992, at a price of $12 per share, of which 1,410,000 were sold by the Company and 540,000 were sold by selling shareholders. This provided over $15 million of capital to the Company which was used to significantly reduce our debt and broaden our shareholder base. These accomplished objectives have strengthened the Company's financial resources which will significantly help us in achieving our aggressive growth and profit objectives for the future." Address: Worthington, Ohio. Phone: (614) 885-9511.

3064. Worthington Foods, Inc. 1993. Form 10-K. 900 Proprietors Rd., Worthington, OH 43085. 39 p. 28 cm.
• ***Summary:*** This is the version of the company's annual report submitted to the U.S. Securities and Exchange Commission. Address: Worthington, Ohio. Phone: (614) 885-9511.

3065. Meyer, Edwin W. 1993. How Ralston Purina got into the soy protein isolate business (Interview). *SoyaScan Notes.* April 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ralston Purina began with industrial isolates which were used for coating paper and sold under the brand name ProCote. They probably heard about Glidden's activities with food-grade isolates so they probably just went ahead and began making edible isolates. Any specialist in this field would have known how to go from industrial to edible isolates. Ed thinks (but is not sure) that Bob Boyer arrived at Ralston Purina from Ford after Ralston Purina started making edible isolates; he was instrumental in showing Ralston how to use their edible isolates to make edible spun soy protein fiber. In the late 1950s Boyer went around trying to sell interest in and licenses to his patent for making spun soy protein fibers. A number of companies took a nonexclusive license including General Mills, Worthington Foods, etc. He may have approached either Glidden or Central Soya. Finally he went to Ralston and sold them the residual exclusive. Address: 1701 N. Sayre Ave., Chicago,

Worthington Foods produces more than 150 different items to provide healthier alternatives to meat, eggs and dairy products. These food items are free of meat, animal fat and cholesterol.

Worthington Foods markets its products nationally under four brand names:

*The **Worthington**® brand satisfies the preferences of consumers seeking premium quality meat substitutes. The line is sold in health and specialty food stores.*

*The **LaLoma**® brand (formerly Loma Linda Foods) complements the Worthington products by offering nutritious meat analogs to health and specialty food shoppers.*

*The **Natural Touch**® brand meets the needs of health food shoppers seeking products free of artificial additives, flavors or colors. These products are made from all-natural ingredients with minimal processing.*

*The **Morningstar Farms**® brand is the most widely available line of zero-cholesterol alternatives to processed meats and whole eggs. They are distributed nationally through supermarkets. Scramblers® and Better'n Eggs™ egg products can be used in virtually all applications calling for whole, shell eggs.*

Illinois 60635. Phone: 312-637-0936.

3066. McDermott, Ron. 1993. The effect of the work of Henry Ford and his researchers on Worthington Foods today (Interview). *SoyaScan Notes.* April 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Robert Boyer, who worked for many years with Henry Ford, brought the technology for making spun soy protein fibers (SPF) to Worthington Foods. Today, as far as Ron knows [and as far as Soyfoods Center knows], Worthington is the only company in the world making SPF. They are used in about 15-20% of Worthington's meat alternatives, and they are especially useful in chicken-like products. More specifically, they are used in about 15% of their Morningstar Farms line of products (they are not used in Grillers, Breakfast Patties, and Breakfast Links), and in about 20% of their other canned and frozen meat alternatives. A new Morningstar Farms Breaded Chicken Patty, which is in expanded test market, also contains spun soy protein fiber.

In April 1992 Worthington had their first public stock offering to finance their new plant, so their financial figures are now available. The stock is traded on the open market over the counter (OTC) under the symbol WFDS for about $9.75 per share. The company total sales for 1992 were $76 million. Of this, meat alternatives accounted for about two-thirds of the total sales, or about $51 million. If SPF account for 17.5% of this, then they have a retail value of about $8.8 million.

Most of Worthington's meat alternatives are made from a combination of wheat gluten and textured soy protein concentrate. SPF work best in simulating the texture of long muscle fibers, as are found in chicken-like products, such as chicken breast or drumsticks. They also work well to simulate fish cutlets or non-ground red meat (such as roast beef), but there is not much demand for these types of products from Worthington customers. Most beeflike forms are burgers made to simulate ground beef. Moreover plain SPF has a better, more bland and less beany flavor than soy protein concentrates, and they hold and bind other added flavors better.

Why doesn't the company use more SPF? Because they are a very expensive ingredient, and Worthington's growth is in low-tech products, both from a consumer preference and a cost viewpoint.

But Ron is quick to add that SPF have had a major impact on the overall growth of Worthington Foods that is not at all adequately expressed by the present 15-20% figure. First, "the initial impact was huge." Before Bob Boyer came along and brought this technology from Henry Ford, Worthington was making mostly canned wheat gluten products for a very small and specialized denominational market. The first SPF products propelled Worthington into a new level of technology, the mainstream market including supermarkets, and into frozen foods. Second, the new SPF technology was a major factor in attracting Miles Laboratories, which purchased Worthington in March 1970s and took the company into the big leagues–in every area of business from accounting to quality control, from manufacturing to marketing. Third, when trying to deliver a full line of products to consumers, having meatless alternatives to chicken has given Worthington an important competitive advantage. Now that Americans consume more chicken than beef, this becomes increasingly important. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3067. McDermott, Ron. 1993. Increasing use of wheat gluten in foods in America (Interview). *SoyaScan Notes.* April 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron sees the use of wheat gluten increasing in the USA. Steve Demos of White Wave is starting to use more gluten. [Note: In June 1989 White Wave launched Meatless Healthy Franks, a tofu hot dog which had wheat gluten as the third ingredient. In Sept. 1990 White Wave introduced Meatless Healthy Bologna, a tofu-based product which also had wheat gluten as the third ingredient. In Feb. 1993 White Wave launched Traditional Style Seitan, in which wheat gluten was the main ingredient.] Ivy Foods also makes some nice gluten products. There are a number of advantages of using wheat gluten and soya together. The wheat gluten often improves the texture and flavor in meat alternatives, while sometimes lowering the fat content of the combination. The soya generally reduces the cost of the combination.

About a year ago ADM (Archer Daniels Midland Co.) purchased Ogilvie (pronounced OH-gul-vee) Mills in Keokuk, Iowa. So now ADM is one of the world's largest manufacturers of wheat gluten, but most of this gluten is going into the bread baking industry. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3068. Butke, Charles. 1993. The Drackett Company's work with soy proteins (Interview). *SoyaScan Notes.* April 15 and May 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** When the Ford Motor Co. sold its soy protein operations to The Drackett Co. in Nov. 1943, Robert Boyer, Frank Calvert, William Atkinson, and Charles Robinette went to Drackett as part of the deal. Charles (now age 71) started working for Drackett in 1946 in the R&D lab at Cincinnati as a chemist and chemical engineer; he had never worked for the Ford Motor Co. For the first 6 months, Fred Wilson from Ford worked in the same lab with him; then Fred moved out to production. His work was to try to increase the amount of protein extracted from the defatted soybean meal.

There was a man named J.F. Johnson who was a very

© Copyright Soyinfo Center 2014

well educated and competent man. He was one of the first graduates of MIT [Massachusetts Institute of Technology, Cambridge, Massachusetts]. From Procter & Gamble, he came to work for Mr. H.R. Drackett, the company's president. He designed Drackett's original soybean crushing and protein extraction plant on Spring Grove Ave. in Cincinnati. His design and process was different from that used previously by Ford. At this plant Drackett processed soybean oil meal, oil, and Drackett Soybean Lecithin (in 55 gallon drums by 1945). Johnson designed a system whereby the oil was extracted from the soybeans using hexane solvent, and the crude soy oil was run into huge tanks and allowed to settle for 7 days. The good oil was decanted off the top and the foots on the bottom were reprocessed and yielded lecithin. Johnson's good soy oil was good enough to use in home cooking; it was used in consumer sampling but it was never sold commercially.

When Ford's soy protein operations went up for sale, H.R. Drackett thought that his soybean crushing operations and Ford's technology for spinning soy proteins would make a perfect marriage.

First Drackett set up an experimental soy protein plant at Spring Grove, then they made it into a commercial plant next to their soybean extraction plant at Sharonville, Ohio, which was crushing about 55,000 bushels/day of soybeans. This plant was later said to be at Evendale (even though it never moved) either for tax purposes or because city boundaries moved.

Charles had a spiral-bound catalog titled "Drackett Proteins" (which he sent to Bob Griffin at Drackett about 6 weeks ago in response to an enquiry related to Drackett company history) that described the three types of industrial isolated soy proteins made and sold by Drackett when he arrived in 1945–Protein 110, Protein 112, and Protein 220. The first two were low-viscosity proteins of low molecular weight used in paper coatings and sizings. The Protein 220 was used very widely in water-based paints. The names of these proteins were later changed to Ortho Protein–of which there may have been different types. A man named Sam Wise (now deceased) held one of the original patents for making water-based paints. Mr. Drackett sold that patent to a big paint company so that they could get into the water-based paint business.

Drackett made and sold Soybean Azlon (spun soy protein fibers) from about 1946 to 1949. Their main customer was the American Hat Corporation (in Connecticut), which used it in felt hats. Chuck is absolutely certain that the Azlon was sold commercially because he was in charge of approving the shipments to go out. It had very good felting properties. Drackett made about 1,000 to 1,500 lb/day of Soybean Azlon, cut the fibers into lengths of about 2½-3½ inches as desired by the hatter, tied them into loose uncovered bales with cord, and shipped them. There were also two other smaller companies that used Azlon. At the time, H.R. Drackett had suits and hats made for his sales force that contained Azlon.

Drackett also had a small operation that made plastics, and he is sure that they received 1-2 orders for these in the form of 3-foot diameter bases for large industrial fans. Not much of the plastic was sold and Butke thinks this was the only application for which it was sold commercially. He does not recall which company ordered the plastic bases.

In 1949 Drackett shut down its plant that was manufacturing Azlon, quit making isolated soy protein, and also shut down some of its soy protein research. Charles was moved out of soybean research into the laboratory doing research on soybean oil. Bob Boyer left Drackett, then rewrote the patents for making Azlon to make them suitable for production of edible soy protein fibers. When Boyer left, Frank Calvert became director of research for Drackett.

Drackett did considerable work on edible soy protein products–a fact that is not well known. Bill Atkinson's TVP grew out of this work. It started when a group of Seventh-day Adventists from Worthington Foods of Worthington, Ohio (located just north of Columbus, Ohio) came to Drackett (in Cincinnati, Ohio) and asked if Drackett could develop an edible soy protein–because they didn't eat meat. They even gave Drackett some seed money to work on the project. Bill Atkinson took charge of the project in about 1956; he worked with Ed Lankheit (pronounced LANG-kite, he is now age 76 and lives in Park Hills, Kentucky) and a lady researcher. Drackett sold granules all the time. To make these granules they took the flakes from the solvent extraction plant, ran them through an alkali extraction process to extract the protein, which is ten precipitated with an acid. It is filtered and dried to make small and hard granules of isolated soy protein. They then used a hot water or steam extraction on the granules to try to get rid of their raw beany flavor–to no avail. So they mixed the granules with beans and chili sauce to mask the beany flavor. The texture of the cooked granules closely resembled that of ground meat, but the flavor was pretty poor. This product was never commercialized, but it did evolve into the TVP developed later by Atkinson at ADM.

In mid-1957 Drackett sold its soybean operations to ADM. ADM wanted Drackett's two industrial soy protein products, Atkinson's work with edible textured soy proteins, and the other people and expertise in the edible area. ADM also bought Drackett's library, laboratory notebooks, etc. Roger Drackett had hired a group from Ohio State University survey the future potential of soy proteins. They concluded that another 25 years of R&D would be needed to make the soy protein operations financially successful. Drackett took the money from the sale to ADM and invested it in TV ads for consumer products like Windex and Drano.

Charles went to ADM as part of the deal–along with about 9 other researchers, including William Atkinson. Charles worked for ADM at the plant in Evendale from 1957

© Copyright Soyinfo Center 2014

to 1960. The soybean crushing and soy protein operations were continued as before except that ADM added a new Ortho Protein product–which was less expensive because it was not bleached as much with hydrogen peroxide. Bleaching was one of the most expensive steps in the process. In 1960 Charles left ADM and went back to work for Drackett at their plant in Spring Grove, where they made Windex, Drano, etc. At some point ADM moved the soybean crushing and protein equipment out of the plant in Evendale but he does not know where they took it. They sold the soybean and grain storage facilities to Central Soya, and they sold the many empty buildings to other small industries. Address: 9541 Flick Rd., Cincinnati, Ohio 45247. Phone: 513-741-4289.

3069. Bryan, Ford R. 1993. Robert Allen Boyer (Document part). In: Ford R. Bryan. 1993. Henry's Lieutenants. Detroit, Michigan: Wayne State University Press. 321 p. See p. 44-51. Great Lakes Series. April. [10 ref]

• ***Summary:*** This biographical sketch of Boyer (1909-1989), Henry Ford's top soybean man, is well researched and full of original material. Robert Boyer was born on Sept. 30, 1909 in Toledo, Ohio. In 1916 he moved with his parents to Royal Oak, Michigan, where he attended grade school while his father worked in the accounting department of the Ford Motor Co. in nearby Highland Park. When Henry Ford bought the Wayside Inn in Massachusetts in 1923, Frank Campsall suggested to Ford that Earl Boyer would be an appropriate business manager for the Inn. So the Boyers, including young Robert and his three sisters, moved into a Ford-owned house near the Inn. Robert then attended high school at Framingham, Massachusetts, where he graduated in 1927. Robert met Henry Ford while skating at the Inn. Ford suggested that he come to Dearborn for some work experience before going to college at Dartmouth as planned. So in Sept. 1927 Robert arrived in Dearborn where he was enrolled in the Henry Ford Trade School at the Rouge plant.

"Henry Ford had taken recent trips to Europe and had been impressed with the agricultural prosperity in some of those countries. Returning to Dearborn, Ford wanted to set up an experimental agricultural chemical factory to determine what products could be obtained from plants. The experimental chemical factory became a one-quarter size model of Ford's mammoth wood distillation plant at Iron Mountain, Michigan. The model was constructed at Iron Mountain and moved to Greenfield Village in late 1928. About then Ford asked, 'Bob, how would you like to supervise this model plant–to stay another year or two and live at the Sarah Jordan Boarding House in Greenfield Village.'

"Boyer had had little formal training in chemistry, but he was provided with tutors from the University of Michigan, and from 1929 to 1933 attended the Edison Institute of Technology, a school founded by Henry Ford and Thomas Edison as a school for inventors... Ford's purpose was to find industrial uses for farm crops. A farm depression was imminent. During the depression year of 1931, Robert Boyer married Elizabeth Szabo of Detroit. During the next few years they had three children...

"In 1931, soybeans became one of the plants investigated at the Chemical Laboratory... Usually the beans were pressed to obtain the oil, and the remaining 'cake' was fed to animals. The Boyer group, however, developed a solvent extraction procedure whereby soy protein as well as oil could be produced...

"By this time Henry Ford was growing rather old, approaching seventy. Design of the V-8 Ford in 1931 seems to have been his final great interest in automobile mechanics. His Edison Institute Schools, Greenfield Village, and soybean research now largely occupied his time. In 1932 he began to plant hundreds of acres of soybeans on his Dearborn farm lands and began procuring thousands more acres in Southeastern Michigan. Several additional processing plants were located in outlying towns where he promised to buy even more soybeans from local farmers to use in automotive paints and plastics. Boyer was largely responsible for Ford's advancement in soybean technology.

"Henry's vegetarian eating habits led him to hire his old gradeschool friend, Dr. Edsel Ruddiman, an organic chemist, to devise tasty dishes containing soybean ingredients for the dining room. And Ford's executives, including Boyer, were coaxed by Ford to try them–soybean milk, soups, bread, croquets, simulated meats, butter and ice cream. Most were not very palatable, however, because of the tendency of the soy oil to be slightly rancid."

Boyer was in charge of the "Industrialized American Barn" demonstration at the 1934 Chicago World's Fair. And in May 1935 when the first chemurgy conference was held at the Dearborn Inn, Boyer was in charge of arrangements. During the second chemurgy conference in Dearborn, Boyer led the groups of participants through his Soybean Laboratory at Greenfield Village. At about this time Boyer developed soy protein fibers which were blended with wool (35% soy and 65% wool) and woven into cloth. The resulting cloth was given to Ford's own tailor, and suits of soy fiber were worn by Ford on occasion–and highly publicized. "Boyer admits that the tensile strength of soy fiber was only 85% of wool, however, behooving the wearer to avoid strenuous movements, bending down for example very cautiously.

"Boyer's fiber was ideal for felt hats, however. All of the fiber Boyer could produce was wanted by the Hat Corporation of America. The soy fiber blended well with rabbit fur, was less expensive and much cleaner to work with. To produce fiber in larger amounts and to develop fiber of higher tensile strength, a modern air-conditioned laboratory was built on Village Road in Dearborn. In this plant not only fiber producing equipment was installed but

© Copyright Soyinfo Center 2014

complete weaving equipment as well."

Between 1939 and 1941 Boyer worked on Ford's "plastic car" made from soybean plastic. It also drew widespread media publicity. "Boyer drove the car a few weeks before it was abandoned. (People are still wondering what became of that plastic car.) A major defect never corrected, according to Boyer, was the strong odor reminiscent of a mortuary...

"The soy protein fiber facility was operating nicely when in 1943 the U.S. Air Force demanded the air-conditioned building for precision measurement of aircraft engine parts. When his building was thus usurped, Boyer was out of a job involving soybeans. He then transferred to Ford's Willow Run Bomber Plant at Ypsilanti, Michigan, where, because of his knowledge of plastics, he was given responsibility for protecting the plastic windshields on the B-24s during assembly of the planes."

In 1943 Drackett Products Co. in Cincinnati, Ohio, purchased the Ford fiber processing equipment and Boyer went to work for Drackett in Cincinnati–he was never again in direct contact with Henry Ford. Boyer wanted to develop edible soy protein fibers. When H.R. Drackett died in 1949, Boyer left The Drackett Co. so he could pursue his goal of receiving a pioneer patent for texturizing vegetable (soy) protein. He was granted this patent in 1949. As many as 30 corollary patents were subsequently obtained.

"Boyer had developed methods for producing soy fiber that was thoroughly washed and tasteless. In 1951 he became a consultant to several food processors who were licensed to use his patents in their operations. These firms included Worthington Foods, Swift & Company, Ralston Purina, Unilever Company of England, National Biscuit Company [Nabisco], General Foods, and General Mills. Dozens of high-volume foods were, and still are, produced using Boyer's procedures... Robert Boyer worked full time for Ralston Purina in St. Louis, Missouri, from 1962 until 1971.

"In February 1963, Elizabeth Szabo Boyer died, and in April 1965, Boyer married Nancy Ann Miller, a recent widow living in St. Louis. Boyer retired from general consulting work in 1971 after his patents had expired in 1966, but continued consulting with Worthington Foods until 1977. In 1973, Nancy and Robert retired to downtown Dunedin, Florida.

"The Boyers did considerable traveling. But in the early 1980s Robert's eyes began to fail, and then his chief hobby became baking, an occupation he had always enjoyed. In 1985 he dictated his oral reminiscences [8 hours on tape with David R. Crippen] as requested by the Henry Ford Archives. Boyer died in Dunedin on November 11, 1989. The body was cremated and the ashes scattered over the Gulf of Mexico."

Photos show: A portrait of Boyer in his later years (Ford Archives photo ID No. P.0.19429). The Chemical Laboratory building at Greenfield Village at Dearborn (No. 0.6213) in 1930. Henry Ford discussing soybean work with Boyer in the Chemical Laboratory on Ford's birthday, July 30, 1937 (No. 188.21320. Ford is seated on a stool by a lab. bench reading and Boyer has one elbow on the bench behind him.) Boyer and Ford with the "plastic car" at Dearborn in 1941 (No. 189.16352).

Talk with Ford Bryan. 1992. Nov. 12. He is now working to get Robert Boyer's soybean research laboratory, the Chemical Plant of the Edison Institute, restored at Greenfield Village and interpreted as to its history and significance. The building is in fairly good shape; the exterior is in good shape but all the equipment has been removed from the interior. Address: 21800 Morley, Apt. 1203, Dearborn, Michigan 48124.

3070. Rattenbury, Jeanne. 1993. All hail fiber! A long unappreciated foodstuff finally gets some respect. *Vegetarian Times.* April. p. 47-50, 52.

• ***Summary:*** This excellent article starts: "It's everywhere! It's everywhere! Dietary fiber, vaunted for its heroics in reducing the risk of heart disease and colorectal cancer, is now being pumped into sandwich breads, breakfast cereals, even potato chips and cookies." This is quite a reversal of fortune for something that has been systematically removed from processed foods since the start of the Industrial Revolution–bringing us white bread, white rice, etc. "Although it lacks nutritional value and calories and it cannot be digested, fiber nonetheless has been a key component of human diets since prehistoric times."

Color photos shows the front panels of boxes of: Kellogg's Cooked Bran. Kellogg's Bran. Kellogg's All-Bran Post's Bran Flakes. Kellogg's Raisin Bran. Also: A color ad for Grape Nuts.

A sidebar, about Dr. Denis Burkitt, is titled "The father of fiber." "Now 81, Burkitt spent 20 years (from 1946 to 1966) as missionary surgeon based in Uganda. During those years he rarely, if ever, saw the medical problems that plague affluent Western societies: Heart disease, colon cancer, diabetes, hemorrhoids, varicose veins, appendicitis and diverticular diseases. Inspired by a colleague who believed that refined foods are the culprit in these diseases of affluence. Burkitt collected extensive data about Africans' eating habits and helped develop a revolutionary hypothesis about the relationship between diet and disease: that fat is promotive and fiber is protective." Long retired, Burkitt now lives in Gloucester, England, with his wife. "In 1962 there were only 10 scientific papers about fiber; in 1980 there were 500."

A large table (p. 50), titled "Fiber in bulk" shows the grams of fiber per serving in many different common foods, grouped by food type as follows: Breads, vegetables, fruits, breakfast cereals, grains, legumes, and nuts and seeds.

Experts recommend consuming 25 to 30 grams of fiber per day. Most Americans get much less. Dietary fiber is the

© Copyright Soyinfo Center 2014

nutrient in shortest supply in the American diet. Address: Chicago.

3071. **Product Name:** Morningstar Farms Country Crisps (Chicken-like Patties).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1993 April.
Ingredients: Textured vegetable protein (Soy protein isolate and concentrate), egg whites, wheat flour, soybean oil, corn oil, water, corn flour, salt, monosodium glutamate, natural and artificial flavors from non-meat sources, dextrose, hydrolyzed plant protein, partially hydrogenated soybean oil, sugar, spices, yeast, paprika, vegetable gum, leavening (sodium acid pyrophosphate, sodium bicarbonate), onion powder, whey, nonfat milk, corn starch, turmeric, garlic powder, corn sweeteners, niacin, iron (as ferrous sulfate), vitamin B-1 (thiamine), vitamin B-6, Red 3 for color, vitamin B-2 (riboflavin), vitamin B-12.
Wt/Vol., Packaging, Price: 10 oz (284 gm) paperboard box. Retails for $2.19 (6/93, Lafayette, California).
How Stored: Frozen.
Nutrition: Per 71 gm patty: Calories 220, protein 8 gm, carbohydrate 13 gm, fat 15 gm (63% of calories from fat, polyunsaturated 11 gm, saturated 2 gm), cholesterol 0 mg, sodium 620 mg, potassium 70 mg.
New Product–Documentation: Product with Label purchased at Lucky Foods supermarket in Lafayette, California. 1993. June 1. 8 by 4 by 1¼ inch box. Red and black on white. Color photo of one patty on a bun and lettuce, topped by two tomato slices, with another sesame bun beside it. Morningstar Farms logo in top left corner. "Cholesterol-free. Vegetable protein patties. Contains no chicken. No animal fat. Only 220 calories. Keep frozen. Microwavable."

3072. **Product Name:** Morningstar Farms Meatless Chik Patties (Chicken-like Patties).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1993 April.
Ingredients: Textured vegetable protein (Soy protein isolate and concentrate), egg whites, wheat flour, water, corn oil, soybean oil, corn flour, natural and artificial flavors from non-meat sources, salt, potassium chloride, dextrose, hydrolyzed plant protein, partially hydrogenated soybean oil, sugar, spices, yeast, paprika, vegetable gum (carrageenan), leavening (sodium acid pyrophosphate, sodium bicarbonate), onion powder, whey, nonfat milk, corn starch, garlic powder, corn sweeteners, niacin, iron (as ferrous sulfate), vitamin B-1 (thiamine), vitamin B-6, vitamin B-2 (riboflavin), vitamin B-12.
Wt/Vol., Packaging, Price: 10 oz (284 gm) paperboard box. Retails for $2.19 (6/93, Lafayette, California).
How Stored: Frozen.
Nutrition: Per 71 gm patty: Calories 170, protein 8 gm, carbohydrate 13 gm, fat 10 gm (53% of calories from fat, polyunsaturated 6 gm, saturated 2 gm), cholesterol 0 mg, sodium 590 mg, potassium 200 mg.
New Product–Documentation: Product with Label purchased at Lucky Foods supermarket in Lafayette, California. 1993. June 1. 8 by 4 by 1¼ inch box. Dark green, light green, tan, red, and blue on white. Color photo of a patty with lettuce and tomato between two buns on right half of front panel. Morningstar Farms logo in top left corner. "Artificial chicken flavor. No animal fat. Microwaveable. Zero cholesterol. Keep frozen."

Talk with Trudy Cravens of Worthington Foods. 1993. June 30. The Chick Patties are replacing the Country Crisps. Worthington introduced 4 new products in April 1993 as extensions of the Morningstar Farms line: Chik Patties, Prime Patties, Deli Franks (which replaces the old Deli Franks), and the Garden Vege Patties. Worthington would like them to be marketed at supermarkets and mainstream grocery stores in the frozen meat case (along with regular chicken patties, fish sticks, etc.) rather than the frozen breakfast section like most of the other Morningstar Farms products. The products are still in test market. Also in April, all other original products in the Morningstar Farms line had their labels redesigned to the new green label except for Scramblers.

Product with Label purchased at Safeway supermarket in Lafayette, California. 1994. May 18. Price: $2.89. Frozen.

Product with Label (new design) purchased at Safeway supermarket in Lafayette, California. 1995. Aug. 17. Price: $2.79. Frozen. 4 patties, 10 oz. Blue, white, red, and gold on green. The front pane text reads: "Chik Patties–A meatless alternative to chicken. Made with vegetable & grain protein." The name "Chik Patties" is written in white letters on a blue band. Soyfoods Center product evaluation. 1995. Aug. 19. 1. Taste/organoleptic: Texture is excellent, flavor is too spicy. Package/label design: Excellent.

3073. **Product Name:** Natural Touch Vege Frank.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1993 April.
Ingredients: Wheat gluten, water, natural flavors (paprika, onion powder, garlic powder, salt, autolyzed yeast), corn oil, spices, vegetable gums (carrageenan, gum arabic, xanthan gum), natural hickory smoke flavor.
Wt/Vol., Packaging, Price: 12.7 oz (360 gm) plastic wrap.
How Stored: Frozen.
New Product–Documentation: Ad (full-page, color) with coupon in Vegetarian Times. 1993. June. p. 17. "If you've

© Copyright Soyinfo Center 2014

ever been burnt by vegetarian franks and burgers, you'll flip over these." Talk with Trudy Cravens of Worthington Foods. 1993. June 30. This product was launched in April 1993.

Label sent by Trudy Cravens of Worthington Foods. 1993. July 1.

3074. **Product Name:** Natural Touch Vege Burger.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1993 April.
Ingredients: Textured vegetable protein (wheat gluten, soy protein concentrate and isolate), corn oil, egg whites, calcium caseinate, natural flavors from vegetable sources, corn starch, raisin juice, onion, soy sauce (water, soybeans, sea salt), carob, onion powder, soy lecithin, garlic powder, spices, sea salt.
How Stored: Frozen.
New Product–Documentation: Ad (full-page, color) with coupon in Vegetarian Times. 1993. June. p. 17. "If you've ever been burnt by vegetarian franks and burgers, you'll flip over these." Talk with Trudy Cravens of Worthington Foods. 1993. June 30. This product was launched in April 1993.

Label sent by Trudy Cravens of Worthington Foods. 1993. July 1.

3075. **Product Name:** Morningstar Farms Meatless Prime Patties.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1993 April.
Ingredients: Textured vegetable protein (Soy protein concentrate and isolate, wheat gluten), natural and artificial flavors from non-meat sources, egg white solids, calcium caseinate, partially hydrogenated soybean and cottonseed oil, corn oil, modified food starch, sucrose, onion powder, salt, caramel colors, emulsifiers from vegetable sources (mono- and diglycerides, glyceryl lacto esters of fatty acids), methylcellulose, ascorbic acid (vitamin C), disodium inosinate, disodium guanylate niacin, iron (as ferrous sulfate), vitamin B-1 (thiamine), vitamin B-6, vitamin B-2 (riboflavin), vitamin B-12.
Wt/Vol., Packaging, Price: 9 oz; 4 patties in a paperboard box.
How Stored: Frozen.

Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1993 April.
Ingredients: Beans and barley (blackeye, green & yellow split peas, pink, great northerns, pearled barley, kidney, red, pinto, and turtle blacks), brown rice, tomatoes, onion, corn oil, carrot, corn, egg whites, cheddar cheese alternative (organic tofu, canola oil, calcium caseinate (protein), sea salt, citric acid, natural cheddar cheese flavor, soy lecithin, guar gum, annatto), jalapeno cheese alternative (organic tofu, canola oil, calcium caseinate (protein), jalapeno peppers, sea salt, citric acid, soy lecithin, guar gum), celery, defatted wheat germ, ripe olives, soy lecithin, Italian & cheese seasoning (tomato, natural flavor, Parmesan cheese, Romano cheese, corn starch, onion, spices, garlic, paprika extract, salt, lactic acid), green & red bell peppers, yeast.
How Stored: Frozen.
New Product–Documentation: Label sent by Trudy Cravens of Worthington Foods. 1993. July 1. "Made with a variety of 9 beans, organic tofu cheese, tomatoes, & brown rice."

3079. **Product Name:** Natural Touch Garden Grain Pattie (With Soy Cheese).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1993 April.
Ingredients: Mushrooms, onion, brown rice, rolled oats, bulgur, cottage cheese (grade A pasteurized cultured skim milk, milk, salt, guar gum, locust bean gum, carrageenan, natural flavors), mozzarella cheese alternative (organic tofu, canola oil, calcium caseinate (protein), sea salt, citric acid, soy lecithin, guar gum), corn oil, walnuts, cheddar cheese alternative (organic tofu, canola oil, calcium caseinate (protein), sea salt, citric acid, natural cheddar cheese flavor, soy lecithin, guar gum, annatto), egg whites, corn starch, soy lecithin, onion powder, calcium caseinate, sea salt, spices, garlic powder, celery extract.
Wt/Vol., Packaging, Price: 9 oz. (4 patties in a paperboard box).
How Stored: Frozen.
New Product–Documentation: Label sent by Trudy Cravens of Worthington Foods. 1993. July 1.

3080. Worthington Foods, Inc. 1993. First quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 4 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** Net sales increased $19.6 million, up 13.4% compared with the first quarter last year. Sales increased in all four major product categories. Sales of Morningstar Farms meat alternatives to supermarkets rose 19.1%. Net income rose to $810,000, up 26.4% compared with the first quarter last year.

"Four new Morningstar Farms meat alternative products (Prime Patties, Deli Franks, Chik Patties and Garden Vege-Patties) began shipping earlier this month into selected test markets. Importantly, these products are located in the meat case sections of the grocery stores and are the first items to be shipped in the new packaging for Morningstar Farms brand products. Four similar products are now being introduced into the natural food market under the Natural Touch brand.

"Phase I of the Zanesville, Ohio production facility is on schedule for completion later this quarter. Initial shipments of refrigerated Better 'n Eggs will begin at that time, enabling the Company to introduce this product to the remaining 53 percent of the nation's supermarkets. Nationally, nearly all the growth in egg substitute sales for all competitors has taken place in refrigerated products in the past two years.

"On April 21, we announced that the Company has entered into an agreement with Burger King Corporation to test the Morningstar Farms Grillers product in a restaurant unit in Watkins Glen, New York." Address: Worthington, Ohio. Phone: (614) 885-9511.

3081. Machlis, Mark. 1993. New developments with seitan and gluten at Ivy Foods (Interview). *SoyaScan Notes.* May 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** His company now has national distribution via 28 natural- and health food distributors. Since Jan. 1993 the company has been making a profit. Ivy Foods still does about $4,000/month in mail order business, but he is now encouraging his customers to buy from their local retail store, but many consumers who live in rural areas have no retailer nearby. Ivy Foods now sells about $40,000 to $50,000 a month of gluten products, so the mail order business is only about 10% of the total. He plans to continue the mail order service, and the company now has a toll-free

© Copyright Soyinfo Center 2014

number for mail order: 1-800-280-1313. His most popular mail order products are the 5-pack sampler (which gives you one pound of each product) and the 10-pack. So the minimum order would be $30.00 (Five 1-lb 5 packs x $5.95/lb including air shipping and handling). He makes more money selling direct by mail order, but he wants to support his retailers who do 9 times as much volume.

All of his retail products are frozen. To ship frozen products by mail he uses Airborne Express second day air, with the products packed in an insulated foam box (without any dry ice). The shipping cost is about $1.00/lb. The total cost of the product, delivered to the consumer's door, is $6.00/lb versus $4.40 to $5.39 at retail stores. If the customer sends the insulated box back to Ivy foods, he or she gets a free pound of product next time. The cost to ship back the box via the post office is about $2.90. Quite a few people ship back (recycle) the foam boxes.

His two flavored dry mix products (Meat of Wheat Chicken Style, and Sausage Style, which were introduced in about May 1993) are also sold by Bob and Cindy Holzapfel of The Book Publishing Co. in Tennessee in their Mail Order Catalog. To make these products the homemaker just adds water, kneads it, keep it in a roasting bag, then steam it.

In June Ivy Foods will run its first ad (in *Vegetarian Times*) aimed at getting consumers to but the company's products in retail stores. In the past he has been running mail order ads. *Vegetarian Times* is the only periodical in which an ad pays for itself; a typical ad of his in *Vegetarian Times* will generate 400 calls per month.

A direction for Ivy Foods will be to sell to food manufacturers for use as an ingredient in their food products. He plans to sell to Gary Barat of Legume. In about Sept. 1992 Barat bought part of Heart and Soul; the former owner, Andy Harrison, ran into financial problems. Barat is now buying Ivy Foods' Chicken Style; he plans to come out with a meatless chicken salad and several entrees.

His latest product is a prepared Chicken Chili. He no longer has a policy of donating a certain percentage of his profits to a worthy cause. He ended up poring nearly $500,000 into the company during its first 2 years in business, mostly just to keep the company alive.

John Marsh (not sure of his last name), Andrew Harrison's old partner, is one of Mark's competitors. He used to be the manufacturer for Heart & Soul, with Andy Harrison in charge of marketing. John ended up leaving and starting his own company in California, which left Andy without a product. At the last Natural Foods Merchandiser trade show (Feb. 1993 at Anaheim) John introduced a sliced deli meat similar to that formerly under the Heart & Soul brand. John Belleme is not a major competitor because his prices are higher in retail stores. Ivy Foods' biggest markets are on the East Coast and in Texas. Ivy Foods does not make traditional seitan; he pre-flavors his dough before his products are steamed (not boiled in a broth). Three years ago at the Anaheim trade show he learned the key secret to financial success from some people from Worthington Foods, who came to him and said: "Don't think about rinsing your own gluten." Use vital wheat gluten. Address: Office: Ivy Foods, 7613 S. Prospector Dr., Salt Lake City, Utah 84121. Phone: 801-943-7664.

3082. Shurtleff, William; Aoyagi, Akiko. comps. 1993. Henry Ford and his researchers' work with soybeans, soyfoods, and chemurgy–Bibliography and sourcebook, 1921 to 1993: Detailed information on 439 published documents (extensively annotated bibliography), 79 unpublished archival documents, 71 original interviews (many full text) and overviews, 13 commercial soy products. Lafayette, California: Soyfoods Center. 249 p. Subject/geographical index. Author/company index. Language index. Printed May 19. 28 cm. [567 ref]

• ***Summary:*** This is the most comprehensive book ever published about the work of Henry Ford and his researchers with soybeans and soyfoods. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of this subject. It is also the single most current and useful source of information on this subject, since 96% of all records contain a summary/abstract averaging 286 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 30 different document types, both published and unpublished; every known publication on the subject in every language; 66 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding this subject from its earliest beginnings to the present.

The bibliographic records in this book include 439 published documents and 79 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 13 commercial soy products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company

© Copyright Soyinfo Center 2014

index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

3083. Leiss, Richard S. 1993. History of the use of spun soy protein fibers at Worthington Foods (Interview). *SoyaScan Notes.* June 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Richard (whose last name is pronounced like "lease," as in "to lease a house") has worked for Worthington Foods in R&D for 28 years, from Aug. 1962 to 1968, then from 1971 to the present. He thinks that small amounts of the first commercial Worthington product to contain spun soy protein fibers were probably sold by late 1962 and definitely by 1963. These meatlike products were probably frozen at first, and then canned later. The first such product may have been the Minute Entree Fried Chicken Style in frozen form. Fri-Chik, which was canned and widely sold to Seventh-day Adventist food outlets, came a little later. The next 3 products that contained spun fibers (White-Chik, Beef Like, and Prosage) were all frozen and were introduced at about the same time (by Oct. 1963), but many Adventist food outlets did not have a frozen food case in those days so Worthington had to supply them with one. Following these, some additional products were made under the Worthington label, including Smoked Beef Style, Wham.

"When I first came to Worthington in 1962 there was a small R&D lab attached to the main food processing building; we didn't have a research facility like we have now. I recall that a new R&D building was completed in October 1964. Prior to Oct. 1964, I recall seeing a Fried Chicken Style product, containing spun fibers, being canned. After Oct. 1964 time, we began to spin our own soy protein for the first time using a pilot plant line in this building. Full-scale spinning of Worthington's Fibrotein soy fibers probably began in about 1965. Prior to that time my recollection is that Worthington purchased most of its spun protein from Ralston Purina Co.; it was manufactured in their Louisville [Kentucky] plant. But Worthington also purchased some spun soy fiber from General Mills; it was made at their James Ford Bell Research Center and was very experimental. I don't recall the name of that product.

"In the early 1960s, about 95% of Worthington's sales were through either the church or through stores in communities where there were heavy concentrations of Adventists. So it really wasn't a very big thing. One very big thing for the company was the first IFT meeting it attended in Kansas City [Missouri] in about 1963 or 1964. It was the first time that Worthington had demonstrated products at a national convention, and there was a lot of interest in these products.

In 1974 the first 3 Morningstar Farms products were introduced: Breakfast Patties, Breakfast Links, and Breakfast Slices. He is quite sure that initially they all contained spun soy protein fibers. However several years after they were launched, the decision was made to remove the spun soy fibers for two main reasons: (1) Making the fibers was an expensive, high-tech process which added too much to the price of each product; (2) Worthington was concerned that if, as anticipated, the Morningstar Farms line became very popular in mainstream national markets, their one spinning line would not be able to produce enough fibers to meet the demand. The "wet spun fiber" was replaced by textured soy concentrates and vital wheat gluten to give similar textures. In 1979 four more Morningstar Farms products were launched: Grillers (meatless burgers), Breakfast Strips (meatless bacon), Luncheon Slices (a new version of the 1974 Breakfast Slices), and Leanies (meatless hot dogs). None of these 4 products contained spun soy protein fibers. Thus, for most of their commercial lives, the Morningstar Farms products have not contained spun soy protein fibers.

Worthington has always had only one line for spinning soy protein fibers–located at their plant in Worthington, Ohio. This line was set it so that a second spinning table could be added to increase its capacity, but that has never been done. Even during the years when the company had a second plant at Schaumburg, Illinois (after Miles Laboratories took over Worthington in 1970), that plant never had its own spinning line.

At one point Worthington sold its Fibrotein spun soy protein fiber to an Adventist company outside the USA. Worthington never sold it to Loma Linda Foods. Initially Loma Linda may have purchased it from Ralston Purina or General Mills; then they got their own spinning line later, in the 1970s; they bought the equipment from Dawson Mills.

Concerning the total amount of spun soy protein fiber used in Worthington food products, it increased rapidly from 1965 to about 1975, then it fell somewhat after the first three Morningstar Farms products were reformulated in the mid-1970s–but it did not fall dramatically because the 3 products were still at the introductory stage. After the amount then stabilized, and remained fairly constant until recent years when the demand for vegetarian products has increased, and with it production of spun soy protein fibers. Today, about 15-20% of Worthington's meat alternatives contain spun soy protein fibers.

In Richard's opinion, the legacy that Henry Ford and his researchers left in terms of food uses of soybeans is mainly in the areas of soy protein isolates (especially functional isolates; the work done by Frank Calvert and Bob Boyer at Ralston Purina) and textured soy flour (the work done by William Atkinson at ADM). While spinning was certainly the most novel of the technologies, spun soy protein fibers are not nearly as important commercially as food-grade isolates and textured soy flour.

© Copyright Soyinfo Center 2014

Richard remembers fondly the pioneering days when Bob Boyer had a lab next to his office at Worthington Foods. Boyer told Richard many anecdotes about the times he worked for Henry Ford and Richard wrote them down in his journal. "Bob Boyer was truly a gentleman. I really enjoyed him a lot."

Richard does not recall any commercial product containing spun soy protein fibers that Ralston Purina launched during that time. They sold all their spun fibers as such to Worthington Foods.

"I'm kind of the keeper of the archives and unfortunately a lot of material has gotten out because during the years that Worthington was owned by Miles Laboratories past history was not considered to be very important." Perhaps a record might have appeared in the *Chopletter* (an internal newsletter published by Worthington Foods). Address: Director, R&D, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3084. Leiss, Richard S. 1993. Recollections of work at Worthington Foods (Interview). *SoyaScan Notes.* June 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Art Schultz worked as a technician with Bob Boyer at Ralston Purina. He is mentioned in some of the patent literature. Art worked for Worthington Foods from about 1970-71 until about 1980.

When Worthington Foods bought Battle Creek Food Co. in 1960, only about 4 people were transferred from that company down to Worthington. One of them was Josephine Williams. She was a nutritionist who worked in the laboratory at Battle Creek, Michigan with Dr. John Harvey Kellogg. She was a very interesting resource, with many stories about working with Dr. Kellogg. She retired in about the early 1970s and may still be living in the Battle Creek area. Address: Director, R&D, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3085. **Product Name:** Naturally Tofu–Better Than Burger? (Dry Mix).
Manufacturer's Name: Sovex Natural Foods, Inc.
Manufacturer's Address: P.O. Box 2178, Collegedale, TN 37315. Phone: 1-800-227-2320.
Date of Introduction: 1993 June.
Ingredients: Soy flour, oats, tofu powder (dehulled soybeans, calcium sulfate), garlic powder, dried onion, vegetable gum (guar gum blend), onion powder, vegetable protein, dill, parsley, basil, dried carrots, oregano, marjoram.
Wt/Vol., Packaging, Price: 12 oz (341 gm) paperboard carton.
How Stored: Shelf stable.
Nutrition: Per ½ cup (55 gm.): Calories 165, total fat 2 gm (3% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 52 mg (2%), total carbohydrate 25 gm (8%; dietary fiber 9 gm [36%], protein 20 gm, calcium 16%, iron 16%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Ad (full page, color) in Health Foods Business. 1993. July. p. 26. Naturally Tofu–Better Than Burger? Sink your teeth into this! Also published in Natural Foods Merchandiser. 1993. Sept. p. 31.

Talk with Chris Durden of Sovex. 1993. Sept. 27. This product was launched in about June 1993. The only other products in the line are Better than Milk? and Ice Creme

Label sent by Sovex. 1993. Oct. 6. 5.5 by 8.25 by 2 inches. Paperboard box. Red, tan, white, and black. Color photo on front panel of a burger between buns with all the trimmings. On the back panel are 3 recipes and a product guarantee. To make a burger, mix the contents of this package (12 oz.) with 1.75 cups warm water and 3 tablespoons soy sauce. Mix, form into patties (24 oz. weight), and fry in vegetable oil.

3086. McDermott, Ron. 1993. History of the use of spun soy protein fibers by Loma Linda Foods (Interview). *SoyaScan Notes.* July 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Note: In about 1968 Loma Linda Foods started making meatlike products containing spun soy protein fibers. The first products were canned meatless slices (chicken-like, beef-like, turkey-like, or luncheon-like slices).

Ron started to work for Loma Linda Foods in 1973 as Director of Quality Assurance at the company's plant in Mt. Vernon, Ohio. In 1975 he left Mt. Vernon and went to Loma Linda's plant at Riverside, California. He thinks that Loma Linda got its first spun soy protein fibers from General Mills. Robert Boyer had licensed General Mills the rights to spin soy protein fibers, and they used these primarily to make their original line of Bontrae Products. At one point after 1973 Ron thinks that Loma Linda was purchasing spun fibers from three sources: Ralston Purina, General Mills, and Miles Laboratories–but the bulk of it came from General Mills. In about 1975-77 General Mills shut down their soy fiber spinning line and sold it to Dawson Mills. During this transition period, Loma Linda purchased a large inventory of frozen, neutralized (neutral pH) fiber from General Mills. The spun soy fiber sold by Miles Laboratories (Worthington) was called "acid tow"; it was refrigerated rather than frozen and the acidic pH prevented spoilage. Loma Linda would then adjust the pH to neutral shortly before use.

In early 1984 (according to documents Ron has in front of him), Loma Linda Foods bought a soy protein fiber spinning line from Dawson Mills. In mid-1984 the equipment was transferred to Loma Linda. Loma Linda probably started spinning their own fibers in California in late 1984 or early 1985. Loma Linda continued to spin their own fibers until the company was sold to Worthington Foods in Jan. 1990. Worthington still owns that line of spinning equipment, which is now dismantled and unused in storage.

© Copyright Soyinfo Center 2014

It could be re-activated if Worthington had a place to put it and a need to make more spun soy protein fibers.

Note: A brief chronology of spinning by General Mills, Dawson Mills, and Ralston Purina Co. 1959–General Mills starts research on textured soy proteins. 1962 Oct.–Ralston Purina Co. begins to make Textured Edi-Pro, a spun soy protein fiber, at its plant in Louisville, Kentucky. 1963 Nov.–The first of many patents for spinning soy protein are issued to General Mills. 1965 Dec.–General Mills introduces the Bontrae line of spun soy protein fiber products, starting with Bac-O*s (bacon-like bits). 1967–Ralston Purina stops spinning soy protein. 1969 June–General Mills breaks ground for major fiber spinning plant at Cedar Rapids, Iowa; It begins operation by late 1970. 1975–General Mills stops spinning, and sells its spinning technology and equipment to Dawson Mills. 1976–Central Soya now owns the Bontrae trademark, formerly owned by General Mills. 1979–Dawson Food Ingredients, a subsidiary of Dawson Mills, starts spinning soy protein fibers; Anaprime is on the market by March 1980. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3087. Demos, Steve. 1993. New developments with soyfoods in America (Interview). *SoyaScan Notes.* July 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Vitasoy purchased Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in May or June 1993 for an estimated $4-$5 million. Azumaya did not sell their building or the land on which their plant is situated. So now Vitasoy owns two large tofu manufacturers on both coasts of the USA: Nasoya in Massachusetts, and Azumaya in California.

Mr. Yamauchi sold the rest of his ownership in House Foods & Yamauchi, Inc. to House Foods of Japan. [Note: Another industry observer states that the sale took place in about April 1993 for about $2 million].

Bill Bolduc is now running a soymilk plant in the Midwest; he now makes Westbrae's soymilk. Steve sees the future of soymilk as being packaged in the new extended shelf life (ESL) gable-top carton and sold as a commodity for a lower price like cow's milk rather than as a specialty flavored beverage.

Anders Lindner told Steve in March that DE-VAU-GE wanted to sell their soymilk plant. He offered to sell the used plant to Steve for a good price in German marks. Steve never responded.

White Wave now makes about 100,000 lb/week of tofu (of all kinds). The company's reduced fat tofu is selling very well. Quong Hop is stating on two red-on-white stickers on their package that (1) their tofu is "The original reduced fat tofu;" and (2) "The original reduced fat–High protein tofu: Serving size 4 oz., Fat per serving 3 gm. Protein per serving 14 gm." Lab tests run by more than one company indicate that Quong Hop's tofu actually contains far more fat.

Steve bought Veggie Life from Leonardo Laudisio much more for the name than for the product (meatless burger) or its formula.

Update: 1993. Nov. 24. Talk with Leonardo Laudisio. On about November 8-10 White Wave secured preferred vendor status from Whole Foods Markets. They now are installing their cold-storage "set" in the individual stores; one is now in the Berkeley store. At the top in large letters is written "White Wave Vegetarian Cuisine" with the oval White Wave logo is bas relief. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

3088. *Health Foods Business.* 1993. Burger King to test meatless burgers. July. p. 80.
• ***Summary:*** "Worthington Foods, Inc... has entered into an agreement with Burger King Corp. to test its meatless burger, Morningstar Farms Grillers, in a restaurant in Watkins Glen, New York." The Griller test began in late April. The meatless burger will be flame-broiled and used to replace a product named Bean Burger currently in a test market in the same Burger King.

3089. Worthington Foods, Inc. 1993. A delicious way to cut down on meat without cutting down on your options (Ad). *Vegetarian Times.* July. p. 29.
• ***Summary:*** See next page. This full-page, color ad, with a $1.20 coupon at the lower right, shows new label designs for four Morningstar Farms meatless products: Breakfast Patties, Breakfast Links, Breakfast Strips, and Grillers. Address: Worthington, Ohio 43085.

3090. Worthington Foods, Inc. 1993. If you've been burnt by vegetarian franks and burgers, you'll flip over these (Ad). *Vegetarian Times.* June. p. 17.
• ***Summary:*** This full-page, color ad, with a coupon, shows two new Natural Touch products: Vege Frank and Vege Burger.

A similar ad (with a title that starts: "If your customers have been burnt...") also appeared in Natural Foods Merchandiser (July 1993, p. 71, and Oct 1993, p. 71). Address: Worthington, Ohio 43085.

3091. Worthington Foods, Inc. 1993. Second quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** "The Morningstar Farms meat alternative sales increased during the first half of 1993. The reformulated lower-fat products are now beginning to appear in the retail supermarkets nationally in the new packages."

"Today we announced three additional Burger King restaurants in New York State have added Grillers to their menu."

A Delicious Way To Cut Down On Meat Without Cutting Down Your Options.

Crumble up our Breakfast Patties to prepare delicious Italian dishes like lasagna.

When you take something away, you usually have less. But the way we see it, now you have more. Because Morningstar Farms® offers you a way to eat less meat while giving you more delicious ways to enjoy your favorite meat dishes.

Made with wholesome grains and vegetable protein, these meatless foods are a healthier way to eat because they have no animal fat and zero cholesterol. Yet they taste so much like meat, you can enjoy your favorite meals the way you always have. Microwave them in minutes just the way they are, or use them to prepare delicious dishes for breakfast, lunch and dinner.

With our Breakfast Links, you can still enjoy your favorite morning meals.

Morningstar Farms has the most complete line of meatless products, including Grillers,® Breakfast Links, Breakfast Patties and Breakfast Strips. Look for them in your supermarket's frozen breakfast section. They're a delicious way to prove that less can be more.

MORNINGSTAR FARMS®

There are as many ways to top Grillers as there are to top hamburgers.

Make It Meatless & SAVE $1.20

For your free Morningstar Farms recipe booklet, plus coupons worth $1.20 for Morningstar Farms products, send a postcard to: *Meatless Favorites, Morningstar Farms, P. O. Box 6018, Dept. VT, Worthington, OH 43085.*

Worthington Foods, Inc.

Limit one per family. Allow 8 weeks for delivery.

"The Zanesville, Ohio facility began producing refrigerated Better 'n Eggs during June, 1993." Address: Worthington, Ohio. Phone: (614) 885-9511.

3092. August, Amanda. 1993. Soya far, soya good. *Vegetarian Living.* Sept. p. 37-38.
• ***Summary:*** "For many vegetarians the decision to drop dairy products from their diet is a natural progression– whether it be for ethical or health reasons... The dairy cow has been described as the most hard-worked of all farm animals. Normally, she would only produce 5 to 7 litres of milk a day for her calf but intensive farming means that the quantity can now be anything from 25 to 40 litres. To keep the milk flowing, the cow is subjected to yearly pregnancies, each lasting 9 months. After giving birth she will be milked for 10 months, but in the third month she will be put in calf [inseminated] again. So for 6 to 7 months of each year the cow is milked whilst pregnant.

"Calves are taken away from their mothers after 2 to 3 days, causing much distress to both mother and baby. Some calves are kept for dairy herd replacement (25%), some are exported to Continental veal crates, and the rest are fattened up to produce beef. Although cows have a lifespan of around 20 years, most are worn out after only 5 years. At this stage they are killed for meat."

"Soya milk is a wonderful alternative to cow's milk... Many brands are fortified with calcium (some containing more than dairy milk) and the vitamins B-12 and D... Soya milk doesn't taste like dairy milk. If trying it for the first time it's worth knowing that its an acquired taste. You may find it to be quite floury, with a strange after-taste and a strong aroma. But there are many who swear by it and whose altered palates find dairy milk cloying, fatty and oversweet.

"The first soya milk came onto the market in 1965, prior to which there had been no alternative to cow's milk. It was launched by one of today's leading producers, Plamil. Other companies began to follow suit in the 1970s.

"The market is still growing. In 1991 soya milk manufacturers produced 10.5 million litres and it's estimated that by the year 2000 Britain will be consuming over 20 million litres per year. Supermarkets even have their own brands now. The Soya Milk Information Bureau's 1991 annual poll found that 39% of respondents were buying more soya milk than in 1990."

Color photos (p. 38) show 3 brands (Granose liter plastic bottles, Plamil 500 ml can, Provamel aseptic cartons), each with the words "Soya Milk" appearing as the product name on the front panel. The following brands are now available: Sainsbury, Safeway, Tesco, Waitrose, Co-op, Granovita, Granose, Sunrise, Plamil, Holland and Barrett, Unisoy, and Provamel [made by Alpro in Belgium]. Address: England.

3093. Worthington Foods, Inc. 1993. Third quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** Net sales are up 7.2% for the first 9 months of 1993 compared with the same period one year ago. Third quarter sales are up 8.3%. But net income (profits) are down 19.6% for the first 9 months, and down 25% for the third quarter. "Egg white prices have been the major factor for the decline in gross margins and net income during the first nine months of 1993 compared to 1992."

"Today we announced 34 additional Burger King restaurants in New York state have added Grillers to their menu, effective in early November. Griller sales continue to be strong in the 4 test restaurants." Address: Worthington, Ohio. Phone: (614) 885-9511.

3094. Crooks, Salle Richards. 1993. Burger King's experiment expands in Southern tier. *Star-Gazette* (*Elmira, New York*). Nov. 23. p. 4B.
• ***Summary:*** Burger King has expanded the test marketing of its meatless burger, the Griller, to a total of 38 restaurants in the Elmira-Rochester area of upstate New York. Made by Worthington Foods Inc. of Ohio, the product is flame broiled and kept separate from meat products. The Griller was introduced to satisfy customers in Watkins Glen connected with the Farm Sanctuary, which rescues abused farm animals. A large photo shows a little girls eating a meatless burger and liking it.

3095. Wilson, Don. 1993. The pioneering work of Aqua Agra in Florida with sprouts and soyfoods. Part I (Interview). *SoyaScan Notes.* Nov. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Don is a Seventh-day Adventist who was a sergeant with a type of special forces (Force Recon) for 2 years in the U.S. Marine Corps during the Vietnam War. He joined the marines in 1964, several years before the U.S. got involved in Vietnam. He lived in a Vietnamese village with the local people for 18 months as part of his assignment, and he learned to speak Vietnamese. After he returned to America, many Vietnamese refugees came into the Orlando, Florida, area. The company for which he was working sponsored 10 families and because he spoke Vietnamese he "got volunteered" to help the refugees. He got irritated because the woman who owned the one Oriental food store in Orlando was selling nuoc mam at an exorbitant markup, buying it for $0.50/bottle and selling it for $5.00 a bottle. "I tried to persuade her to lower her prices, and when she wouldn't do it, I got mad and opened a store named the Oriental Grocery store. I sold everything at cost. We finally signed a peace treaty and I sold the store to her, on the agreement that she wouldn't gouge these Vietnamese refugees. My wife is Korean. I met her in Atlanta, Georgia, after Vietnam, where she was a nurse in a hospital. We have been married for 21 years.

"While we were running our Oriental Grocery, my wife

© Copyright Soyinfo Center 2014

and her mother decided they could grow mung bean sprouts in the bathtub and sell them in our store. One day a man from Superfoods (the Albertson's buying arm for fresh produce) called and said he wanted to buy bean sprouts from us. I went and talked to the buyer whose name was Tom Kern. Their offices were 60 miles away. They wanted 15 x 10 lb bags 3 times a week. I talked to my wife and we decided that I should turn our garage (at 1521 Avalon Blvd., Castleberry, Florida), into a bean sprout growing room. In Oct. 1976 we started growing mung beans in our garage and 2-3 weeks later he asked us to start growing soybean sprouts. One day the city came by and informed me that we must have a huge water leak on our property because we used 190,000 gallons of water. I got nervous and let them walk all around the outside of the house looking for the leak. They never found it. I was running the water off into a shallow well."

Next Don got his sprouts into Winn Dixie, a huge chain. In Orlando he visited Bill Bowman, who was a typical Winn Dixie produce buyer at that time. Don took him a sample of bean sprouts to which Bowman responded, "My God, them look like white worms. There's times when my huntin' dog gets them things crawlin' out his butt, and I take him to the doctor." Having taken enough abuse, Don was about to leave when Mr. Bowman said, "I'll tell you what. I figger anybody's got enough guts to come into my office with something this damn weird, I'm gonna have to order from you just one time. But you ain't gonna get no second orders. That way it won't be a waste of your time. We've got 120 stores out of this division so I'll want one 10-pound bag for every store. How many weeks do you need to get ready for this? You've got to grow the damn things don't ya?" It was Friday and Don replied he have the sprouts ready in about 3½ days. "He looked at me like I was totally crazy. Then he said, 'Do you mean to tell me you can deliver a crop to me next Wednesday and you haven't even got it planted yet?" Don said, "Yes sir." Bowman replied, "This is gonna be worth the price of admission 'cause there ain't nobody gonna plant no damn crop and have it ready by Wednesday." When Don delivered the sprouts at the agreed time, Bowman was out waiting on the dock. He said, "They ain't never gonna sell. Don't you dare expect no extra orders." Two days later Don got an enthusiastic phone call: "Don, this is R.D." "R.D. who?" asked Don. "R.D. Bowman, you know, Winn Dixie. Don, can you bring me some more of them white things over here?" Apparently Asian-Americans and hippies were surprised and delighted to find fresh sprouts at a local supermarket in Florida. Thus were sprouts (mung bean, soy and alfalfa) introduced into mainstream American supermarket chains–one of Don's pioneering contributions. Don needed more space to grow his sprouts, so they moved into a 4,000 square foot commercial location on Seminola Blvd., Castleberry, Florida. Then they introduced alfalfa sprouts. Soon they were sprouting just about everything that would sprout. In the beginning, the company was mainly a sprouting company.

Soon Don got a call from Winn Dixie's national buyer in Jacksonville, who said Mr. Bowman had spoken very highly of Don and his products. By this time he was selling the Orlando division's 120 stores in central Florida about 300 ten-pound bags a week of mung bean sprouts and 150 to 175 ten-pound bags a week. Don had no idea how big Winn Dixie was. While Don was waiting in the buyer's office in Jacksonville, the man ordered 35 railroad carloads of potatoes and 20 carloads of onions. "I began thinking. I am in trouble. There is no way I can grow this amount of sprouts. But he told me that my company and Winn Dixie could grow together, adding on divisions one at a time. You couldn't ask for a better company to do business with than Winn Dixie. They paid every bill before it was due. They even sent their trucks by to pick up the sprouts. Soon we were shipping our sprouts to all the different Winn Dixie divisions." Continued. Address: 2321 Virginia Dr., Altamonte Springs, Florida 32714.

3096. Wilson, Don. 1993. The pioneering work of Aqua Agra in Florida with sprouts and soyfoods. Part II (Interview). *SoyaScan Notes.* Nov. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** "When we started talking about making tofu, it became very evident to me that we would need a bigger space, so in about March or April of 1977 we moved over to 100 Highline Dr., Longwood, Florida 32750. We went from 4,000 square feet of floor space to 50,000 square feet. We outgrew our plant on Seminola Blvd. in about 4-5 months." In June 1977 Don's first child, a son, was born. On Highline Drive, Don built rooms to grow the various sprouts and also diversified the company into chopping and packing huge amounts of fresh vegetables; there was a separate packet of sauce (such as teriyaki) in each bag for making stir-fries. All that was needed was some tofu to complete the stir-fry. Don bought his tofu equipment used from Robert and Mary Brooks, whose company Swan Foods in Miami had gone out of business. The purchase became a mess because Robert had failed to inform Don about the liens that were against his equipment due to Robert's unpaid bills. So Don started to make tofu in 1978. He sold it chiefly to the chain stores–first to Albertson's (the smallest group), then to Publix, and then to Winn Dixie (the biggest chain). He did not deal with restaurants or health food stores. At the height of production, Aqua Agra was making at least 25,000 to 30,000 lb/week of tofu. He was the first person to introduce tofu to supermarkets in Florida.

In the summer of 1979 Don attended the second annual Soycrafters Conference at Amherst College in Massachusetts. "I will never forget that as long as I live. Some of the major U.S. food companies, such as General Mills and a few others, sent representatives in 3-piece suits. I was standing in the back of the auditorium where these

© Copyright Soyinfo Center 2014

guys were and I'll never forget listening to their comments as they talked about what a bunch of dingdongs they had been sent to observe, and how this had absolutely no place in the American food chain whatsoever. I can remember walking away from that conference thinking to myself, 'I sure am glad these big guys think this way because all it would take is one big corporation to get involved in this and a lot of small businesses would soon go down the drain.'"

Aqua Agra grew rapidly. Many of his employees were Asian-Americans and they were wonderful workers. the copycats that tried to compete with him couldn't. About 2 years after Aqua Agra started making tofu, the *Sentinel Star* newspaper did a rather nice story on the company in 1980.

In early 1981 Don started making soymilk, which he sold in bulk to the nearby Seventh-day Adventist Florida Hospital–but not to any of the chain stores. He sold about 300 gallons a week.

At about the same time he started making soy yogurt in individual unprinted cups with a pressure sensitive label. Most of his sales were of plain yogurt, but he also sold strawberry, peach, and blueberry flavors. The yogurt was sold to local health food stores, to Del Champs in Alabama, and to a broker in New York named Marty Grossman, who sold a lot.

In late 1981 Aqua Agra began to make soy tempeh. They sold less than 100 lb/week, and only to a few health food stores in Orlando who had asked for it.

Don and his wife had to close the company in about mid-1982, after 6 years in business. At that time they were making about 75 products. He and his wife were each working 100 hours a week. "The doctor gave me a choice. He said, 'You can either get rid of that business and live, or you can keep it and die! But you're gonna do one of the two.'" Don was so sick and tired of everything at that time that he decided not to even sell the company–just to shut it down and walk away.

Don feels that he was a little bit before his time. "People found it amusing that a sergeant in the United States Marine Corps. was involved in making hippie food." Address: 2321 Virginia Dr., Altamonte Springs, Florida 32714.

3097. Drosihn, Bernd. 1993. Re: New developments with soyfoods in Germany. Letter to William Shurtleff at Soyfoods Center, Nov. 29. 2 p. Typed, with signature on letterhead.

• ***Summary:*** Viana has done a lot of work to improve the design of its labels and packaging. In Germany the soyfoods market is not growing at present, but neither is there a big recession. Germany's biggest soyfoods manufacturer, DE-VAU-GE, stopped production of tofu in early 1993 and now buys its tofu products from Heuschen-Schrouff B.V. in the Netherlands. That should make Heuschen-Schrouff one of the largest tofu manufacturers in the world. DE-VAU-GE plans to stop soymilk production in early 1994.

Some newer, small soyfoods manufacturers have recently started in Germany: Tofuhaus Eisenreich (Steinmetzstrasse 4, 93049 Regensburg, Germany. Owner: Mrs. Eisenreich. Phone: 0941/27 01 27), and Topas GmbH (Bollbergsr. 41, 72116 Moessingen [near Tuebingen], Germany. Owner: Klaus Gaiser. Phone: 07473/25515). Our old friend Klaus Gaiser, once the largest tofu manufacturer in Germany, is trying to make a comeback.

The market for soyfoods in Eastern Europe is developing very quickly. Bernd has had contact with a Polish company named Polsoja. Yesterday a person from Slovenia visited Viana. He wants to make tempeh there and he told Bernd that there are some soyfoods manufacturers in the former Yugoslavia. In Slovenia, which is relatively untouched by the war, there is one existing tofu company and more than 30 natural food stores.

Albert Hess (owner of Das Tofuhaus in Lautersheim) and Bernd are in the process of founding a new company, named Sojarella, which will start to make and sell soy cheeses in early 1994. The address will be the same as Viana. They have developed a method for making soy cheese products that contain no casein. Address: Founder and president, Viana Naturkost GmbH, Willi Graf Str. 88, 33881 Euskirchen-Kuchenheim, Germany. Phone: 02251-56076.

3098. Cheney, Susan Jane. 1993. Our favorite beginner [vegetarian] cookbooks: Essential titles for your kitchen library. *Vegetarian Times.* Nov. p. 80, 82-86. [29 ref]

• ***Summary:*** List 29 vegetarian cookbooks in various categories. Vegetarian classics: Moosewood Cookbook by Mollie Katzen (1977, 1992), American Wholefoods Cuisine by Nikki and David Goldbeck (1983), Laurel's Kitchen and The New Laurel's Kitchen by Laurel Robertson, Carol Flinders, and Brian Ruppenthal (1976, 1986), The Vegetarian Epicure (I and II) by Anna Thomas (1977, 1992), Ten Talents by Frank and Rosalie Hurd (1968, 1983).

Other basic books: The American Vegetarian Cookbook by Marilyn Diamond (1990), Kathy Cooks by Kathy Hoshijo (1986), An Ecological Kitchen by Lorna Sass (1992), Fresh from a Vegetarian Kitchen by Meredith McCarty (1989), The High Road to Health by Lindsay Wagner (1990), Cooking with the Right Side of the Brain by Vicki Rae Chelf (1991).

International cookbooks: Sundays at Moosewood Restaurant by The Moosewood Collective (1990), Italian Vegetarian Cooking by Jo. Marcangelo (1984), Yamuna's Table by Yamuna Devi (1992), Cooking with Japanese Foods by Jan and John Belleme, The Best of Lord Krishna's Cuisine by Yamuna Devi (1992). Baking books: Cooking for special occasions: Gourmet Vegetarian Feasts by Martha Rose Shulman (1987), Vegetarian Celebrations by Nava Atlas (1990), Vegetarian Entertaining by Diana Shaw (1991), Vegetarian Pleasures by Jean Lemlin (1987). Other specialty books: Amazing Grains by Joanne Saltzman (1990), Soups for All Seasons by Nava Atlas (1992), Vegetables on the Grill

3100. Cole, Sidney J. 1993. Changes at DE-VAU-GE (Interview). *SoyaScan Notes.* Dec. 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** DE-VAU-GE (DVG) has stopped making soymilk [actually they plan to stop in early 1994] and therefore also tofu. It was an economic decision. When the Adventist church sold Granose Foods in England, that cost DVG about 40-50% of their soymilk market. DVG still sells and distributes both soymilk and tofu under their GranoVita brand, but they buy the products from other manufacturers. The soymilk may be made by Alpro in Belgium. DVG still manufactures many other soyfoods, such as the soy protein foods, the canned meatlike products, etc.

DVG is still a strong company that is growing rapidly and Michael Makowski is still the general manager. He calculated that he can do better financially by using his factory space to make Corn Flakes rather than soymilk. If DVG keeps up their current growth rate, they may soon pass Australia's Sanitarium Foods as the leading Seventh-day Adventist food company in terms of sales. The church has no plans to sell DVG, and in fact the church is looking to support its food industries quite strongly now.

The decision to sell Granose was made at the local division level, not at the General Conference level. Sidney personally would have preferred that the church not sell Granose, but at least they did sell it at the right time and to a good buyer–the Haldane Foods Group. The products, the company, and the philosophy are all in good hands.

Eric Fehlberg retired about 2 years ago as director of the Seventh-day Adventist International Health Food Assoc. Dr. Cole took his place, and he has also kept his job in Miami at the Inter-American Division. Address: Director, International Health Food Assoc., P.O. Box 140760, Miami, Florida 33114-0760. Phone: 305-443-7471.

3101. Makowski, Michael. 1993. Soymilk at DE-VAU-GE and in Europe (Interview). *SoyaScan Notes.* Dec. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** DE-VAU-GE (DVG) has not yet stopped making soymilk; they had planned to stop during late 1993 and they hope to definitely stop during 1994. They stopped making tofu and Tofu Cream 2 months ago, but they continue to sell tofu; they now buy it from another company [Heuschen-Schrouff in the Netherlands]. DGV decided to stop soymilk production because of the large drop in demand after Granose was sold.

Their problem is to find a partner to produce soymilk for them. This other company must make a good quality product at a reasonable price, must have a large enough capacity to supply their needs (they plan to continue to sell the same soymilk products they are selling now), and must be willing to buy their used soymilk equipment at a reasonable price (this is the main sticking point).

There are not many large soymilk manufacturers in Europe. Alpro in Belgium makes and sells about 32 million liters/year in all the different sizes and flavors. Sojinal in France makes about 5½ million liters/year, and DE-VA-GE makes about 4 million liters/year. Other active soymilk manufacturers include Liquats Vegetal S.A. in Viladrau (near Girona), Spain (which started about 1 year ago and makes their soymilk from whole soybeans; they are a private company), several small manufacturers in England (but their quality is not acceptable), and Soyana in Switzerland. In Michael's opinion, the quality of the soymilk made by Alpro and DVG are more or less the same.

The British market for soymilk is by far the biggest in Europe, comprising about 50-60% of the total European market. Belgium, France, and Germany come next and are all about the same size. Then come Italy and Spain.

In Europe, 80% of all soymilk is sold plain–unsweetened and unflavored; it contains only soybeans and water. Then there are the sweetened types, which are sweetened with sugar, honey, or grape juice. The main flavored types are chocolate, vanilla, or strawberry. Then there are three flavors of dessert puddings: Chocolate, vanilla, and strawberry. That's all. Address: General Manager, DE-VAU-GE Gesundkostwerk GmbH, Postfach 1660, Luener Rennbahn 18, D-2120 Lueneburg. Phone: (04131)-303-145.

3102. Leiss, Richard S. 1993. Re: History of the use of spun soy protein fibers at Worthington Foods. Letter to William Shurtleff at Soyfoods Center, Dec. 16. 2 p. Typed, with signature on letterhead.
• ***Summary:*** Richard has just located a copy of the July 1962 issue of the *Worthington Chopletter.* The enclosed article is the earliest written reference he has been able to find on wet spun soy protein fibers and commercial retail products containing them. "The article does not specifically state which product was sold first, but certainly the Soyameat Fried Chicken Style, Minute Entrees Fried Chicken Style, and Minute Entrees Sliced Whitemeat Style were the first three.

He began to work for Worthington Foods in August 1962. At that time Worthington was not doing any

© Copyright Soyinfo Center 2014

commercial spinning of soy protein fibers. It is likely that at that time these wet fibers were being purchased primarily from the Ralston Purina Co. "Following the completion of the Worthington Foods research center in October 1964, a spinning line was set up in the pilot plant. This line was expanded so that commercial quantities of fiber were produced, probably beginning in 1965. This operation was continued until the construction of a larger manufacturing plant in 1970, at which time the spinning was relocated to the new building.

"During the same time period (1962-1968) some limited quantities of spun fiber were obtained from General Mills as well. It was my understanding that the GM fiber spinning line was located in the James Ford Bell Research Center, and I remember Worthington receiving fiber from General Mills for use in retail products. The fiber from each source [Ralston Purina and GM] was slightly different and had to be handled somewhat differently in production.

Richard is not aware that Worthington Foods ever sold wet spun fiber to Loma Linda Foods. "Certainly during the early years it as not a consideration by Worthington management because it did indeed give Worthington Foods a strong advantage over Loma Linda."

"I have considered it an honor to have been a part of the evolution and development of the vegetarian food business in the United States. Knowing and being able to work with pioneers such as "Kelly" Hartman, Bob Boyer, "Cal" Calvert, and Bill Atkinson have made my career something special..." Address: Director, R&D, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3103. Wittenburg, Bonnie. 1993. Archer Daniels Midland Company: NYSE–ADM. Minneapolis, Minnesota: Dain Bosworth. 36 p. 28 cm.

• ***Summary:*** Contents: Summary and recommendation: Valuation. Company profile. Operating review. Corn refining: High fructose corn syrup (HFCS), ethanol, bioproducts. Oilseed processing (soybeans, soymeal, soyoil): Edible soy proteins (soy protein concentrates, isolates, soy flour, and textured soy flour). Wheat milling. Other products and businesses. International trade: NAFTA and GATT. Financials. Recent results. Outlook and conclusion.

Index of exhibits. ADM sales by segment in 1988 and 1993 (p. 5; In 1993: Oilseed processing 50%, corn refining 28%, wheat milling 13%, other 9%). U.S. oilseed processing capacity (p. 20; ADM 28% of U.S. capacity, Cargill 25%, Bunge 16%, Ag Processors 14%, Central Soya 10%, Other 7%). World oilseed production by crop (p. 20; Soybeans account for 52% of the 227.3 million metric tons [tonnes] total). World soybean production by country (p. 20; Total 116.9 million tonnes, of which the U.S. produces 51%, Brazil 19%, Argentina 10%, China 9%, Other 11%). World vegetable oil consumption 1992 by crop (p. 21; Total 584. million tonnes, of which soybean is 30%, palm 21%, rapeseed 15%, sunseed [sunflowerseed] 14%, peanut 6%, cottonseed 6%, other 3%). Soybean meal use by livestock (p. 20; Poultry 51%, swine 27%, beef 8%, dairy cows 7%, other 7%). Largest exporters of soybean meal: 1990-1994 (tonnes in 1993/94 EC-12 8,830, Brazil 6,550. USA 4,944). Largest importers of soybean meal: 1990-1994 (tonnes in 1993/94 EC-12 13,630, Asia and Oceania 4,936, Middle East and North Africa 2,443).

This "Dain Bosworth Research Report" is "A fundamental appraisal of investment value." "ADM is so big and efficient, and its product lines are so diverse, that it can benefit from almost any positive trend impacting agriculture worldwide. ADM is believed to be the largest corn refiner, oilseed processor and flour miller in the United States... We recommend purchase of ADM shares based on our expectations of improved earnings momentum beginning in the fourth fiscal quarter of fiscal 1994."

Concerning edible soy proteins (p. 23-24): The entire U.S. meat substitute market is estimated at $50-100 million annually today, and growing at 5-8% a year. The Green Giant Division of Pillsbury is marketing ADM's burgers under the name Green Giant Harvest Burger. Worthington Foods of Ohio is the leader in the meat substitute category. Their Morningstar Farms burgers are precooked whereas ADM's burgers require cooking. ADM sold 70 million veggie burgers in fiscal 1993 and is now building capacity to triple production. A company named Aton, said to be one of the largest private enterprises in the Ukraine, has an agreement with ADM whereby ADM will be shipping $100 million of soy-based food ingredients to the Ukraine by the summer of 1994.

Toepfer, which was started in Germany in 1919, handles approximately 9% of the total world grain trade and about 35% of the world trade in feedstuffs. ADM owns 50% of Toepfer; the other half is owned by 14 cooperatives from 7 countries including Gold Kist, Agway, Harvest States, AGP, etc. in the USA.

"We continue to believe that the long-term story for ADM is among the best of the companies we follow." "In our opinion, ADM is among the best positioned, best managed, and financially sound ag processing companies around" (p. 35). Address: 60 South Sixth St., Minneapolis, Minnesota 55402-4422. Phone: (612) 371-2728.

3104. Boyle, T. Coraghessan. 1993. The road to Wellville. New York, NY: Viking. A div. of Penguin Books USA. xii + 476 p. Illust. 24 cm. [2 ref]

• ***Summary:*** Many biographical novels attempt to be true to the life of their main character. This outrageous, satirical and comic novel, which pretends to be about the life of Dr. John Harvey Kellogg, is largely untrue and more like character assassination. The dust jacket states: "The year is 1907, and the boom town of Battle Creek, Michigan, is attracting

© Copyright Soyinfo Center 2014

a formidable array of visitors–the rich, the preposterously rich, and the merely famous, from California, Chicago [Illinois], New York, and even Europe. What draws them to this place? And what inspires them to trade in their steaks and oysters, their martinis and champagne, for a diet of bran and yogurt and a regimen of five enemas per day? Dr. John Harvey Kellogg, of course, inventor of the corn flake, peanut butter, and coffee substitutes that have ruined so many a bright morning, the man whose dietary wisdom is at your disposal in this comic masterpiece... [which] overflows with a Dickensian cast of characters–all in search of the magic pill to prolong their lives, or the profit to be had from manufacturing it."

Boyle describes the rise and fall of Dr. Kellogg and his Battle Creek Sanitarium (p. 475-76). The San's heyday was from about 1890 to 1909, "the years when all the world came to him, John Harvey Kellogg, the one man, the impeachable, the authority, the king." "The teens gave way to the twenties, the war years [World War I] rose up and fell away like some sick red tide, women traded in their dresses and feathered hats for short skirts and cloches, ragtime segued into jazz, and the Battle Creek Sanitarium rose higher and higher on the current, unsinkable... Johnny Weissmuller stopped by to have his plumbing inspected; [Admiral] Byrd, Amundsen, Grenfel and Haliburton paid their homage; J.C. Penney, Amelia Earhart, Battling Bob La Follette, Henry Ford. In 1928 the Doctor added a fifteen-story addition, sumptuous with marble, crystal, tapestries and murals, and sat back to watch its 265 new rooms fill with the physiologically wanting.

"It never happened. The Crash came, the dyspeptic set took to dosing themselves with milk of magnesia, diet was whatever you could get. The San crashed under the burden of its debt, the glorious building... was sold at auction to the federal government and rechristened the Percy Jones General Hospital, and Dr. Kellogg retired to Florida while his enemies–and they were legion [especially C.W. Post]–lifted up their parched old heats and sniffed something new in the air." Dr. Kellogg ate more vegetables, smoked less, drank less, slept less and exercised more than practically any man of his time..." Dr. Kellogg died on Dec. 14, 1943. The author carefully avoids telling us that he died in his sleep at the age of 93.

A review in the *USC Trojan Family* (Autumn 1993, p. 19) states that the author has been a USC (University of Southern California) faculty member since 1978; he is the founder and director of the university's creative writing program. Boyle, who is not a vegetarian, "got the idea to write about the health food movement when a friend gave him a book called The Nuts Among the Berries, by Ronald Deutsch. While his protagonist is based on the life of Kellogg, Boyle admits that he exaggerated some of the cereal king's qualities."

A review in *Newsweek* (19 April 1993, p. 62-63) begins: "Part zealot, part rogue, Dr. John Harvey Kellogg is a satirical novelist's dream." His "true genius was in making people miserable in the name of nutrition." "A funny, thoughtful, immaculately written novel, 'The Road to Wellville' eviscerates the gullible pilgrims and conniving hucksters who rubbed shoulders in turn-of-the-century Battle Creek," Michigan. "But is this Kellogg as he was or as Boyle wants him to be? Boyle is infamous for mixing fact with his own fancies... He is riffing on biographical fact to nail down one of the most influential, albeit unattractive, archetypes of our history; the puritanical, proselytizing crank."

Soyfoods Center review: This sleazy (and to many iconoclastic) film is set at his Sanitarium in Battle Creek, Michigan. Its tone of constant ridicule, cheap sexual subplot, and foul language will embarrass most admirers of Dr. Kellogg; and it will do nothing to educate most other viewers about the life of this remarkable man. It is a caricature and a farce.

Talk with Janice Little of Del E. Webb Memorial Library, Loma Linda University, California. 2005. Sept. 29. Janice has read in book reviews that this book is a satire and the that author has written other satirical novels. However no mention (or even hint) of this is made in the book itself or on the dust jacket. Thus, the typical reader can easily assume (incorrectly) that this is an historical novel about a weird doctor.

In 1994 this novel was made into a film, which (according to one critic) portrays Dr. Kellogg "as a jerk–a well-meaning, very serious jerk." It is a very funny movie. Dr. Kellogg is played by Anthony Hopkins. One of the subplots is slapstick conflict with one of his adopted children–done for laughs. A serious review by vegetarian Rynn Berry appears in Satya (1995, which see). Address: Founder and Director of Creative Writing, USC, California.

elements: Seasonal attunement and the organs in harmony and disease. 23. Therapeutic use of the five flavors. 24. Wood element. 25. Fire element. 26. Earth element. 27. Metal element. 28. Water element.

Part IV: Diseases and their dietary treatment. 29. Blood sugar imbalance [diabetes]. 30. The stomach and intestines. 31. Blood disorders. 32. Cancer and regeneration diets. 33. Other degenerative disorders.

Part V: Recipes and properties of vegetal foods. 34. Vibrational cooking. 35. Grains. 36. Breads. 37. Legumes–Peas, beans, and lentils: Healing properties of legumes, improving the digestibility of legumes, techniques for cooking legumes, miso, tempeh, tofu. 38. Nuts and seeds. 39. Vegetables.

40. Sprouts. 41. Salads. 42. Seaweeds: Agar-agar, dulse, hijiki and arame, kombu and kelp, nori, wakame, Irish moss and Corsican (*Alsidium helminthocorton;* it is sold as a tea and discharges worms. 43. Soups. 44. Sauces. 45. Condiments: Chutneys and relishes. 46. Spreads and patés. 47. Pickles. 48. Grain and seed milks (incl. sesame seed milk, almond milk, almond milk shake, sprouted grain milk {oats, rice, millet, barley}, cooked grain milk). 49. Rejuvelac and yogurt.

50. Fruit. 51. Desserts. Appendixes: Recipe locator. Bibliography (180 references, mostly alternative; Oriental philosophy. Chinese medicine: Theory and foundations. Chinese dietary therapy. Ayurvedic and Tibetan medicine. Western approach to nutrition. Healing the spirit and mind. Chinese herbology. Western herbology. Healing with food. Green foods. Amaranth. Seaweeds. Vegetarian, macrobiotic, vegan. Children. Ecology, politics, and ethics of food. Degenerative diseases and immunity. Toxins and radiation. Cookbooks. Food catalogs, guides, and references. Sources of data for tables, charts, and nutritional statistics). References and notes (356 refs, mostly scientific). Resources index (Incl. Soyfoods Center).

The following are listed in the index (f = most important pages): Acid-forming foods (p. 235f, 240). Aduki [azuki] beans (p. 26, 34, 50, 60, 68, 77, 178, 273, 305, 307, 319, 362, 467f). Amaranth (lots, 419-20f). Amasake (p. 98, 152-53, 155, 160, 163, 275, 287, 592f). Animal products (lots). Aspergillus oryzae (p. 592). Ayurveda (lots). Black sesame seed (lots, 492f). Black soybean (60, 68, 288, 317, 324, 327, 468). Bran (p. 332) and its role in relieving constipation (345-46). Buckwheat (lots, 422f). Buddha. Calcium (lots). Cancer. Cheese (but no soy cheese). Cholesterol. Cigarette smoking. Coldness, bodily. Dampness, bodily. Deficiency. Digestibility (Improving the digestibility of legumes, p. 471-73). Five elements system. Free radicals. Gerson, Max and cancer therapy (p. 41, 126, 162, 365-66, 381). Goiter. Gomasio (sic, gomashio; sesame salt, p. 272, 566f). Heart / Heart/mind. Heat (lots). Hijiki. Ice cream (p. 291, 305 [no soy]). Job's tears (p. 381, 383). Kasha (buckwheat, p. 422). Kelp. Kloss, Jethro (p. 366, 381). Koji (p. 479). Kudzu (p. 22, 25, 29, 60, 289, 299, 309, 317, 414f). Lecithin (lots, p. 127, 470, 414f). Legumes (lots, p. 466-471, 473f). Macrobiotics (p. 3-4). Marijuana (lots). Menopause (p. 181-82, 362-364f, 441, 468, 497). Microwave cooking (p. 20). Milk). Mind, Chinese Zen concept of. Miso (p. 33-34, 60, 72-74, 78, 81, 90, 92, 98, 101, 105-06, 150, 159, 164, 195, 221-22, 272, 275, 315, 376, 479-82f; natto miso p. 482). Mochi (p. 436-37f). Mother's milk–to increase. Mucus. Nails, dry and brittle (p. 285). Oils (incl. soy oil, p. 138-41) Omega-3 fatty acids. Nori. Protein (lots). Qi [chi, p. 16-17]. Quinoa. Rice syrup. Schweitzer, Albert (365). Sea palm (p. 541). Seaweed (lots, p. 540-55f–see also Agar, alaria, arame, bladderwrack, Corsican, dulse, hijiki, Irish moss, kelp, kombu, nori, ocean ribbon, sea lettuce, sea palm, wakame). Seitan (p. 446-47). Sesame butter (p. 81, 492). Sesame seed (lots, 492f). Soybean (p. 52, 56, 60, 105, 124, 161, 178, 232, 235n, 250, 300, 466, 470f; children and soy products 253-54; soy sprouts p. 22, 34, 122, 291, 470f; see also miso, soy sauce, tempeh, tofu).

The section titled "Soybean" (p. 470) begins: "Cooling thermal nature; sweet flavor; strengthens the spleen-pancreas; influences the colon; moistens conditions of *dryness;* supplements the kidneys; cleanses the blood vessels and heart, improving circulation; helps restore pancreatic functioning (especially in diabetic conditions); promotes clear vision; diuretic; lowers fever; highly alkalizing and eliminates toxins from the body; boosts milk secretion in nursing mothers. Also used as a remedy for dizziness, childhood malnourishment (especially in the form of tempeh and soy milk), skin eruptions, constipation, edema, excessive fluid retention and toxemia during pregnancy, and food poisoning. For the imbalances during pregnancy and for food poisoning, drink soybean juice (prepare as 'aduki juice' above). Soybeans are a natural source of lecithin–a brain food.

"Unless well-cooked, soybeans inhibit the digestive enzyme trypsin, making them [sic] difficult to digest. The fermentation process, such as used in tempeh, tofu, miso, and soy sauce, also eliminates the beans' trypsin-inhibiting effect.

"Soybean sprouts are cooling with a sweet flavor. They are diuretic and used to treat spasms, arthritis, food stagnation, *heat*-type coughs and other heat conditions marked by one or more signs such as yellow tongue coating, yellow mucus, and scanty, dark yellow urine."

Soy sauce (p. 34, 78, 81, 98, 105-06, 150, 159, 164, 195, 222, 272, 277, 315, 414f, 480). Spirulina. Sprouting (p. 232-33). Sprouts (lots, p. 528-30f). Steiner, Rudolf (p. 19-20, 504). Stomach (beneficial foods, stomach/duodenal heat and, strengthening food). Stress. Sugar (lots). Superoxide dismutase (SOD). Sweating–night sweats (p. 24, 117, 441). Sweeteners. Sweet rice (p. 433f). Tahini (sesame, p. 106, 225, 493). Tempeh (p. 22, 34, 56, 60, 96, 99, 105, 124, 216, 221, 242, 250, 290, 307, 310, 482-86f; vitamin B-12 and p. 98). Thirst. Tobacco. Tofu (p. 22, 25, 34, 55-56, 60, 68,

Ralston Purina Co. and Protein Technologies International's work with soybeans and soybean products–Bibliography and sourcebook, 1934 to 1993: Detailed information on 293 published documents (extensively annotated bibliography), 44 commercial soy products, 42 original interviews (many full text) and overviews, 16 unpublished archival documents. Lafayette, California: Soyfoods Center. 147 p. Subject/geographical index. Author/company index. Language index. Printed 4 Dec. 1993. 28 cm. [381 ref]

• ***Summary:*** The Ralston Purina Co.–originally named the Robinson-Danforth Commission Co.–was incorporated on 8 Jan. 1894 in St. Louis, Missouri. The founders, William H. Danforth (lived 1870-1955), George Robinson, and William Andrews belonged to the same church. The original capitalization was $12,000. The company began by making horse and mule feed; their product was mixed with shovels on the floor of a back room. In March 1896 Danforth became the president of the company and on May 26 of that year he became the majority stockholder. The next day the mill was completely destroyed by the worst tornado in St. Louis' history. Danforth rebuilt the company and made it one of America's largest producers of animal feeds.

Ralston Purina's research on soybeans probably dates from the period before World War I, when the meal had to be imported from Manchuria. In 1926 the company established a 712-acre research farm at Gray Summit, Missouri, for testing all ingredients in laboratory-developed formulas. It is not clear when the company first used soybean meal in its feed products.

The company began processing soybeans in the depths of the Great Depression, probably in about 1930. By Aug. 1935 it had plants for processing soybean meal at Lafayette, Indiana, Circleville, Ohio, and St. Louis, Missouri. The company processed over 2,000,000 bushels of 1935 crop soybeans. By 1936 this soybean meal was being used in 14 products, mostly "Purina Chows," animal feeds made by Purina Mills of St. Louis. It was sold under the famous corporate trademark, the red and white checkerboard.

By the early 1940s was the largest single consumer of soybean meal in America. By 1947 Ralston was operating at least four soybean crushing plants, located in Lafayette, Indiana; Iowa Falls, Iowa; Kansas City, Missouri, and St. Louis, Missouri. The four plants contained 23 expeller presses, had a capacity of 560 tons of soybeans per day, and a storage capacity of 3.91 million bushels of soybeans. The main product of each plant was Purina Chows.

Ralston Purina became involved with isolated soy proteins in 1958 through the acquisition of four soybean processing plants from Procter & Gamble (Buckeye Division). One P&G plant, located in Louisville, Kentucky had an industrial soy protein isolate operation built in about 1946-47 to produce industrial isolate for their Spic & Span house cleaner. During the 1950s P&G converted this plant to making industrial soy protein isolates for the paper coating industry. Production was started by Ralston Purina on 13 June 1959.

The roots of Ralston Purina's work with edible soy protein isolates reach back to Henry Ford. In early 1960 Robert Boyer, who had become one of the world's leading authorities on soy protein isolates while working for Henry Ford, began work as a full-time consultant for Ralston Purina. Starting that year, largely because of Boyer's arrival, Ralston Purina began its first research on edible soy protein isolates at a new research and pilot plant at company headquarters in St. Louis. In 1961 a semi-works plant to create these products was erected at Louisville. In about September 1962 Boyer was named technical director of protein product sales in the soybean division of the Ralston Purina Co.; he worked for Ralston until his retirement in 1971. In 1962 Ralston Purina began to sell both spray-dried edible soy protein isolates (named Edi-Pro A and Edi-Pro N) and the world's first commercial spun soy protein fibers (named Textured Edi-Pro or Fibrotein, and manufactured under patents owned by Robert Boyer). By July 1962 these fibers were being used by Worthington Foods to make a new generation of meatless meatlike products. Ralston Purina's food-grade soy protein products were sold only to the food industry, not directly to consumers.

Frank Calvert, Boyer's co-worker from the Ford Motor Co., was hired in November 1962 to head up Ralston Purina's R&D work on edible isolated soy protein in St. Louis. In 1965 Calvert was named director of soybean research, and in 1967 director of research of the protein division. Calvert is considered a visionary in soy protein research and the accomplishments of his career were honored

in 1973 when the Ralston plant at Memphis, Tennessee, was dedicated to him.

By 1969 Ralston Purina had become the world's largest producer of formulated livestock and poultry feeds, with plants in over 40 states and 30 foreign countries.

By 1975 Ralston Purina employed more than 50,000 people worldwide and had sales of $3,000 million a year.

In Dec. 1976 Dun's Review proclaimed Ralston Purina to be one of America's best-managed companies. "Besides being the world's largest producer of animal feed and pet food, Ralston Purina is also a leader in protein production and nutrition research, which have vast implications for the company's future."

A survey of U.S. and Canadian soybean processing facilities conducted in Nov. 1977 by Shearson Hayden Stone Inc. found that Ralston Purina was the fourth largest soybean crusher / processor in North America (after ADM, Central Soya, and A.E. Staley), with a capacity of 92 million bushels per year, representing 7.5% of total industry capacity.

During the late 1970s and early 1980s Ralston Purina, under R. Hal Dean (chairman) and William P. Stiritz (president and CEO), was restructured to focus on being a manufacturer of higher-margin consumer packaged goods and to move away from its inherently volatile commodity-based enterprises. During the restructuring, Ralston Purina sold a number of its core divisions that dealt with commodities and used the revenues to purchase many new companies–including Continental Baking Co., Eveready Battery Co., Jack-in-the-Box restaurant chain, Van Camp Seafood Co., Keystone all-seasons resort, etc.

On 2 Jan. 1985 Ralston Purina finalized its sale of six soybean processing facilities to Cargill. Ralston stopped operations at its seventh soybean processing plant in Memphis, Tennessee. The deal left Ralston completely dependent on outside sources for soybean products for its pet foods and other products.

In mid-1986 Ralston Purina sold Purina Mills, its U.S. animal feed business, which represented the origins of the company. The buyer, BP Nutrition, paid $545 million for the prosperous mills. With these two sales, Ralston Purina exited from the bulk animal feed and soybean crushing business. It still sold pet foods to consumers.

The company's 1986 annual report stated that Ralston Purina was the world's largest producer of dry dog and dry and soft moist cat foods, and was the largest wholesale baker of bakery products in the U.S. "Ralston's metamorphosis into a very attractive consumer packaged goods company is now essentially complete." During the past year the company had earned $388 million on $5,500 million sales.

In 1972 Ralston Purina expanded its isolated soy protein operations into Europe by forming Purina Protein Europe (PPE). This started as a marketing organization but soon expanded into a technical service organization with an Application Laboratory in the UK, first at West Haddon and then at St. Albans, Herts., not far from London's Heathrow Airport. By 1976 PPE had an office in Brussels, Belgium, and in late September, 1978, PPE opened Europe's first plant manufacturing isolated soy proteins, at Ieper (Ypres), Belgium.

Also in 1978, in America, Ralston Purina expressed its growing interest in soy protein foods by sponsoring the Keystone Conference on soy protein and human nutrition, a milestone event that brought together top researchers in the two fields and resulted in the publication of the proceedings (Wilcke et al. 1979).

Starting at about this time, Ralston Purina became the world's leading manufacturer of food-grade isolated soy proteins. On 1 July 1987 Ralston Purina Co. established Protein Technologies International (PTI) as a wholly-owned subsidiary, with 92 researchers. Today PTI continues to be the world's foremost maker of isolated soy proteins, with offices worldwide, and manufacturing plants in the USA and Belgium. PTI also makes several industrial isolates and Fibrim soy fiber.

Issued in commemoration of Ralston Purina's 100th anniversary, this is the most comprehensive bibliography ever published about Ralston Purina Co. and Protein Technologies International's work with soybeans and soybean products. It has been compiled, one record at a time, over a period of 18 years, in an attempt to document the history of these two pioneering companies. Its scope includes all known information about this subject, worldwide, from 1934 to the present.

This book is also the single most current and useful source of information on this subject, since 85% of all records contain a summary/abstract averaging 170 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 30 different document types, both published and unpublished, every known publication on the subject in every language, and 42 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of these two companies from their earliest beginnings to the present.

The bibliographic records in this book include 293 published documents and 16 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 44 commercial soy products, including the product name, date of introduction,

© Copyright Soyinfo Center 2014

manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. The introduction contains a history of both companies. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

3107. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Wheat gluten and seitan–Bibliography and sourcebook, A.D. 535 to 1993: Detailed information on 462 published documents (extensively annotated bibliography), 363 commercial gluten and seitan products, 208 original interviews (many full text) and overviews, 104 unpublished archival documents. Lafayette, California: Soyfoods Center. 347 p. Subject/geographical index. Author/company index. Language index. Printed 9 Dec. 1993. 28 cm. [922 ref]

• ***Summary:*** This is the first bibliography ever published about wheat gluten or seitan, and the most comprehensive book ever published on this subject. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of these two interesting foods and food ingredients. Its scope includes all known information about this subject, worldwide, from A.D. 535 in China to the present.

This book is also the single most current and useful source of information on this subject, since 95% of all records contain a summary/abstract averaging 207 words in length.

This is one of more than 40 bibliographies on vegetable proteins being compiled by William Shurtleff and Akiko Aoyagi. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 32 different document types, both published and unpublished; every known publication on the subject in every language–including 736 in English, 68 in German, 61 in French, 26 in Chinese, etc.; and 208 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of gluten, seitan, and related products from their earliest beginnings to the present.

The bibliographic records in this book include 462 published documents and 104 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 363 commercial gluten and seitan products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included.

Introduction (p. 7-8): Gluten is a complex protein (composed of gliadin and glutenin) found mainly in wheat, but also in corn, barley and rye. It is best known for its ability to give elasticity and cohesiveness to bread, allowing it to rise. Vital wheat gluten, a cream-colored, free-flowing power, is most widely used to fortify flour and baked goods, but it also finds many other applications. One of the newest and most rapidly growing of these is its use as the main protein source in meatlike products.

Seitan is a Japanese word, coined in 1961 by George Ohsawa (Sakurazawa Nyoichi), a Japanese-born teacher of macrobiotics. He gave this name to a meatlike product developed by one of his students, Mr. Kiyoshi Mokutani. The product was first made commercially in 1962 by Marushima Shoyu K.K. in Japan. It was made by simmering raw wheat gluten in a broth, typically consisting of water, shoyu (soy sauce), kombu (a sea vegetable), and ginger. Seitan was first imported to the Western world in about 1969 by Erewhon, a macrobiotic and natural food company in Boston.

The earliest publication seen that mentions the word seitan is a 34-page macrobiotic cookbook titled Cooking Good Food, published in 1969 by Order of the Universe Publications in Boston. The author, whose name does not appear in the book, is Jim Ledbetter.

Since 1969, interest in and consumption of seitan in the United States and Europe has increased steadily. It continues to be used mostly as an alternative to meat and the macrobiotic community deserves much of the credit for its growing popularity. This book gives details on 104 commercial seitan products that have been developed and launched, mostly in the United States and Europe, and cites 80 published documents (including 40 cookbooks or articles with recipes) in which seitan is discussed. 73% of the published documents are written in English.

The history of gluten can be divided into various periods, a number of which are first documented in this

© Copyright Soyinfo Center 2014

book: Here are a few highlights.

Early History in China: The earliest Chinese reference seen to wheat gluten is in the *Ch'i-min yao-shu,* the world's earliest encyclopedia of agriculture, written by Chia Ssu-hsieh in A.D. 535. It describes *po to,* a type of noodle made largely from freshly-washed wheat gluten. By the Sung dynasty (960-1279) wheat gluten was being called by its present name, mien chin. It was widely used in place of meat, in various forms, by Buddhists in China. The first 17 citations in this bibliography, all published before 1600, come from China, as do 23 of the first 26 citation published before 1803.

Discovery by Scientists in the Western World: The earliest known reference to wheat gluten in the Western world was in 1745 in a Latin treatise titled *De Frumento* (Concerning Wheat), published in Italy. It describes how Beccari, a Professor of Medicine in the Anatomy and Chemistry Institute of Bologna, Italy, prepared a dough from wheat flour, then washed it with water to isolate the gluten. However as early as 1597 the term gluten had been used to refer to "The albuminous element of animal tissues" sometimes called animal gluten. In 1800 William Henry wrote in his book titled An Epitome of Chemistry: "Gluten forms the basis of the muscular or fleshy parts of animals." Numerous early observers noted that the gluten in wheat had distinctly meat-like or animal-like properties.

The first two English-language publications to mention wheat gluten appeared in 1803 in London. John Imison, in his *Elements of Science and Art* gave an excellent definition of wheat gluten. European chemists, especially those in France and Germany, took great interest in gluten, in its properties, and in the individual proteins of which it was composed. By 1900 they had issued more than 62 publications on the subject, compared with only 18 in the USA. In America, the first scientific publication on wheat gluten appeared in 1893, by Osborne and Voorhees in Connecticut.

First Use as a Food in the West in Diabetic Diets: In 1836 and 1841, the French scientist A. Bouchardat, while doing research on diabetes, discovered that gluten was good for use in diabetic diets–which were supposed to have little starch. He proposed feeding diabetics with gluten bread that contained only one-sixth the starch of regular wheat bread. His proposal caught on and for the next century gluten came to be widely used in Europe and the United States mainly in diabetic diets. Many commercial diabetic food products were manufactured. 48 records in this book discuss gluten in diabetic diets.

Seventh-day Adventists in America Discover Gluten: The first original publication on wheat gluten in the United States appeared in 1882. It was an advertisement for Sanitarium Foods published in *Good Health* magazine. This company was located in Battle Creek, Michigan, and directed by Dr. John Harvey Kellogg, a famous Seventh-day Adventist physician who headed the Battle Creek Sanitarium. The ad mentions Gluten Wafers, Diabetic Food, and Gluten Food. The Seventh-day Adventists soon became pioneers in introducing gluten-based foods, especially meatlike products, to America. 256 records in this book relate to Adventists, including 174 commercial gluten products. In November 1929 La Sierra Industries in Arlington, California (founded and run by T.A. Van Gundy), introduced the world's first meatlike product based on wheat gluten. It was named La Sierra Soy Gluten. From this small beginning many other Seventh-day Adventist companies launched commercial meatlike products based on gluten: The two leaders were Worthington Foods (Worthington, Ohio; 67 products) and Loma Linda Foods (Riverside, California; 48 products).

Popularization of Seitan in America and Europe: All early seitan products in the Western world were made by members of the macrobiotic community. In America the first two commercial seitan products were introduced in Oct. 1972, made by Nik and Joanne Amartseff in Boston. Tan Pups, consisting of skewered deep-fried seitan in a breaded batter, were so delicious that just their aroma drew passers-by into the store. Piroshki (filled with seitan) were also innovative. America's third seitan product was Wheatmeat, sold as small meatball-like chunks in bulk. Its creator, John Weissman, made many of America's earliest and most innovative seitan products and he still owns the trademark on the term "Wheatmeat."

In Europe, the first three seitan products were all made by Jonathan P.V.B.A., founded and owned by Jos Van De Ponseele, who learned how to make seitan in Boston. They were Seitan (1978), Seitanburger (1979), and Seitan Pâté (1980). Since 1972 at least 62 commercial seitan products have been launched in the USA and 38 in Europe.

The Rise of Gluten Worldwide: Starting in the early 1960s interest in and use of gluten by cooks and food processors began to increase rapidly (see p. 335). The number of records in this book grew from 320 in the 1960s, to 476 in the 1970s, to 749 in the 1980s. In 1974 the first of many gluten cookbooks was published by LeArta Moulton. In 1979 the International Wheat Gluten Association was founded by 11 wheat gluten manufacturers; it now has 23 members worldwide. Today most wheat gluten is sold as vital wheat gluten, and used in baked goods or to fortify flour. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

comprehensive books ever published on the soyfoods industry and market worldwide.

In May 1982 the first study of the burgeoning soyfoods industry in the Western world was compiled by Shurtleff and Aoyagi, and published by Soyfoods Center. In April 1985 the fifth edition of that book, titled *Soyfoods Industry and Market: Directory and Databook* (220 pages), was published. It contained statistics through 1984, the market size and growth rate for each soyfood type, rankings of leading soyfoods manufacturers of each soyfood type and the amount each produced, analyses, trends, and projections. This book is published to update the 1985 market study.

In the decade since 1984 the soyfoods market has continued to grow at a very healthy rate, with some soyfood types (such as soymilk) growing at a truly astonishing sustained rate–in both the USA and western Europe–as the statistics in this book show so vividly. In 1975 only 75 new commercial soyfood products were introduced in the USA, yet that number skyrocketed to 217 in 1979, reaching an amazing 422 new products in 1987.

During the decade from 1984 to 1994, Soyfoods Center has invested most of its time and resources in the production of SoyaScan, the world's largest computerized database on soyfoods, which contains more than 44,500 records as of Jan. 1994. This database also includes a wealth of carefully researched statistics and analyses of the soyfoods market; those from the start of 1985 to the end of 1993 are contained in this book. Its scope includes all known information on this subject, worldwide. Its focus, however, is statistics, analyses, and trends concerning the soyfoods industry and market in the United States and Europe.

In May 1990 Soyfoods Center conducted an in-depth study of the tofu market in Europe (137 pages), and in July 1990 of the soymilk market in Europe (261 pages). All original interviews and published records from both of these market studies, plus a summary of each study, are included in the present book.

The SoyaScan database is composed of individual records. One record might be an original interview with the head of the largest soymilk company in Europe, on the size and growth of the soymilk market in Europe, and new trends in that market, conducted by William Shurtleff of Soyfoods Center. Another might be a published article or an unpublished document concerning the growth of the market for soy yogurts or soy sauce in America.

This book documents the growth of each product category in every country worldwide. The book contains three extensive and easy-to-use indexes: A subject/geographical index, an author/company index, and a language index. These allow you to find the exact information you need on the soyfoods industry and market quickly and easily. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

3109. Pierce, Ray. 1994. A brief history of Genice Foods Ltd. and their work with soy ice creams, yogurts, creams, and margarine. Part III (Interview). *SoyaScan Notes.* Feb. 4, 8, 10, and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by a an 8-page fax on 7 Feb. 1994.

• ***Summary:*** Continued: Genice developed its first soy yogurt in 1988; it was a chilled/refrigerated product that the company never actually launched. Genice has never made or sold a soy yogurt under the Genice brand, for reasons mentioned earlier–that the company wants to focus on product development and manufacturing, not marketing. Not long after April 1989, when Genice joined the Haldane Foods Group, they started to make Haldane Yoga, a chilled soy yogurt owned by the Haldane Group, but originally launched by the Regular Tofu Company in 1986. This and all subsequent soy yogurts made by Genice have been cultured products. Haldane Yoga product sold at the rate of about 500 to 1,000 cases per week, continuing until early 1990 when Genice developed a unique process for making pasteurized yogurts that have a 4-month shelf life at ambient temperatures. One other dairy company in the UK [Bridge Farm Dairies] was already producing an ambient stable product, but it suffered from protein degradation and did not contain large pieces of fruit. Genice attacked the problem from two directions–process design and product development. The process design concentrated on the necessity of pasteurizing the yogurt containing large chunks of fruit without degrading the soya protein. The product development consisted of producing a product with heat-stable natural flavors and colors at low pH (range: 3.6 to 3.8 when done). The results were highly successful.

The secret to the Genice process for making shelf-stable products is the "protein protection." If the process is not done correctly, all the protein precipitates, resulting in a very poor lumpy product that looks like porridge. The TVC (total viable count) is less than 10 in each soy yogurt product right after packaging, so they are almost as sterile as if they had been treated by UHT. The pH ranges from about 3.8 to 4.0, which gives added protection. This allows them to sell their yogurts using unrefrigerated distribution, which is much more economical. In the UK, most refrigerated distribution is done only by very large food companies.

Genice now makes 4 different brands of non-dairy soya yogurts for sale in the UK in 12 flavors. (1) So Good Yoghert (launched in early 1990 in 3 flavors–strawberry, black cherry, and peach & passion fruit; this is the Haldane brand; the So Good name has no connection with the same name used by Sanitarium Foods in Australia); (2) Unisoy Soya Yogart (launched in late 1990 in 3 flavors- raspberry, peach melba, and black cherry; Genice made these yogurt products for Unisoy before they joined the Haldane Group; before that, they were made by Bridge Farm Dairies in southern England–which attempted to make a shelf-stable product using dairy technology); and (3) Granose Soya Yogert

© Copyright Soyinfo Center 2014

(launched in late 1990 in 4 flavors–peach melba, strawberry, apricot, and blackcurrant & apple; Granose became part of the Haldane Group in Jan. 1991); (4) Granose Hi-Fruit Premium Yogert (launched in late 1992, with double the fruit content, 20%, in 3 flavors–kiwi & passion fruit, nectarine and pineapple, and fruits of the forest). Note that there is some duplication of flavors among different brands.

Starting in 1992 Genice started to sell its soy yogurts outside the UK. First in 1992 the So Good line of soy yogurts was launched in Spain, in cups printed in Spanish, for ADM-owned Arkady ADM Iberica S.A. (Carretera de Hosplatalet 42, Cornella de Llobregat, Barcelona, Spain) with the addition of two new flavors–orange and natural. In late 1992 the Spaniards requested their own brand, so So Good was changed to Alisana; Four Soya Yogerts (120 gm each) were sold in each pack. The Spaniards are apparently becoming very health conscious, because Spain is now Genice's biggest export market, taking about 20% of all the soy yogurt that Genice makes. In late 1992 the So Good line was launched in Sweden, Norway, and Denmark using, in part, the pre-existing Granose distribution network. One product, named So Good Soya Frutty, was sold to all 3 Scandinavian countries. The label was in Swedish and the names of all 3 distributors were on it. The distributors are: (1) Kung Markatta AB, Hjalmarsberg, S-705 95 Orero, Sweden (this is Genice's second largest export market); (2) Alternative Mat A/S, AVD Import, Kubben, 2150 Arnes, Norway; (3) Grön Distribution, Hoje Gladsaxe Torv 2, 2860 Soborg, Denmark (Genice has not dealt with Grön since 1992). At about the same time the So Good Yoghert (with its regular English label) was introduced to Finland, distributed by Oy Makrobios AB, Leksvall, 10600 Ekenas, Finland.

Then in early 1993 Genice's So Good soy yogurt was launched in Italy, in English with a sticker applied by Genice, thru a company partly owned by ADM named AFG Italy S.r.l. (Via S. Cassiano 76, Trecate, Novara 28069, Italy) and in mid-1993 in Portugal with an English label through another ADM subsidiary, Natiris (Centro Dietetico Lda., Rua de Santo Antonia, Estrela No. 31-B, 1300 Lisburn, Portugal). Italy is one of the two fastest growing yogurt markets in Europe, and it may soon pass Sweden to become Genice's second largest export market. Continued. 3110. Pierce, Ray. 1994. A brief history of Genice Foods Ltd. and their work with soy ice creams, yogurts, creams, and margarine. Part IV (Interview). *SoyaScan Notes.* Feb. 4, 8, 10, and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by a an 8-page fax on 7 Feb. 1994.
• ***Summary:*** Ray feels that these soy yogurts are excellent products. Consumers must have the same opinion since the market is growing very rapidly. "In retail terms, this soya yoghurt market is now worth around £2 million sterling ($3 million), whereas it was worth only about £30,000 sterling in 1985." The market was almost totally created in the last four years–since Genice started making soy yogurt using its unique process that gives a shelf-stable product.

Today Genice now sells about ten times as much soy yogurt as soy ice cream. Moreover, sales of soy ice cream are fairly static, while sales of soy yogurt are leaping ahead. Genice makes at least 90% of the soy yogurts sold in the UK. In short, Genice started as a non-dairy ice cream company, which has in fact turned into a non-dairy yogurt company! "The soy yogurts really sold themselves. It was amazing how they took off so well." There are about 1,500 health food shops in the UK, and no more than half of those have a freezer, so they cannot sell ice cream. Even those with a freezer, usually have very limited frozen storage capacity and the competition for that small space (as from dairy ice creams) is intense. Almost all of those with no freezer also have no refrigerated storage; they sell mainly "pills and potions" etc." So a refrigerated or frozen product can be sold in less than half of all health food stores. This gives shelf-stable products, such as Genice's soy yogurts, a big advantage. Genice is moving its soy yogurts into Italy and Portugal in a bigger way, and is launching two new yogurts for Spain this year (competing soy yogurts are sold on a small scale in Spain). Other concepts and flavours will be introduced into the yoghurt area in 1994, together with the quest for other export markets continuing both in Europe and the rest of the world.

Genice uses fresh soymilk (produced by Unisoy) to make about 50% of its total volume of soy yogurt, and isolated soy proteins to make the other 50%. Powdered soymilk is not used because it is very expensive and too hard to obtain. Isolates are more convenient to use but Ray now feels that fresh soymilk gives a slightly better product–though this is very subjective and different people have different opinions. Isolates also give an excellent soy yogurt.

One of the markets that Genice has not yet entered–and would like to–is Germany, where there are large sales of soymilk and twice as many health shops (Reform Houses) as in the UK. Since most of the Reform Houses do not have chilled or frozen cabinets, Genice's shelf-stable products would fit perfectly; they could be sold on the shelf next to the Muesli. In the smaller health food shops in the UK, Genice's shelf-stable soy products are usually sold unchilled, but in the bigger shops, like Holland & Barrett, they sold chilled, since they taste better after being chilled.

Other dairylike non-dairy products that Genice has made are as follows: In 1990 chilled So Good Soycreem was launched as a non-dairy alternative to dairy double cream, but low in cholesterol, high in polyunsaturates, and low in saturates. It was made for Haldane in a little beige plastic pot with a green foil lid, packed at the Genice plant. It contains a trace of cholesterol because law requires that it contain 36%

© Copyright Soyinfo Center 2014

oil, including some palm oil. In 1991 a shelf-stable UHT version (completely sterilized, with a 9-month shelf life), now named Granose Soya Creem, was launched in a 225 ml Combibloc pack, made for Genice by a large dairy in Ireland which had Combibloc packaging equipment. The chilled So Good Soycreem was discontinued. In 1992 Genice installed a vegetarian margarine plant, which also makes Granose Soya Margarine that is sold chilled. This margarine was developed in Germany, so they took over the business and reformulated the product.

Genice is doing very well. The plant has expanded to 15,000 square feet from its original 2,500–a 6-fold increase. Their turnover (gross sales) has doubled virtually every year since they have been in business. Being owned by ADM has been of great benefit to Genice because ADM has been extremely generous in providing the money that Genice needs for its ongoing expansion and implementation of new ideas. Genice would eventually like to enter the U.S. market (starting in New York) with its shelf-stable non-dairy yogurt products, since there are no such products in America.

When yogurt is pasteurized, the beneficial effects of the yogurt bacteria are nullified. But Ray was just told by Dr. Glen Gibson that oligofructose, a sugar, has the effect of promoting the growth of the small quantities of Bifidobacteria in the human digestive system. Thus a pasteurized soy yogurt could be made into an even healthier product if it were sweetened by oligofructose.

Ray is a native of Wales and his wife is a teacher who often teaches in Welsh. Both are happy to see the revival of the Welsh language. Ray is not a vegetarian, but he has a good feeling and high regard for vegetarianism, he likes vegetarian food, and he has some vegetarian ideals but they go beyond the food to more ethical issues. He finds that many of the people in other companies that he deals with are more ethical people. He would estimate that 85-90% of the consumers who buy products made by Genice are vegetarians or vegans. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

3111. Pierce, Ray. 1994. The origins of the Haldane Foods Group (Interview). *SoyaScan Notes.* Feb. 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Two men were instrumental in conceiving of and putting together the Haldane Foods Group: John Mahlich of British Arkady and Peter Fitch. Ray knows both men well and respects them greatly. Peter does a lot of the leg work, whereas John is the man who actually goes to ADM and requests the money. Ray sees John about twice a year and he is located nearby. John, who is about age 66, is an extremely alert and competent person–one of the most competent men Ray has ever met and, moreover, a very approachable gentleman. John has no particular personal interest in vegetarianism but he definitely understands it, sees its potential, has a strong commercial interest in that potential.

Peter Fitch has told Ray many times he didn't really want to acquire Genice; Ray had to court him for 9 months before he agreed to acquire Genice. Both British Arkady and the Haldane Foods Group report to ADM, but Ray thinks John Mahlich is responsible for both. John actually works at and is the top man at British Arkady. Bill Pringle worked for John, but Ray thinks Bill is now retired.

Brian Wellsby started Haldane Foods, and after his company was acquired by the Haldane Foods Group, he went to work for the Group for a while and then he left the Group in late 1989, after Genice was acquired.

A number of the heads of the companies in the Haldane Foods Group are not vegetarians. Of these companies, Granose and its top people are probably the most strongly committed to vegetarianism–in part because of its origins as a Seventh-day Adventist company. Some people at Haldane are also committed to vegetarianism. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

3112. Ralston Purina Co. 1994. The Ralston chronicle: 1894-1994. A century of managing change. St. Louis, Missouri. 32 p. Illust. 26 x 33 cm.

• ***Summary:*** This excellent company history, which contains more photographs than text, begins with company "Milestones" (1894-1994) in the inside front cover, followed by an Introduction by Bill Stiritz, Chairman and CEO. For each "era" in the company history is given the years encompassed by that era, a one-line description of the era, a description of the key events of that era–both within the company and for the United States, and photographs taken during and capturing key parts of that era.

Milestones (inside front cover): "1894–Robinson-Danforth Commission Company is founded in St. Louis. 1896–Tornado destroys original feed mill. 1898–William H. Danforth assumes a leadership position and enters the cereal business with the endorsement of 'Dr. Ralston.' 1902–The name of the company is changed to Ralston Purina Company to reflect more accurately the business–where 'Purity is Paramount." Ralston adopts the famous Checkerboard logo. 1904–Ralston gains exposure at the 1904 World's Fair in St. Louis. 1926–Ralston opens its experimental farm at Gray Summit, Missouri. Ralston purchases the Rye-Krisp plant in Minnesota. 1932–Donald Danforth Sr. is named President of Ralston. 1937–Wheat Chex is introduced. 1950–Rice Chex is introduced. 1955–Founder and Chairman of the Board William H. Danforth passes away on Christmas Eve..."

1894-1910: Agricultural volatility and reform, and manufacturing might. Color photos show: (1) Company letterhead in about 1896. Across the top: "Familiar faces at your grocers–Ralston Health Club Breakfast Food, Purina

Health Gluten–Whole Wheat Flour, Century Health PanKake Flour, Ralston Health Club Barley Flour, Ralston Infant Food. "Fine foods build fine minds." (2) Poster (red and black on beige) titled "Ralston Purina Foods" with caption "'Dr. Ralston' inspires a line of whole-wheat breakfast foods–'Where Purity is Paramount.' We see the front panel of: Ralston Breakfast Food. Ralston Cereal Coffee. Whole wheat flour for Brain bread (sack). Purina PanKake Flour. Ralston Hominy Grits. Ralston Kornkins–Old fashioned corn meal. Ralston Health Oats. Ralston Barley Food. Black and white photos show: (1) Women working in a factory making Ralston cereals, with rope drives and pulleys. (2) A child by the fire dreaming of the morning and Kellogg's toasted Corn Flakes.

1894-1910: At the World's Fair in St. Louis ("The Louisiana Purchase Exposition"). "Danforth's fascination with fitness and health inspires the endorsement of 'Dr. Ralston, a health guru with 800,000 followers. 'In a million homes,' a 1902 advertisement boasts, 'Ralston Purina Cereals find a welcome home at the breakfast table.'" "When the Louisiana Purchase Exposition comes to St. Louis in 1904, Ralston celebrates its unlikely first decade in a colorful way. Checkerboard boxes with handles are distributed to fairgoers, and the Purina booth serves Ralston Breakfast Food and pancakes made with Purina PanKake Flour." A color poster titled "Ralston Purina Foods" shows a miller tossing a happy little girl into the air. A package of Ralston Health Breakfast Food is shown. A dark brown on beige poster is titled "You will never forget the World's Fair and your Ralston Box. Begin to Live–now!

Note: A little additional history: 1894–The three founders were George Robinson, Will Andrews, and William Danforth. They started with $12,000 in borrowed capital in a storefront near the St. Louis riverfront. Their horse and mule feed–a combination of corn, oats, and molasses–was mixed by shovels then poured into 175-pound sacks, which were then sewn shut by hand."

Danforth was a man of strong personal convictions. Believing that the 'ingredients' of life were body, mind, personality, and character, he strove to balance all four in his own life and to help his employees do the same. A who felt passionate about healthy living, he boasted that he had never missed a day of work due to illness. It was, in part, Danforth's interest in health that helped him succeed in diversifying from animal feed into consumer goods.

In the late 1800s, most whole-wheat flour had the germ removed, to extend its shelf-life. "In 1898, while traveling in Kansas, Danforth met a miller who had developed a way to prevent rancidity in whole wheat. Packaging the miller's wheat, Danforth named it 'Purina Whole Wheat Cereal,' and began selling it to St. Louis grocers. The name Purina was derived from Robinson-Danforth's company slogan: 'Where purity is paramount.' To promote his new cereal, Danforth approached one of the most famous health spokespersons of the day, a Dr. Ralston. Ralston, whose precepts were followed by thousands, agreed to endorse the cereal only if it were named after him. Danforth quickly renamed the product 'Ralston Wheat Cereal,' and the campaign began. By 1902, there was a whole line of Ralston cereals boasting various health benefits." Address: St. Louis, Missouri.

3113. Mahlich, John. 1994. History and development of the Haldane Foods Group Ltd. Part II (Interview). *SoyaScan Notes.* March 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Next, in Feb. 1989, the Haldane Foods Group purchased a company named Kwality Foods. They made sauces, spreads, and dips. John liked the management, their products, and the price at which they offered to sell the company, which had a financial problem–they had run out of money. The Group subsequently changed the name of Kwality Foods into Saucemasters Ltd.

While owning Saucemasters, the Group started another company named Snackmasters Ltd., which was wholly owned by Saucemasters. Then in 1993 the Group sold Saucemasters, but retained ownership of Snackmasters, which they relocated in a new factory adjacent to the Haldane factory. It basically makes noodle- or rice-based vegetarian snack meals that contain textured protein and dried vegetables with a sauce sachet in each plastic cup. You pour hot water into the cup, leave for 4 minutes, and you have a very convenient and nutritious meal. This type of product is a big business in England; one company, Golden Wonder, dominates the market. But Snackmasters has carved out a niche by making ethnic vegetarian meals (Chinese, Indian, etc.), and using their sauce company to make the sachet of sauce. They have taken the product up-market by some ingenious developments and the company is thriving.

A month after buying Kwality Foods, the Haldane Group purchased Genice (pronounced JEN-ais) Foods, which makes non-dairy ice creams, yogurts, and margarines. "By this time we were deeply into the healthy food, health food, vegetarian business." Though this was the Group's first company to make non-dairy products, it fit well because their products were basically made from soya–either soyamilk or soya protein isolates. "Not only were we developing a group of interesting companies that can make some profit, but we were also signalling to a very large audience that maybe others (such as the many food manufactures who have been hesitant to use soya) should get into the soya business. And ADM likes that, because the more it is obvious that soya is here to stay and that it has multitudinous uses, the more Dwayne Andreas's dream will come true. Truthfully, we do not fear competition; the more that are in the business, the merrier. If you can get companies like Unilever to start using soya, then you get good publicity on a global basis.

"Genice is doing a very good job, but I have to say truthfully that selling non-dairy ice cream is missionary

© Copyright Soyinfo Center 2014

work. You need converts, and if you don't get them you're not a happy missionary. Its just a fact that most people want products with more and more cream. But at Genice we were going in the opposite direction–but successfully, though with slow growth. That's a tough number but we are hanging in and more and more will be sold. The non-dairy yogurts, incidentally, are going exceedingly well. That's good business."

ADM is a very acquisitive organization. For this reason, John and Peter Fitch were always looking for promising companies to add to the group. In the 20 years that John has worked for them, he has bought more than companies–with many outside the Haldane Group. Dwayne Andreas was aware of each of the Haldane Group's purchases as they took place. "He was totally aware of what we were doing and obviously was approving as we went. "You have to remember that Dwayne Andreas is very much committed to the evolution of the soyabean. He certainly has shown the keenest of interest in everything that we have done. I report directly to ADM and I could not buy a business without the approval of Dwayne Andreas (or Jim Randall) and finally the ADM board of directors, which meets quarterly... Yet ADM is a very fast-moving animal, and you can't contain its dynamism by quarterly meetings. The whole thing is designed to move with speed. So some acquisitions have been made before the board meeting; the contract simply reads 'Subject to board approval.'"

In those days John used to go to the USA quite a lot because he was running the ADM-Arkady business there for ADM; it was a manufacturing business in Chicago, Illinois–it's now in Kansas.

In December 1990 the Haldane Group purchased Unisoy, a small soya company which was for sale and which made soymilk. In the early 1990s a situation developed where the Haldane Foods Group had a sales director who had been a previous employee of Granose Foods. He suggested that the Group might be able to buy the Granose Foods company. "He had a key to open that particular door. It was with his basic introduction that we approached Granose, and subsequently we bought all of Granose. Granose had built a brand new and beautiful factory which was about 40 miles north of London, and that fit it very well to the growth and pattern that we were following." So the Haldane Group moved the center of their operations out of the Haldane factory and into the Granose factory, where it now is. The group still usually calls itself the Haldane Foods Group Ltd., but under some circumstances other names may also be used–such as the Granose Foods Group.

Granose was selling soyamilk that was being imported from a German manufacturer [DE-VAU-GE]. The Haldane Group decided to discontinue these imports, and now Unisoy is making all of the soyamilk for Granose that used to be imported from Germany. The quality of Unisoy's soyamilk is definitely as good as the German-made product, and now Granose has added many new soyamilk products to its range, with vitamin enrichment, etc. However, it seems like the total soyamilk market in the UK is no longer growing. Continued. Address: The British Arkady Co. Ltd., Skerton Road, Old Trafford, Manchester M16 0NJ, England, UK. Phone: 061-872-7161. Fax: 61-873-8083.

3114. **Product Name:** [Soya Based Drink (Vanilla)].
Foreign Name: Soja Drink–Vanille.
Manufacturer's Name: Bruno Fischer GmbH (Importer-Distributor). Made in France.
Manufacturer's Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.
Date of Introduction: 1994 March.
Ingredients: Water, soya beans* (9%), maize malt extract*, dried sugar cane juice*, sea salt, natural vanilla extract. * = Organically grown and controlled.
Wt/Vol., Packaging, Price: 1 liter glass bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label sent by Bruno Fischer. 1998. April 15. Ingredients and nutritional value are given in five languages, each with the flag of that country by the product name: German, English, Italian, French, and Dutch. Talk with Bruno Fischer. 1998. May 13. This product was launched in March 1994.

3115. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Soy ice cream–Bibliography and sourcebook, 1918 to 1994: Detailed information on 725 published documents (extensively annotated bibliography), 230 commercial soy ice cream products, 210 original interviews (many full text) and overviews, 91 unpublished archival documents. Lafayette, California: Soyfoods Center. 352 p. Subject/geographical index. Author/company index. Extensively annotated. Printed March 14. 28 cm. [1117 ref]
• ***Summary:*** This is the most comprehensive book ever published about soy ice cream. It has been compiled, one record at a time over a period of 19 years, in an attempt to document the history of this subject. Its scope includes all known information about soy ice cream, worldwide, from 1918 to the present, plus considerable information about other non-dairy frozen desserts which contain no soya.

This book is also the single most current and useful source of information on soy ice cream, since 97% of all records contain a summary / abstract averaging 178 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 35 different document types, both published and unpublished; every known publication on the subject in every language–including 1,066 in English, 34 in Japanese, 10 in French, 8

© Copyright Soyinfo Center 2014

in German, etc.; 210 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of soy-based soy ice cream and related products from their earliest beginnings to the present.

The bibliographic records in this book include 725 published documents and 91 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 230 commercial soy ice cream products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included.

Introduction (p. 7-8): Soy ice cream was the hottest soyfood product in America during the 1980s, thanks in large part to David Mintz, whose Tofu Time Inc. launched Tofutti in August 1981 in New York City.

The United Kingdom soon became the second major center of activity following the development of Sunrise Ice Dream by Michael Cole of Soya Foods Ltd. It was launched in July 1985, and was soon being made by Genice Foods Ltd. of Wales.

The idea of making an ice cream from soya originated in March 1918 when a Japanese man, Arao Itano, mentioned it briefly in an article titled "Soy beans as Human Food" in the *Massachusetts Agricultural Experiment Station Bulletin* No. 182.

Other non-dairy ice creams were soon being envisioned. George Washington Carver wrote in Oct. 1919 that he planned to make an ice cream from peanut milk and by 1921 J.H. Stassen was making ice cream from rice milk.

The first patent for tofu ice cream was issued in Nov. 1922 to Lee Len Thuey, a Chinese-American living in Indianapolis, Indiana.

The world's first commercial soy ice cream was introduced in 1930 by Jethro Kloss, a Seventh-day Adventist from Washington, DC. Named Soy Ice Cream, it was sold in strawberry, chocolate, and vanilla flavors, each sweetened with honey. He named his company the Scientific Food & Benevolent Association. By 1934 he was serving his soy ice cream at his lectures in Florida, and in 1935 he included a recipe for soy ice cream in his herbal classic *Back to Eden.*

In the early 1930s Henry Ford's soy researchers Robert Boyer and Edsel Ruddiman developed an experimental soy ice cream at Greenfield Village in Detroit, Michigan. It was based on fresh tofu curds and soy protein isolates. By August 1935 Henry Ford was serving soy ice cream for dessert at VIP and press luncheons held at the Ford Engineering Laboratory in Dearborn.

In 1950 Robert Rich, of Rich Products Corp. in Buffalo, New York, launched Chil-Zert, America's second commercial soy ice cream. Bob Rich had learned how to make soymilk from Henry Ford's researchers.

Interest in soy ice cream, worldwide, was slow from 1918 until the late 1970s (see histogram p. 337-38). Then it began to take off. In Aug. 1976 Ice Bean, the first of a new generation of soy ice creams, was introduced by Farm Foods in San Rafael, California. Developed at The Farm in Summertown, Tennessee, it was soon sold nationwide.

But the product that made soy ice cream famous, and attracted scores of imitations, was Tofutti, developed by David Mintz (and Pesach Lazaroff) at Mintz's Buffet, a kosher Jewish deli on Third Ave. in Manhattan's chic Upper East Side. Tofutti was first sold commercially at the deli in August 1981 as a soft-serve non-dairy frozen dessert in 9 flavors. During the previous two months it had been sold in the deli under other names: Tofu Time Non-Dairy Frozen Dessert (the first flavor was carrot-raisin), then Tofu Time Tofu Ice Kream.

In 1982 Tofutti began to be sold outside the deli in New York City, including at a number of the city's most stylish eateries–such as Bloomingdale's and Zabar's. In 1983 sales expanded ten-fold. Mintz established a new company named Tofu Time and on December 8 Tofu Time Inc. raised $2.76 million net in the company's first public stock offering.

In 1984 Tofutti mania spread across America. Tofutti hit the big time, with huge amounts of free media publicity. Rising to national stardom it became (to everyone's astonishment) America's number one dessert craze. Sales of Tofutti skyrocketed to $9 million in fiscal 1984 (which ended July 31), then to a record $17.1 million in fiscal 1985. Tofu Time had one of the hottest stocks on Wall Street. By the summer of 1985 at least 26 brands of soy ice cream (many of them with "Tofu" on the label), were on the market in America.

The boom years for soy ice cream in America were 1984-1988. When the craze died down, four national brands were left: Tofutti, Ice Bean, Tofulite, and Mocha Mix.

In The United Kingdom, the first soy ice cream was Sojal Frozen Non-Dairy Dessert, launched in 1984. It was developed and marketed by John Holt of the Regular Tofu Co. Ltd. and made in Leicester, England, by Rossa Ltd., a dairy ice cream company. In May 1984 this same company

© Copyright Soyinfo Center 2014

introduced SoyBoy Soymilk Ices, then in June 1985 Sojal Light. Michael Cole was one of the salesmen for this company.

Cole then left and went to work for Soya Foods Ltd. In July 1985 he introduced Sunrise Ice Dream, which quickly became a huge success nationwide. Initially the product was made in Clywd, Wales, by Classic Ices–which was then owned by the Hillsdown Holdings Group. Later in 1985 the founder of Classic Ices, Ray Pierce, and the technical manager, Irene Barclay, left Classic Ices and started a company named Genice Foods Ltd. (pronounced JEN-ais, also in Clwyd, Wales) to specialize in making non-dairy products. Their first product, launched in April 1986, was Genice Ice Delight. In 1986 the manufacture of Sunrise Ice Dream was transferred to Genice from Classic Ices. Today Genice is the largest maker of soy ice creams in the UK and Europe. In April 1989 Genice became a member of the Haldane Foods Group. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

3116. Worthington Foods, Inc. 1994. Annual report 1993. 900 Proprietors Rd., Worthington, OH 43085. 16 p. 28 cm.
• ***Summary:*** See next page. On the cover is Worthington's logo, slanted and in pink, against a light gray background. Total sales rose to $79.3 million in 1993, up 3.6% from $76.5 million in 1992. Net income was $1.8 million for 1993, down 36% from $2.8 million in 1992.

On the inside front cover are the "Corporate objectives" and "Mission statement."

A "Notice of annual meeting of shareholders" (12 p.) is attached.

A table (p. 3) shows the number of shares owned by each director. The four largest shareholders are: George T. Harding IV (3.7% of common stock). Allan R. Buller (3.4%). Dale E. Twomley (2.1%). Donald G. Orrick (2.1%).

A table (p. 9) shows a summary of compensation (annual and long term). Dale E. Twomley, President and CEO, has a salary of $190,000 + $28,194 all other compensation.

The LaLoma brand has now been changed back to the Loma Linda brand. Address: Worthington, Ohio. Phone: (614) 885-9511.

3117. Worthington Foods, Inc. 1994. Free merchandising kit: Over a $50 value. No meat, one week. The Great American Meat-Out, March 1994 (Leaflet). 900 Proprietors Rd., Worthington, OH 43085. 1 p. Front and back. 28 cm.
• ***Summary:*** The purpose of this leaflet is to promote Worthington's Natural Touch line of products. The word "Worthington" does not appear on the leaflet. On the front is the black silhouette of a cow standing in a red circle with a read line drawn diagonally (from upper left to lower right) through it. Across the bottom: "See reverse side for details."

On the rear is an explanation, with photos of what the kit includes: Various numbers of cases of 8 Natural Touch products (at 15%+ discount), plus a window banner, 100 printed flyers, one cotton T-shirt, ten badges for store employees, point of sale signs for Natural Touch products, line art for use in advertising the store event, written news release, etc. Address: Worthington, Ohio. Phone: (614) 885-9511.

3118. Sutherland, Mavis. 1994. Re: Country Life Restaurant in Nashville, Tennessee. Letter to William Shurtleff at Soyfoods Center, April 15. 2 p. Typed, with signature.
• ***Summary:*** Country Life Restaurant (sometimes called Country Life Cafeteria) is located at 1917 Division St., Nashville, Tennessee. Phone: 615-327-3695. It is run by André Wilson and his wife, who are black people. It has been in business for 14 years. It was started as a health food store in 1980 and then became a restaurant in 1981. It never had any connection with Madison College or the Madison Hospital. André thinks that America's longest running vegetarian restaurant in recent times is the Country Life at the Yuchi Pines Institute in Columbus, Georgia, owned by Drs. Agatha and Calvin Thrash. Address: 503 Hood Lakes Rd., Lawrenceburg, Tennessee 38464.

3119. Graves, Cheri. 1994. Update on Cedar Lake-MGM Foods in Cedar Lake, Michigan (Interview). *SoyaScan Notes.* April 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Vesper C. Sias is no longer with this company but he is still alive. The company is now owned by Mr. Alejo Pizzaro, who was formerly with Loma Linda Foods. He bought the company in 1989 or 1990. Mr. Pizzaro now works at Cedar Lake's marketing offices at 12155 Magnolia Ave., Suite 3E, Riverside, California 92503. Phone: (909) 352-3554. In 1993 MGM Brands (of Scarborough, Ontario, Canada) and Cedar Lake joined forces; their products are very similar except that MGM made frozen vegetable protein foods in Canada and Cedar Lake made similar canned foods in Michigan. The MGM plant was moved to Cedar Lake, where all food production no takes place. Address: P.O. Box 65, Cedar Lake, Michigan 48812. Phone: (517) 427-5143.

3120. Graves, Cheri. 1994. Information about Cedar Lake–MGM Foods (Portfolio). Cedar Lake, Michigan. 38 inserts
• ***Summary:*** Inserts include: (1) Cover letter from Cheri (typed, with signature, on letterhead): "Enclosed is a package containing labels, a price sheet, nutritional information, and further information about our products. We will be working on new labels for the majority of our products, and the new labels will have a new look along with nutritional information for each one... Enclosed is the article I mentioned to you over the telephone. I don't have the cover sheet, but the article was in the *Review and Herald*, March 1991 issue. Since that time, as I mentioned to you, Cedar Lake Foods, Inc. and MGM Brands, Inc. have formed

CORPORATE OBJECTIVES

MISSION STATEMENT

Worthington Foods, Inc. is solely dedicated to producing and marketing vegetarian and other healthful foods. Worthington Foods will continue to be a leader in providing nutritionally balanced options to meat, egg and dairy products for healthful living, as it has done for more than 50 years.

SHAREHOLDER OBJECTIVE

To provide our shareholders with increasing value from their investment in Worthington Foods. As a 50-year-old growth company, we recognize the necessary balance between consistent dividends and additional shareholder value created through the internal use of generated profits. Our primary responsibility is to our shareholders. Strategies are elevated not just in terms of increased sales or net income, but with an eye toward enhanced shareholder value as measured by the market appreciation of our stock and its dividends. This approach emphasizes economic cash flow analysis, the company's cost of capital, return on assets and other appropriate standards in evaluating growth opportunities.

CONSUMER OBJECTIVE

To provide our consumers with good-tasting, nutritionally sound vegetarian choices for healthful living. Virtually all of our products are cholesterol-free and contain less total fat and saturated fat than the meat, egg and dairy products they are intended to replace. With more than 150 items among our four brand lines, Worthington Foods offers a variety of high-quality, convenient products appealing to the full spectrum of health-concerned consumers. The market ranges from those desiring to reduce their intake of fat and dietary cholesterol to those seeking only vegetarian foods.

TRADE OBJECTIVE

To provide our trade consumers with a wide assortment of healthful, high-quality products to best satisfy the needs of their shoppers, whether motivated by health or philosophical reasons. Worthington Foods' products will provide our consumers with good value at a fair price while permitting the trade to realize a competitive profit. Demand will be generated through appropriate trade promotions, consumer advertising and merchandising support. To that end, we will maintain our commitment to providing greater product offerings and increased sales volume in supermarkets, health food stores, specialty markets and food service operations, both nationally and in targeted international markets.

EMPLOYEE OBJECTIVE

To provide our employees with challenging and satisfying employment in a pleasant working environment. Stable employment with appropriate financial rewards for outstanding work accomplishments can be expected. Personal growth and development will be encouraged, and all employees will have opportunities to be well informed and meaningfully involved in their company.

COMMUNITY OBJECTIVE

To provide our local community and those we serve with a good corporate neighbor which practices the highest values of honesty, integrity and mutual trust. We will assume a responsible leadership role in economic, social and industry matters in which we believe we can have a positive influence on the public welfare.

WORTHINGTON FOODS

The Company will continue to establish policy and conduct business based on the Judeo-Christian ethics and moral values upon which it was founded and has operated within for more than 50 years.

© Copyright Soyinfo Center 2014

a partnership. This took place on January 1, 1993. MGM Brands, Inc. was a Canadian company that manufactured frozen vegetable protein products in Scarborough, Ontario. I believe the company had been in business for about 10 years and was started by Graham Munroe. The partnership between the two companies allows us to offer canned and frozen products from the same location."

• ***Summary:*** A biography of Richard S. Leiss, age 55, and a history of his work at Worthington Foods. Address: Field editor.

3122. Kevin, Kitty. 1994. Analogs: Fabulous fakes. How five companies make the all-American burger meatless. *Food Processing* (*Chicago*) 55(4):39-40, 42, 44. April.
• ***Summary:*** This article leads off the "Foods of Tomorrow" section. "Meatless burgers are going mainstream–sort of." The five companies are Worthington Foods (Worthington, Ohio–Grillers), Wholesome & Hearty Foods, Inc. (Portland, Oregon), Fantastic Foods, Inc. (Petaluma, California), Archer Daniels Midland/Pillsbury (Decatur, Illinois), Sharon's Finest (Santa Rosa, California). Green Giant Harvest Burgers are made by ADM and distributed by Pillsbury. The basic ingredient is texturized soy protein concentrate. A color photo shows four flavors of frozen Harvest Burgers. Address: Associate editor.

3123. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Cheese and cream cheese alternatives (with or without soy)–Bibliography and sourcebook, 1896 to 1994: Detailed information on 334 published documents (extensively annotated bibliography), 159 cheese alternative products, 119 original interviews (many full text) and overviews, 44 unpublished archival documents. Lafayette, California: Soyfoods Center. 225 p. Subject/geographical index. Author/company index. Printed April 28. 28 cm. [570 ref]
• ***Summary:*** This is the most comprehensive book ever published about soy cheese, soy cream cheese, and other cheese alternatives. It has been compiled, one record at a time, over a period of 19 years, in an attempt to document the history of this subject. Its scope includes all known information about cheese and cream cheese alternatives, worldwide, from 1910 to the present.

This book is also the single most current and useful source of information on soy cheese, since 97% of all records contain a summary/abstract averaging 190 words in length.

This is one of more than 45 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 34 different document types, both published and unpublished; every known publication on the subject in every language–including 528 in English, 11 in French, 11 in Japanese, 10 in German, etc.; 47 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of soy cheese from its earliest beginnings to the present.

The bibliographic records in this book include 334 published documents and 44 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 159 commercial cheese and cream cheese alternatives products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included.

A brief history of cheese alternatives (p. 7-8): Cheese alternatives are Western-style cheeselike products that contain a significant amount of non-dairy protein, typically from soybeans, nuts, or seeds. They may or may not contain casein or caseinates (the main protein found in milk). The hard cheeses that contain casein typically melt, stretch, and

© Copyright Soyinfo Center 2014

shred in much the same way as dairy cheeses. We distinguish cheese alternatives from imitation cheeses and cheese substitutes in which the butterfat is typically removed and replaced by vegetable oil or by no fat at all.

The world's first non-dairy cheeselike products were the various types of fermented tofu made in China (where they are called *doufu-ru, fuyu,* or *sufu*). Said to have been developed 1,400 to 1,500 years ago, they were first mentioned in documents during the Ming dynasty in China in the 1500s (Chin Kan. 1534. Messenger to Ryukyu; Li Shih-chen. 1578-1597. *Pen-ts'ao kang-mu*). Since we consider fermented tofu (sometimes called "soy cheese") to belong to a different category of foods from cheese alternatives (in part since the former do not melt), we discuss them in a separate book.

The first commercial cheese alternative in the Western world was invented and made by Dr. John Harvey Kellogg, the famous Seventh-day Adventist physician and vegetarian. Named Nuttose, it was launched in 1896. Made largely from peanuts, it was a true non-dairy product that was also used as a meat alternative.

The first commercial soy cheeses in the Western world were developed and made Li Yu-ying in 1911. At his modern soyfoods factory near Paris, Li manufactured Fermented Tofu Cheese in Gruyère, Roquefort and Camembert flavors.

Between 1911 and 1985 most of the commercial cheese alternatives in America were made by Seventh-day Adventist companies. Though we know the names of these early products, their ingredients and properties are not always clear. In 1939 Madison Foods (Madison, Tennessee) introduced Cheze-O-Soy, based on tofu. In 1942 Butler Food Co. (Cedar Lake, Michigan) launched ViM-eat Soy-Nut Cheese and in 1944 Butler's Soynut Cheese. In 1951 Loma Linda Foods (Arlington, California) rolled out Vege-Chee (canned, based on tofu). And in 1961 Worthington Foods (Ohio) introduced Kreem-Chee, the world's second commercial non-dairy cream cheese.

The idea of cream cheese alternatives was first conceived of by another Seventh-day Adventist, Jethro Kloss. In April 1934 the *Miami Daily News* reported how approximately 6,000 people had recently heard him speak about dairylike foods made from soy beans at Bayfront park. He exhibited 21 foods made from soy beans (including cream cheese, yellow cheese, and cottage cheese) and invited the public to taste them.

By November 1938 the Wigmore Health Shop in London was making the world's first Soya Cream Cheese. The first two commercial tofu cheesecakes were created in 1971 by students of macrobiotics: One by Marcea Newman was sold at her Souen restaurant in New York; the other by David Kalan (named Tofu Blueberry Pie) was sold at his Crane's Call Bakery in Boston. The first two recipes for a soy cheesecake appeared in 1974: One by Marcea Newman (made with tofu) in her book *The Sweet Life: Marcea Newman's Natural Food Dessert Book;* the other by The Farm in Summertown, Tennessee (made with soy cheese, from naturally fermented / soured soymilk) in their booklet *Yay Soybeans!* The first recipe for a "Tofu Cheesecake" appeared in *The Book of Tofu* by Shurtleff and Aoyagi (1975).

The modern category of commercial soy cheeses and cheese alternatives was born under a bad sign. It began in America in March 1985 with the introduction of Soyarella–probably the most deceptive soyfood product ever launched in America. Though extremely popular for about a year, it was unfortunately mislabeled to deliberately deceive consumers. Though marketed as a "non-dairy soy product" which contained no casein yet melted like cheese, it was later found to contain about 15% casein. The "source" of Soyarella (not to be confused with TofuRella) is thought to have been Nature's Best in Osseo, Michigan. But the name of the manufacturer was not given on the label–and it remains a mystery to this day.

In America, this new category has a number of basic characteristics: (1) Casein (a milk protein) or caseinates is used in more than 95% of all products to make them melt and stretch like dairy cheeses. Less than 5% of all products are truly non-dairy; (2) In the late 1980s, most manufacturers, marketers, and retailers deliberately concealed from consumers the fact that casein is derived from cow's milk (complicated by the fact that FDA regulations allow food products that contain casein to be called "non-dairy"); (3) Many consumers believe that most cheese alternatives are truly non-dairy products. Fortunately, labels and promotional materials have become more honest with each passing year–yet many consumers still remain confused and some deceptive practices still exist; (4) All products are free of cholesterol and lactose, and relatively low in saturated fats. Some are also low in total fats, calories, and sodium; (5) About 95% of the products are soy cheeses and 5% are nut or seed cheeses without soy. Most products contain tofu (either dried or fresh) as a major ingredient; (6) Most products are sold at natural- or health food stores, and retail for about 50% more than typical dairy cheese sold at supermarkets; (7) About 95% of the products are hard cheeses and 5% are soft cheeses, mainly cream cheeses.

The first major soy cheese to hit the market was Soya Kaas, introduced in Jan. 1986 by Richard McIntyre of Soya Kaas Inc., a subsidiary of Swan Gardens Inc. Marketed exclusively by American Natural Snacks of Florida, it is still America's most popular cheese alternative. In June 1986 Mozzarella Style Tofu-Rella was introduced by Richard and Sharon Rose of Brightsong Foods. The company later became Sharon's Finest and the product was renamed TofuRella. In Oct. 1986 Original Pizsoy (a whole-wheat pizza topped with soy cheese) was introduced by Tree Tavern Products; It was the first product in which soy cheese was used as an ingredient.

© Copyright Soyinfo Center 2014

In Jan. 1987 Soymage was introduced by Soyco Foods, a Division of Galaxy Cheese Co.; This was Soyco's first soy cheese product and the first modern soy cheese that contained no casein. In April 1987 NuTofu was introduced by Cemac Foods Corp. This was Cemac's first soy cheese product.

In April 1988 Soyco shreds and slices were introduced–the first soy cheese shreds and slices. In 1988 new labels for Sharon's Finest Tofu-Rella became the first (as far as we can tell) to state clearly on the label that the casein in the product is derived from milk.

In Jan. 1991 Fat-Free Soyco was introduced–the first fat-free soy cheese. In Dec. 1992 Almond Cheeze was introduced by Wholesome & Hearty Foods–the first major non-soy cheese alternative.

In April 1994 VeganRella (made from Brazil nuts) was introduced by Sharon's Finest–a true non-dairy non-soy cheese said to have excellent flavor and texture.

The size of the natural foods cheese alternatives market in the USA is about $15 million/year at wholesale and $25 million/year at retail; this is the equivalent of about 5 million lb/year. The category has grown at a remarkable rate–about 20% a year for the past 3-5 years. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

Second International Congress on Vegetarian Nutrition. Held 28 June–July 1, 1992 at Arlington, Virginia. [39 ref]
• ***Summary:*** Contents: Abstract. Introduction. Vegetarianism and morality. Vegetarianism and nutrition. Sylvester Graham. John Harvey Kellogg. Alexander Haig. Newer nutrition of the 1920s. Recent developments

Note: By choosing many strange examples (and some strange personalities; Haig, Lane) from history, then linking them together in sections much longer than their importance deserves, Whorton ends up with an unbalanced, unsympathetic, reductionist history of vegetarianism. He also omits many of the most important parts of vegetarian history, such as the ongoing Adventist Health Study, which has been instrumental in convincing most physicians that a balanced vegetarian diet is healthier than the standard American diet.

To take but one example: in the section on John Harvey Kellogg, instead of using Dr. Kellogg's best known and most respected works as examples, Whorton takes relatively obscure works that have not withstood the test of time (such as autointoxication) as well as most of his writings. Kellogg was a pioneer in understanding and teaching about the role of dietary fiber in a healthy diet. He was the first to develop and sell a line of meat alternatives. His Battle Creek Sanitarium was a pioneer in the model of preventive medicine and of treating the cause of the disease rather than covering up the symptoms. Address: Dep. of Medical History and Ethics, Univ. of Washington, Seattle, Washington 98195.

3132. Duggan, David. 1994. Problems with the Flier patent assigned to Ralston Purina (Interview). *SoyaScan Notes.* June 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** David is an anti-trust attorney, not a patent attorney. On 5 July 1990 the federal circuit court of appeals, which hears appeals concerning patent cases in the United States, ruled that Ralston Purina Company had procured the famous Flier patent (No. 3,940,495. Feb. 24, 1976. Application filed 17 Jan. 1973) by fraud on the patent office. The case is number 909 F.2D 1494 (Staley vs. Ralston Purina).

Price Heneveld (a law firm of patent lawyers in Grand Rapids, Michigan) apparently represented Ralston Purina on both the original application and in subsequent litigation.

There was apparently earlier litigation involving Far-Mar-Co, Staley, Cargill, etc. The first case was apparently Ralston Purina vs. Far-Mar-Co of Kansas. He believes that Ralston Purina filed the lawsuit in Oct. 1976. The judgment was in or about 1981–showing the slow pace of federal litigation. The case was tried in the 10th federal judicial circuit (district of Kansas), which is statistically the worst, in the sense that more cases are later overturned from that circuit by the U.S. Supreme Court. He finds it interesting that Ralston chose to file its first case in that circuit. There is law to the effect that if you engage in fraud on the patent office and then use that fraud in an attempt to control or monopolize the relevant market, that is illegal, and may be the basis for a anti-trust lawsuit.

In 1976, after Ralston Purina won the case against Far-Mar-Co in Kansas, Ralston started sending demand letters to many other companies that were supposedly infringing this patent–including Staley, Cargill, Central Soya, Griffith Laboratories, Miles Laboratories, Nabisco, Anderson Clayton, General Mills, Nestle, Riceland Foods, Dawson Mills, General Foods, Grain Processing Corp., etc. Ralston was protecting its rights.

In 1985 the Far-Mar-Co case was upheld, saying that Ralston Purina indeed had the rights to the Flier patent (Case no. 772 F.2D 1570). However Far-Mar-Co did not raise the issue of fraud. So it took another 5 years for the court to reach that question–which it decided in 1990.

David's main questions are: (1) Is textured vegetable protein [actually textured soy flour] a distinct segment of some relevant market? (2) Did Ralston Purina try to exclude other competitors from that market. (3) Were there substitutes for the product on which Ralston Purina had a patent? David's firm is in the process of representing a former player in the industry, a major trading company; they may represent a consortium of companies that were effected by the Ralston Purina's "ill gotten gains."

Update: Talk with David Duggan. 1996. April 26. His firm was representing the Lauhoff Residuary Trust in a case against Ralston Purina Co. Lauhoff is a grain company in Danville, Illinois. They were sued by Ralston, which claimed that they had infringed the patent without paying royalties. Lauhoff initially disregard the demand letter threatening a suit. Then they sold the company, but did not properly disclose to the buyers that a lawsuit was pending or had been threatened. Lauhoff then lost the case against Ralston in about 1986 or 1987. So the new owners sued the formers owners for failure to disclose. David argued that the amount paid by Lauhoff to settle the lawsuit was fraudulently paid. The case, which was very complex and convoluted, was thrown out of court by the judge because the statute of limitations had expired–they brought the case too late. Moreover, the patent was nearing its expiration date, or had expired. David believes that there was some pretty serious frauds on the courts in litigation to enforce the patent. David tried to present a RICO (Racketeering Influenced and Corrupt Organizations) Act argument. It provides for triple damages. David tried to approach some of the smaller players like Far-Mar-Co but he did not approach ADM. The patent law was recently changed to 20 years from the point of application; formerly it was 17 years from the point of grant. Address: 321 S. Plymouth Court, Suite 800, Chicago, Illinois 60604. Phone: 312-663-0670.

3133. **Product Name:** Tempeh.
Manufacturer's Name: Stanley Darby.
Manufacturer's Address: P.O. Box 7248, Agat, Guam

© Copyright Soyinfo Center 2014

96928. Phone: 671 565-2059.
Date of Introduction: 1994 June.
New Product–Documentation: Talk with Stanley Darby of Guam. 1995. June 14. He is a Seventh-day Adventist, who has been making tempeh by hand for about one year and selling it to Seventh-day Adventists who have a large get-together each Saturday after church. He has brought tempeh starter culture back from Indonesia several times.

Stanley calls again from Guam. His address is now P.O. Box 8389. He still makes tempeh for SDAs and still has no company name.

3134. Worthington Foods, Inc. 1994. There's a new garden spot that won't be found in your grocer's produce section (Ad). *Vegetarian Times.* June. p. 3.
• ***Summary:*** See next page. This full-page, color ad, with a coupon, features Morningstar Farms Meatless Garden Vege-Patties. It also shows packages of Meatless Prime Patties, and Meatless Chick Patties.

This ad also appeared in the Feb. 1995 issue (p. 5) of this magazine. Address: Worthington, Ohio 43085.

3135. Williams, DeWitt S. 1994. Trends among Seventh-day Adventists concerning vegetarianism (Interview). *SoyaScan Notes.* July 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Williams is head of an active program to educate the public, and especially Seventh-day Adventists, on the benefits of not eating meat, not drinking, and not smoking. He has observed that about 50% of all Adventists are vegetarians, but individuals in the younger generations are less likely to be vegetarian than those in the older generations. Address: Director of Health and Temperance, North American Div. of the SDA, 12501 Old Columbia Pike, Silver Spring, Maryland 20904-6600.

3136. Buller, Allan. 1994. Madison Foods archives, and recollections of Dr. John Harvey Kellogg (Interview). *SoyaScan Notes.* July 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** As far as Allan knows, few or no archival records from Madison Foods presently exist at Worthington Foods. He has never heard of a product named Savory Meat made by Madison. His contacts with Madison began in about 1960. Harry W. "Willis" Miller Jr. was at Madison when Worthington began its contacts; Willis helped to develop Infasoy. Dr. U.D. Register was part of the early history of Madison Foods. He was a student at Madison and he worked at the food plant.

In about 1935-36 Allan, then age 18, worked for about one year in the kitchen with Dr. John Harvey Kellogg (who was then about age 84) at his Battle Creek Sanitarium in Miami Springs, Florida. Dr. Kellogg, who went to Florida during the winter, had a strong interest at that time in using soymilk to make a "soy acidophilus milk" that was cultured; he did ongoing experimentation. Allan's work was to turn the meat grinder that produced the soymilk. Dr. Kellogg served this cultured milk, which was made in the kitchen, to patients at the Sanitarium in Florida. This was Allan's earliest contact with soy. Allan also set up chairs for Dr. Kellogg's lectures. Dr. Kellogg was a strong promoter of developing the right kind of bacterial balance in one's intestinal system. So he was constantly experimenting with how to do this with soymilk instead of cow's milk using the acidophilus cultures.

Dr. Kellogg had a strong interest in nutrition and preventive medicine. He was an amazing man. "As I listened to his lectures as an 18-year-old boy, the things he said impressed me as being important. Now 50 years or more later we see many of the things that he advocated then being generally accepted by health professionals. He talked a lot about the importance of fiber in the diet in order to have regular bowel movements." He advocated a vegetarian diet throughout his life. One of the vegetarian visitors to his Sanitarium in Florida in 1935-36 was George Bernard Shaw; he went to visit Dr. Kellogg for a visit, a vacation, and a "tune-up" (perhaps a massage and sunbath). Allan helped to carry Shaw's luggage into the San, and he would take food on a tray up to Dr. Kellogg's room while he and Shaw were visiting; they were great friends. Exercise was also part of the San's program, including use of mechanical equipment, walking, and bicycle riding. Dr. Kellogg emphasized the importance of bicycle riding and Allan saw him riding a bicycle when he was well into his 80s.

What kind of a person was Dr. Kellogg? "A man of exceptionally high ideals. He was very much interested in helping people, and in helping them to discover better health. He helped a lot of young people through school, using his personal finances–a very generous person. He lectured in Florida every Sunday night on principles of health and he had a great concern with public health. The lectures were open to the public and free of charge. He seemed to lack interest in commercially promoting products–such as Corn Flakes. I think he was too interested in helping the public–he was inclined to give things to people. He also had a strong interest in helping diabetics and his Battle Creek Food Co. developed foods for diabetics to use."

Note: Allan Buller was President and CEO of Worthington Foods until 1985, when he retired. He still comes to work and is on the board of directors. Address: Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085. Phone: 614-885-9511.

3137. Worthington Foods, Inc. 1994. Second quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** "Net sales for the first half of 1994 were $44.4 million, an increase..." "Higher sales in the Mass Market are directly attributed to increase sales of Morningstar

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

Farms' meat alternative products, up 52 percent year-to-date compared to last year. The Meat Substitute total category was up 74 percent for the second quarter compared to a year ago and Morningstar Farms sales of meat alternatives were up 65 percent for the same period. Even with the increased competition in the market, Morningstar Farms continues to have a 70 percent market share in this category."

"A new frozen burger product, *Burger Beaters*, containing only 2 grams of fat, is currently being introduced into the Foodservice market. Product shipment began in early July, 1994." Address: Worthington, Ohio. Phone: (614) 885-9511.

3138. Winter, Ralph E. 1994. Worthington Foods says meatless meals fatten bottom line. *Wall Street Journal*. Aug. 12.

• ***Summary:*** Dale Twomley, president and CEO of Worthington Foods (Worthington, Ohio) says sales of meat substitutes are running more than 50% ahead of year ago. The company, which sells vegetarian foods, expects 1994 sales to top $90 million. Last year Worthington completed a new plant to make a refrigerated egg substitute; unfortunately sales of this product inched up only 3% in the first half. Egg substitutes (both frozen and refrigerated) account for about 30% of the company's sales, and profits on them are good. Nevertheless, this year Worthington shifted major promotional resources from egg substitutes to meal alternatives. Green Giant, a unit of Grand Metropolitan PLC, also launched a big ad campaign for meat substitutes, thus boosting interest in the whole category.

Worthington recently reformulated older products to reduce fat content. The company's best-seller is Grillers, a hamburger alternative with about half the fat of a typical beef burger. Other new products are Prime Patties (air cooked, with very low fat), Garden-Vege-Patties, and BurgerBeaters (intended for restaurants, college cafeterias, prisons, and other food-service providers).

Note: In the three-star East Coast edition, this article is titled: "Worthington sees strong results in '94 as Americans shift to meat substitutes."

3139. Fritschner, Sarah. 1994. One burger... Hold the meat: Vegetarian burgers have been around for 20 years, but they're getting a second look now. *Clarion-Ledger* (*Jackson, Mississippi*). Aug. 24. p. E1-2.

• ***Summary:*** Hillary Clinton eats meatless Boca Burgers and Bill Clinton loves them. T.G.I. Friday's has been selling vegetarian Gardenburgers since 1991, and expects to sell more than one million this year. The Morningstar Farms patty [made by Worthington Foods] has been around for 20 years. Max Shondor makes the low-calorie Boca Burger in Florida. About two years ago Burger King franchisee Dennis Kessler added the Morningstar Farms Grillers to the menu of his restaurant at Watkins Glen, New York. It became a hit immediately, selling about 200 per week in the very rural community. Vegetarian burgers were later test marketed at 38 Burger Kings in the Rochester, New York, area, but the test was stopped after two months, according to Kessler. In May, 1994, a Berkeley franchisee asked Burger King if she could add it to her menu. Her request was refused, even though the Berkeley City Council wrote a letter to Burger King's CEO in support of the vegetarian burger option. Kessler presently owns 18 Burger Kings, but only his Mount Hope restaurant near Rochester, New York, sells a vegetarian burger. Kessler says it's extremely successful, selling about 500 per week for $1.59 each (a Burger King "Whopper" sells for only $0.99).

One reason for the steady growth of interest in vegetarian burgers may be the growing number of vegetarians. Today there are more than 12 million vegetarians in the USA, and the number has been growing by 26% a year. Address: Louisville Courier-Journal, Kentucky.

3140. Ono, Yumiko. 1994. Catering to part-time vegetarians' tastes. *Wall Street Journal*. Aug. 24. p. B1, col. 3; p. B2, col. 5.

• ***Summary:*** "There are only about 12 million self-professed vegetarians in America who shun all meat, but companies believe the vegetarian pitch appeals to any nutritious-conscious consumer..." More than 75% of Americans eat meatless meals twice a week, according to a survey by HealthFocus, Inc., a market research firm in Des Mines, Iowa. *Vegetarian Times*, a monthly magazine, says its circulation has doubled in two years to 340,000 in 1993, in part because part-time vegetarians started buying it. And 14 out of 67 varieties of Lean Cuisine dinners are now meatless. In April Linda McCartney, wife of rock star Paul McCartney, introduced to the USA a line of frozen dinners called Linda McCartney's Home Style Cooking Meatless Entrees. Fairmont Foods of Minnesota makes the products. Worthington Foods, of Worthington, Ohio, makes a wide variety of meatless products. And Pillsbury markets Green Giant Harvest Burgers, made by ADM. Address: Staff reporter.

3141. Tomomatsu, Hideo. 1994. Health effects of oligosaccharides: Ingestion of oligosaccharides increases the bifidobacteria population in the colon, which in turn contributes to human health in many ways. *Food Technology* 48(10):61-65. Oct. [90 ref]

• ***Summary:*** Contents: Introduction. Consequence of toxic fermentation products: Variety and amount of toxic compounds, enzymes participating in toxic compound formation, possible causes of carcinogenesis, possible causes of aging and adult diseases. Benefits of oligosaccharide ingestion: Proliferation of bifidobacteria and reduction of detrimental bacteria, reduction of toxic metabolites and detrimental enzymes, prevention of pathogenic and autogenous diarrhea, prevention of constipation, protection

© Copyright Soyinfo Center 2014

of liver function, reduction of serum cholesterol, reduction of blood pressure, anticancer effect, production of nutrients. Dosages and side effects. Oligosaccharides vs. dietary fiber. Natural Occurrence.

"Oligosaccharides are one of the most popular functional food components in Japan, but they are relatively unknown in the United States. The Japanese produced 40 million lb ($46 million) of nine different types of oligosaccharides in 1990. The number of consumer products containing oligosaccharides reached 450 in 1991 and included soft drinks, cookies, cereals, and candies."

Oligosaccharides are "preferentially consumed by beneficial intestinal bacteria, bifidobacteria, in the colon." Bifidobacteria suppress the activity of putrefactive bacteria and thereby reduce the formation of toxic fermentation products.

Various natural foods are known to contain oligosaccharides. Soybean oligosaccharides [galactooligosaccharides or GOS] are different from fructooligosaccharides [FOS], which are found in many vegetables (such as onion, garlic, burdock, asparagus, etc.).

Note 1. Although bifidobacteria suppress many bad bacteria in the colon / digestive tract, no experimental evidence was given from animal trials that their consumption prolongs the life or improves the health of animals.

Note 2. The early (and later often ridiculed) theories about Elie Metchnikoff and Dr. John Harvey Kellogg concerning bacterial putrefaction in the colon and digestive system may be vindicated by this interesting article and review of the literature. For examples of ridicule see *Nuts Among the Berries*, by Ronald Deutsch. Address: Quaker Fellow, The Quaker Oats Co., John Stuart Research Lab., 617 W. Main St., Barrington, Illinois 60010.

3142. **Product Name:** Morningstar Farms Better 'n Burgers.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1994 October.
Ingredients: Water, textured soy protein concentrate, contains 2% or less of autolyzed yeast extract, cellulose gum, malted barley extract, corn starch, natural flavors from vegetable sources, salt, soy fiber, carrageenan, spices, soy sauce (water, soybeans, salt), garlic powder, onion powder, aspartic acid, citric acid.
Wt/Vol., Packaging, Price: 11 oz (312 gm).
How Stored: Frozen.
New Product–Documentation: Worthington Foods. 1995. Annual Report 1994. p. 1. This product was launched in Oct. 1994. "Our new Morningstar Farms Better 'n Burgers is the first fat-free burger to be introduced nationally. It has the highest turns per point of distribution and is available in 30% of U.S. supermarkets. In 1995, we expect to complete the national roll-out with an improved product in improved packaging."

Product with Label purchased at Safeway supermarket in Lafayette, California. 1995. Oct. 8 by 4 by 1¼ inches. Paperboard box. Red, yellow, blue, white and gold on green. A color photo shows a burger patty between two buns over a lettuce leaf, topped with a slice of onion and tomato. "Fat free. All vegetable & all natural."

First quarter financial report. A996. April. Worthington began production of Better'n Burgers and other hot-air oven products at the Zanesville, Ohio, facility on 1 April 1996.

3143. APV DTD. 1994. DTD 25. Aarhus, Denmark: Danish Turnkey Dairies Ltd. 55 p. 21 x 27 cm. [Eng]
• ***Summary:*** Published on DTD's 25th anniversary, this book tells the story of the company founded on 1 Nov. 1969 by Mr. Jorn B. Jensen. In May 1971 the company signed the world's first contract for a turnkey dairy plant–signaling a new era for the dairy industry.

In 1981 DTD established a new subsidiary company, STS-Soya Technology Systems Ltd., based in Singapore together with DTD's South East Asian regional office. STS developed new technologies for production of a wide range of soy-based products.

1984–STS breaks into the European market with the building of a complete soymilk plant in Germany [for DE-VAU-GE]. Address: 2, Europaplads, P.O. Box 146, DK-8100 Aarhus C, Denmark. Phone: +45 86 12 41 55.

3144. Soyfoods Association of America. 1994. Get the soy edge (Ad). *Vegetarian Times.* Nov. p. 71-74.
• ***Summary:*** This 4-page advertorial, with 17 color photos, is sponsored by the following organizations: ADM, DevanSoy Farms, Inc., Eden Foods, Inc., Lightlife Foods, Lumen Food Corp., Morinaga Nutritional Foods Inc., Soyfoods Association of America, Tofutti Brands Inc., Worthington Foods.

"Did you know you can fit soy into your diet without giving up your favorite foods? Try soy burgers, soy ice cream, soy yogurt, soy hot dogs, soy flour, soy cream cheese, soy sausage, soy chili, soy frozen juice bars, soy margarine, soy milk, soy tacos, soy sour cream, soy sloppy joes, soy 'chicken' patties..." Address: Palo Alto, California. Phone: 415-327-1444.

3145. Roberts, Rosemary. 1994. Maker welcomes call for research [into safety of soy-based infant food]. *Northern Advocate* (*Whangarei, New Zealand*). Dec. 8. p. 1.
• ***Summary:*** Douglas Pharmaceuticals produces Karicare brand soy-based infant formula; according Dr. John Birbeck, the company's private consultant, Douglas is the only New Zealand company making such a product. He believes other similar foods are being imported. Birbeck says the company welcomes more research on the oestrogen content of its soy-based product, and says it is likely the industry will fund the

© Copyright Soyinfo Center 2014

study.

Columbit New Zealand, the company which imports soy isolates to New Zealand, also backs the call for more research, and is confident research will clear its product. Columbit is a partner of the large international corporation Protein Technologies [International]; principals of that U.S.-based company said that they would respond to any requests for information about their products.

Sanitarium Foods [of New Zealand and Australia] does not produce soy-based infant formulae, but does use soy protein isolates in some of its products. The company's technology superintendent, Graham Jackson, said his company was keeping an eye on the situation.

A large photo shows Valerie and Richard James at their New Zealand aviary, with several large white birds, soy bird food, and reports on soy. A similar article appeared in the *Marlborough Express* on this same day.

3146. Twomley, Dale E. 1994. Special message to shareholders. 900 Proprietors Rd., Worthington, OH 43085. 4 panels. 22 x 9 cm.
• ***Summary:*** "Worthington Foods is experiencing rapid sales growth of meat alternative products in both the retail and the food service markets. It has become increasingly evident that, as a Company, we should focus our resources on this opportunity for growth in healthy, meatless food products and build on the position of being Number One in vegetarian foods."

In Nov. 1994 Worthington sold its refrigerated egg substitute business and processing equipment from the Zanesville Plant for $9,000,000. The plant was closed on Nov. 23. The company plans to open it within the next 12-18 months with capacity to produce up to $20,000,000 in meat alternative sales. All of the net proceeds from the sale will be used to reduce debt. The sale will also open up additional processing capacity for meat alternatives at the Zanesville plant. In the meat alternative segment, Morningstar Farms currently has over 60% market share. "Our Worthington Plant will be stretched to the maximum in 1995 to fill meat alternatives orders. We expect net income will be enhanced without the refrigerated substitute business even though the transaction will reduce revenues by approximately $8,000,000... Our refrigerated Better'n Eggs product was third in market share of this category with a 14% share. "Worthington Foods will remain a player in the frozen egg substitute category where Morningstar Farms has a 29% market share and we consider the company to be a low-cost producer. Frozen egg substitute sales of Scramblers and frozen Better'n Eggs will continue under the Morningstar Farms brand nationally where we intend to remain competitive and profitable." The company's newest product is fat-free Better'n Burgers.

"Meat alternatives is one of the fastest growing categories of frozen foods through supermarkets in the US and we intend to become even more recognized as Number One in meat alternatives." Address: President and CEO, Worthington Foods, Inc., Worthington, Ohio. Phone: (614) 885-9511.

3147. **Product Name:** Vegetable Bratwurst (Vegetarian).
Manufacturer's Name: GranoVita UK Ltd.
Manufacturer's Address: Ambron House, Eastfield Road, Wellingborough, Northants NN8 1QX, England, UK. Phone: +44 933 27240.
Date of Introduction: 1994.
Wt/Vol., Packaging, Price: 200 gm pack. Retails for about £1.69 (England, 11/94)
New Product–Documentation: Spot in Soyafoods (ASA, Europe). 1994. Autumn. p. 5. "Vegetarian Bratwursts launched by granoVita."

3148. Butler, Mary; Thornton, Frances; Stolts, Garth "Duff." 1994. The Battle Creek idea: Dr. John Harvey Kellogg and the Battle Creek Sanitarium. Battle Creek, Michigan: Heritage Publications. 104 p. Illust. Photographic index. 22 cm. [6 ref]
• ***Summary:*** This excellent book consists of a 14-page introduction followed by page after page of rare, full-page photos (some in color), each with a substantial caption. Address: Historical Society of Battle Creek, Michigan.

3149. Hammons, Raymond O. 1994. The origin and history of the groundnut. In: J. Smartt, ed. 1994. The Groundnut Crop: A Scientific Basis for Improvement. London: Chapman & Hall. xviii + 734 p. See p. 24-42. [59 ref]
• ***Summary:*** This is an outstanding chapter, the best seen to date (May 1996) on the subject. Contents: Introduction. Prehistoric groundnut agriculture (Peru, Mexico). Post-Columbian historical narratives: Sixteenth century natural histories, selected seventeenth century narratives. Indian vernacular names. Origin of the groundnut: Geographical origin of genus *Arachis*, origin of *Arachis hypogaea.* Dispersal. Ethnography. Early industrial developments: Introduction, beginning of the groundnut oil industry, peanut butter, subsequent development.

In 1894 Dr. John Harvey Kellogg, M.D., of Michigan, developed America's first peanut butter as a nutritious, easily digested food for his patients. Kellogg, who observed a strictly vegetarian diet, obtained the first two [sic three] patents for making peanut butter. To promote his health food ideas, Kellogg elected not to reinforce his patent rights and several brands of peanut butter were on the market by 1899.

In 1896 a former employee of the Sanitarium, Joseph Lambert, began to manufacture and market three machines–a roaster, a blancher and a hand nut-grinding mill–for making peanut butter. Address: Hammons Consultancy, 1203 Lake Drive, Tifton, Georgia 31794-3834. Phone: 912-382-3157.

3150. McCay, Jeanette B. 1994. Clive McCay: nutrition pioneer. Biographical memoirs by his wife. Charlotte Harbor, Florida: Tabby House. xxv + 505 p. Illust. 27 cm. [50+ ref]
• ***Summary:*** This is probably the best and most complete biography of Clive McCay, PhD, ever written. And it is written by an excellent, very perceptive and very sympathetic writer–his wife.

Contents: Dedication. Introduction. Foreword. Prologue: The story of Cornell Formula Bread [which includes defatted soy flour]. 1. Clive McCay's growing-up years. 2. My early years. 3. Music and Clive. 4. Our summer 1923, Berkeley and New York. 5. Growing pains. 6. My job starts. 7. Letters from Jeanette. 8. My last year in the Great West, 1926. 9, Old *Salvelinus fontinalis.* 10. 1927, and peace for both.

11. My flapper wedding. 12. The challenge of "wedded bliss." 13. To Timagami with J.B.S. 14. The story of the cabin and the trees. 15. How we bought our woods–and a house that came too. 16. From the diary of our sabbatical year–1935. 17. On the Continent [Europe]. 18. And then there was a farm. 19. Clive gets acquainted with pets that were different. 20. Life in the laboratory. 21. How to lose money–even your head!

22. How Clive's studies on fish began–and how they grew. 23. To the dogs! 24. World War II–The beginning. 25. Clive's naval career begins. 26. Washington [DC] and Ithaca [New York]. 27. Clive's Washington associates. 28. Nutrition in the navy. 29. Jeanette's war. 30. Our children–Tommy, the fresh air children and Kenny Button. 31. Switzerland. 32. Religion and Ellen G. White. 33. Senior citizens in a changing climate of opinion. 34. The end of our bittersweet years.

Appendixes: A. *Aequanimitas.* B. Dr. Maynard. Cornell and farm animals. C. Clive M. McCay as nutrition historian, teacher and bibliophile. D. Finding a way into nutrition literature. E. *Schewizer Vereinigung Fuer Ernaehrungsforschung* [May 1953]. F. Human "Lines of thought."

Soybeans and/or soy flour is discussed on pages xx-xv, 331-33, 340-41. Address: 39 Lakeview Dr., Englewood, Florida 33533.

3151. Oser, Marie. 1994. Luscious low-fat desserts. Montrose, Pennsylvania: Chariot Publishing, Inc. 124 p. Foreword by Scott W. Sanders, PhD. 21 cm. [18 ref]
• ***Summary:*** The many recipes in this vegan cookbook are low in fat (only 3 grams of fat per recipe), use no dairy products or eggs, and contain no cholesterol. Twenty-five attractive full-page color photos show the prepared recipes. The glossary of ingredients contains entries for the following soy ingredients:

"Lite silken tofu–a reduced-fat form of silken tofu. It is sold in aseptic packages in large supermarkets and natural food stores. Lite silken tofu has 75% less fat than regular silken tofu and does not sacrifice flavor or texture."

"Silken Tofu–a smooth-textured, custard-like tofu that is sold in aseptic packages and is available in most supermarkets and natural food stores. Like regular tofu it is made from soybeans. Silken tofu is an effective egg substitute when used in ¼ cup tofu to one egg proportions. It is also available in soft, firm and extra firm consistencies. I prefer the extra firm consistency."

"Soy buttermilk–a good substitute for dairy buttermilk in baked goods. It is made by adding 2 tablespoons of lemon juice to 1 cup of soy milk."

"Soy milk lite–a reduced fat soy milk that is 1% fat. It is available in large supermarkets and natural food stores." Soy milk lite was first introduced in the USA in March 1990 as WestSoy Lite. Also in 1990 it was introduced in Australia as Sanitarium So Good Lite.

The glossary also defines "Rice milk" as "a delicious non-dairy beverage with a mildly sweet flavor that can be used in place of dairy milk and soy milk. The Rice Dream (R) brand is available in both original (plain) or vanilla flavors and contains 1% fat and no cholesterol."

It also defines the following sweeteners: Barley malt syrup, brown rice syrup, date sugar, FruitSource (made from grapes and grains), maple syrup, Mystic Lake fruit sweetener, natural applesauce, and Sucanat (granulated organic sugar cane juice).

At the listing for "Tofu" in the index, we are asked to "see lite silken tofu,"–which is used in 33 dessert recipes–including the following (listed alphabetically): Almond streusel cake. Apricot almond custard Austrian apple torte. Banana cream pie. Blueberry custard pie. Chocolate dream pie. Chocolate truffles. Classic pumpkin pie. Lemon yellow icing. Peaches 'n cream parfait. Raspberry banana mousse. Strawberry Nice Cream (creamy frozen dessert like ice cream).

In the introduction to the chapter on cakes, the author says: "One way I achieve a rich cake without eggs or dairy is to use lite silken tofu. Its creamy, custard-like consistency is perfect for replacing the eggs and milk found in traditional cakes. And its low-fat profile will keep you coming back for seconds.

A small color photo on the rear cover shows Marie Oser, who has been a vegetarian since 1971. She left a career in TV advertising to pursue her interest in food and nutrition.

Note: The words "low-fat" are hyphenated on the cover but not on the title page. Address: Agoura Hills, California 91391. Phone: 818-707-7353.

3153. Burros, Marian. 1995. When tofu meets bun: Eating well. *New York Times.* Jan. 4. p. C1, C6. Living section.
• ***Summary:*** This feature story about the fast-growing popularity of veggie burgers notes that "This quintessential hippie food [the tofu burger] may be on its way to becoming the food of the masses."

In a large table, 34 brands and varieties of veggie burgers are rated; the author's personal taste test resulted in 13 different burgers being rated from acceptable to very good. Among her favorites: Boca Burger, Green Giant Harvest Burger, and Morningstar Farms Meatless Patties [made by Worthington Foods].

3154. Berry, Rynn. 1995. Famous vegetarians & their favorite recipes: Lives & lore from Buddha to Beatles. Revised 2nd ed. New York, NY: Pythagorean Publishers. xx + 239 p. Illust. by Glory Brightfield. No index. 23 cm.
• ***Summary:*** This revised edition, self-published by the author, contains three new chapters: Immortals: Mahavira (Historical founder of the world's oldest vegetarian religion–the Jains of India), and Plato and Socrates (Pythagorean philosophers who were the founders of the Western philosophical tradition). Visionaries: Swami Prabhupada (Founder of the Krishna movement and the first Asian religion to be established in the West since the days of the Roman Empire). The book no longer contains an introduction. Address: 159 Eastern Parkway (2H), Brooklyn, New York 11238. Phone: 718-622-8002.

3155. Berry, Rynn. 1995. The vegetarian cinophile: The Road to Wellville. *Satya.* Jan. p. 8-9. [5 ref]
• ***Summary:*** This new column looks at movies from a vegetarian perspective. *The Road to Wellville* (1994), written and directed by Alan Parker, is based on a satirical novel of the same title by T. Coraghessan Boyle. Anthony Hopkins plays the leading character, Dr. John Harvey Kellogg of Battle Creek Michigan. Genre: Comedy. This review is highly critical of the movie, "with its relentless emphasis on the human bowel and its noxious effluvia... A better title for this film might have been 'The Road to Dungville. But *Battle Creek Register*, the hometown paper of Kellogg's Battle Creek Sanitarium, thought of an even apter title when it headlined its review as 'The Enema of the People.'"

The movie uses Dr. Kellogg's many important inventions (flaked breakfast cereals, peanut butter, meat alternatives, the electric blanket) to make him look like a mad scientist. In fact, there is little about that is factual; it is a farce. According to the Battle Creek Historical Society, Boyle "breezed into Battle Creek a few years ago to do some superficial research on his biographical novel. He didn't get any library dust on his tweeds because most of the 'facts' about Kellogg's life bubbled up from Boyle's overheated imagination." One source Boyle credits is "Nuts Among the Berries," by Ronald Deutsch, with its equally irreverent tone.

Clearly Boyle "held Kellogg, his Seventh-day Adventism, and his cranky food products in such contempt that he felt it was permissible to invent whole swaths of his life history." For example, the movie shows an ongoing conflict between Dr. Kellogg and his wayward adopted son, George. But this is completely untrue; Kellogg never had a wayward foster son. Although Dr. Kellogg and his wife raised and educated 42 adopted children, all "were disgustingly well behaved and grew up to be solid citizens."

The review concludes: "For stirring up interest in the life and work of Dr. John Harvey Kellogg, Boyle and Parker deserve credit; but for assassinating his character with made-up facts, and for putting vegetarianism and compassion for animals in such bad odor, they both richly deserve the epithet that the *Battle Creek Register* hurled at them. They are both indeed, 'The Enema of the People.'" Address: 159 Eastern Parkway (#2H), Brooklyn, New York 11238. Phone: 718-622-8002.

3156. Ingram, Leah. 1995. Soy wonder. *Entrepreneur.* Jan. p. 291.
• ***Summary:*** Steve Demos, founder of White Wave Inc. in Boulder, Colorado, graduated from college in 1971, then spent 4 years in India. During that time, because meat was hard to come by, he became a de facto vegetarian. Upon returning to the USA in 1975, he realized that there were few vegetarian protein sources on the market, despite the fact that many young people were now making the decision to become vegetarians. Following a recipe in *Ten Talents,* a Seventh-day Adventist cookbook by Frank and Rosalie Hurd, Demos started making and selling tofu. His first customers were members of his tai chi class. By 1977 he realized he could turn tofu into a business, so with loans from a friend and his mother-in-law, White Wave was born.

At first, Demos sold his tofu to Boulder health food stores. Then he convinced a buyer at King Supers grocery store to test his tofu for 30 days. Every day Demos had his employees go into the store and buy tofu. At the end of this "test" period, the tofu was selling so well that King Supers increased distribution to 82 stores.

© Copyright Soyinfo Center 2014

Today White Wave products are available at more than 1,000 stores nationwide and brought in revenues of about $8 million in 1994. A photo shows Steve Demos holding a package of White Wave tofu, and standing next to a large White Wave Soyfoods logo.

3157. Worthington Foods, Inc. 1995. Amazing but true: Natural Touch Vegan Burger. People's choice. Fat free (Ad). *Vegetarian Times.* Jan. p. 5.
• ***Summary:*** See next page. This full-page, color ad, with a 50 cent coupon, features the new Natural Touch Vegan Burger. A half page photo shows a burger between buns on a plate with all the trimmings. Address: Worthington, Ohio 43085.

3158. **Product Name:** Natural Touch Vegan Burger (Fat Free).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085.
Date of Introduction: 1995 January.
New Product–Documentation: Ad (full-page, color) in Vegetarian Times. 1995. Jan. p. 5. "Amazing but true. Natural Touch Vegan Burger. People's choice. Includes a 50 cent coupon, features the new Natural Touch Vegan Burger. A half page photo shows a burger between buns on a plate with all the trimmings.

Spot in Vegetarian Times. 1995. March. p. 12. "It's Burgertime." This new product contains less than half the calories of a regular hamburger, no cholesterol, no fat, and no animal products.

3159. Lindsay, Allan G. 1995. Re: Information on Mr. F.G. Roberts of Australia. Letter (fax) to William Shurtleff at Soyfoods Center, March 6–in reply to inquiry. 1 p.
• ***Summary:*** Unfortunately this Seventh-day Adventist research center, the oldest and largest in Australia, has no information on Mr. F.G. Roberts. However Mr. Roberts has a grandson, Grahme V. Newitt (a practicing chiropractor), who lives at 443 Station Road, Box Hill, Victoria 3128, Australia. Phone: 03-890-1077. Melbourne. Dr. Lindsay phoned him and he provided no other information except to say that the head of Soy Products of Australia Pty. Ltd. (69 Power Road, Bayswater, Victoria 3153) had recently read to him a dossier on Mr. F.G. Roberts to ensure its accuracy. Mr. Newitt did not have a copy of it but he thought it could be obtained from the Soy Products company. Address: PhD, Director, Ellen G. White SDA Research Centre, Avondale College, P.O. Box 19, Cooranbong, NSW 2265 Australia. Phone: (049) 77-1107.

3160. Little, Janice. 1995. Records at Loma Linda University related to F.G. Roberts, soy pioneer from Australia (Interview). *SoyaScan Notes.* March 9 and 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Janice looked for an obituary for F.G. Roberts on every page of the 1977 and 1978 issues of the *Australasian Record,* which is the Seventh-day Adventist newspaper for the Australasian division. She found none. Then she looked at all of the obituaries owned by this library; again she found no obituary. Address: Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-824-4942.

3161. Maher, Timothy J. 1995. Veggie burgers bite: When they're good, they're great, but so far most frozen veggie burgers are el disgusto. *Record* (*York, Pennsylvania*). March 15.
• ***Summary:*** In the author's opinion, the Original Gardenburger (made by Wholesome and Hearty Foods) is the best of the bunch–because it makes less of an effort to simulate meat than the other patties sampled.

3162. Little, Janice. 1995. Information on Mr. F.G. Roberts of Australia (Interview). *SoyaScan Notes.* March 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Janice has been unable to find any information on Mr. F.G. Roberts of Australia, either in the Del E. Webb Library at Loma Linda University, or in any of the North American or Australian obituaries of SDA church members. She checked every single issue. She also talked with the reference librarian of the Heritage Collection at Andrews University (Berrien Springs, Michigan) and searched the OCLC database–again with no results. If anyone had information on him, it should be the Australian branch office or library at the college in Australia. If she gets information on R.G. Roberts, she will catalog it and file it in a "Bio file" under his name.

If Mr. Roberts was a registered member of the Seventh-day Adventist Church, and if he died a Seventh-day Adventist, his death would probably have been reported (by the church of which he was a member) to one of the Union papers. Then her library would have a record of the man. If he was prominent in health food production or as a naturopathic doctor, it would be all the more likely that his death would be reported and recorded in the SDA obituaries.

He could have gone to and graduated from an SDA college and not been an Adventist. That happens all the time. Moreover many non-SDAs believe in and even teach SDA health principles. Address: Reference Librarian, Heritage Room, Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-824-4942.

3163. Devine, Lester. 1995. Re: F.G. Roberts and his early education. Letter (fax) to William Shurtleff at Soyfoods Center, March 21–in reply to inquiry. 2 p.
• ***Summary:*** Hobart Seventh-day Adventist College was, at the time of F.G. Roberts' childhood, an elementary school.

AMAZING BUT TRUE

You might be amazed to know that the new Fat Free Vegan Burger™ from Natural Touch® won this year's "People's Choice Award" for best taste. Considering it beat out burgers containing fat, we'd understand your reaction. But our vegetarian burger was chosen over others in a blind taste test conducted by the National Nutritional Food Association. And we're so sure you'll agree with the results that we're offering a money back guarantee. Either you'll love this burger or you'll get your money back. You've got nothing to lose. So take this coupon to your favorite natural foods store and try the Fat Free Vegan Burger from Natural Touch. The amazing fat-free burger with the award-winning taste.

50¢ OFF

Natural Touch® Fat Free Vegan Burger.™
Available at Natural Food Stores.

RETAILER: Worthington Foods will reimburse you for the face value of this coupon plus 8¢ handling, provided you and the consumer have complied with the terms of the offer. Void if copied, transferred, prohibited, taxed or restricted. Customer must pay any sales tax. Any other use constitutes fraud. Cash value 1/100¢. For redemption, mail to: Worthington Foods, Inc., Lees' Dept. #1660, 11500 Rojas, El Paso, TX 79936.

LIMIT: ONE COUPON PER PURCHASE. Store Coupon | Expires 12/31/96

The word "College" is used differently in Australia than it is in America. It is operating today in Hobart as a Junior Academy, named Hilliard Christian School, P.O. Box 162, West Moonah, Tasmania 7009. Phone: (002) 72 1711. It is still owned and operated by the SDA Church. The principal is Mark Hansen.

The early records of this school no longer exist. Unfortunately Hobart suffered a major catastrophe about 15 years ago–the Collinsville fire, which destroyed a significant part of outer Hobart, and all of the school's records. The resent administration of the school has been trying to find out something of its early history and believes the school was established around 1901 but no one seems to know the name it operated under at that time.

Les has talked with several people who remember F.G. Roberts, but none know the maiden name of his wife, Alice Maud.

"Probably the best source for you to contact for further information about the life and work of F.G. Roberts is Mrs. Bonnie Roberts. A widow, her late husband V. Noel Roberts, was a nephew of F.G. Roberts. Bonnie indicated this morning that she would like to help you with your research–she believes it is important that this sort of thing be done. Mrs. Roberts indicated she has lost contact with that side of the family but knows where to locate them in Melbourne and will assist in whatever way she can in getting the information you need or directing you to that end." Contact: Bonnie Roberts, P.O. Box 260, Sandy Bay, Tasmania, Australia. Phone: (002) 48-5072. Address: EdD, Regional Director for Education, Dep. of Education, South Pacific Div., Seventh-day Adventist Church, 148 Fox Valley Road, Waroonga, NSW 2265, Australia. Phone: (02) 489-1271.

3164. Fischer, Bruno. 1995. Brief history of Bruno Fischer GmbH (Interview). *SoyaScan Notes.* March 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** For several generations, back to his great-great grandfather, his family has been butchers. They owned and ran a meat company named Bruno Fischer Natural Foods. His father started a butcher shop in 1960, but in 1968 his father developed cancer. His father changed his lifestyle, learned about the Bible, and they became Seventh-day Adventists. First they stopped selling pork, and they moved their company toward vegetarianism. Then the company split into two parts, one vegetarian and one the traditional meat products.

In 1976 they introduced their first vegetarian products, which were spreads for breads based on grains, beans, etc. The company's first product containing soy was introduced in 1978; named WieLeberwurst ("Like Liver-Sausage") it was a rather "unspectacular product" made from a mixture of grains and beans, and containing less than 30% of cooked, ground soybeans. In the summer and fall of 1979 Bruno visited Worthington Foods in Ohio. Near the end of the same trip, on 7-8 Oct. 1979 he visited Shurtleff and Aoyagi at Soyfoods Center in Lafayette, California.

Starting in 1976, the company made meat products in the morning, then cleaned up the factory and made vegetarian products in the afternoon. All this took place at their one plant in Cologne. In about 1985 they stopped this system. Interestingly, the vegetarian business had grown so fast that the company could not keep up with the demand. So they rented an old bakery in Cologne and in it they started more automated production of their vegetarian products. In 1987-88 the company opened a new plant in Aetorf for making vegetarian products, but they kept their meat plant in Cologne. They are now in the process of selling off the meat company to their former employees. Formerly they sold off the part of the business which sold meat products by mail order to the people who ran it.

He still has a desire to eat meat, and he prefers not to eat the products made by Worthington Foods and DE-VAU-GE because they do not comply with his idea of healthy, whole foods. His dream is to make whole/wholistic (*Vollwert*) meat alternatives. He feels it is hard to make these products without using wheat gluten, but he would prefer not to use gluten because of problems with allergies. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

3165. Blankenship, J.; Crane, M.; Mullen, T.; Gregory, R.; Lukens, R.; Sample, C.; Cruise, R. 1995. Serum lipoprotein(a) increased by powdered soymilk in subjects on a total vegetarian diet (Abstract). *J. of Nutrition* 125(3S):802S-803S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.

• ***Summary:*** Serum lipoprotein(a) (Lpa) was measured in 4 groups of adults. A low level of Lpa is desirable for adults with cardiovascular ailments. Group 1 ate a total vegetarian diet with no powdered soymilk. Group 3 at the same diet but with 1-2 cups/day of commercial powdered soymilk. Group 1 had the lowest Lpa of the 4 groups. The authors conclude that exclusion of powdered soymilk and other free fats significantly lowers Lpa. Address: 1&7. School of Public Health, Loma Linda Univ., Loma Linda, California 92350; 2-6. Dep. of Medicine, Weimar Inst., P.O. Box 486, Weimar, California 95736.

3166. Smith, Paul. 1995. The life and work of F.G. Roberts, naturopath, and Australia's first soyfoods pioneer. Part I. The early years, 1892-1926. Bayswater, Victoria, Australia. 6 p. March. Unpublished manuscript. Handwritten. Updated by several interviews with and letters to William Shurtleff in March 1995.

• ***Summary:*** Paul Smith is Director and General Manager of Soy Products of Australia Pty. Ltd. (69 Power Road, Bayswater, VIC 3153, Australia). This company was taken over in Aug. 1936 by an Australian naturopath named F.G.

© Copyright Soyinfo Center 2014

Roberts (lived 1892-1977), at which time the name was changed to F.G. Roberts Health Food Products.

Prior to that it had been known as Willson Health Foods, Naturopath, Dentist & Manufacturer (1932 to Dec. 1935), then Drummond's Health Products (Jan. to July 1936). It appears that Roberts' son, Horace, may have joined Willson in 1932, and that Willson manufactured products for Roberts as well as for himself. In the July 1930 issue of *Nature's Path to Health* (NPH) (Melbourne), Mr. W.H.J. Willson was Melbourne Branch president of the Natural Health Societies and Mr. David Evans was secretary of the Ballarat Branch. F.G. Roberts was the founder and national president. In the Dec. 1930 issue there are advertisements for Drummond's Health Products.

In the Aug/Sept. issue of NPH we find the first "Directory of Health Aids," a consolidation of previously scattered advertisements. In it appears an advertisement for: "Mr. W.H.J. Willson (Melbourne, President of Natural Health Society), 40 Chapel St., East St. Kilda. A nature cure dentist." From Jan/Feb. 1936 to 15 July 1936 in NPH we find: "Drummond Health Food Products, 40a Chapel Street, East St. Kilda." Apparently Mr. Willson was "consulted" by the Dentistry Board about his activities as "Dentist, Naturopath, Food Manufacturer" and forced to choose. It appears he chose dentistry, and sold the factory at the rear of his house, which became 40a Chapel Street. Paul Smith states (28 March 1995): "It appears that Wilson and Drummond manufactured Roberts' products prior to 1936... It appears that Willson began manufacturing products in 1932.

Roberts made the 11 earliest soyfood products sold in Australia. Ron Smith, Paul's father, was a pioneer in commercial soybean production in Australia, starting in the early 1950s.

Frederick Roberts was born on 11 Nov. 1892 in Hobart, Tasmania, the son of William Thomas Roberts and Ellen Bloomfield, both Seventh-day Adventists. He was one of eight children, including Arthur, George, Whit, William Edgar ("Bill"), and Kate. Their order of birth and the names of the other two are unknown. His parents came from Wales. In later life he was best known as F.G. Roberts. The "G.," which initially came from the first name of his wife Gladys, was later changed to "George" to add a little distinction to plain Fred Roberts. He attended primary school at the Hobart Seventh-day Adventist College.

While still in his teens [sic, age 22], Fred Roberts married Gladys Maude Griffiths in 1914 in Hobart, Tasmania. Born on 13 July 1895 in Hobart, Tasmania, she was the daughter of Edley James Griffiths and Susan Jane Mason. No additional details are given in the register of marriages. On the birth record, her middle name is spelled "Maud," but on the marriage record "Maude." Born an Anglican, Gladys became a devout Seventh-day Adventist, in part at least on her husband's behalf. They soon had three children: Fred, Jr. (born 14 Sept. 1911 in Hobart), Horace Eric (born 30 Sept. 1914 in North Lyell; died 1943), and Gladys Ellen (born 25 Feb. 1916 in North Hobart). The children, all born in Tasmania, probably in Hobart, were raised in the Seventh-day Adventist faith. Gladys, the daughter and youngest child, was later married three times, to Messrs. Newitt, Grimes, and Hawken.

In 1912 Fred Roberts began his studies in health and natural therapies as a result of the death of his father, William Thomas Roberts, from a hernia operation. Qualifying as an electrician by trade, he worked in Hobart and Mt. Lyell prior to the outbreak of World War I in 1914. He volunteered for an Engineer Reinforcement Corps but was excused from active service on compassionate grounds since he had married young and already had a young family. Moreover, his wife, Gladys, was strongly opposed to him undertaking military service.

In 1918, he left for England, where he studied at the British College of Naturopathy, learning the natural healing methods used in chiropractic, osteopathy, herbalism, dietetics, homeopathy, and hydrotherapy. During this time, his wife stayed behind in Tasmania with their children.

Returning to Hobart late in 1920, he moved his family to Burnie, Gladys' home town, on the northern coast of Tasmania. There he continued his work as an electrician. In 1923 he established his first clinic in Tasmania, where he engaged in chiropractic and osteopathic work. He often took people into his home for hydrotherapy treatment. Meanwhile he and his wife continued to read and study everything they could get their hands on from England and elsewhere related to naturopathy; this enabled them to steadily expand the areas of their clinical work.

While in the U.K., F.G. Roberts had also worked with ultraviolet and infrared lamps, and he was responsible for introducing them into Australia and using them in the treatment of asthma and certain skin disorders. Next the Roberts family moved to Launceston (in the northeast corner of Tasmania on the Tamar River); there they opened their first rest home or "Health Academy" and added dietary advice and herbal treatments to their range of health services. F.G. Roberts, who was born into a SDA family, was first baptised into the Seventh-day Adventist church in Launceston by Pastor Letts. About 2 years later the Roberts family returned to Hobart, establishing another rest home in Kingston and treatment rooms in Central Hobart, where he began practicing iridiagnosis [iridology, the study of the iris of the eye for indications of bodily health and disease; the term was first used in about 1923], and prescribing diets and herbal remedies, etc. Iridiagnosis became a lifelong study, constantly honed.

He became very skilled at using herbs therapeutically, and at diagnosing people, especially by examining the iris of their eyes. He was very interested in the work of Dr. Harry W. Miller (even though there is no record that the

© Copyright Soyinfo Center 2014

two men met) in China during the 1920s and early 1930s. He was also very interested in children who suffered from eczema, colic (abdominal pain), and mucus problems from milk. Continued. Address: Director/General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

3167. Smith, Paul. 1995. The life and work of F.G. Roberts, naturopath, and Australia's first soyfoods pioneer. Part II. Early years in Australia, 1927-1932. Bayswater, Victoria, Australia. 6 p. March. Unpublished manuscript. Handwritten. Updated by several interviews with and letters to William Shurtleff in March 1995.

• ***Summary:*** Continued: In early 1927, after his clinic in Hobart was well established, F.G. Roberts traveled to Melbourne (in Victoria, southern Australia), where he became licensed in 1929 and established his first mainland clinic at Latrobe Street and commenced his well-known lectures. Initially his wife kept the clinic and rest home going in Hobart, then she and the children joined him in Melbourne in late 1927, when the family took up residence in Mordialloc, later moving their house and clinic to 232 St. Kilda Road.

In Nov. 1928 F.G. Roberts and his wife, Gladys, from their headquarters in Melbourne, began publishing a magazine titled *Nature's Path to Health* (NPH). The first issue was volume 5, number 5–raising many questions about previous volumes and issues. They continued publishing NPH until 1951-52. Gladys was a major contributor, serving as editor, publisher and even writer of articles when her husband was away. In later years, Gladys was assisted by her sister, Muriel Ackerman. The magazine became Roberts' main vehicle for announcing his lecture and travel plans, advertising his products, and disseminating his ideas about health, naturopathy, and diet.

In 1929 Roberts established the Australian College of Naturopathy and began offering lectures and study courses, including some in chiropractic; he used his home as the organization's first headquarters. Soon more space was required, so the Roberts family moved to 428-430 St. Kilda Road, where they also established yet another rest home.

During 1930, 1931, and 1932 frequent advertisements appear in *Nature's Path to Health* (Melbourne) for F.G. Roberts interstate lecture circuit, giving dates and venues. He established centers in Sydney and Newcastle (New South Wales), Brisbane, Ipswich, Toowoomba (Darling Downs), Maryborough, Bundaberg, and Rockhampton (Queensland). After traveling this northern circuit by train, he would return to Melbourne for several weeks to rest and attend to his duties there, prior to traveling by car to Ballarat and Geelong (both in southern Victoria), where he had also established centers. Then he was away by train to Adelaide (South Australia), and Fremantle (near Perth, Western Australia). He loved to travel, and in all these places he lectured and treated people. He also participated in radio (wireless) interviews and programs. As his students became qualified, he opened clinics and shops to give the public the goods and services he felt they needed. During this time he closed the St. Kilda Road Clinic and opened a new clinic at Post Office Place.

At about this time, F.G. Roberts may well have traveled to the United States. Esmae N. Jackson (born in 1937), the Roberts' granddaughter, recalls vividly that he told her about several visits (at least two) there during her years in primary and secondary school; she does not know when his trip took place but thinks vaguely late 1930s to mid-1940s. She recalls her grandfather mentioning Loma Linda (which was named College of Medical Evangelists from 1906 to 1 July 1961, when it was renamed Loma Linda University). Paul's father, Ron Smith, has no recollection of F.G. Roberts going to the USA between 1948 and 1954. If Roberts did go, there are three good reasons for thinking he may well have visited Benedict Lust (pronounced LOOST; rhymes with "boost"), who was based in New York. First, Lust published (from July 1925 to 1960) a naturopathic magazine titled *Nature's Path* (New York City). In 1930 F.G. Roberts, assisted by his wife (Gladys), began editing and publishing a bimonthly (later monthly) magazine titled *Nature's Path to Health.* He continued to publish it until about 1952. The magazine was published in Melbourne and Gladys kept it going during her husband's travels. Some articles by Benedict Lust appeared in the Roberts' Australian periodical. And articles by other writers, first published in *Nature's Path* (USA) later appeared in the Australian magazine. By Sept. 1939 Lust appears on the magazine's masthead as "American Contributing Editor"–all indicating a spirit of cooperation and friendship.

Second, the Sept/Oct. 1937 issue of *Nature's Path to Health* (Australia) states (p. 14): "The Naturopathic School of Dr. Benedict Lust conferred on F.G. Roberts, N.D., D.O., D.C. [doctor of naturopathy, osteopathy, and chiropractic], of 430 St. Kilda Road, Melbourne, Australia, the Degree of Dr. of Natural Therapeutics." Esmae believes the honorary doctorate arrived by mail, and that F.G.R. was enormously proud of the honour.

Third, Dr. Lust was widely considered the world's leading practitioner of natural healing (naturopathy) at the time, and it seems likely that an energetic, curious, and dedicated man such as F.G. Roberts would have wanted to meet him, to talk with him about their mutual interests, and perhaps to study Lust's organization, publications, and healing methods. Note: A careful examination of Dr. Lust's magazine might mention a visit from Roberts.

During the 1930s Roberts began to import a range of packet herbs, tablets, and other herbal remedies from Potter and Clark in London.

In 1934-35 F.G. and Gladys Roberts established a restaurant named the Curative Dining and Health Service, on the 2nd floor, 300 Little Collins St., Melbourne. It was renamed Cafe Naytura (see ad in 15 Aug. 1936 NPH). (Note:

© Copyright Soyinfo Center 2014

In 1943 Sanitarium Health Food Co. {SDA} had a cafe and natural food store at 293 Little Collins St., Melbourne). During the 1950s it was located in the basement at this same address and run by the Cutting family. It continued at this address until the late 1970s, when it was purchased by Don Newsome, a pharmacist, and moved to its current Bourke Street Mall location. Don used his experience to establish the Naytura Health Food Section nationwide through the Safeway (Victoria) / Woolworths supermarket chain. The Bourke St. store is used to evaluate products for potential supermarket sale and the basement restaurant still carries on the tradition of the Roberts' 1934-35 Cafe.

In the early 1930s, F.G. Roberts became interested in Mr. Willson's food manufacturing business–probably because his son, Horace, worked there. It may have been that Roberts took over the business to keep Horace in a job. F.G.R. never had the time or any real interest in running it.

In the Aug. 15, 1936 issue of *Nature's Path to Health* we find the first advertisement for "F.G. Roberts' Health Food Products, 40a Chapel St., East St. Kilda." The same appears in the "Directory of health aids." He had acquired this health food factory which had been previously named Drummond Health Food Products. St. Kilda was a beach-side suburb of Melbourne, Victoria, Australia. A photo of this original red brick factory appeared in the May-June 1937 issue of *Nature's Path to Health* (p. 22); an original hangs on the office wall at Soy Products of Australia. The factory began to pack a variety of herbal products, and to manufacture some new foods, all to service the needs of Roberts' shops and clinics. Many herbs were grown locally in Australia to supplement the supplies imported from England. It was during the mid-1930s that many of the products still manufactured today by Soy Products of Australia Pty. Ltd. under the Roberts brand name were first formulated and developed. By the late 1930s F.G. Roberts, his teachings, and his products were known nationwide. From 1951 onward Potter & Clark's herbs were replaced by herbs mixed and packaged in Australia using some imported ingredients.

During this period the Australian College of Naturopathy (which Roberts had founded in 1929) became more closely affiliated with the British College and became known as the British and Australasian College of Naturopathy; the two colleges were run on the same standards and principles.

The Roberts' children had now grown up and were taking an active interest in the business, training for and working in key positions. The eldest son, Fred, Jr., and the daughter, Gladys, worked in the clinics. Fred, Jr. later moved to Brisbane and his son, Peter, carries on the family tradition, practicing as a chiropractor. Mr. Roberts was good at treating people and lecturing, but was less interested in managing the food factory, a role that his youngest son, Horace Roberts, fulfilled. Horace also managed the shop at the Post Office Place Clinic. Horace was instrumental in transforming his father's ideas into formulations and products. Starting in the mid-1930s, and continuing until the 1950s, F.G. Roberts developed a number of health food products, which were sold throughout Australia. They were hand-mixed and packaged at his factory, F.G. Roberts Health Food Products, in St. Kilda and from 1933 he was advertising them nationwide in his magazine *Nature's Path to Health.*

Several of these products contained soy flour. Prior to 1950 he launched and sold the following soy products, listed here is the order they were first advertised in his magazine: (1) Soy Wheat Macaroni (Aug. 1936); (2) Soy Bev (tea or coffee substitute; Nov. 1937) was made primarily from ground roasted soybeans and roasted milled chicory; Paul thinks it was first introduced in about 1935-36; (3) Soy Flakes (Dec. 1937); (4-5) Roberts' Soy Nut Roast; Soy Beans in Tomato (in glass, Oct. 1938; canned June 1940); (6) Malto-Soy Drink (tea or coffee substitute; Sept. 1939); (7) Soy Milk Compound (Sept. 1939; originally a mixture of soy flour, malt, lactose, and nonfat dry milk [skim milk]). This product is still made today in modified form under the name Soy Compound; Paul thinks it was introduced in about 1933 or 1934. It was made using defatted soy flour imported from America; (8) Soya Choc-Malt (Jan. 1940), renamed Soya-Choc in Aug. 1946; it was the Soy Milk Compound plus natural cocoa; Paul thinks it too was introduced in about 1933 or 1934; (9-10) Roberts Soy Nut Brawn, Soy Nut Cheese (May 1940); (11) Vita Elm (1948). This early and widely advertised herbal product was being advertised by May 1935 in *Nature's Path to Health* as a "vitalizer" that can give "Glorious Health." Vita-Elm, which always contained slippery elm, was based on an old English formula that went back to the 1750s; the company still makes the product today. Published ads from 1935, 1936, and 1949 said it contained "the Germ of Life of Wheat, Oats, Barley, Rye, Maize" (and slippery elm) but Paul is sure that somewhere prior to 1948 it also contained small amounts of soya flour. Esmae Jackson believes that the soy was added to Vita Elm in 1937, when Roberts first became interested in it. Continued. Address: Director/General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

3168. Smith, Paul. 1995. The life and work of F.G. Roberts, naturopath, and Australia's first soyfoods pioneer. F.G. Roberts Health Food Products, and Ron Smith. Part II. Mid-1930s to 1949. Bayswater, Victoria, Australia. 6 p. March. Unpublished manuscript. Handwritten. Updated by several interviews with and letters to William Shurtleff in March 1995.

• ***Summary:*** Continued: It is not clear when and how F.G. Roberts first learned about soybeans and soy flour. Paul suspects that he read about Dr. Harry W. Miller (a Seventh-day Adventist doctor) and his pioneering work with soyfoods in China, starting in the 1930s. "There is definitely some connection and I believe it is highly likely

© Copyright Soyinfo Center 2014

that F.G. Roberts met Harry W. Miller." Or the two men may have corresponded. If Roberts visited Loma Linda, California, he would surely have visited Loma Linda Foods, which made a large range of early soyfoods: In 1922 Loma Linda introduced–Smokene (a seasoning based on roasted soy flour). 1934–Soy Mince Sandwich Spread, Soymilk, VegeCheese, Soy Bean Spread, Breakfast Cup (coffee substitute), Soy Wafers, Soybeans with Proteena and Tomato Sauce. 1936–Soy Beans (plain, canned). 1938–Gluten Burger (with soy flour). 1940–Soy Beans with Tomato, Soy Beans with Proteena, etc.

During the 1930s, F.G. Roberts and others were experimenting with soybean cultivation in Australia on a small home-garden and experimental level. An article in *Nature's Path to Health* (15 July 1936, p. 35-36) gives details. Roberts concluded: "The Soya Bean has been very successfully grown in Australia." But there were no commercial crops until the 1950s.

In 1940 Horace Roberts, the youngest son, left the company when he volunteered for service with an ambulance corps being formed in Melbourne. Serving as a non-combatant male nurse during World War II, he was sent to Singapore. With Horace's departure, F.G. Roberts' food production business began to languish; the man who had managed the plant and attended to daily details was gone. Although the company's soy products were available during the war, it continued to languish until Ron Smith entered the business in 1948.

Meanwhile, during World War II, with the clinics and college all well established and running smoothly, F.G. Roberts turned some of his time and attention to a property at Panton Hills, an outer Melbourne suburb, between Eltham and Lilydale, where a home was built; he grew fresh fruit, herbs, and vegetables, and practiced composting. This provided family, friends, and pupils from the college with a place to visit and relax. It never made the expected profit.

Shortly after World War II ended, the Roberts family received devastating news. Their youngest son, Horace, had been captured in Singapore and interned by the Japanese in Changi, their prisoner of war camp there. He had died in October 1943 in Burma (working as a forced laborer on the Thailand-Burma Railway)–unbeknownst to his family until after the war had ended. So shattered was F.G. Roberts by the death of his son that he began to lose interest in the shop and the factory. The shop and clinic in the Post Office Place was closed and the family moved to Malvern Road, Prahran. The factory continued to run indifferently while F.G. Roberts put most of his time and energy into public lectures, the college, and seeing and treating patients.

Esmae recalls that for many years on a Thursday [sic Tuesday] night, often weekly, F.G. Roberts had addressed the public about "Health Matters" at the Athenaeum Art Gallery Hall at 188 Collins Street, Melbourne. Esmae personally attended many of these evenings, singing, playing the piano, and on one occasion addressing the audience with a speech of her own about diet and health.

In 1946 Ron Smith first came in contact with the F.G. Roberts at the Athenaeum. Vincent Ronald "Ron" and Mabel Smith, both originally from Western Australia, had married and settled in Melbourne after World War II. Ron was born on 10 December 1918 at Boulder (near Kalgoorlie), Western Australia. Mabel was born on 16 Dec. 1919 in Bunberry, also in Western Australia. Both in their late 20s and dogged by ill health, they first attended several of F.G. Roberts' lectures and later went to him for advice and treatment. Ron, in particular, was slightly built, had worn glasses for years, and had never enjoyed really robust good health. F.G. Roberts prescribed an exercise program and made radical alterations to the Smith family diet. Almost immediately the Smith family's health began to improve. Ron's physique developed and his eyes improved to where he was able to discard his glasses for nearly 30 years. Thus began a long and ongoing association with the Roberts family.

F.G. Roberts owned Green Island, a small island just off the coast of Queensland at Mackay, near the Great Barrier Reef; you could walk across at low tide. There he built a retreat to which he took his friends and pupils to enjoy the sea air, balmy climate, and the cleansing diet of fresh tropical fruits–pineapples, papayas, bananas, coconuts, and mangoes. Ron Smith enjoyed unforgettable visits with the Roberts at Green Island several times between 1948 and 1954.

F.G. Roberts had an enormous enthusiasm and an almost boundless capacity for work. When he got a bit tired or run down, he would switch off and head for Green Island for a few weeks of relaxation. He was good fun and good company to go away with. He would buy a case of good quality ripe oranges and, with his guests, would enjoy fresh squeezed orange juice and half a ripe pineapple (freshly sliced with a sharp machete and handed around to all present) for morning and afternoon tea. He practiced what he preached.

The Roberts presided over the prenatal and antenatal care of Mabel Smith during the birth of her two sons in 1949 and 1950 with beneficial results to both infants and mother. The Smiths became lifelong converts to Mr. Roberts' philosophy. Note: In 1995, at age 76, Ron Smith still comes to work at the company each day, and often puts in a 10-hour day as managing director of the company.

In early 1948, after several unsuccessful attempts to start his own business, Ron Smith went to work for F.G. Roberts. He worked as an employee at the factory at 40 Chapel St., St. Kilda, increasingly taking over the daily management and running of this operation–formerly the responsibility of Horace, the Roberts' son, who died in the war.

Although a great healer and publicist, F.G. Roberts was not strong in the technical aspects of food production or marketing. The factory at 40 Chapel St. was more like a cottage industry. It was small, cramped, and labor intensive;

© Copyright Soyinfo Center 2014

mechanical aids were either non-existent or very primitive. Output was small and most products were mixed and packed by hand.

Ron sparked the resumption of manufacturing, even though wartime rationing was still in place and obtaining permission to import anything was difficult. Paul recalls (28 March 1995): "Roberts, himself, was a dreamer, and far too preoccupied with travelling, treating patients, lecturing, and racing on to the next new idea. He lacked the patience, persistence, and stability to run a manufacturing business. His skills and interests lay elsewhere."

F.G. Roberts was an osteopath, naturopath, registered dietitian, iris diagnostician, and had several other natural healing qualifications. He studied by attending courses in the U.K. and by correspondence. He was first registered in Australia as a "Consultant Dietitian" in 1942-43. Continued. Address: Director/General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

3169. Smith, Paul. 1995. History of F.G. Roberts Health Food Products and Soy Products of Australia Pty. Ltd. The work of F.G. Roberts and Vincent R. "Ron" Smith. Part III. 1950-1959. Bayswater, Victoria, Australia. 6 p. March. Unpublished manuscript. Handwritten. Updated by several interviews with and letters to William Shurtleff in March 1995.

• ***Summary:*** Continued: In 1951-52 the company launched Australia's first full-fat heat-treated (dry-roasted) soya flour, which was named Soyvita. Prior to 1954 this flour was made from soybeans imported from China and the USA. From 1951 onwards, the company began mixing and packing its own range of herbs.

In May 1952 Ron Smith and F.G. Roberts became equal partners in the ownership of the food factory. In May 1954 Ron Smith bought the entire food processing business from Mr. Roberts, thus ending the partnership. Mr. Roberts kept some of the herbal products and tablets. In June 1954 Smith incorporated a proprietary company under the name "New Life Products Pty. Ltd." and in March 1958 changed the name to "F.G.R's Health Food Products Pty. Ltd."

Shortly after Ron Smith bought F.G. Roberts' Health Foods in 1954, he did two other important things: First, he bought a 3½-acre piece of land at 69 Power Road, Bayswater, Victoria–where the company is located. Bayswater is an outer Eastern suburb of Melbourne at the foothills of the Dandenongs between Croydon and Boronia (north-south), Montrose/Kilsyth and Wantirna (east-west). The property was a green-fields industrial site surrounded by orchards and daffodil farms, with no utilities connected. On this property he built a 100-square-meter storage shed, which was used to store the year's supply of soybeans in hundredweight (112 lb) Hessian sacks. The beans were then taken in small quantities to Hawthorn for dry roasting and milling as required. They were cleaned, bagged, and delivered by semi-trailers, and unloaded by hand.

Second, Smith moved the entire company from St. Kilda to larger premises at 146 Burwood Road, Hawthorn (an eastern, inner city suburb of Melbourne), Victoria–about 45 minutes drive from 69 Power Road. Initially the roaster and mill were at Burwood Road.

Not long after the Smiths purchased F.G. Roberts' food business, they also purchased a new home at Blackburn South on a bare, treeless piece of land. One Sunday, Roberts appeared with four Italian laborers and in a single day transformed the yard, planting zinnias, marigolds, etc. Paul still remembers vividly the riot of color the next summer. According to Ron Smith, F.G. Roberts was a great gardener, and wherever he went (as at homes in Kew and Panton Hills) he surrounded himself with a magnificent garden of herbs, annuals, vegetables and fruit trees.

After 1954, due to family and business pressures, contact between the Smith and Roberts family began to diminish. From all accounts, F.G. Roberts was a lively, congenial, and stimulating companion–a man of rare charm and brilliance. He was extremely widely read in all matters related to natural healing, and a learned man in every sense of the word. He also maintained an active correspondence with naturopathists and herbalists all over the world, even maintaining contact with German and Austrian colleagues during World War II. He avoided attracting attention to himself, and though he cured many people, he made no claims to such cures. He merely went about his chosen profession of helping and healing people. F.G. Roberts was active and healthy throughout his life, working right up until two months prior to his death in 1977 at age 84.

Ron Smith had fine mechanical and technical skills, and he began to expand and automate the factory, even though he was restricted by a shortage of money and the small market for health foods at that time–all the while faithfully preserving the spirit and intent of his mentor's work and often expanding on his legacy. He rebuilt old machines and adapted other machines to new uses. By studying other people's ideas, he was able to modify and adapt them to his own operation at a fraction of new commercial cost. He was an innovator, constantly improving the plant over the years to achieve greater efficiency and output. A stickler for regular maintenance and cleaning to keep the plant running smoothly, he required that meticulous records be kept of bearing performance, greasing routines, etc. Every Friday was devoted to a thorough cleaning of the plant and all its equipment. A keen browser of the technical literature, he built substantial files on all sorts of drying, milling, mixing, dust extraction, and metering equipment and systems.

During the 1950s Ron Smith, frequently accompanied by his two young sons, Paul and Ross, often visited Robert Hutchinson's Flour Mill at Glenroy and H.J. Heinz's new factory at Dandenong (both in Victoria), Australia. From

© Copyright Soyinfo Center 2014

these modern, state of the art plants, they gleaned valuable inspiration.

Ron Smith also carried on much valuable pioneering work, especially in the area of commercial soybean production in Australia. One of the company's major products, Soy Compound, was originally manufactured using defatted soy flour imported from the USA. This flour was often difficult to import during the 1950s, and Ron Smith began to have ongoing problems because of the flour's variable quality, flavour, texture, purity, and colour. So he asked a basic question: "Why can't we make soy flour in Australia?" Ron's research showed that there were soybeans locally available in Australia, so early in the 1950s he began to work with several farmers on experimental production of soybeans, first in the Kingaroy district of Queensland, then soon throughout New South Wales and Queensland. From 1951 to 1957, Ron purchased soybeans from Elmo W. Semgreen of Kingaroy, from Kel Maundsley from Murgon (near Kingaroy). Incidentally, Semgreen married one of F.G. Roberts nurses and became interested in soybeans through Roberts. From 1954-55 Ron also purchased soybeans from the Young family (of Chinese extraction–pioneers of commercial soybean production in Kingaroy), who grew them under contract specifically for him. Experimental plots in the Smith's backyard at Blackburn (a Melbourne suburb about half way between Hawthorn and Bayswater), in 1953, 1954, and 1955 produced healthy plants, flowers, and pods full of beans. Unfortunately temperatures and sunlight hours were not adequate at this location, so the beans did not mature and dry properly. Using Australian-grown soybeans, Ron Smith initially continued to use the small and primitive batch roasting and milling system located at the Burwood Road plant, which had been developed to process the imported beans. This improved the quality, reduced the cost, and put the raw material supply directly into the hands of the Smith family.

Early in 1954 the company first began to process Australian-grown soybeans; the first product made from them was Soyvita, a dry-roasted soy flour, similar to Japanese kinako. As soon as the company began to use locally grown soybeans, the soy processing business began to develop steadily as other local companies preferred local, timely production to the costs and difficulties associated with the imported product(s).

From the mid-1950s to the mid-1980s the company purchased most of its soybeans from the Darling Downs, an agricultural region in Queensland. The construction of huge man-made irrigation lakes and bores on the Darling Downs increased soybean yields and reliability–and the area was closer to the SPA plant. John Bligh, the Todd family, and the Behrendorf family were among the company's main suppliers for many years.

In about 1954 H.J. Langdon, a major importer, exporter, and seller of food ingredients, took an interest in buying soy flour from Soy Products of Australia. Starting in 1955 they had it private labeled under the brand name Soybake. It was extremely gratifying at the time to enjoy the support in marketing and distribution of soy flour by such a large and well established company, founded in the mid-1800s.

Brockhoff, a major Australian biscuit manufacturer established in Victoria since 1880 (acquired by and now part of Arnotts Biscuit Group of Companies, which is now owned by Campbells), started to buy soy flour and contract other products and services from F.G. Roberts. Shortly afterwards, Heinz began to use the soy flour as a thickener in many of their soups; they continue to do so to this day, exemplifying the gradual acceptance and increasing usage of soy for both technical (functional) and nutritional reasons in many varieties of popular foods. As Australian companies heard that soy flour and related products were being made in Australia, they decided to buy locally rather than import. Even Australian politicians helped; during the 1950s they were very concerned about the country's balance of trade and avoiding foreign debt, and they worked to make Australia more self sufficient.

In June 1957 Ron Smith founded Soy Products of Australia Pty. Ltd., and in Sept. 1957 had the new company formally registered and incorporated. So at that time he owned two active food companies, with headquarters at 146 Burwood Road, Hawthorn, and soybeans storage at 69 Power Road, Bayswater, both in Victoria.

During the 1950s the company continued to introduce new products. It canned soybeans, continuing F.G. and Horace Roberts' pioneering work in 1939-40, and lima beans, and bottled cider vinegar. In 1953 the company began exporting Soy Compound to New Zealand and continues to do so to this day (1995).

Demand for the dry-roasted soy flour and grits grew steadily over the years. In 1957-58, after electricity, gas and water services had been connected at Bayswater, the rather primitive roaster and then finally the mill were scaled up moved to the shed at Bayswater. The main mixing, packing, dispatch, and administration operations continued at Hawthorn. Continued. Address: Director/General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

3170. Smith, Paul. 1995. History of Soy Products of Australia Pty. Ltd., and the work of Vincent R. "Ron" Smith. Part IV. 1960-1979. Bayswater, Victoria, Australia. 6 p. March. Unpublished manuscript. Handwritten. Updated by several interviews with and letters to William Shurtleff in March 1995.

• ***Summary:*** Continued: By 1961 roasted whole soy flour was being produced at Bayswater 7 days a week, almost 24 hours a day. So that year an American consulting engineer, George Lloyd Levin, from Minneapolis, Minnesota, was

© Copyright Soyinfo Center 2014

hired to help design a much larger and more sophisticated, 4-story flour mill (including dehulling, steaming, drying and grinding) at 69 Power Road, Bayswater, to the rear and adjacent to the 1954 shed.

On 1 April 1963 this mill began to manufacture soy flour using a new process in which debittering has replaced dry roasting. Previously, the company was roasting and milling whole soybeans. Now they crack and dehull whole soybeans, before they steam, dry, and mill them. This new mill could produce more soy flour in one day than its predecessor could produce in a week using previous methods–and the quality and flavour were infinitely better. Eventually (in 1969-70) the bagged beans were replaced by the first bulk handling system. The plant and its processes have been continually improved in the areas of intake cleaning of the soybeans, throughput, and quality control of fineness, product purity, and microbiological standards, ever since the initial plant construction.

The 1964 *Soybean Blue Book*, in the section titled "Foreign processors" (p. 96), contained its first entry for Soy Products of Australia Pty. Ltd., at Woodmason Rd., Bayswater, Victoria. The top men were T.W. Harvey, V.R. Smith, and H.G. Eakins. Storage capacity: 20,000 bushels. Manufactures "Soyvita" full-fat soy flour. Approximate soybean operations 50% [i.e., 50% of its processing was done on seeds other than soybeans].

In 1965 Ron and Mabel Smith developed and manufactured two soyabean meat substitutes–Soya Bean Luncheon Loaf, and Savoury Roast–for Bellevue Health Supplies, as part of their product range within F.G. Roberts' Health Foods Proprietary Ltd.

By 1968 the contract milling and health food manufacturing operations at 146 Burwood Road, Hawthorn, had also outgrown the available space. So in April 1968 these operations were moved into newly expanded and constructed premises, including a new warehouse and manufacturing and packaging area in the Bayswater plant. Since 1968 the facilities and technologies at Bayswater have continued to expand and develop.

In the late 1960s and early 1970s the company pioneered Muesli manufacturing in Australia, working with Vitamin Supplies, another established and well-known Australian health food company.

By the early 1970s Soy Products of Australia employed more than 30 people and manufactured an extremely wide range of products. Unfortunately, many of these were labor intensive, and the company lacked the resources to finance the enormous capital investment required to automate them and to market them at a much larger scale. Other products, such as the herbs, were under increasing pressure from the medical profession and health departments, and were becoming increasingly difficult to market. With the enormous social and economic changes which have occurred in Australia since the mid-1970s, many of these products were no longer viable and, reluctantly and sadly, the Smiths had to scale down and lean up their operation. They had to concentrate on those products which they could manufacture and pack efficiently with their facilities.

On 28 Aug. 1973, F.G. Roberts was rebaptised into the Seventh-day Adventist (SDA) Church at the East Prahran Memorial Church (a suburb of Melbourne, Victoria) by J.B. Connolly and H.B. Christianson. F.G.R. and his wife were parishioners of the Windsor and East Prahran SDA churches and congregations.

At least four of the early soyfood products continued until the early 1974-74 under Ron Smith's direction: Beans in Tomato, Soy Bev, Soy Choc, and Soy Compound. In 1972, with the election of a labour government, labor and other costs soared. Most hand-made labour intensive products were discontinued at this time. The 2nd shift was discontinued and the number of permanent employees was reduced from 35 to 15, and have continued to decline ever since.

In 1974 the company F.G. Roberts' Health Foods Pty Ltd. ceased trading, following a rationalisation of the Smith family's affairs. The retail products and F.G. Roberts brand name were retained by "Soy Products of Australia Pty. Ltd." and continue to be manufactured by the company to this day (1995).

F.G. Roberts, a true pioneer in the fields of food, health, and naturopathy (natural healing) in Australia, died on 17 Nov. 1977, at "Corinella" Hospital, a Seventh-day Adventist (SDA) hospital adjacent to the SDA camp at Nunawading, an eastern suburb of Melbourne between Blackburn and Mitcham. Roberts was buried on 19 Oct. 1977 at Springvale, Cemetery.

His wife, Gladys, died less than a year later, on 12 July 1978, and was buried beside her husband at Springvale.

Roberts' daughter, Gladys, now (1995) resides at Corinella Retirement Village.

Was F.G. Roberts a vegetarian? Not strictly. Paul recalls: "He loved fish. A whole baked or grilled flounder was a favorite at home or dining out in Melbourne. He certainly enjoyed catching and eating the fresh Barrier Reef fish in Queensland. Roberts ate cheese, eggs and meat sparingly. In later life, as an antidote for a blood problem, he enjoyed a grilled steak on a weekly basis. Roberts favored vegetarianism. All his dietary advice advocated high consumption of fresh fruit, vegetables and wholegrain cereals, and sparing consumption of what he termed the 'concentrated' foods: meat, dairy products, eggs, nuts, fats, refined sugars." Address: Director / General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

March. Unpublished manuscript. Handwritten. Updated by several interviews with and letters to William Shurtleff in March 1995.

• ***Summary:*** In April 1980 Ron and Mabel Smith's eldest son, Paul, abandoned his career as an architect and joined them full time at Soy Products of Australia. Born on 23 January 1949 at Queens Road, South Melbourne, Paul had Architecture, Landscape Design, and Master of Business Administration (MBA) degrees. He had been a director of the company since Aug. 1977. In 1990 Paul became General Manager of the company following Mabel's retirement. In 1981, at the request of William Shurtleff of Soyfoods Center, Paul wrote a brief history of his company (which see). Thereafter, his interest in the company's history steadily grew, and he did extensive research on the subject. Paul is thinking about writing a biography of F.G. Roberts, so he has collected some documents about his life, including articles from *Nature's Path to Health*, published exercise regimes, iridiagnosis charts, and some recipe books. Unfortunately the company has no product catalogs from before 1985. Paul has written parts of the story and he has written an outline article in a 1985 company brochure.

Paul's human sources of information on F.G. Roberts were: His father and mother, Ron and Mabel Smith. Mrs. Gladys Hawken (F.G. Roberts' daughter). Mrs. Esmae Noelene Jackson (1937 -; née Grimes, granddaughter of F.G. Roberts and his wife Gladys; she was reared by both of them). Grahame Newitt (1939 -; chiropractor, grandson of F.G. Roberts, and brother of Esmae). Mr. David Evans, a naturopath who operated F.G. Roberts' clinics at Newcastle and Sydney during the 1930s. Mr. William Pruss, who worked with F.G. Roberts' brother, W.E. "Bill" Roberts in Sydney during the 1930s and 1940s. Nurse Cogan who operated F.G. Roberts' shop and clinic at Ballarat, Victoria, continuously from 1937 until her death in 1993. Numerous patients of F.G. Roberts, including Mr. Shugg (from Surrey Hills, a suburb of Melbourne), Nan Yates (diagnosed with terminal cancer in 1969 and still alive today), and Mrs. Alice Harding (diagnosed with cancer of the liver in 1939, who remarried at age 80 and died in 1987 at age 88).

The "Roberts" brand has been used continuously since F.G. Roberts commenced manufacturing in 1932 at 40a Chapel St., St. Kilda. The "Roberts" brand name applies to numerous other products, developed by Roberts in the 1930s, which have nothing to do with soybeans, e.g. "Molasses," "Alfalfa Tea," "Skin & Healing Ointment," "Vita Balm" (a heat rub), "Malted Bran," cider vinegar, etc., some of which we still manufacture and sell in addition to our soy products.

Apparently many of F.G. Roberts' personal papers and records were either dumped or acquired by Stephen (?) Newitt when Gladys Roberts Hawken sold her home to move into Corinella Retirement Village about 2 years ago. At least one complete set of *Nature's Path to Health* from July 1930 to Jan. 1947 still exists, privately owned, bound in five volumes.

Concerning old advertisements for products made by F.G. Roberts, Paul has original issues of *Nature's Path to Health* from 1935 (2 issues), 1936 (2 issues), and 1937, plus the April-May 1949 issue. He has seen later and earlier issues, and from some of these he has been able to photocopy articles and advertisements.

In the company's archives Paul can find no product labels or brochures which predate the move to Bayswater in 1968. All existing old labels have the Power Road, Bayswater, address, but many of them were copies of earlier labels with only the address changed. Some of the artwork goes back to the 1930s and early 1950s in format and design.

Even though F.G. Roberts was baptised a Seventh-day Adventist, attended an SDA college and married a woman who became a devout member of that church, he left the SDA church for many years during the middle of his life due to a mismatch between his views and the more conservative views held by the church and its elders at that time. There was intense competition between Roberts and Sanitarium Foods, owned by the SDA church. Roberts was a proponent of Norman Vincent Peale's "Power of positive thinking, and was very critical of Sanitarium Foods' use of wheat gluten in their meatlike products, nutmeats, etc. He also felt the SDA diet was too high in starch, sugar, and gluten. Ron Smith recalls that Roberts never discussed the matter with him.

Gladys, F.G.R.'s wife, remained a staunch SDA parishioner and member of the church throughout her life, paying out of her own income to send a number of children to SDA colleges in Australia and Fiji. F.G.R. upheld his wife in her religious beliefs and works, often waiting outside in the car while she and the children attended church. Yet F.G.R. was a very spiritual / religious person judging from the memories of those who knew him, and the tone of his magazine, *Nature's Path to Health.* His granddaughter, Esmae Jackson, was brought up in the Seventh-day Adventist religion and is still a devout, active member of the church. F.G.R. and his wife, Gladys, reared Esmae, due to friction between herself, her mother, and her stepfather. They paid Esmae's fees to attend the SDA college in Oxley Rd., Hawthorn (very near the 1954-1968 factory) and later Avondale College (SDA), where she studied to be a teacher. Esmae speaks very highly of the kindness and generosity of her grandparents for paying her school fees, etc. She apparently had a very happy and secure childhood with them. Paul suspects that F.G. Roberts felt that a religious background was not important to his work and it may have alienated some potential customers. He was widely known throughout Australia, and treated many SDA patients, including several people that Paul knows who formerly worked for the company.

Since 1957, Soy Products of Australia Pty. Ltd. has operated in two parts: One part is a flour milling / commodity type operation, producing heat-treated / stabilised / debittered

© Copyright Soyinfo Center 2014

products including Debittered Full Fat Soy Flour and Grits (the grits come in coarse and fine mesh), Lightly Steamed Full Fat Soy Flour, Heat Treated Soy Fibre Flour (from soy hulls), Stabilised Wheat Germ, and Stabilised Wheat Bran. They also produce heat treated wholegrain rice flour, and maize flour. The other part of the business produces specialty retail products under the Roberts' brand name for the health food, diabetic, and coeliac [celiac] markets. This product range, remaining true to Roberts' philosophy of minimally processed whole foods, continues to include such soy-based foods as Soy Compound, Gluten Free Plain Flour, Gluten Free Self Raising Flour, Soy Crunch, and Vita Elm.

They also make some vegetarian burgers. In addition, since 1963, Soy Products of Australia has supplied cleaned and bagged Australian-grown soybeans to various commercial manufacturers of tofu, soy sauce, and other soyfoods in Australia. Since the early 1970s, most of these soybeans have been grown in the Riverina area in southern New South Wales and northern Victoria.

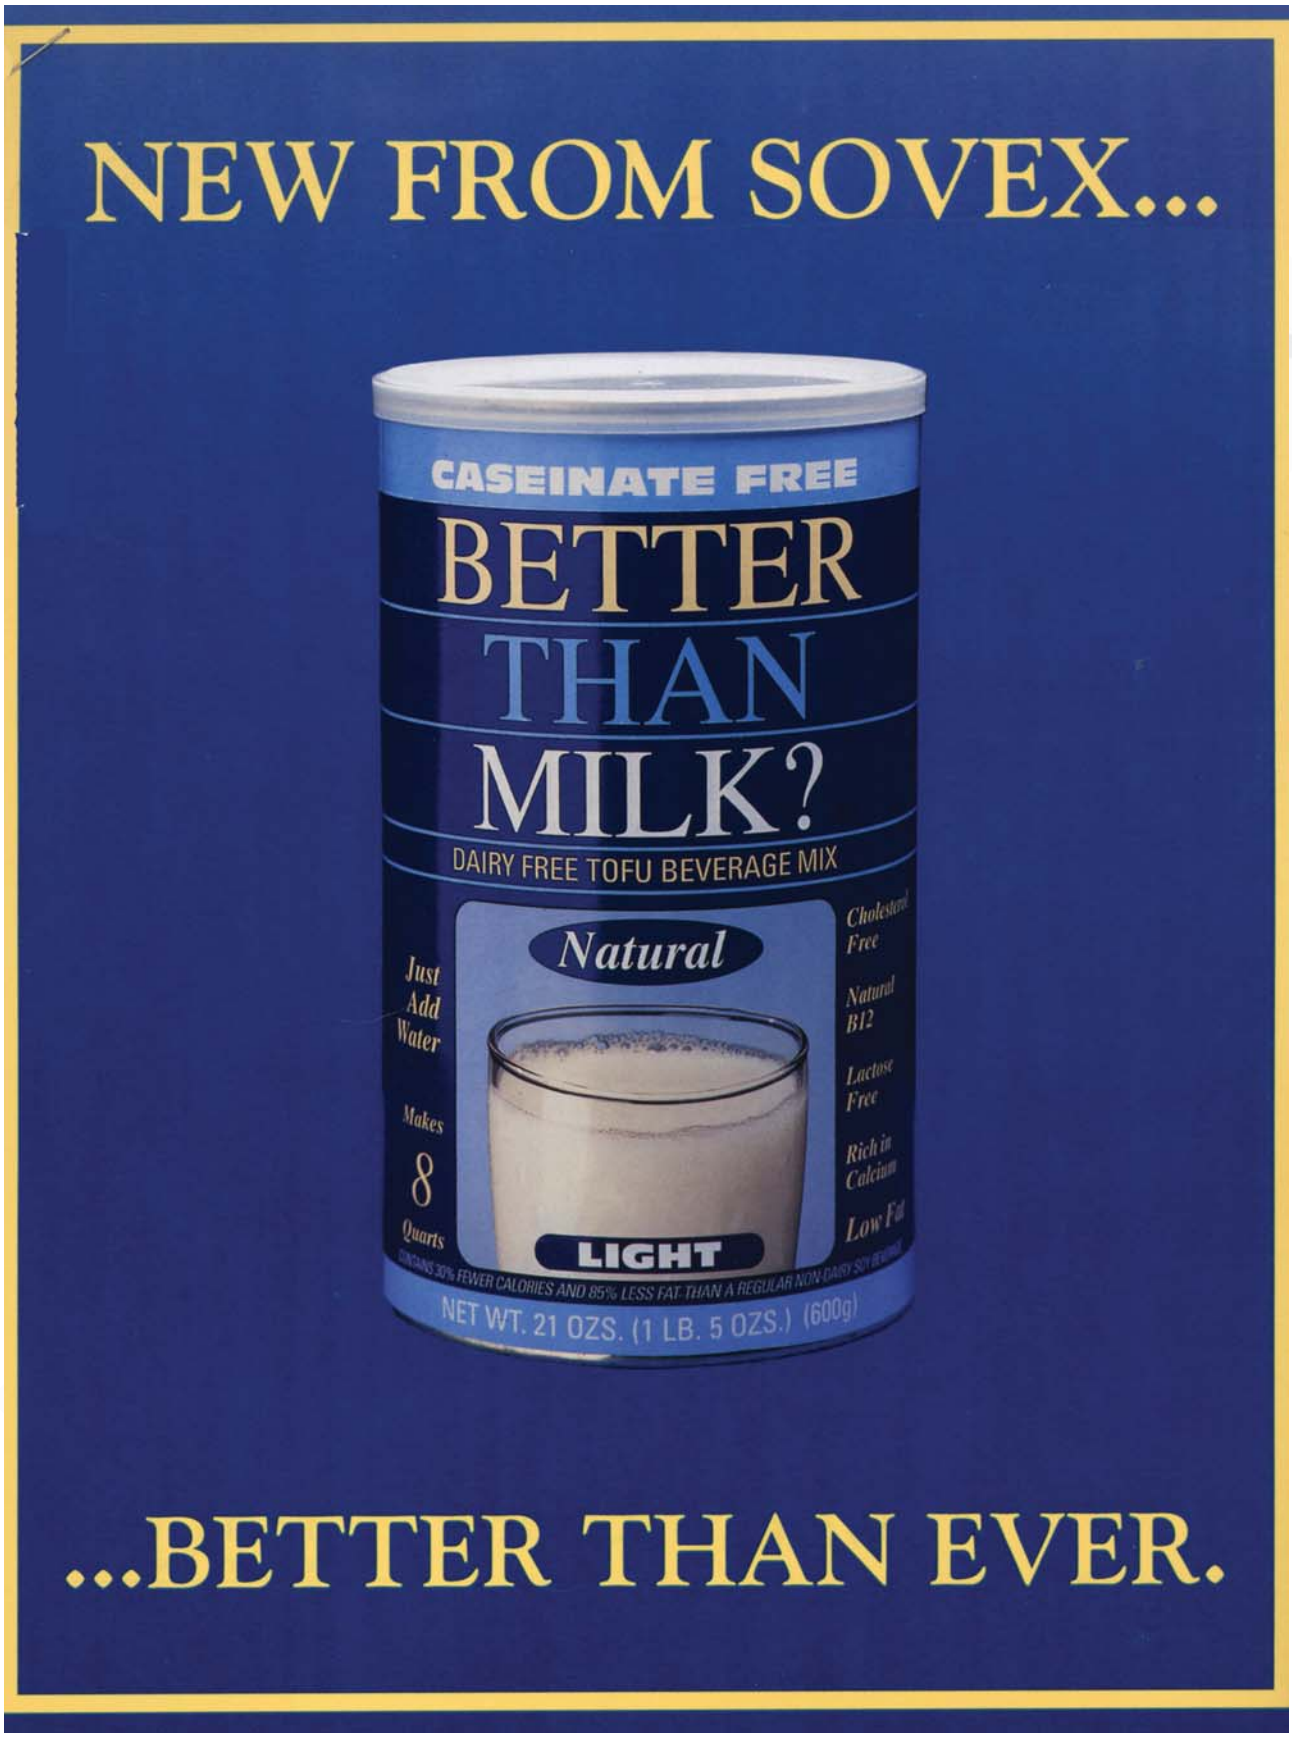
75% of the company's annual turnover relates in some way to soybeans. About 40% of their turnover is sold under the Roberts brand name and the remaining 60% is sold as commercial commodity products. They also do a fair amount of specialist contracting for the food industry, mainly stabilising bran and wheat germ, and milling, sieving, and mixing a variety of food stuffs for human consumption. They also process rice, maize, rye, barley, oats, wheat, and other grains for internal use. They are currently testing buckwheat, lupins, and chickpeas for both internal (i.e., under the Roberts brand) and external use. They propose to use them in conjunction with soy in a variety of applications. They are moving increasingly towards making user-friendly, convenience "health" or healthy foods which meet F.G. Roberts' ideals.

The company has 6 full-time employees and also employs a pool of casuals as required. The mill is highly automated, needing only a single operator. Last year's sales figures are confidential.

As of 1995 Paul Smith is involved in all aspects of the business, including building, plant and equipment selection, design, and development, product development, packaging design, information technology, etc.

V.R. "Ron" Smith is presently the Managing Director and major shareholder of the company; his wife and son Paul own the remaining shares. His main duties now revolve around maintenance and plant installation, with some consultative input on milling, sieving, and general product development. He no longer plays an active role in the day to day running and management of the company.

An excellent 4 by 6 inch black-and-white photo sent by Paul Smith shows F.G. Roberts, dressed in a coat, tie, and hat. Address: Director/General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.



3172. **Product Name:** Better Than Milk? Caseinate Free. Dairy Free Tofu Beverage Mix.
Manufacturer's Name: Sovex Natural Foods, Inc.
Manufacturer's Address: 9104 Apison Pike, P.O. Box 2178, Collegedale, TN 37315. Phone: 615-396-3145.
Date of Introduction: 1995 March.
Wt/Vol., Packaging, Price: 21 oz (1 lb 5 ozs) paperboard carton.
How Stored: Shelf stable.
New Product–Documentation: See next page. Leaflet sent by Patricia Smith from Natural Products Expo West at Anaheim. 1995. March. "New from Sovex... Better than ever." A large photo shows a can of Better Than Milk? on a deep blue background. On the rear are nutrition facts and ingredients (printed too small to read except with a magnifying glass) for seven SKUs. Caseinate Fre Better than Milk? in Natural, Natural Light, Carob, and Chocolate flavors. Low Fat Better than Ice Cream in Vanilla and Strawberry flavors, and Caseinate Free Better Than Milk in a Natural flavor in an aseptic package.

3173. Worthington Foods, Inc. 1995. Annual report 1994. 900 Proprietors Rd., Worthington, OH 43085. 16 p. 28 cm.
• ***Summary:*** Total sales rose to $88.2 million in 1994, up 11.2% from $79.3 million in 1993. Net income (profit) rose to $4.33 million in 1994, up 141% from $1.79 million in 1993. Both 1994 figures were new company records. On 22 Nov. 1994 the Company sold its refrigerated egg assets for $9 million; this helped reduce debt by $10.4 million, made available an ideal plant in Zanesville (Ohio) in which to produce meat alternatives in the future. The company kept its frozen egg products, Scramblers and Better 'n Eggs, which hold, approximately, a 30% market share. "More important than the financial results for 1994, it was a year in which the company was repositioned for improved growth and profitability..."

Meat alternatives is the category in which the company expects to achieve significant growth in the years to come. They developed this category 20 years ago in supermarkets, and in it they have the greatest expertise and technology. During 1994 sales of Morningstar Farms meat alternatives were up 42% in supermarkets and 35% in foodservice operations. In supermarkets Morningstar Farms has maintained over 55% market share. But the company's position as "Number one in meatless" is being challenged. The company's new Morningstar Farms Better 'n Burgers is the first fat-free burger to be introduced nationally. It is selling well and is available in 30% of U.S. supermarkets.

Inside the front cover is the company's very interesting mission statement, which begins: "Worthington Foods, Inc. is solely dedicated to producing and marketing vegetarian and other healthful foods. Worthington Foods will continue to be a leader in providing nutritionally balanced options to

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

meat, egg and dairy products for healthful living, as it has done for more than 50 years." The "Corporate Objectives" are divided into six categories: Shareholders, consumers, the trade, employees, the community, and company policy. Address: Worthington, Ohio. Phone: (614) 885-9511.

3174. *Tofu Times: Emerging Soyfoods Trends* (*Morinaga, Los Angeles*). 1995. Mori-Nu Tofu: Moving into food service. March/April. p. 1-2.
• ***Summary:*** Morinaga is currently preparing a Food Service Manual. Stanford University Dining maintains nine foodservice operations and serves 15,000 students per day. Executive Chef Andre Mallie says: "Students at Stanford are extremely health conscious about what they eat. In addition probably 30-40% of our students are vegetarians and we try to be responsive to their needs and requests... Healthy eating is definitely a continuing trend at the University... For main meals, Stanford students have a choice of as low-calorie dish, a vegetarian entree, a meat choice, or a fish selection. The nutritional information of all entries is posted on the serving line... Tofu is served every day as part of the salad selection, and a hot entree with tofu as the main ingredient is served 2-3 times a week. Tofu entrees are rotated and include tofu casseroles, stuffed tofu ravioli, vegetable and tofu kabobs, tofu moussaka, "eggless" tofu rolls, and marinated and grilled tofu, which is a popular selection.

Chef Mallie recommends Mori-Nu Tofu because of its consistent quality, and the fact that it is very compact and can be stored without taking up valuable refrigerator space–for up to ten months. Ben Chilson, Director of Food Services at Andrews University in Berrien Springs, Michigan prefers Mori-Nu Tofu because he does not have to worry about the product going sour. A Seventh-day Adventist university, Andrews promotes a vegetarian lifestyle and does not serve meat or meat by-products. Tofu entrees are served 2-3 times per week including curry tofu and vegetables, stir fry broccoli with tofu, tofu and nut patties, tofu fritters, and scrambled tofu as a breakfast option.

Mori-Nu Tofu is also on the food service menus at Drake University (Des Moines, Iowa) and the University of Wisconsin.

Talk with Art Mio of Morinaga. 1995. March 10. In America today, tofu is being used in foodservice primarily in universities and colleges, and secondarily in businesses. In both places, it is most widely used either (1) as cubed tofu, placed on the salad bar for use as a salad ingredient, condiment, or topping, or (2) stir fried with vegetables. Stanford University uses, on average, about 30 cases/month of Mori-Nu Tofu. Address: California.

3175. Worthington Foods, Inc. 1995. First quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** "Net sales for the first quarter of 1995 were up 9.3% over the same period in 1994, net income was up 79%, and earnings per share were up 75%. Morningstar Farms Breakfast Links have been reformulated to contain only 2.5 gm of fat per serving. During the second quarter of 1995 Morningstar Farms will introduce two additional "Low-Fat" products: Garden Grain Patties (containing mushrooms, rice, onions, oats, and low-fat cheeses–without any soy ingredients) with only 2.5 gm of total fat and Spicy Black Bean Burgers with only 1 gm of total fat. These two products will be companions to the successful Garden Vege Patties, now available in nearly 60% of U.S. supermarkets. They will appear under the banner "America's Original" Veggie Burgers.

Note: America's earliest known meatless burgers (with the word "Burger" or "Burgers" in the product name) were as follows:

Loma Linda Food Co. 1938. Loma Linda Gluten Burger (with Soy Flour).

Special Foods (Renamed Worthington Foods, Inc. in Dec. 1945). 1945. Choplet-Burger.

Loma Linda Foods. 1949. Vegemeat Burger (or Vegemeatburger).

Loma Linda Foods. 1953. Loma Linda Redi-Burger (Meatless Hamburger).

Loma Linda Foods. 1960. Loma Linda Vegeburger (Canned Meatless Hamburger). Address: Worthington, Ohio. Phone: (614) 885-9511.

3176. **Product Name:** VegiMax: The Ultimate Veggie Burger Sub (Foodservice product).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1995 April.
Ingredients: Vegetables (mushrooms, water chestnuts, onions, carrots, green and red bell peppers, black olives), textured vegetable protein (soy protein concentrate, wheat gluten), egg whites, cooked brown rice, rolled oats, corn oil, calcium caseinate, soy sauce (water, soybeans, salt, wheat). Contains 2% or less of onion powder, corn starch, salt, hydrolyzed corn, soy and wheat protein, sucrose, soy protein isolate, spices, garlic powder, dextrose, jalapeno pepper powder, celery extract.
Wt/Vol., Packaging, Price: 60 x 3.0 oz patties.
How Stored: Frozen.
New Product–Documentation: Worthington Foods. 1996. First quarter financial report. VegiMax is now sold to 3,000 Subway units (restaurants).

Color leaflet with note sent by Worthington Foods. 1996. May 2. This product was introduced in April 1995 by the Morningstar Farms Foodservice Division. It is pre-formed and pre-cooked; just heat and serve on a six inch bun. Only 3 gm fat. No cholesterol. Completely meatless. Excellent Hoagie, too. On the front of the leaflet is a color photo of a

© Copyright Soyinfo Center 2014

VegiMax patty inside a long bun, atop a bed of lettuce, sliced tomatoes, and onion rings. On the back of the leaflet the logo reads: "Morningstar Farms: Number One in Meatless. Providing healthier food alternatives, our only business for over 50 years."

3177. *SoyaScan Notes.* 1995. America's earliest known vegetarian / meatless burgers (Overview). May 3. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** America's earliest known meatless burgers (with the word "Burger" or "Burger" in the product name) were as follows:

Loma Linda Food Co. 1938. Loma Linda Gluten Burger (with Soy Flour).

Special Foods (Renamed Worthington Foods, Inc. in Dec. 1945). 1945. Choplet-Burger.

Loma Linda Foods. 1949. Vegemeat Burger (or Vegemeatburger).

Loma Linda Foods. 1953. Loma Linda Redi-Burger (Meatless Hamburger).

Loma Linda Foods. 1960. Loma Linda Vegeburger (Canned Meatless Hamburger).

3178. Stoneback, Diane. 1995. Veggie burgers pass taste test with few beefs. *Call* (*Allentown, Pennsylvania*). May 3. Address: Food Editor.

3179. Hammons, Raymond O. 1995. Early history of the peanut and peanut butter in the United States (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center. Followed by letter of May 15.
• ***Summary:*** Ray has spent his life studying the origin and early history of the peanut. He retired nearly 11 years ago and hasn't focused much on the peanut since that time. Before his retirement in 1984, he donated his many documents on the subject to the Peanut Reference Library at the University of Georgia Coastal Plain Experiment Station Library at Tifton, Georgia. This is the most comprehensive compilation of reference materials on the peanut in existence; it now owns about 15,000 documents on peanuts. In addition to bulletins, scientific journal articles and papers, etc. it contains about 600 PhD and MS theses and dissertations (many from foreign countries).

The earliest document Ray has seen that mentions the peanut in America is by Thomas Jefferson, in which he describes growing peanuts (he called them "peendars") in his garden [in 1794] before he was president. This information and more about the peanut appears in *Thomas Jefferson's Garden Book* edited by Edwin Morris Betts (1944, American Philosophical Society). The earliest reference seen to Jefferson growing peanuts appears in a very important article titled "Economic importance of peanuts," by Dr. B.B. Higgins (1951, p. 6). Dr. Higgins is no longer living. Note: Jefferson, the third president of the United States, lived 1743-1826, and was president from 1801 to 1809. Jefferson may have introduced the peanut from France.

Ray knows of Samuel Bowen. Concerning the reference to Samuel Bowen introducing 1000 lb. of "ground nuts" in 1774, Ray states that it is important to know where these "ground nuts" came from and if they were, in fact, peanuts. If they came from a English-speaking, British-controlled part of Africa they were probably peanuts, but if not they may have simply been nuts that had been ground and brought in as feed.

For example, John Smith is reported to have searched in the bottom lands of Virginia along the James River for the ground nut, but that was almost certainly a plant of the genus *Apios* because peanuts do not grow in forests or wooded areas, which that area was. Today you can find *Apios* there and it was called "ground nut" in Colonial Virginia.

Recent archaeological finds in coastal Peru by Walter Alva (1988) show the importance of peanut in early Peru.

We do not know when the peanut was introduced to Europe.

During the early 1900s the National Peanut Council published a journal titled *The Peanut Promoter,* which contained many fine articles; it was the precursor of *The Peanut Journal and Nut World.* He has looked through all the issues of this periodical.

Dr. John Harvey Kellogg clearly did pioneering work on peanut butter in America but he was a self-promoter. Colonel Sanders, the founder of Kentucky Fried Chicken, patterned himself after Dr. Kellogg. He wore the same white suits and little goatee; he was a very short man. A book titled *The Original Has His Signature,* about the W.K. Kellogg, by H.B. Powell contains some very interesting material on the origin of peanut butter. It traces the Michigan Supreme Court case where the two Kellogg brothers were trying to decide which one should get credit for peanut butter. Address: 1203 Lake Drive, Tifton, Georgia 31794-3834. Phone: 912-382-3157.

3180. Pratt, Steven. 1995. Copy cows: Soy- and rice-based drinks stand in for milk, but with nutritional consequences. *Chicago Tribune.* May 10. p. 3.
• ***Summary:*** Discusses and gives comments on Rice Dream, Naturally Tofu (Sovex), EdenSoy Extra, and Almond Mylk. Address: Tribune Staff Writer.

3181. Nicholls, Walter. 1995. Foraging: Burgers without the beef. *Washington Post.* May 17.
• ***Summary:*** There are two basic kinds burger alternatives: Those designed to taste like beef and those which are simply a vegetarian patty. True vegetarians often prefer the latter. The author found that alternative burgers are grilled or sautéed in a nonstick skillet with lots of good stuff piled on top. He did a taste test, and rated the many brands into three categories: Exceptional: Boca Burgers (Chef Max's Favorite,

© Copyright Soyinfo Center 2014

Fresh Garlic, Original), Morningstar Farms (Garden Vege Patties, Grillers; [made by Worthington Foods]), Wholesome and Hearty Foods (Gardenburger, GardenMexi).

Acceptable: Amy's (Organic California Veggie Burger), Green Giant (Harvest Burgers), Ken & Roberts (Veggie Burger), Morningstar Farms (Better 'n Burgers), Natural Touch (Garden Grain Pattie), Yves Veggie Cuisine (Burger Burgers).

Forgettable: Lightlife (American Grill, Light Burgers), Mudpie (Veggie Burgers), Soy Boy (Courage Burger, and Veggie Sizzler), Woodstock Whole Earth Foods (The Better Burger), Yves Veggie Cuisine (Vegetable Patties). Photos show packages of the three Exceptional brands. Address: Washington, DC.

3182. Lazzaro, Don. 1995. New developments with soymilk in Australia (Interview). *SoyaScan Notes.* May 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Pureharvest has, for some time, been buying its soymilk from Australian Natural Foods (ANF), but recently the quality of this soymilk has been very inconsistent, and often unacceptable. Berryvale Orchards is Australia's largest manufacturer of fruit juices–a huge company. In about 1988-89, after Sanitarium Foods launched So Good, a small distributor in Victoria approached Berryvale and offered to sell them the technology and know how to make soymilk from whole soybeans. Unfortunately this little fellow didn't know how to make soymilk, so Berryvale's initial products were of very poor quality. Recently they have installed a rather low-cost soymilk plant and Don has switched to using them as his source of soymilk. But the quality is still not as good as he would like. Address: Pureharvest, 15 Ardena Ct., East Bentleigh, Victoria 3166 Melbourne, Australia.

3183. **Product Name:** Carnation Follow-Up Soy: Formula for babies 12 months & older eating cereal & other baby foods–Iron fortified. Powder.
Manufacturer's Name: Carnation Nutritional Products Div., Nestlé Food Company.
Manufacturer's Address: Made in Au Claire, Wisconsin. Corporate headquarters: Glendale, CA 91203. Phone: 1-800-543-3112.
Date of Introduction: 1995 May.
Ingredients: Maltodextrin (potato), soy oil, soy protein isolate, sucrose, minerals (calcium phosphate, potassium chloride, potassium citrate, calcium carbonate, calcium citrate, magnesium phosphate, sodium chloride, magnesium chloride, ferrous sulfate, zinc sulfate, copper sulfate, potassium iodide, sodium selenite), soy lecithin, vitamins (ascorbic acid, choline bitartrate, inositol, alpha-tocopheryl acetate, niacinamide, calcium pantothenate, thiamine hydrochloride, vitamin A palmitate, riboflavin, pyridoxine hydrochloride, folic acid, biotin, phytonadione, vitamin D-3, vitamin B-12), L-methionine, taurine, L-carnitine.
Wt/Vol., Packaging, Price: 14 oz (396 gm) steel can. Retails for $6.99 (10/95, Safeway supermarket, Lafayette, California).
How Stored: Shelf stable.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1995. Oct. 24. Can is 4.75 inches high and 4 inches in diameter. Paper label. Red, blue, yellow, and green on white. Illustration of three wooden ducks on front panel. "Carnation Follow-Up is not intended to take the place of breast feeding. It is intended to replace traditional starter formula when your baby is eating cereal and other baby foods. Caution: If you suspect your baby is prone to allergy, consult your pediatrician." "See inside label for Spanish instructions."

Talk with Brenda at Carnation's toll-free number. In May 1995 Carnation purchased Mt. Vernon Foods (Mt. Vernon, Ohio), which made i-Soyalac and Soyalac. The product names were changed to Alsoy and Follup-Soy in May 1995, but both of these products are made from isolated soy protein; whole soybeans are not used as they were in Soyalac. These are Carnation's first two soy-based infant formulas. Carnation Good Start was on the market in 1988, but it was not soy-based. Follow-Up Soy comes only in powder form in a 14 ounce can. Some amount of these products are made at Carnation's main plant in Au Claire, Wisconsin, and the remainder is made at other plants in the USA whose addresses are confidential.

3184. **Product Name:** Carnation Alsoy: Soy formula for milk-free feeding during baby's first year. Iron fortified. Concentrate liquid–Add water.
Manufacturer's Name: Carnation Nutritional Products Div., Nestlé Food Company.
Manufacturer's Address: Made in Au Claire, Wisconsin. Corporate headquarters: Glendale, CA 91203. Phone: 1-800-543-3112.
Date of Introduction: 1995 May.
Ingredients: 14 oz concentrate: Water, sucrose, soy oil, soy protein isolate, tapioca dextrin, minerals (calcium phosphate, potassium citrate, calcium citrate, potassium chloride, calcium carbonate, magnesium phosphate, sodium chloride, magnesium chloride, ferrous sulfate, zinc sulfate, copper sulfate, potassium iodide, sodium selenite), soy lecithin, vitamins (ascorbic acid, choline bitartrate, inositol, alpha-tocopheryl acetate, niacinamide, calcium pantothenate, thiamine hydrochloride, vitamin A palmitate, riboflavin, pyridoxine hydrochloride, folic acid, biotin, phytonadione, vitamin D-3, vitamin B-12), L-methionine, taurine, L-carnitine, calcium carrageenan.
Wt/Vol., Packaging, Price: 14 fl oz (384 ml) steel can. Retails for $1.99 (10/95, Safeway supermarket, Lafayette, California). 32 oz can ready to feed, and a 14 oz can of powder.
How Stored: Shelf stable; refrigerate after opening.

© Copyright Soyinfo Center 2014

New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1995. Oct. 24. Can is 4 inches high and 3 inches in diameter. Paper label. Red, blue, yellow, and green on white fading into light blue. Illustration of three wooden rabbits on front panel. "Use as instructed by your physician. Breast milk is the preferred feeding for infants. Before deciding to use an infant formula, consult your doctor for advice. Caution: If you suspect your baby is prone to allergy, consult your pediatrician." "See inside label for Spanish instructions."

Talk with Brenda at Carnation's toll-free number. In May 1995 Carnation purchased Mt. Vernon Foods (Mt. Vernon, Ohio), which made i-Soyalac and Soyalac. The product names were changed to Alsoy and Follup-Soy in May 1995. These are Carnation's first two soy-based infant formulas. Alsoy is sold in a 13 fl oz concentrate can, a 32 oz can ready to feed, and a 14 oz can of powder. Some amount of these products are made at Carnation's main plant in Au Claire, Wisconsin, and the remainder is made at other plants in the USA whose addresses are confidential.

Call to Nutricia–Loma Linda Foods in Mt. Vernon, Ohio. 1995. Oct. 30. A message at this number says: "Hello. You have reached the Mt. Vernon Foods Facility, which has recently been closed. The Alsoy product line is being produced at another Nestle facility. If you are a consumer and have questions regarding the product, please dial 1-800-932-5525. For all other enquiries, please dial #201 and leave a message."

Talk with David Polakowski or Mt. Vernon Chamber of Commerce. 1995. Oct. 30. The former Loma Linda soymilk plant is now standing empty. It is owned by Nestle, and the Area Development Council (ADC) is helping Nestle look for a buyer. Nestle purchased the property in Sept. 1994 from Mt. Vernon Foods. They made soymilk at the plant until July 1995, when they closed it. For more details call Tom Heine (president of the ADC and Chamber of Commerce) at this number of the Knox County Recorder (of deeds, 614-393-6755).

Talk with Phil Carlisle, manager of Loma Linda Market. 1995. Oct. 30. The former Loma Linda building is now standing empty, but a new company will be moving in soon. Nutricia bought the Loma Linda name and was using it for the infant formula. They sold the food manufacturing end of the business to Worthington Foods. Recently Worthington re-acquired the name Loma Linda Foods, and they are making old Loma Linda products in Worthington, Ohio, under the name Loma Linda Foods. For a good history and details see the 1995 interview with David Geriguis of La Sierra University.

3185. Packaged Facts. 1995. The meat and dairy alternatives market. New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.

• ***Summary:*** In 1994 retail sales of these products reached an all-time high of $286 million, and these sales are projected to top $660 million in 1999. This very interesting report can be ordered from Packaged Facts, 625 Avenue of the Americas, New York, NY 10011. Phone: 212-627-3228. Price: $2,150. The authors were Sarah and Peter Starr, though their names do not appear in the report. The product director was David Lumis.

Contents: Part I: The products. Scope of the report (Vegetarian products sold as meat or dairy alternatives, products not covered), history of the industry (an emerging market, part of the vegetarian movement, soybeans–an ancient food of Asia, soybeans arrive in the new world in the 18th century, Kellogg family starts health foods industry, makes first meat analogs, Seventh-day Adventists and others produce tofu and meat alternatives in the 1920s, Henry Ford early proponent of soybeans, meat analogs commercially developed in the United States in the 1940s, non-dairy beverages, growth of "Americanized" meat and dairy analogs booming), product definition (foods used to replace meat or dairy products, description of ingredients–tofu, tempeh, soymilk, okara, soy protein concentrates and isolates, textured vegetable protein, wheat gluten and seitan), product categories (three main categories of meat and dairy alternative products, meat alternatives, dairy alternatives, prepared meals), government regulations (the FDA and FTC, NLEA labeling considerations {went into effect in May 1994, making the USA the world's first country to have mandatory nutrition labeling}, soy protein allowed in meat products without special labeling, bovine growth hormone), industry associations (the Soyfoods Association of America, the American Soybean Association, the Vegetarian Awareness Network).

Part II: The Market. Introduction (Retail sales of meat and dairy alternative products by category–1989-94–graph, retail sales of dairy alternatives products by segment–1989-94–graph), market size and growth (market is difficult to monitor, 1994 retail sales estimated at $286 million, dairy alternatives surpass $142 million, meat alternatives soar to $132 million, prepared meals grow steadily to over $12 million, estimated retail sales of meat and dairy alternative products by category–1989-1994–table, growth in milk substitutes segment leveling off but still in double digits, cheese alternatives segment also experiences slight slow-down in 1994, non-dairy desserts–a slow-growth segment, estimated retail sales of dairy alternative products by segment–1989-1994–table), factors in market growth–overall market (maturing population and interest in nutrition, new dietary guidelines, medical community accepts plant-based diet, studies show vegetarian diet equals a healthier–longer life, soy might help to prevent heart disease and cancer, consumers now approve of vegetarian diets, increased demand for vegetarian foods, youth adopts meatless meals, exposure through foodservice, mass market begins to support meat and dairy alternatives,

© Copyright Soyinfo Center 2014

products in wider distribution, innovative new products, improved technology equals better taste, increased funding for soyfoods through foreign capital, pricing continues to limit market, image–taste and texture still a problem), factors in market growth–meat alternatives (concern about health hazards of meat, fat calories targeted by labeling law, an alternative to chicken and fish, ecological and social considerations will propel meatless meals, meatless meals difficult to handle by foodservice), factors in market growth–dairy alternatives (milk substitutes enter dairy case, awareness of lactose intolerance on the rise, taste profile limits acceptance, cheese alternatives–are they healthier?, projected retail sales of meat and dairy alternative products by category–1994-1999–graph {p. 34}, projected retail sales of dairy alternative products by segment–1994-1999–graph {p. 35}), projected market growth (overall market to reach $662 million in 1999, meat alternatives and prepared meals to lead growth, projected retail sales of meat and dairy alternative products by category–1994-1999–table, growth of milk substitutes and other dairy alternatives expected to slow somewhat by 1999, projected retail sales of dairy alternative products by segment–1994-1999–table), market composition (meat alternatives will outsell dairy alternatives, share of sales by product category–meat and dairy alternatives–graph, soy-based ingredients most frequently used in meat-like products, protein ingredients used in meat-like products by number of products made with ingredient–1990-1992–table, bulk of dairy alternative sales from milk substitutes, share of sales by product segment–1989 vs. 1994–graph, sales by retail outlet, share of sales by retail outlet–meat and dairy alternatives–1994–graph).

Part III: The marketers. The marketers (About 30 significant marketers–most small, major companies move into the market, meat alternatives–other mass-market players, meat alternatives–natural foods players, the leaders in milk substitutes, cheese alternative market leaders, the leaders in non-dairy desserts, prepared meals market leaders, selected marketers and brands of meat and dairy alternative products–chart), market and brand shares (mass-market leader Worthington Foods challenged by ADM/Pillsbury Green Giant Harvest Burger, wholesome and hearty growing fast, Boca Burger boogies by the Bystanders, marketer and brand shares of meat alternative products sold through supermarkets–1993 vs. 1994–table, natural foods sales of meat alternatives more fragmented, Worthington is leader in natural foods stores, White Wave and Lightlife hold second and third place, estimated marketer and brand shares of meat alternative products sold through natural foods stores–1994–table, many small regional players capture local markets, Eden Foods leads in milk substitutes, estimated marketer and brand shares of milk substitute products mass-market and natural foods stores–1994–table, Imagine Foods' Rice Dream is leading rice beverage, other vegetable beverages, Tree of Life's Soya Kaas holds leading share of cheese alternatives market, estimated marketer and brand shares of cheese alternative products sold through natural foods stores–1994–table, Tofutti holds top market share in frozen desserts, Fairmont Foods establishes lead in supermarkets, marketer and brand shares of prepared meals sold through supermarkets–1994–table, natural foods prepared meals–many brands and no one leader), competitive situation–overall market (marketers compete primarily through new product introductions, growth through mergers and acquisitions). Continued.

3186. Packaged Facts. 1995. The meat and dairy alternatives market (Continued–Document part II). New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.
• ***Summary:*** Contents: Continued from p. vi. Part III: The Marketers. Competitive situation–meat alternatives (Worthington pioneers Seventh-day Adventist vegetarian market, Miles Laboratories acquires Worthington–places Morningstar Farms in mass market, tofu drives natural foods market, soy frank marketers exploit tofu opportunities, tempeh–another meat alternative ingredient gains interest, wheat-based alternative seitan expands presence, Worthington places tofu patties in natural foods stores–changes hands again, Wholesome and Hearty develops foodservice distribution, meatless burger market heats up, patty competition fierce in natural foods arena, ADM/Pillsbury alliance brings soy burgers to mass market, Worthington fights back, category differentiates in the early 1990s, soy attacked by soy-free burger companies, meat alternative marketers cut the fat, low-fat sausages and franks, tightly targeted vegetarian fun foods and snacks, mass-market companies introduce ground meat analogs, natural product companies follow suit, Wholesome and Hearty seeks retail growth, others seek lucrative foodservice market), competitive situation–milk substitutes (early market limited to ethnic community, Edensoy a big hit–Vitasoy responds, new lines introduced, competition–domestic manufacturing and larger containers bring down soy beverage prices, flavors and packaging distinguish early products, Westbrae introduces first low-fat soymilk, fortification has become key selling point, Eden's fortified product suits strict vegetarians, new package sizes expand market, re-closable–easy to pour, rice beverages–line extensions grab shelf space, Wholesome and Hearty's almond beverage, 100% organic products, a fresh–new market–some products shift to dairy case, mass-market interest), competitive situation–cheese alternatives (Seventh-day Adventists start category, first natural foods cheese alternative, Soyarella, not dairy-free, handful of marketers compete on price in natural foods arena {Soya Kaas, TofuRella by Brightsong / Sharon's Finest, Cemac Foods, Galaxy Foods, White Wave}, new products parallel dairy-based mass market, a move toward lower fat and fat-free, seeking the most melt-able cheese, Sharon's finest finds innovative ingredients, marketers target

© Copyright Soyinfo Center 2014

vegan market), competitive situation–non-dairy desserts (Tofutti dominates, dairy-free puddings–one major player {Imagine Foods sells a rice-based non-dairy pudding}, non-dairy yogurt has yet to catch on–but White Wave's Dairyless, a non-dairy soy yogurt, seems to be the only major natural foods brand in this category), competitive situation–prepared meals (flavored tofu and seitan expanded into meals, Legume is early innovator, cheese alternatives in prepared meals, other companies dive into prepared meals, action has been in natural foods, supermarket products have not succeeded), competitive profiles (The Archer Daniels Midland Co.–Grand Metropolitan PLC–Pillsbury division partnership, Amy's Kitchen Inc., A&A Amazing Foods Inc., Boca Burger Co.–Sun Foods, Eden Foods Inc., Fairmont Foods of Minnesota Inc., Fantastic Foods Inc., The Hain Food Group Inc., Imagine Foods Inc., Lightlife Foods Inc., Sharon's Finest, Tofutti Brands Inc., Vestro Natural Foods Inc., Vitasoy–USA Inc., White Wave Inc., Wholesome and Hearty Foods Inc., Worthington Foods Inc., Yves Veggie Cuisine Inc.), marketing trends (updated packaging, burger market segmenting into natural and mass market, Worthington–a master at working both markets, hamburger look-alikes crossing back into natural foods, veggie patties crossing into mass market, nostalgia–creating brand loyalty, marketers expanding into other categories, moving into the frozen breakfast section, retail displays, pushing into new distribution channels), new product trends (new–improved packaging, light and healthy, product names emphasize healthy, fat-reversal–mass-market burger-substitutes gaining fat, ground meat alternatives, new flavors and varieties–many gourmet and upscale, ethnic–especially Mexican and Southwestern, convenience, technology produces better mimics, mixing soy with grains and other ingredients, mainstreaming health foods, natural ingredients preferred–organic even better, selected new product introductions–meat and dairy alternatives–1994-March 1995–chart), advertising expenditures (most advertising not measured, specialty magazines are preferred medium, radio is another alternative, little consumer advertising, Worthington outspends competition, ADM-Pillsbury spends millions to launch Harvest Burger in 1994, Eden Foods targets mass market, Fantastic Foods' first major spending), advertising positioning (good health is overlying theme, and fat is prime concern, vegetables are a solution to a bad diet, milk substitutes advertised to lactose-intolerant market, highlighting a sense of the familiar, foods children love, traditional burger images used to woo mass market, vegetarian appeal used for meatless patties, organic is important feature in natural foods, examples of consumer advertising), consumer advertising (consumer promotions not heavily used, money-off coupons from several companies, new lines offer more generous rebates, recipes and books educate consumers, in-store promotions–the White Wave Center, marketers join forces in advertorial, sponsoring sports events–a healthy fit, 25 years of earth day, non-profit tie-ins, Turtle Island's recycling program, other types of promotions, examples of consumer promotions), trade advertising and promotions (three key trade publications, trade ads also used as consumer ads, trade ads scheduled to run in convention issues, trade ads announce growing business, editorial promotions, reaching retailers, example of trade ads). Continued.

3187. Packaged Facts. 1995. Retail sales of meat alternatives: 1989-1994 (in million dollars) (Document part). In: Packaged Facts. 1995. The Meat and Dairy Alternatives Market. New York, NY: Packaged Facts. 162 + 42 + 6 p. See p. 17, 19, 51-52. May. 28 cm.

• ***Summary:*** A graph (p. 17) shows that sales of meat alternatives (in million dollars) rose from $69.8 in 1989 to $85.7 in 1991 to $115.5 in 1993 and $131.6 in 1994. The average annual sales growth for this period was 13.6% In the past two years, however, sales of meat alternatives have increased by 15.2 and 18.0%.

Concerning the accuracy of these figures, page 19 notes that sales in these markets are difficult to quantify because a large share of retail dollar volume moves through natural foods stores, where sales are mostly untracked, and because various information sources define meat and dairy alternatives products differently. Therefore these "estimates are based on information provided by Soyatech, Inc., the Soyfoods Center, Information Resources, Inc., the natural foods trade, and various manufacturers."

A table (p. 51) shows the market shares of major manufacturers of meat alternatives sold through supermarkets (NOT including natural food stores) in 1993 and 1994. The 1994 market shares were as follows: Worthington Foods 64.5% (Morningstar Farms brand 63.8% and Natural Touch brand 0.7%). ADM/Pillsbury 21.8% (up from only 8.0% in 1993). Wholesome & Hearty Foods (Garden products) 7.9%. Yves Veggie Cuisine 2.1%. Sun Foods (Boca Burger) 1.4%. Other 2.3%. Source: Information Resources, Inc.; Packaged Facts.

A second table (p. 52) shows estimated market shares of major manufacturers of meat alternatives sold through natural food stores in 1994: Worthington Foods 30.4% (Natural Touch, Loma Linda, Worthington brands). White Wave 9.8%. Lightlife Foods 6.5%. Yves Veggie Cuisine 5.8%. Wholesome & Hearty Foods (Garden products) 4.8%. Fantastic Foods (Nature's Burger) 3.9%. Sun Foods (Boca Burger) 3.0%. Other 35.8%. Source: Packaged Facts.

Wholesome & Hearty Foods (Portland, Oregon): In March 1985 this company introduced the Gardenburger, a non-soy vegetarian patty into natural foods restaurants and college cafeterias. Foodservice remains Wholesome & Hearty's core business and accounts for about 70% of the company's sales. Today, over 22,000 foodservice outlets offer the company's various meatless patties (p. 59). In 1992

© Copyright Soyinfo Center 2014

Wholesome & Hearty began an aggressive drive to introduce its Garden products line into retail stores–both natural foods and mass market.

3188. Lazzaro, Don. 1995. History and current status of soymilk in Australia (Interview). *SoyaScan Notes.* June 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ceres Natural Foods is their holding company and Pureharvest is their trading name. They made this name change in 1982 since they found the word Ceres was difficult for many people to pronounce. The first soymilk they imported to Australia was made by Saniku in Japan and imported from Mitoku.

Don is interested in macrobiotics. In early 1979 he took over the running of a small macrobiotic and natural foods retail store in Melbourne named Ceres Wholefoods. The only way he could make it viable was to try to buy at better prices, so in April 1979 he started a wholesale and import company, which he named Ceres Natural Foods, also in Melbourne. There was a company named Real Foods (run by Michael Pels) in New South Wales, Australia, that was importing, through Mitoku in Japan, tamari, soy sauce, miso, tofu, etc. Real Foods was the first company in Australia to import foods from Mitoku in Japan.

Don knew Michael from when they both used to live in Sydney in about 1978. Michael purchased some rice cake machines (the same kind used by Chico-san) through Mitoku from Airin Co. These machines were very poorly engineered and constructed. Michael has already sold 168 of these machines to Quaker.

When Don took over the Ceres Wholefoods retail store in 1979, he approached Michael and asked to be the distributor in Victoria of the food products Michael was importing from Japan through Mitoku. Michael said okay, and Don began distributing. Don asked Michael to import some soymilk from Mitoku, which he did in mid-1980. The stick-on label over the Japanese label said Ceres Natural, in Choc-Malt and Natural flavors. But the first soymilk in Australia was imported from Japan in about 1977-78, through Muso by 3-4 health food stores named Russel's; it was made by Marusan in a stand-up plastic pouch. Not much of it was sold. In about 1980-81, Michael decided to get out of the whole import business in order to focus on making rice cakes. So Mitoku Mr. Kazama and Chris Dawson asked Don to become their importer in Australia. Don also ran a 3rd company, a center that provided information and advice on macrobiotics.

Jim Wilson, who was running Spiral Foods in Australia, had been importing from Mitoku. He convinced Mitoku not to sell to Don, his competitor; Mitoku agreed. Mitoku then approached Saniku, and in about 1981 Don began importing soy milk made by Saniku through Mitoku. Don sold it under the same label he had used before. The Muso started to import some soymilk packaged in Tetra Brik cartons through Spiral Foods. Don got the same product from Kibun, and on it began to use the name Pureharvest.

In short: Four companies pioneered in importing soymilk to Australia: Real Foods, Russel's, Spiral Foods, and Ceres Natural Foods. There was also a little relatively beany Chinese soymilk sold in the ethnic Chinese market. Ceres, as a result of its Tetra Brik package, managed to get fairly good distribution into the grocery / supermarket trade, starting in late 1983 or early 1984. By this time Ceres was by far the biggest seller of soymilk in Australia. They were importing five 20-foot containers per month of the Kibun soymilk product. Ceres was actively promoting this soymilk, doing trade shows, etc.

In 1986 Ceres was approached by a small soymilk maker named Australian Natural Foods (ANF) in Sydney; basically they had old machinery and were in trouble. They approached Don asking if they could make a soymilk for him. They worked out an exclusive deal and formula, and in Nov. 1986 Ceres launched this as Aussie Soy in its first 1 liter package, in Tetra Brik. Sales shot up. It was trucked in a dairy tanker to Bon Lait in Victoria (almost 1,000 miles away) where it was packaged in a dairy that had a Tetra Brick packaging machine. In about 1990-91 ANF first got its own Tetra Brik packaging machine. That same year ANF launched its own soymilk product, named So Natural, to compete with Sanitarium's So Good. It is made from whole soybeans, and is very similar to the Aussie Soy product they have long made for Don.

As early as 1980 Sanitarium Foods was importing Soyalac in tins / cans. They sold it mostly to Seventh-day Adventists through their own retail stores. Then in April 1987 Sanitarium Foods launched their own So Good soymilk (made from a blend of soy protein isolates, made and packaged by dairy companies) in Australia. They went into it in a big way, with a national campaign. It was the best thing that ever happened to Don and Ceres, because this campaign grew the market dramatically. By April 1987 Ceres was selling 10,000 cartons / month of their Aussie Soy, not including their Japan imports. One year later the figure had skyrocketed to 60,000 cartons / month, increasing to 152,000 on year after that.

Nevertheless, according to the *Australian Grocery Industry Marketing Guide* (1995), Sanitarium has 71% of the dairylike (unflavored) Australian soymilk market, followed by Vitasoy at 7% (they launched in about 1991, and have done a very aggressive marketing campaign), then So Natural (made by ANF) at 5%, Sun Gold at 5%, and Aussie Soy at 4-5%. Of the total Australian soymilk market, flavored soymilks account for only about 5% of the total; the remaining 95% is dairylike; its a milk alternatives market. Each of the three major supermarket chains in Australia (Woolworth's Safeway, Franklin's, and Cole's) has its own soymilk brand. Franklin's has an isolate soymilk made by ANF, starting about a year ago. Sun Gold, made by

© Copyright Soyinfo Center 2014

Associated Dairies of New South Wales, is almost identical to So Good, made by the dairy company that used to mix Sanitarium's product. In about 1990 Sanitarium set up their own soymilk mixing and packaging factory.

Today the soymilk retail market in Australia is $45 million, with a population of only 17 million people. This is huge on a per capita basis. This market has three main segments: (1) Middle class, educated, with some allergies–70%. (2) Age 50 and older, concerned with cholesterol–20%. (3) Natural foods and vegetarian–10%.

In late 1993 and early 1994 Don approached Berrivale Orchard Ltd. (a cooperative of fruit growers, headquarters in Berri, South Australia) to see if they would be interested in making a soymilk product for Ceres / Pureharvest–because Don's relationship with ANF had become intolerable.

In 1979, to get tofu to sell at his retail store, Don used to go to Chinatown in Melbourne twice a week. He bought it from a little Chinese company (whose name he does not remember) located opposite Victoria Market. He would take a couple of buckets and carry it home in bulk, under water. Address: Pureharvest, 15 Ardena Ct., East Bentleigh, Victoria 3166 Melbourne, Australia.

3189. Rosch, Leah. 1995. Meatless burgers and hot dogs: Are they better for you? *Glamour.* June. p. 38.
• ***Summary:*** Four people from *Glamour* magazine taste tested nearly two dozen nationally available veggie burgers and hot dogs, comparing them with widely available hamburgers and lower-fat franks. Most faux burgers and dogs are lower in calories and fat than their meaty counterparts. They also contain no dairy, eggs, or animal by-products. "Their chief ingredient is soy protein. Soy burgers provide about half to three quarters of the protein in a comparable serving of cooked ground beef, but they have fewer calories, less saturated fat and a fair amount of fiber. Compared with the real thing, tofu dogs have twice the protein and less fat. They don't contain nitrites (a preservative used in traditional franks that has been linked to cancer), but they often contain as much sodium as regular hot dogs–or even more."

All tasters enhanced the flavor with their favorite condiments. The three veggie burgers that were liked best were: (1) Boca Burger–Hint of Fresh Garlic (97 calories, 1 gram of fat per patty); (2) Boca Burger–Chef Max's Favorite (110 calories, 2 gm of fat); (3) Green Giant Harvest Burgers (140 calories, 4 gm of fat). The top hot dog: Morningstar Farms Meatless Deli Franks (110 calories, 7 gm of fat each) [made by Worthington Foods].

3190. Webster, Donovan. 1995. Green days: How I became a vegetarian for one trying month and changed my life and health forever. *Men's Health.* June. p. 116-20.
• ***Summary:*** The author struggled through a vegetarian diet for one month, losing 9 pounds and the roll of fat around his belly. He ate quite a few meat alternatives. When it was over he felt like he was "on the horns of a dilemma. Vegetarianism had, obviously, been good for me–and it hadn't been that difficult. Yet I also knew that, long term, the carnivorous pleasures of meat-based life would drag me back into the darkness of their cave. So I struck myself a bargain. For two months out of every year, one in the spring and one in the fall, I would be a vegetarian. The rest of the year I'd eat meat when I wanted to, but I'd still endeavor not to do it all the time."

A sidebar by Greg Gutfeld titled "The Meatless Market" begins: "Time was, a vegetarian had to make do with sprouts, tofu, and voting for McGovern. But new to the supermarket shelves are numerous meatless items mimicking our favorite animal-derived pleasures–even things like hot dogs, hamburgers, bacon and deli meat." The following products were tasted and are evaluated as "Hey, not bad": Worthington Chik Stiks, Worthington Stripples, Garden Gourmet Vege-Nuggets, Boca Burger (the best liked), Worthington Stakelets, Lightlife Fat-Free Meatless Smart Dogs, Garden Mexi Patties.

The rest were "No, thanks, we'll pass": Worthington Meatless Salami, Natural Touch Lentil Rice Loaf, Yves Veggie Tofu Wieners, Yves Veggie Pepperoni, Lightlife Italian Lean Links, Lightlife Organic Three Grain Tempeh, Bearitos Vegetarian Chili.

3191. Chajuss, Daniel. 1995. The meat alternatives industry and market in Israel (Interview). *SoyaScan Notes.* July 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The three major manufacturers of meat alternatives in Israel are Tivall (Tivol), Soglowek (also spelled Zoglabeck or Zoglovek or Zoglowek), and Shamir Food Industries Ltd. Daniel estimates that Tivall has about 50% of the Israeli (non-export) market, followed by Soglowek (35%), and Shamir (15%). Shamir's products are being sold under the label of Dreizin Food Industries Ltd. About 500 tons/month of products made by these three companies are being sold now in Israel–a huge amount. Most (but not all) of these products contain soy. Tivall has been making these products the longest and Shamir is the most recent entrant into the market. Why do Israeli consumers buy these products? Many buyers do not follow a kosher diet. They like these as convenience products, as natural foods (which they aren't really), and as vegetarian products. Daniel would guess that about 5% of Israelis are vegetarians. There are some villages of American Seventh-day Adventists in Israel near the Sea of Galilee that are completely vegetarian. Vegetarians automatically keep kosher.

Daniel believes that Tivall can trace its origins to the work of two men: Dr. Michael (Micha) Shemer, who earned his PhD at the University of Illinois at Urbana-Champaign in 1973, and Saul Katzen, who was the first person to make meat alternatives from extruded soy flour in patty form.

© Copyright Soyinfo Center 2014

Saul's main problem was that his products were made from soy flour, which led to problems of taste (the main problem), antigenicity, and some intestinal gas. Saul bought his soy flour (the fines from non-toasted white flakes sifted out prior to alcoholic extraction) from Daniel's company, Hayes Ashdod Ltd. Saul had extrusion equipment (Wenger X-25 and X-200), so Daniel urged Saul to buy soy protein concentrates (made by Daniel's company) instead of soy flour, and run the concentrates through his own extruder. But Saul felt that soy flour was less wasteful and less expensive. Daniel believes that the use of soy flour led Saul's company into bankruptcy. Daniel was very sad about this bankruptcy, and for a long time before it happened, Daniel gave Saul a lot of soy flour free of charge. After Michael Shemer left the University of Illinois, he went to work for Miles Laboratories, which had purchased Worthington Foods. Then he returned to Israel and worked for Miles on a citric acid project. When Michael was fired by Miles in the late 1970s, he joined an Israeli company name Pedco, which made many kinds of food products. Michael taught Pedco how to make meat analogs. Tivall, a company which is located on a kibbutz in northern Israel, bought Pedco in 1984; Tivall was established and incorporated for the sole purpose of purchasing Pedco and its activities; Tivall was not engaged in any activity and did not operate prior to its purchase of Pedco. Tivall had plenty of start-up capital and the now has a lot of money, most of which they have earned making meat alternatives. A daughter company of theirs used to make tsurumi-like products, but now they are separated.

Dr. Shemer was granted several Israeli and international patents on his process which uses reducing agents (or ss-cleaving agents) to soften gluten. Daniel believes that Tivall is no longer using the Shemer patents; rather they are using a 1956 Hartman/Worthington patent–which is now in the public domain. Thus Shamir can now also use that patent.

To make meat alternatives, Tivall now starts with wheat gluten and adds a reducing agent (such as sodium sulfite) to make the gluten soft. Or ascorbic acid can be used; its low pH softens the gluten. A 1956 patent issued to Warren Hartman and assigned to Worthington Foods describes how to soften gluten by adding soy flour or soy protein. Shamir wants to add soy protein concentrate (SPC) to wheat gluten to soften it. Tivall maintains that SPC is a reducing agent–but Daniel is certain that soy flour is a reducing agent, but regular SPC is not; its NSI [nitrogen solubility index] is 3-6. Dr. Shemer has testified that Tivall is the world's largest manufacturer of meat alternatives and that it was the world's first company to make meat alternatives using wheat gluten and soy protein, but it is well known that Worthington Foods made such products long before Tivall. To help resolve its dispute with Tivall, Shamir hired Dr. Noam, who is a chemist and a patent lawyer. Daniel assisted Dr. Noam–which did not please the people at Tivall.

Shamir is located in the Barkan Industrial Zone (P.O. Box 5), M.P. Ephraim 44820, Israel (Phone: +972-3-936-4159. Fax: +972-3-936-4160); this is in central Israel, far from Tivall. Shamir's basic business is making prepared foods, especially salads, for both consumers and catering (foodservice). They are a relatively small company and they have had a line of meat alternative products on the market for about 3 years–on a very small scale. They make meatless hamburger-like patties (with or without breading; with breading is called "vegetarian schnitzel"), sausages (frankfurters), and some non-soy main dishes based on vegetables–such as peas and corn. These products are similar to those made by Worthington.

Soglowek, a rich and powerful company, is located at 8 Ha Gaton Blvd., P.O. Box 70, Naharya, Israel–10 minute's drive from Tivall. When Soglowek began to compete with Tivall in the meat alternatives market, Tivall's prices dropped significantly. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

3192. Chajuss, Daniel. 1995. New developments with soyfoods in Africa (Interview). *SoyaScan Notes*. July 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tomorrow Daniel will fly to Africa where he will stay for about 10 days and help finish a small factory at Jinja, Uganda, for UNICEF to make foods for refugees from Rwanda, Burundi, Somalia, and Sudan. The factory was built and is being run for UNICEF by Lutri Products, a private company. Other organizations, such as Oxfam, are collaborating. The first products should be available for refugees in about 2 months. The foods will be made by processing soy and corn in a low-cost extrusion cooker into which steam is injected to destroy all the trypsin inhibitors. Before cooking, the ingredients are ground in a hammermill. After extrusion, vitamins and minerals are added, then the product is micromilled with a tube-shaped Air-Whirl mill to grind it finer and to cool and dry it. The cost to make the product is about $0.15/lb. It must contain 400 calories (kcal) per 100 gm, about 14-17% protein, 14% fat, plus certain vitamins and minerals.

Follow-up letter (fax) from Daniel. 1995. Aug. 23. In 1993 three companies making precooked fortified blended food based on 75% cereal and 25% soy, plus vitamins and minerals, started to operate in Nairobi, Kenya. They are: (1) Procter & Allan Ltd. Capacity: 660 tonnes (metric tons)/month. Fax: 542518. (2) House of Manji Ltd. Capacity: 600 tonnes/month. Fax: 541649. (3) SoyAfric (Master Bakers Ltd.). Capacity: 450 tonnes/month. Fax: 440534.

In Uganda one new firm has started: Nutri Products Ltd., P.P. Box 1244, Jinja, Uganda. Their capacity is expected to reach about 200 tonnes/month. Africa Basic Foods has been operating in Uganda for many years. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone:

3193. Shurtleff, William; Aoyagi, Akiko. comps. 1995. Hydrogenation, shortening, and margarine–Bibliography and sourcebook, 1860 to 1995: Detailed information on 934 published documents (extensively annotated bibliography), 37 commercial hydrogenated soy oil products, 37 original interviews (many full text) and overviews, 32 unpublished archival documents. Lafayette, California: Soyfoods Center. 355 p. Subject/geographical index. Author/company index. Language index. Printed July 24. 28 cm. [1013 ref]

• ***Summary:*** This comprehensive bibliography on hydrogenation and its products focuses on hydrogenation of soy oil. Starting with the early literature on hydrogenation, it shows how and why soy oil has become the world's most popular raw material for making shortening and margarine. It includes the large body of literature on the safety of hydrogenation from earliest times to the present, and concludes with the extensive literature published since World War II.

This is the most comprehensive bibliography ever published about hydrogenation, margarine, or shortening. It has been compiled, one record at a time over a period of 20 years, in an attempt to document the history of these closely related subjects. Its scope includes all important information about these subjects, worldwide, from 1860 to the present.

This book is also a very comprehensive and useful source of information on these subjects, since 89% of all records contain a summary/abstract averaging 219 words in length.

This is one of more than 45 books related to soybeans and soyfoods being compiled by William Shurtleff and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 33 different document types, both published and unpublished; every known major publication on the subject in every language–including 917 in English, 46 in German, 22 in French, 13 in Japanese, etc.; 37 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of hydrogenation, margarine, and shortening from their earliest beginnings to the present.

The bibliographic records in this book include 934 published documents and 32 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 37 commercial hydrogenated products (mostly those of historical importance), including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included.

Introduction (p. 7-8): Invented in France in 1869, margarine is a product of major historical (as well as commercial) importance with a number of interesting "firsts" to its name: (1) It was the first commercial substitute food in the Western world–developed as a substitute for butter. (2) It was the first alternative to a meat or dairy product in the Western world. (Note that meat and dairy alternatives based on soy and gluten had been developed centuries earlier in China and Japan). (3) In 1957 consumption of margarine in the United States passed that of butter; this was the first example in America of a major food of vegetable origin surpassing its counterpart of animal origin. (4) The margarine industry was the first to become a major food industry by overcoming the ongoing opposition of governments in every country in the Western world. The two countries that once had the strongest anti-margarine laws were the USA and Canada.

Margarine was sold commercially for more than 30 years before the process of hydrogenation was developed and patented by the German inventor Normann in 1902-03. Hydrogenation has transformed the processing of oils and fats throughout the world, being used to make most types of margarine and shortening, and many types of partially hydrogenated vegetable oil.

A brief history: Margarine was invented in 1869 by the Frenchman Hippolyte Mège Mouriés, in an attempt to alleviate shortages of butter. He won a prize offered that year by Napoleon III. Made mainly from tallow (beef fats), margarine quickly became popular in northern Europe and the United States. Factories began production in Denmark (1871), Netherlands (1871), France (1872-73), Austria-Hungary (1874), United States (1874-76), Germany (1875), and the United Kingdom (1889).

Margarine has always been less expensive than butter. In the early years consumers were often sold margarine (or a mixture of margarine and butter) under the impression that they were buying unadulterated butter. Therefore, starting in the 1880s legislation was enacted in many countries to prevent fraud. Few of the world's foods have been subjected to more discriminatory legislation and court decisions than margarine. Most of this was prompted by political action on

© Copyright Soyinfo Center 2014

the part of powerful national dairy industries.

In 1884 New York enacted the world's first anti-margarine laws–though they were voided in 1885 by a New York court. In 1886 the president of the American Agricultural and Dairy Association demanded the "total extermination of imitation butter." That same year the U.S. congress passed the Margarine Act of 1886; a tax of 2 cents a pound was imposed and various expensive licenses were mandated for manufacturers, wholesalers, and retailers. The law also decreed that the product must be clearly labeled "oleomargarine." In 1887 the first Margarine Act was passed in England, where margarine was initially sold under the name of "Butterine." It required that the product be sold only under the name "margarine." Similar laws were soon passed in France (1887) and the Netherlands.

Hydrogenation was first patented by the German inventor Wilhelm Normann in 1902 in Germany and in 1903 in Great Britain. Joseph Crosfield & Sons, Ltd., of Warrington, England, was the world's first company to attempt commercial hydrogenation; they began operating their plant in 1906. In 1909 Procter & Gamble (P&G) in the United States acquired the rights to the Normann / Crosfield patent. At the time, P&G was a soap manufacturing company that made no edible products. In 1911, after considerable developmental work, P&G launched Crisco, the world's first vegetable shortening. The name was an abbreviation of the words "crystallized cottonseed oil." The company had the wisdom to market Crisco as a new vegetable product, not as a lard substitute, and the absence of any animal fat was featured in its extensive and persistent nationwide advertising. In the United States, discriminatory federal legislation against margarine existed until 1950, when the federal Margarine Act was signed into law by President Harry Truman. On July 1 of that year the entire federal system of excise taxes and licenses was ended. Also in 1950 Canada dropped its Commonwealth ban on margarine. The last two U.S. states to legalize the addition of color (generally natural color) to margarine were Minnesota (1963) and Wisconsin (1967).

The earliest known reference to the use of soy oil in margarine in Europe appeared in England, where the *Daily Dispatch* of 22 April 1910 reported that soy oil had enjoyed "striking success" as a substitute for coconut oil in the manufacture of margarine; Messrs. Bibby & Sons of Liverpool were selling large quantities of soy oil to margarine makers on the continent.

The first reported use of soy oil in margarine in the United States was in 1912, when 321 tonnes (708,000 lb) were used. In 5 years, by 1917, this amount had increased almost 10-fold, to 3,000 tonnes (6,614,000 lb), yet this was only 2.5% of all oils and fats used in margarine that year and much less than oleo oil (38% of the total), cottonseed oil (25%), neutral lard (17%), and peanut oil (4%).

In 1915 hydrogenation was first used in margarine production. Note that the first soy oil used in margarine was not hydrogenated; it was added in part for its yellow color.

In 1930 the Chinese soy oil expert Tsao reported that "From 70-80% of the soy oil imported to Europe at present is used in the manufacture of margarine."

The first all-soy, all-vegetable margarine, containing no products of animal origin, was introduced in 1942 by Butler Food Products at Cedar Lake Michigan. Sold as Soy Butter, its main ingredients were a blend of liquid and hydrogenated soy oils, soymilk used in place of dairy milk, and perhaps soy lecithin (plus salt, carotene, vitamin A, and butter flavor).

During 1951 soy oil passed cottonseed oil to become America's leading margarine ingredient. In 1950 soy oil accounted for 45% of all the oils and fats in margarine, whereas by 1960 it had grown to account for 81% of the total.

After the mid-1950s, the United States became the world's largest manufacturer of margarine, followed by Germany. In Europe, per capita margarine consumption is largest in northern European countries. Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

3194. Worthington Foods, Inc. 1995. Second quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.

• ***Summary:*** Net sales for the first half of 1995 were $43.8 million, an increase of 9% over the same period last year after adjusting for the sale of the sale of the refrigerated egg substitute assets. Net income for the first 6 months of 1995 was $2,421,000, up 72%. The sale of meat alternatives in the mass market has been strong during the first half of 1995. "Category sales [nationwide, all manufacturers] of meat substitutes increased 38% during the second quarter and by 50% during the first half of 1995.* We are aggressively working to gain national distribution for these new products during the first half of 1995..." * Note: Statistics on nationwide category growth are based on scanner data supplied by Information Resources, Inc., the world's leader in this field.

In 1994 Worthington decided to place less resources in the egg substitute business and more resources in the meat alternative business. "This has turned out to be a sound strategic decision in that frozen egg substitute category sales are significantly declining, while the meat substitute category sales are significantly increasing. Two years ago our sales for egg substitutes (frozen and refrigerated) were about equal to sales of meat alternatives in the mass market. Currently, our egg substitute business is less than one-third of our meat alternative sales to supermarkets." Address: Worthington, Ohio. Phone: (614) 885-9511.

3195. Benedetti, Jef. 1995. Soy report generates calls to Worthington Foods, but little stock movement. *Daily*

© Copyright Soyinfo Center 2014

Reporter (*Columbus, Ohio*). Aug. 7. [1 ref]
• ***Summary:*** A study by James W. Anderson published last week in a medical journal touting the advantages of soy protein in reducing blood cholesterol has generated many phone calls to Worthington Foods, and a lot of interest from the consumer and investment communities. Ron McDermott, the company's vice president of research and technology, says that 80% of worthington's food products contain soy protein. The company markets meatless products under four names: Morningstar Farms, Worthington, Loma Linda, and Natural Touch. In 1994 the Morningstar Farms line was the best seller, with almost $56 million in sales, according to the company's 10-K filing.

In April William Blair & Co. in Chicago published a "buy" recommendation on the company's stock, noting that roughly one-half of Worthington's sales are to individuals seeking to reduce their intake of fat and cholesterol.

An Associated Press story about Anderson's study stated that he received $5,000 from Protein Technologies International, which makes soy protein, to help pay for the work. "Anderson told the AP that he believes 20 grams of soy protein a day, substituted for animal protein, could be enough to help lower blood cholesterol."

Patty House of Ohio State University wrote a report titled "From Farm Lands to Shoppers Hands" stating that the average American consumes six gallons of soybean oil per year in such forms as cooking and salad oil, margarine, shortening, and prepared salad dressings.

3196. Dorsch, Alan. 1995. Information Resources, Inc. (IRI): The world's largest independent market research firm and supplier of scanner data, and their InfoScan database service (Interview). *SoyaScan Notes.* Aug. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** IRI has been in business for about 15 years; 2-3 years ago they passed Nielsen to become the world's largest independent market research firm. Nielsen, which is IRI's only competitor, is owned by Dun & Bradstreet. The U.S. market for syndicated data services is roughly a $600 million a year market. IRI has about 55% of this market share, while Nielsen has about 45%. They collect scanner data from food, drug, mass, and convenience stores (c-stores). They supplement this with audit data in the stores that don't have scanning. Note: They do not cover natural/health food stores. Their food-related information comes only from scanner data. They develop categories (they now have about 250) and they process the data, and serve it up with software to consumer products goods companies–like Worthington, which has been a customer since 1992. Their customer use that information to measure their marketing programs, track trends, etc.

Information is available in two general formats: (1) Syndicated database and (2) a customized database. The customer is allowed extensive input in the way they set up a customized database. This database has 4 basic dimensions: Products, time periods, measures, and geographies. They have a structured hierarchy for their databases that is unique to IRI. The hierarchy starts at the category level, and gets more detailed the further you drill down. Looking at each one: (1) Product dimensions: Category (e.g. meat alternatives, soap). Type (e.g. refrigerated/frozen, shelf stable, hand soap, laundry soap, shower gels). Parent Co. (e.g. R.J. Reynolds). Vendor/child (e.g. Nabisco, subsidiary of Reynolds). Brand (e.g. Morningstar Farms). Then UPC (the lowest level on the hierarchy). If you are only interested in one specific product, you can drill right down to UPC and get trends on it. Any customer has potential access (if they pay for it) to information on all products in the industry–so they can do comparisons with key competitors. (2) Time periods: 4, 5, 12, 12, 13 weeks, quarterly, and annual. Data is typically available back 5 years. (3) Measures is all the different ways you can look at the data. There are hundreds of different measures but the basic five are: Tracking measures (e.g. dollar sales or volume sales), distribution measures (e.g. ACV = All Commodity Volume, so an 80% ACV distribution in a food store chain means that you have good penetration in that chain), velocity measures (e.g. sales per point of distribution, or sales million ACV; it tells you the strength of your penetration), pricing measures (e.g. average base price per unit on the retail shelf, or on display), promotion based measures (e.g. what percentage of the weekly volume is on display–like a temporary end cap or free-standing display). (4) Geographics: For each of basic store types (food, drug, mass, convenience stores, club stores), the following geographic breaks/breakdowns are available: Total USA, standard 8 geographic regions based on the U.S. Census (e.g. northeast, south central, west coast, etc.), 64 major markets (e.g. New York, Los Angeles), and key accounts (e.g., Safeway, A&P).

Each client negotiates what information they need. IRI has a contractual agreement to protect each customer's customized database and the way they look at data.

For its syndicated service, IRI has a category named "meat substitutes" There are two types: Refrigerated (= refrigerated and frozen) and shelf stable. Meat is also included in the refrigerated type, so a client can compare meat and meat substitutes. Another category is milk. One type is kefir/milk substitutes/soymilk.

How does IRI get its data? Every main chain in the USA scans and accumulates its own raw data from its cash registers. IRI has a relationship with each of these chains, and it gathers all this scanned data from the corporate headquarters. IRI often puts software and systems on site at the headquarters which allows the chain to read and use its own data. In some cases IRI has to pay for this data, while in other cases it is a barter agreement.

How much does it cost to get information from IRI? One report might cost $1,000. But to set up a custom database

© Copyright Soyinfo Center 2014

might cost $50,000 on up to $1,000,000. Once a company has their own database, they may be able to access it electronically whenever they want to.

IRI's product is named InfoScan, whether it is syndicated or customized. IRI also has Infoscan Census (based on every store in key accounts), Infoscan Panel. They also offer testing services (to set up a test market), MRA (marketing research analysis, with curves, pricing sensitivity, etc.) IRI also has a software division named IRI Software that has separate revenue.

All of these services are sample-based services. They use projection techniques to estimate the entire market.

SAMI (Selling Areas Marketing, Inc.), which was a company, no longer exists. In about 1989 or 1990 it was owned by Arbitron, and was in the process of going out of business. Arbitron focused on rating advertising penetration on radio and TV, and was a competitor of Nielsen (which did TV ratings). IRI did not buy SAMI per se; rather it bought 60-80 of SAMI's employee contracts (those these former SAMI employees went to work for IRI) and SAMI's client files and contracts. SAMI was slow to get into scanned data; IRI, which saw scanner data as the future, came on so fast that SAMI could not recover. Nielsen has always focused on audit data more than scanner data.

Retailers use their own scanner data extensively, as to do category management, track trends and sales of individual products.

Alan is now developing IRI's page on the World Wide Web. The URL is http://pages.prodigy.com/KY/ abdorsch/ abdorschinfores.html.

Update: 1997 April 24–"Over the course of the last two years, Category Management has moved from concept to buzzword to the point where it occupies a substantial part of every modern marketer's time and energy." There is now an "IRI University," where a full-day course on Category Management will be taught on June 18 in New York City. Address: Assoc. Director of Client Services, Information Resources, Inc., Chiquita Center, Suite 700, 240 East 50th St., Cincinnati, Ohio 45202. Phone: 513-357-8025.

3197. *North Pacific Union Conference Gleaner* (*Portland, Oregon*). 1995. Obituaries: Cottrell, Edyth Y. Aug. 21. p. 32.
• ***Summary:*** Edyth Young Cottrell was born on 15 March 1900 in Staples, Minnesota. She died on 3 June 1995 in Moscow, Idaho, at age 95. She is survived by a daughter, Joyce Schwartz, of Orofino, Idaho.

3198. Burros, Marian. 1995. Fresh tofu: Safe cooks buy carefully. *New York Times.* Aug. 23. p. C1, C8.
• ***Summary:*** "Eight containers of tofu were purchased recently from six corner markets in New York City. Two of the containers were commercially packaged and sealed; six had tofu that was floating in water and required a store employee or a customer to pick it up by hand, with tongs or with a plastic bag. The tofu was analyzed by Certified Analytical Group Inc. of Plainview, Long Island, for the total level of bacteria; for coliform, which is indicative of unsanitary handling and storage conditions; for E. coli, which indicates fecal contamination, and for yersinia, a food-poisoning organism historically associated with tofu.

"None of the samples contained yersinia. Both of the prepackaged containers of tofu–Kinugoshi and Mori Nu brands–had relatively low levels of total bacteria and no E. coli. Mori Nu had a level of coliform high enough to indicate unsanitary conditions... But all the tofu that was floating in water had extremely high levels of total bacteria and very high levels of coliform; four contained E. coli."

"Consumers can protect themselves by buying tofu only in sealed packages and by cooking it at high temperatures, until it reaches 160 degrees internally–in other words very hot." Contains two recipes, incl. Ma-Po bean curd. A photo shows tofu being sold loose from open tubs of water.

3199. Parr, Jan. 1995. Under the (veg) influence. *Vegetarian Times.* Sept. p. 22.
• ***Summary:*** Several national restaurant and food-service chains are adding veggie burgers, sometimes even complete vegan meals, to their menus. Some 500 Subway sandwich shops nationwide are serving Wholesome and Hearty's Gardenburger Subs; other outlets are serving or testing the Morningstar Farms' Vegimax burger Denny's restaurant chain is testing two Morningstar Farms Garden Veggie Patties in two markets. Note: Morningstar Farms' products are made by Worthington Foods.

What is driving the trend? Consumer demand, aggressive marketing by the meatless burger companies, and convenient product packaging.

3200. Geriguis, David. 1995. What ever happened to Loma Linda Foods and Nutricia in Riverside, California? (Interview). *SoyaScan Notes.* Oct. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** David's last name is pronounced GER-gus. He worked for Loma Linda Foods in 1989 when the company was sold to Nutricia. He remained with Nutricia, making infant formula at the plant in Riverside, California. The production continued for only a few months, then they had a major problem with the new equipment that was being developed, and they had a recall. It was a disaster. So in about October or November of 1990 Nutricia shut down the plant in Riverside.

Nutricia's plan at that point was to shut down the plant in Mt. Vernon, Ohio, and operate only in Riverside. But after the recall, the opposite happened. Nutricia spent more than $12 million revamping the plant in Ohio, then used it to start making various forms of i-Soyalac (from soy protein isolates) and Soyalac (from whole soybeans). The plant in Riverside went up for sale although Nutricia's sales and

© Copyright Soyinfo Center 2014

marketing departments remained in the office. In mid-1993 Nutricia decided to close their offices at the Riverside and move the rest of the company's operations to Mt. Vernon, Ohio. David left Nutricia in July 1993. Then later in 1993 Nutricia had another recall–and another disaster, which even drove down the stock price of Nutricia in the Netherlands. David thinks that Nutricia's management at headquarters in the Netherlands probably said "This American company is too dangerous for us. We'd better sell it." Nutricia then created a fictitious company named Mt. Vernon Foods to allow them to disassociate that company from the Nutricia. Several months later Nutricia began to negotiate with another venture capital group to buy Nutricia's American operations. These didn't work out so about a year later, in 1994, Nutricia sold Mt. Vernon Foods to Nestle/Carnation.

Nutricia is a good company, but they quickly learned that regulation (by the FDA) is much stricter in the USA than in Europe. In Holland they had 90% of the dairy-based infant formula market, and a significant market share in other European countries, but they made no soy-based products. So soy was a new experience for them. In addition they had quite a few problems getting FDA approval and clinical trails done correctly for their dairy-based formula in America. They planned to discontinue Loma Linda Soyalac, because according to their research, starting with whole soybeans caused nutritional problems in the infant formula (probably flatulence). Apparently Carnation followed through with this plan.

In early 1994 Nutricia sold their plant in Riverside to a company named Dasi (pronounced like the flower "Daisy"), which changed its name to Dasi-Linda. Dasi is a manufacturer of equipment for processing cow's milk, including UHT (ultra-high temperature) systems. Then they got into the actual processing of milk. Right now they are spending a lot of money revamping the former Loma Linda plant on Pierce Street in Riverside with the goal of making UHT dairy milk in aseptic cartons. Parmalat (a huge and very significant Italian food company that is the biggest user of Tetra Pak Aseptic packaging in the world) appears to be both a partner and a customer of Dasi-Linda, which talks about having contracts to package for Parmalat.

La Sierra University no longer owns the property on which the former Loma Linda building stands.

David is quite sure that Carnation introduced Follow-Up Soy before they purchased Mt. Vernon Foods.

Talk with Robert Madey, vice president for R&D of Dasi. 1996. Jan. 19 and 24. The information above concerning Dasi is correct. Dasi first signed a written agreement with Nutricia concerning the purchase of the Loma Linda food plant in Oct. 1993, and the deal was finalized in Sept. 1994. Dasi, which is headquartered in Rockville, Maryland, has several dairy milk processing plants of its own in the USA–one in Decatur, Alabama; it is a partner in another in Utah. The Parmalat plant in Michigan produces essentially all of the Parmalat milk in the USA; it is all sold unrefrigerated. Dasi all sells some of its systems overseas as well. Dasi is now in the process of converting all Parmalat plants worldwide to the use of Dasi equipment ("the Dasi process"). This is all equipment from the balance tank, including pre-heating, sterilizer, homogenizer, and up to but not including the packaging equipment. Address: Director of Industries, La Sierra Univ., 4700 Pierce St., Riverside, CA 92515. Phone: 909-785-2477.

3201. Ohio Company (The). 1995. Investment research: Worthington Foods, Inc. Recommendation: Buy/growth. Columbus, Ohio. 2 p. 28 cm.
• ***Summary:*** A very positive assessment, by Richard J. Wayman, of the financial potential of Worthington Foods. A price graph by Bloomberg for Worthington's stock covers the period Nov. 1994 to Oct. 1995, during which time the price has risen from about 10 to about 17. The main increase took place from March 1995 to June 1995. The stock presently sells for $17.25 a share. Address: Columbus, Ohio.

quarter are up 63.0%. Sales of Morningstar Farms meat alternatives are up 23.9% for the year to date. The market share of Morningstar Farms meat alternatives sold through retail supermarkets has remained constant for the past 9 months at approximately 50%. Better'n Burgers are now available in approximately 66% of all retail supermarkets. "In terms of unit sales per point of distribution, Better'n Burgers continue to out-pace our other meal alternative products."

Foodservice sales were up 31.9% for the first 9 months of 1995 when compared to 1994. "Sales for the third quarter of 1995 were up over 43.2% as a result of increased authorization from restaurants, correctional facilities, and other foodservice operations." Address: Worthington, Ohio. Phone: (614) 885-9511.

3205. Campbell, T. Colin. 1995. Past and current work related to vegetarian diets (Interview). *SoyaScan Notes.* Nov. 21. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** Dr. Campbell grew up on a farm, earned his PhD in animal nutrition, and was interested in finding more efficient ways to produce animal protein. During the 1960s he managed a program in the Philippines feeding children. In the late 1970s he became interested in epidemiology, and was on the 13-member panel of the National Academy of Sciences that wrote *Diet, Nutrition, and Cancer.* Published in 1982, this work created an earthquake in the scientific community. As one by-product, his work was featured in People magazine. He then became chair of the National Committee on Nutrition Fraud, but soon discontinued this work when he saw its motivation. He was highly visible in the early 1980s in government and scientific circles, but as he found himself breaking ranks with traditional science, increasing pressure was put on him and he felt considerable distress. In 1985-86 he took a one-year sabbatical to Oxford, England, and considered never returning to the USA.

In England, he decided to focus on cancer research, and the causes of cancer. He is developing a theory as to why this has been such a contentious field, and a larger theory as to why we think what we do in the field of nutrition. He has taught a senior course in nutrition and biochemistry.

This year he is again on sabbatical, writing an autobiography, focusing on his scientific research and growing discontent with established and orthodox views. Science is becoming ever more reductionist, looking at smaller and smaller pieces of the whole. There is a great need to construct a model of wholism. He is also preparing to teach a new course at Cornell, an introductory course in vegetarian nutrition for both the university and the community. He has lectured twice at Loma Linda University and a close colleague, Jeff Gates, is a Seventh-day Adventist. The data from the China Study II, which was bigger than the first study, is now coming in. To help fund his research at Cornell, he has established two businesses. One is quite involved with herbs. He has been treated by traditional Chinese physicians and was impressed. He was the person who isolated dioxin, and his health has suffered as thereafter; throat polyps and a twitching in his face. Address: Div. of Nutritional Sciences, N204-A MVR Hall, Cornell Univ., Ithaca, New York 14853. Phone: 607-255-2669.

3206. Twomley, Dale E. 1995. Re: Stock split and growing acceptance of Worthington's meat alternatives. Letter to shareholders, Nov. 28. 1 p. Typed, with signature.

• ***Summary:*** On Nov. 27, 1995, the Board of Directors declared a five-for-four stock split on common shares of Worthington Foods, Inc. The board has also declared a dividend of 3 cents per share.

"On November 6, 1995, the Company announced that several restaurant chains had begun serving some of our Morningstar Farms' Veggie Burgers. Denny's is now serving our low-fat Garden Vege Patties in all 1,500 restaurants nationwide. Chilli's, with over 400 restaurants, has just introduced Morningstar Farms' Spicy Black Bean Burger under the menu title of 'Bandito's Vegetarian Bean Burger.'

"Additionally, the recent approval from International House of Pancakes, Marie Callender's, and hundreds of Subways (VegiMax) of Morningstar Farms Garden Vege Patties in various forms makes it clear that meatless products are quickly becoming a regular part of menus in restaurants throughout the nation. More and more restaurants are turning to the Morningstar Farms brand of Worthington Foods, the world's largest producer of meat alternative products and marketer of 'America's Original Veggie Burgers.'" Address: President and CEO, Worthington Foods, Inc., 900 Proprietors Rd., Worthington, Ohio 43085. Phone: (614) 885-9511.

3207. Parr, Robert; Litser, Glyn. 1995. "What hath God wrought!" The Sanitarium Health Food Company story. Berkeley Vale, NSW, Australia: Sanitarium Health Food Co. 463 p. Nov. Illust. Index. 29 cm.

• ***Summary:*** This book is strong in describing the unfailing presence of the hand of God in Seventh-day Adventist health work, but short on a clear presentation of history. For example: Seventh-day Adventists were pioneers in the production of peanut butter worldwide. When did they start commercial production in Australia? Here is a brief chronology:

1897 Nov. 8–Edward C. Halsey first arrives in Sydney, Australia (p. 18 left column), from the USA, where he undoubtedly learned how to make peanut butter, probably at Battle Creek [Michigan].

1898 Jan. 28. Halsey roasted the first tray of peanuts–according to his diary (p. 19 left)–probably at the Melbourne plant.

1898 April 27–The first products of the infant company were Granose, Granola, and Caramel Cereal [grain coffee].

© Copyright Soyinfo Center 2014

The names were registered on patents applied for on this date (p. 16 right).

Undated–There is no evidence of what they said as the first products were taken from the oven; "they were probably too busy with the next batch of Granola or the next tray of peanuts, to be roasted to make the first peanut butter ever made in Australia" (p. 19 right).

1899 May 29–The new factory at Cooranbong is now "ready to allow Edward Halsey to commence his manufacturing Wizardry. His first product was Peanut Butter" (p. 27 right).

1899 July–The company begins to sell its first products at the Union Conference session held at Avondale. "During this conference he [Halsey] produced (and sold to the delegates) the first Granose Biscuits ever made in Australia" (p. 27 right)–but no peanut butter.

1899 Dec.–Halsey "had the following products off the production line and ready for customers: Granose, Granose flakes, Bromose, Nuttose, Antiseptic (charcoal) Tablets, Granola, Caramel Cereal, Nut Butter, Wheatmeal Biscuits, Gluten Biscuits and Gluten meal" (p. 27 right). If this "Nut Butter" was peanut butter (which seems likely) then Sanitarium Foods first made and sold peanut butter commercially in Australia in Dec. 1899. They probably sold it commercially in late May or early June 1899. However, the company may have made 6-12 months earlier, but the records are unclear. Address: Berkeley Vale, NSW, Australia.

3208. *Vegetarian Journal* (*Baltimore, Maryland*). 1995. Burger King offers tomato sandwich on white bread. 14(6):5. Nov/Dec. [3 ref]
• ***Summary:*** A reader wants to know more about the "Spicy Beanburger" that Burger King offers in England. The editor notes that Taco Bell offers many vegetarian/vegan options, and we should all support their efforts. Kimberly Miller of Burger King states that her company, which has more than 6,400 restaurants in the USA, did test a meatless burger, "The Griller" [made by Worthington Foods] in 38 restaurants for six months in Rochester, New York, in late 1993 and early 1994 to see if it would appeal to American customers. "Overall, consumer reaction to the product was mixed; it did well in some restaurants, poorly in others."

3209. Worthington Foods; Morningstar Farms. 1995. Look what happened when we played with our vegetables (Ad). *Vegetarian Times.* Sept. p. 3,
• ***Summary:*** This is a full-page color ad for Morningstar Farms Veggie Burgers. This ad also appeared in the Nov. 1995 issue (p. 3), in the June 1996 issue (rear cover) and in the May 1998 issue (p. 5) of this magazine.

3210. Oppenheimer & Co., Inc. 1995. Worthington Foods, Inc.: Restructured, refocused and ready for growth; Attractive small-cap dominates segment growth; 50% upside potential; Initiating coverage, added to special research series list. New York, NY. 10 p. Dec. 20.
• ***Summary:*** A very positive assessment of the financial potential of Worthington Foods, America's largest publicly traded natural foods manufacturer. Contents: Investment conclusion. Investment highlights: Divestiture [or refrigerated egg business] focuses operations on growth categories, new products, category growth and expanded distribution should drive top line, projecting 15% revenue growth and faster EPS [earnings per share] growth, discounted valuation provides 50% upside to our $23 price target.

Company description: A leader in natural foods industry with distribution muscle, retaining frozen egg substitute segment for strategic reasons. Growth drivers: Category dominance in rapidly growing segment, benefiting from growth in natural foods industry, new products and expanded distribution, expect more new products in 1996, foodservice building an impressive base. Earnings drivers: Volume growth will be major contributor to earnings, bringing production in house from co-packers will benefit margins, margin expansion should propel earnings growth faster than sales, capacity expansion [at Zanesville facility] prepares for growth, price increase should offset rising commodity costs. Management: Stable management becoming increasingly market oriented. Financials: Earnings up sharply this year, expect continuing earnings strength in 4Q and 1996, strong balance sheet, board declares 5-for-4 stock split. Valuation: Worthington shares appear undervalued on several measures, target price of $23 represents 50% upside. Risk factors. Our quarterly EPS estimates from 1994 to 1997. Price chart. Annual data. Balance sheet. Address: New York.

3211. Worthington Foods, Inc. 1995. Worthington Foods: Worthington & Loma Linda product catalog. 900 Proprietors Rd., Worthington, OH 43085. 6 panels. 28 cm. Undated.
• ***Summary:*** Talk with marketing rep at Worthington Foods. 1997. May 14. This catalog was printed in late 1995. When asked if these products now contain genetically engineered soybeans he says "I don't know. Talk to Ron McDermott." Address: Worthington, Ohio. Phone: 1-800-628-3663.

3212. Battle Creek's gold-in-flakes: The origins of the cereal industry in Battle Creek, Michigan. 4 vols. 1995. Battle Creek, Michigan: Heritage Publications. 22 cm.
• ***Summary:*** This 4-volume work comes bound in a slipcover. The four volumes are: (1) The Battle Creek idea: Dr. John Harvey Kellogg and the Sanitarium. (2) Walking the road to Wellville: C.W. Post and the Postum Cereal Company. (3) Cereal Boom: The cereal gold rush, 1902-1910. (4) The best to you each morning: W.K. Kellogg and the Kellogg Company.

Volume 3 is by Mary Butler, Frances Thornton, Martin Ashley, and Duff Stoltz. In vol. 3 on page 97 is a table listing

101 cereal manufacturers. No. 60 is the Lambert Nut Food Co. Date of legal incorporation: 1900. Products: Products: Peanut butter crackers, nut products, and machinery for making nut products. Notes: Name changed to Lambert Good Food Co. in 1901. No. 59 is The Lambert Good Food Co., Date of legal incorporation: 1901. Products: Same as above. Notes: Moved factory to Marshall [Michigan] in 1902; dissolved in 1930. No. 60 is another Lambert Co. The name was changed to the Lambert Good Food Company in 1901.

Note: This table of 101 cereal manufacturers in Battle Creek was first published in 1992 in an article titled "A taste of cereal," by Stoltz. An endnote in that article (p. 57) concerning the legal date of incorporation states that "companies often existed before they actually filed legal papers. Conversely, companies filed legal papers of incorporation and then never progressed beyond that stage to manufacture a product." Address: Battle Creek, Michigan.

3213. Bruce, Scott; Crawford, Bill. 1995. Cerealizing America: The unsweetened story of American breakfast cereal. Boston and London: Faber & Faber. xv + 313 p. Illust. Index. 24 cm. [495+* ref]

• ***Summary:*** This well researched and carefully documented history of breakfast cereal in America includes the work of pioneers John Harvey Kellogg, his younger brother Will Keith Kellogg, Charles William Post, etc.

In Chapter 20, "Baby Boomer breakfast," is a good, humorous history of the reincarnation of Granola. The section titled "Johnny Granola Seed" (after Johnny Appleseed), tells how Layton Gentry, in 1965, developed a formula for "Crunchy Granola," then sold the recipe and manufacturing rights to various companies, starting with Sovex, Inc. in Collegedale, Tennessee (owned by the Goodbrad Family)–for $3,000. He also sold the recipe to Lassen Foods of Chico, California (run by Wayne Schlotthauer)–both Seventh-day Adventist food companies.

Jim Matson, who worked for PET Incorporated, saw the product and introduced it nationally in 1972 as Heartland Cereal. Also in 1972 Quaker introduced 100% Natural cereal. Kellogg followed suit with Country Morning, and General Mills launched Nature Valley. Note: Adelle Davis is not mentioned in this chapter. Address: 1. Cambridge, Massachusetts (Publisher of Flake magazine); 2. Writer, Austin, Texas.

3214. Butler, Mary; Thornton, Frances; Ashley, Martin. 1995. Walking the road to Wellville: C.W. Post and the Postum Cereal Company. Battle Creek, Michigan: Heritage Publications. 104 p. Illust. (some color). Photographic index. 22 cm. Series: Gold in Flakes Set: Volume 2 of 4. [7 ref]

• ***Summary:*** John Harvey Kellogg and his brother, W.K. Kellogg, together discovered the wheat flake, but C.W. Post was the first successful breakfast cereal entrepreneur. This series of four books is about the origins of the breakfast cereal industry in Battle Creek, Michigan.

This very interesting book is composed primarily of full-page photos (some color) with captions, preceded by a brief biography.

For a more detailed biography of C.W. Post, see *C.W. Post–The Hour and the Man*, by Nettie Leitch Major (1963).

Charles William Post was born on 26 Oct. 1854 in Springfield, Illinois, the son of Charles Rollins Post and Caroline (Lathrop) Post. He had two brothers. They were all educated in the public schools of Springfield, with extra private tutoring being provided by their mother. At age 13, Charlie entered Illinois Industrial College, the forerunner of the University of Illinois. Although he had shown aptitude for mechanical engineering and other crafts, he dropped out after two years of indifferent grades. He soon joined the Springfield Zouaves, or Governor's Guards.

On 4 Nov. 1874, Charles William Post and Ella Letitia Merriweather were married at Pawnee, Illinois–at the home of her uncle, her parents having died a few years earlier.

In 1881 he established the Illinois Agricultural Works in Springfield, Illinois. The company, which manufactured Post Capital City Cultivators (mechanically) grew rapidly until a scheming banker tried to take control of the fast-growing business. Post's subsequent quarrels and lawsuits with the banker are thought to have been (eventually) the main cause of Post's first severe nervous breakdown and loss of his health in August 1885; he was left with nothing, not even his health, which–for the first time–he clearly realized was his most cherished possession. He slowly recuperated in Springfield.

On 15 March 1887, the Post family's first and only child, Marjorie Merriweather Post, was born in Springfield, Illinois.

In Nov. 1887 the family left Springfield and spent the winter in Santa Ana, California, where the climate seemed to put the finishing touches on Charlie's recuperation. By Feb. 1888, they had settled in Fort Worth, Texas, and before long he was in business again this time in real estate, building a subdivision and selling the homes. But in about Feb. 1890, his health completely collapsed again.

In Feb. 1891, when C.W. Post, with his wife and daughter, arrived in Battle Creek, with chronic health problems, he did not stay at the main building, Dr. J.H. Kellogg's Battle Creek Sanitarium, since the family assets were tied up in Texas real estate. So they rented a nearby cottage while Mr. Post was taking hydrotherapy, exercise treatments, and fresh air at the "San." But Post was not cured. After 10 months of treatment, Dr. Kellogg, director of the Sanitarium, told Ella he could do nothing more to help her husband. Within a day or two he was healed by a Christian Science practitioner; his appetite returned.

In 1892 he purchased the Beardsley farm on the edge of Battle Creek. His plan was to convert the farmhouse

© Copyright Soyinfo Center 2014

into his own health spa (LaVita Inn). While a patient at the San, he had tasted Caramel Cereal Coffee, a cereal-based coffee substitute. Like Dr. Kellogg, he believed that regular consumption of coffee was harmful to one's health. In late 1894 he developed Postum, his first food or beverage product, made from roasted wheat, bran, and molasses. On 1 Jan. 1895 C.W. Post and his only employee, Clark "Shorty" Bristol, began commercial production of Postum Cereal (a beverage dry mix) just outside Battle Creek. By late 1895 the product was selling well–thanks to his extensive advertising.

In 1895 the Postum Cereal Co. was established; it was incorporated on 22 Oct. 1896.

In 1898 Post introduced Grape Nuts, a very original product; during the slow baking, the starch was reduced to dextrose or grape sugar.

To help promote his new health cereal, Post wrote "The Road to Wellville," a little pamphlet summarizing his philosophy of healthy living and positive thinking, and attached a copy to each box of Grape Nuts.

By 1900 his first two products were being sold in Great Britain. By 1906 more than 600 employees were working around the clock in Battle Creek, making 6-7 million boxes of cereal a month.

By the early 1900s, Battle Creek turned into a boom-town as dozens of cereal and health food companies sprang up overnight, hoping to imitate the popularity of Post's products.

In 1904 he and his wife were divorced and he married Leila Young.

In 1906 he launched his 3rd product, originally named "Elijah's Manna," but soon renamed Post Toasties.

C.W. Post's business produced one of the largest fortunes of the early 20th century.

Also in 1906 Post, now a millionaire, began to buy large ranches in the Garza County section of Texas. Finally, with more than 225,000 acres he built Post City, Texas, which (when incorporated on 23 March 1907) was a humming tent city intended to be a model city or utopian community–on which Post deliberately made no profits. Although always short of water, the community survived until about 1920.

In the late fall of 1913 the first signs that C.W. Post was not in good health appeared, when he showed signs of strain and depression. In January 1914 he broke down from overwork and mental strain. He retreated to his winter home in Santa Barbara, California. But in mid-March he was rushed across the country on an express train to the Mayo Clinic in Rochester, Minnesota, where on 10 March 1914 he underwent a successful operation for appendicitis. He returned to Santa Barbara.

On 9 May 1914 C.W. Post died [suicide, by a self-inflicted gunshot wound]. He was buried in the C.W. Post Mausoleum at Battle Creek, Michigan.

The ownership of his company and properties passed to his daughter, Marjorie–age 27.

In the early 1920s, Marjorie and her second husband, E.F. Hutton, began acquiring food companies.

1925–The first company magazine, the "Wellville Post," was first published in May 1925. The coined word "Wellville" was used extensively in Postum advertising and publicity. It represented the goal of good health which could be obtained in part by eating good nourishing foods such as the company manufactured. The "Wellville Post" continued until September 1927, and was followed in 1928 by "Postum Magazine,"...

In 1927, an exquisite series of color posters titled "The Road to Wellville," produced by children's artist Carolyn Haywood, illustrate "the stages in the manufacturing of Post health products."

In 1929, when Birdseye "Frosted Foods" was added to the list, the company was renamed General Foods. Thus, amazingly, the roots of General Foods, a large and famous American food company, lie in the Postum Cereal Co., a health food company in Battle Creek, Michigan. Address: Historical Society of Battle Creek, 165 N. Washington Ave., Battle Creek, Michigan 49107. Phone: (616) 965-2613.

3215. Eidlitz, Eliezer. 1995. Is it kosher? Encyclopedia of kosher foods, facts, and fallacies. New York and Jerusalem: Feldheim Publishers. 234 p. Index. 23 cm.

• ***Summary:*** An excellent, comprehensive work. Contents: Preface. Introduction. Kashrus contract. Reliable kosher symbols. Sample of kashrus certificate. History of kosher supervision. Kosher information agencies. Federal & State kosher slaughter laws. Kosher laws from California State Penal Code. Kosher laws from New York State Penal Code. Shechita. Laws of Shechita. Treifos. Traibering (Nikur-deveining). Kashering meat–soaking & salting. Kashering liver. Glatt kosher. Illustrations of kosher animals. The kosher butcher shop. Halachic sources of kashrus. Sources of forbidden foods. Some general laws of Kashrus. Passover (Pesach). The Seder. Kitniyos & Matza Ashira. Kosher for Pesach products. Information booklets. Products to be cautious of for Pesach use. Oils. Eggs. Egg substitutes. Health foods. Israeli foods. Restaurants. Food additives. Additives functions in food ingredients. Flavoring. Food flavor. General food products list. Products that do not require certification. Bakeries. Beverages. Candies. Cheese. Chewing gum. Dairy products. Fish. Multilingual guide to common names of kosher saltwater fishes. Illustrations of some popular kosher fish. Ice cream. Margarine. Marshmallows & gelatin. Snacks. Vitamins. Wines & liquors. Insects in your food. Do you know what you are eating? Vegetable inspection. Methods for inspecting vegetables."

The Preface states: "Prior to the food revolution of over 50 years ago, most food was grown or processed by the person or family who would be eating it... What you saw is what you got. Today, this has changed greatly with

© Copyright Soyinfo Center 2014

technology. It is perfectly feasible for a strictly kosher consumer to eat a 'cheeseburger with milkshake' without doing anything wrong. The milk could be from soybeans (pareve) the cheese could be from soybeans (pareve), the ice cream for the milkshake could be from soybeans (pareve), and as a matter of fact, even the bread could be made from soybean."

Page 9 states: "As a matter of fact, it has been estimated that approximately one third of all shelf products in our supermarkets are certified kosher. This makes the kosher industry in the U.S. a 30 billion dollars a year business. Although only a relatively small amount of this is dedicated strictly toward the kosher consumer (about $2 billion), the interest in kosher food is rapidly growing. Some adhere to kosher laws from conviction, such as Seventh-day Adventists, Muslims, and vegetarians."

"In the U.S. alone, there appear to be at least 5 million people who buy products based on their being kosher." 9."

Soybeans appear in the index only once (p. 155); this states that soybeans themselves do not require kosher certification. Soy is not permitted during Passover. Address: Rabbi, North Hollywood, California.

3216. Goldberg, Alan; Thompson, Molly. 1995. The Kellogg brothers: Corn Flake kings (Color videotape). Produced and Directed by Molly Thompson of the Arts Entertainment Television Network. 50 min. *
• ***Summary:*** This is a generally accurate and fair portrayal of the relationship and conflict between the two Kellogg Brothers, Dr. John Harvey Kellogg and Will Keith Kellogg. The video is distributed by: New Video Group, 126 Fifth Ave., New York, NY 10011.

3217. *Natural Foods Merchandiser.* 1996. Worthington Foods expands mainstream ventures. Jan. p. 10.
• ***Summary:*** Worthington Foods has "entered agreements with Denny's, Chili's, International House of Pancakes, Marie Callender's and Subway, to offer its Morningstar Farms meatless burgers, made from either soy or black beans."

3218. *Prepared Foods.* 1996. New food plant construction: Dasi Linda [Riverside, California]. Jan.
• ***Summary:*** Dasi, Inc., headquartered in Rockville, Maryland, purchased the idle facility in the Loma Linda section of Riverside, California, from Nutricia for $2.2 million, then refurbished it at a cost of $8.5 million. The architects/engineers were O'Mally Engineering, Corona, California. Features: The facility includes an 850,000 cubic foot cooler, with initial capacity to produce more than 50 million quarts of fluid annually. "Dasi's patented processing technology permits gentle UHT pasteurization of fluid products while maintaining their taste. Start-up was expected in Dec. 1995. The plant, which 10,000 square feet of processing space, will make UHT and ESL (Extended Shelf Life) milk, and other dairy and non-dairy products in a variety of packages and sizes.

Talk with Robert Madey, vice president for R&D of Dasi. 1996. Jan. 24. Dasi first signed a written agreement with Nutricia concerning the purchase of the Loma Linda food plant in Oct. 1993, and the deal was finalized in Sept. 1994.

3219. Soyfoods Center archival collections, from the 1600s ongoing. 1996. Lafayette, California. [6313 ref]
• ***Summary:*** As of 1 Jan. 1996 the Soyfoods Center Archives contains 6,313 unpublished archival documents–mainly correspondence, interviews, photographs, and unpublished manuscripts relating chiefly to the history of soybeans and soyfoods, and to a lesser extent, the history of vegetarianism and natural foods.

Main subject areas include: early history of soybeans and soyfoods; modern soy protein products; soyfoods industry and market; industrial utilization of soybeans; soy pioneers in the U.S., Europe, and worldwide; major U.S. soybean crushers; Seventh-day Adventists worldwide; pioneer U.S. soy protein companies; pioneer U.S. natural food companies and distributors; soybeans, soyfoods, Third World nations, and world hunger; nutritional and medicinal value of soybeans and soyfoods; and soybean production, trade, and marketing.

Document level access is available through the repository's SoyaScan information retrieval system.

Most important specific subject areas: Miso, natural foods, Seventh-day Adventists, soy sauce, soybean, soybean industry, soybean products, soyfoods, soyfoods industry, soymilk, tempeh, tofu, vegetarianism. Address: P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

3220. **Product Name:** Morningstar Farms Ground Meatless: All Vegetable Burger Crumbles.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1996 January.
Ingredients: Textured vegetable protein (wheat gluten, soy protein concentrate), water. Contains 2% or less of autolyzed yeast extract, natural flavors from non-meat sources, modified food starch, black malt powder, salt, corn starch, garlic powder, sucrose, onion powder, soy sauce (water, soybeans, salt, wheat), tomato powder, spices, vitamins and minerals [niacinamide, iron (ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12 (cyanocobalamin)].
Wt/Vol., Packaging, Price: 16 oz roll (chub pack). 12 rolls per case.
How Stored: Frozen.

© Copyright Soyinfo Center 2014

New Product–Documentation: Worthington Foods news release. 1995. Nov. 23. "Ohio company introduces new fat free ground meat alternative." Suggested retail price is $2.99. The product "can be used as a healthy addition to any favorite family meal such as chili, spaghetti sauce, lasagna, and is perfect in casseroles and soups. First shipment is set for Jan. 2, 1996." "Fat is still the primary issue when it comes to consumers' nutritional concerns. Over 60% of all consumers report the reduction of fat in their diet is their number one nutritional concern. More than 100 million American adults are now watching their fat intake. Two out of three grocery shoppers, according to the FMI [Food Marketing Institute], indicated that low-fat, fat-free labels are extremely important in their product purchasing decisions."

Worthington Foods. 1996. First quarter financial report. In Jan. 1996 Worthington introduced Morningstar Farms Ground Meatless, which is a fat-free, cholesterol-free precooked vegetable burger product that can be used in items such as chili, spaghetti, pizza, casseroles, and other recipes. Trade response has been positive.

Product profile sheet sent by Worthington Foods. 1996. May 2. Sheet dated Dec. 1995. "Description: Ground Meatless is a savory blend of textured vegetable protein with the versatility to be used like browned ground beef in all your favorite recipes. Precooked for convenience, Ground Meatless burger crumbles are fat free and do not experience shrinkage like beef." Second quarter financial report. 1996. Aug. "The introduction of MSF Ground Meatless continues and 39% national distribution has been achieved." New product description sheet sent by Worthington Foods. 1996. Aug. 22. An illustration shows the package. "Fat free. Precooked. Use like cooked ground beef in chili, spaghetti, pizza." A table compares the nutritional composition of Ground Meatless and ground beef (100 gm): Cholesterol: 0 vs. 48 mg. Total fat: 0 vs. 11.5 gm. Saturated fat: 0 vs. 4.5 gm. Calories: 60 vs. 160.

Holly McCord. 1996. *Prevention.* Oct. p. 56-57. A Prevention taste panel liked this product very much when it was used in place of ground beef in Sloppy Joes. "Taste and texture excellent. Pretty darned close to ground beef. 8.5 mg isoflavones per ½ cup."

3221. Goel, Vindu P. 1996. Columbus company feasts on a meat-free market. *Plain Dealer* (*Cleveland, Ohio*). Feb. 25. p. 1-1, 3-1.
• ***Summary:*** Worthington Foods has gradually moved into the mainstream as a growing number of Americans look for healthier alternatives to beef and sausage. Worthington makes three different meatless burgers. Several national restaurant chains, including Subway and Dennys, sell Worthington's Low-Fat Garden Vege-Patties.

"Worthington Foods controls about 58% of the meat alternative category nationally," and it had sales of $91 million in 1995, up 13% over 1994. Address: Plain Dealer Bureau.

3222. Epstein, Joseph. 1996. Worthington Foods: Green is good. *Financial World.* Feb. 26. p. 20.
• ***Summary:*** "Growing demand for soy-based meat and egg alternatives may look like just another countercultural fad fueled by restless American youth, but hey, you never know.

"One thing is clear: The 'meat-alternative' segment of the food industry is growing at a 20%-plus annual rate."

3223. Stuttman, Irene. 1996. Re: Sycamore Creek soynut butter to be sold by Worthington Foods. Letter (fax) to William Shurtleff at Soyfoods Center, Feb. 29. 1 p.
• ***Summary:*** Today her company is making its first commercial run of soynut butter to be private labeled for Worthington Foods. Len Stuttman is in Chicago overseeing the co-packer.

Talk with Irene Stuttman. 1996. March 4. This product will be sold retail by Worthington Foods. Sycamore Creek is giving an exclusive agreement to Worthington, which will be able to keep that agreement as long as they maintain sales of a certain amount, renewable for 6 months for a certain period of time. They also have to pay Sycamore Creek whether they sell or not. They will probably roll out with two brands nationally from the start–Morningstar Farms for supermarkets, and Natural Touch brand for health food stores. Worthington's marketing team will soon be getting 5,000 lb. The product should be out in about April, when they have ordered 40,000 lb. "This whole idea to go with Worthington was T&G's. They did a fantastic job. They are on a first name basis with all kinds of people because they are ingredient sales people. Moreover they were the former marketers of Solnuts." Address: Sycamore Creek Co., 200 State St., Mason, Michigan 48854. Phone: 517-676-3836.

3224. **Product Name:** [Rice-Based Drink].
Foreign Name: Reis Drink.
Manufacturer's Name: Bruno Fischer GmbH (Importer-Distributor). Made in Belgium.
Manufacturer's Address: Im Auel 88, D-53783 Aetorf, Germany. Phone: 49-2243-4021.
Date of Introduction: 1996 February.
Ingredients: Water, rice* (9%), sunflower oil*, sea salt, sunflower lecithin, natural vanilla extract. * = Organically grown and controlled.
Wt/Vol., Packaging, Price: 1 liter glass bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label sent by Bruno Fischer. 1998. April 15. Ingredients and nutritional value are given in five languages, each with the flag of that country by the product name: German, English, Italian, French, and Dutch. Talk with Bruno Fischer. 1998. May 13. This product was launched in Feb. 1996. Note: Imagine Foods ships a rice beverage base to the UK and packages it

there.

3225. Value Line, Inc. 1996. Worthington Foods [Financial report]. New York, NY. 1 p. Feb. 9. 28 cm.
• ***Summary:*** A concise, detailed financial analysis of Worthington Foods as of 9 Feb. 1996. Address: 220 E. 42nd St., New York, NY 10017-5891. Phone: 1-800-833-0046.

3226. **Product Name:** GranoVita Deluxe Soya Yoghart [Natural, Black Cherry, Strawberry, or Peach & Apricot].
Manufacturer's Name: GranoVita UK Ltd. (Marketer-Distributor). Made in Germany by DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Granovita UK Ltd., Ambron House, Eastfield Road, Wellingborough, Northants NN8 1QX, UK. DE-VAU-GE, Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1996 March.
Wt/Vol., Packaging, Price: 125 gm plastic cup with peel-off foil lid. Retails for £0.37.
How Stored: Refrigerated.
New Product–Documentation: Soyafoods (ASA, Europe). 1996. Spring. p. 4. "Granovita launches Soya Yogharts." These are ambient stable products with a shelf life of 4 months. They contain real fruit with no added sugar, artificial color, or preservatives. A photo shows cups (and labels) of the four different flavored products.

Note: In late 1990, DE-VAU-GE, a Seventh-day Adventist health food company in Germany, set up GranoVita UK Ltd. as a UK subsidiary after the Haldane Foods Group purchased their UK distributor, Granose Foods Ltd.

3227. Worthington Foods, Inc. 1996. Annual report 1995. 900 Proprietors Rd., Worthington, OH 43085. 16 p. 28 cm.
• ***Summary:*** Total sales rose to $91.1 million in 1995, up 13.4% from $88.2 million in 1994. Net income (profit) rose to $5.231 million in 1994, up 20.8% from $4.33 million in 1994. Gross margins improved from 37% in 1994 to nearly 40% in 1995. All three of these 1995 figures were new company records.

Sales of Morningstar Farms (MSF) meat alternative products in retail (supermarket) stores grew by 27% in 1995, increasing by 37% in the 4th quarter alone. The MSF Breakfast Links, now a low-fat product with only 2.5 gm of total fat, has become the best-selling meat alternative product in U.S. supermarkets.

"Foodservice was another bright spot for the Company in 1995. Led by sales agreements which came late in 1995 with over 4,000 new restaurants, including Subway, Denny's, Chili's, Pizzeria Uno, and Marie Callender's, total Foodservice sales increased during the fourth quarter by 43% with sales up 35% for 1995. The strong broker and distributor network assembled in 1994 is starting to pay returns."

By the beginning of the second quarter 1996 the Zanesville plant will start producing meat alternative products.

Note: Talk with George Pfau, stock and bond broker at PaineWebber (San Francisco, California). 1996. April 23. The company's growth in sales and profits from 1991 to 1995 has been good but not spectacular. Dale Twomley, president & CEO, is age 56. William Kirkwood, executive VP and chief financial officer, is age 47. Allan Buller, chairman of the board, is age 78. Their earnings per share fell each year from 1991 to 1993. They haven't raised their dividend for years: it has been $0.10 per share since 1992. In Dec. 1995 Oppenheimer wrote a very positive report about Worthington.

Talk with Joan Lieb of Worthington Investor Services. 1996. 1996. April 23. Two underwriters took the company public: William Blair & Co. (Chicago, Illinois) and The Ohio Co. (Columbus, Ohio). The initial public offering (IPO) was in Dec. 1992; the stock opened at $12.00. Oppenheimer, which has done several more reports since their first one in Dec. 1995, is completely objective and has nothing to gain if Worthington stock rises. Address: Worthington, Ohio. Phone: (614) 885-9511.

3228. Worthington Foods, Inc. 1996. First quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** Net sales for the first quarter of 1996 rose 16% over the same period in 1995, net income rose 21%, and earnings per share rose 18%. The Zanesville $9 million capital expansion project was completed and contract manufacturing arrangements (which contributed to reduced gross margins during the past 3 quarters) have been terminated. Worthington began production of Better'n Burgers and other hot-air oven products at the Zanesville, Ohio, facility on 1 April 1996.

Morningstar Farms Prime Patties are now available as a low-fat item. The total fat content has been reduced to only 2 gm and the flavor and texture have been improved to be even more "hamburger like." They are now in production and will begin to appear on supermarket shelves in the coming weeks.

In Jan. 1996 Worthington introduced Morningstar Farms Ground Meatless, which is a fat-free, cholesterol-free precooked vegetable burger product that can be used in items such as chili, spaghetti, pizza, casseroles, and other recipes. Trade response has been positive.

"Foodservice sales continue to grow rapidly as a result of new accounts, which included 4,000 restaurant units added during the fourth quarter of last year." Worthington VegiMax is now sold in about 1,500 Subway units. "Sales to Chili's have been brisk and Denny's sales are also improving." Address: Worthington, Ohio. Phone: (614) 885-9511.

3229. Worthington Foods, Inc. 1996. Morningstar Farms meatless restaurant guide (Leaflet). Worthington, Ohio. 1 p. Single sided. 28 cm.
• ***Summary:*** This glossy color leaflet is produced by the Morningstar Farms, Foodservice Division of Worthington Foods. "Now you can enjoy delicious Morningstar Farms products in many of your favorite restaurants... here are just a few. National: Chili's, Denny's, IHOP*, Subway*, Blimpie*. * = In participating restaurants only." Restaurants are then listed by region: East (26, incl. World Trade Center). Southeast (10). Southwest (4). Midwest (22). Central (4). West (21, incl. Candlestick Park and Oakland Coliseum–baseball stadiums in California).

Talk with Joan Lieb of Worthington Foods. May 22. This list was published on March 1, and is current as of that date.

This leaflet also appeared unchanged in the June 1996 issue of *Vegetarian Times*, p. 110. Address: 900 Proprietors Rd., Worthington, Ohio 43085. Phone: (614) 885-9511.

3230. Worthington Foods, Inc. 1996. Worthington Foods, Inc. announces new foodservice accounts (News release). Worthington, Ohio. 1 p. April 24.
• ***Summary:*** "Worthington Foods, Inc. (NASDAQ: WFDS) today announced the Company has been authorized to sell its Morningstar Farms VegiMax meatless sub product in 1,500 Blimpie restaurants nationwide and 4,000 Subway locations in 19 markets in the U.S. Additionally, Morningstar Farms` Spicy Black Bean Burger was recently approved by Subway's corporate office for all locations.

"Worthington Foods entered the Foodservice category in 1990 and significantly increased its commitment to the industry through the addition of a nationwide network of regional sales managers, food brokers and foodservice distributors. This was in response to greatly increased demand for excellent tasting, low fat, meatless entrees. Over 7,000 restaurants now serve a Morningstar Farms product.

"For the first three months of 1996, net sales increased 49 percent for Foodservice compared with a year ago. During the fourth quarter of 1995, the Company began shipping Morningstar Farms products to Denny's, Chili's, Pizzeria Uno and Marie Callender's restaurants throughout the U.S.

"Worthington Foods, Inc., located in Worthington, Ohio, is the world's largest company dedicated to producing and marketing meatless and other healthful food products." Address: Worthington, Ohio.

3231. *SoyaScan Notes.* 1996. Who is making Westbrae's soymilk (Overview). May 3. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Until recently, Westbrae's soymilk (not including its Malteds) was being made by several different companies in different parts of the USA: (1) Most of it was made by Pacific Foods of Oregon, in Tualatin, Oregon. (2) Some of it was made by Nutricia at the old Loma Linda Foods plant in Mt. Vernon, Ohio. (3) Not long after that plant was taken over by Carnation / Nestle, Westbrae's production was shifted to Bill Bolduc in Ohio. In mid-1993 he purchased a small soymilk plant at which he made plain, unpasteurized/unsterilized soymilk, then sent it northward to Parmalat Foods (5252 Clay Ave., Wyoming, Michigan 49548. Phone: 616-538-3822). Parmalat is a huge and very significant Italian food company that is the biggest user of Tetra Pak Aseptic packaging in the world. Parmalat packaged the soymilk for Westbrae. As of May 1996, none of the above 3 companies make soymilk for Westbrae any longer.

Then in mid-1995 Bolduc was forced to declare bankruptcy, and apparently the relationship between Westbrae and Pacific Foods was not satisfactory for Westbrae. So Westbrae approached Raj Gupta at ProSoya Inc. in Ontario, Canada. In late April 1996 ProSoya started to make Westbrae's soymilk, apparently using their full capacity of 1-2 tankers a week, which is about 45,000 pounds or 20,000 liters a week. The product is probably shipped to Farmland Dairies, a packer in New Jersey, where it is packed in Westbrae's new 2-liter Combibloc cartons. ProSoya in Ottawa is also obligated to do quite a bit of R&D work for the Canadian government. It is not clear why or what kind of compensation they receive for this.

The rest of Westbrae's soymilk is made by Northern Milk Products (related to SunRich) in Alexandria, Minnesota. Several tankers a week are shipped to Parmalat in Michigan.

ProSoya would like to set up a soymilk plant with Westbrae (probably in the USA) on a joint venture basis.

3232. Roller, Ron. 1996. How American Soy Products (ASP) disposes of the okara resulting from making Edensoy (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** ASP is the largest manufacturer of soymilk in North America. Located in the rural city of Saline, Michigan (population 6,500; about 9 miles south of Ann Arbor), they are bounded on the south and west by diversified agricultural land. The ASP plant produces about 1,000 lb/hour of okara, which contains on average 80% water (range 78-82%) and 6.7% protein. The okara comes out of a high-speed decanter. 100 lb of dry soybeans yields 75-100 lb of okara. Ron has an arrangement with one farmer, who owns two large trucks, who comes to the plant each night in one of the trucks, leaves it under the okara spout, and drives the full truck away. These two trucks are used only for hauling okara. ASP pays this man a significant amount of money (which is confidential) each year to haul the okara; in fact Ron estimates that the money may be of more value to the farmer than the okara itself. Ron estimates that this farmer composts

© Copyright Soyinfo Center 2014

about 90% of the okara and adds the remaining 10% to feed for his milk cattle. Cattle are pretty sensitive to a change in their diet, and the wet okara is hard to mix. Ron believes it would be much more difficult and expensive to dispose of okara from a city plant than from his in the countryside.

All of the okara must be hauled away regularly every day. This is the most important thing! The operation must be organized and the person doing the hauling must be reliable. If he missed even one day, it would a nightmare! The okara piles up so fast and Ron would have no idea of what to do with it. The local dump wouldn't take it. The okara freezes in the winter and ferments (putrefies) in the summer.

The amount of okara that ASP produces each year is steadily growing, so Ron is now doing research and planning for the future. The best option appears to be drying the okara then selling it as an ingredient in organic livestock or pet feeds–but they have not yet found a dependable outlet, and dependability is–again–the key. With a dependable outlet, Ron believes they could pay for the drier and make money on it. They have also looked at pelletizing. Drying requires both a large initial investment in a continuous process operation (ideally made with stainless steel so the dried okara would be food grade) and use of a large amount of energy to remove all that water. On a moisture free basis, okara contains 34% protein (of very high quality) and 49% carbohydrates. Okara with 10% moisture (a realistic figure after drying) contains 32% protein and 37% carbohydrates. Outlets for dried okara in food might include use in a burger, in breads and muffins, etc. Worthington Foods has made their Natural Touch Okara Patties since March 1984; okara is the 4th ingredient in order of predominance. Northern Soy has made Soyboy Okara Courage Burger since April 1995; okara is the 3rd ingredient. Many companies make Soysage. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

3233. Kuhn, Mary Ellen. 1996. Soy in the spotlight: Disease-fighting benefits may change the image of the once-lowly bean. *Food Processing* (*Chicago*). May. p. 52-53, 55, 58.
• ***Summary:*** This is a cover story; on the cover is written: "Unlocking the secrets of soy," with four large color photos. The article begins: "What a difference a couple of decades make." Twenty or 30 years ago, most foodservice operators and consumers used soy with hesitation, sometimes scornful comments. "Today, however, the once-maligned soy protein has a much better image, thanks to a fast-mounting stack of research data suggesting it may help prevent and treat high blood cholesterol, cancer, osteoporosis, and symptoms of menopause." And this good news has begun to reach health and nutrition professionals. With better products on the market, "soyfoods marketers may soon be dealing with a new generation of mainstream consumers who–far from spurning soy-based products–actively seek them out.

"Much of the current soy research is focused on isoflavones, a unique class of phytoestrogens or plant hormones found primarily in soy protein." The main soy isoflavone is genistein. Now soyfoods manufacturers are starting to take isoflavone content into consideration when they formulate, label, and promote their products. The isoflavone content of unprocessed soybeans can vary considerably among varieties, years, and place of harvest. Heat treatment does not appear to significantly reduce isoflavone content, but an alcohol wash (used with most soy protein concentrates and isolated soy proteins) removes most isoflavones in the product. The well-known Supro brand of isolated soy proteins are not subject to an alcohol wash, which helps preserve their isoflavone content.

Rick McKelvey, president of the Soyfoods Association of America, has attended the American Dietetic Association show for the past two years. Last year, most of the questions he heard were: "What is this soy stuff that I'm hearing about?" This year's questions concerned the level of isoflavones in specific products. "This shows how far we've come in the bast year," he observes.

ADM, which could easily extract isoflavones from soybeans and sell them has decided not to do so. Jerry Weigel, PhD, who is ADM's vice president of corporate nutrition and regulatory affairs thinks it is probably not legal to sell isoflavones because they do not have GRAS (Generally Recognized as Safe) status or food additive status. Few soyfoods marketers are presently publicizing the isoflavone or genistein content of their products or making specific health or disease-prevention claims.

William Helferich, PhD, an associate professor at Michigan State University's Department of Food Science and Human Nutrition, has been studying dietary phytoestrogens in laboratory animals for 3 years. He has found that "genistein can stimulate estrogen-responsive breast cancer-cell growth in cultured cells and in animals implanted with these cells. He believes that women at risk for estrogen-dependent forms of breast cancer should not consume high levels of phytoestrogens." Most researchers are concerned about consumers taking isoflavone supplements or pills. Yet such products are now on the market and they acknowledge that some consumers will be attracted to them, instead of simply increasing the level of soyfoods in their diet, eating a healthful, balanced diet, and living and healthy lifestyle. Photos show: A jar of Morningstar Farms Roasted Soy Butter (soynut butter) which will be introduced this spring. Jan Remak, president of marketing for Vitasoy U.S.A.

One sidebar, titled "Probing the soy/health connection," discusses the research of Dr. James Anderson and Mark Messina, PhD. "Scientists theorize that phytoestrogens in soy might help compensate for the loss of hormonal estrogen women experience at menopause."

Another sidebar, "Boom times for the bean," notes that starting soon after the research study by Dr. James

© Copyright Soyinfo Center 2014

Anderson was published in August 1995, many soyfoods companies experienced a substantial increase in sales. Peter Golbitz notes that "After years of steady 10% to 15% annual growth, soyfood sales have soared by about 30% in the past year... Many marketers of meat and dairy analogs are reporting sales increases of more than 100%." A 1995 study by the Soyfoods Association of America found that 75% of Americans have heard of tofu, 55% of soymilk, and 50% of soy burgers. Golbitz adds that in Australia, where soymilk based on soy protein isolates is widely available, per capita soymilk consumption is at least three times what it is in the USA. Vitasoy has adopted a niche-market approach to selling its soymilk; it adjusts the amount beany taste according to the taste preferences of each market. Address: Senior Editor.

3234. **Product Name:** Morningstar Farms Prime Patties (Low Fat–Reformulated).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1996 May.
Ingredients: Textured vegetable protein (soy protein concentrate, wheat gluten), egg whites, calcium caseinate, natural and artificial flavors from non-meat sources, autolyzed yeast extract. Contains 2% or less of modified food starch, sucrose, hydrolyzed soy protein, onion powder, soy protein isolate, salt, potato starch, yam flour, partially hydrogenated soybean and cottonseed oil, caramel color, cellulose gum, soy extractives, maltodextrin, ascorbic acid, lactic acid, disodium guanylate, vitamins and minerals [niacinamide, iron (ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12 (cyanocobalamin)], spices.
Wt/Vol., Packaging, Price: 11 ox paperboard box.
How Stored: Frozen.
Nutrition: Per patty (780 gm): Calories 110, calories from fat 20, total fat 2 gm (3% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 300 mg (13%), potassium 170 mg, total carbohydrate 5 gm (dietary fiber 3 gm [12%], sugars less than 1 gm), protein 19 gm. Vitamin A 0%, calcium 6%, thiamine 40%, niacin 6%, viatmin B-12 60%, vitamin C 4%, iron 15%, riboflavin 20%, vitamin B-6 20%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Worthington Foods. 1996. First quarter financial report. Morningstar Farms Prime Patties are now available as a low-fat item. The total fat content has been reduced to only 2 gm and the flavor and texture have been improved to be even more "hamburger like." They are now in production and will begin to appear on supermarket shelves in the coming weeks.

Photocopy of label sent by Worthington Foods. 1996. May 2. Below the product name is written: "87% less fat than hamburger. Big juicy burger taste. Vegetable & grain protein patties. Low fat."

3235. Messina, Mark J. 1996. Thoughts on pills containing soy isoflavones, and the use of soy in place of estrogen replacement therapy (ERT) (Interview). *SoyaScan Notes.* June 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** What does Mark think about all the pills containing soy isoflavones (such as genistein, often in the form of "soy germ" from SoyLife / Schouten) that are starting to flood the market. They could cause serious problems. In the most recent issue of the *Soy Connection*, Mark has written about these pills. Recently Laurent Leduc of Schouten USA Inc. in Minnesota (phone: 612-920-7700) hired Mark to speak to ten employees at Nature's Way, because they are coming out with the pills. He made a video of the speech to be used by their sales people. Laurent may hire Mark to go to the Netherlands or Germany after the Brussels symposium to give a presentation there as well. If a major company offered Mark a year-long, lucrative contract to give one speech every two weeks to promote one such pill containing genistein, he definitely would not accept it. If he told people the truth, they would ask him to stop mentioning all the negative aspects.

Another problem with these pills, besides the philosophical one, is that the concentration of genistein is really tiny; its all daidzein and glycitein. Of the 20 mg per pill of soy isoflavones, only about 2 mg are genistein, because the composition of isoflavones in the hypocotyl [sprout] is different from that in the rest of the soybean. So if you're buying the pills because you want genistein, you must take 10 pills a day to get enough genistein to matter, whereas if you think just in terms of isoflavones, two pills is enough. From an anticancer perspective, most researchers are focusing on genistein. Some 600 papers have been published in the last 2 years on genistein; there were probably 50 or less on daidzein. Mark manually goes through *Current Contents* periodically, but now actually gets no more than about 50 genistein papers a year, because they are quite similar, and usually involve *in vitro* studies (in test tubes and petri dishes), whereas animal studies are needed.

If a company were to introduce concentrated genistein as a commercial product, Mark believes there is the potential for significant damage to the soyfoods industry and the image of soy. Mark thinks the idea of "adding genistein to this and that is absolutely insane."

Concerning the use of soy for estrogen replacement therapy, this is complex. ERT does raise a woman's risk for breast cancer. But taking soy may not eliminate that risk in postmenopausal women. However ERT has several major benefits; it decreases heart disease risk by 50% and fracture rate (osteoporosis) by 50% as well. So if a woman wants to just relieve hot flashes, night sweats, etc. and is not concerned about cardiovascular disease and osteoporosis, then Mark would suggest that she try soy; if it works, good.

© Copyright Soyinfo Center 2014

But if the woman and is concerned about cardiovascular disease and osteoporosis, then Mark cannot recommend soy over ERT. We just don't know enough about soy in these areas.

When you look at all the studies from a very objective viewpoint, Mark just doesn't see what people find so exciting about soy in many respects at this point. It is very intriguing because of what the isoflavones may do; they were hypothesized to do all sorts of different things and soy has so much of the isoflavones, especially a food like tofu–which is the only place a typical consumer can get enough isoflavones except for these pills. So in conclusion, Mark strongly that soyfoods can and should be a very important part of a healthy vegetarian diet. But perhaps one can get the same effects on a Mediterranean diet in terms of lipid profile and cancer risks.

It is becoming extremely difficult for Mark to present his soy lectures to dietitians which the United Soybean Board (USB) has hired him to do for the past year. He is not greatly disappointed that they dropped him because of a chapter that appears in his and Ginny's new book *The Vegetarian Way* that talks about animal rights.

Hans Diehl is a Seventh-day Adventist and a vegan who is setting up what he calls the CHIPS Program, an integrated approach to health, in various cities across America. Now a main center of his activity is in Kalamazoo, Michigan. Twice a year he goes there, works with the local hospital and restaurants, gives 4-week intensive programs of smoking cessation, weight loss, diet change, exercise, etc. It's really great and he tries to get the whole town involved. Mark speaks with him from time to time, last time to about 500 people. He sold a lot of books. Mark's thing is to say "Soy is good and vegetarianism is good," but he is increasingly aware of the complexity of the argument. For example, he does not feel that small amounts of meat or white rice are bad for the health of other people. This type of honesty bothers many other vegetarians, who usually do not have a strong scientific background.

Mark will soon start editing a peer-reviewed journal on vegetarianism to be published in England and targeted to health professionals. Unfortunately the subscription price will be very expensive, beyond what many dietitians could afford. This will give him a valuable and prestigious affiliation, bring in editors fees of about $2,000 a year, and could lead to speaking invitations. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

3236. Harvest Direct, Inc. 1996. Harvest Direct: Food you can live with [mail order catalog]. Knoxville, Tennessee. 16 p. 27 x 16 cm.

• ***Summary:*** Contents: Salad dressings. Meals in a minute (Fantastic Foods). Ground meat alternatives (Protean–The versatile replacement for ground meat, Harvest Direct). Soups, spices, condiments. TVP. Ribs, tofu & tofu meals (Fantastic Foods, Mori-Nu, Arrowhead Mills). Meat Alternatives (Worthington Foods, Fantastic Foods). Soup & meal cups. Beans & Beano. Pasta & sauces. Breads & baked goods. Substitutes for sugar, eggs & fat. Dairy alternatives. Baby foods. Glassware. Gift baskets.

On the cover are nine round, dark brown patties arranged in a circle on a blue and white plate. In the center is a sliced red grapefruit, with a strawberry at its center, blueberries scattered around the periphery, and one sprig of celery. Address: P.O. Box 988, Knoxville, Tennessee 37917. Phone: 1-800-835-2867.

3237. **Product Name:** Morningstar Farms Veggie Burger Kit [Garden Grille, or Southwestern].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1996 June.
Wt/Vol., Packaging, Price: 9.5 oz (268 gm) paperboard box.
How Stored: Shelf stable.
New Product–Documentation: Worthington Foods. Second quarter financial report. 1996. Aug. "Veggie Burger Kits have just started appearing in a few produce sections of supermarkets. It is too early to determine the sales potential of this product, but it has generated a lot of interest with newspaper food editors."

Talk with Joan Lieb of Worthington Foods. 1996. Aug. 22. This product was introduced on 1 June 1996. Two product description sheets sent by Worthington Foods. 1996. Aug. 22. (1) "Create healthy profits! Grow impulse sales in your veggie patch." The products are sold in a Prepack Shipper Display Case, including 48 units. This is meant to be placed near the high-margin pre-cut vegetables. The text on the case reads: "Fat free. Create your own fresh veggie burgers in minutes! Just add fresh veggies." The text on the front of the package reads: "Ready in minutes. Just add fresh veggies. Makes 4 servings." Note: The words "Dry mix" do not appear. (2) "Veggie Burger Kit: Garden Grille & Southwestern." Talk with Trudy of Worthington Foods. 1996. Oct. 3. (1) This is a dry mix. (2) Each box contains two packages; one contains soy protein granules and one that contains flavors and binders. The box does not contain any buns. (3) The consumers mixes the contents of the two packets, adds water, makes a patty. Then has to supply their own buns and vegetables. Note: This literature is extremely unclear and confusing on what this product is. Nowhere in the literature or on the front of the package is the information provided by Trudy given.

3238. Beeley, Robert A. 1996. A brief history of Dixie USA and the company philosophy (Interview). *SoyaScan Notes.* July 31. Conducted by William Shurtleff of Soyfoods Center.

© Copyright Soyinfo Center 2014

• ***Summary:*** Forty some years ago, Robert started out with a burning interest in emergency medicine. This continued into the Air Force, where he was in the medical corps, teaching for the American Heart Association, etc. About 20 years ago he started Dixie USA as an emergency medical supply company. The company has done very well and Robert is still in that business, but it is tapering off for many reasons, none the least of which is the consolidation in the medical industry, etc.

About 15 years ago Brenda Oswalt, joined the company as an equal partner with Robert–primarily for her artistic, writing, and publishing skills. She was raised a Seventh-day Adventist and was trained at the Cordon Bleu in France as a chef. About 2-3 years ago they saw the handwriting on the wall as far as the medical part of their business is concerned, so they said: We've been treating these poor people all this time, why don't we start trying to help prevent their problems." One thing led to another and now they are very much into the preventive food business by mail order. They kept the same company, Dixie USA, but now have two product lines and two catalogs. But their approach is quite different from most others who are in the so-called health food business. They have a couple of key rules: (1) "If it doesn't taste excellent, we will not get involved with it." People should enjoy eating and shouldn't have to look at it as some kind of task they have to endure. Meal time should be an enjoyable time with family and friends–a glass of wine if you want. (2) "Once a week you can go out and blow the whole thing if you want to. Eat a big steak if you must. We're trying to tell people that you can have a healthier lifestyle and still enjoy life. Splurging one day a week won't hurt you at all. Eating soy the next day will help you flush out whatever toxins are left in there. We're very pragmatic people here.

They have developed a lot of their own recipes and today they have almost new 10,000 customers on their food mailing list. After they started the company, Mark Messina's book, *The Simple Soybean and Your Health* was quite influential in focusing their interests on soy. Dixie USA now sells quite a few of Mark's books. Brenda talks with Mark at length about once a week, sharing information. Fat Not! Crème It (Soy Powder) is a tofu powder made by Clofine. Brenda developed a great recipe for using it and now it is one of the company's best sellers. They also sell Mori-Nu Tofu. Beef (not!) is ADM TVP. Address: Chairman, Dixie USA Inc., P.O. Box 55549, Houston, Texas 77255. Phone: 713-688-4993 or 1-800-233-3668.

3239. **Product Name:** Morningstar Farms Roasted Soy Butter [Reduced Fat].
Manufacturer's Name: Worthington Foods, Inc. (Marketer-Distributor). Made by Sycamore Creek Co.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 614-885-9511 or 1-800-628-3663.
Date of Introduction: 1996 July.
Ingredients: Roasted soybeans, soybean oil, corn syrup solids, soy protein isolate, sugar, salt, mono- and diglycerides.
Wt/Vol., Packaging, Price: 18 oz (510) plastic (PET) jar.
How Stored: Shelf stable.
Nutrition: Per 2 tablespoons (32 gm.): Calories 175, calories from fat 100, total fat 11.0 gm (17% daily value; saturated fat 1.5 gm), cholesterol 0 mg, sodium 170 mg (7%), total carbohydrates 10.5 gm (dietary fiber 1.0 gm [4%], sugar 2.5 gm), protein 8.0 gm (16%). Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Letter (fax) with Label from Irene Stuttman of Sycamore Creek Co. 1996. Feb. 29. Today her company is making its first commercial run of soynut butter to be private labeled for Worthington Foods. Len Stuttman is in Chicago overseeing the co-packer.

Mary E. Kuhn. 1996. Food Processing (Chicago). May. p. 55. "Soy in the spotlight." A photo shows a jar of Morningstar Farms Roasted Soy Butter. On the label, below the product name, is printed: "A good source of soy protein. Contains no peanuts." A snipe in the upper right corner reads: "Reduced fat: 33% less fat than peanut butter."

Talk with Irene Stuttman of Sycamore Creek. 1996. June 11. Worthington will sell this product under two brands. The Natural Touch product, sold to natural- and health-food stores, should be on the market this month (June). The Morningstar Farms brand, sold to supermarkets and other mainstream consumers, should be out by July.

Label sent by Irene Stuttman. 1996. Aug. 9. 9 by 3 inches. Self adhesive. Red, blue, and yellow on green and white. Subtitle: "Made from roasted soybeans. Contains no peanuts." Snipe: "Reduce fat–31% less fat than peanut butter."

3241. Worthington Foods, Inc. 1996. Second quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** Net sales for the second quarter of 1996 rose 20% over the same period in 1995, net income rose 46%, earnings per share rose 43%, and gross profit improved one full percentage point, as a percentage of net sales, to 39.1%. Sales of meat alternative products in the Supermarket and Foodservice categories increased 34% and 48% respectively. Foodservice sales were up at Subway units, and the Chili's and Denny's restaurants. Nationwide, the meat alternatives category is growing at about 32% a year. During the most recent quarter the company began full operation of its Zanesville, Ohio facility and eliminated contract manufacturing agreements. A second shift was added at Zanesville and 3 additional shifts are being added at the Worthington plant.

The introduction of MSF Ground Meatless continues and 39% national distribution has been achieved. Veggie Burger Kits have just started appearing in a few produce sections of supermarkets. "Three new MSF Low-Fat Breakfast Sandwiches are currently being introduced in selected markets. These hand-held sandwiches are ready for heat-and-run."

Sales to natural food stores increased 32%. "Recently we converted all of our sales to natural food stores to a national broker network that we manage... Last month three new products were introduced to this market–the Natural Touch version of Spicy Black BeanBurger, Roasted Soy Butter that tastes like peanut butter with 31% less fat, and a cappuccino version of our coffee substitute, Kaffree Roma." Address: Worthington, Ohio. Phone: (614) 885-9511.

3242. **Product Name:** Morningstar Farms Breakfast Bagel Sandwich [Scramblers–Pattie–Cheese].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1996 August.
Ingredients: Breakfast patty: Textured vegetable protein (wheat gluten, soy protein concentrate and isolate), egg whites, sodium caseinate, modified food starch, soybean oil...
Wt/Vol., Packaging, Price: 5 oz (146 m) paperboard box. Retails for $2.19 (1997/05, Lafayette, California).
How Stored: Frozen.
New Product–Documentation: Worthington Foods. Second quarter financial report. 1996. Aug. "Three new MSF Low-Fat Breakfast Sandwiches are currently being introduced in selected markets. These hand-held sandwiches are ready for heat-and-run."

Talk with Joan Lieb of Worthington Foods. 1996. Aug. 22. This product is scheduled to be introduced in Sept. 1996.

Talk with Trudy at Worthington Foods. 1996. Oct. 3. This product is sold frozen, mostly to grocery stores–not to restaurants or foodservice. Worthington started shipping in early August.

Product with Label purchased at Safeway supermarket in Lafayette, California. 1997. May. 4. Price: $2.19. Sold in the "Breakfast Foods" freezer section. Paperboard box. Red, yellow, blue, and orange on green. A color photo shows the product on a white plate with kiwi slices. "Low fat." Soyfoods Center taste test. 1997 May 4. The flavor is okay, but the product seems overpriced.

3243. Highman, Jay. 1996. Worthington's policy on licensing technology to other companies. Thoughts on building a plant overseas. New Web page under development (Interview). *SoyaScan Notes.* Sept. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Worthington does not license technology to other corporations, mainly for two reasons: (1) There are many top secret techniques used in the technology, and, (2) The company is focusing all of its resources (money and attention) on keeping up with demand in the domestic market. They do a large export business, to countries such as Taiwan and the United Kingdom. Not much is exported to Australia because Sanitarium Foods makes similar products there.

Worthington is not considering construction of an overseas plant (as in England) because the domestic market is their first priority. "We're having a hard time keeping up with demand." Jay thinks there is a big market in the UK, and there could be a long-term opportunity there. Roughly 60% of the reason for not looking overseas is related to money and the other 40% would be the loss of focus from trying to do two things at once.

Worthington is developing a web page; Jay is in charge of it. He would to have a cross-link with Soyfoods Center. Address: Senior Manager of Marketing and Sales for the specialty markets, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085. Phone: 614-885-9511.

3244. Sheridan, Margaret. 1996. Is tofu ready for the big leagues? *Los Angeles Times.* Sept. 26. p. H8, H10, H11.
• ***Summary:*** The article begins: "Tofu, the spongy off-white soybean cake that spells B-O-R-I-N-G for so many people, is about to get a marketing makeover. Slick packaging, toll-free consumer hotlines, new products, and a blitz of cookbooks created by chefs rather than earnest vegetarian activists are some of the strategies tofu companies plan to use to bring tofu into the mainstream." A number of second generation tofu products found in supermarkets, and forthcoming cookbooks are listed.

"But some advertising and marketing professionals say that's not enough." The author talks with many such people who dislike tofu for various reasons: "Tofu is a joke... Tofu is a sissy. Bland, white, boring. It needs to take a stand. Become something. And that name! Its terrible." "Tofu goes against the American palate... Very little in American food, except baby food or gelatin, has that texture. Even buying tofu is alien. What else do you buy floating in water? And Americans love convenience. Bean curd is anything but. It's not an open-and-eat product." "I buy tofu but it just sits there, floating in my refrigerator. It makes me feel stupid and guilty. What do you do with it? I end up tossing it out." Hinoichi is America's largest tofu manufacturer. In March 1997 the company plans to move from its present 50,000 square foot plant in Los Angeles to a facility three times that size in Garden Grove. Harry Tanikawa, Hinoichi sales manager, notes that tofu and soy have been helped by good research and press from the medical community. He adds: "When you see fast-food places such as Panda Express in the shopping malls adding more tofu items to the menu, when you can buy a tofu hot dog at Dodger Stadium, you know tofu has arrived." Note: Dodger Stadium is a major league baseball park in Los Angeles.

Worthington Foods has experienced a sales rush in meat alternatives; the category went from nothing four years ago to $150 million a year. The company's best-selling items, sold under the Morningstar Farms brand, are breakfast patties, sausage links, garden burgers, and spicy black bean burgers–according to Don Burke, executive vice president of sales and marketing. The people who buy Worthington products are "the masses, people who want to cut down a little on meat and saturated fat. Most are aging baby boomers who want taste, convenience, and a health benefit."

Tofu "recipes for the mainstream" include: Red flannel hash. Mushroom scrambler. Tofu-stuffed French toast. Tofu slaw. Tofu citrus shake. Tofu cheesecake (p. H11).

The article ends with two sidebars: 16 "Tofu do's and don'ts." Soy food: Its many looks (p. H11)–Defines different soyfoods: Tempeh, miso, textured vegetable protein (TVP), soy milk, soy flour, soy cheese, soy sauce, tamari. Address: Times staff/food writer.

3245. **Product Name:** Morningstar Farms Breakfast English Muffin Sandwich [Scramblers–Pattie, or Scramblers–Pattie–Cheese].

3246. Longa Life Vegetarian Products Pty. Ltd. 1996. United States Products: Dietary information and product information (Leaflet). Yatala, QLD, Australia. 1 p. Single sided. 28 cm.
• ***Summary:*** This photocopied black-and-white leaflet gives dietary, nutritional, and ingredient information on the following products: Notchicken, Notham, Notbacon, Notpepperoni, and Notchicken Nuggets. All are vegetarian and free of MSG. The first two are vegan, egg free, and dairy free. All are Halal (like kosher for Moslems). Two contain less than 0.3% gluten. In the first two products, the main ingredient is wheat gluten; in the others it is soy protein.

The U.S. distributor for these products is: United Specialty Foods Inc., 2475 Bransford Ave., Nashville, Tennessee 37204. Phone: 615-269-7476. Talk with Don Michalenko, founder and head of United Specialty Foods. 1997. April 4. He was with Worthington Foods for 8 years as national sales manager for their natural foods line.

Longa Life Foods started about 10-12 years ago by a man who was a butcher, who became a Seventh-day Adventist and a vegetarian. People encouraged him to start line of meatlike vegetarian products. The managing director is an entrepreneur and the butcher is still one of the partners. Address: 6 Binary St., Yatala (near Brisbane), QLD 4207, Australia. Phone: +61 7 3807-2433.

3247. McCord, Holly. 1996. Let 'em eat crumbles [Textured soy protein granules]. *Prevention* (*Emmaus, Pennsylvania*). Oct. p. 56-57, 60.
• ***Summary:*** Crumbles (a term coined by the author) are healthy new soy products designed to mimic the taste and texture of crumbled ground beef–with zero fat. They are now appearing, usually in the freezer case of supermarkets and natural food stores. They have many amazing pluses: Most are fat free and low in calories. They are very convenient, requiring no pre-cooking–just add them to your recipe. "Some crumbles contain isoflavones, which are natural compounds in soy that may help fight breast and prostate cancer, heart disease, osteoporosis... even hot flashes. Because crumbles are meatless, there is no chance of heterocyclic amines, possible cancer-causing compounds that develop when you cook ground beef or poultry using high heat."

Recently a prevention team sampled Sloppy Joes made with the following crumbles products: (1) Morningstar Farms Ground Meatless ("Taste and texture excellent. Pretty darned close to ground beef"). (2) BeefNot! (contains 62 mg isoflavones). (3) Green Giant Harvest Burgers for Recipes ("Definite smoky flavor. Larger pieces than the others"). (4) Lightlife Meatless GimmeLean! ("It tastes lighter than real ground beef–I like it better"). Photos show: Holly McCord. A burger with buns. Address: RD, Nutrition editor.

3248. Worthington Foods, Inc. 1996. Who says a fat-free burger has to taste like one? (Ad). *Vegetarian Times.* Oct. p. 3.
• ***Summary:*** This full-page, color ad is for Morningstar Farms Better 'n Burgers–Fat Free. A large photo shows a meatless burger between buns with all the trimmings, next to an ear of corn on a plate. "Now you can enjoy a big, juicy burger and hold the guilt, when you try Morningstar Farms Better 'n Burgers. Because they're all vegetable. And all natural. All that's missing is the fat. Bake them. Microwave them. Or throw them on the grill. And they'll satisfy your burger craving. Remember, when you help yourself to Morningstar Farms, you really are helping yourself. Look for them in your grocer's freezer." The name of the company (Worthington) does not appear in the ad.

This ad also appeared in the Feb. 1996 issue (rear cover) of this magazine. Address: Worthington, Ohio 43085.

3249. Worthington Foods, Inc. 1996. Third quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** Net sales are up 20% for the first 9 months of 1993 compared with the same period one year ago. Third quarter sales are up 22.5%. Even better, net income (profits) for the first 9 months of 1995 are up 38.5%, and for the third quarter are up 44%. Gross profit for the third quarter was 40.2% of net sales.

Foodservice sales increased 47.5%, the fifth consecutive quarter with sales increases over 40%. The company has introduced 16 new products during the first nine months of 1996. The board declared a four-for-three share split to be distributed on 6 Dec. 1996. The board also approved a $11.5 million capital expansion at the Zanesville plant. A second production line will be added "to produce hot-air oven veggie burgers." Address: Worthington, Ohio. Phone: (614) 885-9511.

3250. Worthington Foods, Inc. 1996. Natural Touch. 900 Proprietors Rd., Worthington, OH 43085. 4 panels. 28 cm. Undated.
• ***Summary:*** This color catalog shows each of the products in Worthington's Natural Touch line, which now contains about 17 products. For each product there is a color photo of the label, a brief product description, ingredients, and Nutrition Facts. "Veggie Burger Kits" are include in this latest catalog. Inserted into this catalog are large (8½ by 11 inch) single-sided product sheets for Vegan Crumbles, Veggie Burger Kits, and Roasted SoyButter.

On the front of the catalog, in large letters, is a "Purity Pledge: Natural Touch products are completely free of anything artificial... no artificial additives, colors, flavors or preservatives... you have our word on it."

Talk with marketing rep at Worthington Foods. 1997. May 14. This catalog was printed in late 1995. When asked if these products now contain genetically engineered soybeans he says "I don't know. Talk to Ron McDermott." Address: Worthington, Ohio. Phone: 1-800-628-3663.

3251. **Product Name:** Natural Touch Vegan Burger Crumbles, or Vegan Sausage Crumbles (Fat Free).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1996 October.
Ingredients: Vegan Burger Crumbles: Textured vegetable protein (wheat gluten, soy protein concentrate), water, contains 2% or less of autolyzed yeast extract, natural flavors from non-meat sources, modified food starch, black malt powder, salt, corn starch, garlic powder, sugar, onion powder, soy sauce (water, soybeans, salt, wheat), tomato powder, spices,...
Wt/Vol., Packaging, Price: 1 lb roll (chub pack).
How Stored: Refrigerated.

New Product–Documentation: Leaflet (glossy color, single sided, 8½ by 11 inches) sent by Patricia Smith from Natural Products Expo East. 1996. Oct.

3252. Gerstner, Patsy. 1996. The temple of health: A pictorial history of the Battle Creek Sanitarium. *Caduceus* (*Southern Illinois University School of Medicine*) 12(2):1-99. Autumn. Special issue. [101* endnotes]

• ***Summary:*** This special issue, a nicely bound book with a color illustration on the cover, offers a remarkable look at the Battle Creek Sanitarium, including 115 photos, illustrations and other graphics, and a well-written text and balanced appraisal.

Contents: Acknowledgments. 1. From gentle obscurity to worldly fame, 1866-1902. 2. The temple rises from the ashes. 3. The treatment. 4. Never enough space. 5. A moment of glory, 1928 and after. 6. The Battle Creek Sanitarium: An appraisal. 7. Further reading and notes. Picture credits. About the author (and Garth "Duff" Stoltz's remarkable collection of Sanitarium memorabilia). "Certainly the Sanitarium was one of the grandest experiments in health care in the nineteenth and twentieth centuries" (p. 99).

Soy acidophilus milk contained a bacillus similar to the one in yogurt that created lactic acid. Intended "to suppress the putrefactive bacteria in the colon and replace them with 'good' bacteria," this soy-based milk "became a standard item on the Sanitarium menu after 1915" (p. 43).

"Among his [Dr. Kellogg's] most successful efforts were Sanitarium exhibits at the World's Columbian Exposition, the great fair held in Chicago [Illinois] in 1893, and the Louisiana Purchase Exposition, the 1904 world's fair held in St. Louis [Missouri]... Kellogg and others began to refer to the Sanitarium as a 'University of Health'" (p. 81).

"Kellogg recognized the importance of endorsements from well-known personalities... Henry Ford was not only a frequent visitor but the first guest in the 1928 Towers addition. Other famous visitors were presidents William Howard Taft and Warren G. Harding,... arctic explorer Roald Amundsen, industrialist John D. Rockefeller, grape juice manufacturer Edgar Welch, author Upton Sinclair, educator Booker T. Washington, aviatrix Amelia Earhart, and merchandisers J.C. Penney, Montgomery Ward,... First Lady Eleanor Roosevelt was among the noted visitors, but not as a patient" (p. 81).

Figures (Photos unless otherwise stated): (1) People in the grand parlor, Battle Creek Sanitarium (the San), 1880s. (2) Ad for the Health Reform Institute in Battle Creek (1870s), forerunner of the San. (3) Illustration of John Harvey Kellogg, in his early 20s, shortly after he became superintendent of the Western Health Reform Institute. (4) Illust. Dansville, New York, water-cure facility. (5) Exterior of the Western Health Reform Inst. in 1866. (8) Illust. "Women and men share a workout in the gymnasium, 1888." (9) Woman at the punching bag, 1910. (10) The Sewing Department, ca. 1915. (11) Exterior of the 1878 building–5 stories. (12) Diagram of the first floor. (13) Audience in Grand Parlor awaits a lecture; inset illust. shows a doctor interviewing a patient. (14) Illust. Typical San guest room, 1888. (15) Rate card from 1888, showing all basic costs / expenses. (16) The Sanitarium Hospital, completed in 1888. (17) By 1895, the San had been enlarged by a 5th story plus two additions. (18) Menu for dinner, July 15, 1888. (19) Leaflet promoting Sanitarium Training School of Nurses. It opened in 1883 with a six-month program. It grew to a full two-year course. (20). The front of an urban vegetarian restaurant and "Battle Creek Sanitarium Treatment Rooms," location unknown. (21) The dispensary of the Chicago Mission. The sign reads: "American Medical Missionary College: Dispensary." Constructed 1887. (22) Dr. John Harvey Kellogg poses ca. 1895 seated outdoors with some members of the medical and nursing staff. (23) The fire of 18-19 Feb. 1902; it burned the main San building and the hospital to the ground. Only one patient died in the fire. San losses were valued as high as $400,000 and the loss of guests' personal property as high as $500,000. (24) A group of San employees by the ruins. (25). Laying of the cornerstone for the new San on 4 May 1902. (26) Aerial view of the huge new San from the rear, showing the gymnasium and two treatment wings. (27) Entrance to the San. (28) The loggia. (29) A patient wearing the blanket / robe designed by Dr. Kellogg. (30) A Porte-air directing fresh air to the head of a patient in bed. (31) The Grand Lobby, with a "Ladies Corner" at center back. (32) Guests in the Grand Parlor. (33) A guest room being prepared for a new arrival. (34) The San switchboard, 1903. (35) Guests at the roof promenade. (36) The San kitchen. (37) Diagrams of the grounds and buildings of the Battle Creek Sanitarium. (38-39) Scenes from the San laundry, ca. 1910. (40) The annual ice caravan (pulled by horses) makes its way to the San. (41) Many patients being led in outdoor breathing exercises. (42-45) San patients receiving a thorough medical examination. Note: Between 1890 and 1898 Dr. Kellogg adopted the theory of "autointoxication" (mainly from the colon) as the most important cause of disease. (46) A laboratory; an important aspect of diagnosing autointoxication was laboratory analysis of body wastes. (47) Menu of special dietaries. (48) The food booth, located just outside the Palm Garden. (49) Local Rotarians having dinner in one of Dr. Kellogg's dairy barns as a demonstration of its cleanliness. (50) Label of a box of Kellogg's Bran, marketed as a cure for constipation. (51) Labels of Paramels, Ssylla, and Kaba, bulk-producing products developed at the San and sold by the Battle Creek Food Co. (52) A sign that reads "Fletcherize" is prominently displayed in the San's dining room. (53) Program / schedule for the day on a typical day, 22 Feb. 1915, printed on the back of the day's menu. Everyone was expected to participate in the activities listed and each guest also received a personal schedule of treatments. (54) The gymnasium in

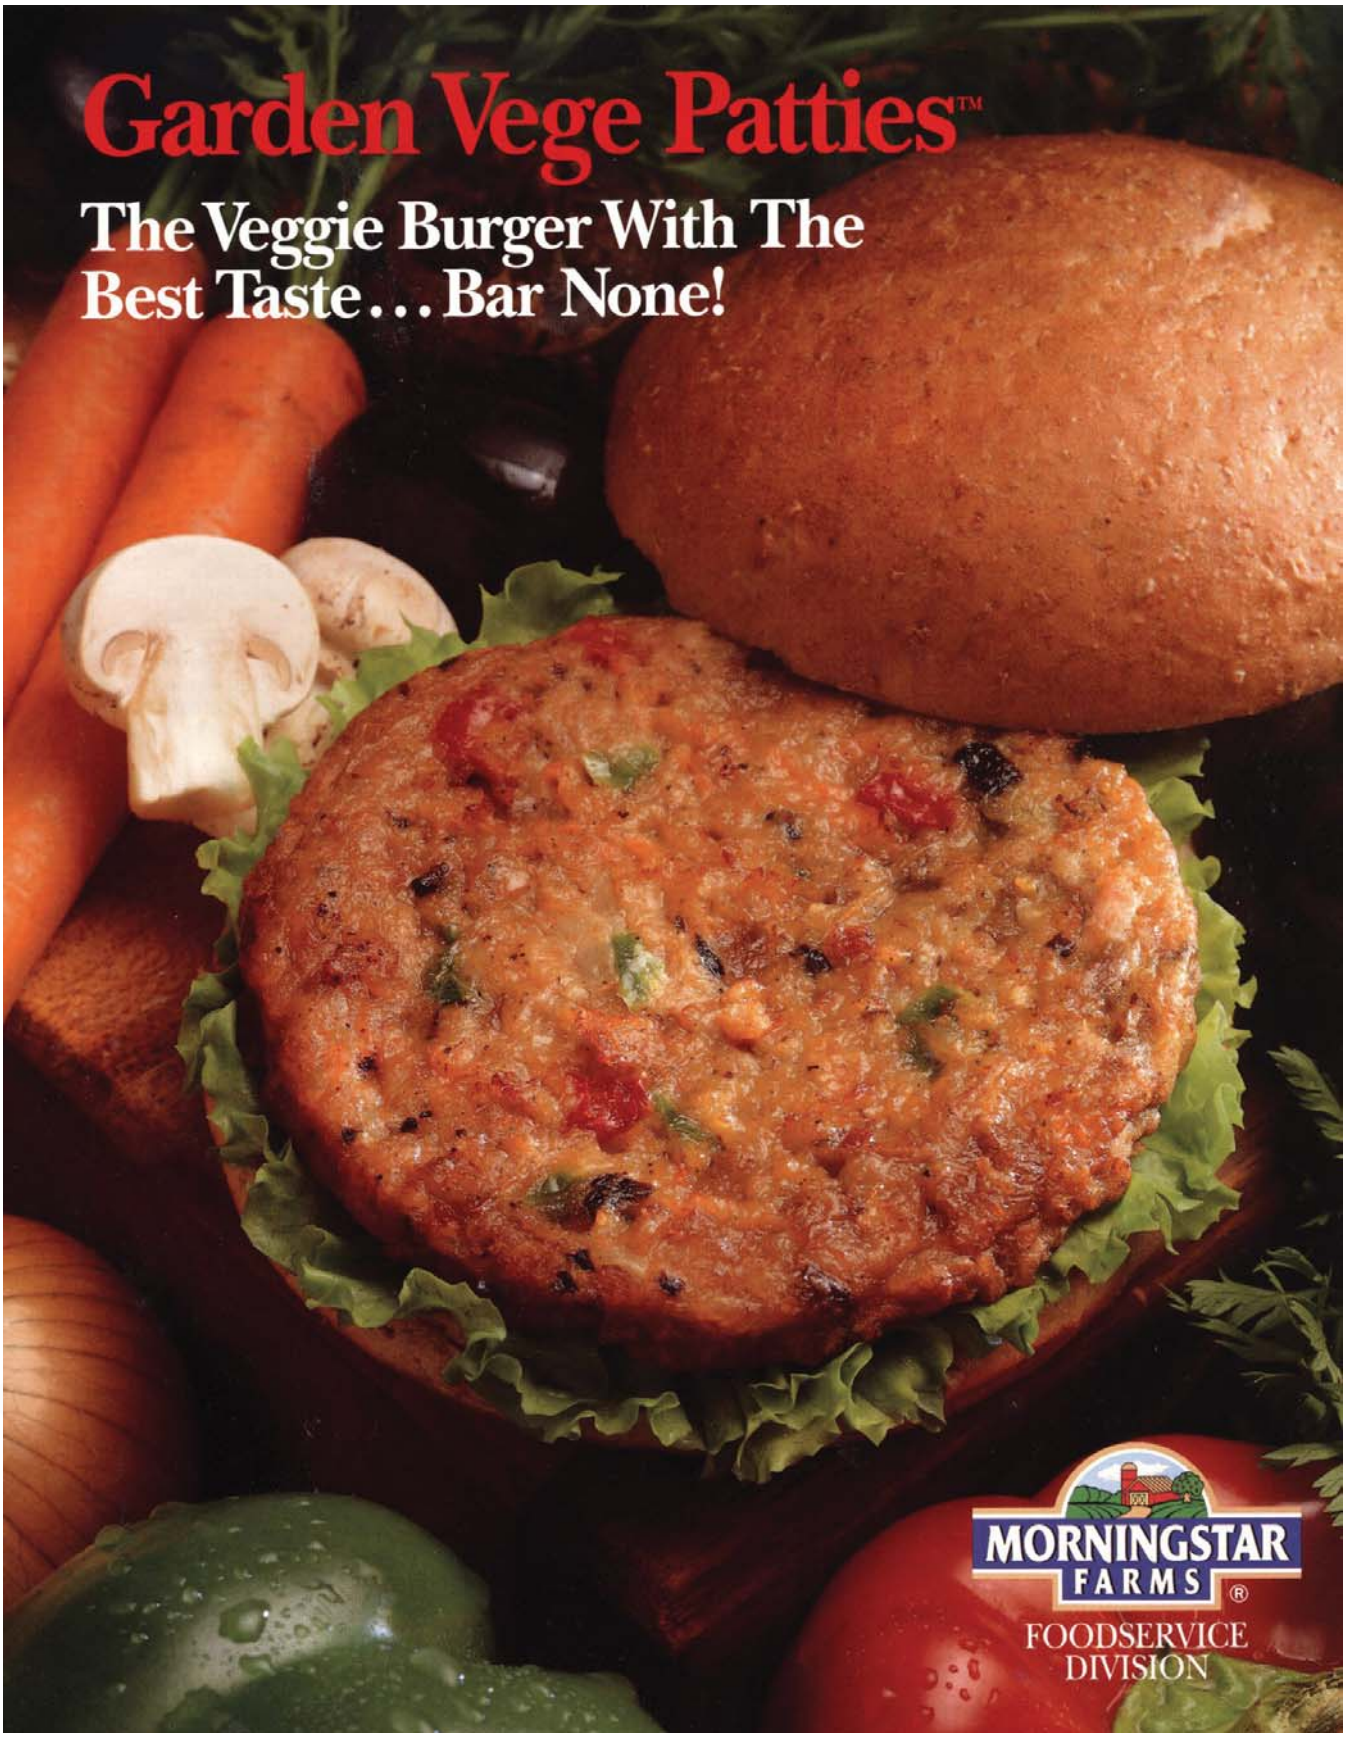
3253. Worthington Foods, Inc. 1996. Morningstar Farms: Number one in meatless (Portfolio). Worthington, Ohio. 4 inserts. Glossy color. 28 cm.
• ***Summary:*** See next page. This portfolio was produced by the Morningstar Farms Foodservice Division. The inserts are: (1) Garden Vege Patties: The veggie burger with the best taste–Bar none! (2) Meatless / IQF Pizza Crumbles: So good, so convenient, and so much lower in fat, calories, cholesterol. (3) Morningstar Farms meatless restaurant guide (Shows most of the restaurant chains at which Morningstar Farms products are served, by region as follows: National. East, Southeast, Southwest, Midwest, Central, West). (4) Spicy Black Bean Burger: Knock-your-socks-off flavor and only 1.5 grams fat.



On the inside front cover is a full-page photo of Grillers and this text: "Entrees: Pre-cooked and frozen. No waste." On the inside rear cover and fold-over portfolio flap are listed all Worthington-made foodservice products. Most are Morningstar Farm brand but a few are Natural Touch–but the brand is not given here. For each is given the name, a brief description, product number, case pack, case weight, and usually color photo of the prepared product. The products are: Breakfast Links. Breakfast Patties. Breakfast Strips [like bacon]. Garden Vege Patties. Crispy Patties. Garden Grain Patties. Spicy Black Bean Burger. Eggrolls. Okara Patties. Breaded Cutlets. Lentil Rice Loaf. Deli Franks. Better'n Burgers. VegiMax. Address: Worthington, Ohio.

3254. Keleny, Kathleen. 1996. The first century of health foods. Gloucester, England: Published by the author. Sole agent: Nuhelth Books. 44 p. Illust. No index. 21 cm.
• ***Summary:*** Contents: Dedication (to James H. Cook, Kathleen's father). Introduction. Early beginnings. Beginnings of food reform. Conversion. The first vegetarian restaurant and hotel. The first health food store. The new factory. Health foods. Kathleen's upbringing. Famous customers. Spanish figs. Wartime. Vitaland (health food factory). Demonstrations. Visitors and staff. Vitaland catalogue.

Kathleen talking. Vegetarian beliefs and ethics. The same ideals (In 1933 she met Frank Mayo, a keen vegetarian; they fell in love, were married a year later, and started a health food store in the City Arcade, Coventry). Effects of war (World War II, from Sept. 1939). After the bombing (returned to Warwickshire). The sale of Vitaland (after World War II). The Bircher Benner Clinic in Zurich [Switzerland]. The Hunzas. The new venture (1950 buy Coombe Lodge near Wotton-under-Edge, in southwest England)... The rest of the book is about her life and work, vegetarianism and veganism in England after World War II, Mad Cow Disease, etc.

The author, a "life vegetarian brought up on a vegan

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

diet...” writes pages 6 through 11 of this book as if her father, James Henry Cook, were the author. It starts: “Early beginnings: My daughter is 88. When she was born I wanted her to have continuous good health,...”

Chronology of the early health food movement in the UK, according to this book:

1869–James Henry Cook, the pioneer, is born on the Isle of Wight. In 1885 he moved to Wolverhampton, where he was influenced by an elderly vegetarian, Mr. George Snape.

1895–Cook attends a meeting of the Vegetarian Federal Union where the President, Arnold Hills, a well known business man and Managing Director of the Thames Iron Works, speaks for an hour on vegetarianism and its benefits. During that speech Cook is converted to vegetarianism. His health soon improves dramatically. Before he changed his diet, he was physically very delicate, and was refused by three insurance companies. A few weeks later, enjoying the live-giving powers of dietary reform, he was accepted as a first class life risk.

1896 to early 1898–The next time Mr. Arnold Hills (an inspiring speaker) visited Birmingham, he called together a group of business men and said that he would like to see a first-class Vegetarian Restaurant in Birmingham, and if they would start one, he would subscribe 10 per cent of the cost. “In 1896 it so happened that a new building was being erected in Corporation Street, Birmingham. After much deliberation, the corporation of business men rented the whole of the basement and ground floor for use as a vegetarian restaurant.” As Mr. Cook was very keen on the whole idea, he was appointed manager. Then the landlord asked the group of business men if they would like to take the whole of the seven storey building and convert the upper five storeys into an hotel.

1896–A vegetarian restaurant opens on Corporation Street in Birmingham, with financial help from Arnold Hills. James Cook is appointed manager. It is on the ground floor of a seven-story building. The vegetarian meals are an immediate success and hundreds of people soon lunch there daily.

1898 [Oct. 20]–The Pitman Vegetarian Hotel, England’s first vegetarian hotel, opens on the top five stories of the building housing the restaurant. It is “named after Sir Isaac Pitman, inventor of Pitman Shorthand, who had been a vegetarian for 60 years, and at the time was the best known vegetarian in England.” Customers of the restaurant “start asking for food which they could take home with them.” James Cook starts to make simple, appetizing “foods from nuts, cereals, fruits and vegetables to take the place of meat, lard, butter, cheese and jelly made from animals.”

1902?–”Six years before Kathleen was born the ‘Health Food Store’ was opened and the manufacturing side increased.” James “realised it was not economic to run a factory in the centre of Birmingham, so he bought a site in Aston” where he built the first [sic] health food factory in England.

1905–The Pitman Health Food Company opens. Its most popular products are Nuto Cream Soup and Nut Cream, followed by Pitman Dandelion All products are dairy-free.

1929–A bigger and better health food factory, called Vitaland, is built in a beautiful building in green fields at Four Oaks, Sutton Coldfield Park, Warwickshire.

Photos show: (1) Portrait of James Henry Cook, handsome, bearded, and in his 60s or 70s. (2) Vitaland, the whole building taken with wire fence round it, seen from ground level. (3) Many photos of Kathleen and friends, yoga group, husband, Coombe Lodge, etc.

An old illustration shows the Pitman Hotel and (according to the caption) “Health Food Stores.”

Note 1. In the section titled “Beginnings of health reform” (p. 6) Bernarr McFadden (of U.S. physical culture and publishing fame) is said to have written that James Cook had coined the term “’Health Food’ advocating Food Reform for Vital Health.” No date is given, so we must assume it was coined in about 1902. In fact, the earliest documented use of the term “Health Food” in the UK is in the name of the Pitman Health Food Co. in July 1905. However the term was used in the United States as early as Oct. 1875 by the Health Food Company of New York, and was widely used in the USA during the late 1800s.

Note 2. James Cook’s date and place of marriage and Kathleen’s date and place of birth are never mentioned in this book. In an article published in Oct. 1898 in *The Vegetarian* (London), James Cook said that he was unmarried and intended not to marry so that he could devote his full energies to his work as manager of the vegetarian restaurant, hotel, and retail store in Birmingham. Eventually he married Grace Marian Cook, a well-known singer. “She was one of the first cookery demonstrators of vegetarian dishes in the Midlands, and she experimented with making very many of the new lines for the Pitman Health Food Company” (p. 9).

Note 3. While this book is a nice tribute by the author to her father, James H. Cook, it is not an accurate history of the early health food industry in the UK, where the pioneer manufacturer was the International Health Association Limited (I.H.A.), a Seventh-day Adventist organization, starting in 1899. That company was renamed Granose Foods Ltd. in 1926. Moreover, two key dates related to the history of Pitman’s work with health foods are vague.

Note 3. During World War II “Pitman Health Foods Ltd.” ran many ads for its foods in the Vegetarian Messenger (UK). “Ask your Health Food Store for these grand foods.” By 1942 the company’s name had been shortened to “Messrs. Pitman, Ltd.” (Vitaland, Four Oaks, Warwickshire). Address: Coombe Lodge, Stroud, Gloucestershire, SW England.

3255. Landrum, Carl; Landrum, Shirley. 1996. Landrum’s Quincy. Vol. 1. Quincy, Illinois: Justice Publications. [viii] +

© Copyright Soyinfo Center 2014

200 p. See p. 142-44. Illust. No Index. 26 cm.
• ***Summary:*** An excellent, detailed history of three companies: Egg-O-See Breakfast Food Company, Battle Creek Breakfast Food Company. The Egg-O-See which was established in Battle Creek, Michigan by John E. Liniham, who was born there in 1866; he later became secretary of the corporation and general manager of the plant. In 1901 the company began to make breakfast foods in Battle Creek, "promoting the Cero-Fruito Food Company in that city." In 1903 the company went bankrupt and was purchased by The Battle Creek Breakfast Food Company.

"The latter company, formed in Quincy by John W. 'Jack' Cassidy, and a number of other Quincy businessmen, brought Liniham to Quincy on 1 Jan. 1903, as an officer in the company and to manage the operation."

Cassidy was born on 20 Jan. 1865 in Kankakee Co., Illinois, and came to Quincy as a young man. A brief biography is given. He died in San Francisco on 15 April 1922.

On 7 Jan. 1903 "Cassidy announced that the Battle Creek Breakfast Food Co. of Quincy was setting up machinery in the building, or buildings, at 111-39 South Front and would probably be in operation by" Jan. 20. It three main products were Egg-O-See Corn Flakes, E-C Corn Flakes Toasted, and Toasted E-C Oats.

A detailed history of the company follows. In 1910 the company's name was changed to United Cereal Mills Company. In 1919 the company was apparently thriving, however in 1921 it went bankrupt and in Sept. 1921 was sold at auction for $50,000 to Barron Collier Co. to satisfy creditors.

"The company was absorbed by the Kellogg Breakfast Food Company of Battle Creek and the local mill was abandoned."

The building was next used to process soybeans! On 29 Aug. 1935 "a charter was issued by the secretary of state to J.H. Ball, John B. Heberkern, and David Coffman for National Mills, using the old Egg-O-See plant for the extraction of soybean oil until the summer of 1939, when the business was sold to the Quincy Soybean Products Company" [owned by Irving Rosen]. Note 1. All of the old Egg-O-See buildings of the original business were razed in about 1958.

Photos show: (1) Front of Battle Creek Breakfast Food Co. at 111-29 South Front in around 1903, with railroad cars nearby. (2) Portrait of John W. "Jack" Cassidy. (3) Early front view (undated) of the 5-story Battle Creek Breakfast Food Co. and surrounding buildings.

Note: This is Vol. 1 of a four-volume work. An index, created after the book was published, is located at the Quincy Public Library in Quincy, Illinois. The date of publication, which does not appear in the book, was taken from the Quincy Public Library cataloging record. The book expands on articles by Carl Landrum first published in the *Quincy Herald-Whig*. The date of the original article is printed at the bottom of each page in the book. Address: Quincy, Illinois.

3256. Peanut Advisory Board. 1996. American peanuts: The gold standard. Atlanta, Georgia: PAB. 16 p. 28 cm.
• ***Summary:*** Contents: About the Peanut Advisory Board (established in 1980, it represents peanut growers in Georgia, Florida, and Alabama). Map of major peanut production areas in the USA. The gold standard (Peanuts are the 12th most valuable cash crop in the USA, with an annual farm value of $1.2 billion. The peanut is the 4th most valuable oil crop worldwide. The USA is the world's third largest producer of peanuts, after India and China). Golden Days (Brief history of peanuts). Nutritional value of peanuts and peanut butter. Peanut varieties, cultivation, and prices. Peanut butter and its history. Adult Peanut Butter Lovers' Fan Club (established about 1990, now has 60,000 members). Peanut products: Snack peanuts, peanut confections, others, peanut oil. Exports. Nuggets of information.

The section on peanut butter and its history (p. 7-8) is quite similar to that in their 1990 book, *The Official Peanut Butter Lovers' Centennial Cookbook*. It begins: "Peanut butter is one of America's favorite foods. Found in about 75% of American homes, peanut butter is considered by many to be a staple like bread and milk. As comedian Bill Cosby once remarked, 'Man cannot live by bread alone. He must have peanut butter." This section again, and without documentation, credits George A. Bayle with inventing peanut butter. It adds a statement similar to that published in 1990: "At about the same time, Dr. John Harvey Kellogg in Battle Creek, Michigan began experimenting with peanut butter as a vegetarian source of protein for his patients. His brother, W.K. Kellogg, was business manager of their sanitarium, the Western Health Reform Institute, but soon opened Sanitas Nut Company which supplied foods like peanut butter to local grocery stores... However the Kelloggs' peanut butter was not as tasty as the peanut butter today because the peanuts were steamed, instead of roasted, prior to grinding." Address: Peanut Advisory Board, 1950 North Park Place #525, Atlanta, Georgia 30339. Phone: (404) 933-0357.

between Broadway and Hill on Third Street, Los Angeles."

Note 1. The vegetarian restaurant in Los Angeles was soon (or perhaps even initially) called the Vegetarian Cafe, and was located at 257 South Hill St.

Note 2. This is vol. 10 of a 12 vol. commentary set. Address: Washington, DC.

3258. Soya World Inc. 1996. So Good–Dairy free beverage: 5 easy to make, nutritious recipes. Product information guide (Leaflet). Vancouver, British Columbia, Canada. 6 panels each side. Each panel: 15 x 10 cm.

• ***Summary:*** This attractive, full-color, glossy leaflet is folded into 12 panels. On the front panel is a photo of a carton of "So Good: Dairy-Free Beverage." It is "Very high in calcium. Enriched with vitamins and minerals. Soy protein rich. Lactose free. Cholesterol free." Contents: The story of So Good. Five recipes and color photos. The So Good family of soy beverages. Tips for using So Good. The ingredients in So Good: Filtered water, soy protein, vegetable oil, maltodextrin, rice extract, fructose, cane sugar, mineral salts (calcium phosphate, potassium phosphate), food acid (potassium citrate), flavours.

Why choose so good? (Nine reasons, incl. contains up to 9.3 gm of protein per 250 ml serving). Nutritional information for each of the five flavors: Original, Fat Free, Absolutely Vanilla, Utterly Chocolate, and Seriously Strawberry.

Note: These products are made by Soya World Inc. under license from the Sanitarium Health Food Company, New South Wales, Australia. Address: P.O. Box 3018, Vancouver, BC V6B 3X5, Canada. Phone: (604) 420-3240.

3259. Van Dolson, Bobbie Jane; Van Dolson, Leo R. eds. 1996. Seventh-day Adventist encyclopedia, 2nd rev. ed. 2 vols.: White Memorial Medical Center. Hagerstown, Maryland: Review and Herald Publishing Assoc. See vol. 2, p. 797-98.

• ***Summary:*** On 29 Sept. 1913 this institution began as a clinic that opened in a rented building at 941 East First St. in East Los Angeles. The clinic was originally started as a teaching facility of the College of Medical Evangelists' School of Medicine (now known as Loma Linda University). On 21 April 1918 the clinic's name was changed to White Memorial Hospital and formally dedicated to the memory of Ellen G. White.

"On Jan. 1 1964 Loma Linda transferred ownership and direction of the White Memorial Hospital and Clinic to the Southern California Conference and the hospital was renamed White Memorial Medical Center, Inc. Although White Memorial is no longer under the guidance of Loma Linda University, the hospital still maintains a strong clinical program for medical, nursing, and allied health profession students, and a continuing program for interns and residents in advanced medical education programs."

Today White Memorial Medical Center is a 377-bed hospital serving more than 100,000 people each year. It is now located in a predominantly Latino part of Los Angeles at 1720 Cesar E. Chavez Avenue. Address: Washington, DC.

3260. Van Dolson, Bobbie Jane; Van Dolson, Leo R. eds. 1996. Seventh-day Adventist encyclopedia, 2nd rev. ed. 2 vols.: Harry Willis Miller (1879-1977). Hagerstown, Maryland: Review and Herald Publishing Assoc. See vol. 2, p. 71-72.

• ***Summary:*** A good, detailed biography of Dr. Miller. "In later years Harry Miller worked seriously with the soybean. He made products that were tasty and practical. These included "vegeburgers," "wieners," and soy cheese [tofu]. His crowning accomplishment, however, was a tasty, affordable, nutritious soy milk, which literally saved the lives of many Chinese babies. Before his death Miller saw his grain-and-soybean-based foods adopted as alternatives to meat all over the world.

"In his 90s Harry Miller continued as a consultant to the World Health Organization and the Food and Agriculture Organization of the United Nations, and still made frequent trips to eastern Asia." Address: Washington, DC.

3261. Van Dolson, Bobbie Jane; Van Dolson, Leo R. eds. 1996. Seventh-day Adventist encyclopedia, 2nd rev. ed. 2 vols.: La Sierra University (Formerly La Sierra College). Hagerstown, Maryland: Review and Herald Publishing Assoc. See vol. 1, p. 899-904.

• ***Summary:*** Contains a good history of this university which is owned and operated by the Seventh-day Adventist (SDA) Church. In May 1922 the Southeastern California Conference organized La Sierra Academy. It opened on 3 Oct. 1922 as a full-fledged 12-grade school. In 1927 La Sierra Academy became Southern California Junior College. On 1 May 1933 it was accredited as a junior college. In 1939 La Sierra College was accredited as a three-year college by the Northwest Association of College and Universities, and in 1946 it was accredited as a four-year college.

During World War II, La Sierra increasingly established a unique link with the nearby College of Medical Evangelists (CME–later Loma Linda University). "SDA students began to look to La Sierra to provide them with the skills and contacts needed to make them successful applicants for admission to the church's health-science school. (The 1966 Danforth Foundation study, 'Church-sponsored Higher Education in America,' noted that a higher percentage of La Sierra graduates had received M.D. degrees in the years 1950-1959 than those of any other church-related institution of higher learning in the United States.)"

By 1965 La Sierra College had a graduate division. In 1967 La Sierra became Loma Linda University's Riverside campus. "Productive scholarly interchange and creative synergy resulted from the merger." On 7 March 1991 La

© Copyright Soyinfo Center 2014

Sierra College was renamed La Sierra University. The current academic programs are discussed under the following headings: College of Arts and Sciences. School of Religion. School of Education. School of Business and Management. Center for Lifelong Learning. Gives the names and dates of the Presidents of La Sierra University and its predecessors (from 1922). Address: Washington, DC.

3262. Van Dolson, Bobbie Jane; Van Dolson, Leo R. eds. 1996. Seventh-day Adventist encyclopedia, 2nd rev. ed. 2 vols.: Andrews University (Originated as Battle Creek College in 1874. Moved to Berrien Springs, Michigan, and Was Renamed Emmanuel Missionary College in 1901). Hagerstown, Maryland: Review and Herald Publishing Assoc. See vol. 1, p. 72-79.

• ***Summary:*** In 1874 Battle Creek College was founded in Battle Creek Michigan, owned and operated by the Seventh-day Adventist Church. It evolved from a "select" private school established in 1868 by G.H. Bell. "The early 1890s were years of deepening emphasis at the college... Throughout the decade, revivalism marked college activities. A study made in 1897 showed that 38 percent of all ordained ministers in the denomination had received some training at Battle Creek College. The highest enrollment to be recorded at Battle Creek was reached in 1893-94 (768, including 337 in preparatory departments)."

In 1897 Edward A. Sutherland became president on a reform platform backed by Dr. John Harvey Kellogg and Percy T. Magan. Classical studies were abolished, and all traces of apparently worldly education were eliminated. The new curriculum focused on the Bible plus New Testament Greek, New Testament [Vulgate] Latin, and medical Latin. College industries were established and denominational workers, especially church school teachers, were prepared. Sutherland desired a spacious rural setting for his college, and such a site was found near Berrien Springs, Michigan. The college moved there in July 1901, reopened that summer, and was renamed Emmanuel Missionary College at the time it reopened. The curriculum consisted largely of secondary school courses. The first class, graduated in 1908, consisted of all secondary students.

In 1960 the entire institution merged with an educational organization (Potomac University) in Washington, and was renamed Andrews University. "In 1974 Andrews University celebrated the one hundredth anniversary of its founding as Battle Creek College with a variety of special convocations and conferences." Address: Washington, DC.

3263. Van Dolson, Bobbie Jane; Van Dolson, Leo R. eds. 1996. Seventh-day Adventist encyclopedia, 2nd rev. ed. 2 vols.: Loma Linda University (Founded in 1905 as the Loma Linda College of Evangelists and Chartered in 1909 as the College of Medical Evangelists). Hagerstown, Maryland: Review and Herald Publishing Assoc. See vol. 1, p. 940-953.

• ***Summary:*** In 1905 this university was founded as the Loma Linda College of Evangelists, located in southern California 60 miles east of Los Angeles; in 1909 it was chartered as the College of Medical Evangelists (CME). This was the second Seventh-day Adventist (SDA) medical college; the first was the American Medical Missionary College (AMMC, 1895-1910) which was connected with the Battle Creek Sanitarium in Michigan; both went out from SDA control in about 1907. There was no organizational or legal connection between AMMC and CME.

The buildings that comprised the College in 1905 were originally part of the Victorian-styled Loma Linda resort hotel, constructed in 1887-1888 as part of the Mound City development, which was part of the larger southern California real estate boom of 1887-88 and subsequent bust of the late 1880s.

The resort hotel was purchased in 1900 by the Loma Linda Association, a group of Los Angeles businessmen and physicians, the latter hoping to establish a health resort. The association remodeled and richly furnished the hotel, adding five patient cottages and a recreation hall, landscaping the hill, and raising the total investment above $150,000. This venture also failed. By 1904 the luxury hotel stood almost empty.

In 1905 Ellen G. White, charmed by the beauty of the San Bernardino Valley and impressed by its potential for a country sanitarium, asked John A. Burden to look for a site. He found Loma Linda (Spanish for "Hill Beautiful") for sale (including 76 acres of land) for $110,000. When they lowered the price to $40,000, Mrs. White told Burden to accept. The option was signed on 26 May 1905, with a down payment of $1,000. In about Oct. 1905 Loma Linda began to receive patients. On 15 July 1910 the assets of the Loma Linda Sanitarium were transferred to the College of Medical Evangelists, thus making the Sanitarium an integral part of the College.

CME was first accredited in 1937 by the Northwest Association of Secondary and Higher Schools. On 1 July 1961 it became Loma Linda University.

Relationship with La Sierra University: When Loma Linda trustees voted to consolidate the four years of medical education on the Loma Linda campus (the third and fourth years had previously been taught in Los Angeles at what is now the White Memorial Medical Center), the need was felt to undergird the professional studies on the Loma Linda campus with expanded courses offerings in the liberal arts. The trustees eventually decided to merge La Sierra College (located 20 miles away) with Loma Linda University; the merger became effective on 1 July 1967. The La Sierra College campus was renamed Riverside Campus of Loma Linda University. Then in 1990 the Loma Linda University Board of Trustees voted to separate the two campuses as independent corporations. This was done in order to enable each campus to more clearly define and focus on its

© Copyright Soyinfo Center 2014

distinctive mission. The Riverside Campus became known (as it still is) as La Sierra University.

Loma Linda University is now a health sciences university. Note: It has pioneered the scientific study of vegetarianism in the Western World, especially with the Adventist Health Studies. Address: Washington, DC.

3267. **Product Name:** Morningstar Farms Chik Nuggets.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1997 February.
Ingredients: Textured vegetable protein (soy protein concentrate and isolate), egg whites, wheat flour, water, corn oil...
Wt/Vol., Packaging, Price: 10.5 oz (298 gm) paperboard box. Retails for $2.95 (1998/03, Lafayette, California).
How Stored: Frozen.
New Product–Documentation: Worthington Foods. First quarter financial report. 1997. April. Three new Morningstar Farms products were introduced into selected U.S. markets starting on 17 Feb. 1997: Chik Nuggets...

Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. March 22. It is sold in the "Breakfast Foods" freezer. 8 by 4 by 2.5 inches. Paperboard box. Blue, yellow, red, and white on green. A color photo shows many nuggets on a white plate around a bowl of red dipping sauce, with a sprig of parsley. "Vegetable and grain protein nuggets. 75% less fat than chicken nuggets." A new slogan (registered trademark) appears on both sides: "The change will do you good." On the back panel a table compares meatless Chik Nuggets with meat chicken nuggets: Cholesterol: 0 vs. 45 mg. Total fat: 4 vs. 17 gm. Saturated fat: 0.5 vs. 4 gm. A small logo on the back has a leaflike green "V" inside the circular words "Suitable for vegetarians."

Note: By 26 April 1998 the price at Safeway had increased to $3.19 from $2.95. By March 10 1999 the price had increase to $3.59. The package has been redesigned with the new Morning Star farms logo to create a brand "umbrella." The front panel text now reads: "75% less fat than chicken nuggets. See Nutrition Information for Sodium Content. Veggie nuggets." Soyfoods Center taste test. The texture and flavor are very good but these Chik Nuggets are much too salty! Four nuggets contain a whopping 670 mg of sodium, or 28% of the recommended Daily Value.

3268. **Product Name:** Rice Moo (Non Dairy Beverage Mix) [Original, Vanilla].
Manufacturer's Name: Sovex Foods, Inc. (Marketer-Distributor).
Manufacturer's Address: Box 2178, Collegedale, TN 37315.
Date of Introduction: 1997 March.
Ingredients: Brown rice syrup solids (partially milled), tapioca, maltodextrin, natural flavor, sea salt, carrageenan, titanium dioxide (a mineral for color), guar gum, xanthan gum.
Wt/Vol., Packaging, Price: 19 gm foil packet.
How Stored: Shelf stable.
New Product–Documentation: Products with Label sent by Patricia Smith from Natural Products Expo West, Anaheim, California. 1997. March. Label: 4 by 5 inch foil packet. Blue and pink on white. "Cholesterol free. Tastes great. Just add water. Fat free. Makes one 8 oz glass."

3269. Worthington Foods, Inc. 1997. Annual report 1996. 900 Proprietors Rd., Worthington, OH 43085. 20 p. 28 cm.
• ***Summary:*** Total sales rose to $109.1 million in 1996, up 19.8% from $91.1 million in 1995. This is the first time the company's sales have topped the $100 million mark. Net income (profit) rose to $7.393 million in 1996, up 41.3%

Allan R. Buller

Dale E. Twomley

from $5.230 million in 1995. Earnings per share rose to $0.83 in 1996, up 38% from $0.60 in 1995.

The company's statements of mission, vision, and values are a model of good sense, good judgment, and traditional values. "Our mission–Worthington Foods is solely dedicated to producing and marketing vegetarian and other healthful foods.

"Our vision–We envision 'veggie burgers' becoming a billion dollar mainstream food category within the next ten years, with our Company continuing to be the leader.

"Our values–More than just an organization to make money, Worthington Foods holds, without compromise, our core values summarized in G.R.I.P. Good taste–good nutrition. Respect for our employees. Integrity is more important than profits. People are whole beings." Each is explained briefly.

"The increased sales were primarily driven by Morningstar Farms meat alternative products in retail supermarkets and foodservice operations."

"For each of the past seven quarters, retail sales of Morningstar Farms meat alternatives have exceeded sales of prior year quarters by 25 percent, while foodservice sales grew at a rate exceeding 40 percent for the past year."

"Worthington Foods introduced a record 21 new products this year. All of these products meet our criteria for new products: Good taste, low or reduced fat, and convenience." Note: The 21 new products are: Morningstar Farms (MSF) fat free ground patties. MSF low fat prime patties. Two MSF veggie burger kits (Garden grille, and Southwestern). Roasted SoyButter [soynut butter] (MSF & Natural Touch). Natural Touch spicy black bean [non-soy] burgers. Three low fat Worthington products (Low fat FriChik, Low fat Veja Links, and Low fat Chili). Natural Touch vegan burger & sausage crumbles. Kaffree Roma Cappuccino. Foodservice pizza and burger crumbles. Three MSF breakfast sandwiches (Scramblers, sausage & cheese on English muffin; Scramblers & sausage on Enlace muffin; Scramblers, sausage & cheese on bagel). Three MSF refrigerated meat case products (Low fat prime patties, Spicy black bean burgers, Garden veggie patty).

"*Chik Nuggets*, an absolutely delicious chicken-like nugget with 75 percent less fat than nuggets made of real chicken, was introduced in February, 1997" (p. 2).

"Worthington Foods is the world's largest company dedicated solely to the manufacture and marketing of vegetarian foods and other healthful items. Since its start in 1939, Worthington Foods has become the market leader in quality and innovation in the rapidly growing $250-million category for meat alternatives" (p. 4).

"Over the past five years, Worthington Foods' sales to Foodservice accounts have been the Company's fastest growing market. Posting sales gains of more than 40% in 1996, our Foodservice sales topped $12-million" (p. 7).

Color photos show: (1) The packages of 6 Morningstar Farms meatless products plus Fat Free Scramblers (cover). (2) Portraits of Allan R. Buller and Dale E. Twomley (p. 2). Five Natural Touch and three Worthington canned products.

A "Notice of annual meeting of shareholders" (23 p.) is attached. Address: Worthington, Ohio. Phone: (614) 885-9511.

3270. McDermott, Ron. 1997. Thoughts on the use and labeling of genetically engineered soybeans in Worthington's food products (Interview). *SoyaScan Notes.* April 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Worthington Foods is still working to establish a policy on this subject. The company had to start dealing with this issue in a big way in July 1996, before the U.S. soybean harvest, when British Retailer's Association (BRA) sent a letter to all of their suppliers, including Worthington, alerting all food manufacturers that genetically modified (GM) Roundup Ready soybeans would become part of the U.S. soybean crop in the fall of 1996, and asking them to please contact their suppliers immediately to request only non genetically modified soybeans. The issue for the BRA was not the safety of the soybeans but the consumer's freedom of choice and labeling. Therefore the BRA wanted to avoid having to sell GM soybeans. The UK is Worthington's largest export market, so the company must take the concerns of British consumers very seriously. Ron understands that concerns over GM foods in Germany are even greater than in the UK.

The BRA sent out a second letter to suppliers in about Sept. 1996, before the U.S. soybean harvest, which basically said that they had come to realize that segregation of non-GM foods was not possible at this time.

The first major problem for Worthington is that they buy most of their soybeans in the form of defatted soybean meal–not whole soybeans. Currently it would almost impossible to find a soybean crusher willing to segregate

© Copyright Soyinfo Center 2014

non-GM soybeans. However in thinking through this with Ron, Shurtleff realizes that within the next year or two, some of the small soybean crushers will probably start to crush non-GM soybeans is order to create a new niche market and a competitive advantage over the big crushers. Worthington would then have a good source–if it wanted one.

A second issue is labeling. Worthington has three different labels for many of its best-selling products. One for the USA market, one for Canada (which must be bilingual, in English and French), and one for the UK–since each has different labeling requirements.

A third issue is the U.S. natural foods market–which has shown that it will probably not sell GM food products. Worthington makes its okara patties from whole soybeans and sometimes buys organic soybeans. No one knows whether or not GMO products will be able to obtain kosher certification.

Note: What are the big issues? They probably have little to do with science. At present there are no benefits to consumers from GM soybeans, and consumers feel a fair amount of uncertainty about genetically engineered foods. If there were some big benefits (such as higher levels of genistein), the decision might be more difficult for consumers. The real issue is freedom of choice. Since 1906 the U.S. Pure Food and Drug Act has required that all ingredients in food products appear on the label so that consumers can decide what to eat. It is unlikely that such a basic, long-standing principle will be changed.

Ron believes that consumers will eventually decide this question. But as a scientist, he has been trying to follow this debate, and listen to both sides. It is unfortunate, he thinks, that the very first application of genetic engineering to soybeans is related to soybean production (weed management through Roundup herbicide) rather than, say, improved nutrition. How many consumers are interested in consuming Roundup Ready soybeans? Ron has heard that Roundup is better for the environment than most other herbicides, and that much less is required to do the job. It could take pesticide application from tons per acre to grams per acre. People who are really concerned about the environment will probably buy organically grown foods. At Anaheim this year, one group speaking out against GMO foods was named "Mothers for Natural Law." Their position is "don't fool with Mother Nature." Ron thinks that Monsanto has done a poor job at educating the public–perhaps because most of the benefits accrue to farmers; they seem to think that this whole issue will soon go away.

To date, Worthington has not had a great deal of consumer concern in the form of letters or phone calls about GM soybeans. In the USA it seems to be more of an activist issue than a consumer issue. Ron has heard that Tivall is having a terrible time on this question, because a large percentage of their products is sold in the UK and continental Europe. Ron does not know whether or not a GMO product can be certified kosher.

Most of the Natural Touch products are NOT from whole soybeans; only the okara patty is. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3271. Worthington Foods, Inc. 1997. First quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** Net sales for the first quarter of 1996 rose 8.8% over the same period in 1996, net income rose 44%, and earnings per share rose 40%–to $0.21 per share. Three new Morningstar Farms products were introduced into selected U.S. markets starting on 17 Feb. 1997: Chik Nuggets, Burger Crumbles for Recipes, and Sausage Crumbles for Recipes. Garden Grain Patties have now been reformulated to contain portabella mushrooms and are now called Garden Grille.

At the Annual Meeting of Shareholders in April, the number of authorized shares of common stock was increased to 30 million. Address: Worthington, Ohio. Phone: (614) 885-9511.

3272. Poirier, Tim. 1997. Computerizing the Ellen G. White papers and published works (Interview). *SoyaScan Notes.* May 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Ellen G. White estate now has a database containing all of Ellen G. White writings, including her published works, letters, diaries, unpublished manuscripts, and even a few major works about her life (such as her 6-volume biography written by her grandson). Her published works are now available on a CD-ROM which was introduced in 1990 and sells for $179.00.

The current focus is computerizing her unpublished works. The text of this information is fully indexed, and can be searched in an instant using the database indexes. The software is Paradox (from Borlund). This material will be available on an Ellen G. White CD-ROM in about 1998. Tim Poirier sent copies of 2 letters from John Harvey Kellogg to Ellen G. White free of charge.

A computerized search using the indexes shows that there is no mention of the words "soy" "soybean" "soya" etc. in any of Ellen White's writings. Likewise, she never mentioned the word "gluten" in her writings. Ellen G. White died in 1915. Address: Assoc. Director of Information Access, Ellen G. White Estate, General Conference of Seventh-day Adventists, 12501 Old Columbia Pike, Silver Spring, Maryland 20904-6600. Phone: 301-680-6540.

3273. Johnston, Trevor. 1997. Recent nightmares at Bean Supreme Ltd. in New Zealand (Interview). *SoyaScan Notes.* May 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The last 18 months have been a marketing nightmare for Trevor. The problems started when a

© Copyright Soyinfo Center 2014

toxicologist, who works for the government in New Zealand, fed his parrots a soy-based formula and they died. He blamed the soy. He and others formed "The Soy Toxin Team" and have been working ceaselessly to (1) get soy-based infant formula banned from the market in New Zealand, and (2) alert the public to what they feel are the dangers of the phytoestrogens in soybeans. Trevor has a huge file of anti-soy and anti-phytoestrogen articles published in New Zealand. Note that in the USA almost all of the many articles about the phytoestrogens in soybeans consider them to be one of the main benefits of soybeans.

The second major problem has been Roundup Ready soybeans–which are genetically engineered by Monsanto. Greenpeace in Australia has made these soybeans their major project; they are working to alert the public to the fact that most food products that contain soybeans–unless specifically labeled otherwise–probably contain at least a small percentage of Roundup Ready soybeans–which are not labeled as being genetically modified (GM). These soybeans offer no benefits to consumers and Greenpeace argues that they main contain some real dangers. They have conducted a number of media actions, such as taking soy products off supermarket shelves to point out that they contain soy–as the cameras roll. The result has been to give soy a negative image in Australia. A group called the Natural Food Commission (an offshoot of Maharishi's Transcendental Meditation or TM) has been formed and is now circulating a draft proposal on genetically modified organisms in foods–urging that they be labeled.

Trevor's sales have decreased by 25% over the past 18 months. His biggest specific problem is trying to find a source of soy protein isolates that are guaranteed to be free of GM soybeans. Protein Technologies International is refusing to deal with this issue by saying that their isolates are safe. There are other big users of soy protein isolates in Australia: A large sausage company and Sanitarium Foods. Of his various products, Trevor's isolate-based soymilk has suffered the greatest drop in sales. Sales of his tofu products have not decreased, and sales of his soy ice creams are down only a little. Address: Managing Director, Bean Supreme Ltd., P.O. Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: (09) 590 592.

3274. Seemo (H. Shapira). 1997. Re: History of Dakini Health Foods Pvt. Ltd., in Pune/Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, May 13–in reply to inquiry. 7 p. Handwritten.

• ***Summary:*** Seemo is Mr. H. Shapira from Israel and Kairava is Mrs. J. Spaelstra from the Netherlands. Seemo is in charge of tempeh, Kairava in charge of tofu & soymilk. They are making the earliest known commercial soybean tempeh in India. For their first letter see Dakini (1997).

Both Seemo and Kairava are devout disciples of Osho (formerly called "Sri Rajneesh"), he since 1984 and she since 1986. They arrived in Pune to stay in about 1988/89. Initially to support themselves, they had a gem and crystal shop, a wholesale new-age jewelry operation, and a motor bike repair shop. Now they have finally found what they want to do for work. "It's love and Zen." Osho died in Pune on 19 Jan. 1990; they returned to India the next day; the fire was still burning at the burning ghat. In the year before his death, his discourses were mostly about Zen. He died in Pune due to heavy metal poisoning and radiation damages done to him by U.S. marshalls in an Oklahoma jail cell, where he was kept unlawfully in 1985.

Their company started with the idea of making white tahini and possibly Turkish halva [halvah] (in which white tahini is a main ingredient). It was extremely difficult to get started. As foreigners doing business in India, they had to register a "Pvt. Ltd." company. Then they could not find a space for the company, since Pune is a rapidly growing city. So Seemo pulled down the back garden in his rented house, constructed a shed with a floor area of 25 square meters, and moved his bedroom up to the second floor. This gave him an additional 24 square meters where the bedroom used to be. They also have a 25 square meter storeroom where they make the tempeh. He got electrical connections then waited for 8 months while a colloid mill (copy of a 1940 model), hot air oven, and filling machine were delivered. The mill proved to be a technical nightmare; he had to totally rebuild it. Finally their small factory started operation. Then they added peanut butter and brown tahini to their product line–with no additives or preservatives. They had to set aside their plan to make halva.

Spicer College, run by Seventh-day Adventists, is located in Pune. They have a health food store and they make peanut butter–nearly edible, with too much sugar and salt, plus other ingredients. Their sesame butter (brown tahini) is gritty, rancid, and inedible. They also produce grape juices (very, very sweet), pastries (Mmmm good). And they make and bottle soy milk in plain and chocolate flavors, but it is loaded with white sugar and Class II permitted preservatives! They also make pretty good tofu; Seemo used to eat it now and then for the last 8 years. "Besides being actually able to taste the Bible in it, I had no reason to complain." This tofu is now served at the Osho commune. "Pune old timers told me that once–20 years ago–the place was managed by an enthusiastic old American woman and the quality of their products was very good.

At Dakini, they now also make hummus in their kitchen, 15 kg/week in summer and 60 kg/week in winter. They pack it in 200 or 400 gm cups and sell it at various shops in town to foreigners and Indians. They like it.

Seemo started developing the tempeh about 8 months ago. Last year a friend of his found a book titled *Handbook of Indigenous Fermented Foods,* edited by Dr. Keith H. Steinkraus, in a pavement stall for 400 rupees (US$13.00). Since he had been to Bali, Indonesia, many times, he tried

© Copyright Soyinfo Center 2014

making some of the foods but rarely got any edible products. So before leaving Pune, he gave the book to Seemo as a gift. As he read it, Seemo got really excited. He had grown up in a meat-eating family. Even while traveling and living in Europe, he continued to eat meat and junk foods. "Then I understood it was not good for me on all levels, and went vegetarian." Living in Holland later on, he started to learn about tofu, and then tempe, tamari, etc. "So now I was a healthy, well-fed vegetarian." Then he moved to India, but after some years of eating fried foods, lentils and lots of dairy products, he started to eat meat again, 2-3 times a month. "It did not feel too good, but I had no idea how to manage my diet, and living on mostly dairy products did not suit my body. So when Dr. Steinkraus' book fell into my hands, I got excited and realized that it might be possible to make tempe here in India at a small, affordable investment.

"So I first got a small incubator built; its actually like a cool box ½ meter wide and 1½ meters high, made of galvanized sheet metal with insulation and 8 shelves (of which I now use only 3)." At the bottom are heaters, which give 250-540 watts of heat. Two old computer cooling fans distribute the heat, and a thermostat regulates it. "It's not a perfect machine but I can do 5-12 kg/day when I want and, most important, I can produce in it excellent spore powder–since it is difficult to import anything here. Actually, I nearly gave up the project, because I was making sporulated tempeh, then sun-drying it and running in through my spice grinder. The powder looked great. The tempe cakes used to get hot, then very hot, then smelly with funny colors (no white mold). I double-checked everything. In the end, only the grinding was left, so I bought a small hand-turned grain mill (500 rupees = US$15.00). Since then, perfect tempeh has been happening.

"For starter, I first got a packet of spores from Holland. Later I got 1 gram of white tempe starter from an American friend in Goa (she used to make her own supply down there), and playing with it I found it a bit more suitable for my use. So most of my spore stock now is from this starter, and some is mixed. I still have to study how to make tempe and starter during the different seasons here. Now it is very hot and dry. Next month is monsoon (wet), followed by a month that is hot and humid, and then the 3-month 'cold' season."

About half of all tempe produced is sold frozen; the other half is sold fresh. Seemo also plans to try making dry tempeh. He gives away lots of tempe as samples; most people love it. Starting this July, it will appear on the menu of one restaurant, possibly two–first as Tempeh Stroganoff and Tempeh Shashlik (steamed, then spiced, then barbecued). "When I get *The Book of Tempeh* I will introduce it to more places. Meanwhile, I have totally forgotten about eating meat. I feel strong and light. I find my vision benefits too; I haven't noticed that with tofu. Now that I am a bit more confident working with the mold, I hope to raise some capital, move to a suitable place (possibly well out of town), and then start to make tamari shoyu, and definitely some miso too. So that's a little of our story. Thank you." Address: Dakini Health Foods Pvt. Ltd., Vidyut Nagar, Plot A2, Kawdewadi, Pune / Puna 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

3275. Burros, Marian. 1997. Trying to get labels on genetically altered food: Eating well. *New York Times.* May 21. p. B8.

• ***Summary:*** In December 1996, Whole Foods Market (WFM), the largest natural foods supermarket chain in America, sent a letter to more than 400 of its suppliers asking if their products contained genetically engineered ingredients. About 75% of the suppliers have not yet responded–According to Margaret Wittenburg, quality assurance director of WFM; she wrote the letter. More soybeans are genetically engineered than any other food crop. "They [most Americans] have no idea what foods on their supermarket shelves contain genetically engineered ingredients because the Government does not require those products to be labeled. A small but growing movement of people is pushing for that to change."

"Europeans have been quicker than American to react to transgenic food... In Austria and Luxembourg genetically engineered food is banned. Most observers suggest that Europe's response is so much more intense because of the European experience with mad cow disease."

"There are signs that the consumer movement is gaining momentum. Nebraska and Maine are considering legislation for labeling. Mothers for Natural Law, a nonprofit consumer advocacy group, has begun a public awareness campaign. The group, which is affiliated with the Natural Law Party, which promotes transcendental mediation, wants to collect a million signatures on a petition asking the Food and Drug Administration to require testing and labeling of transgenic foods."

The article then asks how widespread transgenic foods are in U.S. supermarkets. "[The *Times*] asked Genetic ID, a company in Fairfield, Iowa, that tests foods for genetically engineered ingredients, to test four soy-based baby formulas and eight other products made with soy or corn. The infant formulas–Carnation Alsoy, Similac Neocare, Isomil and Enfamil Prosobee–all tested positive. Eden Soy milk tested negative. Morningstar Farms Breakfast Links and Morningstar Farms Better 'n Burgers, Betty Crocker Bac-os Bacon Bits, all soy-based products, also tested positive. And so did three corn-based chips–Fritos, Tostitos Crispy Rounds and Doritos Nacho Cheesier."

3276. Hymowitz, Ted. 1997. Thoughts on genetic engineering and Roundup Ready soybeans (Interview). *SoyaScan Notes.* May 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ted has just received a letter from Greg

© Copyright Soyinfo Center 2014

Gambrill of Sanitarium Foods in Australia asking how they should relate to consumers who do not want to consume genetically engineered (Roundup Ready) soybeans. Address: Prof. of Plant Genetics, Univ. of Illinois, Urbana, Illinois.

3277. Haumann, Barbara Fitch. 1997. Soy protein foods gain store space. *INFORM* (*AOCS*) 8(6):588-596. June.
• ***Summary:*** Contents: Introduction. Nutritional drive. Meat alternatives. Soymilk and tofu markets. Soybeans as vegetables. Emerging products. Products consumers want. Hurdles. Possible health claim? School lunch opportunities (federal school lunch program). Product promotion. Nutraceuticals.

Soy protein foods sold in supermarkets are no longer targeted at only vegetarians; they're becoming mainstream products. Many U.S. consumers are decreasing their consumption of meat. USDA food intake surveys show that from 1977 to 1994 per capita beef consumption decreased 54% and pork consumption dropped 45%.

The leader in meat alternatives is Worthington Foods, which has seen sales rise approximately 20% in each of the past 3 years. Its Morningstar Farms brand, sold in frozen food sections in supermarkets and geared for mainstream consumers, represents 75% of the company's offerings.

PMS Foods, Inc. in Hutchinson, Kansas, is among the companies that make meat alternatives, including soy-based beef, chicken, ham, pepperoni, bacon, sausage-flavored crumble, sloppy joe mix, soy-based taco mix, and soy-based chili mix–which it sells wholesale, primarily to foodservice operations. Some of its products are used as ingredients in supermarket products–such as bacon bits and salad dressing mixes.

Steve Demos, founder and president of White Wave, jokes: "We're primarily a dairy without a cow. We 'milk' soybeans. Founded in 1977, the company now sells 54 retail products and produces about 125 tons a week of soy proteins via aqueous extraction. White Wave has up to 30 linear feet in the refrigerated sections in some natural food stores. White Wave has experienced 25-30% sales increases per year over the past decade.

The Soy Protein Council in Washington, DC, now has 3 members: ADM, Cargill Inc., and Central Soya; all produce soy protein concentrates, isolates, and soy flours. The council promotes the growth of the soy protein industry and works to broaden the acceptance of soy products in foods. The council's Web site is http://www.spcouncil.org.

Fourteen state soybean boards, the United Soybean Board, and the Soy Protein Council gave joined together to form the "Soy Protein Partnership," whose goal is to promote domestic soy protein use in human foods. Seven members of the partnership–the state soybean boards from Indiana, Iowa, Kansas, Michigan, Nebraska, Ohio, and South Dakota–are providing $270,000 to fund the partnership's first project, a "Food Manufacturer's Initiative." The group in using the slogan "New Food, New Uses: How soy protein can expand your business, to reach food marketing executives and food technologists and to increase their awareness of the demand for soy products and their use in food products.

Surveys by Wiese Research Associates have shown that consumer awareness concerning soy protein increased from 55% of consumers polled in 1991 to 79% in 1996. Likewise, those saying they wee likely to purchase a product if they knew it contained soy protein increased from 20% in 1988 to 32% in 1996.

In addition, a national Gallup survey conducted in 1996 for the Nebraska Soybean Board showed that 56% of the 600 school foodservice directors polled currently use soy products. And studies by the National Restaurant Association indicate that 97% if colleges and universities and 80% of restaurants have incorporated meatless entrees into their daily menus.

Schouten USA Inc. of Minnesota, whose parent company is the Schouten Group in the Netherlands, manufactures SoyLife, a soybean [sprout] extract containing 25-30 mg of isoflavones per gram. According to Laurent Leduc, Schouten USA's international marketing manager, it is presently used as an ingredient by more than 40 different vitamin and supplement companies as a source of isoflavones in their products, and is being incorporated into "functional foods" around the world. Leduc notes that research has indicated that consuming 60-80 mg of isoflavones a day may provide health benefits. He adds: "The only other way to get that much is by eating 8-9 ounces of tofu or drinking two-thirds of a liter of soymilk a day. The average American is not going to do that."

William Shurtleff of Soyfoods Center "said it currently is no longer usual to field questions from consumers in Midwestern states who would like to know how to incorporate soy as part of their diets to lower cholesterol.

"'I credit much of this to the state soybean checkoff boards that are promoting interest in soyfoods, particularly in the heartland. This is changing the demographics for the market throughout the United States. Within the past two years, these boards have collectively become the single biggest force promoting soyfoods in America.'" Address: Senior editor/writer for INFORM.

3278. **Product Name:** So Good (Soymilk Based on Soy Protein Isolates) [Fresh, or Aseptic].
Manufacturer's Name: SoyaWorld Inc.
Manufacturer's Address: 4074 Lozells Ave., Burnaby (suburb of Vancouver), BC, Canada. Phone: 604-420-3240.
Date of Introduction: 1997 June.
New Product–Documentation: Talk with Peter Joe of Sunrise. 1999. May 26. So Good is created under a licensing agreement with Sanitarium Foods in Australia. It was first test marketed in mid-1997 (with the name SoyaWorld Inc. on the package), then in Jan. 1998 the product was officially

© Copyright Soyinfo Center 2014

launched with a big TV advertising campaign. It is sold in both fresh and UHT packaging, but 90% of the sales come from the fresh product. It is targeted at mainstream Canadian consumers and sold mostly in supermarkets.

Note: This is the earliest record seen (Aug. 2013) concerning SoyaWorld, Inc.

3279. Worthington Foods, Inc. 1997. Second quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** Net sales for the second quarter of 1997 rose 14% over the same period in 1996, net income rose 27.3%, and earnings per share rose 27.3%. Gross margins of 42.8% were another record for the Company (compared to 39.1% last year). Address: Worthington, Ohio. Phone: (614) 885-9511.

3280. Sandler, Matthew. 1997. New developments Luppy and with soymilk in the USA (Interview). *SoyaScan Notes.* Sept. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** At the Natural Products Expo in Baltimore, Matt introduced Luppy, a pudding based on organic milk. For years he had wanted to make a soy-based pudding but he was unable to realize his dream, largely for two reasons. He was unable to buy soymilk at a reasonable price, and when the soymilk was heated to aseptic temperatures, it developed off-flavors that he was unable to get rid of.

Matt buys organic nonfat dried milk for $2.30/lb. One pound makes 10 gallons with 10% solids. So the cost of a gallon of liquid is $0.23.

Matt heard that American Soy Products (makers of Edensoy) has recently doubled the capacity of their soymilk plant.

Matt also heard that Elmer Schettler, president of Devansoy, Inc. (Carroll, Iowa), recently sold his company to Sovex. Devansoy started making Solait (powdered soy beverage) as its own brand in Jan. 1993; Solait had previously been made by Miller Farms. Devansoy also made "Better Than Milk" (powdered soy beverage) for Sovex. Note: Talk with Elmer Schettler, owner of Devansoy, Inc. This is not true. Devansoy is not for sale and has not been sold. Address: Co-owner, Luppy Natural Foods, Inc., P.O. Box 5997, Snowmass Village, Colorado 81615. Phone: 970-923-0333.

3281. Shurtleff, William; Aoyagi, Akiko. comps. 1997. Soy in Africa–Bibliography and sourcebook, 1857 to 1997: Detailed information on 1,617 published documents (extensively annotated bibliography), 109 unpublished archival documents, 111 original interviews (many full text) and overviews, 97 commercial soy products. Lafayette, California: Soyfoods Center. 518 p. Subject/geographical index. Author/company index. Language index. Printed Sept. 28 cm. [1794 ref]
• ***Summary:*** Brief History of Soy in Africa: The Society for Acclimatization in France did most of the pioneering work with soybeans in Africa. In 1857 they were asked to send soybeans to the island of Réunion, and one member asked that large-scale soybean trials be undertaken in Algeria. In 1858 Mr. Koenig-Bey of Alexandria, Egypt, wrote the Society about the cultivation of soybeans in Egypt. In 1880 the Society's soybean expert, Auguste Paillieux, published a report from Dr. Bertherand of Algiers (Algeria, which was then a French colony) dated 19 Nov. 1880. It stated: "The breeding nursery cultivated soybeans (Soya; Glycine hispida) many years ago. Soya does rather well here, but its seeds are hard and remain tough. This is the earliest document seen that clearly describes soybean cultivation in Africa.

By 1873 Haberlandt of Austria reported that soybeans were being grown in Tunisia–but gave no details.

By 1903 soybeans were being grown in South Africa, by 1907 in Tanzania, and 1908 in Mauritius.

In 1908 the world price of linseed oil and cottonseed oil skyrocketed. During the next few years the first large shipments of soybeans were imported to Europe from Manchuria. European colonial powers (and South Africa) quickly began to investigate the possibility of growing soybeans in their African colonies, but without much success, since suitable varieties had not yet been developed. Nevertheless in 1909 trials were conducted in Gold Coast (today's Ghana), Kenya, and Gambia, and in 1910 in Nyasaland (Malawi), Southern Rhodesia (Zimbabwe), and Nigeria.

Starting in the 1960s, serious interest in soybeans in Africa began to grow–slowly but steadily. Total production increased from 50,000 tonnes (metric tons) in 1960 to 75,000 tonnes in 1969, a growth of 50% in ten years. The great majority of these soybeans were grown in Nigeria. Starting in the mid-1960s, large amounts of soy flour, in the form of cereal-soy blends, began to be shipped from the U.S. to Africa under the P.L. 480 (Food for Peace) Program. In 1962 Africa's first two commercial soy products were introduced: Pro-Nutro, a cereal soy blend, by Hind Brothers in Durban, South Africa, and a Soy-Fortified Whole Wheat Bread by Harrison Foods in Ghana.

Then in about 1973 there was a rapid rise of interest in soybeans and soyfoods in Africa, paralleling the new interest worldwide. The three major reasons for this strong interest in Africa were the sudden rise in world soybean prices, the work of the International Institute of Tropical Agriculture (IITA at Ibadan, Nigeria) starting in 1970, and the work of INTSOY (the International Soybean Program headquartered at the University of Illinois) starting in 1973. IITA and INTSOY developed soybean varieties and management practices that for the first time gave high yields under African conditions, and sponsored conferences on soybean production and utilization in Africa.

© Copyright Soyinfo Center 2014

Interest, production, utilization, and research grew dramatically during the 1980s. Africa's leading soybean producing countries in 1987/88 were Egypt (144,000 tonnes), Zimbabwe (100,000), Nigeria (75,000), South Africa (49,000), and Zambia (26,000 tonnes).

By 1995/96 Africa's leading soybean producers were Zimbabwe (110,000 tonnes), South Africa (84,000), Nigeria (80,000), Egypt (64,000), and Zambia (35,000 tonnes).

In October 1995 the Third Bi-Annual SoyAfrica Conference was held in Johannesburg, South Africa.

The future for soybeans and soyfoods in Africa, a continent with long-term protein shortages, looks extremely bright.

This is the most comprehensive book ever published about soy in Africa. It has been compiled, one record at a time, over a period of 20 years, in an attempt to document the history of this subject. Its scope includes all known information about this subject, worldwide, from A.D. 1857 to the present.

This book is also the single most current and useful source of information on this subjects, since 97% of all records contain a summary/abstract averaging 181 words in length.

This is one of more than 50 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

3282. Worthington Foods, Inc. 1997. Natural Touch: Purity pledge. Worthington, Ohio. 2 panels each side. Each panel: 8½ by 11 inches.

• ***Summary:*** This glossy color leaflet describes 19 Natural Touch products–including Vege Frank, Dinner Entree, Loaf Mix, Stroganoff Mix, Taco Mix and Vegetarian Chili.

For each product is given: A photo of the front of the package. A brief description of the product. The weight of each package and number of packages per carton. Ingredients. Nutrition facts.

The Purity Pledge on the front panel states: "Natural Touch products are completely free of anything artificial–no additives, colors, flavors, or preservatives–you have our word on it." Address: 900 Proprietors Rd., Worthington, Ohio 43085. Phone: (614) 885-9511.

3283. Davis, Jean; Stoltz, Garth "Duff." 1997. Seventh-day Adventist historical landmarks in Battle Creek, Michigan (Brochure). Battle Creek, Michigan: Printed by Benedict Printing. 10 panels. Oct.

• ***Summary:*** Contents: Twenty-nine historical landmarks, each with a description, an illustration or photo, and its location shown on a map. Key to numbers on tour map. Map of Battle Creek showing historical landmarks. Oak Hill Cemetery map, plus key to numbers on map. Adventist history tours. Chronology of events in Battle Creek Adventist history–1850-1928.

The historical landmarks include: The first four Adventist churches (starting fall 1855 to 1922). Note from Jean Davis, Jan. 1999. "The second church [opened Nov. 1857] has been replicated in the Historic Adventist Village and looks great." 8. John Harvey Kellogg's spacious residence (demolished 1958). 9. The home of James and Ellen G. White, co-founders of the SDA Church, 63-65 N. Wood Street. James and Ellen moved to Battle Creek in the fall of 1855. Note: This home is undergoing restoration and is in the heart of the Historic Adventist Village. 13. The building that stood at 169 W. Emmett. "It was built in 1901 by W.K. Kellogg for his brother, Dr. John Harvey Kellogg, to house the Sanitas Nut Food Company. Corn flakes, peanut butter, and other health foods were manufactured here until 1913 when it was moved to larger quarters in a former organ factory." From 1989 it was "used for the Health and Heritage Museum until it was demolished in 1996 to make way for the Family Health Center."

17. Battle Creek College, founded in 1874, was the first in the denomination. The building was dedicated on January 4, 1875. It flourished, and in 1901 it was relocated at Berrien Springs, Michigan, and was renamed Emmanuel Missionary College. It is now Andrews University.

"18. On December 25, 1865, Ellen White was shown that SDA's needed a health institution. Her counsel was heeded and the Western Health Reform Institute opened September 5, 1866, in a residence on N. Washington. In 1876 Dr. John Harvey Kellogg became medical director, and in 1877 changed the name to" Medical and Surgical Sanitarium, which that same year came to be known as simply "the Sanitarium." A large new brick Sanitarium was opened 'on the grounds of the old Health Institute' in 1878. Its fame spread and it became known worldwide... The San burned February 18, 1902 and was replaced by a larger structure in 1903. Expansions continued and in 1928 the 14 story towers addition was added to accommodate increasing patronage. Due to financial reverses it was sold to the government in 1942, and served as Percy Jones General Hospital until 1953. Today it is known as the Battle Creek Federal Center.

"19. In 1855 James White accepted the invitation of Michigan Adventists to move the *Review* office from Rochester, New York, to Battle Creek... Four men purchased a lot and erected a two-story building 20 by 30 feet on the southeast corner of West Main (now West Michigan). It was moved to the rear in 1861 and survived the fire of 1902." The Review and Herald Offices were moved to Washington, DC, in 1903. Note: Joseph Lambert had his factory in this building, which will be replicated in the Historic Adventist Village.

Key events: "1850–Samuel W. Rhodes, earliest known

© Copyright Soyinfo Center 2014

Sabbatarian Adventist minister to visit Battle Creek, came in August with C.J. Bowles,–visited 'one brother' and had 'strong hopes of his embracing the truth.'

"1852–David and Olive Hewitt accepted the Seventh-day Sabbath and sanctuary doctrine brought to them by Joseph Bates. They became Battle Creek's first Sabbathkeeping Adventists.

"1854 June 9-11–The first SDA evangelistic tent meetings were conducted in Battle Creek.

"1855 April 28-29–James White held his first public meetings in Battle Creek with D.P. Hall in the Universalist Hall.

"1855–Review moved to Battle Creek" from Rochester, New York. First issue printed Dec. 4. Uriah Smith began his long term as resident editor.

"1860 Oct. 1–The name Seventh day Adventist was adopted for the denomination."

"1867 April 9–Health Reform Institute, forerunner of the Battle Creek Sanitarium, was incorporated."

"1874–Battle Creek College was founded. Building completed on Washington (opposite Sanitarium) and dedicated January 4, 1875."

"1901–College was moved to Berrien Springs, Michigan and became Emmanuel Missionary College, now Andrews University.

"1902–Sanitarium burned February 18. Review and Herald burned Dec. 30.

"1903–Sanitarium rebuilt on larger scale. Last Review printed here [in Battle Creek] August 11. Publishing Association and General Conference headquarters moved to Washington, DC.

"1915–Funeral of Ellen G. White was held in the Dime Tabernacle July 24." Address: Battle Creek, Michigan.

3284. Sanitarium Health Food Co. 1997. So Good now: The fresh taste of today (Booklet). 146 Fox Valley Rd., Wahroonga, NSW 2076, Australia. 8 p. April. 15 cm.
• ***Summary:*** The first 2 pages of this attractive full-color booklet contain information about these soymilk products: Soy & linseed–a recipe for good health. What's so good about So Good. Rich in phytoestrogens. The Omega 3 benefit. Calcium. Vitamin B-12. Low fat. There follow 7 pages of recipes. Address: Wahroonga, NSW, Australia.

3285. Stuttman, Irene. 1997. Update on Sycamore Creek and their soynut butter (Interview). *SoyaScan Notes.* Nov. 18. Conducted by William Shurtleff of Soyfoods Center. Followed by a fax of June 19.
• ***Summary:*** Sycamore Creek has no formal contract with T&G Food Ingredient Services (the company which markets their soynut butter) or with the co-packer. In the early days, T&G wanted Sycamore Creek to split off their soynut business into a separate company, then T&G wanted to own half of that soynut butter business. As far as Irene knows, T&G has not done that with other companies whose products they market. This could become a problem if Sycamore Creek sells their company to people who have the funds to make and market the soynut butter themselves, and if T&G decides (working with the co-processor) to continue making and marketing the soynut butter in competition with the new owners–or to stop only for a hefty price. Shurtleff feels that Sycamore Creek is in a potentially vulnerable position, but Irene does not feel vulnerable because T&G does not know how to roast the soybeans, and her company knows what it is doing. Irene could sell her company without telling T&G; she has no plans to tell them. But recently she tested the water, asking T&G if they would like the first right of refusal when she puts the company up for sale; they said "no." She told them she planned to get aggressive about it.

Irene is proud to have accomplished her three goals over the past few years: To get the company back from the guy who was milking it, to build it up, and to get it ready to sell. The company is now profitable and the plant is running at capacity.

Irene could never have done what T&G did in terms of financing the soynut butter launch. She financed the first go-around during which she had to come up with $80,000 worth of raw materials. Since she had hardly any money to do this, she used creative entrepreneurial techniques; she had to talk her suppliers into giving her "terms" until Worthington paid. It worked the first time around, but she could not have continued in that way. Moreover, the co-processors have made some big processing mistakes which required them to throw product away and swallow the financial losses. Irene could never have been able to pay for those losses. So in the final analysis, things have worked out well with T&G. Address: President and CEO, Sycamore Creek Co., 200 State St., Mason, Michigan 48854. Phone: 517-676-3836.

3286. Cho, Sungsoo; DeVries, Jonathan W.; Prosky, Leon. 1997. Dietary fiber analysis and applications. Gaithersburg, Maryland: AOAC International. xv + 202 p. Illust. No index. 26 cm. [500+* ref]
• ***Summary:*** Contents: Preface. 1. The definition of dietary fiber. 2. The structure and chemistry of dietary fiber. 3. An overview of dietary fiber analytical methodology. 4. AOAC International approved dietary fiber methods. 5. The physico-chemical properties of dietary fiber. 6. Analytical methods for measuring the physico-chemical properties of dietary fiber. 7. Future needs for analytical methods for dietary fiber. 8. Dietary fiber content of foods.

In Chapter 8, table 8.4, "Dietary fiber data on foods of Japan, contains a section titled "Grain products" (p. 158-59) which gives values for TDF % (total dietary fiber), SDF % (soluble dietary fiber), and ISF % (insoluble dietary fiber) for the following foods: Miso, barley-koji. Miso, rice-koji, dark yellow type. Miso, rice-koji, light yellow type. Miso, rice-koji, sweet type. Miso, soybean-koji. Natto, Hikiwari,

© Copyright Soyinfo Center 2014

fermented soybean. Natto, Itohiki, fermented soybean. Okara. Tofu, Kinugoshi, soybean curd. Tofu, Kori-dofu, soybean curd. Tofu, Momen, soybean curd. Yuba, dried.

The three values for okara are 9.8%, 0.3%, 9.5%. Thus, most of the dietary fiber in okara is insoluble. Address: 1. Kellogg Co., 235 Porter St., Battle Creek, Michigan.

3287. Hogan, David Gerard. 1997. Selling 'em by the sack: White Castle and the creation of American food. New York, NY: New York University Press. x + 199 p. See p. 99, 100, 107. [261* ref]

• ***Summary:*** A fascinating book, very well researched and written. White Castle, a regional restaurant chain, was founded in 1921 in Wichita, Kansas–at a time when Americans were hesitant to eat ground beef after Upton Sinclair's 1906 novel *The Jungle* had publicized the poor sanitation practices of the meat packing industry. It became the first American hamburger fast food restaurant chain.

It made the hamburger a U.S. institution and launched the fast-food industry.

In the chapter "White Castle goes to war," the section titled "Victory coffee without the coffee" (p. 98-100) states that coffee was in short supply during World War II only because consumers, in the early summer of 1942, fearing it would be rationed, "fulfilled their own prophecy of scarcity by clearing grocery shelves and hoarding coffee in their cupboards." Rationing was imposed a few months later.

White Castle first considered extending the existing coffee supply by adding "chicory or soy meal." Eventually most wholesale roasters added 6-8% chicory to their mix, which did not alter the flavor much. White Castle soon accepted this "chicoried" coffee at most Castles in the chain.

They also tried a variety of other hot drinks to help make up the coffee shortage, such as Postum (an extract from roasted wheat bran flavored with molasses)–but it was quite expensive.

White Castle also considered and tested, but ultimately rejected, other coffee substitutes such as "Soykee, a soy derivative sold by Battle Creek Food Company; Soyfee from Cubbison Company; and Kofy Sub, another soy-based substitute" [made by Dr. Jackson Foods in Toronto, Ontario, Canada]. The only coffee substitute that White Castle considered seriously was Breakfast Cup, sold by Loma Linda Foods of California in 12-ounce packages; it was made from soy, bran, fig, wheat, and honey, but was eventually considered too expensive.

Since meat was also scarce during the war, White Castle also searched for alternatives to their hamburgers–and even considered meatless alternatives. Battle Creek Foods of Michigan offered the most varieties. Special Foods of Columbus [sic, Worthington] Ohio, made Numete, based on peanuts and corn flour. Many companies made a soy burger, while Loma Linda Foods made Vegelona (from soybeans, tomatoes, onions, and peanuts) and Proteena (from soy, tomato juice and yeast extract). Central Soya Co. made soya flour, which White Castle considered using as a meat extender. But there is no evidence that White Castle ever mixed its hamburger meat with any extender.

Brief story of Betty Crocker: The first company to pioneer a corporate hostess for image making was General Mills in 1921–though at the time the company was named Washburn, Crosby, and Company, it "was becoming frustrated with the growing negative publicity about the white bread made from its bleached Gold Medal Flour. White bread was being denounced as having no nutritional value and being full of additives. In response the company created the popular yet fictional gray-haired 'Betty Crocker,' who was portrayed to the public as both an expert on nutritional issues and the ideal role model of the feminine and organized homemaker." The program began with just one secretary signing this pseudonym to all public relations correspondence, but quickly expanded. Address: Assoc. Prof., American History, Heidelberg College [Tiffin, Ohio].

3288. Nutrition Education Service, Sanitarium Health Food Company. 1997. Sensational soy cookbook. Sydney, London, Vancouver, New York: Murdock Books. 64 p. Illust. Index. 20 cm. [32 ref]

• ***Summary:*** A saddle-stitched vegetarian cookbook on glossy paper loaded with color photos and lightweight text. The author and nutritionist is Cathy McDonald of Sanitarium. Recipes developed by Wendy van der Veer of Sanitarium. Contents: The story of soy. The soy family: Miso, soy beans, soy breads & cereals, soy cheese, soy drink, soy flour, soy grits & soy flakes, soy 'meats,' soy pasta, soy sauce, soy snacks, tempeh, TVP, tofu, tofu desserts (ice cream and yoghurt). Breakfasts. Soy for health (isoflavones, menopause, breast cancer, osteoporosis, prostate cancer, heart disease). Light meals. The secrets of soy. Main meals. Soy in perspective. Desserts. Sensational soy (sample menus). Snacks. Know your nutrients. Bibliography. Estimated isoflavones in soy foods (table). Address: 1 Sanitarium Drive, Berkeley Vale, NSW 2261, Australia.

3289. Quick, Graeme R. 1998. The early history of the combine in the United States (Interview). *SoyaScan Notes.* Feb. 23-24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Graeme, an Australian who got PhD at Iowa State University, is an expert on this history of the combine and the co-author (with Wesley Buchele) of the classic book on that subject, *The Grain Harvesters.* He is now working on a new edition of that book, and welcomes the suggestion to include a glossary of basic terms (such as cutterbar, floating cutterbar, reel, pickup reel, header, etc.) for the non-professional reader. Graeme's PhD thesis was about improvements in the combine for soybean harvesting. The combine (and the word "combine") existed as early

© Copyright Soyinfo Center 2014

as 1883. Graeme is a Seventh-day Adventist and has been a vegetarian for 40 years. Wes Buchele is now retired and living in Baja California, Mexico; he often returns to Iowa during the summer.

The Grain Harvesters includes a long and very original chapter on the history of combines in soybean production titled "Cinderella Soybean" (p. 235-32). One especially interesting part of this chapter is the story of the invention and development of the floating cutterbar by Joe Zeb, Horace D. Hume, and J. Edward Love. In 1976 Graeme conducted in-depth interviews with Hume and with John E. Love, the son of J. Edward Love, who now runs the family combine business in Garfield. These interviews form the basis of the story of the floating cutterbar. A floating cutterbar "floats" in two directions to cut as low as possible on changing terrain. The blade is flexible from left to right, like a long cross-cut saw. Moreover, the header itself is mounted on shoes that run along the ground and allow it to move up and down. Graeme also invented the Kwik-Cut Head which was released in 1977 and improved the performance of the cutterbar.

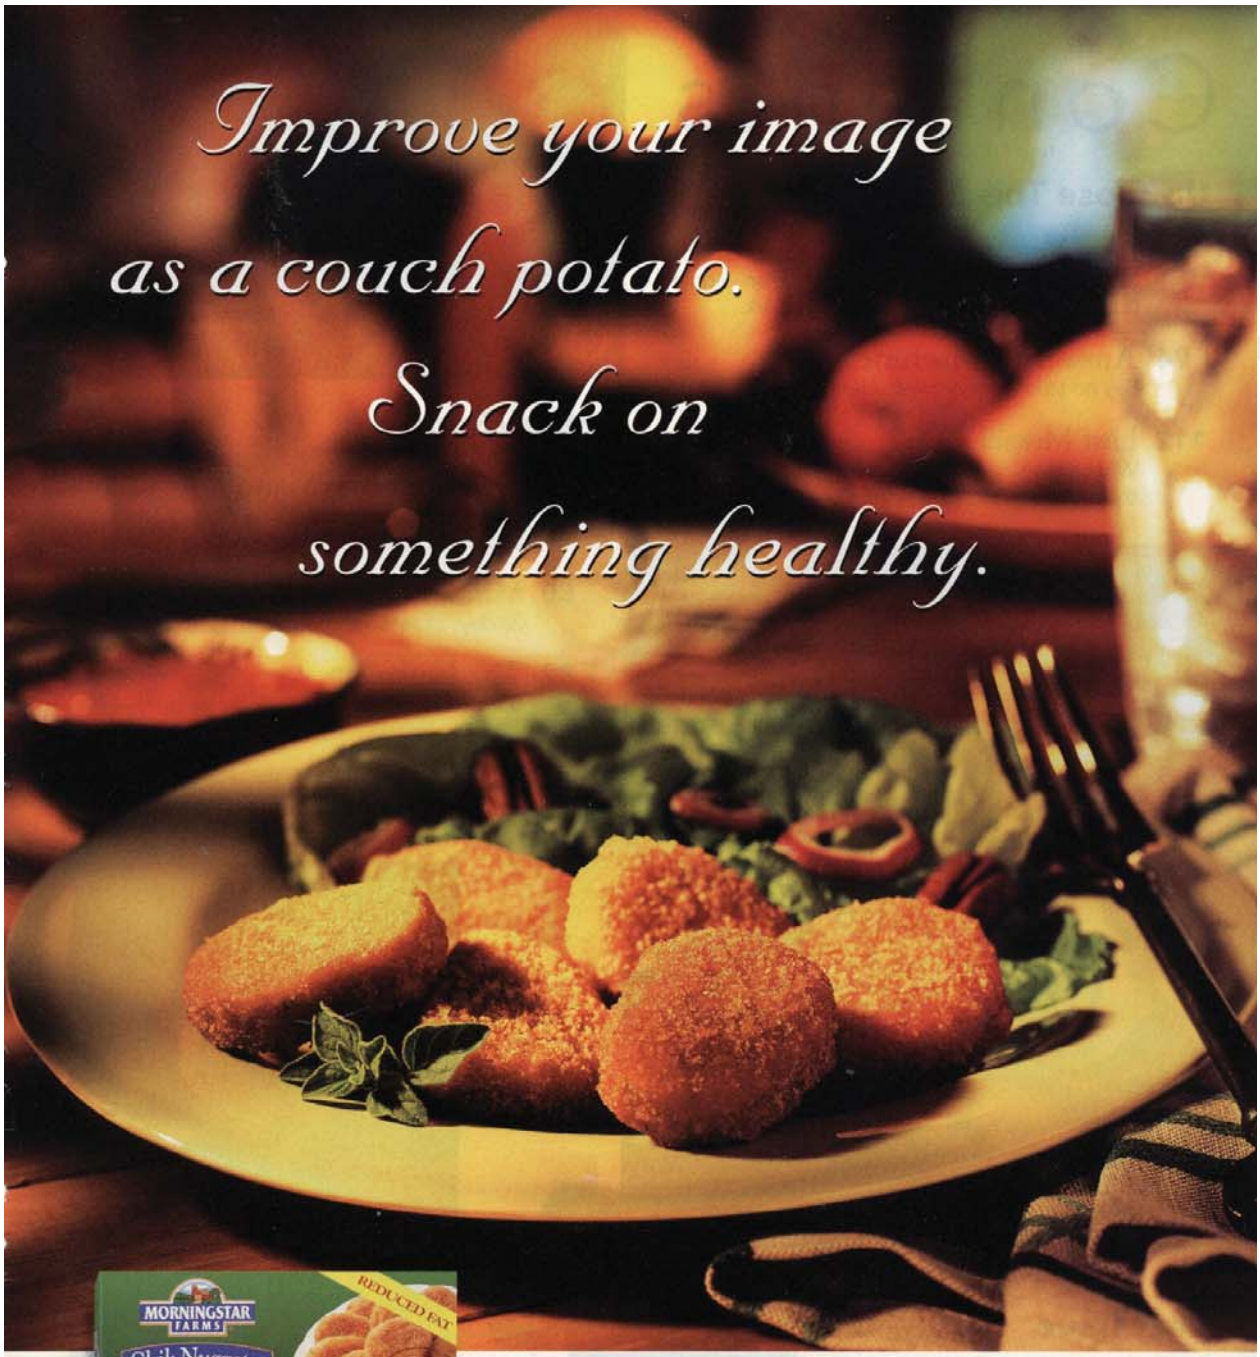
The coulter is an ancient piece of farm equipment, which goes back to the days of the horse-drawn plow, perhaps as early as the 1820s. It is a blade (initially a knife, now a disc) that runs in front of the plow, and makes a shallow cut into the soil to help the plow. Note: According to the *Oxford English Dictionary,* the word coulter (spelled *cultre* at the time), was first used in about 1000 A.D. by Aelfric, an abbot and writer in England (in the work *Colloq.*). It is defined as "The iron blade fixed in front of the share in a plow; it makes a vertical cut in the soil which is then sliced horizontally by the share."

Graeme has not done much research on the early history of the soybean in Australia. The man to contact on that subject would be Don Byth, who is known as "Mr. Soybean" in Australia. He is probably still active at the Dep. of Agriculture, Univ. of Queensland, St. Lucia, Queensland, Australia.

Graeme had not realized that the tractor first began to be used in soybeans at almost exactly the same time as the combine. He thinks that is a very profound observation. Tractors existed in the late 1800s, but why weren't they used in soybeans until about 1923? Graeme can think of at least three reasons: First, in the early 1920s, soybeans were generally grown in small fields / tracts–probably too small to make efficient use of a tractor. Second, soybeans were grown mostly for forage and hay at that time, and fed to livestock. Farmers who did this would be more likely to get their draft power from horses. Third, the early combines were very large, and mostly of the pull type, which required a large tractor, that would not fit well on a small soybean farm. The horse was the dominant source of draft power until about 1919, the year of the peak number of horses on U.S. farms. By this time, the number of tractors was increasing rapidly, and it continued to do so until the Great Depression, when they took a savage blow. Only after the Depression, with the start of World War II, did they start to rise again.

The combine was one of the reasons that soybeans switched from being a hay crop to a seed crop. Not until 1941 did acreage of soybeans planted for seed pass that planted for forage and hay. Address: Dep. of Agricultural Engineering, Davidson Hall, Iowa State Univ., Ames, IA 50011-3080. Phone: 515-294-1320.

3290. **Product Name:** Gardenburger–Hamburger Style Veggie Patties (With Soy) [Regular, or With Cheese].
Manufacturer's Name: Gardenburger Inc.
Manufacturer's Address: 1416 S.E. 8th St., Portland, OR 97214. Phone: 1-800-636-0109.
Date of Introduction: 1998 February.
Ingredients: Incl. soy protein.
New Product–Documentation: Talk with Mr. Lige Weill of Vegetarian Awareness Network. 1998. Feb. 25. Gardenburger Inc. has just come out with a new Gardenburger that contains soy. He thinks they are doing this to compete with the Boca Burger.



News release by Gardenburger. 1998. Oct. 20. "Daily news of soy's health benefits rocketing sales of soy-based veggie patties: Gardenburger Hamburger Style Fat Free Veggie Patties become nation's favorite soy patties." States that this pattie was introduced in Nov. 1997. Note: It was not available in stores until about a year later. Yet the release adds that since November 1997, "Gardenburger has sold more than $10 million worth of soy patties. They are among the few such products available at supermarkets nationwide." "According to A.C. Scantrack data, sales are up 45% from a year ago and 69% in the last month."

Talk with Heidi in consumer affairs at Gardenburger, Inc. 1998. Nov. 25. The company's new soy-based line was introduced this month and is just now getting into retail stores. It complements the popular grain-based line. The two products in the line are Gardenburger–Hamburger Style–Regular or With Cheese. Formerly this company promoted their products as being "soy-free."

3291. Worthington Foods, Inc. 1998. Improve your image as a couch potato. Snack on something healthy (Ad). *Vegetarian Times.* Feb. p. 3.
• ***Summary:*** See next page. This is a full-page color ad for Morningstar Farms Chik Nuggets (reduced fat). The slogan reads: "The change will do you good." Address: Worthington, Ohio 43085.

3292. Fischer, Bruno. 1998. Update on soymilk in Europe: Sojinal, Alpro and Nutrition et Soja (Interview). *SoyaScan Notes.* March 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In mid-1993 Sojinal (of Issenheim, France) was purchased by a Swiss group named B&K Industry Holdings.

© Copyright Soyinfo Center 2014

No, not the garnish, the nuggets. Go on, help yourself. With 75% less fat per serving than regular chicken nuggets, Morningstar Farms® Chik Nuggets™ let you snack away without the guilt. If you like the taste of regular chicken nuggets, you'll love our nuggets. Just heat and serve. Great tasting, meat free, quick, easy and healthy. Remember, when you help yourself to Morningstar Farms, you really are helping yourself. Look for Chik Nuggets in your grocer's freezer.

MORNINGSTAR FARMS®

The change will do you good.™

© Copyright Soyinfo Center 2014

The heirs got much of their money from disinvesting in weapons and ammunitions. Then in December 1996 Alpro (in Belgium) bought Sojinal from B&K. They now make mostly sterilized pre-pack tofu patties and other related meat alternatives. In Bruno's opinion these products are not very good–they don't fit anywhere.

Alpro dominates the European market for soymilk and soymilk products. They do a lot of private label packaging in their factory, and they now make a little pudding in a cup with a peel-off lid. Bruno heard that in 1995 they had sales of 50 million German marks. Note: In March 1998 one German mark was worth about $0.55. So, very roughly, 50 million would be worth about $27 million.

Alpro now also makes rice drink, and in 1995 launched a rice beverage made by Alpro and packaged in glass bottles.

In about Feb. 1998 Vandemoortele, Alpro's parent company, sold all of its margarine manufacturing operations to Cargill. Now Vandemoortele has only Alpro and its oilseed crushing operations.

Nutrition et Soja (in Revel, near Toulouse, France) no longer sells their soymilk in Tetra Pak cartons–so they must be using it as an ingredient in their own products.

DE-VAU-GE (which made the Grano Vita line) no longer makes soymilk. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

3293. Soyfoods Association of North America. 1998. Membership lists (as of March 1998). Washington, DC. 1 p. March 23. Unpublished typescript.
• ***Summary:*** The Association has 34 paid members; 7 past members have not yet paid for 1998. The paid members are: ADM, American Health & Nutrition, American Soy Products, Central Soya Co., Clofine Dairy & Food Products, Corn Belt Foods, Devansoy Farms, EMB Partners, ExSeed Genetics, Galaxy Foods, GeniSoy (MLO) Products, Highland Equipment, Iowa Soy Specialties, Iowa Soybean Assoc., Kentucky Soybean Assoc., Lightlife Foods, Monsanto, MYCAL, Natural Health Magazine (Boston Common Press), Natural Products, Inc., Nebraska Soybean Board, Nutrition Advantage, Optimum Quality Grains [DuPont], P.J. Lisac & Associates, Pacific Soybean & Grain, Sacramento Tofu (California), Soyatech, Sun Rich, Sunrise Markets, Tofu Shop Specialty, Vitasoy (USA), White Wave, Wildwood Natural Foods, Worthington Foods.

The biggest paid members are ADM, Central Soya Co., and Monsanto. Address: N. Chapman Associates, 1723 U. Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

3294. Gardenburger, Inc. 1998. Annual report 1997: Going from niche to mainstream. 1411 Southwest Morrison St., Suite 400, Portland, OR 97205. 29 p. 28 cm.
• ***Summary:*** Net sales (in million dollars) have grown dramatically in recent years: $13.34 in 1993, $24.45 in 1994, $36.82 in 1995, $40.53 in 1996, and $56.83 in 1997 (up 40% over 1996). However in 1997 for the first time the company suffered a loss in net income ($1.393 million). In Nov. 1997 the company successfully introduced its first two soy-based Gardenburger flavors–Hamburger Style and Hamburger Style with Cheese. They completed the hiring of a new senior management team. The big news in manufacturing was securing a new plant in Clearfield, just north of Salt Lake City, Utah, that went on-line in early 1998. It was last used by Heinz to make frozen foods sold under the Weight Watchers and Budget Gourmet names. In May 1998 Gardenburger will launch its first-ever national TV advertising campaign. On 31 Dec. 1997 (according to AC Nielsen Scantrak data) the market share of the frozen veggie patty market is: Worthington 43%, Gardenburger 25%, and Green Giant 15% (p. 11).

"In January 1996 the Company completed the acquisition of Ojai, California-based Gorilla Foods, Inc., a privately held developer and manufacturer of wheat protein-based, meatless food products, including the Garden Dog."

Accompanying the annual report is an announcement of the Annual Meeting of Shareholders and Proxy Statement (17 p.). Lyle G. Hubbard joined the Company in April 1996 as President and CEO. Prior to this he spent 15 years with the Quaker Oats Company in Chicago, Illinois.

"Paul F. Wenner founded the Company in 1985 as a sole proprietorship and acted as its Vice President from the date of its incorporation until December 1989, when he became the Company's President, Chief Executive Officer and Chairman of the Board. In 1994, Mr. Wenner relinquished his duties as President and in 1995 relinquished his duties as Chairman of the Board, at which time he held the title of Founder, Senior Chairman of the Board of Directors and Chief Executive Officer. In April 1996, Mr. Wenner became Founder, Senior Chairman of the Board and Chief Creative Officer. In 1997, he relinquished the title of Senior Chairman of the Board, but remains a Director of the Company. From 1980 through 1984, he owned and operated the Garden House Restaurant and Gourmet Cooking School (the "School"), where he developed the Gardenburger veggie patty. The School was affiliated with Mt. Hood Community College's evening educational curriculum. Mr. Wenner graduated from Mt. Hood Community College in Portland, Oregon in 1973, with two Associate of Arts degrees."

(p. 5). Wenner is the largest owner of the company's common stock, with 20.0% of the outstanding shares. Lyle Hubbard is No. 2 with 2.8%. Address: Portland, Oregon.

3295. Worthington Foods, Inc. 1998. Annual report 1997. 900 Proprietors Rd., Worthington, OH 43085. 20 p. 28 cm.
• ***Summary:*** Net sales rose to $117.9 million in 1997, up 8.1% from $109.1 million in 1996. Net income (profit) rose to $8.006 million in 1997, up 8.3% from $7.392 million in 1996. Earnings per share (diluted) rose to $0.67 in 1997, up 6.3% from $0.63 in 1996. "Worthington Foods'

grocery market share of meat alternatives exceeded 55%, approximately the same as it was at the end of 1996." The introduction of Morningstar Farms Chik Nuggets–the first "finger food" in this line–was a major success and has already become one of the company's top selling products. "The test market sales of Morningstar Farms refrigerated products in the meat case provided convincing evidence that this concept is one we must aggressively pursue during 1998 and beyond. Accordingly, we are beginning a rollout of five refrigerated products in other selected markets, supported with increased advertising and sales personnel." Three of these items are in "modified atmosphere packaging" or MAP. A large color photo shows these five products: Garden Veggie Patties, Quarter Prime, Spicy Black Bean Burger, Chik Nuggets, and Breakfast Patties. Morningstar Farms' America's Original Veggie Dog, under development for two years, is already on the shelves of 15% of U.S. supermarkets. "Seventeen new items–nearly all low-fat or fat free–were introduced into the grocery, specialty and foodservice markets during 1997."

Includes an 11-page "Notice of Annual Shareholders Meeting." Address: Worthington, Ohio. Phone: (614) 885-9511.

3296. **Product Name:** Natural Touch Okara Pattie [58% Less Fat Than Original].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1998 March.
Ingredients: Textured vegetable protein (wheat gluten, soy protein concentrate), egg whites, okara (cooked soy pulp), corn oil, potato flour, autolyzed yeast extract, contains 2% or less of sea salt, onion, vegetable gum (guar and carrageenan), spice, paprika, celery extract, turmeric.
Wt/Vol., Packaging, Price: 9.5 oz (255 gm) box contains 4 patties.
How Stored: Frozen.
Nutrition: Per 1 pattie (64 gm): Calories 110, protein 11 gm, carbohydrate 4 gm, total fat 5 gm (calories from fat 45, polyunsaturated 3 gm, saturated 1 gm), cholesterol 0 mg, sodium 360 mg, potassium 170 mg.
New Product–Documentation: See next ppage. Ad (full page, color) in Natural Foods Merchandiser. 1998. March. p. 27. "Lower fat okara pattie: Natural Touch."

3297. Iderabdullah, Bisi. 1998. History of work with soybeans and soyfoods. Part I (Interview). *SoyaScan Notes.* April 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bisi was born in Brooklyn right after World War II, and grew up there; her father was from Jamaica and her mother from the American South. After graduating from high school, Bisi's entrepreneurial spirit began to appear. She and her mother bought a Carvel ice cream franchise, and she began to make money. On her own initiative, she traveled to Europe three times–before she had even entered college! In 1968 she entered Brooklyn College in New York. During her first year as pre-med student, she was introduced to soyfoods and soybeans when she read Jethro Kloss' book *Back to Eden.* Her college friends were also exploring more natural lifestyles, including natural foods. Bisi liked to cook so she experimented with Kloss' recipes for soybean butter, soybean cheeses, etc. Also during her first year she met her husband-to-be. In 1970 he converted to Islam and changed his name to Mahmoud. As part of her medical program, she had to see an autopsy. "It really shook me up. When they peeled the person's skin back, it looked just like chicken. The only meat I could eat after that was hot dogs–and that got tiring after a while." She had taken the first steps to becoming a vegetarian.

In 1973, during her junior year at Brooklyn College, Bisi converted to formal Islam (she did not become a Black Muslim) and was married to Mahmoud in an Islamic wedding. "At that period in U.S. history Islam was strongly linked with Africa and African myths; many converted to Islam because they felt it was more African. It wasn't as much religion as it was traditional carriage." Mahmoud was a pre-med student studying to be a health educator. Three months later she won a scholarship to study abroad–anywhere in the world she wanted. She chose Africa. Bisi wanted to return to study her roots, to learn more about where she (as an African-American) had come from. So, leaving her husband studying in Brooklyn College, she flew to Zambia for 5 months and studied at the University of Zambia in Lusaka. When school was out there, she flew to Ghana, where she was joined by her husband. She studied archaeology at the University of Ghana in Legon for one year. When in Ghana, they tried unsuccessfully to study with a traditional natural healer.

Returning to the USA (Brooklyn), pregnant with their first child, she decided not to continue her pre-med education, because of its lack of emphasis on healthy lifestyles, nutrition, prevention, etc. They bought a house in Queens. Her husband was working at a clinic, but in 1974, one week before the birth of their first child, a boy, he lost his job. When the child was born, the delivery was extremely long, difficult and painful. In 1976, shortly after the birth of their second child. Bisi started making jewelry as a hobby, then professionally to earn money. They bought a camper, took their two kids, and began to travel all over America. "We became free spirits, traveling to wherever there was an art show, to enter our jewelry."

They ended up settling in an apartment in Fort Lauderdale, Florida. Expecting a third child in 1978, they decided to do the birth themselves–with a midwife. So they bought the book *Spiritual Midwifery,* by Ina Mae Gaskin, published by The Farm. They also bought one of the Farms' cookbooks. From these books Bisi learned about the many

creative things done by The Farm–such as donating food and relief help to developing and poor countries.

They bought a house in Miami and decided, now with three kids, to end their itinerant life. First they opened a jewelry shop in Miami; soon it was thriving. Then they joined a co-op and many of their friends were Rastafarians–who are vegetarians. Soon they decided firmly to become vegetarians and soy became a large part of their diet. Bisi made her own tofu for her family, using *The Book of Tofu* by Shurtleff & Aoyagi. She also made her own whole-wheat breads and other natural foods. Bisi decided to start an alternative school in Miami to give her sons a better education. She incorporated the school and became the principal. Many Rastafarians sent their kids to the new school.

When she was in Ghana in 1973, Bisi decided that someday she definitely wanted to return to Ghana. Over the years she had worked hard to save her money for the return trip. One place in Africa she knew she didn't want to go was Liberia, where she heard the indigenous people were treated badly. Now she realized that if she waited any longer to return to Africa, their eldest son would resist the move. So they pulled up roots in Miami, rented their house in Queens, and Bisi flew to Africa to prepare the way for her family. She decided to settle–of all places–in Liberia, arriving in 1985. After finding a place to live, she returned to New York to bring her family back with her. Her goal was to do something to help the people of Liberia and to find a place where she and her family could pursue their own development.

In 1986 Bisi and her husband started the African Islamic Mission in Monrovia, Liberia, as a non-governmental organization (NGO). Its focus was to be on agriculture and education, helping the people of Liberia to feed themselves, and also on promoting Islam. Because of their lifestyle, they were very interested in organic, sustainable agriculture. But the local people became suspicious; who were these foreigners who were not connected with any known organization? When Bisi and Mahmoud finally got a permit to open their own school, they decided instead to teach at an existing Liberian school (pre-school to 9th grade) in Monrovia. Bisi taught there from late 1986 to 1990. Mahmoud taught there for one year, then got a private-sector job to earn needed money. In their spare time they started programs at their Mission–teaching literacy, English as a second language, and sex education for young girls. Their agricultural work was limited to a backyard garden.

In about 1985-86 Koreans started coming to Liberia to farm. They started selling small amounts of tofu in about 1989, and Bisi started buying it from them in Monrovia–but unfortunately the tofu didn't stay fresh very long. Bisi has no idea where they got the soybeans to make the tofu.

In about 1987 or 1988 the extension service at the University of Liberia in Monrovia tried to grow soybeans. They collected some statistics, but everything was lost during the civil war. Methodists in Liberia had experimented with growing soybeans just before the war, but the project was a total failure. A friend of Bisi's who is a vegan and a Methodist missionary, Bill Whitfield, convinced the Methodist Farm Project to grow soybeans, because he eats soyfoods in place of meat and dairy products–and he was having to import the soybeans. They did grow the soybeans successfully. Bisi bought a 50-lb bag from the Methodists, so that her African Islamic Mission could start making tofu again. But it was a failure because the farmers and the Liberian people weren't interested, and Bill Whitfield had left Liberia and didn't go to the extension service to show people how to use the soybeans. Continued. Address: Director, Imani House, 76A Fifth Ave., Brooklyn, New York 11217. Phone: (718) 638-2059.

3298. Richards, Bill. 1998. Gardenburger bets the (soybeans) farm on the last 'Seinfeld.' *Wall Street Journal*. April 13. p. A1, A6.

• ***Summary:*** This humorous article paints Lyle Hubbard, the company's new CEO, as irresponsible and fairly reckless in his "go-for-broke" "shoot the moon" splurge-style marketing strategy. Gardenburger plans to spend $1.5 million on a spot during the last episode of Seinfeld, NBC's wildly popular sitcom. This spot is the centerpiece of a $14 million, five-week blitz of TV ads promoting the company's meatless burgers. These ads will air about 1,500 times over 5 weeks in May and June but only about two dozen of the ads will appear on network television in prime time. The rest will be on inexpensive cable, late at night, or on syndicated shows. The campaign has gobbled up nearly all the company's cash. A preview of the ads, which poke mild fun at veggie burgers, considered them unimpressive.

Marketing experts doubt the strategy will work. Donald Burke, executive vice president of marketing and sales at Worthington Foods, says that only 8% of Americans have ever tasted a veggie burger. One TV spot is not a good way to change people's perceptions. He notes that Gardenburger unsuccessfully tried another ad campaign several years ago to launch a meatless hot dog called Garden Dog–the product has since been abandoned.

Paul Wenner started the company in 1985 "selling meatless patties made from leftovers at his vegetarian restaurant in Gresham, Oregon. The restaurant flopped, but Mr. Wenner kept peddling the veggie burgers out of his van, under the name Wholesome & Hearty Foods. After then company went public in 1992, its stock rocketed to $30 from $3 on rumors that burgers bigs like McDonald's were planning to sell the meatless patties. It crashed after rumors proved untrue." The shares now sell for $12.75 on the Nasdaq Stock Market. An illustration (dot-style) shows Lyle Hubbard. Address: Staff reporter.

3299. James, Richard F. 1998. Work to expose the dangers

© Copyright Soyinfo Center 2014

of toxic substances in soybeans (Interview). *SoyaScan Notes.* April 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Richard James, who was born and raised in New Zealand and still speaks with a "down under" accent, lives with his wife Valerie and many exotic birds in Whangarei, a fairly large city near the northern tip of New Zealand's North Island, about 80 miles north of Auckland. Before he moved to New Zealand, he was a lawyer and real estate agent in the San Francisco Bay area.

After many of Richard and Valerie's parrots began to die, Richard started to notice that a number of different animal species, including humans, were having some adverse reactions to the consumption of soy products. First he spent a considerable amount of his own money phoning around New Zealand, starting with agricultural people who were having trouble with their birds. It turned out, bit by bit, that rabbits, guinea pigs, pet hamsters, race horses–indeed everything being fed soy products was having some really nasty problems. And yet we couldn't quite put our finger on exactly what it was. We noticed that it was also affecting the reproductive capacity; we were getting deformed babies and infertile eggs. Valerie, apart from being distraught at watching all her lovely friends dying in miserable ways, spent a lot of time talking to Rob Shaw, the technical manager of a health food company–whose phone number Richard would be glad to share. Because the end results are so diverse, because these bloody soybeans have so many levels of toxicity, you almost couldn't put your finger on what was happening. Ultimately Valerie mentioned to Rob that the bird food was being advertised as producing 11-week-old baby birds that had the sexual characteristics of 2-year-old birds. At this point Richard and Valerie had no idea what an estrogen was, but Rob had enough biochemistry (and he really is quite a brilliant fellow) that he said immediately: Oh! That's premature maturation. Not many people in this part of the world would have known about that. Other good men are Dan Sheehan (of the USA) and Glen Plymate (616 Westland Dr., Alameda, CA; a personal friend of Richard's to whom Richard has sent many documents implicating the toxicity of soy).

Sheehan's revenge: Two important scientific papers have been published. The most recent was published in Nov. 1997 in *Biochemical Pharmacology.* The significance of these two is that they did basically what Richard suggested to Sheehan and his co-workers. They examined the huge number of thyroid cases that are reported in the medical literature. Note that one of the first places the effects of the estrogenic chemicals (like DDT, the dioxins, cadmium, mercury, etc.) shows up is in the thyroid gland. Having discovered that, see if you can prove the link between that and soy. The soy industry's defense has always been that their processing gets all the toxins out; that's why nobody else ever complained. In response to that, we have produced all these published research papers about prostate tumors in dogs, and liver cancer and infertility in cheetahs, mice, rats, hamsters, etc. Richard and his research team has the best library of this type of research in the world. Richard offers to send Shurtleff copies of page 1 and the bibliography of many of these key papers.

Back to Sheehan's revenge: They set out to prove that flavonoid compounds cause thyroid cancer. Again, there were two key papers.

There has been a major cover-up. When Rob Shaw look at the early literature Richard and his team were collecting on their literature review, he was very upset: He said the U.S. government must have known (for at least 20 years) the estrogenic content of soy infant formulas, and that that in some cases little girls fed soy infant formula show premature breast development, premature menstruation, premature menopause (at about age 22), etc. It doesn't show up until the kids reach puberty. Then (according to the dosage) the thyroid deficiency and the problems mentioned above start up; the evidence is unequivocal.

Another thing that has never been revealed properly or has been propagandized, like the premature thelarche in Puerto Rico: The only food correlation they found was with soy infant formula. The Centers for Disease Control (CDC) went off and did another search and absolutely, completely ignored soy infant formula, the foods fed after infant formula, and they ignored boys–so they came up with the answer that there is no incidence of anything–no problems. Basically, they defined the scope of their study no narrowly, that they defined away the problem. But even in this limited definition of girls who had problems, they were 2¼ times as likely to have been fed soy formula as anything else.

The other two emidemiologies were on Long Island, New York, where the North Shore Community Hospital went looking for a reason for the high incidence of auto-immune thyroid disease in children age 10 plus or minus 4 years. This occurs when the immune system has gone berserk and is actually attacking the thyroid gland. This is a permanent debilitating disease; its manageable, but chances of early death are fairly high. Kids with that syndrome were 2½ times as likely to have been fed soy formula. The same North Shore Community Hospital also found that kids with insulin-dependant diabetes–which is another auto-immune disease–were twice as likely to have been raised on soy formula. Moreover, some kids with this type of diabetes also had the auto-immune thyroid disease–and no one looked at abnormal breast development in these two groups of kids.

ADM stated to the FDA that they had determined that the soy isoflavones they are now selling [Novasoy pill with 70 mg of soy isoflavones in a softgel form] were safe to be used as a general additive to all foodstuffs. This is "totally toxic."

In 1966 the National Academy of Sciences, National Research Council, Food and Nutrition Board, Food

© Copyright Soyinfo Center 2014

Protection Committee, compiled a very important book titled *Toxicants Occurring Naturally in Foods* (Washington, DC: NRC Press, 301 p.). A greatly expanded 2nd edition was published in 1973 (vii + 624 p.). Their basic approach was: Gee whiz, isn't it great that we have these analytical methods so that we can detect when these toxicants are getting into our foodstuffs. They concluded that the main source of estrogens in foodstuffs is the isoflavones in soy products. Hormone replacement therapy isn't necessarily the same as the chemicals that are in soy; they both mimic hormones but they may not have the same biochemical effects.

"I could go on weeks talking like this but I'll tell you the basics that we can document... We were absolutely 'monstered' by some of the biggest and nastiest companies in the world. But also by certain arms of the U.S. government, particularly the U.S. Department of Agriculture." A professional journalist is now writing a book about this. The small things were late night phone calls. But the pitch that was made all over New Zealand was: "We can buy TV channels. We can divert medical schools. We can influence governments. And we have millions of dollars and teams of lawyers–and we crush nutters like you. You won't last six months. We will destroy your credibility. We do this to 20 or 30 like you every year. I am not a retired bird raiser. My professional training was as a lawyer. I practiced in New Zealand, in London, and in San Francisco–all quite successfully–until the California Bar Association lowered the boom on lawyers who hadn't passed the California Bar. I had an office at Bechtel Corporation in the legal department on the 20th floor, the corner office, facing out towards the Ferry Building. He also got an MBA at Golden Gate University in San Francisco (part time; it took about 5-7 years). "Right now I am the soy industry's biggest friggin' pain in the ass." After I quit Bechtel, we were in the real estate business in Walnut Creek, directly east of San Francisco. We hit the boom in 1976, invested quite carefully in California real estate, and made a few million dollars. Returned to New Zealand and decided to do what the liked–raising exotic birds. His wife has dual citizenship (U.S. and New Zealand).

Dr. Clifford Irvine was (Richard believes) the "chairman of the governing board of Lincoln University in Canterbury, New Zealand. He was also dean of the Dep. of Animal Sciences. His secretary intercepted so many terrifying phone calls–death threats and whatever–that she finally left and went home. She broke down. Cliff was told that if he went to the USA to Dan Sheehan's conference, he should wear body armor and travel on a separate plane from Mike Fitzpatrick–which he did. Mike also was told to wear body armor and to watch out. This was not very nice stuff. Mike's employer was driven out of his mind. I've got it documented from Bill Grayson, who owned Grayson Laboratories, that the pressure was coming from Bean Supreme and Nestlé. If you phone somebody three times a bloody day and tell him the whole New Zealand Food Industry is going to take their business away from his laboratory, you'll frighten the sh*t out him.

"The soy boys pick a pinch hitter in some country. They started with Bean Supreme, then dumped him, and they've been using a fairly big Seventh-day Adventist owned health company–the most corrupt, dishonest company in the world–and I can document that for sure." They have been putting incredible pressure on Richard and the others in his group. Continued. Address: 1868 Whangarei Heads Road, Rural Delivery 4, Whangarei. Phone: +64 9 434 0564.

3300. Worthington Foods, Inc. 1998. America's Original Veggie Dog: We're teaching an old dog new tricks (Ad). *Nation's Restaurant News.* April 27. p. 56. Address: Worthington, Ohio 43085.

3301. **Product Name:** Better than Milk–Soy, and Better than Milk–Rice.
Manufacturer's Name: Hearty Life. Div. of Sovex Natural Foods, Inc.
Manufacturer's Address: 9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320.
Date of Introduction: 1998 April.
New Product–Documentation: Ad (3-page color) in Vegetarian Times. 1998. May. p. 11-13. "The comparison of milk substitutes requires a sharpened number two pencil." "For a free sample, call 1-800-227-2320, ext. 302.

Talk with Jay Jones of Hearty Life Sales Dept. 1998. May 11. Hearty Life is a new division of Sovex Natural Foods; it was created in March 1998 at Anaheim as the natural foods line of Sovex. The old name of the soy product used to be "Better than Milk?" In April 1998 it was changed to "Better than Milk–Soy." The Rice product was introduced at the same time. Ad in Vegetarian Times. 1999. July. p. 77. "Better Than Milk."

3302. Soyfoods Association of America. 1998. Soyfoods once a day for life! (Special advertising section). *Vegetarian Times.* April. 12-page color insert after p. 58.
• ***Summary:*** Contains large color ads by Nasoya (tofu and TofuMate), Morningstar Farms (Chik Nuggets), Eden Foods (organic black soy beans) Vitasoy (creamy original natural soy drink), Westbrae (Westsoy soymilks), Westbrae (Vigoraid nutritional drink), Sno Pac (frozen Sweet Beans–organic green vegetable soybeans), and GeniSoy (soy protein bars). On the rear cover are additional small ads (each with a logo) for Lightlife Foods, Lisanatti, Monsanto, Soyco Foods–Div. of Galaxy Foods Co., Soyfoods Association of North America, and United Soybean Board.

Interspersed with the ads is advertorial text and "Soy facts." The text on page 1 begins: "Miracle food. Health insurance in a pod. Nutritional powerhouse. The bean supreme. Nutritionists, physicians, researchers, chefs, and food experts of all kinds are raving about the healthfulness and great taste of soyfoods, and it's no wonder; soy truly is a

© Copyright Soyinfo Center 2014

nutritional and culinary gift from nature.

"Soyfoods are delicious, convenient, and versatile. At breakfast, soy can make an appearance in the form of soymilk, scrambled tofu 'eggs,' or soy 'sausages.' A soy shake or veggie burger makes a great lunch. Try a tempeh stir-fry, or perhaps a creamy tofu dessert.

"So dig in... with the huge variety of soyfoods available at your local natural foods store, it's easy to get your daily intake of soy, and reap the many benefits of the bean supreme."

The inner contents: Food as medicine. Heart health. Fighting cancer. Menopause? What menopause? Strawberry smoothie. Protein punch.

Soy cooking tips (p. 4): Easy ways to incorporate soy into your baking: Use soy flour in your baking. Be aware that soy flour contains no gluten, and therefore yeast breads will not rise without the addition of some gluten-containing flour. About ¼ cup of soy flour per cup of unbleached white flour is recommended for breads, pastas, and pastries. In place of olive oil, try adding a few ounces of Nasoya Silken Tofu and a dash of lemon juice to mashed potatoes. Try mashing miso into your root vegetables in place of butter. When adding miso to dishes, add roughly 1 tablespoon per four servings. Add GeniSoy Natural Vanilla Soy Powder to your baked goods such as muffins or pancakes. Buy Eden Organic Soybeans in a can and use them the same way you would any other canned bean: over rice, with pasta, in stir-frys, etc.

It's not only what you eat; its also what you don't eat. Making healthy eating taste great. Soy fact: soybeans were traditionally considered one of five sacred crops in China.

No time to cook? Try these quick ways of getting soy in your diet.

Strong bones... a matter of calcium retention. Miso.

Soy fact: there is no word for "hot flash" in Japan. Soy beverage.

Miraculous tofu. So soy convenient. Soy fact: Western culture discovered tempeh through the Dutch colonization of Indonesia. Soy fact: tofu was unknown to most people in the United States until Chinese immigrants came to this country in the 1800's. Tofu.

Tempeh. By the handful. Soy fact: miso was developed in China about 2,500 years ago. Where to find it. Address: Washington, DC.

3303. Fischer, Bruno. 1998. Bruno Fischer GmbH and soyfoods in Germany (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This interview was conducted at Soyfoods Center during Bruno's trip to California. Bruno Fischer GmbH, a family-owned business, is located in northwestern Germany, in Aethorf; the nearest big cities are Bonn (35 km away), Cologne (55 km away), and Frankfurt (150 km away). Bruno now owns half of the business; his father owns the other half. The company was founded at Taunusstrasse 13, 5000 Cologne 91. They had their first butcher shop in a place his parents rented. They stayed there until about 1991. On the other side of the street are some dairy industries. The company now employs about 60 people, including 6 in R&D and quality control. The company does the equivalent of about US$10 million a year in sales. They have 60 different products comprising 140 SKUS. All are vegetarian and they make 132 of these products (SKUs) themselves. Bruno and his parents are Seventh-day Adventists. They prefer not to do joint ventures with other companies, since they do not work on Saturday (as a trade shows).

At BioFach, the biggest organic show on earth, since 1992 three prizes have been awarded on the stage each year for "product of the year." Bruno has won a prize for six years in a row–the only German company to do this well.

Bruno is now a vegetarian, but he was once a master butcher, from a family of four generations of butchers. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

3304. Fischer, Bruno. 1998. Leading soyfoods manufacturers in Germany (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The biggest soyfoods company in Germany is probably Noelke (Nölke), which is a big, private meat-processing company with four plants throughout Germany. Their headquarters is in the Osnabrueck area (Osnabrück, 30 miles northeast of Muenster). Their products, which are mostly meat alternatives (especially sausage alternatives) are marketed under the Eden brand in Reform Houses. No. 2, DE-VAU-GE (pronounced day-fau-GAY, whose Granovita brand is very popular), also makes many meat alternatives, such as links (sausages).

No. 3 is Life Food GmbH in Freiburg (Taifun brand). No. 4 may be Huegli, but they are not really a soyfoods manufacturer. They did buy Soyastern, Yamato, and Horst Heiler, and they sell products under those three brands–not under the Huegli brand.

No. 5 is Albert's Tofuhaus; he produces a lot of bulk tofu for other companies. No. 6 is Viana. The others are fairly small. Geestland started with soy then tried to introduce Lupino (made from Lupins), but the Lupins was not very successful. They are a regional tofu plant, a little bigger than Christian Nagel in Hamburg. Svadesha still exists, but they have been sold to non-soy people, who are fiddling around. They are quite regional and don't make very much soy at present.

TKW (pronounced TAY-kah-vay) has an unusual history. They are a branch of a machinery manufacturing company. They were asked to make a tofu plant, but their customer went bankrupt. So rather than letting the equipment just stand idle, they decided to make tofu. TKW was owned by two brothers who didn't get along very well with each other. So one went into making tofu and the other stayed with

© Copyright Soyinfo Center 2014

the making machinery. "They still seem to do something, somewhere, for somebody. I think they are more into the bulk tofu business."

Henselwerk in Switzerland is not a soyfoods manufacturer. In fact, they don't process any foods; they bottle lecithin, package texturized protein, etc. Soyastern doesn't exist any more; the factory was closed but Huegli still uses the Soyastern brand. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

3305. Nordquist, Ted. 1998. Sanitarium Foods' So-Good soymilk now being made in Canada by Dairy World (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sanitarium Foods is Australia's leading soymilk manufacturer. Their flagship soymilk product, based on isolated soy protein, is named So-Good. In a joint venture between Sanitarium Foods and the Canadian company Dairy World, So-Good is now being made in Canada.

So-Good, with sales in Australia of about $70 million a year, has roughly 85% of the Australian soymilk market. Sanitarium Foods' total sales are said to be about $130 million a year. The company is also Australia's leading manufacturer of breakfast cereals, and they been very successfully in using their cereal advertisements and packaging to promote their soymilk. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

3306. Berry, Rynn. 1998. Tofu comes west: The spread of vegetarianism from Asia's religions. *Vegetarian Voice* (*NAVS, Dolgeville, New York*) 23(1):14-17, 26-27. Spring. [3 ref]
• ***Summary:*** Discusses: Asian religions in America, Asian Ahimsa-based beliefs, William Shurtleff and Akiko Aoyagi, roshi Philip Kapleau, Ron Pickarski, Rev. Prof. Dr. Andrew Linzey (Anglican priest and professor at Oxford University, the world's first to hold an academic post on the ethical and theological aspects of animal welfare; he has written or edited more than 13 books on the moral status of animals), Ellen G. White, The Bible Christian Church, the Order of the Cross (founded in 1904 in England by the Rev. John Todd Ferrier; would-be members must take a vegetarian vow).

Says Prof. Linzey: "From my perspective, it is not inconceivable that Jainism, in its care and respect for creation, has more understood the Christian doctrine of Love than the Christians have themselves."

Says Ron Pickarski: "It may not be in my lifetime, but someday the Western Church will adopt many of the features of Asian religions such as karmic doctrine, reincarnation, vegetarianism, and ahimsa."

Includes six recipes from Berry's book *Food for the Gods.* Address: 159 Eastern Parkway (2H), Brooklyn, New York 11238. Phone: 718-622-8002.

3307. Hearty Life. Div. of Sovex Natural Foods, Inc. 1998. The comparison of milk substitutes requires a sharpened number two pencil (Ad). *Vegetarian Times.* May. p. 11-13.
• ***Summary:*** The first page of this 3-page color ad is mostly white paper. Above the title are three dotted circles the diameter of a pencil. Next to each is written: "Insert point here."

When the reader turns the page, a 2-page color spread appears. On the left page, two cartons of liquid soymilk are leaking on the table from the holes supposed punched in them. To their left is a cylindrical container of "Hearty Life Better than Milk–Soy." In front of it is a conical heap of fine white flakes. The right page is filled with text, and topped with this headline: "We're easier to afford, carry, cook with, mix to your taste, and, yes, even clean up." The text explains that Better than Milk Soy and Rice beverage mixes enable consumers to save up to 40% per quart over liquid soymilk. The products are sold at natural and health food stores, not via mail order. "For a free sample, call 1-800-227-2320, ext. 302." Address: Collegedale, Tennessee. Phone: 800-227-2320.

3308. Winter, Ralph E. 1998. Worthington says rival's ad campaign lifted sales of its own meat-free foods. *Wall Street Journal.* June 19. p. B4A.
• ***Summary:*** Gardenburger Inc., a rival maker of veggie burgers and meat replacements, recently launched a 5-week, $14 million TV advertising barrage, which included a spot on the last episode of "Seinfeld." While Gardenburger's sales skyrocketed, so did those of other makers of veggie burgers. Gives figures for the sales increases of both companies.

3309. Kehoe, John. 1998. Growing up behind glass: The bizarre and tragic lives of the Dionne quintuplets. *Biography magazine.* June. p. 96-102, 117.
• ***Summary:*** These five identical twin girls were born on 28 May 1934 in a farmhouse in Callander, Ontario, Canada. The mother, Elzire, a farm wife, was 26 years old, and the attending physician was Dr. Roy A. Dafoe. The father was Olivia. Olivia and Elzire already had six children, and were poor. Within a week after their birth, these little girls ("the Quints") were the most famous children the world had ever known. Today, three of them survive. They are bitter about their inhuman, exploitative upbringing, and they live as poor recluses. Nothing is left of the tens of millions of dollars generated by their endorsement and advertising deals.

The Ontario provincial government wrested control of the quints away from their parents, and became the legal guardians. Then the government built what was the forerunner of a modern theme park–Quintland. From 1935 to 1943 the Quints were on display 7 days a week, with 2-3 "shows" a day. During these years more than three million

© Copyright Soyinfo Center 2014

people made the trip to Callander to see them–but the children could not see the gaping public that was watching them through a scrim (one-way window). By 1938 the then-astonishing sum of $600,000 was placed in a trust fund for the Quints; nearly all of it was derived from commercial endorsements. The amount collected would eventually amount to $11.5 million in today's dollars. None of it went to their parents.

The first Quint to die was Emilie, in 1954, of epilepsy. Annette was the first to marry in 1957. Others married later but none of their marriages lasted. Marie died in 1970. Contains many photos of all quints at various ages–1934, 1936, 1943, 1951. Address: Contributing editor.

3310. Elliott, Barbara. 1998. Re: New developments at FarmSoy Company in Summertown, Tennessee. Letter (fax) to William Shurtleff at Soyfoods Center, July 8. 1 p.
• ***Summary:*** "Correct me if I'm wrong but no one has challenged the claim that FarmSoy Company is the oldest non-Asian soy dairy in the U.S. [Note: Soyfoods Center believes that claim is correct for companies started after 1970. But a number of Seventh-day Adventist soy dairies, including one in Madison, Tennessee–near Summertown, started in the 1920s and 1930s]. We presently are using only certified organic soybeans that are not genetically modified and all of our products are certified organic by Florida Growers & Consumers, Inc."

"Our soymilk is now a principal ingredient in a new drink just out in the market, called Fruit Quest by Del Valle Food Products, Inc. It is the first drink in the U.S. to combine soymilk and fruit juice. Fruit Quest is very tasty and is available through Whole Foods, Wild Oats, and Tree of Life." Address: 96C The Farm, Summertown, Tennessee 38483. Phone: 615-964-2411.

3311. Gardenburger, Inc. 1998. Second quarter financial report 1998. 1411 Southwest Morrison St., Suite 400, Portland, OR 97205. 11 p. 28 cm.
• ***Summary:*** This unconventional quarterly report consists of: (1) A letter to shareholders outlining the results of recent huge advertising expenditures. "Gardenburger's first national television advertising campaign that began on May 4 and was highlighted by a 30-second spot on the last episode of 'Seinfeld.' The Seinfeld spot created a tremendous amount of public awareness for Gardenburger including stories in *The Wall Street Journal* and a piece on the NBC Nightly News with Tom Brokaw.

"Since the start of 1998, the veggie patty category in the retail grocery channel has grown 61 percent. Gardenburger has captured about 75 percent of this growth while our nearest competitor, Worthington Foods, has captured about 15 percent... As a result, Gardenburger's share of the veggie patty category has grown steadily, and stands at approximately 50 percent as of the date of this report."

(2 p). (2) A news release titled "Gardenburger reports 91% rise in net sales during second quarter to $25.7 million." However, during the most recent second quarter, Gardenburger lost $6.240 million, compared with a loss of $1.371 last year. (3) Balance sheets. (4) Three graphs using A.C. Nielsen scanner data. Graph #2 shows unit share of the veggie patties market from 3 Jan. 1998 to 4 July 1998. On Jan. 3 the market shares of three major products were as follows: Worthington (incl. Morningstar Farms, Loma Linda, Natural Touch, and Worthington): 42%. Gardenburger 27%. Harvest Burger 16%. Only July 4 the market shares were: Gardenburger 50%. Worthington 27%. Harvest Burger 10%. Graph #3 shows the unit market share of total meatless. On Jan. 3, veggie patties had 51% of this market and all other meatless products had 49%. On July 4 veggie patties had 70% and all other meatless products have 30%. Address: Portland, Oregon.

3312. Messina, Mark. 1998. Perceptions on soyfood–Past, present and future. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 6(3):1, 8. Summer.
• ***Summary:*** Contents: Introduction (Dr. John Harvey Kellogg, USDA, *The Book of Tofu*, by Shurtleff & Aoyagi). Concerns about women's health. Functional foods. Interest in plant-based diets. Development of better tasting and more convenient soyfoods. Ethnic influences on meals (esp. Asian).

It is reported that 26 million Americans eat soyfoods. Address: PhD.

3313. Worthington Foods, Inc. 1998. Second quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.
• ***Summary:*** Net sales for the second quarter of 1998 rose 14.8% over the same period in 1995, and net income rose 16%. Address: Worthington, Ohio. Phone: (614) 885-9511.

3314. Hartocollis, Anemona. 1998. Peanut butter is under fire: A few schools have banned childhood staple because of its growing status as a lethal allergen; East Bay takes precaution. *Contra Costa Times* (*California*). Sept. 23. p. A1, A16.
• ***Summary:*** Says that peanut butter was invented by George Washington Carver [Note: Not true; it was invented by John Harvey Kellogg]. Americans now consume it at the rate of 3 pounds per year. But peanut allergies can be lethal, and they are on the rise. So, out of fear of litigation based on the 1990 Americans with Disabilities Act, a small but growing number of private and public schools across the USA have banned peanut butter from their cafeterias. Others have set up committees to figure out what to do. One option is to take precautions such as pointing out all items containing peanuts on menus sent home.

Those favoring a ban are often supported by the Food

© Copyright Soyinfo Center 2014

Allergy Network, a 8-year-old advocacy group in Fairfax, Virginia. The Center for Disease Control reports 88 deaths in the USA from allergies to food (including peanuts) between 1979 and 1995. "But allergists supported by the Food Allergy Network contend that fatalities are under reported and that 0.5 to 1 percent of all Americans suffer from peanut allergies. The network estimates that every year 125 people die from food allergies, the majority from peanuts."

The Transportation Department has informed airlines that, under new disability rules, it must offer "peanut-free buffer zones" defined as at least three rows for any passenger who declares in advance a medically documented severe allergy to peanuts. Some airlines have a policy of sending no peanuts on a flight if a passenger alls in advance with a notice of an allergy. Address: New York Times.

3315. McDermott, Ron. 1998. Thoughts on Gardenburger's recent spate of advertising for meat alternatives (Interview). *SoyaScan Notes.* Oct. 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** "Gardenburger" is a great product name, and this advertising campaign has done a lot to build awareness of the category, as well as of the Gardenburger line of products. This has helped all companies in the category, including Worthington. As this category continues to grow, Worthington's goals are to have the widest variety of products (which it now has), the best quality, and the most innovative products. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

3316. Harrigan, Brian. 1998. ProSoya Inc. and International ProSoya Corp. (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya Inc. and International ProSoya Corp. (IPC) are definitely two separate organizations; each is very different in its activities and philosophy. IPC was not created out of ProSoya, but rather as a separate entity with different owners to license ProSoya's large-scale soymilk technology. This relationship as licensee still exists. IPC does not make equipment or sell equipment worldwide; they make soy products using ProSoya's technology. ProSoya has some ownership in IPC and they have a very small ownership in ProSoya Inc. People do associate these two companies, not realizing that they are totally separate. This confusion (and some things that people from IPC have said and done) has caused ProSoya quite a few problems.

ProSoya does not presently make any soyfood products. The plant on Canotek Road (in Gloucester, near Ottawa), where they used to make some products and have their offices, was originally used solely for R&B, but it expanded so much that it eventually also became a commercial soyfoods production facility. In Oct. 1996 ProSoya sold this plant to IPC and in Jan. 1997 ProSoya moved to separate offices about 500 feet away, on the same road; there they have offices plus a small area at the back for R&D, shipping, and receiving. ProSoya can still take customers and others to see this plant and its operation, but sort of as visitors.

ProSoya is an R&D and technology company. Their equipment is manufactured by other companies (as in India and Russia) for them.

There has been quite a shake-up at IPC recently and things there are rather chaotic. Their soymilk, SoNice was the number one seller in Canada while it was out. It was made in two plants–in Vancouver (BC) and in Ottawa (Ontario, on Canotek Rd.). It's arrival expanded the market for all soymilks sold in Canada; so while Edensoy and Vitasoy lost market share to SoNice, they actually saw their sales volume increase. But recently IPC has had major problems their soymilk; it is no longer being manufactured, but small amounts are still left in the retail pipeline. The product is good, but it is mostly financial factors that have caused it to disappear from the market. IPC has not really commercialized their soy yogurt yet, except perhaps on a small scale for the Vancouver area–and there they were having problems with the formulation, though not with the taste. For more details, contact George Conquergood, who is the vice-president of operations. He is quite open in telling interested people what is happening. The plant in Scotland is a totally separate venture from IPC; Dusty is still there.

A new brand of soymilk in Canada is SoGood. Based on soy protein isolates, it is the same as that made by Sanitarium Foods in Australia. In Canada, it is made (mixed and packaged) under license from Sanitarium by Sunrise (owned by Peter Joe) in Vancouver. Sunrise and Dairyworld (the biggest dairy in Canada) now have a joint venture named SoyaWorld. Dairyworld distributes SoGood soymilk along with their line of dairy products. SoGood is now doing very well in Canada. When SoNice was on the market, it had a bigger market share than SoGood. But SoGood conducted a national advertising campaign that cost several million dollars, and greatly helped their sales. Brian finds the flavor of SoGood rather artificial and the list of ingredients is very long, so consumers tended to prefer the more natural and better tasting SoNice–until it ceased to be available.

Raj Gupta is now more involved with ProSoya Inc, than ever before. He comes to the office every day. When he started ProSoya he was working for the National Research Council (NRC) and working with ProSoya part-time on the side. Now he works on ProSoya full time; about 3 years ago he gave up his position at NRC. ProSoya was growing so much that the company need his full-time presence, and could afford to pay him what he needed.

Note: Other sources say that IPC recently declared bankruptcy. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

© Copyright Soyinfo Center 2014

3317. Bynum, William. 1998. Soy Amazing and Better than Milk. Big changes at Hearty Life, Sovex Natural Foods, McKee Foods, and Fuller Life Inc. (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** William has been with the company for about 6-7 months. Soy Amazing is a new product, introduced less than 2 years ago; it is actually the original Better Than Milk formula. However there is another product named Soy Amazing, sold only in Canada, which is the same as the present U.S. Better Than Milk; that is because it is illegal to use the name "Better Than Milk" for this product in Canada.

For many years, Sovex Natural Foods has been owned by the McKee Foods Corporation of Collegedale, Tennessee. The Southern Adventist University is also located in Collegedale. Founded, owned, and run by Jack McKee (a well respected Seventh-day Adventist), McKee Foods makes mostly popular snack foods. Their most popular product line is "Little Debbies," consisting of about 40 different varieties of snack cakes–from Jello Rolls to Honey Buns. For this reason they kept an arms-length relationship with Sovex Natural Foods. Glen Fuller has been with McKee Foods for about 20 years, and has been the vice-president for the past 10-12 years. Glen developed the Better Than Milk formula and line of dry soymilk products about 7 years ago.

On July 3 of this year, Sovex was merged into its parent company, McKee Foods, and made a division of that company; it was no longer a separate subsidiary. Sovex also makes a wide variety of cereals, bran, granola, and the like. The name Sovex ceased to exist; it is now McKee Plant No. 6. Shortly after McKee absorbed Sovex, probably at Glen's urging, McKee decided to spin off and sell him the Hearty Life brand and the Better Than Milk product line–which includes the Soy Amazing products. That transaction was finalized last Friday, October 23. So now Glen is president, CEO, and sole owner of a new company named Fuller Life Inc. The address has changed to 1628 Robert C. Jackson Drive, Maryville, Tennessee 37801. Phone: 423-681-4171. Maryville is about 100 miles from Collegedale, and the site of Glen Fuller's main home; called his "mountain home," the property backs up on the Great Smoky Mountains. Their main product is Hearty Life Better Than Milk–which includes Soy Amazing and many SKUs including five flavors of the soy Better Than Milk, two flavors of the rice Better Than Milk. Most of it comes in canisters or 25 lb bulk bags, but they also have an aseptic UHT liquid soy Better Than Milk (original flavor). William will send some press releases and a sales brochure, with the date that each product was launched.

In 6-8 months Fuller Life plans to introduce a new product name Better Than Milk Plus, which will be an all-organic, enriched and fortified powdered version of the present Better Than Milk.

Follow-up talk with Darlene Foot, Glen's secretary, still at his office in Collegedale. She joined the company about 5 years ago. At that time Glen Fuller was president. John Goodbrad retired in about 1988-89 and died about 3 years ago. Sovex, the yeast product, still exists. Some years ago Sovex Natural Foods sold the rights to Village Market, located near Southern Adventist University, which subcontracts the production with some other company. Address: Consumer Affairs Administrator, Fuller Life Inc., 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 423-681-4171.

3318. Fuller, Glen. 1998. A brief history of Sovex Natural Foods, Hearty Life, McKee Foods, and Fuller Life Inc. (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Glen is interested in the history of Sovex, which is now named Fuller Foods, Inc. John Goodbrad did not buy any business from the Hurlingers in Michigan. Rather, he bought their formula for making Sovex spread and the brand name. The word "Sovex" is derived from the words "soy vegetable extract." The soy part of it was real soy sauce, and still is. Glen has heard of the Hurlingers in Holly, Michigan, but they didn't call their company Sovex. Glen does not know the name of the Hurlinger's company, but he thinks he could find it in the company archives. In about 1961 Ruth Goodbrad, John's wife, began making Sovex in their basement. In the early years, Sovex was basically Ruth's business.

In 1962 John Goodbrad called Glen about the granola business. John had an opportunity to buy a formula for granola, which he later did buy. At the time, Glen was a student at Southern Adventist College, where John worked for Collegedale Distributors, and Ruth, was still manufacturing Sovex in their basement. John bought the granola formula, under an exclusive arrangement, from a fellow named Layton Gentry–who sold the same formula with the same exclusive rights to at least 6 other individuals or companies who wanted to make granola! Every one of them thought they had an exclusive agreement! For example, the founders of the Bread Shop (in California) bought the formula from Mr. Gentry during the same calendar year. Right after John bought the granola formula, he formed a corporation and named it Sovex Foods Inc. after the spread. After John bought the granola formula, Ruth also manufactured the granola in their basement. Ruth continued making these two products in the basement of their home until about 1966, at which time they moved the food processing up into a building in Collegedale.

On 1 March 1974 McKee Foods acquired the business from Mr. Goodbrad, who didn't really want to sell it. He was a fine and honest man, very much dedicated to his company and involved in it, but he had to sell it for financial reasons. That is usually difficult for an entrepreneur. During his 1980 interview with Soyfoods Center, he may not have mentioned

© Copyright Soyinfo Center 2014

the fact that Sovex was owned by McKee since he was always sensitive to the fact that a health food company was owned by a snack food company.

Goodbrad was president of the company from that day in March 1974 until 30 June 1990. During that time he reported to Glen Fuller, who was vice-president of McKee Foods and responsible for McKee's subsidiaries. On 30 June 1990, when Mr. Goodbrad retired, Glen took over the company and moved his offices from the parent company to Sovex. He retained his position as vice-president of McKee, but also became president and CEO of Sovex. In the early 1990s, Glen changed the company name to Sovex Foods, Inc. from Sovex Natural Foods, Inc.

About 4 years ago, Sovex licensed a local business (named the Village Market) in Collegedale to manufacture the Sovex seasoning spread in their little deli kitchen. There are many other similar products worldwide, such as Marmite, Vegex, Solvex, etc.

Glen has the "Minute Book" for the corporation which goes back to the date it was established in 1962. He could resurrect most of the history from that book, with solid documentation as to dates.

John Goodbrad is deceased, but his wife, Ruth, is still living in Collegedale and very alert. She really started the manufacturing operations.

Glen has never gotten involved in the actual manufacturing of soymilk. He buys the powdered or fresh soymilk he uses from the manufacturer. Some products also use soy isolates or soybeans. Glen does the product formulation and marketing, Glen has a great deal of interest in how his products are manufactured and his company has very strict quality standards. The company is continually inspecting its suppliers, and trying to stay on the cutting edge of product development. Glen knows Elmer Schettler very well; Sovex marketed Elmer's Solait until 30 Sept. 1998, even after Sovex was merged with McKee Foods. There was apparently a falling out and lawsuit between Elmer and Willis Miller, but it was finally settled. Address: Founder, President & CEO, Fuller Life Inc., 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 423-681-4171.

3319. Fuller, Glen. 1998. Dr. Harry Miller and his descendants (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Throughout his life, Glen has heard many fine things about Dr. Harry Miller, though he never had the opportunity to meet him. Glen's wife's parents were Adventist missionaries in China, and they knew Dr. Miller very well. They returned to the USA from China in 1941, several years later than Dr. Miller. Glen's wife was only 3 at the time, but she recalls that there were on one of the last trains that left from Gulin in central China, just above the Yangtze River. Glen knows his son Willis, and Willis' son (Harry Miller III) who is now about age 30, and who married a lady named Kim Arliano, who worked briefly for McKee Foods in the audit department. Harry III (who lived in Nashville, Tennessee, when they were married) did a lot of work developing and attempting to promote and market a later generation of soymilk. He is quite a promoter of various projects and ideas. About 7-8 years ago he and Glen's nephew worked together on a promotional plan on another formula for soymilk; it never became a commercial product. Address: Founder, President & CEO, Fuller Life Inc., 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 423-681-4171.

3320. Goodbrad, Ruth. 1998. History of Sovex Natural Foods, Inc. (Interview). *SoyaScan Notes.* Oct. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ruth, who has just turned age 81, is the widow of John Goodbrad and a Seventh-day Adventist. She and John were married for 54½ years and she has only the fondest memories of him. "Oh, he was good looking and he was the best man on earth!" In 1953 Ruth and John moved to Collegedale from Boulder, Colorado. They built a large house and moved into it in 1954. John was called to Collegedale to be assistant business manager for Collegedale Distributors, and he was for 20 years. He was in charge of many different businesses.

Ruth has always heard that her Sovex spread was first developed by the Hurlingers in Holly, Michigan. She has never heard that it was first made by a man named Mr. Sampson in California. Sovex was Ruth's business; she had nothing to do after her son and only child, Johnny (who is now age 55), graduated from college, got married, and moved to Miami. She told John that she needed something to do at home. He never wanted her to work outside their home. So he told Ruth that he had heard about a lady in Michigan who wanted to sell her Sovex spread. Ruth's mother-in-law (John's mother) made a spread similar to Sovex before; it was a concoction of the same ingredients, brewer's yeast and real soy sauce, mixed in about the same way. Ruth learned the recipe from her mother-in-law and made it at home several times for her own use. Ruth and John drove up to Michigan together, spent the weekend, watched the product being mixed and bottled, then had the mixer shipped down to Collegedale. The product wasn't cooked.

John had almost nothing to do with Ruth's Sovex business during the years that she made the seasoning-spread in the basement of their family home in Collegedale. He was busy with his full-time job at Collegedale Distributors. Sovex was a family business, but Ruth did the work. She continued to use real soy sauce, which she bought by the drum. Soon she added granola to the products she was making in her basement. She bought the granola formula from a man named Layton Gentry in Nashville but she changed the formula to make it crunchy and renamed it "Crunchy Granola." Both honey and brown sugar were

© Copyright Soyinfo Center 2014

used as sweeteners. Mr. Gentry later, and in violation of his promise to the Goodbrads, sold his granola formula to about six other people or companies. Soon the granola took off, and Ruth could hardly keep up with the demand–though she loved the work. She had three granola ovens and the Sovex mixer in their large recreation-room basement. She hired Mario DeLeon (a Seventh-day Adventist from Panama) as Head Mixer to help her make the food. One especially good customer was Mr. Dimmock, a distributor from Maryland. He would back his van up to the door and load it up with about 500 pounds of granola, in drums. Some of it was sold to Miami Beach, Florida, to large gatherings of young people. By about 1969-71 the business had outgrown the basement–thanks to worldwide granola sales. Ruth's son, Johnny, came home to help with the family business. They bought some land nearby, designed a food production plant, had it built, and moved Ruth's business up and out of the basement. The food plant has since been expanded several times. At one point they had an offer from General Foods to buy their granola business, but they refused because General Foods wanted to move the business away from Nashville. This became the subject of a story in the *Wall Street Journal.* Ruth still has this and other articles about the company.

Ruth knows Glen Fuller well. His first marriage was to her sister's daughter, Carolyn Radford–before he married his second wife, Jeanine. McKee Foods was founded owned by O.D. and Ruth McKee, both Seventh-day Adventists who Ruth knew well and liked very much. They started the company in Chattanooga, then opened a branch in Collegedale after 1953. Their son was Ellsworth McKee; he ran the company after his father retired. After McKee Bakery bought Sovex in 1974, Glen oversaw operations at Sovex, and John reported to him. But in about 1990, after Glen had surgery (a colostomy), Ellsworth McKee had told Glen, when he was in the hospital, that he would not be able to return to his former position at McKee, so he would need to find another job. Glen told John that he would have to leave so that Glen could take over his place. John did not want to retire, but he was told by Glen that either he would retire and go home or Glen would make him do so. Glen wanted John's desk and his job. John was heartbroken. He came home and just sat on the couch, looking out the window with nothing to do. Several years later he had a heart attack. He passed away about a year later on 12 Dec. 1993. Address: Collegedale, Tennessee. Phone: 423-396-2826.

3321. Shurtleff, William; Aoyagi, Akiko. 1998. The book of tofu. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. Oct. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]

• ***Summary:*** This edition contains a completely new "Appendix B–Directory of Tofu Makers" (p. 313-316, updated to 1 Aug. 1998). The page "About the Authors" (autobiographical) has been updated, and the original photograph has been replaced with two more recent ones–reflecting the fact that Bill and Akiko separated in Nov. 1993 and their marriage ended in May 1995.

After the first printing in Oct. 1998, the Preface was quite extensively revised (but not updated) to include more about how this book came into being (early dates and names), including the important contributions on Jeffrey and Gretchen Broadbent, and of Nahum and Beverly Stiskin. These Preface changes first appeared in the second printing of May 1999.

On page 336 is "The Best of Vegetarian Cooking from Ten Speed Press" (descriptions of eight cookbooks, with price and ISBN).

The inside rear cover has been updated, and now includes current information about SoyaScan, the unique computerized database produced by Soyfoods Center. This database now contains more than 55,000 records from 1100 B.C. to the present, and more than 73% of all records have a summary / abstract averaging 128 words in length. A description of the four different types of records (published documents, commercial soy products, original interviews and overviews, and unpublished archival documents), and the number of each type, is given.

The front and rear covers, title page, table of contents, and the first page of each section have been redesigned to give the book a much more contemporary look. Still contains 500 vegetarian recipes–both Western and Eastern style.

Ten Speed Press gave this book a new ISBN: 1-58009-013-8. Yet despite the many changes described above, the authors preferred not to have this called a "new edition" or "revised edition." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3322. Worthington Foods, Inc. 1998. Third quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.

• ***Summary:*** Net sales increased 21% to $35 million for the third quarter vs. 29 million a year ago. Net sales are up 18% for the first 9 months of 1998 compared with the same period one year ago. "Despite Gardenburger's concentrated efforts in the veggie burger category, including a $17 million TV campaign, 5 national FSI drops in Sunday newspapers, and very aggressive trade support for shelf space and retail price reductions, Morningstar Farms Veggie Burger sales for the past nine months are up over 13 percent. However, the veggie burger category is only 40 percent of Morningstar Farms meat substitute business! The other 60 percent of our meat alternative business has increased nearly 40 percent during the past 3 quarters."

"On October 16, 1998, Worthington Foods, Inc., closed on the purchase of the Harvest Burger brand of meat alternative products from the Archer-Daniels-Midland Company (ADM). The purchase price of $9.3 million was paid with 488,750 shares of common stock from

© Copyright Soyinfo Center 2014

Worthington Foods, Inc., approximately 4.1 percent of the outstanding shares of stock... Sales of Harvest Burger branded meat alternative products have been approximately $15 million over the past 12 months with approximately 8 percent market share. Now sold under the Green Giant brand, the Harvest Burger Original has the 3rd highest sales-per-point of distribution of all burgers. These same Harvest Burger products will begin appearing under the Morningstar Farms brand beginning January 1, 1999. Foodservice sales were up 34% for the third quarter of this year compared to 1997 and increased 37% for the first nine months of the year." Address: Worthington, Ohio. Phone: (614) 885-9511.

3323. **Product Name:** Morningstar Farms Harvest Burgers [Original Flavor, Southwestern-Style, or Italian, plus pre-cooked Crumbles for Recipes].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1998 October.
Wt/Vol., Packaging, Price: 4 Corn Dogs weigh 10.0 oz (284 gm). Paperboard box.
How Stored: Frozen.
New Product–Documentation: Worthington Foods annual report. 1999. March. p. 4-5. On 16 Oct. 1998 Worthington purchased the Harvest Burger product line from ADM. As part of the agreement ADM continues to produce the Harvest Burgers–previously marketed by Pillsbury under the Green Giant label–at its Illinois plant. A color photo shows the label.

3324. Worthington Foods; Morningstar Farms. 1998. Meatless menu innovations: We played with our vegetables and look what happened! #1 in meatless (Ad). *OnSite* (*Special Section to Nation's Restaurant News*) 1(2):69. Sept/Oct.
• ***Summary:*** See next page. This full-page color ad, targeted at restaurateurs, states: "Consumer requests to 'make mine meatless' at breakfast, lunch, and dinner skyrocket. Restaurants are attracting new customers with low-fat, great-tasting vegetarian meal options.

"National surveys show: 80% of the nation's restaurants see vegetarianism as: A fast growing business, a profitable menu option, and appealing to all age groups. 27% of all the country's restaurants will serve a veggie burger this year..." Six color photos show prepared vegetarian dishes: "Sausage Style Recipe Crumbles. Breakfast Patties, Links & Better 'n Eggs, America's Original Veggie Burgers, America's Original Veggie Dogs, Burger Style Recipe Crumbles, Chik Nuggets." Slogan: "Try Morningstar Farms. We are 'a cut above the rest.' #1 in Meatless."

3325. Bynum, William. 1998. Re: Better than Milk and Fuller Life, Inc. Letter to William Shurtleff at Soyfoods Center, Nov. 2. 1 p. Typed, with initials on letterhead.
• ***Summary:*** "Please let me know how I can obtain a copy of the book you were talking about." He will try to gather more information next time he sees Glenn Fuller, the company owner. He encloses various leaflets plus 5 different 19-gm packets of Better than Milk; each one makes one 8-oz glass of soy or rice beverage. Address: Consumer Affairs Administrator, Fuller Life Inc., 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 800-227-2320.

3326. Peanut Advisory Board 1998. History of peanut butter (Website printout–part). www.peanutbutterlovers.com/History Printed Dec. 15.
• ***Summary:*** Contents: Introduction: Many claims, Civil War soldiers dined on 'Peanut porridge.' In 1890, an unknown physician in St. Louis, Missouri, supposedly encouraged George A. Bayle, Jr., the owner of a food products company, to process and package ground peanut paste as a nutritious protein substitute for people with poor teeth who couldn't chew meat. First patent: Dr. John Harvey Kellogg (but the peanuts were steamed instead of roasted before grinding). Joseph Lambert. George Washington Carver (He did research on other uses of peanuts, but nothing with peanut butter). Peanut Butter goes mainstream (C.H. Sumner introduced peanut butter at the Universal Exposition of 1904 in St. Louis, Missouri. Krema Products Co. of Columbus, Ohio, began selling peanut butter in 1908–and is the oldest existing peanut butter maker).

Peanut Butter as we know it (in 1922 Joseph L. Rosefield began selling a number of brands of peanut butter in California; they were churned to be smooth. One of the first companies to adopt this new process was Swift & Company for its E.K. Pond peanut butter–renamed Peter Pan in 1928. In 1932 Rosefield had a dispute with Peter Pan and in 1933 Rosefield began producing Skippy peanut butter. In 1935 Rosefield created the first crunchy style peanut butter by adding chopped peanuts to his creamy peanut butter at the end of the process. Procter & Gamble: In 1955 P&G got into the peanut butter business by acquiring W.T. Young Foods (of Lexington, Kentucky), makers of Big Top Peanut Butter. P&G introduced Jif in 1958 and today they operate the world's biggest peanut butter plant–churning out 250,000 jars a day). Address: 500 Sugar Mill Road, Suite 105A, Atlanta, Georgia 30350. Phone: 770-998-7311.

3327. Stoltz, Garth "Duff". 1998. Research on the history of Seventh-day Adventist work with foods in Battle Creek, Michigan (Interview). *SoyaScan Notes.* Dec. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Concerning the early history of peanut butter: It may be mentioned in one of the early books written by Dr. Kellogg's wife. Duff has a dated menu from the Sanitarium that mentions either nut butter or peanut butter.

Concerning a biography of Joseph and Almeda Lambert:

An obituary may have been published in the *Review and Herald.* At the local Willard Library there is an excellent vertical file containing biographies of individuals, compiled from clippings by Ross Coller. Duff will see if the Lamberts appear there. Duff owns one of the early peanut grinders made by Lambert's company. Dr. Kellogg first roasted peanut butter, but he turned to steaming and boiling when he found that roasting damaged the natural oils. Also, for most of his meat alternatives, he wanted a more bland flavor from the peanuts; roasting gives a stronger peanut flavor. There may be documents on Dr. Kellogg's work with peanuts in the files of the Bentley Historical Library at the Michigan State University in Ann Arbor–where most of Dr. Kellogg's personal papers are located. The Michigan State University Archives at Ann Arbor also has a small quantity of Dr. Kellogg's papers.

Duff has been collecting material on Seventh-day Adventist history for 20 years. It is now housed in approximately 75 ten-ream photocopy paper boxes, 5-8 file cabinets, and some drawers and cupboards, but it is not well organized. Among these are about 4 boxes of Dr. Kellogg's private papers, and 6 bound paperback volumes of the court proceedings between Dr. Kellogg and his brother Will Keith in the early 1920s. In the safe in his basement, Duff has the formula books used to make products at the Battle Creek Food Company.

There was a plan to restore the Sanitas Nut Food Co. building (built in 1901 with 21-inch thick walls) in Battle Creek but the building has been razed and the plan has been abandoned. Address: Battle Creek, Michigan.

3328. *SoyaScan Notes.* 1998. Chronology of major soy-related events and trends during 1998 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** June–Britain's Prince Charles, who practices organic farming and is a patron of the Soil Association, writes an article attacking genetically modified food that is published in Britain's *Daily Telegraph.* Explaining that he wouldn't eat such food or knowingly give it to his family or guests, he concludes, "I happen to believe that this kind of genetic engineering takes mankind into realms that belong to God and God alone." The prince's surprise article helped unleash a wave of anti-GMO activity and sentiment, that continued for weeks in the British press and carried over to the Continent.

Sept.–New European Union (EU) labeling laws, requiring labeling of genetically modified ingredients, go into effect. However the regulation exempts foods which contain no soy protein but do contain soy oil or soy lecithin. Sept.–Imagine Foods of Palo Alto, California, the natural foods leader in nondairy beverages, launches Soy Dream, the company's first soy product. They support the product with an extensive and very creative advertising campaign.

Sept.–Protein Technologies International starts to offer certified non-GMO soy protein isolates.

Oct.–The Hain Food Group (which owns Westbrae) has announced that it will start to label some of its products as GMO-Free (i.e. free of genetically modified / engineered organisms). It has developed a "Pure Food" logo and a "Just Say No to GEOs" slogan.

Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

Nov. 1-2–Conference titled "Estrogen, phytoestrogens and cognitive function" held in Seattle, Washington (organized by Mark Messina), largely to learn more about the research of Lon White on tofu and dementia/Alzheimer's disease.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

Major trends: (1) The steady expansion of genetically engineered Roundup Ready soybeans. This year an estimated 30% of America's soybean acreage was planted to genetically engineered soybeans. This is one of the hottest and most controversial stories in most countries of the world–except the United States, where it gets unbelievably little media coverage. (2) The hype about the health benefits of soyfoods continues to increase. There are definitely some health benefits, but the exaggerated statements that now routinely appear in articles and advertisements go far beyond what can be supported by scientific evidence. The media seems intent on making as much money as possible as it whips up the story of soy's health benefits. The bigger the story it becomes, the more money they can make later debunking it. (3) The natural foods industry is changing into a supplements industry because of the higher profit margin on supplements. Many consumers are being misled into thinking that supplements are more important than healthy foods in determining good health. (4) Among commercial soy products this year, the ratio of supplements to foods has increased sharply.

Areas of potential danger on the horizon: (1) Lon White of Hawaii and his data on tofu and dementia/Alzheimer's disease. (2) Young girls discovering that overdoses of soy isoflavones could be useful in growing breasts, then publicizing that information using the Internet and World Wide Web. (3) The danger that the media will start to debunk its own hyped story of the health benefits of soy. (4) The concern that the FDA health label claim for soy will not include traditional soy products–such as tofu and soymilk–which contain too much fat. Therefore manufacturers will be tempted to add soy protein isolates to raise the protein to a level that will trigger the health claim.

3330. **Product Name:** Morningstar Farms MeatFree Corn Dogs: America's Original Veggie Dog Batter Dipped on a Stick.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1998.
Ingredients: Incl. sugar, soybean oil, corn syrup solids, hydrolyzed corn, soy, and wheat protein, brown sugar, soy flour, spices, soy protein isolate.
Wt/Vol., Packaging, Price: Four Corn Dogs weigh 10.0 oz (284 gm). Paperboard box. Retails for $3.29 (1999/04, Lafayette, California).
How Stored: Frozen.
New Product–Documentation: Worthington Foods annual report. 1999. March. p. 4-5. "Frozen corn dogs make up one of the industry's top performing frozen food categories, and Morningstar Farms *MeatFree Corn Dogs* are positioned to challenge for category leadership. Made with out own *America's Original Veggie Dogs*, this product could become the company's number-one seller per point of distribution in the near future."

A color photo shows the label.

Product with Label purchased at Safeway supermarket in Lafayette, California. 1999. Paperboard box. 8 by 5 by 1.5 inches. Golden brown, red, yellow, white and blue on a green background. Regular price: $3.29 for a package of 4; on sale for $2.69. A photo shows three Veggie Dogs on a white plate. "67% less fat than meat corn dogs." On the back is a small circular logo with a green "V" inside. "Suitable for vegetarians." A table compares gives a nutritional comparison of Meatfree Corn Dogs and Meat Corn Dogs (per 1 link/dog): Cholesterol 0 / 15 mg. Total fat: 4 / 12 gm. Saturated fat: 0.5 / 3 gm. Soyfoods Center taste test. Excellent flavor and texture; a little sweeter and spicier than we would prefer.

3331. **Product Name:** Morningstar Farms Harvest Burgers.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1998.
Wt/Vol., Packaging, Price: 12.0 oz (340 gm). Paperboard box.
How Stored: Frozen.
New Product–Documentation: Worthington Foods annual report. 1999. March. p. 4-5. "Through an innovative partnership with Worthington Foods, Hard Rock Café restaurants around the world now serve this delicious, all natural blend of sauteed vegetables, grains, and roasted nuts. And the same great co-branded product is in supermarket freezers across the U.S." A color photo shows the label.

3332. **Product Name:** Morningstar Farms Buffalo Wings.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1998.
How Stored: Frozen.
New Product–Documentation: Worthington Foods annual report. 1999. March. p. 4-5. "A 'fun food,' great for kids and adults alike, these spicy vegetarian drumettes prepared from vegetable and grain protein were an instant success in 1998."

3333. **Product Name:** Morningstar Farms Chik Nuggets (Refrigerated in MAP format).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1998.
How Stored: Refrigerated.
New Product–Documentation: Worthington Foods annual report. 1999. March. p. 5. "After successfully test marketing three refrigerated items in "modified atmosphere packaging" (MAP) in 1997, we introduced two additional products in the MAP format in 1998, Chick Nuggets and Breakfast Patties. MAP products are sold in the grocer's meat case, introducing a new consumer to Morningstar Farms products... Morningstar Farms now offers five MAP products in 9,000 supermarkets–and demand is growing."

3336. Butler, Mary. 1999. Good sources of information in Battle Creek, Michigan, on early Seventh-day Adventist work with health reform, John Harvey Kellogg, vegetarianism, Joseph Lambert, and peanut butter (Interview). *SoyaScan Notes.* Jan. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are three good document collections in Battle Creek: (1) The Battle Creek Historical Society Archives, which is fairly well organized. Two years ago it was totally uncataloged. The Sanitarium and John Harvey Kellogg collection is better cataloged than most since they have many requests for information in it. (2) Dr. Kellogg's Discovery Center, which has a museum that opened in Oct. 1998, and will soon be connected with the Historic Adventist Village–they are in separate locations. "They have a terrific man there, Stan Hickerson, a former archivist who comes from Loma Linda University. He is a walking gold mine. He has a private collection aside from the institutional collection." (3) The private collection of Garth "Duff" Stoltz, which is unorganized–although Duff knows it well. Address: Editor, *Heritage Battle Creek* magazine, c/o Battle Creek Historical Society Archives, 165 N. Washington St., Battle Creek, Michigan 49017. Phone: 616-966-4157.

3337. Davis, Jean. 1999. Deeds related to Joseph Lambert in and around Battle Creek, Michigan (Interview). *SoyaScan Notes.* Jan. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jean found the following entries under Joseph Lambert in the Index to deeds for Calhoun County, Michigan. The date is the recording date. Jean has not yet found the actual deeds, whose dates may be several years earlier: (1) Deed from Joseph Lambert to Crescent Bakery and Confection Co., 1900 Feb. 26–Miscellaneous. (2) Lambert Good Food and Machinery Co., Ltd., articles of association, 1902 Feb. 10. Liber 175, p. 520. (3) Lambert Good Food Co., Amended articles, 1902 Sept. 10. Liber 179, p. 334. (4) Deed–Joseph Lambert and wife sold to William Martin, a lot in Marshall, Calhoun Co., Michigan (about 12 miles east-southeast of Battle Creek), 1902 Oct. 29. Liber 167, p. 537. Note 1. Jean wonders if they were getting a divorce at about this time as they were selling off land together.

Note 2: The actual deeds are hard to get. The deed books are only available on microfilm in the basement of the County Courthouse in Marshall, some films are very hard to read, and the two microfilm readers are often being used or broken. Address: 154 Homecrest Road, Battle Creek, Michigan 49017-2650.

3338. Davis, Jean. 1999. What ever happened to the Sanitas Nut Food Co. building and archives in Battle Creek, Michigan (Interview). *SoyaScan Notes.* Jan. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The original building was built in 1901 by W.K. Kellogg for his brother, Dr. John Harvey Kellogg, to house the Sanitas Nut Food Company. Corn flakes, peanut butter, and other health foods were manufactured here until 1913 when it was moved to larger quarters in a former organ factory. From 1989 it was "used for the Health and Heritage Museum until it was demolished in 1996 to make way for the Family Health Center."

Jean and others tried during the early 1990s to buy and preserve the building.

Update: Talk with Jean Davis. 2004. Feb. 10. The battle to restore the Sanitas Nut Food Co. was lost in 1996. The original building was torn down, since the Adventists couldn't afford to restore it. The many precious early Adventist documents which (it was hoped) would be stored in the restored building are now stored in trailers. Duff Stoltz has many more, but they are not well organized. It is not at all clear what will happen to all these precious old documents related to early Adventist work with foods. Address: 154 Homecrest Road, Battle Creek, Michigan 49017-2650.

3339. National Securities Corporation. 1999. Equity research: Galaxy Foods Co. Marietta, Georgia. 4 p. 28 cm.
• ***Summary:*** Rating: Strong buy. Sector: Healthy food manufacturing. Description: Makes cheese & soy-based foods. Galaxy will trade at the pre-split price until the effective date of Feb. 12, 1999. Galaxy stock is now trading at $0.63 before the reverse split on Feb. 12. Stock price adjusted for 1:7 reverse split: $4.38. 52 week range: $8.97 to $2.41. Shares outstanding: $9.2 million. 3-months average daily volume: 25,000 shares. Market capitalization: $40.3 million. Insider ownership: 41%. Book value per share: $1.26.

Note: In this reverse split a shareholder will receive 1 share for every 7 shares previously owned. This will boost the value of each share in order to enable the stock to keep its NASDAQ listing thereby enhancing shareholder value. "Shareholders will vote on the reverse split on Feb. 11."

In retail sales, gross margins soared to 35.9% compared with 29.1% last year.

Comparable peer group valuation analysis. A large table shows the comparable companies: Gardenburger, Hain Food, Horizon Organic, Lifeway Foods, International Yogurt, Worthington Foods, and Galaxy Foods. For each company is given: (1) Current price of the stock (Hain is #1 at $21.88). (2) 1998 estimated revenue in million dollars (Hain in #1 at $145.0). (3) 1998 estimated earnings per share (Worthington Foods is #1 at $0.81). (4) 1999 estimated earnings per share (Worthington Foods is #1 at $0.99; Galaxy is $0.65). (5) Growth rate (Horizon Organic is #1 at 42%; Galaxy is 30%). (6) Price to earnings ratio 1998 estimate (Horizon Organic is #1 at 200.0). (7) Price to earnings ratio 1999 estimate

3341. **Product Name:** Natural Touch Organic Green Soybeans.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1999 January.
Ingredients: Organic soybeans. Certified organic by OGBA. Certified organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 16 oz (435 gm) Resealable poly bag.
How Stored: Frozen.
Nutrition: Per 2/3 cup (85 gm): Calories 110, calories from fat 35, total fat 4 gm (6% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium <5 mg (0%), potassium 240 mg (7%), total carbohydrate 9 gm (dietary fiber 5 gm [20%], sugars 2 gm), protein 9 gm. Vitamin A <2%, vitamin C 8%, calcium 8%, iron 10%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Ron McDermott of Worthington Foods. 1998. Oct. 7. Worthington introduced this product at the Natural Products Expo in Baltimore, Maryland, in Sept. 1998. The first products are expected to be shipped in early December. This will be Worthington's first organic product. Worthington chose not to use the name "Sweet Beans," which is used by SunRich and Sno Pac. Ron thinks this name derives from the concept of "sweet corn," as opposed to "field corn." Among natural food buyers at Baltimore, Worthington found that the name "Sweet Beans" lead to questions as to whether the product contained added sweeteners. The green vegetable soybeans are grown by and obtained from SunRich in Minnesota. Worthington has decided to monitor the total isoflavone content itself, using an independent lab at Iowa State University, rather than rely on figures from SunRich–which are roughly twice as high as what Worthington has found.

Talk with Trudy W. Cravens, PhD, RD, at Worthington Foods. 1999. Jan. 15. This product was packed by a co-packer on 1 Dec. 1998. It was supposed to be available in retail stores in late Jan. 1999, but she learned today that the production introduction has been delayed, so she is not sure when it will be shipped. Label sent by Trudy Cravens. 1999. Jan. 15. 6¼ by 8 inches. Plastic bag. Dark green, red, yellow, and black on tan and light green. Color photo of green soybeans in salad bowl with sliced tomatoes, carrots, and lettuce. "Contains soy isoflavones–24 mg per serving. Excellent source of fiber. Serve as a side dish, in casseroles, or in soups." On the back is a colored bar chart titled "More nutritional value than corn, peas, or green beans." Green soybeans have more fiber, iron, calcium, and protein. Cooking directions for stove top, microwave, or steamer. Suggestions for use.

Leaflet (black on green, 3 panels each side). 1999. July. "Natural Touch Organic Green Soybeans." Contains six recipes.

Leaflet (8½ by 11 inch, color, single sided) sent by Patricia Smith from Natural Products Expo East. 1999. July. On the front is a color photo of the front of the package.

Spot in *Frozen Food Executive* (Harrisburg, Pennsylvania). 1999. Fall. "Natural Touch introduces Organic Green Soybeans."

3342. Lamp, Greg. 1999. Soyfoods health claim nears FDA okay: Heart-risk labeling should boost soybean demand. *Soybean Digest.* Feb. p. 68.
• ***Summary:*** Funds from the soybean checkoff helped generate the research and information that was submitted to the FDA. The process began in 1995 with financial assistance from the Illinois Checkoff Board and the United Soybean Board (USB). Roughly $1 million in soybean checkoff funds were invested in the project. "A coalition to develop the soy health claim involved ASA [American Soybean Association], USB, state checkoff boards and industry partners, such as Protein Technologies International, Central Soya and the Archer Daniels Midland Company."

An estimated 20% of all Americans (54.2 million adults) have high blood cholesterol levels–over 240. ASA predicts that if each of these people consumed 25 grams (less than 1 ounce) of soy protein each day, annual demand for soybeans would increase by more than 55.2 million bushels.

Consumption of U.S. soybeans in the United States now totals about 1.2 billion bushels a year.

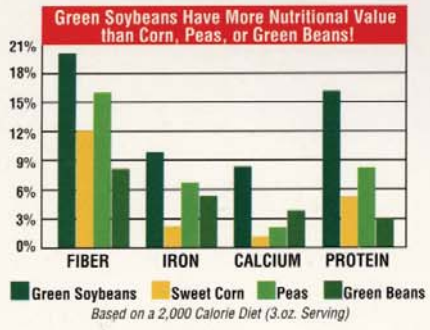
Natural Touch®



Organic Green Soybeans

Soy Isoflavones Without Tofu

Certified Organic

Everyone has heard about the benefits of eating soybean isoflavones. Now you can get a whopping 24 mg of isoflavones with each serving of Natural Touch Organic Green Soybeans. These soybeans are specially planted and harvested while tender green. The result is a fresh vegetable that has the delicious sweetness of a pea and the texture of a lima bean. Serve as a side dish or include in recipes.

foods. Those on the left rack already contain soy protein: Mori-Nu Tofu, Take Care, GeniSoy bars, Harvest Burgers, Galaxy Veggie Slices, SoNice soymilk, Edensoy, Morningstar Farms [Worthington Foods] meat alternatives, etc. Those on the right rack are foods with potential to have soy protein added: Cream of Wheat, Raisin Bran, puddings, Snackwell's cookies, etc.

3343. Soyfoods Association of North America. 1999. Soyfoods Once a Day for Life (Portfolio). Washington, DC. 21 inserts. Feb. 15. 28 cm.
• ***Summary:*** The following eight news releases are from the Soyfoods Association: (1) Soyfoods Association of North America celebrates April as Soyfoods Month (2 p.). (2) Soyfoods sales soar with increased consumer acceptance (2 p.). (3) Soyfoods Association of North America–Industry insiders (ask the experts, 1 p.). (4) Start young enjoying soy (ideas for kids, 1 p.). (5) 1999 Soyfoods Month sponsors (a half-page profile of 11 companies: Archer Daniels Midland, Galaxy Foods Co., Hain Food Group, Lightlife Foods, Inc., P.J. Lisac & Associates, Inc., SunRich, Inc., Tetra Pak, Vitasoy USA Inc., White Wave, Inc., Worthington Foods, Inc., Yves Veggie Cuisine; 6 p.) (6) Soyfoods Association of North America product list (lists soyfood products of 15 companies, many of whom are sponsors of "April is Soyfoods Month," 11 p.). (7) Soyfoods Association of North America member list (52 companies, 1 p.). (8) Dear member of the press, from Allan Routh, President, SANA (1 p.).

Product brochures from the following companies are also included: (9) Sweet Soybeans–Hearty & Natural Edamame, from SunRich. (10) Vitasoy soymilk, (11) Fresh, ready to heat entrées, from Yves Veggie Cuisine. (12) Go Veggie (dairy alternatives), from Galaxy Foods. (13) Lisanatti–The good health cheese alternative, from P.J. Lisac & Associates (Clackamas, Oregon). (14) Trust the protein authority, from ADM. (15) Fact sheet, from White Wave. (16) Nasoya tofu. (17) Veggie recipes, from Galaxy Foods. (18) Westsoy recipes, from Westbrae Natural. (19) Eating healthy can be soy easy, from Lightlife. (20) The change will do you good, from Morningstar Farms. (21) Sweet beans–Vegetable soybeans, from Sno Pac. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

3344. Worthington Foods, Inc. 1999. Used to be "hearty" and "healthy" was a contradiction in terms (Ad). *Vegetarian Times.* March. p. 3.
• ***Summary:*** This full-page color shows a dish on a plate (it looks like lasagna) prepared with Morningstar Farms Recipe Crumbles. At the lower left are two packages of low-fat Recipe Crumbles: Burger Style and Sausage Style. The slogan below the company logo is: "The change will do you good." Address: Worthington, Ohio 43085.

3345. Worthington Foods, Inc. 1999. Annual report 1998: Celebrating 60 years, 1939-1999. 900 Proprietors Rd., Worthington, OH 43085. 20 p. 28 cm.
• ***Summary:*** For the fifth consecutive year, Worthington Foods has achieved record earnings and record sales. Net sales rose to $139.5 million in 1998, up 18.2% from $117.9 million in 1997. Net income (profit) rose to $8.021 million in 1998, up 0.2% from $8.006 million in 1997. Earnings per share (diluted) fell to $0.66 in 1998, from $0.67 in 1997. Gross profit as a percentage of net sales increased to 43.2% in 1998 from 41.3% in 1997. Foodservice sales rose nearly 33% in 1998 compared with the prior year.

Contains a nice, full-page story honoring Allan R. Buller–visionary, leader, and friend, who steps down after 53 years of service to the company. When he arrived in Dec. 1945 "the company had sales of less than $250,000 and had only recently moved its manufacturing from a two-story white frame house to a newly-built plant. Distribution consisted largely of mailing its most popular product, gluten-based *Choplets,* to households across the country at a price of three cans for a dollar." In the 1950s he helped to make "Worthington the first company in the world to offer frozen vegetarian foods." The company reached its first million-dollar sales year in 1960. In 1982, at age 65, Buller withdrew his retirement savings and refinanced his house to further the pursuit of his lifelong dream. "To make healthful vegetarian foods readily available to mainstream consumers." He and a handful of other investors–including Dr. George Harding IV and James Hagle–raised $9.5 million to buy back the assets of Worthington Foods from Miles Laboratories. "The deal closed on Friday [in October]; and the reorganized company–with Buller as president–started production the next Monday without missing a single order or shipment." Buller retired as president of Worthington Foods in 1986, when Dale Twomley was named to the post. He became chairman of the board in 1989; now, a decade later, he steps down from that post, succeeded by Twomley. He joins other fellow Worthington visionaries, Jim Hagle and George Harding, in seeing a brilliant future for vegetarian foods. "'When I was growing up, vegetarianism was accepted largely on faith,' he recalls. 'But today, we have strong scientific evidence to support the benefits of this dietary approach. That can only mean a continually growing market for our products."

"Morningstar Farms (including *Harvest Burgers*) leads the meat alternative market category in supermarkets across the U.S., capturing a 52% market share. As the only brand with meat alternative products for every meal occasion, Morningstar Farms continues to provide customers with the largest variety of products and tastes.

"Shoppers can find the Morningstar Farms brand in more than 96% of the nation's supermarkets. The line now includes more than two dozen frozen and refrigerated food items to replace whole eggs and processed meats. Most of these meat alternatives are made from high quality soy protein,..."

© Copyright Soyinfo Center 2014

New products introduced during 1998 include MeatFree Corn Dogs (batter-dipped on a stick), MeatFree Buffalo Wings (a fun food, great for kids, spicy vegetarian drumettes), and Hard Rock Café Veggie Burgers (a partnership with Hard Rock Cafe restaurants worldwide), and Morningstar Farms Harvest Burgers (On 16 Oct. 1998 Worthington purchased the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant). Two new refrigerated products were introduced in "modified atmosphere packaging" (MAP): Chick Nuggets and Breakfast Patties. MAP products are sold in the grocer's meat case.

Color photos show: Dale E. Twomley. Allan R. Buller. Three new product labels. An aerial view of Worthington's manufacturing facility at Zanesville, Ohio.

Includes a 27-page "Notice of Annual Shareholders Meeting." Address: Worthington, Ohio. Phone: (614) 885-9511.

3346. Fischer, Bruno. 1999. Sale of his company, Bruno Fischer GmbH (in Aetorf, Germany), to DE-VAU-GE in Germany (Interview). *SoyaScan Notes.* April 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bruno is a devout Seventh-day Adventist and DE-VAU-GE (DVG–Granovita) is a Seventh-day Adventist company. Many years ago DVG got out of the soymilk business; they sold their soymilk plant to Korea; it is now the third soymilk plant of Samyung Foods in Korea. Bruno is now interested in getting back into the soymilk manufacturing business in a different way. On 31 Dec. 1998 he sold all of his family-owned company, Bruno Fischer GmbH (in Aetorf, Germany) to DVG–for money. Bruno did not keep or exchange any stock. He now works as a consultant for DVG and no longer owns any part or shares of his former company. He sold the company largely because DVG contacted him at a very appropriate time and offered a very good price. The company had always been run as a triumvirate, his mother, his father, and Bruno. But during the summer of 1998, Bruno's mother had died very unexpectedly. Four weeks later, Bruno's father announced that he would like to get out of the business as soon as possible. This would mean major restructuring. Several months later, out of the blue, came the offer from DVG–like a gift from God. Bruno was not looking for a buyer. The timing was perfect. DVG was looking to buy a company that would allow them to penetrate the organic and natural foods food market better. They had a shopping list and Bruno's company was No. 1 on that list. DVG sells most of their products to the Reform Houses (the predecessor to the natural foods market and stores–*Naturkostlaeden*). DVG already owned a small company in the organic and natural foods market; they had tried for years, using this company, to penetrate the market, unsuccessfully. So they decided that they needed to buy one of the key players in that market.

DVG is owned by the Seventh-day Adventist Church. They contribute significant amounts of money to the church, but if they need money, they must go to non-church sources (mainly banks). Nevertheless DVG has grown at an astonishing rate. Fifteen years ago they had annual revenues (sales/turnover) of about 5 million Deutschmarks; today that figure has increased to about 200 million Deutschmarks. His experience in negotiating with DVG was that they were very ethical and fair. They offered attractive help in moving or severance pay (about one month's salary for each year they had worked for Fischer) to Bruno's former employees in Aetorf after his equipment was moved 400 km (250 miles) away northward to Lueneburg.

Bruno has a non-compete agreement with DVG, but they are interested in buying soymilk from him if should ever decide to make it. They now buy from Alpro.

Katrin [pronounced KAT-rin] Senger, who lives in Munich, is a colleague of Bruno's. She is doing her diploma thesis (something between a BA and an MA thesis) on his behalf on the soy market in Europe.

Bruno has started a new company named Natumi GmbH, located at the same address as his former company. Phone: +49 2243 850 162. Fax: +49 2243 850 172. The sale of his company to DVG is public knowledge. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

3347. Messina, Mark J. 1999. Soy appeal. *Functional Foods* (*Kent, UK*) 2(7):20-23. April.

• ***Summary:*** The subtitle reads: "Soyfoods are viewed by many as the consummate functional food. Dr Mark Messina of the American Soybean Association reviews the latest nutritional research, and looks at product potential." Contents. Introduction. Defining isoflavones. Cancer. Heart disease. Osteoporosis. Product potential. A portrait photo shows Mark Messina, who is an adjunct associate professor of nutrition at Loma Linda University in California. He chairs the editorial advisory board of *The Soy Connection*, a quarterly newsletter sent to over 100,000 health professionals in North America. He has organized and chaired the first two international symposia on the role of soy in preventing and treating chronic disease. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

3348. Sanitarium Health Food Co. 1999. Soy healthy: From the goodness of soy beans (Leaflet). Wahroonga, NSW, Australia. 2 p. April. Front and back.

• ***Summary:*** This attractive full-color leaflet is folded into 4 panels. The front shows the packages of 8 "Soy Healthy" brand vegetarian meat alternatives, nestled in a bed of lettuce and surrounded by green. Below the products: "Soy has never been so easy." The inside left panel discusses: Soy protein and phytoestrogens. Sunflower oil/Canola oil. Iron. Vitamin B-12. Fibre. The inside right panel gives detailed information on five frozen and five chilled Soy Healthy

© Copyright Soyinfo Center 2014

products. Frozen: Original soy burgers. Country-spiced soy burgers. Tender soy medallions. Tender soy schnitzels. Tender flaked soy fillets. Chilled: Original soy slice. Garlic & herb soy slice. Smoked soy slice. Soy sausages. Soy fillets.

The back panel lists suitability for specific diets: Reduced saturated fat / Cholesterol free. Vegetarian (lacto-ovo). No added preservatives. No added MSG. No artificial colours. For more information: www.sanitarium.com.au/Soy. Plus three toll-free numbers. From the company's "Nutrition Education Service." Address: 146 Fox Valley Rd., Wahroonga, NSW 2076, Australia.

3349. **Product Name:** Morningstar Farms Meat Free Buffalo Wings: Spicy Vegetarian Drumettes.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1999 April.
Ingredients: Textured vegetable protein (soy protein concentrate and isolate), egg whites, enriched wheat flour...
Wt/Vol., Packaging, Price: 17-18 Wings weigh 10.5 oz (298 gm). Paperboard box.
How Stored: Frozen.
New Product–Documentation: Label sent by Worthington Foods. 1999. April.

3350. **Product Name:** Morningstar Farms Meat-Free Mini Corn Dogs.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1999 April.
Ingredients: Wheat gluten, water, enriched wheat flour...
Wt/Vol., Packaging, Price: 14 Mini Dogs weigh 10.0 oz (284 gm). Paperboard box.
How Stored: Frozen.
New Product–Documentation: Label sent by Worthington Foods. 1999. April. With new banner headline.

3351. **Product Name:** Morningstar Farms Meat-Free Stuffed Sandwiches [Pepperoni Pizza Style, Ham & Cheese Style, Burger & Cheese Style].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1999 April.
Ingredients: Burger & Cheese Style: Water, unbleached wheat flour, textured soy protein concentrate, cheddar cheese...
Wt/Vol., Packaging, Price: 2 Stuffed Sandwiches weigh 9.0 oz (255 gm). Paperboard box.
How Stored: Frozen.
New Product–Documentation: Labels sent by Worthington Foods. 1999. April. With new banner headline.

3352. Worthington Foods, Inc. 1999. Morningstar Farms is getting a lot of attention. Please plan accordingly (Brochure). Worthington, Ohio. 4 p. 28 cm. [2 ref]
• ***Summary:*** Compares Morningstar Farms (MSF) and Gardenburger (GB) products. Contents: (1) New packaging: New logo to create brand "umbrella." (2) Widest variety: A graph titled "Brands by unit volume" based on AC Nielsen data from 26 Dec. 1998 shows that Morningstar Farms has never lost its lead. Gardenburger peaked in July 1998 than fell sharply. Morningstar peaked at the same time but fell only slightly. (3) Great taste. A table (based on Nielsen data from 20 March 1999) shows unit volume of the top ten MSF and GB products. Eight of the top ten are MSF. The top four are MSF Breakfast Patties, MSF Breakfast Links, GB Original, and MSF Grillers. (4) Category Leader: "Morningstar Farms #1 in Meatless for the past 25 years." About 8% of U.S. households consume MSF products and 7.5% consume GB. But MSF households purchase at a 3-times higher rate.

The rear cover discusses MSF's "New advertising campaign." Targets 75% of women between ages 15-54. Created 1.5 billion impressions. Uses TV and magazine ads plus many types of coupons.

Four inserts show: Ad slicks of two national TV ads: "Surprise-a-guy." and "Surprise-a-gal." Three full-page color ads. Address: 900 Proprietors Rd., Worthington, Ohio 43085.

3353. Joe, Peter. 1999. Sunrise Soya Foods and the creation of SoyaWorld Inc. in Vancouver, Canada (Interview). *SoyaScan Notes.* May 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** First a bit of background: In late 1995 Peter Joe went to Dairyworld and began talking with them about doing a soy yogurt together. Dairyworld is a huge co-operative of dairy farmers in western Canada (not just British Columbia). Gradually the talk turned to soymilk. Dairyworld had powerful packaging and distribution capabilities, while Sunrise had manufacturing and a deep knowledge of the soy business. Dairyworld got more and more interested in soymilk. Initially Peter started talking with a person who is no longer there. As the talks grew more serious, Maheb Nathoo was added to the team that soon drew up a shareholders and joint-venture agreement. Maheb, who is very bright, seemed to have a personal interest in soy. His daughters were into soy. He realized that milk is a commodity, that soymilk is another form of liquid protein, and is part of the milk shelf. Now he has become a convert, and he feels very strongly about the future and potential of soy. Maheb was the person who convinced the board of Dairyworld Foods (which consisted mainly of dairy farmers) that the joint venture with Sunrise was the way to go. These farmers realized that Sunrise was getting more and more space on the dairy shelf (i.e., invading their territory) so,

© Copyright Soyinfo Center 2014

hey, why not get involved with this newcomer. Dairy people also remember what happened with margarine; if they had gotten into the margarine business at an early date, they would have been able to offer it as another product, rather than having to compete with margarine using butter. Finally, the top executives and management people at Dairyworld think beyond the dairy farm and dairy farmer mentality, and they have done a good job over the past 3-4 years in getting the approval of the dairy farmers to go ahead with this joint venture.

At the same time Peter met Sanitarium people at trade shows for a number of years. Sanitarium was trying to sell the product into Canada from Australia in an aseptic package. Finally Peter went to Sanitarium to ask for a license; they were looking to expand internationally, so the timing was good. The final agreement gave Peter exclusive rights to sell So Good in the USA and Canada.

SoyaWorld Inc. was incorporated in Aug. 1996 with Dairyworld Foods and Sunrise each putting in money and owning half the shares. The new SoyaWorld board of directors (4 people, two from each company) was formed at that time. Maheb moved from Dairyworld to SoyaWorld in late 1996. In mid-1997 SoyaWorld got the license to make So Good from Sanitarium Foods (Australia). Test marketing of So Good began in mid-1997 (with the name SoyaWorld Inc. on the package), then in Jan. 1998 the product was officially launched with a big TV advertising campaign. The humorous ad shows a cow confessing that she drinks So Good; it is even endorsed by cows! This may have been the first national mass market TV campaign for soymilk in North America. In late 1997 the Canadian government first allowed soymilk to be fortified with calcium and vitamins. This showed a weakening of their many laws designed to protect dairy products. Use of the word "milk" is still not allowed. Soyganic was launched in mid-1998.

Peter works closely with Dave Coe, who is the CEO and president of Dairyworld Foods and on the board of SoyaWorld. He is the one who is responsible for the joint venture with Sunrise and for what is happening with SoyaWorld–in a sense. Maheb is now working for SoyaWorld as general manager and CEO; he no longer works for Dairyworld.

If a taste panel consisting of typical Canadians was asked to taste So Good and SoNice Vanilla, Peter thinks So Good would win. SoyaWorld plans to target So Good and SoNice to different markets. SoNice in Tetra-Pak cartons still has a very strong following among natural foods customers, but SoyaWorld will try to sell SoNice in supermarkets as well as natural food stores in both fresh and UHT cartons. So supermarket consumers will have a choice. So Good is sold in both gable-top (fresh) and aseptic / UHT packages, but about 90% of the sales come from the fresh product. Peter would guess that the same would be true in the USA. Many Asian-Canadians love Soyganic, which has a beany flavor; they have grown accustomed to that taste. Address: General Manager, Sunrise Soya Foods, 729 Powell St., Vancouver, BC, V6A 1H5 Canada. Phone: 604-254-8888.

3354. Fuller Life, Inc., BetterThanMilk Div. 1999. Why Better than Milk (R) is also Better than Soy and Rice Beverages (Leaflet). Maryville, Tennessee. 1 p. Front and back. 28 x 22 cm.

• ***Summary:*** See next page. This attractive color leaflet (dated May 1999) was sent by Fuller Life in May 1999. A sticker shows that "Better Than Milk" had Booth #1255 in the Food Pavilion. The front states: "Better Than Milk is a mix instead of a liquid, so it: (1) Costs up to 30 percent per quart than liquid quarts. (2) Mixes to your preferred thickness and taste. (3) Makes as little or as much as you need at a time, so its always fresh." On the rear are nutrition facts and ingredients for eight SKUs, which come in either beverage mix cans or pre-mixed cartons.

Note: This product was originally introduced in 1987 by Sovex Natural Foods in Collegedale, Tennessee. In March 1999 the exact same poster (almost) was distributed at Natural Products Expo West (March 1999). Hearty Life, Box 2178, Collegedale, TN 37315. Phone: 1-800-227-2320. It was sent to Soyfoods Center by Patricia Smith. Address: 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 1-800-227-2320.

3355. Gardenburger, Inc. 1999. Annual report 1998: Bullseye. 1411 Southwest Morrison St., Suite 400, Portland, OR 97205. 26 p. 43 cm.

• ***Summary:*** This is a strange-looking, unconventional tabloid size annual report, apparently designed to hide the company's huge losses. Net sales (in million dollars) have grown dramatically in recent years: $40.53 in 1996, $56.83 in 1997, and $100.12 in 1998 (up 76% over 1997). However the company lost $1.393 million (in net income) in 1997, increasing more than 7-fold to a loss of $10.042 million in 1998. Also in 1998 working capital, shareholders' equity, and gross margin all fell significantly, while current liabilities rose more than four-fold. The price of the common stock finished 1998 at 13.75, about the same level as in the first quarter.

But last year was a brand-building year. Gardenburger spent $146 million on media advertising and expanded consumer awareness of the brand from 22% to 42% in the process. Brand awareness before 1998 ad campaign: Gardenburger 22%, Harvest Burger 22%, Morningstar Farms 15%, Boca Burger 5%. Awareness after 1998 campaign: Gardenburger 42%, Harvest Burger 24%, Morningstar Farms 16%, Boca Burger 4%. Gardenburger is the number one veggie burger on grocery shelves and in restaurants. "Largely due to our advertising and product placements, the veggie burger category grew 57% in 1998 to $134 million in the grocery channel, and we captured 80% of that

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

growth. Our January grocery channel market share stood at 51%, compared to 24% for our nearest rival" [Worthington Foods, plus Boca Burger 11% and Harvest Burger 7%]. Gardenburger is also the No. 1 brand in the natural foods channel. Address: Portland, Oregon.

3356. Thrash, Agatha. 1999. History of work with medicine–orthodox and alternative, and vegetarianism (Interview). *SoyaScan Notes.* June 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Both Agatha and her husband, grew up in Georgia, and are physicians with MD degrees. They both went to medical school at Medical College of Georgia (he started in 1950, she in 1951). They met in medical school and married after her second year. They did their internships at the University of Louisville (Kentucky), and began their residency in 1954 at Emory University in Atlanta, Georgia. Then in 1960 they started practicing medicine at a regular hospital in Columbus, Georgia; her husband had a private practice in internal medicine, and she was in pathology at St. Francis Hospital, Columbus, Georgia (she later became chief pathologist). They practiced medicine in this way for about ten years. During that time were not Seventh-day Adventists.

Then they began to study the Bible, and to recognize that the Bible doctrines as taught by Seventh-day Adventists are the same as what the Bible teaches. They started to go to an SDA church where A.C. Becker was the pastor; he was a lifelong vegetarian. Pastor Becker and his wife looked very healthy, as did their three children. Agatha and her husband were "amazed" that a person go live an entire lifetime without eating meat. Earl Prest succeeded A.C. Becker as pastor of this church. In 1964 she and her husband became Seventh-day Adventists. They continued their regular medical practice, but gradually they began to have a bit of unrest. "Surely, this is not all there is to the practice of medicine. You just give drugs, the patients come back again and again, and you usually give them more and more. But we as doctors have done nothing to change the basic course of their disease. We have merely made it tolerable." They got interested in alternative medicine through Seventh-day Adventists. They decided they could never practice such medicine in a hospital, so they started Yuchi Pines Institute in Seale, Alabama. They bought the land in 1968 or 1969, and in 1970 it was organized as a corporation. They have been operating as a "Lifestyle Center" ever since then. They are chartered in the state of Alabama as educational, benevolent, and charitable–a nonprofit, tax-exempt organization. "Now we try to train them to be in charge of their own health, using the eight natural laws of health: Nutrition, exercise, water, sunshine, temperance, air, rest, trust in Divine power. We have been positively amazed that many diseases–such as hypertension, high blood pressure, diabetes, allergies, asthma, and symptomatic heart disease–could be literally cured or greatly improved using these simple, natural methods. We have seen nothing short of miraculous results."

In 1975 she and her husband wrote their first book titled *"Blessed art thou, o land, when... thy princes eat... for strength, and not for drunkenness." Ecclesiastes 10:17.*

Why does our government, which is now so concerned with reducing medical costs, not consider using these methods when appropriate? Agatha thinks it is because of the powerful drug company lobby.

Dr. Thrash was deeply influenced in her medical work by Dr. Dunbar Smith, a Seventh-day Adventist, who ran the Bates Hospital (until the government took it over during World War II), and Adventist hospital in New York. He had been a missionary and a minister, but he had a problem with this voice from overstraining it. So he decided to become a physician. He came back to the USA, studied medicine, practiced medicine for many years, then became the head of the Bates Hospital.

She was also influenced by Earl Prest, the pastor of a local SDA church in Columbus, Georgia. He was from New York and he knew Dunbar Smith; it was from him that Dr. Thrash was introduced to Dunbar Smith. Madison College in Tennessee was a small inspiration.

Concerning powdered soymilks or so-called "tofu milks": She thinks some of them (such as "Better Than Milk") are unhealthful if used as a major food source. The first ingredients are fat and sugar. She knows and likes the major liquid soymilks such as Edensoy, Westsoy, Vitasoy, etc. Address: Yuchi Pines Institute, Route 1, Box 273, Seale, Alabama. Phone: 334-855-4709.

3357. *SoyaScan Notes.* 1999. The soy-based infant formula industry and market in the USA–Basics (Overview). June 25. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Definition: An infant formula serves as the sole source of nutrition for an infant before, and sometimes during weaning. It must supply all of the nutrients needed by an infant in precisely the right amounts, in a sanitary package. The baby's life depends on this. If the manufacturer makes a mistake, a product recall must be conducted; this is very expensive.

Because of the importance of this category of products in sustaining human life, manufacture of infant formulas is very carefully and strictly regulated by the U.S. Food and Drug Administration (FDA). The Infant Formula Act of 1980, which is the basis of that regulation, imposed new quality control and labeling requirements for infant formulas.

Of the many food and beverage categories, the manufacture of non-dairy (usually soy-based) infant formulas is the most technologically sophisticated. It is the food equivalent of building missile defense systems.

Because of the ever-present possibility of recalls, it also contains the most expensive risks of any sector of the food business. To protect themselves from these risks, all manufacturers buy product liability insurance, which is very

© Copyright Soyinfo Center 2014

expensive.

The only companies that have survived in this industry and those which are willing and able to take these risks. The players and competitors are some of the most powerful and experienced companies in America today, coming mainly from the pharmaceutical and food industries.

The future of soy-based infant formulas is–as of mid-1999–quite uncertain because of concern by pediatricians and toxicologists about the levels of isoflavones and phytoestrogens found in such infant formulas. On a body weight basis, the level is about the same as that contained in a birth control pill used by an adult woman.

Because of the complex and demanding nature of this industry, a number of companies have sold their businesses or simply stopped manufacturing soy-based infant formulas, as follows:

The first major U.S. company to get out of the non-dairy infant formula business was the Pharmaceutical Products Division of Borden Inc., a major American dairy company. Borden got into this industry in 1967 by purchasing Neo-Mull-Soy from Dr. Julius Muller M.D., who had launched the product in 1936. Borden had its headquarters at 350 Madison Ave., New York, New York, and its plant at Elgin, Illinois. Borden decided to get out four years later, when they sold their infant formula business to Syntex, a Palo Alto pharmaceutical company.

In 1940 International Nutrition Laboratories in Mt. Vernon, Ohio (owned and operated by Dr. Harry W. Miller, M.D.) introduced SoyaLac, a powdered infant formula based on soymilk. In 1951 he sold the company at book value to Loma Linda Foods (owned by the Seventh-day Adventist Church) of Riverside, California. In 1989 Loma Linda sold the infant formula part of its business to Nutricia, a Netherlands-based manufacturer of infant formulas, and the second largest manufacturer of such formulas in Europe after Nestle. In late 1990 Nutricia shut down the plant in Riverside and in 1994 sold all their infant formula operations Nestle/Carnation. The Soyalac brand disappeared from the market–forever. The full story of "The rise and fall of Soyalac" is told in a separate record.

Syntex Laboratories was started in 1944 by Russell Marker to make progesterone. In 1971 the company bought Neo-Mull-Soy, a soy-based infant formula, from Borden. For Syntex, a high-flying pharmaceutical company with headquarters in Palo Alto, their venture into the infant formula market was a disaster. In March-April 1978 Syntex ceased adding salt (sodium chloride) to the products out of concern that the sodium levels were too high and in the belief that adequate levels of essential nutrients were provided through other ingredients contained in the formulas. The company was mistaken. In July-August 1979 Syntex learned of an illness alleged to be related to the use of Neo-Mull-Soy and Cho-Free. Within days they notified pediatricians nationwide. The company determined that the products were low in chloride and promptly convened a panel of outstanding independent experts to review the reports and recommend corrective action. Within one week of discovering the chloride deficiency, Syntex initiated a voluntary recall of all Neo-Mull-Soy and Cho-Free products. The recall was a major effort involving first-class mailings to more than 100,000 physicians and pediatric nurses, mailgrams, nationally released media statements, and personal visits by Syntex representatives to more than 26,000 stores. In total, nearly 8.5 million cans of the formulas were recalled and destroyed by Syntex. In Dec. 1979 the formulas were reformulated to assure adequate chloride levels and approved for marketing by the U.S. Food and Drug Administration. In Jan. 1980 the reformulated products were returned to market. In Dec. 1980 Syntex ceased production of infant formulas due to lack of demand. The company no longer manufactures any infant formula products.

Wyeth Corp. (later Wyeth Laboratories Inc., then Wyeth-Ayerst) entered the non-dairy infant formula business in 1952 with Soyola, a dietary supplement to infant feeding made in Pennsylvania. In 1979 they launched Nursoy, an iron-fortified soy protein infant formula, also made in Pennsylvania. In 1984 they launched Wysoy in the United Kingdom. But in the mid-1990s, sales of Wyeth's products were first devastated in New Zealand, then in Australia, and finally in the UK by growing concerns about the safety of the isoflavones found in soy-based infant formulas. In Jan. 1996 Wyeth-Ayerst reported that it was phasing out its U.S. infant formula operations. They have probably done the same in New Zealand, Australia, and the UK.

3358. *SoyaScan Notes.* 1999. The rise and fall of Soyalac soy-based infant formulas (Overview). June 25. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Harry W. Miller, M.D., a student of Dr. John Harvey Kellogg, went to China in 1903 (with his wife) as a Seventh-day Adventist medical missionary. In 1926 in Shanghai he began to focus his attention on developing a better soymilk. In January 1928 the Shanghai Sanitarium and Hospital opened, with Dr. Miller in charge. In 1932 he established the Vetose Nutritional Laboratory to further his research. For two years (1936-1937) he fed soymilk he had formulated to several hundred children (mostly infants) at the Shanghai Clinic, running control tests with fresh cow's milk and various American and European prepared baby foods. The study turned out well and he and C.J. Wen wrote an article which was published in the April 1936 issue of the English-language *Chinese Medical Journal.* "Our experimental work on infant feeding has been carried on over a period of more than two years, mostly in the Shanghai Sanitarium Clinic." In 1936 in Shanghai he started one of the first commercial soy dairies in China. One of its products was Vetose Soya Milk Powder with claims of nutritive value the equivalent of other prepared powdered milk food for

© Copyright Soyinfo Center 2014

infants.

In 1937, when the Japanese began bombing Shanghai, Dr. Miller returned to the United States. In Mt. Vernon, Ohio, he and his sons built a soymilk factory and established a new company named International Nutrition Laboratories. In 1940 this company introduced SoyaLac, a powdered infant formula based on soymilk. Several experiments on Soyalac were conducted by leading pediatricians and child specialists on large groups of babies over a long period of time in America, Japan, the Philippines, and China. Finally, by July 1951 Soyalac was accepted as a hypoallergenic food by the American Medical Association's Council on Foods. Soyalac then began to be prescribed by physicians for allergic infants, and soon started to sell quite well.

In early 1951 (following the death of his wife), Dr. Miller sold (at book value–a very low price) his factory, land, and various soymilk products to Loma Linda Foods (owned by the Seventh-day Adventist Church) of Riverside, California. Loma Linda renamed the product Loma Linda Soyalac Infant Powder and continued to make it at Dr. Miller's plant in Mt. Vernon, Ohio.

In Jan. 1951 Loma Linda Foods added a second soy-based infant formula product to its line, Loma Linda Soyalac Infant Concentrate. In about 1960 they added Loma Linda Soyagen Infant Powder, in 1977 Granolac Infant Soya Milk (sold by Granose Foods in the UK), and in 1979 i-Soyalac, a non-dairy infant formula based on soy protein isolates. In 1979 Loma Linda was making 2.24 million gallons of ready-to-use Soyalac infant formula.

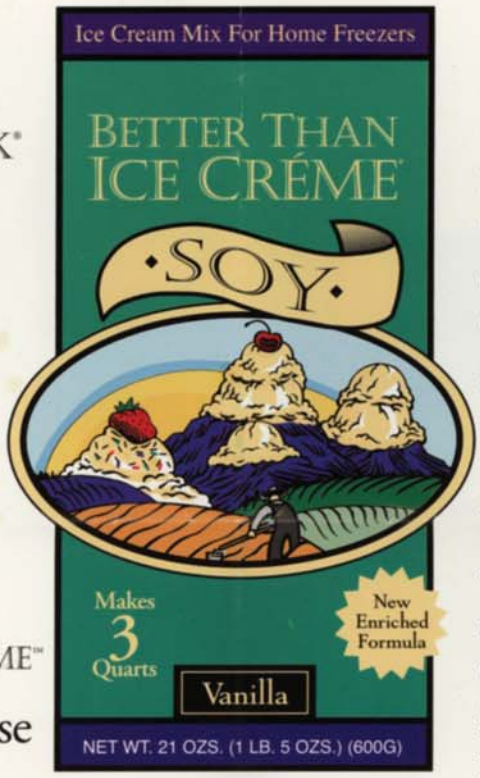
In an interview in March 1990, Eric Fehlberg, director of the Seventh-day Adventist international food operations, said that the church wanted to sell off the infant formula part of Loma Linda Foods because of the high cost of liability insurance. The FDA are really down on infant formula foods. If anything goes wrong, there is no end to the strife. LLF had one small recall due to a small shortage of vitamin A–from dissipation. It was very expensive. In 1989 Loma Linda sold the infant formula part of its business to Nutricia, a Netherlands-based manufacturer of infant formulas, and the second largest manufacturer of such formulas in Europe after Nestle. In the Netherlands, Nutricia had 90% of the dairy-based infant formula market. They had never made soy-based infant formula before they acquired Loma Linda, nor had they ever made infant formula in the United States. Nutricia began making infant formula using new equipment in Riverside, California; they also kept the plant operating in Ohio. Just as they were getting the new plant running, disaster struck, and they had to do a recall. So in late 1990 Nutricia shut down the plant in Riverside, spent more than $12 million revamping the plant in Ohio, then used it to start making various forms of i-Soyalac (from soy protein isolates) and Soyalac (from whole soybeans). The plant in Riverside went up for sale although Nutricia's sales and marketing departments remained in the office. In mid-1993 Nutricia decided to close their offices at the Riverside and move the rest of the company's operations to Mt. Vernon, Ohio. But later in 1993 Nutricia had another recall–and another disaster, which even drove down the stock price of Nutricia in the Netherlands. Nutricia's management at headquarters in the Netherlands probably said "This American company is too dangerous for us. We'd better sell it"–which they did in 1994 to Nestle/Carnation. The Soyalac brand disappeared from the market–forever. Nutricia is a good company, but they quickly learned that regulation (by the FDA) is much stricter in the USA than in Europe.

3359. *Good Food News* (*Sanitarium Health Food Co., NSW, Australia*). 1999. So, what's new with soy? An interview with Prof. Ken Setchell. 11(2):2-3. June.
• ***Summary:*** Recommends 50 mg/day of soy isoflavones for many health benefits, but higher levels may be needed to protect against some conditions such as loss of bone.

3360. Worthington Foods, Inc. 1999. [Second quarter financial report]. 900 Proprietors Rd., Worthington, OH 43085. 1 p. 36 cm.
• ***Summary:*** This quarterly report appears in a cheap, condensed, disappointing format–with much less information and style than previous quarterly reports. It has no title, is in black and white (no color as before), and doesn't even say which quarter the figures are for. The company is trying to save money; what a shame. Has Worthington forgotten about the image it projects?

Net sales rose 17.6%, but net income (after tax profits) dropped 21.2%–compared to the same quarter one year ago. Address: Worthington, Ohio. Phone: (614) 885-9511.

3361. **Product Name:** Better than Ice Créme [Vanilla].
Manufacturer's Name: Fuller Life, Inc., Better Than Milk Div.
Manufacturer's Address: Maryville, Tennessee. Phone: 1-800-227-2320.
Date of Introduction: 1999 July.
New Product–Documentation: See next page. Leaflet (single sided, 8½ by 11 inch, color) sent Fuller Life. 1999. July. "Introducing Better than Ice Créme (TM)." "A soy-based dessert mix for use in home ice cream freezers, or soft-serve machines."



3362. **Product Name:** Natural Touch Tuno (Vegetarian Tuna).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085.
Date of Introduction: 1999 July.
Ingredients: Textured soy protein concentrate, water, expeller canola oil, contains 2% or less of autolyzed yeast extract, natural flavors from non-meat sources, hydrolyzed

INTRODUCING BETTER THAN ICE CRÉME™

The makers of BETTER THAN MILK® introduce a new soy-based dessert mix for use in home ice cream freezers, or soft-serve machines.

BETTER THAN ICE CRÉME™ was created for those who want a creamy, delicious non-dairy ice cream.

Flavor Favorites

- Add strawberries, fresh, frozen or preserves, to mix
- Add flaked coconut and crushed pineapple to mix
- Blend toasted almonds, marachino cherries and carob chips with mix

Unfrozen Sweet Créme:

- Topping for strawberry shortcake and cobblers
- Milkshakes - blend with ice, frozen strawberries or bananas
- Sweet Creme for breakfast cereal and hot beverages

INGREDIENTS: SOYMILK (SOYBEANS, ISOLATED SOY PROTEIN, *FILTERED WATER), CANOLA OIL, MALTODEXTRIN (FROM CORN), EVAPORATED CANE JUICE, WHEAT PROTEIN, NATURAL FLAVORS (NO MSG, NO DAIRY), CALCIUM CARBONATE, SEA SALT, SOY LECITHIN, POTASSIUM CITRATE, FRUCTO-OLIGOSACHARIDES, **MAGNESIUM OXIDE, VITAMIN C (ASCORBIC ACID), VITAMIN E (D-ALPHA TOCOPHEROL ACETATE), VITAMIN A (ACETATE), VITAMIN D_3 (CHOLECALCIFEROL), VITAMIN B_{12} (CYANOCOBALAMIN)

Net Wt: 21 ozs. (1 lb. 5 ozs.) (600 G)
Case Ship Wt: 9.47 lbs.
Pack Out 6 cans per case
Case Dimensions: 12.625" x 8.5" x 7.5"
Case Cube (Ft.): .46
Tie-H: 16 x 7
Cases Per Pallet: 112
UPC 0 41648 07804 4
Also available in 25lb. bulk
UPC 0 41648 01115 7
LBL 11110 7/99

3363. Jacobi, Dana. 1999. Impressions after attending the Soy Symposium and the Global Soy Forum in Chicago (Interview). *SoyaScan Notes.* Aug. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** These two conferences covered four days and were "so stupid! Really poorly organized–a waste of time." Soyfoods were served at only one meal.

The main issues Dana noted: (1) Companies will have to get ready to answer consumer questions after the FDA health claim ruling. (2) A man from DuPont's seed company gave a presentation to 400 people that was "dripping with disdain" for those irrational people who disapproved of genetic engineering of foods. Unfortunately, he said, they had reached a critical mass so that DuPont now had to deal with them. (3) When isoflavones are consumed with soy protein, they have the greatest health benefits. (4) Most soyfoods will probably not qualify for the FDA health claim because they contain too much fat–but they can still make a "structure-function claim." (4) The speaker from Worthington Foods was excellent. Address: New York City.

3364. Nordquist, Ted. 1999. Soymilk in America–past and future: The soymilk wars are heating up. Part I (Interview). *SoyaScan Notes.* Aug. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** After SoyaWorld was created in Vancouver (BC, Canada), because ProSoya was developing soymilk in Vancouver, they needed a quick way to get soymilk on the market. So they started negotiating with Ted to see if he could start sending soybase up to Vancouver from California. Then Sanitarium Foods (from Australia) came into the picture and threw a lot of money towards SoyaWorld, encouraging them to purchase a license to make So Good using soy protein isolates. This would also be Sanitarium's entry into the USA and North America. SoyaWorld took this approach and because of Dairyworld Foods' excellent distribution system, So Good has done very well in Canada. Their aim is to work down into the United States; they have been trying to negotiate with Suiza Foods Corp., but Suiza has its own ideas. Ted has heard that Sanitarium is involved in a lawsuit over its So Good soymilk, perhaps with SoyaWorld, because they believe that SoNice is an infraction on the name of their So Good product–the names SoNice and So Good are too close.

Soy is really getting into the mainstream now. Ted's company has done a lot of market studies in supermarkets and the presence of soymilk is "essentially zero." The big change will take place over the next year as soymilk starts to enter the dairy case of supermarkets. Ted is aware that Horizon has its eyes on this market. SoyaWorld is powerful, but they are up against Dean Foods, Suiza, and others. Wait until November or December of this year to see what is going to happen. Ted may be part of the action or he may get squashed–like the bug under your carpet.

Ted learned a lesson when he was making Silk for White Wave; they came out with a different product, and it didn't seem to matter much to consumers that it wasn't as good, as long as it was approximately as good. Money, labeling, distribution, networking, etc. determine the success of a product. Ted designed Silk with a very low solids content (4% solids) for very specific reasons. The main reason was money–so the product could be sold at a competitive price. But with the FDA health claim anticipated, Imagine Foods now has 7 grams of protein per serving, and White Wave's Silk soymilk has 5-6 grams of protein. You cannot use the health claim if a product contains 6.25 grams of protein per serving, because that is rounded down to 6 grams on the label. So you must have a label that states 7 grams of protein. As the solids content of a soymilk rises, any beany flavor is harder to mask, so the flavor of the soybase becomes more important, and the formulation less important. And the flavor of the soybase becomes even more important with soy yogurt, and even more important with soy ice cream–because both have higher solids content. So, if one were rational and logical, the trend toward higher solids would give Ted an advantage. Ted disagrees strongly with Steve Demos who thinks that the soybase and the formulation are of about equal importance in determining the flavor of the final product. Ted believes that the soybase contributes about 80% of the final flavor and the formulation about 20%. Steve's Silk soymilk is now made by SunRich, in Minnesota. The only other companies that make what Ted considers an acceptable soybase are Pacific Foods of Oregon, and Imagine Foods.

If SunRich were using ProSoya's airless technology and if ProSoya took SunRich to court, Raj Gupta would argue that he patented his oxygen-free process in 1988. Alfa-Laval could go to ProSoya and say that they were selling a plant that made soymilk using an oxygen-free process before that patent was instigated, and they demonstrated that plant at an international conference in 1984. The process was not patented, but it was described in published literature and was well known. To get a patent, Raj Gupta had to prove that there was no prior art; thus Ted believes that the ProSoya patents are not valid. Ted and Raj planned to do a joint venture at one time, but they disagreed on many processing issues. His process is based on the *concept* of an oxygen-free grind, but it is not strictly so. Then he makes claims that you don't have to soak the beans, etc. So there are many things

© Copyright Soyinfo Center 2014

that the patent office has accepted in his patent that Ted believes would not stand closer scrutiny.

Ted has compared his soybase with that made by the ProSoya process; he believes that his is much better. Shurtleff says that he always assumed that the reason Ted used the ProSoya process in Vancouver to make Silk was because it was better than his own. Ted laughs and laughs. The real reason he didn't make the soybase himself was because he had no equipment or plant with which to make it.

Ted started to develop Silk using soymilk made by Pacific Foods of Oregon. Even when he was still in Sweden in the late 1980s, he began to cooperate with them in developing a soy ice cream. Ted bought soybase from all over the world to compare it with the soybase he was developing in Sweden. He ended up using Pacific Foods' aseptically packed soybase (containing only soybeans and water) as a control for his Tofu Line and Swedish Glass ice creams. So when he came to the California in the early 1990s, his goal was to make soy beverages, yogurt, and ice cream. When Ted started doing his work in Gustine, he was using Pacific Foods' soybase. They even had an agreement on the cost of the soybase, the fact that he would be buying it in tankers, etc. The first samples Ted sent to Steve Demos were made with Pacific Foods' soybase. But when the person who finally bought the product made from that soybase turned out to be Steve Demos, then Pacific Foods of Oregon backed off. They didn't want to make soybase for a competitor in the soymilk market. So Ted had to look for a new supplier, and he came into contact with ProSoya in Surrey, near Vancouver. At that time, they were just starting up their soymilk plant and they were really naive; they could make soymilk on a small restaurant scale, but they knew almost nothing about making soymilk on a large commercial scale in a continuous process. It was a nightmare for them at the beginning. Ted did not help them with their process; he just sent them orders, which forced them to get their act together because Ted needed to buy 6,000 gallons (one tanker full) at a time. As ProSoya was learning, Ted was starting to build his own plant, but he couldn't do that until he had money, and his money would have to come from sale of ProSoya soybase to Steve Demos. So Ted went to ProSoya, not because they made better soymilk but because he didn't have the money to do it any other way. Continued. 3365. Center for Science in the Public Interest. 1999. Good foods 2000 (Calendar). Washington, DC. 28 p. 28 cm.
• ***Summary:*** This wall calendar has for each month a full-page color photo of a fruit or vegetable (by photographer Robert Kaufman) and a facing full page box calendar. On each box calendar are several key dates in nutritional history. The introduction notes that CSPI was "founded in 1971 by three scientists who wanted to apply their academic training to solving social problems. Today, 29 years later, CSPI has become an influential international organization with more than 60 dedicated staff members in the U.S. and Canada and an annual budget in excess of $17 million. Our award-winning *Nutrition Action Healthletter* brings the latest nutrition news and advice to one million CSPI members and subscribers in North America... CSPI's prime focus is improving the safety and nutritional quality of our diets." Here is a chronology of the key dates on the box calendars:

1792 Aug. 4–Percy Bysshe Shelley born. Poet and author of *A Vindication of Natural Diet.* [Advocate of vegetarianism].

1794 July 5–Sylvester Graham born. Advocate of whole-wheat flour and vegetarianism.

1828 Aug. 28- Leo Tolstoy born. Writer and vegetarian.

1852 Feb. 26–John Harvey Kellogg, M.D. born. Inventor of flaked cereals.

1856 July 26–George Bernard Shaw born. Playwright and vegetarian.

1878 Sept. 20–Upton Sinclair born. Author of *The Jungle* [published 1906. Sinclair was a vegetarian, social activist, and muckraker. His book describes the injustices and deplorable conditions of the American meat packing industry in the early 20th century; Congress was forced to pass the nation's first meat-inspection laws].

1906 Dec. 9–Esther Peterson born. Consumer activist.

1907 May 27–Rachel Carson born. Environmentalist.

1911 Feb. 28–Denis Burkitt born. Dietary-fiber advocate and cancer researcher.

1915 Aug. 29–Nathan Pritikin born. Founder of Pritikin Longevity Center [and advocate of low-fat diets].

1920 Feb. 19–Jean Mayer born. President of Tufts University and hunger/nutrition advocate.

1934 Feb. 27–Ralph Nader born.

1953 July 16–Dean Ornish, M.D., born. Leader in promoting nutrition to prevent disease.

1962 March 15–John F. Kennedy's speech on consumer rights.

1971 Feb. 25–CSPI founded.

1971 Sept. 1–*Diet for a Small Planet* published.

1974 Jan. 1–*Nutrition Action* first published.

1977 Jan. 14–*Dietary Goals for the U.S.* published.

1980 Feb. 4–*Dietary Guidelines for Americans* published.

1988 July 27–*Surgeon General's Report on Nutrition and Health* published.

1988 Nov. 18–Warnings required on alcoholic beverages.

1990 Nov. 8–Nutrition Labeling and Education Act (NLEA) signed.

1990 Nov. 28–Federal law signed defining "organic."

1992 Jan. 23–Irradiation of food in the U.S. begins at the Vindicator plant, Mulberry, Florida.

© Copyright Soyinfo Center 2014

1994 May 8–New Nutrition labeling required on all food labels.

1997 June 1–*Nutrition Action Healthletter* circulation exceeds 1 million. Address: 1875 Connecticut Ave., N.W., Suite 300, Washington, DC 20009-5728.

3366. Packaged Facts. Subsidiary of FIND/SVP. 1999. The U.S. market for kosher foods. New York, NY: FIND/SVP. 130+ p. Aug. 28 cm. *
• ***Summary:*** This market study, No. LA502, retails for $2,500. In 1998 there were more than 41,000 kosher-certified products in the U.S. retail food market. Jewish consumers account for only 29% of those seeking our kosher products; Muslims, Seventh-day Adventists, vegetarians, the lactose-intolerant, and other consumers also buy these products. Ninety percent of all sales in the $4 billion overall retail kosher foods market are *not* marketed to specifically kosher-observant customers. A graph shows that U.S. retail sales in the core Kosher foods market rose from $2.3 billion in 1994 to $3 billion in 1996, and 4 billion in 1998. Address: 625 Ave. of the Americas, New York, NY 10011. Phone: 1-800-265-9836.

3367. Worthington Foods, Inc. 1999. Second quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. Front and back. 22 x 9 cm.
• ***Summary:*** Net sales for the second quarter of 1997 rose 27.5% over the same period in 1996, net income fell 13.6%, and earnings per share fell 16.7%. Morningstar Farms retail sales ("which include meat alternative products and frozen egg substitutes") rose 38.9%. Meat alternative product sales rose 44.5%. But, approximately one-half of the quarterly sales gain was from the recently acquired [from Pillsbury] Harvest Burger brand. The company is involved in the largest marketing campaign in its 60-year history; initial feedback from the TV campaign is very encouraging. The company is in the final stages of its nationwide search for a new president. Address: Worthington, Ohio. Phone: (614) 885-9511.

3371. *Consumer Reports.* 1999. Seeds of change: In the U.S. and elsewhere, the food supply is being genetically altered. Here's why you should care. Sept. p. 41-46.
• ***Summary:*** About genetically engineered foods in American, with focus on soybeans and corn. One of the most accurate, informative, and fair articles on the subject seen to date. Most Americans, even those who read food labels carefully, are unaware that many of the foods they now buy contain genetically engineered ingredients. By contrast, most Europeans are well aware of this. Today, only three years after the first large-scale commercial harvest of genetically engineered crops, they cover more than one-fourth of U.S. cropland–more than 90 million acres. That includes more than 55% of all soybeans, 35% of all corn, and nearly 50% of all cotton. The USDA has approved 50 genetically engineered crop plants, though some aren't yet being grown in large numbers.

Two of the biggest issues in the debate over genetically engineered foods are: (1) Should they be labeled–as is required several European countries. The U.S. government has opposed mandatory labeling, arguing that Americans aren't interested in the issue and that they don't have anything to worry about. Yet a *Time* magazine poll in Jan. 1999 found that 81% of respondents said genetically engineered food should be labeled as such. (2) What are the long-term environmental and health effects of genetically engineered crops? There is no evidence that genetically engineered foods are unsafe to eat but there are several studies that raise serious concerns about their environmental impact. One recent study showed that when the larvae of monarch butterflies eat the pollen from genetically engineered corn, they die.

In July Gerber and Heinz announced that they were planning to removed genetically engineered ingredients from all their baby foods. Now that European Union regulations prohibit imports of unapproved varieties of genetically engineered corn, U.S. corn exports to Europe have virtually stopped–a $200 million loss.

Basically, genetically engineered crops have been promoted to farmers, not to consumers. To date, they contain no consumer benefits. Do genetically engineered crops give higher yields? USDA data from 1996 to 1998 show significantly higher yields in some regions for some years, yet in other regions yields were lower. Do genetically engineered crops require less total use of pesticides? In some regions they do, in others they do not.

The magazine bought a variety of processed and fast

© Copyright Soyinfo Center 2014

foods that contain soybeans or corn, then had the DNA of these foods analyzed. They found genetically engineered ingredients in: (1) Three powdered infant formulas: Enfamil ProSobee Soy Formula, Similac Isomil Soy Formula, and Nestle Carnation Alsoy. (2) Several soy burgers, including Boca Burger Chef Max's Favorite, Morningstar Farms Better 'n Burgers, Morningstar Farms Harvest Burgers, and McDonald's McVeggie Burgers (sold in select stores in New York City).

A sidebar on the last page of the article is titled "Recommendations." (1) Labeling: "Consumers have a fundamental right to know what they eat, and federal officials should require that all foods containing genetically engineered ingredients be labeled as such, including milk with recombinant bovine growth hormone. Regulatory precedent favors labeling." For example, the FDA requires irradiated food and orange juice made from concentrate to be so labeled. (2) Safety testing: "Consumer Union believes that genetically engineered foods should be subject to a mandatory federal human-safety review before they hit the market. Today U.S. companies can choose whether or not they want federal review." (3) Organic standard: "The USDA should set a single, national standard for certified-organic food that excludes genetically engineered food from the definition." (4) Marker genes: "Industry should cease using antibiotic 'marker' genes in the manufacture of genetically modified crops."

3393. Associated Press (AP). 1999. Company news: Kellogg set to purchase Worthington Foods. *New York Times.* Oct. 2. p. C3.
• ***Summary:*** The Kellogg Company announced yesterday that it would spend $24 a share, a total of $307 million, "to purchased the vegetarian food maker Worthington Foods Inc. Worthington's shares climbed 60 percent, gaining $8.6875, to $23.0625, in Nasdaq trading." Kellogg shares 31.25 cents on the New York Stock Exchange.

3394. Knox, Andrea. 1999. Kellogg, Heinz are buying their way into natural-foods trend: The corn flakes maker will pay $307 million for Worthington Foods. Earlier this week, Heinz bought a stake in Hain organic foods. *Philadelphia Inquirer.* Oct. 2.
• ***Summary:*** This long and very interesting article begins: "It used to be that buying organic and natural food was pretty much a lifestyle thing, done in dim, old-fashioned stores by earnest folks wearing all-cotton clothing and Birkenstock sandals."

But all that has changed. Yesterday the Kellogg Co. announced that it would buy Worthington Foods, a maker of vegetarian and health foods, for $307 million–"the clearest sign yet that counterculture eating is going mainstream."

Natural and organic foods are one of America's fastest growing food categories, with sales increases, on average, of nearly 20% a year, whereas the food industry as a whole averages only 1-2% a year.

Even the growth rate of junk-food lags behind that of organics. Address: Inquirer staff writer.

3395. Berner, Robert. 1999. Kellogg, going vegetarian, forges $307 million deal for Worthington. *Wall Street Journal.* Oct. 4. p. B-12.
• ***Summary:*** Kellogg Co. approached and offered to buy Worthington Foods Inc. for $307 million, or $24 a share–which sent Worthington's stock price soaring 60%. Last Thursday, the stock had closed at $14.375. Worthington, a "maker of meat-alternative products, such as veggie burgers," has 635 employees. Sales / revenues in 1998 were $138.5 million, up 18% from 1997. Net income / profit in 1998 was $8.02, or $0.66 per diluted share. Morningstar Farms, the company's leading brand, commands about a 50% share of meat alternative sales in U.S. supermarkets. Sales in the meat alternative category have grown 33% a year for the past five years in the USA. And there is room for more growth, since only 15% of U.S. households presently consume meat alternatives. Last week H.J. Heinz Co. agreed to buy a 19.5% stake in Hain Foods Group Inc., another natural-foods company.

The bold move by Kellogg's CEO, Carlos Gutierrez, shows that he isn't counting on the company's core, but stagnant, breakfast cereal business as an engine of growth. Gutierrez says he expects Worthington's sales to grow at 12-15% a year.

Note: This sale marks the end of a long era: Seventh-day Adventist food companies in the USA making cutting-edge meat alternatives and other soyfoods that greatly helped the expansion of vegetarian diets in America. However, SDA food companies are still making excellent meat and dairy alternatives in Europe and Australia. Address: Staff Reporter.

3396. Kilman, Scott. 1999. Biotech scare sweeps Europe, and companies wonder if U.S. is next: Hain labels its snacks as free of genetic engineering; other firms may follow. Veggie burgers feel the heat. *Wall Street Journal.* Oct. 7. p. A1, A15. Western ed.
• ***Summary:*** Executives of America's largest food and beverage companies are watching very carefully how U.S. consumers respond to the issue of genetically engineered foods–according to Andrew Jacobson, a senior executive of the Hain Food Group. Although most consumers aren't aware of it, genetically engineered ingredients are present in various products made by Coca-Cola Co., Kellogg Co., General Mills Inc., H.J. Heinz Co., Hershey Foods Corp., Quaker Oats Co., McDonald's Corp., and many more.

3397. Egan, Catherine. 1999. Soy, oh soy! Food Cos get protein power. *Dow Jones News Service* (*New York, NY*). Oct. 20. [Eng]
• ***Summary:*** "New York (Dow Jones)–A good-for-you food is fast becoming a good-for-you investment.

"Soy, the high-in protein, low-in-taste food, has become so popular among American consumers that companies and investment houses are lining up to take advantage of what many are calling the next big thing in eating."

Last week Kellogg Co. (king of breakfast cereals) announced plans to buy Worthington Foods Inc. (WFDS) one of America's largest makers of soy burgers. And in August, Dean Foods Co. (DF) bought a minority stake in the closely held White Wave Inc., which make soy milk and various other soy products.

Moreover, packaged food companies are also developing a wide array of new soy-based products. According the

© Copyright Soyinfo Center 2014

Marketing Intelligence Service (publisher of *Product Alert*), the number of new food and beverage products containing soy has more than doubled since 1995, to 172, from 79.

Peter Golbitz, president of Soyatech, an industry consultancy, says that the soy-food industry, now worth $1.75 billion, is expected to more than double in three years to $3.7 billion.

Fueling the soy mania is aging baby boomers searching for the elixir of life.

"Indeed in a matter of days the U.S. Food and Drug Administration is supposed to decide whether to allow products containing more than 6 grams of soy protein to be labeled as cholesterol-reducing. If approved, this heart-healthy claim could further increase demand for soy products, rendering current growth projections for the industry too low."

Gardenburger Inc. (GBUR), maker of a veggie burger and soy-based patties, points to the fact that some 120 million Americans have never even tried soy.

Scientific studies dating back 20 years showed clearly that soy protein helped lower cholesterol and decrease the risk of heart disease. Then in 1995 the respected *New England Journal of Medicine* published an article [James Anderson's meta-analysis] showing that soy protein lowered cholesterol; Americans began to take notice.

Then the soy category exploded. "Researchers have since found that soy reduces the risk of cancer, helps build bone density, reduces menopausal symptoms like hot flashes–and on and on.

"Now its soy, soy, soy, everywhere."

3398. Brasher, Philip. 1999. Soy becomes healthy option: Under new rules that allow health claims, the milk alternative is expected to find a wider audience despite its relative lack of flavor. *Contra Costa Times*. Oct. 27. p. C1, C4. Business/technology section. Wednesday.
• ***Summary:*** The U.S. government is now allowing food labels to tout soy's ability to lower cholesterol, so a new surge of interest is expected–and not just in traditional soy-based foods such as tofu and soy milk. To qualify for the label claim, a food must contain 6.25 gm of soy protein per serving; this is one-fourth of the 25 grams of soy protein daily that studies have shown is needed to have a significant cholesterol-lowering effect. Carlos Gutierrez, president of the Kellogg Co., says soy is a big food opportunity. Sales of soy-based foods are expected to reach $2.14 billion this year, up from $852 million in 1992, according to Soyatech. Address: Associated Press.

3399. Archer Daniels Midland Co. 1999. Annual report: Globalization for the 21st century. P.O. Box 1470, Decatur, IL 62525. 42 p. Oct.
• ***Summary:*** Net sales and other operating income for 1999 (year ended June 30) were $14,283 million, down 11.4% from 1998. Net earnings for 1999 were $265.9 million, down 34.2% from 1998, and far below the recent peak of $796 million in 1995. Shareholders' equity (net worth) is $6,240 million, down 4.1% from 1998. Net earnings per common share: $0.43, down 36.9% from 1998. Number of shareholders: 31,764.

On p. 16 are photos and brief discussions of Harvest Burgers (now marketed by Worthington Foods), NutriSoy (a new generation of soy protein), and NovaSoy (isoflavones). Page 17 discusses ADM's partnership with DuPont using the latter's STS soybeans. This year the annual report came in a slip cover with another report titled "Archer Daniels Midland: An overview."

Also accompanying the annual report is a "Notice of Annual Meeting." G. Allen Andreas, age 56, Chairman of the Board and CEO, had a 1999 salary of $2,437,698, up from $803,282 in 1997. John D. McNamara, President, had a 1999 salary of $625,243, up from $147,672 in 1997. Address: Decatur, Illinois.

Address: Sales Manager, Lightlife Foods Inc., P.O. Box 70, Greenfield MA 01302. Phone: 1-800-274-6001.

3403. *Natural Foods Merchandiser.* 1999. Cereal giant Kellogg to buy Worthington Foods. Nov. p. 9.
• ***Summary:*** Kellogg (the world's leading producer of breakfast cereals, with yearly sales of $6.8 billion) will buy Worthington Foods for $24 a share or more than $300 million. Worthington has been locked in a battle with Gardenburger for leadership of the meatless burger market. Both have spent so much money on advertising trying to establish their names, that it has significantly reduced their profits. The purchase came days after Kellogg sold its Lender Bagels line for $275 million, down from the $466 million it paid for the company 3 years ago.

3404. *Nutrition Business Journal* (*San Diego, California*). 1999. Soy protein is big news for suppliers. 4(10/11):5-6. Oct/Nov.
• ***Summary:*** The health claim for soy protein, approved Oct. 26, was granted under the Nutritional Labeling and Education Act (NLEA). The claim was submitted in 1998 by Protein Technologies International (PTI), a company of DuPont. On the day the claim was approved, PTI ran full-page ads in the *New York Times* and *Wall Street Journal*–a good idea since neither paper ran the story. Both Kellogg and General Mills are rumored to be developing a breakfast cereal containing soy protein.

In 1998 sales of soyfoods totaled an estimated $1.7 billion and should reach over $2 billion in 1999. During 1998 sales of soy milk grew to almost $200 million (up 20%), tofu to $200 million (up 15%), and tempeh $17 million (up 5%)–according to Peter Golbitz of Soyatech Inc. In 1999, with interest in soyfoods skyrocketing, Golbitz predicts overall growth of 20%, with soymilk up nearly 40%, and meat alternatives, tofu, and other prepared foods containing soy gaining between 20% and 50%, depending on the product.

3405. *Nutrition Business Journal* (*San Diego, California*). 1999. Oh soy! Four soy acquisitions by mainstream companies start to look like a trend. 4(10/11):27-29. Oct/Nov.
• ***Summary:*** This flurry of activity is almost surely related to the recent approval of a soy product health claim by the FDA.

H.J. Heinz invested $100 million in Hain on 27 Sept. 1999.

Kellogg Co. (famous maker of breakfast cereals) paid $342 million Worthington Foods on 1 Oct. 1999; Worthington makes and markets meat alternatives. "Purchased at a 66% premium to Worthington's closing stock price and a 9% premium to its all-time high, Kellogg justified the high valuation by pointing to Worthington's 17% growth rate in a market with strong growth prospects."

Dean Foods took a minority position (the dollar amount was not disclosed) in White Wave (Boulder, Colorado) on 23 Aug. 1999. White Wave, the maker of Silk soymilk, is reported to have annual sales of $21 million, whereas Dean Foods, America's leading maker and distributor of dairy products, has annual sales of nearly $4 billion.

Danone acquired a 15% equity stake in Lifeway Foods on Oct. 6. Lifeway is a maker and marketer of cultured, probiotic and functional food products.

3406. Pagenkemper, Joni. 1999. The use of soy products in treating renal disease. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 7(4):2, 4. Fall. [15 ref]
• ***Summary:*** Biological value is no longer the standard for determining the protein quality of foods. "Since 1989 the international Food and Agriculture Organization (FAO) and World Health Organization (WHO), and the United States Department of Agriculture (USDA) and Food and Drug Administration (FDA) have adopted the Protein Digestibility-Corrected Amino Acid Score (PDCAAS) as the official assay for evaluation of protein quality. The PDCAAS takes into account a protein's essential amino acid composition, corrected for digestibility, and referenced to the two-to five-year-old human requirement pattern. All proteins with a PDCAAS of 1.0 are considered high-quality, complete proteins that fully meet the essential amino acid requirements of children and adults, even if consumed as the sole source of protein in the diet. Milk, egg, meat and soy protein all have a PDCAAS of 1." Address: M.S., R.D., Asst. Prof., Dep. of Nutrition and Dietetics, Loma Linda Univ., California.

3407. Worthington Foods, Inc. 1999. Notice of special meeting of shareholders. Proxy statement for special meeting of shareholders. 900 Proprietors Rd., Worthington, OH 43085. 2 + 60 + v + 41 + 12] p. 28 cm.
• ***Summary:*** A special meeting of shareholders of Worthington Foods, Inc. will be held on 29 Nov. 1999 at the Radisson Hotel in Columbus, Ohio, mainly to consider and vote upon a proposal to adopt the Agreement and Plan of Merger, dated 30 Sept. 1999, with WF Acquisition Inc., a wholly-owned subsidiary of the Kellogg Co. (the latter is a Delaware Corporation). If this passes, Worthington will become a wholly-owned subsidiary of Kellogg and each common share can be converted into $24 cash. Signed, Ronald L. McDermott, Secretary.

Worthington will cease to be a publicly traded company. "Offering more than 150 products, Worthington is one of the leading independent producers of healthier alternatives to meat, egg, and dairy products." These are made primarily from soy and wheat proteins. "Worthington was incorporated in Ohio in 1967 and became the successor to the original Worthington Foods business which was started in 1939... Kellogg was incorporated in Delaware in 1922 as the successor to Kellogg Toasted Corn Flake Company, which

© Copyright Soyinfo Center 2014

had been incorporated in Michigan in 1906."

The Merger–Background (p. 15-19) gives the history from 8 July 1999 when Stephen Benoit, Vice President of Kellogg, phoned Dale Twomley, Chairman, President, and CEO of Worthington to discuss a possible business relationship, including a merger. Kellogg now has a "Natural and Functional Foods Division." Twomley replied that Worthington was not looking for a buyer. The first meeting was held on 16 July 1999 at Worthington's offices. Numerous meetings followed. The merger agreement was finalized on 30 Sept. 1999. "On the morning of Friday, October 1, 1999, the parties issued a joint press release announcing that they had signed the merger agreement." The $24 per common share represents a premium of approximately 77% over the closing price on Sept. 29. Address: Worthington, Ohio. Phone: (614) 885-9511.

3408. Worthington Foods, Inc. 1999. Third quarter financial report. 900 Proprietors Rd., Worthington, OH 43085. 8 panels. 22 x 9 cm.

• ***Summary:*** Describes the agreement to merge with the Kellogg Company. "The merger price is $24 cash for each of the Company's 12.8 million shares outstanding or approximately $307 million."

States (incorrectly) that Dr. John Harvey Kellogg was the founder of Worthington Foods. Gross profit for the quarter ended 1 Oct. 1999 was $17,396,000, or 44.7% of net sales. This gross profit is up 13% compared with the same quarter one year ago.

"I expect this will be the last letter to the shareholders of Worthington Foods... I believe that the Kellogg Company is very committed to our brands and the meat alternative category. I am confident they will provide the resources and commitment to continue the vision for meat alternative products started by Dr. George Harding, III, James Hagle, Allan Buller, Warren (Kelly) Hartman and shared by many others that have worked hard to build upon the foundation they provided."

"Sincerely, Dale E. Twomley, Chairman, President, and Chief Executive Officer." Address: Worthington, Ohio. Phone: (614) 885-9511.

3409. *SoyaScan Notes.* 1999. Chronology of major soy-related events and trends during 1999 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** April–Kevin Cross sells Soy Power Co., Inc. in Santa Monica, California, to Nature's Best.

May 10–SoyaWorld Inc. of Burnaby, British Columbia, Canada, purchases the SoNice brand and two soymilk extraction plants from International ProSoya Corp. (IPC). SoyaWorld is jointly owned by Dairyworld Foods (the largest dairy and food company in western Canada) and Sunrise Soya Foods (Canada's largest tofu manufacturer). SoyaWorld plans to (and has the ability to–because of Dairyworld Foods) put fresh and Aseptic soymilk in every supermarket and grocery store in Canada. Then they will move into the USA. This is a very big story!

July 12–Deutsche Bank, one of its strongest advocates of ag biotechnology, issues a report in which it reverses its previous "buy signals" on many of the companies commercializing ag biotech (such as Monsanto and Pioneer Hi-Bred). It now urges caution, and signals the beginning of trouble for the ag biotech industry.

Aug. 18–White Wave (Boulder, Colorado) and Dean Foods (Franklin Park, Illinois) jointly announce that Dean Foods has created an alliance with White Wave by becoming a minority shareholder in White Wave. The two companies will work together to place Silk soymilk into the refrigerated dairy case of supermarkets across America–and try to get there before SoyaWorld of Canada. A very big story for soymilk in the USA.

Sept. 1–Stake Technology Ltd. (Norval, Ontario, Canada) acquires SunRich Inc. (Hope, Minnesota) in a stock-for-stock deal.

Sept.–In this month's issue of *Consumer Reports,* a 6-page article on genetically engineered (transgenic) foods titled "Seeds of Change" recommends that "federal officials should require that all foods containing genetically engineered ingredients be labeled as such, including milk with recombinant bovine growth hormone."

Oct. 1–DuPont (a large chemical company) buys the 80% share of Pioneer Hi-Bred International Inc. that it doesn't already own–a major move into biotechnology.

Oct. 4–The Kellogg Co., maker of breakfast cereals in Battle Creek, Michigan, agrees to buy Worthington Foods for $307 million. Worthington makes vegetarian meat alternatives.

Oct. 7–The *Wall Street Journal* runs a major front-page story on concern about and opposition to genetically engineered foods in the USA and Europe. Runs two more such stories on Nov. 30 and Dec. 14. Dec.–During the last 6 months of 1999 consumer awareness of and concern about genetically engineered food issues in the United States has increased dramatically. It has moved from a counter-culture to a mainstream concern, and fairly large amounts of money are now flowing into antibiotech organizations. GMO was a widely discussed issue in the breakdown of and mass demonstrations against the World Trade Organization talks in Seattle, Washington.

Oct. 20–The U.S. Food and Drug Administration (FDA) announces its approval of a health claim for soy protein and coronary heart disease. The claim, which goes into effect Oct. 26, can be used on food labels in either of two formats, the first of which is: "25 grams of soy protein a day, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease. A serving of (name of food) supplies ___ grams of soy protein." This promises to have a huge, positive impact on the soyfoods market.

© Copyright Soyinfo Center 2014

Dec.–General Mills acquires Small Planet Foods (Cascadian, Muir Glen) for $60 million.

Dec.–Kellogg Co. purchases Worthington Foods.

In 1999, for the first time in history, more acres were planted to soybeans in the USA than to any other crop. U.S. soybean acreage exceeded that of corn by 3% and that of wheat by 34%. Worldwide, the acreage planted to soybeans has increased fivefold since 1950.

3410. *Bluebook Update* (*Bar Harbor, Maine*). 1999. Major companies dive into soyfoods. 6(4):1, 7. Oct/Dec.
• ***Summary:*** These include Dean Foods, H.J. Heinz, and The Kellogg Co.

3411. Sanitarium Health Food Company. 1999. Sanitarium (Portfolio). Berkeley Vale, NSW, Australia. 27 inserts. 30 cm.
• ***Summary:*** This is simply a collection of colorful documents (each in full color) without a portfolio cover, sent with a cover letter by Melissa Harris, Nutritionist. The documents include: (1) Eight nutrition fact sheets. Subjects include wholegrains, fibre, heart health, etc. (2) Seven product sell-sheets, incl. SoyHealthy, So Good Now, Soyaccino, etc. (3) Three small recipe booklets. (4) 10 tips for healthy eating for the family. (5) Now there's an easy way to lower your cholesterol. (6) Six food cards with recipes. (7) Two booklets in "A taste for health" series. (8) List of available publications and videos.

(9) Sanitarium product range–Australia: Cereals (19 products, incl. Soy Tasty, Weet-Bix Hi Bran Soy & Linseed, Up & Go). Beverages (6 products, all based on So Good, incl. yoghurts and ice cream). Meals (19 products, incl. 5 types of Soy Healthy Frozen, 9 types of Soy Healthy Chilled, Soya Beans in Tomato Sauce, Sanitarium Soya Mince/TVP, BBQ Soya Sausages). Spreads (4 products incl. Marmite and many types of peanut butter). Specialty Foods (incl. many nuts & seeds, dried fruits, legumes, pulses & seeds, fruit snacks, and juices). (10) Leaflet (1999; color, front and back) titled "Soya beans, good health & you." Contents: Introduction. What are phytoestrogens. Protecting hearts. Combating cancer. Managing menopause. Promoting healthy bones. Soy foods for children. Putting the good news into practice. Address: 1 Sanitarium Drive, Berkeley Vale, NSW 2261, Australia. Phone: (02) 4348 7777.

3412. *SoyaScan Notes.* 1999. Major soy-related company acquisitions and mergers worldwide 1990-1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1990 Jan.–Worthington Foods acquires La Loma Foods of Riverside, California (formerly Loma Linda Foods, owned by the Seventh-day Adventist Church).

1990 (early)–Daniel Gevaert purchases the Lima Andiran site at Andiran (near Mezin) in southern France from Lima Foods–but not the Lima trademark. In June 1990 Daniel and his wife, Valerie, established Danival.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy soymilk) acquires Nasoya Foods of Leominster, Massachusetts.

1990 Dec. 21–The Haldane Foods Group (a subsidiary of British Arkady Ltd., which is in turn owned by ADM) acquires Unisoy Milk 'n' By-Products Ltd. of Cheshire, England.

1991 Jan. 1–The Haldane Foods Group acquires Granose Foods Ltd. of Watford, Hertfordshire, England (formerly owned by the Seventh-day Adventist Church).

1991 Jan. 28–Tetra Pak International acquires Alfa-Laval AB.

1991 April–Huegli Naehrmittel A.G. acquires Soyastern Naturkost GmbH / Dorstener Tofu Produktions GmbH.

1991 Dec.–Specialty Food Ingredients (SFI) Europe BV acquires Solnuts BV (Netherlands) and Solnuts Inc. (Hudson, Iowa).

1992 Oct.–Central Soya Co. acquires the Protein Division of Aarhus Oliefabrik in Denmark.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California, for an estimated $4-$5 million. Vitasoy is now in the tofu business.

1993 June–21st Century Foods acquires Farm Foods from Barricini Foods.

1993–House Foods of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is named House Foods American Corporation.

1993 July–Nutrition et Santé (part of the Sandoz Group) acquires Société Soy of Saint-Chamond, France. The latter company was renamed Nutrition et Soja, and on 15 Oct. 1994 it moved into a new factory at Revel (near Toulouse), France.

1993 (mid)–B & K Holdings of Switzerland acquires Sojinal of Issenheim, France.

1993?–Kineret (pronounced kuh-NAIR-et) Acquisition Group acquires Farm Foods from 21st Century Foods, then in Nov. 1993 the Hain Food Group acquires Kineret plus some assets of Barricini Foods Inc.

1996 April 22–Alpro (Belgium) purchases Sojinal (France).

1995 April 21–Irene and Len Stuttman buy back control of their company, INARI Ltd. (dba. Sycamore Creek) from J. Charles Follett (former CEO) and Peter L. Pairitz (accountant).

1995 April–Quest International, a unit of Unilever, acquires A.E. Staley's Gunther Products Division.

1997 Feb. 3–Monsanto purchases Asgrow Seed Co. from Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM).

1997 Aug. 24–DuPont signs a letter of intent to acquire Protein Technologies International, a wholly-owned

© Copyright Soyinfo Center 2014

subsidiary of Ralston Purina Co.

1997 Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc., makers of soymilk. Westbrae's new name becomes Hain Food Group–Westbrae. 1997 Dec. 3–DuPont finalizes its purchase of Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates).

1998 Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

1999 Jan. 4–W.G. Thompson & Sons Ltd. of Blenheim, Ontario, Canada, purchases Sycamore Creek Co., a maker of soynuts and soynut butter (located in Mason, Michigan).

1999 Oct. 4–The Kellogg Co. (famous maker of breakfast cereals, Battle Creek, Michigan) buys Worthington Foods Inc., America's leading maker of meat alternatives.

3413. *Foodservice Director* (*New York, NY*). 2000. East L.A. medical ctr. adds soy, veggie sushi. Jan. 15.
• ***Summary:*** White Memorial Medical Center in East Los Angeles, with 350 beds, is part of the Seventh-day Adventist Health System. It provides cafeteria customers with healthy eating choices. "Edamame–boiled and salted soybeans which are popular at sushi restaurants–are fast becoming a sellout item since being added to the menu." Vegetarian sushi is another fast moving item.

3414. Barrett, Rick. 2000. Veggie-burger firm's new home will be Madison: Kraft Foods buys growing Boca Burger and will move its headquarters to Oscar Meyer plant. *Wisconsin State Journal* (*Madison*). Jan. 19.
• ***Summary:*** The acquisition of Boca Burger gives Kraft an excellent position in the rapidly growing "meat alternatives" category, which has posted double-digit increases for the past five years. Greg Stahl, Boca Burger president, said the timing was right to sell since the Kellogg Co. had recently purchased Boca's biggest competitor–Worthington Foods. Boca makes frozen soy-based products, including two sizes of Boca Burgers, Boca Breakfast Patties and Links, Ground Boca Burger Recipe Basics, and Boca Tenders and Nuggets (chicken alternatives).

In February, Boca Burger will be relocated from Chicago (Illinois) to Kraft's Oscar Mayer Foods headquarters at 910 Oscar Mayer Ave. in Madison, Wisconsin. This will enable Boca Burger to use Oscar Mayer and Kraft resources, including R&D, equipment, distribution channels, marketing and sales. Rick Searer, president of Kraft's Oscar Mayer and pizza divisions, sees new potential and broader applications for soy-based products within Kraft.

A table compares the two Kraft divisions. Oscar Mayer has $2.2 billion annual sales, with 3,000 employees in Madison. Address: Business reporter.

3415. Burros, Marian. 2000. Eating well: Doubts cloud rosy news about soy. *New York Times.* Jan. 26. p. F1, F11.
• ***Summary:*** Sales of soyfoods have been skyrocketing recently because preliminary research suggests that soy has many health benefits, from reducing loss of bone density to easing some menopausal symptoms. In October the FDA "put its imprimatur on soy" when it granted food companies the right to claim that soy protein reduces cholesterol and the risk of heart disease. Although other claims are unproven, soy is strongly promoted by its marketers as a panacea, and the U.S. media has been "almost unanimous in praising its safety and efficacy."

"Against the backdrop of widespread praise, however, there is growing suspicion that soy–despite its undisputed benefits, may pose some health hazards. The scientific world is still divided over many of the claims for efficacy [is it really effective] and over some safety issues." There is agreement on two points: (1) Soy can reduce cholesterol, and (2) There may be an increased risk of cancer when consuming soy isoflavones in pill form–especially for post-menopausal women; and for these women there may also be hazards in adding soyfoods to their diets. The two main isoflavones, genistein and daidzein, are phytoestrogens, or weak plant estrogens. They act in much the same way as regular estrogens in that they can both inhibit and stimulate the growth of certain cells.

"Not one of the 18 scientists interviewed for this column was willing to say that taking isoflavones was risk free." There is a big difference between consuming soyfoods and components of the soybeans, like isoflavone supplements.

During the 12 months ending October 1999, sales of soyfoods in supermarket chains were $420 million, up 45% from the previous year, according to SPINS scanner data. The biggest increase was in soy isoflavone pills, whose sales were up 246% during the same 12-month period. These supplements, which can contain more than 85 mg of isoflavones in a single pill, have much higher levels of isoflavones than occur naturally in foods. And some makers advise taking two pills a day. Some soy protein concentrate powders have up to 160 mg of isoflavones per serving. Scientists are concerned that typical consumers don't distinguish isoflavones from soy protein, and that they will overdose on the isoflavones. For this reason, Dr. Daniel Sheehan of the FDA's National Center for Toxicological Research (in Jefferson, Arkansas) opposed the FDA's soy health claim. No one knows what the maximum safe dosage of isoflavones is, because no human studies have been conducted. However, if people consume soyfoods instead of supplements, they will not overdose on isoflavones. In Japan, for example [where women's breast cancer rates are one-forth to one-sixth of those in the USA] the typical daily consumption of isoflavones is 25-50 mg, and most people

© Copyright Soyinfo Center 2014

consume soyfoods throughout their lives.

Dr. William Helfreich, associate professor of nutrition at the University of Illinois who specializes in diet and breast cancer, is concerned about the risk of soy isoflavones for post-menopausal women with estrogen-dependent breast cancer. Given early in life, he notes, they will prevent, but given late they may promote. Unfortunately the research in this area is very limited and the results are unclear and far from definitive. Fortunately, a number of studies that answer these questions are now being underwritten by the National Cancer Institute.

Many large companies are developing new soy products in response to the growing soy demand: Kellogg's, General Mills, Campbell's Soup, and ConAgra.

This article was reprinted, under the title "Rush to embrace soy products raises warnings about downside," in the *Oregonian* (Portland, Oregon; Feb. 8, p. FD10). On the same page was a recipe for a "creamy, dreamy" Tofu Cheesecake.

3416. Branson, Roy. 2000. Harry Miller: Adventist hero of social reform. A dedicated doctor changed the way the world eats. *Adventist Review* (*Hagerstown, Maryland*). Feb. 10. p. 13-15 (p. 213-15).

• ***Summary:*** A very well-written story of Dr. Miller's life and work with soybean foods. This article begins: "He had a résumé that turned heads. Trained at Battle Creek Sanitarium by internationally renowned surgeon John Harvey Kellogg, he had gone on to Chicago to study under some of the finest surgeons in the country. By 1903 he was already, at 24, an instructor at Rush Medical College in Chicago. That year he and another researcher, who would later become one of the nation's foremost dermatologists, had written an article that took up nearly the entire May l903 issue of the *Journal of Dermatology.* John Harvey Kellogg had every reason to expect that his Adventist protégé would become a nationally acclaimed professor of medicine.

"But Harry Miller was about to drop his bright career in academic medicine and go to China. He would take with him his wife, Maude, another of Adventism's top physicians–she had surprised Harry by outscoring him on the Illinois state medical examination. When Kellogg heard what Harry and Maude were planning to do, he jumped on a train to Chicago. He would talk some sense into his prize pupils. A lot had gone into producing such fine physicians. The effort shouldn't be wasted.

"Kellogg had taken students like Harry Miller, born in a log cabin north of Dayton, Ohio, instructed them at the Adventist medical school in Battle Creek, then plunged them not only into academic medicine but into the disease and poverty of downtown Chicago. Working in some of the six health and social reform institutions Kellogg had established at the turn of the century, Miller knew there was a great work of reform to accomplish in America's cities. The Seventh-day Adventist Medical Missionary Benevolent Association had already established health reform institutions in 17 American cities. The *Life Boat*, edited by Dr. David Paulson, one of Miller's Adventist teachers, was the Adventist voice of urban mission, publishing articles on such social reform topics as juvenile delinquency, child labor, and prison reform. At its peak, the *Life Boat* reached an astonishing 200,000 subscribers.

"When Kellogg arrived in Chicago, he told his protégés that he wanted Harry to achieve his full potential, to become a professor at a top medical school, an emissary for Adventism to America's university life. But in the face of their strong-willed teacher's advice, Harry and Maude Miller held firm. They insisted on expanding Adventism's encompassing vision of reform across the Pacific. Harry Miller plunged on with his commitment to service and became the 'China Doctor.'

"In refusing Kellogg's entreaties, Miller nonetheless honored his mentor. Just as Kellogg had established a national reputation as an abdominal surgeon, Harry Miller would became a world-renowned thyroid surgeon. Kellogg had erected a half-dozen social reform institutions in Chicago–one of which would become the Chicago campus of the University of Illinois Medical School. Miller would found clinics, hospitals, and food laboratories throughout East Asia. Kellogg transformed America's breakfasts with corn-flakes; Miller would introduce commercially successful soy milk to the world. Kellogg would live to be 91, Miller to 97..." Address: Senior research fellow, Kennedy Inst. of Ethics, Georgetown Univ. [Washington, DC].

3417. **Product Name:** Smart Start Soy Protein (breakfast cereal).
Manufacturer's Name: Kellogg Company.
Manufacturer's Address: One Kellogg Square, P.O. Box 3599, Battle Creek, Michigan 49016-3599. Phone: (616) 961-2000.
Date of Introduction: 2000 February.
Ingredients: Rice, whole grain wheat, sugar, soy granola clusters (sugar, toasted pieces, toasted oats, soy protein concentrate,, corn syrup, rice flour, malt extract, salt, honey, cinnamon, artificial flavor, BHT for freshness), toasted defatted milled soy, texturized soybean protein, salt, honey, high fructose corn syrup, malt flavoring, cinnamon, alpha tocopherol... plus many vitamins and minerals.
Wt/Vol., Packaging, Price: 15.3 oz (434 gm) paperboard box. Retails for $4.39 (2000/07, Lafayette, California)..
How Stored: Shelf stable.
New Product–Documentation: Article in *Milling and Baking News.* 2000. Jan. 25. "Kellogg hops on the soy train, adds new cereal to Smart Start line."

Nutrition Business Journal (San Diego, California). 2000. "Kellogg undeterred by demise of Ensemble; Soy cereal launched: Company blames merchandizing, not

pricing or promotions, for failure of Ensemble." May. p. 17. Fortified with soy protein, the cereal contains rice, wheat, and soy granola clusters. The products is stocked in supermarket cereal aisles next to the company's Special K, Product 19, etc. The other cereals are simply fortified, and Kellogg has been a leader in fortification for decades. The new soy cereal is different, in that it should deliver a "physiological benefit that goes beyond basic nutrition." Moreover the results should be seen quite quickly, even if its only that the consumer feels better. Talk with Kellogg Consumer Service. 2000. June 29. The product is still in the test-market stage, and only in supermarkets on the West Coast. They do not know what supermarkets carry the product.

Product with Label purchased at Safeway supermarket in Lafayette, California. 2000. July 2. Retail price: $4.39 for 15.3 oz box. 6.25 by 10.75 by 2.25 inches. Red and black on white. Paperboard box. A photo shows a clear glass bowl of the cereal and milk, with a spoon lifting out a spoonful. "New. A soy protein cereal made of lightly sweetened rice and whole wheat flakes with cinnamon flavored soy granola clusters. 100% daily value of 10 vitamins and minerals." FDA diet-heart health claim on pack panel. For more information: www.smartstart.com. Soyfoods Center evaluation. 2000. July 2. The rice/corn flakes are very crunchy and very sweet with 14 gm of sugars per 1 cup serving. The price is very expensive.

3418. *SoyaScan Notes.* 2000. Chronology of soy sprouts worldwide. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 100 A.D.–Soy sprouts are first mentioned in China in the *Shen-nung Pen-tsao Ching* [Classical pharmacopoeia of Shen Nung, the Heavenly Husbandman]. Four Chinese characters [yellow + curls + big + bean] are used to refer to soy sprouts, whose use is mentioned only as a medicine, not as a food. The use of soy sprouts as a food in China did not become popular until the Sung dynasty (A.D. 960-1127). This pharmacopoeia was compiled starting in the Early/Western Han Dynasty [206 B.C. to A.D. 8] from material that had existed long before. Today it is considered by Chinese authorities as a genuine work.

1767–Soy sprouts are first mentioned in an English-language publication or in the American colonies by Henry Yonge of Savannah, Georgia. Yonge got his information from Samuel Bowen, for whom he grew the first soybeans [called Chinese vetches] ever cultivated in North America in 1765. Bowen got his soybeans while traveling in China. Yonge writes:

"They put about two quarts of the vetches into a coarse bag, or hair-cloth bag, that will hold about a peck [2 gallons], and after keeping them in it a little time in warm water, they lay the bag on [a] flat grating, or a wooden lattice, placed about half way down a tub; then every four hours they pour water on them, and in about 36 or 40 hours they will have sprouted about three inches in length; they are then taken out and dressed with oil and vinegar, or boiled as other vegetables..." Mr. *Flint* and Mr. *Bowen* having found them an excellent antiscorbutic prepared in this manner, was a principal reason for his introducing them in *America,* as it would be a most valuable remedy to prevent or cure the scurvy amongst the seamen on board his majesty's ships." Note that in America, as in China, soy sprouts are first recommended for use as a medicine; It is their vitamin C that prevents or cures scurvy.

1830–Soy sprouts are first mentioned in Europe by Philipp Franz von Siebold, an early traveler in Japan, in his book on the economic plants of Japan. In a large fold-out table, he states that soybeans (*Sooja Japonica,* Sieb.) can be artificially germinated to make "Mogasi" [sic, Moyashi]. He includes the word *moyashi* written in both katakana and Chinese characters.

1871–Frederick Porter Smith, a medical missionary from England living in China, states in his book *Contributions toward the Materia Medica and Natural History of China,* that soy bean sprouts (*Tau-ya*) are "artificially raised in large quantities for food in the winter" when green vegetables are scarce in China. This is the second earliest English-language publication that mentions soy sprouts.

1905-06–Soy sprouts are first produced commercially in the United States by two Chinese food companies in California: Wing Chung Long in Los Angeles, and Quong Hop & Co. in San Francisco.

1911–Soy sprouts are first produced commercially in Europe by Li Yu-ying, a Chinese scholar and soybean expert, at his plant *Usine de la Caseo-Sojaine* at Valles, Colombes, northwest of Paris, France.

1914–D. Bois in France publishes the earliest illustration seen of a soy bean sprout.

1917-1918–During World War I, interest in soy sprouts in the United States grows. Yamei Kin, a Chinese-American woman with an M.D. degree from an American college, is sent to China in June 1917 to study and report back on soyfoods–including soy sprouts, which she says can be used in a nutritious salad with fermented tofu.

Writing in *Country Gentleman* (28 Sept. 1918), Sam Jordan of Missouri states: "Another dish which tastes as good as it looks or sounds is soy-bean sprouts. The smaller beans, of some yellow or green variety, are usually used." They are excellent because of "their use in the winter, acting as a green vegetable, and the fact that the vegetable can be had whenever wanted."

William Morse, the USDA's soybean expert, writes in the *Yearbook of the U.S. Department of Agriculture* (1918) in a special section titled "Soy-bean sprouts" that in China soy beans are widely used for sprouting. "Bean sprouts can be used as a home winter vegetable, for the dried beans are sprouted easily in a short time under proper conditions of

© Copyright Soyinfo Center 2014

heat and moisture. It is quite possible that sprouted soy beans utilized in various vegetable dishes would appeal to the American taste." A full-page photo shows a large basket of sprouted soy beans. Taken by Frank N. Meyer, it is the first photo of soy sprouts ever published.

1921–Dr. John Harvey Kellogg, in his book *The New Dietetics*, has a special section titled "Soy bean sprouts" in which he is the first to use the word "vitamins" in describing the nutritional benefits of soy sprouts, and the first to note that "Sprouted soy beans is one of the constituents of the famous chop suey."

1941-45–During World War II, awareness of soy sprouts again increases. Their champion is Prof. Clive McCay of Cornell University. His first brochure on the subject (April 1943) begins: "Our daily paper would surprise us if it carried an ad: 'WANTED: a vegetable that will grow in any climate, rivals meat in nutritive value, matures in 3 to 5 days, may be planted any day in the year, requires neither soil nor sunshine, rivals in vitamin C, has no waste (in preparation), can be cooked with as little fuel and as quickly as pork chop.' The Chinese discovered this vegetable centuries ago in sprouted soy beans."

Prof. McCay and his wife, Jeanette, worked closely with the New York State Emergency Food Commission, to publicize soy sprouts and other soyfoods during the war years. Governor Thomas E. Dewey hosted a famous "soy bean lunch" at the governor's mansion in Albany, New York, to demonstrate the value of mean substitutes. Soy sprouts were in two of the dishes served to the 67 media representatives.

1960s-2000–Soy sprouts benefit from the rapid growth of interest in all kinds of sprouts in the USA and Europe, and from the growing number of Asian-Americans.

3419. Fulmer, Melinda. 2000. Food firms eat up health trend. *Los Angeles Times.* March 1. p. C1, C5. Business section.
• ***Summary:*** A sidebar at the beginning of the article is titled "Food and function: Soy, organic foods, and 'functional foods' are hot sellers and have attracted the interest of many big food companies." One column, titled "What's hot" lists eight foods including "soy" with a photo of edamame (one pod is open) and the caption "Soybeans."

The main story is about how big food companies (such as Kellogg Co., General Mills, Kraft Foods, H.J. Heinz, and Nestle) are rushing to buying up natural- and health foods companies–especially those offering functional foods. A table shows sales of eight categories of functional foods in the USA at two types of stores: mainstream and health food. The two big categories in terms of sales are meal replacements, and energy bars and gels. Mainstream stores sold $267 million worth of energy bars and gels in 1999, up 62.7% from 1998. Health foods stores sold $109 million worth of energy bars and gels in 1999, up 13.9% from 1998. Address: Times Staff Writer.

3420. Essoyan, Susan. 2000. Trouble for titan tofu: A study in Hawaii finds that the health food favorite may accelerate aging of the brain. But critics note that the research creates more questions than answers, and no causal connection has been made. *Los Angeles Times.* March 23. p. B2. Metro section.
• ***Summary:*** Results from the Honolulu-Asia Aging Study, some of which were presented by chief investigator Dr. Lon White (of the Pacific Health Research Inst.) at a symposium in Washington, DC, in Nov. 1999, are scheduled for publication in the April issue of the *Journal of the American College of Nutrition.*

The vice president of medical and scientific affairs for the National Alzheimer's Assn. in Chicago (Illinois), Bill Theis, "considers the findings too preliminary to support any conclusions."

A clinical trial is underway to examine the connection between estrogen and Alzheimer's; it follows a survey which showed that women who took hormone replacement therapy after menopause were at lower risk for getting Alzheimer's. Dr. Kenneth Setchell, prof. of pediatrics at the Univ. of Cincinnati's Children's Hospital Medical Center (Ohio), disputed White's conclusions. His research shows that isoflavones have a positive effect on the brain. He asked: If soy is so bad, why are there not high rates of Alzheimer's disease in Japan and China? And why is there no association with any other soyfood? And why don't vegetarians, who typically consume plenty of tofu, get Alzheimer's?

"In stark contrast to White's findings, a 1993 study of 272 Californians enrolled in the Adventist Health Study, matched for age, sex and ZIP Code, found that those who ate meat were more than twice as likely to become demented as their vegetarian counterparts."

This article concludes with some market statistics from a study titled "The U.S. Soyfoods Industry," by Soyatech Inc. and Senechal, Jorgensen & Hale Co. U.S. tofu sales have grown from $108 million in 1992 to $238 million (forecast) in 1999. U.S. sales of all types of soyfoods have grown from $852 million in 1992 to $2,140 million (forecast) in 1999. Address: Special to Times.

3421. Hays, Constance L. 2000. Selling natural foods to the crowd. *New York Times.* April 9. p. BU2.
• ***Summary:*** The story and history of Irwin D. Simon and the Hain Food Group. He spent his formative years in Glace Bay, Nova Scotia, Canada, in a family that worked hard and wasn't affluent. In 1985, several years out of college, he went to work for Haagen-Dazs, the ice cream brand. In 1990 he joined Slim-Fast, the diet-shake company as a brand manager. In 1992 he left to be his own boss, and bought the Kineret line of Kosher foods, which he took public in 1993. Shortly thereafter he acquired Hain, a line of vegetable oils, condiments, and other products.

© Copyright Soyinfo Center 2014

In Dec. 1999, the Kellogg Co., bothered by flat cereal sales, purchased Worthington Foods for about $80 million.

3422. Cole, Franklin. 2000. Got milk substitute? *Times* (*Maryville-Alcoa, Tennessee*). May 6.
• ***Summary:*** Maryville-based Better than Milk is a division of Fuller Life, Inc. William Bynum, sales manager for Better Than Milk, says the soy milk industry is basically a $4 billion a year industry; his company has about half of one percent of that total. "Now, with assistance from the Tennessee Department of Agriculture's market development division, Bynum said Fuller Life is among six Tennessee specialty food companies going to the 2000 U.S. Food Export Showcase, to be held in Chicago from May 7 through 9."

Fuller Life sells powdered mixes (made in Indiana), not liquid soy milk. These are "shipped to Fuller Life's corporate headquarters in the Blount County Industrial Park where they are packaged, labeled, and shipped to 24 distributors nationwide."

A large photo shows William Bynum standing next to a display of Better Than Milk products.

3423. *Nutrition Business Journal* (*San Diego, California*). 2000. Kellogg undeterred by demise of Ensemble; Soy cereal launched: Company blames merchandizing, not pricing or promotions, for failure of Ensemble. 5(5):17. May.
• ***Summary:*** Last year Kellogg (with approximately $6.8 billion in worldwide food sales last year) became one of the first big American food makers to test market a branded line of 22 functional foods–psyllium-enriched Ensemble products spread out in supermarkets over seven categories including bread, pasta, etc. The test market in southwestern Michigan failed.

In Feb. 2000 Kellogg launched Smart Start Soy Protein, a breakfast cereal fortified with soy protein, and containing rice, wheat, and soy granola clusters.

3424. Barboza, David. 2000. Modified foods put companies in a quandary: Science is called sound but public is not sure. *New York Times.* June 4. p. 1.
• ***Summary:*** Chicago, June 3–In January Frito-Lay announced that it would stop using biotechnology-based [genetically engineered] corn in its chips. Gerber Products has banned genetically modified ingredients from its baby food. And McDonald's has stopped using genetically altered potatoes in its french fries.

Yet despite these announcements, all made in response to public concern over genetically altered [genetically engineered] foods, none of these companies is actually abandoning biotechnology. What a contradiction!

"At the same time, some food giants are investing in organic or natural food units. Last year, Kellogg bought Worthington Foods, which makes vegetarian dishes."

3425. *Greenpeace Magazine* (*Washington, DC*). 2000. Food fight: The truth about genetically modified organisms. 5(1):14-15. Spring.
• ***Summary:*** Gives six myths about genetic engineering then states what it believes to be the truth about each. The myths (each accompanied by a logo) are: (1) "Natural? Genetic engineering is merely an extension of traditional breeding." (2) "Food quality: GMOs can make foods better, more nutritious, longer-lasting and better-tasting." (3) "Pesticides: GMO crops will reduce chemical use and are necessary for environmentally sustainable farming." (4) "Food safety: The Government ensures that genetic engineering is safe for the environment and human health." (5) "Evidence: There is no scientific evidence that GMOs harm people or the environment." (6) "Hunger: GMOs are necessary to feed the developing world's growing population."

A color photo shows a field of soybeans being harvested by a large combine, from which a conveyor transfers the harvested soybeans to a "grain truck" driving near and parallel to the combine. On the inside front cover is a full-page color photo of Kellogg's "Cereal City," a company museum in Battle Creek, Michigan. On the all-glass front of the building, Greenpeace activists have hoisted a huge flag which reads: "Kellogg's. Stop feeding Frankenfoods to America's kids. Greenpeace. www. greenpeaceusa.org." At the top of the building, where Tony the tiger is licking his chops, is another large sign that reads: "They're gross!" A tear-off postcard invites the reader to send a postcard to Carlos Gutierrez, President and CEO of the Kellogg Company, stating: "I was distressed to learn that Kellogg's products in the U.S. may contain genetically modified (GMO) ingredients, even though Kellogg's has pledged not to use GMO ingredients in Europe... I therefore ask you to stop using GMO ingredients..."

3426. Broncaccio, Diane. 2000. Lightlife sold to food giant: 150 employees and company heads to keep their jobs here. *Recorder* (*Greenfield, Massachusetts*). July 17. p. 1.
• ***Summary:*** ConAgra Inc. (of Omaha, Nebraska), has purchased Lightlife Foods Inc. (of Turners Falls, Massachusetts) for an undisclosed amount. ConAgra Inc. has about $25 billion in annual sales, while Lightlife has about $25 million–only one-thousandth as much. Lightlife, which was founded 21 years ago and has 150 employees at its plant in Turners Falls, began to look for a strategic partner after the Kellogg Co. purchased one competitor [Worthington Foods] and Kraft purchased another [Boca Burger]. They chose ConAgra because ConAgra likes to keep companies completely intact, respects the Lightlife brand and what it stands for, and will help Lightlife accomplish its mission. No one will be fired, salaries, benefits packages, and profit-sharing agreements will remain unchanged, and the plant will stay in Turners Falls, Franklin County, Massachusetts.

© Copyright Soyinfo Center 2014

Lightlife's CEO Michael Cohen and President Chia Collins emphasize that they will remain as leaders and the entire management team will stay in place.

Lightlife's manufacturing plant, now only two years old, occupies less than 6 acres of its 13-acre lot at the Montague Airport Industrial Park–so there is room for plenty of growth. The 70,000-square-foot food processing facility has a Tax Incremental Financing (TIF) plan with Montague and with the state; this gives Lightlife a 63% tax exemption on its $9.9 million plant investment from July 1999 to July 2009. Lightlife, in return, has agreed to add 5-10 employees each year to its 1998 work force of 82 full-time workers.

In a news release, Bruce Rohde, ConAgra's CEO and Chairman, said his company bought Lightlife because of the growing demand for vegetarian alternatives to meat and for more healthful foods. Rohde said the market is being "driven by awareness of the benefits of soy." He then quoted the FDA heart health claim. More than 70% of Lightlife's 45 products meet the requirements of that claim. These products, now marketed to at least 12,000 stores nationwide, include meatless franks, Smart Dogs, Tofu Pups, Smart Deli Slices, Gimme Lean (sausage alternatives), and Lightburgers. Other brands produced by ConAgra include Healthy Choice, Peter Pan, Hunt's, and Wesson. Address: Recorder staff.

3427. *Ontario Soybean Growers Newsletter.* 2000. Pepsi to market soymilk. July. p. 8.
• ***Summary:*** "Coming soon to U.S. theatres: A cold soymilk-and-fruit drink to wash down that hot buttered popcorn. The drink is a product of PepsiCo Inc's Tropicana brand, one of several big food and beverage companies trying to get in on the growing market for soy. Kellogg, Kraft and H.J. Heinz have also recently acquired soyfood companies.

"Known as 'Tropicana Smoothie made with veggie milk', this icy drink is a joint venture with Galaxy Foods in Florida. In addition to some theatres in Florida, the drink is going to be tested in selected restaurants and Kroger supermarkets.

"Galaxy Foods hopes to soon market the Tropicana Smoothie, as well as other soy products, in Canada." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

3428. Wolf, Walter. 2000. Soy-related documents–Business records (Archival collection). Peoria, Illinois.
• ***Summary:*** In July 2000 Dr. Walter Wolf, as he was preparing to retire from the Northern Center for Agricultural Utilization Research in Peoria, Illinois, sent to Soyfoods Center many file folders of soy-related documents that he had collected between about 1968 and the present. Most are in the field of soy protein, and none are confidential / proprietary. Each one is neatly dated, and the documents are in reverse chronological order in each manila file folder.

Dr. Wolf earned his PhD degree at the University of Minnesota, where he studied soy proteins. He began work at NCAUR in 1956; at that time it was named the Northern Regional Research Center. He worked as a chemist in the Meal Products Research Group. He did mostly pure research, rather than applied. At the time there was little interest in food uses of soy protein. One of his main contributions was collecting and publishing statistics on the annual production and price of soy flour, soy protein isolates, soy protein concentrates, and textured soy protein products.

The following files (listed alphabetically) were received by Soyfoods Center. Unless otherwise stated, only one file on each company or subject was received. A thin file contains less than about 20 sheets of paper; a thick one contains more than 20 sheets: ADM (Archer Daniels Midland Co.; 2 thick files 1970-2000). Anderson Clayton (thin, 1971-81). Cargill (thin, 1970-2000). Central Soya (4 thick files, 1959-1999). Dawson Mills (thick, 1974-1983). Edible Soy Products, Inc. (Hudson, Iowa; Maker of Pronuts; thin, 1971-78). EMI Corp. (Des Plaines, Illinois, thin, 1971-74). Erie Casein Co. (thin, 1966-73). Fuji Oil Co. Ltd. and Fuji Purina Protein Ltd. (of Japan, thick, 1972-1993). Farmland Industries and Far-Mar-Co (thin, 1970-1993). Food Ingredients–Dale Johnson (thick, 1964-1998). Garrison Products (extrusion, thin, 1977-78). General Foods (thin, 1974-1981). General Mills (thick, 1965-1976). Gerber Products (thin, 1969). Grain Processing Corp. (1968-1976). Griffith Laboratories (thick, 1968-1986). Gunther Products (purchased by A.E. Staley, thick, 1963-1975). Honeymead Products (Mankato, Minnesota, thin, 1978-1986). Industrial Grain Products (Montreal, Canada, thin, 1973-1975). Kikkoman (thick, 1972-1997). Kraft, Inc. (1965-1984). Lauhoff Grain (1 thin, 1973-86). Loma Linda Foods (thin, 1969-1986). Miles Laboratories (thick, 1970-83). Nabisco (1974-81). Meals for Millions Foundation (1 thin file, 1976). Protein Advisory Group of the United Nations, PAG Guidelines (thin, 1969-1978). Quaker Oats (thin, 1970-97). Joe Rakosky, consultant (1979-83). Ralston Purina Co. (4 files, very thick, 1962-1999). Soy protein products (2 files, thick, 1970-1986). Soy protein production statistics and estimates (two thick files, 1970-1996). Staley (A.E., 1 thick, 1969-1986). Swift & Co. (thin, 1961-1971). Takeda Chemical Industries (thin, 1970-1984). Textured soy proteins (1 thin, 1969-71). Tofu equipment (thin, 1970s). Tokuji Watanabe tofu studies at Peoria, Illinois (thick, 1960-61). United Nations Industrial Development Organization (UNIDO, thick, proceedings of Nov. 1969 meeting at Peoria, Illinois), Unilever (thin, 1974-79). Wenger Manufacturing Co. (thin, 1975-76). Worthington Foods (thick, 1965-1998). Address: NCAUR, Peoria, Illinois.

3429. White, Heater. 2000. Kellogg acquires Kashi Co. *Natural Business.* Aug. p. 1, 4.
• ***Summary:*** Seven months ago, Kellogg Co. acquired Worthington Foods. On June 29 it acquired Kashi Co. of La Jolla, California, a maker of natural cereals. The deal closed July 1.

© Copyright Soyinfo Center 2014

Kashi, which was founded by Philip Tauber and his wife, Gayle, will continue to operate from its headquarters in southern California as a wholly owned subsidiary, "but will fall under Kellogg's Natural and Functional Foods umbrella."

Tauber was approached earlier this year by Post and Kraft (a unit of Philip Morris), but he and his wife decided that Kellogg would be able to further enhance Kashi's mission–which is to have as many people as possible educated about the benefits of minimally processed foods.

3430. **Product Name:** Natural Touch Veggie Corn Dogs and Veggie Dogs–from Morningstar Farms.
Manufacturer's Name: Kellogg Co. (Specialty Foods Investment Company).
Manufacturer's Address: Battle Creek, Michigan
Date of Introduction: 2000 September.
How Stored: Frozen.
New Product–Documentation: See next page. Ad (8½ by 11 inches, color) in Natural Foods Merchandiser. 2000. Sept. p. 24. "Nature's symphony." Note: The most striking thing about this ad is the merger of the Natural Touch brand with the Morningstar Farms brand. Worthington Foods had kept them carefully apart, with Natural Touch targeted to the natural / health foods market. The Kellogg Co. (famous maker of breakfast cereals) purchased Worthington Foods, Inc. on 1 Oct. 1999.

In the Jan. 2001 issue of Natural Foods Merchandiser is a corporate profile of "Natural Touch by Morningstar Farms." The company address is: "Natural Touch, Natural and Functional Foods Division, P.O. Box 3599, One Kellogg Square, Battle Creek, Michigan." Web site: www.naturaltouch.com. Key executives: Steve Benoit, Vice President and General Manager. Ron McDermott, Vice President, Research and Technology.

Note: By 2013 the Natural Touch brand has disappeared, replaced by the Morningstar Farms brand.

3431. Oetman, Michelle L. 2000. Trinity Island overjoyed about soy. *ADRAWorks* (*Silver Spring, Maryland*). Autumn. p. 1, 3.
• ***Summary:*** ADRA is the [Seventh-day] Adventist Development and Relief Agency. Trinity Island is a small town located outside of Guayaquil, Ecuador. ADRA's presence in Ecuador began in 1999. It was soon noted that too many children were dying before their fifth birthday, often because of poverty.

"Further into the program, the ADRA nurses realized that the meat products available to the community were expensive and contributed to sickness because of its poor quality. Soy products were then introduced. Women have now learned to make soymilk and other soy recipes.

"Although originally introduced for health reasons, a side-benefit surprisingly surfaced–economic development. Two women in the community opened a soy store and now provide healthful soy products to their community. Norma Orosco, one of the community leaders said, 'Thank you ADRA for working with my community. Now that we eat soy, we're healthier and I can also sell it to earn an income.'" Address: Asst, for Marketing & Development, ADRA International Headquarters.

3432. Little, Janice. 2000. Re: Looking for information about the Van Gundy family in Southern California. Letter to William Shurtleff at Soyfoods Center, Nov. 2. 2 p. Typed, with signature on letterhead.
• ***Summary:*** 1. On the business address for La Sierra Industries. Suggest that we call the Riverside Public Library, which has a local history section that contains city directories. Talk to William Swafford, local history librarian. Phone: (909) 826-5736.

2. Seventh-day Adventist (SDA) church records. The La Sierra University Church (Phone: 909-354-7095) was very helpful. The membership secretary told Janice that Dorothea Van Gundy joined the La Sierra College Church (now La Sierra University Church) in 1927. She married Norval Jones and in 1986 her membership was transferred to the Fletcher, South Carolina, SDA Church. Janice was unable to locate any church record for Theodore Van Gundy. She was told that he and his family might have attended the Loma Linda Hill Church of the La Sierra College Church, but no records of membership could be found. Note: Edna Gallington says the SDA Southeastern California Conference has no records back as far as the 1920s or 1930s.

3. Other sources: Beth McCalla is living in the old Van Gundy home at 11678 Val Verde, La Sierra, Riverside. Phone: (909) 785-4976.

Betty Minton of the La Sierra University Church in Riverside, California (Phone: 909-354-7093) reports that one Theodore Van Gundy transferred his membership from the Arlington Church to the La Sierra church in 1949; he died in 1950. His wife's name was Lulu. This is confusing, since Theodore Van Gundy (the father) married Lulu Pond in 1898 and he died on 1 June 1935. They had a son named Theodore. The Arlington SDA Church has no records earlier than 1967. At the Conference office, talk with Dorris Morris about early church records. Address: Library Asst., Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-824-4942.

3433. Schwarz, Richard W. 2000. From Battle Creek to Battle Creek: A tale of vegetarian meat analogs. *Adventist Review.* Dec. 7. p. 12-16. [68 ref]
• ***Summary:*** Discusses Dr. John Harvey Kellogg, meat alternatives, Madison Foods, Loma Linda Foods, Worthington Foods, Robert Boyer, spun soy protein fiber, Miles Laboratories, Morningstar Farms, the Kellogg Co. Contains many excellent photos of early meat alternatives,

many made by Worthington Foods.

3434. *SoyaScan Notes.* 2000. Chronology of major soy-related events and trends during 2000 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 8–The Kerry Group (of Wisconsin and Iowa) purchases Solnuts, a pioneer manufacturer of dry-roasted soynuts, in Hudson, Iowa.

Jan.–Kraft Foods Inc. (Illinois) purchases Boca Burger Inc., America's third largest maker of veggie burgers, after Worthington Foods and Gardenburger.

March 6–The Hain Food Group announces that it will acquire the Celestial Seasonings tea company to become the largest natural foods company in the USA.

March 9–The USDA formally approves a rule change allowing soy protein products to completely replace meat products in the Federal School Lunch Program.

March 31–Monsanto, the world's leading agricultural biotech company, merges with Pharmacia & Upjohn (a large pharmaceutical company), and the new company is renamed Pharmacia Corporation.

April–An article by Lon White on tofu and brain aging is published in *J. of the American College of Nutrition.*

June 9–20/20 (ABC) television program, titled "Soy–The untold story," airs on Friday at 10:00 p.m. discusses many of the shortcomings of soyfoods, but in a very fair way.

June 13–Martha Stewart, on her popular nationwide TV program *Living,* has a very positive segment on edamamé.

July 14–Lightlife Foods Inc. (of Turners Falls, Massachusetts) is purchased by ConAgra, Inc., a $25 billion food company based in Omaha, Nebraska–for an undisclosed amount. Lightlife's plant, employees, and management team will stay in place. Lightlife is a leading maker of vegetarian meat alternatives, with 150 employees and about $25 million in annual sales.

July–At a joint meeting of ASA and USB, the International Soy Protein Program (ISPP) was born as ASA and the Illinois Soybean Program Operating Board (ISPOB) formalized their joint commitment to "Increase the international consumption of soy protein by humans in new markets–developing countries–and thereby create new opportunities for disappearance of soybeans and provide higher economic returns to U.S. soybean producers." ISPOB and its Executive Director Lyle Roberts were instrumental in conceiving the program and raising its initial funding. This program was later renamed WISHH.

Sept.–Monsanto's patent on glyphosate expires. Glyphosate is the active ingredient in *Roundup,* the world's best-selling herbicide.

Dec.–Sanitarium Foods of Australia acquires the 47% of SoyaWorld owned by Sunrise Soya Foods (Vancouver, BC, Canada).

Trends: 1. This year, the momentum created by the FDA health claim in Oct. 1999 has propelled the soyfoods industry to new heights. Existing companies are growing rapidly, and many new companies (including some of America's biggest food companies) are entering the market with new products.

2. This year, for the first time, soymilk has become a mainstream American beverage. As of May, White Wave Silk soymilk is sold in 24,000 supermarkets nationwide. Edamamé (green vegetable soybeans) have gone mainstream in California, and are rapidly becoming popular on both coasts of the USA.

3. In the United States and Europe, the tide seems to be flowing increasingly against genetic engineering of foods and food plants. More and more companies in the natural foods industry are labeling their products as "non-GMO" or "GMO-free" or "No GMOs." Monsanto has stopped its efforts to develop genetically engineered soybeans for food use and focused its attention instead on livestock feeds. It now seems likely the genetic engineering of plants has a future, but not in the area of foods–at least in developed countries.

4. Interest in "food-grade soybeans" continues to grow in the USA and has increased substantially this year. Canada began focusing on identity-preserved food-grade soybeans 10-15 years before the USA. U.S. interest began to grow in about 1995 with the introduction of genetically engineered soybeans and with the accelerating interest in food uses of soybeans.

5. While pro-soy articles (mostly about health benefits) continue to increase, so do anti-soy articles and Internet sites. The loudest anti-soy voices are those of Sally Fallon and Mary Enig of the USA (they believe traditional fermented soyfoods–such as miso, shoyu, natto, and tempeh–are good, traditional non-fermented soyfoods–such as tofu, soymilk, and edamamé–are not very good, and modern soy protein products–such as soy protein isolates, concentrates, and textured soy flour–are the worst of all, being highly processed with chemicals such as hexane solvent). Also: Richard and Valerie James of New Zealand, and Lon White of Hawaii. Some of the concerns they raise are legitimate and deserve further research, but the majority (we believe) are not. Nevertheless, many of the health claims made for soy in popular articles are exaggerated or somewhat sensational, and not firmly supported by scientific evidence.

6. As we are about to enter a new century and a new millennium on 1 Jan. 2001, soyfoods appear to have a bright future, worldwide. This past year has seen more activity and interest in, and media coverage of, soyfoods than at any time in the history of the United States.

3435. Cottrell, Stanley W. 2000. The Dr. J.H. Kellogg Discovery Center moves to Historic Adventist Village. *Adventist Heritage Ministry Bulletin* (*Silver Spring, Maryland*) 13(4):3. Dec. (Holiday issue).
• ***Summary:*** "Following two years of successful operations

in the former Michigan Bank building located just across the parking lot from the Battle Creek Tabernacle, the Dr. J.H. Kellogg Discovery Center has moved to its new home in the Welcome Center of Historic Adventist Village." The Center is a sort of museum, which includes Dr. Kellogg's bicycle. "A new video room, with seating for 40 people, has been designed across the front section of the auditorium." Four photos show parts of the Center and the move to its new home. Address: Director, Historic Adventist Village.

3436. Shurtleff, William; Aoyagi, Akiko. 2000. Tofu & soymilk production. 3rd ed. Lafayette, California: Soyfoods Center. 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. Dec. 28 cm. [223 ref]
• ***Summary:*** Contains many new advertisements, plus changes on the title page, copyright page, and rear cover of both paperback and hardcover editions (new ISBN for each). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3437. Antrobus, Derek. 2000. Salford's influence on U.S. vegetarianism: Transatlantic origins of Vegetarian Society. Paper presented to the 2000 annual meeting of the UK Vegetarian Society. 3 p.
• ***Summary:*** This talk (the full text of which is available on the Web at www.zyworld.com/dantrobus/) discusses the role members of the Bible Christian Church (Salford, England) in establishing the first vegetarian society in the United States. "The crucial moment was the establishment in Salford in 1809 a new denomination–the Bible Christians. Their autocratic leader was the Rev. William Cowherd who imposed a vegetarian diet on his flock. This church was the first institution to promote vegetarianism in the contemporary western world and its followers effectively set up the Vegetarian Society" [in the United Kingdom].

Another influence on the birth of the Society was the Alcott House Concordium, a utopian socialist community founded in 1838. William Oldham was head of the community, founded on the principles of American writer Bronson Alcott. Oldham had already been connected with a short-lived forerunner of the Vegetarian Society called the British and Foreign Society for the Promotion of Humanity and Abstinence from Animal Food, founded in 1843.

Actually these two influences were not as separate as one might think. Indirectly the Concordium was influenced by the Bible Christians–in the United States.

"The group of migrants was led by two ordained ministers of the Bible Christian Church–James Clark and William Metcalfe (1788-1862). Clarke was unsuccessful in trying to organise a church and died a farmer in 1826. Metcalfe was more successful. Eventually 41 pilgrims from Manchester and Salford left Liverpool on 29 March 1817 for the United States, attracted by the new civil and religious freedom. Their voyage took 79 days. After arriving in Philadelphia [Pennsylvania], the Bible Christians prospered and in 1823 were able to build themselves a church.

"How does Metcalf's American ministry relate to a utopian socialist society in Surrey? In 1830, the Bible Christians had two influential recruits, Dr. Sylvester Graham (1794-1851) and the aforementioned William Alcott, editor of the *Moral Reformer* and the *Library of Health.* Both became presidents of the American Vegetarian Society. Metcalfe converted Graham, inventor of graham bread and graham crackers, to vegetarianism. Graham was an enormous influence on John Harvey Kellogg. Kellogg was already a vegetarian but Graham's views on diet turned Kellogg's mind to food reform. And the result of that is on most breakfast tables every day. Alcott converted his cousin, Bronson Alcott, to vegetarianism in 1835 and it was Bronson Alcott whose ideas inspired the Concordium community in Richmond. Influential in his day, Alcott's fame was superseded by that of his daughter, Louisa May, who wrote *Little Women."* Address: Salford, England.

3438. Davis, Brenda; Melina, Vesanto. 2000. Becoming vegan: The complete guide to adopting a healthy plant-based diet. Summertown, Tennessee: The Book Publishing Co. v + 281 p. Index. 25 cm. [153 ref]
• ***Summary:*** An excellent vegan sourcebook (not a cookbook) by two registered dietitians. Contains perhaps the most up-to-date, accurate, and concise yet complete information in vegan nutrition.

Contents: Acknowledgements. From the authors. 1. Vegan roots. 2. Perspectives on vegan health. 3. Plant protein. 4. Big fat lies. 5. The two faces of carbohydrates. 6. Prospecting for minerals. 7. Vitamins for vegan vigor. 8. Phytochemicals. 9. The vegan food guide. 10. Building vegan dynamos. 11. Growing vegans. 12. The prime of life. 13. Overweight. 14. Eating disorders. 15. Underweight. 16. The vegan athlete. 17. Vegan diplomacy.

This book begins with a good history of veganism and contains (throughout the book) a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus Adventist Health Studies, dietary fiber, phytochemicals and sea vegetables. Address: 1. Kelowna, British Columbia; 2. Langley, British Columbia. Both: Canada.

3439. Evers, Marco. 2001. Steaks vom Weizenacker [Steaks from the wheat field]. *Spiegel* (*Der*) (*Germany*). March 12. p. 200-03. [3 ref. Ger]
• ***Summary:*** To deal with the world food crisis, people must get more of their protein from the plant kingdom. But actually they are making plant-based foods that imitate meats–one might say pseudo-meats.

Mentions De-Vau-Ge of Lüneburg, Klaus Gaiser of

Topas, and "Life Food Taifun-Produkte," in Freiburg, Germany's largest tofu manufacturer. Last year Life Food made 15 metric tons (tonnes) a week of tasteless tofu. Now they are making 25 tonnes a week, but are hoping to make 45 tones a week.

3440. Gupta, Rajendra ("Raj") P. 2001. Changes in ownership of SoyaWorld, Inc. (Interview). *SoyaScan Notes.* March 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Dec. 2000, Saputo, a large American cheese company, acquired Dairyworld Foods (Burnaby, British Columbia, Canada) and thereby also acquired Dairyworld's 50% ownership of SoyaWorld, Inc.

Then in Jan. 2001 Sanitarium Foods of Australia bought Peter Joe's 50% ownership of SoyaWorld. Maheb Nathoo is still the managing director of SoyaWorld, and the company is doing well. Maheb is basically a financial man. So SoyaWorld, Inc. is a separate company owned by Sanitarium Foods.

The soymilk company in Scotland, which used ProSoya technology and which Dusty Cunningham helped to start, has declared bankruptcy. Raj is now negotiating with another company to take over the plant and equipment.

Raj has heard that Dean Foods is for sale, and that White Wave's Silk is not yet profitable. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

3441. Smith, Patricia. 2001. The Natural Products Expo at Anaheim and the natural foods industry (Interview). *SoyaScan Notes.* March 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Expo at Anaheim this year was the biggest ever, attracting more than 30,000 people. She walked past every booth and almost every one was offering some kind of soy product. The interest in soyfoods just keeps growing.

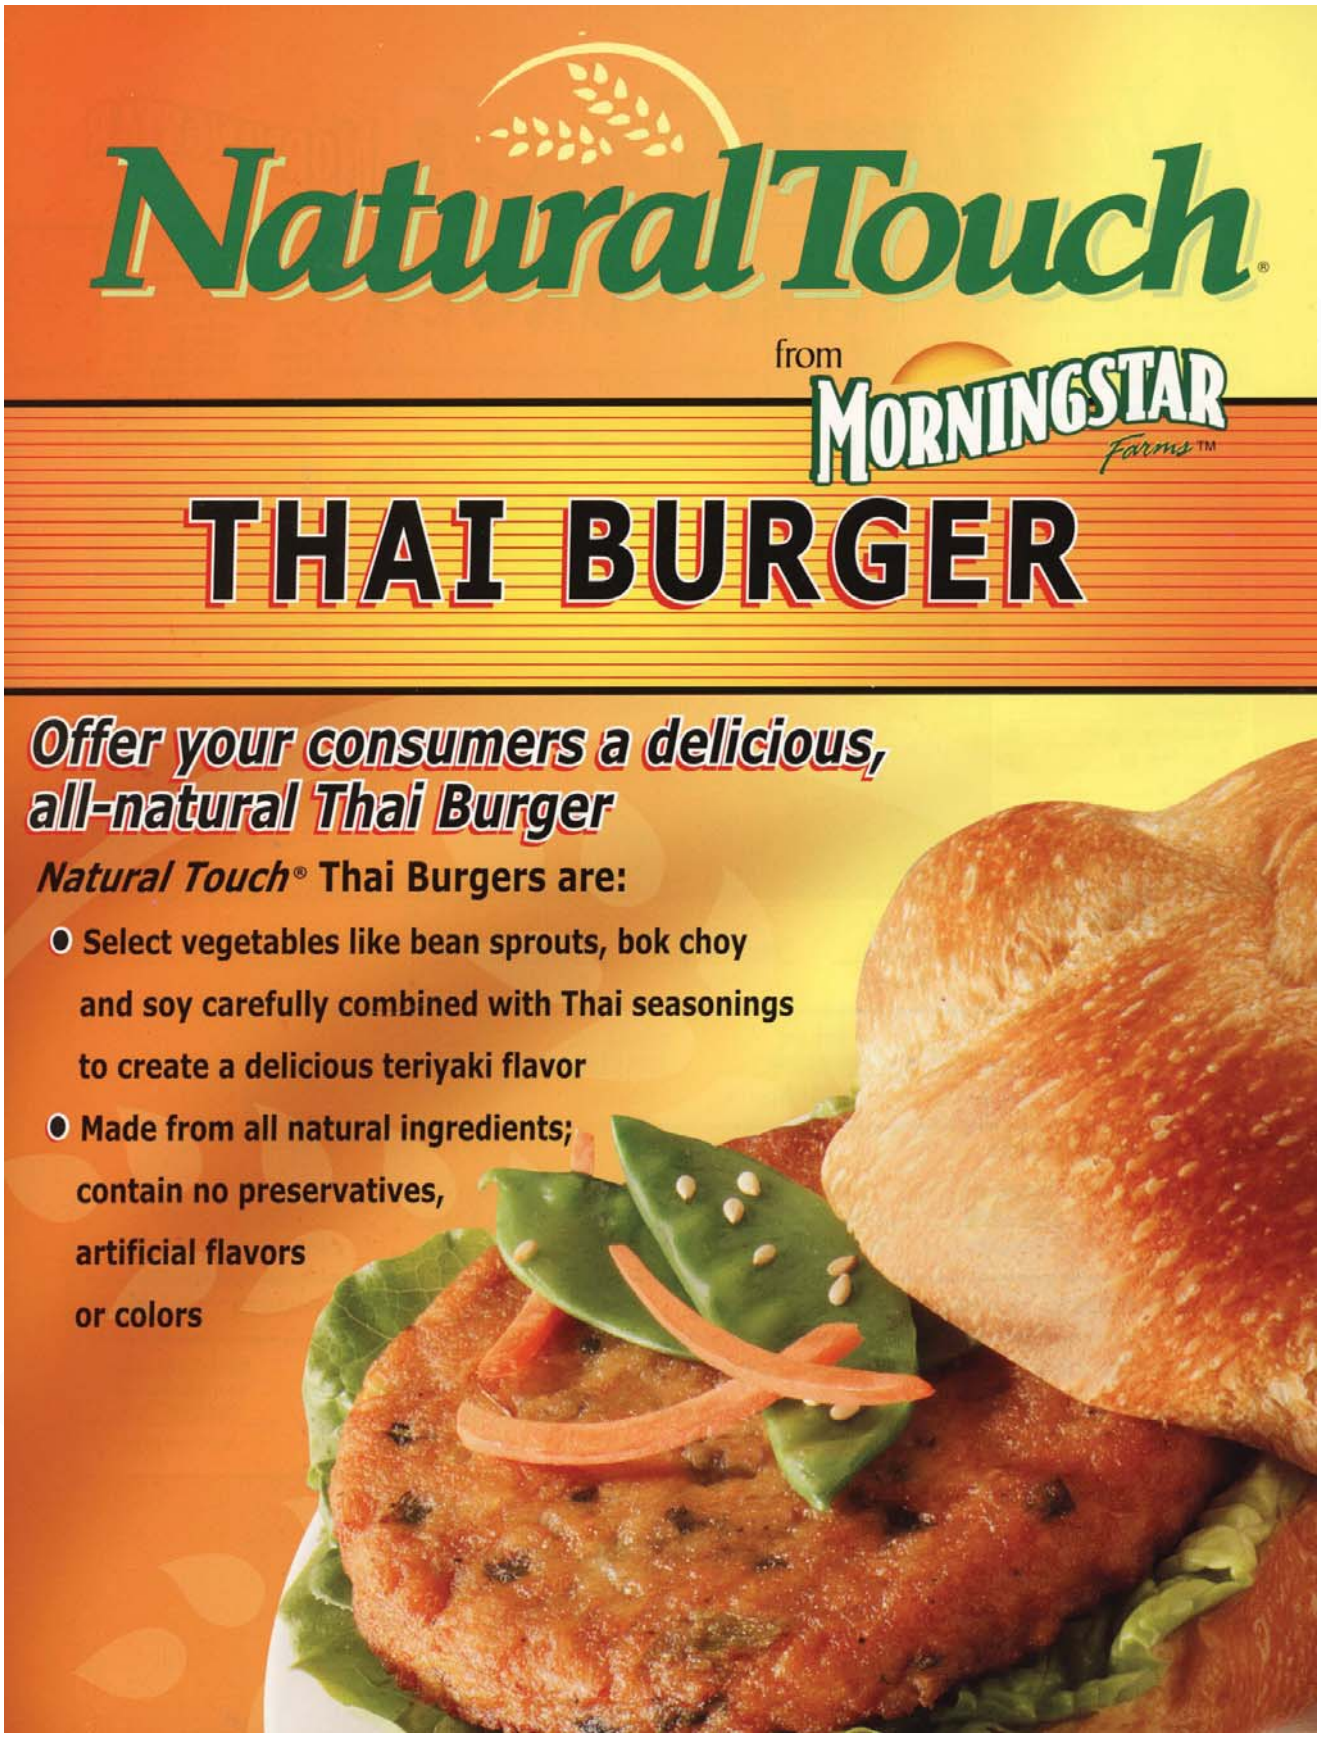
At the show there was talk about illegal genetically-engineered StarLink corn in Kellogg's Morningstar Farms products such as Corn Dogs, Mini Dogs, and maybe other products. Some company are pulling these products from their shelves.

Before the first Natural Foods Merchandiser (NFM) trade show was held in 1981, at Anaheim, California, the pioneering natural foods companies such as Erewhon, Eden, Westbrae, Sunburst, and Chico-San all (reluctantly) attended the annual NNFA show in Las Vegas, Nevada. There would always be a big party one evening in someone's hotel suite–with lots of fun. But from 1981 on, these and other natural foods companies found their real home at the NFM trade shows.

Patricia saw Yuko Okada at this year's show. His Macrobiotic Company of American now sells only Muso Shokuhin products. Norio Kushi is running the company. Yuko kicked out Bruce Macdonald over alleged financial improprieties. A lawsuit that Bruce filed has apparently been settled.

Michael Potter bought the Herb-T Company from Cecile Levin in southern California. Mr. Muramoto started the company many years ago.

Patricia has now worked for Trader Joe's for 16 years. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.



3442. **Product Name:** Natural Touch Thai Burger–from Morningstar Farms.
Manufacturer's Name: Kellogg Co. (Specialty Foods Investment Company).
Manufacturer's Address: Battle Creek, Michigan
Date of Introduction: 2001 March.
Ingredients: Vegetable protein (textured soy protein, textured wheat gluten, water), bok choy, bean sprouts, water, green onions, egg whites, corn oil, celery, potato starch...
Wt/Vol., Packaging, Price: 9.5 oz.
How Stored: Frozen.
New Product–Documentation: See next page. Leaflet (color, front and back, 8½ by 11 inches) sent by Patricia Smith from Natural Products Expo West at Anaheim. 2001. March.

3443. Shurtleff, William; Aoyagi, Akiko. 2001. The book of tofu. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. May. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]
• ***Summary:*** The spine has a new look, with dark brown letters on a beige background. At the base of the spine is the Ten Speed Press logo in orange.

This edition contains an updated "Appendix B–Directory of Tofu Makers" (p. 313-316, updated to 22 Feb. 2001). The copyright page and inside rear cover have also been updated; the SoyaScan database now contains 62,000 records. The preface has been expanded. Numerous other small changes have been made throughout the book. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3444. *SoyaScan Notes.* 2001. On the English-language etymology of "green vegetable soybeans," "edamamé," "vegetable-type soybeans," and "food-grade soybeans": A chronology of terminology (Overview). July 6. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** No other soyfood has had so much difficulty in finding a single, standardized name. To this day, soybeans picked when still fresh and green in the pods, boiled or steamed, and served like a vegetable, are called by a bewildering variety of names: *edamamé* (pronounced ay-duh-MAH-may, the Japanese name), fresh green soybeans, vegetable soybeans, green soybeans, edible green soybeans,

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

green vegetable soybeans, immature green soybeans, green immature soybeans, immature soybeans, garden soybeans, garden-type soybeans, garden soys, branch-beans, etc. The short names are all ambiguous and the precise names are all too long. Fortunately, since the late 1990s, the media have increasingly used one name: edamamé.

The first attempt to describe green vegetable soybeans appeared on 12 April 1855 when T.V.P. [T.V. Peticolas] of Mount Carmel, Ohio, writing in the *Country Gentleman* said: "They are inconvenient to use green, being so difficult to hull." For the next few decades other writers followed this pattern of describing rather than naming the tender green beans.

In Dec. 1890 C.C. Georgeson, writing in the *Kansas Agric. Exp. Station Bulletin* first used the term "Edamamé" in an English-language publication to describe his seeds imported from Japan; but he was using the word as the name of a soybean variety, rather than as the name of a food type.

It wasn't until Jan. 1915 that a real name for these tender fresh beans first appeared–in the *USDA Bureau of Plant Industry, Inventory* No. 33. Referring to Plant Introduction No. 34702, from Shantung Province, China, Dr. William R. Faries of Coachella, California, wrote that he had received the seeds in December 1912. They "grow well here. They are fine for green shelled beans."

On 19 May 1917 Anna R. Van Meter, writing in the *Ohio Farmer,* called them "Green Soybeans." The only problem was that dry soybeans with green seed-coats are called by the same name.

In July 1918 William J. Morse, wrote in the *USDA Farmers' Bulletin* No. 973 about this "green-vegetable bean."

The name we prefer was coined by William Morse while studying soybeans in Japan. In July 1929 he first called them "Vegetable soybeans," then in Jan. 1931 he started using the term "Green vegetable soybean," and finally in March 1932 "green vegetable soybeans" (our preference). Morse made a major effort to introduce both the new varieties and the new way of eating them to America.

During the 1930s, six new terms were introduced: "green shelled soybeans" (USDA Bureau of Home Economics, 1933), "fresh green soybeans" (Carey Miller of Hawaii, 1933), "green immature soybeans" (Carey Miller and Ruth Robbins, 1934), "shell soy beans" (Dr. John Harvey Kellogg, letter of 9 Dec. 1935 to William Morse), "immature green soybeans" (Dr. A.A. Horvath 1938), and "immature garden soy beans" (Helen Parsons, Abby Marlatt, and George M. Briggs, 1939).

The name "Green vegetable soybeans" first appeared in the title of a publication in 1935; it was an article by Morse in the *Proceedings of the American Soybean Association* (p. 44-45). In the same article he began to search for terms to describe the new *type* of large-seeded Japanese soybeans from which the best edamamé are grown: Being unaware of the word edamamé, he coined the terms "vegetable types" and "green vegetable types." In 1938 he began to call them "edible soybeans."

But the name that stuck was first appeared in March 1939 in a famous bulletin titled "Eighteen varieties of edible soybeans," by J.W. Lloyd and W.L. Burlison of the Illinois Agricultural Experiment Station. They called them "vegetable-type soybeans" and distinguished then from typical "field-type soybeans."

Other terms used to refer to regular soybeans include "grain type" (Deodhar et al., 1973), "oil beans" (Liu et al., 1995), and "commodity soybeans" (Poysa, 1999).

During the 1930s and 1940s William Morse did more than any other person to try to introduce green vegetable soybeans and "edible- or vegetable-type" soybeans to America as a new food and to popularize their use. He wrote and lectured widely about them, and therefore he thought a great deal about what name would best describe them. He was in a unique position to see the big picture in terms of soybean terminology, and by the 1940s he had clearly settled on the terms "green vegetable soybeans" and "edible types" as those he preferred.

After 1940 only a few new names appeared: "Garden soys" (Edward Dies, 1942), "garden-type soybeans" (Allan K. Smith, 1959), and "branch-beans" (a literal English translation of the Japanese name *edamamé*) (*Organic Gardening and Farming*, July 1977).

Then in the late 1990s a new name burst upon the scene: "edamamé," the Japanese word for green vegetable soybeans cooked and served in the pods. This name was first used in an English-language document, as far as we can tell, in 1991, by the Jameson-Williams Co. of Fairmont, Michigan. The company issued a 2-page leaflet titled "What is edamamé?" By the late 1990s and early 21st century, food writers and manufacturers were using the word "edamamé" for all kinds of green vegetable soybeans, including shelled ones that would never be called "edamamé" in Japan.

Today, most people using the term "edamamé" don't realize that they are using it to mean "green vegetable soybeans" and that the word "edamamé" has long been used to refer to a subcategory of green vegetable soybeans–namely those that are cooked and served in the pods. Moreover, many do not understand the important connection between "vegetable-type soybeans" and "green vegetable soybeans." This is unfortunate.

After studying these terminology questions for more than 25 years, Soyfoods Center would like to see the following terms adopted: (1) Green vegetable soybeans: Vegetable-type soybeans picked green and cooked until tender. They may be served either in the pods (as edamamé) or shelled. This term has a 50-year history of use in the professional literature. (2) Edamamé: Green vegetable soybeans sold, cooked, and served in the pods. For shelled green vegetable soybeans we favor the term "shelled

© Copyright Soyinfo Center 2014

edamamé." In Japan, the latter are just starting to become available in the produce section of grocery stores, sold refrigerated (not frozen), typically in rigid containers with clear plastic tops and called either *mukimi edamamé* or *edamamé no mukimi* or *mukimamé. Mukimi* means "shelled" and *mukimamé* means "shelled beans." (3) Vegetable-type soybeans: Certain varieties of large-seeded soybeans (most with Japanese pedigrees and clear hilums) recognized for their good flavor and texture when used as food–either as green vegetable soybeans or tofu, soymilk, etc. This term has a 50-year history of use in the professional literature. In Japan, such seeds are called *edamamé no tane* ("edamamé seeds"). They are widely available in Japan in the spring in typical paper seed packets at grocery stores next to the produce department or the cut-flower department.

An alternative, simpler approach (now used by the American media) would be to call both (1) and (2) above "edamamé" then to call the shelled ones "shelled edamamé."

Unfortunately each of these three approaches and terms has its disadvantages. (1) Green vegetable soybeans is a very descriptive term, but it is quite long and unfamiliar to most Americans. Since "shelled green vegetable soybeans" is much too long, "shelled edamamé" (a term now starting to be used in Japan) or "green shelled soybeans" might be better. (2) Edamamé is nice and short, and widely used in the American press since the late 1990s. But it is difficult for English speakers pronounce correctly if there is no accent on the last letter, yet no English words have accents, and the keyboard character (é) only exists in special foreign-language character sets, which are a nuisance to use frequently. (3) The term "vegetable-type soybeans" is easy to confuse with "green vegetable soybeans." Moreover, the term sounds strange when used to describe large-seeded (often clear hilum) soybean varieties preferred for making tofu or soymilk. In addition, most American's have never heard of "vegetable-type soybeans." The term "food-grade soybeans," widely used in Canada since the 1980s, has its own problems. First, it is often used to refer to all soybean varieties utilized to make foods, including small-seed varieties used to make natto and soy sprouts. Second, all soybeans can be considered "food grade."

3445. Eig, Jonathan. 2001. Snap, crackle, plop; Cereal is a sore subject in Battle Creek, Michigan. The birthplace of the corn flake has lost plants, jobs, sales; Breakfast without Kellogg's. *Wall Street Journal.* Aug. 27. p. A1, A2.
• ***Summary:*** Nowadays people eat many other things for breakfast besides cereals made in Battle Creek–such as bagels, croissants, muffins, Egg McMuffins, yogurt and energy bars. Now there is a big trend to no breakfast at all–just a cup of coffee at Starbucks. "One in five Americans skips breakfast or has just a drink." Of those who do eat breakfast, only about 35% have cereal.

"Early in the 20th century, cereal did for Battle Creek what the microchip has done for Silicon Valley.

In 1999 Kellogg shut down one of its cereal plants–a 93-year-old facility–in Battle Creek, laid off 550 workers, and shipped some of its equipment use to make cereals to Mexico. The town's fondness for cereal seems to have declined.

"Few American cities have ever been so closely linked with one product"–breakfast cereal. In fact Battle Creek has long been known as "Cereal City."

Note: In recent years Kellogg has become saddled with the reputation for making unhealthy yet popular sugary cereals such as Sugar Frosted Flakes (since 1951), Honey Smacks (since 1953; 56% sugar by weight, leads one list of the "10 worst children's cereals"), Fruit Loops (since 1962), and Pop-Tarts (since 1964)..

Garth "Duff" Stoltz, a maintenance manager at Cereal City USA and the museum's unofficial historian, says he oughta eat more cereal, but is often too busy. Address: Staff reporter.

3446. Soy Happy! 2001. SoyHappy.org. Let's get veggie dogs in major league ball parks (Website printout–part). www.soyhappy.org Printed Sept. 17.
• ***Summary:*** Contents: Home page. 1. About the campaign (5 p.). 2. Veggie dog info. 3. Ballpark reference guide. 4. Soy Happy news. 5. Caps and patches. 6. Founder bio. 7. Links. 8. Contact us.

Dates when ballparks started selling veggie dogs: Norfolk Tides (before April 2000). Chicago White Sox (April 2001). Seattle Mariners (April 2001). Florida Marlins (April 2001). Montreal Expos (April 2001). Oakland A's (May 2001). Los Angeles Dodgers (June 2001). Toronto Blue Jays (June 2001). Most ballparks are selling Morningstar (Kellogg's) Veggie Dogs–which are vegetarian but not vegan. The Los Angeles Dodgers and a few others are selling Yves Veggie Cuisine's The Good Dog–which are vegan, kosher, and non-GMO, or Lightlife Foods' veggie dogs.

On page 1 of the home page is a color photo of Johanna McCloy, the campaign's founder. Address: P.O. Box 42152, Los Angeles, California 90042. Phone: 323-363-7226.

3447. *Nutrition Business Journal* (*San Diego, California*). 2001. Functional Foods V. 6(10):1, 3-8. Oct.
• ***Summary:*** The U.S. retail food market in the year 2000, worth $495 billion dollars, is divided into the following eight categories, listed in descending order of size: Meat, fish and poultry $108.7 billion. Beverages $88.9 (not incl. milk or liquor). Fruit and vegetables $84.9. Bread and grains $59.7. Dairy $53.4. Packaged/prepared foods $51.7. Snack foods $30.0. Condiments (incl. oils, dressings, spreads, sauces, spices, sweeteners) $17.6.

The top five U.S. functional food companies in terms of U.S. functional food sales ($ million) are Pepsico U.S. $3,530, General Mills $1,400, Kellogg $1,370, Kraft $780,

© Copyright Soyinfo Center 2014

and Coca-Cola $650. Smaller top companies include: Clif Bar $130, Stonyfield Farms $100, Imagine Foods $90, and White Wave $90. 90% of Imagine Foods' total sales come from functional foods, compared with 100% for White Wave. Imagine Foods launched a big campaign in 2001 to market Organic Power Dream Soy Energy drinks to athletes and fitness enthusiasts.

"Soy is the functional food star of the last two years with an estimated 300 soy products introduced in 2000 alone." Ingredient suppliers in the field of soy are now bearing heavy responsibility for functional food research. ADM, Cargill, Central Soya, and Protein Technologies International (PTI, owned by DuPont) are all investing in research, education, and consumer outreach–plus innovation in processing and new ingredients. One of the largest uses of soy protein is SlimFast, but the health benefits of soy are not the shopper's first consideration.

3448. *Nutrition Business Journal* (*San Diego, California*). 2001. Kellogg debuts heart-healthy cereal: Kellogg extends Kashi into functional area, adds organic breakfast patties, and tests healthy snack bar. 6(10):12. Oct.
• ***Summary:*** In mid-October the Kellogg Co. announced its deepened commitment to offering healthful food alternatives by a major change to its Worthington Foods' Natural Touch line of vegetarian entrees. The company says that all of its "top products" in the Natural Touch line just went organic.

Kellogg's Garden Veggie Pattie, Okara Pattie, Spicy Black Bean Burger, and new Breakfast Pattie will all be made with organic ingredients and will be in stores starting in January 2002.

Another big announcement by Kellogg is its formation of a multi-year alliance with the Walt Disney Corporation. "The deal gives Kellogg exclusive rights to develop and market co-branded Disney / Kellogg breakfast foods centered around Disney characters." Moreover, Kellogg has been named "official sponsor of breakfast" at Walt Disney World.

3452. Eden Foods, Inc. 2001. The history of Eden Foods. Clinton, Michigan. 3 p. Unpublished typescript. Undated.
• ***Summary:*** This chronology (1967-2001) begins as follows: "1967–Michael Potter and a small group of students on the Univ. of Michigan campus, begin making collective, small orders of natural foods from two of the largest wholesalers at the time.

"1968–Eden Foods Co-op is established in Ann Arbor, Michigan.

"1970–Eden Foods begins food processing, opening a bakery, cafeteria, and the 'Turtle Island' restaurant in Ann Arbor."

Note 1. The early entries in this chronology are deceptive and inaccurate. They make it appear as though Michael Potter founded Eden Foods since his is the only name mentioned in the chronology and since his name is mentioned just before the business was established. In fact, Potter did not join Eden Foods until Oct. 1971–a fact that is omitted in the chronology.

Note 2. Eden Foods was established in Nov. 1969–not in 1968. All of the founders (Bill Bolduc, Tim Redmond, etc.) and early publications agree on that date.

Note 3. The names of the founders of Eden Foods are, unfortunately, omitted from this chronology.

Note 4. One entry states: "1983–North America's 1st soymilk Edensoy is introduced." In fact, Miller's Soyalac Soya Milk had been made since 1940 in Mt. Vernon, Ohio, by International Nutrition Laboratory, founded by Dr. Harry Miller. It was on the market and sold well for more than 40 years.

© Copyright Soyinfo Center 2014

The later entries are interesting and probably accurate: "1986–Eden opens a warehouse in San Francisco, California. 1987–Eden partners with the Hirzel family of Ohio to grow organic tomatoes, chilies & cabbage for Eden sauerkraut. 1989–Eden Organic Pasta Company becomes the first third party certified organic pasta facility in America.

"1991–The first Eden organic beans are canned in Eaton, Indiana. 1993–Eden expands its facilities in Clinton, Michigan. Eden first questions organic integrity under USDA/NOSB. Eden adopts a policy requiring affidavits from growers and suppliers guaranteeing that their food is GEO-free. 1994–Eden contracts with a cooperative of family orchards to secure organic tree fruit. 1997–Eden sponsors the first whole foods cooking show, 'Christina Cooks' nationally, on PBS. 1998–Eden introduces its first Biodynamic food, Whole Grain Rye Spirals and celebrates its 30th anniversary. 1999–Eden expands its warehouse facility for the eighth time.

"2000–AIB Certification, New Eden web site is launched and Edensoy Light is introduced. 2001–Eden purchases Sobaya, the Canadian producer of Eden Organic Traditional Japanese Pasta. Eden receives the prestigious 'Socially Responsible Business Award' for exemplary business practices. Over 400 vegetarian recipes are posted to Eden's renewed web site, along with detailed historical information, nutritional information and manufacturing descriptions for all of Eden's products." Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

• ***Summary:*** Contents: The monograph series. Introduction. “Mother.” Autobiography. Diary. Work in progress. The Kellogg children. “Regulations adopted by members of our family in 1906.” “The cricket.” Baby Newell. The Haskell home. “Good Health” magazine. Publications. *Science in the Kitchen.* “Union Signal.” Fashion petition. Seventh Day Baptist Church. “In Memoriam.” Women’s Hall of Fame. Timeline of events during the lifetime of Ella Eaton Kellogg. Bibliography. Index. About the author. Acknowledgements.

“Introduction: According to Battle Creek historian Berenice Bryant Lowe, in her *Tales of Battle Creek,* when dietitian and author, Lenna Frances Cooper, was asked if she was the ‘mother’ of home economics, she replied ‘I’m sometimes called the Dean but the “Mother” of Home Economics is without doubt Ella Eaton Kellogg.’ While Ella Eaton Kellogg’s students like Lenna Frances Cooper acknowledged their debt to her, Lowe points out that ‘Ella Eaton Kellogg’s contributions to the growth of awareness of nutrition in America... are immeasurable and unfortunately nearly forgotten.’” Address: Teacher of American, Michigan, and local history, Kellogg Community College.

• ***Summary:*** The best scholarly book seen to date on this subject. Consists of a Prologue (by Mervyn Hardinge) plus 21 chapters, in five sections, by various authors.

This book contains extensive information on soyfoods as follows: Vitamin B-12, homocysteine, meat analogues and soya milks (p. 47). Summary of epidemiologic studies of soy / tofu intake and breast cancer risk (p. 80-81). Vegetarian diets and soy in the prevention of osteoporosis, diabetes, and neurological disorders (p. 120-21, 125). Iron and soy (p. 202-03). Guidelines to achieve an optimal ratio of essential fatty acids in the diet (p. 203; soy is rich in α-linolenic acid). Zinc, calcium and soy (p. 206). Women's reproductive function, menopausal symptoms, phytoestrogens and soy (p. 232-34, 244). Health advantages of a vegetarian diet for the elderly–and soy (p. 254-55). Vegan children, protein and soy (p. 302). Iron and soy (p. 304; "While the percentage of iron absorbed from soy may be low, the total amount of iron absorbed is adequate, because soy beans naturally contain relatively large amounts of iron" (p. 304-05)). Phytoestrogens and soy (p. 312-13). Macrobiotic diets (p. 313-15). Calcium and soy (p. 316). Vitamin B-12, miso and tempeh (p. 319-22). Iodine and soy (p. 323). Health-promoting phytochemicals beyond the traditional nutrients–soyfoods and isoflavones (p. 342-45; One table shows the isoflavone content (genistein, daidzein, and glycitein) of soybeans, roasted soyflour, roasted soynuts, TVP, tofu, tempeh, miso, and soy milk). Another shows the isoflavone content of commercial soy products by the weight of a typical serving, in descending order of isoflavone content (cooked soybeans, dry TVP, dry roasted soy nuts, tofu, soy

flour, soy protein isolate, soymilk, SoyBoy Breakfast Links, soybean chips, tempeh, miso, soy cheese, Ice Bean [soy ice cream], Green Giant Harvest Burger, soy noodles, Tofutti [soy ice cream], soy sauce, soy oil). Protection against cancer and soy (p. 346-47). Help for menopause and bone loss (p. 347-48). Protective substances and soy foods (p. 397-98). Calcium fortified products such as soy (p. 421). Consuming a wide range of vegetable oils from intact plants–soy (p. 421). Developing a vegetarian food guide–Legumes, lentils and peas (p. 428-29; "Among legumes, the soybean possesses unique nutrient characteristics." Many food guides place soy beverages in the milk-dairy category). Table: Comparison criteria for evaluating soy and grain-based beverages (p. 430). The water efficiency of food production–and soy (p. 449; "The water intensity of animal production is much larger than the water intensity of crops. For instance, per gram dry weight, soybeans require about 0.75 liters of water" compared with about 20 liters for cattle). Note: Joan Sabaté is a man. The series editor is Ira Wolinsky, PhD, Univ. of Houston, Texas. Address: 1. Prof. of Chair, Dep. of Nutrition, and Prof. of Epidemiology, Loma Linda Univ., Loma Linda, California.

Vegetarianism and the medieval church. 17th- and 18th-century vegetarianism: Thomas Tryon, the 18th century, evangelicalism. The 19th century: Introduction of physical arguments for a vegetable diet, Sylvester Graham and vegetarianism in America, vegetarianism in Europe. The 20th century: Henry Salt, John Harvey Kellogg, "The Newer Nutrition," the revival of animal rights, environmentalism and vegetarianism, Asian influences on vegetarianism.

As usual, while appearing to treat the subject fairly and objectively, Whorton actually mocks and ridicules it. Why does he continue to be fascinated with this subject he also disparages? The next chapter contains a more accurate and balanced history of vegetarianism. Address: Ph.D., Dep. of Medical History and Ethics, School of Medicine, Univ. of Washington, Seattle, Washington.

3468. The Mail Order Catalog for healthy eating. Winter 2002. 2002. P.O. Box 180, Summertown, TN 38483. 36 p.
• ***Summary:*** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, vegetarian soyfood cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, animal rights, and sustainability.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), miso soup mixes, wheat free soy pasta, soy & rice pudding mixes, soy & nondairy beverages and beverage mixes, soy protein powders & shake mixes, soynut butters, sea vegetables, vegetarian jerky, soynuts, plus foods from Worthington and Loma Linda, Jyoti India Cuisine, and Dr. John McDougall. Address: Summertown, Tennessee. Phone: 800-695-2241.

3469. Praskin, Laurie Sythe. 2002. How tofu came to The Farm in Tennessee, and how Laurie got interested in tofu and vegetarianism (Interview). *SoyaScan Notes.* Feb. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** When The Farm was first settled in 1971, one of the really popular books was *Ten Talents,* by Frank and Rosalie Hurd (1968). They were Seventh-day Adventists and the book was a vegan cookbook that contained two recipes for homemade soybean curd (tofu, p. 195-96). The first used whole soybeans, with Epsom salt as a coagulant; the second used soy flour, with lemon juice as a coagulant. During the first 2-3 years of The Farm, before any tofu was made at a central location, people at home in their buses were using soy flour, with vinegar as a coagulant. The soymilk was never filtered so the okara remained in the tofu.

Alexander Lyon, because he had a PhD degree, was put in charge of learning more about soyfoods and developing soyfoods production at a central facility. In 1972 he started The Farm Soy Dairy.

In 1974 when Laurie arrived at The Farm, quite a bit of this tofu was being made by individuals. She recalls: "It was actually quite tasty. I liked it. It was a nice relief from eating whole soybeans all the time." However the Soy Dairy was making mostly soymilk; occasionally they made "soy cheese" by allowing soymilk to stand until it fermented; the resulting acid caused the separation of curds and whey. The curds were then hung in a sack until firm; the resulting product was quite similar to tofu, even though it was made without use of a coagulant or forming box.

In 1974 Laurie wrote Bill Shurtleff in Japan requesting information on making tofu, and sent him the book *Hey beatnik! This is The Farm book,* published in 1974. Bill sent Laurie pre-publication information on homemade tofu from *The Book of Tofu,* which was published in Dec. 1975. Laurie recalls: "That book was a great help, and a key turning point in The Farm's starting to manufacture tofu on a large scale. I remember just eatin' that book up, and saying 'We've got to do this. You don't need a lot to make it work.'" In early 1975, Alexander Left the soy dairy and Laurie took over managing production.

Laurie (whose maiden name was Sythe) grew up in Los Gatos, California, during the 1960s. She became a vegetarian when she was a teenager (age 15-16), living at home with her parents. The main influence came from her elder brother, Dan Sythe, who was living on Haight Street in San Francisco and was a vegetarian–in fact a fruitarian. She did a lot of vegetarian cooking while in high school, and eventually had her whole family eating vegetarian before she went to The Farm. She recalls buying and cooking with tofu several times during this time–perhaps directly from small tofu makers in nearby San Jose. Dan had a bus, which he drove to Tennessee, arriving on The Farm in 1971 or 1972, shortly after the main caravan of buses arrived in May 1971 on the Martin Farm. He lived on that first Martin Farm. He started "Solar Electronics" on The Farm. Address: 17969 Oak Dr., Los Gatos, California 95030.

3470. *Soybean Digest.* 2002. Healthy growth in soyfoods. Mid-Feb. p. 34-35.
• ***Summary:*** This article is part of a special pull-out insert on "New Uses." Notes that soyfoods have reached a new level of acceptance during the past year with the purchase of Kashi Co. (a natural cereal manufacturer) by the Kellogg Co. Kashi already made lines of soy-enriched cereal and the company recently expanded its line to include GoLean soy-based diet drinks and cereals. Founded in 1984 by Philip and Gayle Tauber, Kashi grew by more than 100% during the fiscal year before Kellogg's purchase–for an estimated $30 to $50 million. In the year 2000 Kashi had sales of about $25 million, compared with $7 billion for Kellogg. But Kellogg sees a continuing trend toward healthier eating.

Color photos show: (1) Packages of Kashi GoLean and Westsoy Soy Smoothie. (2) Various unpackaged soy

products including textured soy protein, soymilk, silken tofu, edamamé, soy cheese, soy hot dogs, breaded soy cutlets, and soy powder. (3) Tortillas filled with cooked whole soybeans and trimmings, a package of Soy Fusion (Berry), and a soy burger between buns. (4) Cover of the 2001 Soyfoods Guide.

3471. Denny, Darrell. 2002. Jack's still jumping: LaLanne looks back at a healthy life. Natural legacy: The people who founded an industry. *Natural Foods Merchandiser.* March. p. 52, 54, 56, 58, 60.
• ***Summary:*** An excellent biography of Jack LaLanne, now age 87. He continues his daily regimen of exercise and vegetarian diet. For breakfast every morning, he has a blended soymilk and protein powder shake, multi-grain organic cereal with soymilk, and a host of vitamins and supplements. He was the first to: Open a modern health spa. Have a nationally syndicated TV show on exercise and nutrition. Introduce yogurt to America. Have athletes work out with weights. Have women work out with weights. Encourage the elderly to work out with weights. Have a combination health foods bar and gym. Develop a weight-loss instant-breakfast meal-replacement drink. Open a coed health club. Combine weight training with nutrition. Make an edible, nutritious snack bar. Sell vitamins and exercise equipment on TV. Encourage the physically challenged to exercise and work around their disabilities. Perform feats of strength and endurance to emphasize the benefits of exercise and good nutrition. For example: In 1954 (at age 40): Swam the length of the San Francisco Golden Gate bridge underwater with 140 pounds of equipment (incl. two air tanks)–an undisputed world record. Age 41: Swam handcuffed from Alcatraz to Fisherman's Wharf in San Francisco.

He was born in 1914 to French immigrants. When he was 15 the family lived in Berkeley, California, and his mother, a devout Christian, had become a Seventh-day Adventist years before. Jack was unhealthy and unruly. A lecture in Berkeley by health food pioneer Paul C. Bragg changed his life. Bragg told him that if he obeyed nature's laws he could be born again. Contains many good photos of LaLanne, and one cartoon illustration. Address: Executive VP/president Penton Lifestyle Media.

3472. Specialty Foods Investment Co. 2002. Natural Touch: Nourish your body and spirit (Ad). *Natural Foods Merchandiser.* March. p. 81.
• ***Summary:*** The top half of this full page color ad shows an Okara Patty on a sesame bun with lettuce and sliced onions. At the top: "Now made with organic soy!" Below that are the front panels of four packages of Natural Touch products: Breakfast Patties (New), Okara Pattie, Veggie Medely, and Tex Mex Burger. At the bottom left: "from Morningstar Farms." At the bottom right: "A proud supporter of: Global Re-Leaf, www.Americanforests.org."

Note: This company is owned by the Kellogg Co., which also owns Worthington Foods. Natural Touch is their natural food line.

3473. Soyatech; FBX / IQPC. 2002. SoyFoods 2002: June 25 & 26 2002, The Hyatt Regency O'Hare, Rosemont/Chicago, IL. www.foodbevx.com (Brochure). Bar Harbor, Maine. 3 p. 28 cm.
• ***Summary:*** This fax brochure begins: "Soyatech is pleased to announce its participation in a very important landmark conference for the soyfoods industry." The U.S. soyfoods market has been growing at double digit rates for the past 10 years and the future looks promising. But the market is maturing quickly as big food companies enter: Kellogg, Kraft, General Mills, Dean Foods, ConAgra, Unilever, and Heinz. Soyfoods 2002, is produced by IQPC in association with Soyatech, Inc. Those who register by April 16th will receive a $300 discount. The price is very expensive: $2,799 for the conference plus two workshops or $1,799 for the conference only. This brochure gives the conference's "agenda highlights" but none of the names of the speakers or presenters.

2002 April 20. A second printed glossy brochure (green and yellow on white) arrives from the Food & Beverage Exchange (FBX), giving much more detail and the names of the speakers. The headline is: "IQPC & Soyatech are teaming up to bring you the most compelling technology and market driven two-day conference specifically for the soy industry." Two additional prices have been added: $3,199 for the conference plus three workshops. $3,299 Gold Package: Conference plus ALL workshops. Address: Bar Harbor, Maine. Phone: 1-800-882-8684.

3474. *SoyaScan Notes.* 2002. The American Tasting Institute (ATI/AOTA) and their Gold Taste Awards (Overview). May. 18. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following information comes mostly from the company's website: www.awardsamericas.com. The American Tasting Institute is a private organization, founded in 1985, comprised of about 35,000 professional chefs. They are headquartered at 211 Sutter St., 5th Floor, San Francisco, California 94108. Phone: 415-982-0781. The organization is also called AOTA = Awards of the Americas.

In awarding gold medals, at least six leading chefs conduct a double-blind test on products in a specific category. The highest scoring product in each category is offered the Institute's Commercial Gold Medal Endorsement Program. It is offered to only one company in each category. Acceptance requires payment of an annual fee.

The following companies have accepted gold medal awards in soy-related categories (mostly in the natural-foods category): Soybean milk–Vitasoy. Soy chips/crisps–Snackie Jack. Soy protein drink: Next Nutrition, Inc. Yogurt, soy–Silk Cultured Soy (White Wave). Tofu–Nasoya. Veggie

Burgers–Worthington Foods / Morningstar Farms.

3475. Demos, Steve. 2002. White Wave's 25th anniversary: How Steve sold White Wave to Dean Foods for $189 million (Interview). *SoyaScan Notes*. June 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Steve is at the farm. White Wave's 25th anniversary is coming up in September. At Goldman-Sachs Steve has given his presentation on Jack and the Beanstalk: A modern day fairy tale. "Depending on who I'm talking to, I bring 'Right Livelihood' into it. 'Right Livelihood,' to me, is at the root if it, but we don't always talk about it because we're not going to use that as the reason for the success in the business model. The business model has to be successful because it is a good business model, its based in Right Livelihood, but I don't want to become the Right Livelihood company, I want to become the business model that was very successful because it was based on Right Livelihood."

"Dean Foods is making a commitment to entering the branded foods business. And they've also chosen the healthy benefits foods to be part of that. This was somewhat of the introduction of the investment they had made, by me just giving the 'street' (Wall Street), so to speak, an update on the soy industry and White Wave." Dean Foods has owned brands before, but they have all been relatively small and No. 2 or 3 in their category. Dean Foods has about $250 million a year in cash flow. This money is looking for a home. They need to invest their stockholder's money or give it back to them. Dean Foods is saying, hey, the way to use the money here is to invest in these value-added, branded foods. Where is the most growth coming from? The legitimate, natural, nutraceutical, healthy benefits, organic type of foods. We ring every one of those bells.

"Our business model is a series of very conscious choices going all the way back to the product itself. It's good for me, good for you, good for everybody who touches it. Right Livelihood is values-based business, or principal-based business.

"We ultimately gave away 10% of the company back to the employees. But we did it in two different ways. Round one came a few months ago; when we saw that this was very likely to occur, we awarded stock options (at the lowest possible price) back to the employees based on job responsibility and contribution to growth. That was 5% of the company. Everybody made 3-5 times what the price was of the option was. Nobody turned it down because it was absolutely free money. The option was something like $10 and the stock sold for $130; who is going to turn that down? The second round came from the five largest stock holders based only a years one had worked for the company. We have talked about this before so there is no need to go over it again."

Looking back over the past 25 years, what are the things that have been most important to White Wave success? "One is innovation. The willingness to constantly try until you find something that works. If you look at the number of attempts versus the number of successes, clearly we are in our own one in a hundred, or even five hundred. We've introduce a lot more failures over the years than we have Silks. In the process, by innovation, we taught ourselves key things. Now, I could tell you how to make a soy product in any factory, virtually for any type of soyfood, from burgers to ice creams, from fermented to curdled. That gives us a different perspective, and it gives us insights into how soy is going to get into the mainstream diet. All that experience and all that time we have come to understand how it is accepted, what is accepted, what they are looking for. In this industry, I think this is somewhat unparalleled. We've tried everything but miso.

Second, we made a business model that was highly profitable and we proved it by investing in all the right stuff. We made all the right decisions for this business model so that we could prove that we could finance growth on our own, without a bank. And over the past several years, since we initially took on Dean's money, we haven't received anything else, and yet we've probably tripled in size–and the numbers were quite large."

When do you think that business model was first clear in your head? "It was at least 5 years ago I saw the three levels of profit that are associated with the soymilk business: Extraction, packaging, and distribution. All are money-makers but two of those are owned by the dairies. So my whole business model was: Use the infrastructure that existed, because the dairies had it all in place, and basically tell them you'd pay them more than they were currently making from their normal cow juice stuff. Once we sat that that was, in fact, true, then we started getting more and more interest on our side in going to a vertical business model, because the profits that were present with packaging and distribution were so much bigger than manufacturing the extract. We're about to start that with Dean Foods; the next step is proving this business model. In the past, White Wave has not been packaging; we have only been extracting. But we got control of how we distributed the extract by where we located the extract. It's funny. You can pay Mother Nature to distribute for you–in other words use the water where you find it and need it–or you can pay truckers to distribute if you happen to ship a heavy water product all over the U.S. So we located our extraction systems located in different parts of the U.S.–more efficient for where Silk was being packaged. And then we bought our own extraction. We have not put in our own processing / formulation, which is one more profit level that we haven't even seen yet, and we're already a very handsome business model. White Wave presently has two different extraction locations, but the company draws off of four. We have an arrangement with another company [such as Sunrich] to supply us. White Wave makes about 50% of the Silk sold and the other company also makes 50%. White

© Copyright Soyinfo Center 2014

Wave does not necessarily want control of 100%; there are headaches that come with that. It is expensive to build a soymilk extraction facility. We are focusing our money on ramping up sales.

Anything else? "Over the past 25 years White Wave has stayed true to our principals–but those are things I take for granted. Some people seem to think that those are great achievements. I think they are normal, which is why I don't mention them. How else would I do it? But it's apparent that there are not a lot of people who walk their talk–at all; it's unfortunate. So, even through some very difficult times, we did not compromise our morals or ethics in running the business. We probably compromised our personal well beings [overwork, stress], which is not all that good. But hopefully, we'll be making up for that.

What was it like when White Wave began operations in 1977? Natural foods were bulk only. Organic was known, but there was no differentiation between organic and natural because nobody had yet deceived the public with a fake product. I had started a natural foods store in Pennsylvania based on no packaging, all bulk. So natural foods was a lifestyle but had not been compromised by business yet. There were not a lot of natural foods stores in the U.S. in 1977 and they were mostly co-ops. The big natural foods stores came a few years later. The chains and supermarkets (such as Whole Foods and Wild Oats) came 10-15 years later."

Organically grown? "We used to go to Walnut Acres, one of the original organic meccas, to buy all our flours and grains for my natural food store named Touch the Earth in Pennsylvania. I have a clear memory of the bottom third of the bag being dirt. It was organic all-right. We always knew that we had to watch for stones and dirt in anything sold as organic. God knows why!

Soyfoods? "I don't think the word had been invented or was well known. 'Tofu' as a word was starting to be known, partly because of what you were doing at that time. My first experience of making tofu came through the Seventh-day Adventists–through the Bible we used to carry around–*Ten Talents*. It had a recipe for making bean curd. Of course soy sauce was well known. In 1977 there was no category of foods called 'soyfoods' and there were no companies that were soyfoods companies" (Continued). Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

3476. Demos, Steve. 2002. White Wave's 25th anniversary: How Steve sold White Wave to Dean Foods for $189 million (Interview). *SoyaScan Notes*. June 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Vegetarian? "You were either Indian (from India) or you could have been a left-over hippy from the 1960s, and then there were the Seventh-day Adventists. My father often talked about a couple of people that he was in business with that were into yoga and were vegetarians. I didn't know anybody who was not eating any animal products.

Non-dairy? "Rich Products and whipped toppings or coffee creamers were starting to come about, and maybe infant formula. I think that would be about it for non-dairy.

In the 1960s, Steve bought tofu from a store named Seeds of Life on Telegraph Avenue in Berkeley; it sold foods only in bulk–no packaging. "You weighed your food and priced it yourself. It was Utopian food shopping."

Meat alternatives? "That would have to be Worthington Foods with fake sausage. And they certainly weren't called 'meat alternatives.' They were called 'meat analogs.'"

The diet-health connection? "That idea came in in 1984 with a *Time* magazine cover story–'And now the bad news.' There were two fried eggs for eyes and a piece of bacon doing a downward grin. I use that in a lot of my talks. That was the beginning of the mainstream diet-health consciousness. Up until that point it was calories and calories only–which had to do with gaining weight; it was not yet about disease and diet and well being. Up until that time the cholesterol hypothesis–the theory that cholesterol caused heart disease–had not been proved. Francis Moore Lappe and *Diet for a Small Planet* arrived in the early 1970s–diet and the planet. Now we had diet and consciousness, and environment and consciousness. This whole idea that diet and health were related did not reach most Americans until the 1980s." When Steve started making tofu he saw it as a complete food low on the food chain. It seemed to him inevitable that such foods had a bright future. "To me, it was the environmental and the moral animal-rights issues that I was focusing on, far more than I was on diet and health issues. Yet we were looking at tofu as a healthier food–no question. But it was only in the mid-1980s that Americans started to get into the disease-related part of that. Remember, our generation organized the first Earth Day in April 1970, so there was already the realization 'Aren't we living a little too high on the hog?' From there people began asking 'How are we going to save the planet?' Many of us tried to apply ourselves to this question in some individual way. Lots of us ended up working with food."

Health benefits of soy in 1977? "Complete protein is the only thing I can think of. And most people didn't even think that soy was a complete protein. Many people still don't know that.

"The key thing about founding White Wave in 1977 was we had no experience, no money and no access to any. And those translate to no confidence. You don't need both experience and money, just one or the other–in order to have confidence. Now, we know this market. We helped to create it. So we have a high degree of confidence in what we think about it and where we're going with it. That's a big difference. I have all the faith in the world that I know how to think; the question was what I wanted to think about.

© Copyright Soyinfo Center 2014

Making tofu looked like a pretty good thing to think about. So I just paid attention and learned as I went along. I also know that I had some genetic tendencies that way because of my father, Anthony.

"He was a successful entrepreneur–and still is. He started his own company semi-processing minerals and alloys when he was in his 30s. He would crush and size, and then sell that material to the welding-rod or steel industry. His company now has sales of a few hundred million dollars and has a few hundred employees. When we sold White Wave to Dean Foods he was ecstatic. He was an investor in White Wave to boot. He made double digit millions on the deal. He didn't have much faith in his son when I started in 1977, but he does now! He first invested in about 1983-84 when White Wave was in deep financial trouble. Steve's mom, Lorraine, is still alive and her support for Steve has always been strong and positive. She always believed I was an OK person, and she let me know that–like any good mother. My actions had to be honorable; it didn't matter much what they were. My father, likewise, is a man of very high integrity–he just didn't believe in what I was doing. But he started relating to me in a completely different way after we sold White Wave.

"I grew up outside of Philadelphia near Villanova and Bryn Mawr. One brother was a surgeon, the other an attorney. In the 1970s my family basically gave up on me. The joke was: Where's Steve? Oh, he's off in India, up some tree somewhere. We paid for his education; what a waste. But he who laughs last laughs hardest. There is a certain vindication when everybody in your family is capable of retiring because of what you've done.

"I remember going to visit Azumaya (I don't recall what year), and I was very impressed at how big it was–so industrial. It looked like such big equipment. And I remember that they were hand curding and hand ladling. I thought: It will take me decades to get near the money to buy equipment like this. I tried to get money many times, but no bank would lend money to a small tofu manufacturer. White Wave got almost all its money from my family–and Pat Calhoun's folks, but to a much smaller extent. White Wave's five major shareholders are: (1) My elder brother, Jack, who is a surgeon and who carried the investment for the company. (2) My father, Anthony. (3) Myself. (4) Pat Calhoun. (5) A man by the name of Michael Sutton–an attorney friend of ours, early in the game, who ended up investing a lot. He's the luckiest person on the planet right now. That was the only way White Wave was able to finance its growth over the years.

"The first bank loan came in about the mid- to late 1980s, and it was for equipment. At one point White Wave got an SBA (Small Business Administration) loan for several hundred thousand dollars; it ended up being a nightmare. That helped finance the expansion into two production facilities. Within the last 3 years White Wave issued industrial revenue bonds through a state & federal program and raised $13 million. We used the money to build two Silk extraction facilities and to rebuild the tofu factory.

"When Dean Foods made its first investment of $5 million in White Wave in Aug. 1999, all of the money was used for product placement and marketing of Silk. Half of that money went specifically to slotting allowances / fees to supermarkets. We almost never lost a slot, but in some cases we actually went back and paid twice. The rest the money was used for samples, PR (public relations) and advertising. In May 2000 we got a new PR agency that is still with us: Carmichael Lynch Spong, of Minneapolis, Minnesota. They have done a great job for us. We had already put in place all of the financing of the equipment for the capacity expansion. It's not too hard to raise money for equipment; the risk-takers can always take back the equipment and sell it."

Nine months later, having spent the initial $5 million, White Wave went back to Dean Foods. But things had changed for the better. Sales had now risen to $28 million. This time Dean invested $10 million.

Did White Wave have any important firsts? "(1) We took a deep look at foods and challenged how they were being presented. We didn't stop challenging until we found a way that worked and was accepted. We put Silk soymilk in gable-top cartons like milk and put it in the dairy case. When Silk took off, it was everything we could do just to hold on. Silk now has sales of $170 million a year; all of White Wave's other products might be $10-15 million. (2) We flavored tempeh and tofu, and basically created the 'flavored tofu' category. (3) We were the first to do shelf sets with soyfoods. We put up 'Vegetarian Cuisine' centers in Whole Foods markets in the San Francisco area. Ultimately we ended up organizing the entire case around vegetarian foods. (4) Use of the word 'vegetarian' boldly with our product line. It was just one more extension of our lifestyle. The Farm in Tennessee did much the same thing but on a much smaller scale. We need to get back to that idea" (Continued). Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

3477. *Nutrition Business Journal* (*San Diego, California*). 2002. U.S. consumers gain appetite for meat alternatives: Boca, Gardenburger and Sunrich expand market with new meat alternative products. 7(7):4-6. July.
• ***Summary:*** A pie chart shows the $395 million meat alternative market (wholesale figures, 2001) divided as follows: Kellogg (Morningstar Farms) 45%. Kraft (Boca Burger) 15%, Gardenburger 14%, ConAgra (Lightlife) 11%, Hain Celestial (Yves Veggie Cuisine) 8%. This converts to about $550 million in consumer sales, with about 60% via the mass market channel, 30% through natural / health food stores, and 10% through other channels. Soy-based meat alternatives accounted for about 85% of those sold in mass market outlets and 80% of those sold in natural /

© Copyright Soyinfo Center 2014

helath food stores. Growth during the previous year (2000) was estimated at 14.5% (16.4% in mainstream and 10.1% in natural / health).

In mainstream supermarkets and grocery stores, frozen products account for 68% of meat alternatives, while the remaining 32% are refrigerated. In natural food stores, 59% are sold refrigerated and 41% frozen. In the refrigerated category, Lightlife claims to have 50% of the market in natural food stores, followed by Yves (34.5%) and Veggie Patch (3%).

A new major player is Quorn, a European company making products from mycoprotein (myco = mold or fungi, not mushrooms).

Kraft owns both Boca Burger and Oscar Meyer; the latter just entered the meat alternative business. Kraft's newest introduction is Boca Ground Burger in microwaveable pouches, for use in recipes ranging from tacos to spaghetti.

3478. *Nutrition Business Journal* (*San Diego, California*). 2002. Quorn enters U.S. market for meat alternatives: Sales grow for meat-free entrees amid mushrooming controversy. 7(7):7. July.
• ***Summary:*** Quorn Foods Inc. (Riverside, Connecticut) entered the U.S. market in January 2002, and has since generated $1 in sales–along with plenty of controversy over Quorn's main ingredient, mycoprotein. Quorn products are marketed by Marlow Foods, a division of AstraZeneca. Last year their retail sales in Europe were $170 million, according to the company. Product labels describe mycoprotein as a "small, unassuming member of the mushroom family." But both Gardenburger and Center for Science in the Public Interest have petitioned the FDA claiming that Quorn is mislabeled.

Quorn now has 7 SKUs in 1,000 U.S. stores, all frozen, including chicken-style nuggets, chicken-style tender, lasagna, and a beef-style ground ingredient. However in Europe, Quorn sells more than 90 SKUs, equally divided between fresh and frozen. Quorn's U.S. pricing is competitive with other meat alternatives at $3.79 for a typical entree, or 10-15% higher than similar meat-based products.

Quorn says that 45% of European households buy frozen meat alternatives each year versus only 15% on the USA. The company claims that in taste tests American consumers prefer Quorn products to their Morningstar Farms counterparts by two to one. Morningstar is the leading U.S. meat-free brand.

3479. *Nutrition Business Journal* (*San Diego, California*). 2002. Summary of organic initiatives by large corporate entities. 8(11):17. Nov.
• ***Summary:*** Coca-Cola has acquired Odwalla. ConAgra, Inc. acquired Lightlife Foods. Danone acquired part of Stonyfield Farm. Dean Foods acquired White Wave and Suiza (which owns 14% of Horizon Organic Dairy). General Mills acquired Small Planet Foods (Cascadian Farms, Muir Glen brands). Kellogg acquired Kashi and Worthington Foods. Kraft Foods acquired Boca Burger.

3480. *Nutrition Business Journal* (*San Diego, California*). 2002. Top U.S. natural & organic food companies, 2001. 8(11):5. Nov.
• ***Summary:*** For each of 43 companies gives the ranking by sales, the natural / organic sales in 2001 ($ million), the percentage of natural & organic that are organic, and the organic sales in 2001 ($ million).

The following companies make soyfood products: 1. The Hain Celestial Group $360. 2. Kellogg (Worthington, Kashi) $255. 4. Coca-Cola (Odwalla, Mad River Traders) $160. 5. Dean Foods (White Wave, Alta Dena) $150. 8. General Mills (Sunrise, Cascadian Farms, Muir Glen) $125. 11. Stonyfield Farm $85. 13. Amy's Kitchen $76. 14. Vitasoy USA Inc. $75. 15. Imagine Foods Inc. $70. 19. Pacific Foods $63. 20. Kraft Foods (Boca Burger) $60. 23. Eden Foods Inc. $57. 25. Gardenburger $55. 29. Galaxy Nutritional Foods $42. 33. Conagra (Lightlife Foods) $35.

Sum of sales of top 43: $3.28 billion. Sum of organic sales of top 43: $1.63 billion.

3481. Shao, Margaret. 2002. *Parkia biglobosa:* Changes in resource allocation in Kandiga, Ghana. Master's thesis, Michigan Technical University. vi + 106 p. http://forest.mtu.edu/pcforestry/people/1998/shao.pdf [72 ref]
• ***Summary:*** Contents includes: 1. Introduction. 2. Background... 5. *Parkia biglobosa:* Botany, traditional uses, process of dawadawa preparation, microbiology and fermentation, natural regeneration [of the trees] (p. 44-78). 6. Soybeans (p. 79-82). 7. Results and discussion. 8. Conclusion. 9. Literature citations. 10. Appendix.

"In 1757, Michel Adanson first recorded *Parkia biglobosa* during his collecting trips to Senegal and Gambia. Although Adanson did not name the tree, in 1763 Nicolaus Jacquin formally published the valid binomial name *Mimosa biglobosa."* In 1826 Robert Brown suggested renaming the genus *Parkia* to commemorate Mungo Park, a Scottish surgeon who explored western Africa in the 1790s, following the course of the Niger River (p. 44). *Parkia biglobosa* is a leguminous tree. A photo (p. 45) shows the tree. Bats are the primary pollinators of this tree. "The fruit or seedpod is the most widely used and economically important part of the tree... In Feb. or March the pods, when green, fleshy, and pliable are sometimes eaten by humans after roasting the pods over embers" (p. 48, 52). Baboons, chimpanzees and other primates also feast on the immature pods–thus competing with humans.

A map (p. 52) shows the distribution of *Parkia biglobosa* trees in Africa (adapted from Hall et al. 1997); it is

© Copyright Soyinfo Center 2014

found in 19 African countries.

"In March and April, the beginning of 'hunger season' when other foods are becoming scarce, mature pods are collected for food. The seeds are used in preparation of dawadawa, a protein and fat rich food.

This tree has many important medical uses. "The name of the tree and the food product, dawadawa is from Hausa, the lingua franca of West Africa spoken by over" 50 million people in western Africa. Hausa borrowed many words from Arabic, and these greatly influenced its vocabulary. In Swahili, also a language of Arabic origin, *dawa* refers to any medicament supplied by a doctor. A decoction of the seeds, pounded with salt and fermented is used to treat tension, mouth ulcers, skin infections, and wasp or bee stings.

The process of making dawadawa from locust bean seeds in Kandiga, Ghana, is described (p. 58-65) and a flow chart appears on p. 63. "A more recent processing method is to add fermented soybeans as a filler, increasing the volume, diluting but not losing the preferred taste of the traditional dawadawa" (p. 64).

"The process of producing soybean dawadawa is similar with only one critical and major difference. The first major step of boiling the seeds of *P. biglobosa* for fourteen hours is changed to only one hour of boiling of the soybeans. The composition of *P. biglobosa* seed is 30% testa [seed coat] and 70% cotyledons (Campbell-Platt 1980) compared to soybean which is10% testa and 90% cotyledons (Wolf 1971). The soybeans have a thin seed coat; the bran is easily removed after only one hour of boiling. An alternate method of removing the bran is to dry roast or fry the soybeans, imparting a golden brown color to the soybeans, then the beans are pounded to remove the bran (Odunfa 1986). The sequence of steps then follows the traditional method." The author observed one woman and two men "produce both the traditional and soybean versions of dawadawa.

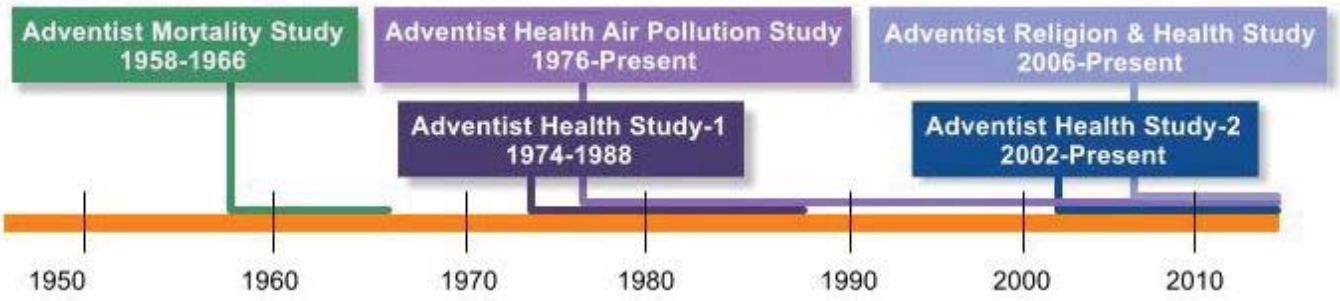
"The traditional dawadawa is greatly preferred for taste over the soybean version. Every person I interviewed for this study preferred the traditional. I believe this is due to the recent introduction of soybeans and slow adoption or acceptance of new foods. Konlani et al. (1999) states that *tonou* in Togo is now prepared from soybean. However, those interviewed would only use the soybean version because it was a cheaper substitute or because the traditional dawadawa was not available.

"One of the major advantages, perhaps a critical advantage in the future, is the shorter boiling period of the soybeans. The traditional dawadawa takes an enormous amount of fuel wood to boil the *P. biglobosa* seeds for fourteen hours when compared to the one or two hours necessary to boil the soybeans. Fuel wood is a precious commodity in all of West Africa and a major factor driving deforestation in northern Ghana" (p. 65). "In Kandiga, the dawadawa is usually sold in the market by young children, mainly girls, and women" (p. 66).

The chapter on "Soybeans" states: "West African countries are looking to soybeans as 'the miracle crop' to alleviate malnutrition and poverty" (p. 80).

"In 1987, the International Institute of Tropical Agriculture (IITA) supported with funds from the International Development Centre (IDRC) aggressively introduced soybeans into Nigeria. In 1985, Nigeria only produced 28 metric tons and in 1995, production increased to 200,000 metric tons (Dashiell 1998). In the last 20 years, several agencies within Ghana have advocated soybean cultivation. Ghana's Ministry of Food and Agriculture (MoFA), Adventist Development and Relief Agency (ADRA), Catholic Relief Services (CRS), and other NGOs have been educating, promoting, and assisting farmers in the cultivation and use of soybeans" (p. 81).

"The presence of soybeans in Kandiga, both in the market and in the fields is on the increase. I worked directly with ADRA (Adventist Development and Relief Agency) farmers promoting agroforestry. Those chosen by ADRA were low-resource farmers who needed assistance attaining self-sufficiency. One of the expectations from ADRA for the farmers was to cultivate soybeans. Farmers were given soybean seed on credit and the assurance that ADRA would buy the harvest in lieu of cash for payments on farmer's loans. I observed that non-ADRA farmers would also plant soybeans in their fields. One example was a widow, a neighbor of mine who farmed a small plot of soybeans from seed given to her from an ADRA farmer. The crop yields could vary with rainfall and proper spacing and cultivation methods. The greatest obstacle to the success of soybeans in Kandiga was that approximately half of the ADRA farmers would sell the seed for cash immediately, instead of planting it on their farms." Photos show: (1) Forming balls of dawadawa. (2) Dawadawa balls left out to dry. (3) Royco bouillon cubes (top), traditional dawadawa (left), soybean dawadawa (right).



The author observed the increased substitution of soybeans for locust beans.

Note: This thesis was submitted toward a Master of Science in Forestry. The research was conducted from Sept. 1999 to Dec. 2001 during her service with the Peace Corps in Kandiga, Upper East Region, Ghana. Address: Michigan Technical Univ., Houghton, Michigan.

3482. Adventist Health Study-2 (AHS-2) starts at Loma Linda University. 2002. http://www.llu.edu/public-health/health/about.page

• ***Summary:*** "Adventist Health Study-2 (AHS-2) is a health research study of 96,000 Seventh-day Adventists in the U.S. and Canada. Adventists, due in part to their unique dietary habits, have a lower risk than other Americans of heart disease, several cancers, and probably high blood pressure, arthritis, and diabetes. This, along with their wide variety of dietary habits, provides a special opportunity for careful

© Copyright Soyinfo Center 2014

research to answer a host of scientific questions about how diet (and other health habits) may change the risk of suffering from many chronic diseases.

"Two previous studies on Adventist health involving 24,000 and 34,000 Californian Adventists have been directed from Loma Linda University over the last 40 years. These have been among the first to raise scientific awareness of the close relationship between diet and health. This groundbreaking work has brought visibility and accolades to the lifestyle recommended by Seventh-day Adventists from both the scientific and lay communities.

"Dr. Gary Fraser with a team of researchers from the School of Public Health, Loma Linda University, is conducting the study."

"History of Adventist Health Studies:

"Studying Seventh-day Adventists: Seventh-day Adventists (Adventists) have increasingly become the objects of epidemiologic studies, both because they tend to be far more homogeneous in many lifestyle choices and because they are more heterogeneous in nutritional habits than the general population. Certain lifestyle characteristics, such as heavy cigarette smoking, consumption of alcohol, and diets heavy in fats may confound or modify the effects of other factors, making it difficult to study members of the general population.

"In the Adventist population, these potentially distorting characteristics are largely absent, making other factors more easily observed. Perhaps even more importantly, the wide range of dietary habits, from strict vegetarianism to a normal American diet, greatly enhances the ability of investigators. Below are links to summaries of each of the five major Adventist Health Studies conducted by researchers at Loma Linda University.

"Adventist Mortality Study: 1958-1966: The first major study of Adventists, begun in 1958, has become known as the Adventist Mortality Study, a prospective study of 22,940 California Adventists. The study was conducted at the same time as the large American Cancer Society study of non-Adventists, and comparisons were made for many causes of death between the two populations.

"Adventist Health Study-1 (AHS-1): 1974-1988: The second major study was designed to determine which components of the Adventist lifestyle give protection against disease. Over the course of the study, several questionnaires were mailed to 34,198 California Adventists. In the beginning, AHS-1 was primarily a cancer investigation. (See a PDF of cancer findings.) In 1981, a cardiovascular component was added.

"Adventist Health Air Pollution Study (AHSMOG): 1976-Present: The AHSMOG Study is a substudy consisting of 6,338 California Adventists who were members of the parent AHS-1. It is believed this population provides a unique opportunity for also investigating the health effects of long-term exposure to ambient air pollutants with very little confounding (distortion) by active tobacco exposure. Since 1977, the cohort has been followed and monitored for newly diagnosed malignant neoplasms, coronary heart disease, and all-cause mortality.

"Adventist Health Study-2 (AHS-2): 2002-Present: With 96,000 Adventist participants in the U.S. and Canada, AHS-2 is one of the largest and most comprehensive studies of diet and cancer in the world. It is also one of the largest dietary studies of Black/African Americans and will help answer why this group has a disproportionate amount of cancers and heart disease.

"Adventist Religion & Health Study (ARHS): 2006-Present: ARHS is a substudy of AHS-2 consisting of 11,000 Adventist Americans who are members of the parent AHS-2. It aims to understand what specific aspects of religion, life stressors and other health behaviors account for better or worse health and trace some of the biopsychosocial pathways to health."

3483. White (Ellen G.) Estate. 2002. Legacy of Light: An interactive journey of faith, heritage, & prophecy (Compact disc–CD-ROM). Silver Spring, Maryland.

• ***Summary:*** Contents of this two-CD interactive multimedia collection: (1) Library. All of Ellen White's 375 published works with a comprehensive index. Take a self-guided tour of the White Estate Vault. 3484. Praestiin, Julie. 2003. Sanitarium buys out Soyaworld. *Record* (*SDA, Victoria, Australia*) 108(2):3. Jan. 18.
• ***Summary:*** Kevin Jackson, CEO of Sanitarium Foods (Australia), recently announced the company successful purchase of SoyaWorld in Canada. "'On entering the initial agreement [about 2 years ago] we purchased half of the business and also negotiated an option to buy the remaining part of the company. We have now exercised our option to purchase the remaining 53% of SoyaWorld, and, as such, we now own 100 per cent of the Canadian company' said Mr Jackson on announcing the takeover."

SoyaWorld, which produces So Good soymilk, now has a 60% share of the soymilk market in Canada. Its current annual sales is about $A46 million (Australian). A photo shows Kevin Jackson. Address: Berkeley Vale, NSW, Australia.

3485. *Institutional Investor.* 2003. CEO interview with Alberto Weisser of Bunge: Taking the leap. A low-key agribusiness giant is stirring. Its seventh acquisition in roughly three years–France's Cereol–won't be its last. Jan.
• ***Summary:*** Though Bunge is not a household name, the company produces more bottled salad and cooking oils than any company in the world–but it generally sells these commodities to familiar brand-name packagers such as General Mills, Kellogg Co., Frito-Lay, Nestlé, etc. With the acquisition last year of French agribusiness Cereal, Bunge now has 24,000 in 28 countries and a very strong presence in Eastern Europe.

Bunge has recently made two major transactions: (1) Its initial public offering (IPO) in August 2001, by which the company raised $278 million by floating 23% of its shares on the New York Stock Exchange. (2) Its acquisition of Cereol, the French agribusiness, which enabled Bunge to jump from 8 million tons of oilseed processing capacity in 1997 to 32 million today. Cereol is the biggest of 7 acquisitions completed since 1999.

Bunge was founded in 1818 by Johann Peter Gottlieb Bunge, a Dutch grain trader. Descendants of the founders were still running the company in the early 1990s, however the location of its headquarters have bounced around from Amsterdam to Rotterdam, Antwerp (Belgium), Buenos Aires (Argentina), Sao Paulo (Brazil, where it stayed for 30 years), and White Plains, New York (since 1999, to be closer to the hub of international trade and finance).

Weisser, age 46 and a native of Brazil, joined Bunge in 1993 as CFO and in 1999 became CEO. Bunge has 3 main divisions: Agribusiness (which includes soybean processing), food products, and fertilizers. Though a giant, Bunge is only about half as big as ADM, the U.S. agribusiness colossus, and its market capitalizations is only about one fourth of ADM's. Bunge went public mainly to gain access to new kinds of financing–equity capital. The transition from family ownership went smoothly.

3486. Little, Janice. 2003. Dr. John Harvey Kellogg's financial problems near the end of his life (Interview). *SoyaScan Notes.* June 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Kellogg had increasing financial problems towards the end of his long and very productive life. The Battle Creek Sanitarium was sold to the U.S. government in 1940. He died insolvent. He and (after his death in Dec. 1943) his estate had to sell his private libraries and furniture to pay his debts. The Heritage Room of the Del E. Webb Memorial Library has a bookcase filled with Dr. Kellogg's personal books. It was donated by Dunbar Smith, who was a close friend of Dr. Kellogg.

Dr. Kellogg spent the last third of his life outside the Adventist church; he was expelled or "disfellowshipped" in 1907. Address: Library Asst., Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-558-4942.

3487. Mangels, Reed. 2003. Nutrition hotline: Omega-3 fatty acids and DHA. *Vegetarian Journal* (*Baltimore, Maryland*) 25(3):2, 23. [43 ref]
• ***Summary:*** The omega-3 fatty acid that Kellogg may be adding to its products is DHA (docosahexaenoic acid), which is usually found in fatty fish. The fish get it by eating microalgae. Martek Biosciences Corp. has skipped the fish and developed a vegetarian (and probably vegan) DHA directly from the microalgae. The health benefits of DHA and omega-3 fatty acids are discussed. "Our bodies are able to produce some DHA from alpha-linolenic acid, another omega-3 fatty acid, but we are not very efficient at this production. To maximize DHA production, vegetarians are encouraged to include good sources of alpha-linolenic acid" in their diet–flaxseed, tofu, soybeans, etc. Address: PhD, RD.

vegetarians in the United States eat? *American J. of Clinical Nutrition* 78(3S):626S-632S. Supplement. Sept. [29 ref] Address: 1. Dep. of Nutrition, School of Public Health, Loma Linda Univ., Loma Linda, California.

3490. Nelson, Tina. 2003. SANA [Soyfoods Association of North America] 25th anniversary celebration. September 4, 2003. Washington, DC: Soyfoods Association of North America. 2 p. 28 cm.
• ***Summary:*** A brief and superficial story of the founding of the Soyfoods Association of North America in July 1978 in Ann Arbor, Michigan. Steve Demos and Lester Karplus, who were present at both the founding and at this reception, shared their reflections of the past 25 years. She thanks the chefs who created the evening's soy delicacies: Kim Galaez, Patricia Greenberg, Dana Jacobi, and Akasha Richmond. She also thanks and acknowledges the sponsors of the evening: ADM, Cargill, Hain-Celestial Group, Kellogg / Worthington Foods, Light Life, Solae LLC, Sunrich, Tetra Pak, Vitasoy-USA, and White Wave. And she welcomes special guests from USDA, FDA, and Capital Hill.

The talks ends: "Thank you all for coming and enjoy the soy treats and the historical documents and photos with your colleagues." Address: Galaxy Foods.

3491. Rajaram, Sujatha. 2003. The effect of vegetarian diet, plant foods, and phytochemicals on hemostasis and thrombosis. *American J. of Clinical Nutrition* 78(3S):552S-558S. Supplement. Sept. [77 ref]
Address: Dep. of Nutrition, School of Public Health, Loma Linda Univ., Loma Linda, California.

3492. Reijnders, Lucas; Soret, Sam. 2003. Quantification of the environmental impact of different dietary protein choices. *American J. of Clinical Nutrition* 78(3S):664S-68S. Supplement. Sept. [41 ref]
• ***Summary:*** This remarkable paper uses life cycle impact assessment (LCIA) techniques for evaluating dietary choices environmentally and quantitatively. Processed foods based on soy protein, one of the types evaluated, have a small environmental impact, especially when compared with meat protein, or even fish protein. The environmental burden of vegetarian foods is usually relatively low when production and processing are considered.

Technological advances have enabled dramatic increases in modern agricultural production. But with these advances, the environmental impact of food production and consumption has also increased. Many scientists, and even some policymakers, have begun to question the sustainability of agriculture as practiced today. "Particular skepticism has been directed at supporting the increased demand for animal products in the diet of economically advantaged persons of the world."

Long distance of transportation of all food by airplanes dramatically increases its environmental impact. The same is true of freezing and deep-freezing.

Of the different primary production systems, organic agriculture has the lowest environmental impact, including advantages to soil quality and biodiversity. Address: 1. Inst. for Biodiversity and Ecosystem Dynamics, Center for Sustainable Development, Univ. of Amsterdam, The Netherlands; 2. Dep. of Environmental & Occupational Health, Loma Linda Univ. School of Public Health, Loma Linda, California.

3499. Richmond, Akasha. 2003. Visit to Franklin Publications and *Let's Live* magazine in Santa Monica, California (Interview). *SoyaScan Notes.* Nov. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Yesterday Akasha drove to Santa Monica and spent 4 wonderful hours at Franklin Publications, the owner of *Let's Live* magazine, doing research for her forthcoming book. She got to know the editor, Beth Salmon, who is very nice, healthy, and committed to healthful living. Franklin Publications has almost every back issue of *California Health News–except the entire year 1938. A National Journal of Better Living* (started in Jan. 1933 by Clark Irvine); it is a magazine a little larger than 8½ by 11 inches and in fragile condition. On 15 May 1942 he changed the name to *Let's Live.* No one has ever contacted Beth to request permission to do research at her office.

Akasha, overwhelmed with this superb, unknown collection of early food history, says: "I started to cry. They don't even understand what treasures they have." Beth has to focus on the next issue; they publish 3 magazines out of that one office. Akasha looked through the years from 1930 to 1936 and found a surprisingly large number of articles about soyfoods and pioneers in California's early soyfoods health food industry–such as La Sierra Industries, Bill Baker, California Food Kitchens, Loma Linda Foods, Paul Bragg, and Otto Carque. "Soy was just everywhere." There were ads for Yogananda's lectures and a lot of spiritual things. She took notes but did not ask to photocopy any articles. She plans to return go through the issues carefully. The *Let's Live* offices in Santa Monica are only a 15-minute drive by freeway from Akasha's home. Address: Los Angeles, California.

3500. *SoyaScan Notes.* 2003. What is titanium dioxide and how is it used with soy products? (Overview). Nov. 26. Compiled by William Shurtleff.
• ***Summary:*** According to the *Encyclopedia Britannica* (2002), titanium is a chemical element–a lightweight, high-strength, low-corrosion, structural metal. Titanium dioxide, a nontoxic, pure white powder, is extensively used as a pigment in paints, enamels, and lacquers.

The SoyaScan database presently contains 20 records that mention "titanium dioxide." From 1936 to 1961 (3 records) it is used as a pigment to whiten paints. In 1953 The Glidden Company, in a joint venture, started a large plant in Japan to manufacture titanium dioxide. From 1965 to 1981 (4 records) it is used as a tracer or tag, mixed with isolated soy proteins (ISP) or textured soy protein products, so that their presence could be detected when used in meat products. One label read: "0.1% titanium incorporated as food grade titanium dioxide in accordance with USDA regulations." In 1984, during the Reagan administration, the USDA eliminated the requirement that titanium dioxide be added to soy protein products as a tracer.

In 1993 it was used as a whitener in Mocha Mix Fat Free Non-Dairy Creamer (made by Presto Food Products). In 1997 it was used as a whitener in Rice Moo (Non Dairy Beverage Mix) (Original and Vanilla flavors, made by Sovex Foods). Also in 1997 it was used as a whitener in SoySoft Deep Treatment Penetrating Cream (made by SoySoft, Inc.) In 1988 its use as a whitening pigment for paper coatings was discussed. According to Ted Nordquist (Dec. 2003), he saw it on the label of 8th Continent Soymilk (Vanilla and Original flavors, made by General Mills) in which it was presumably used as a whitener when the product was first launched in about 2001, however (Dec. 2003) it presently no longer appears on the label.

3501. Brown, Reg. 2003. Back to the beginnings: 3. *Record* (*SDA, Victoria, Australia*) 108(47):8-9. Nov. 29.
• ***Summary:*** "This article continues a series on the history of the Adventist Church in the South Pacific." In 1897, Edward Halsey, one of Dr. John Harvey Kellogg's bakers at the Battle Creek Sanitarium, Michigan, arrived in Melbourne, Australia, and began manufacturing Granola, caramel cereal (a coffee substitute), and peanut butter. "The Sanitarium Health Food Company was registered as a business on April 27, 1898." On the advice of Ellen G. White, the health food factory was moved to Cooranbong, NSW, to be near the newly established school at Avondale.

Sanitarium Foods is the soymilk market leader in Australia. Its flagship product, So Good, enjoys almost 50% of the market share, and is also the leading brand in New Zealand, the UK, and Canada. So Good was developed at Sanitarium's laboratory at Cooranbong. "In 2002 Sanitarium purchased a Canadian company, SoyaWorld, which gives it 60 per cent of the Canadian [soymilk] market." Address: Australia.

3502. Jacobi, Dana. 2003. Serving soyfoods on Capitol Hill (Interview). *SoyaScan Notes.* Dec. 20. Conducted by William Shurtleff of Soyfoods Center.

© Copyright Soyinfo Center 2014

• ***Summary:*** Each year the American Soybean Assoc. (ASA) has a board meeting in Washington, DC. At that time they have an event for Congress. This year ASA decided to "host its first Soyfoods Luncheon," which they announced in a 2-page news release. Representative Jo Ann Emerson (R-MO) served as the Congressional host of the event. White Wave, Solae, Soyatech, and SANA sponsored the event but it (incl. Dana and her food) was paid for by ASA.

Apparently Nancy Chapman of the Soyfoods Association told ASA that Dana was a professional chef with expertise in soyfoods. So Dana got a call from Anna Pavolva of ASA inviting her take responsibility for catering this event. Dana ended up hiring a local caterer, because she lives in New York City and could not make all the preparations at such a long distance. Dana supplied the recipes and supervised the food preparation.

The event took place at lunchtime on Tuesday, 1 April 2003 at the Rayburn Building in Washington, DC. Dana was told to prepare for 200 people, but about 250-350 showed up–most of them staffers, but there were a few members of Congress. The room (29 by 52 feet, or 1,508 square feet) was packed, with standing room only. Food was served on four draped tables, buffet style like a real catered party, with real China plates (no paper plates), and spoons and forks. The attendees ate *all* the food. Dana's meatless recipes (the majority of which came out of her latest cookbook), all on one long table were: Sweet & sour meatballs. Beans and franks (Using Bratos for the franks). Macaroni salad (using ADM's Soy-7 macaroni). Honey mustard with tofu (served 3 kinds of donated soyburgers from Boca and Morningstar Farms). Chocolate velvet mousse. Edamamé. Finger sandwiches with soynut butter and jelly.

ASA hired a chef (Tod Schiller) from one of Washington, DC's premier restaurants, Kinkead's, and he conducted a cooking demonstration at the luncheon; at a second table he served a very elegant soyfoods recipe that included edamamé.

White Wave / Dean Foods had a 3rd table at which they served Silk Cappuccino soymilk out of a cooling machine. On a 4th table at the end of the room was Solae 8th Continent soymilk and Luna Bars (cut into pieces for finger foods). ASA and United Soybean Board had a 5th long table on which was information (leaflet, pamphlets) and exhibits about soybeans and soyfoods.

Dana mingled anonymously and talked with many of the staffers. "They were astounded by all the good food. This sort of event helps greatly to dispel the negative image that soy still has in terms of how it tastes and looks." Dana notes: "My interest in not in preaching to the converted, it is in introducing soyfoods to the rest of the people." Address: New York City.

3503. Reich, Egon. 2003. An unusual life: How to cope with difficulties and come out on top. Los Angeles, California: Published by the author. *
• ***Summary:*** Egon ran a marketing company that represented a baking company named Better Way Foods, located in Los Angeles. The baking company made and sold Granola and bread with Adelle Davis' name on the package. A photo shows a sign for the Granola.

Talk with Akasha Richmond of Los Angeles. 2004. Aug. 10. She talked with Egon Reich (age 75-80) yesterday. "He has been married for 50 years and is a super-nice guy." It is a fact that there was a commercial product named Granola with Adelle Davis's name on the package. Egon said it was sold in every health food store nationwide. It was never sold in grocery stores. So Adelle Davis really did help popularize granola. The Granola developed by Layton Gentry and sold (first) to Sovex in Tennessee, is different from and earlier than Adelle Davis's granola. All the royalties that Adelle received from these two foods went to start her Adelle Davis foundation. The royalties from her book served as her personal income and did not go into the foundation. Address: Los Angeles, California.

3504. Willis, Richard J.B. 2003. The Kellogg imperative: John Harvey Kellogg's unique contribution to healthful living. Alma Park, Grantham, England: The Stanborough Press Ltd. 110 p. Illust. No index. 21 cm. [90 ref]
• ***Summary:*** Contains a list of books by Dr. John Harvey Kellogg (alphabetically by title), a good bibliography, and 12 pages of black-and-white photos related to Dr. Kellogg. Unfortunately this book has no index.

However Willis makes this profound observation in the caption to a portrait photo: "Dr. John Harvey Kellogg, whose scientific approach to the wonders of life brought a new orthodoxy to health reform, formerly the domain of many outlandish ideas." Address: Health educator.

3505. Little, Janice. 2004. Organization of information on Seventh-day Adventist food companies worldwide at Del E. Webb Memorial Library (Interview). *SoyaScan Notes.* Feb. 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The best collection is on the Loma Linda Food Co. When they started in 1906 (as Sanitarium Food Co.), they were a very small operation and were located about 35-40 miles away next to the Sanitarium in Loma Linda, California. Then in the 1930s, they realized they needed a bigger facility, so they moved the factory about 35-40 miles to La Sierra / Arlington–which is now a suburb of Riverside.

Most of the information on Loma Linda Food Co. (LLF, other than books and periodicals–such as *Today's Foods*) is located in either of two places: (1) The vertical file, which has 10-20 published pamphlets, brochures, etc. (2) The SDA (Seventh-day Adventist) document files, which are expanding archival files with numerous subfiles–also stored in file cabinets. Each file has an archival record in their database and typically contains hundreds of documents. The

© Copyright Soyinfo Center 2014

Loma Linda Food Co. file is No. 3574. The subfiles for LLF are: History, promotional brochures, labels, correspondence, minutes & committee actions, International Research Foundation and Laboratory (Dr. Harry Miller). In addition, there is material in boxes "all over the place" that has not been cataloged and is sometimes hard to locate.

Each Seventh-day Adventist food company, worldwide, has similar files in the library–which is typically open 9-5 Mon-Thurs, and 9-1 Friday. Researchers can stay in a local hotel (ca. $50+/night), and sometimes in the boys dormitory at Loma Linda University. Los Angeles in about 90 miles away by car–depending on the traffic. Address: Library Asst., Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-558-4942.

3506. Drosihn, Bernd. 2004. Update on soyfoods in Europe. Part II (Interview). *SoyaScan Notes.* March 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Soymilk: A major new soymilk maker in Europe is named Wild (www.wild.de), an old German food company that specializes in fruits and ingredients; their retail soymilk is named Soy and Joy. Their most famous brand is Caprisun, a non-soy drink in a foil pouch, well known in the USA. They and So Good, the Australian soymilk now made with Solae, are both strong competitors of Alpro.

Several weeks ago Hain-Celestial of New York purchased two German soymilk makers, both owned by Bruno Fischer, Jr.: Natumi and Gut Honneroth. He sold both companies at a low price–probably because he had to. Bruno had gotten his soymilk into Aldi, the mother company of Trader Joe's and the No. 1 discounter in Germany–and maybe in all of Europe, and he developed a large soymilk business with Aldi–perhaps so large he could no longer handle it himself. Bruno also made a lot of private label soymilk. With Hain, Bruno found a large German dairy to make soymilk for Aldi under a new Aldi brand. The new European CEO of Hain-Celestial is Philippe Woitrin, who was CEO of Lima Foods when Hain acquired it.

Triballat makes the best soy yogurts (Sojasun brand) in the world–in Bernd's opinion. They have a new brand, Sojadé, which are delicious creamy yogurt drinks–maybe organic. The Japanese Yakult concept of drinking live beneficial probiotic bacteria each morning has now caught on in a big way in Europe. Yakult is one of the best entries into the European food market in years. Bernd just saw White Wave's Silk Alive [the name was soon changed; it was sold commercially only under the name "Silk Live"], a similar product, at the Anaheim Natural Products Expo. But he liked the Wildwood smoothie even better, and the WholeSoy fermented soymilk best of all American products.

In France a small company named Sojami (pronounced so-zha-MEE), which started about 10 years ago, makes very creative, unique, and interesting soy cheeses and cultured soy yogurts. The founder has a university research background and is a very nice guy.

Tofu: Tofu consumption in Europe has expanded steadily over the past 5-7 years, but it is still a very small product. The largest maker of the tofu and tofu products sold in Germany is Life Food GmbH / Taifun Produkte, run by Wolfgang Heck and Guenter Klein. Heuschen-Schrouff B.V. (Landgraaf, Netherlands) and Viana are tied for second place. About 10 years ago, Heuschen-Schrouff started selling their tofu under the organic So Fine brand (www.sofine.nl). An Indian-run company in Kerkrade, Netherlands, run by the brothers Singh (both Sikhs), makes tofu mostly for the Asian (Indonesian) market. In 2001 Viana started selling its tofu to the mainstream market under the Veggie Life brand; this English-language brand name communicates well to people speaking many different languages throughout the EU (European Union)–though distribution is still limited to Germany and Austria. Soto Tofu, formerly run by Rolf Barthof has been sold to a very large dairy company, Algäuland. Viana's main products are tofu and tofu products–such as meat and cheese alternatives. Viana is #1 in Germany in meat alternatives. Germans buy soyfoods for three main reasons: They are good for one's health, they taste good, and good for the environment. Bernd is a vegan, but about 90% of Viana's products are sold to non-vegetarians.

Early tofu companies still active in Europe include Sojafarm (founded and still run by Lothar Stassen), Albert's Tofuhaus (Albert Hess; exports lots of his products to France). A basic problem with the smaller, early tofumakers in Germany is that they didn't have the creativity or power to put a brand on the market. So both these companies produce a lot of tofu under private labels. Lothar bought the Svadesha brand (Svadesha was the first German tofu company) and produces tofu under the Svadesha brand. About 2-3 years ago he also purchased the Nagel's Tofu brand from Christian Nagel, who now markets the tofu under his former brand. So Lothar makes tofu under 3 brands. Berief Feinkost (in Beckum, northern Germany), started 10-15 years ago, tries to cover the mainstream tofu market, but not very successfully. Kassel Tofu Kato (started by Gyoergy / Yuri Debrecini, who was at Soyastern). Thomas Karas is no longer involved with soyfoods; he tried to enter the computer business but Bernd does not know what he is doing now. In Spain, the market leader is Natursoy near Barcelona. Nearby is Salvador Sala of Vegetalia. In Spain, there is a lot of interest in and rapid growth of soyfoods and organic foods. In Italy the Ki Group (Schenker) owns a tofu company–fairly old but not very creative.

In the United States, Pulmuone now has three U.S. factories; their first one in Southgate, southern California, a new one at Fullerton, California, and a 3rd one in New York. The Fullerton factory is the most modern Bernd has ever seen. There they make Gourmet Tofu, introduced in about Jan. 2004, which is presliced and marinated, in 4 flavors / styles: Baked, Sliced, and Marinated.

© Copyright Soyinfo Center 2014

Meat alternatives: Nestle now owns Osem which owns Tivall, the Israeli maker of meat alternatives. Since all of Tivall's products are held together by eggs or egg whites, none of them are vegan–and none are organic. Quorn, which also contains lots of egg protein, is owned by AstraZeneca [Marlow Foods]–which wants to sell the company because growth and profits have been lower than expected. DE-VAU-GE in Germany is a very big company, they make large amounts of meat alternatives (incl. burgers), and they do a lot of business with Aldi in breakfast cereals–not in soyfoods. Bernd thinks they are good, and very economical manufacturers, but they are not very creative and they have no USP (unique sales point); moreover, many of their products contain egg protein, but their quality is lower than that of Tivall. Bernd believes his meat alternatives are as good as Tivall's, but more expensive, in part because of organic ingredients. Tivall makes its raw materials in Israel, then exports these to Europe for cutting and flavoring.

Klaus Gaiser owns Topas which sells Viti brand meat alternatives based on wheat gluten, with no soy; he owns the brand and markets the products, but he has meat companies manufacture them. However, when his typically 3-year contract with the manufacturer expires, he has to find a new manufacturer, but the previous one keeps making his products under their own brand. In the USA: At Turtle Island Foods (Hood River, Oregon), Bernd met Hans Wrobel, a German who does product development. Note: Hans and Rhonda Wrobel of The Higher Taste developed Tofurky in Portland, Oregon. Bernd makes Pizzarella, a tofu-based cheese alternative. Address: Founder and president, Viana Naturkost GmbH, 54578 Wiesbaum / Vulkaneifel, Germany. Phone: +49 06593-99670.

3507. Burt, Merlin D. 2004. Keeping the vision alive. *Adventist Heritage Ministry Bulletin* (*Silver Spring, Maryland*) 17(2):1. March/April.
• ***Summary:*** "During the spring of 1844, Elder Fredrick Wheeler accepted the Sabbath through the efforts of a Seventh Day Baptist widow named Rachael Oaks. He was probably the first 7th day Sabbath-keeping Adventist minister in North America.

"Soon after he accepted the Sabbath a Millerite camp meeting was held just south of Washington in Hillsboro, New Hampshire." The outdoor meeting, and its benches, tents, and music is described. This camp meeting "may have been the first where the Sabbath was presented to Millerite Adventists by Frederick Wheeler. During the summer of 1844, another Adventist minister in Nashua, New Hampshire, named T.M. Preble also accepted the Sabbath perhaps under the influence of Frederick Wheeler.

"Preble in turn wrote an article and tract on the Sabbath in February and March 1845 that convinced Joseph Bates. Bates then wrote tracts which convinced others such as James and Ellen White and Hiram Edson to keep the Sabbath." Address: PhD, Director, Center for Adventist Research, Ellen G. White Estate Branch Office, Andrews Univ. [Berrien Springs, Michigan].

3508. *SoyaScan Notes.* 2004. How health foods came to America and Los Angeles–starting with the American Health Food Co. of New York City, and Dr. John Harvey Kellogg of Battle Creek, Michigan (Overview). May 24. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** First came American Health Food Co. of New York City. The idea of making and selling health foods in American originated in Battle Creek, Michigan, the brainchild of Dr. John Harvey Kellogg–who was a Seventh-day Adventist, an influential "health reformer" who wanted to change American eating habits, a vegetarian, and the head of the Battle Creek Sanitarium, one of America's most famous and respected hospitals from the late 1800s until the mid-1930s. He lived to age 91.

In Aug. 1866 he started *The Health Reformer,* a periodical published in Battle Creek, of which he was the editor and publisher. He used it to disseminate new ideas on health and diet reform.

In Jan. 1879 he changed the name of his magazine to *Good Health,* which soon developed a very large circulation. An excellent publication, it continued until 1953.

In the early 1880s, Dr. Kellogg felt the need to supply healthy vegetarian foods to Sanitarium patients. In Dec. 1882 he established the Sanitarium Food Department, his first food manufacturing company. Initially it made foods for patients, but after these patients returned to their homes, they began to order the unique foods that had been prescribed for them at the Sanitarium. Thus, a small mail order business developed. The early foods were mostly baked goods (such as crackers, wafers, and diabetic foods) with a low moisture content and long shelf life.

Dr. Kellogg then realized that there was a potential nationwide, even worldwide, market for the many new foods he was developing since Seventh-day Adventists were active starting other sanitariums and vegetarian restaurants across America and in Australia and the UK. Between 1896 and 1908 he started several early commercial food manufacturing companies: Sanitas Food Co. (by Feb. 1896), Battle Creek Sanitarium Bakery (July 1896), Battle Creek Sanitarium Health Food Co. (Nov. 1896; this was the world's first company to have the term, "Health Food" in its name), Sanitas Food Co. (July 1900), Battle Creek Sanitarium Food Co. (July 1901), and Battle Creek Food Co. (1908).

Among the early foods that Dr. Kellogg developed were the first meat alternatives (based on finely ground nuts) and the first nut butters (he invented and patented peanut butter). Brand names included Nuttose (by July 1896), Protose (1899), and Malted Nuts (1900; a dairy alternative resembling malted milk made primarily from peanuts and almonds). Being an extremely generous man, dedicated

© Copyright Soyinfo Center 2014

helping humanity, Dr. Kellogg gave other Seventh-day Adventists the right to use his formulas to make foods in other countries–free of charge!

By the late 1890s, Dr. Kellogg began to advertise and promote these foods widely–especially in his own magazine. By Sept. 1899 they were being sold in Sydney, Australia and Los Angeles, California–both places on the edge of the known world! A column in the *Los Angeles Times* (Sept. 24, p. 28) titled "Care of the body," states: "During the past few years a great number of new foods, composed of nuts and other products, have been placed on the market, so that those who prefer to abstain from flesh food have a large variety of other foods to choose from. In London there are probably twenty of these restaurants. There are many vegetarians in Los Angeles, and it seems that a first-class vegetarian restaurant, conducted by some one who understands the business, should be a paying investment."

Less than four months later the wish has been granted: The same column (7 Jan. 1901, p. IM27), in a section titled "A vegetarian restaurant," reports: "Los Angeles now has a first class vegetarian restaurant and it appears to be well patronized. The restaurant, which also keeps health foods for sale, is connected with a well-known hygienic institution [Battle Creek Sanitarium] in Michigan, which manufactures these foods on a large scale, and has branch sanitariums all over the world."

Kellogg's goal of helping to establish vegetarian restaurants and providing them with healthy foods was being realized. In Jan. 1904 his magazine *Good Health* published a directory of "Vegetarian cafes and restaurants." It gave the name and address of (amazingly) 29 of them in the United States alone–with more overseas. Most of them, no doubt, sold Battle Creek health foods to help them pay the rent.

The pioneer in making and selling health foods in Los Angeles was Otto Carqué. He and John Harvey Kellogg had much in common. They both had very original, creative minds, both were vegetarians (Carqué wrote his first book on vegetarianism in 1904) and deeply interested in what they believed was the strong connection between diet and health, both were good businessmen, and both (quite selflessly) dedicated their lives to making the world a better place and helping others.

By the summer of 1906, Carqué was creating a new industry for southern California: unfermented grape juice. He had invented a new and lower cost process for putting up the delicious juice in wooden barrels instead of the usual glass bottles. On Aug. 19 the *Los Angeles Times* wrote: "Mr. Carque put about 25,000 gallons of grape juice in barrels last fall and expects to turn out a larger quantity this season." About 2 years later (25 Oct. 1908) the *Times* reported that Carque had spent the summer in Fresno and Sonoma counties, "where he put up about 500,000 gallons of unfermented grape juice."

Carqué began to focus his considerable talents on southern California's most precious food resource: Fruit. He learned how to dry many kinds of fruit without the use of sulphur, and he became known as the father of the Black Mission Fig. By Jan. 1912 he decided to start what was (so far as we know) the first health food store in Los Angeles. But he also processed many of the foods that he sold. His original tiny classified ad in the *Times* (Jan. 18, p. I7) read (in full): "Wanted–Boy with wheel to assist in manufacturing of health foods; vegetarian preferred. Otto Carque, 943 West 12th st. Home Phone 52269. Call early." In addition to his own line of fruits, he carried foods made by Dr. Kellogg in Battle Creek, Michigan–foods which he had probably first seen in the Los Angeles' first vegetarian restaurant, the "Vegetarian Cafeteria," run by Seventh-day Adventists.

On 15 Aug. 1912 Carque incorporated his company, together with three other people.

By Oct. 1923 his shop, now named The Carqué Shop, had been remodeled and was located at 2618 West 7th St. in Los Angeles. Widely publicized with attractive ads in the *Times*, it now sold foods under the brilliant registered trademark "Natural Foods of California." Carque had coined the term "natural foods" in its modern meaning–i.e., unrefined and unadulterated.

Soon others began to follow his lead. On 18 Oct. 1926 "Hain Health Foods" opened its first store at 329 W. 3rd St.

By 4 Oct. 1925 the Carque Pure Food Company, Inc. had moved into The Natural Foods Building, 729 Seward St., in Los Angeles. This became his new factory and manufacturing company. On 23 July 1927 Hain opened a second store.

By the late 1920s the health food industry in Los Angeles was a small but growing enterprise–with Otto Carque as its admired, indeed beloved, godfather. But no one at that time could have dreamed of the heights it would reach or the influence it would have on America (and Hollywood) during the next three decades.

3509. Kellogg NA Co. 2004. Olivia Newton-John. Born 1948, Cambridge, England. Kellogg's Smart Start Soy Protein (Ad). *Vegetarian Times.* May. p. 24.
• ***Summary:*** This full-page color ad is for Smart Start breakfast cereal. A large photo shows Olivia Newton-John singing.

3510. Mason, David. 2004. Memories of Bill Baker of Ojai, California (Interview). *SoyaScan Notes.* June 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** David did not know Bill Baker but he has written various articles about him. He still has copies of all these articles and some photos of Baker and his bakery. Many scrapbooks containing hundreds photos concerning Bill Baker are in the Ojai Museum; contact Jane T. McClenahan, executive director (805-640-1390).

In 1928 the St. Francis Dam (205 feet high) burst /

© Copyright Soyinfo Center 2014

failed; it was located in San Francisquito Canyon about 10 miles north of the town of Saugus in Los Angeles County. It held 38,000 acre feet of water from the Owens Valley. Its failure (due largely to the inappropriateness of the geological substrate) resulted in the birth of engineering geology.

When the dam burst, Bill Baker rushed to the rescue. He wanted to do something big both to help the people there and to promote his bakery. He supplied all the shelters and trucked over free fresh bread to the survivors in Santa Paula and Fillmore.

The Santa Barbara Earthquake took place in June 1929. Again, Baker rushed to the rescue and provided bread.

The source of information about his death related to poison oak probably came from the long obituary published in the *Ojai Valley News* in 1942. Rose Boggs of Ojai (805-646-3659) is an authority on Bill Baker, tried to have his bakery established as an Ojai historic site, and is thinking about writing a book about him.

Talk with Janice Little of Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. 2004. June 28. When this dam broke, many Seventh-day Adventist doctors, nurses, and others rushed to the site to try to save lives and be of help. Address: Ojai, California 93023.

3511. The history of St. Helena Hospital. Chapter VI– The Sanitarium Food Company. 2004. http://www.sthelenahospital.org/anniversary. Printed June 23.
• ***Summary:*** The Sanitarium Food Co. operated at the St. Helena Hospital in St. Helena, California, from 1898 to 1920. It was founded by John A. Burden, the business manager of the hospital, who was also a visionary and a true entrepreneur. Burden came to St. Helena in 1891.

In 1898 the food company started production in a small building north of the original Sanitarium building. One early product was whole-wheat bread.

In 1901 a four-story building was opened on Sanitarium Road. State-of-the-art machinery included two large reel ovens, five granose flake machines, a granose mill, and a wine press for making unfermented grape juice. Rol Rose, the manager of the facility for over 20 years, supervised 32 employees." Products included Zwieback, Granose flakes and biscuits, Caramel Cereal Coffee ([grain coffee] similar to Postum; made from roasted grains), peanut butter, grape juice, malted nuts, and Nut Cereo and Nut Loaf (vegetarian meat alternatives which are known today as Nuteena and Proteena). Gives additional history.

3512. Little, Janice. 2004. Pacific Health Journal published in Oakland, California (Interview). *SoyaScan Notes.* June 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** *Pacific Health Journal* was a Seventh-day Adventist periodical published by Pacific Press Publishing Co. in Oakland, California. It was published from 1885 to 1904. Like all SDA periodicals related to health, it advocated a vegetarian diet. For a while, the SDA church was publishing dual health journals, one published on the West Coast by the Pacific Press Coast (California) and the other (*Life and Health*) on the East Coast by the Review and Herald Publishing Co. (Maryland). The prevent redundancy, the two eventually merged in about 1904 or 1905.

Current SDA health periodicals are *Life and Health* and *Vibrant Life.* Address: Library Asst., Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-558-4942.

3513. Cohen, Robert. ed. 2004. Food for thought: Words to live by from Ellen G. White. Garden City Park, New York: Square One Publishers, Inc. 208 p. 22 cm. *
• ***Summary:*** Contains over 400 inspiring quotations from the writings of Ellen G. White (1827-1915). Paired with each of White's inspiring thoughts are the voices of such noteworthy individuals as William Shakespeare, Thomas Edison, Florence Nightingale, Mother Teresa–who provide further food for thought. The quotations are arranged topically and alphabetically.

3514. Zinko, Carolyne. 2004. At 60 he swam to Alcatraz handcuffed. As he turns 90, Lalanne has his eye on Catalina Channel. *San Francisco Chronicle.* Sept. 24. p. S1, S17. Datebook section.
• ***Summary:*** Jack LaLanne was born on 26 Sept. 1914 in San Francisco, California. His parents were French immigrants, a house maid and a telephone installer. He grew up in Berkeley and was a sickly kid with pimples and an addiction to sugar. Then his mother, a Seventh-day Adventist, took Jack to hear Paul Bragg lecture at the Oakland Women's City Club. He "took one look at Jack and told the audience, 'It matters not what your age is or your physical condition, if you obey nature's laws, you can be born again.'" Bragg "advised against eating white sugar, white flour, red meat, and processed foods. That night Jack got down on his knees and prayed, asking God to help him turn his life around and promising to help others in return." He changed his diet and started lifting weights. He became captain of the school football team. His friends, impressed by his physical transformation, began working out with him in his backyard. Today, a force of nature, still swims laps in his private swimming pool at Morro Bay.

In 1936 Jack "started America's fitness craze" with a gym (Jack LaLanne's Physical Culture Studio) in Oakland in 1936. In 1951 he began hosting a live exercise show on

© Copyright Soyinfo Center 2014

KGO-TV. After a few years, it expanded to Los Angeles. At age 42 (in about 1956) he first went on national TV doing 1,000 push-ups in 19½ [then 1,033 push-ups in 23 minutes] minutes on Art Baker's "You Asked for It." In 1959 the "Jack LaLanne Show" went national and ran for a total 34 years in the USA, Europe, and Russia. Jack is still urging Americans to give up their unhealthy ways, to eat right, and to exercise daily.

He has always liked publicity stunts: At age 40, he towed a 2,000-pound cabin cruiser as he swam the Golden Gate Channel. "At 60 he put handcuffs on his wrists and swam from Alcatraz to Fisherman's Wharf while towing a half-ton boat. At 70 he swam a portion of the Long Beach harbor with 70 people in 70 boats tied to his back." At age 90 he plans to "swim 22 hours underwater (with air tanks or a hose to the surface) the 26 miles from Catalina Island to Los Angeles.

The life goal of America's "original fitness guru" has always been to help others–because he still believes his life was changed by diet and exercise. Photos show: (1) Jack in his swimming pool (color). (2) Jack and his German shepherd, Happy; they were household names during the 1950s and 1960s. (3) Jack and his wife, Elaine, standing and laughing together as they enjoy an exercise break at their Morro Bay home. Address: Staff writer.

3515. Hottinger, Greg. 2004. The best natural foods on the market today: A yuppie's guide to hippie food. Vol. I. Asheville, North Carolina: Huckleberry Mountain Press. 223 p. Index. 23 cm. [94 ref]

• ***Summary:*** This book looks very commercial because it mentions many natural products by brand name. We wonder if companies paid to be mentioned. Contains scattered recipes for branded products, and scattered sidebars titled "Hippie wisdom." Discusses: Almonds, almond butter, almond milk, American Miso Co., antibiotics (used in agriculture in 4 different ways; prevention, treatment, and control of disease, and growth promotion. In 1998 the European Union banned the use of antibiotics to promote growth in livestock. In Oct. 2000 the FDA proposed a ban on two antibiotics also used to treat humans), antioxidants, Bifidobacterium (bifidus), bovine growth hormone, bovine somatotropin (BST), Bragg Live Foods, Bragg Liquid Aminos, breast cancer, calcium, canola oil, celiac disease, cereal & Kellogg Brothers, cheese alternatives, dulse, edamame, Eden Foods (says "Eden Foods opened shop in 1968. By 1969 they were grinding their own flours and bottling their own oils and nut butters"), FDA, flaxseed oil, Galaxy Foods (says they "started in 1972 when founder Angelo Morini invented a new way to make a cheese product free of saturated fat, cholesterol, and the milk sugar, lactose"), genetically engineered foods, ghee, ginger, gluten sensitivity, glycemic index, GMO [genetically engineered] crops, Graham–Sylvester, heart disease, hippie foods, Horizon Organic, hormones, Lactobacillus, lactose intolerance, Lappe–Francis Moore, Lightlife Foods, magnesium, Maine Coast Sea Vegetables, Messina–Mark, milk–problems with, miso, Miso Master brand, nutritional yeast, oils, olive oil, omega-3 and omega-6 fatty acids, organic farming, palm oil, phytochemicals, phytoestrogens, prostate cancer, protein, Red Star nutritional yeast, quinoa, saturated fat, sodium, soymilk, soy products, soy sauce, soy supplements and concerns, soy yogurts, spelt, Stonyfield Farm, tahini, tamari, tempeh, trans fats (hydrogenated oils), WholeSoy Company. Near the back are many color coupons for the companies mentioned in the book by name. Address: MPH, RD, Asheville, North Carolina.

3516. Iacobbo, Karen; Iacobbo, Michael. 2004. Vegetarian America: A history. Westport, Connecticut, and London: Praeger Publishers. xvi + 267 p. Illust. Index. 25 cm. [447 ref]

• ***Summary:*** An excellent history of the vegetarian movement in the United States from the late 1700s to the present–extremely well researched, well documented, and original. There have been three major waves of interest in vegetarianism, each beginning about 70 years apart. The first was in the 1830s and 1840s, and included Sylvester Graham and William Alcott. The second was from about 1900 to 1930. And the third and current period began in about 1970.

Contents: 1. Seeds are sown: Native Americans, Benjamin Franklin, Johann Conrad Biessel (1691-1768; founded Seventh-Day Baptists, Ephrata Cloister in Pennsylvania), vegetarian Dunkers, William Dorrell and The Dorrellites (Leyden, Vermont), John Wollman (Quaker) and his journal, Herman Daggett, L. Du Pre, Johnny Appleseed (John Chapman, follower of teachings of 18th century Christian mystic and vegetarian Emmanuel Swedenborg), Joshua Evans. 2. Abstinence from fleshfoods: Christian vegetarians, and the English connection: Percy Bysshe Shelley, George Nicholson, Joseph Ritson, Rev. William Cowherd and the Bible Christian Church of Salford, William Metcalfe comes to the Philadelphia 1817 and establishes the Bible-Christian Church.

3. Sylvester Graham, Grahamism, and the Grahamites: Cholera epidemic, Graham's preventive medicine, why vegetarian?, Jacksonian era dining habits, Graham bread, Jacksonian era medicine, Isaac Jennings, Asenath Hatch Nicholson, Dr. John Burdell, Graham in the press, William Andrus Alcott and *The Moral Reformer,* American Physiological Society (APS) in Boston, founded in 1837, Mary Gove Nichols, *The Graham Journal of Health and Longevity,* the vegetable diet, Dr. Luther V. Bell and his prize-winning essay, Dr. Milo L. North, Asa Mahan and Charles Finney of Oberlin College [Ohio], Dr. Reuben Mussey, Grahamites and anti-Grahamites, J.J. Flournoy, abolitionists and transcendentalists, A. Bronson Alcott (father of Louisa May) of Concord, Massachusetts, nonviolence

© Copyright Soyinfo Center 2014

and Thoreau, James Pierrepont Greaves, Ham Common, Alcott House, William Lambe and the Physiological and Health Association, Fruitlands, abolitionist-vegetarians, Orson S. Murray, Horace Greeley and Mary Youngs Cheney (his wife), Graham's teachings on physiology and anatomy, William Metcalfe's book *Bible Testimony on Abstinence from the Flesh of Animals as Food...* (June 1840), Larkin B. Coles.

4. The American Vegetarian Society (AVS, organized in 1850 by William Metcalfe): First convention on 15 May 1850 in New York City, the society's periodical *The American Vegetarian and Health Journal* (Nov. 1850–Oct. 1854), Joel Shew and water cure / hydropathy, John Grimes and the first Vegetarian Festival in New York City (Christmas, 1851), feminism, Anne Denton, Charles Lane, death of Sylvester Graham, Dr. Russell Trall, Graham's legacy, front-page headlines in 1853 at the Vegetarian Festival (guests incl. Trall, Greeley, James Caleb Jackson, Frances Dana Gage, Lucy Stone, Susan B. Anthony, and Emilia Bloomer), New York Vegetarian Society (est. 1852), decline of AVS, Henry Stephen Clubb, Fowler & Wells, *The Water Cure Journal*, Quaker Jeremiah Hacker, Thomas Low Nichols.

5. The water cures, Seventh-day Adventists, and the Civil War: Henry Clubb, Octagon Settlement in Kansas (1856), Dr. James E. Spencer and the Harmonial Vegetarian Society in Arkansas (1857), James Caleb Jackson, Our Home on the Hillside, Dr. Harriet N. Austin, Seventh-day Adventists, Millerites, Ellen G. White, drugless medicine, Dr. Russell Thacher Trall, end of AVS with the death of Wm. Metcalfe.

6. The Civil War to the end of the century: Dr. Mussey, Rev. Henry Ward Beecher, Henry Clubb keeps vegetarianism alive in America (though its lacks a national organization), John Harvey Kellogg, Isaac and Susan Rumford and Joyful News, California, Victoria Woodhull, Clubb founds the Vegetarian Society of America (VSA) in 1886, the VSA cookbook, and its periodical *Food, Home and Garden*, Chicago Vegetarian Society, Rev. A.T. De Learsey, Annie Besant, the New Thought movement, Charles and Myrtle Fillmore found the Unity School of Christianity in Missouri, Ralph Waldo Trine, Chicago World Exposition of 1892 (Illinois), William Axon is secretary of the Vegetarian Federal Union, vegetarian society formed in Washington, DC, vegetarian lectures at the Chicago World Expo, Alice Stockham, Dr. Susana Way Dodds, Dr. Martin Luther Holbrook, *The Herald of Health* magazine (Trall), vegetarianism and Christianity, J. Howard Moore, Lawrence Grunland, Henry Perky and his New Era Cooking School, 1895 gathering of vegetarians to celebrate Thanksgiving at University of Chicago, the animal question and ethical vegetarianism, antivivisection movement.

7. The Progressive Era and the rise of vegetarianism: It followed the Gilded Age and the Victorian Era, women's suffrage and vegetarianism, refrigeration expands food choices, vegetarian foods developed at the Battle Creek Sanitarium and Sanitas Nut Food Co. (Michigan), peanuts and meat substitutes, Dr. John Harvey Kellogg, Lena Francis Cooper, vegetarianism in the media, George Bernard Shaw, Sarah Bernhardt, General William Booth and the Salvation Army, athletes and showmen, Eustace Miles, Karl Mann, walking and cycling, Bernarr Macfadden and his *Physical Culture*, his chain of vegetarian restaurants in New York City, scientific evidence in favor of vegetarianism, M.E. Jaffa, Dabney, E.V. McCollum, Russell H. Chittenden of Yale, Nicola Tesla, Kellogg's *Good Health* magazine, Upton Sinclair and *The Jungle*, passage of the 1906 Pure Food and Drug Act and the Meat Inspection Act, Hereward Carrington, Ernest H. Crosby, glamorous socialite Mrs. Maude R.L. Hammer Sharpe, the Millennium Guild (1912), M.R.L. Freshel, Benedict Lust and naturopathy, Kellogg battles the meat industry, the *Vegetarian Magazine*.

8. The Depression to the sixties: The lean years: Eat more meat, the soybean, Jethro Kloss, Henry Ford, World War II, Symon Gould, John Maxwell, Dr. Christopher Gian-Cursio, Herbert Shelton and natural hygiene, Dr. Jesse Mercer Gehman, *Recovery of Culture*, by Henry Bailey Stevens, the American Vegetarian Party found in 1948 by Symon Gould, its first presidential candidate was John Maxwell, Dr. Mervyn G. Hardinge, H. Jay and Freya Dinshah, American Vegan Society.

7. Peace, love, and vegetarianism: The counterculture of the 1960s and 1970s: Socialites Pageen and Ed Fitzgerald, the California scene, Gypsy Boots, drugless doctor Pietro Rotundi, Los Angeles Vegetarian Society, Bianca Leonardo, Woodstock, Hog Farm commune of New Mexico, Wavy Gravy, Lewis B. Marvin, Lisa Laws, Yogi Bhajan, Golden Temple restaurant, Haight-Ashbury, hippies, The Farm and Stephen Gaskin in Tennessee, the soy dairy, *The Book of Tofu*, by Shurtleff & Aoyagi, Helen & Scott Nearing, *Diet for a Small Planet*, Nellie Shriver and Connie Salamone, *Vegetarian Times*, PETA, Isaac Bashevis Singer, North American Vegetarian Society, the press, William Blanchard and *Vegetarian World*, McGovern Report.

10. Vegetarianism has arrived: Animal rights, popular vegetarian cookbooks, vegetarianism and the environment, John Robbins and *Diet for a New America*, new scientific evidence, Dr. Neal Barnard and PCRM, Suzanne Havala, Howard Lyman, the movies and television, new vegetarian foods, the Internet, the Atkins Diet attack.

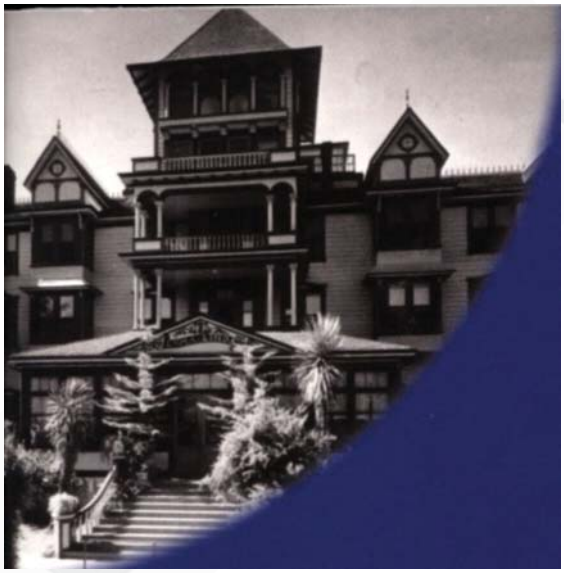
the cover of *Physical Culture* magazine (Sept. 1902). (13) Cover of *Good Health* magazine (Aug. 1898). (14) M.R.L. Freshel. (15) Cover of *The Vegetarian Magazine* (July 1924). (16) Constantina "Connie" Salamone. (17) Ingrid Newkirk of PETA. (18) PETA poster "Does your food have a face? Go vegetarian." (19) Neal Barnard, M.D. of PCRM. (20) Suzanne Havala Hobbs. (21) Howard Lyman. (22) VivaVegie's Penelo Pea Pod. (23) Two PETA spokeswomen with signs outside Rhode Island State House. (24) Bruce Friedrich of PETA.

Note: This book has several weak points: (1) The authors repeatedly confuse a vegetarian diet with a "plant-based" (vegan) diet. (2) The history focuses too much on the story of individuals and not enough on the great historical forces by which those individuals are shaped. Address: 1. Journalist, researcher, and Adjunct Prof. of English at Johnson and Wales, Univ., Rhode Island; 2. Journalist who has worked for the Associated Press, the Providence Phoenix, and other publications.

3517. White, Ellen G. 2004. God's nutritionist: Pearls of wisdom from Ellen G. White. Edited by Robert Cohen. Garden City Park, New York: Square One Publishers, Inc. xvi + 173 p. Foreword by Agatha Thrash, M.D. No index. 22 cm. [500* ref]

• ***Summary:*** As a spiritual leader, prolific writer, and pioneer nutritionist, Ellen G. White (1827-1915) had a profound effect on people around the world. Today her words still guide millions of individuals. "Her books have been translated into more languages than those of any other author in the history of American literature. Yet few outside the Seventh-day Adventist Church know of her work–that is, until now. In this unique book, editor Robert Cohen has blended Ellen White's most insightful quotations on health and nutrition with current scientific facts that confirm her views. She generally advocates a simple, vegetarian diet.



"Here are 500 of Ms. White's 'pearls of wisdom'–words that are as practical, insightful, and moral as they are accurate." The source of each is cited, but not precisely. Robert Cohen, the editor, is a Seventh-day Adventist. Her views on dairy products changed over the years.

3518. Loma Linda University School of Nursing. 2005. A century of caring (Calendar). Loma Linda, California. 28 p. 22 x 28 cm.

• ***Summary:*** Contents: A message from the dean. About the School of Nursing. Page per month calendar. "The School of Nursing, established in 1905, was the first in a group of schools which in 1961 became Loma Linda University." The inspiring mission is described and the number of diplomas and degrees listed. As you open to any month, on the top page is an historic photo about the nursing school, on the bottom page is calendar for that month plus a caption explaining the upper photo. Address: Loma Linda, California.

3519. Loma Linda University; Loma Linda University Medical School. 2005. Fulfilling the global vision: Centennial gala, Sunday, February 13, 2005, Loma Linda University, Drayson Center. Loma Linda, California. 42 p. 28 cm.

•

Summary: Contents: Welcome. Loma Linda University Adventist Health Sciences Center leadership. Message from the chair of the board. Loma Linda University Adventist Health Sciences Center (LLUAHSC) Board of trustees and advisors. Letters of congratulations (6). Program. Program notes. Telegram to John Burden (28 May 1905) from a church officer in Washington, DC, telling him not to purchase the Loma Linda property. Letter to John Burden from Ellen G. White (14 May 1905) telling him to "secure the property by all means" and not delay. He chose to follow Mrs. White's advice. About us (gives a 2-page historical overview of LLU Medical Center, then specifics about each of the 20 schools, centers, faculties, and institutes and when each was established). Historical photos with captions (10 p.). Loma Linda timeline [excellent chronology] (p. 37-41). Thank you and acknowledgments. Photos of the LLU Medical Center.

Photos (see next page) on p. 36 show: (1) The original Loma Linda Sanitarium, a 64-room building on 76 acres of land. (2) John Allen Burden; following Ellen White's counsel, he purchased the building that would become the College of Medical Evangelists. (3) Dr. P.T. Magan. In 1914 he was invited to join the Loma Linda faculty. The rest of his life was dedicated to the education and training of Adventist medical workers. Address: Loma Linda, California.

Shurtleff at Soyfoods Center, Feb. 10. 1 p.
• ***Summary:*** Loma Linda Sanitarium became the College of Medical Evangelists, and is now Loma Linda University & Medical Center.

Note: The College of Medical Evangelists (CME) was renamed Loma Linda University on 1 July 1961.

The library building where Janice works constructed in 1953. The new section, the Del E. Webb, was added in 1980. "There was a library for the college and hospital nurses in 1907. It was located in the original hospital building. It later moved to other locations before moving to this building in 1953." Address: Library Asst., Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-824-4942.

3521. Ridenour, Jeremiah. 2005. Pulmuone first invests in Wildwood Natural Foods in April 2004 (Interview). *SoyaScan Notes.* Feb. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jeremiah met Tom Lacina and his partner / brother-in-law one day when they showed up at the Wildwood plant in Santa Cruz. Jeremiah took them on a tour of the plant, then they went out to lunch. Tom was one of those rare people who was both an attorney and a farmer. He owned a farm and had built a small tofu shop on his land. He was selling about $50,000/year worth of soy products at the most. They said they were struggling in Iowa trying to make their tofu plant work, and they were losing tons of money. Somebody (Shurtleff) told Lacina that if he wanted to be successful, he should model his company after Wildwood. After visiting Wildwood, they visited San Diego Soy Dairy and Luke Lukoskie. He then called Jeremiah and said that if he was ever in the Midwest, he was welcome to stop by for a visit. On a trip to the East, Jeremiah stopped in to see Tom, who introduced him to venture capitalists (VCs) in Des Moines who scouted for companies potentially suited for Iowa state money. The VCs grilled Jeremiah about his business. To get money from the state of Iowa, a company had to have more than $5 million/year in sales. Jeremiah really liked Tom and the Soy Sisters (Tom's wife and sister). Wildwood had run out of capacity, working around the clock 7 days a week, so it was "grow or else." Wildwood and Midwest Harvest Corp. (Tom's company) ended up merging, becoming an Iowa corporation and getting money from the state of Iowa for job creation in Iowa and value-added products made in Iowa from Iowa farm crops. A certain percentage of that money had to be spent in Iowa, but Jeremiah was able to get enough to buy a used meat-packing plant in Watsonville, about 25 miles southeast of Santa Cruz. First the new corporation bought 10 acres of land in Grinnell, Iowa, 1½ miles down the road from Tom Lacina's farm and in 2001 built a state-of-the art plant (22,000 square feet) where only soymilk and cultured foods (such as soy yogurt) were made–the only such plant in the USA. Jeremiah has long had a strong commitment to organic farming and the use of organic ingredients wherever possible in his products. On his 320-acre farm, Tom Lacina grows some of the organic soybeans that Wildwood makes into cultured soyfoods in Iowa. This is the type of vertical integration that Jeremiah had long sought. Jeremiah used to contract with various organic farmers, but he gradually found problems keeping the protein levels of his two select varieties high enough and ensuring the cleanliness of the soybeans he wanted. So 5-6 years ago he started to buy his soybeans through a broker, and giving very clear specifications–such as at least 43% protein in the soybeans to be used in making tofu. That system has proven to be much better.

While building his first factory in Iowa, Jeremiah

© Copyright Soyinfo Center 2014

bought an old meat-packing plant in Watsonville, California and began to renovate it for food processing. Building two plants at once turned out to be a big mistake. The usual cost overruns occurred. After building plans had been approved by the inspectors and the meat-packing plant renovation was almost finished, inspectors came back in and said that about $1 million worth of earthquake retrofitting would have to be done. Jeremiah did the work and finished the plant. But now he needed the last million dollars of marketing money that he had been promised by Iowa. But Iowa refused to pay that money, arguing that it would take more than that amount for the company to reach the break-even point. What Wildwood couldn't see, was that politics was at work behind the scenes; Iowa wanted to get out. The money guys told Jeremiah he would have to find a strategic partner. Jeremiah suddenly found himself short of cash and in a financial crisis.

So he made a short list of potential partners who might invest money. House Foods America Corporation (Los Angeles) showed some interest then backed off. Jeremiah had first met Pulmuone in the spring of 2003 at the Natural Products Expo West in Anaheim; their booths happened to be across the aisle from one another. They had a smoothie product and Wildwood had introduced a smoothie the year before; Jeremiah thought that Pulmuone's wasn't very good. Some people from the Pulmuone booth came over to visit. They said that their CEO was coming from Korea and invited Jeremiah to meet him. But for some reason it never happened. So Jeremiah never thought of putting Pulmuone on his short list of potential partners.

Meanwhile, the Iowa cultured products plant was not doing well. "This discipline required to make cultured soyfoods is like that in an operating room." Jeremiah's basic concept was to make these cultured soy products probiotic, which would give them functional value. At his first meeting with the employees he asked how many people had heard of "probiotics," Nobody. Woops. How many had heard of "antibiotic." Everybody. He knew from that moment he would have marketing problems. Jeremiah and a PhD in microbiology had traveled to the plant, established the sanitation protocols, and trained the workers. But soon after he left, the quality control problems returned. Tom Lacina was more interested in having the paperwork done well than in enforcing the sanitation rules. This led to a loss of business and of money.

There was another factor. Jeremiah has come to believe that many, if not most, Midwesterners see anyone from California as a hippie. Hippies don't know how to run businesses and don't understand most Midwesterners. At one point the VCs put their foot down and told Jeremiah, "Too much travel. We don't want you to come here anymore." At that point things got out of control.

Stonyfield Farms was planning to have their soy yogurt made at Wildwood's Iowa plant–a huge potential account. But the people in Iowa could not produce the quality that was required. They missed a huge opportunity to make the Iowa plant successful. Jeremiah's wishes he had waited until the Iowa plant was making good quality products before bringing in Stonyfield.

Today, the Iowa plant is doing very well in every way; sales grew 400% last year. Pulmuone sent their R&D experts there and turned things around in short order. (8) In April 2004 Wildwood sold a controlling interest to Pulmuone. It was a matter of economic survival. So Wildwood has become an international company, with Korean partners. To celebrate the deal, Jeremiah went on a tour of Pulmuone's facilities in Korea. (9) Origins of Pulmuone in 1955 in Korea as a Christian Farming Cooperative. Their mission is "Love Thy Neighbor" and they are deeply committed to pure foods, organic agriculture, and no artificial ingredients. The saintly Mr. Won. Alex Nam went to college with Mr. Won's son. Pulmuone now has 12 organic food products.

In the early days, the Soyfoods Association was unable to attract any Asian soyfoods companies. Today both Asian companies, huge American food processors (Kellogg, ADM, DuPont, Kraft), and even state soybean boards are members. Address: 412 E. Riverside Drive., Watsonville, California 95076.

3522. Smith, Paul. 2005. Re: W.E. "Bill" Roberts, brother of F.G. Roberts, and president of the Vegetarian Society of Australia–starting in 1948. Letter (e-mail) to William Shurtleff at Soyfoods Center, April 29–in reply to questions. 2 p.

• ***Summary:*** Shurtleff wrote Smith on 13 April 2005: "Today I learned: 'It is not until 1948 when the Vegetarian Society [of Australia] is re-founded under the presidency of W.E. Roberts, a naturopath and owner of a health farm...' I am very interested in the history of vegetarianism. In looking through our SoyaScan database I found one document (a letter from you) stating that F.G. Roberts had a brother named W.E. "Bill" Roberts, who was in Sydney during the 1930s and 1940s.

"Can you tell me any more about Bill Roberts. Do you know when and where he was born, married, died? Was he a younger or older brother of F.G. Roberts? Do you have any documents that describe his life?"

Paul replied: "In relation to the Roberts family. The Roberts were Seventh Day Adventists and deeply interested in good health achieved through natural means and a well planned, balanced vegetarian diet, based upon whole grains, fresh fruit and vegetables. They were not adverse to the use of eggs, dairy and cheese. Bill Roberts wrote a recipe book that I have on file. It is undated but comes from the 1930s or 1940s. It would appear that Bill had very similar interests and direction to F G Roberts. However Bill lacked the breadth of influence achieved by F G, who started the Australasian School of Naturopathy in the early 1930s and later in 1954 the Australian School of Chiropractic after

© Copyright Soyinfo Center 2014

my father bought out Roberts share of the manufacturing business. F G Roberts either trained or influenced most of the senior natural health practitioners throughout Australia and both the training organisations he started survive to this day.

"Bill Roberts also lacked the multiplier effect of having a business which has carried on his name for more than 50 years beyond the 20 years plus period that F G Roberts was at the helm. I have no idea as to whether Bill was younger or older than F G Roberts.

"The Roberts family came from Tasmania. F G Roberts was born in Tasmania in October 1891 and died in October 1977 in Melbourne. F G Roberts moved to Melbourne either during or just after World War I. Apart from the recipe book, I have no information or documents about W E Roberts. There was often intense rivalry and jealousy between the various members of the Roberts clan and the lack of family co-operation often appears to have been counter productive. Another brother, George, worked in the railways in Tasmania.

"F G Roberts had 3 children who followed him into the business. Horace Eric who was killed in Changi POW camp working on the Burma railway. Fred, a naturopath who resided and practiced in Brisbane, and Gladys, a naturopath and chiropractor who resided and practiced in Melbourne. F G Roberts had 2 grandsons, Peter Roberts in Brisbane (Fred's son) and Graeme Newitt in Melbourne (Gladys' son) both of whom practice as chiropractors and are at or near retirement."

3523. Crook, Edgar. comp. 2005. Bibliography of Australian sources for vegetarianism and veganism. 2nd rev. ed. Wanniassa ACT: Australia. 58 p. Unpublished typescript. April. 28 cm. [297 ref]
• ***Summary:*** The best (and only) bibliography seen on this subject. The compiler is a professional librarian. Contents: Monographs (general works; 41 refs). Monographs (cookery, nutrition and health; 135). Periodicals (34). Manuscripts [archival collections] (4). Theses (15). Music (1). Other materials (Audio visuals, ephemera, pamphlets; 4). Archived websites (2). Other websites (15–URLs accessed Feb. 2005). Seventh Day Adventist Church: Monographs, periodicals, other materials (46).

The Introduction (p. 2) states: "This bibliography is only concerned with works produced within Australia, or by an Australian, which prominently feature vegetarianism or veganism. Most, but not all of the works, are currently available to researchers from Australian libraries (according to institutional catalogues and the Australian National Bibliographic Database).

"This bibliography is as comprehensive as possible on works published prior to 1980 but it is not a complete record of all works published. The bibliography contains only that which is known to the compiler or available in a library or other institution..." For more information: edgarcrook@hotmail.com. Address: Librarian, Wanniassa ACT 2903, Australia.

3524. Crook, Edgar. 2005. A history of vegetarianism in Australia–1788 to 1948. Wanniassa ACT: Australia. 117 p. Unpublished typescript. April. 28 cm. [297 ref]
• ***Summary:*** The best (and only) history seen on this subject. The compiler is a professional librarian. Contents: Introduction. The establishment of meat. A new dawn. Religious and temperance reformers. Alfred Deakin and the Melbourne spiritualists. The advent of the Adventists. A radical diet. Women. Eccentric reformers. Dietary reformers. Food. Vegetarian societies. Animal rights and welfare. Vegetarian writers. Opposing artistic and literary perceptions. Concluding remarks. Address: Librarian, Wanniassa ACT 2903, Australia.

3525. Sanitarium. 2005. About us: Our history (Website printout–part). www.sanitarium.com.au/about-us/history.html Printed May 3.
• ***Summary:*** "A Century of Good Health: Over a century ago, in 1898, a small business opened its doors in Melbourne, Australia with the vision to help people `learn to stay well'–the meaning of the word Sanitarium–by linking good diet with good health.

"From a modest rented bakery, Edward Halsey, a baker, created Sanitarium peanut butter (Australia's first) and ready-to-eat breakfast cereals like Granose (an unsweetened forerunner to Weet-Bix) and Granola (a cereal made from wheat, oats, maize and rye) which were unlike anything previously available.

"In late 1898, the fledgling company relocated to larger premises in Cooranbong, south of Newcastle in New South Wales. Halsey installed bake house equipment in a large building that had previously been a sawmill.

In 1900, Halsey transferred to New Zealand where he began making the first batches of Granola, Caramel Cereals (a coffee substitute) and bread in a small wooden shed in the Christchurch suburb of Papanui.

"Since Edward Halsey began the business, the Sanitarium company has been at the forefront of healthy eating. Sanitarium advocated vegetarianism before it was trendy and were the first to introduce the concept of the health food shop. Throughout the years, Sanitarium has remained true to the vision of its founders by promoting a better life through better nutrition.

"Today, Sanitarium Australia is owned and operated by Australians while Sanitarium New Zealand is owned and operated by New Zealanders. We do work together, however, to produce over 150 products and employ approximately 1700 people in our manufacturing and distribution sites throughout Australia and New Zealand.

"The Origin of Sanitarium icons–Weet-Bix: Sanitarium's original wheat biscuit, Granose, was marketed in Australia

© Copyright Soyinfo Center 2014

and New Zealand during the early 1900s, not only as a breakfast cereal but also as an alternative to bread. During the 1920s, Sanitarium faced a challenge to Granose from a new sweetened flake biscuit called Weet-Bix, which was produced by a company called Grain Products.

"In 1930, Sanitarium acquired Grain Products, which also had connections to the Seventh-day Adventist Church, and made Weet-Bix its own.

"Marmite: Marmite was introduced to Australia and New Zealand by Sanitarium. Initially it was imported from the United Kingdom but shortly before World War II, we secured the secret recipe from the English and made the first Australian Marmite in our Cooranbong factory in 1944. Since the 1970s, Sanitarium's Christchurch factory has manufactured all the Marmite sold in the South Pacific.

"Health Food Stores: As early as the 1900s, Sanitarium introduced Australians and New Zealanders to the concept of health food shops and vegetarian cafes. The first Sanitarium cafes opened in March 1902 in Sydney's Pitt Street and in 1907 in Auckland's Victoria Street. These stores generally incorporated a cafe as well as a retail outlet where patrons could buy much of what they had eaten.

"The overriding aim of the cafes was to introduce people to a better way of living through vegetarian meals and cooking lessons. While the stores flourished through to the 1960s, changes in buying habits of consumers prompted Sanitarium to close its cafes and retail shops. However our commitment to sharing our knowledge has not ceased. We now provide education and information through our Nutrition Education Service, which was established in 1987." Address: Australia.

3526. Walker, Cynthia. 2005. Re: Was Swedenborg a vegetarian? Rev. Wm. Cowherd was a Swedenborgian minister in Manchester. Alnwick grove, Pennsylvania and Bryn Athyn. Letter (e-mail) to William Shurtleff at Soyfoods Center, June 14. 1 p.

• ***Summary:*** 1. The evidence of Swedenborg as a vegetarian is somewhat convoluted. In the *Intellectual Repository* (1816-17, p. 272-78) is a statement and counterstatement, the latter by Robert Hindmarsh. Both concern a paper said to be a verbatim report from Shearsmith about Swedenborg, intimating that during the last 20 years of Swedenborg's life he neither ate meat not consumed alcoholic drinks. Hindmarsh was reported to have been with Shearsmith when he was quizzed by Armistead. Hindmarsh, in his counterstatement, says he was in fact there during the interview in 1910, but that Shearsmith's mind was wandering and contradicting earlier things he had said about Swedenborg when Hindmarsh frequented Shearsmith's barbershop in Clerkenwell.

2. Are you aware that the Rev. Wm. Cowherd was a Swedenborgian minister at the Peter Street church in Manchester from about the 1790s until 1817, and a very active vegetarian. We have a volume of his entitled *Facts Authentic in Science and Religion*, published in Salford, Manchester, in 1818. "I ran across a statement that one of his converts brought his beliefs first to Philadelphia and then to Michigan and influenced Dr. John Harvey Kellogg. Maybe you can help me with that."

3. Alnwick, Pennsylvania (in Chester Co., founded about 1697 by a Quaker named Abraham Marshall), is not the same as Alnwick grove, which is part of Lower Moreland Township, Montgomery County. The grove was the picnic stop on the Reading Railroad from which Bryn Athyn sprang. "I believe the first picnickers came out from Philadelphia about 1885, but I have no proof of that." In Alnwick grove, "Swedenborgians started building our village about 1895. The first school building was at the Inn and then about 1901 the main school was built, then an elementary school and library were added by 1910. The corner stone of the Cathedral was placed June 19, 1914." Address: Archivist, The Archives, Swedenborg Library, Box 740, Bryn Athyn, PA 19009. Phone: 267-502-2524.

above societies had closed by the early 1860s and, for about the next 20 years, we have no references to any vegetarian societies in the USA. The British vegetarian magazines carried many letters from Americans; reports from health establishments, particularly at Battle Creek, Michigan; reports from several religious communes such as the Shakers, and secular communities in Alabama and California. Vegetarianism was still very much alive and kicking in the States, but no societies.

3530. Soyatech.com. 2005. U.S. soyfoods market shows signs of maturity with slow growth in 2004, says new report. http://www.soyatech.com/bluebook/news/viewarticle.ldml?a=20050829-1. 3 p. Posted 29 Aug. 2005. [6 ref]

• ***Summary:*** *Soyfoods: The U.S. market 2005*, a new market study, shows that total sales of soyfoods hit $4.0 billion in 2004, but "showed the slowest year-over-year growth (2.1%) for the industry as a whole since the early 1980s, when the category began its climb."–according to Peter Golbitz, president of Soyatech, Inc. In 2004, 4 of the 5 top soyfoods categories (meat alternatives, tofu, energy bars, and meal replacements) showed decreased sales; only soymilk posted increased–but modest gains. Up and coming categories include snack foods and other dairy replacements.

In recent years, a number of articles and reports have questioned the health benefits of consuming soyfoods and products containing soy ingredients. "If you look at the top 10 companies in the soyfoods market today, virtually all of the original founders and visionaries are gone," observes Golbitz. During the boom years of the late 1990s and early 2000s, they were bought out by bigger food companies, such as Dean Foods, Kraft, Kellogg, General Mills, ConAgra and Hain-Celestial. These are solid companies but are less willing to take risks and are driven more by "market data than by vision."

The report, the 5th in a series by information partners Soyatech, Inc. and SPINS, is sold in parts. The "macro section" [80-page executive summary] costs $2,900. The more specialized sections are available for about $1,500 each. You can download the prospectus at: http://www.soyatech.com/ pdf/soyfoods05.pds. Soyatech was founded in 1985 and SPINS in 1995. Address: Bar Harbor, Maine.

Morningstar Farms line of meat alternatives–because one of the two factories is way underused. Address: Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

3533. *SoyaScan Notes.* 2005. What ever happened to the Loma Linda Foods plant at 11503 Pierce St., Riverside, California? (Overview). Sept. 12. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** After Loma Linda Foods left in the mid-1990s, the plant was sold several times. As of Sept. 2005 it is owned by Stremicks Heritage Foods, LLC, which has its headquarters in Santa Ana, California. The plant packages beverages.

A Yohoo! Finance website on dairy products says that after selling its large fluid milk business, Adohr Farms, to Suiza Foods (now Dean Foods), Stremicks (whose president and CEO is Louis J. Stremick, a former Carnation executive) began producing more specialized beverages. "It is the exclusive bottler of NesQuick flavored milks in California and the Southwest, and packs extended self life [ESL] dairy and nondairy products, such as Coffee-mate." And it packs soy- and rice beverages into aseptic containers for one customer. It also blends ice cream mix for foodservice customers. Contact: 4002 Westminster Ave., Santa Ana, CA 92703. Phone: 714-775-5000.

3534. Little, Janice. 2005. Basic reasons for the split between Dr. John Harvey Kellogg, Ellen G. White, and the Seventh-day Adventist Church (Interview). *SoyaScan Notes.* Sept. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The issues that had been simmering came to a head in Dec. 1902 when the Battle Creek Sanitarium, owned by the Seventh-day Adventist Church, was destroyed by fire. Ellen G. White told Dr. Kellogg not to rebuild it. He decided to ignore her advice, and was able to gain control of the board of directors. He wrote a book titled *The Living Temple* which he hoped would pay the costs of reconstruction. When the book was published, it was sharply criticized by Ellen G. White for what she considered to be its many statements of pantheism (God is in everything). He made all or almost all the corrections she suggested, probably for at least two reasons: (1) To help sales of the book to SDAs, and (2) To try to repair his breach with her. The latter apparently didn't work. In 1907 he was disfellowshipped.

James and Ellen White had treated J.H. Kellogg like their own son. They had paid all or most of his way to medical school. As he became a good doctor, and then gained considerable fame, he wanted more and more control at the hospital. In the years before 1902, Ellen White urged him to curb his pride and to "come down off his high horse." He continued to press for more control.

It is not well known that Dr. Kellogg's wife was a Seventh-day Baptist, not a Seventh-day Adventist. She was a well-known nutritionist and wrote many books. She was near deaf for much of her later life.

Dr. Kellogg felt very strongly about vegetarianism and the other health teachings of the SDA church. Yet quite of few SDA leaders and brethren did not follow them. Dr. Kellogg criticized them sharply, openly, and in public, which created hostility toward him among many of those who he had criticized.

Janice has heard it said by many good SDA historians and researchers that there was another source of conflict. While young, Dr. Kellogg was quite attracted to a young lady about his age named Mary Kelsey. While he was away in Europe studying medicine, she and Willie White, Ellen's son, were married.

Another rift was between Dr. Kellogg and his younger brother Will Keith, of breakfast cereal fame. The split apparently began when Dr. Kellogg learned that his brother has started to put white sugar in his breakfast cereals. Will Keith was an entrepreneur, and he had observed that sugared cereals sold by his competitors increased in sale. A lawsuit resulted and the two brothers were estranged for the rest of their lives. Address: Library Asst., Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-558-4942.

3535. Little, Janice. 2005. Arthur White was determined to preserve the immaculate reputation of his beloved grandmother Ellen G. White (Interview). *SoyaScan Notes.* Sept. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Arthur was head of the Ellen G. White Estate. He did not want researchers using selected letters in the estate's vault that might in any way tarnish the reputation of his grandmother. The most carefully protected letters were in the "Z file." It took a committee vote before any researcher could examine them.

After Arthur died in 1991, this protective policy was reversed. The letters in the "Z-file" were dispersed among the rest of the archives and researchers where given very open access to all her records. This is gradually leading to a much more realistic appraisal of Ellen G. White, a truly remarkable woman, but one (who like all people) had her shortcomings and struggles.

One of the best of these is *Messenger of the Lord: The Prophetic Ministry of Ellen G. White,* by Herbert E. Douglass (Pacific Press Publishing Association, 1998, 640 p.). This is used as a college textbook.

Another new look, much easier to read, is found in a series of four slim books (ca. 108-144 pages each), by George R. Knight, written from 1997 to 1999 and published by the Review and Herald Publishing Association (SDA church): They are: (1) *Reading Ellen G. White: How to Understand and Apply Her Writings* (1997). (2) *Meeting Ellen White* (1997). (3) *Ellen G. White's World* (1998) (4)

© Copyright Soyinfo Center 2014

Walking with Ellen White: The Human Interest Story (1999).

Many Americans do not realize that Ellen G. White is the most widely translated author in American history. That is, her writings have been translated into more languages than any other American author. To arrive at this figure, multiply the number of her books that have been translated times the number of languages into which each has been translated. Her book *Steps to Christ* has been translated into more languages than any other single book by an American author. Address: Library Asst., Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-558-4942.

3538. Richmond, Akasha. 2005. Hollywood dish: More than 150 delicious, healthy recipes from Hollywood's Chef to the Stars. New York, NY: Avery–A member of the Penguin Group (USA) Inc. xi + 310 p. Illust. Index. 25 x 20 cm. [125 ref]
• ***Summary:*** One of the most original and interesting cookbooks seen in decades. This book, originally titled *Healthy Hollywood*, is much more than just a collection of superb recipes and stories about Hollywood celebrities and glitterati. In carefully researched and well-written sidebars, it documents the history of health foods in Hollywood and southern California. The introduction to each chapter tells the history of that type of food, and every recipe has a long and interesting historical headnote. The acknowledgments show vividly Chef Akasha's high and wide circle of Hollywood friends. The introduction–"The Road to Hollywood" tells the story of how Akasha got interested in and researched this subject. History is woven into every page of this book–in the most palatable way. In short, this is a cookbook with a remarkable tale to tell–one to read and study–as well as one to cook from.

Sidebars and illustrations: (1): "The stars and the Hollywood Diet"–Sue Carol (lovely future wife of Alan Ladd) on the cover of *Motion Picture* magazine, Oct. 1929. (2) Mildred Lager (1908-1960). (3) Harry Chandler (1864-1944). (4) Granola (Layton Gentry, Adelle Davis, Dorothea Van Gundy Jones). (5) Photo of silent film star Anita King eating Sun Maid Raisin Pie, 1916. (6) Adelle Davis (1904-1974). (7) Clarke Irvine, 1892-1975. (8) Photo of Radiant Radish health food store, owned by Beach Boy Brian Wilson, Los Angeles, 1969. (9) Otto Carque, 1867-1935, with a photo of his health wagon, around 1912. (10) Gayelord Hauser (1895-1984). (11) "Nature Boy"–Bill Pester and the 1948 hit song by Eden Ahbez. (12) The Ashram–Hollywood restaurant founded by Anne-Marie Bennstrom. (13) The Hollywood diet, with a photo of page 1 of the "18-Day Diet" from *Motion Picture* magazine, Oct. 1929. The sidebar begins: "The first best-selling diet book in America, *Diet and Health, with a Key to the Calories*, was written by Los Angeles-based Dr. Lulu Hunt Peters in 1918, and sold over 2 million copies. The book introduced the concept of counting calories." (14) Alan Hooker (1902-1993). The grandfather of California cuisine, he opened the Ranch House restaurant in 1956 in Ojai, California. (15) Gloria Swanson–Hollywood's Green Goddess. She "was the highest paid and most popular, influential star of the 1920s." (16) Jim Baker (1922-1975). A pioneering organic restaurateur, he Opened the Aware Inn in 1957, then the Source restaurant in 1969. (17) Raw, raw, raw (Arnold Ehret, Vera and John Richter, and raw foods). (18) Photo of silent film star Mary Pickford drinking orange juice made with Sunkist fruit and juicer. (19) The godfather of fitness–Jack LaLanne. Master chef Danny Kaye (1913-1987). (20) The Farmer's Market in Los Angeles, started in 1934. (21) Paul Bragg (1881-1976), with photo of Rita Hayworth on the cover of his *Health Builder* magazine. (22) Books and cooks–"150 Recipes of the Stars (1928), Helen Evans Brown. Soyfoods are used in recipes (and recipe titles) throughout this book: Edamame or fresh green soybeans (used in 2 recipes), miso (1 recipe), soymilk (many, especially in place of milk in desserts, incl. "Chocolate Jack Daniel's soy gelato" and "Soya chocolate" milk), soy flour (1, Bill Baker's bread), soybeans (whole, 1, "Soybean casserole"), tofu (10), and tempeh (4).

Also discusses: Sophie and Harry Cubbison (p. 47), El Molino Mills (p. 106). Early veggie burgers (p. 106). Silk soymilk and Steve Demos (of White Wave, p. 266).

The recipes in this book are largely vegetarian (including 17 vegetarian main dishes), all call for organically grown ingredients, and many are dairy-free (using soymilk instead of cow's milk). However: Beef (used in 2 recipes, incl. "Fillet mignon Japanese"). Pork (used in 1 recipe, "Citrus roasted pork chops with rosemary potatoes"). Chicken (used in 6 recipes, incl. "Endive petals with curried chicken salad"). Turkey and duck (3 recipes). Fish (many recipes as for cod, halibut, salmon, whitefish). Shellfish (crab, scallops, shrimp).

Talk with Akasha Richmond, who calls. 2005. Dec. 7. Her favorite parts of the book are: The smoothie story (p. 275-80, both dairy and nondairy). Otto Carque. Gloria Swanson. Yogis and Swamis, Granola. She is very happy with everything about the way the book and its promotion turned out ("It looks great")–except she wishes she could have included more photos. Address: Los Angeles, California.

3539. **Product Name:** Morningstar Farms Grillers (Meatless Hamburger Patties) [Prime, or Original].
Manufacturer's Name: Kellogg Sales Co. (Marketer-Distributor).
Manufacturer's Address: Battle Creek, MI 49016.
Date of Introduction: 2005.
Ingredients: Prime: Textured vegetable protein (wheat gluten, soy protein concentrate, concentrate, soy protein isolate, water for hydration), corn oil, sunflower oil, egg whites. Contains 2% or less of cornstarch, natural flavors from non-meat sources, soy protein isolate, autolyzed yeast extract, salt caramel color,...
Wt/Vol., Packaging, Price: 10 oz (284 gm). Four patties in paperboard box. Retails for $4.59.
How Stored: Frozen.
New Product–Documentation: Products (two) with Labels purchased at Safeway supermarket in Lafayette, California. 2006. July 31. Prime: 8 by 4 by 1¼ inch box. Green, red, black and yellow on white. Color photo of a patty with veggies between two buns. Soyfoods Center taste test. Poor. Has the aroma of warm, moist dog food. Tough, not tender or juicy or tasty.

3540. Campbell, T. Colin; Campbell, Thomas M, II. 2005. The China Study: the most comprehensive study of nutrition ever health ever conducted and the startling implications for diet, weight loss and long-term health. Dallas, Texas: BenBella Books. xviii + 417 p. Illust. Map. 24 cm. [757* ref]
• ***Summary:*** The China Study examines more than 350 variables of health and nutrition with surveys from 6,500 adults in 65 counties, representing 2,500 counties across rural China and Taiwan. But only about one-third of this book is about The China Study.

While revealing that proper nutrition can have a dramatic effect on reducing and reversing these ailments as well as obesity, this text calls into question the practices of many of the current dietary programs, such as the Atkins diet, that enjoy widespread popularity in the West. The impact of the politics of nutrition and the efforts of special interest groups on the creation and dissemination of public information on nutrition are also discussed (from publisher description).

Contents: Acknowledgements. Preface, by Howard Lyman. Foreword, by John Robbins. Introduction. Part I: The China Study. 1. Problems we face, solutions we need. 2. A house of proteins. 3. Turning off cancer. 4. Lessons from China.

Part II: Diseases of affluence. 5. Broken hearts. 6. Obesity. 7. Diabetes. 8. Common cancers: breast, prostate, large bowel (colon and rectal). 9. Autoimmune diseases. 10. Wide-ranging effects: bone, kidney, eye and brain diseases.

Part III: The good nutrition guide. 11. Eating right: eight principles of food and health. 12. How to eat.

Part IV: Why haven't I heard this before? 13. Science–the dark side. 14. Scientific reductionism. 15. The "science" of industry. 16. Government: it is for the people? 17. Big medicine: whose health are they protecting? The good work and sad endings to stories of Caldwell Esselstyn (in reversing heart disease using diet) at the Cleveland Clinic (Ohio) and Dr. John McDougall (in reversing autoimmune diseases using diet) at St. Helena Hospital (Napa Valley, California; a Seventh-day Adventist Hospital). 18. Repeating histories.

Appendixes. A. Q&A: Protein effect in experimental rat studies. B. Experimental design of The China Study. C. The "Vitamin" D Connection.

From cover of paperback edition: "Everyone in the field of nutrition science stands on the shoulders of Dr. Campbell, who is one of the giants in the field. This is one of the most important books about nutrition ever written–reading it may save your life." Dean Ornish, MD.

Note: This book is also available (as of 2009) in audio,

as an abridged sound recording on 6 CDs.

The findings of this book were criticized on the Web by various people, one good example of which is Denise Minger, age 23. Minger lists her educational and professional qualifications on her Facebook page as writer, Catholic school teacher, summer camp instructor, and "Professional Sock Puppeteer." Her critique The China Study: Fact or Fallacy? by Denise Minger–may be found at: http:// bit. ly/9s5pn8.

Dr. Colin Campbell took the time to write a excellent, lengthy, detailed "Reply to Denise Minger" which may be found at http://www.vegsource.com/ news/ 2010/07/ china-study-author- colin-campbell- slaps- down-critic-denise-minger.html. Address: Jacob Gould Schurman Prof. of Nutritional Biochemistry, Div. of Nutritional Sciences, Cornell Univ., Ithaca, New York 14853.

3541. Price-Pottenger Nutrition Foundation. 2006. Resource guide–2006 edition: Books, videos, membership & services. La Mesa, California. 23 p. 28 cm.
• ***Summary:*** Includes: PPNF fundamentals and dietary guidelines (p. 20). Similarities of traditional diets (p. 21).

Talk with Pat Connolly. 2006. April 3. Weston Price studied 14 groups but was never able to study any groups in Asia or any vegetarian groups. He believed that butter and cod liver oil were good foods (people should consume ½ teaspoon a day), but Pat says that, in today's world, most butter and most cod liver oil are not good foods. The butter must be a deep yellow orange and made from cows reared on rotational pasturing–such as Mark Mcafees organic pastures. Cod liver oil should be of the Norwegian kind with the pollutants found in the oceans removed.

Her husband was a dentist, who was given Weston Price's books and writings. She believes that Seventh-day Adventists are not very healthy, and explains that Ellen G. White was "all crippled up with arthritis." She met Royal Lee, who was also a dentist. Address: P.O. Box 2614, La Mesa, California 91943-2614. Phone: 619-462-7600.

3542. Michigan Women's Hall of Fame. 2006. Lenna Frances Cooper (1875-1961). http://hall.michiganwomenshalloffame.org/honoree. 2 p. Printed Feb. 14.
• ***Summary:*** Inducted: 1993. Era: Historic. Area of achievement: Dietetics. She was a "leader and innovator in the development of dietetics as a science and profession.

"Originally trained as a nurse, Cooper was a protege of Dr. John Harvey Kellogg, director of the Seventh-day Adventist sanitarium in Battle Creek, and his wife, Ella. Under their tutelage, Cooper took up the study of nutrition and became a leading proponent of health care through diet.

"In 1908 Kellogg established a School of Home Economics at the 'San,' and Cooper was named its first director... More than 500 dieticians graduated from the Battle

Creek program during her tenure.

"To lend structure and professionalism to the field, Cooper co-founded the American Dietetic Association (ADA) in 1917... She was a charter member of the American Home Economics Association, founded in 1909, and of the Michigan Home Economics Association, founded two years later... She served as the first dietician in the United States Army in 1918-19,..."

"In 1928 Cooper was named one of the ten most distinguished women of achievement in Michigan. Cooper's greatest renown came through her role as senior author of *Nutrition in Health and Disease*, a text that was used for 30 years in dietetic and nursing programs around the world. She participated in 13 of the book's 17 revisions."

A portrait photo shows Lenna F. Cooper.

3543. Gupta, Rajendra ("Raj") P. 2006. New developments at ProSoya in the USA and Canada (Interview). *SoyaScan Notes.* May 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** "ProSoya" is the popular name of Raj's company. ProSoya Corporation in Heuvelton, New York state is not a new entity. ProSoya Corporation has long existed as a holding / parent company, based in St. Louis, Missouri. The one in New York is a branch of that. The ProSoya UK Ltd. in Livingston, Scotland, which was a separate entity under license from ProSoya Inc., no longer exists. ProSoya Foods India Pty. Ltd. is now active in India.

ProSoya Corp. in Heuvelton is now shipping "soy extract" [soybase / soya base] to a company in Canada. They

© Copyright Soyinfo Center 2014

have also developed a delicious "creamy orange" soymilk with a thick consistency like a smoothie–but it is not yet for sale. Supermarkets that have their own brand of soymilk do not buy soyabase; they want a finished product delivered to their door in their package. Last year Raj could not find a co-packer; but now he has found one in Toronto that packs about 3 truckloads a day for him. He is still looking for one in the USA. If he had been able to find one a year ago, he would be in almost every store by now.

SoyaWorld is now very strong everywhere except in the USA; they have the best-selling soymilk brands in Canada. Since about 2001-2002 they have been owned by Sanitarium Foods of Australia. Originally SoyaWorld was owned by Dairyworld, which was sold to Saputo, then Saputo sold the soymilk business to Sanitarium Foods. Sanitarium kept "SoyaWorld" as a name for both the business and the brand. They don't want to call it Sanitarium, which is sort of an outdated, old-fashioned funny name. SoyaWorld no longer has royalty or exclusivity agreements with ProSoya (they expired in May 2004), which is why ProSoya can now make and sell soybase, soymilk, and soymilk products.

Raj's soybase is now made by an improved process. It is still made by the basic airless cold-grind process, so that change is more in the art than in the science–it is not a breakthrough, but a fiddling with details. He has not licensed his process to anyone. It is better for formulation, is more bland, and is unique in that it has no soy taste. Raj likes to say that his soybase has "no soy taste" and "no beany taste." Most good manufacturers have be able to get rid of the "beany taste, which is normally associated with rancid oil-like flavors, chalkiness, and astringency," but Raj believes that only his company has been able to also get rid of the "soy taste," which is more subtle yet still a big obstacle to widespread acceptance of soyfoods and soy beverages. When Raj talks to big distributors, they say that all the soyfoods manufacturers claim to have gotten rid of the "beany taste," yet the taste still leaves something to be desired–"it still tastes like soy." So Raj speaks of "no soy taste" to distinguish his products from the others. Raj has found that the people of India "hate soy taste." But they love his products, which have no soy taste. Certain flavors go very, very well with his soybase. If a company uses strong flavors or heavy masking, consumers say the product tastes like medicine.

One interesting phenomenon is that the flavor of soybase or soymilk improves as it is allowed to age for 4-5 days.

Raj is not sure whether or not he should put the word "soy" on the package or not. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

3544. Green, Carolyn. 2006. Top ten: Welcome to the garden–Garden Protein International, Richmond, BC. *Food in Canada.* May. p. 39.

• ***Summary:*** Garden Protein International makes meatless chicken and beef from identity preserved (IP), non-GMO soy protein and wheat protein, plus various other ingredients such as carrot fiber, minerals and vitamins. In its first year, ending March 31, the company had sales of $10 million.

By contrast, Yves Fine Foods, which he started in 1985, had sales of $235,000 its first year. When Potvin began considering the next generation of meat alternatives in the early 1990s, he used the example of surimi, a Japanese crab-like product made from pollock fish. The result was Gardein, which is made like pasta (sort of) by a unique process of extrusion technology.

By 2003, Potvin began demonstrating Gardein to other food Manufacturers. One of his first customers was Morningstar Farms, a division of the Kellogg Co., Battle Creek, Michigan. Gardein will also be a major ingredient in Loblaw's President's Choice Blue Menu products this fall.

In 2001, when Yves sold Yves Veggie Cuisine to the Hain Celestial Group, he signed an agreement that contained a "non-compete clause" (covenant not to compete–CNC), which prevented Potvin from putting Gardein in the market as a stand-alone product until the fall of 2006. At that time he hopes to have four Garden Protein products in grocery stores: chicken or beef strips can be used in recipes such as stir fries or fajitas, and a chicken or beef dish in a sauce. The price is expected to be about $3.99 for 250 gm.

A photo shows Yves Potvin, a native of Sherbrooke, Quebec, Canada (the only major city in the Eastern Townships) standing and looking happy.

Note: Yves was born in Waterloo, Quebec, then moved with his family to Sherbrooke, Quebec, when he was a teenager.

3548. Fromartz, Samuel. 2006. Organic, Inc.: Natural foods and how they grew. New York, NY: Harcourt, Inc. xx + 294 p. No illust. No index. 24 cm. [270 ref]
• ***Summary:*** Contents: Introduction (the case of Arthur Harvey, a small organic blueberry farmer from Maine). 1. Humus worshippers: The origins of organic food. 2. The organic method: Strawberries in two versions. 3. A Local initiative: From farm to market. 4. A spring mix: Growing organic salad. 5. Mythic manufacturing: Health, spirituality, and breakfast (very interesting, largely about Steve Demos, White Wave Silk soymilk and Dean Foods / Suiza, plus Sylvester Graham, Dr. James Caleb Jackson, Dr. John Harvey Kellogg and his brother Will K. Kellogg, Jeremiah Ridenour, Ted Nordquist, *The Book of Tofu* by Shurtleff and Aoyagi, *Diet for a Small Planet* by Frances Moore Lappe). 6. Backlash: The meaning of organic. 7. Consuming organic: Why we buy. Acknowledgments. Notes.

A history (sort of) of the organic food industry in the United States, and how the movement has gone from fringe, to commercial, to mainstream. This is a niche or underdog food culture involving many issues of morality–the relationship of humans to agriculture and nature, and specifically how a principled person or business can thrive in the modern world without compromising ideals.

The author, a business writer, says in the introduction: "I was particularly interested in the people who sought to manifest their values in business... The intersection of idealism and business was not an easy place to stand, since one usually trumped the other."

"Sales of organic food had shot up about 20% per year since 1990, reaching $11 billion by 2003." This industry, which has its roots in utopian ideologies, will surely have an interesting future.

A great deal of the book is devoted to the recent history, and the early history of the organic food industry in the United States is (unfortunately) extremely weak. The book is hurt first by the lack of an index, second by the lack of endnote reference numbers in the text (the 254 endnotes themselves are excellent), and third by the lack of complete references to key books cited in the endnotes (he gives the author and title, but no year of publication or publisher; so one who wishes to cite these books must take the time to look up the missing information). Address: Business writer, Washington, DC.

3549. Jones, Ellis. 2006. The better world shopping guide: every dollar makes a difference. Gabriola Island, B.C., Canada: New Society Publishers vi + 169 p. Portrait. Product Category Index. 16 cm. [26 ref]
• ***Summary:*** This is a book about green and ethical products. The ratings are not about flavor or sales or market leadership; they are about company commitment to a green and ethical world. The author has consulted many reliable sources (p. 7) for his ratings.

Soy related sections include: Dairy alternatives (p. 68-69): Corporate hero: Silk (White Wave). Corporate villain: Cool Whip (Altria). A+: Silk. A: Follow Your Heart, Stonyfield Farms, Nancy's, Wildwood. A-: WholeSoy, ZenSoy. B+: Tofu Rella, Vegan Rella, Almond Rella, Soya

Kaas. C: Lisanatti, Tofutti, Soy Moon, Soyco, Galaxy Nutritional, Soymage, Vegie Slices, Rice Slices. C-: Borden. D: International Delight. D-: Carnation. F: Cool Whip.

Note: Cool Whip is a brand of imitation whipped cream named a whipped topping by its manufacturer. Cool Whip was introduced in 1967 by the Birds Eye division of General Foods. Within two years of introduction, it became the largest and most profitable product in the Birds Eye line of products. Birds Eye later merged with Kraft Foods and Philip Morris, eventually becoming part of Altria Group until the spin-off of Kraft Foods from Altria in 2012. Cool Whip was invented by William A. Mitchell, a food chemist at General Foods Corporation. The key advantage of the invention was that it was a whipped cream-like product that could be distributed in a frozen state by grocery chains and kept in the consumer's refrigerator.

Ice cream alternatives (p. 96-97): Corporate hero: Ben & Jerry's. Corporate villain: Haagen Dazs (Nestle). A: Stonyfield Farms, Ben & Jerry's, Soy Delicious, Straus Family. A-: Celestial Seasonings, Wholesoy, Rice Dream, Soy Dream, Natural Choice. B+: Double Rainbow, Julie's, Newman's Own. B: Starbucks. B-: Dole. C+: Weight Watchers, Godiva. C: Tofutti, Crystal, Fruitfull. C-: Breyers, Klondike. D+: Dove, Snickers. D-: Healthy Choice. F: Dreyer's, Nestle, Haagen Dazs.

Meat alternatives (p. 102-03): Corporate hero: White Wave. Corporate villain: Boca (Altria). A+: White Wave, Tofutown. A: Amy's, Wildwood. A-: Yves, Small Planet. 3551. Chalmers, Elizabeth. 2007. Business history of the Chalmers family: Making soyfoods in New Zealand (Interview). *SoyaScan Notes.* Jan. 16. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** On Easter 1980 Rick & Elizabeth Chalmers, together with Rick's brother Greg (his formal name is "Stephen"), opened Harvest Wholefoods, 403 Richmond Road, Grey Lynn, Auckland. They borrowed the money from Elizabeth's mother, and were all equal owners. It was New Zealand's first wholefoods / natural foods store as well as the country's first macrobiotic foods retail store. They were idealists and purists, refusing to sell any vitamins, or minerals, or dairy products.

They started the store partly as a result of becoming interested in macrobiotics, and partly because Elizabeth and Rick had a 3 year old son (Daniel) who could not tolerate dairy products. As the Chalmers could not get the food they wanted anywhere, they thought that they would open a shop to also provide it to others. Moreover, Greg, who had been overseas in London (where he had worked in a restaurant) and the USA, was a pioneer in bringing macrobiotics to New Zealand. "He brought home miso and some seaweeds–foods we had never seen before."

After about six months, in Oct. 1980, in order to attract customers to the shop, they started to make nigari tofu (for their own store only) in a small room at the back of the store, designated just for that purpose. They made the simple equipment themselves, and they learned the process from *The Book of Tofu,* by Shurtleff and Aoyagi.

After another six months they were inundated with other store owners, and cafe & restaurant owners from all over New Zealand wanting to buy their tofu. "It was just amazing." The tofu was completely unpackaged and they sold it under water in bulk buckets only. So in about April 1981 they started to sell their tofu outside of Harvest Whole Foods. "Sometimes they would pick it up, and sometimes we would deliver it."

Sanitarium Health Food Co. was making many kinds of breakfast cereals and canned nut meats, but no soyfoods. Several Chinese restaurants were making tofu (they called it "bean curd"), but only for use in their own restaurants; they did not sell it elsewhere. One of these was named Sun Sun, located in Khyber Pass, Auckland.

Their daughter, Jesse, was born on 1st October 1981, and by this time it was becoming difficult to manage both the shop and making tofu. So they sold the shop and with the capital gained they brought in special tofu making equipment from Japan, moved to new premises at 1 Wallingford St., Auckland, and started Harvest Soyfoods. Harvest Whole Foods is still at its same original location today; it is going strong and doing well financially.

Harvest Soyfoods' first product was nigari tofu; to this they soon added Tofu Spreads (Feb. 1981) then Tempeh (April 1981). The business grew very rapidly, and during this period Greg also had a child, so they all had very young children and were trying to manage their lives as well as an extremely rapidly increasing business.

Greg's partner decided that she wanted to leave Auckland, and as they could not picture another partner in his place and were feeling very overloaded anyway they

© Copyright Soyinfo Center 2014

decided in 1983 to sell the business to Paul and Trevor Johnston, who renamed it Bean Supreme. The Johnstons paid half the money at the time of sale and the remainder a year later; Elizabeth and Rick Chalmers worked for the Johnstons during that year. This business is also still in existence, although it was bought out by Sanitarium Health Food Co. in about Aug. 1986. Note: Trevor is no longer with the company; Paul sold the company to Sanitarium Health Foods.

From 1983 to 1986 Rick and Elizabeth had a commercial cleaning business, which suited the family structure very well, but was very unsatisfying workwise and environmentally.

In about 1980 or 1981 Austin Holden had started a largely macrobiotic import and wholesale business, Kiaora Naturals, at 374 West Coast Road, Glen Eden, in west Auckland. Holden soon started a very small shop in the corner of his warehouse and called it East West Wholefoods. For the first few years, his only customer was Harvest Wholefoods. "We kept him going."

Then in 1986 Rick and Elizabeth started East West Organics, taking over the building (and business) formerly occupied by Austin Holden and Kiaora Naturals. They knocked out all the walls, resulting in a much larger shop that specialised in organic food, with a big emphasis on fruit and vegetables.

They had no intention of making soyfoods. However there was suddenly an influx of Asian immigrants to New Zealand and Asian Tofu (usually made with calcium sulfate in aluminum pots) became widely available. By this time organics was really growing in New Zealand. Elizabeth and Rick wanted to stock organic tofu in their store, but they couldn't find a source. They talked with Trevor and Paul Johnston about making it for them, but the brothers felt there was no future in it, so they declined to do it.

So in 1996 Elizabeth and Rick started The Organic Soy Company, again in a small food factory out the back of East West Organics. They started making nigari tofu again–for their own store only. For the first time, they started to use organic soybeans, and as many other organic ingredients as they needed and could get. "We were right back where we started. And then exactly the same thing happened again. Once the word got out that organic nigari tofu was available again, people started coming from everywhere to buy it. It was not our intention to get back into the soyfoods business; we'd already sold our company. But we wanted the quality, so we had to make it ourselves." East West Organics is still operating today, although out of new premises (outgrew old one), and has just moved up the road slightly.

Their son Daniel joined them in January 1998, and in October of 1998, they sold East West Organics and moved the Organic Soy Company to their current premises at Unit A, 2 Corban Avenue, Henderson, Auckland.

Elizabeth and Rick separated the same year, but continued on in the family business together. In 2001 their daughter Jesse returned from Europe and also joined us in the business. Later that same year Rick left the business to go to University and currently, Elizabeth, Daniel and Jesse are in joint ownership, with Rick still having a 10% share. They started using the brand names (the first being Tonzu) in 2002.

The business is growing slowly, currently producing tofu, tempeh, soy yoghurt, tofu burgers and teriyaki sauce, all 100% organic. Elizabeth has moved to part time as the younger generation are taking on the responsibility for the business. They currently have 3 full time employees as well as themselves, so are still reasonably small.

"We see a great future for the business and will probably outgrow our current premises within the next few years. We love making traditional soy products, and eventually hope to make miso and tamari, which will be export products as well as for the domestic market."

First sold commercially by the organic soy company: Tofu (1996), Teriyaki Tofu (1999), Tempeh (1999), Tofu Burgers (2001), Teriyaki sauce (2003).

All current labels and packaging are new, and have changed very much from the original. They once made two tofu spreads, one teriyaki and the other curry flavour. However it was hard to get a good enough shelf life out of them to make them viable, so reluctantly they discontinued them. They have also changed their burgers significantly. When they first produced a burger in 2001, they had 3 varieties: Garlic and Cheese, Sundried Tomato, and Feta, and Vegan. They have discontinued them all and now just make one that is actually Vegan, although they do not call it that. The burgers did not sell well; they are not certain why that was, maybe they were too expensive with all the organic ingredients and very labour intensive. So they have simplified and streamlined their current burger making the whole process more viable.

As the population of the whole of New Zealand is around 4 million and only 15% of them are vegetarian, they are playing to quite a small market; this can sometimes be quite a challenge. In the long term it will be sensible to develop products that they can export. Address: Founder and owner, The Organic Soy Company, Ltd., Unit A, 2 Corban Ave., Henderson, Waitakere, Auckland 0612, New Zealand. Phone: +64 9 835 3617.

3552. Tibbott, Seth. comp. 2007. Tofurky brand products overview: Natural foods segment. Hood River, Oregon: Turtle Island Foods, Inc. [36] p. 28 cm. [1 ref]
• ***Summary:*** A full-color booklet bound with a handsome, black ProClick plastic spine. On the front cover: "1980-2006: 26th anniversary Turtle Island Foods, Inc." "Sales data from: SPINscan Natural and SPINscan Conventional. 52 weeks ending December 30, 2006. All statistics are for the total U.S. market.

Contents (unnumbered pages): (1) "Turtle Island Foods

© Copyright Soyinfo Center 2014

honored by Inc. magazine: 2,240th fastest growing small business in the USA (of 6 million total). 159.7% growth rate over last 4 years. 57th fastest growing food and beverage company in the USA. 19th fastest growing food processor.

(2) About Tofurky products: 100% vegan. Based on organic soy products. Use non hexane extracted proteins. VejNews. Winner veggie awards–Best meat substitute.

(3) Natural foods market without Whole Foods (which no longer shares sales info with the industry). Growth of top ten brands ranked by dollar volume. Frozen and refrigerated meat alternatives. 52 weeks ended Feb. 24, 2007. Category: $35.5 million. Growth: 4.7%. Turtle Island is the fastest-growing brand: 16.1%, followed by Quorn, Nates, Amys Kitchen, Morningstar Farms, Gardenburger, and Yves. Lightlife, Boca Foods, and White Wave all have negative growth.

(4) Natural foods market. Frozen and refrigerated meat alternatives. Top ten of 478 items by dollar volume. 52 weeks ending Dec. 30, 2006. #1. Quorn Chicken Style Nuggets. 10.6 oz. $1,507,537. 5.6%. #2. Turtle Island Tofurky Italian Sausage (organic) 14 oz. $1,262,616. 25.7%. #3. Quorn Chicken Style Patties. #4. Lightlife Gimme Lean Sausage. #5. Quorn Veg. Naked Chicken Cutlet. #6. Turtle Island Tofurky Deli Slices, Hickory Smoked. 5.5 oz. $1,131,760. 19.2%. #7. Lightlife Smart Dogs. #8. Boca Original Patties Chicken Natural (4-pack). #9. Amys Burger California Veggie. #10. Quorn Meat Free Chicken Tenders.

(5) Natural foods market. Refrigerated meat alternatives, Top 10 of 260 items by dollar volume. 52 weeks ending Dec. 30, 2006. Turtle Island currently as the #1, #3, #9 and #10 best selling items among the 260. They are: Tofurky Italian Sausage. Tofurky Deli Slices Hickory Smoked. Tofurky Deli Slices Oven Roasted. Tofurky Kielbasa (sausages).

(6) Tofurky deli slices: Six features, incl. "Organic tofu based." The six types of deli slices are: Oven roasted, Hickory smoked, Peppered, Italian deli, Cranberry & Stuffing, "Philly-style" steak.

(7) Tofurky deli slices. Bar charts of refrigerated meatless deli sales, 2001-2006. For each year are given: Competitor #1. Competitor #2. Turtle Island. Overall category. "While the competition sales have been flat, Turtle Island has grown the subcategory 72 and has become the #1 brand.

(8) Deli slice standings. (9) Tofurky gourmet sausages. (10) Frozen and refrigerated meat alternatives. (11) Tofurky Jurky: 5 features.

(12) Top 10 jerky items (meat and meatless)–SPINscan natural channel. 52 weeks ending Feb. 24, 2007. The category is $8.3 million. There are three vegetarian jerkys among the top 10. Tofurky Jurky Original is the #2 seller and Tofurky Jurky Peppered is #7. The other vegetarian brand (#6 seller) is Primal Strips Seitan Teriyaki.

(13) Tofurky "foot long" veggie dogs: 5 features, incl. organic tofu based. (14) "Open mouth, insert foot."

(15-17) Turtle Island tempeh: Five features.

(18-22) Happy Tofurky Day: Five features.

(23-35) Glossy color sell sheets, printed on both sides, with the following titles: (23-24) Happy Tofurky Day! (25-26) Brave New Tempeh. (27-28) Tofurky Jurkey. (29-30) Frankly speaking Tofurky Franks & Links are the best! (31-32) There's 3 big new dogs in the house. (33-34) Go beyond the bun: Introducing Tofurky 'foot long' veggie dogs. (35-36) Tofurky deli slices: New look. Other Turtle Island glossy color sell sheets. Address: Founder and President, Turtle Island Foods, P.O. Box 176, Hood River, Oregon 97031.

3553. Johnston, Paul. 2007. Re: Bean Supreme–Sale to Sanitarium Foods. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 7. 1 p.

• ***Summary:*** In 1999 Paul sold his very successful soy ice cream, brand-named "LiteLicks" to "Movenpick" in New Zealand.

In Feb. 2006, Paul sold Bean Supreme to "Lisa's Healthy Foods Ltd." (which is owned by the Seventh-day Adventist Church of New Zealand, as is Sanitarium Foods). He remains on a 3-year management contract. The sale has enabled Bean Supreme to pursue a broad new product development plan and to commission a new mid-sized tofu plant from Takai in Japan. "Our intention is to double the sales of vegetarian chilled products in New Zealand and from our year together we are well above target, so some export to Australia will follow in late 2007." Address: New Zealand.

3554. Gupta, Rajendra ("Raj") P. 2007. The purchase of SoyaWorld by Sanitarium Foods (Interview). *SoyaScan Notes.* July 24. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** SoyaWorld is now completely owned by Sanitarium Foods of Australia. First Sanitarium bought the 47% of SoyaWorld owned by Sunrise Soya Foods. Later they bought the remaining 53% owned by Saputo. The person who knows the exact dates is Maheb Nathoo, who is still president of SoyaWorld.

SoyaWorld still makes two soymilk products: (1) Soy Good, made from soy protein isolates, is made using the formula developed by Sanitarium Foods. It is very heavily promoted in Canada, using both TV and print, and has about 60% of the Canadian market, but because it is so heavily promoted and costs more to make, Raj thinks that it is presently not as profitable as the other product, So Nice. (2) So Nice is made from whole soybeans, using the ProSoya process. It is never promoted or advertised by Sanitarium Foods. It has about 40% of the Canadian market.

The fact that So Nice is outsold by So Good no longer effects Raj's income, because the exclusive agreement between ProSoya and SoyaWorld (from which ProSoya earned royalties) has expired. SoyaWorld now has non-exclusive use of the process and ProSoya does not get any

© Copyright Soyinfo Center 2014

royalties.

It is difficult to do blind taste tests comparing these two products, in part because so many people already have developed. There are also issues about using another person's branded product in a taste test and publicizing the results. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

3555. Joe, Peter. 2007. Sale of Sunrise's share of SoyaWorld Inc. and starting a new tofu plant in Toronto, Canada (Interview). *SoyaScan Notes.* July 24. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** In Dec. 2000 Peter Joe sold his 47% share of SoyaWorld to Sanitarium Foods of Australia.

He recently built a new tofu manufacturing plant in Toronto, Ontario. It began production in March 2002. All is well for Peter and Sunrise. The market for tofu in Canada is growing. Address: General Manager, Sunrise Soya Foods, 729 Powell St., Vancouver, BC, V6A 1H5 Canada.

3556. Luther, Claudia. 2007. Obituaries: Jack LaLanne dies at 96; spiritual father of U.S. fitness movement. *Los Angeles Times.* Sept. 24. p. AA1.

• ***Summary:*** Jack LaLanne, for decades America's master of health and fitness, first popularized the idea that Americans should work out and eat right to retain youthfulness and vigor. He died Sunday at age 96. According to his agent, Rick Hersh, he underwent heart valve surgery in December 2009.

LaLanne was far more than merely a "muscle man." He "was the spiritual father of the health movement that blossomed into a national craze of weight rooms, exercise classes and fancy sports clubs."

In 1951 he launched an early-morning exercise program on television keyed to housewives. His religion was physical culture and nutrition, and he spent his life on a crusade to help Americans is these two areas.

"Well into his late 80s, LaLanne continued his personal fitness routine of two hours a day–one hour of weight training and another hour exercising in the pool–beginning at 5 or 5:30 in the morning (a concession to his age; in earlier days, he started at 4 a.m.).

"No one–not even Arnold Schwarzenegger–could argue that LaLanne wasn't the best. Schwarzenegger, who met LaLanne in the 1960s on Muscle Beach on the Venice Boardwalk, said LaLanne would try to see who could match him in numbers of chin-ups and push-ups.

"'Nobody could,' Schwarzenegger told The Times. 'No one even wanted to try.'

"Francois Henri LaLanne (nicknamed Jack by his brother) was born Sept. 26, 1914, in San Francisco to French immigrant parents; his father worked at the telephone company and was a dance instructor and his mother, who was a maid, was a Seventh-Day Adventist, a religion that advocates "eight keys" to good health, including nutrition and exercise.

"LaLanne grew up in Bakersfield, where his parents had moved to become sheep farmers, but the sheep contracted hoof-and-mouth disease, and the family moved to Oakland. LaLanne's father died of a heart attack at age 50.

"LaLanne often told the story of how his mother spoiled him, giving him sweets as a reward. By the time he reached adolescence he had become a 'sugarholic' with a violent temper and suicidal thoughts.

"He was failing in school, his stomach was upset, he wore glasses, he had terrible headaches, he was weak and skinny, he had pimples and boils." Then he met Paul Bragg at a lecture in Oakland and turned his life around. "In 1936, he opened his first real gym–LaLanne's Physical Culture Studio in downtown Oakland." The rest is history.

In 2002 LaLanne was given a star on Hollywood's Walk of Fame.

LaLanne is survived by this wife, Elaine; Elaine's son, Dan Doyle, of Los Angeles; LaLanne's daughter by his first marriage, Yvonne, a chiropractor, of Walnut Creek; and the couple's son, Jon, of Kauai, Hawaii.

Note: Pioneers in physical fitness and physical culture in the USA (chronological): Bernarr Macfadden (1868-1955, an influential proponent of physical culture, a combination of bodybuilding, good nutrition, and a healthful lifestyle), Bob Hoffman and Joe Weider (born 1919; muscles, bodybuilders), Paul Bragg (1895-1976), Jack LaLanne (he had by far the greatest impact because of his TV show and the wide media coverage from his swimming events).

3557. Mahr, Krista. 2007. Why some countries feast and others famine. *Time* (*Asia*). Sept. 27.

• ***Summary:*** In the 1930s Henry Ford used to wear a suit made from soybean fiber. He became extremely interested in the many possible uses of the soybean. He served gala dinners in which all the dishes contained soy, and he made great efforts to incorporate soy products into Ford cars, using it for things such as upholstery fabric and experimental panels. The potential that Ford saw in soybeans has today be come a reality.

In his new book *Stuffed and Starved,* Raj Patel takes a sweeping look at the international food system in which 800 million people are malnourished, while over a billion eat so much that a high percentage become overweight or obese. Patel has a good sense of world food history. He includes a story of how Ellen G. White, long head of the Seventh-Day Adventist church, had a vision showing that a vegetarian diet was the key to longevity. Thus Seventh-day Adventists were "the first white people in the United States to make tofu."

3558. Erickson, Leeann. 2007. Re: F.G. Roberts information. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct.

© Copyright Soyinfo Center 2014

7. 2 p.
• ***Summary:*** "Please accept my apologies for the time it has taken for me to contact you! I really struggled to find much genealogical information about my Great Grandfather. I have researched a couple of libraries here in Melbourne, but the genealogical websites did not fare too well, considering the cost for research which I cannot afford at this point. I have managed to find an obituary, though! It is attached to the end of this email.

"I found a few dates that you may find helpful. They are as follows: F.G. Roberts was born 28 November, 1892 in Hobart, Tasmania and died 17 October 1977 in Nunawading, Victoria. Son of William Thomas Roberts and Ellen Bloomfield.

"He married Gladys Maude Griffiths (born 13 July, 1895 and died 12 July 1978) on 14 February 1914 at the Hobart Registrary Office, Tasmania. However, I am not sure if this is actually when the marriage took place, or if this was the date their marriage was actually registered. It was explained to me that back at the turn of the century, a lot of marriages happened without actually being registered until someone was available to register marriages in the region. But, considering they were in Hobart, I don't think this was the case with my great grandparents. And considering the actual date (Valentine's Day), it would seem that this was the date they were actually married.

"They had three children: Fred, born in Hobart 14 September 1911, Horace Eric, born in North Lyell 30 September 1914 and Gladys Ellen, born in North Hobart 25 February 1916. Fred died in Brisbane, Queensland in 1967, and Horace died in WW2 in a prison camp (Changi I believe) in Singapore in 1943. Gladys is still living in Melbourne, now 91 years of age.

"I have not been able to gather information about their families, because the family is quite scattered. And the family of my Grandmother, Gladys, has been estranged for many years. I'm not sure how much family information I should be sharing because of this, but I can tell you that my Father, Ian Robert, was Gladys' second son, born on 29 July 1941. He married Margaret Leslie Thorpe (born 19 October 1942) on 8 September 1963, in Nunawading, Melbourne Victoria. They had two children, my brother, Brendan Leslie, born 21 July 1964, and myself, born 3 September 1965. My father died suddenly of a brain tumour on 17 April 1995.

"It's interesting that you wondered how well known F.G. Roberts was in the Seventh-day Adventist Church. From conversations I have had, the church actually shunned him for his beliefs in his work, especially iridology. Apparently, the practise of Chiropractics, Iridology, etc. was not widely accepted in Australia when my Great Grandfather set up his medical Practices, and even less accepted among Adventists. My Great Grandfather had brought my Great Grandmother into the Adventist Church, but for many years, he was not a member because of the way he had been treated by the Church. (And rightly so, in my opinion!!) However, he did return to the church after many years, and as you said, died a Seventh-day Adventist. He and my Great Grandmother are buried together at Springvale Cemetery, Melbourne, Victoria.

"In answer to your question regarding his connection to the other Roberts' mentioned, this was very hard for me to find out! There are a lot of Roberts' in Tasmania, and I'm sure they are all connected in some way, but I would probably have to find an expert who would be willing to research back that far.

"I'm sorry I couldn't be more helpful at this point, but if there is any other specific information you are wanting, please let me know and I will see what I can do. I am glad that you are writing about my Great Grandfather. He and my Great Grandmother were very good and generous people, and I have many childhood memories of them." Address: Melbourne, Australia.

3559. Stern, Yoni; Taragin, Robyn; Larry, Shahar. 2007. New thought for food. *Food Technology* 61(10):34-36, 38-40. Oct.
• ***Summary:*** Michael Shemer, a young Israeli, methodically tried to develop meat alternatives that had excellent taste, texture, and nutritional value. For years, he experimented with wheat and soy proteins. In "the early 1980s he had a breakthrough when he combined the two vegetable proteins. He quickly evolved his technology into a line of meat analog products..." He found a home for his line of meat analog products at Kibbutz Lohamei HaGeta'ot. "Production began in 1985 under the name Tivall, later to become part of Nestlé Corp."

Note: This article is deceptive in two areas: (1) It does not explain that Michael Shemer worked for Worthington Foods, the world leader in meat alternatives since 1939 and owner of the famous Morningstar Farms brand, for about 3 years after earning his PhD degree in 1973 in the USA and before returning to Israel. (2) The idea of using wheat gluten and soy protein together to make outstanding meat alternatives was discovered by a team of researchers at Worthington Foods in about the mid-1970s. Michael Shemer was one member of that team. The leader of that team at the time, Richard Leiss, said that Michael deserves no more credit for the discovery than any other member of the team.

3560. Chajuss, Daniel. 2008. Re: Brief biography of Dr. Micha / Michael Shemer. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 4. 1 p.
• ***Summary:*** "Micha [Michael] was born on April 26, 1944 and passed away on May 26, 2007 and had lived in Haifa.

"I knew Micha very well and for a long time. (His M.Sc. thesis [which was submitted in 1970 to the Technion, Haifa, Israel] on cottonseed protein isolation was a done based on a patent of mine that had used hexametaphosphate solution as extractant of proteins). Micha was a very capable and inventive person with an inquiring and opened mind. He

© Copyright Soyinfo Center 2014

was the food technologist that had developed most of Tivall products. After obtaining his PhD as a visiting student in the U.S., he went to work for Miles Laboratories (Worthington Foods, in the US) for a few years on vegetarian meat analogs; he was later the mind behind Tivall's success." This job with Miles was the first one he got after earning his PhD degree at the University of Illinois at Urbana, Champaign.

"Tivall was founded in 1986 and is today considered a leading producer of vegetarian protein derived meat analogs like hamburgers and sausages (mainly using soy, peas and wheat proteins) selling in the UK and the rest of Europe, including the Netherlands, Israel, Germany, Sweden, Italy and Belgium.

Micha was the first person in Israel who produced some technologically improved analogs of meat patties, hamburgers and sausages, that were commercially very successful. He did not invent meat alternatives.

"Tivall products were first made and still are made at kibbutz Lohamei-Hagetaot. Oshrat is probably the Mobile Post name not a real location and thus could not be found on a map.

"The Tivall plant (in Kibbutz "Lohamei-Hagetaot") is located north of Haifa and is far away from the place where I live.

"Micha was not the founder of Tivall per se. Tivall was owned and built by the members of the kibbutz Lohamei-Hagetaot. Micha was not a member of the kibbutz but a hired person that had developed the technology by which Tivall had made their products and thus can be considered as a part of the founders of Tivall." Address: Israel.

3561. Leiss, Richard S. 2008. Recollections of Michael Shemer's work at Worthington Foods (Interview). *SoyaScan Notes.* Jan. 7. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Mike Shemer worked at Worthington Foods for about three years in about the mid-1970s (roughly 1974-1977), not long after he had earned his PhD degree. He lived with his wife, Ronitha, and perhaps some children. He worked at Worthington during the era when the company was doing research on ways to combine soy and wheat and a number of other vegetable proteins. Michael was one member of a team of about 4-5 researchers. For him to be given credit for the important discovery how to combine soy and wheat proteins is unfair. "We were all working together in that same area, and I don't think that any one of us was truly the discoverer of that idea."

Vegetable Skallops, introduced by Worthington in 1965, contained both soy and wheat. By the mid-1970s Worthington has a canned product that contained soy and wheat.

However, Michael returned to Israel for a family visit (about 2 weeks) while he was still employed at Miles Laboratories / Worthington Foods. He brought back an idea from a company that made extruded soy steaks, each about half the size of one's hand, called something like a "Joshua Steak." Note: Perhaps this steak was the Vegetarian Schnitzel / Cutlet {Dry}, made by Shefa Protein Industries Ltd. in Arad. They hydrated and soaked their extruded product in excess water for longer than they had before to get rid of the soy flavor and create a blander, more favorable flavor, before they infused it with flavor. That excess washing was the basis for a lot of subsequent R&D. Michael does deserve credit for bringing *that* particular idea to Worthington Foods. Address: Former Director, R&D, Worthington Foods, Worthington, Ohio 43085-3194.

3562. Leiss, Richard S. 2008. The old, historic Worthington Foods' plant in Worthington, Ohio, no longer exists (Interview). *SoyaScan Notes.* Jan. 7. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** In 1999, Worthington Foods was acquired by The Kellogg Company. At the time, Worthington had two food manufacturing plants: One in Zanesville, Ohio, built in 1989 to make Scramblers, the company's frozen egg product, and the main plant in Worthington, Ohio. Kellogg continued to use the plant at Worthington for 2-3 years. Then Kellogg decided to merge the plant at Worthington into the newer plant at Zanesville. So they moved everything of value and all the production to the plant at Zanesville, where all of the former Worthington products are now made. At about this time, Ron McDermott moved to Battle Creek, Michigan, to work at Kellogg's corporate offices. He is vice president in research.

The original plant in Worthington, Ohio, is no longer standing. Very sadly and tragically, they tore it down in about 2004-2005. They just leveled the whole facility–all three buildings: administrative, research and manufacturing. They are now building business condos on that site. It was a real historical landmark. The large oak tree, around which they so carefully built the new plant in Worthington, still stands. It's a bicentennial oak. Richard is not aware of any effort to place a monument or plaque on the site.

Mr. Allan Buller, who is now about age 90-91, recently celebrated his 65th wedding anniversary. He would probably have the strongest feelings about erecting a monument or plaque. Richard, who retired in 2001, and is now age 69, also has an interest in such a project. The former Harding Hospital is now part of Ohio State University. Address: Former Director, R&D, Worthington Foods, Worthington, Ohio 43085-3194. Phone: 614-889-1386.

3563. Shurtleff, William; Aoyagi, Akiko. 2008. Le livre du tofu: La source de protéines de l'avenir–dès maintenant! [The book of tofu: Protein source of the future–now! Translated from the English by Nathalie Tremblay]. Varennes, Quebec, Canada: Éditions AdA Inc. 430 p. Illust. by Akiko Aoyagi. Index. Feb. 28 cm. [53 ref. Fre]

© Copyright Soyinfo Center 2014

• ***Summary:*** Contents: Preface. Acknowledgements. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food. 3. Getting started. Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History, cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*), kinako (roasted full-fat soy flour), soybean sprouts (*daizu no moyashi*), natto (sticky fermented whole soybeans, with "gossamer threads"), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein (TVP), soy oil products). 5. Gô (*purée de fèves de soya fraîches;* a thick white puree of well-soaked uncooked soybeans). 6. Okara or Unohana. 7. Curds and whey (*Caillé et petit-lait*). 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding).

9. Deep-fried tofu (*Tofu frit*)*:* Thick agé or nama agé (*Agé épais* {*côtelettes de tofu frit*}), ganmo or ganmodoki (*burgers de tofu frit;* incl. *hiryozu / hirosu*), agé or aburagé (*pochettes de tofu frit;* incl. "Smoked tofu," p. 197). 10. Soymilk (*Lait de soya*). 11. Silken tofu (Kinugoshi ou tofu soyeux) ("*Kinu* means 'silk'; *kosu* means 'to strain'; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk"). 12. Grilled tofu (*Tofu grillé*). 13. Frozen and dried-frozen tofu (*Tofu surgelé et tofu surgelé séche*). 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha's chicken, Buddha's ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}*;* see p. 258 for illustrations of many meat alternatives, incl. Buddha's fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig's head, and molded ham). 16. Special tofu (*Tofu particuliers*).

Part III–Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way. Appendices: A. Tofu restaurants in Japan (many are vegetarian). B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe {Germany, Austria, Belgium, Denmark, Finland, France, Ireland, Italy, Netherlands, Portugal, Spain, Switzerland, UK, Wales}, and 3 in Latin America {Brazil, Colombia, El Salvador, Guatemala, Mexico}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for "Mock tuna salad with deep fried tofu."

Note. This is the earliest French-language document seen (Sept. 2013) that mentions soy cream cheese (p. 125), which it calls *Fromage à la crème au tofu.* Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549 USA. Phone: 925-283-2991.

3564. *Globe & Mail* (*Toronto, ONT, Canada*). 2008. Veggie innovator breaking new ground [Yves Potvin and Garden Protein International]. March 26. Eat Well, p. 2. Special information supplement.
• ***Summary:*** A photo show Yves Potvin shopping in a grocery store. In 1988, Mr. Potvin invented the meatless wiener.

Note: This last statement is incorrect. The first meatless wiener (named "Meatless Wiener") was introduced in 1944 by Battle Creek Food Co. in Michigan. By 1988 more than 115 different meatless wieners and sausages had been launched in the USA. The first tofu hot dog was "Weissman's Original Tofu Sausage," introduced in Nov. 1980 by the Vegetable Protein Co., Cambridge, Massachusetts. At least ten tofu hot dogs had been launched in the USA before 1988. These included: Tofu Links (Nov. 1981, by Soya Food Products, Cincinnati, Ohio). Light Links (July 1982, by Light Foods Inc., St. Louis, Missouri). Lightlife Meatless Tofu Pups (Sept. 1985, by Tempehworks, Greenfield, Massachusetts).

3565. Burt, Jonathan. 2008. If Wesley were alive today. *Adventist Heritage Ministry Bulletin* (*Silver Spring, Maryland*) 21(3):6. Fall.
• ***Summary:*** At the Adventist Heritage Center in Silver Spring, Maryland, is a Dr. John Harvey Kellogg Discovery Center including an orientation DVD and different exercise machines and exhibits. "By the time we had finished they

© Copyright Soyinfo Center 2014

realized that all of Kellogg's advanced medical practices were based on the principles found in Ellen G. White's 1863 health vision."

In Hardy house, African American history is portrayed. Note: The reference to Wesley in the title probably refers to John Wesley (1703-1791), a Church of England cleric and Christian theologian. Wesley is largely credited, along with his brother Charles Wesley, with founding the Methodist movement and church which began when he took to open-air preaching. Methodism was a highly successful evangelical movement in the United Kingdom and the United States; it encouraged people to experience Jesus Christ personally. John Wesley was among the first to preach for slaves rights, attracting significant opposition. Many African American slaves became Methodists. Address: Scholarship Student [Silver Spring].

3566. Potvin, Yves. 2008. The basic business model of Garden Protein International, Inc. (GPI) (Interview). *SoyaScan Notes.* Oct. 7. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** GPI's main product is Gardein (TM, pronounced gar-DEEN, derived from Garden + protein). In his previous business, Yves Veggie Cuisine, Yves was a retail brand manufacturer. He manufactured everything he sold, and built a brand. Then he realized in 1998, when he developed this new proprietary process, Gardein, that he is now an ingredient manufacturer. That was one reason he sold his former business, but also because his present business is very capital intensive, so he needed more money to get it started.

Many different formulas / recipes are used to make Gardein; its both an art and a science–and constantly evolving with new R&D. All the formulas have much in common (all are meatless. The main ingredients are wheat gluten and soy protein), but each one is different–and thus custom designed–to suit each individual product application. Yves works closely with a chef (and he is also a trained chef with many years of experience) to develop the best possible formula for each application. The product behaves differently with different sauces (when its a low pH sauce they must start with a softer product. The protein in Gardein reacts to a dairy-based sauce much differently from the way it reacts to a tomato sauce). They have recently started to add new grain ingredients such as quinoa, kamut, amaranth, etc. to give new and interesting textures, and to increase the percentage of grain in the product. In Canada Gardein must be fortified to makes its nutritional value equal to or better than that of the meat product it is designed to replace; this is not required in the USA. The strips that they make for Trader Joe's are simply the raw material (plain Gardein), whereas the Chick'n Breasts they make for Costco are carefully formulated and formed to make a second generation product. GPI has no list of all the different types of Gardein. Rather, each company tells GPI the application, and GPI develops Gardein specifically for that product; no two are the same.

Gardein is always sold in a moist form (62-65% moisture, very much like that of meat)–never dry.

GPI sells Gardein either refrigerated or frozen–to keep it fresh. Any product sold refrigerated must be pasteurized first, which creates a whole new manufacturing cycle. Gardein is still much more difficult to process and handle than meat–for example. Most retailers buy it refrigerated, but most of the bulk product (shipped overseas or to foodservice) is sold frozen as to Cysco, Kellogg, Loblaw.

In 2005, after two years of solely R&D, Yves started to sell Gardein; his first customer was the Kellogg Co., which was already selling a line of meat alternatives under their Morningstar Farms brand. This began even before sales in bulk to foodservice.

Yves' basic strategy is to sell the ingredient (Gardein) to food product manufacturers, but they are required by a license agreement to put the Gardein logo on the label. The agreement specifies very precisely the size and location of the logo, how the ingredients are to be listed, etc. and the fact that the buyer cannot mix Gardein with meat.

But GPI also sells Gardein in four other ways: (2) Private label, as when they sell to Kellogg's, Loblaw's, President's Choice or Trader Joe's. Each of these customers also signs a licensing agreement. GPI and the customer work together to design and name the product and ingredients. Many private label customers (such as Kellogg and Trader Joe's) design their own package / label–but this can be frustrating sometimes, as when Yves can see that a poor package design will hurt sales of the product. The customer then sends its packages to GPI in Vancouver (actually in Richmond, BC, a suburb of Vancouver) where GPI packages its product.

(3) Control label, as for very large customers such as Costco, under the name Garden Goodness. The Gardein logo appears prominently on both the front (lower right corner) and the back (bottom center) of the attractive box. GPI owns the brand "Garden Goodness." Costco asks GPI to develop the product and to design the package; Costco has to approve of both, but they do not get involved in the details. Costco is happy because no other company has that Garden Goodness brand, and GPI is happy because it is their own label and their Gardein brand prominently displayed. "It is a win-win situation." Presently GPI makes only one SKU for Costco–"6 Veggie Chick'n Breasts," but they are about to launch several new items with Costco. GPI has already made the presentation and Costco liked the ideas.

(4) Under its own label, using the "It's All Good" brand. Initially Yves had no intention of going back into the retail business, because its very painful. But as he was trying to work with his previous company (Yves Veggie Cuisine), they kept saying it was too complicated, etc. So he realized he could use his own brand to do basic R&D. For example, in

© Copyright Soyinfo Center 2014

Canada he has tried selling "Its All Good in the meat section, the deli section, and the produce section of food stores. From this experiment, he has learned where it sells best, and he can share this valuable information with his customers that buy Gardein. He has also learned which product types and names sell best, what's the price point, etc. And he gets lots of consumer feedback about those products. Customers such as Trader Joe's, Costco, and Safeway in Canada always want the best seller in the It's All Good" line. Yves always changes the product name slightly, as from "Tuscan Tomato" to "Basil Tomato." A new product Yves is developing to sell under his own label is a stuffed product (like a stuffed chicken), which is Gardein stuffed with black beans (frijoles) and corn; the package has a tomato sauce inside. GPI uses a broker (who is paid 5%) to get these products into the retail market. In addition, GPI has its own sales force (1 person each in Ohio, New Jersey, and Toronto, and 3 in Vancouver). One guy is responsible for private label, one for the club business, etc. Next Wednesday they will make a presentation at Safeway headquarters; GPI wants to launch the "It's All Good" line with Safeway in the U.S. The week after that they go to Kroger headquarters, then the next week to Publics. Yves attends the most important presentations, which causes him to travel a lot.

Yves is also in the process of raising some money to finance that growth; he projects sales to double in the next 24 months. Currently Yves owns all the shares in GPI Inc. He's basically looking for one venture capitalist who will invest about $1 million in exchange for 10% of the business–just enough to go to the next level. He hopes to find a person who understands his vision and wants to be part of the journey. Yves believes this can be a $1 billion company.

Yves believes that he GPI must be strong in its own back yard before it tries to conquer the world. So his initial focus has been on Vancouver, British Columbia, and Canada (with 30 million population). His products are all over Canada, with 80% distribution. "But the big market for us is really the U.S." Right now, about 40-50% of his sales are in the USA and 10% in the UK, but in 1-2 years he expects that figure to rise to 70%.

GPI presently has two manufacturing sites in Vancouver, located 5 minutes apart; the second facility is leased, 20,000 square feet, and houses all the sales and marketing. One is the distribution center where all products are shipped fresh, refrigerated. The other site makes products that are sold frozen. As soon as every batch of product is made, it is frozen to keep it fresh. Within the next 2-3 years Yves expects to have one plant in the USA and one in Europe, then one in Asia within 5 years. The product has tremendous global potential. Yves is fortunate to have already started one business, and to have already had so much business experience. This makes the growth go much faster, but its still painful–yet he wouldn't want to be doing anything else. Yves is married and has two kids. He feels that raising a family and growing a business are quite similar.

(3) GPI sells Gardein (as an ingredient, frozen, by the container) to a customer, such as Tesco or Grassington's Food Co. in the UK, which has the product developed and produced, and packaged. Of course they also sign GPI's licensing agreement as described above. In this case the Gardein logo and text must appear in the lower right corner of the front panel: "Made with Gardein (TM). Farm grown protein." UK customers have (so far) asked for GPI's opinion on their package design, and GPI always gives an honest opinion. A new brand in the UK will be "Pick of the Crop."

(4) Food Service Products started with Whole Foods Market in Los Angeles, California, but are now sold to delis, restaurants, schools, catering companies, cafeterias, hospitals, etc. and go mostly through a distributor (such as CANA, UNFI, or Cysco Corp.), unless a company has large enough volume to go direct. GPI's main foodservice customer at present is Whole Foods, which sells Gardein in their deli and displays the Gardein logo prominently on the deli case. When a product is sold to foodservice, GPI realizes that this product will be served in a wide variety of ways (salads, sandwiches, fajitas, in a sauce, etc.), so it must be designed with that flexibility in mind. Moreover, the product must keep its good texture and flavor whether it is eaten hot or cold. As of Oct. 2008 the following products were available to food service: Chicken Cubes, Chicken Strips, Beef Strips, Chicken Breasts (nonbreaded), Beef Burger, Chicken fillets (non-breaded or breaded), and a seasonal Stuffed Turkey.

3567. *SoyaScan Notes.* 2008. When was the first meat alternative turkey created? (Overview). Oct. 7. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** We will the answer into two parts: (1) When was meatless turkey first served? That turkey was almost surely made from meat alternatives such as Protose, Nuttolene, and Nut Food–all made by the Sanitas Nut Food Co. of Battle Creek, Michigan. The earliest references for that are:

1895 Dec. 29 Chicago Daily Tribune. Vegetarian society Thanksgiving.

1899. Guide for Cookery, by Almeda Lambert (SDA–Seventh-day Adventist).

1904. Vegetarian Cook Book: Substitutes for Flesh Foods, by Edwin Giles Fulton (SDA).

(2) When was the first commercial meatless turkey first launched?

1968. Loma Linda Foods, Riverside, California. Loma Linda Canned Meatless Slices–Turkey-Like Slices. (SDA).

1968. Loma Linda Luncheon Slices–Smoked Turkey Flavor (SDA).

1968. Worthington Foods, Worthington, Ohio. Holiday Roast (Meatless Turkey-like product based on spun soy protein fibers) (SDA).

© Copyright Soyinfo Center 2014

So 1968 was the "anno mirabilis" or "miracle year" for commercial meatless turkeys, just as a growing number of young vegetarian hippies were looking for something to eat at Thanksgiving and Christmas. Markets rarely fail to met a budding new demand!

3568. *WISHH Soy News.* 2008. Silk donation to World Soy Foundation will support Adventist Development and Relief Agency (ADRA) school feeding in Ghana. Nov. www.wishh.org/media/newsletters.

• ***Summary:*** "The World Soy Foundation announced October 16, World Food Day, that Silk (R) soy milk, a WhiteWave Foods brand, is expanding its commitment to a project that provides nutritious meals to school children in Ghana as well as supports sustainable economic development in the West African country. Silk is donating $75,000 over three years for the World Soy Foundation to increase its partnership with Adventist Development and Relief Agency (ADRA)."

"Silk first contributed to the World Soy Foundation when the foundation was created in late 2006. That initial support of $20,000 aided ADRA's school feeding in Ghana, which the World Soy Foundation leveraged through contributions from U.S. soybean farmers. The new funding will allow World Soy Foundation to purchase, transport and install a "VitaGoat" soymilk processing machine as well as train operators and provide a year's worth of soybeans. As a result, the VitaGoat will produce enough soymilk to feed a school of 280 children for at least one school year and have sufficient product to sell to the community as a sustainable small enterprise. The machine will be placed in a rural community in Western Ghana where local farmers grow soybeans."

Later in this same issue is an interview with Ellen Feeney, Vice President for Responsible Livelihood for WhiteWave Foods. Portrait photos show: (1) Jim Hershey. (2) School children eating in a classroom in Ghana. 3. Ellen Feeney.

• ***Summary:*** This well researched and well written PhD thesis has a long and very useful bibliography (p. 369-404).

Note: "B.Ed. St" apparently stands for "Bachelor of Educational Studies." Address: M.Ec (UNE [University of New England, New South Wales]), Grad Dip Acc (Monash), B.Ed St (QU [Queensland Univ., Queensland]).

3570. Hurd, Frank J.; Hurd, Rosalie. 2008. A good cook–Ten talents. New updated, expanded pictorial ed. Grants Pass, Oregon: Published by the authors. Printed by The College Press, Collegedale, Tennessee 37315. 668 p. Illust. Color plates. No index. 22 x 15 cm. Spiral bound. [1 ref]

• ***Summary:*** A feast for the eyes, the mind, and the palate. Filled with more than 1,300 beautiful color photos; many of them accompany over 1,000 healthful, natural recipes, but others show the great variety of natural foods, from colorful fruits to basic whole grains. Brimming with sound advice on diet, lifestyle, and health.

This is the new edition of a very important, pioneering, indeed classic American vegan cookbook. On the front and back covers is an idyllic painting of the Garden of Eden. Author Rosalie Hurd is seated under The Tree, reading the Bible–Genesis 1:29, which describes God's original diet for men and women. The book uses no animal products (except in one chapter at the end titled "Recipes Using Milk and Eggs," "for those who are in the transitional period. However, we encourage all those who still cling to milk and eggs to become acquainted with the facts concerning their use, and become weaned through this process"). Some recipes also use honey.

Contains even more innovative soy recipes than the original 1968 edition. A minor point: some of the soy terminology is inconsistent and/or outdated. Address: 1. D.C. [Doctor of Chiropractic], M.D.; 2. B.S. Both: P.O. Box 5209, Grants Pass, Oregon 97527. Phone: 541-472-1113.

Socio-economic diverse demographics.

3572. Morano, Jim. 2009. The transformation of the natural foods industry (Overview). *SoyaScan Notes.* Feb. 22. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** This is a summary of a talk with Jim Morano, PhD, founder and owner of Innovative Sweeteners, Somerset, New Jersey–on 29 Feb. 2009.

Jim watched as the natural foods industry changed from the first wave (the pioneers who built a new industry, starting in the mid-1960s, because of their deep commitment to and interest in natural foods) to the second wave (the money guys who saw that the industry was taking off and wanted to get in and make money). The pioneers started companies like Erewhon, Westbrae Natural Foods, Chico-San, Tree of Life, and Eden Foods. The pioneers typically had many great ideas and lots of energy; but they often lacked business skills and money. However they learned fast through experience.

The second wave guys typically had both business and marketing skills and experience, plus either money or the ability to attract it. They wore suits, ties, and short hair, and had less interest in the foods themselves than in the profit that could be made from taking them into the mainstream market. They were pretty smart guys and quick learners. Using marketing and money, they could make things happen, big time and fast.

During the 1990s the natural foods market was growing much faster than the mass market, even though it was much smaller. While the mass market for foods was experiencing annual growth rats in the low single digits, the natural foods market was growing in the low double digits–and certain segments of the natural foods market (mainly soyfoods) were growing well in excess of 25% a year.

It was this difference in growth rates that attracted both the "suits" and Big Food to take notice.

The transformation took place during the years 1995 to 1997. There had been three ingredients that it was forbidden to use or sell (by common unwritten consensus) in natural foods prior to about 1995; sugar (especially white sugar), meat, and highly refined products such as white bread, white rice, white flour, white sugar, etc.

The crucial event in the transition came when white sugar was renamed "evaporated cane juice" (by Bruce Kirk, who was working with Florida Crystals) and allowed into a growing number of natural food products. The era of real food had changed into the era of the illusion of real food.

Jim was well positioned to witness this transition. He was selling natural brown rice syrup, which he had developed and which was sticky and tan. Evaporated cane juice (which Jim calls "minimally refined sugar" and which is only 1% less refined than pure white sugar) gradually took away much of his market and hurt his business.

The "standards" set by the natural food stores represent the "last line of defense" for product quality to the consumer. If an ingredient supplier attempted to rename less-refined sugar as ECJ (Evaporated Cane Juice), it would not fly unless the natural food outlets went along with this false and misleading designation.

In many ways, your local natural food store was similar to the local pharmacy. Most people ask their pharmacist for recommendations and transparent information about medicine. In a similar manner, the natural-food consumer depends on the natural food store proprietor for similar information about natural / healthy food alternatives. As these outlets became more consolidated and commercialized, they lost the commitment to "higher standards" as an uncomfortable trade-off to "higher profits". Today, it is more about the perception and connotation of the *label* than it is about the quality of the *product.* What we seem to be doing more and more of today is finding new and better ways of making the consumer feel good about eating lousy foods.

Big Food and the "guys in suits" realized early on that the major deterrent to making acquisitions in this new and exciting growth segment was the fact that the natural foods industry started as a counterculture movement to the mass foods market. What consumer back then would trust the name of a mass-market company on a health food product? This is the very reason why, when companies like Kellogg from the mass-market acquired small natural foods companies like Kashi, the former was very careful not to allow their name to be commercially connected to the latter. Mass-market companies that broke this rule quickly learned a painful lesson. For example, General Mills was one of the first cereal companies to come out with an organic cereal under their own name. If you look up the history of the General Mills product called Sunrise (organic cereal), you will see that it lasted in the marketplace for less than two years. After they failed with the Sunrise product, General Mills purchased Small Planet Foods as well as Cascadian Farms and were careful not to let their corporate name contaminate the historically pure reputation of their acquisition. Even today, it is hard for the average consumer to connect Kashi to Kellogg's. 3580. Byrd, Alita. 2009. 50 years selling Choplets [Interview with Allan Buller of Worthington Foods]. *Spectrum: Journal of the Association of Adventist Forums* 37(3):36-41, 63. Summer.
• ***Summary:*** "Allan Buller joined Worthington Foods as a young ex-soldier right after World War II and served as an executive at the legendary Adventist food company for more than 50 years, until he retired as president and CEO in 1986.

"He watched the company grow from a small Adventist-focused business to a nationally valuable brand with a sales volume of more than $200 million and meat substitute products on the shelves of supermarkets across America. He watched the world of business and marketing evolve, as well as the attitudes of people toward vegetarianism. Spectrum interviewed him about his years as an Adventist businessman.

"Question: You began your career at Worthington Foods just after World War II. How did you get the job? What challenges did the company face in the late 1940s?

"Answer: I began my career with Worthington Foods in 1945 immediately following my discharge from active service in the U.S. Army. James Hagle was the manager of Worthington Foods at that time.

"Jim and I had known each other for a number of years prior to my four plus years in military service. We both were alumni of Andrews University (then Emmanuel Missionary College), although he graduated some four years before I did.

"Both of us were students from the community at Berrien Springs rather than dormitory students. He was president of the college senior class in 1935–the same year I was president of the academy senior class. We played ball together, as well as being involved in other activities of mutual interest.

"While I was serving as supply sergeant for the 1400-bed U.S. Army 102nd General Hospital and was stationed in England, Jim wrote to me and suggested I visit him at Worthington Foods before accepting employment anywhere else after the war was over. I responded by telling him I was interested in going back to school to pursue graduate studies leading to an MBA.

"Jim pointed out that Ohio State University was located

© Copyright Soyinfo Center 2014

in Columbus, and just a few miles from Worthington. He suggested I take a position at Worthington as assistant manager and at the same time enroll at Ohio State University.

"When I got my Army discharge my wife and I visited Worthington and decided to accept Jim's offer. We moved there in December of 1945, and I became an employee of Worthington Foods. I enrolled at Ohio State University shortly thereafter, and received my MBA degree in 1952 after working full time and attending classes part time. In 1948 Jim accepted the position of manager at Harding Hospital in Worthington and I was asked to replace him as manager of Worthington Foods.

"The big challenge facing Worthington Foods at that time was an adjustment in the mission of the company. During the war years–under meat rationing–Worthington Foods had been busy trying to meet the public demand for a non-meat protein food that could serve as a replacement for meat. There was also a need to expand facilities and to raise capital for that purpose. The big question for the company was: Can we continue to produce and market a vegetarian protein food with no government meat rationing to support the business?

"Question: How many employees did Worthington have when you joined the company, and how many does it have now?

"Answer: We had less than 30 employees when I joined the company in 1945. When we merged with the Kellogg Co. in 1999 we had more than 500.

"Question: The Morningstar Farms brand launched by Worthington in the 1970s has become very well known in supermarkets across America. How did the marketing for the Morningstar brand differ from the marketing for brands targeted at the traditional Adventist market?

"Answer: Actually the initial launch of the Morningstar Farms brand was done by Miles Laboratories, which had acquired the rights to market the meat analogs developed by Worthington, along with the technology of how to make them.

"When Worthington reacquired those rights in 1982, the product line had already been introduced into the supermarket trade. Of course Miles had to rely on advertising and sales promotion to get things started. They began by selecting the name Morningstar Farms to pique the interest of consumers. This introduction also involved persuading consumers there was a valid reason to use the products. Miles was aided in this by research that had established a link between the consumption of animal fats and the presence of cholesterol and plaque in the arteries of human beings.

"Adventist consumers were already aware of the benefits of protein from non-animal sources through the church's health education programs. So advertising to the Adventist market could be directed toward taste, economy, and convenience.

"About this same time young people of high school and college age began to sense the social and economic–as well as possible moral issues–involved in raising and killing animals for human consumption. By the end of the 20th century some 200 colleges and university cafeterias were on Worthington's customer list and moms around the country were asking: 'What can I feed my child, newly converted to vegetarianism, when he or she comes home from school for the holidays?' Mom, why not try a Morningstar Farm chicken or hot dog? They contain no animal fat, they taste good, they're good for you, and you can get them at your local supermarket!

"Question: Why did Worthington put so much effort into the Adventist market over the years? Didn't that restrict the company in some ways?

"Answer: In all the years we were in business we saw the Adventist market as our prime target. In a sense it was our raison d'être.

"We began our business with that market in mind and were committed to it from then on.

"When we merged with Miles Laboratories in 1970 a provision was included in the working agreement contract to ensure that the Adventist market would continue to be served by the company. After we reacquired the business in 1982 we continued to respect our commitment to the Adventist market. It was important to us, and we wanted our Adventist customers to know they could count on having our products available in the future even though we might merge with another company.

"I'd like to point out that during our years with Miles we insisted on maintaining our policy of avoiding the use of meat products and meat derivatives as an ingredient in our product formulations. We insisted on this even though it was pointed out to us, and we agreed, that meat extractive flavors might make our products more palatable to the public taste. This policy did restrict us in some ways, but we felt that our Adventist and other customers who were vegetarian were counting on us to make sure Worthington brand products contained no meat or meat derivatives other than milk or eggs. In this respect we felt we were adhering to the traditional lacto-ovo vegetarian diet preferred by Adventists and others. Had we compromised our position in this matter we might have increased our sales–but we might also have confused or alienated our customers.

"Question: How would you describe Worthington's connection to the Adventist church?

"Answer: As a private company and as a chartered corporation Worthington could have no direct connection with the Adventist church. But individuals who were shareholders, employees, or members of the board of directors could be, and were, members of Adventist churches nearest their homes.

"For example: George T. Harding III, MD, one of the principal founders of the company, was an Adventist, a

© Copyright Soyinfo Center 2014

graduate of Columbia Union College and the Loma Linda College of Medicine. Beginning in 1948 and continuing for several years he took a leave of absence from Harding Hospital as its President and served as President of Loma Linda.

"James L. Hagle joined Worthington Foods in 1941 as General Manager. He, too, was an Adventist and a graduate of Andrews University, as well as of Northwestern University. He was serving as President of Worthington when it merged with Miles Laboratories in 1970. While President of Worthington Foods Mr. Hagle also served as a member of the Ohio Conference of SDA Executive Committee and the Columbia Union Conference Executive Committee. Later he was elected to serve on the Kettering Hospital Board.

"For my part, I was an Adventist graduate of Andrews University. During the 50 or more years I was employed at Worthington Foods, I not only filled every corporate office of the company at one time or another, but also served on the Ohio Conference of SDA Executive Committee for 23 years and on the Columbia Union Conference of SDA Executive Committee for over 15 years.

"Most of our key employees at one time or another filled important offices in their local churches. There has clearly been a close working relationship and support to the Adventist church from people who were a key part of Worthington Foods throughout its history.

"Question: How did the market for meat analogs change over the years?

"Answer: I believe these were among the most important factors in change:

"1. A growing public awareness of the possible link between high serum cholesterol levels and the consumption of animal fats." Continued.

3581. Byrd, Alita. 2009. 50 years selling Choplets (Continued–Document part II) [Interview with Allan Buller of Worthington Foods]. *Spectrum: Journal of the Association of Adventist Forums* 37(3):36-41, 63. Summer.

• ***Summary:*** Continued: "2. A developing interest on the part of consumers, especially young people, in modifying their diets to eliminate, or at least minimize, the consumption of animal meats because of a perceived moral issue in the killing of animals for human food.

"3. As the demand for meat analogs grew so did competition. This led to a significant increase in the number of companies producing and marketing these analogs. Among the newcomers were Garden Burger made by a company in Oregon and Boca Burger made by a firm in Florida. Although Worthington Foods continued to be the leader in the industry, newcomers meant the competition grew keener and larger companies began to see potential for these products.

"Question: Did Worthington begin to put emphasis on other healthy foods as time went on?

"Answer: Yes, I would say that became of interest to us. Other products that we added to our line included Kaffree Tea–a caffeine-free tea which we imported and repackaged for retail sale. This tea, known as rooibos or red tea, had been grown and used in Africa as a beverage for decades. We also added a second beverage, Roma, which was also imported (in this case from Europe), and repackaged it as a caffeine-free alternate to regular coffee. At one time we test-marketed canned mung (soy) bean sprouts and Kel-jel made without animal ingredients as an alternate to the popular gelatin products on the market. Lack of consumer response ended the tests and we continued to place primary emphasis on meat analogs.

"Question: In the early 1980s you re-mortgaged your home, along with other Worthington executives, and took great personal risk to buy back Worthington Foods, which had been taken over by Miles Laboratories and Bayer AG, in turn. Did you take the right decision? Why did you and the other executives agree to be taken over in the first place?

"Answer: An adequate response to this question might require a rather extensive explanation of management philosophies, which could take more space than we have here. But I can say this much: I don't believe any of us who were involved in the reacquisition of Worthington Foods had any doubts about what to do when the opportunity came–even though the cost and risks involved were high.

"Former president James Hagle, George Harding IV, the son of co-founder George T. Harding III, and I were convinced we should proceed with the chance we had to reacquire the business. It was the only way the future of the company and its purposes could be met. We pooled our resources, such as they were, and moved ahead. For me the decision meant re-mortgaging my family's home and using my accumulated retirement funds. James Hagle had the foresight to make sure the name Worthington Foods had been legally safe-guarded. George Harding was willing to use his family's identity and financial resources to support the move.

"It proved to be a wise move. The company became even more successful than it had been before the merger with Miles Laboratories in 1970.

"Our merger with Miles had come about because we knew of at least four nationally known companies who were seriously exploring the possibility of entering the market with their own brands of meat analogs. A friendly merger with Miles, who agreed to continue making the Worthington brand of foods even though they anticipated establishing their own brand, seemed more promising and more prudent than trying to compete with a company with more resources and more experience in marketing than we had. James Hagle, George Harding, and I all felt we had a moral obligation to protect the interests of Adventists and other users of meat analogs.

"Question: Later, Worthington went public. What was the reason behind listing on the stock exchange? Did a new

© Copyright Soyinfo Center 2014

responsibility to shareholders hamper the company?

"Answer: When Worthington Foods merged with Miles Laboratories in 1970 both companies realized manufacturing capacity at Worthington would be inadequate to meet the needs of their expected sales volumes. Plans for a new plant at Worthington were initiated and the new factory was completed in 1972.

"As the planning and construction moved ahead it became clear that the 10 acres of land owned in Worthington did not provide for any further expansion should it be needed. Miles decided to purchase a food manufacturing facility that had become available in Schaumburg, Illinois, near to its own administrative offices located in Chicago. Miles decided to use the Schaumberg site for the production of the newly developed Morning Star Farms line of products.

"About ten years later, Miles itself became a partner in a merger with Bayer AG, a German company that was looking for an American pharmaceutical company with whom they might jointly work in expanding their markets. This newly formed company did not want to continue in the food business, which, in turn, provided an opportunity for Worthington to acquire its own meat analog business back, plus what had been launched by Miles. Worthington Foods chose not to include the Schaumberg operation in its purchase, because it believed it could meet its projected sales for a number of years with production limited to Worthington.

"Following our takeover of production and marketing of all analog products we experienced a surge in sales that created the need for additional production capacity. We were able to find land in an industrial park in Zanesville, Ohio, about 60 miles from Worthington. Because no new manufacturing businesses had come to Zanesville for a number of years, the city offered us tax incentives and other benefits to build a new plant there. However, this would have taken millions of dollars of capital, which we did not have at that time. After a review of investment potential among our Adventist acquaintances, we concluded we could not generate enough capital quickly from that resource. Accordingly we decided to explore going public with a stock offering. This proved to be successful, but it also brought new problems.

"We soon discovered that public interest in stock investment is more directed toward financial return than to better eating habits. Furthermore, publicly held companies must learn to live with financial analysts, who see their purpose as that of helping companies to maximize profitability for the benefit of investors in the company. This places pressure on company management to make decisions that don't always coincide with management's vision of what is best for their company's customers. Under this constraint we were not always able to do what we felt was best for our customers. Expecting financial analysts to understand and share these ideals was not always practical or feasible.

"Question: When did Worthington Food experience the biggest growth?

"Answer: It all depends upon what you mean by growth and how it is defined. I'll respond in general terms. When we completed our new plant in 1972 we achieved a 250% increase in production capacity. When we completed our second plant construction at Zanesville we more than doubled our 1972 capacity in the production of frozen foods. Our production of frozen foods represented the major portion of total production and sales. The total number of employees peaked by 1990 when both the Worthington and Zanesville plants were in operation. As our technology and efficiency improved, production increased without an increase in the number of employees. From 1960 to 1970 our total sales volume increased 1,000% but in real dollars the increase between 1970 and 1980 was greater than it had been in the previous decade. This was also true for the decade 1980 to 1990 over the preceding decade. In capital investment, we never stopped growing.

"In summary I would say that our history of growth was geometrical in nature, rather than arithmetic. Profitability did not keep pace with production and sales increases, but we did continue to show increases in earnings as well. The year 1945 was the only year we did not show a profit and that was due to a post-war adjustment. In 1945 when I joined the company we had annual sales of less than $200,000. By 1999 our sales volume was approaching $200,000,000.

"Question: How did the challenges the company faced in the 1990s differ from those in the 1940s?

"Answer: Challenges in the 1990s differed from those in the 1940s because we had become committed to meeting the interests and needs of the public rather than to a segment of it.

"A second area of challenge had to do with the increase of competition or possible competition from large companies who were beginning to see potential in what we were doing.

"A third area of challenge was in the field of finance. It had become necessary for us to expand in order to meet market demands. Raising capital was a real challenge. This is why we decided to go public with stock in our company. This, in turn, brought pressure from stockholders who were more interested in profit than in sound nutrition principles.

"Question: When were you the busiest? What did you enjoy most about your job?

"Answer: The most intense activity I experienced at Worthington Foods came during the time between August 15 and October 15, 1982. Those were the weeks we were preparing for the reacquisition of the company after 12 years affiliation with Miles Laboratories." Continued.

3582. Byrd, Alita. 2009. 50 years selling Choplets (Continued–Document part III) [Interview with Allan Buller of Worthington Foods]. *Spectrum: Journal of the Association of Adventist Forums* 37(3):36-41, 63. Summer.

• ***Summary:*** Continued: "I was the Worthington representative in negotiations. It had already been decided that I would serve as the President and CEO of Worthington Foods after the company became ours again. The familiar phrase 'the buck stops here' seemed to apply. I was busy trying to raise capital while adjusting to line authority after years in a staff position. Putting together a management team for production, marketing, research, human resources, and finance took all the time and energy I could muster. There were development and communication of plans to be shared with customers, vendors, employees, prospective shareholders, etc.

"During this time my attaché case containing details of plans was stolen from my locked car. My prayers were answered in recovery of these valuable documents.

"Life was a bit hectic but with God's leading and help we began business as Worthington Foods on Monday following the closing of business as a division of Miles the previous Friday. A big factor in making this possible was a decision on the part of every employee to accept our invitation to continue working for the company vs. continuing with the former parent company. Regaining control of the company and helping it to become a private company once more and successful beyond our expectations was the biggest thrill I experienced while I was a part of Worthington Foods.

"Question: What has been Worthington Foods best selling product of all time?

"Answer: I'm not sure I can specifically answer this question because different products were leading sellers at one time or another. I can say this much: Our reputation as a vegetarian food producer began with our early product, Choplets. This was a meatless steak-like product made from wheat gluten. The name was adopted and registered as a trademark by company management after it was suggested as a name by George T. Harding IV, son of the company's co-founder and just ten years old at the time. George's family had just completed a meal at which Choplets were served and the question was asked, 'What name shall we choose for this product when we're ready to begin marketing it?' George suggested his choice of names and Choplets went on the market in health food stores, Adventist book centers and campmeetings and rapidly became a favorite of many consumers–so much so that in time it began to be used as the generic term for any wheat gluten steak made and sold by any company.

"Choplets thus became the best-selling vegetarian product made by Worthington. Even New York's Waldorf Astoria Hotel served Choplets during wartime rationing. Later when Veja-Links, a meatless 'hot dog' were introduced, they took over the number one spot for a while. In time frozen vegetarian foods came into their own, and because we were able to make them available to the public in supermarkets they took the lead in sales.

"Question: What is your own favorite Worthington food?

"Answer: My favorite Worthington food when I first joined the company was Choplets, but they are not now made the way we used to make them, so they no longer are my favorite. I guess my favorite among the products currently made would be Morning Star Farm Grillers.

"Question: When did you step down as Worthington's chief executive?

"Answer: I stepped down as President and CEO of Worthington Foods, Inc. on January 1, 1986. I was succeeded by Dr. Dale E. Twomley who had joined the company some three years earlier as the intended successor. Before that he was serving as head of the business department at Andrews University.

"Under Dale's leadership the company continued to grow at a rapid pace. He was instrumental in negotiating the acquisition of the Loma Linda Food Co. and later the purchase of land in Zanesville, Ohio, and the subsequent construction of a new plant in that area. As president and CEO he also took a lead role in negotiations with the Kellogg Co. when it acquired our business in 1999.

"Question: What kept you at the company for over 50 years?

"Answer: I enjoyed my work. I felt the company was responding to a genuine need on the part of its customers. My employer wanted me to stay. I felt the company had a promising future. Our family liked the community in which we lived. All of these had an influence in my continuing with the company for so long.

"Question: What would you say is the secret of Worthington's success?

"Answer: I believe the secret of our success is not really a secret. Founders and owners, management, and key employees all believed in the mission of the company. The principles that guided these people were (a) honesty and fairness to employees, stockholders, and vendors, (b) a commitment to our mission, and (c) a faith in God.

"Question: What do you see in the future for Worthington Foods? How can it remain competitive as so many other companies get into the meatless food market?

"Answer: From a legal point of view the future for Worthington Foods now rests in the hands of the Kellogg Co., which now owns Worthington.

"Our Worthington board members decided that the Kellogg Company is better prepared with greater resources to be competitive than we were at the time we sold the business to Kellogg.

"I will be disappointed if Kellogg management does not aggressively protect its investment in what has been a promising vegetarian food business. The fact that Worthington Foods and Morning Star brand products continue to be made available in greater variety than years ago is some assurance of this.

© Copyright Soyinfo Center 2014

"Question: Can you tell us an interesting story from your years with Worthington Foods?

"Answer: I'm sure I could identify a number of things that happened during my career that reflect human interest rather than business concern, but there is one that stands out as perhaps being a good example. I call it 'The story of the $40,000 tree.'

"When I first joined Worthington Foods in 1945 a new factory building had just been completed. In front of it stood a tall and impressive white oak tree. At the time I had no idea of its age, but it looked quite old. Obviously the tree had not been moved or damaged by any recent construction activity. It remained undisturbed for the next 27 years, generously providing squirrels with an annual supply of acorns.

"By the time we merged with Miles Laboratories in 1970, it had become obvious that a new and larger factory was needed. The Miles Company hired an architect and assigned one of its engineers to supervise construction. I was asked to serve as chairman of the building committee

"The architectural firm had a set of building plans ready for us at the first official meeting of our committee. The first thing I noted was that no white oak tree appeared on the drawings. The architect's explanation was, 'We feel it needs be removed so the main entrance to the building can be located in that spot.' When I suggested we keep the tree and change the entrance, the architect responded, 'Because of the time already spent in preparing plans, it could cost as much as $40,000 to change them.' The Miles engineer added this comment, 'I think changing anything at this stage might require approval by a higher authority than this committee has.'

"We shortly adjourned the meeting, but I didn't feel satisfied. At that time Dr. Walter Compton was President and CEO of Miles Laboratories. I had not known him before our merger with his company, but my impression of him was that he placed aesthetics above dollars. I decided to write a letter to him explaining my concern about cutting down a tree that had as much size and history as the white oak standing on property that had just become a part of Miles Lab. I explained that I had arranged for a horticulturist from nearby Ohio State University to give us an estimate on the age of the tree.

"His report stated that it in his opinion the tree was standing when George Washington and his troops were fighting the Revolutionary War. That would make it the oldest living thing in Worthington. Dr. Compton's immediate response was, 'We must save it!'

"The tree is still alive and well and stands in all its majesty where it sprang from an acorn. Lightning rods and a plaque have been installed. If the tree had a voice I'm sure it could tell us a great deal about how Worthington came to be settled and what life here was like when Indians lived here. Who knows how many Indian children might have played under this very tree?

"Allan Buller lives with his wife in Ohio. This interview was conducted via email over a number of months in 2008 and 2009."

3583. *VegeScan Notes.* 2009. Chronology of the early health foods movement in England (Overview). July 21. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1898 [Oct. 20]–The Pitman Vegetarian Hotel, England's first vegetarian hotel, opens on the top five stories of the building housing the restaurant. It is "named after Sir Isaac Pitman, inventor of Pitman Shorthand, who had been a vegetarian for 60 years, and at the time was the best known vegetarian in England." Customers of the restaurant "start asking for food which they could take home with them." James Cook starts to make simple, appetizing "foods from nuts, cereals, fruits and vegetables to take the place of meat, lard, butter, cheese and jelly made from animals."

1902?–"Six years before Kathleen was born the 'Health Food Store' was opened and the manufacturing side increased." James "realised it was not economic to run a factory in the centre of Birmingham, so he bought a site in Aston" where he built the first [sic] health food factory in England.

1905–The Pitman Health Food Company opens. Its most popular products are Nuto Cream Soup and Nut Cream, followed by Pitman Dandelion Coffee. All products are dairy-free.

1907 Oct. 28–The health food factory of the International Health Association Ltd. is dedicated at Stanborough Park, Watford, Hertfordshire, England. Two hundred people attend. The estate and all its buildings are dedicated to the service of God.

1926–The International Health Association Ltd. (still located at Stanborough Park) is renamed Granose Foods.

1929–A bigger and better health food factory, called Vitaland, is built in a beautiful building in green fields at Four Oaks, Sutton Coldfield Park, Warwickshire.

3584. May, Rebecca. 2009. Dale Twomley: A true investor in Adventist education. *Focus* (*The Andrews University Magazine*) 45(4):50-51. Fall.

• ***Summary:*** An excellent biography of a man of great talent and dedication, with many successful careers in education and business. In 1983, after reorganizing and revitalizing the Andrews University School of Business, Dale began a "successful career with Worthington Foods [Worthington, Ohio]. Among the company's successes during his 14 years as President / CEO, sales increased from $27 million to $185 million, and shareholders' equity increased at 31 percent compounded annual growth rate for 14 years. The business theories he'd learned, taught, and institutionalized at Andrews were brilliantly successful in the 'real world.'"

A large color photo show Dale Twomley in his later years. A smaller black and white photo shows Dale when

he was younger. Address: Director of campus relations & events, Office of Integrated Marketing & Communication, Andrews Univ., Berrien Springs, Michigan 49104.

3585. Moncrieff, Scott. 2009. What the Sam's Chicken? The true story of the man behind the meat. *Focus* (*The Andrews University Magazine*) 45(4):20-23. Fall.

• ***Summary:*** "You go through the serving line at Dining Services, picking up mashed potatoes and gravy, salad, and a drink. Oh, and you add a portion of Sam's Chicken, along with two tablespoons of tartar sauce. It's pricey, at $3.79 a serving–and 25 cents for the tartar sauce–but it has been an irresistible favorite at Andrews University for 40 years. As you work through your five ounces of wheat gluten, soybean oil, soy flour, yeast extract, sea salt and top secret spices, you have no idea of the history of Sam's Chicken, or who Sam is, if indeed there is such a person. But as those 400 calories hurtle past your taste buds and into your bloodstream, sit back and maintain consciousness. I'm going to tell you.

"Our story starts about 6,000 miles away from Berrien Springs, Michigan, near the city of Obihiro, on the island of Hokkaido, in Japan. That is where Michihisa Yoshimura was born on March 4, 1915. His father, a well-to-do businessman, owned a coal mine and raced horses for fun. In some ways, Michihisa was a lot like your average American kid of the Post World War I era. He liked to snow ski, ice skate and play baseball (catcher and left field). As Michihisa got into his teens his mother, a Christian (his father was an atheist), wanted her son to attend a Christian school, so she sent him way down south to Saniku Gakuin, the Adventist college about 50 miles east of Tokyo on the other side of Tokyo Bay.

"There Michihisa providentially–for purposes of our story and title product–worked in the food department, helping manufacture peanut butter, grape juice and bakery products. During summer vacations he worked with his grandfather's flax company, further extending his knowledge of food production. When Michihisa turned 18, in 1933, he was required by law to apply to join the federal army. However, he was rejected because of flat feet–Japan was not yet in a large-scale war and its military was selective. This rejection prepared the way for him to gain permission to leave Japan to attend Madison College, just outside Nashville, Tenn., where he began further studies in 1937. He had been encouraged to go to Madison by Perry Webber (Emmanuel Missionary College class of 1911), a PhD in chemistry who had a special interest in soyfoods, and had spent much time at Madison College as well as in Japan. As Michihisa set off for Madison, Webber suggested he adopt the name 'Sam,' after the biblical Samuel. Thus Webber unwittingly saved us from 40 years of 'Michihisa's Chicken.' Incidentally, Sam's younger brother Zenzaburo, who remained in Japan, trained as a kamikaze pilot, and had given away his clothes preparatory to his final mission–and then, mercifully, the war ended.

"In entering Madison College, Sam had come to the school most suited to enhance his work as a food technologist with soy products. In 1904, E.A. Sutherland, having resigned as president of Emmanuel Missionary College, embarked with his colaborer Percy Magan to open a new school in the South. This institution, originally the Nashville Agricultural and Normal Institute, became Madison College (in 1937), and Sutherland served as president there for over 50 years. This school, like Andrews and Saniku Gakuin, focused on the harmonious development of body, mind and spirit. As part of the plan, students were to work off half or more of their expenses each year. Among the industries which developed on campus was a food factory which, in 1918, became Madison Foods. By the time Sam arrived in 1937, Madison Foods was a leading–probably the leading–developer of soy-based products in the United States, including soymilk, soy meat substitutes and tofu products.

However, times were hard and wages were pennies per hour. Sam's classmate Shirou Kunihira worked in the soymilk production plant, while Sam worked at the bakery, where his duties included running the bread loaves through the slicer. Shirou would get an allotment of soymilk at the end of his shift and Sam would collect the crumbs from the pan under the slicer. With these ingredients the friends would share a humble evening meal. For Japanese and Japanese-American students, there was the added challenge of the United States being at war with Japan. Despite these challenges, Sam graduated from Madison College in 1941 and worked an additional two years for Madison Foods, but now his passion for soy was balanced with a new passion for she.

Sumiko Yano, a.k.a. Sumi, was born in Japan, but grew up in Southern California. At the time the U.S. declared war on Japan, in December of 1941, her family was living in El Centro, California. Her father made his livelihood by arranging for cantaloupes and other valley produce to be shipped to market. In 1942, her family was given a one-month notice that they would be placed in a 'War Relocation Camp' in Poston, Arizona. (After relocation started, Sam and the other Japanese or Japanese-Americans at Madison would hide in the cornfields whenever immigration officials came looking for Japanese persons.) For approximately one year Sumi lived with her parents in an army barracks at the camp, eating in the communal dining area, using a latrine, and working every day in the agriculture department as a secretary, for $19 per month. One day, Sumi received a box of home-baked peanut-butter cookies from someone named Sam. Sam had sent the cookies as part of a thank you to Sumi's family, who had helped Sam's family with a financial transaction at a time when Japanese bank assets were frozen. Sumi wrote back asking for more cookies. Sam, in turn, helped arrange for Sumi to get early release from camp, in order to attend Emmanuel Missionary College, through the

© Copyright Soyinfo Center 2014

auspices of A.N. Nelson, then dean at EMC, but formerly president of Saniku Gakuin when Sam was a student there. Sumi, in turn, decided to pass through Madison on her train trip to EMC, to meet Sam. They met and got acquainted in the home of Perry Webber, and that fall of 1943 found Sam as well as Sumi enrolled for classes at EMC. Sumi worked as a reader in the home economics area for Mrs. Holquist, while Sam worked at the farm and the greenhouse.

The young couple was married on June 12, 1944, at a friend's house in Chicago, and lived in an apartment until Sam's graduation on August 1, 1945, with a BS in agriculture. Their first child, Steve, was born in June of that year. Sumi remembers that a friend drove her to Watervliet, Michigan, where the doctor, sympathizing with her state as a poor student, delivered her baby for free. Sam returned to Japan in 1947 (Sumi and infant Steve followed six months later), and spent ten years helping build up the food factory at Saniku Gakuin. The Yoshimuras returned to Tennessee in 1957, where Sam became production manager at Madison Foods. Continued. Address: M.A., Prof. of English, Andrews Univ., Berrien Springs, Michigan 49104.

3586. Moncrieff, Scott. 2009. What the Sam's Chicken? The true story of the man behind the meat. Part II. *Focus* (*The Andrews University Magazine*) 45(4):20-23. Fall.

• ***Summary:*** Continued: "Near the end of the time he worked there, he began developing Sam's Chicken '1.0,' a canned product. In 1963, Sam resigned from Madison Foods and began work as an independent consultant for Madison Hospital. He also did independent research using the hospital's facilities at night, working on, among other things, improving Sam's Chicken. As far as Sam knows, it was the first product to mix wheat gluten with soy or tofu. Sam says the product was made 'by blending tofu, wheat gluten, and other ingredients; the mixture was whipped, shaped into a loaf, baked briefly to sterilize it, torn into chunks, dipped into batter, then deep-fried to yield a delectable "meatless chicken"' (soyinfo.com).

"Sumi, who had gone on to get her BS in dietetics from Loma Linda University, was working as director of the Madison Hospital cafeteria, and used Sam's Chicken in the cafeteria with great success. What couldn't be consumed by the hospital was sent on to local self-supporting schools like Little Creek and Fountain Head.

"Around 1966, Sam went to work at Harding Hospital for Worthington Foods. While there, he developed Sam's Chicken as a frozen product, and further tinkered with the recipe, which included soaking it in a buttermilk and egg batter overnight, prior to dipping it in a bread-crumb and spice mixture and deep-fat frying it. It was shortly after this time, probably 1969 or 1970, when the Andrews cafeteria, under the leadership of Clinton Wall, began using Sam's Chicken, according to Ruth Roberts, who worked with Wall.

"Of his many accomplishments in the food technology industry, however, Sam himself was especially pleased to be loaned by Worthington Foods to help the country of Uganda with improving its food supplies for school children and women. Over a six-month period in 1969, he and his team, along with workers from UNICEF, developed porridge, roasted soybeans, and soyflour-enhanced bread for more nutritious school lunches.

"Sam and Sumi, now long retired, live in a suburb of Sacramento, California. And it appears that the ever-popular Sam's Chicken will tantalize the taste buds of new generations of Andrews students. As you wash down your last morsel with some grape juice, here are two last bits of the story to chew on. First, 'Sam's Chicken' has always been an unofficial name. The official Worthington product from which it is made is called 'Chic-ketts.' Second, Sam depended heavily on Sumi to give him feedback on the

'meaty' taste of his product. She ate real chicken, while the only meat occasionally eaten by Sam, the Sultan of Soy and illustrious innovator in a long line of meatless meat products, was fish."

Photos show: (1) Sam Yoshimura in 1941, when he graduated from Madison College. (2) Sam and his wife in 1963 seated on a couch in Madison, Tennessee.

(3) Sam standing in Kobe, Japan, in 1976.

(4) Tearing the mixture of baked tofu and wheat gluten into chunks.

3587. Messina, Mark J. 2010. The war has been lost: Update on research on the health benefits and risks of soy (Interview). *SoyaScan Notes*. May 31. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** The image of the safety or healthfulness of soyfoods, primarily on the Web, in large part due to the Weston A. Price Foundation, is getting worse and worse. Mark fears that the future of soy as a human food looks bleak, and that sales of soyfoods and ingredients will decline over the next 20 years–even though the nutritional science is making soy look better and better.

For example, the research on the safety of soy for people with thyroid problems is now solid. Soy does not cause thyroid problems in humans. Soy does cause thyroid problems in rats but rats are a bad model to use for studying this problem. Even for people living in a goiter belt–a place with iodine depleted soil–consuming soy is not a problem.

The research on the safety of soy for women with breast cancer is becoming more solid. The paper by Shu et al. is the most important development although the Guha paper is also basically supportive of safety. The paper by Messina and Wood discusses the clinical work. Add to this the fact that there is another paper albeit smaller in size that will be published soon that supports the paper by Shu and that it is now known that the animal studies aren't very relevant to humans because the amount of biologically active genistein in circulation is much higher in mice than in humans makes a pretty strong case. The editorial by Messina, Abrams and Hardy that makes the case succinctly.

It is quite clear that if a young girl has one serving of soymilk a day for life, that will reduce her risk of breast cancer. Likewise for women with breast cancer. However, nothing is clear when it comes to chronic disease and diet. The hypothesis is quite intriguing and has epidemiologic and animal data in support of it. However, without clinical data it will remain speculative. Nevertheless, because the potential benefit is so great, the amount of soy need for protection so small (one serving) and that in my view there is no disadvantage to consuming soy, it seems like a no brainer to make a recommendation for girls to consume one serving per day.

The area where we have the fewest good studies and the biggest knowledge gap is in safety of soy for young children. Seventh-day Adventist children have been consuming soymilk for more than 60 years with no reported problems, yet this needs to be studied scientifically. A good two-year study has been designed but has yet to be funded.

There has been a big decrease is sales of soy infant formulae over the past ten years due to uncertainty in this area.

The main are of concern today is with isoflavones / phytoestrogens (such as genistein), which are classified as endocrine disruptors. The anti-soy faction likes to talk about "estrogens in soy" as being risky and about feminization.

The Weston A. Price Foundation (WAPF) recently had their 10th annual conference / meeting in Chicago; 1,000 people attended. Their focus was not anti-soy, although a few such comments were made.

Note: According to Wikipedia, the organization was founded in 1999 by Sally Fallon and Mary G. Enig, PhD. Headquartered in Washington, DC, it is a "501(c)(3) non-profit organization dedicated to 'restoring nutrient-dense foods to the American diet through education, research and activism.' Its goals include disseminating the research and dietary advice of dentist and nutritional researcher Weston A. Price, who studied the foods and health of isolated non-industrialized peoples around the world, and supporting the scientific validation of traditional diets." Their anti-soy program is named "Soy Alert!" and they repeatedly refer to soy as "toxic." "In 2010 its membership numbered 13,000 and was growing at an annual rate of 10%, according to The Washington Post (6 Aug. 2008). It has more than 450 community-driven chapters across the United States, and international chapters in Australia, Canada, Finland, Germany, Pakistan, New Zealand, the United Kingdom and various other countries."

Mark regrets that he agreed to debate Sally Fallon. She made a number of false claims, such as Illinois prison inmates were being fed 100 gm of soy protein a day.

Alpro Soya recently released an excellent cartoon video commercial titled "Great Ideas Often Take a Long Time to Sink in" as part of its "Join the movement now" campaign. It encourages people to change their diet by replacing meat and dairy by an alternative just once a week.

White Wave [Dean Foods] is no longer funding scientific studies on soy–as they were a year ago. They have turned all their soy activities over to a PR firm. Mark finds this very disappointing. However the Silk Soy Nutrition Center has a good website (soynutrition.com) which focuses on the health benefits of soy.

The next soy conference will be in October. Kaayla Daniel is writing a new book of anecdotes about how she has helped people who had nutritional problems with soy.

© Copyright Soyinfo Center 2014

What evidence does Mark have that people are concerned about the safety of soyfoods? (1) The United Soybean Board (USB) has sponsored a booth at the annual meeting of the American Dietetic Association each year for at least the last 15 years. The booth is organized by Publicis, the USB's PR agency. The purpose is to provide information about soy oil and soyfoods. Materials are provided and usually a soy-related product served or handed out. It could be edamame or soynuts or chap stick made with soy oil. The ADA show attracts about 10,000 dietitians. Mark has staffed the booth every year (except one when he was unavailable) to answer questions about soy nutrition. He answers about 50 questions during the 3-day meeting. Most of the questions are about soyfoods (rather than soy oil). He has watched the nature of these questions change over the years. Initially they were about ways to incorporate more soy into the diet. Now they are about the safety of soyfoods and soy formula, and about isoflavones.

(2) He is often contacted by non-scientific journalists who want to interview him for radio, TV, or the Web / blogs. Here again he is now hearing the same safety concerns. (3) Mark gives many talks about soy nutrition each year. After a typical talk, he opens it up for questions. Here, also, he gets mostly questions about the safety of soy. (4) Mark's wife, Ginny, does a great deal of work promoting vegetarian and vegan diets. She says that support for soy is weakening among vegetarians. (5) On the Web, the number of negative stories about soy nutrition is growing. Almost all are based on hearsay rather than on science. (6) Mark increasingly hears negative comments about soy at random. In short, the climate has changed dramatically since 1990, when the trend was "straight up," to today when things are looking down. Mark has no reason to believe that this downward trend will not continue.

Twenty years ago they soy industry should have developed a long-term strategy, with adequate funding, to respond to the anti-soy faction disinformation campaign with science-based facts. But the industry was unwilling to do this. They thought it would go away, that it was just a passing fad, or that it was not important and would not have any significant effect on the market, which was growing rapidly at the time. Mark did everything he could to try to convince the soy industry that this was a real concern and that they should take action. There is still no interest in a long-term strategy, but now it is probably too late. Address: PhD, 429 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

3588. Drosihn, Bernd. 2010. Tofutown.com: Network of activities. To do list for a sustainable world. Portrait [Tofutown.com: Network of activities. To do list for a sustainable world. Portrait]. Tofutown Wiesbaum, Germany: Tofutown.com. 12 p. Illust. (all color). 30 cm. [Ger]

• ***Summary:*** Contents: Tofu is coming: In 1980 tofu was sold in about 100 Reform Houses, Bioläden, and vegetarian restaurants in Germany. In 2010 it is sold at more than 40,000 locations in a great variety of forms. Tofutown is there: Making it easy for people to eat and drink without going through the detour of animals.

After 30 years of making tofu in Germany, all is well. Photos show and earlier and present view of the company's plant.

Brands: Viana: Listen to your heart. Veggie life. Demeter (First soya sprout drink). Soyatoo whipped soy cream. Private labels. Tofu Musick.

Marketing. To youth. Quality. Customer relations.

Protecting animals and the environment, health. We believe in food democracy. Tofuismus No. 6. "In a Tofu Body lives a Tofu Spirit."

Tofu Fact No. 4. Four photos inside and outside the company's headquarters.

Nine website URLs and four photos. Very big numbers. Awards and prizes.

Milestones in the company's history / chronology: 1981/82–Founding of the tofu collective Soyastern, at the time the 3rd so-called "Tofurei" in Germany. In the 1970s and 1980s many small tofu projects were based on vegetarianism.

1988–Founding of Viana Naturkost GmbH on Cologne.

1990–Move to a larger building in Cologne.

1992.–Move to a former dairy in Euskirchen Kuchenheim.

1995. Expansion. 1997 Expansion.

1999–Move into a new building in Wiesbaum / Vulkaneifel.

2001. Detour to Wiesbaum.

2002–Develop the "Veggie Life" brand.

2003–Rename the company Tofutown GmbH.

2004–Development of the "Soyatoo!" brand.

2005–Major expansion of the cold storage area and the final packing area.

2007–Expansion of production.

2008–Start-up a Spaceshuttle Tofu- and Soymilk plant.

2009–Establish Tofutown North America LLC in San Francisco, California, for marketing the company's products in North America and Canada.

Note: During the years 2008 (*Inbetriebname*) and 2010 (Take over a modern production facility formerly owned by De-Vau-Ge Gesundkostwerk in Lueneberg) the story gets very complex, so Shurtleff writes Drosihn to please explain what it means. He kindly explains the 2010 entry in an e-mail dated 1 Nov. 2010: "I'll try to answer your questions. It is a little Gordian [knot] and complex: De-Vau-Ge in Lüneburg is a 'big city' and we did take over a 'small garage' (a small but separate building including about 60 employees) where the home of the 'vegetarian production' has been situated for years. The present owners of the 'De-Vau-Ge Dailycer Group' (50% is owned by 'One Private Equity' a

© Copyright Soyinfo Center 2014

Chase Manhattan Bank PE Company and 50% is owned by the Seventh-day Adventist Foundation 'MSP') focused the company strictly to the core business 'breakfast cereals' and carved out everything else to spin off. (Vegetarian Products) to Tofutown, Baby Food (to Sunval Company) and so on.

Already in 2007 all the health food businesses (brands for so called 'Reform Häuser' and natural food stores and supermarkets) owned by De-Vau-Ge has been carved out to a daughter company named 'Prima Vita' and moved to 'Heimertingen' in the South of Germany. So they did concentrate on the health food brands (most important one is 'Granovita,' the other ones are 'Eden,' 'Linusit,' 'Granovital' and also the smaller ones 'Martin Evers' and 'Bruno Fischer,' in total maybe 10 to 15 health food brands). Nowadays also the other European businesses are consolidated into the newly developed 'Bio Herba Group' which is beside the 'Prima Vita' in Heimertingen also Granovita UK and Granovita Spain. This health food business in total is, compared to the De-Vau-Ge Dailycer Group, of almost no economic importance and is still owned by Seventh-day Adventist money. The De-Vau-Ge Dailycer Group is a competitor of the Kellogg Co. and Nestlé in breakfast cereals and makes about 500 billion Euro turnover [sales] per year. They have several locations in Europe (France, Netherlands, UK, Switzerland).

"Tofutown is still very small compared to this big business; it has two production locations in Germany (Wiesbaum and Lüneburg) and a small bureau in San Francisco.

"A complex story and this is only the short version. Good to hear that you are well and still interested in companies and soy foods and the developments on the market.

Follow-up e-mail (Nov. 2): "There is a SoyaCow (made by ProSoya) grazing and giving milk in Tofutown. Frank Daller and Raj Gupta are both very credible people in the soy market.

"Yes, you are right with the mad accountants and also with mad consultants.

"I do use Google Books and Wikipedia as you do. In my Tofugraphy there is a scene where I tried to register a 'Tofu company' at the city hall somewhere in the beginning of the nineties and the two guys in the line before me tried to register a 'search engine.' Both were completely unknown and therefore nearly impossible to register. Now we have Tofu in every supermarket and we have Google on every computer." Address: Founder and president, Tofutown.com GmbH, Industrie und Gewerbe Park, D 54578 Tofutown Wiesbaum, Germany. Phone: 06593 9967-0.

3589. Sharma, Ratan. 2010. Re: Work with soymilk and tofu in India and worldwide. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 21. 2 p.

• ***Summary:*** "After completing my Ph.D. on soymilk and tofu in 1993 at Banares Hindu University in India, I started working for a Canadian non-governmental organization (NGO) named Child Haven International (CHI). Please see www.childhaven.ca. I was introduced to them by Dr. Raj Gupta of ProSoya. ProSoya had developed the SoyaCow technology and through CHI they wanted to introduce this technology to benefit the people of India and other developing countries. I started working for CHI in India after receiving intensive training in Canada on the SoyaCow technology (which was in the developing stage at that time), project formulation and other related subjects. CHI was supported by some funding from the Canadian International Development Agency (CIDA) for this project. The main objective of this project was to create employment opportunities and to provide low cost nutrition to the Indian masses. In 1994, on behalf of CHI and ProSoya, I transferred this technology to SSP Private Ltd., Faridabad, India. SSP is based near Delhi.

"It is important to mention here that in the latter part of the 1980s a few companies had tried introducing soymilk in the Indian market through large scale production (Tetra Pak, poly pack, etc.) but failed for many different reasons, so they stopped their operations. I worked hard to establish this technology in India, helping SSP in manufacturing quality machines and helping the users of this machine in product development, packaging, shelf life, marketing etc. I helped them in developing the products suited Indian tastes. Because of the previous failure of soymilk in the Indian market, I had to work very hard to introduce this product again in the Indian market and I tried to do it successfully.

"All the organisations involved in the promotion and establishment of this technology, considering its usefulness and the need for it in India and other developing countries, had no intention of making money. This was just for a noble cause and was done very successfully. We approached the Indian government and this machine was included under the Prime Minister's Employment Scheme where one can apply for a subsidised bank loan. In the meantime this machine was upgraded by ProSoya and SSP. I was involved from both the ends, coordinating between CHI, SSP and ProSoya. In the meantime SSP sold many machines to Russia and later Russians developed their own machine similar to this.

"It took time but this technology grew in many folds and Indian entrepreneurs started earning handsome money. Through this technology I promoted the small-scale soy food business in India and now close to four hundred such small factories are operating in India, producing soymilk, tofu, soy nuts, re-packaging defatted soy flour, making soy based noodles and other products. I am helping all of them. Based on the success of these small entrepreneurs a few companies started producing and selling the soymilk in Tetra Pack in India. From India these machines were sold to Nepal, Bangladesh, Pakistan, Sri Lanka and many other neighbouring countries.

© Copyright Soyinfo Center 2014

"Besides this I promoted this small scale soymilk and tofu business in Uganda, Tanzania, Kenya, South Africa, Egypt and in some other African countries with the help of Malnutrition Matters, CHI, WISHH etc. Also, I helped Dr. Steven Kwon in getting the soymilk machines from India and using them in Afghanistan. Now there are many such machines working in Afghanistan successfully.

"On average, Indian entrepreneurs are making tofu in a range of 100 to 500 kg per day. Some are making 50-100 kg per day. Large scale soymilk business is also growing in India."

Ratan visited Spicer Memorial College in Pune in about 1999 to learn about and perhaps help with their soymilk production. He recalls that they were making very sweet bottled soymilk in various flavors, as well as tofu (which was certainly not canned in a tin). They sold these products at a canteen inside the college and they had two outlets in the city of Pune; he visited one of these which was on a narrow street and was not fancy.

Ratan remembers a company that started making tofu and soymilk in Ghaziabad using a large new plant from Takai (of Japan); he does not remember the company name, but it was not Amrit Protein Foods. When he arrived in Ghaziabad, he lived with the owners of this company for a month. They had recently closed the plant and did not take him there. Later all of their equipment was sold at auction by the bank as they were not able to repay their loan. They had a very nice tofu tray packing system and were selling the tofu in water-filled tray packing only. The owner of the company was a chartered accountant by qualification.

Ratan also remembers a company in Allahabad (both he and Rajendra Gupta of ProSoya are natives of Allahabad) that purchased a large plant from Takai through an agent based in Hyderabad. This plant was purchased by a cigarette manufacturing company named Shyam Bidi. The owner of the company was a politician, who had earned lot of money from his tobacco business. They had just launched the product, which they continued for less than a month, then closed down the business before the product had a chance to become known. This company may possibly have been related to Mishra Soya Food Products, which definitely had a Takai system and which either introduced or was about to introduce "soyabean based paneer" [tofu] in the Bombay market. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

3590. Sharma, Ratan; Shurtleff, William. 2010. How soymilk came to India after 1970; fragments of a long and interesting story. Part I (Overview). *SoyaScan Notes.* Oct. 7.

• ***Summary:*** 1971–Pantnagar Soymilk Products Pvt. Ltd. launches Sipso Soymilk, made at G.B. Pant University of Agriculture and Technology, Pantnagar, Uttar Pradesh, India. This is the earliest known commercial soymilk produced in India. The equipment is imported from the USA and funded in large part by USAID. The patented "Illinois method" is used to make the soymilk, from which the okara (dietary fiber) is not removed, but is finely pulverized by a high-pressure homogenizer. The selling price (which allows some profit) is about one-third that of cow's milk. By 1978 this plant had produced nearly one million bottles of soymilk, which had been sold to the students and test marketed. A New Delhi Plant was established in 1979. In 1987 this product is still on the market, being sold in Prepac aseptic 200 ml plastic bags. By Oct. 1978 M/S Pantnagar Soy Products (the new name) in New Delhi was producing about 100,000 packets of soymilk per day. Each packet contained about 200 milliliters of soymilk.

1974–Soyghurt Food Products & Co. launches Soyamilk, made at Wardha Rd., Sitabuldi, Nagpur 440012, Maharashtra (MS), India. This company was started in about 1974 by Dr. S.L. Kothari, formerly of the Dep. of Food Science & Technology, G.B. Pant Univ. of Agriculture and Technology, Pantnagar (Nainital), UP, India.

1979–Spicer's Food Specialties of Pune / Poona launches Soyalac (canned soymilk) and Soya Soft Drink (in bottles), with a full page ad in the *Times of India.* The products are made by Spicer Health Foods, at Spicer Memorial College (a Seventh-day Adventist Organization), which started making Soyalac in 1973 for the students and for delivery to customers over a small radius, and Soya Soft Drink in 1979. The plant was started by Dr. Harry W. Miller, a great man and soyfoods pioneer, worldwide.

1979–The Institute of Buddhist Dialectics introduces Soymilk. It is made on a small scale by the Tibetan Buddhist community in exile at Dharmasala, Dist. Kangra, Himachal Pradesh, India. It is consumed mostly the monks and other members of the community, but small amounts are sold to local residents who bring their own container.

1981 May–Anuradha Industries (of Bombay, India) launches Amisoy (Spray dried soyabean milk powder) with a large ad in the *Times of India.* The product is still on the market in Jan. 1982.

1987 early–Noble Soya House (with partners Godrej, a powerful distributor, and Great Eastern Shipping) launches India's first major soymilk product (named Noble House Great Shake) and first soymilk product sold in aseptic Tetra Pak cartons. The soymilk processing plant, made by Kibun of Japan, had a capacity of 4,000 liters per hour. At this time, there were four Tetra Pak lines in the plant for this product only Targeted to youth, the product was not successful; it was more than a decade ahead of its time.

1988–Premier Industries (India) on Indore, launches Tuffy Hi-Protein Soymilk (in Malt, Orange, Banana, Mango, Strawberry, and Chocolate flavors). The soymilk equipment was from Mitsubishi in Japan. The product was discontinued in 1989.

1989 May 29–Amrit Protein Foods Ltd. (Ghaziabad, Uttar Pradesh) launches Big Sipp Soyamilk [Mango Shake,

© Copyright Soyinfo Center 2014

Banana Shake, Rose, or Pinakool (Pineapple)]. The soymilk processing plant was made by Mitsubishi of Japan. It is packaged in 200 ml aseptic, multi-layered, metalized Prepac Standi-Pak pouches. The product was discontinued in 1991.

1990 Nov.–A SoyaCow, invented by Raj Gupta (a machine that makes palatable, low-cost, high-protein soymilk) is now making soymilk in Hyderabad, India, at one of the Child Haven homes for poor children. The machine was made in Bombay, India (*Child Haven International* newsletter, fall 1990; *Toronto Star,* 19 June 1991. p. D2).

1991 May–The first SoyaCow made in Canada (Ottawa, Ontario) is sent to Child Haven in India (*Child Haven International* newsletter, spring 1991 and summer 1991).

Note: Dates and quotations from 1992 to 1996 are from the *SoyaCow Newsletter,* published by ProSoya, Ottawa, Ontario, Canada.

1992 March–"Child Haven International of Maxville, Ontario, has purchased six SoyaCow systems for their Soya Milk Cottage Industry Project in India. The project is supported by the Canadian International Development Agency [CIDA] and charitable donations from the public.

1992 June–CIDA funds Child Haven to buy seven more SoyaCows. They were shipped to India by air on 30 Nov. 1992.

1993 Sept.–Child Haven has hired Ratan Sharma, PhD, for their SoyaCow project in India.

1994 March–Child Haven has established a SoyaCow Centre in Ghaziabad, India, about 30 miles drive from Delhi to serve the growing population of SoyaCows in India. The Centre's main objective is to help women in self-employment by producing and selling soymilk and its products at affordable prices.

1995 June–SSP to manufacture SoyaCows in India. "In a recent visit to India, Frank Daller, President of ProSoya Inc., made arrangements with SSP of Faridabad, India, to develop an SC20 prototype in stainless steel. SSP is a reputable stainless steel fabricator for the dairy, food, and chemical process industries." "Earlier attempts of technology transfer to India to manufacture SoyaCows were not successful..."

1995 Dec.–Vocational training in soymilk production and use started in India at Manav Vikas Parishad of Ghaziabad in collaboration with the Government Polytechnic College and the SoyaCow Centre; they have developed a short course.

1995 Dec.–SSP gets approval from ProSoya Inc. to manufacture the first 10 SoyaCow SC20s in India.

1997–The first SoyaCow is sold commercially in India, by Dr. Ratan Sharma; it is a model SC20. This is the start of a new era for soymilk in India, as small entrepreneurs start to buy soymilk equipment.

1998–After the early success of SoyaCow in India three local companies also started producing these machines, direct imitations or "rip-offs" of the patented ProSoya technology. Their equipment is very inferior in quality and their service is poor so their sales are poor even though their price is lower than the SC20.

2000–Godrej restarts soymilk production using the brand name Staeta (pronounced STET-uh) and packaging in Tetra Pak cartons as part of a co-packing agreement initiated by ProSoya Foods India (a subsidiary of ProSoya Inc. of Ottawa, Canada, founded by Rajendra Gupta). The soymilk is made at the original Godrej soymilk plant at Mandideep, after some modification of their equipment made by Kibun of Japan. Godrej observed that ProSoya's Staeta soymilk was successful in aseptic Tetra Pak cartons–requiring no refrigeration.

2003–ProSoya Foods, India Pvt. Ltd. installs its own 2,000 liter per hour plant at the Godrej's plant in Mandideep in order to make use of their Tetra Pak facility on a co-pack basis using the brand name Staeta. ProSoya plans to launch this product in December 2003. Godrej (using a 2,000 liter per hour soymilk processing plant) launched its own Tetra Pak (Sofit) soymilk about 15-30 days after ProSoya launched its product. Godrej now has several Tetra Pak packaging lines. Staeta was actually launched in Jan. 2004 and Sofit was launched a month later.

2006 Sept. 9–SSP transfers their SoyaCow business to Pristine Plants India (PPI) Pvt. Limited. Pristine Plants is a new and independent company started by one of the relatives of SSP's managing director solely to manufacture small SoyaCows (SC20s). All these machines are based mainly on the ProSoya Technology. As of Oct. 2010 Pristine Plants is doing well financially.

2008 Oct.–ProSoya Inc. sells ProSoya Foods India to SoyaWorld of BC, Canada.

2009 Oct.–SSP starts again to make large and medium scale soymilk equipment. This is the first soymilk manufacturing equipment they have made since Sept. 2006. As of Oct. 2010 they have made one 200 liter per hour plant sold in India and one 100 liter per hour plant exported to some other country. Their designs are based on ProSoya designs but with major modifications to suit the needs of their clients. They make each these plants only after they receive an order and down payment for it. They are not marketing their soymilk machinery aggressively. Ratan Sharma works with SSP occasionally on these plants, not on the engineering but to give them ideas about the final product, product specifications, processing techniques and other details so that they can engineer each plant accordingly. Continued. Address: 1. PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India; 2. Soyinfo Center, P.O. Box 234, Lafayette, California 94549.

3591. *SoyaScan Notes.* 2010. Did the Chinese or Japanese or Koreans traditionally feed soymilk to infants or to recently-weaned children? No! (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** A personal view by William Shurtleff:

© Copyright Soyinfo Center 2014

I have lived in Japan with a Japanese family for 6½ years, spoke fluent Japanese, traveled all over China, and read huge amounts of literature about soy in China and Japan.

I would say that the Japanese and Chinese do NOT feed soymilk to infants or even to weaned infants. Rather they DO feed tofu as one of the earliest weaning foods. They mash it with rice gruel, so both are very soft. Remember that traditional Asian soymilk causes infants intestinal gas which tofu generally does not, or at least much, much less.

Of course it depends partly on what age you mean by "infants." At what age does an infant cease to be an infant? Wikipedia says of "infant": "It is typically applied to children between the ages of 1 month and 12 months; however, definitions vary between birth and 3 years of age."

I have never seen or heard of soymilk used as an infant food or a weaning food, except in a few early French-language articles such as: Labbé 1911, and Beltzer 1911–and maybe a few other articles.

The statements in these two articles that soymilk is fed to infants are rare exceptions. I imagine that Beltzer learned it from Labbé and that Labbe did not know much about the subject.

Read the writings of Dr. Harry Miller (M.D., on our website, www. soyinfocenter.com) who established the first soy dairy in China in 1936, who lived in China as a missionary in China for many decades, and who introduced soymilk for infants (Soyalac) to the United States. He wrote a great deal and a biography has been written about him, yet I do not recall that he ever said that Chinese feed soymilk to infants. Address: Soyinfo Center.

3592. Gorell, Wallace. 2010. Re: Brief memoir–Interest in and involvement with macrobiotics. Letter (e-mail) to William Shurtleff at Soyinfo Center, 27 Dec. 2010 and 6 March 2011. 5 p. [1 ref]

• ***Summary:*** "I moved to San Francisco in January of 1966 at the invitation of my friend Deacon with whom I had studied acting at the Carnegie Institute of Technology, Pittsburgh, Pennsylvania (then considered to be the best theater program in the country; now Carnegie-Mellon University), and soon became a part of The Firehouse Repertory Theatre company, which up to that point had consisted of Bill Tara, director; Jean Allison, actress, George Eby and Deacon, actors, and a few others who took care of technical matters. Paul Hawken did lighting for us and co-produced (with Bill) some of the rock and roll dances we put on to make the money we needed to produce plays–such as "Endgame," a 1957 theatre-of-the-absurd play by Samuel Beckett. At this remove, I can see that the dances we produced were more culturally significant than the theatre, but we were not far from that view even then. We saw both endeavors as art making.

"Bill Tara has not been celebrated as Bill Graham and Chet Helms have, but he was really good at putting on rock and roll dances. He hired great people to do visuals for us, like Elias Romero, who invented liquid light projections, and Roger Hillyard, a talented filmmaker; he put together great bills with terrific bands–Big Brother and the Holding Company, the Amazing Charlatans [Sopwith Camel, The Wildflower, Great Society]; and he encouraged our company members to dream up performances to incorporate in the evening. He wanted our dances to be more than entertaining; he wanted them to be enlightening. We all did.

"We were intent on changing the world, nothing less, so we saw *everything* we did–eating, tripping, dancing, loving–as vitally important. Reading Timothy Leary, Jethro Kloss, Alan Watts, George Ohsawa and others, we learned that we had to change ourselves before we could change anyone else. So we determined to change ourselves, to *embody* change. It was critical.

"We tend to remember the sixties as carefree, but in fact they were fraught with anxiety. The draft had many of us in a constant state of apprehension. As President [Lyndon] Johnson heated up the war in Vietnam, we watched atrocities on TV as if we were seeing them first-hand. Life seemed nightmarish. A lot of young people, many of them flooding into San Francisco, got the idea we could turn things around–to open our hearts, to give peace a chance, to treat our brothers and sisters and the planet on which we all live with respect. The belief that we could bring peace to the world by making ourselves peaceful was, perhaps, an exuberance of youth. Most adults would say so. (I haven't reached a conclusion.) But at the time that sort of cynicism dismayed us. We believed it could be done. We believed ourselves to be the *avant garde* that would lead the way. Many of us had experiences with cannabis, LSD and mescaline that seemed to validate such a vision. We wanted to share that vision with the world. "During the so-called 'Summer of Love' (1967–the war was still raging in Vietnam) my friends Greg and Mary, with whom I was then living, famously took acid so Joan Didion, on assignment for *Look* magazine, could watch.* (See Didion's essay 'Slouching towards Bethlehem' in the collection of the same name). Meanwhile, Bill, Jean, Deacon, Paul, Roger and I were busy planning an anti-war art piece to be presented at the big dance we had scheduled for Halloween night with The Grateful Dead, Quicksilver, Mimi Fariña and other performers. We had bought every second-hand baby doll we could find in San Francisco, had taken a blowtorch to them, and planned to hang them in camouflage netting all over the hall. Roger was putting together a montage of grisly war footage, and Bill, Jean, Deacon and I had rehearsed a piece to perform over the PA system–an excerpt from Kenneth Patchen's 'Journal of Albion Moonlight.' The artistic intent was to portray war as a bad trip.

"Ken Kesey, then on the lam, announced that he would appear with the Dead at Winterland Ballroom on Halloween to tell America's youth to turn away from drugs. Hold on,

© Copyright Soyinfo Center 2014

we thought, we have The Grateful Dead under contract for our dance at California Hall. This was confusing. Some of the Pranksters were actually staying at Bill's warehouse home south of Market. (By that time we had been kicked out of the firehouse and were now called the San Francisco Calliope Company.) Could we transfer what we had planned to Winterland, a much larger venue? We decided to sit tight and wait to see what would happen. Then rumors started to circulate that Kesey actually intended to dose the punch at Winterland, thumbing his nose at the law. What would happen if we did our anti-war piece–especially with all those burned baby dolls–to an audience on acid? Not pretty. As it turned out, our dance went on as scheduled. Nothing happened at Winterland. (Another version of this story appears in Tom Wolfe's *The Electric Kool-Aid Acid Test*).

"In retrospect, I can see our bad trip war piece wasn't *just* about Vietnam. It was expressive of what was happening that summer in San Francisco. Psychedelic drugs had, for a year or two, fostered genuine camaraderie there, but other drugs that had appeared on the scene–notably crystal methamphetamine and PCP–had seriously undermined it. The vibe had changed. A lot of youths had lost faith. Some of us decided we had indeed seen the light, but needed to do more work to sustain the vision. Bill, Jean, Paul, Roger and I were interested in attaining higher consciousness through clean living. Deacon and quite a lot of others weren't.

"We had seen some issues of 'The Order of the Universe' out of Boston and wanted to know more about the Macrobiotic study center there. I wrote to the editor, assuming that English was not his first language, and offered my help. Embarrassed, Jim Ledbetter accepted my offer. My friends Mike and Jan Costello drove me across country while I read aloud to them *You Are All Sanpaku* and *The Book of Tea*. By the time I reached Boston, Paul (in his early twenties) was already there, and Aveline Kushi (then about forty) was having an affair with him." Continued. Address: Berkeley, California, and Flinders Island, Tasmania.

3593. Doblmeier, Martin. producer / director. 2010. The Adventists (Color motion picture). Alexandria, Virginia: Journey Films. 1 hour.
• ***Summary:*** In 1866, three years after the Seventh-day Adventist church was formed, it opened the Western Health Reform Center in Battle Creek, Michigan. It became an instant success. Soon, a brilliant young surgeon, John Harvey Kellogg, whose medical education was sponsored by Ellen White, became director. Kellogg changed the name to the Battle Creek Sanitarium, and over the next 50 years he built an empire around the evolving approach to medicine and healthy living. "The San" was a place where people could come to learn how to get healthy and to stay healthy. Kellogg understood the healing power of nature, but he supported it with the best of science, and the result revolutionized medicine. He developed a reputation as an eccentric who was always looking for new ways to work with nature using diet and healthy living. "Scores of celebrities came to Battle Creek including President William Howard Taft, King Edward, inventor Thomas Edison, pilot Emelia Earhart. Kellogg's sanitarium was now the largest health institution in the world." Rich people such as Mr. and Mrs. J.C. Penney also came; they simply wanted to feel better.

Contains a long segment about Florida Hospital in Orlando, Florida. People recover better when they are in a community. Adventist physicians are on the cutting edge of medicine–in many fields, and are very active in exploring new paradigms that include faith, nature and healing–and high-tech medicine.

George R. Knight, historian, says: "Deep in our history is the whole concept that our bodies are the temple of the holy spirit, and they belong to God and we ought to care for them." There is no part of human beings, such as a spirit or a soul, that lives independently from the body. "So we are physical beings from beginning to end." It is very important to take care of the body. Most Adventists don't drink alcohol.

St. Helena (in northern California) is the oldest Adventist hospital; it was established in 1878. There is a strong emphasis on the workings of the mind, and its effect on a person's overall health. There is a program to stop smoking, that began in 1969–one of the first in the United States. By doing five things, you can cut your risk of cancer by 70%: 1. Exercise regularly. 2. Maintain your idea weight. 3. Eat more fruits and vegetables. 4. Eat less red meat. 5. Do not smoke [tobacco]. Only 3% of Americans do all five. to

3594. Vegetarian and Vegan Foundation. 2010. The soya story: Everything you wanted to know about soya. The truth about how it impacts our health and the environment. Bristol, England. 60 p. Illust. 21.5 x 28 cm. [50+ ref]
• ***Summary:*** An very nice online digital book. Contents: Introduction. History. Soya: the superbean! The nutritional power of soya (by Juliet Gellatley) (7 refs).

Soya: the health protector (by Dr. Justine Butler): The health effects of soya, phytoestrogens, heart health, blood pressure, diabetes and CVD, diabetes, menopausal symptoms, bone health, breast cancer, prostate cancer, endometrial cancer, colon cancer, brain power, soya-based infant formula, thyroid function, allergies, soya production, summary, references (35 refs).

Soya: a global threat? How soya impacts the environment. Bean cuisine! An introduction to cooking with soya (by Jane Easton): Ingredients, stocklists (which soyfood products are available at the following British supermarkets: Asda, Sainsbury, Tesco, Waitrose, Independent health food shops and Oriental food markets. A good online source of soyfoods is Goodness Direct {www.goodnessdirect.co.uk}).

Soya recipes (p. 35-60).

The section on ingredients includes: Soya beans, edamame (fresh soya beans), tofu (silken tofu, firm tofu,

3595. Little, Janice. 2011. Re: What percentage of Seventh-day Adventists (SDAs) are presently vegetarians or vegans? Letter (e-mail) to William Shurtleff at Soyinfo Center, March 28–in reply to inquiry. 1 p.

• ***Summary:*** "I called our Loma Linda University School of Public Health which conducts the Adventist Health Study which has been going on for the last several decades. The answer that I got from them is the following: These are the only statistics they have. There are no worldwide figures that include all SDA's -just the ones in the Study done here in North America. These are updated to 2011. The first study done had higher figures in some area's which the person did not give me at this time.

"8% of the study group are Vegan

"28.2% are Lacto-Ovo

"9.9% are Pesto (eat some clean (Biblically approved) fish)

"5.6 are semi-vegetarian (eat some meat)

"48.3 are Non-vegetarian

"There are no exact numbers to be had. Worldwide more cultures include meat or fish as a staple diet. Worldwide SDA's reflect this also.

"What was interesting to me is that when I was a child in the 1950's & 1960's the percentage of SDA Vegetarians was much higher (at least in North America.) I remember somewhere around 50+%. How times have changed!" Address: Library Asst., Del E. Webb Memorial Library, Loma Linda Univ., Loma Linda, California 92350. Phone: 909-824-4942.

3596. *SoyaScan Notes.* 2011. What ever happened to the canned and frozen Worthington products (Overview). May 2. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** According to the manager of the Adventist Book Center in Pleasant Hill, California, about 45 of these products are still available. This is about half of the 90 that were available before the Kellogg Co. bought Worthington Foods. Among these 45 products, some have the "Loma Linda" brand. About 60% are canned and 40% are frozen. The brands are owned by the Kellogg Co. but they are made by a company somewhere in the southern part of the USA.

For more information, go to www.kelloggs.com. On the home page click "Brands." Then in the lower right click the "Worthington" logo.

Under "Kellogg" you can also click "Contact Us" and "FAQs."

3597. Davis, John. 2011. Veganism from 1808 [chronology]. *Vegsource.com.* May 25. http://www. vegsource.com/ john-davis/veganism-from-1806.html.

• ***Summary:*** "This is a brief summary of a talk I will be giving at the International Vegan Festival in Malaga, Spain, June 4-12, 2011.

"1806–Dr. William Lambe FRCP, in London, England, changed his diet at the age of 40–and gave us the first known unambiguous statement: 'My reason for objecting to every species of matter to be used as food, except the direct produce of the earth, is founded on the broad ground that no other matter is suited to the organs of man. This applies then with the same force to eggs, milk, cheese, and fish, as to flesh meat.'

"1811–John Frank Newton, a patient of Dr. Lambe, in his book 'Return to Nature' expanded Lambe's medical ideas to include ethical values towards all animals.

"1813–Percy Bysshe Shelley, poet, joined a 'vegan commune' which alternated between Newton family homes in London and Bracknell.

"1830s–Sylvester Graham, in Boston, USA, had been promoting the 'vegetable diet'–generally 'with or without' eggs/dairy. In 1837 he exchanged letters with Dr. Lambe, and his 1839 book clearly claimed that 'without' was more effective for health.

"1830s–Dr John Snow, 'vegan' since reading Newton's book when he was 17. Moved to London in 1838 and eventually achieved fame for discovering the way in which cholera was spread. In 2003 British doctors voted him the greatest physician of all time.

"1838–James Pierrepont Greaves opened 'Alcott House Academy', a school near London run entirely consistent with the ideas proposed by Lambe and Newton. It ran for the next ten years.

"1842, April–the first confirmed use of the word 'vegetarian' in the Alcott House journal. All other early uses were by people close to Alcott House, and all using it for what we now call 'vegan'.

"1842 June–Bronson Alcott, from Boston USA, already veg*n thanks to Sylvester Graham, visited Alcott House, named in honor of him and his earlier school in Boston. In 1843, with new English friends, he ran the short-lived 'Fruitlands' near Harvard, MA–again run on totally ethical 'vegan' principles. "1845-46–Henry David Thoreau lived by Walden Pond, near Concord MA, living solely on plant foods plus some fishing–but wrote about how much he regretted

© Copyright Soyinfo Center 2014

the fish.

"1846–William Horsell moved the hydrotherapy institute from Alcott House to Northwood Villa, in Ramsgate, Kent, England. This again followed Dr. Lambe's principles of plant food plus purified water.

"1847–The Vegetarian Society was founded at a meeting in Ramsgate, launched jointly by Alcott House and the (ovo-lacto) Bible Christian Church from Salford near Manchester. The compromise was to set the objective as merely 'abstaining from the flesh of animals'–and the confusion over everything else has continued ever since

"1874–Dr. Russell Trall had been running a hydrotherapy institute in New York City since 1850. This changed to exclusively plant food plus water in 1862–and in 1874 produced the first known 'vegan' cookbook.

"1887–John Harvey Kellogg privately removed eggs and dairy from his diet, though his books and sanitarium, in Battle Creek, Michigan, continued to use them. 40 years later he returned to using yogurt–but then discovered soy milk.

"1910–Rupert Wheldon in England, published 'No Animal Food', the first British 'vegan' cookbook. This was reprinted by Dr. Elmer Lee in New York. A 1910 article about Lee in the New York Times included the first known use of the phrase 'plant foods'. "1909-14–The *Vegetarian Messenger,* journal of The Vegetarian Society, carried much discussion about the use of eggs/dairy. There seemed to be a possibility of significant change, but all momentum was destroyed by the First World War.

"1931–Mahatma Gandhi spoke at a meeting of the London Vegetarian Society, making it clear that he objected to the use of milk and milk products. Such high profile support must have emboldened the minority who called themselves 'non-dairy vegetarians'.

"1944–Donald Watson and friends coined the word 'vegan' and founded The Vegan Society–the first issue of their journal [*Vegan News,* Nov.] was subtitled 'the journal of the non-dairy vegetarians'–and made it clear that they had not wanted to separate from The Vegetarian Society, they just wanted a distinct section within it. Most retained their memberships of both societies, as many do today.

"1947–Watson was a speaker at the IVU World Veg Congress–The Vegan Society had joined IVU soon after being founded, and has been a member ever since.

"1960–The American Vegan Society was founded, joining IVU from the outset. This included a smaller group started in California as far back as 1948.

"1957–The first Indian Vegan Society joined IVU. We don't know how long it lasted, but the new society is also prominent member.

"1960-1990s–Many new vegan organizations were formed, and the word gradually spread.

"1995–Records of printed media show a significant increase in the use of the word 'vegan'–this appears to have come from the rapid expansion of vegan websites, leading to a market for vegan books, especially recipes.

"1997–The IVU website started a recipe collection–agreed to be entirely vegan from the outset. We now have over 3,000 in English with more in other languages.

"1998–IVU agreed that all food at IVU Congresses would in future be completely vegan.

21st Century–Most veg organizations around the world now promote veganism as the ideal, regardless of whether they are called 'vegetarian' or 'vegan'.

"By 2009 more books had 'vegan' in the title than 'vegetarian.'

"2009/2010 surveys in the USA showed that 66% of vegetarians exclude eggs and dairy.

"By 2011 there were as many Google searches for 'vegan' as for 'vegetarian.'

"22 organizations with 'vegan' in their title are now members of IVU

"Will all vegetarians eventually be vegan? We have no way of knowing, but the continuing trend seems inevitable.

"For more details of everything above see: www.ivu.org/history/ vegan.html." Address: IVU webmaster.

3598. *Gainesville Sun.* 2011. Obituary: Harrison, Dr. David W. May 29.

• ***Summary:*** "Dr. David W. Harrison, Age 90, Retired Medical Doctor with 30+ Years of Missionary Medical Service in Africa, US Army Veteran, died Thursday, May 26, 2011, at E.T. York Care Center (Gainesville, Florida).

"Dr. Harrison, a self-supporting Seventh-Day Adventist Medical Missionary, has done pioneering work in introducing soybeans and soyfoods into Africa starting in the 1960s. Africa Basic Foods, which he founded in Uganda in 1962, was the earliest known company in Africa to make and market a line of commercial soyfoods. His work with soybeans and soyfoods in Ghana, Uganda, and Kenya affected the lives and nutritional well-being of thousands of people from government officials to school children and villagers.

"Born into a black Seventh-day Adventist family in Nebraska in 1921, the family moved to California when he was five years old. He received his B.S. Degree from Pacific Union College and attended Loma Linda University, where he earned his M.D. Degree in 1945. Dr. Harrison interned at Harlem Hospital (New York City) and began his medical career in North Carolina. From there, he was called to military service (in 1951). He earned a degree in public health in Texas in 1951 then went to Korea for a year as a Captain in the Army, working with the United Nations Civil Assistance Command. There he first began to develop an interest in nutrition to supplement the strong education he had received in nutrition at Loma Linda Medical School. Back in the United States, he was a Resident in General Surgery at a hospital connected with Duke University.

"Funeral Services will be held 11:00 AM Tuesday, May

© Copyright Soyinfo Center 2014

31, 2011, at Duncan Brothers' Chapel (Gainesville, FL) with Pastor Joseph P. Lewis officiating. Burial (with Military Honors) will follow at the Florida National Cemetery (Bushnell, FL) at 2:30 PM. Dr. Harrison will only be viewed at the Chapel 1 hour prior to the Services–And with the Processional.

"Dr. Harrison is immediately survived by: Wife–Edith Stokes-Harrison of Gainesville, FL; Sons–William Kenneth Bennett (& Janis) of Orlando, FL, David Michael Bennett of Washington, DC and David W. Harrison (& Fatima) of Upper Marlboro, Maryland; Daughters–Liza Widmer and Linda Stokes of Gainesville, FL; Grands; Great Grands; Nieces & Nephews; In-Laws; Cousins; & Friends."

"Arrangements entrusted to: Duncan Brothers' Funeral Home, 428 NW 8th Street, Gainesville, Florida."

3599. *SoyaScan Notes.* 2011. Chronology of early U.S. commercial soymilk products with the word "soy milk" or "soymilk" in the product name. June 10. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** As of today, our SoyaScan database contains 434 records for commercial soymilk products launched in the USA from 1917 to the present. Most have fanciful brand names such as VitaSoy, Soy Lac, Soya-Lac, Kreme-O-Soy, etc.

Here are the early commercial products with soymilk or soy milk in the product name as it appears on the label. Most were sold in interstate commerce. Date, product name, company name, location, number of clear documents describing product.

1929–La Sierra Soy Milk, La Sierra Industries [founded and run by T.A. Van Gundy], Arlington, California, 3 documents.

1931–Madison Soy Milk, Madison Foods, Madison, Tennessee, 5 documents.

1934–Loma Linda Soy Milk (canned), Loma Linda, California, 3 documents.

1936–Soy Milk (Canned), Battle Creek Food Co., Battle Creek, Michigan, 4 documents.

1936–Soy Milk, Soybean Health Products Co., Oakland, California, 1 document.

1937–Radcliffe's Soya Milk, Radcliffe Soya Products, San Francisco, Calif., 3 documents,... etc.

1975–Soymilk, Welcome Home Bakery and Tofu Shop, Corvallis, Oregon, 2 documents.

1975–Soymilk, American Food Co., Alhambra, California, 2 documents. incl. label.

1976–Carob Soymilk, Farm Food Co., San Rafael, Calif., 1 document (label).

1977–Laughing Grasshopper Soymilk, Laughing Grasshopper Tofu Shop, Millers Falls, Mass., 2 documents including poster.

1977–Soymilk [Honey & Vanilla, or Plain], The Soy Plant, Ann Arbor, Michigan, 4 documents including label.

1977–Fresh Joy o' Soy Soymilk, The Tofu Shop, Telluride, Colorado, 2 documents including label.

1978–Island Spring Plain Soymilk, Island Spring, Inc., Vashon, Washington, 3 documents incl. label, etc.

3600. Shurtleff, William. 2011. The word "vegetal / vegetale" (Editorial). *SoyaScan Notes.* July 2.

• ***Summary:*** How would you translate the French: "Produit 100% végétal."

Or this from a Spanish cup of soy yogurt: "100% vegetal."

This excellent word, "vegetal," is used frequently nowadays in French, Spanish, Italian, and Portuguese, plus "pflanzliches" in German.

Yet we have no corresponding word in use today in English. We might say: "100% vegan product." or "100% plant-based product."

However the word "vegetal" used to be used in English!

1896 Sept.–Dr. John Harvey Kellogg wrote in the journal *Modern Medicine and Bacteriological Review:* "In the experiments which we have made with nut milk we find it has a delicate, delightful flavor, with a suggestion of its nutty origin, but resembles cow's milk very closely indeed... Added to cow's milk in proper proportion, lac vegetal, or nut cream, prevents the formation of hard curds in the stomach, as when the cow's milk is used alone. This renders it an exceedingly valuable food for infants–vastly superior to any infant's food which has been devised."

"Nuts are unquestionably the vegetable analogue of meat and other animal foods.

1896–In a cookbook by Dr. Kellogg's wife: Sanitas Food Co. in Battle Creek, Michigan, has an ad for "Lac Vegetal, or Nut Cream: Prepared from the choicest nuts."

1927–*The Future Food Supply of the United States,* by Alonzo E. Taylor. "Vegetal oils may be expected to continue a prominent component of the diet... Americans taste seems to favor bland vegetal cooking oils over animal fats, as illustrated in the preference for vegetal lard substitutes over lard."

And many more...

Merriam-Webster's Collegiate Dictionary (1998) defines vegetal (derived from the Middle Latin *vegetare*, meaning to grow), a word first used in English in the 15th century, to mean: "1: vegetable. 2. Vegetative..."

Do you think we need to reintroduce this word into English?

Or do we presently have equally good alternatives? Address: Founder and director, Soyinfo Center, Lafayette, California. Phone: 925-283-2991.

3601. Davis, John. 2011. A history of veganism from 1806: A collection of blogs in the order they were written (Website printout). www.ivu.org/history/Vegan_History.pdf 26 p. Printed July 31. Illustrated. [3 ref]

© Copyright Soyinfo Center 2014

• ***Summary:*** Contents: 1. The Invention of the Vegans: the word 'vegan', the first Vegan Society and the development of the movement. 2. Vegetarian equals vegan!–how the first vegans invented vegetarianism. Alcott House, Fruitlands, the word 'vegetarian' and–the first Vegetarian Society. 3. Shelley: the first celebrity vegan. Percy Bysshe Shelley, Mary Shelley and Dr. Frankenstein's monster. 4. Vegans are vegetarians too: early years of the Vegan Society. 4. Gandhi and the launching of veganism: Gandhi in 1931, with Henry Salt by his side, on *The Moral Basis of Vegetarianism.* 5. Bronson Alcott: American pioneer vegan. Ethical veganism, Fruitlands, Louisa May, and the search for others. 6. Henry David Thoreau and the roots of plantism: steps towards vegan self-sufficient environmentalism and a non-violent lifestyle. Henry Salt, Gandhi, Shelley, and books that changed veg history. 7. Taking the waters: transatlantic pioneer plant-food doctors. Dr. William Lambe, Sylvester Graham, William Horsell, Dr. Russell Trall, Dr. John Harvey Kellogg, Dr. Elmer Lee–includes the first known 'vegan' cookbooks from 1874 and 1910. 8. Dr. John Snow: a vegan of genius. In a poll of British doctors in 2003 John Snow was voted as the greatest physician of all time. Though probably few of them would have known he was what we now call vegan. 9. Veganism from 1806: a brief timeline [chronology] summary of everything included here. 10 *The Truth Tester* 1846-48: a vegan journal. Edited by William Horsell, vegan recipes, the launching of the Vegetarian Society.

Note: This series of articles / blogs is about the meaning of the words "vegetarian," "vegetarians," and "vegetarianism" from the time that word first appeared in print (in July 1843) until the founding of the Vegetarian Society in England. It is not about the early history of vegan diets–which in the early years were widely called a "vegetable diet" or "Pythagorean diet." Address: IVU [International Vegetarian Union] manager and historian.

3602. Matthews, V.L.; Knutse, S.F.; Beeson, W.L.; Fraser, G.E. 2011. Soy milk and dairy consumption is independently associated with ultrasound attenuation of the heel bone among postmenopausal women: the Adventist Health Study-2. *Nutrition Research* 31(10):766-75. Oct. [28 ref]*
• ***Summary:*** Many people (such as vegans) who do not consume dairy products, use soy milk instead. Fortified soymilk provides calcium protein, and vitamin D–nutrients needed for healthy bones. Moreover, the isoflavones found in soy may offer some protection from osteoporosis. The researchers studied 377 post-menopausal women, who were asked about their diet; ultrasound measurements of bone health were made at an interval of two years. Compared with women who did not drink soy milk, women drinking soy milk once a day or more (1.3 cups of soymilk) had 56% lower odds of osteoporosis. (We do not know if the soy milk was fortified). Likewise, women who used dairy products at least once a day had an almost identical reduction of risk of osteoporosis. The results of this small study suggest that regular use of soymilk can reduce risk of osteoporosis in women. Address: Dep. of Epidemiology and Biostatistics, School of Public Health, Loma Linda Univ., Loma Linda, California.

3603. Roth, Matthew. 2012. Re: Morse correspondence at the National Archives. Letter (e-mail) to William Shurtleff at Soyfoods Center, March 9. 1 p.
• ***Summary:*** "I've had a chance to do an inventory of the Morse correspondence I took digital snapshots of at the National Archives. They are from the Morse folders from Box 92 of the General Correspondence file, which is organized chronologically, and not from the correspondence folders for the various state agricultural experiment stations.

"The Morse folders form Box 92 contained 485 letters, 395 of which dealt with named crops; 171 of these mention soybeans. You have 19 of these in your Morse book. This folder is apparently where the leftover letters went, the ones that didn't make it into any other folder. As such, many of them are short and procedural, but there are a number of longer letters from Morse's inspection tours. And some of the short ones directing Morse to send seeds to so-and-so are interesting. There's one from 1911 directing him to send soybeans to George Washington Carver, who apparently planted them in 1912. There's also a letter from 1919 mentioning a visit to Madison College.

"I've attached an Excel spreadsheet listing the letters;..."

Matt would like to look through the state folders such as North Carolina, South Carolina, and other southern states that Jacob Jones did not look through–but he may not have the opportunity to return to the National Archives.

If you look at the tabs at the bottom (of the Excel spreadsheet he sent), you'll notice one I labeled Summary Data. This has tables that attempt to draw some conclusions from the "sample" of letters–but I fear that the sample might be too small (compared to Morse's total correspondence) and arbitrary to permit any firm deductions. But I think it's safe to say that through World War I, Morse's focus was on the South, in particular as the most likely place for a crushing industry to develop; and also that, though his and Piper's enthusiasm seems to have rapidly centered on the soybean, they remained highly active in testing and advocating other forage and manure crops.

Note: The tab "summary data" has two parts: One is organized by year from 1907 to 1926, with line 1 being a summary of "all." The second is organized by state, in descending order of the number of letters total and the number of letters concerning soy for two time periods: 1907-1926 and 1907-1918. The four most important states for soy during the period 1907-1926 were North Carolina (17 letters) followed by Illinois (8), Georgia (7), South Carolina (6), New York (6), Maryland (5), Alabama (5) etc. Address: Philadelphia, PA 19123.

3604. Palmer, Sharon. 2012. The plant-powered diet: The lifelong eating plan for achieving optimal health, beginning today. New York, NY: The Experiment. xx + 412 p. Foreword by David L. Katz, MD, MPH. [228 ref]
• ***Summary:*** A positive attitude toward traditional soyfoods is found throughout this excellent book. The traditional Japanese diet (p. 19-20)–one of the healthiest–leads to an average life expectancy of 80 years for men and 85 years for women. The Japanese diet is characterized by a "Focus on soy foods. Whole soyfoods such as edamame, tofu, and miso are regular features of the diet.

The section titled "Soy, the superfood" (p. 58-59) describes the basic types of soyfoods and their benefits. The next section is "A word about soy meat alternatives" (p. 60-61) including veggie burgers, soy meat crumbles, and vegetarian hot dogs.

The "Plant-based dairy alternatives guide" (p. 72-76) includes various types of soy milk, soy milk yogurt, and soy ice cream.

The word "soy" appears on 55 pages of this book, the word "tofu" on 54 pages, "tempeh" on 18 pages, "soy foods" on 17 pages, "seitan" on 15 pages, "edamame" on 10 pages, "soybeans" on 10 pages, "soy milk" on 8 pages, "soy sauce" on 6 pages, "miso" on 6 pages "soy milk yogurt," "soy ice cream" and "soybean oil" on 2 pages each, and "soy cheese" and "soy cream cheese" on 1 page each.

Includes "75 original plant-based recipes for every meal–all with nutritional data." "A 14-day meal plan with action alerts to get you started." "Essential information on the healthiest plant food–whole grains, vegetables, fruits, nuts, legumes, and even herbs, spices, dark chocolate (rich in polyphenol antioxidants), coffee (contains many beneficial antioxidants), tea (rich in polyphenol antioxidants, and takes the place of high-calorie, high-sugar drinks), and wine.

Virginia Messina, in her blog The Vegan RD, says this: "It's a book that makes the scientific case for eating fewer animal products and more plant foods while admitting that there is no precise definition for 'plant-based diet.' The information in the book is balanced, honest, and practical, and the recipes–which appear to all be vegan–look really nice. In the forward to the book, Dr. David Katz, of the Yale University Prevention Research Center says this about Sharon's book: 'So much of modern health advice is about marketing a particular perspective that such a balanced and moderate approach is a truly surprising and welcome departure.'

"I agree, and it's the thing that made this book stand out for me. Admittedly, I wish the book had included more perspective on making compassionate food choices. When animals are part of the discussion (and I think they should always be part of the discussion) a vegan diet is the one and only best way to eat. When the focus moves away from animals, then diet-related issues become somewhat less clear. So far, no one has proven that a vegan diet is healthier than other plant-based ways of eating, and it's unlikely that they ever will. So, this isn't a book I would use to promote veganism–it presents a vegan option, but not a vegan imperative–but, it is one I would use to promote healthy plant-based eating for those who are looking for that type of information."

About the author: "Sharon received her Bachelor of Sciences Degree with Honors from Loma Linda University, California. She enjoyed a diverse 16-year dietetics career with experiences as a clinical dietitian, wellness dietitian, chief clinical dietitian, food and nutrition services director, and consultant dietitian." Address: RD (Registered Dietitian), P.O. Box 1052, Duarte, California 91009.

3605. WhiteWave Foods Co. 2012. Saputo to buy Dean Foods Morningstar unit for $1.45 billion (News release). Broomfield, CO 80021 1 p. May 23. 28 cm.
• ***Summary:*** Saputo is the largest dairy processor in Canada. They started out as a cheese company, then got into dairy milk. Saputo acquired Dairyworld Foods in about 2001. Dairyworld owned a company named Soyaworld, which made the So-Nice brand of soymilk. Saputo spun off Soyaworld and sold it to Sanitarium Foods in Australia. After a while, Sanitarium sold it back to Agrifoods International in Calgary. It is now named Earth's Own.

Wikipedia (July 2013) says the following about Earth's Own Food Company: "Earth's Own Food Company (previously Soyaworld Inc.) is a health food manufacturing company in Canada. They are producers and distributors of the So Good, So Nice, Almond Fresh and Ryza brands within Canada.

"History: Earth's Own was founded under the name Soyaworld Inc. in 1995 by Maheb Nathoo, and soon grew with an investment from Dairyworld Foods where Mr. Nathoo held the position of Vice President of Finance.

"In 2003 Sanitarium So Good Limited purchased 100% control of Soyaworld. From 2003 onward the company was wholly owned by the Seventh Day Adventist Church, through Sanitarium So Good Limited and Canadian Nutrition Association.

"In early 2011, Soyaworld Inc. was renamed Earth's Own Food Company Inc.

"In 2012 Earth's Own ownership group was renamed to Life Health Foods, Inc. The group remained 100% owned by the Seventh Day Adventist Church. In 2012 Agrifoods International Cooperative Ltd. purchased shares of Earth's Own." Address: 12002 Airport Blvd., Broomfield, Colorado 80021. Phone: (313) 635-4000.

3606. Shurtleff, William; Aoyagi, Akiko. 2012. The book of tofu: Protein source of the future–Now! 2nd ed. Revised. Lafayette, California: Soyinfo Center / www.createspace.com. 344 p. Dec. 22. Illust. by Akiko Aoyagi Shurtleff.

© Copyright Soyinfo Center 2014

Index. 28 cm. [321 ref]
• ***Summary:*** This edition, published as a print-on-demand book by www.createspace.com, is 8 pages longer than any previous edition. The entire Glossary (with all illustrations) from the original 1975 edition is included, as is the updated Preface, the complete "Directory of Tofu Manufacturers" in the Western world (as of Feb. 2001), and the complete bibliography of 321 entries. After the Index is an updated full page of information about Soyinfo Center, then the original photo of Shurtleff and Aoyagi in 1975 from the original edition, and updated page "About the Authors," with new photos of Bill and his son Joey at Yosemite in 1994 and Akiko Aoyagi Shurtleff at the Lafayette Reservoir in 1999.

Then comes the section "Sending Tofu in the Four Directions," with a new photo of William Shurtleff with his tofu master's family at Sangen-ya Tofu Shop during his apprenticeship period, Tokyo, circa 1974. On the last page is (1) Information about the book *Tofu & Soymilk Production* and (2) about the SoyaScan database, which now contains more than 90,000 records from 1100 B.C. to the present. To order a customized search of this remarkable database, contact Soyinfo Center at 925-283-2991 or www.soyinfocenter.com.

Thanks to Akiko for redesigning the front and rear covers, and for skillfully and artistically integrating all the pieces into this newly revised edition. Address: P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3607. Sixth International Congress on Vegetarian Nutrition held on 24-26 Feb. 2013 at Loma Linda University. 2013. http://www.vegetariannutrition.org/
• ***Summary:*** This renowned scientific conference on plant based diets is held once every five years at Loma Linda University, Loma Linda, California. This year the conference was sold out–over 700 attended. It offeres an exciting opportunity for health professionals, researchers, students and the public to advance their knowledge in vegetarian nutrition. A multitude of plenary sessions, workshops, poster presentations and social gatherings make this event engaging and enjoyable for all who attend!

As of 21 Dec. 2013 the proceedings of this conference have not yet been published.

The 7th ICVN will be held in Feb. 2018.

3608. Messina, Virginia. 2013. Notes from the 6th International Congress on Vegetarian Nutrition. *The Vegan Dietitian* (*blog*). Feb. 28. [25 ref]
• ***Summary:*** "I spent 3 days at the 6th International Congress on Vegetarian Nutrition this past week in Loma Linda, California. Held every five years or so, the event is hosted by the School of Public Health of Loma Linda University and is considered the premiere conference on plant-based nutrition. It brings experts and researchers together from all over the world and its proceedings are published in the *American Journal of Clinical Nutrition*, the most prestigious of all nutrition journals. I was honored this year (and a bit terrified, since I felt very much out of my league) to be a speaker."

"The conference gave me confidence that the themes that come up often on this blog are well supported by the evidence. That is, vegans do need to pay attention to certain nutrients. And, there are no plant foods that need to be avoided completely on a healthy vegan diet. And finally, while there is abundant evidence supporting health benefits of a plant-based diet–i.e., a diet that contains mostly plant foods–it's difficult to build the case for veganism without bringing ethics into the picture." Address: R.D., Port Townsend, Washington.

3609. Tantamango-Bartley, Y.; Jaceldo-Siegl, K.; Fran, J.; Fraser, G. 2013. Vegetarian diets and the incidence of cancer in a low-risk population. *Cancer Epidemiology, Biomarkers, and Prevention* 22(2):286-94. Feb. Epub 2012 Nov. 20. *
• ***Summary:*** Cancer is the second leading cause of death in the U.S. Dietary factors account for at least 30% of all cancers in Western countries.

This study examined the association between dietary patterns and overall cancer incidence among the 69,120 participants in the Adventist Health Study-2. 2,939 cancer cases were identified. The multivariate HR [hazard ratio] of overall cancer risk among vegetarians compared to nonvegetarians was statistically significant (HR=0.92; 95%Cl; 0.85,0.99 for both genders combined).

"Conclusion: Vegetarian diets seem to confer protection against cancer. Impact: Vegan diet seemed to confer lower risks for overall and female-specific cancer compared to other dietary patterns. The lacto-ovo-vegetarian diets seem to confer protection from cancers of the gastrointestinal tract."

Note: This is an epidemiologic study, and as such the findings are suggestive only.

Letter (e-mail) from Mark Messina, an expert on the subject. "The cancer incidence was reduced by 8%. Not very impressive. Comment: So for vegans, cancer incidence was reduced by 16%. That is nice but not overwhelmingly impressive. I am intrigued by the 34% reduction in female specific cancers. That is a curious finding. I assume that is due to a reduction in breast cancer primarily but I would have thought the authors would have said so if that was the case. But again, not sure whether or not drinking, weighing less or not smoking contributed to this protective effect. Also, it appears that veganism was not protective against prostate cancer, colon cancer, etc. etc." Address: 1. Epidemiology and Biostatistics, Loma Linda Univ.

3610. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of tofu and tofu products (965 CE to 2013): Extensively annotated bibliography and sourcebook (Continued–Document part II). Lafayette, California: Soyinfo Center. 4004 p. Subject/geographical index. Printed

20 May 2013. 28 cm. [13302 ref]

• ***Summary:*** Continued: 1906–Quong Hop & Co. starts making tofu in San Francisco, California. Until Sept. 2010, when it declared bankruptcy, Quong Hop was the oldest existing Chinese-American tofu manufacturer in the USA.

1910–Europe's first commercial soyfoods manufacturer, named Caséo-Sojaïne, is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. By May 1911 he was making and selling tofu, and by August 1911 he had added smoked tofu, pressed tofu sheets, fermented tofu cheese (in Gruyere, Roquefort, and Camembert flavors), and soymilk.

1911–Ohta Tofu-ten (Ota Tofu Shop) is now making tofu at 266 Davis St., Portland, Oregon. As of 2013 Ota Family Tofu is still making tofu in Portland, Oregon, making it the oldest existing tofu maker in the United States.

1923–The two 2nd oldest existing Japanese-American tofu companies (House Foods & Yamauchi Inc. of Los Angeles and Aala Tofu Co. of Honolulu) are founded in Hawaii. They both began as H. Iwanaga Daufu at 1031 Aala St. in Honolulu. In 1926 the company was renamed Shoshiro Kanehori Tofu, and in 1937 Haruko Uyeda Tofu, still at the same address. In about 1939 the company was purchased by Mr. and Mrs. Shokin Yamauchi, who later renamed it Aala Tofu Co. Their son, Shoan Yamauchi, made tofu at the family company until 1946, when he went to Los Angeles, purchased the Hinode Tofu Co., and began making tofu there in 1947. After becoming Matsuda-Hinode Tofu Co. in 1963, the company was renamed House Foods & Yamauchi Inc. in 1983.

1929 Nov.–T.A. Van Gundy, a Seventh-day Adventist and founder of La Sierra Industries in Arlington, California (near Riverside), becomes the first Westerner to make tofu commercially when he introduces La Sierra Soya Cheese. This tofu was canned and pimiento was added to prevent graying after canning.

1930–Azumaya Tofu Seizo-sho (later renamed Azumaya Co.) starts making tofu, yaki-dofu (grilled tofu), and ganmodoki (fried tofu patties) in San Francisco at 1636 Post St. between Buchanan and Laguna streets. The company is owned by Mr. Teranishi, who may have started it as early as the early 1920s. In Feb. 1937 it was sold to George and Jack Mizono, and their mother and father (Saichi Mizono).

1932 Dec.–Madison Foods, part of Madison College in Madison, Tennessee, is making Soy Cheese, then by 1939 they had launched Cheze-O-Soy (seasoned tofu), and by 1940 they were making a canned tofu bologna named Yum.

1934–By this year Loma Linda Food Co. (Adventist) in Loma Linda, California, is making Loma Linda Vege-Cheese (canned tofu with pimiento).

1939–Paris Tofu, founded by Joe Gon Fung, starts making tofu at 237 Powell St., Vancouver, BC, Canada. In 1957 the name was changed to Sunrise Market Ltd. and Leslie Joe became the owner.

1942 Sept.–Dr. Harry Miller, a Seventh-day Adventist doctor who had worked for many years in China as a medical missionary, begins making Miller's Soya Cheese (tofu) at Mt. Vernon, Ohio.

1944 Sept.–Butler Food Co. in Cedar Lake, Michigan, introduces Butler's Soynut Cheese. Note that the first five Caucasian-run tofu companies in the Western World were all founded and run by Seventh-day Adventists. Note also that each of these five Seventh-day Adventist tofu products used the word "cheese" in the name and that each was canned.

1957 Aug.–Shizuka Hayashi, head of the Japanese-American Soybean Institute in Tokyo, publishes (in Soybean Digest) the earliest English-language statistics on tofu in Japan. "There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day." In 1957 Japan will use somewhere between 160,000 and 308,000 tons of soybeans to make tofu.

1958–The world's first packaged tofu is sold in Los Angeles, California, by Matsuda Hinode Tofu Co. Mr. Shoan Yamauchi, owner, conceived of the idea of putting individual cakes of tofu each in a plastic bag with water, sealing the bag with a heat sealer, placing the bag in a stiff paper deli carton with a wire handle, then folding over the top. The process was labor intensive. This happened at about the same time that a letter from journalist George Yoshinaga had led the city to pass a new regulation requiring tofu to be packaged in individual containers.

1958–Tofu is first sold in a U.S. supermarket, Boys Markets, a supermarket chain which had about 12 stores at the time in Los Angeles. The tofu was sold in individual packages (see above) and made by Matsuda Hinode Tofu Co., whose owner, Mr. Shoan Yamauchi was responsible for this major innovation, and for seeing the mainstream potential of tofu.

1965–The Library of Congress establishes the subject heading "Tofu" as the official name for that food in cataloging books for libraries across America. However, in the mid-1970's disputes arose there about the proper form of Romanization of that term. The dispute was resolved by the decision to use the common English term "Bean Curd" instead.

1966–Tofu is first packaged in plastic trays/tubs, the type so widely used today. Again, Mr. Shoan Yamauchi conceived of the idea. He went to the Sealright Company in Los Angeles that made Sealright trays and asked them to make a waterproof plastic tray for his tofu. Mr. Yamauchi created three specific early innovations in tray packaging: (1) A very deep tray, holding 26-28 ounces; (2) A method for heat sealing a plastic film to the flange of a tray which had cold water flooding over the flange; (3) High-speed sealing machines to pack and seal the tofu in his plant.

© Copyright Soyinfo Center 2014

1975 March–Alec Evans, owner of first of the new breed of Caucasian-run tofu shops, starts to make "Tofu" in Corvallis, Oregon. His Welcome Home Bakery and Tofu Shop is the sixth Caucasian-run tofu company in America.

1975 Dec.–*The Book of Tofu*, by Shurtleff and Aoyagi, is published by Autumn Press. This book, which had sold more than 618,000 copies in English-language editions by April 2013, played a major role in introducing tofu to the Western World. Tofu came to the Western world from 1975 on as part of a new wave of interest in vegetarianism.

1976 Jan.–Swan Gardens starts making tofu in St. Ingatius, Montana. Founded by Dick & Jocelyn McIntyre. In 1979 they moved the company to Miami, Florida.

1976 Aug.–Larry Needleman introduces The Learning Tree Tofu Kit (Bodega, California).

1976 Sept.–Farm Food Company starts making tofu as part of their Soy Deli at 820 B. St., San Rafael, California. Robert Dolgin and David Sandler are key figures.

1976 Nov.–Island Spring, Inc. begins making tofu on Vashon Island, Washington state, founded by partners Lukoskie and Sylvia Nogaki.

1977 Jan.–Laughing Grasshopper Tofu Shop starts making tofu in Millers Falls, Massachusetts, founded by Richard Leviton and Kathy Whelan. In Feb. Tom Timmins joined as a partner and by August of that year so did Michael Cohen. In Nov. 1977 Laughing Grasshopper moved to Greenfield, Massachusetts, was renamed New England Soy Dairy, and before long was the largest of the new wave of tofu makers in the United States.

1977 Jan.–The Soy Plant (a worker-owned collective) starts making tofu in Ann Arbor, Michigan. Steve Fiering is a key figure.

1977 March to Oct.–Bean Machine, Inc. (BMI) is established by Larry Needleman with headquarters in northern California. Initially, BMI Orders most of its equipment from Takai Tofu & Soymilk Equipment Co. in Kanazawa, Japan. New tofu companies can order specialized tofu equipment they need from BMI.

1977 May–Flying Cloud Tofu (later renamed The Tofu Shop, then Northern Soy) starts making tofu in Rochester, New York. Greg Weaver, Greg Mello, and Andy Schecter are key figures.

1977 July–The Tofu Shop starts making tofu in Telluride, Colorado. In 1980 Matthew Schmit moves this tofu shop and soy deli to Arcata, California.

1977 Aug.–Takai Tofu & Soymilk Equipment Co. publishes its first English-language equipment catalog, which helps many American and European tofu shops to get started. Most order their equipment through Bean Machines, Inc.

1977 Sept.–White Wave, founded by Steve Demos, starts making tofu at 1738 Pearl St., Boulder, Colorado.

1977–Morinaga Milk Industry Co., Ltd. in Japan introduces the world's first aseptically packaged tofu in a Tetra Brik carton (see U.S. Patent No. 4,000,326 of 28 Dec. 1976). It is named "Morinaga brand Tofu. Soybean Curd." In 1978 the name was changed to "Morinaga brand Ever-Fresh Silken Tofu." In 1981 the product was first imported into the United States,

1977–Swan Foods Corporation, owned by Robert Brooks and Mary Pung, starts making "Tofu–Organic" at The Soybeanery, 5758½ Bird Rd., Miami, Florida. This is the first tofu in the Western World labeled "Organic." Swan Foods is also the first American company to make a wide variety of soyfoods, and the second to open a soy deli–which had a take-out menu. Continued. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3611. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of soy fiber and dietary fiber (1621 to 2013): Extensively annotated bibliography and sourcebook. Lafayette, California: Soyinfo Center. 832 p. Subject/geographical index. Printed 7 June 2013. 28 cm. [2004 ref]
• ***Summary:*** This is the most comprehensive book ever published about the history of soy fiber. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of these interesting soyfoods. It is also the single most current and useful source of information on this subject.

Contents: Search engine keywords. Dedication and acknowledgments. Introduction: Brief chronology / timeline of soy fiber and dietary fiber. About this book. Abbreviations used in this book. How to make best use of this digital book–Search it. Nine pages of color photos. Contains 103 photographs and illustrations. http://www.soyinfocenter.com/books/163.

Brief chronology of soy fiber and dietary fiber:

1621–In the *Qunfang Pu* [The assembly of perfumes, or Monographs on cultivated plants], Wang Xiangjin, of China, after discussing tofu, remarks that the residue (*zhi*, Jap: okara) from the tofu can be used to feed pigs. In times of famine, people also eat this residue.

1692–The *Haikai, Zôdanshû* [Comic / unorthodox, collections of various topics] is the earliest known Japanese work to mention okara, which it calls kirazu (meaning "cannot be cut").

1772–The word "okara" is first used in Japan in the *Gakutaiko*. The Japanese, in line with their ancient tradition of honoring even the simplest and most humble of foods, place the honorific prefix o before the word kara, which means "shell, hull, or husk." Thus o-kara means "honorable shell."

1847–The word "unohana" is first used in Japan to mean okara in the *Honzô kômoku keimô*. "Unohana" also refers to a small white flower (Deutzia scabra) that grows in thick clusters on briar bushes and blooms in the spring.

1867–Okara is first mentioned in English by James C. Hepburn in *A Japanese and English Dictionary.* Under

© Copyright Soyinfo Center 2014

Kiradz [Kiradzu, Kirazu] he writes: "The refuse left in making tôfu."

1869–Okara is first mentioned in French in *Fabrication du fromage de pois en Chine et au Japon* [Production of tofu in China and Japan], by Paul Champion and M. Lhôte. They refer to it as *la pulpe égouttée* (the drained pulp).

1874–Okara is first mentioned in German by H. Ritter in "Tofu, Yuba, Ame," an article published in *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens* (Yokohama) 1(5):3-5. July. They refer to it as *Der Pressrueckstand* (The pressed residue).

1903 Jan.–Dr. John Harvey Kellogg writes an editorial titled "Constipation" in his periodical *Good Health* (Battle Creek, Michigan). A Seventh-day Adventist and vegetarian, he is a pioneer in emphasizing the importance of roughage / bulk / dietary fiber in the human diet. He writes: "It is necessary that the food should have a certain bulk in order that intestinal activity may be normally stimulated. Fruits, wholemeal bread" and vegetables "are highly conducive to intestinal activity."

1917–In his book *Colon Hygiene* (417 p.) Dr. J.H. Kellogg states (p. 11-12): "Forty years' experience and observation in dealing with chronic invalids, and careful study of the results of the modern X-ray investigations of the colon, together with observations made at the operating table in many hundreds of cases, has convinced the writer -

"1. That constipation with its consequences is the result of the unnatural habits in relation to diet and colon hygiene which prevail among civilized people."

This is the earliest document seen that links constipation and human diets in civilized countries.

1919 Aug.–William G. Bowers, in "Some studies on the nutritive value of the soy bean in the human diet," coins the term "soy bran" to refer to soybean hulls (*North Dakota Agricultural Experiment Station, Special Bulletin, Food Department*).

1920s–McCance and Lawrence are instrumental in developing the concept of unavailable carbohydrate; this was a stepping stone to the modern concept of dietary fiber–plant substances not digested by human digestive enzymes.

1958–Central Soya Co. of Fort Wayne, Indiana, launches Soybean Flakes, made by steaming soybean hulls then running them through flaking rolls.

1972–Poly-Soy, a soy cotyledon/soy isolate fiber, is launched by Ralston Purina Co. of St. Louis. Missouri. "Poly" is an abbreviation of "polysaccharides." This is the first product of its kind.

1973-1974–Prior to the early 1970s, most of the soy fiber used in human diets was okara, and it was used mostly in East Asia. The rise of the modern interest in key role of dietary fiber in the prevention of disease dates from the years 1973 and 1974, when Denis P. Burkitt, a British physician who had done extensive research on traditional diets in Africa, began to argue convincingly, based on studies of traditional diets, that the lack of fiber in modern Western diets was a major cause of disease. Foods of animal origin (such as meat, eggs. and dairy foods) contain no fiber, whereas most foods of plant origin (and especially those from grains, legumes, and vegetables) are excellent sources of fiber.

1974 Oct.–The terms "soy pulp" and soypulp," which refer to okara, first appear in the very creative booklet "Yay Soybeans! How You Can Eat Better and for Less and Help Feed the World," by The Farm in Summertown, Tennessee. This is also the earliest document seen that that uses the word "soysage" to refer to a meatless sausage-like food in which soy pulp (okara) is the major ingredient. It also contains recipes for Soysage and Soyola (soy pulp granola).

1975 Dec.–*The Book of Tofu* (and its companion, *Tofu & Soymilk Production,* 1979) are largely responsible for the word "okara" becoming widely used in English.

This book contains an entire chapter about okara with the most information about okara and the most okara recipes of any book published in English to date.

Before publication of this book, okara was very difficult to obtain in the West, except directly from Asian tofu shops. Soon, however, people started making their own tofu at home (often using tofu kits) and many new tofu shops sprang up and became sources of fresh okara.

Within 5 years after the book's publication the importance of fiber in the diet began to be widely publicized.

1980–A growing body of medical research, especially that published since 1980, has demonstrated that fiber plays a host of valuable roles in human diets: it aids bowel function (decreasing mouth to cecum transit time, increasing fecal bulk and moisture), lipid metabolism (lowering serum cholesterol), and diabetic control (reducing hypoglycemic rebound in normal individuals, improving glucose tolerance in obese diabetics).

In 1962 there were only 10 scientific papers about fiber; in 1980 there were 500.

By the late 1980s Americans were being advised by dietitians to consume 20-35 grams of fiber daily. In fact, eating more fiber had almost become a dietary fad.

1986–Fibrim, a soy cotyledon / isolate fiber, is launched by Ralston Purina Co. (renamed Protein Technologies International in July 1987) of St. Louis. Missouri–accompanied by extensive scientific data and a strong marketing program. Fibrim played a leading role helping to document the importance of dietary fiber, and to create new markets from which all soy fiber products could greatly benefit.

1986–Gene A. Spiller, in *CRC Handbook of Dietary Fiber in Human Nutrition,* coins the term "Soybean isolate fiber (p. 71, 445) to refer to the fiber resulting from the manufacture of soy protein isolates.

1990–Grace Lo, in "Physiological effects and physico-chemical properties of soy cotyledon fiber," a conference

© Copyright Soyinfo Center 2014

paper, coins the term "soy cotyledon fiber" (see Furuda and Brine 1990, p. 49-66). Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3612. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of whole dry soybeans, used as beans, or ground or flaked (240 BCE to 2013): Extensively annotated bibliography and sourcebook (Continued–Document part II). Lafayette, California: Soyinfo Center. 950 p. Subject/geographical index. Printed 2 July 2013. 28 cm. [2337 ref]
• ***Summary:*** 1917 May 19–An article titled "Soybeans for Human Food, by Kay B. Park, published in *Ohio Farmer* is the first to recommend that soybeans not be cooked in the water in which they are soaked. "One result of the work is that an exceedingly simple household method has been found by which soybeans can be made as palatable as navy beans. The process consists merely in soaking the beans overnight in a large excess of hot water or until the bad flavor has disappeared, which can be determined by tasting. The water should be poured off and the beans rinsed. When the strong flavor has been removed the beans can be cooked like navy beans."

1917 Sept.–The term "soy-bean pulp" is first used in the popular *Good Housekeeping* magazine in an article titled "Soy: The Coming Bean," by William Leavitt Stoddard. Eight soy recipes are given; six call for whole "soy beans" and two for "soy-bean meal"–full-fat soy flour. The term soy-bean pulp probably refers to whole soybeans that have been baked then ground or mashed to a pulp.

The term is next used (very clearly) on 2 Jan. 1918 in several recipes in the *Boston Daily Globe.*

1918 Feb.–Dr. John Harvey Kellogg, in an article titled "The Soy Bean" published in *Good Health magazine*, describes an ingenious way to pressure cook soybeans without using a pressure cooker and with no concern about stirring or burning.

1918 Feb.–The term "whole soy-beans" first appears in the *Journal of Home Economics* (p. 64-70).

1918 July 30–The *Boston Daily Globe* writes: "Odd as it may seem, and incredible as it may appear, the Boston baked bean of today is almost invariably the soya bean, which is imported from China and grown on Southern estates, from Virginia to the Mississippi."

1918–During the season of 1916 about 100,000 bushels of American-grown soy beans were packed as baked beans by several canning companies in the Central and Eastern States" (W.J. Morse, *Yearbook of the USDA*).

1921 April 27–The term "canned soybeans" is first used by J.C. Hackleman of the University of Illinois, in a letter to W.J. Morse.

1926–Hain Health Foods (Los Angeles, California) begins selling "Canned Soy Beans."

1929 Nov.–La Sierra Industries (Arlington, California; founded and run by T.A. Van Gundy) starts selling "La Sierra Soy Beans" (Canned; Unseasoned Green-Seeded Type, or With Tomato Sauce) and "La Sierra Soy Cereal"–a toasted and shredded all-soy product. The latter was the company's best-seller in the early 1930s.

1929-1930–During their 2-year expedition to East Asia, Dorsett and Morse (USDA agricultural explorers) find many commercial products in Japan (Tokyo) containing whole soybeans–many of them treats or sweets for children. In Korea they find no food products but several uses of cooked whole soybeans as feed (as for an ox). In China they find no uses for food or feed.

1933–California Food Kitchens (Los Angeles, California) launches a line of whole soybean products–the earliest such products for which we have an advertisement. These include Gud Fud Soya Beans, Soya Loaf, Soya Rice Lunch, Soya Sandwich Spread, etc.

1934 June–La Sierra Industries launches La Sierra Soy Breakfast Food (Ready to Serve Cereal). The company advertised it in Health magazine as "Perfect Protein, High Alkaline Ash, Low Starch."

1941-1945–During World War II, soybeans again return to prominence just as they did during World War I.

1945–The Kellogg Co., famous maker of breakfast cereals (Battle Creek, Michigan), introduces Kellogg's Corn Soya Shreds, and advertises them widely–including two full-page color ads in *Life* magazine. They were made from "soya flakes."

1960–The influential book *Zen Macrobiotics*, by George Ohsawa, contains many recipes for soybeans (including black soybeans) served as beans, often with Japanese seasonings–such as soy sauce or miso.

This is the earliest macrobiotic document seen that gives a recipe for whole soybeans served as beans.

1965–In his work "Soybean Utilization in Japan," William Brandemuhl has a section on Soybean tsukudani and nimame. He says a very large maker might use 300-350 kilograms of soybeans per day for soybean tsukudani.

This is the earliest document seen that contains the term "Soybean tsukudani."

1971–Arrowhead Mills (Hereford, Deaf Smith County, Texas) uses a unique process that involves infrared heat to make Soybean Flakes. This type of heat plasticizes the soybeans so that they become cohesive flakes rather than grits and flour.

1992–In *The Zen Monastic Experience: Buddhist Practice in Contemporary Korea*, Robert Buswell, Jr. states: "Bean products constitute one of the largest components of the monastic diet during all seasons. Cooked black [soy] beans, seasoned with soy sauce, sugar, and white sesame, are served at least once a day." Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

Vegetarian dietary patterns and mortality in Adventist Health Study 2. *JAMA Internal Medicine* 173(13):1230-30. July 8. * Address: School of Public Health, Loma Linda University, Loma Linda, California 92350, USA.

3614. Messina, Virginia. 2013. Calcium and protein and bone health in humans. *The Vegan Dietitian* (*blog*). Aug. 20. [10 ref]

• ***Summary:*** "There is good evidence that vegan diets can prevent heart disease and they are likely to lower risk for cancer as well. But does going vegan improve your bone health? I see some post or infographic in social media nearly every week claiming that a vegan diet protects against osteoporosis.

"The theory is that animal protein, through its acidifying action, 'leaches' calcium from bones, eventually weakening them and causing bone fractures. If that's true, it means that those of us who eat no animal protein are likely to have better bone health. And maybe even lower calcium needs.

"Unfortunately, it's not true. Or at the very least, the evidence in support of this relationship has fizzled over the years. I've written about this before, but it remains such a pervasive and potentially harmful belief that it deserves an occasional revisit.

"The theory has its roots in research published in 1992 showing that hip fractures were more common in countries with high animal protein intakes. The simplistic interpretation of this is that people who eat more animal protein have more osteoporosis. But hip fractures don't equal osteoporosis. For example, in some countries where hip fracture rates are low, rates of spinal fractures are actually higher. (1)

"In fact, it appears that the factors protecting against hip fracture often have little to do with diet or with bone health. They are more about ethnic differences in bone anatomy and also in cultural habits that affect the risk of falling. (2,3) In contrast, spinal fractures are likely to reflect bone health. So if low-protein consumers are more likely to suffer from spinal fractures, this tells us that protein might actually be a protective factor in bone health.

"In fact, quite a bit of research shows this to be true. In the Iowa Women's Health Study for example, older women with higher protein intakes were less likely to fracture a hip. (4) In the Adventist Health Study, women eating more protein from either plants or animal foods were less likely to fracture their wrists. (5) In other studies, older women who ate more protein had better bone mineral density. (6,7)

"It shouldn't be surprising. Protein is an integral part of bones and it also improves calcium absorption. (8) It's also important for maintaining muscle strength with aging, which in turn helps to support healthy bones.

"And it seems that protein's acidifying effects may not even be relevant to bone health. A 2009 meta-analysis found that acid production (measured by acid compounds in the urine) was not associated with calcium balance or with bone loss. (9) A 2012 review of studies on protein, calcium and bone health concluded that high-protein diets did not impair calcium balance or bone health. (10)

"So, based on what we know right now, vegans don't appear to have any particular advantage when it comes to bone health. Instead, it's important for us to give some attention to both calcium and protein in our diets. Vegans have been slow to accept this, in part because there is such a wealth of misinformation about it on the internet and in popular books. And, of course, it's hard to let go of these concepts when we want to paint the most enticing picture possible of vegan diets.

"As always, though, bad nutrition information for vegans can't have a happy outcome. I hear from those who have bought into the outdated science on protein and bone health and ended up with osteoporosis. They took a casual approach to calcium in their diet, believing that they were protected by their lower protein intake. Maybe they would have gotten osteoporosis anyway, of course. It's a complex disease that involves a host of risk factors. But at the very least, we should promote information that minimizes that risk.

3615. Johnson, Juliette. 2013. Re: All existing issues of the *Madison Survey* (1919-1963, Madison, Tennessee) have been scanned and are available online free of charge. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 22. 1 p. • ***Summary:*** "Hello Bill, Thank you for contacting the Center for Adventist Research. I have some good news for you! We recently completed the full digitization of the Madison Survey and they are available free of charge on our website. You can reach them at this link: http://jewel.andrews.edu/record=b1671061 (email me if this link doesn't work). Click on the link that says 'Full Text, Complete Holdings.' You will see a directory of all issues by volume and number. If you need information on the year, you can see this on the main view before clicking into the full text. The PDFs are searchable as well.

"We also have these scanned in a higher resolution if you have trouble reading any of the text. Just let me know.

"The Madison College Alumni group has been in negotiation with us to be the repository of their archives. We have received a large amount of materials from them, and are in negotiations to get the remainder of the collection. I am confident in saying that the Center will be the future home of the Madison College materials.

"Let me know if you need more information!" Address: Digitization Manager, Center for Adventist Research, Andrews University, Berrien Springs, Michigan 49104.

3616. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of soymilk and other non-dairy milks (1226-2013): Extensively annotated bibliography and sourcebook. Lafayette, California: Soyinfo Center. 2,972 p. Subject/geographical index. Printed 30 Aug. 2013. 28 cm. [8761 ref] • ***Summary:*** This is the most comprehensive book ever published about the history of soymilk and other non-dairy milks. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of these interesting beverages. It is also the single most current and useful source of information on this subject.

Contents: Search engine keywords. Dedication and acknowledgments. Introduction: Brief chronology / timeline of soymilk and other non-dairy milks. About this book. Abbreviations used in this book. How to make best use of this digital book–Search it. Eight pages of color photos. Contains 233 photographs and illustrations. http://www.soyinfocenter.com/books/166.

Contents: Scope for Soymilk: This book focuses on the use of soymilk as a beverage. Soymilk has long been the most widely consumed non-dairy milk worldwide. Soymilk also appears as a step in the process for making tofu, yuba, soy yogurt, soy ice cream, soy cheese, fermented soymilk (incl. soy acidophilus milk), etc. Each of these soy products is or will be the subject of a separate book.

Amazaké, a thick fermented non-dairy rice beverage from Japan, usually served hot, topped with a dab of grated gingerroot, is also the subject of a separate book.

Use in East Asia: Only in China has soymilk (*doujiang*) long been used as a beverage. Traditionally it was been served hot, ladled from a caldron for breakfast, at the place where it was made either sweetened or as the base of a salted soup served with deep-fried crullers. It was not used to feed infants or as an infant formula.

Starting in the 1920s, a small number of companies in China started to make and sell bottled soymilk.

In Hong Kong, Vitasoy was launched in 1940 by K.S. Lo as a nutritious food for refugees fleeing during World War II. By 1968 it had captured 25% of the Hong Kong soft drink market, second only to Coca-Cola.

In Japan, bottled soymilk arrived in about 1957. The first soymilk boom started in about 1980; the many brands of soymilk were all sold in 180 ml aseptic cartons.

In the United States and Europe, soymilk started to become popular in the 1980s. The first two brands sold nationwide were Vitasoy and Edensoy, both aseptically packaged so they did not need refrigeration. The first superstar of soymilks, Silk, was launched by White Wave of Boulder, Colorado, in early 1996. It was sold in the dairy case in gable-top cartons that looked like typical milk cartons.

The first widely popular rice milk was Rice Dream, launched in June 1990 by Imagine Foods of Palo Alto, California

Brief chronology of soymilk and other non-dairy products.

1226–Kitab al-tabik [A Baghdad Cookery Book], by al-Baghdadi et al. is the earliest document seen that mentions a non-dairy milk–almond milk.

1365?–Yiya Yiyi [Remnant Notions from I Ya], by Han Yi is the earliest document seen that mentions soymilk, which it calls doufujiang.

1390–"Almond milk" is first mentioned in English in The Forme of Cury. It came to be widely used in Europe during Lent–the first popular non-dairy milk in the Western world.

1640 ca.–Soymilk is probably in use in China by the beginning of the Qing dynasty (H.T. Huang 2006).

1704–Soymilk is first mentioned in English by Domingo Fernandez Navarrete in his book A Collection of Voyages and Travels. Navarrete served as a Dominican missionary in China.

1790?–An undated painting of hawkers selling soymilk (doujiang) in China, by Yao Wenhan, is from the Qing dynasty.

© Copyright Soyinfo Center 2014

1790–Soymilk is mentioned by Juan de Loureiro in his book The Flora of Cochin China. Loureiro was a Portuguese Jesuit missionary who lived in what is now Vietnam. He notes that soymilk is part of the process for making tofu.

1866–Soymilk is first discussed as a drink in its own right by the Frenchman Paul Champion, who traveled in China. In a French-language article he stated that the Chinese had taken their cups to tofu shops to get hot soymilk, which they drank for breakfast.

1896 June–Soymilk is first referred to in the United States by Henry Trimble in the American Journal of Pharmacy.

1897 July 7–The term "soy-bean milk" (or any cognate / relative thereof) first appears in a USDA or U.S. government publication: C.F. Langworthy. 1897. "Soy beans as food for man." USDA Farmers' Bulletin No. 58. p. 20-23. July 7. The table, titled "Comparison of the composition of soy-bean milk and cows' milk," gives the nutritional composition of the two liquids. The same term next appeared in Dec. 1916 in a USDA Bulletin by Piper & Morse, and then on 7 Feb. 1917 in a USDA Weekly News Letter.

1897 Nov. 16–Peanut cream and peanut butter are now being made in Kokomo, Indiana by Lane Bros. (Kokomo Daily Tribune, p. 4). This is the earliest document seen that contains the term "peanut cream."

1899–Almeda Lambert of Battle Creek, Michigan, in her book Guide for Nut Cookery, describes how to make "peanut butter, peanut cream, peanut milk, raw peanut milk and cream, almond milk, hickory milk, pine-nut milk, chufas milk and cocoanut milk" at home. This is the earliest document seen that contains the term "peanut milk" or the term "cocoanut milk."

1906 April–Katayama, in Japan, reports that he has made "A condensed vegetable milk" from soy-beans.

1909–The first soy-based infant formulas and soymilk made from full-fat soy flour are developed in the United States by John Ruhräh, a pediatrician. He reports his results in the Archives of Pediatrics (July 1909).

1910–The world's first soy dairy, named Caséo-Sojaïne, is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. In December 1910 he applies for the world's first soymilk patents (British Patents No. 30,275 and 30,351). The first patent is titled "Vegetable milk and its derivatives." He is issued both patents in Feb. 1912.

1913 June 13–Li Yu-ying is issued the first U.S. soymilk patent (No. 1,064,841), titled "Method of manufacturing products from soja." He filed the application on 10 Oct. 1911.

1914–Maria M. Gilbert, in her book Meatless Cookery, gives a recipe for "Rice milk."–the earliest know use of this term.

1917–Soymilk is being produced commercially in the U.S. by J.A. Chard Soy Products in New York City.

1921 Sept. 23–Vita Rice Products plans to build a factory to make "rice milk products," including Vita Rice Milk, in San Francisco (San Francisco Business, p. 20).

1921–Leon Rouest of France gives the first detailed discussion (in French) of calf-milk replacers based on soymilk.

1929 Nov.–T.A. Van Gundy, founder of La Sierra Industries in Arlington, California, launches La Sierra Soy Milk, and becomes the first Seventh-day Adventist worldwide to make soymilk commercially. The product was canned and the beany flavor removed by live steam processing.

1929 Dec.–Bottled soy bean milk is now widely made and sold in China. "One large factory in Peking now makes and distributes over a thousand bottles of [soy] milk daily; in Shanghai two factories each meet an even greater daily demand. The industry is bound to grow rapidly to greater dimensions" (Adolph and Wang 1929).

1931–Madison Foods of Madison, Tennessee, introduces Madison Soy Milk–the world's earliest known soymilk to be fortified with calcium and the second commercial soymilk product made by Seventh-day Adventists in the USA. Madison Foods is a company run by students and faculty within Madison College, a pioneering work/study school.

1936 Jan.–Dr. Harry W. Miller and his son, Willis, start making Vetose Soya Milk, sold in natural or chocolate flavors in sterilized half pint or quart bottles at their Vetose Nutritional Laboratories in Shanghai, China. Dr. Miller is a Seventh-day Adventist physician, a student of Dr. John Harvey Kellogg, and a medical missionary living in China. The world's first "soy dairy," this company also made soy ice cream and Acidophilus Vetose (a cultured soya milk)–both launched in Jan. 1936. But Japan was invading China. Within months after the soy-milk business began booming, a Japanese bomb blew up the soy dairy.

1936 April–The earliest known English-language document to contain the modern word "soymilk" is: Miller, Harry W.; Wen, C. Jean. 1936. "Experimental nutrition studies of soymilk in human nutrition." Chinese Medical Journal 50(4):450-59. April. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3617. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of soymilk and other non-dairy milks (1226-2013): Extensively annotated bibliography and sourcebook (Continued–Document part II). Lafayette, California: Soyinfo Center. 2,972 p. Subject/geographical index. Printed 30 Aug. 2013. 28 cm. [8761 ref]

• ***Summary:*** Continued: 1936 June–Sobee, the world's earliest known branded soy-based infant formula, is launched by the American Soya Products Corp. of Evansville, Indiana.

1939 autumn–Dr. Harry W. Miller, forced by the war in China to return to the USA, starts making soymilk at Mt.

© Copyright Soyinfo Center 2014

Vernon, Ohio, in a large brick plant which he and coworkers built from the ground up. The first two products are canned liquid soymilk (made in a pressure cooker and fortified with vitamins and minerals) and malted soymilk (Soy-A-Malt). Pressure from the powerful U.S. dairy industry and the USDA convinced Miller not to call his product 'soymilk,' so he latinized the name to Soya Lac. This term was first used in late 1939 for Miller's first American soymilk.

1940 March–K.S. Lo, founder and managing director of the Hong Kong Soya Bean Products Co. Ltd. starts to make soymilk in Hong Kong. His product, originally named Vita Milk (Wai-ta-nai in Chinese) was fortified with calcium, cod-liver oil, and vitamins, and sold in milk bottles, primarily as a nutritious, affordable beverage for refugees. In June 1940 the product was renamed Sunspot, and in 1953 it was renamed Vitasoy.

1943–Bob Rich first learned about soymilk from employees of Henry Ford, who were making soymilk at the Carver Laboratory in Dearborn, Michigan, for use in the Ford Hospital. In April 1945 Rich Products Corp. launched Whip Topping–a non-dairy product. The first lawsuit against Whip Topping (1949) charges that this is an imitation dairy product–and thus illegal. Bob Rich and Rich Products (Buffalo, New York) mount an aggressive defense, contending that their product is not an imitation (which implies inferiority to the real product) but a replacement. By 1974 Rich Products (which now also made non-dairy Coffee Rich–a coffee whitener or creamer) had won 40 cases. That year the Kansas Supreme Court declared Coffee Rich "a new and distinct food" and the dairy lobby gave up. Were it not for Bob Rich and his lead attorney, Ellis Arnall (former attorney general and governor of Georgia, 1943-47), non-dairy products might still be illegal in the USA!

1950s–Soymilk enters the modern era as it begins to be marketed in bottles like soft drinks, largely due to work by K.S. Lo of Vitasoy in Hong Kong and Yeo Hiap Seng in Singapore.

1956 Dec.–The Plantmilk Society has its first annual general meeting in London. Mr. C.A. Ling is in the chair. This report in The Vegan is the earliest English-language document seen that uses the word "plantmilk" to refer to soymilk and other non-dairy milks–a nice short word.

1957–Japan's first commercial soymilk, sold in bottles, named Tônyu, is introduced by the Ueda Tofu Shop in Hachioji, Tokyo. Dr. Harry Miller was the inspiration for and helped to establish the shop.

1960s–In Japan, soymilk slowly increases in popularity. New manufacturers are: Nihon Tanpaku Kogyo (1962). College Health Foods (later renamed San-iku Foods) in Chiba prefecture with its Soyalac (1969, also inspired and aided by Dr. Harry Miller). Luppy Tanpaku (House Shokuhin) in Saitama prefecture with its Luppy soymilk (1969).

1965–ProSobee, the world's earliest known non-dairy infant formula based on soy protein isolates, is launched by Mead Johnson & Co. of Evansville, Indiana.

1966–The enzyme lipoxygenase is discovered by scientists at Cornell University [Ithaca, New York] to be responsible for the "beany" flavor in soymilk. They develop a process which can be used to help eliminate this "beany" flavor.

1967–Soymilk begins to be packaged aseptically in Tetra Pak cartons. This allows it to be sold without refrigeration for six months or more. The first such product was Beanvit, made by Yeo Hiap Seng Ltd. in Singapore and packaged in a disposable tetrahedron-shaped container.

1970s and 1980s–Soymilk becomes a popular beverage throughout Asia, spreading to Europe, Australia and the United States.

1979–Hong Kong Soya Bean Products Co. Ltd. starts to export Vitasoy, packed in Tetra Brik cartons, to selected countries throughout the world. By the early 1980s exports were going to over 20 countries, both developed and developing. Exports to the USA began in 1980.

1980 Jan.–DE-VAU-GE Gesundkostwerk, a Seventh-day Adventist food company near Hamburg, Germany, launches GranoVita Soja Drink in 500 ml Tetra Brik cartons; this soymilk product is made by N.V. Vandemoortele (one of Europe's largest oilseed crushers, founded in 1934) in Izegem, Belgium.

1980 June–N.V. Alpro is founded by Vandemoortele to take over production of this soymilk. Inspired and headed by Philippe Vandemoortele, Alpro purchased the land on which it was located from Vandemoortele, and became an independent manufacturer. Alpro quickly became Europe's leading producer of soymilk, making private-label brands for scores of companies.

1983 July–Edensoy brand soymilk is launched by Eden Foods of Clinton, Michigan. Imported from Japan (where it is made by Marusan-Ai Co.), it is sold in plain and carob flavors in stand-up foil retort pouches.

1984 Feb.–The first comprehensive study of the soymilk market in the U.S. is published by Soyfoods Center of Lafayette, California. It estimates that total soymilk consumption in the U.S. in 1983 (not including soy-based infant formulas) was 2.68 million gallons (26% of this was imported), and total production of soy-based infant formulas was 32 million gallons.

1984 March–Vitasoy (USA) introduces the first soymilk whose flavor is described as "Original"–meaning dairylike or resembling (as much as possible) dairy milk.

1984 Aug.–Westsoy Natural brand soymilk is launched by Westbrae Natural Foods of Emeryville, California. Imported from Japan (where it is made by San-Iku Foods), it is sold in one flavor in stand-up foil retort pouches.

1984 Oct.–Westbrae Natural Malted's, a thick soymilk resembling a milk shake, are launched in many flavors by Westbrae Natural Foods, imported from Japan.

© Copyright Soyinfo Center 2014

1986 Nov.–Edensoy starts to be made in America by American Soy Products (ASP) at a large, modern plant in Saline, Michigan, and sold in Tetra Brik aseptic cartons. ASP is a joint venture of 4 Japanese companies and Eden Foods.

1986–Raj Gupta (of ProSoya Foods International, Ottawa, Ontario, Canada) applies for two patents on the oxygen-free, cold-grind process and equipment that he has invented. The first U.S. patent is issued on 17 May 1988. This process soon becomes widely used to make good-tasting soymilk. ProSoya becomes a major manufacturer of systems used to make soymilk worldwide.

1988 Nov.–Pacific Foods of Oregon launches its first soymilk product, Naturally Northwest Soy Beverage [Plain], in a 1-quart Tetra Brik Aseptic carton. The company's new factory is in Tualatin, Oregon.

1990 April–WestSoy Lite, America's first "lite" soymilk, with a low fat content, is introduced in plain, vanilla, and cocoa flavors by Westbrae Natural Foods. Made by adding water to regular soymilk, the product is less expensive to make, but also contains less nutrients.

1990 June–Alpro opens a new soymilk plant at Wevelgem, Belgium. Costing about US$15 million and having a capacity of 45 million liters a year, it is reputed to be the largest in the world. Alpro now makes about 70% of the soymilk in Europe.

1990 June–Rice Dream, a non-dairy beverage, is launched in a Tetra Pak aseptic carton by Imagine Foods of Palo Alto, California. It is made by California Natural Products of Manteca, California, using an innovative patented process, in which the ground rice is digested by enzymes. Many prefer its flavor to that of soymilk. Continued. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

Contents: Background and context: Soy ice cream is largely a United States phenomenon. This is not surprising. The USA has the world's largest per capita consumption of (dairy) ice cream. As a result of the U.S. counterculture and vegetarian movements of the 1960s and 1970s, America was home to a large number of entrepreneurs with new ideas. And the number of Americans who keep a kosher diet has long been very large. Kosher rules say that one cannot eat meat and dairy products at the same meal; hence an interest in developing non-dairy products.

Moreover, the soyfoods movement originated in the United States in the early 1970s, and by the end of this decade was steadily developing momentum. Many of the entrepreneurs who developed soy ice creams were involved with other soyfoods before they branched out into soy ice creams and other non-dairy frozen desserts.

Brief chronology of soy ice cream and other non-dairy frozen desserts.

1899–Almeda Lambert, a Seventh-day Adventist of Battle Creek, Michigan, in her *Guide for Nut Cookery* (452 p.), publishes the world's earliest known recipes for non-dairy ice creams: Ice cream (made of almond or peanut cream). Ice cream made of peanut milk. Almond ice cream.

1918 March–Arao Itano of Japan is the world's first person to conceive of making an ice cream from soy. In an article titled "Soy beans as human food, in the *Massachusetts Agricultural Experiment Station Bulletin* No. 182 he states "Vegetable butter, ice cream, oil (table use) and lard (cooking): The manufacture of these articles from soy beans further investigation."

1921 April–At a meeting of the Ways and Means Committee of the U.S. House of Representatives, George Washington Carver, a professor at the Tuskegee Institute, "astonished both the members and spectators with visible proof that he can manufacture one hundred and forty-five different foods and useful articles, including milk and cream, from peanuts." From it he has also made ice cream, which he says was the finest he ever tasted (St. Louis Globe Democrat, April 3, p. 3).

1922 Nov. 28–Lee Len Thuey, a citizen of the United States and a resident of Indianapolis, Indiana, is the world's first person to be issued a patent for a soy ice cream. Titled "Frozen confection and process of making same," he filed the application on 18 Oct. 1920. It was made from tofu, flavoring, and a sweetener.

1930 Sept.–The term "soybean ice cream" first appears in the Proceedings of the American Soybean Association (p. 3-6). At 12:00 noon a "special soybean lunch" was served at the University of Illinois South Farm, prepared by ladies of the First M.E. Church. The desserts were "soybean ice cream, and soybean ice."

1930–The world's first commercial soy ice cream is introduced by Jethro Kloss, a Seventh-day Adventist, at Takoma Park Station, Washington, DC. Named Soy Ice Cream and honey sweetened, it is sold in strawberry,

© Copyright Soyinfo Center 2014

chocolate, and vanilla flavors. He named his company the Scientific Food & Benevolent Association. By 1934 he was serving his soy ice cream at his lectures in Florida (Miami Daily News, 1934, April) and in 1935 he included a recipe for soy "Ice cream" (non-dairy; made with "4 qts. Soy bean milk") in his herbal classic Back to Eden (p. 105).

1930s early–Henry Ford's soy researchers, Robert Boyer and Edsel Ruddiman, develop an experimental soy ice cream at Greenfield Village in Detroit, Michigan. It is based on fresh tofu curds and soy protein isolates. By August 1935 Henry Ford was serving soy ice cream for dessert at VIP and press luncheons held at the Ford Engineering Laboratory in Dearborn (Literary Digest 1935 July 27; Simonds 1938; Strother 1961).

1936–Vetose Nutritional Laboratories in Shanghai, China (run by Dr. Harry W. Miller and his son, Willis, both Seventh-day Adventists), starts to sell soy ice cream in small quantities (Raymond Moore, 1961, p. 182).

1945 April 16–The term "frozen dessert" is first used in connection with soy in an article titled "Who's who and why" (about Herbert Marshall Taylor and Delsoy), by Fred L. Olmsted, published in the Detroit News (p. 4).

1945–The modern term "soy ice cream" first appears in that remarkable book *The Useful Soybean: A Plus Factor in Modern Living,* by Mildred Lager of Southern California. In her "recipe" for "Soy ice cream" (p. 250) she notes that "Soy milk may be used in place of regular milk in ice-cream recipes."

1946 March–The word "dairylike" first appears in connection with soy in an article titled "Imitation or improvement? Dairy `replacement' products widening market, seeking to equal margarine's success," by Lawrence E. Doherty in Food Business (p. 22-23, 56).

1951–Robert Rich, founder of Rich Products Corporation of Buffalo, New York, introduces Chill-Zert–a non-dairy soy ice cream (Buffalo Evening News, 1952). Rich had learned how to make soymilk from Henry Ford's researchers. The U.S. Food and Drug Administration (FDA) seized the product, claiming that it should be labeled "imitation chocolate ice cream." Rich Products fought back, in state after state, and eventually won. All subsequent makers of non-dairy ice cream owe Robert Rich a huge debt of gratitude.

1968 May–In their classic vegan cookbook, *A Good Cook–Ten Talents,* Frank and Rosalie Hurd (both Seventh-day Adventists; he is a Doctor of Chiropractic) have five recipes for non-dairy ice creams, one in which "rich soy milk" is an ingredient and four in which "soy milk powder" is an optional ingredient.

1969 Aug.–The term "non-dairy frozen dessert" first appears in an article titled "How to make parevine," by Wendell S. Arbuckle in the American Dairy Review.

1971–Heller Enterprises of New York launches Heller's Non-Dairy Frozen Dessert, perhaps the first commercially successful non-dairy frozen dessert based on isolated soy proteins.

1976 Aug.–A new wave of interest in soy ice creams begins with the introduction of Ice Bean by Farm Foods in San Rafael, California. Developed at The Farm in Summertown, Tennessee, it was soon sold nationwide.

1979 summer–Pesach Lazaroff introduces David Mintz to tofu. That summer Lazaroff spent more than 100 hours working with Mintz as a consultant.

1980 July–Jolly Licks Ice-C-Bean is introduced by Mark Brawerman of San Francisco, California. Marketed and distributed by Jolly Licks, it is sold in six flavors. Later that month the product name is changed to simply Jolly Licks and the name of the marketer-distributor is changed to Pacific Trading Co. In Nov. 1982 Pacific Trading Co. was renamed Living Lightly.

1980 Dec.–Farm Foods starts a national ad campaign for Soy Ice Bean with full-page color ads in national magazines: *New Age, Whole Foods, East West Journal,* and *Vegetarian Times.*

1981 Aug.–Tofutti is first sold at Mintz's Buffet, a kosher Jewish deli on Third Ave. in Manhattan's chic Upper East Side. Developed by David Mintz (and Pesach Lazaroff) this was the product that made soy ice creams famous and attracted huge amounts of free media publicity. Tofutti was first sold in this deli as a soft-serve non-dairy frozen dessert in 9 flavors. During the previous two months it had been sold in the deli under other names: Tofu Time Non-Dairy Frozen Dessert (the first flavor was carrot-raisin), then Tofu Time Tofu Ice Kream.

1982 June–Farm Foods presents Ice Bean at the American Booksellers Convention in Anaheim, California.

1982 July–The term "Dairy free" first appears in a leaflet titled "Tofutti: Dairy free," created by Mintz's Buffet of New York City.

1982–Tofutti begins to be sold outside Mintz's deli in New York City, including at a number of the city's most stylish eateries–such as Bloomingdale's and Zabar's.

1983 April–Rice Dream, a non-dairy frozen dessert based on amazake (cultured rice) in launched in 3 flavors in pints by Gloria Gilbert, owner of Fresh Foods, in Boulder, Colorado. The product had been developed in 1980 (non-commercially) by Barbara Svenning and Marty Roth in Santa Fe, New Mexico. They sold their business, Community Kitchens, to Gloria. Steve Demos of White Wave in Boulder made Gloria's Rice Dream. It was on the market for only 3-6 months. On 10 Feb. 1984 Robert Nissenbaum (who was already making amazake) purchased the name Rice Dream from Gloria for $2,000.

1983 June–The world's first non-dairy ice cream sandwich is launched by Farm Foods of Summertown, Tennessee. Made of Ice Bean (soy ice cream) sandwiched between two carob coated honey wafers, it comes in three flavors: Honey Vanilla, Carob, or Peanut Butter. Continued.

3619. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of cheese, cream cheese and sour cream alternatives (with or without soy) (1896-2013): Extensively annotated bibliography and sourcebook. Includes tofu cheesecakes and cheesecake alternatives. Lafayette, California: Soyinfo Center. 567 p. Subject/geographical index. Printed 22 Oct. 2013. 28 cm. [8761 ref]

• ***Summary:*** This is the most comprehensive book ever published about the history of cheese, cream cheese and sour cream alternatives (with or without soy). It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of these interesting foods. It is also the single most current and useful source of information on this subject.

Contents: Search engine keywords. Dedication and acknowledgments. Introduction: Brief chronology / timeline of cheese, cream cheese and sour cream alternatives. The many names of soy cheese, soy cream cheese, tofu cheesecake, and soy sour cream (helpful for digital searching). About this book. Abbreviations used in this book. How to make best use of this digital book–Search it. Nine pages of color photos. Contains 104 photographs and illustrations. http://www.soyinfocenter.com/books/169.

Introduction: This industry was born and raised largely in the United States. Its history, like that of other dairy alternatives, is fairly short.

Cheese alternatives are Western-style cheeselike products that contain a significant amount of non-dairy protein, typically from soybeans, nuts, or seeds. They may or may not contain casein or caseinates (the main protein found in milk, which causes cheese to melt and stretch). No one has yet figured out how to make soy protein melt or stretch. The hard cheese alternatives that contain casein typically melt, stretch, and shred in much the same way as dairy cheeses. We distinguish cheese alternatives from imitation cheeses and cheese substitutes in which the butterfat is typically removed and replaced by vegetable oil or by no fat at all.

The world's first non-dairy cheeselike products were the various types of fermented tofu made in China (where they are called doufu-ru, fuyu, or sufu). Said to have been developed 1,400 to 1,500 years ago, they were first mentioned in documents during the Ming dynasty in China in the 1500s (Chin Kan. 1534. Messenger to Ryukyu; Li Shih-chen. 1578-1597. *Bencao Gangmu*). Since we consider fermented tofu (formerly sometimes called "soy cheese") to belong to a different category of foods from cheese alternatives (in part since the former do not melt), we discuss them in a separate book titled *History of Fermented Tofu.*

The main benefits of cheese alternatives: Dairy cheeses contain lactose (a major problem for those suffering from lactose intolerance) and are high in cholesterol and generally high in total fat, saturated fat, calories and salt. Cheese alternatives (even if they contain casein or caseinates) are free of lactose and cholesterol, low in fat, low in calories, and relatively low in salt. Those which contain casein or sodium caseinate are unacceptable to vegans (vegetarians who eat no dairy products, eggs, or other animal products), and to those keeping kosher, but those which do not are a welcome innovation. Sour cream, cheesecake, and sour cream alternatives never contain casein or caseinates.

Perhaps most important is that true cheese alternatives do not involve the exploitation of animals or the wasteful feedlot system.

The main disadvantage of cheese alternatives is their somewhat higher price than dairy cheese.

1896–Nuttose, the first commercial cheese alternative in the Western world, is invented and made by Dr. John Harvey Kellogg, the famous Seventh-day Adventist physician and vegetarian. Made largely from peanuts, it was a true non-dairy product that was also used as a meat alternative.

1910 Dec. 30–Li Yu-ying (a Chinese national, scientist and engineer, residing north of Paris, France), in British Patent No. 30,275 states: "For obtaining fermented cheese such as roquefort, parmesan [Parmesan], romatour [Rahmatour; Bavarian cream cheese], camambert [Camembert], and gruyere, suitable ferments are employed."

1911–The next commercial soy cheeses in the Western world are developed and made Li Yu-ying. At his modern soyfoods factory near Paris, Li manufactured Fermented Tofu Cheese in Gruyère, Roquefort and Camembert flavors (Scientific American Supplement. 1911. Aug. 19. p. 115).

1934 April–The idea of cream cheese alternatives is first conceived of by Seventh-day Adventist, Jethro Kloss. The Miami Daily News reported how approximately 6,000 people had recently heard him speak about dairylike foods made from soy beans at Bayfront Park. He exhibited 21 foods made from soy beans (including cream cheese, yellow cheese, and cottage cheese) and invited the public to taste them.

Between 1911 and 1970 most of the commercial cheese alternatives in the USA were made by Seventh-day Adventist (SDA) companies; although called "soy cheese" and the like, and often used them like cheese, they were actually tofu. Though we know the names of these early products, their ingredients and properties are not always clear.

1936 Dec.–Soy sour cream (*Sojasauerrahm*) is first mentioned by Glassman and Gologarskaja in Odessa, USSR.

1938 Nov.–The Wigmore Health Shop in London is now making the world's first Soya Cream Cheese.

1939–Madison Foods (SDA, Madison, Tennessee) introduces Cheze-O-Soy, based on tofu.

1942–Butler Food Co. (SDA, Cedar Lake, Michigan) launches ViM-eat Soy-Nut Cheese and in 1944 Butler's Soynut Cheese.

1948 or 1949–Casein becomes classified as a chemical

© Copyright Soyinfo Center 2014

and a non-dairy product by the U.S. government (not the Federal Trade Commission), at about the same time that price supports for dairy products begin. At the time it is used almost exclusively for industrial applications (such as adhesives and sizings) rather than in foods. Today about 80% of the casein in America is used for foods–mainly imitation cheeses, whip toppings, and other imitation dairy products, plus medical and nutritional products prescribed by doctors. The remaining 20% is used for industrial purposes–mainly adhesives and sizings.

As of 1992 there are no companies in the USA that make casein; government price supports for milk price it out of the world market. The last U.S. manufacturer, Land O'Lakes, stopped in the 1970s. All casein used today in America is imported, mainly from New Zealand, Ireland, France and the Netherlands (Petka 1992).

1951–Loma Linda Foods (SDA, Arlington, California) rolls out Vege-Chee (canned, based on tofu).

1961–Worthington Foods (SDA, Worthington, Ohio) introduces Kreem-Chee, the world's second commercial non-dairy cream cheese.

1971–The first two commercial tofu cheesecakes are created by students of macrobiotics: One by Marcea Newman is sold at her Souen restaurant in New York; the other by David Kalan (named Tofu Blueberry Pie) is sold at his Crane's Call Bakery in Boston.

1974–The first two recipes for a soy cheesecake appear. One by Marcea Newman (made with tofu) in her book *The Sweet Life: Marcea Newman's Natural Food Dessert Book;* the other by The Farm in Summertown, Tennessee (made with soy cheese, from naturally fermented/soured soymilk) in their booklet *Yay Soybeans!*

1975–The term "Tofu Cheesecake" (with a recipe) first appears in *The Book of Tofu*, by Shurtleff and Aoyagi.

1976–Howard Grundland of Sprucetree Baking Co. (near Baltimore, Maryland) introduces Tofu Creme Pie (with Blueberry or Strawberry Topping). With improvements by Louis Fellman it becomes perhaps the most delectable tofu cheesecake ever made.

1985 March–The modern category of commercial soy cheeses and cheese alternatives is born under a bad sign (Medoff 1986). It begins in America in March 1985 with the introduction of Soyarella–probably the most deceptive soyfood product ever launched in America. Although extremely popular for about a year, it was unfortunately mislabeled to deliberately deceive consumers. Though marketed as a "non-dairy soy product" which contained no casein yet melted like cheese, it was later found to contain about 15% casein.

The "source" of Soyarella (not to be confused with TofuRella) is thought to have been Nature's Best in Osseo, Michigan. But the name of the manufacturer was not given on the label–and it remains a mystery to this day. Continued. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

Brief chronology of non-dairy whip topping, coffee creamer, cottage cheese, and icing/frosting (with or without soy):

Overview: This may seem like a very narrow and perhaps uninteresting subject–but it definitely is not. For with the advent of the first commercial whip topping, created near the end of World War II by Bob Rich in Buffalo, New York, the entire category of non-dairy products was born. But it was not an easy birth.

The basic lineage of the U.S. non-dairy industry is: Henry Ford > George Washington Carver Laboratory (established by Henry Ford in Ford's Greenfield Village in Dearborn, Michigan) > Bob Rich and Rich Products, Inc. > Holton W. "Rex" Diamond and Frank S. Mitchell (both employees of Rich Products, Inc.) > 40 lawsuits against Rich's non-dairy products by individual states trying to keep these products off the market; Rich Products won all of the suits but one, and paid more than $600,000 in legal fees in the process > The U.S. non-dairy industry is born.

The first wave: The early interest in these non-dairy products took place starting in the late 1800s as urbanization was increasing, ice was still used for refrigeration, and milk–unless consumed fresh on the farm–was a source of pathogens and infectious diseases. Seventh-day Adventists, many of whom consumed no dairy products, were among the pioneers in developing non-dairy products.

Henry Ford disliked cows–and horses: As early as 1921, in an interview published in the New York Tribune (Feb. 9, p. 1, 4), Ford predicted that horses would be replaced by

© Copyright Soyinfo Center 2014

automobiles and tractors. The horse is a "twelve-hundred-pound 'hay motor' of one horse power," he quipped. The milk and meat from cows will be replaced by man-made products. Ford notes: "It is a simple matter to take the same cereals that the cows eat and make them into a milk which is superior to the natural article and much cleaner. The cow is the crudest machine in the world. Our laboratories have already demonstrated that cow's milk can be done away with and the concentration of the elements of milk can be manufactured into scientific food by machines far cleaner than cows and not subject to tuberculosis." [Note: This article was written 10 years before Ford discovered soybeans and soymilk!]

In the mid-1930s Henry Ford built a soymilk plant in Greenfield Village (Dearborn, Michigan). It was just a demonstration plant that made several hundred gallons of soymilk a day. The plant was part of the larger research effort; none of the milk was sold commercially. With the arrival of World War II, the process was taken by Bob Smith, one of the men who developed it, and used as the basis for a private plant [Delsoy Products] in Dearborn where he sold a lot of soymilk for use in whipped toppings, baked goods and frostings. It was quite successful (Source: Robert Boyer).

In about July 1942, during World War II, Henry Ford created the George Washington Carver Laboratory in Greenfield Village (Dearborn, Michigan), in honor of George Washington Carver (who shared many of Ford's beliefs, including those about cows; Carver made milk from peanuts). There Ford assembled a team of scientists to intensify his research on alternatives to dairy products–including soymilk and "soy whip topping." He served this soymilk to patients in the nearby Ford Hospital, and he offered to give the soymilk recipe to anyone who was interested. Bob Rich was one of the first to accept this offer.

Whipping cream and World War II: During World War II, whipping cream had not been available to typical American consumers. It was reserved for use by our troops and allies. The dairy industry fought in state after state to prevent "imitations" from gaining a commercial toehold. And Bob Rich fought back, refusing to give up and mounting an aggressive defense, all the while maintaining that his new products were a superior replacement!

Because cream was such a hugely important product for the dairy industry, the test product soon became Coffee Rich, a non-dairy coffee creamer–which Bob Rich sensitively referred to as a "coffee whitener" in an attempt not to step on the toes of dairy interests. But the dairy industry went to court to enforce the laws in state after state where it was illegal to sell imitation dairy products.

As recently as the 1970s it was illegal to sell imitation dairy products (such as soymilk, whip topping, or coffee creamer/whitener) in some U.S. states, especially those having a large dairy industry. But today, non-dairy products can be sold freely throughout the United States, so long as the label states clearly that it is not a dairy product.

Moreover, the market for non-dairy products is growing much faster than the market for dairy products.

1900–*In Every-day Dishes and Every-Day Work*, Ella Kellogg, a Seventh-day Adventist and wife of the famous Dr. John Harvey Kellogg, discusses her system of meatless cookery. She notes (p. 166-70) that either peanut butter or almond butter work well as an ingredient in the icing for peanut cake or in almond pound cake.

1904–In *Healthful Cookery: A Collection of Choice Recipes for Preparing Foods, with Special Reference to Health*, Ella Kellogg has the earliest known recipe for a non-dairy whipped cream–Almond Whipped Cream (p. 246). She again uses almond butter in the icing of Almond Pound Cake (p. 231).

1919 March 22–The first recipe for a non-dairy frosting (the British word for "icing"), Peanut Butter Frosting, appears in an article titled "Peanut butter in the diet," by Mrs. Escoe Ervin (Ohio Farmer, p. 490).

1934 April 8–Non-dairy "cottage cheese" is first mentioned in the Miami Daily News. Seventh-day Adventist Jethro Kloss (in Miami, Florida) exhibits 21 foods made from soy beans including soy cottage cheese.

1939–In his classic book Back to Eden, Jethro Kloss has recipes for "Soybean cottage cheese" (made from fermented soybean milk, p. 608) and Soybean cottage cheese loaf.

1941 Dec. 7–World War II begins for the United States. A War Food Administration (WFA) is created at the federal level and rationing of certain foods (especially meats, dairy products, and oils and fats) begins in late 1942. For example, in Nov. 1942 the WFA issued an order prohibiting the sale of whipping cream in America. This leads to a nationwide push to find nutritious and tasty alternatives.

1942–The first recipe for a non-dairy soy frosting, Soy Bean Chocolate Frosting (with "2 squares soy bean chocolate," p. 116) appears in a book titled Vegetarian Cookery, by Pietro Rotondi.

1943–One day the chief purchasing agent of Detroit's Ford Hospital came into Bob Rich's office at the War Food Administration in Detroit in search of additional butter ration points. Rich explained that his job was concerned solely with the diversion of non-essential civilian milk supplies into the production of dry and condensed milk for the U.S. armed forces and for Lend Lease. The purchasing agent replied that the Ford Hospital was not in need of milk. The entire supply of milk and cream was produced in Dearborn, Michigan, by Henry Ford's Carver Laboratory (named after Dr. George Washington Carver)–from soybeans! Those last words sparked what was to become a lifelong interest for Bob Rich. He had never heard of soymilk before–and like Henry Ford, he disliked cows. Rich soon visited the Carver Lab, where he met Rex Diamond.

1943 Dec. 4–An article titled "Soybean curd makes good cottage cheese substitute" appears in Science News

© Copyright Soyinfo Center 2014

Letter (p. 360).

1944 Aug.–Delsoy, a soymilk-based non-dairy whipped topping is launched by Russell-Taylor Inc. of Dearborn, Michigan. The world's earliest known whip topping, it had been developed at the Henry Ford's Carver Laboratory, largely by Bob Smith and Holton W. "Rex" Diamond. The key man behind the new business is Herbert Marshall Taylor. The company, which was renamed Delsoy Products, Inc. by July 1945, did not last long (Detroit News. 1945. April 16).

1945 Jan.–Whip Topping starts to be sold commercially by Rich Products. It was developed by Frank Mitchell of Spencer Kellogg & Sons, with financial backing from Bob Rich. In the early years, when Rich Products Corp. used soy protein as the protein source in its non-dairy products, it obtained the protein from defatted soybean flakes purchased from the Archer-Daniels-Midland Co. (ADM). In 1945, Rich Products did $28,000 worth of business, selling only non-dairy products.

1945 April–The term "Whip Topping" is first used (in a document) in a contract between Frank S. Mitchell and Robert E. Rich. The contract begins: "Whereas Mitchell has invented and owns a certain secret formula for the preparation of a substance for human food called 'Whip Topping,' and..." Continued. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3621. Dittes, Albert. 2013. Three Adventist titans: The significance of heeding or rejecting the counsel of Ellen G. White. Ringgold, Georgia: Teach Services, Inc. 103 p. No Index. 25 cm. [346 ref]

• ***Summary:*** The three titans are John Harvey Kellogg (founder and head physician of the Battle Creek Sanitarium), Arthur G. Daniells (president of the General Conference), and Percy Magan (co-founder of Madison College and later president of the College of Medical Evangelists, later renamed Loma Linda University). The story of each man's relationship with Ellen G. White is carefully documented using a treasure trove of letters penned by Percy T. Magan. Magan followed the counsel of Ellen G. White; Kellogg and Daniells did not. Edward A. Southerland, for 60 years a friend of Percy T. Magan, is also an important character in this book.

In this book we find many new insights into the personal struggles of Dr. Kellogg. Address: Author, Portland, Tennessee.

3622. *SoyaScan Notes.* 2013. Soyfoods success stories in developing countries (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Public sector with outside funding: 1. Sri Lanka, Thriposha program (Cereal-soy blends, started 1976. Thriposha itself started in 1973). 2. Mexico (Chihuahua) program selling PADSA, Soyaven / Soyavena, Albachisa, and Almesa (Cereal-soy blends, 1978-80). 3. Thailand, ASEAN full-fat soy flour project (1978). 4. Guatemala, Plenty Soy Dairy (Tofu, soymilk, soy ice cream, 1980)

Private sector, largely self sufficient: 1. Uganda, Africa Basic Foods (Dr. D.W. Harrison. Roasted whole soy flour, cereal soy blends, 1966-69). 2. India. Ruchi's Products (TVP, 1980).

3623. *SoyaScan Notes.* 2013. Europe's biggest international food fairs / shows and expositions: ANUGA, SIAL, Helfex, and CIBUS (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** ANUGA and SIAL are held in Cologne (Germany) and Paris (France) respectively on alternating years in October. Each fair lasts for about 6 days, and tickets cost about $20. Food people and companies come from all over the world to exhibit and see the latest in all kinds of foods and food equipment. ANUGA is held on odd numbered years (1987, 1989, 1991, etc.) and SIAL on even numbered years (1986, 1988, 1990).

ANUGA (pronounced uh-NEW-guh) stands for *Allgemeine Nahrungs und Genussmittel Ausstellung* ("General exhibition of food and food adjuncts {stimulants / enjoyables"}). Billed as the "World Food Market–Consuma–Gastroma–Tecnica," it is held at the Cologne Messe (Exhibition Center) and is sponsored / produced by Messe und Ausstellungs Ges. mbH, P.O. Box 210760, D-5000 Cologne, West Germany. Phone: 221-8210. The first ANUGA fair was held in 1929. Statistics at ANUGA in 1986 were mind-boggling: 200,000 visitors; 5,201 companies exhibiting, from 86 different countries; and what seemed like 50 miles of exhibit space (actually 227,000 square meters).

SIAL (pronounced see-AL) stands for "Salon International de l'Alimentation," and is also called the 'International Food and Dairy Exhibition'. The first SIAL was held in Nov. 1964. The permanent address of SIAL is 39 rue de la Bienfaisance, 75008 Paris.

The 'SIAL d'Or' (also called 'Golden SIAL' or Food Oscar') gold medal awards, first presented in Oct. 1986, are given for the best new food products in each food category at the AIDA-SIAL International competition judged in Paris in June. The Oscars are a bi-annual competition between 16 nations, including Canada, Great Britain, Italy and the USA. Each country presents products in 7 food and beverage categories: Grocery, alcoholic drinks, non-alcoholic drinks, dairy, deep-frozen, meat / poultry and delicatessen. The retail trade in each country nominates the representative products. At least one soy product, So Good, a soymilk produced by Sanitarium Foods in Australia, has been awarded the Golden SIAL.

Helfex, the International Health Food Trade Exhibition and Convention, is much smaller than the two fairs mentioned above and its scope is much more limited. Held biannually in the spring in the United Kingdom on even numbered years, it is sponsored by the British Health Food

© Copyright Soyinfo Center 2014

Manufacturers Association and the British Health Food Trade Association. The Foreign Agricultural Service (FAS) of the USDA typically has a large pavilion featuring booths representing U.S. health / natural food manufacturers. In 1988 at least 8,000 visitors came to Helfex from 25 countries. About 600 exhibitors were there and the U.S. Pavilion was the biggest booth at the entire show. About 88% of the natural foods products at Helfex '88 came from the U.K. The first Helfex was held on 17-19 March 1974 at the Bloomsbury Centre Hotel in London. The tenth Helfex was held on 8-9 April 1990 in Birmingham, England; over 200 companies exhibited in Birmingham. For more information contact the British Health Food Trade Assoc., Angel Court, High Street, Godalming, Surrey, GU7 1DT, England. Phone: 0483-426450. Fax: 0483-426921.

CIBUS (pronounced CHI-bus), the biggest food fair in Italy, is held in Parma in about May each year.

3624. *SoyaScan Notes.* 2013. The best libraries and centers in the USA for doing research on Seventh-day Adventist work with health reform, vegetarianism, and soyfoods (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1. The large collection of Ellen G. White's unpublished manuscripts and letters housed in the vault of the Ellen G. White Estate, Inc., in Washington, DC. Many of these documents are restricted and may be used only with the permission of the trustees. Fortunately, however, some of the following collections have duplicate copies of these documents.

2. The C. Burton Clark Collection, acquired in the 1970s and now housed in the Heritage Room, Vernier-Radcliffe Library (Loma Linda University Library / Del E. Webb Memorial Library), Loma Linda, California. This collection is especially strong in medical and health-related documents. Jim Nix, an archivist at the library until early 1993, knows the collection intimately. In addition the Heritage room has microfilmed all the Kellogg papers at the University of Michigan (Ann Arbor) and Michigan State University (East Lansing). The Vernier-Radcliffe Library is an excellent source of information. The library is willing to try to answer written questions as long as they do not require too much research time; the staff is limited. Visiting researchers are welcome to visit the library for as much as 3 weeks. There are hotels within 2 miles.

3. The Adventist Heritage Room in the James White Library at Andrews University, Berrien Springs, Michigan. Has a good collection on the history and development of the SDA church. 4. Michigan Historical Collections, University of Michigan, Ann Arbor, Michigan; contain the John Harvey Kellogg Papers. 5. Michigan State University Archives and Historical Collections, East Lansing, Michigan; Contains the John Harvey Kellogg Collection.

6. The Ballenger-Mote Papers, a private collection in the possession of Mr. Donald F. Mote, Riverside, California; especially rich in documents relating to dissident Seventh-day Adventists. 7. As of 1991 the Adventist church has a functioning archives department at their new General Conference headquarters in Silver Spring, Maryland. This denominational collection is pretty much open to the public. It is in the same building as the Ellen G. White Estate with its vault.

8. The best early periodicals are *Advent Review and Sabbath Herald, Health Reformer,* and *Good Health.*

3625. *SoyaScan Notes.* 2013. The visionary work of Henry Ford and his researchers with soyfoods–then and now: Popularized the use of soybeans as foods in America (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Before Henry Ford began his pioneering work with soybeans in the early 1930s, most American consumers and farmers thought their only use was as feed for animals. Ford and his researchers and chefs played a major role in developing a remarkable variety of tasty and nutritious American-style foods from soybeans, and in publicizing these foods and their health benefits nationwide.

Prior to 1934 (according to records in the SoyaScan database) only about 188 commercial soyfood products had been introduced in America. Of these, 78 had been launched in the Hawaiian Islands, so only 110 had been introduced on the American mainland. Of these 110, at least 46 were made by Asian-American companies primarily for Asian-Americans (such as Chinese-Americans, Japanese-Americans, etc.). Thus only 70 products were made by Caucasian-American companies, and, of these, 27 products were made by Seventh-day Adventist companies and sold mostly to other Seventh-day Adventists. In short, between 1766-1767 (When Samuel Bowen launched America's first two commercial soy products–Soy-based Vermicelli Noodles and Bowen's Patent Soy [Sauce]) and 1934, only 43 commercial soy products had been introduced by Caucasian-American companies, not including Seventh-day Adventists.

Henry Ford's ideas about introducing American-style soyfoods took their first clear form on August 13, 1934, when he presented an all-soy gala dinner banquet for the American media at the immensely popular Ford Exhibit in the Century of Progress World's Fair in Chicago, Illinois. Note first that he chose a world-class event to introduce the little-known Cinderella crop. Now listen to the names of dishes on the menu: "Tomato juice seasoned with soy bean sauce. Salted soy beans. Celery stuffed with soy bean cheese [tofu]. Puree of soy bean. Soy bean cracker. Soy bean croquettes with tomato sauce. Buttered green soy beans. Pineapple ring with soy bean cheese [tofu] and soy bean dressing. Soy bean bread with soy bean relish. Soy bean biscuit with soy bean butter. Apple pie (soy bean crust). Cocoa with soy bean milk. Soy bean coffee. Assorted soy bean cookies. Soy bean cakes. Assorted soy bean candy."

© Copyright Soyinfo Center 2014

This menu represented a fresh, new vision of soyfoods in America! Note the creative use of tofu in a pineapple ring and as a celery stuffing, and of soymilk with cocoa.

But this was just the beginning. By Aug. 1935 Ford was serving soy ice cream for dessert at VIP and press luncheons held at the Ford Engineering Laboratory. In about 1936 Ford's Edison Institute published a 19-page booklet titled "Recipes for Soy Bean Foods," which contained 58 innovative American-style preparations including: Soy bran bread. Cinnamon buns. Muffins (for diabetic patients). Waffles (with soy flour). Scalloped green soy beans. Omelette (with tofu). Salad soy bean sprouts. Gingerbread. Honey soy bean ice box cookies. Macaroons. Coconut balls (with chopped soynuts). Lady fingers. Soy bean chocolate bars. Apple sauce cake. Doughnuts. Soy bean custard (with soymilk).

In 1938, when Ford researcher Bob Smith invented a new and greatly improved type of soymilk (based on soy protein isolates), Ford and his researchers focused on developing new dairylike products based on this soymilk, including a non-dairy whipped cream, and an improved soy ice cream. The soymilk itself was widely served at Ford institutions in and around Dearborn, Michigan.

Indeed a strong case can be made that Henry Ford and his coworkers played the leading pioneer role in developing American-style soyfoods and introducing them in a big way to America. In so doing, they set the stage for the rapid rise of soyfoods consumption among typical Americans that began in a small way during World War II, and in a big way starting in the 1970s and continuing into the 1990s.

3626. *SoyaScan Notes.* 2013. The visionary work of Henry Ford and his researchers with soyfoods–then and now: Invented meat alternatives based on spun soy protein fibers (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** One day in 1942 at the Ford plant, Robert Boyer, while sampling fibers of his "soybean wool," realized that these same soy protein fibers, if made tender by omitting the protein denaturation, hardening, and insolubilization, could be used as a basic ingredient in making meatlike textured soy protein foods. He had already developed an analog for the protein fibers that grow on the *outside* of a sheep (wool), why not develop an analog for those on the *inside*, a meatless meat or meat analog? In 1949 Boyer left his job at The Drackett Co.

He devoted all his energy to developing food uses of edible products made from spun soy isolates. His first patent for edible soy fibers was applied for in 1949; It was rewritten and applied for in May 1952 and issued in June 1954 (No. 2,682,466). In 1956 Worthington Foods purchased a license from Boyer and began to develop the world's first meatlike meatless products based on these soy protein fibers. In Oct. 1962 Ralston Purina Co. began to produce the world's first food-grade spun soy protein fibers–named Textured Edi Pro–at its plant in Louisville, Kentucky. Worthington Foods purchased these fibers and used them as key ingredients in a new generation of meatlike products. The first of these were on the market by 1963, with names like Worthington Soyameat–Fried Chicken Style, Chicken Style Roll, Prosage (like pork sausage), White-Chik, Soya Meat–Beef Like; The Soyameat–Fried Chicken style was canned whereas the other products were frozen. The flavor and texture were better than any meatlike product ever made in America. Initially these products were sold in health food stores but in late 1965 they started to be sold in supermarkets. In 1966 Worthington started to spin its own soy fibers, and the next year Ralston Purina stopped spinning.

Other companies also licensed the rights to spin soy protein fibers from Robert Boyer. In December 1965 General Mills introduced its Bontrae line of spun soy protein fiber products, starting with Bac-O*s (imitation bacon bits). By May 1966 General Mills was making analogs for ground beef, diced ham, and diced poultry–all from spun soy protein fibers. So successful were these products (they also won several prizes) that in June 1969 General Mills broke ground for a multi-million dollar state-of-the-art fiber spinning plant at Cedar Rapids, Iowa. It began making Bontrae products in later 1970. By 1975 Cortaulds in England had launched Kesp, based on spun soy protein.

Today about 15-20% of Worthington's meat alternatives contain spun soy protein fibers. These products have a retail value of about $8.8 million. Worthington's Morningstar Farms line of meat alternatives, some of which contain spun soy protein fibers, is sold in the frozen foods section of about 95% of all supermarkets and grocery stores in America.

3627. *SoyaScan Notes.* 2013. Chronology of soymilk worldwide–1500 A.D. to 1949. Part I. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1500 A.D.–The earliest known written reference to soymilk appears in China in a poem titled "Ode to Tofu," written by Su Ping

1665–Soymilk is first mentioned by a Westerner, Domingo Fernández de Navarrete, in his book *A Collection of Voyages and Travels.* Navarrete served as a Dominican missionary in China.

1790–Soymilk is mentioned by Juan de Loureiro in his book *The Flora of Cochin China.* Loureiro was a Portuguese Jesuit missionary who lived in what is now Vietnam. Note that each of these and many other early references mentioned soymilk as part of the process for making tofu.

1866–Soymilk is first discussed as a drink in its own right by the Frenchman Paul Champion, who traveled in China. In a French-language article he stated that the Chinese had taken their cups to tofu shops to get hot soymilk, which they drank for breakfast.

1896 June–Soymilk is first referred to in the United

© Copyright Soyinfo Center 2014

States by Henry Trimble in the *American Journal of Pharmacy.*

1909–The first soy-based infant formulas and soymilk made from full-fat soy flour are developed in the United States by John Ruhräh, a pediatrician. He reports his results in the *Archives of Pediatrics* (July 1909).

1910–The world's first soy dairy, named *Caséo-Sojaïne*, is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. In December 1910 he applies for the world's first soymilk patents (British Patents No. 30,275 and 30,351). The first patent is titled "Vegetable milk and its derivatives." He is issued both patents in Feb. 1912.

1913 June 13–Li Yu-ying is issued the first U.S. soymilk patent (No. 1,064,841), titled "Method of manufacturing products from soja." He filed the application on 10 Oct. 1911.

1917–Soymilk is being produced commercially in the U.S. by J.A. Chard Soy Products in New York City.

1929 Nov.–T.A. Van Gundy, founder of La Sierra Industries in Arlington, California, launches La Sierra Soy Milk, and becomes the first Seventh-day Adventist worldwide to make soymilk commercially. The product was canned and the beany flavor removed by live steam processing.

1931–Madison Foods of Madison, Tennessee, introduces Madison Soy Milk–the world's earliest known soymilk to be fortified with calcium and the second commercial soymilk product made by Seventh-day Adventists in the USA. Madison Foods is a company run by students and faculty within Madison College, a pioneering work/study school.

1936 Jan.–Dr. Harry W. Miller and his son, Willis, start making Vetose Soya Milk, sold in natural or chocolate flavors in sterilized half pint or quart bottles at their Vetose Nutritional Laboratories in Shanghai, China. Dr. Miller is a Seventh-day Adventist physician, a student of Dr. John Harvey Kellogg, and a medical missionary living in China. The world's first "soy dairy," this company also made soy ice cream and Acidophilus Vetose (a cultured soya milk)–both launched in Jan. 1936. But Japan was invading China. Within months after the soy-milk business began booming, a Japanese bomb blew up the soy dairy.

1936 June–Sobee, the world's earliest known branded soy-based infant formula, is launched by the American Soya Products Corp. of Evansville, Indiana.

1939 autumn–Dr. Harry W. Miller, forced by the war in China to return to the USA, starts making soymilk at Mt. Vernon, Ohio, in a large brick plant which he and coworkers built from the ground up. The first two products were canned liquid soymilk (made in a pressure cooker and fortified with vitamins and minerals) and malted soymilk (Soy-A-Malt). Pressure from the powerful U.S. dairy industry and the USDA convinced Miller not to call his product 'soymilk,' so he latinized the name to Soya Lac. This term was first used in late 1939 for Miller's first American soymilk.

1940 March–K.S. Lo, founder and managing director of the Hong Kong Soya Bean Products Co. Ltd. starts to make soymilk in Hong Kong. His product, originally named Vita Milk (*Wai-ta-nai* in Chinese) was fortified with calcium, cod-liver oil, and vitamins, and sold in milk bottles, primarily as a nutritious, affordable beverage for refugees. In June 1940 the product was renamed Sunspot, and in 1953 it was renamed Vitasoy. Continued.

3628. *SoyaScan Notes.* 2013. Chronology of soymilk worldwide–1950 to present. Part II. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1950's–Soymilk enters the modern era as it begins to be marketed in bottles like soft drinks, largely due to work by K.S. Lo of Vitasoy in Hong Kong and Yeo Hiap Seng in Singapore.

1957–Japan's first commercial soymilk, sold in bottles, named *Tônyû*, is introduced by the Ueda Tofu Shop in Hachioji, Tokyo. Dr. Harry Miller was the inspiration for and helped to establish the shop.

1960s–In Japan, soymilk slowly increases in popularity. New manufacturers are: Nihon Tanpaku Kogyo (1962). College Health Foods (later renamed San-iku Foods) in Chiba prefecture with its Soyalac (1969, also inspired and aided by Dr. Harry Miller). Luppy Tanpaku (House Shokuhin) in Saitama prefecture with its Luppy soymilk (1969).

1965–ProSobee, the world's earliest known non-dairy infant formula based on soy protein isolates, is launched by Mead Johnson & Co. of Evansville, Indiana.

1966–The enzyme lipoxygenase is discovered by scientists at Cornell University [Ithaca, New York] to be responsible for the "beany" flavor in soymilk. A process is developed which could be used to help eliminate this flavor.

1967–Soymilk begins to be packaged aseptically in Tetra Pak cartons. This allows it to be sold without refrigeration for six months or more. The first such product was Beanvit, made by Yeo Hiap Seng Ltd. in Singapore and packaged in a disposable tetrahedron-shaped container.

1970's and 1980's–Soymilk becomes a popular beverage throughout Asia, spreading to Europe, Australia and the United States.

1979–Hong Kong Soya Bean Products Co. Ltd. starts to export Vitasoy, packed in Tetra Brik cartons, to selected countries throughout the world. By the early 1980s exports were going to over 20 countries, both developed and developing. Exports to the USA began in 1980. 1980 Jan.–DE-VAU-GE Gesundkostwerk, a Seventh-day Adventist food company near Hamburg, Germany, launches GranoVita Soja Drink in 500 ml Tetra Brik cartons; this soymilk product is made by N.V. Vandemoortele (one of Europe's largest oilseed crushers, founded in 1934) in Izegem, Belgium.

© Copyright Soyinfo Center 2014

1980 June–N.V. Alpro is founded by Vandemoortele to take over production of this soymilk. Inspired and headed by Philippe Vandemoortele, Alpro purchased the land on which it was located from Vandemoortele, and became an independent manufacturer. Alpro quickly became Europe's leading producer of soymilk, making private-label brands for scores of companies.

1983 July–Edensoy brand soymilk is launched by Eden Foods of Clinton, Michigan. Imported from Japan (where it is made by Marusan-Ai Co.), it is sold in plain and carob flavors in stand-up foil retort pouches.

1984 Feb.–The first comprehensive study of the soymilk market in the U.S. is published by Soyfoods Center of Lafayette, California. It estimates that total soymilk consumption in the U.S. in 1983 (not including soy-based infant formulas) was 2.68 million gallons (26% of this was imported), and total production of soy-based infant formulas was 32 million gallons.

1984 Aug.–Westsoy Natural brand soymilk is launched by Westbrae Natural Foods of Emeryville, California. Imported from Japan (where it is made by San-Iku Foods), it is sold in one flavor in standup foil retort pouches.

1984 Oct.–Westbrae Natural Malted's, a thick soymilk resembling a milk shake, are launched in many flavors by Westbrae Natural Foods, imported from Japan.

1986 Nov.–Edensoy starts to be made in America by American Soy Products (ASP) at a large, modern plant in Saline, Michigan, and sold in Tetra Brik aseptic cartons. ASP is a joint venture of 4 Japanese companies and Eden Foods.

1988 Nov.–Pacific Foods of Oregon, launches its first soymilk product, Naturally Northwest Soy Beverage [Plain], in a 1-quart Tetra Brik Aseptic carton. The company's new factory is in Tualatin, Oregon.

1990 April–WestSoy Lite, America's first "lite" soymilk, with a low fat content, is introduced in plain, vanilla, and cocoa flavors by Westbrae Natural Foods. Made by adding water to regular soymilk, the product is less expensive to make, but also contains less nutrients.

1990 June–Alpro opens a new soymilk plant at Wevelgem, Belgium. Costing about US$15 million and having a capacity of 45 million liters a year, it is reputed to be the largest in the world. Alpro now makes about 70% of the soymilk in Europe.

1990 Sept. 24–The company name is changed to Vitasoy International Holdings Ltd. from Hong Kong Soya Bean Products Co. Ltd.

1991–There are at least 35 processors or marketers of soymilk in the U.S., increasing production to approximately 9.8 million gallons. Consumption is estimated to be growing at between 15 and 20% per year since 1984.

1993–More than 200 scientific journal articles about soymilk have been published in English, and at least 80 English-language patents on soymilk have been issued between 1912 and 1993.

1994 Jan.–Soy-Um, a low-priced and attractively packaged soymilk, is launched by J&G Inc., a product developer and distributor in Chicago, Illinois. The product is made in Oregon by Pacific Foods.

1995–A market study is published, estimating that $108 million of soymilk was sold in the U.S. in 1994. This equates to approximately 13.5 gallons of soymilk. By 1995 sales are projected to have risen to over $130 million, or approximately 16.3 million gallons.

3629. *SoyaScan Notes.* 2013. Chronology of tofu worldwide–965 A.D. to 1929. Part I. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 965 A.D.–Tofu is first mentioned in China in a document, the *Qing Yilu* (Wade-Giles: *Ch'ing I Lu*) [Anecdotes, Simple and Exotic], by Tao Ku. It states: "In the daily market were several catties of doufu. People of the region called doufu the 'vice mayor's mutton.'" It goes on to tell the story of a vice mayor named Jishu, who was so poor that he couldn't afford to buy mutton. Instead he bought a few pieces of tofu every day and ate them as a side dish with rice. Soon people in the area came to call tofu the "vice mayor's mutton." The story implies that tofu was widely consumed in China in those days and that it was less expensive than mutton.

1183 A.D.–Tofu is first mentioned in Japan in the diary of Hiroshige NAKAOMI, a Shinto priest of the shrine at Nara; the tofu was used as an offering at the shrine's altar.

1489–The word "tofu" is first written in Japan with the characters used today.

1603–The word "tofu" is first mentioned in a European-language (Portuguese) document, *Vocabulario da lingoa de Iapam...* [*Vocabulary of the language of Japan*], the earliest dictionary of the Japanese language compiled by Europeans (Jesuits living in Nagasaki, Japan). Tofu is referred to as *Cabe, Tôfu,* or *Taufu.*

1613–The word tofu is first referred to (though indirectly) for the second time by a Westerner, Captain John Saris, in the log of his trip to Japan. He wrote "Of Cheese [probably tofu] they haue plentie. Butter they make none, neither will they eate any Milke, because they hold it to bee as bloud [blood], nor tame beasts." This is the earliest English-language document that mentions tofu in connection with Japan.

1665–Tofu is first mentioned specifically by a Westerner, Domingo Fernández de Navarrete, in his book *A Collection of Voyages and Travels.* Navarrete, who served as a Dominican missionary in China, wrote: "Before I proceed to the next chapter, because I forgot it in the first book, I will here briefly mention the most usual, common and cheap sort of food all *China* abounds in, and which all men in that empire eat, from the emperor to the meanest *Chinese,* the emperor and great men as a dainty, the common sort as necessary sustenance. It is call'd *teu fu,* that is, paste of

© Copyright Soyinfo Center 2014

kidney-beans. I did not see how they made it. They draw the milk out of the kidney-beans, and turning it, make great cakes of it like cheeses, as big as a large sieve, and five or six fingers thick. All the mass is as white as the very snow, to look to nothing can be finer. It is eaten raw, but generally boil'd and dressed with herbs, fish, and other things. Alone it is insipid, but very good so dressed and excellent fry'd in butter. They have it also dry'd and smok'd, and mix'd with caraway-seeds, which is best of all. It is incredible what vast quantities of it are consum'd in *China*, and very hard to conceive there should be such abundance of kidney-beans. That *Chinese* who has *teu fu*, herbs and rice, needs no other sustenance to work; and I think there is no body but has it, because they may have a pound (which is above twenty ounces) of it any where for a half-penny. It is a great help in case of want, and is good for carriage. It has one good quality, which is, that it causes the different airs and seasons, which in that vast region vary much, to make no alteration in the body, and therefore they that travel from one province to another make use of it. *Teu fu* is one of the most remarkable things in *China*, there are many will leave pullets for it. If I am not deceiv'd, the *Chineses* of *Manila* [Philippines] make it, but no *European* eats it, which is perhaps because they have not tasted it, no more than they do fritters fry'd in oil of *Ajonjoli* ([sesame seed] a very small seed they have in *Spain* and *India*, which we have not) which the *Chineses* make in that city and is an extraordinary dainty."

1704–Friar Domingo Navarrete's book is published in English. This is the earliest English-language document that mentions tofu in connection with China.

1770 Jan. 3–James Flint in Capringe writes Benjamin Franklin in London (in response to an inquiry from Franklin) a detailed description of how the "Chinese convert Callivances into Towfu" (soybeans into tofu).

1770 Jan. 11–The earliest document seen in which an American mentions tofu is a letter written by the famous Benjamin Franklin (who was in London) to John Bartram in Philadelphia, Pennsylvania. He sent Bartram some soybeans (which he called "Chinese caravances") and with them he sent "Father Navarrete's account of the universal use of a cheese made of them in China, which so excited my curiosity, that I caused enquiry to be made of Mr. [James] Flint, who lived many years there, in what manner the cheese was made, and I send you his answer. I have since learned that some runnings of salt (I suppose runnet) is put into water, when the meal is in it, to turn it to curds."

1821–The second earliest reference seen to tofu in America, and the first to be published in the USA, appeared when A.F.M. Willich of Philadelphia mentioned it in *The Domestic Encyclopedia.* Speaking of soybeans (which he called "the seeds of the Chinese plant *Dolichos soja"*), he wrote: These *seeds* are used in China and Japan as food; they are made into a kind of jelly or curd, which is esteemed very nutritious, and which is rendered palatable by seasonings of different kinds."

1870 Dec.–The term "Bean curd" is first used by Emil V. Bretschneider, writing in English in the *Chinese Recorder and Missionary Journal* (Foochow, p. 173). He said: "Bean-curd is one of the most important articles of food in China." Then he gave an accurate description of how it was made.

1880–Tofu is first made in Europe by Paillieux, in France, for the Society for Acclimatization (but not on a commercial scale).

1878–The earliest tofu company in the USA, Wo Sing & Co., is in business at 708½ Dupont St. in San Francisco, making both fermented and regular tofu.

1895–Hirata & Co. in Sacramento, California, the earliest known Japanese-American company in the USA, starts making tofu.

1896 June–Tofu first appears in print in an American scientific journal (*American Journal of Pharmacy*), in an article by Henry Trimble, a pharmacist, titled "Recent Literature on the Soja Bean."

1906–Quong Hop & Co., the oldest existing tofu maker in America today, starts making tofu in San Francisco, California.

1910–Europe's first commercial soyfoods manufacturer, named *Caséo-Sojaïne*, is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. By May 1911 he was making and selling tofu, and by August 1911 he had added smoked tofu, pressed tofu sheets, fermented tofu cheese (in Gruyere, Roquefort, and Camembert flavors), and soymilk.

1923–The two oldest existing Japanese-American tofu companies (House Foods & Yamauchi Inc. of Los Angeles and Aala Tofu Co. of Honolulu) are founded in Hawaii. They both began as H. Iwanaga Daufu at 1031 Aala St. in Honolulu. In 1926 the company was renamed Shoshiro Kanehori Tofu, and in 1937 Haruko Uyeda Tofu, still at the same address. In about 1939 the company was purchased by Mr. and Mrs. Shokin Yamauchi, who later renamed it Aala Tofu Co. Their son, Shoan Yamauchi, made tofu at the family company until 1946, when he went to Los Angeles, purchased the Hinode Tofu Co., and began making tofu there in 1947. After becoming Matsuda-Hinode Tofu Co. in 1963, the company was renamed House Foods & Yamauchi Inc. in 1983.

1929 Nov.–T.A. Van Gundy, a Seventh-day Adventist and founder of La Sierra Industries in Arlington, California (near Riverside), becomes the first Westerner to make tofu commercially when he introduces La Sierra Soya Cheese. This tofu was canned and pimiento was added to prevent graying after canning. Continued.

3630. *SoyaScan Notes.* 2013. Chronology of tofu worldwide–1930 to present. Part II. Compiled by William Shurtleff of Soyinfo Center.

© Copyright Soyinfo Center 2014

• ***Summary:*** 1930s early–Azumaya Tofu Seizo-sho (later renamed Azumaya Co.) starts making tofu, *yaki-dofu* (grilled tofu), and *ganmodoki* (fried tofu patties) in San Francisco at 1636 Post St. between Buchanan and Laguna streets. The company is owned by Mr. Teranishi, who may have started it as early as the early 1920s. In Feb. 1937 it was sold to George and Jack Mizono, and their mother and father (Saichi Mizono).

1932, Dec.–Madison Foods, part of Madison College in Madison, Tennessee, was making Soy Cheese, then by 1939 they had launched Cheze-O-Soy (seasoned tofu), and by 1940 they were making a canned tofu bologna named Yum.

1934–By this year Loma Linda Food Co. (Adventist) in Loma Linda, California, was making Loma Linda Vege-Cheese (canned tofu with pimiento).

1942 Sept.–Dr. Harry Miller, a Seventh-day Adventist doctor who had worked for many years in China as a medical missionary, begins making Miller's Soya Cheese (tofu) at Mt. Vernon, Ohio.

1944 Sept.–Butler Food Co. in Cedar Lake, Michigan, introduces Butler's Soynut Cheese. Note that the first five Caucasian-run tofu companies in the Western World were all founded and run by Seventh-day Adventists. Note also that each of these five Seventh-day Adventist tofu products used the word "cheese" in the name and that each was canned. 1957 Aug.–Shizuka Hayashi, head of the Japanese-American Soybean Institute in Tokyo, publishes (in *Soybean Digest*) the earliest English-language statistics on tofu in Japan. "There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day." In 1957 Japan will use somewhere between 160,000 and 308,000 tons of soybeans to make tofu.

1958–The world's first packaged tofu is sold in Los Angeles, California, by Matsuda Hinode Tofu Co. Mr. Shoan Yamauchi, owner, conceived of the idea of putting individual cakes of tofu each in a plastic bag with water, sealing the bag with a heat sealer, placing the bag in a stiff paper deli carton with a wire handle, then folding over the top. The process was labor intensive. This happened at about the same time that a letter from journalist George Yoshinaga had led the city to pass a new regulation requiring tofu to be packaged in individual containers.

1958–Tofu is first sold in a U.S. supermarket–Boy's Market supermarket chain (which had about 12 stores at the time) in Los Angeles. The tofu was sold in individual packages (see above) and made by Matsuda Hinode Tofu Co., whose owner, Mr. Shoan Yamauchi was responsible for this major innovation, and for seeing the mainstream potential of tofu.

1965–The Library of Congress establishes the subject heading "Tofu" as the official name for that food in cataloging books for libraries across America. However, in the mid-1970's disputes arose there about the proper form of romanization of that term. The dispute was resolved by the decision to use the common English term "Bean Curd" instead.

1966–Tofu is first packaged in plastic trays/tubs, the type so widely used today. Again, Mr. Yamauchi conceived of the idea. He went to the Sealright Company in Los Angeles that made Sealright trays and asked them to make a waterproof plastic tray for his tofu. Mr. Yamauchi created three specific early innovations in tray packaging: (1) A very deep tray, holding 26-28 ounces; (2) A method for heat sealing a plastic film to the flange of a tray which had cold water flooding over the flange; (3) High-speed sealing machines to pack and seal the tofu in his plant.

1975 March–Alec Evans, owner of first of the new breed of Caucasian-run tofu shops, starts to make "Tofu" in Corvallis, Oregon. His Welcome Home Bakery and Tofu Shop is the sixth Caucasian-run tofu company in America.

1975 Dec.–*The Book of Tofu,* by Shurtleff and Aoyagi, is published by Autumn Press. This book, which had sold about 550,000 copies by 1997, played a major role in introducing tofu to the Western World.

1977 Aug.–Takai Tofu & Soymilk Equipment Co. publishes its first English-language equipment catalog, which helps many American and European tofu shops to get started.

1977 Sept.–White Wave, owned by Steve Demos, starts making tofu at 1738 Pearl St., in Boulder, Colorado.

1977–Morinaga Milk Industry Co., Ltd. in Japan introduces the world's first aseptically packaged tofu in a Tetra Brik carton. It is named "Morinaga brand Tofu. Soybean Curd." In 1978 the name was changed to "Morinaga brand Ever-Fresh Silken Tofu."

1977–Swan Foods Corporation, owned by Robert Brooks and Mary Pung, starts making "Tofu–Organic" at The Soybeanery, 5758½ Bird Rd., Miami, Florida. This is the first tofu in the Western World labeled "Organic." Swan Foods is also the first American company to make a wide variety of soyfoods, and the first to open a soy deli–which had a take-out menu.

1978 April–Nasoya Foods, owned by John Paino and Bob Bergwall, starts making Nasoya Organic Tofu (water pack) at Mechanic Street Exit, Leominster, Massachusetts.

1978 Dec.–*The Book of Tofu,* by Shurtleff and Aoyagi, is published by Ballantine Books in a mass-market edition that retails for $2.95.

1979 July–*Tofu & Soymilk Production,* by Shurtleff and Aoyagi, is published by Soyfoods Center in California. This book is used to start hundreds of tofu manufacturing companies throughout the Western World and in some Third World countries.

1982 April–There are 242 tofu manufacturers in the Western World, including 173 in the United States.

1985 June–The Library of Congress decides to change its subject heading from "Bean curd" back to "Tofu." This,

© Copyright Soyinfo Center 2014

perhaps more than any other single thing, makes the word tofu "official."

1983–House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1989 Dec.–Sixty-five books (each more than 48 pages long) on tofu have been published in the Western World since 1970. Each one has the word "tofu" or its equivalent in the title. Forty of these books were published in the United States, 6 in Canada, 5 in Switzerland, 5 in Japan (but written in English for sale primarily outside of Japan), 3 in West Germany, 3 in France (but 2 of these were published simultaneously and primarily in Quebec, Canada), 2 in England, and 1 each in Italy, Sweden, and Brazil.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy) acquires Nasoya Foods of Leominster, Massachusetts.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California for an estimated $4-$5 million.

1993–House Foods Corp. of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is renamed House Foods American Corporation.

1997 March 12–House Foods America Corporation holds the opening ceremony for America's largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles.

3631. *SoyaScan Notes.* 2013. Chronology of green vegetable soybeans and edamamé (incl. maodou) worldwide–A.D. 1275 to 1939. Part I. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** First a few basic definitions: (1) "Vegetable-type soybeans" refers to certain large-seeded soybean varieties developed for use as a vegetable crop. (2) "Green vegetable soybeans" refers to vegetable-type soybeans harvested at the green stage for use as a vegetable. The beans can be cooked and served in or out of the pods. (3) "Edamamé" is the Japanese term for green vegetable soybeans cooked and served in the pods, often as a snack–like peanuts in the shell. The green beans are popped out of the pods directly into the mouth of the person eating them.

Before 7th century BC–The *Shijing* (*Book of Odes*) is China's earliest classic and the earliest document seen worldwide that mentions the soybean, which it calls *shu.* It does not mention green vegetable soybeans. Zheng Xuan (Wade-Giles: Chêng Hsüan), the most important commentator of the 2nd century AD, confirms that *shu* refers to the soybean and that soybean leaves, called *huo,* can be pickled–presumably when green, then presumably eaten.

AD 100–The term *Sheng dadou* [Chinese characters: raw / fresh + large + bean] appears in both *Shennong bencao jing* (*Classical pharmacopoeia of Shen Nung*) and later (about AD 450-500) in the *Mingyi bielu* (*A critical record of famous doctors. A materia medica*). However a careful analysis of the context by a Chinese scholar who is an expert in the history of Chinese foods and of soybeans (H.T. Huang, PhD) indicates that this term refers to raw soybeans rather than fresh green soybeans. Therefore, surprisingly, we know of no early reference to green vegetable soybeans in China.

1275 July 26–The word "edamamé" first appears in Japan when the well-known Buddhist saint Nichiren Shônin writes a note thanking a parishioner for the edamamé he left at the temple. In: In: *Nichiren Shonin Gosho Zenshu* (*The Collected Writings of Saint Nichiren*).

1406–The Ming dynasty famine herbal titled *Jihuang bencao,* by Zhu Xiao is the earliest Chinese document seen that describes: (1) eating the tender leaves of soybean seedlings (*doumiao*)*;* (2) eating the whole pods of young soybeans, (3) eating green vegetable soybeans; (4) or grinding the green beans for use with flour. The last three uses are recommended for times of famine only.

1620–*Maodou* (Chinese characters: hairy + bean) are first mentioned in the *Runan pushi* [*An account of the vegetable gardens at Runan*], by Zhou Wenhua. *"Maodou* has green, hairy pods. It is also called *qingdou* ('green beans).' It is mentioned in the *Bencao* [materia medica] literature [we are not told which book], which states that it has a sweet flavor, is neutral, and nontoxic. It can be used medicinally mainly to 'kill bad / evil chi.' It stops bodily pain, eliminates water [reduces edema], dispels heat in the stomach, reduces bad blood, and is an antidote to poisonous drugs... Boil the beans in the pods until done, then remove the beans from the pods and eat them. The flavor will be sweet and fresh. Or you can remove the beans from the pods before cooking, then cook the beans in lightly salted water. Or the beans can be placed on a metal screen over a charcoal fire to roast or dry them... They can be served with tea or fruits, as a snack." This is also the earliest document seen that gives medicinal uses for green vegetable soybeans.

1855 April 12–T.V. Peticolas of Mount Carmel, Ohio, is the first Westerner to mention green vegetable soybeans. In an article on soybeans in the *Country Gentleman* (p. 12) he writes: "They are inconvenient to use green, being so difficult to hull."

1856–Only a year later, at least two Americans have apparently figured out how to shell them with ease, and to enjoy them. Thomas Maslin of Virginia writes: "They are fine for table use, either green or dry..." Abram Weaver of Bloomfield, Iowa, praises them in the *Report of the Commissioner of Patents, Agriculture* (p. 256-57). "I had some of them cooked, while green, at their largest size, and found them delicious."

1890 Dec.–The first large-seeded vegetable-type soybean variety arrives in America. Named Edamame, it was

© Copyright Soyinfo Center 2014

introduced from Japan by Charles C. Georgeson, who had been a professor of agriculture in Japan. Other early large-seeded varieties included Easycook (introduced in 1894 from Shandong Province, China) and Hahto (1915, from Wakamatsu, Japan).

1915 Jan.–William J. Morse (of USDA's Office of Forage Crop Investigations), the man most responsible for introducing green vegetable soybeans and vegetable type soybeans to the United States, mentions them for the first time in a USDA special publication titled "Soy beans in the cotton belt": "The green bean when three-fourths to full grown has been found to compare favorably with the butter or Lima bean."

1917–During World War I, USDA researchers conduct cooking tests on many soybean varieties in search of an inexpensive source of protein that lacks the typical unpleasant beany flavor and will cook quickly. Only two such varieties are found–Hahto and Easy Cook; both are large-seeded. Some progress is made in convincing Americans to eat these varieties–but only as whole dry soybeans.

1923 March–*The Soybean*, by Charles V. Piper and William J. Morse, published by McGraw-Hill (329 p.), is the first major book written about this plant in the United States. It contains a long section titled "Immature or Green Soybeans" (p. 221-22) that includes a description, nutritional analysis, recipe ideas. It also includes the first photograph in a U.S. publication of green vegetable soybeans, showing many cooked, open pods on a white plate. The caption reads: "Seeds and pods of the Hahto variety of soybeans, the seeds being especially valuable as a green vegetable." Between 1915 and 1929 Morse mentioned green vegetable soybeans in more than 20 publications.

1929-32–During the USDA sponsored Dorsett-Morse Expedition to East Asia, William J. Morse (now a soybean expert) and P.H. Dorsett were surprised to learn that: (1) Soybeans are widely "used as a green vegetable" or as "green vegetable beans," served in the pods. (2) The seeds for these soybean varieties are sold by horticultural seed companies, are listed with the garden beans in their seed catalogs, and are larger and sweeter than regular soybeans. On 24 April 1929, while in Tokyo, Dorsett made the first edamamé purchases, seven varieties with "Edamame" in the varietal name from T. Sakata & Co. They eventually collected more than 100 varieties of large-seeded vegetable-type soybeans (other suppliers included Yamato Seed Co. in Tokyo) and had them grown for a year at USDA's Arlington Farm in Virginia. (3) Edamamé account for less than 1% (actually 0.8%) of all the soybeans used in Japan. (4) Green soybeans are salt-pickled in the pod in Hokkaido, the northernmost main island. (5) The soybean seeds are planted at intervals of several weeks in the same field, then, when ready, the plants are uprooted and sold in bundles. On 15 July 1929 Morse wrote: "Saw many plantings of soybeans from just coming up to ready to pull for market. It is extremely interesting to note how they are planted for succession. We saw many plantings of beans ready for pulling for market with rows interplanted as seedlings or transplants just coming into bloom." Near Tokyo, three crops of vegetable soybeans are grown during the season–early, medium and late season. The 8,000-page typewritten report is interspersed with many photos of green vegetable soybeans at various stages from the farm to the table.

1929 July 20–A letter from William Morse in Tokyo is read before the attendees at the Tenth Annual Meeting of the American Soybean Association in Guelph, Ontario, Canada, and later published in the *Proceedings of the American Soybean Assoc.* (Vol. 2., p. 50-52). It is the first publication in which Morse describes his many new discoveries concerning vegetable soybeans.

1931 Jan. 3–Morse writes in his log in Tokyo: "At one of the department stores, in the vegetable market section, we found small bundles of soybean sprouts and also some bundles of green vegetable soybean plants." This is the earliest document seen that contains the term "green vegetable soybean(s)."

1934–Vegetable-type soybean varieties that yielded well at Arlington Farm are sent to many state agricultural experiment stations for further trials. In addition, extensive investigations of the cooking qualities and composition of the green shelled and dry edible soybeans are conducted at various departments of home economics. The green beans are found to be one of the most nutritious vegetables ever analyzed.

1935 Dec.–Dr. John Harvey Kellogg of Battle Creek, Michigan, is the first person on record to can green vegetable soybeans, or to consider harvesting them mechanically. In a letter dated Dec. 9 he writes to William Morse at USDA. "We have been doing some experimenting this year with growing and canning shell soy beans. I am having a couple of cans sent you so you can see what our product is like. We think it is very fine. The few thousand cans we put up went off like hot cakes... One of the difficulties in the way of the soy shell bean business is the expense of picking from the vines and shelling the pods. Do you know of any machinery that is used for either of these purposes?"

1935 Aug.–Rokusun, the first vegetable-type soybean is mentioned in a U.S. publication–followed in March 1936 by Bansei, and Chusei. These soybeans are now publicly available in the U.S.

1936 April–A 2-page leaflet titled "Soybean introductions named in January 1936" is published by the USDA, Bureau of Plant Industry, Div. of Forage Crops and Diseases. It is the first official publication in which varietal names are given to the new vegetable type soybeans introduced by Dorsett and Morse from Japan and tested at USDA's Arlington Farm. Twenty varieties suitable for use as a "green vegetable" are listed, together with their seed

© Copyright Soyinfo Center 2014

color, days to maturity, and region of the USA best suited for production. This is the earliest English-language document seen that mentions the following vegetable-type varieties–all with Japanese names: Chame, Fuji, Goku, Hakote, Higan, Hiro, Hokkaido, Jogun, Kanro (in USA), Kura, Nanda, Osaya, Sato, Shiro, Sousei, Suru, Toku, and Waseda. It is also the earliest document seen in which soybeans are classified by use as "green vegetable" or "dry edible bean" or both.

1936 July–Green Shelled Soy Beans (canned) are first sold in the USA by Dr. John Harvey Kellogg's Battle Creek Food Co. in Battle Creek, Michigan. This is the earliest known commercial green vegetable soybean product in the USA.

1936 Oct. 30–A long article titled "Canning green soy beans," by Corinne Loskowske, appears in the *Herald,* published by the students of Henry Ford's Edison Institute. They have mechanized the canning process. They canned and sold 500 cans in 1935 and 1,000 cans in 1936. Similar canned green soybean products soon follow: 1939–Mother's Choice Brand Green Vegetable Soybeans (Canned), by the Fox Valley Canning Co. of Hortonville, Wisconsin.

1939 March–"Eighteen Varieties of Edible Soybeans," by J.W. Lloyd and W.L. Burlison is published at the *University of Illinois Agricultural Experiment Station, Bulletin* No. 453. The 58-page report is the most detailed and interesting to date, being based in part on comments received from 1935 to 1938 from more than 685 home gardeners, market gardeners, and canners in Illinois. The university offered to send free seed and growing instructions to any gardener who would test the green soybeans and submit frank comments in writing. The new way of growing and eating soybeans got rave reviews. For example: "Fresh soybeans had a satisfying flavor... They were delicious... We like them better than peas or beans... I served soybeans to all guests this summer and most everyone liked them... Everyone who tried them said they were splendid... We have never eaten beans as good... The beans were delicious to eat and were universally liked by my family and guests. In fact it took persuasion to leave any for seed."

During the 1930s William Morse and the University of Illinois took the lead in popularizing both green-vegetable soybeans and vegetable-type soybeans in the USA. Continued. Address: Lafayette, California. Phone: 925-283-2991.

3632. *SoyaScan Notes.* 2013. Chronology of green vegetable soybeans and edamamé (incl. maodou) worldwide–1940 to 2001. Part II. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Continued: 1940 Dec.–Vegetable-type soybeans (Bansei and Jogun) are first offered for sale in the USA, by Strayer Seed Farms of Hudson, Iowa (Ad in *Soybean Digest,* p. 12).

1941-1945–During World War II, green vegetable soybeans are grown in Victory Gardens in the Midwest and at least six new canned products are introduced. By 1945 some 44 large-seeded vegetable-type soybean varieties have been named and released in the USA.

1944 Sept.–The first English-language advertisement for green vegetable soybeans appears in *Soybean Digest* (p. 61). Titled "Meet the vegetable cow," it is a full-page, black-and-white ad run by Dr. Harry Miller of the International Nutrition Laboratory, and a former student of Dr. John Harvey Kellogg. It shows the head of a cow made entirely from soybeans. The horns, forelock, parts surrounding the eyes, nostrils, and mouth are made of soybeans in their [green] pods.

1946–The Japanese government (*Norinsho* or Ministry of Agriculture, Forestry, and Fisheries) starts keeping statistics on domestic edamame area, production (weight including pods), and yield. In 1946 these figures were about 7,000 ha and 30,000 metric tons (tonnes). Yields peaked in 1969 at almost 10 tonnes/ha. In about 1982 both area (14,000 ha) and production (122,000 tonnes) peaked, then began a very slow decline as imports rose dramatically (Lumpkin & Konovsky 1991, p. 123).

1950s early–Varietal improvement of vegetable-type soybeans starts in Taiwan.

In the United States, the period from 1935 to 1947 saw the first wave of interest in green vegetable soybeans and vegetable-type soybeans. But after World War II, interest almost disappeared. A second and even larger wave of interest began in the late 1960s and has continued to grow.

1966 July–Mr. Noritoshi Kanai, President of Mutual Trading Co. (MTC, Los Angeles, California), imports the first edamame and the first frozen edamame to the United States. They are imported from Japan and sold under Mutual's Miyako brand to local restaurants. Initially only two cases of 30 x 10.5 oz bags/case are imported as a trial. The company next imports frozen edamame on 1 July 1970; during 1970 MTC imports 70 cases from Japan and again sells them to restaurants (Personal communication with Atsuko Kanai of MTC, June 2001).

1972–Taiwan exports 472 tonnes of green vegetable soybeans, yet total area and production of these soybeans are negligible. By 1989 that figure had jumped 77-fold to 34,821 tonnes, with Japan buying 99% of the exports in frozen form. Japan's total consumption that year was about 160,000 tonnes–by far the largest in the world.

1980 Sept.–The sushi "boom" in California begins when the very popular TV miniseries and epic drama *Shogun,* based on the novel by James Clavell, created a great interest in traditional Japanese culture among Americans. With the sushi, they drank Japanese beer and saké. In America, beer is usually served with peanuts. But, true to tradition, Japanese restaurants served edamamé, free of charge, with the beer. Atsuko Kanai of Mutual Trading Co. recalls: "It was a mass

© Copyright Soyinfo Center 2014

sampling of the edamamé without people having ordered it! So the success of sushi, Japanese beers, Japanese saké, and edamamé, are all tied in together."

1982 April–Researchers at AVRDC in Taiwan [Shanmugasundaram et al.] publish their first two investigations on "immature green soybeans."

1982–Rodale Research Center in Kutztown, Pennsylvania, publishes as excellent 25-page report titled "Fresh green soybeans: Analysis of field performance and sensory qualities," based on two years of research [May 1980 to Dec. 1981]. It identifies eight varieties found to be exceptional in both field and sensory qualities and gives the address of the seed company from which each can be purchased. Rodale Press (publisher of *Organic Gardening & Farming* magazine) also did pioneering work in introducing green vegetable soybeans to Americans, with at least 23 articles or books on the subject between 1962 and the present.

1985–AVRDC in Taiwan starts research on mechanical harvesting of vegetable soybeans.

1987–Reiko Weston, a Japanese woman who owns Fuji-Ya, a Japanese restaurant in Minneapolis, Minnesota, decides she wants to try growing edamame in Minnesota rather than paying more for an imported product. The same business savvy that earned her the titles of U.S. and Minnesota 'Businesswoman of the Year' sparked research in 1987 by Jim Lambert of the Jameson-Williams Company into the viability of raising this new crop. Unfortunately, Weston died shortly before the first year's crop was harvested." Jameson-Williams steadily increases their production of edamame from 7,000 pounds in 1988 to the 350,000 pounds in 1990. In Nov. 1990 Lambert describes Jameson-Williams as "the only commercial producer of edamame in the U.S." He has experimented with hundreds of edamame varieties.

1991 June–Yamato Flight Kitchen of Burlingame, California, starts serving edamame on Japan Airlines flights from San Francisco to Japan.

1991 Aug. 5–An article in the *St. Paul Pioneer Press* (Minnesota) states that Jameson-Williams' company name has been changed to Minnesota Edamame Co. The Nishimoto Trading Co. of Tokyo likes the taste and look of these green soybeans so much that they decided last week to place more than $100,000 worth of their bagging and packaging equipment in the Minnesota Edamame plant. In September, Minnesota Edamame will start using Nishimoto's equipment to ship 1 million pounds of partially processed immature soybeans to Japan. That's a big jump from the 7,000 pounds shipped in 1988. Minnesota Edamame has contracts to supply Nishimoto with 3 million pounds of the soybeans from the 1992 Minnesota crop, 6 million pounds in 1993 and 15 million pounds by 1996. Unfortunately, quality problems in Minnesota prevented these rosy predictions from coming true.

1991 June–Yamato Flight Kitchen starts serving edamame on United Airlines flights from San Francisco to Japan.

1991 April 29 to May 2–The first international workshop / symposium on green vegetable soybeans is held at Kenting, Taiwan. The excellent proceedings, titled *Vegetable Soybean: Research Needs for Production and Quality Improvement,* were edited by S. Shanmugasundaram of the Asian Vegetable Research and Development Center (AVRDC) in Shanhua, Tainan, Taiwan. These are the first English-language proceedings and the first English-language book devoted to green vegetable soybeans. AVRDC has become a leader in research on green vegetable soybeans in Asia–in part because this crop has now become Taiwan's leading agricultural export, with most of the sales going to Japan.

In these proceedings is an especially interesting paper titled "A critical analysis of vegetable soybean production, demand, and research in Japan," by Thomas A. Lumpkin and John Konovsky of Washington state; it contains extensive new information on the history of edamame plus a superb bibliography of 187 references. In about 1986 Lumpkin founded the East Asian Crop Development Program at Washington State University (WSU), in Pullman, Washington. In the summer of 1989 he first grew a trial crop of edamame (20 varieties); this was reported in a 1989 publication. By 1991 he is full-time head of a team of 12 people in this program, all of whom except himself are working part-time, developing East Asian plants–including edamamé–to be grown in Washington state. Lumpkin is interested (among other things) in documenting the history of various East Asian crops. He has collected about 400 varieties of edamamé; the germplasm is maintained at Pullman.

1994 April–The first bibliography devoted to green vegetable soybeans, with 489 references, compiled by Shurtleff and Aoyagi, is published by Soyfoods Center in Lafayette, California.

1994 May 27–Tak Kimura ("Mr. Edamamé"), a food broker from Concord, California, introduces Eda Mame, America's first refrigerated, ready-to-eat edamamé–first sold at Whole Foods Market in Berkeley, California. 8 ounces of precooked, lightly salted green soybeans are packed in a plastic tray with a clear film lid by Yamato Flight Kitchen of Burlingame, California. In Oct. 1994 the first local supermarket to carry Tak's product was Mollie Stone's, an upscale supermarket with six stores in the San Francisco Bay Area. In Feb. 1998 Safeway supermarkets in Northern California become the first large supermarket chain to carry this product, again with Tak Kimura as the broker. By Jan. 2000 this edamamé product was served on United Airlines. Wholesale sales grew from $18,000 in 1994 to more than $540,000 in 1998. In 1998 the market for edamame in the USA (especially on the West Coast) exploded!

1994 July 1–Minnesota Edamame is renamed SunRich Foods. Their 1994 edamame crop is a record 750,000 lb–but

© Copyright Soyinfo Center 2014

still not enough to meet demand.

Other important "firsts" among commercial products after 1990: 1995 Jan.–Sweet Beans (SunRich Inc., Minnesota). 1996 Jan.–Freshlike Baby Broccoli Blend (with 40% green soybeans; Dean Foods Vegetable Co.). 1996 Dec.–Frozen Organic Sweet Beans (Sno Pac Foods, Inc.). 1997 June–Birds Eye Baby Broccoli Blend (Dean Foods Vegetable Co.). 1997 Sept.–Trader Joe's Edamame (frozen in the pods, imported from China by Seaside Farms). 1998 Feb.–Cold Mountain Eda-Mame (Mutual Trading Co., Inc., frozen). 1999 April–Edamame–Blanched Soybeans (retail or foodservice; Seapoint Farms, formerly Seaside Farms). 1999 Aug.–Melissa's Soybeans (Edamame) (Melissa's World Variety Produce). 1999 Oct.–Edamamé (Frieda's, Inc.). 2000 May–Freeze-Dried Green Soybeans in Salsa, Indian Spice, and Sweet & Sour flavors (Eat Your Heart Out, New York; the first freeze-dried and the first flavored or spicy edamame).

In 1999 at least 8 new edamame products were introduced, followed by 9 in the year 2000, and 5 more by May 2001.

2001–The U.S. company with the most innovative and extensive line of edamame products, the best and most colorful graphics (labels and ads), and the most extensive advertising, is Seapoint Farms of Huntington Beach, California, founded in 1997 by soyfoods pioneer Kevin Cross.

2001 July–At least 70% of the green vegetable soybeans consumed in the USA are imported, mainly from China or Taiwan. The two main U.S. growers are SunRich in Minnesota and Cascadian Farms in Washington state. Address: Lafayette, California. Phone: 925-283-2991.

3633. *SoyaScan Questions.* 2013. Questions about the life and work of Theodore A. Van Gundy and his children. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** What year did La Sierra Industries start making foods (about 1927 or 1928)? What was the company's address in Arlington, California? Try to get some land or tax records concerning the business. What Seventh-day Adventist church did the Van Gundy family attend?–Probably La Sierra University Church. Does that church have any records concerning the family? What is the true story about Ransom Brown and Loma Linda's soymilk? When (between April 1934 and Sept. 1935) did La Sierra Industries move to Ontario, California? What was their physical address in Ontario?

Do any of the following have information: La Sierra University? Riverside Public Library? Riverside Chamber of Commerce–Small Business Section? Riverside County tax office? Riverside Historical Society?

3634. *SoyaScan Questions.* 2013. Questions about the life and work of Mildred Lager. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** We need a better relative chronology and absolute chronology of Mildred's life, both before and after she arrived in California; after she started the House of Better Living in Oct. 1933, our knowledge of her life and work is quite good.

Was her middle name Mathilda?

When did Mildred enter college and when did she graduate? From when to when, and at what schools did she teach in Wisconsin and Michigan? Why did she change schools?

When did she start work at The Family Shoe Store in Superior? Why? When did she become a co-owner of the store?

When did Mildred arrive in California? Why did she come to California? Was she influenced primarily by her doctor or by Frank McCoy? If by McCoy, how? By reading his column in her local newspaper or otherwise? Did she first meet McCoy in Michigan or in California.

Where did Mildred first live in California and what did she do to earn a living?

How and when did she meet Frank McCoy? What was the name of his institute? When did Mildred enter that institute, what did she learn, and how long did she stay? How and when did McCoy get his column in the Superior newspaper? When did Mildred start to travel around the United States teaching about and demonstrating foods? How often and for how long did she so this?

When and how did Mildred first meet Gilbert Thayer? Was he in Indiana or southern California at the time? What did he do to help her and her work?

Add to history chapter the 3 key dates related to her two radio programs.

Try to get a marriage certificate for her marriage to Ed Jones. Exactly when in 1946 were they married? Who was present?

The California Marriage Index states that Martha D. Van Gundy married Edwin S. Jones on 7 Aug. 1960 in Riverside, California. He was age 69 (born about 1891) and she was age 57 (born about 1903); Dorothea's formal first name was Martha.

Try to get a death certificate for Mildred Lager.

3635. *VegeScan Notes.* 2013. Major trends and events influencing the rise and fall of the second wave of vegetarianism in the Western world from the mid-1800s until World War I (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The first wave of vegetarianism in the Western world began in Greece starting with Pythagoras (about 530 B.C.) and lasted until about 150 A.D. For almost 700 years many of the most prominent Greek philosophers believed that it was morally wrong to eat animals. The idea then died out for almost 1,700 years.

The second wave of vegetarianism began in England in the mid-1800s. Why did it begin at that time? And why in England? The 19th century in the West was one characterized by the widespread idea of progress, social reform movements, and a utopian vision of the future for human beings and their *perfectibility.* Starting in about 1840, the idea that continual growth and improvement was the usual state of human and natural life resulted from the cumulative scientific, technological, economic, and political changes of the previous eras.

The steady rise of scientific thought and the rapid growth in population gave birth to the industrial revolution, which began in England in about 1760, and radically altered Europeans' view of the world and the future. It had seemed that the amount of food and natural resources available to the rapidly growing number of human beings was steadily shrinking. Between 1700 and 1800 the population of Europe grew by 50% or 60 million people, from 120 to 180 million. Then from 1800 to 1900 it grew by another 47% or 125 million people, from 180 million to 265 million. Population pressure during the 1800s caused millions of Europeans to emigrate, largely to America. Yet population pressure also stimulated invention, starting with the mechanical revolution. As it began, pessimism about people's material future gradually began to be replaced by optimism. The sowing drill (invented in 1701) began the mechanization of agriculture. The Newcomen steam pump (1712) aided coal mining and coal fueled the revolutionary new steam engines patented by James Watt in 1769. Coke smelting and rapid strides in metallurgy produced cheap, sturdy iron for machinery by the 1730s. The flying shuttle (1733) and spinning jenny (1764) replaced hand labor in England's large new cotton textile factories.

By the early 1800s a mighty revolution had come upon England and parts of western Europe. Now it began to gather steam. In 1804 the locomotive was invented by Trevithick, and by 1825 this was translated into a steam-powered train on tracks by Stephenson. Railroad tracks began to spread; over 150,000 miles had been laid worldwide by 1880. In 1807 the steamboat was invented by Fulton, and in 1819 the S.S. Savannah became the first steamship to cross the Atlantic ocean. The telegraph, perfected in 1844 by Samuel Morse, connected the Old and New worlds by transatlantic cable in 1866, quickening the pace of international commerce and politics. In 1851 London hosted the first "World's Fair"–the Great Exhibition at the Crystal Palace, whose theme was universal prosperity. In 1856 the invention of the Bessemer furnace made possible the mass production of steel.

The field of agricultural chemistry, started in about 1840 by Justus von Liebig in Germany, revolutionized agricultural productivity in Europe. The use of mineral or chemical fertilizers steadily increased the yield per acre, allowing agricultural production to grow faster than population. It led to a better diet for most people, but it also allowed ill-nourished livestock, which had formerly been kept as a source of manure, to be increasingly slaughtered for meat.

The chemical revolution began with the discovery by Kekulé in 1865 of the structure of the first organic compound–the benzene ring. Chemists in Germany and England began to create the first synthetic dyes such as mauve (from analine), alizarin, and synthetic indigo.

The rapid growth of population, and the attendant industrial revolution and the revolution in agricultural chemistry, brought many human beings to a new and higher plane of material well being. This led to a social revolution–which also started in England. This decentralized and populist revolution consisted of various reform movements whose goal was to create a more humane and just society for humans and animals alike. In England successive reform bills (1832, 1867, 1884) gave political representation to the new industrial towns, and extended the right to vote to the middle and lower classes, and to Catholics, Dissenters, and Jews. But the largest and most successful reform movement was the antislavery movement that aimed to abolish slavery.

1833–Slavery is prohibited by law in the British Empire; in 1838 all slaves in the British West Indies were emancipated. The growing success of the anti-slavery movement gave encouragement to other reformers working to prohibit or limit the sale of alcoholic beverages (temperance movement in the UK, prohibition in the USA), secure basic rights for women (including the right to vote), prevent cruelty to animals, reform prisons and improved women's clothing, etc.

1847 Sept.–The Vegetarian Society, world's first such society and an offshoot of the Bible-Christian Church (founded 1809), is established at Ramsgate, Kent, in southeast England. James Simpson is elected the first president.

1849 Sept.–*The Vegetarian,* the world's first vegetarian periodical, begins publication in Manchester, England, by The Vegetarian Society (UK). The title is changed in 1860 to *The Vegetarian Messenger.*

1850 May–The American Vegetarian Society is founded in New York. Leaders are William Metcalfe (pastor of the Bible-Christian Church, founded 1817 in Philadelphia), Dr. William Alcott, and Sylvester Graham.

1850 Nov. Publication of America's first vegetarian periodical, the *American Vegetarian and Health Journal* begins in Philadelphia under the direction of William Metcalfe.

1859–*The Origin of the Species* by Charles Darwin is published. This landmark book presents Darwin's theories of evolution and natural selection, which come to form the basis of the modern life sciences. It also discusses Survival of the Fittest (a term previously often used by Mr. Herbert Spencer) and the Struggle for Existence. Upon publication, it provokes great controversy; by casting doubt on the historical accuracy

© Copyright Soyinfo Center 2014

of the biblical account of creation, it caused many believers to question their faith in Christianity. At the same time, it provides a great stimulus to the nascent vegetarian and animal rights movements by showing scientifically the kinship of all creatures. Darwin, a British naturalist, lived 1809-1882.

1863 Jan. 1–President Abraham Lincoln issues the Emancipation Proclamation freeing "all slaves in areas still in rebellion." The biggest victory yet for American social reformers.

1863 June 5–Ellen G. White has a vision near Otsego, Michigan which officially starts Seventh-day Adventists practicing and advocating health reform, including vegetarianism.

1865 April–The U.S. Civil War ends, with the anti-slavery forces victorious.

1865 Dec. 18–The Thirteenth Amendment to the U.S. constitution takes effect, abolishing slavery in the United States.

1871–*The Descent of Man* by Charles Darwin is published. Darwin's second major work, it deals specifically with Darwin's theory of the evolution of the species *Homo sapiens* from monkeys.

1905–Japan defeats mighty Russia in the Russo-Japanese War, thus winning for itself full status as a world power, and becoming the first non-white or non-Western nation to defeat a white or Western nation. Vegetarians in England publicize the fact that the Japanese do not eat meat, that their soldiers eat brown rice, and that part of the victory was based on the Japanese ability to make long marches carrying heavy loads. British vegetarians then challenge the German army to similar long marches with heavy loads–and the vegetarians win, attracting great crowds and attention! The German military command takes note of a new way to save money and increase soldier endurance.

To summarize, as scientific thought led to the technological advances of industrialism, the humility of human beings in the face of the mysteries of the world gave way to a greater self confidence in the 17th and 18th centuries. By 1900 a state of supreme self assurance had begun to reign, along with materialism, rationalism, nationalism, urbanization, liberalism, and socialism. Then in 1914 the new world view and world order was shattered by the catastrophe of World War I, which also drained off most of the energy from reform movements. The dark, beastly side of human beings reappeared. In 1915 Germany starts using poison gas. In 1916, through the use of modern artillery and improved machine guns, 750,000 are slaughtered in bloody trench warfare at Verdun in France, as the French repel a large-scale German offensive. In Jan. 1917 Germany begins unrestricted submarine warfare against neutrals. The first aerial bombing of cities, initially from German Zeppelins and then from bombers (Luftwaffe, etc.), raises the horrors of war to new heights. As human beings increasingly behave in ways formerly considered inhumane, the positive connotation of the word "humane" comes to be tarnished. This prolonged outburst of violence puts a final end to idealistic notions of human perfectibility and progress that were the backbone of the reform spirit that brought vegetarianism to popularity before 1914. Now a new ethic begins to emerge out of the ashes of the European war–articulated so eloquently by Albert Schweitzer in 1923 as "reverence for life" in his book *Ethics and Civilization.*

An asterisk (*) at the end of the record means that SOYFOODS CENTER does not own that document.
A plus after eng (eng+) means that SOYFOODS CENTER has done a partial or complete translation into English of that document.
An asterisk in a listing of number of references [23* ref] means that most of these references are not about soybeans or soyfoods.

SUBJECT/GEOGRAPHICAL INDEX BY RECORD NUMBERS

Africa–Angola. 2326, 3281

Africa–Benin (Bénin in French; Dahomey before 1975; Part of French West Africa from 1904-1960). 1778, 1836, 1904, 1948, 2004, 2073, 2326, 3281

Africa–Botswana (Bechuanaland until 1966). 1717, 1778, 1836, 1904, 1948, 2004, 2073, 2326, 3281

Africa–Burkina Faso (Upper Volta before 4 Aug. 1984). 1717, 1778, 1836, 1904, 2004, 2073, 2326, 3281

Africa–Burundi (Part of the Belgian trust territory of Ruanda-Urundi or Belgian East Africa until 1962). 1717, 1778, 1836, 1904, 1948, 2004, 2073, 3192, 3281

Africa–Cameroon (Spelled Kamerun from 1884-1916; Cameroun in French). 1648, 1717, 1778, 1836, 1904, 1948, 2004, 2073, 3281

Africa–Cape Verde or Cape Verde Islands (Ilhas do Cabo Verde. República de Cabo Verde). 1904, 1948, 2326, 3281

Africa–Central African Republic (République Centrafricaine; Part of Ubangi-Shari-Chad from 1906-1910. Then Ubangi-Shari or Oubangui-Chari. Part of French Equatorial Africa from 1910-1960. Called Central African Empire from 1976-1979; Centrafrique in French). 1717, 1778, 1836, 1904, 1948, 2073

Africa–Chad. 1778, 1836, 2004, 2073

Africa–Comoros, Federal Islamic Republic of the. *Isles Comores* in French. Also called Comoro Islands. Includes the islands of Great Comoro (*Grande Comore*), Anjouan, Mayotte {a French Overseas Territorial Collective since 1976}, and Mohéli. 2073, 2326

Africa–Congo (formerly Zaire). Officially Democratic Republic of the Congo (DRC). Also known as Congo-Kinshasa. Named Zaire from Oct. 1971 to May 1997. Named Congo Free State from 1855-1908, Belgian Congo (*Congo Belge* in French) from 1908-1960, Republic of the Congo from 1960 to 1964, then Democratic Republic of the Congo from 1964-1971. 1002, 1717, 1778, 1836, 1904, 2073, 3281

Africa–Congo Republic (Officially Republic of the Congo or People's Republic of the Congo. Also known as Congo-Brazzaville. Called Middle Congo {Moyen-Congo} from about 1880 to 1960. Part of French Equatorial Africa from 1910 to 1958). 2004, 3281

Africa–Cote d'Ivoire (Ivory Coast until Oct. 1985; Part of French West Africa from 1895-1959). 1778, 1836, 1904, 1911, 2004, 2073, 2326, 3281

Africa–Djibouti (Also Jibuti; French Somaliland–*Côte Française des Somalis*–from 1892 to 1967. French Territory of the Afars and Issas from 1967 to 1977). 2073, 3281

Africa–Egypt. Named United Arab Republic (UAR) from 1958-1971. 210, 445, 650, 1753, 1778, 1836, 1904, 1933, 1948, 1971, 2004, 2035, 2073, 2167, 2213, 2326, 2900, 2984, 3281

Africa–Equatorial Guinea (Rio Muni + Fernando Po; Spanish Guinea before Oct. 1968). 3281

Africa–Eritrea (Part of Ethiopia PDR from 1952 to May 1993). 3281

Africa–Ethiopia (Including Eritrea in Ethiopia PDR from 1952 to May 1993. Formerly Part of Italian East Africa). 1091, 1778, 1836, 1904, 1911, 1948, 2004, 2073, 2326, 3281

Africa–Gabon (Part of French Equatorial Africa from 1910 to 1958). 1717, 1778, 1836, 3281

Africa–Gambia (The). Includes Senegambia. 1717, 1778, 1836, 1904, 1948, 2004, 2073, 2326, 3281

Africa–Ghana (Gold Coast before 1957). 1348, 1648, 1717, 1778, 1836, 1904, 1948, 2004, 2073, 2326, 2335, 2400, 3281, 3481, 3568

Africa–Guinea (French Guinea before 1958; Guinée in French; Part of French West Africa from 1895-1958). 1717, 1904, 3281

Africa–Guinea-Bissau (Portuguese Guinea before Sept. 1974). 2073, 2326, 3281

Africa–Introduction of Soy Products to. Earliest document seen concerning soybean products in a certain African country. Soybeans as such have not yet been reported in this country. 1091, 1717, 1778, 2073

Africa–Introduction of Soy Products to. This document contains the earliest date seen for soybean products in a certain African country. Soybeans as such had not yet been reported by that date in this country. 1091, 1717, 1778, 2073

Africa–Kenya (British East Africa Protectorate from 1895. Renamed Kenya Protectorate in 1920). 1620, 1640, 1778, 1836, 1904, 1948, 1957, 2004, 2073, 2326, 2335, 2400, 2662, 2867, 3192, 3281

Africa–Lesotho (Basutoland before 1966). Constitutional Monarchy Surrounded by South Africa. 1778, 1836, 1904, 1948, 2004, 2073, 2326, 3281

Africa–Liberia. 1717, 1778, 1836, 1904, 1948, 2004, 2073, 2326, 3281, 3297

Africa–Libya (Including Tripoli, Tripolitania, and Cyrenaica; Also Spelled Libia). 1258, 1583, 2176, 2178, 2179, 2180, 2181, 2234, 3281

Africa–Madagascar (Malagasy Republic or Republique Malgache before 1975). 1648, 1778, 1836, 1904, 1948, 2004, 2073, 2430, 2438, 2666, 2667, 2883, 3281

Africa–Malawi (Nyasaland from 1891-1964). 1648, 1717, 1778,

1948, 2004, 2073, 2326, 3281

Africa–Mali (Part of French West Africa from 1895-1960. Senegal & Sudanese Republic from June 20 to August 20, 1960. Formerly also called French Sudan (*Soudan français*, created on 18 Aug. 1890) and Upper Senegal-Niger (*Haute-Sénégal et Niger*)). 1778, 1836, 1904, 2073, 3281

Africa–Mauritania, Islamic Republic of (Part of French West Africa from 1904-1960). 1778, 1836, 1904, 1911, 1948, 2004, 2073, 2326, 3281

Africa–Mauritius (Ile Maurice, Including Rodriguez, in the Mascarene Islands, 450 Miles East of Madagascar). 1904, 1911, 1948, 2326, 3281

Africa–Morocco, Kingdom of (Including Western Sahara. Divided into French Morocco and Spanish Morocco from 1912-1956). 1717, 1778, 1836, 1904, 1948, 2004, 2073, 2326, 3281

Africa–Mozambique (Moçambique; Portuguese East Africa before 1975). 2004, 2073, 2326, 3281

Africa–Namibia (German South-West Africa from 1885 to 1915, and South-West Africa from 1919 to 1966 as a mandate of the Union of South Africa. Namibia came into popular use in 1966 and became official in March 1990). 3281

Africa–Niger (Part of French West Africa from 1904-1959). 1778, 1836, 1904, 1948, 2004, 2073, 3281

Africa–Nigeria, Federal Republic of. 1648, 1717, 1753, 1778, 1836, 1850, 1904, 1911, 2067, 2426, 2427, 2461, 2661, 2664, 2867, 2901, 3281

Africa–Reunion (Réunion is a Department of France, in the Mascarene Islands, 425 Miles East of Madagascar). 3281

Africa–Rwanda (Part of the Belgian trust territory of Ruanda-Urundi or Belgian East Africa until 1962). 1648, 1717, 1778, 1836, 1904, 1911, 1948, 2004, 2073, 3192, 3281

Africa–Sao Tome and Principe, Democratic Republic of. 2004, 2073, 3281

Africa–Senegal (Part of French West Africa from 1895-1959. Sénégal & Sudanese Republic from June 20 to August 20, 1960. Includes Senegambia). 1648, 1717, 1778, 1836, 1904, 1948, 2004, 2073, 2326, 3281

Africa–Seychelles, Republic of. 1836, 1904, 1948, 2004, 2073, 2198, 3281

Africa–Sierra Leone. 1648, 1717, 1778, 1836, 1904, 1911, 1948, 2004, 2073, 2326, 3281

Africa–Somalia. (Formed in 1960 by the Union of British Somaliland and Italian Somaliland. Formerly Part of Italian East Africa). 1836, 1904, 2004, 2073, 2326, 3192, 3281

Africa–South Africa, Republic of (Including four former Homelands–Bophuthatswana, Transkei, Venda, and Ciskei). Named Union of South Africa from May 1910 to May 1961. 230, 282, 286, 292, 302, 676, 1102, 1467, 1480, 1543, 1753, 1766, 1850, 1871, 1974, 2019, 2072, 2218, 2426, 2427, 2437, 2622, 2696, 2867, 3022, 3281

Africa–Soybean Production, Area and Stocks–Statistics, Trends, and Analyses. 1543

Africa–Sudan (Anglo-Egyptian Sudan from 1899-1956). 1778, 1836, 1904, 1948, 2004, 2073, 3192, 3281

Africa–Swaziland, Kingdom of (Independent Kingdom Inside South Africa; Formerly Also Spelled Swazieland). 1778, 1836, 2004, 2073, 2326, 2661, 3281

Africa–Tanzania, United Republic of (Formed the Bulk of German East Africa 1895-1946. Tanganyika existed 1920-1961. Created in 1964 by Merger of Tanganyika and Zanzibar). 1648, 1717, 1778, 1836, 1904, 1948, 2004, 2073, 2326, 2697, 2914, 3281

Africa–Togo (Togoland until 1914). 1648, 1778, 1836, 1904, 1948, 2004, 2073, 2326, 3281

Africa–Tunisia. 1717, 1778, 1904, 1948, 2004, 2073, 2326, 3281

Africa–Uganda. 1439, 1446, 1488, 1489, 1509, 1538, 1543, 1553, 1554, 1555, 1556, 1557, 1558, 1559, 1640, 1661, 1957, 1974, 2072, 2172, 2334, 2335, 2400, 2641, 2661, 2662, 2697, 2769, 2862, 2867, 3192, 3281, 3622

Africa–Zambia (Northern Rhodesia from 1899-1964). 1778, 1836, 1911, 1948, 2004, 2073, 2326, 2661, 2662, 3281

Africa–Zimbabwe (Southern Rhodesia from 1923-1970, Rhodesia from 1970-79). 1480, 1836, 1911, 2661, 3281

United States–States–Texas. 1107, 1182, 1237, 1239, 1330, 1451, 1486, 1494, 1495, 1628, 1829, 1863, 2068, 2098, 2120, 2125, 2138, 2226, 2257, 2459, 2520, 2619, 2718, 2719, 2811, 2816, 2925, 3081, 3214, 3238, 3461, 3598

United States–States–Utah. 282, 2702, 3016, 3081, 3294

United States–States–Vermont. 370, 1213, 1863, 2098, 2876, 2877, 3516

United States–States–Virginia. 164, 207, 293, 493, 719, 736, 831, 908, 999, 1041, 1083, 1107, 1118, 1166, 1237, 1288, 1718, 1863, 2223, 2239, 2275, 2330, 2406, 2426, 3023, 3054, 3099, 3128, 3179, 3314, 3631

United States–States–Washington state. 205, 243, 251, 268, 282, 286, 584, 660, 775, 789, 919, 999, 1001, 1028, 1044, 1096, 1104, 1184, 1215, 1525, 1527, 1846, 1863, 1901, 1954, 1958, 2036, 2038, 2039, 2098, 2174, 2457, 2458, 2666, 2667, 2668, 3052, 3131, 3235, 3328, 3347, 3409, 3446, 3467, 3587, 3599, 3632

United States–States–West Virginia. 268, 282, 357, 3020

United States–States–Wisconsin. 108, 144, 235, 243, 251, 268, 282, 450, 789, 889, 920, 1005, 1041, 1083, 1104, 1166, 1498, 1579, 1747, 1858, 2086, 2100, 2122, 2213, 2239, 2275, 2402, 2694, 2709, 3060, 3174, 3183, 3184, 3414, 3434, 3570, 3631, 3632, 3634

United States–States–Wyoming. 282

United States Department of Agriculture (USDA)–Agricultural Cooperative Service. Including Farmer Cooperative Service (FCS, 1926). 1840

United States Department of Agriculture (USDA)–Agricultural Research Service (ARS, Established 1953). Including Agricultural Research Administration (1942-1953). 1230, 1321, 1531, 2678, 2734

United States Department of Agriculture (USDA)–Arlington Experimental Farm at Arlington, Virginia (1900-1942). 2223, 3631

United States Department of Agriculture (USDA)–Bureau of Agricultural and Industrial Chemistry (1943-1953). Including Bureau of Agricultural Chemistry and Engineering (1938-1943), Bureau of Chemistry and Soils (1927-1938), and Bureau of Chemistry (1901-1927). Transferred to the Agricultural Research Service (ARS) in 1953. 751, 775, 789, 942, 1112

United States Department of Agriculture (USDA)–Bureau of Human Nutrition and Home Economics (1943-1953). Including Bureau of Home Economics (1923-1943), Office of Home Economics (1915-1923), and Nutrition and Home Economics Work in the Office of Experiment Stations (1894-1915). Transferred to the Agricultural Research Service in 1953. 365, 607, 740, 1101, 3444

United States Department of Agriculture (USDA)–Bureau of Plant Industry, Soils, and Agricultural Engineering (1943-1953). Including Bureau of Plant Industry (1901-1943), Office of Plant Industry (1900-1901), and Division of Agrostology (1895-1901). Transferred to Agricultural Research Service in 1953. 370, 371, 397, 409, 417, 420, 459, 498, 638, 707, 714, 730, 734, 735, 736,
