"The Association would probably function in three main stages: (1) It would conduct an enquiry into progress made in this and other countries in the manufacture of non-animal milks [Note: see Harry W. Miller, 1944. "The Story of Milk from the Soya Bean," 37 p.]. (2) Based upon information thus collected and collated, it would consider the problems connected with the successful manufacture and sale of such a milk upon the general market in this country, including the question of scientific research and experiment. (3) Upon the successful manufacture on a small scale of an acceptable, the association would consider the question of large-scale manufacture and sale, including the organization required to promote such manufacture and sale; such, for example, as the formation of a Limited Company.

"While the work of the Association would be largely motivated by the ideals of vegetarianism and veganism, it would nevertheless function as a body with a precise practical job to do, and membership would be open to anyone prepared to support its work.

"The work would take a number of years and require considerable financial support. It would call for sustained and high endeavour, and though difficult, would be by no means impossible to achieve. Its successful outcome would be of immense value in many ways.

"Any persons interested in the proposal should send their name and address to Leslie J. Cross, Uxbridge, Middx. [Middlesex], who will, if support is sufficient act as convener of an inaugural meeting."

Note: This is the earliest document seen (Aug. 2013) that uses the word "Veganmilk" to refer to plantmilk. Address: Vice-President, The Vegan Society.

1224. *Today's Food.* 1956-1973. Serial/periodical. Riverside, California: Loma Linda Foods.

• ***Summary:*** The place of publication is given as Arlington, California from Spring 1960. The Heritage Room of the Del E. Webb Memorial Library at Loma Linda University in Loma Linda, California, owns the following volumes and years: 1(1956)-5(1960), 6(1961)-12(1967), 13(1968)-14(1969), 15(1970)-18(1973). Address: Riverside, California.

1225. White, Herbert Clarence. 1956. California meeting impresses physicians: Display of organically-grown produce earns favorable comment from Los Angeles medical group. *Organic Gardening and Farming* 3(5):70-71. May.

• ***Summary:*** "January 3, 4, and 5 of 1956 were three great days in the annals of Organiculture out here on the West Coast, During the history-making event, nearly 7,000 members of the Los Angeles County Medical Association were brought face to face with the basic principles of natural farming and gardening under the most favorable environment possible."

At the annual mid-winter convention, Foods for Life, Inc. presented a magnificent exhibit of organically-grown fruits, vegetables, nuts and grains. It was favorably received, and so far as the writer could tell, not one unfavorable or

© Copyright Soyinfo Center 2014

disparaging comment was heard from these distinguished physicians about the value or soundness of the Foods for Life enterprise, which involves the growing and distribution of all many kinds of organic foods; all are grown without the use of chemical fertilizers or poison sprays.

"It is heartening to know that Dr. Jonathan Forman's basic concept of 'Creative Medicine' seems to be gaining ground among his fellow Allopathic practitioners. For the benefit of our readers it might be of interest to re-state Dr. Forman's dynamic views on this subject. Here is a paragraph from *The Land*, of which Dr. Forman is editor.

"'It is no oversimplification to say that *our health comes from the soil.* No matter how many physicians and health officers we train, and how much *curative or preventive medicine* they may practice, we cannot attain optimal health until they and we have turned our attention to creative medicine, and thereby learned to keep and even improve our health. To build and maintain good soil is the real fundamental service. Creative medicine must be founded on growing the best foods. Thus alone can create real health for our people–through creating a sound and prosperous agriculture.'"

"The most important single attraction of the Foods for Life booth was the display of succulent, garden-fresh organic produce."

"But the biggest 'hit' of all was the bakery display. In front of the array of Foods for Life loaves, trays of delicious peanut-butter and creamed-cheese sandwiches were placed. These, of course, were made from the new 100% whole-grain loaf we have mentioned. A leaf or two of crisp bronze lettuce was also incorporated into each delightful sandwich. One of these dainty 'delicacies' was offered *free* to each visitor at the booth. The almost overwhelming popularity of this 'sandwich feature' is indicated by the simple fact that that nearly 3,000 of these tantalizing, titillating morsels 'disappeared' during the three day medical conclave.

Note: The founder and head of Food for Life, Inc. was Dr. George Johnstone, a Seventh-day Adventist physician, who also founded Behrens Memorial Hospital in Glendale, California. Address: Emmaus, Pennsylvania.

1226. Chen, Philip S. 1956. Heart disease and soybeans: Will recent medical discoveries mean increasing importance for soybeans? *Soybean Digest.* June. p. 22, 24.
• ***Summary:*** Philip Stanley Chen was born in 1903. Address: Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts.

1227. *CME Alumni Journal* (*College of Medical Evangelists, Loma Linda, California*). 1956. Harry Miller, M.D., O.B.B.S. July. p. 44.
• ***Summary:*** Dr. Harry W. Miller, class of 1902-a, "recently returned from Formosa with the highest honor the Chinese Nationalist Government can confer, the Order of the Brilliant Blue Star. This is comparable to the U.S. Congressional Medal of Honor.

"Dr. Miller received the award personally from General Chiang Kai Shek, at a party at the President's mansion with the Generalissimo and Madam Chiang.

"The award came as a climax to Dr. Miller's last contribution to medical work in that area. For the past two years he has been in Formosa where he established and has been director of the new SDA Taiwan Sanitarium and Hospital." A photo shows Dr. Miller bowing as he receives the award and shakes hands with Chiang Kai Shek.

Note: Dr. Miller graduated from the American Medical Missionary College in Battle Creek, Michigan, in 1902. The commencement address was given by Dr. John Harvey Kellogg. According to the 1996 Seventh-day Adventist Encyclopedia, there was no organizational or legal connection between American Medical Missionary College and the College of Medical Evangelists (CME).

1228. **Product Name:** Loma Linda Soy Milk (Powdered, and Liquid).
Manufacturer's Name: Loma Linda Food Co., Eastern Div.
Manufacturer's Address: P.O. Box 388 (Wooster Road), Mount Vernon, Ohio.
Date of Introduction: 1956.
New Product–Documentation: Soybean Blue Book. 1956. p. 99. No brand name is given, but the product includes Soyalac. This is right after Loma Linda bought Dr. Harry Miller's International Nutrition Laboratory. *Soybean Digest Blue Book.* 1970. p. 117. "Powdered and liquid soy milk in five flavors."

1229. **Product Name:** Instant Soyamel (Soy Milk. Based on Isolated Soy Protein) [Powdered, or Liquid, in Plain, or Malt Flavors].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio.
Date of Introduction: 1956.
New Product–Documentation: See next page. Soybean Blue Book. 1958. p. 88. "Processing and packing powdered soy milk." No brand name given. Wholesale price list. 1957. April 1; Letter from Allan Buller. 1981. April 29. Shurtleff & Aoyagi. 1984. Soymilk Industry and Market. p. 28. This was the "world's first soymilk to be made from soy protein isolate; the isolate was manufactured by Gunther Products in Illinois. This was not an infant formula." Sold in 12 oz, 3 lb, or 15 lb sizes.

1230. Chen, Philip S.; Chen, Helen D. 1956. Soybeans for health, longevity, and economy. South Lancaster, Massachusetts: The Chemical Elements. xii + 241 p. Illust. Index. 21 cm. 2nd ed. Jan., 1962, 242 p. [24 ref]

© Copyright Soyinfo Center 2014

• ***Summary:*** See next page. A comprehensive review of the subject. Contents: Preface, by the author (South Lancaster, Massachusetts, July 1956). Foreword, by Geo. M. Strayer, Vice-President and Secretary-Treasurer, American Soybean Association. Introduction. Part I: Nutritive value of the soybean. 1. Protein (incl. Dr. Wolfgang Tiling of Hamburg, Germany; Dr. Harry Miller). 2. Fat (incl. phosphatides, sterols and hormones). 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease (incl. Dr. Wolfgang Tiling of Germany).

Part II: Soy products. 8. Soybean oil: Composition and properties, processing and refining, reversion, uses, phosphatides, margarine, mellorine (vegetable frozen dessert). 9. Soybean oil meal: Heat treatment, Gelsoy, Multi-purpose Food. 10. Soy flour: Uses, soy bread vs. enriched white bread. 11. Soy milk. 12. Soy cheese (or soybean curd, "aptly described by the Chinese as 'the meat without bones'"–incl. pressed tofu sheets and yuba). 13. Soy sauce: Preparation of kojis, brine fermentation, production yields, microorganisms are available. 14. Soybean sprouts.

Part III: Soybean culture and preservation. 15. Soybean culture: Two types of soybeans (commercial field vs. edible or vegetable varieties), inoculation, fertilizer, cultivation,

© Copyright Soyinfo Center 2014

harvest. 16. Preservation of soybeans: Shelling, canning, freezing, dehydration, harvesting dry mature soybeans.

Part IV: Recipes. 17. Soybeans and soybean pulp: Green or fresh soybeans, dry soybeans, soybean pulp ("prepared by pressing cooked soybeans through a coarse sieve or by grinding them in a food grinder"), recipes (incl. Soyburger, Scalloped green soybeans, and Roasted soybeans–dry roasted or deep-fried (p. 151). Describes how to make wheat gluten at home and praises monosodium glutamate for its ability to improve the flavor of recipes–though its use is called for only in the recipe for Soyburger). 18. Soy flour: Breads, cakes, cookies, pies, soups, other recipes (A recipe for Wafers, p. 180, calls for "½ cup roasted soybeans, finely chopped").

19. Soy grits and soy flakes. 20. Soy milk. 21. Soy cheese. 22. Soybean sprouts.

Appendices: A. Soybean utilization (chart). B. Manufacturers and handlers of soy foods (Source: 1956 *Soybean Blue Book*). C. References.

Chapter 1, "Protein," begins: "The soybean is best known for its high protein content (p. 7). It then discusses the work of Dr. Harry Miller (p. 14-15).

Chapter 15, "Soybean Culture," describes how to grow soybeans in a garden. Pages 126-27 discuss the two types of soybeans: the commercial field type and the edible vegetable type. Five major differences between the two types are discussed (p. 126). The edible varieties are larger in size, do not yield as heavily (though they yield more heavily than snap beans or lima beans), are more prone to shatter as they near maturity in the field, are superior in flavor, texture, and ease of cooking, and some edible varieties are also superior in the manufacture of soybean flour, soybean milk, roasted beans and other products. Table 31 (p. 130) lists eleven varieties of edible soybeans: Very early–Giant Green. Early–Bansei, Fuji. Midseason–Hokkaido, Jogun, Willomi. Late: Illington, Imperial, Funk Delicious, Emperor, Higan. Commercial–Illini.

Chapter 16, "Preservation of Soybeans," describes how to preserve "green soybeans" by canning, freezing, and dehydration.

Photos show: (1) A sack of Lincoln soybeans (facing p. 1). (2) Soybean plants, showing pods and leaves (p. 3 and 4). (3) A beam balance with a small amount of soy flour balancing many animal products. "The protein value of soy flour: 1 lb. of soy flour contains protein values equal to 2 lbs. beef, or 34 eggs, or 6 quarts milk." Source: Health and Character Education Institute (p. 6). A similar photo (p. 24) states: "1 lb of soy flour contains food calories equal to 3½ lbs beef, or 3 quarts milk, or 29 eggs. (4) Two views of a child. Left, suffering from marasmus. Right, after six months on a soy milk diet. Courtesy Dr. Wolfgang Tiling (p. 62). (5) A machine at the Northern Utilization Research Branch of USDA treating soybean oil with alkali (p. 72). (7) Quaker City No. F4 grinding mill (p. 102; Courtesy Straub Co., 4059 Ridge Ave., Philadelphia, Pennsylvania). (8) Early soy cheese (tofu) production in the United States (p. 108; perhaps at Madison Foods). (9) The Northern Utilization Research Branch, Agricultural Research Service, USDA–shows outside of the huge building (p. 113). (10). How to grow soy sprouts in a glass jar at home (p. 119). (11) Well nodulated soybean roots (p. 129; Courtesy The Nitragin Co.). (12) Baked soybeans in a crock (p. 144). (13) Soy flour used in numerous baked products (p. 159; Courtesy ADM). (14) Griddle cakes [pancakes] made with soy flour brown quickly (p. 173). (15) Soy peanut butter cookies (incl. peanut butter and soy flour; p. 185). (16) Soy grits in a glass jar (p. 198). (17) Freshly-cooked crisp soybean sprouts in a raw vegetable salad (p. 219).

Note 1. The first printing of this book (1956) was dedicated "To Li Yu Ying and William J. Morse, *The Soybean Champions of the Eastern and Western Hemispheres,"* but by the second printing (April 1957) the dedication had changed "To William J. Morse and Harry W. Miller, *The Soybean and Soy Milk Champions of Our Time."*

The publisher of this third printing was unable to sell all the books printed, so Chen apparently arranged for a company named "Outdoor Pictures" (Box 1326, Escondido, California) to sell them. On the title page, Outdoor Pictures pasted their name and address over that of "The Chemical Elements."

Note 2. According to the *National Union Catalog*, Philip Stanley Chen was born in 1903. The rear cover states that he was born in China and is now a naturalized U.S. citizen. He is a graduate of Emmanuel Missionary College [in Berrien Springs, Michigan] and Michigan State University. Before writing this, his first book on diet, health, or soybeans, he wrote several books on chemistry: (1) The Chloro Derivatives of *m*-cresol. 1933. Easton, Pennsylvania: Mack Printing Co. 7 p. (Abstract of his PhD thesis, Michigan

State College of Agriculture and Applied Science); (2) *The Chemical Elements, Rev. ed.* 1948. South Lancaster, Massachusetts: Chemical Elements (fold chart). (3) 500 Syntan Patent Abstracts, 1911-1950. 1950. South Lancaster, Massachusetts: Chemical Elements. 125 leaves. (4) Syntans and Newer Methods of Tanning. 1950. South Lancaster, Massachusetts: Chemical Elements. 128 p.

In 1962 Chen wrote *A New Look at God,* published by Chemical Elements (288 p.). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

1231. Chen, Philip S.; Chen, Helen D. 1956. Tables (Document part). In: P.S. Chen and H.D. Chen. 1956. Soybeans for Health, Longevity, and Economy. South Lancaster, Massachusetts: The Chemical Elements. 241 p. [24 ref]

• ***Summary:*** Tables show: (1) Soybean production in the United States, 1924-1958 (p. 2). (2) Essential amino acid content of some foods (calculated as percent of amino acid in sample). Foods include: Extracted soybean oil meal, whole milk, whole eggs, beef loin, patent wheat flour (p. 8). (3) Protein efficiency of a number of proteins (incl. whole milk 2.9, cottonseed flour 2.0, peanuts 1.9, soybean flour 1.8, casein 1.7, patent flour 1.00) (p. 11). (4) Biological value of food proteins for human adults (incl. whole eggs 78, milk 74, meat 72, soy flour 65, peanut flour 42, white flour 41) (p. 11). (5) Supplemental values of soy flour and milk for wheat flour (p. 12). (6) Nutritional quality of soy flour and milk solids in bread (p. 13). (7) Fat content of several common foods (p. 16). (7A) Chemical composition of vegetable oils (in per cent) (p. 18). (8) Carbohydrate content of soybeans (Street & Bailey) (p. 21). (9) Caloric values of various cereals and legumes (p. 22). (10) Mineral content of soybeans (p. 25). (11) Calcium, phosphorus and iron content of soybeans (p. 26). (12) Availability of iron in different foods (p. 27). (13) Availability of iron in several Hawaiian foods (p. 28). (14) Alkalinity of various foods (p. 29). (15) Vitamin content of soybeans and soybean oil meal (p. 32). (16) The vitamin B-1 content of some common foods (milligrams per 100 grams) (p. 34). (17) The vitamin B-complex content of soy flour as compared with wheat flour (per 100 grams of flour) (p. 35). (18) Choline content (dry weight basis) (p. 37). (19) Production of fats and oil in the United States in 1953 (p. 67). (20) Physical and chemical characteristics of soybean oil (p. 68). (21) Chemical composition of soybean oil (p. 69). (22) Protein concentrates used for feed in the United States, 1954-1955 preliminary (p. 83). (23) Correlation of volume of loaf and urease content of soy flour used in making bread (p. 86). (24) Analysis of nutritive elements (p. 92). (25) Soy flour standards (p. 94). (26) The growth-promoting values of the proteins of soybean flour, peanut flour, and cottonseed flour and their values as supplements to the proteins of patent wheat flour (p. 99). (27) Composition of soy milk and cow's milk (p. 103). (28) Some precipitating agents for soy milk (p. 107). (29) Composition of soybean curd (p. 109). (30) Composition of soy bean sprouts vs. mung bean sprouts (p. 122). (31) Eleven varieties of edible soybeans (p. 130). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

1232. Chen, Philip S.; Chen, Helen D. 1956. The work of Dr. Harry Miller with soy milk (Document part). In: P.S. Chen and H.D. Chen. 1956. Soybeans for Health, Longevity, and Economy. South Lancaster, Massachusetts: The Chemical Elements. 241 p. See p. 14-15. [24 ref]

• ***Summary:*** Chapter 1, "Protein," begins: "The soybean is best known for its high protein content (p. 7). It then discusses the work of Dr. Harry Miller (p. 14-15): "The one who has done more with soy milk than any one else is Dr. Harry W. Miller, Director of Research, International Nutrition Research Foundation. He began his work with soy milk shortly after 1925 when he was in China as a medical missionary and saw the need of making a preparation for the feeding of babies and children. Referring to his work with soy milk, he said,'I regarded that work as of far greater importance than the building up of the sanitarium because it had to do with the preservation of thousands of lives that otherwise would be lost if they did not have a proper substitute for mother's breast milk, because cow's milk is beyond the economic level of the Chinese people and almost all the Oriental races. We used this milk extensively and a long period of experimental work was carried on. Studies were made of the development of babies and children as to their weight gains, their height gains, their disposition, their skin texture, their hair development, their dentition and bone development. We finally published the article in the Chinese Medical Journal in 1937.'

"Dr. Miller was the first to put out a true soy milk, one that is homogenized and built to any formula. Finally he made it into a powdered milk by spray drying. Both 'Soyagen' and 'Soyalac,' which he perfected according to his patented process, are now widely used by infants and children who are allergic to cow's milk, as well as by grown-ups who prefer a vegetarian diet.

"Besides his factory in this country, Dr. Miller has established soy milk plants in Japan and Formosa [Taiwan], and has helped the United Nations build a plant in Indonesia. His formula is used by three large soy milk companies in Hong Kong, one of which puts out 75,000 bottles a day." Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

1233. Chen, Philip S.; Chen, Helen D. 1956. Soy cheese (Document part). In: P.S. Chen and H.D. Chen. 1956. Soybeans for Health, Longevity, and Economy. South

Lancaster, Massachusetts: The Chemical Elements. 241 p. See p. 106-10. Chap. 12.

• ***Summary:*** "Soy cheese" is tofu. Starts by describing how to make tofu. A very interesting photo (p. 108) shows "Early soy cheese production in the United States" (probably at Madison College in Madison, Tennessee).

"Soybean curd contains 7 to 9 percent of highly digestible protein with little carbohydrates and no crude fiber, and therefore has been aptly described by the Chinese as 'the meat without bones'" (p. 108). "From the soybean curd are derived three products of which the Chinese are very fond. They are Tofu Kan [pressed tofu], Tofu P'i [pressed tofu sheets] and fermented soybean cheese [fermented tofu]. These are briefly described below.

"Tofu Kan, or dried soybean curd, is made by filling a small straw or cloth bag with soybean curd and subjecting it to great pressure to reduce further the water content. The product [each cake] measured about 2½ by 2½ by ¼ inches and has the consistency of a soft rubber eraser. The dried soybean curd thus prepared may be seasoned with burnt millet-sugar or soy sauce flavored with tea or other spices.

"Tofu P'i, or soybean curd skin, is formed by pressing soybean curd between sheets of cloth under great pressure. The formed Tofu P'i is like a sheet of canvas about one foot square. It is generally used as a wrapper for sausage.

"Fermented soybean cheese is made in several forms and with different flavors. They are prepared by exposing cubes of soybean curd (from ½ by ½ by ¼ to 1½ by 1½ by ¼ inches) on matting to mould for a week or longer, and then placing it is salted rice wine or salted soy sauce to age for 6 months to a year.

"Besides soybean curd and other soybean products, another food product derived from soy milk that is popular among the Oriental people is Yuba. The Yuba is the name given to the protein film that forms on the surface of soy milk when the latter is heated nearly to the boiling point. It is removed with sticks, hung on a line and dried in the form of sheets or sticks. Before being use, it is wetted back by soaking in water. The Yuba in sheet form is like Tofu P'i and finds similar uses."

Note 1. This is the earliest English-language document seen (Oct. 2012) that uses the term "protein film" to refer to yuba.

Note 2. This is the earliest document seen (Nov. 2010) in which the Chinese author (Philip S. Chen, Ph.D.) uses the Japanese word "Yuba" to refer to this delectable soyfood, which is popular in both China and Japan. Its Chinese name makes no sense when translated into English–"bean curd skin." Dr. Chen was a Seventh-day Adventist. Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

1234. Chen, Philip S.; Chen, Helen D. 1956. Soybean sprouts (Document part). In: P.S. Chen and H.D. Chen. 1956. Soybeans for Health, Longevity, and Economy. South Lancaster, Massachusetts: The Chemical Elements. 241 p. See p. 117-22. Chap. 14.

• ***Summary:*** Begins by discussing the research of Dr. Clive McCay at Cornell University on soybean sprouts, then gives the 8-step procedure for sprouting soybeans at home recommended by Cornell.

Dr. Chen then adds: "The sprouts will be fully grown in four to six days when they are around 1½ to 2 inches in length. They should be taken out of the vessel before rootlets have shown their appearance. After the sprouts are washed to free them from loose hulls or seed coats and excess water, they are ready to be used in cooking, stored in the refrigerator, or blanched for two minutes and placed in a deep freezer.

"The writer has found that either 30-ounce fruit juice cans or 3-pound shortening cans are very convenient for use in sprouting soybeans. The cans were perforated with small holes at the bottom. After the soaked beans were placed in the cans, they were then covered, and left on the draining board of the kitchen sink to drain. The beans were watered regularly after each meal when the dishes were washed.

"For those who might encounter difficulty in their first few experiments and become discouraged, the following suggestions are offered:

"Beans will become moldy or even rot during sprouting if they are too old and lack germination. The only remedy for this is to use new seeds with high germination values.

"In case the decay of the beans is due to bacterial action, the use of a disinfectant may be resorted to, provided its use is limited to not more than one-half hour treatment. The disinfectant to be used may be in the form of chlorinated lime (bleaching powder) or any of the soluble hypochlorite solutions such as Chlorex [sic, Chlorox?], Dazzle, Oxo, or Savol. The use of water containing one teaspoon of chlorinated lime or other bleaching solutions in three

© Copyright Soyinfo Center 2014

gallons of water once a day will be sufficient to discourage the growth of mold or bacteria which cause spoilage of the beans. Frequent changing of soaking water was found by some to be just as effective as bleaching solution.

"It might be well for the housewife to gain some experience from sprouting mung beans before attempting to sprout soybeans. Mung beans are the tiny green beans out of which the bean sprouts used in chop suey dishes are prepared. They may be purchased in Chinese grocery stores in any Chinatown, and they never give trouble in sprouting. While they are easy to cook and widely used, they cannot compare with soybean sprouts in flavor and food value."

Two photos show soybeans being sprouted in an inverted glass fruit jar in a sink (Courtesy Nebraska Extension Service).

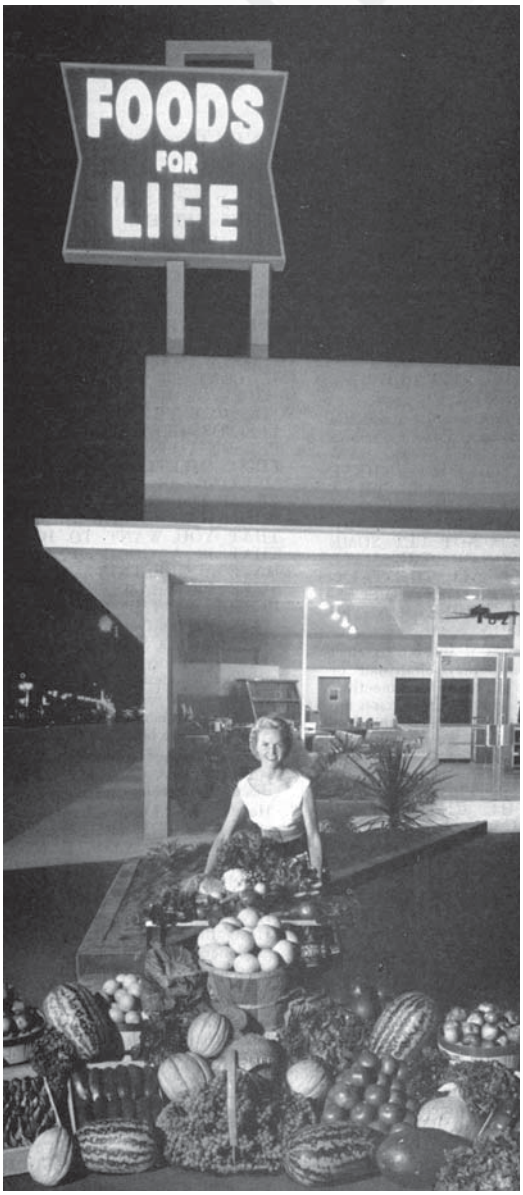
A table (p. 122, based on Li and Grandvoinnet 1911-1912) compares the nutritional composition of soybean sprouts and mung bean sprouts. Soybean sprouts contain 14.73% nitrogenous materials (protein) compared with only 3.41% for mung bean sprouts. Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

1235. Powell, Horace B. 1956. The original has his signature–W.K. Kellogg. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 358 p. Illust. No index. 24 cm.
• ***Summary:*** The lack of an Index and of any bibliographic references greatly reduce the value of this book.

W.K. Kellogg built a mighty breakfast cereal manufacturing company and established a major charitable foundation. In 1906 W.K. Kellogg started his own company making corn flakes.

"In February of this year [1956] the Kellogg Company observed the fiftieth anniversary of its founding, and June will complete the W.K. Kellogg Foundation's twenty-fifth year as the vehicle of its founder's investment in people."

Until the late 1890s consumption of peanuts in America was mostly roasted in the shell. However, in 1894 Dr. John Harvey Kellogg, M.D., an eminent health reform advocate and director of the Sanitarium in Battle Creek, Michigan, developed and introduced peanut butter as a nutritious, easily digested health food for patients [see p. 94-95].



Note: A short article titled "Corn Flakes maker Kellogg deceased," in an unknown Oct. 1951 magazine states that "W.K. Kellogg died on 6 Oct. 1951, at age 91. He credited his longevity to his diet based on Kellogg's Corn Flakes and other vegetarian foods. He developed the first wheat flake in 1894 at his brother's sanitarium in Battle Creek, Michigan, and promoted the product tirelessly. He spent millions on charity.

"In 1907 a conflagration engulfed one of his factories. Will Keith was calm. 'The fire is of no consequence,' he said. 'You can't burn down what we have registered in the mind of the American woman.'" A photo shows W.K. Kellogg and his seeing eye dog standing in front of the W.K. Kellogg Foundation.

1236. White, Herbert Clarence. 1957. Natural Food Associates in action. *Natural Food and Farming* (*Atlanta, Texas*) 3(10):12-14. Feb.
• ***Summary:*** Heroes of the Natural Foods Movement include Dr. Joe Nichols, Paul Pfund, Dr. Fred Miller, Earl Striplin, Leonard Wickenden, Dr. Royal Lee, and many others.

"But in this brief story I want to bring to our membership the thrilling story of another N.F.A. member from the medical profession who has gone 'all the way' in an effort to bring 'Creative Medicine'–not only to his family, and to the patients in his 100 bed Behrens Memorial Hospital [Glendale, California], but to the *entire community.*

The article then focuses on the story of Dr. George A.

© Copyright Soyinfo Center 2014

Johnstone of Glendale, California, the Glendale, California, founder and president of Foods for Life, Incorporated, and of its first Foods For Life market and lunch counter, which opened in the late spring of 1950 in Glendale, California (on South Verdugo Road).

Dr. Johnstone has three farms–one in North Dakota and two in Southern California. After hearing the writer speak, he said: "I want to get onto this organic program–and Fast! Will you help me?" And that is how Foods for Life was conceived. Three months later the Foods for Life enterprise was "born" as a legal corporation with nearly twenty of Dr. Johnstone's medical associates.

"One of the first projects of the new corporation was to make Dr. Jonathan Forman's concept of 'Creative Medicine' not merely a 'dream' but a 'living reality' in the lives of the Glendale community. Southern California organic farmers from Escondido to Santa Barbara were sought out and their garden-fresh, vitamin-packed, mineral-rich produce was made available to city dwellers in the greater Los Angeles Metropolitan area."

The second step was to establish the Foods for Life store.

One photo shows the outside, and three show the inside of the huge, modern natural foods supermarket–the first of its kind in the United States.

Note 1. Dr. George A. Johnstone was a Seventh-day Adventist and graduate of the College of Medical Evangelists (now Loma Linda University) School of Medicine Class of 1923.

Note 2. According to a small ad in *Modern Nutrition* magazine, in about 1961 Foods for Life was located at 821 E. Broadway, Glendale, California. It sold "Organically grown and unsprayed fruits and vegetables. Roger Jessup and Alta Dena certified Milk. Natural Vitamins and Minerals."

Note 3. In 1968, Dr. Jonathan Forman established the Jonathan Forman Gold Medal Award, honoring those who had contributed to the field of clinical ecology. Dr. Forman was also president of Friends of the Land–and a professor of the history of medicine at Ohio State University.

1237. Nichols, Joe. 1957. President's address, 1957 national convention. *Natural Food and Farming* (*Atlanta, Texas*) 3(11):5, 8-10. March.

• ***Summary:*** "Natural Food Associates was organized in January, 1953, at the Normandy House in Chicago, Illinois. A small group of men and women met together in an effort to effect a national organization which would have for its objective, the teaching of the advantages of natural, poison-free food and natural organic farming methods. This was not the beginning of the organic movement in America. Many people and a few organizations had practiced organic farming and had taught the values of natural foods for many years. Long before Sir Albert Howard's book, *An Agricultural Testament*, was published in this in this country in 1946, there were organic farmers scattered all over this nation. Some of the people at our first Chicago convention had been taught organic farming by their fathers. The publication of Sir Albert's book and the work of the Mr. J.I. Rodale of Emmaus, Pennsylvania, did much to increase the interest of thousands of American farmers. Books by Friend Sykes and Sir Lionel Picton in England, and the work of Lady Eve Balfour and her Soil Association, with

© Copyright Soyinfo Center 2014

members scattered all over the world increased interest in natural farming methods and emphasized the declining nutrition of both man and beast. Sir Robert McCarrison for years had tried to interest the medical profession in better nutrition. Our own Dr. Royal Lee, Dr. Henry Trautmann, Dr. Jonathan Forman, Dr. Fred Miller, Dr. Coda Martin, Dr. Ray Evers and many, many others have recognized the values of natural foods grown on fertile soils for years. Dr. James Asa Shields of Richmond, Virginia, has been writing about the relationship of soils to health for a long time. The American Academy of Nutrition, organized on the West Coast in 1936, was an attempt by a group of doctors and dentists to find and publicize the truth about nutrition in relation to metabolic disease. Dr. E.E. Pfeiffer, who is perhaps the world's greatest soil scientist, has proved the principles of organic farming, long before some of you were born."

"The Mormons and the 7th Day Adventists have known and practiced these principles for decades."

"Modern scientific agriculture and modern scientific nutrition have failed. The plight of our farmers and the illness of our people prove that statement... The real cause of our farm problem is poor soil and the hordes of insects that have resulted from chemical farming. Chemical farming has failed... All history teaches us that every great civilization has failed when the fertile soil was destroyed." Address: Atlanta, Texas.

• ***Summary:*** Dr. Joe D. Nichols, a "small town Texas banker, physician and nutritionist," spoke yesterday before 75 physicians at a staff meeting in Behrens Memorial Hospital, Glendale, California. When he finished, he was applauded. Nichols is the spark plug behind "several organizations which are trying to change farming methods and the nation's dietary habits."

He said that we live in a country where we have more good physicians, more excellent medical schools and hospitals, more education, more outstanding scientists, and more money than any other country on earth.

"But despite all of this, everybody in the country is sick." He said that he did not know anyone, anywhere, who did not have some physical disability. Even his own son, age 3, has three bad teeth!

Diseases such as heart disease, cancer, high blood pressure, stomach ulcers, rheumatism, diabetes, and mental diseases are all increasing in the USA. He believes that the basic cause of these problems is modern chemical farming–the way we mistreat our soil, with chemical fertilizers and sprays–and the effects of this on the crops and animals that consume the products of such farms. The plants are unhealthy, and so the animals (both human and non-human) are unhealthy.

He then discussed refined foods, such as white bread and white rice. He described white sugar as "the worst food in the American diet"–noting that not even a worm would eat it. By refining natural foods, American food processors are destroying their life-giving qualities. When people eat such foods, day after day, it is no surprise that they are poorly nourished.

Note 1. This is the earliest article seen (Aug. 2010) on "Joe D. Nichols" in the ProQuest suite of 15 digitized major American newspapers.

Note 2. Behrens Memorial Hospital was founded and is run by Seventh-day Adventist physicians.

• ***Summary:*** About soy milk. Address: 11503 Pierce Place, Arlington, California.

1243. Walley, Ersel. 1957. Soybeans around the world. It would take 400 million bushels of soybeans to meet minimum needs of babies and growing children alone in the Orient. *Soybean Digest.* Sept. p. 30-32.
• ***Summary:*** The author made a world tour studying soybeans, including visits to Hawaii, Japan and other parts of Asia, and Italy. He studied production of soy milk in Taiwan, Hong Kong, and Bangkok (Thailand). In Taiwan he visited a soya milk plant which was established "by our good friend and American Soybean Association pioneer, Dr. H.W. Miller. In Hong Kong, the 'peek hole' and gap in the Bamboo Curtain, we found many small soya food producers and no doubt the largest and most successful soya milk plant to be found anywhere [Hong Kong Soya Bean Products Co. Ltd., makers of Vitasoy]." Hong Kong is the place where competition between soybeans from Red China and the USA is said to meet head-on. "May I voice my conclusion that Red China needs in its domestic economy more soybeans than it can possibly produce.

"A trip to southeastern and south Asia included good and sufficient visits to Thailand (Siam), Burma, India, and Pakistan. Of these countries, Pakistan is the only one that has soybean production of mention and here the total production is less than 1 million bushels per year."

A photo shows Walley. Address: Part president and chairman of Market Development Committee, American Soybean Assoc.

1245. **Product Name:** Compro (Canned Meatless Meat with Tofu).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1957.
Ingredients: Wheat gluten tofu, seasonings.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable.
New Product–Documentation: Letter from Sam Yoshimura. 1981. March 19.

1246. **Product Name:** [Soymilk].
Foreign Name: Tônyû.
Manufacturer's Name: Ueda Tofu Shop.
Manufacturer's Address: Hachioji, Tokyo, Japan.
Date of Introduction: 1957.
Wt/Vol., Packaging, Price: 180 ml bottles.
How Stored: Refrigerated.
New Product–Documentation: William Shurtleff. 1981. Soyfoods. p. 35. "Dr. Harry Miller: Taking soymilk around the world." "Starting in about 1955 Dr. Miller started to recommend that the Adventist-run Japan San-iku School serve soymilk instead of cow's milk to the students; however the staff hesitated because of its nutritional value and flavor. In 1957 two Japanese Adventists, Mr. Hidekazu Watanabe and Mr. Hanzo Ueda (who ran Ueda Tofu Shop at the time), started making Japan's first soymilk on a small scale in Hachioji, Tokyo, bottling it is 180-ml milk bottles, and selling it locally. Mr. Watanabe later described the great value to them of Dr. Miller's ongoing technical, nutritional, and spiritual guidance. After some time, directors of the San-iku School visited the small soymilk plant, liked the soymilk flavor, and understood its nutritional value. In 1959 they bought similar equipment, set up a small plant in the school, and started to produce soymilk, which was bottled in 180-ml bottles and served to the students at every meal. In 1969 the San-iku School set up an independent food production company called College Health Foods (which later became today's San-iku Foods) and through it, with the help of Loma Linda Foods in America, began to produce Soyalac soymilk infant formula."

Letter (in Japanese) from Hidekazu Watanabe. 1981. July 19. Discusses the early history of this product. "The Ueda Tofu Shop in Hachioji helped with the product development; I was there at the time. In those days our name was *San-iku Gakuin Shokuhin-bu*, not San-iku Foods. The purpose was to provide a place of labor for the students and opportunities to learn food processing. It was not a business. Dr. Perry Webber was the principal of our school at the time. I think that our company did not make commercial soymilk before 1957. The food company is said to have been founded in 1928 in connection with the school, but legally it did not become an independent company until December 1970."

Note 1. This is the earliest known commercial soymilk product made in Japan.

Note 2. This product was the predecessor of Soyalac made by San-iku Foods.

Letter from Mr. Ichiro Tabuchi of San-Iku Foods. 1990. July 4. In 1948 Mr. Tabuchi visited Dr. Harry W. Miller and studied at his soymilk plant in Mt. Vernon, Ohio. During this period, Dr. Miller visited Nihon San-iku Gakuin (located at Chiba prefecture, Sodegaura-cho) almost every year and earnestly advised the people there to make soymilk. In about 1957-58 they started to make soymilk at a tofu plant that was owned by Mr. Ueda. They bottled it in 180 ml dairy milk bottles, which they sold with their tofu. It was a small scale operation and it didn't last long.

Note 3. This is the earliest document seen (Aug. 2013)

concerning major soymilk manufacturing companies in Japan.

1247. **Product Name:** VP ("Vegetable Protein").
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1957.
Wt/Vol., Packaging, Price: 20 oz or 4.75 lb can.
New Product–Documentation: Wholesale price list. 1957. April 1. Sold in 20 oz or 4.75 lb cans.

Chopletter (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include VP.

1248. **Product Name:** Fry-Sticks (Like Chicken Drumsticks; Spelled Fry Sticks by 1971).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1957.
Ingredients: In 1971: Wheat protein [wheat gluten], soya, potato meal, powdered whole eggs, hydrolyzed vegetable proteins, dehydrated onion and garlic, plant extractive flavorings, MSG, salt, water.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Wholesale price list. 1957. April 1. Sold in 12 oz and 4 lb 12 oz cans. No description of the product is given.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 163. Lists the ingredients in "Fry Sticks (Worthington)." This is an institutional product.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned chicken drumstick-like product based on spun soy protein fiber.

• ***Summary:*** Though written in a light-hearted, often humorous and playful manner, this book is nevertheless extremely well researched and well written. The author has spent 12 years pursuing the social history of American eating and food reform movements. It contains an excellent history and chronology of the 19th century vegetarian food reform movement (inspired in large part by Seventh-day Adventist teachings), which led to the development of ready-to-eat breakfast cereals and other foods by W.K. Kellogg, John Harvey Kellogg, C.W. Post, Sylvester Graham, and others.

Contents: 1. Foodtown, U.S.A. (Battle Creek, Michigan). 2. The landing of the vegetarian pilgrims (Rev. William Cowherd, William Metcalfe, American Vegetarian Society, Bible Christian Church of Philadelphia (Pennsylvania), Rev. Henry Stephen Clubb). 3. The great American stomach ache (Dr. James Caleb Jackson of Dansville, New York, early American eating habits). 4. Sylvester Graham watched America starve. 5. Bloomers and bread crumbs (Dr. J.C. Jackson–more detail). 6. The grains, the nuts and the second coming (Seventh-day Adventists, Ellen G. White, the Millerite movement). 7. The Cornflake Kelloggs found a home in the West (The Kellogg family and Battle Creek, Michigan). 8. The cable address was "Health" (Dr. John Harvey Kellogg and the Battle Creek Sanitarium). 9. Ella Kellogg's dough board (flaked breakfast cereals, Granose flakes, Granola). 10. A sword of fire hung over Battle Creek (the Sanitarium burned in 1902, Sanitarium menu 1912). 11. C.W. Post; or, what is this strange power? 12. Our stock salesmen meet all the trains. 13. Few were chosen. 14. None genuine without this signature. 15. The Golden Rule and other good ideas. 16. The simple life in a nutshell. 17. Doctor Kellogg's last fight. Chronology (1794-1951). Sources and authorities; chapter notes.

Chapter 13 is a discussion of the genius of C.W. Post, and his new type of advertising, which was serious, focused, and potent. He was among the first to see the great potential power of advertising in selling a product and building a company–and he spent millions of dollars on advertising. He once said, "All I have I owe to advertising." He reminded people that they could "recover from any ordinary disease by discontinuing coffee and poor food, and using Postum Food Coffee and Grape Nuts." Other manufacturers soon adopted the new Post way to advertise food. The Ralston Health Food Co., for example, explained that when you open the package, you could see thousands of tiny grains "full of the Vegetable phosphorus that makes children grow like magic and develop strong mentally," giving the brain "all the phosphorus it can use in heavy thinking."

Note: C.W. Post, developer of Postum Food Coffee, Grape Nuts, etc. is discussed throughout this book–often in depth. His Postum Cereal Company was eventually renamed General Foods Corporation. Address: Millerton, New York.

1250. Miller, Harry W. 1957. Review of literature on the nutritional value of soy milk. WHO/FAO/UNICEF Nutr. Panel R.1/Add.4. 18 p. 21 cm. International Nutrition Research Foundation. [102 ref]
• ***Summary:*** "In China where the infant mortality ranges as high as 250 per 1000 live births and malnutrition so evident amidst surviving infants, there is a problem of finding suitable available food for the nourishment of infants and growing children. Dr. Harry W. Miller, Medical Director

© Copyright Soyinfo Center 2014

of the Shanghai Sanitarium and Clinic, and Consultant to a large group of Seventh-day Adventist hospitals in China and the Far East, determined to produce a completely formulated milk beverage from the soybean to meet this need.

"Beginning his research in 1928, a milk called Soyalac was manufactured and granted exclusive patent rights in 1937 by the United States Patent Office. The product had all the characteristics of animal milk, was a true colloid liquid, and could be make to any desired formula. This milk, in contrast to the gruel formulas made from soy flour, was a fiber-free liquid which would not plug the nipples. Its processing resulted in a milk that was both palatable and readily digestible. It could be manufactured either as a canned liquid or dehydrated in powder form. The powder could readily be reconstituted to a liquid. Both the sterilized bottled milk and the powder would not require refrigeration. In the original soybean dairy in Shanghai, China, soy milk was boiled in bottles, and distributed daily.

"In a paper by Miller and Wen published in the April 1936 *Chinese Medical Journal* appears the results of extensive feeding on premature, new-born and growing infants on Miller's formulated soy milk. This feeding was carried out in the Shanghai Clinic where a 20 bed ward of new-born babies, and a 24 bed ward for older children, where Miller's soy milk was their routine diet. This report covered a record of two years of supervised feeding."

"This early work on infant feeding with Miller's soy milk was the first and most far reaching use of soy milk feeding, as the entire city of Shanghai had a soy milk route, with many thousands of families using it, until the soy milk plant was destroyed by Japanese bombing in 1937."

1251. Zerfing, Sally D. 1957. Sally's recipes. Glendale, California: Published by the author. vi + 221 p. Illust. No index. 25 cm.

• ***Summary:*** A remarkable vegetarian cookbook with a Christian message and references to many Biblical passages. It would be vegan, except for the use of honey. The author is a devout Christian and is probably a Seventh-day Adventist since (1) Ellen G. White is quoted on several pages (p. 2, 214-17, etc.), (2) it contains so many soy recipes at a relatively early date, and (3) it mentions some brands of soy products (e.g. Madison Health Food Company's Cheze-O-Soy = tofu) made by Adventist companies. Page 14 has a short section on soy oil and page 14 a long section on soy beans, including soy milk. Soy-related recipes include: Soy beans (p. 44). Soy paste (with soy milk powder, p. 50). Soy-whole wheat noodles (with soy flour, p. 62). All purpose soy milk no. 1, no. 2, and no. 4 (made with El Molino Soya Milk Powder, p. 66-67). All purpose soy bean milk no. 3 (made from whole soy beans). Hot carob drink (with soy milk, p. 66). Almond milk. Cashew nut milk. Sesame milk (p. 67. "Liquefy together: 1 cup sesame seeds and 2 cups water. Then strain the milk through a fine cloth; squeeze to get out all the milk. Then liquefy with a little honey, salt, oil, or liquid lecithin").

Note: This is the earliest English-language document seen (Aug. 2013) that contains the term "sesame milk"–or a recipe for making it at home.

Scrambled tofu (with Chef Bonneaus Aminotone, p. 73). French toast (with soy milk, p. 73). No. 2 health burgers (with tofu, p. 79). Scrambled tofu sandwich (p. 80). Creamed tofu and nut spread. Soy cream and olive sandwich on Boston bread (with soy creamed cheese, p. 80). Cheze-O-Soy sandwich (p. 81). Sesame tahini cheese spread (with Sally's Soy Mayonnaise, p. 81). For other tahini recipes, see p. 82 and 111. For other sesame seed recipes: Sesame cream cheese (p. 82). Sesame salad dressing (p. 85). Sesame wheat germ candy (p. 148).

Soy creamed cheese (p. 82). Soy mayonnaise. Thousand island dressing (with soy mayonnaise, p. 83). Cucumbers with tofu cream dressing (p. 90). Homemade tofu cottage cheese (p. 91). Tofu cottage cheese (p. 91). Tofu vegetable jello-salad (p. 92). Tofu and rice croquettes (p. 100). Soy and rice patties (with ground soybeans, p. 101). Soy and eggplant patties (with ground soybeans, p. 101). Tartar sauce (with Sally's Soy Mayonnaise, p. 104). Baked macaroni and soy cheese (with tofu). Cheze-O-Soy and millet hash. Baked soy beans (p. 104). Soy and millet loaf (p. 105). Thanksgiving loaf–Wheat, tofu and nut combination (p. 107). Cheze-O-Soy patties (p. 108). Spanish-style scrambled tofu (p. 115).

Note: This is the earliest document seen (Feb. 2012) that contains the term "Scrambled tofu" or that contains a recipe for "Scrambled tofu." The book actually gives 3 recipes for scrambled tofu (pages 73, 80, and 115).

Ravioli (noodles made with soy flour and filling made with Cheze-O-Soy, p. 116). Bean sprout entree (with Cheze-O-Soy, p. 117). Scalloped corn (with tofu). Tofu Chick Pea Foo Young (p. 117). Wonder of the sea loaf (baked, with tofu, p. 118). Chew mein vegetarian style (with soy sprouts, p. 119). Tofu and Sally's homemade tofu (p. 118-19; curded with lemon juice and sea salt). Homemade soy cheese (made with El Molino Soya Powder, p. 119). Tofu gravy (p. 120). Non-dairy ice creams (p. 149-53; most recipes call for 2 tablespoons El Molino soya milk powder). Banana split, Maple nut sundae, Fruit Sundae (each topped with "soy whipped cream," p. 151).

Note 1. We are unable to find a recipe or definition for "soy whipped cream" anywhere in this book.

Note 2. This is the earliest English-language document seen (Oct. 2013) that contains the term "soy whipped cream" (regardless of capitalization).

Date shake (with "2 cups soy milk No. 3 or No. 1," p. 152). Carob soy malt (with "2 cups all purpose soy milk No. 3," p. 152). Ice cream pie (topped with soy whipped cream, p. 153). Carob-wheat germ banana shake (with soy milk, p. 153). Soy pie crust (with "¼ cup stirred soy flour," p. 154). Pineapple soy cheese pie (with "1¼ cups tofu and "¼ cup

© Copyright Soyinfo Center 2014

soy milk powder," p. 156). Baby's soybean formula (p. 196). Composition of ¼ cup soy powder (p. 196). Tofu for babies (p. 200).

Chapter 18, "Grandma's remedies" is about fasting, including "A week or fourteen day fast" (p. 204). A large portrait photo on the front cover shows Sally Zerfing. Address: 24629 N. Arch St., Newhall, California.

1252. Dimond, Albert. 1958. Former ASA secretary in Japan mission [American Soybean Assoc. secretary Dr. P.A. Webber]. *Soybean Digest.* March. p. 7.
• ***Summary:*** Albert Dimond, past president of the American Soybean Association (ASA). wrote this account of Dr. P.A. Webber, a former ASA secretary, after visiting him and Mrs. Webber while in Japan recently. The Webbers live and work 10 miles north of Maebashi City, and a third the way up towering Mount Takagi.

"Dr. Webber, who did his graduate work at the University of Michigan, and his wife, also a graduate of the same school, are well on their way toward building and establishing the Mount Akagi Rest Home and Rural School. This is a non-profit Christian, medical and educational center, dedicated to furnishing self-help education and a rehabilitation center for handicapped children. The center is on a mountainside farm of 125 acres.

"Dr. Webber has spent much of his life alternating between Japan and the United States, and has been in Japan since 1948.

"During the early part of his career in Japan he became thoroughly acquainted with the valuable properties of soybeans. On one of his sojourns in the United States he served as secretary of the American Soybean Association, in 1931-32.

"Among his other activities in the United States were serving on the faculties of Berea College in Kentucky and Madison College in Tennessee. He headed the latter for a time. These are both well-known self-help educational institutions. Madison College manufactures and sells soybean foods.

"Dr. Weber also did much of the research and development work on soy milk done in this country [Japan].

During World War II the U.S. government drafted him for "liaison work in Japanese concentration [internment] camps in the western" USA. He "speaks of this interval in his life with sadness. There is no mistaking his love of the Japanese people.

"Asked what was the most pressing need of the Japanese people, Dr. Webber replied, 'Nutrition.' What food? "Soybeans.' Of course it is not as simple as that, but he pointed out that Japan now consumes ½ bushel of soybeans per capita per year. The people need 3 bushels and could use 5 bushels for each person every year. Other forms of protein are beyond their pocketbooks. It is either soybeans or no protein.

"In Japan the government provides 6 years of school. The thirst for knowledge beyond that by these industrious and intense people is impossible to comprehend unless you have seen and talked with them.

"Dr. and Mrs. Webber in offering self-help educational advantages to this agricultural community are doing a wonderful service. It is an example of what can be done by a combination of science and devotion."

1253. Register, U.D.; Peterson, E.W. 1958. The influence of carbohydrate on the utilization of rations containing soybean alpha protein. *J. of Nutrition* 64(3):483-91. March. [13 ref]
• ***Summary:*** Soybean alpha protein (made by the Glidden Co., Chicago, Illinois) or casein, in rations containing 12.5%, 25%, or 15.5% protein, was fed to rats, together with various combinations of sucrose or starch, methionine, and vitamin B-12 to measure the average gain per week over a 5-week period. The highest average weight gain (39.1 gm/week) was from alpha protein + starch + 0.5% methionine + vitamin B-12. At the protein levels studied, alpha protein rations with starch supported better growth of rats than those with sucrose. This effect was not seen with casein or heated soybean protein. Address: Dep. of Biochemistry, College of Medical Evangelists, Loma Linda, California.

1254. McCay, Clive M. 1958. The use and abuse of nutrition research. *Natural Food and Farming* (*Atlanta, Texas*) 5(2):6-7, 14-17. May.
• ***Summary:*** "In 1915 at the ripe age of 88 died one of the most remarkable women that America had produced. Her name was Ellen G. White. Although she had only a few months of formal schooling when a child, her list of books even today numbers about 60. Some of these are books about her or compilations from her lectures. Unfortunately these writings are buried in a few stores dealing with religious books and listed in a catalogue entitled Spirit of Prophecy Volumes. The chief book of Ellen G. White which deals with nutrition is entitled *Counsels on Diet and Foods.* This work consists of excerpts starting in 1863, at the time of our War Between the States and extending until 1909 or nearly until World War I." Address: Ph.D., Prof. of Nutrition, Cornell Univ., Ithaca, New York.

1255. Register, U.D. 1958. Are nonflesh proteins adequate? A scientist's report on some interesting research. *Review and Herald.* Aug. 7. p. 16-19. [18 ref]
• ***Summary:*** This review of the scientific literature, plus extensive new information based on investigations in progress, indicates the adequacy of vegetable proteins. Present-day research, based on controlled experiments, shows that the minimum requirement of protein for human beings is much less than advocated by the two pioneer researchers in this field: Liebig and Voit. In the mid-1800s, the German chemist Justus Liebig (lived 1803-1873)

© Copyright Soyinfo Center 2014

believed that protein was the source of energy for work; thus the more a person works, the more protein he or she requires. But it is now known that protein requirements are not increased by activity. The German physiologist Voit, a contemporary of Liebig, recommended 118 grams of protein a day for a moderately active man. He based his recommendation simply on a survey of the average intake of protein by German workers. "In 1946 outstanding investigators at Harvard and the University of Illinois reported that the minimum requirement for adult men was approximately 30 grams of protein per day, whether the diet was of plant origin or from a mixture of plant and animal foods (Sahyun, *Proteins and Amino Acids in Nutrition* [1948], p. 159). As late as 1955, Dr. C.W. Rose of the University of Illinois, for more than 25 years outstanding in the field of protein research, concluded that the protein requirement of adult men was less than 25 grams per day (*J. Biol. Chem.* 217:997, 1955)."

1256. Downs, Robert A.; Dunn, M.M.; Richie, E.L. 1958. Report of dental findings of Seventh Day Adventist students as compared to comparable students in other schools. *Bulletin of the American Association of Public Health Dentists* 18(3):19-21. Sept.

• ***Summary:*** In November 1956 a study of the dental effects of five years of fluoridation was conducted in Grand Junction, Colorado. "The students' dental caries rate was found to be similar for all the Grand Junction schools with the exception of a statistically lower decay rate found in the students attending the Seventh Day Adventist school." It was hypothesized that the reason for this difference, which was also found in studies of other groups of students, was that Seventh Day Adventists discourage the use of refined carbohydrates (such as white sugar) in their diet, and discourage snacking between meals.

1257. Miller, Harry W. 1958. Soybeans meeting nutritional needs in undeveloped countries. *Soybean Digest.* Sept. p. 68-73.

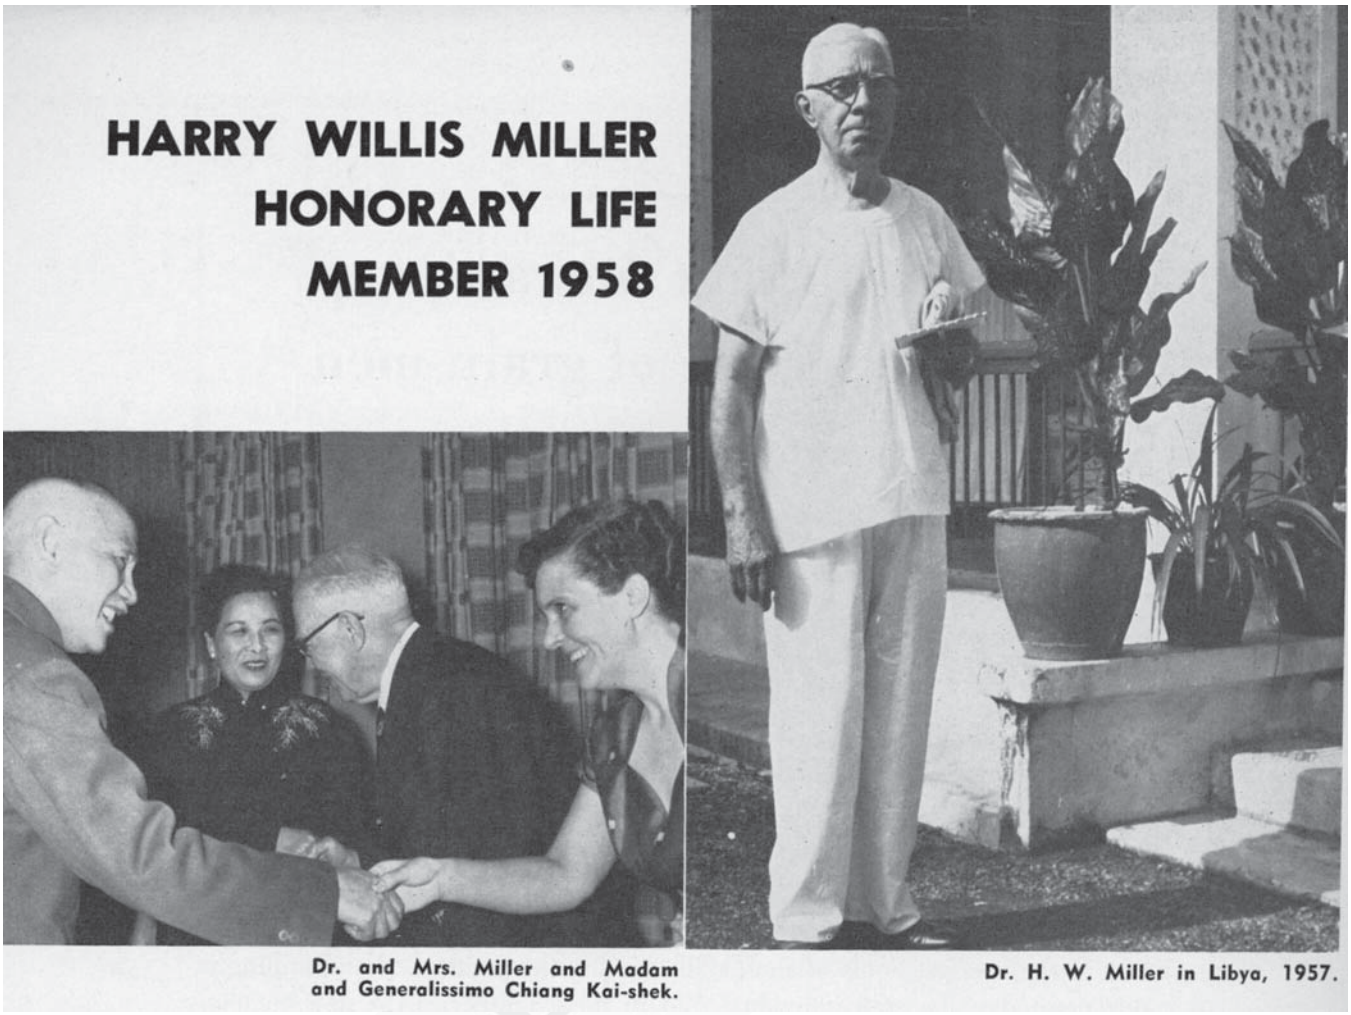
• ***Summary:*** "It was at the Dearborn, Michigan, meeting of the American Soybean Association held Aug. 18-20, 1940, that I presented a paper on 'Soybeans in Human Nutrition." In this paper I ventured the statement that while soybeans and the interest in them were chiefly valued for their oil content, I foresaw the day would come when soybeans in some form or other would become a regular item in the American diet for humans. The bean flakes and cake were discarded as fertilizer, except to a slight extent they were beginning to be used as stock feed, with a certain amount of credulity.

"At that time we were buying soybeans for a penny a pound, largely as a result of the fact that the value of their high biologic protein was not fully appreciated in animal feeds. Today it is being strongly emphasized and well authenticated that the soybean is one of the world's greatest protein yielders, and protein, as its name indicates, is of prime importance in maintaining the life and nutrition of mankind."

In countries where meat and dairy products as suppliers or protein are unavailable, or form a very small amount of the dietary, there is noted a predominantly high incidence of infections, as also a low life expectancy averaging from 25-30 years. This is directly related to a low intake of high quality protein. In these countries the most noticeable and severely injured classes are those of the newly weaned infant, the growing child, and expectant and nursing mothers. During these ages and conditions the demand for the ratio of protein in the diet is double that of the average adult man and woman. The impact of protein deficiency is more than any other factor the cause of deterioration healthwise in nations where this lack exists."

In the United States: "One-half of the products of cultivated land is fed to animals..."

"E.J. DeCastro, in his book *The Geography of Hunger* comparing animal and vegetable sources of protein states, 'The conversion of vegetable calories into animal tissue has long been known to be inefficient. Only 15% of vegetable calories is recovered in producing milk, 7% in eggs, and only 4% in beef.'"



Three tables (p. 70) show "that the value of food obtained from an acre of soybeans is three times that of wheat and twice that of corn. The reason we do not appreciate these values in this country is that we overproduce corn and wheat for edible purposes, but scarcely use any soybeans for human consumption."

"Up to this time the only agricultural product that has given any promise of being a replacement for animal milk is found in the soybean."

"The Japanese are perhaps the best per capita nourished people of the Asiatic races. Imagine them as maintaining a population that is more than half that of the United States on tillable soil no more than that found in the state of California. Through intensive farming and heavy use of fertilizers to the soil they have raised the yield per acre of land to a production of 13,000 calories per day. And on their land they are able to supply the nutritional requirements for a person on 0.2 acre, as contrasted to 1.8 acres in America. One-half of the calories of farm products in the United States go to animal feed. But in Japan only 5% of their calories come from meat, milk and eggs. Their annual consumption of the soybean as their main protein supplier is 50 pounds per capita,..."

"Milk Plant in Shanghai: After 1945 it looked as though we had a little open time for the development. The Chinese government put in a million-dollar soybean plant in Shanghai. It was completed and ready for operation just prior to the takeover of Shanghai by the Communists in 1949 which ended this.

Dr. and Mrs. Miller and Madam and Generalissimo Chiang Kai-shek.

Dr. H. W. Miller in Libya, 1957.

"But the soy milk business has been spreading to other parts of Asia, first to the Philippines then Hong Kong, and now it has been taken up by the United Nations who are pushing the use of soy milk in Indonesia. The Indonesian people have used Tempe [tempeh], which is a form of boiled soybeans that have been inoculated with the aspergillus [sic, Rhizopus]. In that way they have consumed a considerable amount of soybeans. But here the bean was not in a form Where babies or young children could make use of it."

"Now with the ability to install practical soy milk and soy cheese [tofu] plants in countries, especially the tropics, where soybeans do not grow well and the need of protein is so great, there is opened to the soybean industry a tremendous field of opportunity. This field should also receive a liberal apportionment of funds for research. Some research has been given to this subject, but it's infinitesimal with what is required."

Photos show: (1) Portrait of Dr. Miller. (2) A "factory at Jogjakarta in central Java that produces a ton of soy milk [Saridele] every 7 hours. It is a cooperative venture between FAO, UNICEF, and the Indonesian government. Construction was supervised by H.W. (Bill) [Willis] Miller, son of the author." Water buffaloes are pulling a cart on a street in the foreground. Address: M.D., Director, International Nutrition Research Foundation, Arlington, California.

1258. *Soybean Digest.* 1958. Harry Willis Miller honorary life member [of American Soybean Association] 1958. Sept. p. 10-11.

• ***Summary:*** "Dr. Harry Willis Miller, director of the international Nutrition Research Foundation [INRF], Arlington, California, was born 79 years ago in Ludlow Falls, Ohio. Although renowned as one of the world's leading thyroid surgeons, he also has spent many years in soybean research and has done much to perfect and promote soybean food products on the American market.

"As a medical missionary sent to pioneer the work of Seventh-Day Adventists in China from 1903 to 1911, he wondered how he could aid the millions of undernourished Chinese children–hundreds of infants dying daily from malnutrition.

"After years of investigation and practical experimentation with one of the most staple foods in China,

© Copyright Soyinfo Center 2014

he discovered a method of 'milking' soybeans and perfected a palatable formula suitable for both infants and adults.

"The response to the product was spectacular. To meet the immediate demand machinery was shipped to China, and under Dr. Miller's management the first modern vegetable milk plant in the world was put into operation. Until the outbreak of war in Shanghai in 1937, fresh soybean milk was delivered daily to hundreds of homes in Shanghai.

"For the service he rendered to the people of Free China in saving the lives of countless thousands of infants with the use of soybean milk and for his untiring efforts in establishing a dozen or so sanitariums-hospital clinics in the Orient, he has received National China's highest honor. In 1956 Dr. Miller was decorated with the Brilliant Blue Star by Generalissimo Chiang Kai-shek himself.

"Although Dr. Miller has certificates to practice medicine in nine of the 49 states and 11 foreign countries, and even at his age retains a steady hand for surgery cases, he continues to devote much time to the development and perfection of soybean foods.

"Despite his full life as a general medical practitioner, and many years spent superintending numerous Chinese sanitarium-hospitals, serving as president of the Seventh-Day Adventist mission in prewar China, managing and editing the Chinese Signs of the Times, authoring many medical books and articles and lecturing around the world, he has managed to continue his soybean research and experimentation whatever his location.

"From 1939 to 1950, while medical director of the Mount Vernon, Ohio, sanitarium and hospital, he opened a research laboratory where he developed a new improved soy milk, soy-olive sandwich spread, and numerous other nutritious foods made from soybeans and grains, and initiated the International Nutrition Laboratory of America which later became the INRF which he has heavily endowed.

"In 1951 he sold his growing soybean food industry to the Loma Linda Food Co. and came to Arlington, California, where he now makes his home and spends as much time as possible in the new laboratory placed at his disposal by Loma Linda. Two years ago, the World Health Organization became interested in Dr. Miller's progress in developing a superior soy milk and modeled a million-dollar factory in Indonesia after the Loma Linda food factory which he had pioneered in Mount Vernon, Ohio. At the present time WHO is also providing $30,000 for an intensive 2-year infant nutrition research program at a leading U.S. hospital using his soy milk formula.

"Since his appointment as director of the INRF, has laboratory and experimental work have been frequently interrupted to answer please for help from his medical colleagues in foreign lands. From 1954-1956 he went to Penang [Malaysia] and Formosa to serve as medical director and surgeon for the hospitals there, took a similar post for 2 months in Trinidad in 1956, another in Libya in 1957, and he is now filling the post of medical director and surgeon at the Tokyo Sanitarium-Hospital in Japan during a 6-month leave of absence by an SDA medical-missionary.

"Despite his present busy daily routine at the sanitarium he is continuing his work with soybeans and has a nearby tofu shop deliver soy milk daily to the sanitarium in 5-gallon containers. Since his arrival he has introduced soy whipping cream for daily use at the sanitarium and routinely prescribes soy milk to allergic Chinese infants. He writes that he was surprised to find that the soy milk he helped perfect for the Loma Linda Food Co. is now obtainable by military personnel at the U.S. army post exchanges in Japan."

Note 1. This is the earliest published English-language document seen (Oct. 2013) that contains the term "Soy whipping cream."

"While other men have rightly taken up golf, fishing, or other hobbies, Dr. Miller has devoted most of his spare time to research and development of vegetable foods. 'Soybeans have been my lifetime hobby,' he declares. Small wonder he is known from East to West as the man who gets 'milk from an iron cow.'

"Over the years Dr. Miller has been among the most active supporters of the American Soybean Association. He was chosen an honorary life member of the Association at the Des Moines convention. The award was made in his absence in Tokyo during the annual banquet."

Photos show: (1) Dr. and Mrs. Miller with Madam and Generalissimo Chiang Kai-shek. (2) Dr. Miller in Libya in 1957–standing outdoors and dressed in his plain white doctor's outfit. (3) "C.G. Simcox presents honorary life membership award to C.P. Miles, manager Loma Linda Food Co., Mt. Vernon, Ohio, in behalf of Dr. H.W. Miller. Award will be formally presented to Dr. Miller in Tokyo by Shizuko Hayashi, managing director of the Japanese American Soybean Institute."

1261. *Soybean Digest.* 1958. Dr. Miller receives honorary [life] membership [in American Soybean Association] (Photo caption). Nov. p. 23.
• ***Summary:*** This photo shows Dr. Harry W. Miller seated next to Mrs. Miller with 10-15 other people at a long table during a formal luncheon in Tokyo; there he received a gold medallion signifying his election as honorary life member of the American Soybean Association. "The luncheon was arranged by the Japanese American Soybean Institute and Shizuka Hayashi, managing director (standing), presented the award. Dr. Miller, who is on duty in a Tokyo hospital, was elected honorary life member at ASA's convention in Des Moines [Iowa] last August."

1262. **Product Name:** [GranoVita Cutlets].
Foreign Name: GranoVita Phag-Schnitten.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1958.
Wt/Vol., Packaging, Price: 270 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Form filled out and Label sent by DE-VAU-GE. 1990. June 11. Note: This is the earliest document seen (Oct. 2004) concerning DE-VAU-GE and soy. This is the earliest known commercial soy product made by DE-VAU-GE.

1263. **Product Name:** Sanitarium Health Foods Vegecuts (Vegetarian Steaklets).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1958.
Ingredients: Wheat protein, casein, soya beans, peanuts, cornflour, Marmite, onion powder, salt, monosodium glutamate, sucrose, curry.
Wt/Vol., Packaging, Price: 1 lb can.
How Stored: Shelf stable.
New Product–Documentation: Letter from Sanitarium Health Food Co. 1981. Label. 10 by 4 inches. Full color. "Vegetable Protein–Ideal for grills, casseroles, stews, salads." Recipes for Vegecuts Ambrosia and Sukiyaki.

Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1958.

Note: This is the earliest soy product seen that uses casein as an ingredient.

1264. **Product Name:** Sanitarium Health Foods Vegetarian Sausages.
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1958.
Ingredients: Wheat protein, peanuts, tomato, soya beans, Weet-Bix, dried yeast, Marmite, herbs, cloves.
Wt/Vol., Packaging, Price: 430 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Sanitarium Health Food Co. 1981. Label. 10 by 4 inches. Full color. Photo shows frankfurter-like sausages on a bed of rice. "Vegetable Protein" Recipes for Sweet & Sour Sausages and Sesame Veg-Sticks.

Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1958.

1265. Chen, Philip Stanley. 1958. Heart disease–Cause, prevention, and recovery. South Lancaster, Massachusetts: Chemical Elements. 189 p. Illust. 21 cm. Summarized in Soybean Digest, May 1958, p. 37. [10 soy ref]
• ***Summary:*** The author is a Seventh-day Adventist who advocates a vegetarian diet to prevent heart disease. In Part III, "Prevention of heart disease," are the following chapters: 11. Lecithin. 12. Sitosterol. 13. Heart disease and soybeans–Part 1. Soybean oil. 14. Heart disease and soybeans–Part 2. Soybean protein. 15. Heart disease and religion. 16. Future dietary habits and practices.

Philip S. Chen, Jr. assisted in preparing part 1 of this book. Address: Prof. of Chemistry and Chairman of Div. of Natural Sciences, Atlantic Union College, South Lancaster, Massachusetts.

1266. Ford, Herbert P. 1958. The life story of Dr. Harry W. Miller. Unpublished manuscript. 169 p. Unpublished manuscript. 28 cm.
• ***Summary:*** This manuscript is the slightly edited second draft of the transcript of a single 7-8 hour interview that Mr. Ford did with Dr. Miller in 1958 in Chicago. According to Mr. Ford, Dr. Miller later gave a copy of the manuscript to Raymond S. Moore PhD, a Seventh-day Adventist educator, with the understanding that Moore would use it as the basis for a book. The book, titled *China Doctor,* was published in 1961. Dr. Miller was not very happy with the way the book

© Copyright Soyinfo Center 2014

turned out.

Pages 122-35 give a much more detailed account and history of Dr. Miller's work with soy milk, tofu, yuba, other soyfoods, meatlike products, and wheat gluten than is found in the finished book, *China Doctor.*

Concerning wheat gluten: Dr. Miller's company in Mt. Vernon, Ohio, International Nutrition Laboratory, "had protein foods in which they used wheat gluten and made meat patties and various kinds of stews, sprouted the green soybeans and made a chili with them and wheat gluten." They also developed a vegetarian wiener [Veja Links] containing raw vital wheat gluten, soy flour, seasonings, and flavors. They stuffed these into wiener casings, submitted them to a smoke house and to cooking, then peeled off the casings/skins and canned the wieners. He developed these at the Mt. Vernon slaughterhouse.

"Soy milk manufacture in the U.S.A. (p. 131). In 1939 Dr. Miller returned to the United States having been so thoroughly convinced that soy milk was destined to have world-wide acceptance... His son, Harry Willis Miller, Jr. had returned preceding his father and had started a small soy milk plant in Utica, New York, where he made and bottled soy milk and also made and canned some of the protein foods out of wheat gluten for which they had developed recipes. This plant was later moved to Mt. Vernon, Ohio, after they started the soybean plant at Mt. Vernon. The plant was rather small at first as their capital was very limited. They had to build up the food plant out of his surgery earnings. As these products were mostly for export, the firm was called the International Nutrition Laboratory. It was called International because they didn't think of having any particular market for soy milk in the United States but anticipated making and packing soy powder which they could ship over to China, Japan, Korea, and other fields. Since the United States is a dairy country, they just thought they would have all kinds of difficulty getting it introduced over in America. They gave their attention largely in the early part of the work to making some products that went over quite well, which could be sold locally such as meat patties–vegaburgers. They would take the wheat flour, wash the starch from it, and make gluten patties. They actually built up a very fine product that was netting them earnings. The earnings of that, together with Dr. Miller's medical and surgery fees, to finally get together a spray dryer which they built with the aid of the know-how assistance of the Rogers Company, who sold these spray dryers... and through this home-made outfit they daily spray dried considerable powdered soy milk and placed it on the market. They made some ice cream mixes and they shipped out in barrels to the Philippines soy milk powder and also shipped consignments of the powder to Shanghai where they had formerly introduced a soy milk to the Shanghai Settlement. Thus they kept soy milk going up until the time of the world war in 1941 which cut them off from shipping to the Orient."

In the United States they found "an interest on the part of doctors in feeding babies that were covered with various kinds of rashes which they called atopic dermatitis. Many of these babies had asthma, diarrhea, projectal vomiting, nervous irritability and were unhappy babies, all because of the allergy to cow's milk formula." Doctors began to realize that babies with allergies and other sicknesses responded well to soybean milk; the market soon increased. Eggs and milk are the chief causes of allergy, but some vegetable proteins like wheat, corn, and some legumes also cause allergic reactions in some cases. Then doctors began to ask for evidence that the milk was safe. They suggested that it be submitted to the American Medical Association [AMA]. So at once Dr. Miller contacted Dr. Earl Baxter, Professor of Pediatrics at the Ohio State University Medical School, and he agreed to conduct some feeding experiments with soy milk. These studies showed that "babies could be nourished as well on soy milk." In Tokyo, Dr. Choei Ishibashi (later president of the Japan Medical Society) also did meticulous feeding tests with infants, using the powdered soy milk Dr. Miller had sent after World War II. Over a period of many months, he compared the blood, measurement, and growth records of babies fed soy milk with those fed animal milk [cow's milk]. Then Dr. Miller took the results of the studies in Japan and at Ohio State and submitted them to the Council on Food and Nutrition of the American Medical Association. The Council has 15 members, the very best scientists on food and nutrition. "They examined the [soy] milk, examined the claims for it, looked over the research, and then gave the seal of approval which was placed on every can of soymilk thereafter."

"Now that they had this seal of approval, they went to medical conventions and canvassed the doctors; the sale of soy milk grew very rapidly." The plant began to get larger; it made great demands and there were many details to look after. These facts and his lack of capital to carry on this work adequately made Dr. Miller realize that he must do one of two things. He must either organize a corporation, issue stock, and enlarge the company greatly, or he must dispose of the plant and give his time and attention to research.

During this time, Dr. Miller received valuable help from the U.S. Department of Agriculture [USDA]. Dr. J.A. LeClerc (Senior Chemist, Agricultural Chemical Research Division) and Mr. L.H. Bailey, who investigated the use of "soybean milk in making breads" and made the results and analyses available to Dr. Miller. "Thus they got themselves very well established in this country as having a milk for people who did get along with cow's milk."

However the secretary of the AMA told Dr. Miller that he should not claim or advertise that his soy milk was a good alternative to cow's milk for all babies, but only "for those babies who do not do well on cow's milk." However he added: "If you can take care of babies that cow's milk does not take care of, there is no reason why you could not take

© Copyright Soyinfo Center 2014

care of the other babies that cow's milk does agree with too." This was his diplomatic way of counseling them not to make unfriendly comparisons with cow's in a dairy country–even if those claims are valid. By following his advice, Dr. Miller was able to work well with the dairy industry without any conflicts.

The Loma Linda Food Company in California showed an interest in acquiring Dr. Miller's company in Ohio. "They had been making some soy milk in the liquid form, but they were interested in getting an Eastern branch." So in 1950 they purchased the [soy] milk plant in Mt. Vernon and have been operating since that time. This took a great burden off Dr. Miller's shoulders and left him free to do medical and nutritional research work. "It was then decided to start the International Nutrition Research Foundation and Dr. Miller was asked to be the Director of this Foundation. He placed a larger part of the purchase price of the factory into this Foundation, which would be devoted to food research only. From the day this research institution was started it has attracted a great deal of attention from all parts of the world; among those interested parties has been the World Health Organization of the United Nations. They came to the conclusion that soy milk had great possibilities in countries of low economic conditions where they could not afford to buy imported [cow's] milk," and in protein-deficient countries. They came to Mt. Vernon to investigate both the soy milk plant and the experimental research. Dr. Miller educated them on the many benefits of using protein from soybeans instead of from animals. As a result, the United Nations constructed a large soy milk plant in Djojakarta [Jogjakarta / Yogyakarta] Indonesia. It was built with the advice of Dr. S.S. De (who has headquarters in Bangkok, Thailand) and the support of the Government of Indonesia, FAO, UNICEF, and WHO.

1267. McCay, Clive M. 1959. A nutrition authority discusses Mrs. E.G. White. *Review and Herald* 136(7):16-17, 24. Feb. 12. Continued Feb. 19 and 26.
• ***Summary:*** For the past quarter century, the writer has taught a course for graduate students on the history of foods and nutrition. "Among the thousand historical acquaintances in my files, one of the most worth-while is Ellen G. White. As near as one can judge by the evidence of modern nutritional science, her extensive writings on the subject of nutrition and health in general, are correct in their conclusions. This is doubly remarkable: Not only was most of her writing done at a time when a bewildering array of new health views–good and bad–were being promoted but the modern science of nutrition, which helps us to check on views and theories, had not yet been born. Even more singular, Mrs. White had no technical training in nutrition, or in any subdivision of science that deals with health, In fact, because of her frail health from childhood she completed only a part of a grammar school education."

He then discusses her basic views. A portrait photo shows the left side of Clive McCay. Address: Ph.D., Prof. of Nutrition, Cornell Univ.

1268. Nichol, Francis David. 1959. Editorials: An onlooker comments. *Review and Herald* 136(7):3-4. Feb. 12.
• ***Summary:*** This is a comment on the article in this issue titled "A nutrition authority discusses Mrs. White," by Clive McCay, Ph.D.

One evening last year, Dr. McCay was invited to give a talk at a man's club of the local church he attended. He chose as his subject: "An Unusual Nineteenth Century Woman, Mrs. E.G. White." A copy of his talk reached the periodical.

On a trip last summer, the writer stopped at Cornell University, in New York State, to visit Dr. McCay. He "is a classic exhibit of the truly scientific man."

"We stayed overnight at Dr. McCay's home, a very livable, rambling remade farmhouse. We soon discovered, to our delight, that though he was a specialist in the field of nutrition, his active interest and reading extended over a remarkable range. More than once during the evening he returned to the question: 'How do you explain the fact that Mrs. White, with very little formal education and no special training in nutrition, so accurately set forth nutritional principles that are only now scientifically established?' He ruled out as wholly unsatisfactory the answer sometimes casually given: 'Mrs. White simply borrowed her ideas from others.' He observed that such an answer simply raises another question: 'How would Mrs. White know which ideas to borrow and which to reject out of the bewildering array of theories and health teachings current in the nineteenth century?'"

"Nor did we seek during the delightful but all too brief visit to enter into extended discussion of the theological doctrine of inspiration. We simply stated that Adventists accept Mrs. White's declaration that she was inspired by God, and let the matter stand at that." Address: Ph.D., Prof. of Nutrition, Cornell Univ.

1269. McCay, Clive M. 1959. Science confirms our health teachings: A nutrition authority discusses Mrs. White. *Review and Herald* 136(8):6-7. Feb. 19.

1272. Miller, Harry W. 1959. Why Japan needs soy milk. *Soybean Digest.* April. p. 16-17.
• ***Summary:*** "It was an opportunity greatly appreciated to study the needs of the Japanese people nutritionally during my 7 months' responsibilities as surgeon and physician at the Tokyo Sanitarium and Hospital... The idea of a soybean beverage and milk from the soybean for soups and cooking was something altogether new... We set us a small pilot plant where we made soy milk, soy cream, soy ice cream, and soy spread... After seeing the ready acceptance by the nursing staff and patients of the Tokyo Sanitarium and Hospital of soy milk and soy cream made daily from a small fabricated plant of equipment procurable in Japan, we conceived the idea of such additions to be made to the tofu plants... We fitted up a small tofu plant out in a rural district with a homogenizer and a few utensils for milk handling. The milk is being bottled and capped there, and the local community is most appreciative. Since it sells at half the cost of fresh dairy milk it leaves a modest profit for the local shop."

1273. Kalnay, Francis. 1959. Soybean has all the answers (or nearly all). *House Beautiful* 101:174-75, 207-12. May.
• ***Summary:*** The opening 2-page spread contains photos of many commercial soyfood products available in America at the time: Dr. Fearn's Soy-O pancake flour (one with whole wheat and soya, and the other with just wheat and soya), Pure soya bean powder, and Soya bean granules, Wuest's soya-protein bread, Wuest's cookies, Wel-Pac kinako [roasted soy flour], Yamasa shoyu, Kikkoman shoyu, Oliver Tonkatsu Sauce (Tonkatsu are breaded pork cutlets), Hain soy oil (cold pressed), Amoy soy sauce, Prosperity soy sauce, Golden Sang Chan soy sauce, Madison Zoy-Koff, Hime aka-miso (Pacific Trading Co.), Hime yakidofu, Hime frozen bean curds, Delicious Edamame (Packed by Tokai Kanzume Co. Ltd., Nagoya, Japan), Quong Hop & Co. bean cake [tofu], Schiff soy lecithin, Oriental food shop black soybeans, Climax wheat and soy pure egg noodles (The Pfaffman Co., Cleveland, Ohio), and Prince Veta-Roni (Mezzani or Spaghetti; Prince Macaroni Co.).

The subtitle reads: It's a choice gourmet food. It's as nutritious as vitamin pills. It comes in a dozen forms and makes a hundred dishes.

The author uses soy-related words in a very modern way: "Have you ever noticed the way people who know food pronounce the simple word 'soy'? Their facial expression changes instantly, and their tone of voice turns positively lyric. There are two serious reasons for their extraordinary respect for a bean so little and so innocent. The soybean is enormously rich in protein. This wealth of protein is apparent in both quality and quantity... And because soy oil is high in unsaturated fatty acids, it fits well into today's popular low-cholesterol diets.

"In our country soy is relatively new... Soy is the most versatile legume imaginable... The glittering star in soy's troupe of players is soy sauce (also called soya and shoyu)... The soy food industry is still in its infancy in the U.S. Yet the variety of soy products available is impressive."

Note 1. This is the earliest publication seen (April 2001) that mentions Quong Hop & Co. in connection with tofu.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term "soya-protein" (or "soya-proteins").

1274. **Product Name:** Loma Linda Soy Beans in Tomato Sauce.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1959 May.
Wt/Vol., Packaging, Price: 1 lb 1 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Francis Kalnay. 1959. House Beautiful. May. p. 174-75. "Soybean has all the answers." Photo of the can and label. On the front panel is a glass casserole dish filled with the product. A sort of oval in the lower right corner says "Loma Linda Foods." 1968. Called "Soy Beans in T.S." [Tomato Sauce]. 17 oz. for $0.30 retail.

1275. *British Vegetarian.* 1959. A vegetarian research centre. July/Aug. p. 138-40.
• ***Summary:*** A vegetarian research laboratory is being established in the Science Department of Stanborough School, Watford, Herts., England. Seventh-Day Adventists, who administer the Stanborough School, are making great efforts to raise funds to support the research. The laboratory will conduct nutritional investigations, focusing particularly on vegetarianism. Dr. Frank Wokes has been invited by the school board to organize the research. A life-long vegetarian, he is well known for his nutritional research during the last 18 years at the Ovaltine Research Laboratories. He has been a pioneer in showing the importance of vitamin B-12 in vegetarian diets and in improving the quality of vegetable protein. One outcome of this work was the development of a new soyamilk product, fortified with vitamin B-12 and launched recently under the name Wanderlac by A. Wander Ltd., which also makes Ovaltine. "This first British plantmilk has been used with success to replace milk in various allergic conditions, including the disease galactosaemia" [galactosemia].

Note. This is the earliest English-language document seen (Aug. 2013) that contains the term "replace milk" in connection with soyamilk.

Stanborough School provides a particularly suitable site

© Copyright Soyinfo Center 2014

for the research center, in part because it was the site, 27 years ago, of the first Experiments in Great Britain on the basal metabolism of vegetarians. The results were published in the *Journal of Biological Chemistry* (1932).

A photo shows the new laboratory at Stanborough Park. Note: *Webster's Dictionary* defines galactosemia (a term first used in 1934) as "an inherited metabolic disorder in which galactose accumulates in the blood due to deficiency of an enzyme catalyzing its conversion to glucose."

1276. Battle Creek Food Company. 1959. Eastern authorized dealer price list. Battle Creek, Michigan. 1 p. Sept. 1.
• ***Summary:*** Products of interest on the list include the following; those followed by an asterisk (*) contain soya: Soya Flakes* (5 oz). Veg. Burger, Prime (20 oz or #10). Nuttose (10 or 20 oz). Protose (10, 20, or 28 oz). Vegetable Skallops (10, 20, or 28 oz, or #10). Vegetable Steaks (10, 20, or 28 oz, or #10). Vegetable Steaks, small cuts (20 oz or #10). Vegetable Steak, low sodium (20 oz). Gluten Flour (5 lb or 100 lb). Malted Nuts (14 oz or 5 lb). Savita (3, 7, or 14 oz, 8½ lb or 50 lb). Savita Soup Cubes (10 cubes). Soy Beans* (15½). Soy Flour* (2 or 5 lb). Brewers Yeast (10 oz). Lacto Dextrin (16 oz, or 4 lb). Address: Battle Creek, Michigan.

1277. **Product Name:** Gluten Flour.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1959 September.
New Product–Documentation: Battle Creek Food Company. Price List. 1959. Sept. 1. Available in 5 lb. or 100 lb. sizes.

1278. Wokes, Frank. 1959. Vegetable diets and nutrition (Letter to the editor). *New Scientist* 6(150):595-96. Oct. 1. [1 ref]
• ***Summary:*** "Plantmilks based on soya are being used in America to treat milk allergies in infants. The first British plantmilk, Wanderlac, has just been put on the market, after two years' trial on infants suffering from such allergies, especially galactosaemia..." (p. 596, col. 1). Address: Vegetarian Nutritional Research Centre, Stanborough Park, Watford, Herts. [England].

1279. **Product Name:** Promine D (Food-Grade Isolated Soy Protein–Dispersible), and Promine R (Food-Grade Isolated Soy Protein–Regular = Nondispersible/Insoluble, Precipitated at the Isoelectric Point). Named Amisoy before about 1955.
Manufacturer's Name: Central Soya Co.
Manufacturer's Address: 1825 N. Laramie Ave., Chicago, Illinois.
Date of Introduction: 1959 October.
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 50 lb multi-wall paper bag.
How Stored: Shelf stable.
New Product–Documentation: Promine, the world's first non-enzyme modified, edible isolated soy protein, has an unusual history. This line of products having different functional properties was developed by The Glidden Company from 1955 to 1959 and was made available for testing by other major companies but never sold commercially by Glidden. It was only after Central Soya acquired the Chemurgy Division of the Glidden Co. and built a semi-commercial plant to make Promine in Chicago (opened 27 Oct. 1959) that the product was first sold commercially. For details, see interviews with Edwin Meyer and Dale Johnson (1985, below).

1955. Aug. 31. 38th Annual Report. Page 5 notes: "During the year we increased our productive capacity for isolated proteins by 67%. There is increasing acceptance of these products for use in paint, paper and other industrial products. A new edible product is now being tested by several major food processors as a nutritional supplement for their products. The potential for this new protein is promising." Under "Chemurgy Division"–Edible Soya Products is a listing for "Promine–Isolated Protein."

The Glidden Co. 1956. Nov. 13. Annual Report. Page 13 states: "Our work on the development of an edible protein is continuing. Its initial reception by the food industry as been promising, but extensive tests are still being conducted to obtain a proper evaluation." On the same page the product's name is given as *Promine* edible protein.

Chemurgic Digest. 1957. Nov. p. 9. "Edible Protein Plant Announced by Glidden." "A new $4,000,000 edible protein plant, the world's first facility for commercial production of this important soybean derivative, will be constructed at Indianapolis [Indiana] by the Glidden Company... The new protein product will be marketed under the registered trademark 'Promine.'... Already used in a wide range of food products, Promine has been available in limited quantities for the past three years. It promises a wide variety of uses in bakery products, all types of breakfast foods, senior foods, baby foods, desserts, and scores of other food items."

Soybean Digest. 1957. Dec. p. 25; Glidden Annual Report. 1957. p. 12. "On the basis of our technical and market development work on edible protein, we have started construction of a new protein plant at Indianapolis. Promine, our trade name for this edible protein, is an entirely new product." Central Soya bought the Glidden plant in 1958.

Food Processing. 1959. March. p. 36. "Multipurpose quality protein offers 'plus' factors." Isolated soybean protein containing 92% protein, free of undesirable flavor characteristics and no indigestible carbohydrates. Lists almost 100 products in which Promine may be used.

Chicago Tribune. 1963. "Central Soya Co. spends a million to boost output." March 5. p. B5. The expansion,

© Copyright Soyinfo Center 2014

involving the redesign of the facility and installation of added equipment, "has resulted in a tripling of the plant's capacity to produce Promine. The newly expanded plant went into operation last month. It has been producing Promine on a semi-commercial basis since the product was launched in late 1959.

Interviews with Edwin Meyer and Dale Johnson, who worked for both Glidden and Central Soya. 1985 and 1993. Dr. Sidney J. Circle, head of protein research, was in charge of the development of Promine, the world's first edible soy protein isolate product, which he called Amisoy until 1955. It was produced in a small pilot plant constructed outside, behind the company's laboratory in Chicago. The first Promine that Circle made was not dispersible in water, because it had been precipitated at the isoelectric point and he did not have a good spray dryer. It had to be oven-dried in a range dryer (on a steam heated belt) then ground. It had to be dispersed with a food-grade alkali. Several hundred pounds a month of edible isolates were produced and Dale W. Johnson offered them to various food companies (such as General Foods and Pillsbury) for testing. Dr. M.L. (Tim) Anson of Lever Brothers (a division of Unilever) in New York tested Glidden's non-dispersible isolate to make sheets, which were then laminated and flavored to make meat analogs. He was issued a number of well-known patents on these inventions. Circle hired Steve Frank from Cornell University to help him develop new applications such as margarine, milk, and ice cream. The basic concept was to use small amounts of isolates (to bypass problems of beany flavor) in foods containing small amounts of casein. With interest in Promine growing among major American food companies, but with no orders or sales yet, Glidden decided to take a risky gamble. In 1957 they began to build America's first real plant to produce edible soy protein isolates, next to their solvent extraction plant in Indianapolis. But then problems began to develop; Circle pointed out what he considered to be major flaws in the design and Glidden halted production. Glidden then let it be known (unbeknownst to researchers in their Chemurgy Division) that this chemurgy division was for sale, because they were not making the return on their investment that they could make from selling paints at their new paint centers, a large store that sells paints both to retail customers and professional/trade painters. Ed later learned that Glidden had talked to Central Soya in the mid-1950s about buying Glidden's Chemurgy Division and Central Soya turned down the offer. Glidden then came back later, in 1957-58 with a better offer and the deal was consummated. After almost 10 years of inactivity in the field of edible soy protein products (since early 1949), Central Soya jumped back into the field in a big way–with the benefit of Glidden's outstanding research team. They formally acquired Glidden's Chemurgy Division it on 1 Sept. 1958, starting with a 3-year lease, then purchasing it on 31 Aug. 1961. Central Soya scrapped the plant in Indianapolis and in late 1958 began construction of a new edible isolate plant in Chicago at 1825 N. Laramie Ave., adjacent to Glidden's large old plant that made industrial isolates. Several doors connected the two buildings. This semi-works plant, a scaled-down version of the plant designed by Glidden's engineers, opened to much fanfare and publicity on 27 Oct. 1959. At that time the first Promine D and Promine R (D = Dispersible; R = Regular) were sold commercially–in small amounts. The plant had a capacity of 5 million lb/year of edible isolates but it never made more than 3.5 million lb. The first customer for Promine R was Picot Laboratory in Mexico, which made a high-protein nutritional food. Most of the Promine D was sold to the meat industry for use as emulsifiers and/or binders in sausage-type products. Promine D would gel if heated to about 100º, but the gel would break if it was heated much higher. Ed Meyer visited Worthington Foods many, many times because, for a while, they were using Promine made by Central Soya as the basis of their spun soy protein fiber.

Booklet (8 pages) announced in *Food Engineering.* 1977. June. p. ef-34 (In special section on Engineered Foods). On the cover of the booklet is a baby's face in rectangle, surrounded by many foods.

1280. Kirschner, H.E. 1959. What about fasting? *Let's Live.* Oct. p. 26-27.

• ***Summary:*** Dr. Kirschner, who advocates therapeutic use of raw food juices, was skeptical of therapeutic fasting at first–even though the natural hygienists have waxed eloquent for more than a century about this method of treating the sick. Though he was in normal good health, he decided to go to an institution in the mountains about 17 miles from Harrisburg, Pennsylvania, and undergo a supervised 7 day fast. For "seven days nothing but two quarts of water passed my lips each day. I was on what they call a 'total fast.' After the second day the pangs of hunger left me and I did not miss food. I was surprised that I did not become weak... I was amazed at the beneficial results. My blood pressure dropped from 175/95 to 120/80... But best of all I lost 15 pounds in weight..." Five additional days were required to "break" the fast–12 days in all... "I was happily surprised at the improvement in my eyesight, and how much better I felt in so many other ways..."

Leaders of the natural hygiene movement include Dr. Sylvester Graham, Dr. Trall, Dr. Jackson, "and my friend the late John Harvey Kellogg, M.D. of Battle Creek [Michigan] fame." Address: M.D., 748 Crescent, Monrovia, California.

Medicine, College of Medical Evangelists, Loma Linda, California.

1282. **Product Name:** Granose Soya Beans in Tomato Sauce (Canned).
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England. Phone: 0923-672281/2.
Date of Introduction: 1959.
Ingredients: Soya beans, tomato puree, brown sugar, onion oil, soya flour, salt, maize starch, soya oil, yeast, hydrolised vegetable protein, mixed spice, autolised protein.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *The British Vegetarian.* 1960. Sept/Oct. p. 249. Granose makes Soya Beans, containing soya beans, tomato puree, brown sugar, vegetable shortening, onion, yeast extract, wholemeal flour, and seasoning. Note: This is the earliest commercial soy product seen made by Granose Foods.

Ad in *The British Vegetarian.* 1962. July/Aug. p. 5. "If he likes 'beans on toast'–he'll love these new wonder beans!" "Granose Soya Beans are truly 'The Wonder Beans of Health.'" A boy is carrying a large can of the beans, showing the label, in a wheelbarrow. They are made by Granose Foods Ltd., Watford, Herts.

Manufacturer's catalog. 1980. April. p. 3. "Soya Beans have a high balanced protein content. Can be used as an extra vegetable or as a nutritious snack."

Form filled out by Granose Foods Ltd. 1981. States that the company first started to make foods of any kind in 1899. Their first food product containing soybeans was Canned Soya Beans in Tomato Sauce, introduced in the late 1950s. The company presently produces the following foods that contain soy, listed in descending order of popularity and each starting with the brand name Granose: Sausaltas, Saviand, Soyabean in Tomato Sauce, Soy Beans in Brine, Goulash, Curry, Bolognese Sauce, Chicken Pie Filling. A descriptive brochure is enclosed.

Shurtleff. 1981. Overseas Adventist Food Companies. p. 6.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product was introduced in 1959. It has been discontinued.

1283. **Product Name:** Soymilk.
Manufacturer's Name: Mountain View College.
Manufacturer's Address: Mindanao, Philippines.
Date of Introduction: 1959.
New Product–Documentation: Letter from Eric C. Fehlberg, Director, International Health Food Assoc. 1990. May 24. This organization no longer makes foods.

1284. **Product Name:** Veelets.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 2-2539.
Date of Introduction: 1959.
New Product–Documentation: *Chopletter* (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Veelets.

Note: This is the earliest known commercial meat alternative product that bears a Kosher label as having been Kosher certified.

1285. Baur, John E. 1959. The health seekers of southern California, 1870-1900. San Marino, California: Huntington Library. ix + 202 p. Foreword by John W. Caughey. Index. 24 cm. Series: Huntington Library Publications. [310 ref]
• ***Summary:*** Discusses: The gold rush and the health rush. California's population growth: The health seekers represented "the first big influx to southern California, and the chief dynamic in the region's development" in the 1870s, 1880s (the boom years), and 1890s. It was aided by the introduction of the navel orange, abetted by the arrival and promotions of the Southern Pacific and Santa Fe railroads, and swelled by the promotional antics of real estate developers and agents and chambers of commerce. Each of these elements contributed to the population growth to about 76,000 in 1880, to 221,000 in 1890, and 325,000 in 1900. At least a quarter of the new arrivals are estimated to have come as health seekers. In "almost every important respect–agricultural, commercial, residential, cultural–this health rush permanently changed southern California (p. viii-ix, by John W. Caughey). Medical advice, diet and outdoor living (p. 21-26).

The sanatorium / sanitarium belt, Los Angeles as a resort, diet. The main types of resorts were desert, mountain, mineral springs, and seaside. (p. 32-38). Sanitariums and hospitals (p. 39-42). Health foods, diet, Seventh-day Adventists, and the Battle Creek Sanitarium, Michigan (p. 47-50). The health rush and its effects, Pasadena founded in 1874 as an early health resort and community for invalids from Indiana (p. 51-54). Sanatoriums (p. 57-58). Diet and Dr. Francis M. Pottenger, who came to Monrovia in 1895 for his wife's health. Despite her early death, he loved California and "in 1903 opened the Pottenger Sanatorium, a private residential hospital for tuberculars of all stages." It was successful from the beginning and "the first modern sanitarium in southern California." There were only 60 such hospitals in the USA at that time. Pottenger's sanitarium attracted considerable attention because of its advanced methods and high percentage of recoveries (p. 59-60).

Small southern California towns were often overwhelmed with the arrival of hundreds of health seekers,

© Copyright Soyinfo Center 2014

many of whom were unable to secure lodging. In 1872 Santa Barbara, which had long promoted itself as a resort for health and pleasure, suddenly became a sanitarium, and the Arlington Hotel was built (p. 67-68).

Not far from Santa Barbara lies the Ojai Valley, publicized as a resort town nationwide by Charles Nordhoff. Laid out in 1874, it had two well-patronized invalids' hotels for those "seeking relief from the ravages of tuberculosis and the discomforts of asthma" (p. 71-72).

In "1886 Dr. Wellwood Murray and his wife established a small resort at Palm Springs where they regained their health and soon began to welcome dozens of boarders, who were mostly tuberculars." "It was not the climate that cured, but the new way of life–rest, relaxation, a psychology of serenity..." (p. 77-78).

The Idyllwild Sanatorium opened on 10 April 1901. It was an early example of medical philanthropy, funded by 40 local physicians and 20 other important citizens, who spurned profits and worked to get persons in the early stages of tuberculosis out of the hotels and boarding houses of large towns and into the sunshine and mountain air. Yet by 1907 this model resort failed. Its counterpart was Loma Linda, which took over a hotel already built (in 1886 in the midst of the great boom). "Unfortunately, Loma Linda shared the fate of Idyllwild, and its quarters once more reverted to hotel status" (p. 85-86).

By the 1890s, California doctors were at least as advanced in the study of lung diseases as their eastern colleagues. "Few individuals have written more words on tuberculosis than Francis M. Pottenger" (p. 86). Yet quackery was also common. "In 1905 a member of the local board of medical examiners called Los Angeles County the 'Mecca of the quack.' and few doctors would dispute the unpleasant nickname (p. 87). This area became known as the "Sanitarium Belt" (p. 88-89). The Pasadena Young Men's Christian Association (YMCA), established in 1886, was active in trying to help the sick. In December 1891 the Cottage Hospital at Santa Barbara was opened (p. 97). In 1886 the Temecula Land and Water Co. laid out Murietta, a spa with mineral springs (p. 108).

Southern California grew up as a health resort and attracted famous people. While many historians have overlooked this unusual story, but James M. Guinn helped to organize the Historical Society of Southern California in 1883, and wrote two solid histories of the region in 1902 and 1907. Other good histories soon followed (p. 126-30).

One health seeker who would eventually become the "most powerful of all local journalists was Harry Chandler." While a promising student at Dartmouth College, his health suddenly broke and he staked all his hopes on a trip to Los Angeles. He went to work on a ranch, then for the *Los Angeles Times.* Chandler rose rapidly, married the daughter of owner Harrison Gray Otis, and when Otis died in 1917, Chandler became proprietor of what would become southern California's greatest newspaper (p. 130).

There is a long discussion of Abbot Kenney, who came to live in a community at Sierra Madre by 1882. He wrote on outdoor life and health, and later developed Venice Beach and its canals to help promote it as "the American Italy" (p. 132). Other prominent health seekers to Southern California are also discussed: Thaddeus S.C. Lowe, Helena Modjeska, Walter Q. Gresham, John C. Frémont (Fremont), Joseph Pulitzer, Joseph Medill, Andrew McNally, Philip Danforth Armour (the "world's greatest butcher"), Eugene Field. These men brought as much talent and human eminence to California as had the earlier gold rush (p. 141-49).

The failed movement to build state-sponsored sanitariums for tuberculosis / consumption / phthisis (first petition was 1869). Address: Los Angeles, California.

1286. Encyclopedia Britannica (14th ed): Vegetarianism. 1959. Chicago, Illinois: William Benton, Pub. See vol. 23, p. 27-28.

• ***Summary:*** "Vegetarianism, a word which came into use about the year 1847, as applied to the practice of living on foods from which fish, flesh and fowl are excluded...

"The fact, however, must not be overlooked that while vegetarian societies claim as 'vegetarians' all who abstain from flesh foods, there is a large and growing number of people who repudiate the name of 'vegetarian' because of its associations, but who none the less, for some of the reasons detailed below, abstain from eating anything that has been killed."

The main reasons advanced for practicing a vegetarian or fruitarian diet are: 1. Health (animals are affected by infectious diseases such as parasites and tuberculosis; the flesh of artificially-fed animals is full of excretory substances which, along with uric acid or rapid tissue-destroying disease, may end up in humans, e.g. gout, cancer). 2. Economy (one can obtain more nutrients for less cost from a vegetarian diet). 3. Social economy (an acre of land can produce 2 to 20 times as much food from plants as form cattle or their feed). 4. Racial improvement (every prosperous community should aim to have a large proportion of farmers who labor growing crops; animals require less labor). 5. Character improvement ("On the ground that after the virtues of courage and valour and fearlessness have been taught in the lower stages of evolution, the virtue of gentle humaneness and extended sympathy for all that can suffer should be taught in the higher cycles of the evolutionary spiral. Flesh-eating entailing necessarily an immense volume of pain upon the sentient animal creation should be abstained from by the 'higher classes' in the evolutionary scale").

Vegetarian societies have been organized in many countries, chiefly in the United Kingdom, America, Germany, France, Austria, Holland, and Australia. "In England, the oldest and one of the most important societies is 'The Vegetarian Society,' of which the headquarters are

© Copyright Soyinfo Center 2014

at Oxford Street, Manchester. An attempt has been made to organize the various vegetarian societies of the world under the title of 'The Vegetarian Federal Union.' The headquarters of the London societies and of the 'Union' are at Memorial Hall, Farringdon Street, E.C.

"In the religious world the Seventh-Day Adventists (who are connected with many sanatoria and the manufacture of food specialties) and some Bible Christians, the worshippers of Vishnu and the Swami Narang and Vishnoi sects, amongst others, preach abstinence from flesh food. The Salvation Army, the Tolstoyans and the Doukhobors encourage it. A number of orders in the Roman Catholic church (*e.g.*, the Trappists) and in the Hindu faith (*e.g.*, the Dadupanthi Sadus) are pledged abstainers...

"In former years the 'Vegetarian Society' was the most active in producing literature, but since about 1901 the Order of the Golden Age has come to the front with new and up-to-date books, booklets and leaflets, and the Ideal Publishing Union has reprinted much of the earlier literature. The chief periodicals are the *Vegetarian* (weekly), the *Herald of the Golden Age* (monthly), the *Vegetarian Messenger* (monthly), the *Vegetarian* (American monthly), the *Children's Garden* (monthly)."

Kosher and Pareve (neutral). Foods bearing the Kosher label are Choplets, Choplet Burger, Vegetarian Burger, Proast, Numete, Sandwich Spread, Soyamel, Veelets, Veja Links, VP, and Entree.

New and improved Vegetarian Patties are now available. A product named New Vegetable Burger is also available.

Note 1. This is the English-language document seen (Jan. 2007) that contains the term "Vegetarian Burger" (or "Vegetarian Burgers"), or the term "Vegetable Burger" (or "Vegetable Burgers").

Note 2. This is the earliest document seen (Jan. 2009) that uses the word "Kosher" or the word "Pareve" in connection with meat alternatives or with soy products. Address: Worthington, Ohio.

1290. **Product Name:** Vegetarian Burger.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1960 April.
Ingredients: In 1971: Wheat protein [wheat gluten], water, yeast extract, salt, soy sauce, Brewer's yeast, MSG, seasonings, algin, caramel color.
Wt/Vol., Packaging, Price: 20 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *Chopletter* (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Vegetarian Burger.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Vegetarian Burger (Worthington)."

Ad in Whole Foods. 1983. Sept. p. 45. in 20 oz. cans. This product and Vegetable Skallops are being promoted as "Salt Shakers." Both are available in versions with and without salt and MSG. For the hypertensive and sodium-conscious. A black-and-white photo shows the can and label. The text reads: "Contains no meat. A vegetable protein product. No added salt or MSG."

Worthington Yesterday and Today. 1984. p. 11. Nutrition Action Healthletter. 1987. Oct. p. 13. Critical treatment of this product which contains 790 mg of sodium vs. only 65 mg for lean beef. Much of the sodium comes from MSG. The "no salt added" label is highly misleading though technically legal. It also contains caramel coloring. Thus it is not necessarily more healthful than beef.

1291. **Product Name:** Loma Linda Dinner Cuts (Meatless Cutlets) [With Salt, or with No Salt Added].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Arlington, CA 92505.
Date of Introduction: 1960 May.
Ingredients: In 1971: Wheat protein [wheat gluten], water, soy sauce, yeast extract, salt, MSG, dextrose, powdered onion, celery and parsley extracts.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 2 dinner cuts (3.5 oz–100 gm): Calories 110, protein 21 gm, carbohydrate 4 gm, fat 1 gm, cholesterol 0 mg, sodium 30 mg, potassium 75 mg.

New Product–Documentation: *Today's Food* (Loma Linda Foods, Arlington, California). 1960. Spring. p. 4. Today's Food. 1964. Autumn. p. 7. 20 oz. can retails for $0.74, serves 5, and provides 65 gm of protein; Ad. 1981, undated. "Try improved Dinner Cuts. Its no longer a tough choice. Let's face it, our old Dinner Cuts–as delicious as they were–took a lot of chewing. We took a lot of kidding... Dip in batter and wheat germ and brown in a skillet."

Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Dinner Cuts contain 18.79% protein, 1.00% fat, and 3.49% carbohydrate. One serving, 1 patty, weighs 125 gm.

Loma Linda Food Co. 1969. "Wholesale Price List." Dinner Cuts are now sold in 14 oz, 19 oz, 28 oz, and 48 oz cans. A version with no salt added is sold in 20 oz cans.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Dinner Cuts (Loma Linda)."

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned steak or burger-like product based on wheat protein.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 175. The ingredients in "Dinner Cuts (Loma Linda)" are "wheat protein, soy sauce, yeast extract, MSG, salt, powdered onion, L-lysine, dextrose, celery, parsley extract."

Label sent by Loma Linda Foods. 1988. Oct. 5. The ingredients are now, for "No salt added": Wheat gluten, water, oat flour, wheat flour, soy protein isolate, caramel color. Broth: Water, natural (vegetable) flavors, onion powder, mono potassium glutamate, dextrose, L-lysine, spice. This product was introduced in 1963.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1292. Van Gundy, Dorothea. 1960. Man-sized meals in mere minutes... for homemakers in a hurry! *Today's Food* (*Loma Linda Foods, Arlington, California*) 5(1):4-6. Spring.
• ***Summary:*** Commercial food products made by Loma Linda Foods include: Vegemeats (with gluten). Vegeburger. Dinner Cuts. Loma Linda Green Soy Beans. Linketts. More information about these products is given on pages 3 and 7 of this 8-page magazine. A photo shows Dorothea Van Gundy. Address: Dietitian, International Nutrition Research Foundation, 11503 Pierce Place, Arlington, California.

1293. California State Registrar of Vital Statistics. 1960. Certificate for the marriage for Martha D. Van Gundy and Edwin S. Jones. Riverside, California. 1 p.
• ***Summary:*** Martha D. Van Gundy (age 57, born about 1903) and Edwin S. Jones (age 69, born about 1891) were married on 7 Aug. 1960 in Riverside, California. Ed Jones was a widower; he had previously been married to Mildred Lager, a close friend of Dorothea Van Gundy. Address: Riverside, California.

1294. Farlow, David R. 1960. The Japanese American Soybean Institute. When Automatic Allocation goes into effect you will see the full impact of JASI's promotion work. *Soybean Digest.* Sept. p. 35-36.
• ***Summary:*** JASI is starting to get involved with soy milk in Japan. There are about 60,000 tofu makers in Japan and they can readily make both tofu and soy milk. Dr. Harry W. Miller "has long been a strong advocate of the utilization of soy milk to aid in the increased consumption of protein and fat by the Japanese people... K.S. Lo of the Hong Kong Soybean Co. showed me his plant last fall, and I saw huge amounts of soy milk being manufactured and bottled for the Hong Kong area alone. Pepsi Cola is bottled in the same plant and Mr. Lo informed me that soy milk was outselling Pepsi Cola by about two to one in the Hong Kong area. I drank a bottle and I have to admit that much to my surprise it was delicious."

The increase in exports of U.S. soybeans to Japan has been accomplished under a "controlled allocation system"–controlled by the Japanese government. "When the Automatic Allocation system goes into effect, and the consumer alone decides the amount of soybeans and soybean products that are consumed, you will see the full effect that the promotion work that we have done has had." A small portrait photo shows David Farlow. Address: Asst. to the Executive Vice President, American Soybean Assoc.

1295. Worthington Foods, Inc. 1960. Battle Creek Food Company, authorized dealer price list. Worthington, Ohio. 1 p. Oct. 15.
• ***Summary:*** Battle Creek Food Company in Battle Creek, Michigan, is now a division of Worthington Foods, Inc. in Worthington, Ohio. Products of special interest on the list include the following; those followed by an asterisk (*) contain soya: Veg. Burger, Prime. Nuttose. Protose. Vegetable Skallops. Vegetable Steaks, regular or small cuts. Gluten Flour. Malted Nuts. Savita. Savita Soup Cubes. Soy Flour*. Brewers Yeast Powder. Lacto Dextrin. Address: Worthington, Ohio.

1296. *British Vegetarian.* 1960. Vegetarian foods. Sept/Oct. p. 248-49.
• ***Summary:*** The main protein foods used by vegetarians are nuts, cheese and pulses. In addition, all Health Food Stores sell a wide variety of tinned nutmeats, including the following:

Granose Foods Ltd. makes: Nuttolene (peanuts and cashew nuts). Sausalene (wheat protein, mixed nuts, etc.). Saviand (Wheat gluten, ground nuts, etc.). Meatless steaks (wheat gluten, etc.). Savoury Pudding (wheat protein, wheatmeal flour, groundnuts, etc.). Nutmeat (wheat gluten, cashew nuts, wheat flour, etc.). Sausalatas (wheat protein, mixed nuts, etc.). Soya Beans (soya beans, tomato puree, brown sugar, vegetable shortening, onion, yeast extract, wholemeal flour, seasoning). Peanut Butter. Cashew Nut Cream. Granose was founded in 1898 under the name International Health Association Ltd. and is now at Stanborough Park, Watford. Note: This is the earliest document seen (July 2000) concerning the work of Granose Foods Ltd. with soya beans.

Mapleton's Nut Food Co. Ltd. makes: Maplemeat (cashew nuts, wheat risk, etc.). Savormix and Frittermix (incl. groundnuts); these are in packets for making savouries. They also make numerous tinned nutmeats, plus a wide range of nut and soya butters [probably margarines], savoury spreads and pastes, nut creams, fruit and Dundee cakes. Mapleton's was started in 1897 by the two Mapleton brothers who were processing cracked nuts in a large house on Dolphin Street, Manchester. By 1907 Mapleton's had become a public limited company and occupied a mill at Wardle, Lancashire, later moving to Garston, near Liverpool. The company opened a second factory in Hamburg, Germany, which flourished until 1914, when it was confiscated. A fire gutted the their Garston mills in 1932 but in 1933 the factory and offices were rebuilt.

Many tons of organically grown produce are grown in the UK and overseas using compost.

1297. Miller, Harry W. 1960. The package soy milk shop. *Soybean Digest.* Oct. p. 14-15.

• ***Summary:*** Soy milk is now widely marketed in the United States in both powdered and evaporated forms.

"The demand for the product has been mostly from those allergic to animal milk and through prescription to those who cannot tolerate dairy products. Its manufacture, however, has been by large factory establishments. This is the case with Loma Linda's Soyalac, Borden's Mull-Soy, and Mead Johnson's Sobee. The latest soy milk is being put out by the Indonesian soy milk plant located at Djorgakarta [Yogyakarta, Jogjakarta] which began soy milk powder production in 1957. These plants have contributed much to the knowledge of soy milk, and emphasized its value as a dietary article."

A package soy milk plant can be installed for less than

$2,000. It can start as a tofu shop to which is added a steam boiler or steam generator of 5 to 10 horsepower capacity, either a hand-operated stone mill, or better a small mill run by an electric motor with steel or carborundum buhr, and a 50-gallon pressure cooker. The soymilk is formulated by adding sugar, oil, salt, calcium, and vitamins. "These are placed in about one-fifth the desired quantity of extracted milk and run through a small homogenizer especially made for the package plant. When it is homogenized it is added to the other four-fifths of the milk, and we have it as a constituted milk of a nice color and good flavor.

"In most places this soy milk is used hot and marketed at once as hot milk. However, where it is bottled (as is customary with animal milk) it is run over a cooler and bottled which adds a little expense. The package soy milk plant has a capacity for 150 pounds of cheese curd, and 200 gallons of milk per day of operation, using three trained workers, also at a very minimum of cost.

"Plant 30 Years Ago: The practicability of such package soy milk and cheese plants has been amply demonstrated. In fact, my first beginning with soy milk was made in a rather crude package plant at the Shanghai Sanitarium some 30 years ago. This grew into the large soy milk factory later in Shanghai. The next one, which was more streamlined, was put in a school at Taipei, Taiwan, supplying the school, the Taiwan Hospital and community with soy milk daily.

"One year ago the writer had the satisfaction of arranging a flow line of the above described equipment in a village in the northern suburbs of Tokyo, where soy milk is made in a soy cheese [tofu] factory so both bottled soy milk and tofu are supplied to the community and also to a state institution. There are an estimated 3,000 soy curd plants in Japan. At little additional cost each of these can be transformed into soy milk producing shops.

"A soy milk package unit has been assembled at Mountain View College, located in central Mindanao, Philippine Islands. Here the college farm raises a good type of edible soybean. There 700 students get soy milk for breakfast every morning and at noon have soy cheese. In these rice eating and corn producing areas the soybean thus prepared has made a great contribution to the health and welfare of the student body and faculty members.

"A similar package soy milk shop is now being installed at a school in Hong Kong, another at a college and hospital at Bandung, Indonesia, and another at a college in Japan.

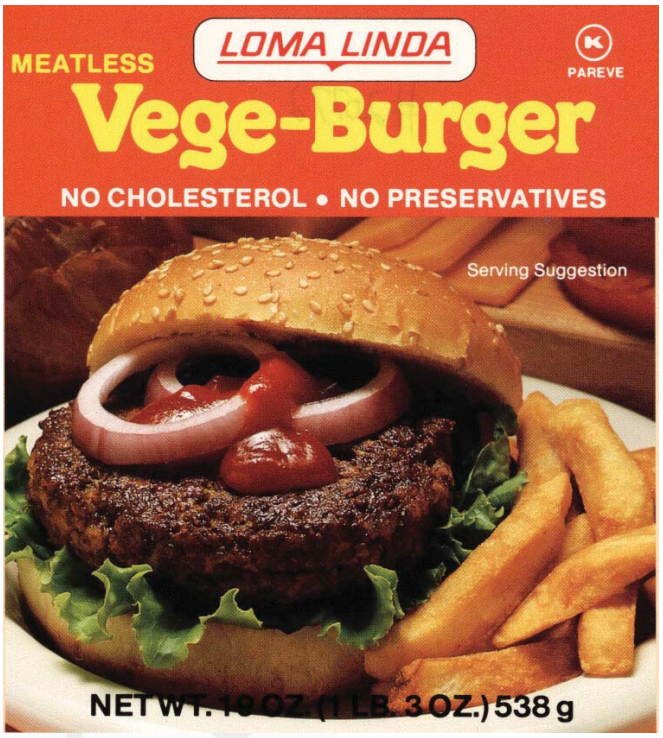
"Thus a partial solution of the all-important protein in the nutrition of the Orientals, within their economic reach, is now a possibility. No greater benefit can be visualized than nutrition adequate for infants and the growing school child."

Photos show: (1) Three Japanese workers standing behind a table on which are glasses of soy milk. The caption

© Copyright Soyinfo Center 2014

reads: "Soy milk, ready for customers, is made fresh every day." (2) Dr. Harry Miller and three Japanese workers in a "soy milk package plant," or compact soy milk shop, with several pieces of equipment. Address: M.D., Director Emeritus International Nutrition Research Foundation.

1298. **Product Name:** Soymilk.
Manufacturer's Name: Bandung College.
Manufacturer's Address: Bandung, West Java, Indonesia.
Date of Introduction: 1960.
New Product–Documentation: Letter from Eric C. Fehlberg, Director, International Health Food Assoc. 1990. May 24. This organization no longer makes foods.



1299. **Product Name:** Vegetable Steaks.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1960.
Ingredients: In 1971: Wheat protein [wheat gluten], water, yeast extract, salt, flavorings, MSG, caramel color.
Wt/Vol., Packaging, Price: 20 oz can. Retails for $2.70 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Vegetable Steaks (Battle Creek–by Worthington)." Note: Worthington Foods acquired Battle Creek Food Co. in 1960.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned steak or burger-like product based on wheat protein.

Worthington Yesterday and Today. 1984. p. 11.

1300. **Product Name:** Soymilk.
Manufacturer's Name: Hong Kong Hospital and South China College.
Manufacturer's Address: Hong Kong.
Date of Introduction: 1960.
New Product–Documentation: Letter from Eric C. Fehlberg, Director, International Health Food Assoc. 1990. May 24. This organization no longer exists.

1301. **Product Name:** Loma Linda Vegeburger (Canned Meatless Hamburger). Later renamed VegeBurger or Vege-Burger.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, California.
Date of Introduction: 1960.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *Today's Food* (Loma Linda Foods, Arlington, California). 1960. Spring. p. 4-5. "Loma Linda Vegeburger."

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Vegeburger contains 17.75% protein, 0.92% fat, and 4.08% carbohydrate. See also reformulated 1971 version that contains textured soy protein.

Loma Linda Food Co. 1969. "Wholesale Price List." Vegeburger is now sold in 14 oz, 20 oz, 30 oz, and 51 oz cans. A version with no salt added is sold in 20 oz cans.

1302. **Product Name:** Loma Linda Vegelona (Meatless Bologna-like Loaf).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, California.
Date of Introduction: 1960.
Ingredients: Wheat gluten, water, dried yeast, corn oil, salt, soy flour, vegetable mono- and di-glycerides, caramel color, natural (vegetable) flavors, oat flour, onion powder, L-lysine, wheat flour, artificial colors, soy protein isolate, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per ½ inch slice (2.4 oz–67 gm): Calories 100, protein 18 gm, carbohydrate 6 gm, fat 1 gm, cholesterol 0 mg, sodium 210 mg, potassium 100 mg.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Vegelona contains 25.38% protein, 5.45% fat, and 7.22% carbohydrate.

Loma Linda Food Co. 1969. "Wholesale Price List." Vegelona is now sold in 14 oz, 20 oz, and 30 oz cans.

It's Your World Vegetarian Cookbook. 1973. Glendale,

© Copyright Soyinfo Center 2014

California: Seventh-Day Adventist Church. p. 118. This is a canned bologna-like product.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1963.

1303. **Product Name:** Cho-Pats.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison, Tennessee.
Date of Introduction: 1960.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Cho-Pats contain 16.50% protein, 0.10% fat, and 6.22% carbohydrate.

Talk with Warren Hartman, who worked for Worthington Foods since early 1946. 1992. Nov. 5. He thinks that this product was made by Madison Foods.

1304. **Product Name:** Chic-Ketts (Meatless Chicken).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1960.
How Stored: Frozen.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Chic-Ketts contain 18.45% protein, 0.21% fat, and 6.70% carbohydrate.

By 1973 this product was reformulated to contain textured soy protein concentrate and isolate.

Note: This is the earliest commercial meat alternative seen which has a name clearly indicating that it is an alternative to chicken or poultry.

1305. **Product Name:** Cutlets.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 800-628-3003.
Date of Introduction: 1960.
Ingredients: In 1971: Wheat protein [wheat gluten], extract of Brewer's yeast, hydrolyzed vegetable proteins, MSG, salt, caramel coloring, water to process.
Wt/Vol., Packaging, Price: 50 oz (1417 gm) can. Retails for $6.25 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Cutlets plus their liquid contain 15.50% protein, 0.62% fat, and 4.94% carbohydrate. Not listed in the 1965 *Diet Manual.*

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Cutlets (Worthington)."

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 175. The ingredients in "Cutlets (Worthington)" are "wheat protein, yeast extract, HVP, soy sauce, mushrooms, MSG, salt, lysine, dextrose, corn oil."

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

By 1990 this product had been reformulated with textured soy protein concentrates.

1306. **Product Name:** Cutlets in Gravy.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 800-628-3003.
Date of Introduction: 1960.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Cutlets in gravy contain 14.37% protein, 3.68% fat, and 8.34% carbohydrate. Not listed in 1965 *Diet Manual.*

1307. **Product Name:** Vegelinks (Meatless).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1960.
Ingredients: In 1971: Soy protein (Fibrotein spun soy protein fibers), oats, corn oil, vegetable shortening, [egg] albumin, salt, corn syrup solids, soy sauce, vegetable gum, hydrolyzed vegetable protein, flavorings, U.S. certified color, water.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Vegelinks and its liquid contain 22.10% protein, 10.70% fat, and 9.19% carbohydrate. The manufacturer's name is not given.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "Vegelinks (Worthington)." This is an institutional product.

© Copyright Soyinfo Center 2014

Note: This is the earliest English-language document seen (Aug. 2003) that uses the term "Vegelinks" to refer to meatless soy sausages.

1308. Meyer, Herman Frederic. 1960. Infant foods and feeding practice. Springfield, Illinois: Charles C. Thomas. xxviii + 332 p. Foreword by Philip L. White. Index. 24 cm. [199* ref]
• ***Summary:*** Chapter 5 is titled "Bottle-fed (artificial) infant foods." A photo (p. 82) shows all known available U.S. and Canadian bottle-fed infant foods. These are divided into 3 basic types: 1. Milk-base dilution mixtures. 2. One-formula (ready-modified) mixtures. 3. Preparations with special functions. The soy milk products are all listed under type 3, in the category "Hypo-allergic preparations (liquid or dry). The following are mentioned: Mull-Soy Liquid and Mull-Soy Powder (The Borden Co., Pharmaceutical Div., 350 Madison Ave., New York 17, NY). Sobee (dry) and Sobee Liquid (Mead Johnson & Co., 2404 W. Pennsylvania St., Evansville, Indiana). Soyalac Infant Powder, Soyagen (dry), and Soyalac Infant Concentrate (liquid) (International Nutrition Laboratories, 11503 Pierce Place, Arlington, California; or Box 388, Mt. Vernon, Ohio).

Soyola (made by Wyeth), a soy-based "Therapeutic adjunct and dietary supplement," has been discontinued since 1952. Almond Lac (made by Almond Lac Co.), a hypoallergenic preparation, was discontinued during 1952-59. Address: Assoc. Prof., Dep. of Pediatrics, Northwestern Univ. Medical School, Chicago, Illinois.

1309. Seventh-day Adventist Dietetic Assoc. 1960. Diet manual. 1st ed. Main Office: 1720 Brooklyn Ave.. Los Angeles 13, California. 106 leaves. 22 cm.
• ***Summary:*** The title page reads: "Prepared by the Department of Dietary Service, White Memorial Hospital, College of Medical Evangelists, in cooperation with the Seventh-day Adventist Dietetic Association" (SDADA). It was published and distributed by the SDADA. Editions published after 1971 (later listed as 1970, i.e. 1975, 1978, 1982, 1990) were prepared by the SDADA.

A comprehensive loose-leaf handbook for the planning, selection, and coordination of vegetarian diets. Although this book is undated, subsequent editions give the publication date as 1960.

Table VI, titled "Protein, fat, and carbohydrate composition of some meat alternates" (p. 95), lists 27 product names alphabetically. Most (perhaps all; the names of the manufacturers are not given) are made by Seventh-day Adventist food companies, especially Loma Linda Foods and Worthington Foods. These products are: Chic-Ketts, Cho-Pats, Choplets–liquid, Chopletburger, Cutlets–liquid, Cutlets in Gravy, Garbonzos, Nuteena, Nutmeat, Proast, Proteena, Protose, Sandwich Spread, Soyloin Steaks, Soybeans–green, Steaklets–liquid, Vegeburger, Vegechee, Vegecuts, Vegelinks–liquid, Vegelona, Vegemeatburger, Vegemeat Steaks, Vegetable Cheese, New Wieners–liquid, Yum, Zoyburger.

Note: This is the English-language document seen (Jan. 2007) that contains the term "Chopletburger" (or "Chopletburgers"). Address: California.

1310. Sonnenberg, Lydia. ed. 1960. Everyday nutrition for your family. Los Angeles, California: Seventh-day Adventist Dietetic Assoc. 147 p. Illust. 4 tables on nutritional intake. 22 cm. [43 ref]
• ***Summary:*** Discusses the principles of a vegetarian diet for all age groups. Chapter 3, "The Basic Food Groups," lists five: Fruits, vegetables, bread and cereals, protein foods (including legumes, cottage cheese, eggs, soy cheese [tofu], prepared meat alternates, nuts and nut butters), and the milk group. A "soy cheese sandwich" is listed as "something hearty" in a month's suggestions for pack-it lunches. The chapter titled "Proteins on Parade" discusses soy milk as a good source of protein, "complete proteins," and the supplementary action of proteins (p. 46-47). It has a section titled "Soybeans Important" which praises soy flour and soy cheese [tofu].

Chapter 8, titled "Fats are Concentrated," has a table (p. 53) listing protein-rich foods of animal origin (with mostly saturated fat) and plant origin (mostly unsaturated): Soybeans, soybean milk, and soybean cheese are mentioned; they have 50-70% of their calories from fat. A "Gluten" type entree is low in fat. Chapter 21 is titled "The Vegetarian Diet."

Note: This is the earliest document seen (Dec. 2013) that mentions the Seventh-day Adventist Dietetic Association. Address: Director, Dietary Dep., Loma Linda Sanitarium and Hospital and Assoc. Prof., School of Dietetics, College of Medical Evangelists.

1311. **Product Name:** Loma Linda Soyagen Infant Powder (Soy-Based Infant Formula).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce Place, Arlington, California. Phone: 714-687-7800 (3/88).
Date of Introduction: 1960?
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
New Product–Documentation: H.F. Meyer. 1960. Infant foods and feeding practices. A photo (p. 82) shows this canned product. A photo of a baby's face appears on the front panel. See also p. 88 and 90. Page 121 gives a detailed analysis of the product. The powder, after being reconstituted, contains: Fat 3.2%, protein 2.85%, carbohydrates 5.4%. Calories per ounce: 18. Tablespoons per oz.: 4. Added vitamins and minerals: ferrous sulphate, calcium carbonate, dibasic calcium phosphate. Affected by terminal sterilization: No. How formulated or reconstituted:

© Copyright Soyinfo Center 2014

1 vol. milk to 7 vols. water. Chemical definition and essential clinical uses: Same as Soyalac Infant Powder but sold in grocery and health food stores. Soyalac Infant Powder and Infant Concentrate only sold in drug stores. Meyer gives the manufacturer as International Nutrition Laboratories, but with two addresses: 11503 Pierce Place, Arlington, California, and Box 388, Mt. Vernon, Ohio.

1312. Madison Foods. 1960? Everybody loves Madison Foods: Recipes. Madison, Tennessee. 32 p. Undated. 10 x 15 cm.

• ***Summary:*** Contents: The story of Madison Foods (a division of the famous Madison College located near Nashville, Tennessee). Tasty, healthful Madison foods (listing and photo). Vegetarian vs. meat diet. Vegetable fats vs. animal fats. Vegetable proteins vs. animal proteins. Nutritional analyses of Madison Foods products. List and description of Madison Foods. Recipes (at least one for each product; a photo accompanies each).

This little (6 by 4 inch) booklet focuses on the various innovative Madison Foods vegetarian products, which are packed in 14 oz, 19 oz, and No. 10 cans. The undated booklet was published after Jan. 1960, since page 6 cites an article from *Nutrition Reviews* published that month.

Madison's products are: Cheze-O-Soy (tofu), Com-Pro ("Madison Foods' latest and best." No ingredients given), Dinner Morsels (all-gluten, resembling chicken), Kreme-O-Soy, Madison Burger, Madison Links, Soy beans in tomato sauce, Not Meat (with peanuts and soybeans), Meatless Nu-Steak (all-gluten), Soyburger, Meatless Stake-Lets (with wheat gluten, whole wheat, and soy flour in a meatlike sauce), Vigorost, Yum, and Zoy-Koff (1 lb bags). Coming soon: Madison Links (hot dogs; photo shown).

Photos on the last two pages show: A student operating a canning machine. Madison Links on half-buns on a tray. The Madison Food factory. Dr. A. Perry Webber, food consultant, with Madison's products.

Note 1. This is the earliest English-language document seen (Aug. 2003) that uses the term "Madison Links" to refer to meatless soy hot dogs or sausages.

Note 2. This is the earliest document seen (Jan. 2013) that mentions "Com-Pro" or "Madison Links"–protein foods made by Madison Foods. Address: Madison, Tennessee.

1313. *Madison Survey* (*Madison, Tennessee*). 1961. Health restaurants and treatment rooms. 43(1):1. Jan.

• ***Summary:*** "During the Golden Anniversary Convention at Madison in October, last fall [the college celebrated its 50th anniversary in Oct. 1960], Robert Santini, R.N., of Pine Hill Sanitarium, near Birmingham, Alabama, touched off the important question of opening up vegetarian cafeterias and treatment rooms in the larger cities, using the units as country bases. He said he was frequently approached by non-Adventists, asking when a health restaurant would be opening in the Birmingham area." It was agreed that "it would be even more difficult to find qualified personnel than money."

"Several spoke of how formerly we had health restaurants and treatment rooms in the large cities of the South, and these should be reopened. Nashville (the Polk

© Copyright Soyinfo Center 2014

Street Settlement), Birmingham, Knoxville, and Memphis were mentioned.

Note: Madison Survey is now 23 cm tall and 4 pages long. At the top of page 1 is an illustration of the entrance to the college, consisting of two stone pillars. On the left one is written "Madison Sanitarium and Hospital." On the right one "Madison College 1904."

1314. Donnelly, Charles J. 1961. A comparative study of caries experience in Adventist and other children. *Public Health Reports* 76(3):209-12. March. [6 ref]
• ***Summary:*** Seventh-day Adventist children have fewer caries (cavities), decayed, missing, or filled teeth than would normally be expected. Address: Dental Surgeon, Epidemiology and Biometry Branch, National Inst. of Dental Research, Public Health Service, USA.

1315. *British Vegetarian.* 1961. Soya milk for household use. March/April. p. 93.
• ***Summary:*** Granose Foods will soon be in a position to supply two varieties of spray-dried soya milk, Soyalac and Soyagen, made by one of their associated companies, Loma Linda Food Company in Arlington, California. Soyalac is specially prepared for infants, whereas Soyagen is for general use. A table compares the nutritional composition of the two products in both powdered and reconstituted forms. Reconstituted, Soyalac contains 2.85% protein and 3.39% fat vs. 2.80% and 2.80% for Soyagen. Sold in 16-oz. tins, Soyalac retails for 10 shillings 6 pence, and Granogen for 9 shillings 6 pence.

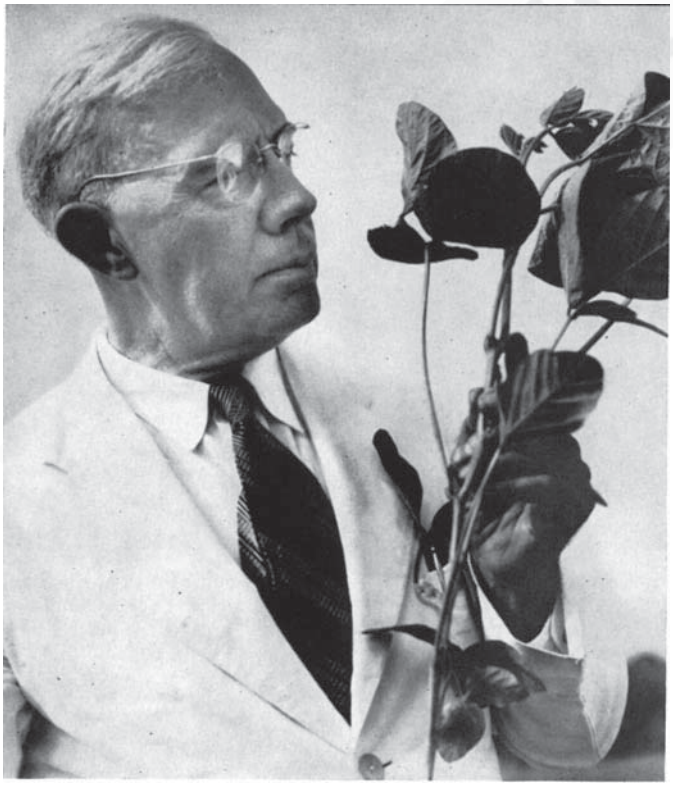
1316. Fact sheet: Harry Willis Miller, M.D., F.A.C.S. (News release). 1961. n.p. 1 p. April. [1 ref]
• ***Summary:*** This one-page biographical sketch of Dr. Miller was released with the book *China Doctor,* by Raymond S. Moore, published this month by Harper & Brothers in New York. "Dr. Clarence Hall, *Reader's Digest,* says: 'Towering figure... Dr. Harry W. Miller... in the inspiring tradition of such all-time "greats" as Livingston, Judson and Paton [sic, Patton, General George]... restless creator of new traditions, a modern-day pioneer whose imaginative use of medicine has touched millions with the magic of new hope and health."

Concerning his work with soymilk and nutrition, this sketch states: "Proponent of preventive medicine, public health and nutrition as greatest challenge to America from world's needy (Consultant to United Nations). Out of this grew his research and development of fiber-free, potable soybean milk which is saving countless lives of infants and adults around the world (In Hong Kong more Miller soymilk sold than soda pop). Gives all royalties and fees back to research and building of hospitals (over $2,500,000). U.N. establishing overseas soymilk plants with Miller's counsel in areas where there are few cows (Indonesia, etc.). Recipient of gold medals for research."

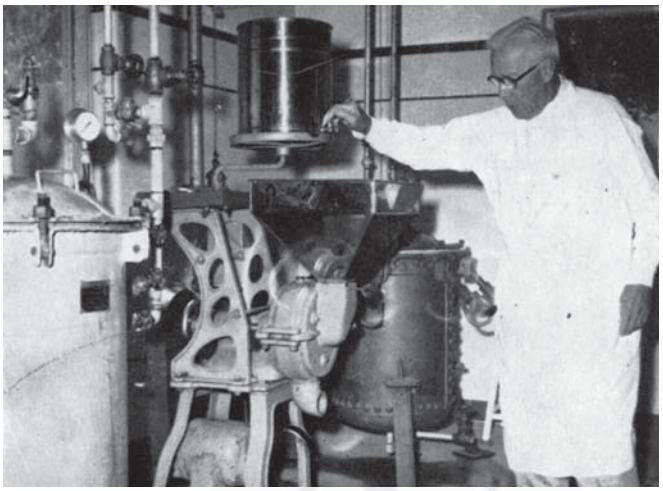
Note: The soymilk made in Hong Kong that sold better than soda pop was not made by Harry Miller; he never made commercial soymilk in Hong Kong. Rather, it was Vitasoy, made by K.S. Lo of Hong Kong Soya Bean Products Co. Ltd.–with little or no influence from Dr. Miller.

1317. Moore, Raymond S. 1961. China Doctor: The life story of Harry Willis Miller. New York, NY: Harper & Brothers. xiv + 215 p. Illust. (8 pages of photos). Index. 21 cm. 2nd edition, 1969. Pacific Press, Mountain View, California.

• ***Summary:*** A key but sometimes inaccurate source of biographical information about this truly Great Man. Contains many excellent photos of Dr. Miller, including an especially good portrait facing page 80.



Contents: Foreword by Hollington K. Tong. Preface. Map: The Far East. The opium cure. Hallway to service. The medical buff. Young surgeon at work. Slow boat to China. From mufti to mao tze and queue. The penniless VIP. Strange horizons. Pigtail honeymoon. Wife hunt. Picture section. Some close calls. A key decision. Operating on the Siamese elephant. Conquering new fields. Return to the Orient. No recipes in China. High finance. Facing the medical boards. A doctor's choice. Travel by presumption. To bow or not to bow. Kidnapping the generalissimo. "Mayor" Miller. An ounce of prevention. Shanghai again. China's greatest honor. Benghazi brink.

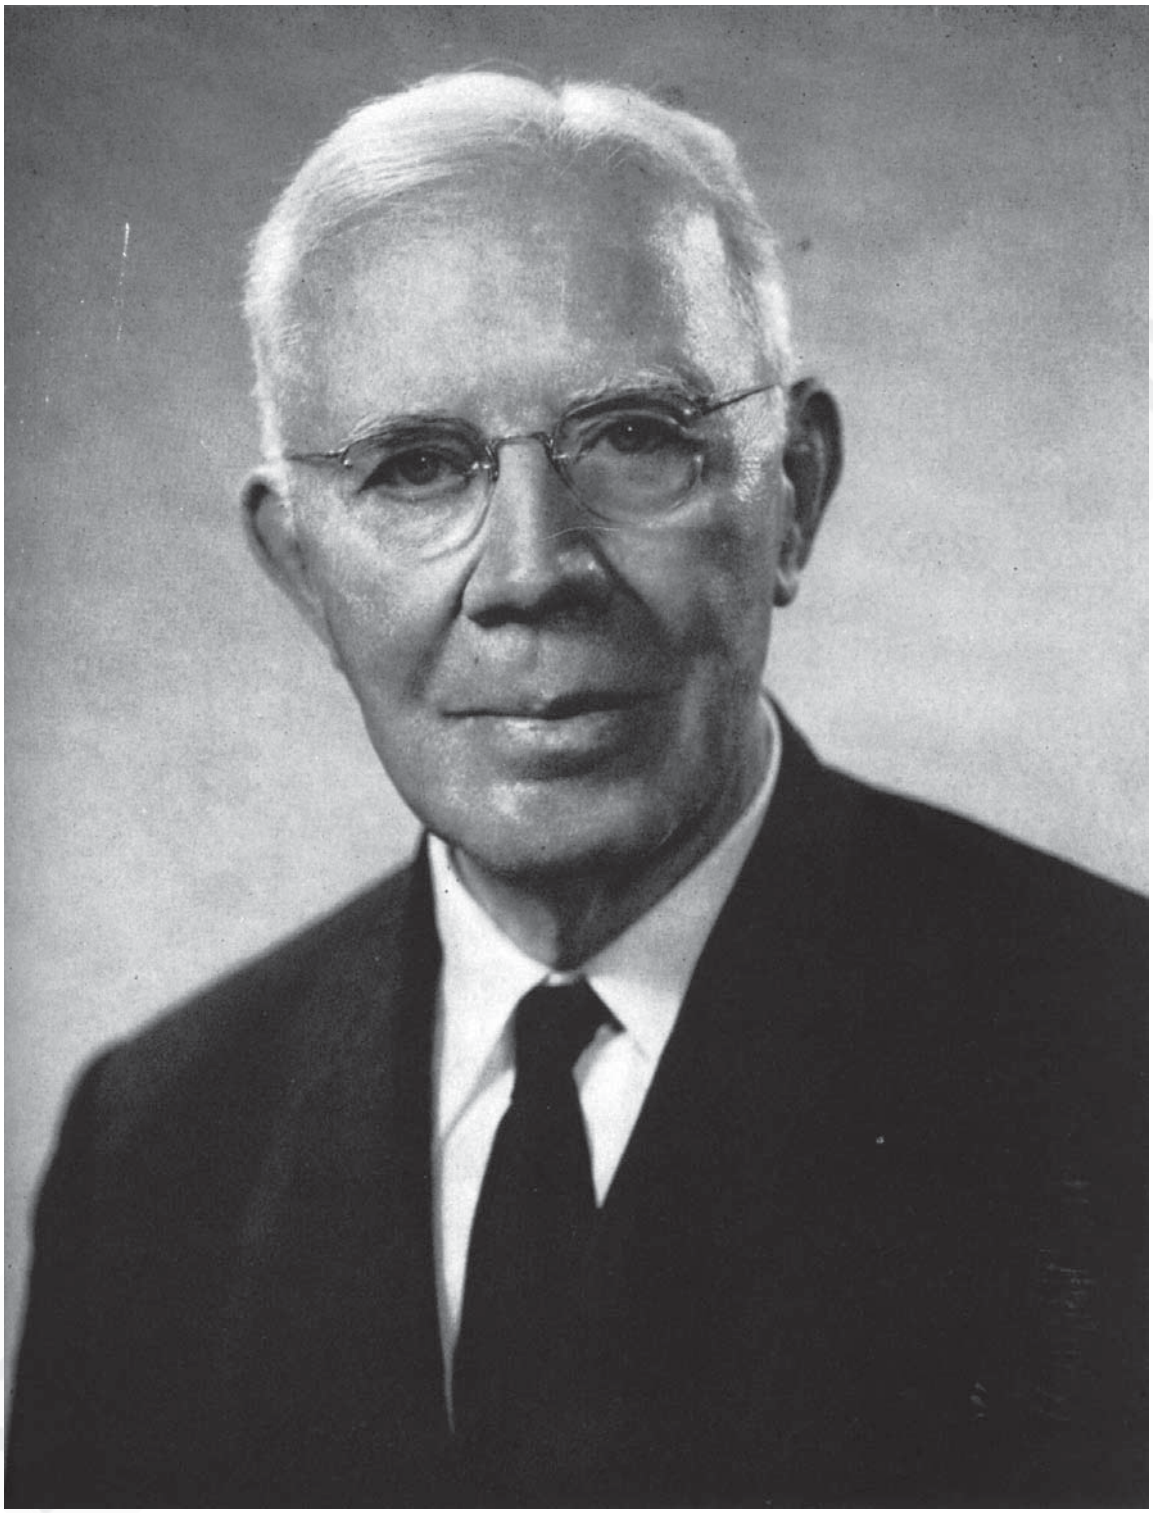


The rear cover of the book describes it as follows: "What happens when a man gives himself and his talents to the service of God? Here are a few of the things that Dr. Harry Willis Miller has done and is still doing! At 23 gave up a promising medical career and quarter-million

© Copyright Soyinfo Center 2014

dollar inheritance in America. Went to China as a medical missionary and lived among the poor and sick. Immediately began building the first of 15 hospitals throughout China. With inventive genius performed daring operations and made new discoveries in preventive medicine. Was responsible for many cures of the dread opium 'sickness,' including the cure of the famed 'Young Marshal' Chang. Became perhaps the most widely practiced surgeon in the world. Invented and developed soybean milk, which is responsible today for saving thousands of lives in undernourished areas of the world. Had many dramatic encounters with bandits, wars, famines. Was so well-known and respected that during World

War II the Japanese invaders permitted Dr. Miller to give sanctuary to Chinese soldiers in the hospital compound. Returned to the U.S. for a time. Was consulting physician to 3 U.S. presidents and personal physician to national figures, senators, ambassadors, etc. Was awarded the coveted Blue Star of China by Generalissimo Chiang Kai-shek. At 81 is still healing and caring for the people of the Far East."



An ad for the book in *Soybean Digest* (Nov. 1935, p. 35) begins: "The incredible biography of the 'Schweitzer' of the Orient."

Pages 180-89 describe Dr. Miller's work with soy milk, Soyalac and Soyagen, and other soy foods. In the Shanghai Sanitarium kitchen he learned how to improve the flavor and digestibility of soy milk by running steam directly into the milk. From the Philippine Refining Co., which transformed bad-smelling copra into good-smelling coconut oil, he learned that steam distillation was the key to the transformation. From a Filipino company that refined stale and rancid butter into a product that tasted as fresh as new, he learned the secret of flash pasteurization–which effectively killed bacteria. Back in China, Dr. Miller, with his older son, Harry Willis Miller, Jr., worked to apply these new discoveries to soy milk. They worked! He expanded his experiments with infants and children, and in 1936 his results were published in the *Chinese Medical Journal.*

Photos (p. 81-89, unnumbered) show: (1) An excellent full-page portrait of Dr. Miller at age 81. (2) Harry and Maude Miller in China, wearing the Chinese dress they adopted after their arrival in 1903. Maude's tragic death two years later–caused by sprue, a vitamin deficiency disease–gave added personal meaning to Dr. Miller's nutritional research. (3) A group portrait showing a meeting of Adventist Missionaries at Shanghai, China, in 1907.

(4) Harry and Marie Iverson Miller at the time of their marriage in 1908. A trained nurse, she served with him through 42 years of missionary activity, and helped rear their 4 children. (5) Shanghai Sanitarium, opened 1 Jan. 1928, the first of 15 hospitals to be established in China under the leadership of Dr. Miller, who also founded numerous smaller

© Copyright Soyinfo Center 2014

clinics. (6) Members of the Shanghai Sanitarium staff in the mid-1930s, standing in front of a one-engine plane, as they see him off for a visit to outlying places.

(7) Dr. Miller and Marshall Chang Hsüeh-liang at Hankow airport in 1935, two years after Dr. Miller had cured the young Marshall's opium addiction. (8) Dr. Miller carried out more than 18,000 operations. Here he performs a thyroidectomy at one of his frequent visits to hospitals in Manila, Philippines. (9) Wuhan Sanitarium and Hospital at Wuchang, one of the medical units established through the generosity of the Young Marshal. Twenty thousand refugees moved into the Sanitarium compound when Hankow capitulated to the Japanese in 1938.

(10) The ruins of the Wuchang city dispensary, destroyed by Japanese bombs in 1938. (11) Dr. Miller examines a soybean plant grown on his farm at Mt. Vernon, Ohio. (12) Dr. Miller demonstrates his small-scale soymilk processing machine, which can be operated by one person. "The goal of Japan's Ministry of Health is to install one of these in each of the thirty thousand village tofu (soy cheese) factories in Japan."

(13) A baby and nurse with a large can of Soyalac in Japan. (14) A soymilk booth in Hong Kong, where more soymilk is sold than any kind of soft drink. The bottles in wooden cases are stacked four high. (15) A baby, little Mohammed Ali, a Bedouin child suffering from malnutrition bordering on starvation, at the Benghazi, Libya, hospital. In 1956 Dr. Miller nursed him back to health. He soon grew strong and healthy and began to take a lively interest in the world around him.

(16) "Generalissimo Chiang Kai-shek greets Mrs. Mary Greer Miller while Madame Chiang congratulates Dr. Miller following the ceremonies held March 26, 1956, in which Miller received the Blue Star of China, that country's highest award, similar to the Congressional Medal of Honor in the United States." Address: Vice President, College of Medical Evangelists, Loma Linda, California.

1318. Worthington Foods, Inc. 1961. Wholesale price list–order blank. Worthington, Ohio. 1 p. May 1.
• ***Summary:*** New products in the Worthington Foods line include: Barbie Sue. Patties. Big Pat. Safflower oil. Kreem-chee (natural white or pimiento). Ripe green olives. Chili.

Worthington now owns the Battle Creek line of foods including: Burger, Veg. Prime. Nuttose. Protose. Vegetable Skallops. Vegetable Steaks. Gluten Flour. Kaffir "Tea." Malted Nuts. Savita. Savita soup cubes. Soy flour. Natural wheat germ. Acidone tablets. Brewer's yeast. Lacto dextrin. Laxo. LD-Lax. Psyllium seed blond. Sugarless sweetener.

Worthington now has warehouses in Portland, Oregon, and San Leandro, California (near Oakland). Address: Worthington, Ohio. Phone: Tuxedo 5-5359.

1319. Barber, Mary I. 1961. Lenna Frances Cooper, February 25, 1875–February 23, 1961. *J. of the American Dietetic Association* 38(5):458. May.
• ***Summary:*** An excellent obituary. Her parents, who were pioneer settlers in Kansas, desired "that their children should receive an education that would enable them to serve others. One son went East to Battle Creek, Michigan, to study medicine, and in 1898, his sister, Lenna, followed him to take up nursing at the Battle Creek Sanitarium. She was graduated as a nurse in 1901 and for the next few years was closely associated with Dr. John Harvey Kellogg and assisted in the care of his many adopted and foster children. Dr. Kellogg practiced dietetics along with medicine and had many theories about food for 'biologic' living. It can be imagine how his quiet nurse persuaded him to allow her to attend Drexel Institute in Philadelphia [Pennsylvania] to study foods and food chemistry. She finished the two-year course in 1908 and later was awarded her bachelor's and master's degrees by Teachers College, Columbia University. Miss Cooper met all of her educational expenses with her own earnings.

"On her return from Drexel, she became the *first* dietitian at the Battle Creek Sanitarium where later, as Dean, she initiated the Battle Creek Sanitarium School of Home Economics."

She was the first to be appointed a Supervising Dietitian in the Army during World War I. "In this position she directed the work of over three hundred dietitians in war service for the first time in history. Another *first* was her suggestion that a conference of dietitians be arranged in 1917 to formulate a plan for dietetic communication and to consider the means by which dietitians could best serve the war needs, both at home and overseas. In cooperation with Lulu G. Graves, a decision was made to invite all dietitians of their acquaintance to come to Cleveland [Ohio] for October 18 to 20. This was of great importance to the dietetic profession, because here The American Dietetic Association was formed. From a nucleus of thirty-nine charter members, the Association today numbers almost 15,000."

In 1927 Miss Cooper became Food Service Director at the University of Michigan. Also in 1927 she received an honorary Master of Home Economics degree from Michigan State University. In 1930 she "went to Montefiore Hospital in New York City, where she was Chief of Nutrition for eighteen years." She was the author of three important books. Address: Battle Creek, Michigan.

1320. **Product Name:** Soy Flour.
Manufacturer's Name: Worthington Foods, Inc. (Marketer-Distributor).
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1961 May.
New Product–Documentation: Wholesale price list. 1961. May. 1. Sold in 2 lb or 5 lb bags.

© Copyright Soyinfo Center 2014

1321. Smith, Allan K. 1961. Oriental methods of using soybeans as food. With special attention to fermented products and notes on Oriental farming practices. *USDA Agricultural Research Service.* ARS-71-17. 65 p. July. Illust. 27 cm.
• ***Summary:*** Contents: Part I: China. Introduction. Farming conditions in China. Oilseed production. Soy sauce in China. Sweet flour paste–Tien mien chang [chiang]. Soybean or vegetable milk (incl. Willis Miller and the Henningsen Produce Co. in Shanghai). Yuba. Soybean curd or tofu. Soybean cheese [fermented tofu]: Chee-fan ("cheese" + "small cube"), tsüe-fan ("drunken cheese"), hon-fan ("red cheese"). Fen-T'iao from mung beans. Fermented soybeans [fermented black soybeans]. Vinegar fermentation process.

Note: This is the earliest document seen (Oct. 2011) that uses the term "tsüe-fan" ("drunken cheese") to refer to a type fermented tofu.

Part II. China–Chinese Institutions. Henry Lester Institute (in Shanghai; Dr. Bernard Read). Academia Sinica (headquarters in Nanking). China Vegetable Oil Corporation (CVOC, Shanghai). The China Oils and Fat Industries Ltd. (Shanghai). National Bureau of Industrial Research. Catholic University (Fu Jen, at Peiping). Yen Ching University (Peiping). Agriculture Experiment Station (Peiping).

Part III: Japan. Introduction. Production of miso in Japan. Soy sauce in Japan. Trends in soy sauce production. Part IV: With Raymond E. Culbertson. Korea. Introduction. Breeding work. Soybean varieties. Climatic relations. Soils of Korea. Topography. Land use. Cultural practices. Marketing. Soybeans as foodstuff. Soy sauce. Acknowledgment.

Page 19 states: "The China National Government has taken an active interest in soybean milk for use by its army. Mr. Willis Miller, with offices and business connections with the Henningsen Produce Company in the Dollar Building (7th Floor) at 51 Canton Road, Shanghai, had just completed, at the time of my visit, the building of a soybean milk plant for the Chinese Government. The process is patterned after that of the International Nutritional Laboratories at Mt. Vernon, Ohio, for making a powdered or spray-dried milk. Mr. Miller also was supervising the installation of a vegetable canning plant for the same purpose."

The text of this bulletin was previously published, serially, with slight revisions, in *Soybean Digest,* from Feb. to June 1949. Address: Northern Utilization Research and Development Div., Peoria, Illinois.

1322. *Today's Food* (*Loma Linda Foods, Arlington, California*). 1961. [Commercial food products made by Loma Linda Foods]. 6(2):5-6, 8. Summer.
• ***Summary:*** Loma Linda food products include: Smokene. Savorex. Vegeburger. Nuteena.

Also mentioned as generic names are: Soy mayonnaise, and soy milk. Address: 11503 Pierce Place, Arlington, California.

1323. Spalding, Arthur Whitefield. 1961-1962. Origin and history of Seventh-day Adventists. 4 vols. Washington, DC: Review and Herald Publishing Assoc. *
• ***Summary:*** The author lived 1877-1954. This primarily anecdotal history contains an abundance of information and serves as a useful reference.

1324. **Product Name:** Loma Linda Boston Style Baked Soybeans (also called Soy Beans Boston Style).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: P.O. Box 388 (Wooster Road), Mount Vernon, Ohio.
Date of Introduction: 1961.
Wt/Vol., Packaging, Price: 20 oz can.
New Product–Documentation: Soybean Blue Book. 1961. p. 101. "Boston-Style Soybeans." Today's Food. 1962. Summer. p. 6. Today's Food. 1964. Autumn. p. 4-5. 20 oz. can. Wholesale pricer list. 1968. Says "Soy Beans Boston Style." 17 oz. for $0.30 retail. Soybean Blue Book. 1973. Still being produced.

1325. **Product Name:** Cheze-O-Soy with Tomato Sauce (Tofu Entree).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1961.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: An improved version of the tofu introduced in 1931.

1326. **Product Name:** Fortified Instant Soyamel (Soymilk).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1961.
Ingredients: 1985: Soy protein isolate, partially hydrogenated soybean oil, corn syrup solids, malt extract.
Wt/Vol., Packaging, Price: 2 lb can makes 2 gallons.
New Product–Documentation: Wholesale price list. 1961. May 1; Shurtleff & Aoyagi. 1984. Soymilk Industry and Market. p. 28. "The first fortified soymilk based on isolated soy protein, it was NOT thought of or marketed as an infant formula."

1327. **Product Name:** Kreem-Chee (Non-Dairy Cream Cheese) [White, or Pimiento].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.

© Copyright Soyinfo Center 2014

Date of Introduction: 1961.
Wt/Vol., Packaging, Price: 6 oz. or 16 oz. can.
New Product–Documentation: Wholesale price list. 1961. May 1. Sold in 6 oz. or 16 oz. cans. Soybean Blue Book. 1961. p. 104. "Processing and packing a soy cheese." No longer listed in 1964. Note: This was the world's second commercial soy-based cream cheese.

1328. **Product Name:** Patties.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1961.
New Product–Documentation: Wholesale price list. May 1.

1329. Deutsch, Ronald M. 1961. The nuts among the berries. New York, NY: Ballantine Books. 224 p. No index. 18 cm. 2nd ed., 1967 (320 p.). Revised 1977 as The new nuts among the berries. Palo Alto, CA: Bull Publ. Co. 359 p.
• ***Summary:*** The rear cover states: "From Dr. Graham (inventor of the Graham cracker) to Dr. Jarvis, the best-selling author of 'Folk Medicine', this book tells the astonishing story of a hundred years of health foods and faddists. It names the promoters and the products. It cites the findings of the Food and Drug Administration. It quotes the warnings of the American Medical Association. It completely exposes the hokum and ballyhoo of the health food business–now bilking the public of $2,000 million ever year–and shows why crackpot food fads are a waste of money at best and a serious danger to the health of those suffering from real illnesses.

"'We are facing an organized dissemination of medical and nutritional quackery which takes the concentrated efforts of all of us to combat'–George Larrick, Commissioner Food and Drud Administration."

In fact, this book ridicules the very people whose ideas and lives it purports to discuss; it sarcastically paints them all as "nuts." Its goal is not understanding but a tacit–and not so thinly veiled–endorsement of the contemporary Big Food and medical industries.

Contents: 1. Of cabbages and things (a brief history of "health-foodism"; "For example the Greeks Porphyry and Pythagoras maintained that meats are unnatural foods for men, and repugnant, while fruits and vegetables were the natural nutriment). 2. Mr. Graham bakes a cracker (Sylvester Graham, William Cowherd, the Bible Christians, William Metcalfe). 3. Little men, little women, little food (Louisa May Alcott, Amos Bronson Alcott, William A. Alcott, vegetarianism, and the American Vegetarian Society; Fruitlands, Sylvester Graham). 4. Father Kneipp and his watering can. 5. Mother White casts her brood upon the waters (Ellen G. White and James Caleb Jackson). 6. Snap! Crackle! Enter Dr. Kellogg! (Dr. John Harvey Kellogg). 7. The battle of Battle Creek (Michigan and Seventh-day Adventists). 8. From pillar to Postum (Charles W. Post, Dr. J.H. Kellogg, Ellen G. White, the evils of coffee, Postum Cereal Food Coffee). 9. Kickapoo and Kellogg, too. 10. The Jungle, the sausage, and the law (Upton Sinclair, Harvey W. Wiley, and the formation of the FDA). 11. Chew, chew, baby (Fletcher, Chittenden). 12. Life along the alimentary canal (Metchnikoff, Kellogg, Henry Ford). 13. The bare torso king (Bernarr Macfadden). 14. The bare torso king rampant (Macfadden). 15. I see America starving (Alfred W. McCann) 16. How to stop your cow from drooling (selling nutrition, Colonel Dinshah Pestanji Framji Ghadiali of Bombay, India, and Malaga, New Jersey). 17. A plague on both your Hausers (Gayelord Hauser, Benedict Lust). 18. How to write about health foods (Lelord Kordel, Cathryn Elwood). 19. Mrs. Spratt's millions (fat and dieting). 20. My mother squeaked (Dan Dale Alexander PhD and arthritis; Dr. D.C. Jarvis, *Folk Medicine*, honey and vinegar). 21. The poisons in your health food (how the public is being duped by health food hucksters; the American Medical Assoc. estimates this racket is now costing 10 million Americans over $500 million a year). 22. Postscript to a sad tale.

In the Introduction, page 9 notes that many health nuts and food faddists "are of the most respectable sort." "Among their number are best-selling authors such as Louisa May Alcott, Gayelord Benjamin Hauser, Upton Sinclair, D.C. Jarvis, and Elbert Hubbard. There are such distinguished scientists and innovators as Elie Metchnikoff, Dinshah Ghadiali (developer of Spectro-Chrome Therapy), Amos Bronson Alcott (the Seer of New England), and Dr. John Harvey Kellogg (inventor of cereal flakes, peanut butter, and the mechanical horse). There are famed industrialists, Henry Ford, Bernard Baruch, and John D. Rockefeller. There are entertainers, as Great Garbo and Robert Cummings, and religious leaders, as Sister [Ellen G.] White, founder of Seventh Day Adventism."

Colonel Dinshah Pestanji Framji Ghadiali was born in Bombay, India, in 1873, and came to the USA at the age of 38 (i.e. in about 1911). "His title derives from his position during the first world war as commander of the New York Police Reserve Air Service, a little-known organization which served little purpose. It was, however, an honorable civilian patriotic group... In 1920 Ghadiali brought forth one of the scientific wonders of our age–Spectro-Chrome Therapy." Based on a vegetarian diet (also free of alcohol, tobacco, coffee and tea), the system also made liberal use of colored lights. "By 1924 Ghadiali was so successful that he opened a Spectro-Chrome Institute on 50 acres at Malaga, New Jersey." In the early days Ghadiali earned more than $3.5 million from sales of memberships, equipment, and his course. He served a 5-year sentence in a federal penitentiary for a violation of the Mann Act by a book he wrote, "Railroading a Citizen," in which he accuses jealous doctors of trumping up charges against him. In the 1940s Colonel

© Copyright Soyinfo Center 2014

Ghadiali was prosecuted on the basis of his medical work. He was found guilty and sentenced to 3 years in jail–though his sentence was suspended–and he was fined $20,000. His work, however, still has devoted followers (p. 151-52).

The author acknowledges the help of the U.S. Food and Drug Administration (FDA), Frederick Stare M.D., and the American Medical Association (AMA). Address: Popular scientific and medical reporter.

1330. Deutsch, Ronald M. 1961. Snap! Crackle! Enter Dr. Kellogg. The Battle of Battle Creek. From Pillar to Postum. Kickapoo and Kellogg, Too (Document part). In: R.M. Deutsch. 1961. The Nuts Among the Berries: An Exposé of America's Food Fads. New York, NY: Ballantine Books. 224 p. See p. 54-94.

• ***Summary:*** This is a largely unsympathetic and satirical treatment of the health reform work of Dr. John Harvey Kellogg. Page 63 notes that "In 1879 he married Ella Eaton, of Alfred Center, New York. Within ten years, from the burgeoning sales of his books and the food products he was developing, he had earned enough money to build Ella a twenty-room Queen Anne mansion close to the [Battle Creek] Sanitarium grounds. It was a lavish residence..." Dr. Kellogg drew no salary from the Sanitarium.

"Ella Kellogg kept busy around the Sanitarium. There was not much for her to do around the house, for two reasons. First there were any number of servants. And second, there were no children; Dr. Kellogg had stated publicly that sex bred evil diseases in young men, and therefore he was determined to live without sex as a demonstration that it could be done. Whatever the real reason, John Harvey Kellogg and Ella occupied separate apartments in their home. They were always good friends, and later they adopted a total of forty-two children...

"We have seen Dr. Jackson's water-cure establishment offer the first cereal product in *Granula,* crumbled bits of baked wheat. Kellogg had come up with much the same thing. He called it *Granola.* He was sued and changed the name to *Granose."*

Charles W. Post, a Texan, went to Battle Creek to be cured. After 9 months at the San, Post gave up. He turned to studying the power of the mind, of mind over matter, Christian Science, and the like. Before long he got out of his wheelchair, declared that he was well, and went to work. Before he left the San, he offered to join forces with Dr. Kellogg in making breakfast cereals, but was rejected. In 1892 Post established La Vita Inn on 10 acres in Battle Creek; here the curative forces of both diet and mental healing were combined. Although meat was allowed, the other poisons were not (p. 59).

Post cured people by telling them they were well–and wrote a book about it. He also wrote "The Road to Wellville," a pamphlet that he gave away. In 1895 Post started to make Postum Cereal Food Coffee–just add water and serve as a hot drink in place of coffee. He first sold it in paper bags from a handcart in Battle Creek. Then he began to advertise the product widely and his sales soared. Eventually his ads focused on the ability of Postum to prevent "coffee nerves." In 1898 he launched Grape Nuts, which he also sold as a health food. By 1901 Post had net income of a million dollars from his food business. "Imitators flocked to Battle Creek to stake their claims." Before long, it was a boom town. Address: Popular scientific and medical reporter.

1331. Rodale, J.I. ed. 1961. The complete book of food and nutrition. Emmaus, Pennsylvania: Rodale Books. 1054 p. Index. 23 cm.

• ***Summary:*** J.I. Rodale recommends the consumption of natural meat and eggs. He discourages humans from consuming or using milk, chemicalized meats, added salt, sugar, chocolate, aluminium utensils, and heated or hydrogenated fats. Throughout this book, he uses scientific sources and cites them carefully.

Chapters 30-40 (p. 116-56) are a critique of cow's milk. Man has made the cow into a milk machine, with ever larger udders, which can produce 75 times as much milk per year as in Biblical times. For adults, milk may cause lactose intolerance, allergies and excessive tallness, and may contain undesirable antibiotics.

Chapter 40, titled "Nutritive substitutes for milk" (p. 154-55), mentions "soybean milk and Tahini milk which is a milk made from ground sesame seeds. Tahini milk appears to us to be an excellent substitute for milk in the diet because of its extremely high content of calcium" (p. 155).

Dr. Stefansson (p. 69-72) lived for one year in good health on meat alone. The discovery of cereal culture 2,000 years ago was the beginning of civilization and human degeneration. The human digestive tract has not had time to adjust to this change. It took humans 2 million years to adapt to the diet of the primitive human hunter (consisting mainly of proteins and animal fats) from the largely vegetarian diet of the anthropoids. "It is extremely difficult to plan a vegetarian diet in which the essential amino acids will all be represented in their proper proportion."

Chapter 127, "How to sprout beans" (p. 472-74), discusses mainly how to sprout soybeans, and their nutritional value. A table compares the vitamin and mineral content of soybean sprouts and mung bean sprouts; the former are much more nutritious.

Chapter 153, "Soybeans–The wonder food" (p. 536-41) has the following contents: Introduction. How nutritious are soybeans? ("Soybeans are one of the few non-animal proteins which are complete–that is, contain all of the essential amino acids in good proportion.") Sprouting beans for vitamin C. Soybeans are economical (says the best book on soybeans is *Soybeans for Health, Longevity and Economy,* by Philip S. Chen, Ph.D.). Soybean milk for infants. "Soybeans are richer in potassium than any other

© Copyright Soyinfo Center 2014

food except brewer's yeast which, of course, is eaten in much smaller quantities. They contain more pantothenic acid than any other food except egg yolk, brewer's yeast, liver, rice bran, and wheat bran. The iron in soybeans is 96 per cent 'available'–that is, digestible and used by the body." Chapter 154, "Soya milk and soya curds" (p. 541-42), by Dr. W. Kring, of Dusseldorf discusses: Use of soybeans in East Asia. Fresh soya milk for every household. Acidophilus soya milk–Soya curds. Making soya cheese or tofu [at home].

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "soya curds" in connection with tofu.

Note 2. This is the earliest English-language document seen (Sept. 2012) that contains the term "Acidophilus soya milk" (or "Acidophilus soymilk") regardless of capitalization, hyphenation, or spaces.

Chapter 178, "Eggs, meat and soybeans" (p. 675-77) gives a nutritional comparison of these three high-protein foods. One section titled "Meat substitutes" begins: "Soybeans should be a part of your diet as a substitute for meat." It continues: "Even though you include plenty of meat in your diet, make use of soybean protein, too. If your family does not know soybeans, get some and begin to introduce them to a wonder food."

Chapter 169, "Are chemical fertilizers harming our food" (p. 618-24) is part of a statement made by J.I. Rodale on December 15, 1950, to a Congressional Committee formed to investigate chemical fertilizers. He argues that the organic method is "far superior to the present general practice with respect to fertilizer usage, not only from the human health standpoint but from the point of view of preventing soil erosion and giving higher yields at a lower cost." Also discusses: History of the organic method. What is the organic method? What is a chemical fertilizer? The health aspect (experiments showing a much higher survival rate in mice fed organically grown food). More vitamins in "organic" food. Physicians praise the organic method. Rejection by our government (and request that agricultural experiment stations test and compare the two methods).

Chapter 173 titled "Investigating Primitive Diet" (p. 642-54) contains a detailed summary of the work of Weston A. Price. D.D.S., as described in his book *Nutrition and Physical Degeneration.* This book is available from the Lee Foundation for Nutritional Research, 2023 W. Wisconsin Ave., Milwaukee, Wisconsin.

Chapter 182, titled "When you use fats and oils" (p. 682-83) discusses margarine, which is made from vegetable fats which have been hydrogenated. Soybean oil is one of the oils use to make margarine. "As you know, we do not recommend using margarine, mostly because of the many chemical substances used in it, of which the synthetic vitamin A is only one. Artificial coloring, preservatives and so forth are also used. But, in addition, hydrogenating the oils to make them solid destroys most of the essential fatty acids which are the chief reason for eating vegetable oil. So margarine is no better than butter as a spread, in spite of the fact that it is made from substances that do not contain cholesterol." "Soybean oil is another popular vegetable oil." Rodale especially recommends "our old friend, sunflower seed oil"–which is rich in vitamin E and linoleic acid.

Chapter 183 titled "Heated fats can cause cancer" (p. 686-90) summarizes several scientific studies and notes that "Hydrogenated fats are everywhere" in our food supply. "Finally, don't buy hydrogenated shortenings (the solid kind)..."

Chapter 198 titled "Who pays for nutrition research?" (p. 741+) begins: "'Dr. Stare's Nutrition Department (at Harvard University, Massachusetts) received from Food Industries and Foundations representative of their interests between and including the fiscal year 1950 to 1956 gifts totaling approximately $378,000, half of which was from the Sugar Research Foundation, supported by the sugar interests, and the Nutrition Foundation, supported largely by commercial food processors. A large portion of the other half was from the chemical and drug interests.

"This challenging statement sets the tone for a series of open letters from the Boston Nutrition Society, Incorporated, to Dr. Nathan M. Pusey, President of Harvard University. We think readers will find in these letters the answer to their puzzled query Ä 'Why?' Why must we eat doctored up, chemicalized, refined, cheapened food and above all, why must some of our top food scientists, men like Dr. Stare of Harvard, call everyone a faddist and a crackpot who points out that the modern American food is not everything it should be?

"The open letters hit at the very heart of the problem. Much university research on nutrition is being financed by the very folks who profit from selling this worthless food."

Chapter 199, "A British nutritionist takes stock," summarizes an article titled "Food and Health," by Dr. H.M. Sinclair (*British Medical Journal,* 14 Dec. 1957) about the dangers of feeding too much cow's milk to infants and children. Another article on the same subject by Dr. Milton J.E. Senn, was published in *McCall's* (Jan. 1958). Chapter 272 is "Kelp for trace minerals" (p. 1005-09) and Chapter 273 is "The value of seaweed nutrition" (p. 1010-12).

Chapter 39, "Miscellany on milk" (p. 146-54), documents many problems with cow's milk. Its contents: Introduction, detergents in milk, antibiotics in milk, some infants can't take milk at all, is milk the universal antidote?, an all-milk diet is hazardous, ulcer patients beware!, cavities caused by milk, DDT contamination, misuse of calcium, radioactive substances in milk, milk as a cause of goiter, a famous nutritionist speaks (Dr. Norman Jolliffe), milk's value questioned (by McCance and Widdowson), allergies to milk sugar, dermatologist criticizes both bread and milk, and old (1926) court decision on raw milk. Chapter 41: "Yogurt" (p. 156+). "Yogurt is probably the most popular of all so-

© Copyright Soyinfo Center 2014

called health foods". In the 19th century, Metchnikoff was the first to investigate it scientifically. Chapter 96: "Sesame seed–An ancient and nutritious food" (p. 342-44; Tahini milk makes a good milk substitute). Address: Emmaus, Pennsylvania.

1332. Grand Rapids Press. 1962. "Meat" for vegetarians. He lost his job, but made a success manufacturing. *Wonderland: The West Michigan Magazine.* Jan. 21.
• ***Summary:*** About Vep Sias and Cedar Lake Foods. Address: Michigan.

1333. Chen, Philip S.; Chen, Helen D. 1962. Soybeans for health, longevity, and economy. 2nd ed. South Lancaster, Massachusetts: The Chemical Elements. xii + 242 p. Jan. Illust. Index. 21 cm. 1st ed. 1956. [24 ref]
• ***Summary:*** This book is identical to the original 1956 edition, third printing (the dedication is to William J. Morse and Harry W. Miller), except that: (1) Table 1, titled "Soybean production in the United States" (p. 2) gives statistics to 1960, instead of 1958. (2) Appendix B (p. 224-36) has been updated based on the 1961 *Soybean Blue Book.* (3) The dust jacket has been updated. On the rear dust jacket is a portrait photo of Dr. Philip Chen and a biographical sketch. (4) The paper is slightly thicker.

Note: In 1962 Chen wrote *A New Look at God,* published by Chemical Elements (288 p.). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

1334. **Product Name:** Infa-Soy (Soymilk Infant Formula).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1962 March.
New Product–Documentation: Letter from Sam Yoshimura. 1981. Feb. 20. "At the beginning of 1962, production of Infa-Soy, using Dr. Harry Miller's formula, was started under the direction of his son, Willis Miller." The key to the formula was the addition of a little cooked rice (or the water therefrom; a small amount of rice was cooked in excess water for 10-15 minutes), which was effective in preventing loose stools in infants. Soybean Blue Book. 1965. p. 115. The company is now called Nutrition International Corp. and Infa-Soy is described as a "hypoallergenic baby formula."

1335. *British Vegetarian.* 1962. Dr. Harry Willis Miller. March/April. p. 96.
• ***Summary:*** Discusses the excellent work of Dr. Harry W. Miller with plantmilks and infant nutrition. Dr. Miller, Emeritus Director of the International Nutrition Research Foundation in Arlington, California, has just been elected an honorary member of the Vegetarian Nutritional Research Council.

"Dr. Miller has recently been visiting different parts of the Far East setting up equipment for the production of liquid plantmilks in under-developed areas..." A large photo shows Dr. Miller.

1336. Hardinge, Mervyn G.; Crooks, Hulda; Stare, Frederick J. 1962. Nutritional studies of vegetarians. IV. Dietary fatty acids and serum cholesterol levels. *American J. of Clinical Nutrition* 10(6):516-24. June. [37 ref]
• ***Summary:*** The subjects studied were the same as in part I of this study. The study found: (1) A significant negative correlation between serum cholesterol and consumption of unsaturated fatty acids; (2) A positive correlation between consumption of animal fat and serum cholesterol; (3) An inverse relationship between the ratio of polyunsaturated to saturated fatty acids and serum cholesterol; (4) In the younger age groups no significant difference between serum cholesterol levels in vegetarians and non-vegetarians. Address: 1-2. Dep. of Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California; 3. Prof. & Chairman, Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

1337. *Chopletter* (*Worthington Foods, Ohio*). 1962. A new concept in foods. 15(3):1, 3. July.
• ***Summary:*** "A new concept in protein foods has recently been announced by Worthington Foods. After years of research involving a unique process in the spinning of protein fibers, the Company has been successful in producing a food product with a texture and nutritional quality that are new an revolutionary. The new product is called *Fibrotein,* a name coined to identify the product and suggest its important qualities." Fibrotein is spun soy protein fibers, made under a patented process.

"Worthington Foods has already been successful in utilizing Fibrotein to make vegetarian protein foods that resemble fried chicken, white meat of turkey, roast beef, and various other kinds of meats. Several of these products are already on the market. Others are to be introduced during the next few months."

"As a direct result of the development of fibrotein, and new line of *Entrees* has been introduced by Worthington Foods. A line of canned vegetarian proteins is also being developed to be marketed under the trade name *Soyameat.* All of these products contain the basic ingredient of *Fibrotein."*

"The enthusiasm of customers who have already tried Worthington *Minute Entrees* and Worthington *Soyameat* indicates a bright future for this type of food.

A photo titled "Three New Fibrotein Products by Worthington" shows: (1) Sliced Whitemeat Style (Worthington Minute Entrees–Frozen; paperboard box); (2)

© Copyright Soyinfo Center 2014

Fried Chicken Style (Worthington Minute Entrees–Frozen; paperboard box); (3) Worthington Soyameat–Fried Chicken Style (9½ oz can).

Note 1. This is the earliest English-language document seen (Nov. 2010) that contains the word "Soyameat" (with any combination of capitalization or quotation marks).

Note 2. This is the earliest document seen (Nov. 2010) that contains the word "Fibrotein" which is Worthington's registered trademark used to refer to spun soy protein fibers. Address: Worthington, Ohio.

1338. **Product Name:** Worthington Minute Entrees–Fried Chicken Style (Meatless Chicken–Frozen).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio.
Date of Introduction: 1962 July.
Ingredients: Incl. Fibrotein spun soy protein fibers.
Wt/Vol., Packaging, Price: 6 oz. paperboard box. Or 15 lb.
How Stored: Frozen.
New Product–Documentation: Chopletter (Worthington Foods, Worthington, Ohio). 1962. July. p. 1, 3. "A new concept in foods." This product, made with Fibrotein [spun soy protein fibers], is already on the market. A photo shows the product." Note: This is the earliest commercial soy product seen (one of three chicken alternatives introduced this month) in which Fibrotein is used as an ingredient.

Wholesale price list. 1962. Oct. 1. Sold in 6 oz. portions (24 per case for $9.90, or 15 lb bulk for $1.25/lb). Note: No mention is made on this sheet of spun soy protein fibers.

George D. Kyd. 1963. *Food Processing.* May. p. 123-26. "Edible soy protein fibers promise new family of foods." The author, an employee of Ralston Purina Co., states that this product, which contains Textured Edi Pro (spun soy protein fibers made by Ralston Purina) is already on the market. Page 126 describes the product as "frozen fried-chicken style Minute Entree." These "are new but already fast-selling products, distributed largely through health food stores." No photo of the package is shown.

Note: This is one of the world's first three food products to contain a modern textured soy protein product.

1339. **Product Name:** Worthington Minute Entrees–Sliced Whitemeat Style (Meatless Chicken White Meat–Frozen).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio.
Date of Introduction: 1962 July.
Ingredients: Incl. Fibrotein spun soy protein fibers.
Wt/Vol., Packaging, Price: 6 oz paperboard box.
How Stored: Frozen.
New Product–Documentation: Chopletter (Worthington Foods, Worthington, Ohio). 1962. July. p. 1, 3. "A new concept in foods." This product, made with Fibrotein [spun soy protein fibers], is already on the market. A photo shows the product."

Wholesale price list. 1962. Oct. 1. Sold in 6 oz. portions (24 per case for $9.90 or bulk rolls, frozen, for $1.25/lb). Rolls weigh approximately 8 lb. each and a packed 6 rolls per box. Note: No mention is made on this sheet of spun soy protein fibers.

George D. Kyd. 1963. *Food Processing.* May. p. 123-26. "Edible soy protein fibers promise new family of foods." The author, an employee of Ralston Purina Co., states that this product, which contains Textured Edi Pro (spun soy protein fibers made by Ralston Purina) is already on the market. A photo shows the package–a thin paperboard box about 8 by 10 by 3/4 inch thick. The label states: "New frozen food concept. Serve hot or cold. Contains no meat." A photo shows three meatlike slices on a plate. These "are new but already fast-selling products, distributed largely through health food stores."

Soybean Blue Book. 1965. p. 112. "White Meat Style."

Note: This is one of the world's first three food products to contain a modern textured soy protein product.

1340. **Product Name:** Soyameat–Fried Chicken Style (Canned).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio.
Date of Introduction: 1962 July.
Ingredients: In 1965: Specially processed soybean protein (Fibrotein), corn oil, [egg] albumen, isolated soybean protein, salt, monosodium glutamate, vegetable gum, starch, hydrolyzed vegetable proteins, seasonings.
Wt/Vol., Packaging, Price: 9½ oz can. After 1965: 13 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Chopletter (Worthington Foods, Worthington, Ohio). 1962. July. p. 1, 3. "A new concept in foods." This product, made with Fibrotein [spun soy protein fibers], is already on the market. A photo shows the product."

George D. Kyd. 1963. *Food Processing.* May. p. 123-26. "Edible soy protein fibers promise new family of foods." The author, an employee of Ralston Purina Co., states that this product, which contains Textured Edi Pro (spun soy protein fibers made by Ralston Purina) is already on the market. A photo shows the can. The label states: "Worthington Soyameat. Vegetarian. 9¼ ozs. avd." A photo, above the photo of the can, shows chunks of the chicken-like product on a plate. The caption below this photo reads: "Fried-chicken style shown above has realistic texture; it came from the can shown below." These "are new but already fast-selling products, distributed largely through health food stores."

Soybean Blue Book. 1963. p. 98. Wholesale price list.

© Copyright Soyinfo Center 2014

1966. Dec. 1. Hartman. 1966. Food Technology. 20(1):39-40. "Vegetarian protein foods." "The first textured soybean protein fiber product marketed in the U.S. is Worthington's frozen 'Fri-Chik,' an extruded formulation simulating a small fried portion of white chicken meat. This same formulation was next canned in a light gravy and called 'Soyameat–Fried Chicken Style,' and was also later marketed as frozen and canned 'White-Chik' in large rolls for slicing, dicing, etc. The approximate analysis of these simulated chicken products: protein 20-26%, fat 18-25%, and carbohydrate 2-3%."

Ziemba. 1966. Food Engineering. May. p. 82-93. "Let soy proteins work wonders for you." Photo of 6 cans.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. "Soyameat–Fried Chicken-like flavor" is a canned chicken-like product based on spun soy protein fiber.

Note: This is one of the world's first three food products to contain a modern textured soy protein product.

Label sent by Dr. Walter Wolf. 2000. July. Since the first ingredient is Fibrotein (spun soy protein fibers), this label is probably from about 1965. Red, dark blue, and light blue on white. A small color photo shows two pieces surrounded by sprigs of parsley on a blue dish. "Vegetarian. The quick and easy dish with a chicken-like flavor and texture. A new concept in foods."

1341. *Guardian* (*Manchester*). 1962. Milk made from vegetables may be on sale soon. Aug. 27. p. 2, col. 3.
• ***Summary:*** "Milk made from outer cabbage leaves, pea pods, and other greenstuffs may soon be on sale as a result of experiments by scientists working in the Vegetarian Nutritional Research Centre, Garston, Watford." Dr. Frank Wokes, director of the research center, believes that there will never be enough cow's milk to supply all the world's children or to meet all the protein deficiencies. Before the end of this year, the Centre hopes to open a pilot plant for the process; large scale production would start later.

Related experiments have been made since before World War I, and "a plantmilk, made from cereals and pulses, has been on sale for some years."

1342. Dowding, Muriel (Lady). 1962. Why I am interested in plantmilk. *British Vegetarian.* July/Aug. p. 188-89.
• ***Summary:*** This famous woman and vegetarian (head of the Beauty Without Cruelty campaign) is speaking at the [Vegetarian Nutritional Research] Centre located at the Stanborough School, Watford, Herts., England. The school is run by Seventh-day Adventists. She speaks of the cruelty involved when cows are made to give milk and dairy products, and looks forward to the alternate milk that this centre will provide, at the beginning of a new age–the Age of Aquarius.

1343. *Today's Food* (*Loma Linda Foods, Arlington, California*). 1962. [Commercial food products made by Loma Linda Foods]. 7(2):4-6. Summer.
• ***Summary:*** Loma Linda food products include: Loma Linda Boston Style Baked Soy Beans.

An article by nutritionist D. Van Gundy Jones (p. 4) notes that "Soy milk makes an excellent mayonnaise." Address: 11503 Pierce Place, Arlington, California.

1344. Worthington Foods, Inc. 1962. Frozen foods wholesale price list–order blank. Worthington, Ohio. 1 p. Oct. 1.
• ***Summary:*** Only two frozen products are available: Minute Entree–Fried Chicken Style (24 x 6 oz, or 15 lb). Sliced Whitemeat Style (24 x 6 oz or 8 lb rolls). Address: Worthington, Ohio. Phone: 885-5359.

1345. **Product Name:** Textured Edi-Pro (Spun Soy Protein Fibers).
Manufacturer's Name: Ralston Purina Co. Special Soy Products Dept.
Manufacturer's Address: Plant: Louisville, Kentucky. Offices: Checkerboard Square, St. Louis, MO 63102.
Date of Introduction: 1962 October.
New Product–Documentation: G.H. Kyd. 1963. Food Processing (Chicago). May. p. 123-26, 138. "Edible soy protein fibers promise new family of foods." Ralston Purina makes "Textured Edi Pro," an edible spun soy protein fiber. Products amazingly like meat can be made from these fibers.

Soybean Blue Book. 1966. p. 111. "Textured Edi-Pro, spun edible isolated protein fibers as a basis for unique and novel human foods. Provides both texture and excellent protein nutrition."

Soybean Digest. 1969. Nov. p. 43. "Ralston Purina Co." A photo (p. 40) shows "Chiplike products made from Ralston Purina's textured Edi-Pro." A chart of "Edible grade food ingredients" indicates that Ralston Purina makes only soy protein isolates and spun fibers.

W.Z. Gottschall. 1969. "Ralston Purina Yesterday and Today." Nov. p. 15. "Textured Edi-Pro is purified, isolated soy protein which has been converted into continuous filament or fiber form by a patented process."

Horan, Odell & Forman. 1971. PAG Bulletin No. 13. p. 25. Textured Edi-Pro was "in commercial production beginning in 1967." Shurtleff & Aoyagi. 1983. History of Worthington Foods. p. 7.

Worthington Foods. 1989. "The Tradition of Healthy Foods" (50th anniversary booklet). p. 21. "Worthington was too small to go into the business of crushing soybeans and disposing of the oil, or of purchasing the protein extrusion or spinning equipment. So [Robert] Boyer negotiated with Ralston-Purina to set up a pilot plant to make the protein for Worthington. As it turned out, Ralston-Purina made the protein, did the spinning, and Worthington bought the output and put it into new products. When the new Ralston-Purina

© Copyright Soyinfo Center 2014

plant was operational, it had the capacity of 10,000 pounds a day. Worthington was not ready for this kind of volume, but working out these difficulties involved Jim Hagle in further negotiations with executives of a large corporation. Finally, Worthington agreed to take all the production, and sales took off."

Talk with Ed Meyer of Central Soya. 1993. April 3. Ralston Purina went into a joint venture (for a short time) selling frozen spun soy protein fiber with National Can Co., which had a small protein division, with they called National Protein.

Letter from Susan W. Vorih, Communications Manager, Protein Technologies International. 1993. June 17. A semi-works plant to produce edible soy proteins was erected in 1961 at Louisville, and both spray-dried and spun fiber proteins began to be produced and sold in October 1962.

1346. Van Gundy, Dorothea. 1962. Holiday recipes from abroad. *Today's Food* (*Loma Linda Foods, Arlington, California*) 7(4):4-7. Winter.
• ***Summary:*** The author has just returned from a six-week trip to Europe. She noticed, above all, the leisurely way in which meals are served, and enjoyed the large, open-air markets in Italy (Venice and Rome) and Germany (Bremen). A black-and-white photo shows Dorothea Van Gundy Jones holding a plate of food. Address: Nutritionist.

1347. **Product Name:** Granose Soya Beans in Brine.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1962.
Ingredients: Incl. soybeans, water, salt.
Wt/Vol., Packaging, Price: Canned.
New Product–Documentation: Letter from Granose. 1981. Lists products they are presently producing that contain soy.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1962. It has been discontinued.

1348. **Product Name:** Soy-Fortified Whole-Wheat Bread.
Manufacturer's Name: Harrison Foods.
Manufacturer's Address: Accra, Ghana.
Date of Introduction: 1962.
New Product–Documentation: Interview with Dr. D.W. Harrison. 1982. Note 1. This is the earliest known commercial soy product made in Ghana.

Note 2. This is the earliest known commercial soy product made by Dr. D.W. Harrison in Africa.

1349. **Product Name:** Madison Burger.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1962.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Madison Burger contains 11.08% protein, 0.47% fat, and 4.67% carbohydrate. One serving, ½-inch slice, weighs 76 gm.

Letter from Sam Yoshimura. 1981. Feb. 20.

1350. György, Paul (moderator); Anderson, D.W.; Fomon, S.J.; Hand, D.B.; Miller, H.W.; Sarett, H.P. 1962. Panel discussion on soy milk. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 188-91.
• ***Summary:*** This discussion of the five papers in Section V ("Processing and feeding value of fluid and dry soy milks") focuses mainly on feeding soy milks to infants and children, rather than to adults.

"In introducing the panel discussion Dr. György said that FAO is writing a manual on milk and milk products. Several years ago FAO wrote a summary on milk. At the first two conferences 4 years ago there was considerable opposition to calling soy milk by that name. There is still opposition, but on the international level objections have subsided. Soy milk has taken its place along with human (or breast) milk, goat milk, and other milks which are normally designated to distinguish them from cow's milk.

"Dr. Fomon commented that it is important that a study be made on a number of babies (30 or more) from birth up to 8-9 months of age. They have some opportunity to do this with students' babies. Controls are breast fed or fed pooled human milk. Dr. György said that for premature babies breast milk is not satisfactory. In the Orient most mothers nurse their babies as long as they can, 1 to 2 years, and a higher protein diet is needed for the older babies to prevent the occurrence of kwashiorkor.

"Dr. Fomon expressed the opinion that for experimentation involving full-term babies the soy milk and human milk should be compared on an equal protein and fat basis." Address: 1. Chairman of the Dep. of Pediatrics, Philadelphia General Hospital, Philadelphia, Pennsylvania.

1351. Miller, Harry W. 1962. Traditional methods of processing and use of soy liquid and powdered milk. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 149-56.
• ***Summary:*** "It is a new day when so many important sponsoring organizations join in evaluating the suitability of the protein of the humble soybean to meet the nutritional needs of the human subject, and to study practical ways of extending its benefits in protein deficient diets.

"In August l940, I presented a paper entitled 'The Role of the Soybean in Human Nutrition' before the American

© Copyright Soyinfo Center 2014

Soybean Association at Dearborn, Michigan, and predicted that the day would come when we would find an awakened interest in this country in utilizing soy products as a part of the American menu. I believe we are rapidly approaching that goal, There is now an awakening in many lands to the needs of better nutrition, and it is timely that study and research be given to how we can utilize the values of the soy protein for universal race betterment.

"Soybeans have for centuries been the chief protein supplier in the heavily populated areas of Southeast Asia. It is well to examine methods of processing and utilization as practiced in the Orient. However, the per capita utilization of soybeans has been far below their needs, ranging from 15 to 50 pounds per annum in countries like China, Japan, and Korea, largely due to the inability of agriculture to keep pace with population.

"It was in these soy-producing and-utilizing countries that I had the opportunity over more than half a century to observe their methods of preparation, and to check the results in the feeding of soy products. Considerable leafy vegetables, stems and 'roots' have to a certain extent supplemented the diet with protein, so that adults of mature age probably get adequate protein. However, the appalling infant mortality and adolescent protein deficiency diseases have stressed the need for increased rations such as may be supplied by the soybean.

"Protein has its greatest contribution during the growing years of life. Three times the amount of protein per unit of body weight is needed the first year of life compared with the adult. During adolescence and the teenage years twice the amount of protein is required till they attain their normal body weight as in after life. If individuals are well grown with ample biologic protein their chances for long life expectancy are enhanced.

"With the infant's short intestinal tract and its immature digestive juices, foods have to be reduced to liquids to be usable. Consequently, a liquid food beverage, if supplied in sufficient quantity and quality, enables normal growth to proceed rapidly. Without it, growth is stunted; anemia, infection follows and many do not survive these years of inadequate food intake. Those that survive childhood often die early in life of degenerative diseases.

"The need of liquid nourishment following birth is evident from the fact that all mammals, including the human, have no provision for taking solid food, so as a starter food a lacteal secretion is by nature supplied, and to meet the need of the growing years of the human, various animal milks have been used. However, the supply is meager in the Afro-Asiatic countries.

"My attention was called to soybeans as a dietary food upon reaching China and living on Chinese cuisine. It was some 20 years later, in 1925, that I embarked on the development of a liquid beverage from the soybean. Considerable progress has since been made in improvement of such a food beverage and its use. However, it is only a few areas where nutritional use is made of soy milk, and much remains to be done in its improvement and distribution to combat malnutrition.

"The Oriental approach to processing the soybean is entirely opposite to that of the west. Western countries process the soybean by grinding it into fine flour after dehulling, and screening through very fine 200- or 500-mesh screens, or shall we call it, the milling operation. While in lands where soybeans have been used for centuries, they first hydrate the beans, or as we call it, use the wet-milling operation.

"In Eastern countries interest in soybeans has been primarily in its protein content, while the West has vied for its oil. It was my good fortune that I began my study of the soybean in the Orient where soybeans were used for human food, rather than for animal rations. Soaking the hard, dry bean was the first procedure, and it then is ground into a milklike slurry. The whole soybean is given a water soak for 8 hours, or after dehulling a water bath for 2 hours. In either case the bean doubles its original weight by water intake. It is then ready for the milling operations. This is accomplished with stone buhr mills, or disintegrators, that break up the continuity of the fiber, and expose its nutrient particles of protein, oil, carbohydrate, vitamins, and minerals to a water wash. The water-soluble nutrients are separated from the fiber portion by filtration. The amount of water used in the slurry mix, its temperature, whether hot or cold, and also the quality of beans, determines the ratio of soluble nutrients to those still clinging to the fiber.

"In fact, there are numerous techniques to be observed to get the dispersible protein and other nutrients in the highest soluble amounts. Beans differ, as also the aging of beans. The nutrient yield is greatest immediately after harvest time. Long heat exposure in warm climates, makes for less solubility. A proper soak is of great importance; then next the grinding of the beans. A small stream of water to give a tearing, rubbing action so as to thoroughly expose all soluble ingredients is preferred to a mill with a cutting action to mince into fine particles. Before filtration this slurry should be agitated and heated, which will yield an additional 10 percent to the soluble ingredients. Several methods of filtration, such as a shaking screen, a plate and frame pres, vacuum drum filters, or centrifuges of various types can be used. A re-grind of the fiber cake and a second extraction makes possible an extra 5 to 8 percent recovery of the solubles. A possible 92 percent of protein with other nutrients in proportion has been attained by grinding and filtration methods. In practical plant operations we expect 60 to 80 percent protein recovery of the original bean. This leaves considerable nutrients in the fiber or pulp, which is then used for stock feed.

"The milky solution thus extracted is used either for cheese curds of various types, or is formulated and processed

© Copyright Soyinfo Center 2014

into a beverage milk–liquid or powdered. Soybeans are used in different countries in making a savory sauce, called Soy Sauce; a soup base as in Miso, or as a fermented bean as Japanese Natto. They are eaten as immature green beans in pod or shelled and are very delicious.

"Soy Milk: Trials have been made in the past to utilize soy milk by the Asiatics but for lack of proper processing methods such milk, as filtered and not formulated, was neither tasty nor nutritionally acceptable, giving rise to very unpleasant digestive responses. I have repeatedly asked in parts of China, Japan, and Korea why it was not used as a beverage, always with the same answer, that it gave rise to intestinal disturbances. So a cheese curd is used instead of milk. Curdling it into a cheese, through the use of calcium salts, vinegar or other coagulative agencies, has resulted in many savory food products. Heating this milk extract causes a scum film [yuba] to form, also very tasty, and the remaining portion is curdled and made into cheese [tofu] cakes of varying dimensions and density. All such sheets and blocks of curd receive a second cook, or are fermented, which seems to render them more digestible.

"Soy cheese or curd is easy to market and very popular, being tastily flavored and combined in the Chinese cuisine as a meat, fowl, and fish replacer. The Japanese report 70 different forms or dishes utilizing soybeans, and the Chinese even more. Out of 1 pound of soybeans they make 4 pounds of curd called Tofu.

"While we have spent some time in Indonesia we have had little experience with Tempe–a fermented soybean food product.

"My contributions had to do with developing an easily digested and highly nutritious soy milk, and processing it sufficiently to render it acceptable to both infants and adults. The extract from the bean which is rich in protein can be formulated as desired with added fat, carbohydrate, minerals, and vitamins. These properties can be varied or formulated to that of human milk, or any other type of animal milk. The final product can be made in a single strength, or condensed to double strength and canned, or spray-dried as a powder.

"Our first work in developing a formulated soy milk dates back 56 years ago when we secured a Disper mill [Dispermill], or homogenizer, to constitute a formulated liquid. This soy milk was first used in the Shanghai Sanitarium and Hospital as a table beverage for nurses, helpers, staff, and patients of the institution, and later to the baby and children's ward of the Shanghai Clinic and Hospital. Here we had baby boarders, infants kept under observation on soy milk feeding for up to 2 years. The results of this feeding was reported in the China Medical Journal of 1957. Many other farmed out research studies were made, such as at the indigent hospital in the Philippines; at the Tokyo University, and the Ohio State University in America.

"Results on the Ohio State study are shown in Figure 1.

"The first commercial development was a soy milk dairy established in Shanghai in 1935, the process used was in-bottle sterilized milk, formulated to the standard of cow's milk; also a chocolate milk; and a soy-acidophilus milk, which was extensively marketed all over the city of Shanghai up until the plant was destroyed in 1937 by the bombing of Shanghai.

"A soy milk powder plant was also fabricated there, using a local made Grey Jensen spray dryer, which also came to an end in the same way at the same time.

"There are many technical problems involved in producing a satisfactory nutritional beverage from the soybean to simulate milk, which in the few moments we have would be impossible to enter into. These are gradually being solved, such as improved color, taste, stability, condensing as a double strength canned milk, and as an instant soluble powdered soy milk. On vacuum pan evaporation, due to the viscosity of soy milk, concentrating to more than 30 percent solids is the limit, as compared with animal milk at 45 percent solids. However, generally speaking, once a water extraction soy milk is obtained the same methods and equipment used by the dairy industry are applicable to produce it in various forms for marketing" (Continued). Address: M.D., Director Emeritus, International Nutrition Research Foundation, 11503 Pierce Blvd., Arlington, California.

1352. Miller, Harry W. 1962. Traditional methods of processing and use of soy liquid and powdered milk (Continued–Document part II). In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 149-56.

• ***Summary:*** Continued. "Once we have obtained a fiber-free milklike fluid from the soybean, containing the water dispersal nutrients of protein, oil, carbohydrate, minerals, and vitamins processed to make them nutritionally acceptable, it no becomes a question as to formulation. No standards have yet been set for the resulting formula. Composition of soy milk today has been a matter largely decided by the respective manufacturers.

"Dr. E. A. Ruddiman working in the early 4O's at Dearborn with the Ford Foundation, tackled this subject in a paper to the A.S.A. suggesting that cow's milk be the standard. Few pediatricians today accept that for infant feeding.

"We know fairly well what are obtained from the hydrated bean with 7 parts of water to 1 part of bean by weight; namely, 3.64 percent protein; 1.8 percent fat; and considering 40 percent of carbohydrate to be edible, a usable 1.5 percent dextrines, sucrose, and starch. In brief, the edible entities extracted from the soybean of fat and carbohydrates are each half that of the protein.

"To this, additives can be added to formulate human milk, cow's milk, cream, and ice cream mixes of any

© Copyright Soyinfo Center 2014

variation desired. The types of beans used, methods of manufacture, causes variation in availability of nutrients and elements found in various preparations, so that chemical formulae do not always coincide with usability of nutrient.

"Thus far I have dealt with a nonfiber soy milk made either from the whole soybean, or dehulled, using only the cotyledons. This is the practice of the Orient and it is my belief that human nutrition is so important that we can afford to sacrifice to animal feed the fiber and small amount of ingredients that cling to it in order to obtain the rich ingredients in soluble form. It is still economical compared with other similar products on the market.

"However, some researchers have been making milk from the whole dehulled soybean used in entirety, giving us 3 percent fiber on a dry basis. For older children and adults this can do quite well when formulated. We have objected to the fiber on the grounds that animal milks are fiber free, and on coagulation we get a rough, tough curd as compared with a smooth, jellylike curd made from a fiber-free liquid. Isolated protein, either in entirety or combined with raw soy milk can be processed and formulated into a fiber-free milk. Here we need to be careful of having the proper additives. We have made fiber-free milk from the 70 percent soluble soy flakes or grits, and when fortified with vitamins and minerals, good growth records have resulted in animal feeding.

"We may say that protein is protein from the soybean, but too long processing at too high temperature, and too much exposure to chemical changes leaves a question in our minds as to whether we destroy its soy nutritive values. We do know that all soy milk needs a heat treatment above boiling to destroy the trypsin inhibitors.

"The one outstanding problem of soy milk, whether from the whole soybean, or its extracted solubles, is a characteristic soybean flavor. Since soy milk looks white like animal milk, those accustomed to animal milk think it should taste like cow's milk, especially since it is called a milk. The dairy people object to the word 'milk' used in reference to soy milk, claiming the term 'milk' designates an animal secretion.

"Trying to overcome this prejudice of the laity has led to much experimental work. We shall not be able to simulate the taste of cow's milk unless we use some derivative of animal milk, but we can mask the soy flavor by processing methods, also by additives of distinctive flavors.

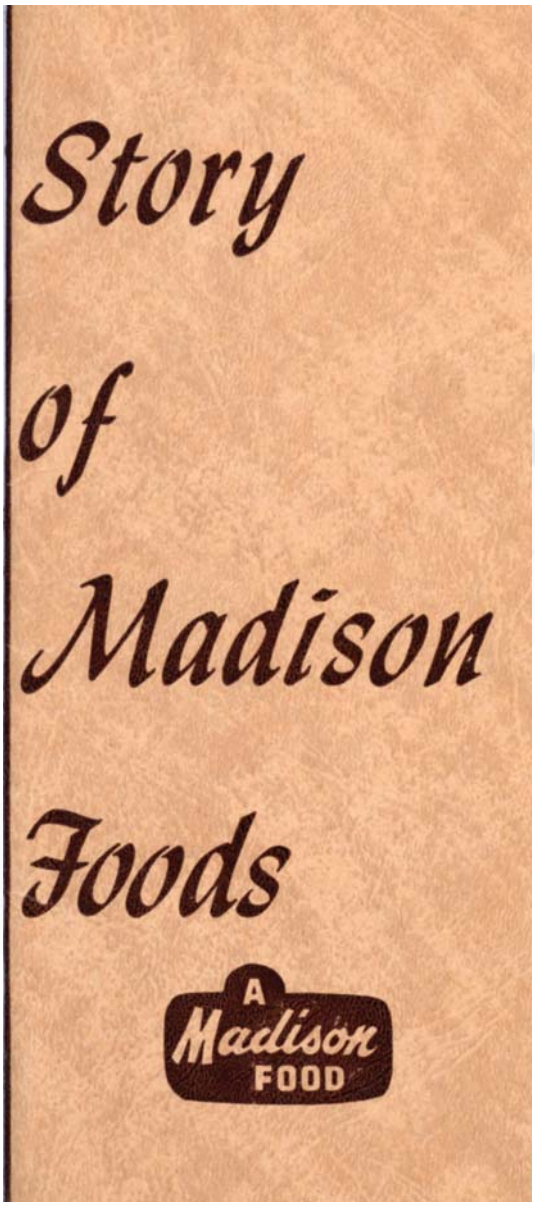
"I wish to conclude this paper by referring to the widespread possibilities of the utilization of the soybean, and the economics involved. We assume that for adequate nutrition all nations of mankind need a milk beverage, especially in the very earliest years of life to promote adequate nutrition. The possibility of achieving this lies only with the soybean. The human, as well as all other mammals, require a milk for post-natal feedings. Soybeans can make this possible for the entire human race through improved and extended agricultural production and efficient processing methods, and within the reach of the meager economies of nations.

"Using the formula of animal milk, from l pound of soybeans we can obtain sufficient protein extracted to formulate a gallon of milk. This pound of soybeans yields all needed protein, half of the required oil, and some of the edible carbohydrate. The B vitamins, together with some minerals are present, and other vitamins can be added at low cost. At the market value of the sum total of constituents needed to constitute a gallon of formulated vitamized soy milk less than 15 cents is required, and these figures answer quite well for most parts of the world. While vitamins cost more in certain areas than they do here, added carbohydrates and the oil is cheaper in certain areas. The greatest expense, of course, is in processing equipment. Low-cost small pilot plants operated by cheap labor in countries of low economic resources seem very practical. These figures and statements are verified through the operation of several small pilot plants in Southeast Asia countries. The United States and China produce soybeans abundantly, and with the rising prices of soybeans, they are still the best buy of any agriculture product produced from the soil when their contained nutrients are used to sustain human life.

"It must be remembered that nearly all Afro-Asiatic people cannot afford containers, or the overhead cost of merchandising. They live largely on foods they produce and prepare at a consumer cost little above what the agriculture producer gets for his crops.

"The soybean is rightly called, because of its comparative wealth nutritionally, "gold from the soil." It ranks as the most outstanding product Americans can export if rightly processed for world nutritional relief. Great progress has been made in the adaptation of soy formulated foods for animal and pet diets. The soybean, in the light of what role it has had in preserving the millions of Southeast Asia people for centuries, deserves the combined efforts of scientists, nutritionists, and financiers to lift it into a human acceptable and economical available food.

"The soybean is variously called 'gold from the soil' or 'meat without bones.' With its multitudinous variety of ways to incorporate it in the human diet, I would like to give one more fitting title to it as a 'universal protective factor of diet.' Animal milk has served this role in Western lands, but is of limited availability. Soybeans incorporated in the national diets as a milk and cheese, and its many other recipes, if supplied in adequate quantities insures balanced nutrition. It is a body builder from infancy to the age limit. It is unique compared with other agriculture products in that it is available as a liquid, curd, or solid, as whole beans and flour.



"Yet, as a food supplier, the soybean has had little scientific research or the help of modern trained technicians. We still hark back to the know-how of the Oriental people who have learned to relish the soybean and know of its building power, and enjoy its energy yield.

© Copyright Soyinfo Center 2014

"We depend on flash pasteurization and a vacuum pull to de-bitter the beany odor and taste, but no one has come up with the answer, to what it is and from what it comes–the fat or carbohydrate component. We have had some success in a cheddar cheese, but so far have not been able to make a cheese that melts. It is to be hoped as a result of the study and interest that prompted this assembly that chemists, technicians, and dietitians, along with the agriculturists, can solve these interesting problems. It may be that an agronomist will come up with a new soybean with a delicious flavor." Address: M.D., Director Emeritus, International Nutrition Research Foundation, 11503 Pierce Blvd., Arlington, California.

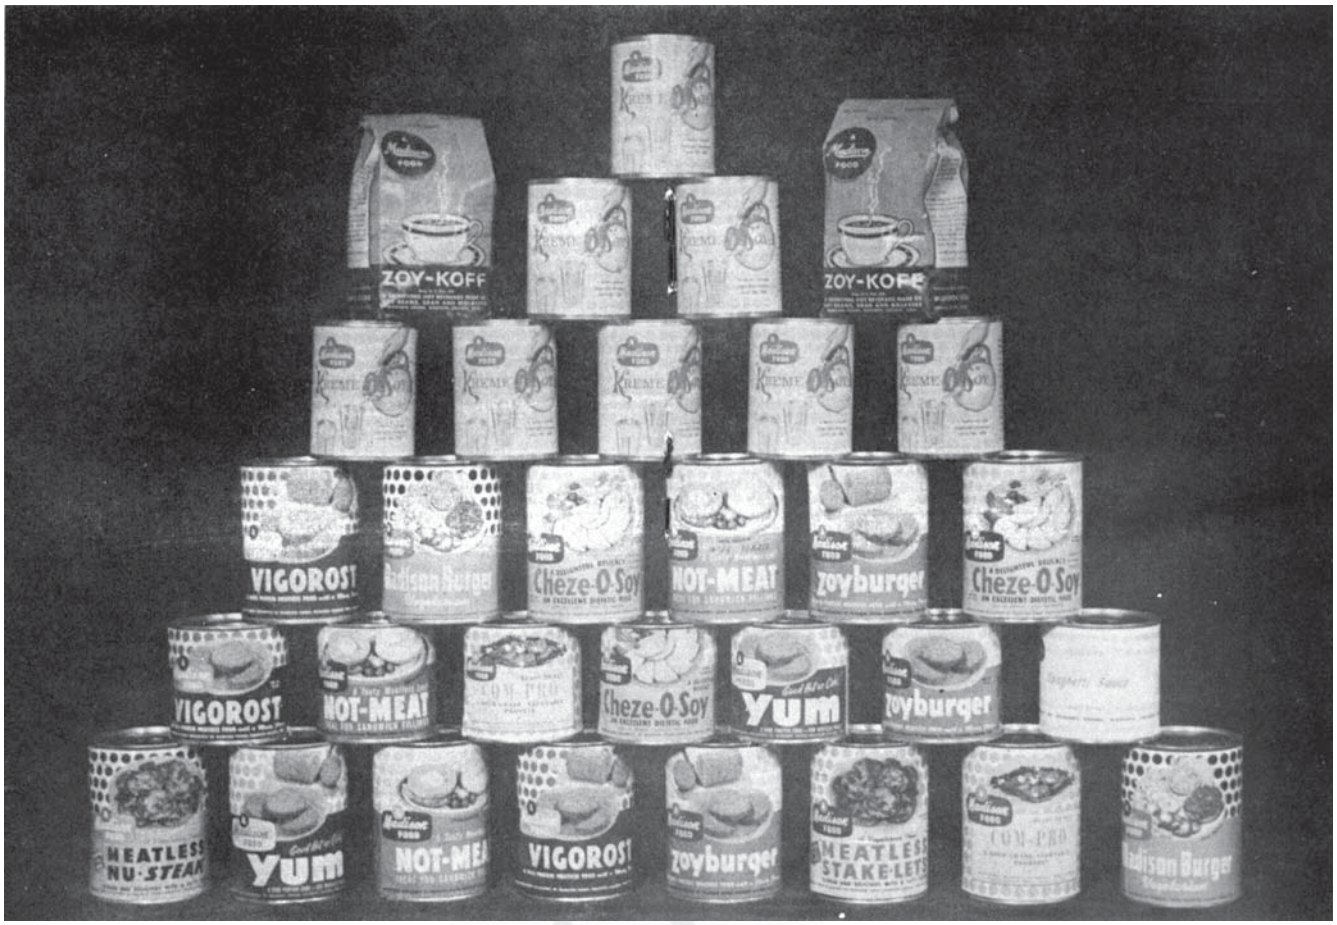
1353. Madison Foods. 1962? The story of Madison Foods. Madison, Tennessee. 17 p. Undated. 22 x 10 cm.

•

Summary: Contents: The early history of Madison and the story of Madison Foods. Early pioneers (with photo taken in about 1909 including W.C. White, Ellen G. White, Mr. and Mrs. Edson White, P.T. Magan, Mother Druillard, and E.A. Sutherland). Industries. Madison hospital offers you. Tasty, healthful Madison Foods: High in proteins (cans of the following are shown): Cheze-O-Soy, Com-Pro, Dinner Morsels, Kreme-O-Soy, Madison Burger, Madison Links, Not Meat, Soy Beans in Tomato Sauce, Nu-Steaks, Stakelets, Soyburger, Yum, Vigorost, Zoy-Koff.

The home of Madison Foods. Dr. Claxton (former U.S. Commissioner of Education) says. Dr. P.A. Webber. Madison College is vegetarian. Madison meat alternates for all. Kreme-O-Soy (a new double-strength milk-like canned beverage).

J.B. Craw (with photo), manager of Madison Foods, says: "New life has come to Madison Foods! The expansion program is moving forward. In fact, the entire food factory is being remodeled; new equipment is steadily and carefully being installed, and new products manufactured.



"Kreme-O-Soy, double strength liquid, is now on the market. It is an entirely New soy milk, an entirely New Formula... in a little while we will have a powdered soy milk.

"We are glad to have H. Willis Miller, Jr., the son of H.W. Miller (China Doctor) with us. Willis is doing a wonderful job of engineering in the placing and manufacturing of newly designed equipment to fit our special need for the new products that will be coming out one by one. We will soon have a modern plant of which we can be very proud."

Other new products: Madison Links, Com-Pro. A message from the president: Ralph M. Davidson (with photo. Note: He was president of Madison College from 1961 to 1963).

President Davidson notes: "Madison Foods, an integral part of the college educational program accomplishes a three-fold mission. First, the food factory furnishes remunerative work for students to earn their way in school. Secondly, it provides a laboratory where the student may learn to do useful work with his hands, thus giving him a

© Copyright Soyinfo Center 2014

balance to his educational program. Thirdly, the successfully operated food factory will bring in means to subsidize the educational and instructional departments of the college."

• ***Summary:*** Recently soy products have been included in the "Protein-rich food Program of World Health Organization [WHO], Food and Agriculture Organization [FAO], and United Nations Children's Fund" [UNICEF]. This program's goal is to prevent protein malnutrition, which is widespread among infants and preschool children in most tropical countries. A toasted full-fat soybean preparation, Sobee, supported better growth in rats (PER 2.3 ± 0.15) and infants than soybean water extracts like Soyalac, Saridele, and Mull-Soy. The authors found considerably more variability in weight gain than with feedings of cow's milk formula. Formulas made from toasted low-fat soy flour gave the best results (PER 2.43), followed by those made from full-fat soy flour (PER 2.40).

Note: This is the earliest report seen on the results of feeding soy protein formula to premature infants. Address: Dep. of Pediatrics, Philadelphia General Hospital, Pennsylvania.

1356. Honma, Osamu; Ono, H.; Nishihara, K. 1963. Daizu o tanpakushitsu gen toshita nyûji shoku no riyô ni tsuite [On the use of soybeans as a source of protein in infant diets]. *Chiryo* (*J. of Therapy, Tokyo*) 45(4):705-10. April. [28 ref. Jap]
• ***Summary:*** In Germany, soybeans are valued as a food with medicinal uses. There are some products on the market sold as Vollsojamehl (whole soy flour, made by Henselwerk in Magstadt) that are used in regular foods and medicinally by adults, but also by elderly people and young children. Soy-based infant formulas made in the USA include: Mull-Soy Liquid (made by Borden); Sobee Powder and Sobee Liquid (made by Mead Johnson); Soyalac Infant Powder, Soyalac Infant Concentrated, and Soyagen Infant Powder (made by International Nutrition Lab. [Mt. Vernon, Ohio]). Those made in Germany include Soyakraft and Sojabasan (Henselwerk); Lactopriv; and Solactin. Address: Tokyo Keisatsu Byoin Shonika, Icho (Tokyo Police Hospital, Pediatric Div., Head).

1357. James, W.S. 1963. New sources of protein in a hungry world. *British Vegetarian.* March/April. p. 69-77.
• ***Summary:*** The world population is now doubling roughly every 40 years and by the end of this century it is expected to reach 6,000 million. A new source of protein has been found. Scientists have discovered ways of separating protein from the indigestible cellulose and fibre of waste vegetable matter, including leaves, grass, etc. One of the pioneers in this basic research is N.W. Pirie, F.R.S., head of the Biochemistry Department at Rothamsted Experimental Research Station, Herts. Pirie and his colleagues have developed a small "Village Unit" machine for extracting protein from vegetable matter. The leaf protein from these machines is a dark green cheeselike substance.

A chemical company has recently put up the necessary capital to form a subsidiary company named International Protein Products, Ltd., which has built a factory costing £300,000 at Plymouth, England, for extracting protein from various vegetable sources using I.H. Chayen's "Impulse Process." The protein concentrate now produced at Plymouth has been given the trade name Lypro; it consists of about 65% protein and 35% oil loosely combined. It looks very much like flour, has a very pale cream color, and a faint attractive nutty flavor.

The low biological value of some leaf proteins can be greatly improved by mixing them with equal weights of soya protein, in the form of commercial food products such as Soyalac (Loma Linda Foods) or Velactin (A. Wander Ltd.). Address: M.Sc.

1358. Kyd, George H. 1963. Edible soy-protein fibers promise new family of foods. *Food Processing* (*Chicago*) 24(5):122-26, 138. May.
• ***Summary:*** "Products amazingly like meat such as the ham-like product shown below and the chicken-style products shown on page 124 can be fabricated from protein fibers shown opposite" (in a full-page photo), magnified slightly more than two times. Ralston Purina now makes "Textured Edi Pro," an edible spun soy protein fiber made from "an isolated edible soy protein that is almost pure protein. It contains no fat."

Page 124 has the heading: "Is the web of spun soy-protein fibers first of the modern superfoods? Meat-like production. These Textured Edi Pro foods–already on the market–look, taste, and chew amazingly like the meat item they so closely resemble, yet they may have a fat content as low as a fraction of one per cent, and a protein content of almost any level desired." Photos show packages and labels of Chicken Style Roll (Minute Entrees, refrigerated roll), Worthington Soyameat Fried-Chicken Style (canned), Worthington Sliced Whitemeat Style (Frozen Minute Entrees). Shown without a package or label are is a ham-shaped, ham-like product [Wham].

Page 126 states: "Tons of the textured product [Textured Edi Pro] each week go into the following products made by Worthington Foods: canned 'Soyameat': refrigerated Chicken-Style Roll; frozen fried-chicken style Minute Entree; and frozen chicken whitemeat style Minute Entree. These products resemble chicken meat in taste and texture. They are new but already fast-selling products, distributed largely through health food stores."

"The edible soy protein work is being carried on under

© Copyright Soyinfo Center 2014

the direction of Dr. H.L. Wilcke, Purina Research Vice President, and D.B. Walker, Vice President in charge of the Soybean Division. Two nationally known scientists who have pioneered soy development have performed much of the development work. They are Robert A. Boyer and Francis E. Calvert. Both at one time were associated with Henry Ford, and, through him, with Thomas A. Edison.

"The work has been coordinated under supervision of W.E. Tjossem, Manager of Purina's Special Soy Products Department, and W.B. Brew, Manager of Special Products Research. Ralston Purina is the largest manufacturer of animal rations, and one of the principal processors of soybeans in this country [USA]. Textured Edi Pro and Edi Pro are developments of Ralston Purina Company, Checkerboard Square, St. Louis 2, Missouri."

"Fifty million people in the U.S... are not able to eat the meat of animal or fowl some or all of the time by reason of their religions, restrictions of their doctors, or by personal preferences. For these many millions who for one reason or another cannot eat meats, the Textured Edi Pro meat-like products will supplement the supply of food items which they approximate... The versatility and adaptability of these new edible soy products make them 'the most exciting and most promising group of new foods of this decade,' says Purina vice president D. B. Walker. 'They are so characteristic of present health theories that they are likely to establish themselves in diets of the future. And the meat- like products will find an eager market among those 50 million who can't eat real meat."

Note: This is the earliest English-language document seen (March 2009) that mentions Textured Edi Pro, made from spun soy protein fiber. Address: Ralston Purina Co., St. Louis, Missouri.

1359. **Product Name:** Chicken Style Roll–Worthington Minute Entrees (Meatless; Resembles White Chicken Meat).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085.
Date of Introduction: 1963 May.
Ingredients: 1990: Textured vegetable protein (soy protein isolate and concentrate), egg whites, soybean and/or corn oil, salt, flavorings (hydrolyzed vegetable protein, onion powder, turmeric, spice extractives), monosodium glutamate, carrageenan, niacinamide, iron (as ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), artificial color, vitamin B-2 (riboflavin), vitamin B-12.
How Stored: Frozen.
New Product–Documentation: George D. Kyd. 1963. *Food Processing.* May. p. 123-26. "Edible soy protein fibers promise new family of foods." The author, an employee of Ralston Purina Co., states that this product, which contains Textured Edi Pro (spun soy protein fibers made by Ralston Purina) is already on the market. A photo shows the product–a cylindrical roll about 2½ inches in diameter and 10 inches long. The label states: "Chicken Style Roll–Worthington Minute Entrees." One end of the roll has been sliced, slivered, and diced. Page 126 describes the product as "refrigerated Chicken-Style Roll." These "are new but already fast-selling products, distributed largely through health food stores."

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. Chicken Roll is a frozen product based on spun soy protein fiber. Each roll weighs 72 oz.

Manufacturer's catalog. 1984, undated. Frozen Products.

1363. **Product Name:** Prosage (Meatless Sausage Based on

© Copyright Soyinfo Center 2014

Spun Soy Protein Fibers) [Links, Patties, or Roll].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1963 October.
Ingredients: In 1971: Water, wheat protein [wheat gluten], soya protein, corn oil, albumin [egg protein], dextrose, salt, hydrolyzed vegetable protein, MSG, vegetable gum, flavorings.
How Stored: Frozen.
New Product–Documentation: Soybean Blue Book. 1965. p. 112. "Prosage." Buller & Klis. 1965. Food Processing. 26(9):115-17, 120. Sept. "Spun Soy Protein Foods Get Supermarket Sales Test." Prosage, a meatless sausage resembling pork sausage, is made with spun soy protein fibers. A photo shows a man rolling a rack of Prosage into a room for quick freezing. "A 1½ ounce of Prosage can be fried without any loss in size or weight, as contrasted with 30 to 40 per cent shrinkage of pork sausage."

Ziemba. 1966. Food Engineering. May. p. 82-93. "Let soy proteins work wonders for you." Photo of package.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 163. Lists the ingredients in "Prosage (Worthington)." This is an institutional product.

Ad (½ page) in *Better Nutrition.* 1974. Dec. p. 43. "New meatless Prosage Links." A photo shows the package.

Manufacturer's catalog. 1984, undated. Frozen Products. Label reads: "Vegetable Protein Food. Artificial Sausage Flavor." Spot in *Soybean Digest.* 1970. April. p. 9. "50% less calories and 75% less fat in Prosage." The product is being test marketed in Columbus, Ohio and South Bend, Indiana.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a frozen sausage-like product based on spun soy protein fiber.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Prosage, frozen (Worthington)" are "wheat protein, corn oil, soy protein concentrate, oats, albumen [egg protein], corn syrup solids, artificial flavors, soy protein, yeast extract, salt, HVP, malt extract, vegetable gum, sucrose, caramel coloring, niacin, thiamin, iron, vitamin B-6, riboflavin, vitamin B-12."

Worthington Foods. 1989. "The Tradition of Healthy Foods" (50th anniversary booklet). p. 21-22. Worthington's first products made with spun soy protein fibers were White Chik, Beeflike, Prosage, Stripples, and Holiday Roast (with a plastic wishbone). All were hits and sales took off. These products were sold frozen. In "October 1963 a series of television, radio and newspaper advertisements featuring the new frozen foods was introduced."

Color photo of package in *Linda McCartney's Home Cooking.* 1990. p. 18.

Talk with Ron McDermott of Worthington Foods. 1992. Oct. 23. In 1968-70 Worthington developed a new generation of products containing wheat gluten; the first of these was Prosage (rhymes with "Sausage"). For the first time, fresh (not dried) wheat gluten was combined with spun soy protein fibers and textured soy protein concentrates to give improved texture, flavor, and nutritional value (through protein complementarity). Later the spun soy protein fiber was removed but the textured concentrate remained. Miles Laboratories, which bought Worthington in March 1970, did a lot of further development on Worthington's products; Breakfast Links, Breakfast Patties, etc. Morningstar Farms Breakfast Patties, a meatless sausage, which are an improved version of Prosage, were introduced to the mass market in 1974, still featuring the gluten-soy combination.

1364. **Product Name:** White-Chik (Meatless Chicken Based on Spun Soy Protein Fibers–Frozen).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085.
Date of Introduction: 1963 October.
Ingredients: Specially processed soybean protein (Fibrotein), corn oil, [egg] albumen, isolated soy protein, salt, monosodium glutamate, vegetable gum, trisodium phosphate, seasonings.
Wt/Vol., Packaging, Price: Paperboard box or canned.
How Stored: Frozen.
Nutrition: Protein 20-26%, fat 18-25%, carbohydrate 2-3%.
New Product–Documentation: Buller & Klis. 1965. Food Processing. 26(9):115-17, 120. Sept. "Spun Soy Protein Foods Get Supermarket Sales Test." "White-Chik" is "simulated white meat chicken" based on spun soy protein fiber. A photo shows the thin paperboard box in which it is sold, frozen.

Hartman. 1966. Food Technology. 20(1):39-40. "Vegetarian protein foods."

"The first textured soybean protein fiber product marketed in the U.S. is Worthington's frozen 'Fri-Chik,' an extruded formulation simulating a small fried portion of white chicken meat. This same formulation was next canned in a light gravy and called 'Soyameat–Fried Chicken Style,' and was also later marketed as frozen and canned 'White-Chik' in large rolls for slicing, dicing, etc. The approximate analysis of these simulated chicken products: protein 20-26%, fat 18-25%, and carbohydrate 2-3%."

Ziemba. 1966. Food Engineering. May. p. 82-93. "Let soy proteins work wonders for you." Photo of box.

Worthington Foods. 1989. "The Tradition of Healthy Foods" (50th anniversary booklet). p. 21-22. Worthington's first products made with spun soy protein fibers were White Chik, Beeflike, Prosage, Stripples, and Holiday Roast (with a plastic wishbone). All were hits and sales took off. These products were sold frozen. In "October 1963 a series of television, radio and newspaper advertisements featuring the

• ***Summary:*** Carcinoma of the cervix can be cured in its early stages. By utilizing the cytologic technic almost all invasive malignancies of the cervix could be prevented. Address: Dep. of Gynecology and Obstetrics and the Dep. of Pathology, School of Medicine, Loma Linda Univ., Loma Linda, California.

1367. Hardinge, Mervyn G.; Crooks, Hulda. 1963. Non-flesh dietaries. I. Historical background. *J. of the American Dietetic Association* 43(6):545-49. Dec. [31 ref]
• ***Summary:*** Contents: Introduction. Biblical account of the diet of man. Oriental nations. Peoples of the Middle East. The Greeks and Romans. The Christian Era. Britain and the Western world. America. War experience (Dr. Hindhede in Denmark during World War I. Similar experience in Norway during World War II. "The period between World War I and II is frequently alluded to as the Golden Era of Vegetarianism. During this time vegetarianism lost much of its stigma of 'cultism' and advanced to a more scientific basis"). Contemporary vegetarian groups in the U.S. The future. Summary.

This is one of the best, most concise, and most accurate and original well-documented histories of vegetarianism up to this time.

In Britain and the Western world, the vegetarian movement was born in Manchester, England, in 1809, when members of the Bible Christian Church under the leadership of William Cowherd, pledged themselves to abstain from alcoholic drinks and flesh foods. "In 1847, the Bible Christian Church, under the leadership of Joseph Brotherton, established a vegetarian society apart from the church."

"The vegetarian organization begun in England was brought to America by the Reverend William Metcalfe and forty-one members of his church. They landed in Philadelphia, Pennsylvania, in 1817 where their number soon grew. Their regimen was strengthened and expanded through the influence of several prominent men who became convinced of the advantages of a fleshless diet. Among these were Reuben D. Mussey (1780-1866), fourth President of the American Medical Association, and Edward Hitchcock (1793-1864), Professor of Science and then President of Amherst College [Massachusetts], whose 'Lectures on Diet, Regimen, and Employment' were published in 1831.

"In 1829, Sylvester Graham, a young Presbyterian minister who believed he had regained his own health on a vegetarian diet, began actively by pen and voice to advocate moderation in eating. His impressive arguments and fiery zeal gave impetus to the vegetarian movement and caused his contemporaries to regard him as the apostle of temperance. He is best remembered by his advocacy of the use of unbolted 'Graham' flour in bread-making." Address: Dep. of Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California.

1368. Hardinge, Mervyn G.; Crooks, Hulda. 1963. Non-flesh dietaries. II. Scientific literature. *J. of the American Dietetic Association* 43(6):550-58. Dec. [96 ref]
• ***Summary:*** An excellent review of the English-language literature relating to experimental investigations, group studies, health advantages and disadvantages of a vegetarian diet. Address: Dep. of Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California.

1369. **Product Name:** Loma Linda All Purpose Soyagen (Milk Free Soy Beverage Powder).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505. Phone: 714-687-7800 (3/88).
Date of Introduction: 1963.
Ingredients: Soy solids, corn syrup, soy oil, sugar, soy lecithin, salt, di-calcium phosphate, tri-sodium citrate, calcium carbonate, di-potassium phosphate, artificial flavors, vitamins (ascorbic acid, DL-alpha tocopheryl acetate, vitamin A palmitate, cholecalciferol, riboflavin, phytonadione, cyanocobalamin), ferrous sulfate, tri-potassium citrate.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
Nutrition: Per 1 oz. powder (approximately ¼ cup making one cup of liquid): Calories 130, protein 6 gm, carbohydrate 14 gm, fat 6 gm, cholesterol 0 mg, sodium 150 mg, potassium 210 mg.
New Product–Documentation: Label and color photo sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1963; the label is dated "9/78"–Sept. 1978. A less sophisticated version of this product with the same name appeared in 1948.

1370. **Product Name:** Loma Linda Sandwich Spread (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1963.
Ingredients: In 1975: Minced olives, peanut meal, legumes, tomato puree, soy flour, flaked 100% wheat meal, bell peppers, soy sauce, yeast extract, salt, MSG, onion, flavoring.
Wt/Vol., Packaging, Price: 14 oz (397 gm) can. Retails for $2.40 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Sandwich Spread contains 12.90% protein, 16.50% fat, and 7.4% carbohydrate. One serving is 3 tablespoons.

Loma Linda Food Co. 1969. "Wholesale Price List." L.L. Sandwich Spread is now sold in 4.75 oz and 14 oz cans.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Sandwich Spread (Loma Linda)" are given.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. The ingredients are now: Water, olives, peanut butter, garbanzos, tomato puree, soy flour, red peppers, natural (vegetable) flavors, salt, dextrose, onion powder, caramel color, vitamins [niacinamide, D-calcium pantothenate, thiamine (vitamin B-1), vitamin B-6, riboflavin (vitamin B-2), vitamin B-12], spices. Label printed Sept. 1989.

1371. **Product Name:** Loma Linda Little Links (Meatless Frankfurters).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Riverside, CA 92515.
Date of Introduction: 1963.

© Copyright Soyinfo Center 2014

Ingredients: In 1971: Wheat protein [wheat gluten], water, vegetable oil, brown rice, defatted wheat germ, dried yeast, soy protein, salt, potato flour, onion powder, MSG, lecithin, caramel color, hydrolyzed vegetable protein, garlic powder, lepine, seasonings.
Wt/Vol., Packaging, Price: 14 oz can.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Little Links contain 16.60% protein, 12.17% fat, and 5.82% carbohydrate. One serving, 2 links, weigh 47 gm.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Little Links (Loma Linda)."

Note: This is the earliest English-language document seen (Aug. 2003) that uses the term "Loma Linda Little Links" to refer to meatless soy hot dogs.

1372. **Product Name:** Loma Linda Linketts (Meatless Frankfurters). Renamed Linketts by 1965.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1963.
Ingredients: In 1971: Wheat protein [wheat gluten], water, vegetable oil, dried yeast, salt, soy flour, MSG, caramel, onion powder, lysine, garlic, U.S. certified color, seasonings.
Wt/Vol., Packaging, Price: 20 oz can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: 1988: Per 2 links (2.6 oz–74 gm): Calories 150, protein 15 gm, carbohydrate 5 gm, fat 8 gm, cholesterol 0 mg, sodium 340 mg, potassium 75 mg.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Linketts contain 18.70% protein, 10.38% fat, and 5.70% carbohydrate. One serving, 1 link, weighs 42 gm.

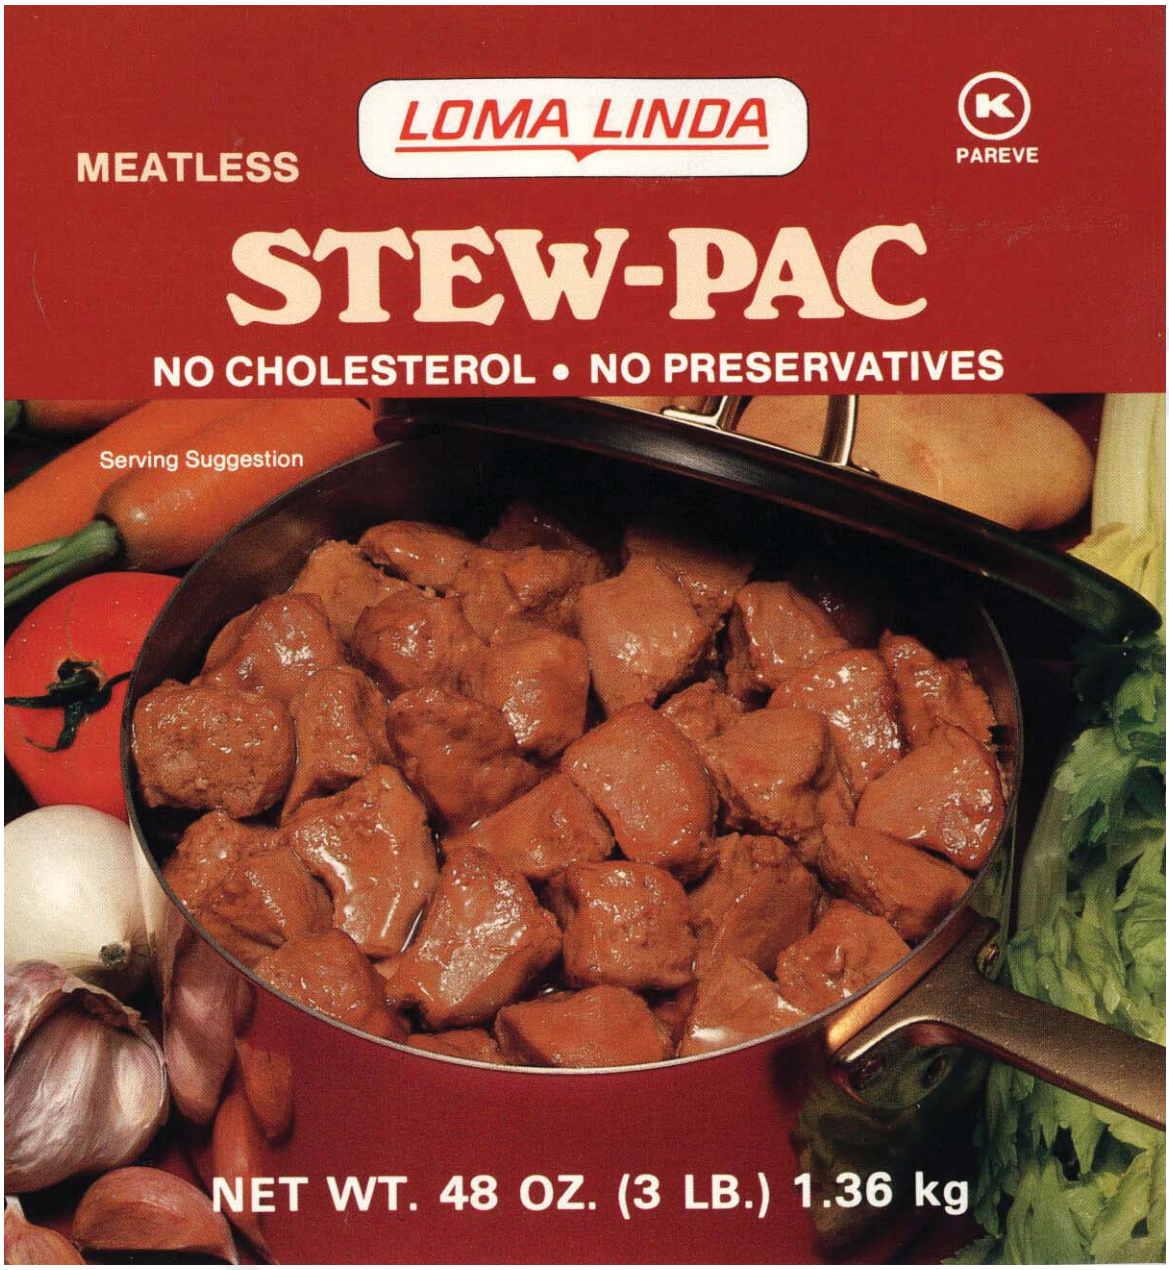
Note: This is the earliest English-language document seen (Aug. 2003) that uses the term "Loma Linda Linkettes" to refer to meatless soy hot dogs.

Loma Linda Food Co. 1969. "Wholesale Price List." Linketts are now sold in 13 oz and 20 oz cans. Big Franks are sold in 20 oz cans. And Little Links are sold in 14 oz cans.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Linketts (Loma Linda)."

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned frankfurter-type product.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 175. The ingredients in "Linketts (Loma Linda)" are "Wheat protein [wheat gluten], soy oil, dried yeast, salt, HVP, soy protein concentrate, flavoring, defatted soy flour, mono- and diglycerides of vegetable origin, lecithin, L-lysine, onion powder, caramel, artificial color, garlic powder, hickory smoke flavor."



Recipe booklet. 1979.

Label sent by Loma Linda Foods. 1988. Oct. 5. Ingredients for Linketts are now: Wheat gluten, corn oil, water, dried yeast, soy protein concentrate, artificial and natural (vegetable) flavors, soy flour, vegetable mono- and di-glycerides, soy lecithin, L-lysine, onion powder, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). Broth: Water, salt. This product was introduced in 1982. A less sophisticated version of this product with the same name was introduced in 1953.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

garlic powder, L-lysine, flavoring.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per ½ inch slice (2.4 oz–68 gm): Calories 130, protein 14 gm, carbohydrate 5 gm, fat 6 gm, cholesterol 0 mg, sodium 370 mg, potassium 120 mg.

New Product–Documentation: A less sophisticated version of this product was first introduced in 1953. Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Redi-Burger contains 21.80% protein, 12.20% fat, and 8.58% carbohydrate. One serving, ½-inch slice, weighs 75 gm.

Loma Linda Food Co. 1969. "Wholesale Price List." Redi-Burger is now sold in 19 oz cans.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Redi-Burger (Loma Linda)" are given.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1963. A less sophisticated version of the same product with the same name was introduced in 1953. The ingredients are now: "Wheat gluten, corn oil, water, wheat germ, rice flour, dried yeast, soy flour, natural (vegetable) flavors, potato flakes, onion powder, oat flour, caramel color, salt, soy lecithin, wheat flour, garlic powder, L-lysine, soy protein isolate, spice, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin)."

1375. Delafield, D.A. 1963. Ellen G. White and the Seventh-day Adventist Church. Mountain View, California; Omaha, Nebraska; Calgary, Alberta, Canada: Pacific Press Publishing Co. 90 p. Illust. No index. 18 cm. [44* ref]

1376. Lager, Mildred; Jones, Dorothea Van Gundy. 1963. The soybean cookbook: Adventures in zestful eating. New York, NY: Devin-Adair Co. xiv + 240 p. Foreword by Ruth Stout. Index. 22 cm.
• ***Summary:*** The copyright page states: "Note: This is a revised and updated version of a privately printed book, *How to Use the Soybean*, by Mildred Lager which was first printed in 1955 and reprinted in 1959." This lacto-ovo-vegetarian cookbook contains over 350 recipes, including 72 tofu recipes.

Contents: Preface to 1955 edition. Preface to 1963 edition. Part I: The versatile soybean. History of the soybean. Nutritional value. Abbreviations and special terms. Soup to nuts: Introduction, green soybeans [green vegetable soybeans], dry soybeans, roasted soybeans, sprouted soybeans, the cow of China–soy milk (kinds of soy milk), "the meat without a bone"–tofu or soy cheese, the little giant among protein foods–soy flour, soy grits and bits (puffed grits), soy oil and soy butter, meat replacement foods, sandwich spreads, malts, coffee substitutes, soy sauce, other soy products (soy albumen, Glidden's product that contains on a dry basis 96.6% protein [soy protein isolate]).

Part II: Soybean recipes. Green soybeans. Dry soybeans. Roasted or toasted soybeans. Sprouted soybeans. Meat replacement dishes. Soy noodles, macaroni, and spaghetti. Sauces and gravies. Soy soups. Salads. Soy spreads and soy butter ["a butter resembling peanut butter may be made from finely ground soybeans or soy flour... Roasted soy butter is made from the roasted beans that have been ground into a fine flour."]. Soy milk. Tofu or soy cheese. Soy cereals and breakfast dishes. Soy desserts. Soy candies. Soy flour breads: Full-fat soy flour, low-fat or fat-free soy flour. Pastry. Cookies. Cakes. Extra tips. Appendix. Menus.

The chapter titled "History of the Soybean" (p. 3-7) discusses: W.J. Morse and the U.S. Department of Agriculture, Dr. J.A. LeClerc, the American Soybean Association (which has held a national convention every year since it was founded in 1920), its publication *Soybean Digest*, Henry Ford and his work with both industrial and edible soy products, T.A. Van Gundy, Harry W. Miller, M.D., Dr. Clive McCay of Cornell University (Ithaca, New York), and the Sept. 1961 Conference on Soybean Products for Protein in Human Foods (held at Peoria, Illinois).

Concerning T.A. Van Gundy we read (p. 5): "The father of one of the authors, T.A. Van Gundy, became interested in the nutritional value of soybeans while attending the World's Fair in San Francisco in 1915, where they were featured in the Oriental exhibits. Upon going home he purchased some soybeans and began experimenting in them. As far as we know he was the first person on the Pacific Coast to develop a line of commercial foods from this wonder bean. By 1927

© Copyright Soyinfo Center 2014

he had developed a number of palatable products which he manufactured and sold through health food stores. Soybean foods were virtually unknown at this time, and it took courage and perseverance to put them across."

Recipes for "Soy Ice Cream" (p. 175-76) now include vanilla, maple nut, orange, and strawberry flavors. A recipe for "Granola" (p. 161) calls for 1 cup soy flour. The rest of the ingredients (such as wheat and barley flour) appear to be similar to those found in the earliest granola recipes of the mid-1800s. Address: Southern California.

1377. Major, Nettie Leitch. 1963. C.W. Post–The man and the hour. Washington, DC: Published by the author. xx + 318 p. Illust. Index. 27 cm. [50+* footnotes]
• ***Summary:*** This excellent biography of C.W. Post was published six years after another excellent biography of both W.K. Kellogg and Post titled *Cornflake Crusade*, by Gerald Carson. Both books are rich troves of original research, and both are well written and well documented. This book is more sober; Carson's is full of good humor. Address: Washington, DC.

1378. Jones, Dorothea Van Gundy. 1963? Information sheet. Loma Linda, California. 1 p. Undated. Unpublished typescript.
• ***Summary:*** Native of California. Graduated from Dietetic course at Loma Linda University, Loma Linda, California. Finished college (B.S.) at Pacific Union College, Angwin, Calif.

Experience includes: "1. Head of college home economics department. 2. Director of Food Service in Junior College. 3. Therapeutic dietitian in hospital. 4. Administrative dietitian in hospital. 5. Diet counseling in doctor's office. 6. Worked with clinical group as dietary consultant. Present position, for past eleven years nutritionist for International Nutrition Research Foundation, Arlington, California. Just returned recently (1962) from six-weeks tour of Europe studying nutritional habits.

"Mrs. Jones' position has included traveling over the United States and Hawaii, conducting community classes in nutrition and the proper preparation of food. These classes have ranged in size from 50 to 1200, and included men, women and children."

"She is associate editor for *Today's Food*, an eight-page quarterly magazine devoted to better nutrition.

"She has authored many articles on nutrition and food preparation that have been published in national magazines."

Note: This undated mimeographed sheet was apparently written before Mrs. Jones went to Japan in Oct. 1964. Address: Loma Linda, California.

1379. **Product Name:** Loma Linda 7-Grain Cereal [No Sugar Added, or Crunchy].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Riverside, CA 92515.
Date of Introduction: 1963?
Ingredients: No Sugar Added: Corn flour, rice flour, soy flour, oat flour, barley flour, rye flour, whole wheat flour, buckwheat flour, salt.
How Stored: Shelf stable.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. In the Crunchy flavor, soy flour is the 6th ingredient, and brown sugar is the 7th.

1380. **Product Name:** Soy Chips or Grits.
Manufacturer's Name: Soy Products of Australia Pty. Ltd.
Manufacturer's Address: 69 Power Road, Bayswater, VIC 3153, Australia. Phone: 729-1738.
Date of Introduction: 1963?
Ingredients: Soybeans.
New Product–Documentation: Talk with Paul Smith of Soy Products of Australia Pty. Ltd. 1995. This product was introduced after 1963, when the full mill operation came on stream.

1381. *Quick Frozen Foods.* 1964. Protein controlled simulated meat concept opens unlimited frozen potential: Food of tomorrow, today. 26(6):79-82. Jan.
• ***Summary:*** A whole array of new simulated meats are made from edible soy protein, in the form of spun soy protein fibers, as the basic ingredient. Two companies are presently marketing these new foods: Worthington Foods, Inc., Worthington, Ohio, and Brown's Frosted Foods, Inc., Philadelphia, Pennsylvania. A table lists nine "Major advantages of soy protein 'meat.'"

Worthington has registered the trademark "Fibrotein" to identify its edible soy fibers, which are produced thanks to the aid of a "revolutionary, scientific breakthrough which has converted the soy bean into a magic wonder-bean capable of playing a number of profitable roles." Worthington's president James L. Hagle discusses the nutritional and economic advantages of his company's new foods. Allan R. Buller, general manager, describes how Fibrotein is made using a viscous liquid of soy protein that is "extruded under pressure through platinum spinnerettes having holes 1/4000th of an inch in diameter." The resulting fine filaments of protein are "formed into a 'tow' which can be cut, twisted, chopped, or rolled into various forms for use in foods."

Note: This is the earliest English-language document seen (March 2009) that uses the word "spinnerettes" (or "spinnerette") in connection with edible spun soy protein fibers.

Mr. Buller's firm has been successful in using Fibrotein to make frozen vegetarian foods that resemble fried chicken (Fri-Chik, 8 oz carton), white turkey meat (White-Chik, 8 oz carton), roast beef slices (Prime, 8 oz carton), and ham

© Copyright Soyinfo Center 2014

(Wham). Worthington has entered the frozen field with a new line of vegetarian foods it calls "Minute Entrees." Worthington also makes Prosage (like sausage) packed in 1 pound casings.

Worthington is also making seven frozen foods for the institutional market, including chicken style rolls (8 lb roll), chicken sliced or diced white meat (5 lb packages), and fried chicken style (1¼ oz portions). The firm also makes a canned line under the brand "Soyameat."

Photos show: (1) Prime, smoked and chipped, in a 4 oz transparent pouch. (2) A Chicken Style Roll next to a deli slicer. (3) An 8 oz carton of Fri-Chik. (4) An 8 oz carton of Prime. (5) A roll of Prosage.

1382. **Product Name:** Prime (Slices), Prime-Smoked and Chipped (Meatless Meats).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1964 January.
Ingredients: Fibrotein (soybean protein), water, corn oil, vegetable shortening, [egg] albumen, hydrolyzed vegetable protein, salt, caramel coloring, monosodium glutamate, flavorings, U.S. certified color.
Wt/Vol., Packaging, Price: 8 oz. Paperboard box.
How Stored: Frozen.
New Product–Documentation: *Quick Frozen Foods.* 1964. "Protein controlled simulated meat concept opens unlimited frozen potential: Food of tomorrow, today." Jan. Fibrotein is the basic ingredient in Worthington's new "Meat-like but meat-free foods." A photo shows a package of "Prime" identical to that sent by Dr. Wolf in July 2000.

Soybean Blue Book. 1965. p. 112.

Buller & Klis. 1965. Food Processing. 26(9):115-17, 120. Sept. "Spun Soy Protein Foods Get Supermarket Sales Test." A photo shows the thin paperboard box in which Prime is sold, frozen, and a plastic bag in which it is sold in granular form.

Ziemba. 1966. Food Engineering. May. p. 82-93. "Let soy proteins work wonders for you." Photo.

Label (undated) for Prime (slices), Beef flavor sent by Dr. Walter Wolf. 2000. July. Since the first ingredient is Fibrotein (spun soy protein fibers), this package is probably from about 1964. Red and white on dark blue. A large color photo on the front panel shows the slices served with a few vegetables on a white serving dish. On the front panel: "Minute main courses. Foods for 4. New frozen food concept. Contains no meat. Like beef? Yes ma'm!"

1383. Walden, Richard T.; Schaefer, L.E.; Lemon, F.R.; Sunshine, A.; Wynder, E.L. 1964. Effect of environment on the serum cholesterol-triglyceride distribution among Seventh-day Adventists. *American J. of Medicine* 36(2):269-76. Feb. [23 ref]

• ***Summary:*** The authors compared the serum lipid levels of 145 Seventh-day Adventist lacto-ovo-vegetarians (of whom 19 ate meat occasionally) with those of the New York population. Lacto-ovo-vegetarians had lower serum cholesterol and higher triglyceride levels than New York City residents, the differences becoming more pronounced following manipulation of dietary fat by fat restriction or fat substitution diets. Address: New York, New York.

1384. *British Vegetarian.* 1964. Disastrous fire at Stanborough Press, Watford. March/April. p. 92-93.
• ***Summary:*** On Friday, Jan. 3. a terrible fire gutted the buildings at Stanborough Press. Fortunately no one was hurt, but £100,000 damage was incurred in addition to priceless records and an incomparable of library of pictures an back issues of printed materials. The Press, established in 1907 by the British Union of the Seventh Day Adventists, prints and publishes books and periodicals dealing with both religion and vegetarianism. Its bi-monthly magazine *Good Health* has a circulation approaching 50,000. Photos show both the burning buildings and the gutted buildings after the fire. Address: B.A.

1385. **Product Name:** Granogen (Powdered Soymilk for Adults).
Manufacturer's Name: Granose Foods Ltd. (Importer-Marketer). Made in the USA by Loma Linda Foods.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England. Phone: 0923-672281/2.
Date of Introduction: 1964 April.
Ingredients: Soya bean solids, corn syrup, soya oil, sugar, salt, lecithin, vitamins.
Wt/Vol., Packaging, Price: 1 lb can. Retails for 9 shillings 6 pence (4/64, England).
How Stored: Shelf stable.
Nutrition: Protein 22.5%, carbohydrate 46.8%, fat 22.6%, ash 4.2%, moisture 3.9%.
New Product–Documentation: *The British Vegetarian.* 1961. March/April. p. 93. "Soya milk for household use." Granose Foods will soon be in a position to supply two varieties of spray-dried soya milk, Soyalac and Soyagen, made by one of their associated companies, Loma Linda Food Company in Arlington, California. Soyalac is specially prepared for infants, whereas Soyagen is for general use. A table compares the nutritional composition of the two products.

The British Vegetarian. 1964. March/April. "Granogen: Soya Bean Milk Now Available." "Readers will be glad to know that a really delicious general purpose soya bean milk is now available in Britain and will shortly be on sale in Health Food Stores." Made in America, Granose is imported and distributed to the trade by Granose Foods Ltd., Stanborough Park, Watford, Herts. Fortified with vitamin B-12, this fine white powder is sold in a 1-lb can for 9

© Copyright Soyinfo Center 2014

shillings 6 pence.

Orr and Adair. 1967. Tropical Products Institute Report G-31. "The production of protein foods and concentrates from oilseeds." p. 72. Soyalac is made in both liquid and powder form by Loma Linda Foods. The powder is imported into the U.K. by Granose Foods Ltd. and sold under their brand name of Granogen. A nutritional analysis is given.

Leah Leneman. 1971. *The British Vegetarian.* Jan/Feb. p. 6. "Plantmilk and sex!" The author (and many other people she knows) prefers the taste of Granogen to that of Plamil as an alternative to cow's milk. Granogen, however is not made in Britain.

Listing in The Vegetarian Health Food Handbook (UK). 1974. p. 155. "Granogen Soya Milk by Granose Health Foods Ltd." Note the new company name.

Manufacturer's catalog. 1980. April. "Soya milk for adults with added vitamins and minerals. Of great value to those with milk allergies." Purves. 1981. Nutrition and Food Science. Jan/Feb. p. 5-6.

Letter from Adrian Peck, production manager at Granose Foods. 1990. July 11. This product has always been imported as a powder. Granose has never sold a liquid Granogen. Before 1988 it was named Granogen and made in the USA by Loma Linda Foods. From 1988 on it was renamed Soyagen and made in West Germany by DE-VAU-GE.

1386. Lemon, Frank R.; Walden, R.T.; Woods, R.W. 1964. Cancer of the lung and mouth in Seventh-Day Adventists: Preliminary report on a population study. *Cancer* 17(4):486-97. April. [34 ref]

• ***Summary:*** "Since 1950, at least 28 reported epidemiological studies have yielded findings consistent with the conclusion that prolonged and regular smoking of cigarettes increases the risk of the development of lung cancer by as much as 20 to 60 times. The use of tobacco and alcohol in a variety of forms has also been implicated as an important etiological factor in buccal cancer."

"A complete roster of the California Seventh-Day Adventist membership was not available in 1958. Individual churches had complete membership lists but without pertinent data such as age, race, and occupation." In 1958, Lemon and Walden identified approximately 47,000 Seventh-day Adventists (SDAs) by the use of a brief census questionnaire mailed to households. "The questionnaire provided for basic information: sex, date of birth, length of church membership, race, marital status, place of birth, occupational and residential history, and the present state of health in general terms."

In 1960, with the assistance of Hammond (of the American Cancer Society) they collected a second mailed questionnaire from approximately 27,000 SDAs age 30 or over. Address: Dep. of Preventive Medicine and Public Health, School of Medicine, Loma Linda Univ., Loma Linda, California.

1387. Madison Foods. Div. of Worthington Foods, Inc. 1964. Wholesale price list–order blank. Worthington, Ohio 43085. 1 p. July 1.

• ***Summary:*** Products in Madison Foods line (now owned by Worthington Foods) include: Cheze-O-Soy [canned tofu]. Com-Pro. Dinner Morsels. Madison Burger. Not Meat (plain or tomato). Nu-Steaks. Stake-Lets. Vigorost. Yum. Zoyburger. Kreme-O-Soy [canned soymilk]. Soy Beans (Boston). Zoy-Koff (regular, or fine grind).

Worthington now has warehouses in Portland, Oregon; Oakland, California (actually San Leandro); Washington, DC; and Madison, Tennessee. Address: Worthington, Ohio. Phone: 614-885-9511.

1388. Longway, E.L. 1964. After many days [Dr. Harry W. Miller in the Philippines]. *Review and Herald.* July 2.

• ***Summary:*** A photo shows Don Toribio handing a check for 10,000 pesos to Dr. Harry Miller. Address: Field Secretary, Far Eastern Div.

1389. Jones, Dorothea Van Gundy. 1964. Quick 'n easy dishes for picnics or patio. *Today's Food* (*Loma Linda Foods, Riverside, California*) 9(2):7-8. Summer.

• ***Summary:*** Loma Linda ingredients in the recipes (p. 7) include: Vegeburger. Kidney Beans. Linketts. Garbanzos. Boston Style Baked Soybeans. Smokene. Soyagen milk. A photo (p. 8) shows nutritionist Dorothea Van Gundy Jones standing by a table.

© Copyright Soyinfo Center 2014

• ***Summary:*** Begins with a fanciful account of the early history of the soybean in China. "A fundamental rule in farming was to count the number of persons in the family and plant 5 acres of soybeans for each person."

"The father of our Nutritionist Dorothea Jones, T.A. Van Gundy, became interested in the nutritional value of soybeans while attending the World's Fair in San Francisco in 1915, where he saw them featured in an Oriental exhibit. So far as we know, he became the first person on the Pacific Coast to develop a line of commercial foods from the wonder bean. Soybean foods were virtually unknown at this time, and it took courage and perseverance to put them across."

Loma Linda Foods at present manufactures some twenty-five products which incorporate the use of the soybean in their ingredients–most of them providing a most economical means of adding more protein to the diet." These products include: Loma Linda RediBurger (19 oz can, 6 servings and 116 gm protein, costs $0.72; a blend of soy and other vegetable proteins). Loma Linda Dinner Cuts (20 oz can, 5 servings and 65 gm of protein, costs $0.74).

Note: The Panama Pacific International Exposition took place in San Francisco in 1915. Scores of documents were written about it and an official catalog describing it was published.

1394. Jones, Dorothea Van Gundy. 1964. Soybean magic. *Today's Food* (*Loma Linda Foods, Riverside, California*) 9(3):4-6. Autumn.

• ***Summary:*** See next page. The author is on her way to Tokyo, Japan, where the American Soybean Association has asked her to participate in a soybean seminar and fair; she will lecture and demonstrate the use of soybeans in human nutrition.

"My interest in soybeans goes back many years when our family came in contact with them at the world's fair in San Francisco. They were featured in one of the Oriental displays. My father became so enthusiastic, he promptly bought a hundred pound sack of soybeans and we began experimenting. We discovered they were hard to cook and had a peculiar flavor. It was some time before we found a way to mask their beany taste and prepare them properly... My father [T.A. Van Gundy] became a real pioneer in introducing this king of the legume family and often was referred to as 'Soybean Van Gundy.'

"Many years ago, Loma Linda Foods became aware of the nutritional value of soybeans and began manufacturing a few products. Today there are twenty-five soybean foods under the famous Loma Linda label–some made entirely from soybeans and others incorporating them in some form. One of the latest additions to the Loma Linda line is Boston Style Baked Soybeans.

A photo shows Dorothea Van Gundy Jones with Miss Kojima, assistant manager of the Japanese Soybean Association [sic, Japanese American Soybean Institute], who is visiting the USA as part of her world tour to study uses of the soy bean.

Page 5 shows that the following Loma Linda brand soy products are now available: Soy Flour, Soyagen (All Purpose or Malt), Sandwich Spread, VegeChee, Smokene, Boston Baked Soybeans, and Soy Sauce. A photo on the cover of this issue of Loma Linda's quarterly magazine shows a can of Loma Linda VegeBits. Address: Nutritionist, Loma Linda Foods, 11503 Pierce Place, Riverside, California.

1395. Hardinge, Mervyn G.; Crooks, Hulda. 1964. Non-flesh dietaries. III. Adequate and inadequate. *J. of the American Dietetic Association* 45(6):537-42. Dec. [34 ref]
• ***Summary:*** This is a summary of the findings of a number of investigators worldwide. Contents: Introduction. Adequate non-flesh dietaries: Lacto-ovo-vegetarian type, pure vegetarian type [vegan]. Adequate, near-vegetarian population group diets. Inadequate near-vegetarian population group diets. Inadequate world food supply. Discussion. Summary.

"A reasonably chosen plant diet, supplemented with a fair amount of dairy products, with or without eggs, is apparently adequate for every nutritional requirement of all age groups...

"Vegetarian and near-vegetarian diets that have proved inadequate include: (a) vegan diets which have been reported to produce vitamin B-12 deficiency in some individuals; (b) grossly unbalanced near-vegetarian diets in which as much as 95 per cent of the calories were provided by starchy foods extremely low in protein, such as cassava root; (c) diets dependent too largely on refined cereals, such as cornmeal or white rice, even though small amounts of animal foods were included; and (d) intake of total calories insufficient for maintenance requirements."

The author concludes that "a reasonably chosen plant diet, supplemented with a fair amount of dairy products, with or without eggs, is apparently adequate for every nutritional requirement of all age groups." Address: Dep. of Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California.

1396. **Product Name:** Loma Linda VegeBits.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Riverside, CA 92505.
Date of Introduction: 1964.
New Product–Documentation: Today's Food. 1964. Note: According to the Soybean Blue Book and to *Today's Food*, the name of the city in which Loma Linda Foods was located was Arlington, California, before 1964 and Riverside, California, after 1964.

Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Vegebits contains 14.60% protein, 8.31% fat, and 5.95% carbohydrate. One serving, 5 bits, weighs 70 gm.

1397. **Product Name:** Loma Linda RediBurger.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1964.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *Today's Food.* 1964. Autumn. p. 7. A 19 oz. can of Rediburger retails for $0.72, serves 6, and provides 116 gm of protein.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned steak or burger-like product based on wheat protein.

1398. **Product Name:** Sovex Flavoring Concentrate (Thick, Dark Brown Paste).
Manufacturer's Name: Sovex Natural Foods, Inc.
Manufacturer's Address: Basement of Goodbrad home, Collegedale, Tennessee. Later–9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320.
Date of Introduction: 1964.
Ingredients: Soy sauce (water, salt, hydrolyzed vegetable protein, corn syrup, caramel coloring), primary grown yeast, lecithin, vegetable flavorings. In 1971: Pure dry yeast, water, salt, soybean protein derivations [hydrolyzed vegetable protein], corn syrup, coloring, vegetable flavoring.
Wt/Vol., Packaging, Price: 9 oz plastic jar. Retails for $2.44 (7/90, California).
How Stored: Shelf stable.
Nutrition: Per 1 teaspoon (6 gm): Calories 11, protein 1 gm, carbohydrate 1 gm, fat 0 gm, cholesterol 0 mg, sodium 300 mg, potassium 50 mg.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 160. Lists the ingredients in "Sovex (Sovex Inc.)."

Talk with John Goodbrad, president of Sovex. 1980.

© Copyright Soyinfo Center 2014

Nov. 26. Sovex was founded in 1953 by the Hurlingers in Holly, Michigan. The company's original product was Sovex, a flavor concentrate paste, made from a mixture of brewer's yeast and soy sauce. In 1964 John bought the business [actually the formula and brand name] and moved it to Collegedale, Tennessee. Note: Ruth Goodbrad, John's wife, made the product in the basement of their home.

Talk with Glen Fuller, President and CEO of Fuller Life Inc. 1998. Oct. 28. Glen is interested in the history of Sovex, which is now named Fuller Foods, Inc. John Goodbrad did not buy any business from the Hurlingers in Michigan. Rather, he bought their formula for making Sovex spread and the brand name. The word "Sovex" is derived from the words "soy vegetable extract." The soy part of it was real soy sauce, and still is. Glen has heard of the Hurlingers in Holly, Michigan, but they didn't call their company Sovex. Glen does not know the name of the Hurlinger's company, but he thinks he could find it in the company archives. In about 1961 Ruth Goodbrad, John's wife, began making Sovex in their basement in Collegedale, Tennessee. In the early years, Sovex was basically Ruth's business.

1399. **Product Name:** [TFA Soymilk].
Manufacturer's Name: Taiwan Farmer's Association.
Manufacturer's Address: Taiwan.
Date of Introduction: 1964.
Wt/Vol., Packaging, Price: Glass bottle.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 95, 98. This is a cooperative of many small soymilk producers was established in 1946 and began to make soymilk in 1964, using a process introduced by Dr. Harry Miller. By 1980 the TFA had 6 soymilk plants in operation, producing 11.18 million bottles (each 260 ml) or 2.91 million liters. The largest, Lo-Tung produced 5,820,000 bottles, the smallest 350,000.

1400. **Product Name:** Vigorost. Renamed Vigoroast by 1965.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1964.
Ingredients: Wheat gluten, firm tofu and/or okara, whole peanut meal, seasonings.
Wt/Vol., Packaging, Price: 14 and 20 oz cans.
How Stored: Shelf stable.
Nutrition: Protein 19.4%, fat 8.6%, carbohydrates 12.3%, ash 2.1%.
New Product–Documentation: Madison Foods. Division of Worthington Foods, Inc. 1964. July 1. Wholesale price list–order blank. Lists Vigorost.

Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Vigoroast [sic, Vigorost] contains 12.70% protein, 8.00% fat, and 15.60% carbohydrate. One serving, ½-inch slice, weighs 80 gm.

1401. Jones, Dorothea Van Gundy. 1964. The soybean cookbook: Adventures in zestful eating. New York, NY: Gramercy Publishing Co., a divison of Crown Publishers Inc. Paperback published by Arco Publishing Co. Inc. xii + 240 p. Foreword by Ruth Stout. Index. 21 cm.
• ***Summary:*** This lacto-ovo-vegetarian cookbook is identical to the 1963 edition published by Devin-Adair except: (1) Mildred Lager, who died in Aug. 1960, is no longer listed as the author. Note: Mildred's husband, Ed Jones, married Dorothea Van Gundy, the present author. (2) The dust jacket is white, yellow, green and black on a blue background. A face, made of yellow and green soybeans, is wearing a chef's hat. (3) The publisher of the hardcover edition is now Gramercy rather than Devin-Adair. The copyright date (written in hard-to-read Roman numerals) is 1963, the same as the Devin-Adair edition. The date of publication is not given, but it must have been after 1963. We have taken the liberty of giving it as 1964. (4) The title of the second preface has been changed to "Preface to the revised edition" from "Preface to the 1963 edition." Both were written by Dorothea Van Gundy Jones of Arlington, California. Address: Arlington, California.

1402. Lager, Mildred; Jones, Dorothea Van Gundy. 1964. Suggestions for the arthritic. Recipes and menus. Riverside, California: Mrs. E.S. Jones. 68 p. 22 cm.
• ***Summary:*** Contents: Part I. Arthritis–The result of many conditions: Types of arthritis, causes of arthritis, suggestions, foods for the arthritic, my own case. General outline of the diet: Juice diet, limited diet, general diet. Other suggestions: Mental attitude, comments 1957, comments 1961. Part II. Menus. Carbohydrate content of fresh fruits. Carbohydrate content of dried fruits. Carbohydrate content of fresh vegetables. Recipes.

Mildred wrote that proper diet was the greatest factor in her recovery from arthritis. Based on her own experience and that of many others who she helped, she strongly opposed the use of dairy products, and thus used dairylike soy products in their place, especially soymilk, tofu, and soy flour or grits.

Mildred wrote in Aug. 1957 that it has been 32 years since she began her battle with arthritis. In a Feb. 1961 update to this book Dorothea wrote that Mildred died on 25 Jan. 1960. "Hers was a very remarkable life in that while still in her teens she was told, after examination at a noted medical clinic, that she had incurable arthritis and would never walk again, her feet and legs being completely ankelosed at that time. In spite of this verdict Mildred went home with a determination to show those doctors they were wrong, and show them she did, for before long she was back on her feet again. You already know her story. For the next forty years she battled arthritis, never quite winning but keeping it under control to the extent that she lived a

© Copyright Soyinfo Center 2014

normal life and made a remarkable contribution to the field of nutrition as, health food store owner and operator, author, lecturer, radio commentator and dietary consultant. She taught many arthritics how to overcome their handicaps, and if that was not possible, how to live with them. Her life made a real contribution and she left many friends as a result." Address: Riverside, California.

1403. Schwarz, Richard William. 1964. John Harvey Kellogg: American Health Reformer. PhD thesis in modern history, University of Michigan. vi + 504 p. 23 cm. [234 + 1,308 footnotes]

• ***Summary:*** This is one of the finest examples of recent Adventist scholarship. John Harvey Kellogg was born on 26 Feb. 1852 in rural Tyrone Township, Livingston County, Michigan. His parents were John Preston Kellogg and Ann Stanley, his second wife. His birth was spaced almost midway between those of his seven half- and eight full brothers and sisters. Contents: Preface. 1. The making of a health reformer. 2. "What manner of man." 3. Biologic Living: The Kellogg "Gospel of Health." 4. Kellogg and the Battle Creek Sanitarium. 5. Lecturer, author, publisher. 6. Surgeon and inventor. 7. His brother's keeper. 8. Kellogg's break with the Adventist church. 9. Food manufacturer and eugenist. 10. Concluding years. Bibliography: Primary sources (Manuscript collections, books by John Harvey Kellogg, articles by John Harvey Kellogg, newspapers and periodicals, official reports and records, interviews, other primary sources, secondary sources).

Concerning the invention of peanut butter: (p. 283-84): "Another important item in the modern American diet first introduced by Dr. Kellogg was peanut butter. Shortly after 1890, John Harvey had a quantity of roasted peanuts ground up into a paste for use by patients who had difficulty in masticating nuts well enough to digest them properly. Later the doctor decided that roasting caused the fat content of the nuts to begin to decompose and that this irritated the digestive organs. From that time forward Sanitarium peanut butter was made from nuts which had been steam-cooked rather than roasted. Kellogg devised a variety of other nut butters which he claimed were 'sweeter, more palatable, and more digestible' than regular butter. He directed that these nut butters be used as shortening in the preparation of all baked goods produced at the Sanitarium. John Harvey made no attempt to control through patents the production of either peanut butter or any of his other nut butters. He announced that he believed that these were products that 'the world ought to have; let everybody that wants it have it, and make the best use of it.'" Address: Univ. of Michigan.

1404. Vollmer, Marion W. 1964. Food: Health and efficiency. Lessons in nutrition and healthful food preparation. Revised ed. Nashville, Tennessee: Southern Publishing Association. 136 p. 23 cm.

• ***Summary:*** In this Seventh-day Adventist vegetarian cookbook, soy-related recipes include: Farmer soy breakfast hash (with Proteena, p. 34). Granola (with soy flour, p. 34). Bit o' soy waffles (with soy flour, p. 35). Cashew milk (p. 52). Soy nut milk (with soy milk powder, almonds & cashews, p. 52). Baked soybeans (with cooked whole soybean, p. 62). Gluten–how to prepare and serve it (incl. Gluten stroganoff, gluten cheeseburgers, 64-67). Soy cheese–how to make and serve it (tofu made from full fat soy flour and curded with lemon juice, p. 67-68). Soy cheese loaf (with tofu, p. 69). Soy cheese croquettes (with tofu, p. 69). A note on p. 69 states: "Tofu is fresh soybean curd. Sold in blocks under water in Oriental and some other markets. Canned soy cheese called Vegechee, Cheez-o-Soy, etc., may be substituted." Note: An earlier edition was published in 1954.

1405. White, Ellen G. 1964. Life at its best. Mountain View, California: Pacific Press Publishing Assoc. 314 p. Illust. Index. 17 cm.

• ***Summary:*** This book is comprised of major selections from Ellen G. White's book *The Ministry of Healing,* which was first published in 1905.

1406. Wokes, F.; Ellis, Frey R. 1964. Vitamin B-12 deficiency and serum cholesterol levels in strict vegetarians. In: Proceedings of the Sixth International Congress of Nutrition. Edinburgh and London: E. & S. Livingstone Ltd. xv + 683 p. See p. 508. Held 9-15 Aug. 1963 at Edinburgh, Scotland.
Address: Vegetarian Nutritional Research Centre, Garston, Watford, Herts. [Hertfordshire], England.

1407. James, W.S. 1965. The Vegetarian Nutritional Research Centre, 1959-1964. *British Vegetarian.* Jan/Feb. p. 29-32.

• ***Summary:*** Discusses the history and activities of the Centre, Wanderlac and Velactin, Frank Wokes, N.W. Pirie, Cyril Vesey, vitamin B-12, leaf proteins, etc.

The article begins: "Since the Research Centre was inaugurated in Stanborough Park near Watford in 1959, I have, as a member of its scientific sub-committee, been in close contact with its activities of which the following is a brief summary.

"Scientific investigations must be based on much previous experience. The Research Centre was fortunate in starting in 1959 under the guidance of Dr. Frank Wokes with over thirty years' experience of nutritional research especially on vegetarian foods. In 1958 [sic, 1959] this culminated in the marketing of the first British vegetable milk Wanderlac, now called Velactin (A. Wander Limited). At the inaugural meeting of the Research Centre there were several vegetarian experts whose investigations during the previous ten to fifteen years had done much to help directly

© Copyright Soyinfo Center 2014

or indirectly in the development of Wanderlac. These included Dr. W.W. Payne and Dr. Cyril Pink, who carried out clinic trials on babies at Great Ormond Street Children's Hospital and at the Vegetarian Nursing Home, Blackheath, respectively. Dr. Lester Smith, F.R.S., whose discovery of vitamin B-12 in 1948 gave a clue to the successful use of vegetable protein, was also present. As the Royal Society's adviser to the research project on vitamin B-12 in Stanborough School, in which the Research Centre has played a leading part, Dr. Lester Smith has taken increasing interest in its work.

"In October, 1959, the Research Centre helped to arrange a meeting in Manchester on leaf proteins, addresses being given by the leading expert Mr. N.W. Pirie, F.R.S., and by Dr. Wokes, who had for some years previously been studying these problems with Mr. Pirie."

"When the Research Centre started in 1959 its administrative headquarters were at Stanborough School where the headmaster, Mr. Richard Syme, its chairman until February, 1961, and his colleagues gave great help. Mr. Cyril Vesey, B.Sc., head of the school's science department, first functioned as Secretary and as Treasurer, but towards the end of 1960 handed the latter duties over to Mr. Ted Cox. Mr. Vesey, as well as taking an active part with Dr. Wokes and his son Richard in establishing the research laboratory, remained Secretary until 1964, when his secretarial duties were taken over by Mr. Ronald Luxton, another member of the school science department. Mr. Harry Leonard, B.A., a third member of the school staff, served as Committee Chairman in 1961 and again in 1963-1964.

"Steady increase in the Research Centre's activities showed the need for its own headquarters. In 1961 these were established at Dr. Wokes' residence, on the outskirts of Stanborough Park, close to the research laboratory. They contain the registered office of the Centre, also a library housing its books and records, providing a unique collection of information on vegetarian nutrition." Address: M.Sc., Chairman.

1408. Wynder, Ernst L.; Lemon, F.R.; Mantel, N. 1965. Epidemiology of persistent cough. *American Review of Respiratory Disease* 91(4):679-700. April. [30 ref] Address: 1. National Cancer Inst., National Institutes of Health, U.S. Public Health Service, Bethesda, Maryland.

1409. Jones, Dorothea Van Gundy. 1965. Nutritionist Jones praises low-fat foods of Japan: To Tokyo for tofu. *Today's Food* (*Loma Linda Foods, Riverside, California*) 10(1):4-6. Spring.
• ***Summary:*** In the fall of 1964 Dorothea was invited by the American Soybean Association to travel to Tokyo, Japan, to participate in a soybean seminar and fair. It was held in August and sponsored jointly by the U.S. Government and the American Soybean Association. She also lectured and demonstrated the use of soybeans in human nutrition. This article describes the trip. Part of her time was taken up with television, radio, and newspaper interviews. Miss Kojima went along to interpret. On a side trip to rural Japan, they had the privilege to stay in a Japanese Inn. Photos show: (1) Nutritionist Dorothea Van Gundy Jones demonstrates Western cookery at a stove while Soybean Institute Vice-President Miss Kojima translates for the audience. (2) Ingredients for making sukiyaki (incl. Loma Linda Tender-Bits and Loma Linda Soy Sauce). (3) Dorothea Jones and her husband standing behind ace carvings at a banquet.

1410. Miller, Harry W. 1965. Meeting the world's nutritional needs with soy milk. *Soybean Digest.* May. p. 19-21.
• ***Summary:*** In East Asia, milk is in short supply and expensive. A replacement made from soybeans has proved acceptable both tastewise and nutritionally. Moreover, animals are not an efficient means of producing protein. In East Asia, soybeans for food use have traditionally been soaked and then milled. Thus a "wet milling operation" is used instead of dry milling, as to make flour. "For adult use, they have built up a number of soy protein dishes, called 'meat without bones'. However they have not taken into consideration the nutritional needs of infants and growing children, and malnutrition is seen everywhere in these developing countries."

"In Japan, 30 pounds per capita of soybean are consumed as food but to provide soy milk for infants and children another 15 pounds per capita need to be added." For soy milk processing two systems are in use: the small community soy milk plant (the fresh milk may be dispensed from the conventional milk can without bottling, thus lowering the cost) and the large commercial bottling plant. "In Hong Kong, soy milk is made, bottled, and distributed everywhere in the colony for 3½ cents for a 7-ounce bottle. It has the largest sale of any bottled beverage in the colony... In Hong Kong are two factories of the most modern type, with upwards of 40 large delivery beverage trucks, under the genius and leadership of K.S. Lo, general manager. These plants daily manufacture some 25,000 cases each containing 24 bottles of soy milk [i.e. 600,000 bottles/day]. These are delivered to hospitals and schools, and this milk is on sale at all beverage places..." In Singapore, in Bangkok, Thailand, and in Manila, Philippines, soy milk is also made and well accepted. In Formosa, where 2-3 years ago there was only one soy milk plant in Taipei, today more than a dozen rural pilot plants have sprung up all over the country.

Photos show: (1) A bottling machine at a soy milk plant in Hong Kong. (2) Boy scouts in Hong Kong drinking bottled soy milk. Address: M.D., Director Emeritus,

International Nutrition Research Foundation, Arlington, California.

1411. Worthington Foods, Inc. 1965. New food concepts made with Fibrotein (Leaflet). Worthington, Ohio. 2 p. May 15. Single sided. On letterhead. 28 cm.
• ***Summary:*** Contents: What is Fibrotein? Varieties of simulated meats made from Fibrotein. Form in which Fibrotein meat is available. Applications and uses of Fibrotein. Advantages of Fibrotein. Food value of Fibrotein. Price of Fibrotein. For further information. Address: 900 Proprietors Rd., Worthington, Ohio 43085. Phone: (614) 885-9511.

1412. Thrapp, Dan L. 1965. Thousands owe lives to doctor's soybean "milk." Noted surgeon nutritionist, now 86, devised formula as missionary in 1925 [Dr. Harry Miller]. *Los Angeles Times.* July 31. p. 19. Saturday.
• ***Summary:*** "Starving babies, often cast out to die because the parents have no way to feed them, inspired Dr. Miller to undertake his research [on milk from soybeans 40 years ago]... Today in Hong Kong about 25,000 cases of 24 bottles in a case are delivered daily... In America, the use of soybean formula for infants is growing rapidly–at a rate of 15-20% a year. Dr Miller has seen plants to create his product rise in China, Japan, Formosa, the Philippines, Singapore, Thailand, and, of course, Hong Kong. 'The nutritional qualities of the soybean are a gift to the world,' he said, 'and I have not copyright.' He said that U.S. studies showed that 14% of the people here are allergic to some degree to cow's milk and 7% of new-born infants get severely ill from cow's milk formula. There is no allergy rate from soybean milk, he said... Since 1960 he has been in Hong Kong raising money for two hospitals." One served refuges from Red China. As a surgeon, he has performed more than 3,000 goiter operations during his lifetime. Address: Times religion editor.

1413. De, Sasanka S. 1965. The present state of protein-rich food development in Asia and the Far East. *J. of Nutrition and Dietetics* (*India*) 2(3):166-76. July. [23 ref]
• ***Summary:*** Gives an excellent account of soymilk production in Asia during the mid-1960s and a brief history of the FAO/WHO/UNICEF/Protein-rich food program. "The First International Conference sponsored by FAO, WHO and Josiah Macy Jr. Foundation (New York) held in Jamaica in 1953, discussed the biological, technical and pathological aspects of protein malnutrition. The next Conference on 'Human protein requirements and their fulfillments in practice' held in Princeton in 1955 under the same sponsorship, gave detailed consideration to the testing of new protein rich foods before their use in child feeding was recommended.

"The Protein Advisory Group (PAG) was established by the Director-General of WHO in 1955 to 'act on behalf of WHO in rendering advice to FAO and UNICEF on the safety and suitability for human consumption of proposed new protein-rich foods.' The PAG... became a tripartite FAO/WHO/UNICEF Protein Advisory Group in 1961."

Soybean milk: "In 1939, K.S. Lo established a firm known as 'Hong Kong Soyabean Products' to produce sterilized bottled soya milk. The two plants of the firm in Hong Kong produce 12,000 cases (24 x 7-oz. bottles per case) a day."

Also discusses miso, natto, tempeh, full-fat soya flour, soya presscake and meal, groundnut protein isolate. Address: Regional Office for Asia and Far East, FAO, Bangkok, Thailand.

1414. Todhunter, E. Neige. 1965. Biographical notes from the history of nutrition: Lenna Frances Cooper–February 25, 1875–February 23, 1961. *J. of the American Dietetic Association* 47(1):28. July.
• ***Summary:*** "To be responsible for the birth of a new profession, to have been a teacher, to be a dean of home economics, a dietitian, the first head of the Army dietitians (1918), an author of books on food and dietetics, and recipient of honorary degrees–these are not everyday accomplishments. But these were the achievements of Lenna Cooper, whose ancestors were used to being among the first to do things. The first members of the Cooper family in this country arrived in the early seventeenth century with George Calvert who founded Maryland. The Coopers settled first in Virginia, then in the Carolinas. Later generations pioneered the settlement of Springfield, Illinois, and others 'moved westward to Kansas. There Lenna Frances Cooper was born on February 25, 1875, when there were still many hazards to life and existence in that young state.

"Her early education was in a country school; then, when the family moved to town, she attended high school in Hutchinson, Kansas. Needing money for further education, she taught in a country school for two years and then went to Battle Creek, Michigan, where her brother was a doctor. There, she enrolled in the nurses' course at Battle Creek Sanitarium. Mrs. Kellogg, the wife of Dr. John Harvey Kellogg, the famed vegetarian, encouraged Miss Cooper to go to the Drexel Institute in Philadelphia to study cookery.

"When Miss Cooper completed the course and returned to Michigan, Dr. Kellogg appointed her Chief Dietitian at the Battle Creek Sanitarium. Within the limitations of the foods permitted, Miss Cooper worked wonders in serving attractive food. Then Dr. Kellogg opened a training school for dietitians and appointed Miss Cooper as its head (1906); this later became part of Battle Creek College, and Miss Cooper served as Dean of Home Economics until 1926. She was an inspiring teacher, and loyal alumnae of Battle Creek College still gather regularly at the Annual Meeting of The American Dietetic Association."

"Her first [sic] book, *How to Cut Food Costs* (1917),

© Copyright Soyinfo Center 2014

met a wartime need. Soon she dreamed of a text in dietetics and invited the help of co-authors to produce *Nutrition in Health and Disease* (1928), which has gone through so many editions and remains a basic text in the field, familiarly referred to more often as 'Cooper-Barber-Mitchell-Rynbergen' than by its title."

Note: Her first book, published in 1913, was *The New Cookery: A Book of Recipes, Most of Which Are in Use at the Battle Creek Sanitarium* (v + 298 p.).

"Lenna Cooper... is buried at Memorial Park Cemetery, Battle Creek, Michigan." Address: PhD, Dean, School of Home Economics, Univ. of Alabama, Tuscaloosa.

1415. Winters, Rhett Y. 1965. Charles William Dabney: Educator, administrator and scientist. *North Carolina State University at Raleigh, School of Agriculture and Life Sciences, History Series.* No. 2. 23 p. July. [6 ref]

• ***Summary:*** A photo inside the front cover shows Dr. Dabney. He was born in Hampden-Sydney, Virginia on 19 June 1855. He graduated at Hampden-Sydney College in 1873 with the degree of Bachelor of Arts. He entered the University of Virginia in 1874, and remained for 3 years studying chemistry, physics, and mathematics. He then went to Germany and studied at the Univ. of Goettingen, where he studied under the pioneers of agricultural chemistry and in 1880 he earned a PhD degree in organic and agricultural chemistry, cum laude, in 2 years. In Europe, Dabney also studied at the Agricultural Institute at Goettingen and added to his knowledge of scientific field work in agriculture by studying the reports of the Director of the Rothamsted Farm in England. During holidays he attended lectures at Berlin, under Friedrich Woehler [lived 1800-1882], then considered the foremost chemist in Germany and, with Justus von Liebig [lived 1803-1873], one of the two founders of the field of agricultural chemistry.

Dr. Dabney returned to America in 1880 with the personal goal of helping to rebuild the South, and especially its natural and human resources, which had been devastated by the Civil War (1861-65). That year he was offered the position of professor of chemistry at the University of Virginia, but instead in Nov. 1880 he accepted a position as the second director of the North Carolina Agricultural and Fertilizer Control Station (established in 1877) and State Chemist. During the 7 years that he held this position, he carried out his work, with emphasis on fertilizers and soils, with vigor and professional skill. "The soybean received its first study at this station, as to varieties, soil, fertilizers, cultivation, and yield. Chief interest in the bean at this time was as a livestock feed and parts of the plant were compared with cow peas and other fodders." Note 1. In the Station's 1883 Annual Report, Dr. Dabney wrote a detailed section titled "The soja bean–*Soja hispida"* (p. 116-27).

Note 2. This is the earliest scientific publication seen on the soybean in North Carolina (April 2002) and the earliest publication seen on soybeans from a North Carolina Agricultural Experiment Station. It is also the earliest document seen (April 2002) that clearly referred to the cultivation of soybeans in North Carolina. This document contained the earliest clear date seen for the cultivation of soybeans in North Carolina (1882).

Dr. Dabney saw the need for establishing a separate land-grant college in North Carolina, apart from the University in Chapel Hill, and took an active role among the leaders of the state who promoted the approval of the legislation of 1887 to establish in Raleigh the North Carolina College of Agriculture and Mechanic Arts (known today as North Carolina State University). In fact, in early 1887 he wrote the bill that established the college. The bill was enacted into law on 3 March 1887 and the college opened on 3 Oct. 1889. Dabney Hall, which houses the Department of Chemistry, was later named in his honor.

Dr. Dabney did not remain in the state to see the opening of A&M on October 3, 1889. In 1887 he became President of the University of Tennessee (Knoxville) and served there until 1904. "While serving as president of the University of Tennessee, Dr. Dabney accepted President Grover Cleveland's appointment as Assistant Secretary of Agriculture and was granted temporary leave from the University [he was gone from 12 Dec. 1893 to 27 March 1897]. When McKinley succeeded Grover Cleveland as President [in 1897], he invited Dr. Dabney to remain as Assistant Secretary, and as an added inducement the appointment carried the title Director of Scientific Research with continuing status when new administrations came into office." While serving as Asst. Secretary of Agriculture, Dabney introduced soybeans to Seventh-day Adventist soyfoods pioneer Dr. John Harvey Kellogg of Battle Creek, Michigan.

From 1904 until 1920 Dr. Dabney was President of the University of Cincinnati. Honorary degrees were conferred upon Dabney by Davidson College in 1899, Washington and Lee University in 1900, Yale University in 1901, Johns Hopkins University in 1902, and the University of Cincinnati in 1937.

Note 3. Dr. Dabney died on 15 June 1945 (Friday) of acute coronary thrombosis at age 90 in a hospital in Asheville. He was buried in Cincinnati, Ohio. He was survived (in 1945) by two daughters, Mrs. Alexander Thompson and Mrs. John Ingle. For about 3 years Dr. Dabney had maintained a summer home in Montreat, near Asheville, North Carolina. During the winter, he resided at Winter Park, Florida, and was en route from there when he suffered the fatal attack. Address: Director, North Carolina Agric. Exp. Station, 1925-1937.

1416. Buller, Allan R.; Klis, John B. 1965. Spun soy protein foods get supermarket sales test: Duplicating meat fibers, protein value. Improved meat substitutes, recently

© Copyright Soyinfo Center 2014

established in health food stores, win chain-store distribution. *Food Processing* (*Chicago*) 26(9):115-17, 120. Sept.
• ***Summary:*** "Health food stores have been the traditional outlets for meat-alternate products, but Worthington Foods, Inc. Worthington, Ohio, has taken the initial steps toward moving these products into general distribution.

"Using spun soy protein fiber as the basic ingredient, Worthington Foods has developed a full line of products that look, taste, and chew like chicken, pork and beef products. Test marketing of two items is being done in three chains in Columbus, Ohio–Alber's, Big Bear, and Kroger. The two spun soy protein foods, Wham, a ham-like product, and White-Chik, simulated white meat chicken, are both being well received by consumers in these marketing tests... Use of the fibers in foods is subject to a patent owned by Ralston Purina Company. In Columbus, both Wham and White-Chik are priced at $0.69 for an 8-oz package. New foreign distribution, principally in Norway and Sweden, has already added some volume."

A large photo bears the caption "Worthington's line of spun soy protein meat-like products are packed in canned, frozen, and dehydrated forms." Frozen products is thin paperboard boxes include White-Chik, Fri-Chik, Prime, and Wham. Canned moist products include Veja-Links, Soyameat (many flavors), Saucettes. Meat Loaf Mix is a dry canned product. Prime is in a plastic pouch.

A newspaper ad for frozen Wham stresses the product's low fat content ("65% less fat than cured ham"), convenience, and the fact that it contains no meat." A photo shows a rack of meatless Prosage, which resembles a pork sausage made by Worthington, ready for quick freezing. Prosage does not shrink when fried.

"Edible spun soy protein fibers, sold under the trademark Fibrotein, are supplied in fresh frozen and dehydrated forms to the food processing industry by Worthington Foods, Inc., 900 Proprietors Rd., Worthington, Ohio 43085. The company also supplies imitation meats made from Fibrotein in fresh, frozen and dehydrated forms. The imitation meats are available in slices, cubes, chips, granules, round rolls, square logs and in other shapes and sizes."

Note: This is the earliest English-language document seen (Jan. 2004) that contains the term "imitation meats" (with any combination of quotation marks). Address: 1. General Manager, Worthington Foods, Inc; 2. Assoc. Editor.

1417. **Product Name:** Wham (Meatless Ham) [Slices, or Rolls].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1965 September.
Ingredients: In 1965: Specially processed soybean protein (Fibrotein), corn oil, egg albumen, hydrolyzed vegetable proteins, salt, lactose, brown sugar, monosodium glutamate, vegetable gum, flavorings, U.S. certified color. In 1971: Soybean protein, corn oil, albumin [egg protein], hydrolyzed vegetable protein, corn syrup solids, salt, MSG, flavorings, U.S. certified color.
Wt/Vol., Packaging, Price: 8 oz paperboard box or can.
How Stored: Frozen or canned (Sept. 1965).
New Product–Documentation: Soybean Blue Book. 1965. p. 112. Buller & Klis. 1965. Food Processing. 26(9):115-17, 120. Sept. "Spun Soy Protein Foods Get Supermarket Sales Test." Wham, a ham-like product, is made with spun soy protein fiber. A photo shows the thin paperboard box in which Wham is sold, frozen, and the large can in which it is sold in canned form. An ad announces that Wham contains 65% less fat than cured ham. "What a menu-maker for Lent and meatless days."

Ziemba. 1966. Food Engineering. May. p. 82-93. "Let soy proteins work wonders for you."

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "Wham (Worthington)." This is an institutional product.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned or frozen product based on spun soy protein fiber. The frozen slices are available in 8 oz. or 24 oz. sizes.

Photo. Manufacturer's catalog. 1984, undated. Frozen Products.

Label (undated) for "New Wham imitation ham" sent by Dr. Walter Wolf. 2000. July. Since the first ingredient is Fibrotein (spun soy protein fibers), this package is probably from about 1965. Red and white on dark blue. A large color photo on the front panel shows slices of Wham served a white serving dish surrounded by sliced pineapple rounds with a red cherry at the center of each. On the front panel: "Contains no meat. 65% less fat than cured ham."

1418. **Product Name:** Fibrotein (Spun Soy Protein Fibers) [Fresh, Frozen, or Dehydrated].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1965 September.
New Product–Documentation: Buller & Klis. 1965. Food Processing. Sept. p. 117. "Edible spun soy protein fibers, sold under the trademark Fibrotein, are supplied in fresh frozen and dehydrated forms to the food processing industry by Worthington Foods, Inc., 900 Proprietors Rd., Worthington, Ohio 43085. The company also supplies imitation meats made from Fibrotein in fresh, frozen and dehydrated forms. The imitation meats are available in slices, cubes, chips, granules, round rolls, square logs and in other shapes and sizes."

Ziemba. 1966. Food Engineering. May. p. 91. "Let soy proteins work wonders for you." "Worthington's simulated

© Copyright Soyinfo Center 2014

meats made from spun soy protein fibers (Fibrotein) come in cubes, slices, chips, granules, rolls, square logs, or other shapes and sizes. They are in fresh, frozen, or dehydrated forms."

Soybean Digest. 1969. Nov. p. 44. "Since 1966, Worthington Foods has manufactured its own spun protein, which it formerly purchased from Ralston Purina Co., for its meatless meats."

Shurtleff & Aoyagi. 1983. History of Worthington Foods. p. 8.

1419. **Product Name:** Veja-Links (Made with Spun Soy Protein Fibers–Canned or Frozen).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 614-885-9511.
Date of Introduction: 1965 September.
Wt/Vol., Packaging, Price: Can.
How Stored: Canned or frozen.

New Product–Documentation: Buller & Klis. 1965. Food Processing. 26(9):115-17, 120. Sept. "Spun Soy Protein Foods Get Supermarket Sales Test." Photos show: (1) The can in which Veja-Links are sold; the caption says that they contain spun soy protein fibers. (2) Two women packing Veja-Links into cans. The caption states that these meatless frankfurters are packed in both canned and frozen forms.

Hartman. Ziemba. 1966. Food Engineering. May. p. 82-93. "Let soy proteins work wonders for you." A photo shows the package.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. Veja-Links is a canned frankfurter-type product.

American Soybean Assoc. 1974? "Soybeans: From America's fertile soils the world's versatile protein resource." A photo shows the can.

1420. **Product Name:** Prime Vegetable Burger. Renamed Prime Vegetarian Burger by 1971.
Manufacturer's Name: Battle Creek Foods. A Div. of Worthington Foods.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 614-885-9511.
Date of Introduction: 1965.
Ingredients: Wheat protein [wheat gluten], water, yeast extract, salt, soy sauce, Brewer's yeast, MSG, seasonings, algin, caramel color.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Prime Vegetable Burger contains 15.60% protein, 0.20% fat, and 3.70% carbohydrate. One serving, ½-inch slice, weighs 66 gm.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Prime Vegetarian Burger (Battle Creek)."

1421. **Product Name:** Loma Linda Soyagen (Milk Free Soy Beverage Powder) [Carob].
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505. Phone: 714-687-7800 (3/88).
Date of Introduction: 1965.
Ingredients: Soy solids, brown sugar, soy oil, carob powder, soy lecithin, salt, tri-sodium citrate, calcium carbonate, vegetable mono- and di-glycerides, artificial and natural (vegetable) flavors, vitamins (ascorbic acid, beta-carotene, DL-alpha tocopheryl acetate, vitamin A palmitate, cholecalciferol, phytonadione, cyanocobalamin).
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
Nutrition: Per 1 oz powder (approximately ¼ cup): Calories 140, protein 6 gm, carbohydrate 16 gm, fat 6 gm, cholesterol 0 mg, sodium 160 mg, potassium 290 mg.

© Copyright Soyinfo Center 2014

New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1965; the label is dated "3/77"–March 1977. A less sophisticated version of this product with the same name appeared in 1948.

A color photo (taken in Sept. 1980 in California) shows different flavors and sizes of canned Soyagen and Soyalac.

1422. **Product Name:** Loma Linda Dinner Rounds.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1965.
Ingredients: In 1971: Wheat protein [wheat gluten], water, vegetable oil, soy flour, oat flour, dried yeast, salt, onion powder, MSG, dextrose, lecithin, caramel.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Dinner Rounds contain 15.91% protein, 8.95% fat, and 6.26% carbohydrate. One serving, 1 patty, weighs 40 gm.

Loma Linda Food Co. 1969. "Wholesale Price List." Dinner Rounds are now sold in 20 oz cans.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Dinner Rounds (Loma Linda)."

1423. **Product Name:** Kreme-O-Soy, and Infa-Soy (Hypoallergenic Baby Formula).
Manufacturer's Name: Nutrition International Corp. (Formerly Madison Foods).
Manufacturer's Address: Box 415, Madison, TN 37115.
Date of Introduction: 1965.
New Product–Documentation: Soybean Blue Book. 1965. p. 115. Also listed in 1970. Note: Kreme-O-Soy was soymilk.

1424. **Product Name:** Cheze-O-Soy.
Manufacturer's Name: Nutrition International Corp. (Formerly Madison Foods).
Manufacturer's Address: Box 415, Madison, TN 37115.
Date of Introduction: 1965.
Ingredients: In 1971: Soybeans, vegetable oil, tomato paste, onion, monosodium glutamate, hydrolyzed vegetable protein, seasonings, water.
New Product–Documentation: Soybean Blue Book. 1965. p. 114. Note new spelling of product name.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 160. Lists the ingredients in "Cheze-o-Soy (Madison)."

1425. **Product Name:** Soy Protein Concentrates, and Isolates (Promine, Edi-Pro).
Manufacturer's Name: Worthington Foods, Inc. (Handler, not manufacturer).
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1965.
New Product–Documentation: Soybean Blue Book. 1965. p. 112. They also now operate International Nutrition Laboratories. *Soybean Digest Blue Book.* 1970. p. 118. Name of INL is now Nutrition International Corp., Box 415, Madison, Tennessee 37115.

1426. **Product Name:** Saucettes (Meatless Sausage-like Links).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1965.
Ingredients: In 1971: Wheat protein [wheat gluten], water, corn oil, soya protein (Fibrotein spun soy protein fibers), albumin [egg protein], dextrose, salt, hydrolyzed vegetable protein, MSG, seaweed extractive, flavorings, U.S. certified color.
Wt/Vol., Packaging, Price: 19 oz can. Retails for $2.85 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Note: This product was originally introduced by Battle Creek Food Co. in about 1936. Buller & Klis. 1965. Food Processing. 26(9):115-17, 120. Sept. "Spun Soy Protein Foods Get Supermarket Sales Test." A photo shows the small can in which Saucettes are sold. A caption states that the product contains spun soy

protein fibers. Soybean Blue Book. 1965. p. 112. Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "Saucettes (Worthington)." This is an institutional product.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned frankfurter type product based on spun soy protein fiber.

Shurtleff & Aoyagi. 1983. History of Worthington Foods. p. 11.

1427. **Product Name:** Fri-Chik (Meatless Chicken Based on Spun Soy Protein Fibers–Frozen).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1965.
Ingredients: Water, textured soy protein isolate, egg whites, soybean and/or corn oil, flavorings (hydrolyzed vegetable protein, onion, turmeric, spice extractives, disodium guanylate, disodium inosinate), modified corn starch, salt, monosodium glutamate, carrageenan, niacinimide [niacinamide], iron (as ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), artificial color, vitamin B-2 (riboflavin), vitamin B-12.
Wt/Vol., Packaging, Price: 25 oz can. Retails for $4.89 (12/80). 12.5 oz can retails for $2.35 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Buller & Klis. 1965. Food Processing. 26(9):115-17, 120. Sept. "Spun Soy Protein Foods Get Supermarket Sales Test." A photo shows the thin paperboard box in which Fri-Chik is sold, frozen.

Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Frozen Fri-Chik contains 25.61% protein, 25.06% fat, and 2.04% carbohydrate. One serving, 2 pieces, weighs 84 gm.

Hartman. 1966. Food Technology. 20(1):39-40. "Vegetarian protein foods." "The first textured soybean protein fiber product marketed in the U.S. is Worthington's frozen 'Fri-Chik,' an extruded formulation simulating a small fried portion of white chicken meat. This same formulation was next canned in a light gravy and called 'Soyameat–Fried Chicken Style,' and was also later marketed as frozen and canned 'White-Chik' in large rolls for slicing, dicing, etc. The approximate analysis of these simulated chicken products: protein 20-26%, fat 18-25%, and carbohydrate 2-3%."

Ziemba. 1966. Food Engineering. May. p. 82-93. "Let soy proteins work wonders for you." Photo of box. Consumer Reports. 1980. June. p. 357-65. The protein PER is 2.60. Sensory comments: Too moist. Perceived as

chickenlike or spongelike.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. Contains no cholesterol. Certified Kosher/Pareve. Shelf life is approximately 3 years under proper storage conditions.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. 12.5 oz can. The main ingredients are now: Textured vegetable protein (soy protein isolate and concentrate), egg whites, soybean oil, corn oil, natural and artificial flavors from non-meat sources, salt, dextrose, vegetable gum, onion, turmeric, celery, niacin, iron, etc.

Talk with Dick Leiss, Director of R&D at Worthington Foods. 1993. June 30. This was an early product that contained spun soy protein fiber and was deep fat fried.

1428. **Product Name:** Vegetable Skallops (Regular, or Without Added Salt or MSG).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1965.
Ingredients: Regular: Skallops: Textured vegetable protein (Wheat gluten, soy protein concentrate). Broth: Water, salt, monosodium glutamate, L-lysine hydrochloride (an essential amino acid).
Wt/Vol., Packaging, Price: 20 oz (567 gm) can. Regular retails for $2.60, and "No salt or MSG" retails for $2.70 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Vegetable Skallops contain 16.80% protein, 0.60% fat, and 10.70% carbohydrate. One serving, 3 pieces, weighs 62 gm.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned fish-like product based on spun soy protein fiber.

Ad in Whole Foods. 1983. Sept. p. 45. in 20 oz. cans. This product and Vegetarian Burger are being promoted as "Salt Shakers." Both are available in versions with and without salt and MSG. For the hypertensive and sodium-conscious. A black-and-white photo shows the can and label. The text reads: "Contains no meat. A vegetable protein product. No added salt or MSG."

Products with Labels purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. The regular flavor is red, white, yellow, and blue. The "No added salt or MSG" is blue, black, and yellow on white.

Soyfoods Center Product Evaluation. 1992. Feb. 16. This product is delicious when prepared as follows: Drain, break large pieces into smaller ones, dust in wheat flour, dip in beaten egg, dust in Japanese bread crumbs (which are made without sugar, and are bigger and flatter than their Western counterparts), then deep fry. Serve with Japanese-style Tonkatsu sauce or tartar sauce.

Talk with Dick Leiss of Worthington Foods. 1993. July 30. This was an old Battle Creek Foods product. Dick is quite sure that it never contained spun soy protein fibers. It was also based on gluten.

1429. **Product Name:** Big Pat.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 614-885-9511.
Date of Introduction: 1965.
Ingredients: In 1971: Wheat protein [wheat gluten], mushrooms, dehydrated onion, pecan meal, salt, rolled oats, soy grits, sunflower seeds, MSG, garlic powder, hydrolyzed vegetable protein, starch, corn oil, natural extractive flavorings.

© Copyright Soyinfo Center 2014

New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Big Pat contains 21.80% protein, 8.00% fat, and 16.60% carbohydrate. A serving, 1 Pat, is 64 gm.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 160. Lists the ingredients in "Big Pat (Worthington)."

1430. Robinson, Dores Eugene. 1965. The story of our health message: The origin, character, and development of health education in the Seventh-day Adventist Church. 3rd ed. Nashville, Tennessee: Southern Publishing Assoc. 445 p. No index. 17 cm. First edition was 1943. 2nd ed. 1955. [100* ref]

• ***Summary:*** This book is perhaps the most useful and carefully documented history of health reform among Seventh-day Adventists. Sadly, however, it has no index. The author (a man) was Ellen White's personal secretary and grandson-in-law. Contents: 1. "The times of this ignorance." 2. Movements toward therapeutic reform. 3. Temperance and diet reforms (The American Temperance Society was organized in Boston, Massachusetts, on 10 Jan. 1826. It was the founders' hope "by light and love to change the habits of the nation, with regard to the use of intoxicating liquors." Several years passed before the goal switched from moderation to abstinence or "teetotalism.") 4. Joseph Bates, a health reformer ("In heart-searching preparation for the expected return of Christ," he resolved in Feb. 1843 to eat no more meat. He was the first Adventist to become a vegetarian.) 5. Health reforms among Seventh-day Adventists (Following Ellen White's vision in the autumn of 1848, the emphasis was on discontinuing use of tobacco, tea and coffee.) 6. The vision at Otsego, Michigan. 7. Early health literature. 8. Launching a campaign for health. 9. The popular dress reform. 10. The quest for moderation. 11. Days of affliction. 12. "Let us arise and build." 13. The ministry as teachers of health. 14. A lesson in institutional finance. 15. Lost confidence restored. 16. Opposing extreme views. 17. Reaching for high standards. 18. On to world leadership. 19. Uniting with the temperance forces. 20. Training for service. 21. Training of physicians. 22. For medical missionary service. 23. Launching a medical college. 24. Variant views arise. 25. Steps toward unity. 26. Final steps in separation. 27. A remarkable coincidence. 28. Rapid moves in southern California. 29. The call for a third sanitarium. 30. Purchase of Loma Linda property. 31. How the payments were met. 32. "An educational center." 33. "We wait for light." 34. A bold venture in faith. 35. Faith further tested. 36. Through "rivers of difficulty." 37. By the providence of God. 38. Retrospective and prospective. Appendix: Guiding principles in dress reform.

1431. Seventh-day Adventist Dietetic Assoc. 1965. Diet manual, utilizing a vegetarian diet plan. Revised edition. Loma Linda, California: Seventh-day Adventist Dietetic Assoc.

• ***Summary:*** The title page reads: "Prepared by the Department of Dietary Service, White Memorial Medical Center, Los Angeles, California. In cooperation with the Seventh-day Adventist Dietetic Association" (SDADA). Revised Edition, edited by Phyllis Acosta, M.S., Ardis Beckner, M.S., Esther Lee, M.S., Darlene Manullang, M.S., Martha Miller, M.S., and Elizabeth Wenz. It was published and distributed by the SDADA. All subsequent editions (1971 (later listed as 1970), 1975, 1978, 1982, 1990) were prepared by the SDADA.

A comprehensive loose-leaf handbook for the planning, selection, and coordination of vegetarian diets.

Table VI, titled "Protein, fat, and carbohydrate composition of some meat alternates" (p. 104), lists 39 product names alphabetically. Most (perhaps all; the names of the manufacturers are not given) are made by Seventh-day Adventist food companies, especially Loma Linda Foods, Worthington Foods, and Madison Foods. These products are: Big Pat, Burger, Chic-ketts, Chili, Cho-Pats, Choplets, Com-Pro, Dinner Cuts, Dinner Rounds, Entree, Frozen Fri-chic, Linketts, Little Links, Meatless Nu-steak, Madison Burger Miller's Main Course, Numete, Nuteena, Nut Meat, Prime Vegetable Burger, Proast, Proteena, Protose, Redi-Burger, Sandwich Spread, Soya Meat–Beef Like, Soya Meat–Chicken-like, Vegebits, Vegeburger, Vegechee, Vegecuts, Vegelona, Vegetable Skallops, Vegetable Steaks, Vegetarian Patties, Vegetarian Products, Vega-Links, Vigoroast, Zoyburger.

Note: This is the earliest English-language document seen (Nov. 2010) that uses term "Soya Meat" to refer to a meatless meatlike product made from soy. Address: Main Office, Box 75, Loma Linda, California.

1432. Worthington Foods, Inc. 1965? A food plan for fitness (Leaflet). Worthington, Ohio. 2 p. Undated. Front and back. 28 cm.

• ***Summary:*** This glossy color leaflet contains a "Daily food guide for growth, energy, maintenance and resistance." It recommends a vegetarian diet containing: 4 or more servings daily of fruits and vegetables. 3 or more servings daily from the milk and cheese group (incl. Soyamel–A Powdered Soy Milk). 2 or more servings daily of protein foods (incl. many canned or frozen Worthington products). 4 or more servings daily of breads and cereals. Limited servings daily of "Plus foods" such as oils and fats, sweets, desserts, etc.

On the back panel is a description of the vitamins and minerals needed in a healthy diet. Color photos show: Prime, White-Chik, Big Pats, Soyameat, Chili, Choplets, Veja-Links, Entrée, Prosage. Address: 900 Proprietors Rd., Worthington, Ohio 43085.

1433. Worthington Foods, Inc. 1965? Recipes: Delight the

© Copyright Soyinfo Center 2014

family with Worthington... "Foods of the future" today! (Brochure). Worthington, Ohio. 12 panels. Undated. Each panel: 21 x 10 cm.

• ***Summary:*** On the cover of this brochure, printed with dark blue ink on white, is a woman holding up an oval serving plate on which are round sliced meat-like products. The Worthington products called for in these recipes and shown in these photos are all made with Fibrotein, which Worthington's registered trademark used to refer to spun soy protein fibers. Photos shows five cans of Soyameat in Fried Chicken Style, Sliced Chicken Style with Gravy, Diced Chicken Style, Beef Style Slices with Gravy, and Diced Beef Style. They also show three frozen products in cartons: White-Chik, Fri-Chik, and Wham (like ham). Prime–Smoked & Chipped is in a plastic pouch, and Prosage is in a 1 lb sausage-shaped chub pack. Recipes are given for each. On the back panel is information about these products and Fibrotein, which is produced under U.S. Patent No. 2,682,466. Address: 900 Proprietors Rd., Worthington, Ohio 43085.

1434. Worthington Foods, Inc. 1965? Typical analyses–New Fibrotein products (Leaflet). Worthington, Ohio. 2 p. Undated. Front and back. 14 x 22 cm.

• ***Summary:*** This is a table, printed with black ink on glossy white paper, with 3 holes punched along one of the long sides. For each product is given the nutritional composition: Product name, serving size and weight of one portion, slice, link, etc., protein, fat, carbohydrate, ash, fiber, moisture, iron, calcium, sodium, calories, diabetic exchange list values.

Side 1: Worthington frozen products: Fri Chik, White Chik (roll), White Chik (diced), Prime (roll & sliced), Prosage, Veja Links, Wham (like ham).

Side 2: Worthington canned products–Soyameat label: Fried Chicken Style, Diced Chicken Style, Sliced Chicken Style, Beef Style with gravy, Veja Links.

Dehydrated product: Meat Loaf Mix. Address: 900 Proprietors Rd., Worthington, Ohio.

1435. Southern Union Conference of Seventh Day Adventists. 1966. Warranty deed. 4 p. Jan. 27. Unpublished manuscript.

• ***Summary:*** Note that during the year 1937 the name of the school was changed from the Nashville Agricultural and Normal Institute to Madison College. Yet as late as 1966 some officials still used the name "Nashville Agricultural and Normal Institute" (NANI). The warranty deed begins: "Whereas, Southern Union Conference of Seventh Day Adventists, the area governing body of the Seventh Day Adventist religious organization, has by proper resolution decreed that its affiliate, Nashville Agricultural and Normal Institute, a Tennessee Corporation, convey to another of its affiliates, to-wit: Kentucky-Tennessee Conference Association of the Seventh-Day Adventists, Inc., also a Tennessee Corporation, the hereinbelow described lands..."

The deed was signed by the president of NANI, H.H. Schmidt.

1436. Hardinge, Mervyn G.; Crooks, H.; Stare, F.J. 1966. Nutritional studies of vegetarians. V. Proteins and essential amino acids. *J. of the American Dietetic Association* 48(1):25-28. Jan. [12 ref]

• ***Summary:*** This study of lacto-ovo-vegetarians, pure vegetarians, and non-vegetarians found that all subjects consumed more than twice their minimum requirements of protein. "Summary and conclusions: The amounts of essential amino acids, as well as of cystine and tyrosine in the diets of vegetarians and non-vegetarians, have been calculated and compared. All groups met and generously exceeded twice their minimum requirement." Address: 1-2. Dep. of Pharmacology, School of Medicine, Loma Linda Univ., California; 3. Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

1437. Hartman, Warren E. 1966. Vegetarian protein foods. *Food Technology* 20(1):39-40. Jan.

• ***Summary:*** "Early Worthington products bore the mark and influence of John Harvey Kellogg and the Seventh-Day Adventists. In 1866 the Adventists established the forerunner of the Battle Creek Sanitarium and the Battle Creek Food Company, in Michigan. Continuous experimentation with materials and methods to provide a wholesome palatable non-flesh diet led to the invention of breakfast cereals, peanut butter, cereal coffee substitutes, and decaffeinated coffee. It is not generally realized that these products, now a regular part of the diet of both meat-eaters and vegetarians, emanated from the vegetarian habits of the early Adventists."

"Until recently, the majority of the U.S. population was totally unaware of the so-called vegetarian protein food products, and the food industry gave them little more than passing attention. Undoubtedly, the greatest contribution to the present technology and status of vegetarian protein foods was that of Robert A. Boyer and his method of processing edible protein, first by solubilizing and then utilizing textile spinning techniques to orient the molecules in continuous filaments. Convinced of a future for vegetarian protein foods, Worthington obtained a license in 1957 under the Boyer patent..."

"In 1960, Worthington acquired Battle Creek Food Company, pioneer of the vegetarian protein foods industry. And in line with its modernization and diversification policy, Worthington has recently acquired Nutrition International Corporation and its subsidiary, Madison Foods, Tennessee. Prime interest focused on 'Infa-soy,' Nutrition International's highly palatable hypoallergenic liquid soy formula for infants. Another important addition to the Worthington complex is the new Research and Development Center...

Note: This is the earliest English-language document seen (Dec. 2004) that uses the term "soybean protein fiber" to refer to edible spun soy protein fiber. Address: Worthington Foods, Inc., Worthington, Ohio.

1438. Johnson, Danetta. 1966. Spices and condiments. Prepared for Nutrition Seminar, Dr. Barnard. 8 p. April 5. Unpublished manuscript. [25 ref]

• ***Summary:*** This carefully documented paper sets forth the Seventh-day Adventist position against the use of most spices and condiments. They can be classified as: (1) Irritating, stimulating, harmful (cayenne pepper, chili, horse-radish, pepper [black or white]), (2) strongly aromatic, irritating (cloves, ginger, paprika (Hungarian), curry), (3) slightly irritating, and (4) sweet herbs, not irritating. Citations from scientific publications are then given in support of the following statements: Spices and condiments irritate the digestive tract, may produce hypertension, may be carcinogenic in rats, are kidney irritants, may have toxic effects, are but slightly antiseptic, and nutmeg produced the same physical effects as marijuana.

Similar statements are then supported by the writings of Ellen G. White. Stimulants are generally considered undesirable.

1439. **Product Name:** Soya Porridge (Sweetened Soy-Fortified Corn Flour–Precooked).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1966 May.
Ingredients: Maize flour 46%, soy flour 35%, sugar 15%, nonfat dry milk 3%, salt 1%.
Wt/Vol., Packaging, Price: 1 lb polyethylene bags, or 2 lb or 50 lb paper bags.
How Stored: Shelf stable.
Nutrition: Protein 20.1%, moisture 11%.
New Product–Documentation: Economist Intelligence Unit. 1969. Demand for Soya-Based High Protein Foods in Uganda. p. 50. Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 19, 33-35. Recommended as a weaning food for children 5-6 months or older.

E. Orr. 1972. Tropical Products Inst. G73. The use of protein-rich foods for the relief of malnutrition in developing countries: an analysis of experience. Table II (p. 66) shows that this product contained 38% soya and 5% DSM (dry skim milk), and 42% maize.

Note: This is the earliest known commercial soy product made in Uganda, or made by Dr. D.W. Harrison of Africa Basic Foods in Uganda.

1440. Thurston, Claude E. 1966. *Today's Food* passes 10th birthday. *Today's Food* (*Loma Linda Foods, Riverside, California*) 11(1):3. Spring.

• ***Summary:*** "As this *Today's Food* goes to press we are beginning our eleventh year of publication. Begun as a two-color paper in the spring of 1956, with a circulation of only a few thousand–mostly in California–*Today's Food* is now printed in full color and is circulated from coast to coast to every member of the Seventh-day Adventist church who wishes to receive it. Many thousands of non-Adventists have also requested that their names be placed on our subscription list because they are interested in our vegetarian program."

The Associate Editor, Dorothea Van Gundy Jones is "daughter of the late T.A. Van Gundy, pioneer developer of vegetarian protein loaves and soy milk... Upon completion of her Bachelor of Science Degree at the CME [College of Medical Evangelists] School of Dietetics, she served as a dietetic counselor to a Beverly Hills physician for a number of years before accepting a call to La Sierra College as Director of Food Service. For the past eleven years (during which she became Mrs. Edwin Jones) our nutritionist has traveled widely both in this country and abroad while conducting cooking classes, lecturing before civic groups, camp meetings, and professional organizations of physicians and dentists. Mrs. Jones has also made numerous TV appearances from coast to coast."

Photos show nice portraits of Editor F.W. Edwardy and Associate Editor Dorothea Jones. Address: PhD, Director, Research Lab., Loma Linda Foods.

1441. *Today's Food* (*Loma Linda Foods, Riverside,*

California). 1966. Celebrating our 60th anniversary [Loma Linda Foods]. 11(1):5 (back cover). Spring.

• ***Summary:*** Loma Linda Foods has been guided by the wise counsel of Ellen G. White, who began discussing healthful nutrition in 1863. "Actually, the nutrition work of Seventh-day Adventists, who own and operate Loma Linda Foods, began 100 years ago at Battle Creek Michigan... But the denominational affiliation with the old Battle Creek San breakfast foods ended in 1903 and it was not until 1906 that it was reactivated at the Loma Linda Sanitarium in California. Here stoneground wheat bread and healthful cookies and fruit crackers were made in the sanitarium bakery, and in 1907 demand for the products from residents of the growing community forced the construction of a separate building. Here in a combination bakery and store, the business thrived for 30 years.

"Now known as Loma Linda Foods, the new factory continued making fine bread and cookies but added high protein products perfected to take the place of meat in vegetarian menus; whole grain breakfast foods; Breakfast Cup cereal drink [coffee substitute]; and about 1930, began making the first soy milk.

"Demand for Loma Linda Foods quickly outgrew the small delivery truck service developed within a 125 mile area, and when land for a new plant was offered by what was then La Sierra Junior College, ten miles west of Riverside, the move was made.

"Our present plant and Western Division general offices opened in 1938, and in 1951 the Eastern Division headquarters opened in Mount Vernon, Ohio. Developed for 25 years under the leadership of George T. Chapman from Australia, and now managed by Charles P. Miles, Loma Linda Foods is one of 30 food factories owned and operated by Seventh-day Adventists in Australia, New Zealand, South America, England, France, Denmark, Germany, Switzerland, Africa and Japan.

"Some 300 workers, plus nearly 100 salesmen, are dedicated to the production and distribution of more than three dozen tasty products bearing the Loma Linda Foods label..."

Color photos show: The general offices and main Loma Linda Foods plant at Riverside. Sales representatives and management personnel of the Western Division of Loma Linda Foods.

1442. *Today's Food* (*Loma Linda Foods*, *Riverside*, *California*). 1966. None of these healthy youngsters was reared on milk. 11(1):1-3. Spring.

• ***Summary:*** Photos show many healthy infants and children. Commercial soymilk products include:

Soyagen: all-purpose, malt flavored, or carob flavored; in liquid or powdered form.

"Multigen: This new soy milk just now being placed on the market, is specially formulated to supply a total diet for those on a restricted menu. It supplies a higher fat and carbohydrate content and all the nutrition needed for those on a liquid dietary.

High-So-Pro: a high-protein powdered soymilk, low in fat, salt, and carbohydrates that is especially good for those on weight-reducing programs and ideal for diabetics.

"Instagen: an isolated protein soy milk, fortified to provide the essential vitamins and minerals. Instagen has a little lighter color, a little milder flavor, and is a little lower in price.

Whether or not you have dietary

© Copyright Soyinfo Center 2014

problems, if you wish to lower your cholesterol level, or would like to become a complete vegetarian, Loma Linda soy milks provide the easy answer.

"As to those who in years past complained of a 'beany' flavor in soy milk: try it once more–today's product is vastly improved! And for the diehard who still demands a completely different taste, the new Carob Soyagen with its rich chocolate-like flavor comes not only ready to drink, but may be used in any number of tasty recipes for puddings, ice cream, and other dishes."

1443. Ziemba, John V. 1966. Let soy proteins work wonders for you. *Food Engineering* 38(5):82-84, 87-90, 93. May.
• ***Summary:*** The subtitle reads: "With far better quality and functional properties, soy proteins are finding ever-increasing uses in foods. You can 'engineer' new foods or improve your current products–at more profit, too."

Contents: Introduction to soy proteins–flours, concentrates, and isolates. Soy flours and grits. Who's supplying what. Benefits in quality, cost. Values of soy concentrates. Varieties of concentrates. Highest protein: Isolates. Soy proteins added to egg albumen. Versatility of isolates. Foams and gels. Fiber technique emerges: Worthington's accomplishments ("First textured soy protein fiber product marketed as Worthington's frozen Fri-Chik–an extruded formulation simulating a fried portion of white chicken meat"), problems ahead. Texturizing in other ways.

"New process techniques have been 'engineered' into making soy proteins better so far as quality and function are concerned... Last year about 250 to 300 million lb of soy flours and grits went into formulating food products. About 7 million lb of concentrates and 9 million lb of isolates were used. Present estimates indicate that flours and grits are increasing at a 5% per year rate, concentrates and isolates at about 10% each." Who supplies what? Soy flours and grits: ADM, Central Soya, Crest Products, Staley. Soy protein concentrates: ADM, Central Soya, Crest, Griffith, Gunther Products, Ranell Labs., Swift & Co. Isolated Soy Proteins: Central Soya, Crest, Gunther, Ralston Purina. Spun isolate fibers: ADM, General Mills, Ralston Purina, Worthington Foods. Textured Soy Proteins (extruded grit-type): ADM, H.B. Taylor.

"Archer Daniels Midland is currently researching with a patent-applied-for extrusion process. Product (about 50% protein) can be shaped into many fibrous, textured forms Ä chips, chunks, flakes, slabs, wafers, or puffs. But whole meat-resembling pieces can't be formed.

"Company's selling product-development lots in various sizes, shapes and flavors. Customers are planning or test-marketing ADM's 'fabricated protein' in stews, chili, and casserole products. Potential market for chunky, ground or snack-type products is likely to be much greater than the one for simulated whole meats." Note: This is the earliest document seen (Sept. 2003) that mentions textured soy flour or grits produced by an extrusion process–later widely known by its ADM trademark as TVP.

"Worthington's simulated meats made from spun soy protein fibers (Fibrotein) come in cubes, slices, chips, granules, rolls, square logs, or other shapes and sizes. They are in fresh, frozen, or dehydrated forms" (p. 93).

Photos show: (1) Soy protein fibers, plus chunks and cubes made from fibers. The caption reads: "Simulated meats can be 'engineered' readily from soy protein fiber shown in the center of these General Mills products." At lower left, going clockwise: 'bacon' chips, 'beef' granules, 'chicken, 'beef' chunks, 'ham,' and 'seafood.' (2) Many of Worthington Foods' packaged foods made from textured soy protein fiber; they are canned, frozen, smoked, diced, sliced, or formed into rolls or sausages. (3) Spun soy protein fiber coming our of a spinnerette head (in a glass beaker). (4) Joseph Rakosky operating an electrophoresis apparatus at USDA's Northern Regional Laboratory (NRRL, in Peoria, Illinois). (5) Edible soy protein foam on a meringue pie, developed by USDA at NRRL. (6) A.K. Smith watching Tokuji Watanabe making "tofu cake" by an improved process at NRRL. Address: Senior Assoc. Editor, Food Engineering magazine, Chicago.

1444. *Time.* 1966. Commotion in the bean pit. 88:77-78. July 8.
• ***Summary:*** The soybean is now "the hottest item in the seething U.S. commodities market. Last week futures for soybeans, soybean oil and soybean meal set seasonal records after a month of wild trading." Prices tripled during the month.

"Introduced to the U.S. from Asia in 1804, the soybean did not become a significant agricultural product until World War II cut off normal U.S. imports of fats and oil. From a crop of 193 million bu. in 1945, output rose to 843.7 million bu., worth nearly $2.5 billion last fall. Soybeans are the U.S.'s most valuable agricultural export, ranking ahead of wheat and corn...

"Worthington Foods Inc. takes edible soybean fiber produced by Ralston Purina, turns it into meatless frankfurters, roast beef and fried chicken, sells them to Seventh-day Adventists and vegetarians. Archer-Daniels-Midland Co. is testing a soy beverage to be sold in powder form, and Central Soya has developed an ice cream-like frozen dessert made of soybeans.

"What interests researchers the most about the soybean is its high protein content (up to 50%), and this month Central Soya will begin mass production of Promine, an isolated soybean protein, at a new Chicago plant. Promine binds and emulsifies pulverized meats, such as sausages, meat loaf and bologna."

1445. *Business Week.* 1966. Soybeans move up on the menu. July 23. p. 82, 84, 87.

© Copyright Soyinfo Center 2014

• ***Summary:*** "General Mills, under its Betty Crocker Red Spoon trademark (A.D. Odell in charge), is test marketing the first of a series of projected foods spun out of a protein isolated from soy. Called Bac*Os, it is designed as a condiment and looks and tastes like lean, crumbled, cooked bacon. Priced at $0.69 for 3.25 ounces, the jar is equal to 1 lb of cooked bacon." Corn Products' (CPC) Best Foods Div. is marketing Skippy peanut butter containing the product. "Thomas J. Lipton, Inc., a Unilever subsidiary, recently launched four dried gourmet main dish meals including beef stroganoff and chicken la scala. Lipton has patented a process to use isolated soy protein (ISP) as a binder for dried meats... Ralston Purina has developed a series of spun soy protein foods resembling ham, chicken, and turkey out of ISP. It is selling its spun ISP base, Edi-Pro, to Worthington Foods Inc. Worthington has developed its own line of chicken and ham-like products for sale to religious groups.

"Central Soya makes an isolated soy protein binder called Promine, which goes into sausage and other processed meats. Sales of the binder at $0.35/lb–twice the cost of the binder it is replacing–are so promising that production will be doubled to 2.5 million lb monthly when a new plant opens in Chicago next month... In addition the company this fall hopes to start exporting a frozen soy dessert to tropical countries with no dairy industries." General Mills, Ralston, ADM, Central Soya, and Worthington combined spend some $4 million annually on research. Half of this sum is going into basic research and half into product development. ADM recently shipped 3 million lb of a new protein rich soy beverage to Latin America and the East Asia under a USDA program.

1446. **Product Name:** Roasted Whole Soy Flour (Full-Fat).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1966 July.
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 3 oz or 1 lb polyethylene bags, or 2 lb or 50 lb paper bags.
How Stored: Shelf stable.
Nutrition: Protein 38.5%, moisture 10%.
New Product–Documentation: Economist Intelligence Unit. 1969. Demand for Soya-Based High Protein Foods in Uganda. p. 50. In 1969 this was the company's most important product: 28,920 kg were produced from January to June. Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 14, p. 33. Interview with Dr. D.W. Harrison. 1982.

1447. Odell, A.D. 1966. Meat analogues: A new food concept. *Cornell Hotel and Restaurant Administration Quarterly* 7:20-24. Aug.
• ***Summary:*** "Despite spectacular increases in food production, the stupendous growth in total world population spells drastic food shortages ahead." Food science is focusing efforts on the development of new solutions to the food dilemma. The conversion of "feedstuffs by animals into meat is often less than, and seldom better than, 10 percent." We can shorten the food chain by developing new man-made protein sources. "One such candidate is the new class of textured, high-protein foods which has been made possible by the application of textile technology to the purified proteins which may be extracted and isolated from soybean meal, for example."

"The name Bontrae has been coined for General Mills' spun specialties." A diagram shows how Bontrae granules, cubes, bits, and slices are made from "protein spinning dope" by spinning to give "protein fibrils." Photos show: (1) A "tow" or "tissue" of "16,000 individual, endless monofilaments, spun from soy protein through a spinneret with holes of 0.003 inch diameter" [by General Mills]. (2-4). Smoky Chips (a soy product tasting like crisp bacon), ham, chicken, and fish analogs, Sloppy Joe, etc. A product closely similar to General Mills' Smoky Chips "is being supplied to the Best Foods Division of Corn Products as 'Smoky Crisps' for inclusion in a new version of Skippy Peanut Butter."

"The Isolated Protein Program of General Mills represents a major research effort involving nearly fifty people, which is dedicated to the above objectives. Although currently still in the research phase, various Bontrae items are now emerging into the commercial test market. Full scale commercialization, if warranted, will probably not be achieved before early 1968. Other commercial firms, notably Ralston-Purina Company and Worthington Foods, are engaged in similar programs."

Note 1. This is the earliest English-language document seen (Nov. 2003) that uses the term "meat analogues" (or "meat analogs") in the title.

Note 2. This is the earliest English-language document seen (Dec. 2004) that uses the word "monofilaments" to refer to edible spun soy protein fibers. Address: PhD, Manager, Isolated Protein Program, General Mills, Inc., Minneapolis, Minnesota.

1448. Lemon, Frank R.; Walden, Richard T. 1966. Death from respiratory system disease among Seventh-Day Adventist men. *J. of the American Medical Association* 198(2):137-46. Oct. 10. [40 ref]
• ***Summary:*** "The total number of deaths observed and death from respiratory disease were approximately one half and one fourth, respectively, of that expected at comparable ages for California men. In the SDA group, the 28 deaths contributed to by emphysema or lung cancer were concentrated in a minority with a history of heavy tobacco usage; only one such death occurred among 3,913 (35%) SDA 'lifetime' members who had never smoked. The findings from this study are consistent with previous epidemiologic studies and predictions of a large reduction

© Copyright Soyinfo Center 2014

in lung cancer and other mortality in any nonsmoking US population."

"The present study was initiated in 1958 when questionnaires were mailed to California SDAs and distributed in each of their 341 churches. That questionnaire was essentially a census instrument, and we were able to enroll almost 85% of the actually available membership... The data were organized on IBM punch cards for follow-up study and analysis. Our 1958 enrollment involved over 47,000 individuals, approximately 60% of whom were women. Of the nearly 18,000 men who enrolled, 11,071 (61.5%) were age 30 years or older. The latter group and their experience through five years of follow-up study form the basis for this report. Three fourths of this group of SDA men were also enrolled subsequently (1960) in the current epidemiological study of the American Cancer Society (ACS) under Hammond's direction. The latter study has provided information regarding the smoking patterns in our SDA study population. Contact has been maintained with enrollees by annual (sometimes semi-annual) mailing of interval questionnaires and other notices." Address: Dep. of Preventive Medicine, School of Medicine, Loma Linda Univ., Loma Linda, California.

1449. *British Vegetarian.* 1966. "Soya Steaks." Sept/Oct. p. 411. [1 ref]
• ***Summary:*** This article is excerpted from *SCATS Sentinel, Journal of the Southern Counties Agriculture Trading Society,* June 1966.

A recent technical report from Trouw & Co., N.V., of Amsterdam, states that products resembling steaks, chickens, and ham are now being made from soya, using spun soy protein fibers. In the USA, General Mills, Ralston Purina Co., and Worthington Foods (Ohio) are working on spinning, and in England Unilever is reported to be interested. Worthington Foods has developed a full line of products that look, taste, and chew like chicken, beef, and pork products. Wham is a ham-like product and White Chic is simulated chicken. A photo shows a label of Worthington Soyameat Salisbury Steak Style.

1450. Miles, Charles P. Assignor to Pacific Union Association of Seventh Day Adventists, doing business as Loma Linda, Foods (Riverside, California; a corporation of California). 1966. Process of producing milk from soy beans. *U.S. Patent* 3,288,614. Nov. 29. 3 p. Application filed 2 Nov. 1964. [2 ref]
• ***Summary:*** Miles was manager of the Loma Linda plant at Mt. Vernon, Ohio at the time. The process involves cracking, dehulling, flaking, blending with water (hot or cold), pressure cooking, homogenization, centrifugation, and formulation. Address: Riverside, California.

1451. Worthington Foods, Inc. 1966. Dealer wholesale price list–order blank. Worthington, Ohio 43085. 1 p. Dec. 1. 36 cm.
• ***Summary:*** New products in the Worthington Foods line include: Soyameat [or Soya-Meat] (Fried chicken, sliced chicken, diced chicken, sliced beef, diced beef, Salisbury steak). Bakon Yeast.

Worthington now owns the Madison Foods line of products including: Cheze-O-Soy, Dinner Morsels. Madison Burger, Not Meat (Regular or tomato). Nu-steaks. Yum. Zoy burger. Kreme-O-Soy. Infasoy.

Worthington now has warehouses in Battle Creek, Michigan; Dallas, Texas; Denver, Colorado; Los Angeles, California; Madison, Tennessee; South Lancaster, Massachusetts; Oakland, California (actually San Leandro); Portland, Oregon; Washington, DC. Address: Worthington, Ohio. Phone: 614-885-9511.

1452. Sanchez, Albert; Porter, G.G.; Register, U.D. 1966. Effect of entrée on fat and protein quality of diets. *J. of the American Dietetic Association* 49(6):492-96. Dec. [19 ref]
• ***Summary:*** The nutritive value of various diets was tested by the rat growth method. Two cafeteria diets (each containing soy proteins), a hospital diet, and a selected vegetable diet were evaluated for protein quality. Diets which contained milk resulted in the best growth rates. Address: Dep. of Biochemistry, Loma Linda Univ., Loma Linda, California.

1453. Glass, R.L.; Hayden, J. 1966. Dental caries in Seventh-day Adventist children. *J. of Dentistry for Children* 33:22-23. *

1454. Hartman, Warren E. 1966. Research and development in synthetic foods. *New York State Association of Milk and Food Sanitarians, Annual Report* [19 ref]
• ***Summary:*** "Research and development in synthetic foods is no longer a skeptical venture. Today it is fast becoming an alarming necessity! Two most basic and major problems face the world today (1) The world population explosion accompanied by (2) The skyrocketing need for food. Synthetic foods are already a part of big business."

"Worthington Foods has been in the vegetarian protein food business for some 25 years. Primarily, the business was concerned with supplying such foods to consumers who had medical, philosophical, or religious reasons for wanting them. Early products were based on wheat proteins or 'gluten.' Worthington had accumulated considerable flavoring 'know-how' by the time soy products such as flakes, toasted grits and isolated protein became available. One of the first Worthington products based on soy protein was a powdered milk-like product, Soyamel, which was designed primarily as a hypoallergenic formula for infants and children who were allergic to milk... Perhaps one of the first companies to explore the protein spinning technique

© Copyright Soyinfo Center 2014

developed by Robert Boyer (U.S. Pat. # 2,682,466) was Worthington Foods. For the past ten years Worthington has pioneered in the field of vegetarian protein foods; seeking suitable protein isolates for spinning, developing spinning technology, formulating and adapting these spun protein fibers to acceptable consumer end-products."

"The present technology of spinning as practiced by Worthington Foods, uses as a raw material relatively pure soy protein isolate as obtained from Ralston Purina, Central Soya or other suppliers of protein isolates."

A photo shows Hartman, who has been with Worthington Foods since 1947. "His academic training was acquired at Andrews University, Berrien Springs, Michigan; University of Michigan, Ann Arbor; and at Massachusetts Institute of Technology. Dr. Hartman was employed as a biochemist- bacteriologist for four years by the Michigan State Department of Health Laboratories in Lansing, Michigan, and was a consultant-instructor for a year for the U.S. Public Health Service." Address: Director of Research and Development, Worthington Foods, Inc., Worthington, Ohio.

1455. **Product Name:** Loma Linda Hi-So-Pro (Powdered Soymilk for Diabetics. Low in Fat and Salt and Carbohydrates).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1966.
Wt/Vol., Packaging, Price: 12 oz. can.
New Product–Documentation: Today's Food. 1966. Wholesale price list. 1968. Sold in 12 oz. cans for $1.42 retail.

1456. **Product Name:** Loma Linda Instagen (Based on Isolated Soy Protein) [Fortified Concentrated Liquid].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1966.
Wt/Vol., Packaging, Price: 16 oz. can.
New Product–Documentation: Today's Food. 1966. Apparently not an infant formula; Wholesale price list. 1968. Instagen All Purpose Fortified. Sold in 16 oz. cans for $1.05 retail. Shurtleff & Aoyagi. 1984. Soymilk Industry and Market. p. 28. Later renamed "i-Soyalac."

1457. **Product Name:** Loma Linda Chili Beans (Meatless with Pinto Beans and Soy Protein).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1966.
Ingredients: Water, pinto beans, tomato puree, textured soy granules, corn oil, salt, paprika, spice, natural (vegetable) flavor, wheat flour, onion powder, sugar, monosodium glutamate, garlic powder, soy lecithin.
Wt/Vol., Packaging, Price: 15 oz or 48 oz cans.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1987, undated. "Meatless chili with a zesty flavor. Made of pinto beans and tasty soy protein. Heat and serve."

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1966.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1458. **Product Name:** Loma Linda Multigen (Soymilk).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1966.
Wt/Vol., Packaging, Price: 16 oz. can.
New Product–Documentation: Today's Food. 1966. "This new soymilk is specially formulated to supply a total diet for those on a restricted menu. It supplies a higher fat and carbohydrate content and all the nutrition needed for those on a liquid dietary." Wholesale price list. 1968. Sold in 16 oz. cans for $1.51 retail.

1459. **Product Name:** Loma Linda Big Franks (Meatless Hot Dogs).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1966.
Ingredients: In 1971: Wheat protein [wheat gluten], vegetable oil, water, dried yeast, wheat germ, garlic, paprika, soy flour, MSG, onion, flavorings, caramel and U.S. certified color.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per one frank (1.8 oz–51 gm): Calories 100, protein 10 gm, carbohydrate 4 gm, fat 5 gm, cholesterol 0 mg, sodium 220 mg, potassium 75 mg.
New Product–Documentation: See next page. Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 160. Lists the ingredients in "Big Franks (Loma Linda Foods)."

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned frankfurter-type product.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 174. Lists the ingredients in "Big Franks (Loma Linda)." Lysine has been added.

Label sent by Loma Linda Foods. 1988. Oct. 5. This

product was introduced in 1966. The ingredients are now: Wheat gluten, corn oil, water, dried yeast, soy protein concentrate, artificial and natural (vegetable) flavors, wheat germ, soy flour, onion, vegetable mono-and di-glycerides, garlic powder, salt, soy lecithin, caramel color, L-lysine, paprika, artificial color, spice, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). Broth: Water, salt.

A less sophisticated version of this product with the same name was introduced in 1953.

1460. **Product Name:** Soyamel Banana Beverage (Soymilk).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1966.
New Product–Documentation: Wholesale price list. 1966. Dec. 1.

1461. **Product Name:** Soyameat (Meatless Meats) [Fried Chick, Sliced Chick Style, Diced Chick Style, Sliced Beef, Diced Beef Style, or Salisbury Steak].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1966.
Ingredients: Beef: Slices: Textured soy protein isolate, egg whites, soybean oil, wheat flour, partially hydrogenated soybean and cottonseed oil, yeast extract, flavorings (hydrolyzed vegetable protein, monosodium glutamate, onion powder, artificial flavor), caramel color, corn syrup solids, salt, dextrose, niacinamide, iron (as ferrous sulfate), artificial color, vitamin B-1 (thiamine mononitrate), disodium guanylate, disodium inosinate, vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12. Broth: Water, modified corn starch, soybean oil, yeast extract, flour, flavorings (onion powder, celery extract), dextrose, caramel color.
Wt/Vol., Packaging, Price: 13 oz can. Sliced Beef Style (13 oz) retails for $2.20. Sliced Chik (13 oz) retails for $2.30. Diced Chik (13 oz) retails for $2.45 (7/90, California).
How Stored: Shelf stable; refrigerate after opening. Or, Frozen.
Nutrition: Per 2 slices (56 gm drained): Calories 90, protein 8 gm, carbohydrate 4 gm, fat 5 gm, cholesterol 0 mg, sodium 290 mg, potassium 45 mg.
New Product–Documentation: Soybean Blue Book. 1965. p. 112. "Canned and frozen soyameats, white meat style, fried chicken style, prime, prime-smoked and chipped, prosage, saucettes, wham, and veja-links." Worthington Wholesale price list. 1966. Dec. 1.

W. Hartman. 1966. Food Technology. 20(1):39-40. "Vegetarian protein foods." The first textured soy protein fiber marketed in the U.S. was frozen "Fri-Chik." "This same formulation was next canned in a light gravy and called "Soyameat–Fried Chicken Style," as was also later marketed as frozen and canned "White Chik" in large rolls for slicing, dicing, etc."

Ziemba. 1966. Food Engineering. May. p. 82-93. "Let soy proteins work wonders for you." Photo of 6 cans.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 163. Lists the ingredients in "Diced Beef Style Soyameat (Worthington)." This is an institutional product. The ingredients are now: Water, soybean protein (Fibrotein), vegetable shortening, corn oil, albumin [egg protein], yeast extract, hydrolyzed vegetable proteins, salt, flavorings, caramel color, MSG, starch, U.S. certified color.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. "Soyameat–Salisbury Steak-like flavor" and "Soyameat–slices with beef-like flavor" are canned beef-like products based on spun soy protein fiber.

Product with Label purchased at Adventist Book Center, Pleasant Hills, California. 1990. July 8. Sliced Chicken is now called Sliced Chik, Diced Chicken is called Diced Chik, and Sliced Beef is called Sliced Soyameat–Sliced Beef Style. The main ingredients for Diced Chik are now: Textured vegetable protein (soy protein isolate and concentrate), egg whites, water, soybean oil, natural and artificial flavors from non-meat sources, modified food starch, salt, vegetable gum, onion, turmeric, celery, niacin, iron, etc.

1462. **Product Name:** Salisbury Steak.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.

Date of Introduction: 1966.
Ingredients: In 1971: Wheat protein [wheat gluten], water, textured soybean protein, vegetable shortening, oats, albumin [egg protein], yeast extract, hydrolyzed vegetable protein, plant extractives, flavorings, caramel color, MSG, vegetable gum, U.S. certified color.
How Stored: Frozen (in 1975).
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 163. Lists the ingredients in "Salisbury Steak (Worthington)." This is an institutional product.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Salisbury Steak, frozen (Worthington)" are "wheat protein [gluten] and soy protein, Fibrotein [spun soy protein fiber], corn oil, vegetable shortening, albumin [egg protein], mushrooms, modified corn starch, yeast extract, artificial flavorings, salt, HVP, caramel color, MSG, dextrose, vegetable gum, wheat and soy flours, sucrose, niacin, U.S. certified food color, iron, thiamin, vitamin B-6, pantothenic acid, riboflavin, vitamin B-12."

1463. **Product Name:** Soyameat–Beef Style with Gravy.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1966.
Ingredients: In 1971: Water, soybean protein, vegetable shortening, albumin [egg protein], yeast extract, hydrolyzed vegetable proteins, salt, plant extractive flavorings, caramel color, monosodium glutamate, starch, U.S. certified color.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "Soyameat–Beef Style with Gravy." This is an institutional product.

1464. **Product Name:** Soyameat Diced Chick Style.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1966.
Ingredients: In 1971: Water, textured soybean protein [Fibrotein spun soy protein fiber], corn oil, albumin [egg protein], soybean protein, salt, monosodium glutamate, vegetable gum, starch, hydrolyzed vegetable proteins, flavorings.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "Soyameat Diced Chick Style (Worthington)." This is an institutional product.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 174. The ingredients in "Chick Style, canned plain (Worthington)" are: Fibrotein [textured soy protein fiber], corn oil, egg white solids, HVP, starch, soy protein, salt, seasoning, MSG, carrageenan, certified color.

1465. **Product Name:** Soyameat Fried Chick.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1966.
Ingredients: In 1971: Water, textured soybean protein [Fibrotein spun soy protein fiber], corn oil, egg albumin, soybean protein, salt, MSG, vegetable gum, starch, hydrolyzed vegetable proteins, flavorings.

1468. Neufeld, Don F.; et al. ed. 1966. Seventh-day Adventist encyclopedia: Granose Foods Limited. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 527-28.

• ***Summary:*** "A health-food factory situated in Stanborough Park, Watford, Hertfordshire, England, manufacturing several kinds of nut foods and breakfast cereal biscuits, one of the latter being called Granose. In 1962 business volume [sales] totaled £250,000.

"The SDA [Seventh-day Adventist] health food work in Great Britain was begun by a group of laymen who, under the name The London Health Food Company, purchased health foods from Dr. J.H. Kellogg, of Battle Creek, Michigan, and distributed them to the public. After a few years SDA leaders in Great Britain sent J. Heide, a master baker, to Battle Creek to learn how to make the foods. In 1899 a manufacturing company was formed under the name The International Health Association Limited, changed in 1926 to Granose Foods Limited. The company purchased a flour mill in Salford, near Redhill, Surrey, to serve as the factory. Disused plant equipment obtained from Battle Creek, together with machinery purchased in Great Britain, formed the nucleus from which the present business has grown. W.T. Bartlett was the first manager and secretary and A. Rodd was the first factory superintendent.

"Before electricity was available, candles were often used, a practice that led to a fire that burned the factory to the ground in [Aug.] 1900. Health foods were again temporarily imported from America, but gifts and loans from SDA's re-established the company, in Birmingham.

"In 1907 all SDA institutions in England, including the

© Copyright Soyinfo Center 2014

food factory, were centralized at Stanborough Park, Watford. The factory has grown until in 1963 it had a floor space of approximately 25,000 square feet, and still further extensions were planned.

"Former managers included H. Osborne, J. Rigby, and George Adair. Joint managers in 1963 were George Norris and B. Goulstone."

Note 1. This is the earliest document seen (June 2009) that mentions the "London Health Food Company" or that explains its work importing health foods from Dr. Kellogg in Battle Creek, Michigan, and "distributing them to the public." Presumably the foods were sold.

Note 2. Concerning the term "Granose": Richard W. Schwarz in his book John Harvey Kellogg, M.D. (1970) discusses Granose Flakes on pages 119-20, and 209-10. The first flaked breakfast cereals were developed from wheat jointly by Dr. J.H. Kellogg and his brother Will, in about 1894. Dr. Kellogg named their first successful wheat flakes product Granose Flakes, and on 31 May 1894 he applied for a U.S. patent on "Flaked cereal and process for preparing same." But in 1903 courts declared the doctor's patent invalid. Will Kellogg developed the product into a great commercial success, in part by adding sugar to the malt and corn combination from which he made the flakes. "The sugar greatly enhanced the cereal's taste appeal, and, as a result, the Corn Flakes business was booming by late 1905." The term "Granose" appears in 1904 in a "Chart of Food Elements" in the magazine *Good Health* (Jan. Insert after p. 48) published by John Harvey Kellogg in Battle Creek Michigan. It appears to be a grain-based breakfast cereal. Address: Washington, DC.

1469. Loma Linda University, School of Health. 1966? Summary of results of Adventist mortality study, 1958-1965. Loma Linda, California: Loma Linda University. 2 p. Undated. 28 x 19 cm. Black on yellow.

• ***Summary:*** "During the period 1958-65 a study was conducted by Loma Linda University among approximately 50,000 California Seventh-day Adventist (SDA) church members. During this eight year period, all deaths among Adventists were identified and the cause of death determined. Death rates in Adventists were calculated and compared to the published death rates in all California residents of the same age and sex. These comparisons are shown below for several causes of death. Using lung cancer as an example, for every 100 lung cancer deaths that occur in a group of California residents we would find only 20 lung cancer deaths in an equal size group of Adventists of the same sex and age." Footnote: "The figures on this sheet are for men and women age 35 and over during 1958-65..."

1. Causes of death strongly related to smoking: Lung cancer 20%. Mouth, throat, larynx cancer: 5%.

2. Causes of death strongly related to drinking [alcohol]: Liver cirrhosis 13%. Esophagus cancer 34%. Single vehicle traffic accidents 54%.

3. Other causes of death: Coronary heart disease 55%. Stroke 53%. Diabetes 55%. Peptic ulcer 42%. Suicide 31%. Breast cancer 72%. Leukemia 62%. Uterus cancer 54%.

"Because of the lower death rates in Adventists from many different causes of death the life expectancy is longer among Adventists than among all California residents. Death rates for all causes of death and life expectancy at age 35 are shown below.

"All causes of death life expectancy at age 37:

"California men–71 years.

"Adventist men–77 years.

"California women–77 years.

"Adventist women–80 years.

"Seventh-day Adventists are known to abstain from smoking and drinking alcoholic beverages. It is clear why Adventists seldom die from diseases that are strongly related to smoking or drinking. But it is not yet known why risk of death from other diseases is lower among Adventists. A further study will be conducted during l974-80 to determine which components of the Adventist lifestyle may account for their lower risk of death from many different diseases.

"Because of a high interest in health among Adventists they tend to follow good health practices in general which likely contributes to their low death rates. Many Adventists have unusual dietary practices such as vegetarianism and frequent use of unrefined foods. Other possible factors that may influence the low death rates are high educational background, good medical care and less stress and anxiety." Address: Adventist Health Study, School of Health, Loma Linda Univ., Loma Linda, California 92354.

1470. **Product Name:** Chickettes (Meatless Chicken).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1966?
Ingredients: Incl. tofu, gluten, seasonings.
New Product–Documentation: Chickettes are based on Sam's Chicken (developed by Sam Yoshimura), which was made from tofu, gluten and seasonings. Worthington substituted soy protein for the tofu.

1471. Worthington Foods, Inc. 1966? Soyamel–Fresh tasting: Five different ways (Leaflet). Worthington, Ohio. 4 panels each side. Each panel: 22 x 9 cm. Undated.

• ***Summary:*** In the middle of the front panel is a photo of a boy and girl drinking soymilk from glasses. At the bottom of this panel is a photo of 5 cans of Worthington Soyamel: All Purpose, Instant Malt Flavor, Instantized All Purpose. Banana Beverage. And Fortified Soyamel: A Powdered Soy Milk.

Two pages of the leaflet describe these products and their nutritional composition. "Regular Soyamel, Fortified

© Copyright Soyinfo Center 2014

Soyamel, and Soyamel Banana Beverage are packed in a 1 lb. can, 4 lb. can and a 20 lb. carton. Instant Soyameal and Instant Malt Soyamel are packed in a 12 oz. can, 3 lb. can and 15 lb. carton." The ingredients of Soyamel are: "Soy bean protein [probably soy protein isolate], soy bean oil, dextrose, soy bean lecithin, dextrins and maltose, sucrose, barley malt, salt, dicalcium phosphate, and added vitamin B-12. To make 1 glass of regular Soyamel place 1 cup of water in high-speed mixer or blender and add 6 level tablespoons of Soyamel. Mix until powder is dissolved. Refrigerate until used. To make instant Soyamel, add 1/3 cup of powder to 1 cup water. Stir until dissolved, or use blender. One pound of Soyamel will make a gallon of delicious, wholesome soy drink. When mixed, a quart of Soyamel will cost a little as $0.25 depending upon the richness desired."

Four pages of recipes are given. Address: 900 Proprietors Rd., Worthington, Ohio 43085.

1472. International Nickel Co., Inc. 1967. Where no metal but Platinum will do the job as well: Worthington Foods, Inc. uses platinum alloy spinnerettes to guard product purity of synthetic meat fibers (Ad). *Industrial Research.* Jan. p. 40-41.

• ***Summary:*** Soy protein is extruded through the 15,000 tiny holes of a three-inch-diameter platinum spinnerette. Platinum is non-corrosive and non-reactive. Photos show: (1) A 3-inch-diameter platinum alloy spinnerette. (2) Strands of spun soy protein fibers after extrusion. Address: 67 Wall St., New York, NY 10005.

1473. Deutsch, Ronald M. 1967. The nuts among the berries: An exposé of America's food fads. New York, NY: Ballantine Books (mass market paperback). 320 p. Foreword by Frederick Stare, M.D. Index. Feb. 18 cm. Revised in 1977 as The new nuts among the berries. Palo Alto, CA: Bull Publ. Co. 359 p.

• ***Summary:*** The rear cover states that "this book tells the astonishing story of a hundred years of health foods and faddists. It names the promoters and the products. It cites the findings of the Food and Drug Administration. It quotes the warnings of the American Medical Association. It completely exposes the hokum and ballyhoo of the health food business–now bilking the public of $2,000 million ever year–and shows why crackpot food fads are a waste of money at best and a serious danger to the health of those suffering from real illnesses."

Contents: Foreword. Introduction. 1. Of cabbages and things (a brief history of "health-foodism"). 2. Mr. Graham bakes a cracker (Sylvester Graham). 3. Little men, little women, little food (Amos Bronson Alcott, Louisa May Alcott, and vegetarianism). 4. Father Kneipp and his watering can. 5. Mother White casts her brood upon the waters (Ellen G. White and James Caleb Jackson). 6. Snap! Crackle! Enter Dr. Kellogg! (Dr. John Harvey Kellogg). 7. The battle of Battle Creek (Michigan and Seventh-day Adventists). 8. From pillar to Postum. 9. Kickapoo and Kellogg, too. 10. The Jungle, the sausage, and the law (Upton Sinclair, Harvey W. Wiley, and the formation of the FDA). 11. Chew, chew, baby (Fletcher, Chittenden). 12. Life along the alimentary canal (Metchnikoff and yogurt). 13. The bare torso king (Bernarr Macfadden). 14. The bare torso king rampant (Macfadden). 15. I see America starving. 16. How to keep your cow from drooling (selling nutrition). 17. A plague on both your Hausers (Gayelord Hauser). 18. How to write about health foods (Lelord Kordel, Cathryn Elwood). 19. Mrs. Spratt's millions (fat and dieting). 20. My mother squeaked (Don Dale Alexander and arthritis). 21. The poisons in your health food (how the public is being duped by health food hucksters). 22. How to be an expert. 23. What the law can do. 24. Taller in the saddle. 25. The unteachables. 26. To market, to market. 27. On learning to be a faddist. Address: Popular scientific and medical reporter.

1474. Harkins, Robert W.; Sarett, Herbert P. 1967. Methods of comparing protein quality of soybean infant formulas in the rat. *J. of Nutrition* 91(2):213-18. Part I. Feb. [13 ref]

• ***Summary:*** Discusses: Prosobee and Sobee (Mead Johnson), Mull-Soy (Borden), and Soyalac (Loma Linda, Riverside, California). Address: Dep. of Nutritional Research, Mead Johnson Research Center, Evansville, Indiana.

1475. *Soybean Digest.* 1967. Arkansas Soybean Assn. in step toward checkoff. Feb. p. 106, 108.

• ***Summary:*** "More than 400 Arkansas Soybean Association members held their third annual meeting at Helena, Arkansas, Jan. 12 to explore new ways of keeping soybeans the top cash crop in the United States and abroad." Laurel C. Meade (of West Lafayette, Indiana), president of the American Soybean Association addressed the group, noting that the greatest growth in soybean production since 1945 has occurred in the South. "The Delta has the largest soybean fields in the world, which will bring $215 million to Arkansas farmers from the 1966 crop."

R.W. Fischer, president of Soypro International (Cedar Falls, Iowa) said "Soybeans as an economical food could end starvation and wars in the world." Walter Grant of Worthington Foods showed the audience samples of high protein foods made by his company that are now on the market.

"During the annual business session a resolution was passed directing the officers to proceed toward state legislation to make legal the collection of a per-bushel deduction at the market place for financing research and market promotion. The checkoff program would become operative on a favorable vote by soybean producers. Of the 12 major southern soybean producing states, according to secretary Hartz [Jake Hartz, Jr.], Georgia and North Carolina

© Copyright Soyinfo Center 2014

already have appropriate acts, and Louisiana has permissive legislation not specifically dealing with soybeans. In northern states, similar bills are being entered in the current legislative sessions of Minnesota, Iowa, and Illinois."

A photo shows Laurel C. Meade with Sam Howe, president of the Arkansas Soybean Association (Wabash) and R.W. Fischer, president, Soypro International, Cedar Falls, Iowa (only the right half of Fischer's face is visible).

1476. Thulin, W.W.; Kuramoto, S. 1967. "Bontrae"–A new meat-like ingredient for convenience foods. *Food Technology* 21(2):64-67. Feb. [14 ref]
• ***Summary:*** Bontrae is made from spun soy protein fibers. "Although regeneration of oriented protein systems had been studied earlier (Lundgren, 1949), techniques for spinning protein were reduced to practice in the early 1930s by a group at the Ford Motor Company led by Robert A. Boyer. The Ford efforts were directed toward textile applications." In 1954 Boyer was granted a patent for using spun protein fibers to create edible structures. Research directed to this end has been undertaken by a number of food processors including Swift & Co., Unilever, General Foods, National Biscuit Co., Worthington Foods, Ralston Purina, and General Mills.

A photo shows two hands holding a "protein ribbon expanded to display individual filaments." A note at the end of the article states: "Presented at IFT 25th Annual Meeting."

Note: The 25th Annual Meeting of the Institute of Food Technologists was held 16-20 May 1965 in Kansas City, Missouri. An abstract (10A) of this paper appears on p. 43 of the program. Address: James Ford Bell Research Center, General Mills, Minneapolis, Minnesota 55427.

1477. Fischer, R.W. 1967. The use of soy in food products. *Oil Mill Gazetteer.* March. Also published in Soybean Digest, May 1967, p. 29-38. Translated into Spanish by Polaquimia, S.A., Ciudad, Mexico. *
Address: Soypro International Inc.

1478. Hartman, W.E. 1967. Vegetable base high protein food product. *U.S. Patent* 3,320,070. May 16. *
• ***Summary:*** Describes a method for preparing from spun soy protein fibers a bacon-type product resembling the natural product in being sliceable and in having zones resembling the fat and lean portions of the natural product.

1479. Fischer, R.W. 1967. The use of soy in food products. *Soybean Digest.* May. p. 29, 31-32, 35-36, 38.
• ***Summary:*** An excellent overview, with considerable history. Contents: Introduction. Grisly hand of hunger. Soybean oil. Oriental soy foods. Soy flour and grits (with a good history of Berczeller, A.E. Staley, Shellabarger, Allied Mills, J.R. Short Milling Co. and Wytase). Isolates and concentrates. The war years (during and immediately after World War II, soy flour and grits come to be widely disliked). New products and know-how.

"Oriental soy foods:... In the Orient soybeans have, for centuries, played an important part in human diets as soy milk for infants, shoyu, or soy sauce as we call it, miso, tofu, tempeh, kinako, natto, yuba, etc."

"Isolates and concentrates: In the mid-1930's processes for further refining the protein factors of soy began to appear. The first 70% soy protein concentrate was turned out by Mead Johnson Co. using the Bonato process of sulfur dioxide and sulfurous acid extraction, but was discontinued for lack of adequate markets for the product. In 1936 the Glidden Co. began working on the production of an isolated protein [90-100% protein] from extracted soy flakes for industrial uses. Glidden, as a major manufacturer of resin, wanted the isolate as a stabilizer for the resin used in sizing paper to provide wet strength. By 1939 Glidden was producing an enzyme hydrolyzed isolated protein to be used with egg albumen for its whipping capacity in producing food toppings... Over the years soy protein isolates have found their greatest application in the industrial field, particularly as paper coatings for high gloss products."

A photo shows cans of Worthington Choplets, Soyameat (3 varieties), and Numete–all made from spun soy protein fibers. Address: Soypro International Inc.

1480. Orr, Elizabeth; Adair, David. 1967. The production of protein foods and concentrates from oilseeds. *Tropical Products Institute Report* No. G31. 104 p. June. Also titled T.P.I. Report (London). [44 ref]
• ***Summary:*** Contents: Foreword. Acknowledgements. Introduction. 1. The use of oilseeds as a source of protein. 2. Oilseed resources. 3. The manufacture of protein flours by standard oil milling processes. 4. Some cost aspects of the manufacture of protein flour by standard oil milling processes. 5. Examples of the use of edible flours made by standard oil milling processes. 6. Full fat soya flours. 7. Oriental methods of processing soya. 8. Other processes for making protein products. 9. The distribution of protein products. 10. Current experience of making protein flours and foods from oilseeds. 11. The initiation of protein food programmes with particular reference to the role of the administrator. Appendices. 1. Protein nutrition. 2. Oilseed statistics. 3. Toxic hazards. 4. P.A.G. Guides [PAG]. 5. Aflatoxin. 6. Questionnaire. 7. Some examples of the cost of packaging oilseed-based protein foods. 8. Prices of edible oilseed products and protein flours and foods made from oilseeds. Bibliography. Chapters 6 and 7 are especially relevant to soyfoods.

"Full fat soya flour (FFSF) is manufactured in the USA by Archer Daniels Midland Co. and Central Soya, and in the UK by 3 firms: British Arkady Co. Ltd., Soya Foods Ltd., and British Soya Products Ltd. There are no official statistics for production in either country. A trade source of

© Copyright Soyinfo Center 2014

information has estimated UK usage of soya flour at 30,000 tons per annum, but this figure includes defatted soya flour made from meal imported from the USA. Full fat soya flours can be divided into 2 main categories: (a) flours used primarily for bleaching purposes in bread, and (b) general purpose flours. When the flour is to be used mainly for bleaching it is made from uncooked beans, since the natural enzymes in the bean must remain active until the bleaching process has been completed. It is estimated that about half the full fat soya flour made in the UK is used in bread manufacture."

A table lists all known commercial full-fat soy flours, their composition and prices. Describes the Promo Process and Wenger Process for making FFSF, with cost data. Gives case histories for Pronutro in South Africa and Nutresco in [Southern] Rhodesia.

Chapter 7. Oriental methods of processing soya beans: Kinako ("a flour made from ground toasted [soy] beans, used in making cakes"). Fermentation products: Soya sauce (shoyu), miso, natto, tempeh. Developing the use of fermented products. Aqueous extracts: Soya milk and tofu, kori-tofu. Soya milk as a substitute for cow's milk. The package soy milk shop (including Tetra Pak and Prepac packaging; the Prepac system, developed by the S.E.A.B. Co., Villejuif, France, has a capacity of 1,500 packs/hour). Case histories for soya milk: Rural cooperatives in Taiwan, Saridele in Indonesia, and Vitasoy in Hong Kong. Soya milk made from soya flour: The 4 known manufacturers of soya milk are Promo Ltd. of the U.K. ("The product made by Promo is marketed under the brand name of 'Velactin' by the Wander company."), and Loma Linda Foods (Soyalac and Granogen), Mead Johnson (Sobee or Soybee), and Borden's Soy Processing Co., all of the USA. Promo and Loma Linda use the traditional Oriental method rather than using soy flour.

Note: This is the earliest document seen (Aug. 2013) concerning Tetra Pak and soy. Address: TPI, 56/62 Gray's Inn Road, London WC1.

1481. Horton, Yvonne. 1967. Soybean products: Candid consumer. *Christian Science Monitor.* July 6. p. 10.
• ***Summary:*** Increasingly sophisticated edible plant proteins are now available to American consumers, after getting their start in institutions.

Synthetic bacon bits, named Bac-Os, made by General Mills, Inc. from isolated soy protein under the trade name Bontrae, resemble crisp fried pieces of lean bacon without fat. They are being test marketed in Buffalo and Syracuse, New York; in Sacramento and Stockton, California; and in Denver, Colorado.

Before being test marketed at retail outlets, Bac-Os were used for salads on Eastern Airlines flights and for bacon, lettuce and tomato sandwiches in restaurant chains, university dining halls, etc.

Another high-protein product made from Soybeans by General Mills is Modern Protein Food (MPF), also called Multi-Purpose Food; it is recommended by the maker for stocking fallout shelters, for stretching food budgets, and for vegetarian or other special (religious) diets.

Many other food manufacturers are doing research on "vegetable protein products." Archer Daniels Midland Co. of Minneapolis [Minnesota] makes TVP (Textured Vegetable Protein), which contains no waste, less than 1% fat, and can be cooked in many ways. Other companies involved in the field are Central Soya Co., Ralston Purina Co., Swift and Co., and Worthington Foods. Address: Home economics writer, Christian Science Monitor.

1482. Register, U.D.; Inano, M.; Thurston, C.E.; Vhymeister, I.B.; Dysinger, P.W.; Blankenship, P.W.; Horning, M.C. 1967. Nitrogen-balance studies in human subjects on various diets. *American J. of Clinical Nutrition* 20(7):753-59. July. [26 ref]
• ***Summary:*** Using nitrogen balance tests on human subjects for 16 days each to evaluate the quality of vegetable protein mixtures as meat substitutes, the authors found no significant difference in the ability of pure vegetarian [vegan], lacto-ovo-vegetarian, and non-vegetarian diets to maintain positive nitrogen balance, and thus to get enough protein. Average nitrogen values were all positive.

Many of the diets contained no meat, but did use vegetable protein mixtures prepared to simulate meat products. Commercial products used in the tests include Dinner Rounds, Rediburger, Soyagen, and Mocha Mix. There is no indication than any of the 16 subjects were Seventh-day Adventists. Address: Loma Linda Univ., Loma Linda, California.

• ***Summary:*** These substances are formed in charcoal-broiled meat. Perhaps as a result of their vegetarian diet, Seventh-day Adventists have a lower intake of benzo(a)pyrene and nitrosamines [pronounced nai-TRO-suh-meens]. Address: Div. of Oncology, Chicago Medical School, Chicago, Illinois.

1486. McCay, Jeanette B. 1967. Re: Biography and obituary of Clive M. McCay–1898-1967. Letter to Ralph for Clive McCay's memorial service at Cornell, Sept. 23. 13 p. Typed, with signature.

• ***Summary:*** This long, interesting typewritten letter is written to "Ralph," whose surname is unknown. Later it formed the solid foundation of "Clive Maine McCay (1893-1967): A biographical sketch," by J.K. Loosli, published in the prestigious *Journal of Nutrition* (Vol. 103, No. 1, Jan. 1973).

"During his first year in a study on fish blood and its relation to water pollution he wrote: "The mass of men (fail) to realize that their welfare is closely interwoven with the condition of everything that lives."

"Clive was interested in everything that lives and during his more than 40 years of scientific work he made studies of: Cold blooded animals (fish, eels, turtles), farm animals (such as dairy cows, calves, bulls, goat, sheep, pigs), laboratory animals (such as white rats, cotton rats, mice, guinea pigs, hamsters, rabbits, and monkeys), fur bearing animals (chinchillas, mink), insects (such as clothes moths, bean weevils, flour beetles, cockroaches), dogs (Cairn terriers, beagles, danes, dalmations, and old dogs over ten years of age)–and finally man [humans].

Some quotations of his: "A century ago, Sylvester Graham stumped the nation in attempts to impress upon housewives the importance of high-quality bread to their families' health, Today, poor Sylvester would probably roll his lean bones over in his long grave if he realized how little attention the average housewife pays to the nutritive value of the bread she buys."

"In addition to bread, Clive felt that other foods could also be improved. One might find him almost any day entertaining house guests... making chop suey with soy beans that he had sprouted. In the laboratory he developed a large scale bean sprouter [see illustration], and for a while he was taking down bushels of sprouted soy beans to sell at the Co-op."

"Human experience has long shown the value of temperance in the consumption of food. Luigi Cornaro (1464-1655) stressed this in the series of essays written in the late years of his life. Francis Bacon stated: 'It seems to be approved by experience that a spare diet, and almost a pythagorical,–such as is either prescribed by the strict rules of a monastical life, or practiced by hermits, which have necessity and poverty for this rule,–rendereth a man long-lived.' Such statements as these comprise the content of many of the works written about diets for the aged."

1951 in Empire State Jersey Journal: "Every pound of sugar that goes into an American home pushes off the table more than five pounds of wholesome natural foods such as milk, potatoes, and apples."

In a 1950 hearing on Poisonous Chemicals in Foods before a Congressional Committee he stated: "We have made numerous studies of the effect of these cola beverages upon the teeth of rats, dogs and monkeys... We have published data indicating that the molar teeth of rats are dissolved down to the gum line if the rats are well fed but given nothing to drink except cola beverage for a period of six months."

In 1953, in the Introduction to a paper on "Diet as a Factor in Aging he wrote: "The object of nutrition research is to discover diets that will preserve the best possible health and the greatest productivity throughout the life of man and his domestic animals. Research upon aging is not concerned with protracting the worthless years at the end of life when a senile body and a deteriorated brain make living nothing but a heavy burden."

"Almost at the beginning of his research life, Clive began the famous series of studies on prolonging the span of life through retardation of growth." The following are quotations from some of his papers:

1928–In a paper titled "The nutritional requirements and growth rates brook trout"–"The growth of the animal body has occupied the attentions of students of natural science as long as we can have historical records. It remains the outstanding concern of all those engaged in animal industry, whether they be rearing swine or trout." Yet is life span not as important as growth?

"Although Clive has been a loyal and enthusiastic Unitarian for years, he developed a great interest and respect for the dietary practices and teaching of the Seventh-Day Adventists and Jehovah's Witnesses. This also carried over to other health groups such as Friends of the Land, Natural Food Associates and those that some of his academic friends called faddists or fringe fanatics. He spent a good deal of time writing and speaking to these groups, and was always ready to welcome them in his home or laboratory.

"In general he felt that their ideas were correct and he admired their sincerity and the tenacity in actually practicing what they believed to be good nutrition. He felt that they stand as a block against the steady erosion and deterioration of natural foods by the tampering of the food industries eager to make dollars without respect to nutritive value.

"He thought that learning about food and its health values was an excellent hobby for older people, and that

© Copyright Soyinfo Center 2014

gardening was a sure way to obtain pure and wholesome diets. '... gardens are stable investments for good nutrition and health. On our small home place we even produce our own meat by raising an occasional calf and keeping a small flock of sheep. We also produce our own apples, cherries, plums, strawberries, gooseberries and currants... plus vegetables.

"There was no sharp division between Clive's professional life and his recreation and home life. His friends were his fellow workers and other scientists from near and far... He must have hiked hundreds of miles with Dr. Maynard and Dr. Sumner."

"In the garden, he would include plants in which he happened to be interested at the moment such as soybeans,..."

Reading was Clive's great delight, and if reading maketh a full man, he was very full indeed. Clive's happiest hours at Cornell were spent in the libraries. He loved to study old book catalogs and browse in second hand book stores to find treasures for his own library or for the University."

A long and very interesting section concerns four reasons for studying the history of any science. Plus several paragraphs of additional thoughts on that subject.

"When Clive was 22 years old [ca. 1920] and an instructor in Chemistry at Texas A. and M. College, he filled out an "Individual Analysis Card," which I just found among his papers. I am amazed to see how well he knew his own characteristics at this age. He checked for himself: Common sense; industry, persistence, moral courage, conscientiousness, self control and self respect–attributes that carried through his whole life.

"Likewise there were the following traits. Regularity in habits, purpose and coordination in work, ability to profit [learn] from experience, breadth of view, given to facts, lives at high tension.

"These are the same traits and characteristics that I would have checked after knowing him these 45 years. Perhaps most revealing of his personality was his answer to the questions of how he reacted to success and adversity. To the first he wrote 'elation,' to the second 'renewed energy.'" Address: 39 Lakeview Lane, Englewood, Florida.

1488. **Product Name:** Extrusion Cooked Whole Soy Flour (Full-Fat).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1967.
New Product–Documentation: Interview with Dr. D.W. Harrison. 1982. Sold in 3 oz. and 16 oz. bags.

1489. **Product Name:** Soya Maize or Baby Formula (Unsweetened Soy Fortified Corn Flour with Nonfat Dry Milk).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1967.
Ingredients: Maize Flour 72%, soy flour 25%, nonfat dry milk 2%, salt 1%.
Wt/Vol., Packaging, Price: 1 lb polyethylene bags, or 2 lb or 50 lb paper bags.
How Stored: Shelf stable.
Nutrition: Protein 17%, moisture 12%.
New Product–Documentation: Economist Intelligence Unit. 1969. Demand for Soya-Based High Protein Foods in Uganda. p. 50. "Soya Maize." Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 18. Interview with Dr. D.W. Harrison. 1982. This product resembled CSM (Corn-Soy-Milk) and was precooked.

1490. **Product Name:** [Nutana Beeflike Slices, and Chickenlike Slices].
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1967.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. John. 1981. Adventist Food Industries: Recent Developments. Spectrum. Feb. Interview with Eric Howse. 1981. Feb. In 1981 Nutana was doing the most advanced work with soy of any Adventist food company outside the U.S. They started in the early 1960s importing spun protein fibers (SPF) from the U.S. Now they import soy fibers spun by DE-VAU-GE in Germany and use them to make a range of meat analogs. Labels in Danish, Dutch, and Finnish.

Note: This is the earliest known commercial soy product made in Denmark.

• ***Summary:*** A Seventh-day Adventist lacto-ovo vegetarian cookbook. Soy-related recipes include: Tofu loaf (p. 51). Soy cheese scallops (with tofu, p. 54). Soyameat–vegetable loaf (with 1 lb. Soyameat Chicken Style, p. 95; many recipes on pages 95-103 use Soyameat, which comes in 13 oz cans or frozen, and is made by Worthington Foods). Roasted soybeans (Nepalese, p. 258). Soy cheese roast (Korean, with tofu, p. 268). Chop Chai #1 (Korean mixed vegetables with 2 cups soy bean threads, p. 269). Pineapple soy chicken curry (Polynesian, with Chicken Style Soyameat, p. 274). Polynesian soya meat with cling peaches (with Chicken Style Soyameat, p. 274). Address: Loma Linda Univ., School of Medicine, Los Angeles, California.

1493. Marsh, Edward E. 1967. How to be healthy with natural foods. New York, NY: Gramercy Publishing Co. 157 p. No index. 21 cm. [23 ref]
• ***Summary:*** The message of this unusual, copycat book on "natural foods" is largely borrowed from Linda Clark, Adelle Davis, Carlton Fredericks, Gayelord Hauser, D.C. Jarvis, and other health-food authors of the 1950s and early 1960s. The book has no clear publication date, no index, and we are told nothing about the author. It advocates a diet based on fatty meats plus various "extraordinary foods" such as apple cider vinegar, honey, bone meal, brewer's yeast, lecithin, sea kelp, sunflower seeds, and yogurt.

Soybeans are mentioned as follows: Most vegetable proteins (except soybeans, sunflower seeds, peanuts and a few other foods) do not contain all the essential amino acids in the correct amounts to be first-class or complete proteins. Be sure that at least two-thirds of your protein intake comes from animal protein; the other third can come from other complete proteins such as soya products (p. 22-23). Soybeans are listed as a good source of vitamin D (p. 43), B-complex vitamins (p. 44), vitamin B-1 (p. 47), choline (p. 51), folic acid (p. 51-52), niacin (p. 53-54), pantothenic acid (p. 54-55), vitamin C (p. 60), vitamin E (p. 66), vitamin F (soybean oil, p. 67-68, 71), calcium (p. 76), copper (soy flour, p. 78), magnesium (soy flour, p. 83), and phosphorus (p. 84).

Lecithin, one of the "extraordinary foods," is "not a drug, but a granular form of soybean lecithin, free from objectionable elements." It can help relieve stress, quiet nerves, promote good health, improve mental poise, and induce a renewed feeling of well-being. Lecithin is found only in natural foods, such as soybean oil (p. 95-97).

Note: Edward Marsh was born in 1900. This edition was published by Gramercy, a division of Crown Publishers, Inc., by arrangement with Arco Publishing Co., Inc. Copyright Arc Books Inc., 1963. Library of Congress Catalog Card No. 67-14909. On the rear cover is a full-page ad for *The Soybean Cookbook*, by Dorothea Van Gundy Jones.

• ***Summary:*** This study of 265 white Seventh-day Adventist church members and an equal number of white nonmembers suggests that abstention from alcoholic beverages, tobacco, and meat can be consistent with good mental health. Address: 1. Chief, Dep. of Medicine, Brooke General Hospital, Fort Sam Houston, Texas.

1495. *SoyaScan Notes.* 1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part II (1967–1971). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: 1967–Arran begins his first food business when he starts the Golden Lotus restaurant at 2936 West 4th Ave. (at Bayswater), Vancouver. Serving natural, vegetarian and macrobiotic foods, it is the city's first vegetarian restaurant. Before he left India, his Master had encouraged him to take up this "right livelihood" and promised to extend "all feasible help, both inside and outside." A place was found and the necessary money appeared as if by magic. Most of the workers were spiritual seekers. All lived upstairs, above the restaurant.

Arran was one of the cooks; he had learned how to cook brown rice, veggies, hijiki, wakame and miso soup while working as a waiter at the Paradox Restaurant in New York City in 1964; he learned the rest by trial and error, including the use of macrobiotic and vegetarian cookbooks such as *Vegetarian Cookery*, by Pietro Rotondi, and (later) *Ten Talents* by Frank and Rosalie Hurd.

"Amazingly, the rather monastic rules–including regular meditation and celibacy–were accepted and enthusiastically followed. In the communal setting, all worked without pay for the first 9 months. "Before the year was out, bills and loans were entirely repaid and all began receiving hourly wages, benefits, room and board. The numbers attending our weekly satsangs outgrew the upstairs, and the venue shifted downtown to the YMCA." One photo shows Arran standing in front of the Golden Lotus restaurant in 1968 and another standing inside in 1969.

1968 Oct.–Arran and three others return to India to be with Master Kirpal Singh, having received his written permission. On the way they visit Ram Das (the former Richard Alpert) who was in retreat at his father's large New Hampshire estate. In India Arran lives close to Kirpal Singh.

© Copyright Soyinfo Center 2014

The Master will not initiate those who beg for food, only those who earn an honest living.

1969 March 4.–Arran, with the Master's blessing, marries an Indian woman, Rattan Mala Bagga, age 22, in a traditional Sikh marriage. She comes from a good family, has an M.A. degree, and is a lecturer at a girls' school in Moradabad. The Master, who changes her name to Ratana ("jewel") encourages family life and the tender bonds of matrimonial love and responsibility.

1969 April–Arran and sari-clad Ratana return to Vancouver, Canada, after nearly 6 months in India. He has changed from ascetic to householder. They settle into a little room above the restaurant, sharing a bathroom with 14 others and working, on average, 12-16 hours a day to get the restaurant firmly established. In May and December, Kirpal Singh writes with wise advice. As a result: "In three months we saved $1,000 to make a down payment on a little two-bedroom house with a garden. Ratana was already pregnant with our first child, and we had had our fill of communal living."

"Considerable agitation began among the more left-leaning workers to turn the Golden Lotus into a commune. After a lot of soul-searching, we decided to make a clean break, and sold the restaurant to the group for a paltry $3,000, wishing them all success." Soon after the Golden Lotus restaurant became defunct.

1970 Jan.–Arran opens a little store named Jyoti Importers and Natural Foods at West 4th Ave., near Yew Street on the same street as the Golden Lotus, but on top of the hill. He sells "Indian bedspreads, clothing, classical musical instruments, and healthy and organic foods. Food soon edged out the other wares. It became obvious that my destined vocation was connected to organic foods and wholistic living." After several years of growth, the business moves into a much larger building at 1813-1817 West 4th Ave., a corner location and opens as Lifestream Natural Foods on 1 Jan. 1971. Then Lifestream expanded to a second store on Broadway at Traflagar (See: *Shared Vision* 1990, p. 9).

1970 April 4–Arran and Ratana's first child is born at St. Paul's hospital in Vancouver by natural childbirth. Master telegrammed. "You may name the baby Shanti" (the ancient Sanskrit word for "peace"). Note: All the Stephens' children were born at this same hospital. Arran writes: "I was present at the miracle of each birth. On the birth of two of our children, Ratana was blessed with the vision of our Master, and she also experienced great light within."

1970 spring–On an impulse, Arran gives half of his business, Jyoti, to Peter Harwood, his friend and fellow disciple of Kirpal Singh; Peter becomes a working partner.

1970 June–Arran attends the founding meeting of Organic Merchants (OM), held outdoors on the side of Mt. Shasta. Lifestream becomes one of the founding members. OM was the first trade association for natural food retailers on the West Coast and the first organic trade association. Arran also remembers OM meetings at Blake Rankin's, at Lifestream, and at Pajaro Dunes.

1971 (1990 Shared Vision article says Lifestream opened 1970 Jan. 1). Jan. 1–Arran opens Lifestream Natural Foods in Vancouver, British Columbia, Canada, just north of the U.S. border, at 1813-1817 West 4th Ave. (at Burrard). It is Canada's first large natural foods retail store. His father suggests the name. "Free fresh carrot juice drew in crowds; an electric powered 20-inch stone-buhr mill, visible through a window from the street, ground tons of fresh whole-grain flour every day; alfalfa sprouts were grown in our nearby warehouse / factory; fresh nut butters were roasted and milled to order; natural candy bars and cookies were extruded and baked; egg-free cakes and muffins popped from the ovens; pies, crunchy granola, bulk foods, and wholesome artisanal breads were baked and sold by the hundreds. These were all firsts in Canada." The inspiration came from many sources, but was not macrobiotic. The Lifestream brand was represented by a woman gathering sheaves of wheat into a basket. "Teachers brought classes of school children on tours to see how wholesome foods were made. The store became so busy that it was often difficult to wade through the crowds of shoppers and hangers-on... Sales doubled every year for seven years, and the business quickly branched out into wholesale distribution."

1971 or 1972–A separate small vegetarian restaurant, named Mother Nature's Inn (MNI) was started as a *separate* business in the rear of the large retail store (on West 4th Ave.) by Victor Yankowich,..." But after about a year MNI was purchased from Victor (for a pittance) for Ratana, who showed her business skills by running it very successfully and profitably. The company's best-known products are its line of Essene sprouted grain breads–moist, heavy, and delectable.

1972–Lifestream opens its own Bread of Life bakery (100% owned by Lifestream) in North Vancouver because of the area's scarcity of organic and natural baked items. The original Lifestream Essene Bread, developed by Arran at that bakery, was one of the Lifestream's first baked products. Essene Bread was always made with organic grain–from the Alvin Scheresky and David Orchard organic grain farms in Saskatchewan province.

A 1971 color photo shows Arran, smiling, holding a loaf of Essene Bread.

1971–At about this time Lifestream Natural Foods Ltd. moves to 724-26 W. 6th Ave., Vancouver 9, BC, Canada. This was a combination headquarters, warehouse, manufacturing and packaging facility. It housed a flour mill, alfalfa sprout operations, nut butter operation, tamari nut roasting and packaging, plus packaging a wide range of organic grains, beans, nuts, seeds, flours, etc. When this facility opened, the only other Lifestream operation was the retail store.

© Copyright Soyinfo Center 2014

1971–Since there was a scarcity of natural and organic foods, Lifestream began to do wholesale distribution. Frank Ford, founder of Arrowhead Mills in Texas, appointed Lifestream as distributor in Canada for the entire Arrowhead Mills' range of organic grains, beans, flakes, hot cereals, and flours. Hundreds of products were developed and marketed under the Lifestream brand: Breads, other baked goods, fruit & nut-based energy bars, juices, trail mixes, tamari roasted nuts and seeds, preserves, yogurt, granolas, mueslis, sprouts, soyfoods, expeller-pressed oils, and a wide range of imported Japanese macrobiotic products. During the 1970s Lifestream's profits came from a blend of manufacturing, wholesaling, and retailing–but not even the accountants knew what percentage of the total came from each of these activities. Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

1496. **Product Name:** Prime Stakes: A Vegetable Protein Product.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 800-628-3003.
Date of Introduction: 1967?
Ingredients: Textured vegetable protein (soy protein concentrate and isolate, wheat gluten), egg whites, soybean and/or corn oil, flavorings (hydrolyzed vegetable protein, onion, turmeric, spice, spice, salt, extractives of celery & spice), potatoes, partially hydrogenated soybean and cottonseed oil, modified corn starch, oat flour, wheat flour, modified tapioca starch, yeast extract, caramel color, onion, carrageenan, niacinimide [niacinamide], iron (as ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12.
Wt/Vol., Packaging, Price: 13 oz (368 gm) can. Retails for $2.35 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1980. Sept. 11.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19.

1497. Sanford, David. 1968. Unfoods: Do you know what you're eating? *New Republic* 158(2):13-15. May 18.
• ***Summary:*** Discusses (critically) the meat-like products made by Thomas J. Lipton Co., Loma Linda Foods, Worthington Foods, and General Mills (Bac*Os). "Swift & Co. markets a soy larded chili, salisbury steaks, canned meat loaf and sloppy joes to restaurants, which call them pretty much what they like.

"The transforming of soy protein into edibles involves, in the case of Worthington Foods, General Mills and Ralston Purina a process licensed by Robert Boyer, an inventor and

© Copyright Soyinfo Center 2014

protégé of Henry Ford." Note: No mention is made of Loma Linda using spun soy protein fibers. Many legitimate issues regarding the labeling of modern soy protein products are raised.

"Bac*Os, the bacon-like bits test marketed over the past 18 months in Denver [Colorado], Buffalo [New York] and Sacramento [California], is about to be advertised nationally. Two years ago a token quantity of Bac*Os was seized by the Food and Drug Administration in Buffalo and a case was brought in the US Federal District Court (Western Region) in New York to force General Mills to identify their product as 'imitation bacon.'...

"Bac*Os bottles didn't say that Bac*Os were bacon, just that they were a lot *like* bacon... Its label now reads 'Crispy Bontrae bits with a flavor like bacon.' Bontrae, the label explains, is a registered trademark for a vegetable protein product. Arthur Odell, who manages General Mills' isolated protein program, thinks that that is sufficient."

1498. Hurd, Frank J.; Hurd, Rosalie. 1968. A good cook–Ten talents. Chisholm, Minnesota: Published by the authors. Printed by The College Press, Collegedale, Tennessee 37315. 354 p. Illust. Color plates. No index. 22 x 15 cm. Spiral bound. [1 ref]

• ***Summary:*** A very important (after errors in the 1st printing were fixed), pioneering, indeed classic American vegan cookbook, which uses no animal products (except in one chapter at the end titled "Recipes Using Milk and Eggs," "for those who are in the transitional period. However, we encourage all those who still cling to milk and eggs to become acquainted with the facts concerning their use, and become weaned through this process"). Some recipes also use honey.

Contains more than 750 unique recipes (plus color photos), including many innovative soy recipes, including the first recipe for shakes made with soy milk ice cream.

In the Glossary (p. 11-17) are entries for lecithin (p. 13; "A food extracted from the soybean"), soybeans (p. 15-16), and tofu (p. 16), as well as agar-agar, almonds, carob, cashew nut, coconut, dulse, flaxseed, malted nuts (made from peanuts and cashew nuts with dry malt added), nuts, oils, peanut, sea kelp or dulse, sesame seed, and sesame tahini. A color photo (p. 55) shows soy sprouts. Soy-related recipes include: Homemade soy coffee (p. 66). Soybeans milks (p. 69; No. 1 costs $0.06/quart homemade. "Soybean pulp [okara] which remains can be made into various dishes. Try Soy Not-Meat," p. 202; No. 2 uses 1 cup plain soya starter). Banana milk shake (with chilled soy milk, p. 70). Banana carob milk shake #1 or #2 (with soy milk, p. 72). Molasses milk shake (with soy milk, p. 72). Soy-fig milk (p. 72). Milkless milk shakes (with non-dairy ice cream incl. soy milk powder, p. 72-73). Soy yogurt, cultured (p. 73-74; 3 recipes–made from whole soybeans, liquid Soyagen, or soy starter). Soya bread or rolls (p. 80). Vanilla ice cream (with

soy milk powder optional, p. 125). Pineapple ice cream (with soy milk powder, p. 127). Banana soya ice cream (with rich soy milk, p. 128). Sesame soy cookies (p. 131, with 1½ cups raw sesame seeds). 7 grain granola (with 1 cup soy flour, p. 156). Easy granola (with soy flour, p. 157). Soy-millet patties or loaf (p. 182). Vegetable-nut loaf (with soy milk, p. 186). Green soy beans (p. 187; dry, green-seeded soybeans). Buckwheat, soy or whole wheat spaghetti (p. 192). Soybean curd #1 (homemade tofu using whole soybeans, curded with Epsom salt, p. 195). Soybean curd #2 (from soy flour, curded with lemon juice, p. 196). The tofu-making process is shown in six black-and-white photos. Ways to serve tofu (p. 196). "Scrambled eggs" (made with tofu, egg-free, p. 196). Tofu loaf (p. 198). Chinese nut loaf (with soymilk, p. 198). Vegetarian chow mein (with soy sprouts, p. 199). Peanut-soymeat (with soy flour, p. 200; steamed for 2-3 hours in greased cans). Soy not-meat (p. 202, with soaked ground soybeans or "the soybean pulp from the soy bean milk. This way the pulp is not wasted" [i.e. okara]). Peanut-soy round (p. 202). Soy meat (p. 203; made with 2 cups homemade gluten, 1 cup toasted ground peanuts, and 1 cup soaked

© Copyright Soyinfo Center 2014

blended soybeans, plus water, seasonings, oil and salt, steamed for 3 hours in greased cans). Soya peanut soufflé (p. 204). Soybean soufflé (p. 204). Tofu & rice croquettes (p. 206).

The chapter titled "Nuts, seeds, olives" (p. 209-20) includes: Glossary of nuts, raw nuts for your enzymes, nut notes, almond butter (king of the nuts), raw nut butters, cashew nut butter, cashew Brazil-nut butter, peanut butter, nut butter clusters, peanuts–oven blanched, dry roasting–soya nuts, malted nuts, browned sesame seeds, seed cereal topping (sunflower seeds, sesame seeds, flax seed), peanut butter-seed spread (tahini, sunflower seeds), peanut butter balls, simple sesame squares, sprouted sunflower clusters, olives, tree chestnuts, roasted chestnuts, roasted chick peas.

Note 1. This is the earliest document seen (Dec. 2013) that uses the term "dry roasting" to describe how soybeans are roasted, or that contains the term "Dry Roasting–Soya Nuts" (p. 217).

Green soy bean salad (p. 234; probably dry, green-seeded soybeans). Soybean sprouts salad (p. 234). Tofu cheese salads (p. 235). Tofu sun faces (p. 236). Pineapple tofu salad (p. 245). Pineapple tofu cottage cheese (p. 246). Lo-fat salad dressing (with soy yogurt, p. 251). Soy mayonnaise–eggless (4 types, p. 252-53). Soy butter (made with soybean flour, lightly dextrinized, p. 262). Soya starter (made with soy flour, p. 262). Soya yeast sandwich spread (p. 263). Super sandwich spread (with soybean pulp [probably okara, see p. 69], p. 264). Pimento-soy chee spread (p. 265). Sour cream–soy (p. 270). Soy whipped cream (p. 271; whirl in a blender ½ cup each soybean milk and soy oil, plus 1 tablespoon honey, ¼ teaspoon vanilla, and a pinch of salt). Tartar sauce, cheese (with soy mayonnaise and tofu, p. 273). Sprouts (p. 291-95). Fresh cucumbers with soy sour cream (p. 304). Celery and green soyas (p. 312; "2 cups green soy beans, frozen, canned, or fresh." Probably means green vegetable soybeans). Soya starter (base, made with soy flour, p. 326; keep a jar ready for quick use in making tasty spreads, milk and cream, mayonnaise, a binder when nut butter is not available. Dextrinizing the soy flour gives this Soya Starter a nutlike flavor).

Talk with Rosalie Hurd. 1991. June 3. *Ten Talents* is now going into its 44th printing. More than 250,000 copies have been sold. The latest was published by College Press in 1985. The first edition was published in May 1968. Frank, originally a chiropractor, is now a medical doctor. The Hurds now live most of the year in Fountain City, Wisconsin, where they run Alpine Springs, a live-in lifestyle program and center on 585 acres of land offering treatment and education in natural health.

Note 2. This is the earliest cookbook seen (Oct. 2013) that contains a recipe for soy sour cream. For the basic recipe: Pour 3/4 cup soy bean milk into a blender. Gradually add 3/4 cup soy oil until desired thickness is reached. Stir in 1-2 tablespoons lemon juice and ¼ teaspoon salt. Chill. "Delicious on fresh cubed cucumbers with a dash of dill." An alternative recipe calls for the use of: ½ cup soy starter (not dextrinized, see p. 69, 262), ¼ cup water, and ½ teaspoon honey.

Note 3. This is the earliest English-language document seen (Nov. 2003) that contains the word "Soymeat" (p. 200), or the term "Soy Not-Meat," or the term "Soy Meat" (p. 203) as a recipe name.

Note 4. This is the earliest dated English-language document or book seen (Sept. 2012) that contains the modern term "Soy yogurt."

Talk with Rosalie and Dr. Frank Hurd. 2005. Feb. 9. Both have moved to Oregon to warmer weather. They have a daughter there. *Ten Talents* is now in its 48th printing. They are working on a revision. He was born in March 1936 and she in April 1937.

Talk with Rosalie Hurd. 2009. Jan. 19. Frank is still working as a doctor and she as his helper. They are both in good health. The greatly enlarged 40th anniversary edition of *Ten Talents* has been published and is now available.

The term "Ten Talents" comes from the teachings of Ellen G. White: "The one who understands the art of properly preparing food, and who uses this knowledge, is worthy of higher commendation than those engaged in any other line of work. This talent should be regarded as equal in value to ten talents; for its right use has much to do with keeping the human organism in health. Because so inseparably connected with life and health, it is the most valuable of all gifts" (Ellen G. White, *Counsels on Diet and Foods*, p. 251). Address: 1. D.C. [Doctor of Chiropractic]; 2. B.S. Both: Box 86A–Route 1, Chisholm, Minnesota 55719.

1499. Wokes, F. 1968. Proteins. *Plant Foods for Human Nutrition* 1(1):23-42. May. [19 ref]
• ***Summary:*** Almost half of the plant proteins consumed by humans come from cereal grains. Address: The Vegetarian Nutritional Research Centre, Watford, Herts. [Hertfordshire], England.

1500. Wokes, Frank. 1968. Our aims [in starting publication of the journal Plant Foods for Human Nutrition]. *Plant Foods for Human Nutrition* 1(1):3-6. May. [5 ref]
Address: The Vegetarian Nutritional Research Centre, Watford, Herts [Hertfordshire], England; Editor of the new journal.

1501. West, Raymond O.; Hayes, Olive B. 1968. Diet and serum cholesterol levels: A comparison between vegetarians and nonvegetarians in a Seventh-day Adventist group. *American J. of Clinical Nutrition* 21(8):853-62. Aug. [13 ref]
• ***Summary:*** "The serum cholesterol levels and the dietary habits of a voluntary study group of 466 Seventh-day Adventists in a Washington, DC suburban area were compared to determine the influence of diet on serum

© Copyright Soyinfo Center 2014

cholesterol levels in an adult population whose only environmental differences related to dietary practices–adherence to vegetarianism. This study matched vegetarians with nonvegetarians from the same base population according to several physical and demographic variables–place of residence, age, sex, marital status, height, weight, and occupation–and examined the effects of various levels of meat, fish, and fowl consumption (degrees of nonvegetarianism) on serum cholesterol levels. With the exception of those under 25 years of age, the results showed that the nonvegetarians had higher serum cholesterol levels than the vegetarians." As the degree of nonvegetarianism increased, serum cholesterol levels also increased.

1502. *Los Angeles Times.* 1968. New ideas on food will be presented. Sept. 29. p. SG_B12.
• ***Summary:*** San Gabriel, California–A series of four classes in food preparation and nutrition is open to the public as a free service of Seventh-Day Adventist Churches in the San Gabriel Valley.

They will be held on Monday through Thursday, Sept. 30 to Oct. 3, from 7:30 to 9:30 p.m. at the San Gabriel Academy auditorium.

Dorothea Van Gundy Jones, lecturer for the International Nutrition Research Foundation (Loma Linda, Calif.), will give the presentations.

1503. Amundsen, Wesley. 1968. Experience of the Seventh-day Adventist Church in North America. *American Annals of the Deaf* 113(4):896-97. Sept.
• ***Summary:*** The author admits that in both the educational and evangelical arenas, "The Seventh-day Adventist Church in North America has been rather delinquent in past years in meeting the challenge within its own ranks for a positive approach to the education of deaf children of Seventh-day Adventist parents... Presently our Church employs only three full-time ministers in service to the deaf,–two in California and one in Oregon." Neither food nor diet are discussed. Address: Secretary of the North American Missions Committee of the North American Div. of the General Conference of Seventh-day Adventists.

1504. *British Vegetarian.* 1968. History of vegetarianism in North America. Sept/Oct. p. 396-98.
• ***Summary:*** Canada: In 1911 a small organization named the Food Reform League was formed in Toronto. Meetings were held at the home of Miss E.M. Budd. When World War I began, meetings were discontinued in favor of war work.

In July 1945 Professor Arthur Stevenson initiated discussions of the formation of a vegetarian society. Later in 1945 the Toronto Vegetarian Association was established. Membership, which cost $2.00 a year, included a subscription to *The American Vegetarian.* The three presidents from 1945 to 1952 were Mr. F. Mathews, Mr. Don Scott, and Mr. Lee Pritzker. The Association's first newsletter began publication in 1954, edited by Mr. C. Pratt. An official charter was taken out in about 1955 in the name of the Toronto Vegetarian Association. In 1949 a Vegetarian Convention was held at Lake Geneva, New York, USA, and attended by several Canadians. After this the Canadian Vegetarian Union was formed. The membership began at 140 and gradually rose to about 600. The High Park Sanitarium was opened from 1907 to 1922. One Unit was founded in Calgary and another in Ottawa.

United States: Following the formation of the Vegetarian Society in Manchester, England, in 1847, the Rev. William Metcalfe was inspired to travel to America to start a similar society. He had emigrated to Philadelphia in 1817 with 41 fellow members of the Bible Christian Church, which had been founded in England by the Rev. W. Cowherd and Mr. Joseph Brotherton, M.P.; among its conditions of membership was abstinence from flesh foods and alcohol. Rev. Metcalfe held an exploratory meeting in New York in 1850.

Among the early advocates and practitioners of vegetarianism in America were Sylvester Graham, Dr. James C. Jackson, Horace Greeley, R.T. Trall, and Dr. John H. Kellogg.

One of the oldest societies still in operation is the Washington Vegetarian Society, which was organized in 1927. "The American movement is not large, but it is well served by its devoted members.

National organizations are: (1) The American Vegetarian Union, Inc., Duncannon, Pennsylvania. President: Dr. Jesse Mercer Gehman. Periodical: *American Vegetarian-Hygienists,* (2) American Natural Hygiene Society, Los Angeles, California. (3) Vegetarian Society, Inc., Hollywood, California. President: Dr. Pietro Rotondi. (4) Vegetarian Youth Movement, Los Angeles, California. c/o Dr. William A. Harris. (5) American Vegan Society, Malaga, New Jersey. Mr. H. Jay. Dinshah.

The addresses of the following local societies are given: Boyes Hot Springs, California. Chicago, Illinois. Erie, New York. Los Angeles, California (Mr. A. Abramowitz). Dearborn, Michigan. St. Paul, Minnesota. New York City, New York. San Francisco, California (Mr. D. Murphy). Washington, DC.

1507. Jones, Dorothea [Van Gundy]. 1968. Re: Death of her husband, Ed Jones. Letter to friends before Christmas, Dec. 20. 1 p. Typed.
• ***Summary:*** "Most of you know that Ed died, March 7, very suddenly. He seemed fine all day and about 15 minutes after we were in bed he relaxed and was gone with no pain or struggle. I believe he didn't know what happened. It's a blessing he didn't suffer–it is truly a wonderful way to go, but a terrific shock to those left.

"There is so much to be thankful for–seven and a half years of wonderful memories. Ed was such a happy, active companion–always traveling with me to classes. He made such a contribution to the cooking schools that it has been hard to adjust to doing them alone.

"Another thing I'm thankful for is Ed's wonderful family. They still belong to me. Thanksgiving was spent with Lois and George Bower in Redding. They are fine..." Address: 11776 Carmine Dr., Riverside, California 92505.

1508. *SoyaScan Notes.* 1968. Chronology of soybeans, soyfoods and natural foods in the United States 1968 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1968, March. Saci, a liquid soymilk in chocolate and caramel flavors, launched by Coca-Cola Industrias Ltda. in Brazil. Indicates growing interest in commercial soy beverages in Third World countries.

1968, April. First Workshop on Soybean held in New Delhi by the Indian Council of Agricultural Research.

1968, April. *Aerobics* by Dr. Kenneth Cooper published. The book soon becomes a major force in America's new wave of interest in health, fitness, and jogging.

1968, May. Conference on Protein Rich Food Products from Oilseeds held by the USDA in New Orleans, Louisiana. Oilseed proteins are increasingly seen as the answer to the "protein crisis."

1968, May. *Ten Talents* self-published by Frank and Rosalie Hurd of Chisolm, Minnesota. An early vegan cookbook (using no meat, eggs, or dairy products) with many innovative soy recipes.

1968. *International Action to Avert the Impending Protein Crisis,* a United Nations publication, recommends soybeans as the single most promising protein source to close the "protein gap."

1968, Aug. Erewhon starts importing foods from Japan, initially from Muso Shokuhin, then later by correspondence with Mr. Akiyoshi Kazama, who worked for an import/export company named Mitoku, which sold no food at that time. The initial orders include red miso (made by one of George Ohsawa's cronies) and natural shoyu made by Marushima. These soon become high-volume items.

1968. *Plant Foods for Human Nutrition,* a scientific journal, starts publication from the Vegetarian Nutritional Research Centre, Watford, Herts, England. Runs many articles on soy nutrition and on vegan diets.

1509. **Product Name:** School Porridge (Sweetened Soy-Fortified Corn Flour).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1968.
Ingredients: Maize flour 63%, soy flour 20%, jaggery raw sugar 15%, salt 1%, nonfat dried milk 1%.
Wt/Vol., Packaging, Price: 1 lb polyethylene bags, or 2 lb or 50 lb paper bags.
How Stored: Shelf stable.
Nutrition: Protein 14.1%, moisture 11.0%.
New Product–Documentation: Economist Intelligence Unit. 1969. Demand for Soya-Based High Protein Foods in Uganda. p. 50. Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 18-19. Interview with Dr. D.W. Harrison. 1982.

1510. **Product Name:** [GranoVita Sausages (Regular, or seasoned Frankfurter Style)].
Foreign Name: GranoVita Soja-Wuerstchen (Regular, or nach Frankfurter Art).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1968.
Ingredients: Vegetable oils and fats, water, soya protein, egg protein, onions, natural spices, wheat gluten, salt, glucose, yeast, rolled oats, bread crumbs.
Wt/Vol., Packaging, Price: 275 gm can of either wholesales for DM 6,30; 140 gm can for DM 4.
How Stored: Shelf stable.
New Product–Documentation: Full-page ad for 8 granoVita soy products in the book by Manfred Heide. 1977. *Vegetarische Ernährung: 193 Rezeptvorschläge und*

Speisepläne für ein Vierteljahr [Vegetarian nutrition and food: 193 recipe suggestions and meal plans for a quarter of a year]. Stuttgart, West Germany: Paracelsus Verlag.

DE-VAU-GE leaflets. 1980? Rezepte aus der GranoVita Versuchskueche. And Neue Rezepte mit Soja-Wuerstchen Frankfurter Art. "Did you know that soyfoods (Soja-Kost) are free of cholesterol and low in purines?" Manufacturer's catalog. 1981. May 1. DE-VAU-GE Sortiments-Preisliste. 4 p.

Letter from H.J. Gruetzmann of DE-VAU-GE. 1981. May 18. "Our company started producing foods in 1899. Our first Soja-product was produced around 1970. We started with Soja-sausages. Our current Soja-line contains Soja-cutlets, Soja-sausages, Soja-ready-dish, and Soja spreads. Our most popular products currently are the sausages and the cutlets, followed by the spreads and the ready-dish (Fertiggerichte). We are enclosing our current price list, where we marked the Soja-products. Note: At the top right of the letterhead and price list is written, in large letters, "granoVita."

Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products.

Form filled out and Labels sent by DE-VAU-GE. 1990. June 11.

1511. **Product Name:** Loma Linda Canned Meatless Slices (Based on Spun Soy Protein Fiber) [Chicken-Like Slices, Beef-Like Slices, Turkey-Like Slices, or Luncheon-Like Slices].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1968.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Loma Linda probably purchased the spun soy protein fibers from General Mills. Sold in 14-ounce cans. Note: This is the earliest commercial product seen (June 2007) that is a meatless alternative to turkey (one of six products).

1512. **Product Name:** Loma Linda Luncheon Slices (Frozen and Meatless; Based on Spun Soy Protein Fiber) [Chicken Slices, Smoked Beef-like Flavor, Corned Beef-like Flavor, Smoked Turkey Flavor].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1968.
How Stored: Frozen (in 1973).
New Product–Documentation: It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. Luncheon slices are frozen products that come in smoked beef-like flavor, corned beef-like flavor, and smoked turkey flavor. They are based on spun soy protein fiber, which Loma Linda probably purchased from General Mills.

Sold frozen in 1 or 2 lb packages. Note: This is the earliest commercial product seen (Aug. 2002) that is a meatless alternative to turkey (one of six products).

1513. **Product Name:** Loma Linda Soy Fortified Cereals [Ruskets, or Ruskets Crunchy].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1968.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: H.F. Meyer. 1960. Infant foods and feeding practices. A photo (p. 82) shows these two canned products. A photo of a baby's face appears on the front panel of each. See also p. 88 and 90. Page 121 gives a detailed analysis of the product. The powder, after being reconstituted, contains: Fat 3.2%, protein 2.85%, carbohydrates 5.4%. Calories per ounce: 18. Added vitamins and minerals: ferrous sulphate, calcium carbonate, dibasic calcium phosphate. Affected by terminal sterilization: No. How formulated or reconstituted: 1 vol. milk to 7 vols. water. Chemical definition and essential clinical uses: "Contains soya bean solids, dextrose, maltose, dextrins, sucrose, soya oil. A spray-dried soya food to serve the nutritional needs of the bottle-fed infant. Completely soluble and formulated to simulate human milk. Used for infants allergic to dairy milk."

1514. **Product Name:** Loma Linda VegeCuts.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1968.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Seventh-day Adventists. Food Service Improvement Committee. 1968. "Dining delightfully: Tested recipes from Adventist hospital chefs." Loma Linda VegeCuts are mentioned.

Loma Linda Food Co. 1969. "Wholesale Price List." Vegecuts are now sold in 14 oz, 20 oz, 30 oz, and 48 oz cans.

1515. **Product Name:** Luncheon Slices, or Frozen Roll [Meatless Corned Beef, Meatless Smoked Beef, or Meatless Smoked Turkey].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1968.
Ingredients: Meatless Corned Beef: Textured vegetable protein (soy protein isolate, wheat gluten and flour), egg

© Copyright Soyinfo Center 2014

whites, soybean and/or corn oil, partially hydrogenated soybean and coconut oils, flavorings (hydrolyzed vegetable protein, yeast extract, garlic and onion powder, natural smoke flavor, artificial flavors, spice), sugar, salt, artificial colors, disodium guanylate, disodium inosinate, niacinamide, etc.
How Stored: Frozen.
New Product–Documentation: *Soybean Digest Blue Book.* 1968. p. 110. "Luncheon Slices." Manufacturer's catalog. 1984, undated. Frozen Products. Label reads: "Vegetable Protein Slices. Rich in Vegetable Protein. Artificial Flavor."

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. The ingredients in the Meatless Corned Beef (rolls, or luncheon slices) are those given above. Note: This is the earliest commercial product seen (Aug. 2002) that is a meatless alternative to turkey (one of six products).

1516. **Product Name:** Holiday Roast (Meatless Turkey-like Product Based on Spun Soy Protein Fibers).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1968.
How Stored: Frozen.
New Product–Documentation: *Soybean Digest Blue Book.* 1968. p. 110. Perhaps later renamed Dinner Roast (1980).

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. Holiday Roast is a frozen turkey-like product based on spun soy protein fiber.

Worthington Foods. 1989. "The Tradition of Healthy Foods" (50th anniversary booklet). p. 21-22. Worthington's first products made with spun soy protein fibers were White Chik, Beeflike, Prosage, Stripples, and Holiday Roast (with a plastic wishbone). All were hits and sales took off. These products were sold frozen. In "October 1963 a series of television, radio and newspaper advertisements featuring the new frozen foods was introduced." Note: This is the earliest commercial product seen (Aug. 2002) that is a meatless alternative to turkey (one of six products).

1517. **Product Name:** Turkey Style.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1968.
New Product–Documentation: *Soybean Digest Blue Book.* 1968. p. 110. Note: This is the earliest commercial product seen (Aug. 2002) that is a meatless alternative to turkey (one of six products).

1518. **Product Name:** Smoked Beef (Meatless).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1968.
Ingredients: Soybean protein, water, wheat protein [wheat gluten], corn oil, vegetable shortening, egg albumin, wheat flour, yeast extract, hydrolyzed vegetable protein, flavorings, salt, corn syrup solids, MSG, caramel, U.S. certified color.
How Stored: Frozen.
New Product–Documentation: *Soybean Digest Blue Book.* 1968. p. 110. "Luncheon Slices."

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "Smoked Beef (Worthington)." This is an institutional product.

Manufacturer's catalog. 1984, undated. Frozen Products. Label reads: "Vegetable Protein Slices. Rich in Vegetable Protein. Artificial Flavor."

1519. **Product Name:** Smoked Turkey (Meatless).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1968.
Ingredients: Soybean protein, water, wheat protein [wheat gluten], water, corn oil, egg albumin, soy protein, hydrolyzed vegetable protein, salt, MSG, sugar, flavoring, vegetable gum, onion powder, U.S. certified color.
How Stored: Frozen.
New Product–Documentation: *Soybean Digest Blue Book.* 1968. p. 110. "Luncheon Slices."

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "Smoked Beef (Worthington)." This is an institutional product.

Manufacturer's catalog. 1984, undated. Frozen Products. Label reads: "Vegetable Protein Slices. Rich in Vegetable Protein. Artificial Flavor." Note: This is the earliest commercial product seen (Aug. 2002) that is a meatless alternative to turkey (one of six products).

1520. Hansen, Louis A. 1968. From so small a dream. Nashville, Tennessee: Southern Publishing Assoc. 288 p. Index. 20 cm.
• ***Summary:*** About the Seventh-day Adventist Southern Union Conference from 1897. Contains extensive, inspiring information about Madison College in Tennessee (p. 42, 114-20, 147, 150, 164-77, 179-90, 254), but little about Madison Foods. As early as 1908 Mrs. Ellen G. White stated in "An Appeal for the Madison School" that if the Madison plan were properly extended and faithfully carried out, "We as a people would be a spectacle to the world, to angels, and to men." Address: Tennessee.

1521. Hon, Hazel. comp. 1968. Three week vegetarian menu.

© Copyright Soyinfo Center 2014

Sydney, Australia: Published by the author. 88 p. 24 cm.
• ***Summary:*** This Seventh-day Adventist vegetarian cookbook uses lots of canned Adventist food products, gluten, and whole soybeans. The Four Basic Food Groups (p. 7) are fruits and vegetables, cereal and bread, protein (including legumes, cottage cheese, eggs, soy cheese, nuts, peanut butter, and various manufactured nuts, soybean and gluten products), and milk groups ("use milk or a suitable alternative such as soybean milk").

A table titled "Seasonings" (p. 8) divides them into (1) Not irritating. (2) Slightly irritating. (3) Strongly irritating: Cloves, ginger, paprika (Hungarian). (4) Irritating, stimulating, harmful: Cayenne pepper, chili pepper, horse-radish, mustard, pepper (black or white). (5) Seasoning herbs: Oregano, tarragon, chervil, sage, basil or sweet basil, bouquet garni, marjoram, rosemary.

A table (p. 9) lists "Goods obtainable at all Sanitarium health food shops" including gluten flour, soya flour, Soyagen (liquid or powder). Sanitarium canned foods: Nutmeat, Nutolene, Soya Beans, Vegetarian Sausages, Lima Beans. Worthington Foods: Soya Meat in tins. Chicken Style sliced. Chicken Style diced. Beef Style sliced. Beef Style diced. Loma Linda: Vegelona, and Linkettes.

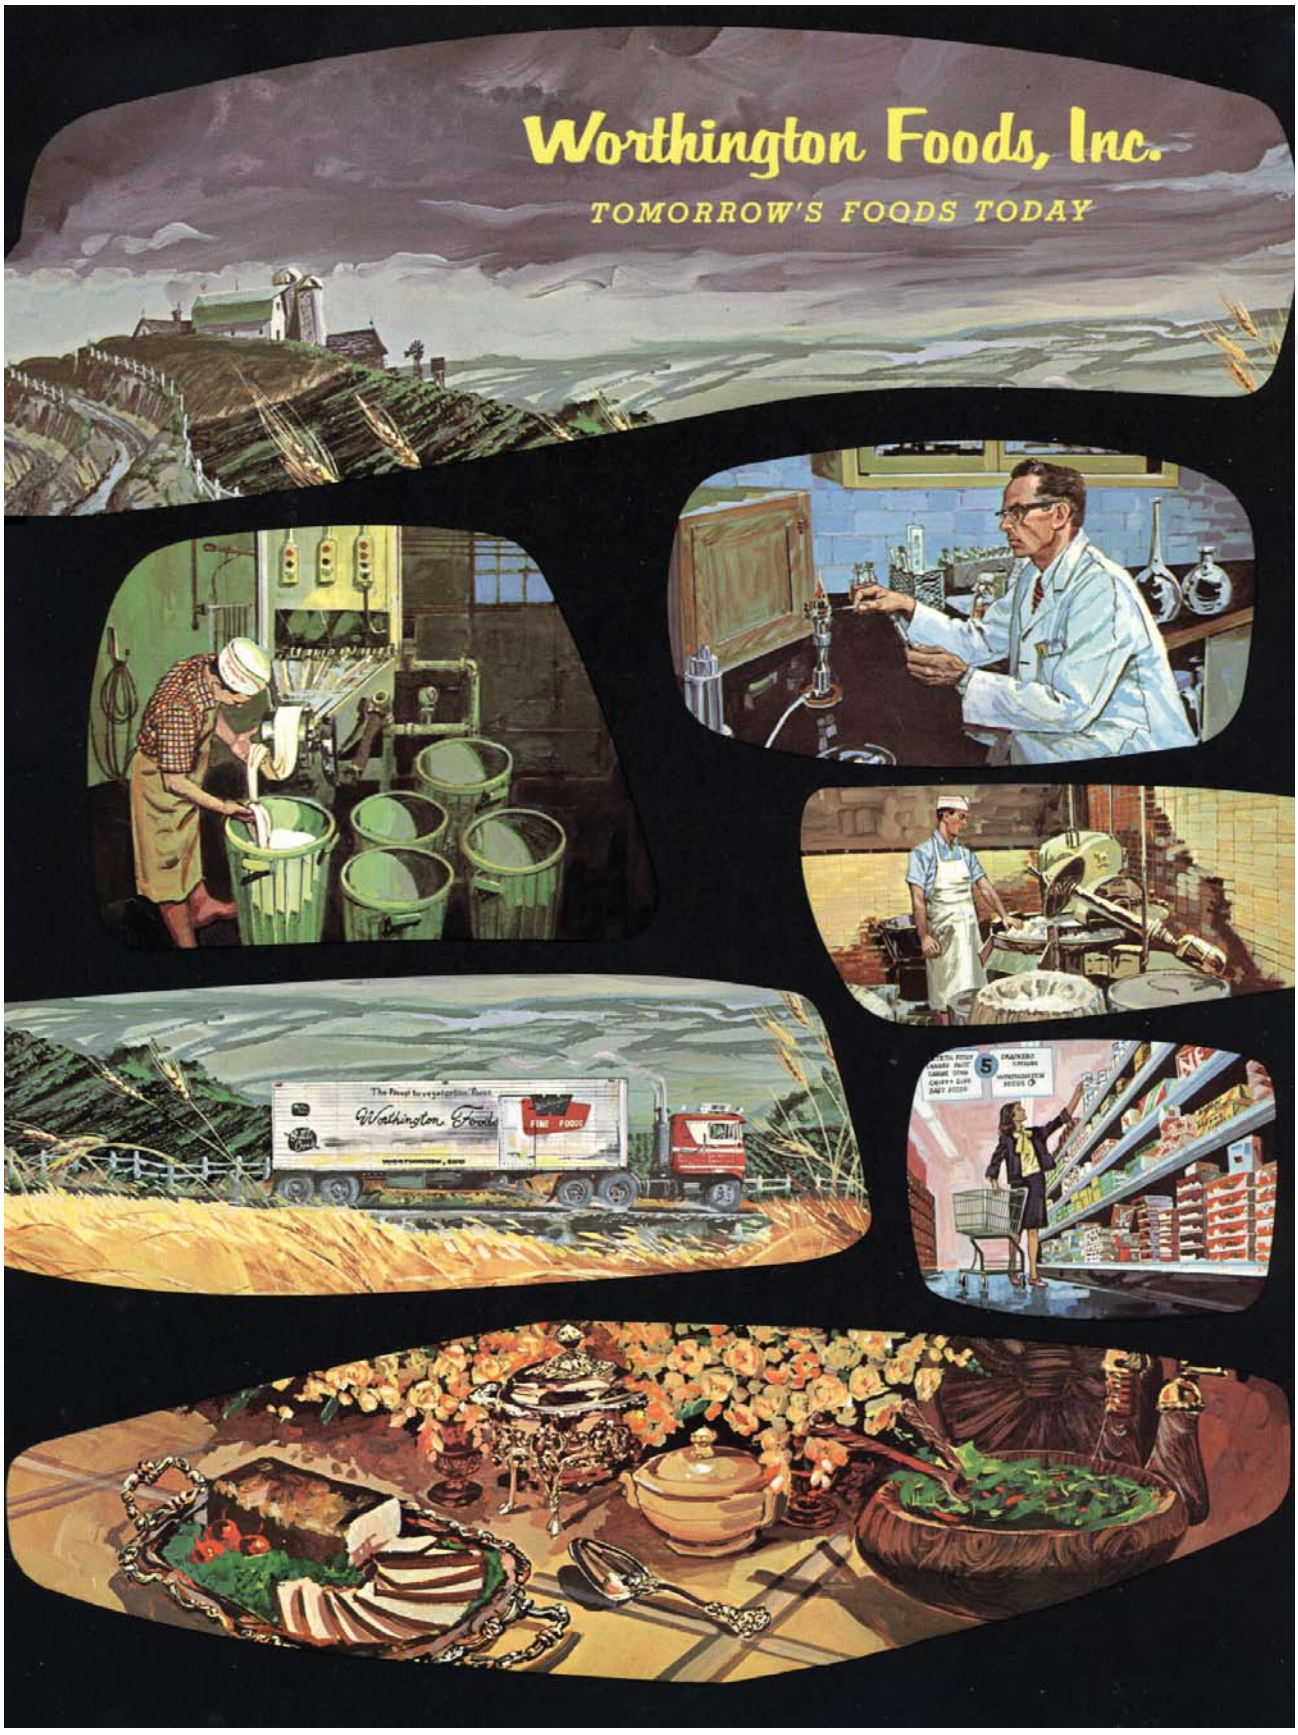
Three weeks of menus and recipes are given. Soy-related recipes include: Soya nut loaf (p. 30). Soybean omelette (p. 65). Soya vegetable loaf (p. 70). Soya mayonnaise (p. 71). Soya oven croquettes (p. 82).

Note: This is the earliest document seen (Oct. 2004) concerning the work of Sanitarium Foods in Australia with soy. Address: 54 Castle Howard Road, Cheltenham, N.S.W., Australia.

1522. Jones, Dorothea Van Gundy. 1968. The soybean cookbook: Adventures in zestful eating. New York, NY: Arc Books, Inc. ix + 240 p. Foreword by Ruth Stout. Index. 21 cm.
• ***Summary:*** This lacto-ovo-vegetarian cookbook is identical to the original 1963 paperback edition by the same title except that this is a hardcover edition and the publisher is listed as Arc Books rather than Arco Publishing. The publisher's address is the same. Address: Arlington, California.

1523. Seventh-day Adventists. Food Service Improvement Committee. 1968. Dining delightfully: Tested recipes from Adventist hospital chefs. Washington, DC: Review and Herald Publishing Assoc. 159 p. Illust. (some color). 25 cm.
• ***Summary:*** This Adventist vegetarian cookbook is sponsored by the Medical Department of the General Conference of Seventh-day Adventists, and the Seventh-day Adventist Hospital Association. The entrees in this book use lots of meatlike products (many of which contain soya) manufactured by Seventh-day Adventist food companies. These products include: Worthington White Chik (frozen). Nuteena. VegeBurger. Wham. Bac-O-Chips. Smoked Chipped Prime. Worthington Prime (chipped, smoked [frozen]). Battle Creek Vegetable Skallops. Loma Linda VegeCuts.

1524. Worthington Foods, Inc. 1968? Tomorrow's Foods Today. Worthington, Ohio. 19 p. Undated. 28 cm. [3 ref]
• ***Summary:*** See next page. Contents: Message from management. Tomorrow's Foods Today (the company slogan). Research and development department, W.E. Hartman, director. Production department, Sam Brown, manager. Sales department, W. Kenneth Case, manager. The Worthington line. Engineering department, B.J. Knecht, chief engineer, B.L. Knecht, assistant engineer. Data processing department, John Dalton, manager. Credit and traffic, Al Foster, manager. Advertising department, Michael A. Jones, manager, James Converse, art director. Purchasing and office management, Luther Lyle, manager. Personnel department, Kenneth Innocent, manager. Accounting department, Richard Waters, manager. The future. The wonderful Choplet. Board of directors: James L. Hagle (chairman), Warren E. Hartman, Allan R. Buller, George T. Harding, III, M.D., Warren G. Harding, M.D., George E. McKay, Harrison Evans, M.D.



A color photo shows each of the products in the Worthington line. All are canned, except those followed by an asterisk: Cutlets, Fry Sticks, Vegetable Skallops, Sandwich Spread, Chili, Vegetarian Luncheon Slices*, Kaffir Tea, Soyameat, Vegetarian Dinner: Salisbury Steak Style*, Soyameat: Diced Chicken Style, Choplets, Vegetarian Pie: Chicken Style*, Vegetarian Dinner: Chicken Style*, Holiday Roast*, Prosage: Breakfast Treat*, Vegetarian Luncheon Slices: Smoked Beef Style*, Vegetable Steaks, Numete, Vegetarian Luncheon Slices: Use Like Corned Beef*, Soyameat: Diced Beef Style, Breading Meal: Fry and Loaf Mix, Vegetarian Dinner: Ham Style*, Soyameat: Beef Style Slices with Gravy, Soyameat: Sliced Chicken Style, Meat Loaf Mix*, Veja-Links, Soyamel: All Purpose, Saucettes, Infa-Soy, Soyamel: Banana Beverage, Fortified Soyamel: A Powdered Soy Milk. The section titled "The future" is prophetic. "Since 1962 Worthington Foods has been growing in sales by nearly 20 percent a year. This is significant but modest in comparison to what is coming. For in out opinion the growth of the vegetable protein industry very shortly will be astronomical. The reasons are fairly simple.

"First, these new foods not only taste good. They are nutritionally sound.

"Second, vegetable protein foods offer significant economies over traditional meats. When grazed, an acre of land offers approximately 43 pounds of protein. Plant that same acre to soybeans and the yield is about 450 pounds of protein. The economic advantages of vegetable proteins are widening rapidly today. They will continue to widen.

"Third, vegetable protein foods are more convenient, and convenience foods will soon dominate the food

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

business. No long hours of marinating, basting, of baking are necessary with these new foods. No skin to peel or bones or fat to cut out. With vegetable protein foods, taste and tenderness are controlled. The housewife or chef need only heat and serve.

"A forth reason why the growth of this industry is going to be enormous shortly is because of the protein shortage in the world. The U.S. Department of Agriculture recently pointed out that even in the United States, 'Future protein needs must be met by chemically nurtured and protected plant materials. They certainly cannot be met by animal protein.'"

Note 1. This brochure contains an original illustration of each of the men mentioned above. Note 2. All three dated footnotes at the end of this brochure are from the year 1967, and the latest is Dec. 1967. Address: Worthington, Ohio.

1525. Cade, Leland. 1969. 'Artificial meats': Something to contend with in the years ahead–Outlook 1969. *Washington Farmer* (*Washington State*). Jan. 2. p. 8-10.
• ***Summary:*** Contains a long list of "artificial meats" made by Worthington Foods. A photo shows many of these canned products.

1526. *Food Processing* (*Chicago*). 1969. Soy protein debuts as main course. Winter. p. F4-F7. Foods of Tomorrow section.
• ***Summary:*** About textured soy protein products that can take the place of meat, especially Bontrae (from General Mills, Inc., Minneapolis, Minnesota), TVP from ADM (Minneapolis, Minnesota), and Stripples from Worthington Foods (Worthington, Ohio). The costs vary widely. "Unflavored spun soy fibers in an acid-salt media [medium] cost about 50 cents a pound." Prices of the finished products to consumers are about 2/3 to 3/4 of that of the meat they can replace. "Expanded-soy textured protein [extruded textured soy flour] is less expensive. Cost in chunk or dry granular form ranges from 12 to 40 cents a pound. Since it rehydrates with 2 parts water, the cost on an as-served basis ranges from 4 to 13 cents a pound."

Bontrae comes in the form of frozen, free-flowing, pre-cooked crumbles or dice packed in 5-lb cartons. "General Mills is making a sizable increase in the capacity of its pilot plant for the production of Bontrae..." Bontrae is presently being marketed mainly to Minnesota State institutions, hotel, restaurant, and institutional accounts in Albany, New York, and college food service accounts in the Baltimore (Maryland), and Washington, DC, area.

ADM "calls its expanded-soy textured vegetable protein TVP" (registered trademark). The company "had the first production-size facility for textured soy protein and is now in the midst of a major expansion." In the U.S., TVP has been sold mainly to food processors for use in canned, dehydrated, and frozen foods. But in Europe it is sold mostly to consumers, in 200 gm (7 oz) retail packages.

Swift & Co. (Chicago) entered the market 2 years ago with Texgran, expanded soy protein. In less than a year, sales exceeded capacity. A new plant, being constructed in Champaign, Illinois, should be finished soon.

H.B. Taylor Co. (Chicago) sells Textrasoy, an expanded-soy textured protein, which is the lowest cost textured protein available. Until about a year ago it was sold to the pet food industry.

"Six years ago [1963], Worthington Foods introduced a line of simulated meats based on spun-soy textured protein supplied by Ralston Purina." In 1966, Worthington built its own plant for making the "spun-soy fibers." A new line has just been developed for the institutional market. Worthington's latest product is Stripples, which can replace bacon. It undergoes no shrinkage in preparation for serving, compared with a loss of about 25% of its weight when bacon is broiled or fried. Although it costs twice as much as bacon, "the as-served cost is only half that of bacon." Ralston Purina still makes spun-soy textured protein in the form of unflavored fibers in an acid-salt media, or in flavored dehydrated form.

Color photos show: (1) A table set with 4 ready-to-eat dishes, each containing "Bontrae spun-soy textured protein," which "is being successfully market tested in restaurants and institutions." On one side is a menu with the bold title "C'est Bontrae." (2) A smiling lady placing silver platters of food on a sideboard. The caption: "TVP expanded-soy textured protein is penetrating the home market in Europe." (3) Three traditional bacon dishes on a table, each containing Stripples. The "latest soy protein convenience food," its hickory-smoked strips can be used in place of bacon. Both the light and dark stripes are protein.

1527. Layrisse, M.; Cook, J.D.; Martinez, C.; Roche, M.; Kuhn, I.N.; Walker, R.B.; Finch, C.A. 1969. Food iron absorption: A comparison of vegetable and animal foods. *Blood* 33(3):430-43. March. [17 ref. Eng; spa]
• ***Summary:*** "Iron absorption measurements have been made in 131 individuals relating the absorption of nine different foods tagged biosynthetically with radioiron. Relatively low absorption, ranging from 1.7-7.9, was found with wheat, corn, black beans, lettuce and spinach. Higher values of from 15.6-20.3 were observed with soybeans, fish, veal and hemoglobin." Address: Instituto Venezolano de Investigaciones Cientificas (IVIC), Caracas, Venezuela; Dep. of Medicine, Loma Linda Univ., Loma Linda, California; Depts. of Medicine and Botany, Univ. of Washington, Seattle, Washington.

1528. Breth, Fred E. 1969. Ersatz-foods: The danger ahead. *British Vegetarian.* March/April. p. 141-45.
• ***Summary:*** Writing in a critical tone, the author discusses the various products resembling meat and dairy products

© Copyright Soyinfo Center 2014

now available to American shoppers. "Turkey meat that has never held a feather and milk that has never been near a cow... These foods are making progress in markets around the world. Like the prospect or not, it is obvious we shall have to live with laboratory-bred proteins in the not-too-distant future." For more than a decade, food companies have been developing imitation animal proteins, based largely on soya bean proteins. Soya bean derivatives are being used to "stretch" low-cost meats.

"The American dairy industry has yet to find an answer to soya-protein based coffee whiteners, whipped cake toppings, cream-type and frozen desserts. The consuming public has fully accepted them some time ago–and likes them. Are synthetics a real threat to animal products? Expert opinion on this question is deeply divided." Mr. J.L. Hagle, president of Worthington Foods Inc. ("at present the major producer of 'synthetic foods'") believes that "Granted enough time, the relative efficiency of man-made foods will work in their favour."

"Professor C.O. Chichester, University of California, put it even more bluntly: '... the isolation of plant proteins and their processing into textured products may very well result in a major change in the eating habits of the world.'"

"'Meatless' meats, also called 'synthetic meats,' 'analogue meats' and 'textured meats' are made from isolated soya-protein (90 per cent. protein), which is a tasteless, odorless powder."

"Worthington Foods Inc. is already marketing about 30 different 'meat' items, including fried chicken, dried beef, meat loaf casserole, croquettes, chicken show mein, 'soymeat' sandwiches, sandwich spread, bacon bits and so on."

Experts predict plenty of competition in the field of "high-protein drinks" (H.P.D.s). Large companies like Monsanto (a chemical company), Pillsbury (a flour mill), and Swift (a meat packer) have already entered this market. They are all aware of the success story of "Vita-Soy" [Vitasoy], "a straight, three per cent. protein soya-bean milk drink," which sells 60 million bottles a year and has captured 25% of the Hong Kong soft drink market; it sells for as little as 5 pence per bottle. And they are aware of a similar powdered soy protein drink [Saridele] which contains 18% protein and is being marketed successfully in Djakarta, Indonesia and was introduced in 1957; 300 tons/year are now being produced.

The author concludes that these new foods are a necessity from the viewpoint of global nutrition.

Note: This is the earliest English-language document seen (Nov. 2003) that contains the term "meatless meats" or "meatless meat" (with any combination of quotation marks). Three other publications also used this term later in 1969.

1529. Nagle, James J. 1969. Iowa plant to produce soy protein. *New York Times.* May 18. p. F15.
• ***Summary:*** General Mills announced that it has begun construction of a multimillion dollar plant in Cedar Rapids, Iowa, for the production of soy protein foods marketed under the brandname Bontrae. The plant is necessary because demand for the company's Bontrae products has outstripped the present capacity of the pilot plant that makes them.

General Mills has invested millions of research dollars and "more than 300 man years of effort" in Bontrae foods, which are made from defatted soybean meal that is transformed into spun soy protein fiber. Bac-O, the first product, went into test markets several years ago and is now distributed nationally through retail food stores.

Soy protein products made by Swift & Co., ADM, and Worthington Foods are also discussed.

1530. Tabuchi, Ichiro. 1969. Tônyû inryo ni kansuru chôsa to kongo [A survey on soymilk and its future]. *Daizu Kaihatsu, Shokuhin Kaihatsu* (*Soybean Development, Food Development*). May 27. p. 10-15. [Jap]
• ***Summary:*** Contents: Why we started producing soymilk. First is the economic reason; getting soymilk directly from soybeans is less expensive than feeding cows and getting milk from them. Second is the health reason. Our school has 3 goals in our education; the help develop a sound mind in a sound body with high moral values. We also emphasize independence and self-sufficiency, in part be encouraging students to be active in one of the businesses that are part of the school. And we encourage students to produce, as much as possible, what we eat at school.

We used to run a self-sufficient dairy farm and produced milk, which we used at the school and sent any extra to the Tokyo Eisei Byôin (Tokyo Adventist Hospital), etc. But during World War II for about 2 years, Christianity in Japan received pressure from the Japanese government. After the war we lost the milk cows and couldn't run the dairy farm. We switched these plants to make other foods. At this time we were using the nonfat dry milk from the USA–which was not tasty, or a little milk which we got somewhere. But that was not enough for the growing children at school. We needed the least expensive and most nutritious milk we could find.

Right at this time, Dr. Harry W. Miller visited us. He was an honorary member of the Japan and American Soybean Association, and a developer and researcher of soymilk; he urged us to make soymilk.

But actually we were not so sure about making soymilk, so we hesitated. It was a long time later that we decided to do so.

The main reason for our hesitation was that even if we made soymilk, we were not sure that the children would like it and drink it. But as we think about it now, it was an unnecessary worry.

Anyway, Dr. Miller stayed for two months at our school and taught us how to make soymilk. He also gave three lectures on soymilk. mostly from a nutritional point

© Copyright Soyinfo Center 2014

of view. He did this because some thought that soymilk was nutritionally inferior to cow's milk and therefore it would not be a good idea to feed soymilk to growing children. Therefore he had to correct this point of view.

So in 1959, from the earnest recommendation (*nesshin na susume*) of Dr. Miller and the wise decision of our school principal, we discontinued the use of dairy milk and switched to soymilk only.

There was the opinion that we should keep both and let individuals decide which they wanted to drink.

It has been just ten years since we made the decision to switch to 100% soymilk. As I look back, I realize that we were now free of the work of feeding, caring for, and milking dairy cows; that was a big plus.

At present we make 1,000 bottles of soymilk a day, and this work is done by 1 person in half a day; it is very efficient.

Also discusses: Physical condition improves with ongoing soymilk consumption. Boys (male students) tend to like soymilk more than girls. Try not to lose the characteristics of soymilk.

Note: This is the earliest publication seen written by Mr. Tabuchi about soymilk and Soyalac. Address: Nihon San-iku Gakuin.

1531. Emerson, R.J. 1969. AID incentives to U.S. commercial operations in developing countries. *USDA Agricultural Research Service* ARS 72-71. p. 137-39. May.
• ***Summary:*** Discusses Saci to be made by the Coca Cola Company in Brazil, Vitasoy concentrate to be made by Monsanto in Southeast Asia and Latin America, and Incaparina made by Quaker Oats in Latin America. Gives details on AID incentives to private investment by U.S. companies in developing nations. Recently AID has established, within the Office of Private Resources, a Private Investment Center and a Private Resources Development Service. Address: Office of Private Resources, Agency for International Development, U.S. Dep. of State, Washington, DC.

1532. *Food Engineering.* 1969. Vegetable 'meats' look good for the '70s. 41(5):85-87. May.
• ***Summary:*** Pioneer producer Worthington Foods, Inc. of Worthington, Ohio, now makes more than 60 "meatless-meat products." Sales are growing 20% a year, quality is steadily improving, and consumer awareness is growing. A larger proportion of the simulated meats has been sold to people abstaining from meat for religious, health, or philosophical reasons, but purchases have also been made by the meat-consuming public.

Worthington is taking a sophisticated new marketing approach with its bacon-like slices named Stripples, which are made from randomly layered, spun soy protein fibers. The process of making Stripples is described. The company spins soy protein isolate purchased from Ralston Purina, Central Soya, and others. Address: Worthington Foods, Inc., Worthington, Ohio.

1533. Gentry, Robert E.; Connolly, Eleanor M. 1969. Fabricated foods. *Stanford Research Institute, Report* No. 374. 16 p. May. (Menlo Park, California, and Zurich, Switzerland).
• ***Summary:*** This is subtitled "A research report by the Long Range Planning Service." Contents: Executive summary. Scope and definitions. Present status and outlook: Changes in product mix, changing technology. Impact on food processing industry: Markets, marketing strategies, processing, research and development. Impact on food service industry. Impact on food wholesalers and retailers. Impact on flavor technology. Impact on packaging materials. Impact on agriculture: Meat and poultry, dairy products, oilseeds, grains. Impact on petroleum, natural gas, and coal. Boxes: New protein sources. Approval by the Food and Drug Administration (FDA). Representative groups of companies developing new sources and forms of food. Examples of fabricated foods–1980.

This report predicts that sales of fabricated foods in the USA will increase from about $1,500 million in 1969 to approximately $7,000 in 1980, but will still account for only 5% of total sales of the food processing industry. The primary impact during the 1970s will be on convenience, snack, and other specialty foods.

"Sales of meat, seafood, and poultry analogs amounted to only about $2.5 million in 1966. Worthington Foods and Loma Linda Foods were the major suppliers to a primarily religious and vegetarian market. In the past few years, several major food companies have entered the market and sales have risen to an estimated level of $10 million. As flavor and texture improve, 1980 sales will soar to $1,500 million to $2,000 million." The foodservice industry will be a prime outlet for the new products.

The most important food analog in America today is margarine. Among dairy foods, margarine accounts of about 66% by volume of the butter market, nondairy whipped toppings have about 60% of the whipped cream market, and coffee whiteners have about 35% of the cream market. In terms of sales: In 1968 sales of margarine are $475 million out of $1,150 million (41%) for the total butter and margarine market. By 1980 this is predicted to increase to $750 million out of a total $1,250 million (analogs will have 60% of the total market). Sales of coffee whitener are $30-35 million out of $85-100 million (35%) for the total coffee cream and coffee whitener market. By 1980 this is predicted to increase to $100 million out of a total $130-150 million (71%). Sales of nondairy whipped topping are $25 million out of $40-50 million (55.5%) for the total whipped cream and nondairy whipped topping market. By 1980 this is predicted to increase to $50-60 million out of a total $80-

© Copyright Soyinfo Center 2014

100 million (61%). Sales of filled and imitation milks are $3-4 million out of $3100-3200 million (0.11%) for the total milk and imitation milk market. By 1980 this is predicted to increase to $600 million out of a total $3800-4000 million (15%, the biggest percentage increase). Sales of mellorine and other "frozen desserts" are $45 million out of $1200-1300 million (3.6%) for the total frozen dessert market. By 1980 this is predicted to increase to $80-90 million out of a total $1500-1700 million (5.3%).

A table (p. 5) titled "Soy Protein Products" discusses soy flour and grits, soy protein concentrate, and soy protein isolate, describing briefly the protein content, processing, price per pound, 1967 U.S. consumption, and applications. In 1967 soy flour and grits sold for $0.075/pound and 105-110 million pounds were consumed. Soy protein concentrate sold for $0.18/pound and 17-30 million pounds were consumed. Soy protein isolate sold for $0.37/pound and 22-35 million pounds were consumed.

Page 10 lists representative companies developing new sources and forms of food. For each, the company name, city, state, and product name or names are given. Companies selling soy protein products include Archer-Daniels-Midland (Minneapolis, Minnesota), Bryan Bros. Packing Co. (Subsidiary of Consolidated Foods Corp, Chicago, Illinois), Central Soya Co., General Mills Inc. (Minneapolis), Griffith Laboratories, Inc. (Chicago), Loma Linda Foods (Riverside, California), Ralston Purina Co., Swift & Co. (Chicago), H.B. Taylor Co. (Chicago), USDA ("Developing edible forms of soybean protein"), and Worthington Foods, Inc. (Worthington, Ohio).

Note: This is the earliest document seen (Aug. 2002) containing statistics on the meat alternatives industry or market–by geographical region. Address: 1. Senior economist; 2. Industrial economist, Stanford Research Inst., Menlo Park, California 94025. Phone: 415-326-6200.

1534. *Tomorrow's Foods for Today's Homemaker.* 1969-1977. Serial/periodical. Worthington, Ohio: Worthington Foods, Inc. Vol. 1. May/June 1969. Frequency: Bi-monthly. *
• ***Summary:*** Continues: *Tomorrow's Foods Today.* Continued by: *Tomorrow's Foods* (which existed in summer 1986), then by *The Healthy Appetite*, which started in Feb. 1992. Talk with Worthington Foods. 1992. April 8. The company has kept only scattered issues of this bi-monthly publication. Address: Worthington, Ohio.

1535. Lemon, Frank R.; Kuzma, Jan W. 1969. A biologic cost of smoking: Decreased life expectancy. *Archives of Environmental Health* 18(6):950-55. June. [25 ref]
• ***Summary:*** The mortality and survival of 34,217 Seventh-day Adventists (SDAs) from 1960 to 1962 was subjected to a life table analysis and compare to similar data for the California population at that time. The SDAs had a much lower mortality rate and longer survival, probably because they do not use tobacco.

"Raymond Pearl (1935) was perhaps the first to document both the high death rates and decreased longevity of tobacco smokers. It is surprising now that his work stimulated so little immediate response to what has more recently been recognized as a major public health problem..." Address: 1. Univ. of Kentucky School of Medicine, Lexington, Kentucky; 2. Loma Linda Univ. School of Public Health, Loma Linda, California.

1536. Worthington Foods, Inc. 1969. Create! Improve! Processed plant protein (Portfolio). Worthington, Ohio. Eight inserts. 28 cm.
• ***Summary:*** These 8 glossy color leaflets have a full-page photo on one side and a description of one product on the other. The cover letter (on Worthington letterhead) from Radcliffe F. Robinson, dated 22 Aug. 1969, explains that these are new vegetable protein products that Worthington now supplies to the food industry. The products are: Ground beef type granules. Chicken-alike cubes. Red meat extender. Fibrotein–spun protein fibers. Dehydrated ham-alike nuggets. Bacon-style chips. Chicken meat extender. Textured simulated meats. Address: 900 Proprietors Rd., Worthington, Ohio 43085.

1537. Landrum, Carl. 1969. 'Egg-O-See' Breakfast Food Co.: From Quincy's past. *Quincy Herald-Whig* (*Illinois*). Sept. 28. p. 3C.
• ***Summary:*** This company was established in about 1900 in Battle Creek, Michigan, by John E. Liniham. For an improved and expanded history see *Landrum's Quincy.* Vol. 1, by Carl and Shirley Landrum (1996, p. 142-44).

The company was absorbed by the Kellogg Breakfast Food Company of Battle Creek and the local mill was abandoned in about 1930. The building was next used to process soybeans! In about 1935 National Mills, Inc. used the old Egg-O-See plant for the extraction of soybean oil until the summer of 1939, when the business was sold to the Quincy Soybean Products Company" [owned by Irving Rosen]. All of the old Egg-O-See buildings of the original business were razed in about 1958.

A photo shows the "Egg-O-See" plant of the Battle Creek Breakfast Food Co. at 111-129 South Front in about 1910. One of the first firms in the USA to manufacture packaged breakfast cereals, it was finally taken over by the Kellogg Breakfast Food Co.

1538. Economist Intelligence Unit. 1969. Demand for soya-based high protein food in Uganda. EIU Ltd., Spencer House, 27 St. James's Place, London, S.W.1, England. v. + 192 p. Sept. 28 cm.
• ***Summary:*** This study was commissioned in April 1969 by UNICEF following a request by the Ministry of Planning and Development, Government of Uganda. The purposes of the

© Copyright Soyinfo Center 2014

study are: (1) to determine the market potential in Uganda for protein enriched foodstuffs, and (2) to determine the best methods of encouraging low income groups to purchase high protein foods. The study deals extensively with the company Africa Basic Foods Inc. Production of soy products for Jan-June 1969 were: Soya Flour (full-fat) 28,920 kg, School Porridge 14,310, Soya Porridge 2,970, Soya Maize 2,430, Soya Nuts 1,820 kg.

Contents: Preface. A. Background: Introduction, cash income by district, socio-economic and medical background, distribution system. B. Market for soya-based products: General analysis of the markets for soya, demand from educational institutions, demand from hospitals, demand from canteens and other institutions, demand for bakery products, demand for an infant food, other products. C. Promotion: Institutional promotion, promotion through health education, commercial promotion, packaging, distribution of soya-based products. D. Conclusions and recommendations.

The Preface expresses thanks to many organisations and individuals who assisted the E.I.U. team in its study: "We particularly wish to thank the Ministries of Education and Health and the individual hospitals and schools interviewed. We greatly appreciate the assistance rendered by Miss Pollard of the School Meals Section, Ministry of Education, Dr. Church and Mrs. Stokes of Mwanumugimu Clinic, Mulago Hospital, Mr. Belshaw of Makerere University College, and Mrs. Macrae, who kindly allowed us to quote extensively from her MSc Thesis. We also wish to thank Dr. Harrison of Africa Basic Foods for the very full co-operation he gave the team."

Note 1. This is the earliest publication seen (Dec. 2013) that mentions Africa Basic Foods of Uganda, or its founder Dr. D.W. Harrison.

Note: This is the earliest document seen (Dec. 2001) that contains industry or market statistics for soynuts by individual companies. Address: London, England.

1539. Prestbo, John A. 1969. Meatless 'meats': Several firms develop soybean-based copies of beef, pork, chicken. Some now on market mixed with real thing; low cost, high-protein food is aim. Questions about taste, labels. food aim. *Wall Street Journal.* Oct. 2. p. 1, col. 1 and p. 21, col. 4.
• ***Summary:*** Discusses soy-based "pork, beef, and nuts" made by 6 U.S. companies including ADM, General Mills, Swift & Co., Worthington Foods, and Ralston Purina Co. Americans are eating more of these meat analogs than they may realize. "Soup mixes, canned stews and chili, frozen ravioli and prepared, frozen hamburger patties are among a growing number of grocery store staples that now contain relatively small amounts of flavored, textured soybean 'meats' along with real meat. In many instances, the only mention of the analogs on the labels of these convenience foods is in the fine-print list of ingredients. Analogs also are being tested in restaurants, factory cafeterias and institutions."

"Since last year, the New York State Department of Mental Hygiene has been adding General Mills Inc.'s meatless crumbled 'beef' and diced 'ham' and 'chicken' to meals for its 90,275 patients in 49 institutions."

Sales of soy-based analogs this year are estimated at $10 million and growing fast, up from about $3 million 5 years ago. "One study conducted by a West Coast research firm forecasts sales of $1.5-$2 thousand million for the products by 1980, which would equal 5-6% of the meat and poultry market now projected for that year."

"One of the first products to use analogs, Skippy Peanut Butter with Smoky Crisps (simulated 'bacon' bits), was dropped last year after little more than a year in test markets."

"Last year a cattlemen's convention innocently devoured a banquet entree of 'meat loaf,' only to be jolted later by a speaker who told them they had eaten soybeans, not beef."

"Right now, most meat analogs retail for as much or more than the real meat they imitate. But eventually analogs' biggest attraction is expected to be low cost–roughly half that of trimmed, boned and cooked real meat."

Extruded soy "meats" wholesale for an average of $0.35/lb., while those made from spun soy protein fibers range from $0.45 to $0.80/lb. General Mills is building its first meat analog plant at Cedar Rapids, Iowa. Worthington Foods makes a bacon analog named Stripples, which sells for $0.79 per half pound package. "Worthington is also developing meatless breakfast sausages with similar characteristics which it plans to call Sizzles.

"Other food makers are trying different approaches to using analogs. Nalley's Fine Foods division of W.R. Grace & Co. is test-marketing Meat Mate, a package containing dehydrated, textured soy particles. When mixed with a pound or more of ground meat and some water, the particles expand, extending the meat weight by up to 50%. Different types of Meat Mate contain various spices." Other products include Wham, Bac-Os, and Bac'n.

• ***Summary:*** "General Mills, the Ralston-Purina Company, Worthington Foods and other food processors are all actively researching and test marketing meat analogs." A diagram (courtesy of General Mills) shows how textured soy protein meat analogs, made from spun soy fibers, are manufactured. Address: Food Service Consultant, Baltimore, Maryland.

1541. **Product Name:** Stripples (Meatless Bacon-like Strips Based on Spun Soy Protein Fibers).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.

© Copyright Soyinfo Center 2014

Date of Introduction: 1969 October.
Ingredients: Incl. spun soy protein fibers.
How Stored: Frozen.
New Product–Documentation: Notes by Dr. Walter Wolf of Peoria, Illinois. 1969. April 16. Worthington is now test marketing Stripples, a frozen product. Upon heating, there is no shrinkage or fat loss. Wall Street Journal. 1969. Oct. 2. p. 1. "Meatless 'meats.'" Stripples retail for $0.79 per half pound package. Spot in Food Product Development. 1969. Jan. p. 13. A photo shows a package of Stripples. 8 oz sells for $0.69. Spot in *Soybean Digest.* 1970. April. p. 9. Being test marketed in Fort Wayne, Indiana. Stripples do not shrink.

H. Hellman. 1972. Popular Science. Oct. p. 78-80, 164. This product is made from spun soy protein fibers.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a frozen pork-like product based on spun soy protein fiber.

Horan. 1974. Meat analogs. p. 380. Ad (½ page) in *Better Nutrition.* 1974. Dec. p. 45. "Now they're back. Meatless Stripples." A photo shows the package.

Manufacturer's catalog. 1984, undated. Frozen Products. Label reads: "Artificial Bacon Flavor. Textured Vegetable Protein Strips." Frozen.

Worthington Foods. 1989. "The Tradition of Healthy Foods" (50th anniversary booklet). p. 21-22. Worthington's first products made with spun soy protein fibers were White Chik, Beeflike, Prosage, Stripples, and Holiday Roast (with a plastic wishbone). All were hits and sales took off. These products were sold frozen. In "October 1963 a series of television, radio and newspaper advertisements featuring the new frozen foods was introduced."

1542. Abel, Mary A. 1969. Soy proteins work for homemakers. *Soybean Digest.* Nov. p. 29-32.
• ***Summary:*** Cakes containing soy flour have an unusual tenderness and fine texture with a fragrant aroma, good flavor and a unique moistness when served. Photos show various foods containing soy proteins made by A.E. Staley Mfg. Co., General Mills, Worthington Foods (hors d'oeuvres), and Archer Daniels Midland Co. (TVP beef-flavored sukiyaki). Three photos show General Mills Bontrae food products, including Bontrae crumbles with a flavor like beef, Bontrae rice with a flavor like chicken, and dice with a flavor like ham.

"Soy protein is also making possible the development of new foods. One new line of products, developed by Thomas J. Lipton Inc., recently won the Institute of Technology's 1969 Industrial Achievement Award, the most coveted food industry award. The winning products are the main dish dinners, nationally distributed and well known to many homemakers. The dehydrated, shelf-stable dinners require only a few minutes preparation to become gourmet main dishes for either family or guests." Address: Central Soya.

1543. Harrison, D.W. 1969. Analysis of the Uganda experience based on Africa Basic Foods Inc. Paper presented at United Nations Industrial Development Organization Expert Group Meeting on Soya Bean Processing and Use. 43 p. plus 6-page summary. Document: ID/WG.45/4. Held 17-21 Nov. 1969 at Peoria, Illinois.
• ***Summary:*** Africa Basic Foods (ABF) Ltd. was established in Uganda to develop soybeans as a food cash crop with small farmers, to produce and market low-cost soyfoods, and to educate the people about their value for good health. In 1965 ABF asked the Ministry of Agriculture at the Department of Agriculture at Makerere University to do research on soybean production. The company built a food factory 4 miles from Kampala, and by May 1966 was producing various soy-based foods, and marketed them throughout Uganda, especially to hospitals, schools, the government, and various institutions.

"The soya bean was introduced in Uganda from America and South Africa in 1938. Within a few years various varieties were tested and the crop distributed to the farmers. The crop increased in production as the demand from overseas grew during the wartime shortage of proteins in England.

"The highest acreage achieved during the Second World War was about 35,000 to 40,000 acres. After that time (about 1948) the acreage gradually dropped, due to lack of demand, to only a few thousand acres under cultivation by 1965.

"Since 1965, ABF Ltd. has been actively promoting the growth of soya beans. First, the Ministry of Agriculture initiated variety trials. Then in 1966 the University of Makerere Department of Agriculture started variety trials with over 50 varieties available. The crop production has grown very rapidly as the farmers heard of a local demand, and the price of 25 cents per pound (US¢ 3½). In 1968 about 12,000 to 15,000 tons were produced. A large share of this was used locally by the oil milling industry...

"Aside from the oil millers, there is an animal feed plant now operating in Uganda since about 1967, as well as our human food plant. The consumption from these two plants is small, about 352 tons and 120 tons respectively...

"Over 50% of the local production is perhaps exported."

By 1969 ABF was making the following (for each is given processing details, and the name and brand of equipment used): Roasted soybeans ground to a flour, soy milk sterilized in bottles (adapted from Dr. Harry Miller's method), soy cheese (tofu mixed with a little nonfat dry milk, curry, sage, and salt, packed into 1-inch diameter casings, pasteurized at 190ºF for 20 minutes, then cooled and refrigerated, p. 16-17), soy butter (like peanut butter, from soy flour, oil, sugar, and salt), soy bread mix (wheat flour fortified with 20% soy flour, plus sugar, nonfat dry milk, salt, and yeast), soy fortified maize flour (25% soy), school porridge, and soy porridge (soy fortified corn porridge).

Note: This is the earliest *published* English-language

© Copyright Soyinfo Center 2014

document seen (Oct. 2013) that uses the term "soy cheese" to refer to a Western-style soy cheese.

In Dec. 1964 Dr. Harrison was hired by the government of Uganda, Buganda region, to serve as Director of Nutrition and Health Education, with emphasis on local, commercial production of high-protein foods (p. 28). Then ABF was registered in Uganda as a nonprofit corporation. Dr. Harrison and two of his government departmental employees "operate the entire scheme." Their salaries come entirely from the Uganda Government, so the government is to some extent helping to finance the project. The company has hired 3 other persons full time and one part time. They receive salaries from sales income. Address: President, Africa Basic Foods Inc., Kampala, Uganda.

including vegetarian entrees, meatless meats, and milks. Many simulate meat, fish, fowl, or nuts. They have been on the scene only since 1962.

"Worthington's vegetable protein foods are marketed frozen, dehydrated, or canned, or as an ingredient in other foods. Since 1966, Worthington Foods has manufactured its own spun protein, which it formerly purchased from Ralston Purina Co., for its meatless meats."

1548. Worthington Foods, Inc. 1969. Dealer wholesale price list–order blank. Worthington, Ohio 43085. 1 p. Dec. 15.
• ***Summary:*** New products in the Worthington Foods line include: Salisbury Steak, Worthington "209," Stripple Zips, and Tamales.

The Madison Foods line of products now includes: Cheze-O-Soy, Madison Burger, Not Meat (Tomato). Yum. Infasoy. Address: Worthington, Ohio. Phone: 614-885-9511.

1549. *Wall Street Journal.* 1969. Miles Labs set to buy fabricated-food maker: Worthington to be purchased for $16.4 million of common. Makes about 65 protein items. Dec. 22. p. 10.
• ***Summary:*** "Elkhart, Indiana–Miles Laboratories Inc. has agreed in principle to acquire all the outstanding stock of Worthington Foods."

Worthington Foods is a pioneer is the technology of making textured vegetable proteins, especially those from edible spun soy protein fibers, and soy beverages. It currently accounts for about 50% of the fabricated food market with trademarks such as Stripples, Prosage and Soyameat. Worthington's 1969 sales will be an estimated $5 million.

1550. **Product Name:** Worthington Tamales.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1969 December.
Ingredients: In 1971: Textured soy proteins (incl. Fibroprotein spun soy protein fibers), tomato paste, corn meal, corn oil, dehydrated onion, rolled oats, hydrolyzed vegetable protein, salt, sugar, corn starch, sweet peppers, MSG, garlic spices, caramel color, water to process.
Wt/Vol., Packaging, Price: 20 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Worthington Foods Dealer wholesale price list–order blank. 1969. Dec. 15. Lists "Tamales." Note: This is the earliest meatless tamale seen. *Webster's Dictionary* defines tamale (derived from Nahuatl *tamali*), a word first used in English in about 1854, as "ground meat, seasoned usually with chili, rolled in cornmeal dough, wrapped in corn husks, and steamed."

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Worthington Tamales (Worthington)."

Ad in Whole Foods. 1983. Sept. p. 45. in 20 oz. cans. This product and Vegetable Skallops are being promoted as "Salt Shakers." Both are available in versions with and without salt and MSG. For the hypertensive and sodium-conscious. A black-and-white photo shows the can and label. The text reads: "Contains no meat. A vegetable protein product. No added salt or MSG."

Worthington Yesterday and Today. 1984. p. 11. Nutrition Action Healthletter. 1987. Oct. p. 13. Critical treatment of this product which contains 790 mg of sodium vs. only 65 mg for lean beef. Much of the sodium comes from MSG. The "no salt added" label is highly misleading though technically legal. It also contains caramel coloring. Thus it is not necessarily more healthful than beef.

1551. **Product Name:** Stripple Zips (Dehydrated; Smoky Bacon-like Flavor).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 614-885-9511.
Date of Introduction: 1969 December.
Ingredients: In 1971: Wheat, soy and yeast protein, corn oil, egg albumin, brown sugar, salt, U.S. certified color, seasonings, MSG, carrageenan, flavorings, nucleotides.
Wt/Vol., Packaging, Price: 6 x 11.5 oz.
New Product–Documentation: Worthington Foods Dealer wholesale price list–order blank. 1969. Dec. 15.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "Stripple Zips (Worthington)." This is an institutional product.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a dehydrated product with a smoky, bacon-like flavor.

1552. **Product Name:** Worthington "209."
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio 43085. Phone: 614-885-9511.
Date of Introduction: 1969 December.
Ingredients: In 1971: Water, textured soybean protein (Fibrotein spun soy protein fibers), vegetable oil, wheat protein [wheat gluten], egg albumin, soybean protein, salt, brown sugar, starch, wheat flour, vegetable extractive flavorings, MSG, seasonings.
Wt/Vol., Packaging, Price: 12 x 14 oz.
New Product–Documentation: Worthington Foods Dealer wholesale price list–order blank. 1969. Dec. 15. Lists 'Worthington "209"'. Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 164. Lists the ingredients in "209 (Worthington)." This is an institutional product.

1553. **Product Name:** Soy Milk.
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
Ingredients: For 20 gallons: Soybeans 20 lb., sugar 5 lb., salt 18 gm.
Wt/Vol., Packaging, Price: In sterilized bottles with crown caps.
How Stored: Shelf stable.
Nutrition: Protein 3.5%, fat 2.0%.
New Product–Documentation: Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 15-16. Interview with Dr. D.W. Harrison. 1982. Letter from Sam Yoshimura. 1982.

1554. **Product Name:** Tofu Sausages.
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
Ingredients: Tofu 96%, nonfat dried milk 2%, salt 1.0%, MSG 0.5%, curry powder 0.3%, sage 0.2%.
Wt/Vol., Packaging, Price: Packed into 1 inch diameter casings.
How Stored: Refrigerated.
Nutrition: Protein 15%, moisture 65%.
New Product–Documentation: Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 16-17. Interview with Dr. D.W. Harrison. 1982. Letter from Sam Yoshimura. 1982. The product was pasteurized at 190ºF (88ºC) for 20 minutes in the casings, cooled, and refrigerated.

1555. **Product Name:** Soya Nuts.
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
Ingredients: Soybeans and salt or sugar.
Wt/Vol., Packaging, Price: 10 oz.
How Stored: Shelf stable.
New Product–Documentation: Economist Intelligence Unit. 1969. Demand for Soya-Based High Protein Foods in Uganda. p. 50. Interview with Dr. D.W. Harrison. 1982. Letter from Sam Yoshimura. 1982.

1556. **Product Name:** Soya Butter (Soynut Butter; Resembles Peanut Butter).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
Ingredients: Roasted soy flour 60%, vegetable oil 26%, vegetable shortening 10%, cane syrup 2.2%, salt 1.2%, antioxidant.
Wt/Vol., Packaging, Price: 12 oz jars or 8 lb tin cans.
How Stored: Shelf stable.
Nutrition: Protein 25%, moisture 12%.
New Product–Documentation: Economist Intelligence Unit. 1969. Demand for Soya-Based High Protein Foods in Uganda. p. 50. Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 17. Interview with Dr. D.W. Harrison. 1982. Letter from Sam Yoshimura. 1982.

1557. **Product Name:** Soy Bread Mix (Dry).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
Ingredients: Wheat flour 70%, soy flour 20%, sugar 5%, nonfat dry milk 2.7%, salt 1.3%, yeast (separate package) 1%.
Wt/Vol., Packaging, Price: 10 lb or 50 lb paper bags.
How Stored: Shelf stable.
New Product–Documentation: Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 17-18. Interview with Dr. D.W. Harrison. 1982. Letter from Sam Yoshimura. 1982. Contained whole wheat flour fortified with 20% soy flour plus sugar, nonfat dry milk, salt, and yeast.

1558. **Product Name:** High Protein Buns (Soy-Fortified).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
New Product–Documentation: Economist Intelligence Unit. 1969. Demand for Soya-Based High Protein Foods in Uganda. p. 50. Interview with Dr. D.W. Harrison. 1982. Made of corn and wheat flours enriched with soy flour. Equal to egg in nutritional value, it sold for half the price.

1559. **Product Name:** High Protein Bread (Soy-Fortified).
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
New Product–Documentation: Economist Intelligence Unit. 1969. Demand for Soya-Based High Protein Foods in Uganda. p. 50. Sold in 1 lb loaves.

1560. **Product Name:** [Soymilk (Brand Named Soyalac by 1983)].
Manufacturer's Name: Alimentos Colpac. Affiliate of Liga Mexico Pan-Americana Medio Educacional A.C.
Manufacturer's Address: KM 13 Carratera Huatabampo, Apartado 502, Navojoa, Sonora, Mexico.
Date of Introduction: 1969.
New Product–Documentation: Soybean Blue Book. 1976. The company makes a "soy beverage." It is not clear whether this is a soy coffee or a soymilk. They are an affiliate of Liga Mexico Pan-Americana Medio Educacional A.C., KM 13 Carratera Huatabampo, Apartado 502, Navojoa. *Soybean*

Digest Bluebook. 1979. p. 98.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). "COLPAC, Apartado 16, Montemoralos, Sonora, Mexico. Seventh-day Adventist soy dairy."

Letter from Robert Folkenberg. 1983. Feb. 15. This company, organized in 1969, presently makes about 3,000 liters/week of soymilk.

J. Ponce Aguirre. 1982. History of Soyfoods in Mexico. "In 1968 in Navojoa, Sonora, Alimentos Colpac began operations, run by Seventh-day Adventists. Paul Allred started production of textured soy flour and whole soy flour to make a base for soymilk." Soya Bluebook. 1983. p. 63. "Soyalac Soy Beverage." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 128. "The first soymilk plant in Mexico was started in 1968 or 1969 by Seventh-day Adventists in Sonora, Navojoa. Its founder was Paul Allred, who also pioneered a similar plant in Egypt. This soymilk was made from whole soy flour."

1561. **Product Name:** [Soyalac {Soymilk}].
Foreign Name: Soiyarakku Neo.
Manufacturer's Name: College Health Foods. Later renamed San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1969.
Wt/Vol., Packaging, Price: 180 ml glass bottle. Caned by 1980.
New Product–Documentation: Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants. In Japan: San-iku Foods, Kanno 4162, Sodegaura-machi, Kimitsu-gun, Chiba-ken 299-02. M. Urumba, Manager. Hidekazu Watanabe, production manager for Soyalac.

Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 227-28. Gives a detailed description of the method used to make Soyalac.

William Shurtleff. 1981. Soyfoods. p. 35. "Dr. Harry Miller: Taking soymilk around the world." "Starting in about 1955 Dr. Miller started to recommend that the Adventist-run Japan San-iku School serve soymilk instead of cow's milk to the students; however the staff hesitated because of its nutritional value and flavor. In 1957 two Japanese Adventists, Mr. Hidekazu Watanabe and Mr. Hanzo Ueda (who ran a tofu shop at the time), started making Japan's first soymilk on a small scale in Hachioji, Tokyo, bottling it in 180-ml bottles, and selling it locally. Mr. Watanabe later described the great value to them of Dr. Miller's ongoing technical, nutritional, and spiritual guidance. After some time, directors of the San-iku School visited the small soymilk plant, liked the soymilk flavor, and understood its nutritional value. In 1959 they bought similar equipment, set up a small plant in the school, and started to produce soymilk, which was bottled in 180-ml bottles and served to the students at every meal. In 1969 the San-iku School set up an independent food production company called College Health Foods (which later became today's San-iku Foods) and through it, with the help of Loma Linda Foods in America, began to produce Soyalac soymilk infant formula." By 1980 this product was canned in plain and carob flavors.

Letter (in Japanese) from Hidekazu Watanabe. 1981. July 19. Discusses the early history of this product. "The Ueda Tofu Shop in Hachioji helped with the product development; I was there at the time. In those days our name was San-iku Gakuin Shokuhin-bu (the food department of the San-iku School). The purpose was to provide a place of labor for the students and opportunities to learn food processing. It was not a business. Dr. Perry Webber was the principal of our school at the time." K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Neo was introduced in 1969. It is now sold by Saniku Fuuzu in a 425 gm can and distributed nationwide.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. "In 1958 Dr. Miller set up a small soymilk plant in the kitchen of the Adventist-run Tokyo Sanitarium. It was used to make soymilk, soy whipping cream, soymilk ice cream, and soy spread, which were served to the staff and patients. In 1959 a small soymilk plant was established in the Seventh-day Adventist San-iku School. From this year, Japan's oldest existing soymilk company, San-iku Foods, traces its origin. By 1982 San-iku Foods was Japan's fourth largest soymilk manufacturer.

Letter from San-iku Foods. 1990. June. This product was introduced in 1969.

Letter from Ichiro Tabuchi. 1990. July 4. In 1970 San-iku Foods became independent from the San-iku Gakuin Food Department and started to make and sell infant formula.

1562. **Product Name:** Loma Linda Vegelet 'n Gravy (Meatlike Product).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, California.
Date of Introduction: 1969.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.

The chapter titled "Emergency Meals" has a section on "Protein and Main Dish Foods" including "Canned vegetable proteins (Vegelona, Vegetable Steaks, Soyameat, Nuteena, etc.)."

1567. Loma Linda Food Co. 1969. Wholesale price list. Arlington, California. 4 p. Undated.
• ***Summary:*** The cover states: "Quality foods since 1906. Camp Meeting Prices 1968, 1969." Soy-related products include: Soy Flour. VegeChee [Tofu]. Soy Beans Boston Style. Soybeans T.S. Smokene (Shaker bottle). Soy Sauce (3 sizes, glass bottles). Other products [probably made mostly from wheat gluten and/or peanuts include]: Nuteena. Proteena. Vegelona. Vegelet 'n Gravy. Dinner Cuts. Dinner Rounds. Vegecuts. Vegeburger (regular or no salt added). Tender Bits. Linketts [Linkettes]. Big Franks. Little Links. Loma Linda Sandwich Spread.

Note: No mention is made of spun soy protein fibers.

Address: Arlington, California.

1568. Moore, Raymond S. 1969. China Doctor: The life story of Harry Willis Miller. 2nd ed. Mountain View, California: Pacific Press. 215 p.
• ***Summary:*** The original edition of this book was published in 1961. This 1969 edition, although it has been completely re-set, contains only minor revisions: (1) A new color paperback cover shows a large illustration of Dr. Miller's face. (2) This second edition contains a 3-page Postscript (p. 150-52), which describes his work in Hong Kong (1960-65, 1969), Philippines (1966), expansion of his work with soymilk in Hong Kong ("The Hong Kong soft drink industry dispenses more milks derived from his soybean milk than all others combined"), other work with soy ("His grain-and-soybean-based foods are being adopted as alternates to meat in lands which cannot support animals as a principal diet source. They range from soy cheese, milk, ice cream, and butter-like spreads to simulated steaks, wieners, and sausages. These vegetable foods now are making headway even in the United States and other Western countries. In an era of population dilemmas, Harry Miller reminds the experts that meat, as compared with vegetable protein, takes several times the acreage to produce the same amount of food."), George McGovern and Food for Peace (1961) which resulted in sharply increased exports of soybeans from the USA. (3) The number of pages in the book has been reduced to 152, from the original 215. (4) The valuable index in the first edition has (unfortunately) been omitted. (5) The number of photos has been reduced to 11, from 16 in the first

© Copyright Soyinfo Center 2014

edition, and many photos from the first edition were omitted. New photos (located on unnumbered pages 142-47) show: (1) Harry and Maude Miller at the time of their wedding in 1902. (2) Dr. Miller with a woman victim of goiter in China. (3) Hong Kong Hospital for Chinese refugees at Tsuen Wan, completed in June, 1965. (4) Dr. Miller with little Mohammed Ali, a Bedouin child in Libya. (5) Harry and his wife Mary in 1957 waiting at the airport in Benghazi, Libya. (6) Mr. Chan Shun donates 1 million Hong Kong dollars for the construction of a Seventh-day Adventist hospital in Hong Kong. Dr. Miller looks on. (7) In 1968 at Albuquerque, New Mexico, Dr. and Mrs. Miller are given a red-carpet welcome by Governor David F. Cargo.

1569. Short biography: Harry Willis Miller, M.D., F.A.C.S. [Fellow of the American College of Surgeons]. 1969. n.p. 3 p. Undated. Unpublished typescript. [1 ref]

• ***Summary:*** This typewritten manuscript describes a great man and medical doctor in his 90th year. Soy is not mentioned.

1570. Thurmon, Jimmie Joan. comp. 1969. Adventures in vegetarian cooking: Over 200 meatless main dish recipes. Nashville, Tennessee: Southern Publishing Assoc. 128 p. 23 cm.

• ***Summary:*** The author of this Seventh-day Adventist vegetarian cookbook is a woman. Interesting recipes include: Nut Cheese (no. 1 & 2, with peanuts or peanut butter and gluten flour, p. 11). Tomato Nuttose (with nut butter, p. 11). Homemade Nuttose (with nut butter, p. 12). Homemade Protose (with peanut butter and mashed beans (p. 12). Homemade Nutmeat (dark) (with gluten flour, peanut butter, and Vegex, p. 12-13). Homemade Nutmeat (light) (with raw nut/peanut butter and flour, wheat meal, or soybean meal, p. 13). Nuttolene (with peanut butter and eggs, p. 13). Homemade gluten (with Vegex or soy sauce, p. 14). Granola. Preparing and cooking dry soybeans (p. 15). This page describes how to make "soybean pulp," an ingredient is subsequent recipes. "Press cooked soybeans through a coarse sieve or grind in a food grinder. Use in making soups, croquettes, loaf, or soufflé. Cold, the pulp makes a nutritious and flavorful filling for sandwiches when mixed with chopped onion and enough salad dressing or milk to make it easy to spread. May be used like pumpkin or squash with milk, eggs, and spices as a filling for pie. May be used in place of burger in chili."

Soybean loaf (p. 19). Soybean cheese loaf (with 1 can (14 oz.) soy cheese [tofu] and Savita, p. 21). Gluten roast no. 1 (with gluten burger, p. 21). Soybean loaf, p. 27). Soybean-rice loaf (p. 28). Gluten roast no. 1 & 2 (p. 29). Baked soybean croquettes (with soybean pulp, p. 36-37). Soyameat patties (p. 37). Cheese-nut burgers (with VegeChee [tofu, made by Loma Linda Foods], p. 37). Soyameat tetrazzini (p. 52). Soybean casserole (with Wham, p. 52-53). Soybean souffle (with soybean pulp, p. 53). Tofu with mushroom sauce (p. 90; Tofu is "A fresh soybean milk curd obtainable at Oriental markets, or canned under the trade name VegeChee" [by Loma Linda Foods]). Puree of soybean soup (with soybean pulp, p. 110).

Pages 121-22 list "Vegetable protein brand names." All products are made by Seventh-day Adventist food manufacturers. Brand name codes: B = Battle Creek. C = Collegedale. L = Loma Linda. M = Madison. S = Sunnydale. W = Worthington. 1. Nut meats (canned): Not-Meat (M). Numete (W). Nuteena, Proteena, and Vegelona (L). Protose (B).

2. Gluten burgers: Choplet Burger (W). Collegedale Burger (C). Madison Burger, and Zoyburger (M). Prime Vegetable Burger (B). Redi-Burger, and VegeBurger (L). 2. Gluten steaks: Big Pat, and Fry Sticks (W). Chic-Ketts (S). Collegedale Chops (C). Dinner Cuts, Dinner Rounds, Vege Cuts, and Vegetables 'n Gravy (L). Vegetable Skallops, and Vegetable Steaks (B).

Note 1. This is the English-language document seen (Jan. 2007) that contains the term "Gluten burgers" (or "Gluten burger").

4. Wieners and sausages: Big Franks, and Linketts (L). Saucettes (B). Veja-Links (W). 5. Frozen foods: Chipped Prime, Prosage, Vegetarian Luncheon Slices (Chicken and Beef Style), Wham (W). Note 2. Worthington was the first Adventist company to make frozen meatlike products.

6. Soy meats: Soyameat (Diced Chicken Style, or Diced Beef Style) (W). VegeChee [Tofu] (L).

Frequently used seasonings in vegetarian entrées. (p.

122). Accent. Bac-O-Chips (General Mills). Bakon Yeast. Gravy Quik (L). G. Washington Broth. McKay's Chicken Style Seasoning. Savita. Savorex, and Smokene (L). Sovex. Tartex. Tastex. Vegex.

Update. 1995. Oct. 25. Jimmie Joan Thurmon, a Seventh-day Adventist, is retired and lives with her husband at 128 Mountain Ridge Dr., S.E., Cartersville, Georgia 30120-6951. Phone: 770-974-9218. She learned how to make wheat gluten from Seventh-day Adventist women, who had been making it for years. In addition Loma Linda Foods in California and Sanitarium Food Co. in Australia had many products containing wheat gluten on the market by the 1960s. Address: Nashville, Tennessee.

1571. *Soybean Digest.* 1970. Author Philip S. Chen has plans to retire. March. p. 54.
• ***Summary:*** "Dr. Philip S. Chen, well-known author and chairman of the division of sciences and mathematics at Atlantic Union College, South Lancaster, Massachusetts, has announced that he will retire at the end of this year.

"Dr. Chen's interest in soybeans stems from over 30 years ago when he was a teacher at Madison College (Tennessee) and in charge of the food research laboratory of Madison Foods, now a branch of Worthington Foods.

"Dr. Chen's books include 'Soybeans for Health, Longevity and Economy,' and 'Heart Disease–Cause, Prevention, and Recovery,' which are carried on the book list of the Soybean Digest. He has just finished writing a book on vegetarianism.

"Dr. Chen has been a member of the American Soybean Assn. for over 30 years."

A small portrait photo shows Dr. Philip S. Chen.

1572. Lee, Elinor. 1970. Soy can save the pennies. *Washington Post, Times Herald.* April 9. p. C9.
• ***Summary:*** Since meat and other protein foods are the most expensive part of the food budget, most homemakers are interested in economical sources of protein.

Soy flour [defatted or low fat] is the most economical source of protein, according to a letter received from Mrs. Seymour Fiekowsky. She says that "soy flour and granules as well as canned soy foods are on sale at health food stores." She suggests that you look in the yellow pages of the phone book under "Foods, Health," or contact the nearest Seventh Day Adventist church.

1573. *Soybean Digest.* 1970. Worthington Foods test markets a soy sausage. April. p. 9.
• ***Summary:*** "A soy-protein 'sausage' is being test marketed by Worthington Foods, in Columbus, Ohio, and South Bend, Indiana. Called Prosage, ads in newspapers tell the consumer that there are 50% less calories and 75% less fat in Prosage made of all-vegetable protein with hickory-smoked flavoring added.

"Stripples, a vegetable protein baconlike product, has been test marketed in Fort Wayne, Indiana, and may soon have national distribution. Stripples do not shrink, and are made by Worthington Foods, also."

1574. **Product Name:** Add-a-Bits.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1970 April.
New Product–Documentation: H. Hellman. 1972. Popular Science. Oct. p. 78-80, 164. This product, made of spun soy protein fibers, consists of small rectangular dehydrated bits of fried meatless bacon, used for garnishing salads or as a snack. They are basically small pieces of Stripples. Horan. 1974. Meat analogs. p. 380.

1575. Fiske, Edward B. 1970. Adventists: Old faith, new pressures. *New York Times.* June 15. p. 41.
• ***Summary:*** More than 25,000 of the world's 2 million Seventh-day Adventists, representing 193 countries, gathered in Atlantic City, New Jersey. They are one of the few major Christian churches still making large gains in membership. Adventists believe that Christianity is more than simply going to church in Saturday; it includes serving all the needs of their believers, not just their spiritual ones. Thus, the church operates a medical school, and more than 200 hospitals, clinics, and nursing schools worldwide. Adventists are also deeply committed to education (with schools and colleges) and relief work.

One consequence of this view is vegetarianism, which is practiced by about half of all Seventh Day Adventists. The church teaches that a nonmeat diet is more healthy than one which contains meat, and it produces its own "vegetable protein foods" under the Loma Linda Foods brand.

"Soybean burgers:" Snack bars at the convention hall sell nonmeat items such as Loma Linda Burgers for $0.60 each; they come in "beef style" and "chicken style," and are made mostly of soybeans and whole wheat. Clinton A. Wall, a dietitian, set up a temporary restaurant that serves 4,000 meals a day in the basement. Young people often ask him for advice on how to plan a balanced vegetarian diet. He adds that Adventists are not against use of insecticides.

For Adventists, diet is only one aspect of a religion that touches the whole of their daily life. Elder Pierson said it well: "We believe that Christianity is more than simply going to church on Saturday."

A photo shows the packed convention hall.

Note: This is the English-language document seen (Jan. 2007) that contains the term "Soybean burgers" (or "Soybean burger").

1576. *Ralston Purina Magazine* (*St. Louis, Missouri*). 1970. Thanks to Mr. Ford. May/June. p. 26-29.

© Copyright Soyinfo Center 2014

• ***Summary:*** Henry Ford had an eye for promising young men. And two of Ralston Purina's key research men, Frank Calvert (R&D director for new venture management) and Bob Boyer (senior scientist, central research) received a truly unique education." In 1930 the new Chemical Laboratory opened in Greenfield Village; Calvert and Boyer were among the 15 boys from the Ford Trade School, Henry Ford's technical school in Massachusetts, who were chosen to work there. Boyer, age 21, who had attended the Ford Trade School [at the Rouge Plant in Dearborn, Michigan] from 1927 to 1930, was put in charge of the project. After deciding to focus on soybeans in 1931, they developed a process for extracting soybean oil. Every morning at 8:00 sharp, Henry Ford used to appear at Boyer's office to see how his pet project was going.

"In 1938 Frank Calvert joined The Drackett Company in Cincinnati [Ohio], and he was followed in a few years by Boyer. 'At Ford we were trying to make synthetic wool out of [soy] protein but the war cut these efforts short,' says Boyer.

The work on 'soybean fabric' continued at The Drackett Company during the early 1940s. 'We tested the wool fabric for salt content and other factors and one day–I'll never forget it–it occurred to me that if we could make something for the outside of man, why not for the inside.' That's how it came about that in 1949 Bob Boyer filed the patent for edible soy protein fiber.

"He obtained the use of a textile pilot plant and hand made samples of 'synthetic meats.' Later that year, armed with a soy protein 'ham loaf' he contacted Worthington Foods, a firm making meat substitutes for people who shun meat for religious, health or other reasons "If they hadn't shown interest I probably would have dropped it because I had no income at the time.'

"Swift was the first company to take out a license on the patent and Worthington followed not far behind. Soon several companies were licensed to use the patent and Boyer was kept busy with consulting work...

"In 1957 The Drackett soybean operation was sold to Archer Daniels Midland, and Calvert became technical of their protein operations. The paths of Boyer and Calvert crossed again in 1962 when they both joined soybean research activities at Ralston Purina. Boyer had worked as a consultant to Purina when the company began investigating industrial and edible uses of soybean. When he joined the company he assigned his patent ownership to Purina."

"'Back in the 1930s many people thought our work was crazy,' recalls Boyer. 'But Mr. Ford was shrewd enough to know' better. 'The best thing he did was to help popularize the soybean.'"

Photos show: Calvert and Boyer, together and separately. The automotive products made at Ford's lab being displayed in New York in 1931; Calvert and Boyer are present. Boyer and Ford conversing. Ford and Boyer standing behind the famous white "plastic" car.

1577. Wokes, Frank. 1970. India revisited: 1920-1970. *British Vegetarian.* May/June. p. 221-25.
• ***Summary:*** The author arrived in Bombay on 31 Jan. 1970 to participate in an international seminar on nutrition at the invitation of Prof. C.V. Ramakrishnan of Baroda University, India. He and his wife, Dr. Rajalakshmi, both lifelong vegetarians, are very interested in increasing production and consumption of plant foods in India. The author first visited India on 1 Feb. 1920.

In India there are plenty of cows but their milk yields is far lower than in Western countries. Since hygienic conditions are far from satisfactory, much of the milk is grossly contaminated. Therefore the Government of India, with the help of foreign aid, has established at Anand, near Baroda, a large dairy farm to which milk is brought by farmers from surrounding areas, pasteurized, and spray dried for sales in tins. "In this powdered baby food most of the protein now comes from plant foods, the proportion gradually being increased as investigations at CeFTRI [CFTRI = Central Food Technology Research Institute, at Mysore] show its suitability for replacing cow's milk protein, at a lower cost." CeFTRI has already made, on a pilot plant scale, non-dairy milks made entirely from plants, which it hopes eventually to commercialize.

"Many Indians, especially among the Jains and Theosophists, pressed me to suggest how they could make for general domestic use a liquid vegetable milk similar to that in my tins of Plamil. They listened with interest to my descriptions of what is being done at CeFTRI, where among other things a study is being made of *Vitasoy,* the liquid soya milk, made by wet grinding and processing of steeped soya beans by a method developed by Dr. Harry Miller, who first made soya milks in China nearly forty years ago [actually 1936] and described it to me over twenty years ago, when I first saw samples of his products. In Hong Kong, *Vitasoy* is said to be rivalling *Coca Cola* in public favour."

Also discusses CeFTRI's interest in leaf protein, and problems with aflatoxins in groundnuts in India.

1578. Ashton, Maureen R.; Burke, Carole S.; Holmes, A.W. 1970. Textured vegetable proteins. *British Food Manufacturing Industries Research Association, Scientific and Technical Surveys* No. 62. 36 p. Aug. [92 ref]
• ***Summary:*** Contents: Introduction. Protein sources. Extraction. Spinning. Extrusion. Gelation. Other methods for generating texture. Commercial aspects. Nutritional aspects. Legal aspects. References. Appendix. The appendix contains an extensive list of patents (mostly British and U.S.) on textured vegetable proteins grouped by the company assigned to or inventor. For each patent, the inventors, country, patent number and year are given, with a brief description of the subject. No patent titles are given in either

the appendix or bibliography. The companies/inventors are Archer Daniels Midland Co. (2 patents), R.A. Boyer (3), F.P. Research Ltd (1), General Foods Corp. (7), General Mills Inc. (23), C. Giddey (1), J.H. Kellogg (2), Lever Bros. and/or Unilever (20), G.K. Okumura and J.E. Wilkinson (1), Ralston Purina (4), Swift & Co. (4, including 2 listed for R.A. Boyer), Dr. A. Wander A.-G. (2 Swiss), Worthington Foods Inc. (2), C.L. Wrenshall (1). Address: 1-2. BSc; 3. PhD, FRIC. All: British Food Manufacturing Industries Research Assoc., Randalls Road, Leatherhead, Surrey, England.

1579. Briggs, George M. 1970. Memories of an "oldtimer." *Soybean Digest.* Aug. p. 50-53.
• ***Summary:*** "My personal interest in soybeans has spanned nearly 60 years–from September 1912 to the present. My introduction to the crop came when, with a fellow agricultural student at the University of Minnesota, we attempted to thresh out some soybeans with old fashioned flails in a high-sided boarded wagon box at the University Farm. In a half-hour's time we harvested about 10 pounds of little soybeans!"

"Following my graduation from the College of Agriculture of the University of Minnesota, I became the 14th county agricultural agent in Wisconsin, serving for 3½ years in Burnett County.

"This county has a large proportion of light, sandy soils. People needed a cash crop, as well as a legume hay. Soybeans seemed to offer an answer to the problem of producing cheaper feed. So, it was natural that we had considerable interest in the development of a program that would answer the needs of the farmer.

"During my Burnett County years, and later, in my years of agricultural extension work at the University of Wisconsin, it was my privilege to advise and counsel with people on farm crop culture. An attempt was made to establish a recommendation that farmers plant soybeans according to the rule of 1 acre for hay, 1 acre for seed, and 1 acre to plow under as green manure."

"The production of soybeans in Wisconsin, as well as in the whole country, was never too great until the combine was perfected." Dr. Harry Miller, an ASA member from Ohio, had been a missionary in China. "He related to me how he helped develop and distribute a soybean milk for Chinese infants who were deprived of nutritional foods.

"Soybean milk was introduced in many parts of this country. Over 50 years ago, one of my nephews in Minnesota was nurtured to health and growth by its use when regular milk could not be assimilated properly. The use of soybean milk as a regular milk substitute in special diets is now well established."

Also discusses early problems of soybean production, soybean hay which was piled in cocks then fed to dairy cows to increase their milk production, the slow acceptance of soybean meal for livestock feeding in America, how I.C. Bradley educated farmers about soybean meal, why Wisconsin didn't favor margarine, and work with the ASA.

Photos show: (1) Early shocks of soybean hay in a field. (2) Soybean pioneer V.P. Atwell (Stevens Point, Wisconsin) harvesting soys with an old-fashioned reaper. (3) Portrait: "George 'Soybean' Briggs was one of the founders of the American Soybean Association, and its fourth president. In fact, he may be the only member who was at the first meeting at Camden, Indiana" [at the Fouts Bros. farm]. Address: Univ. of Wisconsin, Agric. Exp. Station.

1580. *Food Processing* (*Chicago*). 1970. Textured vegetable protein granules have natural meaty flavor. Summer. p. F10-F11. Foods of Tomorrow section.
• ***Summary:*** About Ground Beef-Like Granules, "spun soy granules," made by Worthington Foods, Worthington, Ohio. "The granules are made from spun soy protein fibers, plus binders and flavoring; no animal products are used in their production." They closely match the flavor, texture, and appearance of cooked ground beef. Advantages of the dry granules over beef: Less than half the calories, no fats, no cholesterol, and less than half the cost. A full-page color photo shows the product, as sold, and in a casserole.

1581. Hartman, Warren E. 1970. Textured soy proteins. In: SOS/70 Proceedings of the Third International Congress, Food Science and Technology. 951 p. See p. 245-47. Held 9-14 Aug. 1970 at Washington, DC.
• ***Summary:*** "Worthington is currently offering four types of plant-protein products. The first type of product must be classified as a raw material. This major raw material is the textured spun-protein fiber [made of soy protein]. The second type of product is a mixture of raw materials formulated to have a specific function. Among these are extenders for poultry meat and extenders for red meat. These mixtures contain fibers, binders, emulsifiers, fillers, color, and flavors similar to those in the extended product. Hamburger chain-outlets are looking with renewed interest at the fiber red-meat extenders.

"The third type of products are special formulations with or without fiber which may be mixed and extruded to produce units simulating ground beef or other meatlike portions. These bits, or granules, may be large or small, colored or uncolored, flavored or unflavored...

"The fourth type of Worthington's food ingredients consists of the present end-products. This includes all the simulated meats and the various canned foods currently available from Worthington Foods. These products are sold fresh or frozen or canned. The simulated meats may also be purchased diced, air-dried, or freeze-dried...

"Early this year [March 1970], Worthington Foods became a totally owned subsidiary of Miles Laboratories, of Elkhart, Indiana. The objective is to become to a greater

© Copyright Soyinfo Center 2014

degree, *architects of change* rather than *victims of change!*...

"Whether the products of our technology be called 'Fake Steak,' 'Sham Ham,' or 'Phoney Baloney' [Phony], these protein fabricated foods *will survive.* And they will find extended and varied uses." Address: Worthington Foods, Worthington, Ohio 43085.

1582. *Soybean Digest.* 1970. ASA's honorary life members 1946-1969. Aug. p. 40-41.
• ***Summary:*** 1946–W.J. Morse,* agronomist, USDA, president, ASA; W.L. Burlison,* chief, agronomy division, University of Illinois, president, ASA. 1947–I.C. Bradley, J.C. Hackleman, G.G. McIlroy. 1948–J.B. Edmondson, David G. Wing, C.M. Woodworth. 1949–Keller E. Beeson, Jacob Hartz Sr., E.F. (Soybean) Johnson.

1950–G.H. Banks, E.J. Dies, Taylor Fouts. 1951–Frank S. Garwood, James W. Hayward. 1952–Garnet H. Cutler. 1953–George M. Briggs. 1954–J. Ward Calland. 1955–Geo. M. Strayer. 1956–J.L. Cartter, John P. Gray. 1957–Howard L. Roach, Ersel Walley. 1958–Harry W. Miller. 1959–John W. Evans, W.E. Hodgson.

1960–Frederick Dimmock, Edgar E. Hartwig. 1961–Shizuka Hayashi, Albert H. Probst. 1962–Chester B. Biddle, Joseph E. Johnson. 1963–Allan K. Smith, C.R. Weber. 1964–A.J. Ohlrogge, Leonard F. 1584. Strayer, George M. 1970. Basic problems haven't changed. *Soybean Digest.* Aug. p. 54-57.
• ***Summary:*** This is an interesting history of the American Soybean Association as seen through the eyes of its most important early member.

"Geo. M. Strayer served as executive officer of the American Soybean Assn. from 1940 until 1967, through the formative years when most of the present structure was established. His term of service on the board of directors started 3 years earlier and was probably longer than that of any other one man. Today he is secretary of Associated Hybrid Producers, as he has been for many years. He exports corn, soybeans, grain sorghum, popcorn, and other midwestern products through Agricultural Exports Inc. He is associated with his brother Gordon and other members of his family in Strayer Seed Farms. He recently was elected mayor of Hudson where he has resided for the past 30 years. The above sketch of Mr. Strayer as mayor is by Jack Bender of the Waterloo (Iowa) Daily Courier.

"Soybeans to me 52 years ago were just a lot of work–a novelty of which a small amount of seed had been secured by my father from W.J. Morse in the Department of Agriculture. Planted in the hills of a small patch of popcorn, they had to be pulled by hand, dried, and then threshed out by hand and with a flail. They were too late for complete maturity in our latitude–but we found out they would grow here!

"By the spring of 1924 there were enough varieties (all imports from the Orient) that my father, B.S. Strayer, in cooperation with USDA and the local Smith-Hughes agricultural instructor, planted a testplot of about 3 acres, and included some 15 or 20 strains of varying maturities. There were black, green, brown, yellow, and vari-colored varieties."

"First exposure to the American Soybean Assn. came in September of 1924 when my father attended the fifth meeting at Ames, Iowa. It was a 2-day meeting, in the days of dirt and gravel roads, and the 100 miles to Ames was a major journey taken the day prior to meetings. I heard the stories of the wonders of the soybean crop secondhanded–I was in high school, the meetings came after school started, and such meetings were no place for kids anyway!

"Wonders of the soybean world: It was not until 1930 that I had my first exposure to the American Soybean Assn., except for reading the proceedings of each of the annual meetings as mailed to all members. The sessions that year were held at the University of Illinois.

"Four of us drove over for the meetings. We stayed at a private home in Urbana. I was indoctrinated into the wonders of the world of such men as W.L. Burlison, J.C. Hackelman, Soybean Briggs, Bill Riegel, John T. Smith, W.K. Kellogg, Keller Beeson, W.J. Morse, Charlie Meharry, Taylor Fouts, Scott Wilkins, and others.

"Today, only Soybean Briggs is still living. But they were the men who had the vision and the foresight and the fortitude to preach and talk soybeans, to plant and harvest them, and to interest people in their possible uses.

"At these 1930 meetings, held while I was a college student, I found my real interest for future years. I believe it was in 1937 after graduating and starting to farm that I was first elected to the board of directors of ASA. My father had served several years ahead of me.

"In 1936 the ASA annual convention was held in Iowa, and I was a member of the committee given the responsibility for planning the program. The first day was held at Iowa State University at Ames, the second day at Cedar Rapids, where processing facilities could be visited,

© Copyright Soyinfo Center 2014

and the third day was held at Hudson on our farms.

"In preparation for the big event we had freshly painted our farm buildings with paint made with soybean oil."

Also discusses: The launching of *Soybean Digest* (Nov. 1940). First trips abroad (1949 with Jack Cartter as members of ECA Technical Assistance Mission No. 1 to Europe, especially Germany; in 1952 to visit potential customers in Western Europe at his own expense; in 1954 as a member of the official USDA-sponsored agricultural trade mission; in 1955 weeks with Paul Quintus, head of USDA's fats and oils division, to study the possibilities of selling soybeans to that country. "I spent 7 weeks in Japan meeting with processors, foods manufacturers, shoyu manufacturers, tofu makers, miso makers, and Japanese government officials").

"The Japanese American Soybean Institute was formed in early 1956, and became the first overseas market development project on soybeans or any oilseed.

"With soybean production zooming, and with the Japanese project well underway, it appeared logical to explore other possible markets. In May of 1956 Paul Quintus again asked me to serve as an emissary of USDA and the soybean industry, this time to survey market possibilities and potentials in 10 Western European countries. Given a free hand, I spent about 2 months on this assignment, came back convinced that we had both problems and opportunities in Europe.

"I recommended that an industry-wide organization be formed. The European market was not solely a soybean market. Some countries would use oil, others meal, still others soybeans. It was too big a job for the small American Soybean Assn. Processors as well as growers had a stake in that market. Out of the arguments, discussions and deliberations the Soybean Council of America was formed to do the market development work in Europe and eventually in South America and in parts of Asia, with both growers, through ASA, and processors, through the National Soybean Processors Assn., participating.

"The problems are the same: Today's problems are the same as those of 1945–creation of larger and larger markets for U.S. soybeans." Address: Former Executive Vice President, American Soybean Assoc. and former editor, Soybean Digest.

1585. *Los Angeles Times.* 1970. Program to focus on world ills. Sept. 22. p. H9.
• ***Summary:*** Orange County, California–World food shortages, population control, and pollution will be among the subjects included in a program today titled "Creating tomorrow" at the Psynetics Foundation headquarters.

The main speaker will be Wayne D. Lamont, president of Earth Steward Inc. and education chairman for Planned Parenthood World Population.

A "foods of the future buffet," prepared under the direction of Dorothea Van Gundy Jones, will accompany the talk.

1586. Dinshah, Freya. 1970. The vegan kitchen. 6th ed. Malaga, New Jersey: The American Vegan Society. 44 p. Illust. Recipe index. Sept. Saddle stitched. 21 cm. The Ahimsa book series No. 2.
• ***Summary:*** With a bonus chapter: Why veganism? by Eva Batt. Page 6 notes that soya beans can be sprouted. The authors believe that the best way to eat cereal grains is to sprout them. In a section titled "About Vitamins" we read: "Some people, at least in the transition period, may wish to supplement the menus given, with a glassful of B-12 fortified soya-milk. In the USA, Loma Linda Soyagen and Worthington Soyamel are marketed in various flavors. In England there is Granogen, Velactin, and a leaf-protein milk known as Plantmilk or Plamil. (Plamil is now also being made available in North America)." Soy-related recipes include: Soya patties (with soya meal or flour, baked in an oiled dish, p. 20). How to shell green soya beans (p. 21). Soya loaf (with cooked soya beans, baked, p. 23). Soya milk (with soya powder/flour and dates, p. 24). Soya cheese Americana (tofu made with soya powder/flour and coagulated with lemon juice, p. 25). Australian soya cheese (tofu made with soya powder, coagulated with orange and lemon juice, jelled with agar-agar, p. 25). British Plantmilk cheese (tofu made with Plamil and lemon juice, p. 25). Vegan "mayonnaise" II (with soya milk and mashed potatoes, p. 26).

A lifetime vegetarian, the author has been a vegan since 1959, and the Secretary of the American Vegan Society since 1960. Married to AVS President H. Jay Dinshah, she is an accomplished author, lecturer, and teacher. Address: The American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey 08328.

Ohio.

1589. Dimler, R.J. 1970. Expanded soybean and corn uses. *Notes from the Director of the Northern Division* (*Peoria, Illinois*) No. 1005. p. 2. Oct. 23.
• ***Summary:*** "Miles Laboratories has announced two major changes of direct interest to NU products and developments. One is a multimillion-dollar expansion in Worthington Food Division for the manufacture of textured protein foods primarily based on soybean isolates and wheat gluten. The other is the formation of a new Division called Marschall which incorporates its Union Divisions (wet-milling) and other industrial operations, including dialdehyde starch, citric acid, enzymes, and chemicals." Address: Director.

1590. Lane, Mary Margaret. 1970. Tomorrow's foods today. *Nursing Homes* 19(10):28-29. Oct.
• ***Summary:*** The author visited the Worthington Foods plant near Columbus, Ohio. There she saw foods made from spun soy protein fibers, such as Prosage, Stripples, corned beef, smoked beef, and turkey-style slices. "The meat shortages of World War II brought meatless protein into popular demand. Only in 1962, however, did Worthington begin to turn its attention to the manufacture of analogues–those products which taste and look like meats." The vegetarian products in the Worthington line of "meatless meats" include "fried chicken, choplets, cutlets, pot pies, Skallops which are like seafood, and Veja-Links which contain only 15% fat–half that of regular frankfurters." Address: R.D.

1591. Wilding, M.D. 1970. Oilseed proteins. Present utilization patterns. *J. of the American Oil Chemists' Society* 47(10):398-401. Oct. [10 ref]
• ***Summary:*** A review of the uses of soy protein. Soybean is the most economical source of protein in terms of yield/acre. Flavor problems have been solved. Textured soy protein is reported. Figure 1 shows the relative efficiencies of protein conversion from some major protein sources. "The time has now come as predicted by Harry W. Miller in 1943, that our chief interest in the soybean is in its value as a human food."

The first significant development in texturizing proteins was made by Robert Boyer in 1947; he developed an edible soy protein fiber using a process similar to that for making textile fibers. This process is described. Today such fibers are being produced commercially by General Mills, Worthington Foods, and Ralston Purina, and used in some very sophisticated "engineered meat-like items." General Mills recently announced its intention to construct a multimillion dollar plant to make these "fabricated engineered foods."

Figure 1 shows the number of days of protein requirement (by a moderately active man) produced by one acre, yielding selected food product. Legumes make very efficient use of the land, grains make fairly efficient use, and livestock make very inefficient use. Soybeans make the most efficient use of the land to produce protein; they will sustain a man for 2,224 days. Beef cattle make the least efficient use; they will sustain a man for only 77 days.

Tables show: (1) The estimated production and prices of soy proteins. Soy flour and grits (120-126 million lb, 7-8 cents/pound). Soy concentrates (19-33 million lb, 18-26 cents/pound). Soy isolates (24-38 million lb, 35-45 cents/pound). (2) Amount of soy flour (million lb) used in various applications (both extrapolated from Eley 1968). (3) Physical properties and functional advantages of textured soy protein.

Large amounts of soy protein are also now being used to make fluid beverages. In Brazil, the Coca-Cola Co. has launched Saci, a chocolate flavored soy beverage. In British Guiana, Monsanto is making Puma. In Hong Kong Vitasoy is a commercial success. Address: Research & Development Center, Swift & Co., Oak Brook, Illinois.

1592. Wokes, Frank. 1970. Plantmilk (Letter to the editor). *British Vegetarian.* Sept/Oct. p. 462.
• ***Summary:*** During his tour of research centers in India, his stock of Plamil samples was eagerly tasted by colleagues who wished such a product were available in India. Discussions with industrialists and research workers showed him that it would be easier and cheaper to prepare a plantmilk in India from soya beans grown domestically using Dr. Harry Miller's original method, which calls for wet-grinding soaked soya beans, then processing them into a vegetable milk. "The product would be cheaper than cow's milk, which in India is relatively scarce and expensive... In Hong Kong Dr. Miller's efforts have led to the production of a soya milk cheaper than the equivalent amount of cow's milk..."

Margarine would not be available today in the UK "at prices lower than that for butter if it had not been bought by vegetarians who helped Hugh Mapleton in his pioneer efforts on its production." Address: V.N.R.C. [Vegetarian Nutrition Research Centre], Watford, Herts., England.

1593. **Product Name:** [Soyalac {Soymilk} (For General Use)].
Foreign Name: Soiyarakku Ippanyô.
Manufacturer's Name: College Health Foods. Later renamed San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1970.
Wt/Vol., Packaging, Price: 425 gm can.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Ippanyô was introduced in 1970. It is now sold by Saniku Fuuzu in a 425 gm can and distributed nationwide.

1594. **Product Name:** [GranoVita Tender Soymeat Cutlets].
Foreign Name: GranoVita Soja-zart (Zartes Sojafleisch).

© Copyright Soyinfo Center 2014

Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1970.
Ingredients: Soya protein, water, corn-germ oil, egg protein, salt, dextrose, spices.
Wt/Vol., Packaging, Price: 175 gm can wholesales for DM 4.65; 350 gm for DM 6.95 (1980).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: 14% protein.
New Product–Documentation: Full-page ad for 8 granoVita soy products in the book by Manfred Heide. 1977. *Vegetarische Ernährung: 193 Rezeptvorschläge und Speisepläne für ein Vierteljahr* [Vegetarian nutrition and food: 193 recipe suggestions and meal plans for a quarter of a year]. Stuttgart, West Germany: Paracelsus Verlag.

DE-VAU-GE leaflet. 1980? Rezepte aus der GranoVita Versuchskueche. Manufacturer's catalog. 1981. May 1. DE-VAU-GE Sortiments-Preisliste. 4 p. Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products.

Label sent by Anthony Marrese. 1990. Jan. 10.5 by 2 inches. Red, green, and white on beige. Color photo shows the product, resembling a golden-brown tofu burger with sesame seeds showing, surrounded by peas and carrots. "Soyameat in slices (Sojafleisch in Scheiben)." Neuform certification symbol. Ingredients now read: Whole soybean puree, water, soy oil, egg protein, soy protein, wheat protein, salt, seasonings, dextrose, celery, carob bean flour and guar seed flour as thickeners, onions, spices. Sauce: Water, seasonings, soy sauce, salt. 8 slices per can weigh 200 gm, but 310 gm with sauce. Retails for DM 4.98 (1/90). Composition per 100 gm.: Protein 15 gm, fat 16 gm, usable carbohydrates 5 gm, calories 221.

1595. **Product Name:** Loma Linda Canned Meatless Loaves (Based on Spun Soy Protein Fiber) [Meatless Chicken Loaf, Meatless Beef Loaf, Meatless Smoked Turkey Loaf, Meatless Ham-like Loaf, or Meatless Luncheon Loaf].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1970.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening. Or, Frozen.
New Product–Documentation: *Soybean Digest Blue Book.* 1970. p. 114. "Soy loaves (chicken, turkey, beef, and hamlike flavors)." Loma Linda probably purchased the spun soy protein fibers from General Mills. Sold frozen in 1 or 2 lb packages.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Beef-Like Loaf (Loma Linda)." This is an institutional product.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. Turkey-like Loaf is a canned product and Smoked Turkey Loaf (72 oz) is a frozen product. Both are based on spun soy protein fiber.

1596. **Product Name:** Loma Linda Soybeans Boston Style (Canned).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1970.

1604. Barnard, W.G. 1970. Health via the carrot and other vegetables. St. Catharines, Ontario, Canada: The Provoker Press and Paul S. Eriksson, Inc. xiv + 144 p. No index. 19 cm.
• ***Summary:*** This is apparently a reprint (with several words missing from the title) of the original edition (which Soyfoods Center has never seen), published in about 1939 by the Natural Foods Institute of Cleveland, Ohio. This edition contains 37 short chapters on a variety of subjects such as: What causes good health and poor health? Personal experiences of the author. The natural laws that govern health–God's simple rules of natural living. About vitamins and minerals. Various health problems or diseases and testimonials of cures and prevention. Good and bad foods, etc. Enemies of health: Coffee, alcoholic liquors, tobacco, denatured foods, tea, cocoa, cola drinks.

The introduction begins: "One of the most wonderful gifts God gave to man is a healthy body. It costs not one penny to preserve your health, but it may cost you a fortune, untold suffering, yes, even life itself, once health is lost... Primitive man sustained himself on natural foods..." (p. ix). "In our opinion some of the worst enemies man has today are High Pressure Advertising of Denatured foods, drugs, etc... Through the powerful medium of radio, billboard, magazine, and newspaper advertising, the public has fastened themselves upon the use of aspirins, alkalizers, narcotics, pills, laxatives, seltzers, cold cures,... Some of the largest buildings in our cities are the hospitals... Oh, what tragedy!" Sadly man fails to recognize that he has brought all these diseases upon himself (p. xiii).

Chapter 3, titled "My personal experiences with carrots and other fruits and vegetables" (p. 11) begins: "For the past 14 years the writer has been lecturing in food shows, trade shows, and expositions on the proper preparation of foods. I lectured at the Century of Progress in Chicago [Illinois] in 1933 and again in 1934, and at the Great Lakes Exposition in Cleveland in 1936 and again in 1937. I am the founder of the Natural Foods Institute in Cleveland, Ohio. He has proclaimed the health-giving carrot to thousands.

"Up to ten years ago, I had been living the average life, eating anything and everything, drinking coffee, tea, cocoa, and colas. The base of my meal was potatoes and white bread. I acquired an excessive weight of 212 pounds. Heartburn followed every meal." He then describes a typical day's diet, loaded with meats, sugar, fat and refined foods–and the agony that followed. He lost his pep and ambition, and was refused life insurance because of sugar in his urine. His family became very concerned. A doctor warned him of the possibility of immanent death, and "prescribed a diet of milk, bananas, lots of raw vegetables and vegetable and fruit juices, which I heeded" (p. 14). He began to feel better from the first day. "Today I feel like a new man... at the age of sixty-six my recovery is so complete that I am now enjoying exceptionally good health" (p. 15).

"With the return of spirituous liquors [in Jan. 1934], cocktail recipes and cocktail bars are prevalent all over the land. We all know that alcoholic cocktails are injurious regardless of the content as long as alcohol prevails... There are cocktails however, that can be made from Nature's vegetables and fruits that are healthful, exhilarating and bracing." "A new machine called a liquefier propelled by electricity liquefies vegetables in from one to three minutes and marvelous Health-Cocktails can thus be prepared at least once each day for the entire family" (p. 16-17). He also mentions the "liquefier" on p. 34, and p. 53 ("liquefying machine"). So this book was apparently not written mainly to promote the liquefier. Note: This liquefier would later become known as a "blender" and Barnard's company would later make and market the Vita-Mix or Vitamix, a powerful type of blender.

"Constipation is a disease known mainly to the civilized races" (p. 29). Barnard regularly cites and summarizes the writings or Dr. John Harvey Kellogg.

Essential for good health is a "pure, red blood stream created by natural foods, fresh air, sunshine, and exercise. Soy bean products, spinach, parsley, celery, cabbage and beets, as well as carrots help make good red blood. Eat a plate of salad made of three grated carrots together with orange juice dressing. Drink freely of carrot juice daily" (p. 49). "Carrot juice and other vegetable and fruit juices can be included in the diet of every child every day." In growing boys or girls, beware of "False Sugar Appetites."

"A strict vegetarian diet is used in the treatment of cancer with notable success..." (p. 88).

© Copyright Soyinfo Center 2014

Like many in the 1930s, the author believes that an alkaline diet fights acidosis and promotes good health (p. 91). "Salt is a very harmful substance if not used in moderation" (p. 119).

Chapter 35, titled "Soy bean (the perfect protein food)" (p. 127-28) begins: "For centuries the Chinese have used the Soy Bean as a source of protein and fat and the necessary Amino acids that are found in flesh foods. In America the production of the soy bean is now running into millions of bushels and vegetable meat factories and milk factories are springing up all over the country.

"Henry Ford, who has done so much to educate the American people to the value of the Soy Bean, recently made the prophecy that the cow and hog were destined to oblivion and we will soon be eating our meat from the Soy Bean and drinking our milk from the Soy Bean. In other words obtaining our food direct from the soil first hand instead of second hand..." "It is the experience of the Natural Foods Institute that babies taken from the natural mothers milk thrive on soy bean milk and we have found no one allergic to it.

"Soy Meat substitutes, Soy Milk, Soy Flour, Soy Cheese [tofu], Soy Coffee substitutes, canned green soy beans, canned soy beans in tomato sauce, soya macaroni are fast becoming popular among health minded people."

In conclusion (p. 133-34): "In writing this book I have consistently followed one line of reasoning. It is agreed to by many physicians, dieticians [sic, dietitians], and food scientists, that vegetables and fruits are absolutely essential for maintaining good health, natural balance, and physical well being. I have tried to help those who are afflicted by giving this information." I also want to help those who are healthy to stay healthy. At the end of the book is a food dictionary and lists of acid-forming foods (bad) and foods with an alkaline reaction (good). Address: Cleveland, Ohio.

1605. Hooker, Alan. 1970. Vegetarian gourmet cookery. San Francisco, California: 101 Productions. 192 p. Edited by Helen Morrow. Illust. by Sara Raffetto. 21 x 21 cm.
• ***Summary:*** The section on "Entrees" states (p. 101-02) that one of the easiest ways to get one's daily protein is by using soya flour, which can be added to many foods.

Soy-related recipes include: Baked soy beans (p. 56). Tofu with tempura vegetables (p. 132). Page 181 recommends various vegetarian food products, including Vegeburger and Choplets (made by Loma Linda Foods), Kikkoman brewed Soy Sauce, Bakon Yeast, and Gravy Quik (which contains soy and other vegetable proteins). Address: Founder, Ranch House vegetarian restaurant, Ojai, California.

1607. Schwarz, Richard W. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. Illust. Index. 22 cm. See p. 44, 120-23, 243. Also published in 1970 by Andrews Univ. Press (Berrien Springs, Michigan).
• ***Summary:*** This excellent biography of Dr. J.H. Kellogg was originally written as a 1964 PhD thesis at the University of Michigan. Although it contains no references or footnotes, and thus lacks the documentation and completeness of the dissertation, it is still (March 2009) the best biography of Dr. Kellogg. The author is a Seventh-day Adventist.

Contents: Preface. 1. The boy foreshadows the man. 2. A convert (the early health reform and vegetarian movements in America). 3. From teacher to doctor. 4. A man is what he eats. 5. Changing American habits. 6. Developing the Battle Creek Sanitarium. 7. Sanitarium ups and downs. 8. A torrent of words. 9. Variations on a boyhood dream. 10. The unwilling surgeon. 11. Products of an active mind. 12. All work, but little play. 13. What manner of man. 14. Father of forty-two children. 15. His brother's keeper. 16. The ties of fifty years are broken. 17. Food manufacturing and family quarrels. 18. New outlets for promoting an old program. 19. The last battles. 20. An epilogue.

Concerning meat substitutes (p. 121-23): "During the years in which he directed the experiments which led to the production of flaked cereals, Bromose, and Malted Nuts, Dr. Kellogg also attempted to develop a substitute for meat from plant sources. He traced his interest in such a product to conversations with Dr. Charles W. Dabney, noted agricultural chemist and former president of the University of Tennessee. When Dabney was serving as President Cleveland's Assistant Secretary of Agriculture [probably about 1893-1897], he had discussed with Kellogg the problem of supplying adequate protein for the world's rapidly expanding population. The men agreed that it was better economics to use grain for human food than to feed it to animals and then use them for food. The problem, as Dabney saw it, was to produce a grain product which would have all the nutritional value and taste appeal of meat.

"In 1896 Kellogg announced that he had perfected the ideal substitute for meat in Nuttose, a nut product which he could prepare to taste much like beef or chicken... The doctor's interest in new vegetarian meatlike protein foods continued active until shortly before his death. Among some of the more popular creations later developed in his laboratories were Protose, Battle Creek Steaks, and Battle Creek Skallops. Various combinations of nuts and wheat gluten composed the principal ingredients in the imitation meats...

"Kellogg's last major food discovery was an artificial milk made principally from soybeans. He was particularly enthusiastic over soy milk because it proved an excellent

© Copyright Soyinfo Center 2014

host for the *acidophilus* bacteria which the doctor believed needed to be implanted in the intestinal tract in order for it to function perfectly. Shortly after Kellogg had developed soy acidophilus milk, he chanced to read that Marie, smallest of the Dionne quintuplets, was suffering from bowel trouble. Immediately wiring the quints' physician, Dr. A. R. Dafoe, he announced he was sending him a supply of soy acidophilus milk, which he was certain would cure Marie's problem. About ten days later he received a letter from Dafoe which indicated that the soy acidophilus milk had indeed corrected the situation and asked that a continuous supply be sent to Callander, Ontario [Canada], for the five little girls."

In summarizing Dr. Kellogg's major accomplishments, the author notes (p. 243): "His introduction of peanut butter added another widely accepted item to the American diet, and it probably did more to provide a market for peanuts than did the efforts of any other person, with the possible exception of George Washington Carver. John Harvey's development of meatlike products from nuts and legumes combined with wheat gluten has not only helped to enrich the dietary of thousands of persons who for ethical, health, or religious reasons choose to be vegetarians, but such high-protein foods also hold possibilities for supplementing the diet in countries where the supply of meat is insufficient to provide enough protein for a rapidly expanding population."

Concerning Granola: In the early 1860s, Dr. James Caleb Jackson of Dansville, New York, developed Granula, America's first successful cold breakfast cereal, made solely from wheat. For 40 years, Dr. Jackson operated "Our Home on the Hillside," probably the most successful of the "water-cure" institutions that blossomed in the 1850s. "In an atmosphere approaching that of a European spa, Jackson provided hydropathic treatments and a special diet for as many as a thousand patients a year." In about the 1870s, at the Battle Creek Sanitarium, John Harvey Kellogg developed a similar product, which he named Granola. It differed from Jackson's Granula in that it consisted of several grains, and longer baking dextrinized the starch more thoroughly. "At first he apparently had no thought of selling it. He intended it solely for sanitarium patients. Gradually, however, as former patients and others interested in dietetic improvement sent to the sanitarium for Granola, a small commercial business developed, and Battle Creek thus took its first step toward becoming the 'Breakfast Food Capital of the World.'... Shortly after the production of Granola for patients at the sanitarium began in 1877, Dr. Kellogg organized the Sanitarium Food Company as a subsidiary of the Battle Creek Sanitarium. Operated as an adjunct to the sanitarium bakery, for more than a decade it marketed a variety of oatmeal, graham, and fruit crackers and whole-grain cooked cereals–all originally devised to provide variety in the menu of sanitarium patients." All products were made from whole grains without artificial additives, and all underwent prolonged high-temperature baking designed to dextrinize their starch. "By 1889 the Sanitarium Foods had become popular enough to warrant the establishment of a separate factory; Granola alone sold at the rate of two tons a week." But when Dr. Kellogg wanted to expand the business, other sanitarium doctors refused to vote the funds. So Dr. Kellogg launched the private Sanitas Food Company, relying heavily on his younger brother, Will Keith, who had served as his personal accountant and business manager since 1880. John Harvey's new flaked cereals and vegetable meats became the property of the Sanitas Company. In mid-1906 Dr. Kellogg decided to change Sanitas' corporate name to the Kellogg Food Company. Then: "In the spring of 1921, to avoid further difficulties with Will Kellogg's manufacturing business [Battle Creek Toasted Corn Flake Company], Dr. Kellogg changed his concern's name to the Battle Creek Food Company."

Concerning flaked breakfast cereals: The first ones were developed from wheat jointly by Dr. J.H. Kellogg and his brother Will, in about 1894. Dr. Kellogg named their first successful wheat flakes product Granose Flakes, and on 31 May 1894 he applied for a U.S. patent on "Flaked cereal and process for preparing same." But in 1903 courts declared the doctor's patent invalid. Will Kellogg developed the product into a great commercial success, in part by adding sugar to the malt and corn combination from which he made the flakes. "The sugar greatly enhanced the cereal's taste appeal, and, as a result, the Corn Flakes business was booming by late 1905." Will convinced his brother, John Harvey, to relinquish Sanitas' rights to Corn Flakes, and in early 1906 Will established a separate Battle Creek Toasted Corn Flake Company with outside financing. John Harvey agreed not to take an active part in the new company's management. Six months later John Harvey decided to change Sanitas' corporate name to the Kellogg Food Company. The new company "began operating in July 1908, with Dr. Kellogg owning all but two of its fifteen thousand shares of stock. Not only did the new company absorb the old Sanitas Company, but it also leased the entire plant, machinery, goodwill, and business of the Battle Creek Sanitarium Food Company, thus bringing the manufacture and distribution of all the food products with which Dr. Kellogg was associated into one organization. By then John Harvey had decided that it would be a good thing to put out all company products under the trade name 'Kellogg's.'"

Will became very upset when Dr. Kellogg attached the family name to his new food company and products. Eventually a series of legal battles developed between the two brothers over this and other products. Will Keith Kellogg is discussed on pages 64, 118-20, 122, 144, 148, 192, 210-18, 224, 237-38.

On pages 193-208 are 16 pages of excellent black-and-white photos from the life of Dr. Kellogg, starting with a portrait of him and his wife in 1884.

Association (Hagerstown, Maryland)–but with the new subtitle: "Pioneering health reformer." Adventist pioneer series. On the new cover, on a snipe in the upper right corner: "Father of the health food industry." Address: Andrews Univ., Berrien Springs, Michigan.

1608. Schwarz, Richard W. 1970. The boy foreshadows the man (Document part). In: Richard W. Schwarz. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. See p. 9-16.
• ***Summary:*** For nearly 200 years the Kellogg family had lived in Hadley, Massachusetts. Then in the summer of 1834, John Preston Kellogg loaded his wife, Mary, their young sons, Merritt and Smith, and some household belongings into a wagon and headed for Albany, New York, the eastern terminus of the Erie Canal. They traveled by canal boat from Albany to Buffalo, boarded a lake steamer for Detroit, then journeyed northwest by wagon for about 60 miles until they reached the farm of their former neighbor, Lansing Dickinson, near the present city of Flint, in the Michigan Territory. There were only about 6 families and a few Indians in the area.

John Kellogg filed a claim for 320 acres of government land and soon began farming. But over the next 4 years the health of his wife steadily deteriorated until, in the fall of 1841, she died. John persuaded Ann Stanley, age 18, to care for the children and the house. In March 1842 she and John were married. She soon found that the family had financial difficulties. Before long they moved southwest to Tyrone Township in Livingston County. "Within ten years the Kelloggs had one of the most prosperous farms in the neighborhood." Soon John was baptised and the family joined the Heartland Center Congregational Church. They tried to demonstrate their religion in practical ways, as by becoming active abolitionists and occasionally passing fugitive slaves on toward the Canadian border and freedom. Ann learned to distrust traditional medical practitioners after the death of Emma, one of her first children. The family began to subscribe to Dr. Joel Shew's the *Water Cure Journal.*

On 26 Feb. 1852 Ann gave birth to her second son, John Harvey Kellogg. In the summer 1852 they got to know the Millerite movement, that would later become the Seventh-day Adventist Church. In 1853 the Kellogg family accepted Adventism and moved to Jackson, Michigan, to be with a larger group sharing their convictions. In 1856, when John Harvey was 4, the family moved to Battle Creek, already on its way to becoming Adventist headquarters. One day he admitted that Satan had made him tell a tall tale. Then, after a little sober thought he said, "Mother, I wish God would kill Satan." Address: Andrews Univ., Berrien Springs, Michigan.

1609. Schwarz, Richard W. 1970. A convert (Document part). In: Richard W. Schwarz. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. See p. 17-25. Chap. 2.
• ***Summary:*** In 1864, at age 12, John Harvey Kellogg began to work with the Seventh-day Adventist health reform movement as a printer at the Review and Herald Press. Discusses: Ellen G. White's health reform vision at Otsego, Michigan, in June 1863. Social reform movements in America. Dr. James Caleb Jackson. Dr. Russell T. Trall. Doctors, their treatments, and medical schools in the mid-1800s. The great cholera outbreak of 1832-34. Dr. George Cheyne. Andrew Combe. William Metcalfe. The American Vegetarian Society. Edward Hitchcock. Prof. Reuben D. Mussey. Dr. William Alcott. Sylvester Graham. Mrs. Mary Gove. Dr. Joel Shew. Hydropathy. The water treatments given by Vincent Priessnitz, an uneducated Silesian peasant at Graefenburg, Austria. *Water Cure Journal.* Dr. L.B. Coles of Boston, Massachusetts, and his book *Philosophy of Health.* Our Home on the Hillside in Dansville, New York. Granula (America's first successful cold breakfast cereal, developed by Dr. James C. Jackson in the early 1860s). Dio Lewis. Publication of the *Health Reformer.*

"In 1817 a group of vegetarian Christians, led by William Metcalfe, arrived in Philadelphia from Manchester, England. Metcalfe helped organize the American Vegetarian Society in New York City in 1850."

"In May, 1830, another recruit joined the ranks of American health reformers when Dr. William Alcott adopted a strict regimen which included a vegetarian diet and excluded all liquids except water. A graduate of Yale University's Medical School [in Connecticut], Alcott mixed part-time farming and years of teaching with the practice of medicine. He was one of the first health reformers to publish his ideas widely in printed form. In 1835 Alcott launched *The Moral Reformer,* a monthly journal devoted to the cause of healthful living. He also authored numerous popular books on physiology and hygiene, sex education, and character training... The doctor served as the first president of the American Vegetarian Society.

"In order to attract public attention in an era of limited communications media, the health reform movement needed an orator. Sylvester Graham, a former Presbyterian preacher and onetime General Agent for the Pennsylvania Temperance Society stepped into the role in the 1830's. At the start of the decade Graham spent several months in an intensive study of physiology and diet. It was probably then that he came into contact with and accepted the dietetic views of William Metcalfe's vegetarian congregation in Philadelphia. Reading the experiences of a fifteenth- and sixteenth-century Italian nobleman, Luigi Cornaro, who believed that he had regained his health by adopting a radical change in diet, also deeply impressed Graham." Graham soon "decided that diet was the most important factor in the maintenance of good health." Address: Andrews Univ., Berrien Springs, Michigan.

1610. Schwarz, Richard W. 1970. Work to expose the dangerous effects of using alcohol, tobacco, tea, and coffee (Document part). In: Richard W. Schwarz. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. See p. 106-07. Chap. 9.
• ***Summary:*** Dr. Kellogg's activities in this area of health education began at the two Battle Creek colleges, the American Medical Missionary College, and the variety of schools associated with the Battle Creek Sanitarium. "He entered the modern field of audiovisual education as early as the 1880's, when he prepared a series of ten colored charts depicting the harmful effects of alcohol and tobacco. Temperance lecturers used them widely. Several years later he developed two series of charts for school use. Going beyond the conventional fundamentals of anatomy and physiology, the charts showed the effects of bad habits in dress and posture and the results of neglecting to secure sufficient exercise.

"The doctor also participated in a wide variety of adult education ventures. Along with James and Ellen White and G.I. Butler, he had organized the American Health and Temperance Association in 1878 in an effort to expose the dangerous effects of using alcohol, tobacco, tea, and coffee. Dr. Kellogg served as the Association president during its fifteen-year life-span and actively organized public meetings and campaigns to distribute temperance tracts and pledges. In later years John Harvey served as president of the Michigan Anti-Cigarette Society, and following World War I he became a member of the Committee of Fifty to Study the Tobacco Problem. Kellogg assisted the latter group–which included Henry Ford, George Peabody, and John Burroughs–in producing one of the first educational motion pictures devoted to the dangers of tobacco smoking." Address: Andrews Univ., Berrien Springs, Michigan.

1611. Schwarz, Richard W. 1970. Products of an active mind: Peanut butter (Document part). In: Richard W. Schwarz. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. See p. 120-21.
• ***Summary:*** "Another important item in the American diet which Kellogg first introduced was peanut butter. Shortly after 1890, he had a quantity of roasted peanuts ground up into a paste for use by patients who had difficulty in masticating nuts or peanuts (which are a legume) well enough to digest them properly. Later he decided that roasting caused the fat content to begin to decompose, irritating the digestive organs. From that time forward the sanitarium made its peanut butter from steam-cooked rather than roasted peanuts. Kellogg also devised a variety of nut butters, which he claimed were 'sweeter, more palatable, and more digestible' than regular butter. Making no attempt to secure patents which would let him control the production of either peanut butter or any of his nut butters, he announced that he believed that they were products that 'the world ought to have; let everybody that wants it have it, and make the best use of it.'

"During the decade following the appearance of peanut butter, Dr. Kellogg developed several other food products with a nut base. In 1896 he patented a product labeled 'Bromose,' which he claimed to be a vegetable equivalent of malted milk...

"At about the same time, John Harvey originated a similar product which he named Malted Nuts. Derived principally from peanuts and almonds, one could mix Malted Nuts with water to form a vegetable milk which Kellogg maintained looked 'exactly like milk, and tastes so nearly like it that it is a very satisfactory substitute.' He designed the latter product primarily for infants who could not tolerate cow's milk..." Address: Andrews Univ., Berrien Springs, Michigan.

1612. Trager, James. 1970. The enriched, fortified, concentrated, country-fresh, lip-smacking, finger-licking, international, unexpurgated foodbook. New York, NY: Grossman Publishers. xv + 579 p. Illust. Index. 24 cm. [350+* ref]
• ***Summary:*** This hefty volume is packed with information about a multitude of interesting, little known, or bizarre subjects related to food. It is divided into 11 major chapters, each of which contains many mini-chapters, often with witty or enticing (but often undescriptive) titles such as "mushrooms take savvy" or "Farmer Jefferson." The extensive index is very useful, containing entries for such things as Accent/MSG (p. 445-48), prehistoric agriculture and food (p. 3-11), meat analogs and Bac*Os (p. 450-51, 457, 501), Archer Daniels Midland (p. 450), bean curd (p. 333, 362), Battle Creek Sanitarium (p. 460), Kellogg (p. 384, 460-61), miso soup (p. 362), soybeans (p. 21, 262, 382, 450-51, 518), soy protein (p. 450), vegetarianism and vegetarians (p. 3, 324, 343, 457-59).

In Chapter 10, titled "Nuts in the Fruitcake" (p. 455-86), the author takes the opportunity to make fun of anything he discusses related to health/natural foods or vegetarianism. To him, it all smacks of food faddism and extremists. There are sections about vegetarians past and present ("there are no convincing nutritional justifications for vegetarianism"), Sylvester Graham ("One of America's first home-grown food faddists"), Horace Fletcher, Dr. William Howard Hay and acidosis, Gayelord Hauser ("Perhaps the most prominent diet and health mythologist in recent years"), organic foods baloney ("DDT has not yet been shown to have harmful effects for humans"), Carlton Fredericks and Adolphus Hohensee, Tiger's Milk, aphrodisiac foods, and food and astrology. Address: New York.

1613. Elmshaven, the house in which Ellen G. White spent the last years of her life (Photograph). 1970?

"Elmshaven. The house in which Ellen G. White spent the last years of her life is located near St. Helena, Napa County, California. Mrs. White did most of her writing in the tower room to the right. Editorial details were handled in the office building appearing behind and to the left (color)."

1614. Dimler, R.J. 1971. ED technology applied to commercial soy beverage. *Notes from the Director of the Northern Division* No. 1013. p. 1. Jan. 8.
• ***Summary:*** In Feb. 1969 Mr. J.E. Minesinger (chemist) and D.J. Keeler (manager) of Loma Linda Foods (Mt. Vernon, Ohio) visited the NRRC and learned about their process to inhibit the development of rancid flavors and odors in full-fat soy flour. Loma Linda adopted their process to inactivate lipoxygenase and now reports obtaining a highly significant improvement in the flavor of its soy beverage products.

"After receiving a sample of our new soy beverage, Mr. Minesinger came on Dec. 9 to discuss with Mr. Mustakas (ED = Engineering & Development) our research in more detail. Loma Linda is marketing 'Soyagen,' a spray-dried formulated soy milk powder selling at about $1.00 a pound. Each pound of water dilutes with water to make about 1 gallon of beverage. This new product is highly nutritious and is also available with a carob (chocolate-like) flavoring. Mr. Minesinger commented specifically about using our process to inactivate lipoxygenase to improve flavor quality." Address: Director.

1615. Harris, Jean. 1971. Engineered food is on the way! *News and Observer* (*Raleigh, North Carolina*). Jan. 17.
• ***Summary:*** Henry Ford's desire to make cloth from soy protein started the original research on "meat analogues." The technology for producing spun soy protein products developed from a process to produce casein fibers in Italy in the mid-1920s. A second group of "soy meats," called textured meat analogues, is made by an extrusion process applied to textured vegetable proteins made from soy protein isolates; one example is Bac-Os.

"Most of these soy meats are available only to the institutional trade. They are now in use in prisons, hospitals, and orphanages." Two manufacturers of such products are Loma Linda Foods and El Molino Mills.

In North Carolina a full soybean product, made from toasted soybeans, is sold under the name of Golden Nuggets; all Raleigh seems to be eating them.

Recipes are given for: Soya cake (with sifted soya flour). Soyanaise (with Soyamel soymilk). Golden nut pie crust (with soya flour). Soya cookies (with soya flour). Roasted soybeans (made from canned soybeans, either dry roasted at 350 degrees or deep fat fried). Puree of soybean soup (with sieved soybean pulp). Address: Food editor.

1616. Carberry, James F. 1971. Our daily bread: Food faddism spurts as young, old people shift to organic diets. Concern on pesticides cited, but some see deception by quacks claiming cures. Yin and yang ice cream. *Wall Street Journal.* Jan. 21. p. 1, 12.
• ***Summary:*** Written from Hollywood, California, this article reports that "food faddism has been particularly prevalent lately." Kahan & Lessin Co., one of the nation's biggest distributors of organic foods, reports that its sales have doubled to $12 million a year from $6 million in 1968. New Age Foods of San Francisco [owned by Fred Rohé] recently opened a branch store in suburban Palo Alto, where it expects to gross $1 million during its first year.

"Health and organic food advocates say the popularity of such items–as well as the more conventional products grown under 'natural' conditions–reflects the growing public concern over pesticide poisoning and the publicity over the dangers of food additives, preservatives, and substitutes like cyclamates."

Richard Hansen is a sociologist at the University of California at Davis; he is researching the organic food movement.

"New insights into universe: Bruce MacDonald [sic Macdonald], president of Erewhon Trading Co., a Boston and Los Angeles concern that specializes in such exotic foods as hacho miso (a soybean paste), says that organic foods appeal to many dropouts from the drug culture. 'It's not just that the body's malnourished from being on drugs a long time,' he says. 'It's also that organic foods can give a person new insights into the order of the universe."

Warren Stagg, the bearded proprietor of H.E.L.P., a popular vegetarian restaurant, believes in the mystical,

© Copyright Soyinfo Center 2014

spiritual value of certain foods. A vegetarian diet can help elevate a person to a higher level of consciousness and bring him into harmony with the order of the universe, he says. Since 75% of H.E.L.P.'s clientele are nonvegetarians, the "restaurant offers some meat substitutes such as 'beef' stroganoff made from vegetable protein, mushrooms, scallions, bell peppers and sour cream sauce, and a 'vegeburger' sandwich that's also made from vegetable protein. Other dishes on its menu include braised tofu (soybean cake) with brown rice and a salad of cottage cheese, alfalfa sprouts, sunflower seeds, grated carrots, scallions, figs and apricots."

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "braised tofu" to refer to grilled tofu.

"A group of young people following a macrobiotic diet live in an old Victorian mansion above Hollywood's Sunset Strip. They are students of the late Georges Ohsawa, a Japanese philosopher who taught about the delicate balance between yin and yang; they eat ascetic meals that include pressure-cooked brown rice and seaweed soup. There have recently been well-publicized cases of the deaths or severe illnesses of a few young people subsisting on only brown rice, the extreme form of the macrobiotic diet.

"Another famous food-faddist helped found a huge business in breakfast cereals. He was John Harvey Kellogg..." according to Ronald Deutsch, author of a history of food fads called "The Nuts Among the Berries." Deutsch then tells his inaccurate version of how Mr. [sic, Dr.] Kellogg got into the cereal business.

"One man who spends a great deal of time pooh-pooing various nutritional eccentricities is Dr. Fred Stare, chairman of the department of nutrition at Harvard University's School of Public Health." Dr. Stare discusses his pet peeves.

Note 2. Bruce Macdonald recalls (April 1992): "In early 1971 *The Wall Street Journal* ran a front-page feature story on the emerging new natural foods industry. A person from Merrill-Lynch came in and said, 'We could package this business and raise millions for you.'"

Advest Co. 1972. Dec. "A recent *Wall Street Journal* article named this industry as one of the ten highest growth industries for the 1970s." Address: Staff Reporter.

1617. Horan, F.E.; Odell, A.D.; Forman, M.J. 1971. Textured vegetable proteins. *PAG Bulletin* (*Protein Advisory Group, WHO / FAO / UNICEF*) 2(1):22-26. Winter. No. 13.
• ***Summary:*** This paper was compiled from background documents presented by the authors at the 18th PAG [Protein Advisory Group] meeting held on 9-12 Feb. 1971 at Rome, Italy. Contents: Introduction. Spun monofilament products. Extrusion-expansion products (currently marketed at about $0.45/lb). General considerations. Case studies: Thailand (ADM's TVP), Brazil (Swift & Co.'s textured meat analogs), India (Swift & Co., ditto). Textured vegetable protein products: Fibroprotein–Spun Protein Fibers (Worthington Foods Div., Ohio), Textured Edi-Pro (Ralston Purina Co., Missouri), Texgran (Swift & Co., Illinois), Bontrae (General Mills, Minnesota; spun vegetable protein products), Carne Vegetal (Industria e Comercio de Productos Alimenticios Vegetal Ltd., Brazil). LiveLong–VP (Nisshin Flour Milling Co. Ltd., Japan; a wheat gluten extract in the form of a dried or frozen mincemeat-like product. "It seems to be made by a filament extrusion process using isolated wheat gluten protein"). The Farmarco Co. (Far-Mar Co., Kansas), The Fuji Oil Co. (Japan; thermoplastic extrusion), and Shefa Protein Foods Ltd. (Israel) each manufactures texturized soy food products by thermoplastic extrusion.

Introduction: "The chief virtue of the individual members of this new class of foods rests in their ability to supply precisely reproducible balanced dietary inputs of essential amino acids with greatly enhanced agronomic efficiency and with high consumer acceptance... At the moment two broad classes of meat analogues are apparent. The extrusion–expansion products sell for US 10-15¢ per pound; the spun monofilament products sell at present in the USA for 20-25% less than meats, but are still too expensive to be of interest for developing countries."

"General considerations: Meat analogs do not appear to have a negative connotation to vegetarians; there are many examples of eager acceptance of meat analogs by such groups. The textured protein approach is also a stride forward in food efficiency, since conversion of soy to animal protein averages about 7% efficiency."

"Over the past few years US/AID has entered into contracts with twelve different U.S. commercial companies to investigate and evaluate low-cost proprietary protein products in some ten developing countries."

Note: This is the earliest English-language document seen (Dec. 2004) that uses the word "Fibroprotein" to refer to edible spun soy protein fiber. Address: 1. ADM, Decatur, Illinois; 2. General Mills, Minneapolis, Minnesota.

1618. Leneman, Leah. 1971. Plantmilk and sex! *British Vegetarian.* Jan/Feb. p. 6.
• ***Summary:*** The author (and many other people she knows) prefers the taste of Granogen to that of Plamil as an alternative to cow's milk. Granogen, however is not made in Britain.

On a different subject, she finds sex outside of marriage to be a glorious and rewarding experience. Address: St. Pancras, London, W.C.1, England.

1619. Robinson, R.F. 1971. Plant proteins: Their advantages as extenders in meat products. *Meat Processing* 10(2): Feb.
• ***Summary:*** Extruded plant protein products are made from soy flours and soy concentrates. "The spun protein fibers today are opening a new horizon to the meat processor..." "Fibered extenders have a stabilizing effect on comminuted

© Copyright Soyinfo Center 2014

meat products." "The price of fibered extenders is lower than the cost of the natural product and therefore the final convenient extended meat item is more economical to the consumer." The cost of "fibered plant protein extenders has been gradually going down."

Note 1. It is interesting that the term "plant proteins" rather than "vegetable proteins" is used. Note 2. It is not clear whether extruded soy concentrates are being made commercially. Address: Marschall Div., Miles Labs., Inc.

1620. Martin, Roy E. 1971. Edible soy proteins: Challenge and opportunity. *Soybean Digest Blue Book Issue.* p. 26-30, 32-33. March. [6 ref]

• ***Summary:*** Contents: Introduction ("A new frontier is being forged in food technology with the development of soy protein for human consumption"). The proteins defined (Soy flour, flakes, and grits). Types of soy flour (Full-fat, low-fat, defatted). Soy proteins. The concentrates. The isolates. The spun proteins. Textured proteins. Soy milk. Soy beverages. Blended foods (USDA CSM, WSB). Special products for overseas (Puma, Sobee {"A U.S. full-fat soy flour product nutritionally adequate to support infant growth, introduced in Taiwan"}, Cerealina, Pro-Nutro, Saridele, Saci, Nutresco, Nestle's soy-corn flour marketed in Brazil). How large is the market? Further reading.

Soy milk: "Soy milk has been used for centuries in the Orient for infant feeding [sic] and other purposes... the process has been refined and its application greatly extended in the Far East by Dr. H.W. Miller and others. K.S. Lo [of Vitasoy, Hong Kong] has been bottling soy milk as a nutritious low-cost soft drink and selling many millions of bottles yearly." In 1959 the World Health Organization built a $1 million soy milk plant in Indonesia [to make spray-dried Saridele]. In the Western soy protein [isolate] is used in soy-based infant forumlas. "It is also used by adults with allergies, diabetes, or who for other reasons prefer" a non-dairy milk.

Tables show: (1) New Protein Food Program of the Agency for International Development (an independent federal agency). Five columns show: Country. U.S. company. Date of product [launch]. Product description & contract [no product names are given]. Raw materials. Of the 11 products in 7 countries, eight contain soya. They are: Brazil, Krause Milling Co., March 1967. Brazil, Monsanto, June 1967. Brazil, Swift, April 1967 (two products). Kenya, Del Monte, June 1968. Pakistan, General Mills, June 1968. Thailand, ADM, Aug. 1968. India, Swift, July 1968.

(2) Protein cost per pound of various foods:
Beef (retail) $4.44.
Chicken (dressed) $1.50.
Wheat flour $0.60.
Bulgar wheat [bulgur] $0.47.
Peanut meal (defatted) $0.43.
Dry skim milk [nonfat dry milk] $0.40.
Wheat (whole) $0.30.
Cottonseed flour $0.17.
Fish meal (food) $0.14.
Soy flour (food) $0.11 (from Bean 1966).

(3) Efficiency of land use for protein production. Three columns give the name of the crop or animal, average yield per acre, and pounds of protein per acre.
Soya bean, 24.2 bu, 508 lb.
Other legumes, 20.7 bu, 293 lb.
Maize, 64.2 bu, 323 lb.
Wheat, 25.1 bu, 180 lb.
Milk, 2,780.0 lb, 97 lb.
Beef, 342.0 lb, 58 lb.

Note: No earlier source of this table can be found; it is not in Bean (1966).

Photos show: (1) Sukiyaki made with textured vegetable protein. (2) A stable whip of soy protein being ejected from the spout of a pressurized can onto the top of a parfait dessert. (3) Defatted soy flakes, which are the raw material for defatted soy flour, special soy protein, soy protein concentrate, isolated soy protein. Address: General Manager, Vegetable Protein Products, Swift Chemical Co.

1621. *Battle Creek Enquirer and News* (*Michigan*). 1971. San's glamour spa era ends: Presidents, tycoons, stars 'took the cures' in its heyday. April 21. Wednesday. Address: Battle Creek, Michigan.

1622. **Product Name:** Temptein (Spun Soy Protein Fibers) [Meat-Like Nuggets, Bacon-Like Chips, Seapro, Ham-Like Cubes, Pepperoni-Like Links, or Pro-Lean 45].
Manufacturer's Name: Miles Laboratories, Inc. Marschall Div.
Manufacturer's Address: Elkhart, Indiana 46514.
Date of Introduction: 1971 May.
New Product–Documentation: Ad in Food Technology. 1971. 25(5):44-45. May. "These spun vegetable fibers could revolutionize your new foods. Temptein: The spun textured protein."

Miles Laboratories Inc. Marschall Div. 1973. Jan. Technical information on Temptein spun textured vegetable protein. Ad in *Soybean Digest.* 1973. Nov. p. 19A-B. "From Miles–Six specific ways to whittle costs in your meat and seafood formulations. And maintain quality."

1623. Miles Laboratories, Inc. Marschall Div. 1971. These spun vegetable fibers could revolutionize your new foods. Temptein: The spun textured protein (Ad). *Food Technology* 25(5):44-45.

• ***Summary:*** Temptein, the new textured protein from Miles, is significantly different because its spun. "We spin refined soy isolate (more than 90% protein) using platinum spinnerettes, each containing 15,000 tiny holes. The result is a highly manageable protein 'tow.'"

© Copyright Soyinfo Center 2014

Much more easily than other forms of protein, it "assumes the texture of almost any food you choose. The genuine texture. Of anything from ground beef to chicken, lobster to scallops. Moreover, Temptein accepts flavors, colors and additional nutrients in precisely measurable quantities. his means that variables like taste, texture, bulk density and nutritional content are calculable. Controllable."

A large photo shows Temptein held between a thumb and forefinger.

Note: This is the earliest English-language document seen (March 2009) that mentions Temptein spun soy protein. Address: Elkhart, Indiana. Phone: (219) 264-8716.

1624. Tabuchi, Ichiro. 1971. Saishoku-shugi no riron-teki haikei: Shokubutsu-sei tanpaku shokuhin kaihatsu ni okeru shûkyô-teki tachiba ni tsuite [Theoretical background on vegetarianism: The religious viewpoint in the development of vegetable protein foods]. *Shokuhin Kaihatsu* (*Up-to-Date Food Processing*) 6(6):31-35. June. [5 ref. Jap]

• ***Summary:*** Contents: Seventh-day Adventists. Ellen G. White's viewpoint. Seventh-day Adventist food enterprises and their purposes. Popularization of Soyalac made by San-iku Foods (Shokuhin) in Japan. The campaign for quitting tobacco in 5 days at the Adventist Tokyo Hospital (*Tokyo Eisei Byoin*).

The section on the popularization of Soyalac states: "Although in a recent issue of *Shokuhin Kaihatsu* magazine, soymilk was described as an illusory food (*maboroshi*), at least for us, it is a very real food, because San-iku Shokuhin has been making soymilk for the last 12 years and providing it for our school dormitory cafeteria meals. We have gotten good results in both taste and nutrition. With this experience and Loma Linda's formula and technique (they make formulated dairylike [chôsei] soymilk), Neo-Soyalac was born. It is a superior, nutritious infant formula.

"Soyalac was developed by Dr. Harry W. Miller, who was the world's leading authority in the field of soymilk. He spent half a century researching and developing Soyalac. It started to be produced and sold in the 1940s. Since that time it has contributed as an infant formula, and a milk substitute for children who are allergic to or dislike dairy milk. Its effectiveness and safeness have been proved by clinical experimentation. Also, Soyalac was used after World War II as an especially nutritious food for the protein-rich food program of the World Health Organization (WHO), FAO, and UNICEF and it saved many children from starvation and kwashiorkor.

"San-iku Shokuhin is now starting this work in Japan. We are trying to popularize our soymilk through very special methods such as via our religious network, health food stores, and doctors detailings. Babies who can't drink cow's milk or had allergies have been saved. Those with rashes and sweat rashes have been cured. We have received many expressions of thanks. One mother raised her 3 children on soymilk only, and one of the three was selected at a healthy baby contest in her county (*gun*). Formulated soymilk is not a medicine, therefore we are not allowed to promote its medicinal effects. Nevertheless, these various good effects have been proved clinically and in actual experience.

"A century ago, Ellen G. White predicted that 'the time will come when we will not even drink dairy milk.' Now we feel that this prediction is coming true as we see our dairy milk contaminated with penicillin, BHC, DDT, etc. I feel that in this day and age our work to popularize soymilk, which contains no antibiotics, no chemicals, and no cholesterol, and which is so nutritious and healthy, is very meaningful." Address: Product Development Dep. (Kaihatsu-bu), San-iku Foods, Japan.

1625. Starr, Paul. 1971. Hypercholesterolemia in school children: A preliminary report. *American J. of Clinical Pathology* 56(1):515-22. July. [15 ref]

• ***Summary:*** 3,000 Seventh-day Adventist school children, ages 6 to 14 years, in Southern California schools were screened for serum cholesterol. 6-7% of them had serum cholesterol concentrations above 220 mg per 100 ml, which means they have hypercholesterolemia as defined by Wilkinson (1950). In the age range from 9 to 12 years, 10% have hypercholesterolemia. Address: Univ. of Southern California, School of Medicine, Los Angeles, California.

1626. Rodale, Robert. 1971. The right way to vegetate: Organic food. *Washington Post, Times Herald*. Aug. 19. p. H4.

• ***Summary:*** Many young people are turning to vegetarianism. Here are some of the main reasons: 1. Reverence for life. 2. Mystical [and ethical] reasons. 3. Economy. 4. Animal feeds are drugged. 5. A vegetarian diet can be healthful–as shown by studies of Seventh-day Adventists. Rodale then offers a few words in favor of eating meat. His personal preference in diet is a compromise between a vegetarian diet and the standard American meat-heavy diet.

Some vegetarians eat novel foods. "Health food stores catering to vegetarians do a big business in millet, buckwheat groats, unpearled barley, nutritional yeast, and even Japanese Azuki beans."

Both vegetarians and meat-eaters show a growing interest in such healthy foods as wheat germ, sunflower and pumpkin seeds, brown rice, raw or lightly roasted peanuts, and peanut butter.

1627. Laine, Iris Coyn. 1971. Soy goes to school. *School Lunch Journal* 35(7):41-43. July/Aug.

• ***Summary:*** "On February 22, 1971, USDA authorized the use of textured vegetable protein, fortified with vitamins and minerals, to meet part of the minimum requirement of two ounces of cooked meat for the Type A school lunch."

© Copyright Soyinfo Center 2014

Discusses: What this means: Main dishes, sandwiches. What are textured vegetable proteins? Look and taste. Nutritional content. What products are available? Want more information? Contact the Food Protein Council. The nine regular members of the Council are listed: ADM, Cargill, Central Soya Co, Far-Mar-Co, Griffith Laboratories, Miles Laboratories, Ralston Purina Co., A.E. Staley Manufacturing Co., and Swift Chemical Co.

"For schools that prepare their own foods, there are several recipes in USDA's 'Quantity Recipes for Type A School Lunches', that are ideal for including textured vegetable protein products." The names of ten main dishes (with the USDA Card No. for each) and 2 sandwiches are given. A photo shows three school lunch dishes which include textured vegetable proteins: Hamburger, sloppy joe, and spaghetti sauce. Address: Foodservice Relations Director, Food Protein Council.

1628. *Los Angeles Times.* 1971. Kahan and Lessin Co. big in health foods. Sept. 26. p. H1, H7.
• ***Summary:*** Kahan and Lessin Co. (Compton) is one of California's largest distributors of health and diet foods. It was formed in 1945 by the union of two small Los Angeles food distributors: The Ben Kahan Co. and the Joseph E. Lessin Co. During the depression years of the 1930s, they both distributed health foods such as breads, dried fruits, honey, juices, herb teas, candles, etc. When World War II started, Joe Lessin entered the service–and thus ended his business. When the war ended, in 1945, Joe and Ben got together and formed Kahan & Lessin Co. (K&L). In 1948 Art Miller (who had started in the health food industry in the 1930s in New York with All Health Food Distributors and Brownie's Natural Foods) joined the company and in 1955 became a partner. Today, Kahan is president, Miller is vice president, and Lessin is secretary-treasurer of the company.

Ben Kahan recalls that in 1932, when he graduated from the Los Angeles City school system, the health food industry was virtually non-existent. He started the Ben Kahan Company because of economic necessity, but he soon came to realize the value of natural and organic foods. Early meetings and associations with the patriarchs of the industry such as Otto Carque, William T. Thompson Sr., and Eugene Vandercook Sr. deepened his interest.

In those early days, Ben's company served the few existing health food stores in Southern California. Those still in business include The Grist Mill in Los Angeles, House of Nutrition in San Diego, Schulman's in Long Beach, and Seilers in Huntington Park.

Major early manufacturers of health foods included El Molino Mills, Hain, Ayers & Held, Battle Creek [J.H. Kellogg, in Michigan], Alberty, Dia-Mel, Cellu, Modern Products, American Dietaids, and Schiff.

By the mid-1940s, K&L was distributing a previously unimagined 1,500 items, compared with 8,000 items today.

In 1950 K&L moved into a facility of 5,000 square feet on Hunter St. in Los Angeles. In 1955 it moved again to a building of 18,000 square feet on the same street.

Last year Kahan & Lessin opened a 65,000 square foot warehouse and office on a 2-acres site at 3131 E. Maria St. in Compton, to serve 2,000 health food stores in 11 western states, Texas, Alaska and Hawaii. It boasts 11 shipping docks, 126 parking spaces, a railroad spur, freeway access, air conditioning, insulation, and resistance to earthquakes and fires. A refrigerator of 43,200 cubic feet is so large that a fork-lift truck can be driven in.

K&L, a full-service distributor, notes that efficiency plus accuracy equals service. Computers help to make operations more efficient.

All three principals share a deep personal belief in and commitment to health foods; they believe that the future of this industry looks very bright.

A large photo shows Kahan & Lessin's current warehouse at 3131 E. Maria St. in Compton.

1629. *Soybean Digest.* 1971. What's ahead for soy protein? Nov. p. 11-13.
• ***Summary:*** Discusses the work of the Food Protein Council, established this year as an autonomous organization within the National Soybean Processors Association. "The goal of the new FPC is to centralize promotion of edible vegetable protein for use in human food." The focus in 1972 will be on the school foodservice market, plus the institutional and commercial restaurant market. "The Food Protein Council, like its parent association, the National Soybean Processors Assn., is managed by Smith, Bucklin & Associates Inc... Member companies of the Council are: Archer Daniels Midland Co.; Cargill Inc.; Central Soya Co. Inc.; Far-Mar-Co, Inc.; Griffith Laboratories; Miles Laboratories Inc.; Ralston Purina Co.; A.E. Staley Manufacturing Co.; and Swift Chemical Co."

1630. Dwyer, Johanna; Mayer, Jean. 1971. Vegetarianism in drug users. *Lancet* ii(7739):1429-30. Dec. 25.
• ***Summary:*** The authors are engaged in a study of the motivations leading increasing numbers of American adults to become vegetarians, people turn to vegetarianism and how they fare on this regimen. "Our greatest interest is in the hard-core vegetarians–i.e., those who are the most committed to totally vegan diets and most strict in their observance of them–since we believe potential health risks are highest among such persons." Seventh-day Adventists are praised for their balanced vegetarian diets. Vegetarian immigrants also generally follow sound diets. A third group, which excites much greater concern, is the hard-core native American vegetarians who follow a casual or communal life style, were not raised as vegetarians, lack sound dietary knowledge, and were in many case hard-core drug users in the past. Many switched to vegetarian diets to save them from drugs. A

© Copyright Soyinfo Center 2014

discontinuation of the diet might cause a relapse into drugs, which would be even harder on their health. Address: Dep. of Nutrition, Harvard Univ., School of Public Health, Boston, Massachusetts 02115.

1631. **Product Name:** Protose (Meatlike Product Made of Peanuts and Wheat Gluten).
Manufacturer's Name: Battle Creek Food Co. Div. of Worthington Foods.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1971.
Ingredients: In 1971: Wheat protein [wheat gluten], water, peanuts, vegetable oil, salt, yeast extract, soy sauce, MSG.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad for Protose by Sanitas Nut Food Co., Ltd. 1900. July. *Good Health* (Battle Creek, Michigan). Protose is described as an easy to digest, perfect substitute for meat. There is no evidence showing that gluten was used in this product until 1971. Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Protose (Battle Creek)." Note that in 1960 Worthington Foods had acquired Battle Creek Food Co.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned peanut product resembling cold cuts. Can also be used in salads or sandwiches.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Protose (Battle Creek)" are "wheat protein [wheat gluten], peanuts, wheat and soy flour, corn oil, yeast extract, soy sauce, salt, HVP, niacinamide, thiamin, iron, vitamin B-6, riboflavin, vitamin B-12."

1632. **Product Name:** Loma Linda Vita-Burger (Meatless Dehydrated Beef-like Product) [Chunks, or Granules].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1971.
Ingredients: Soy flour, salt, natural (vegetable) flavor, caramel color, artificial flavor, spices, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin), ferrous sulfate.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
Nutrition: Per ¼ cup (0.75 oz–21 gm): Calories 70, protein 15 gm, carbohydrate 6 gm, fat (less than one gm), cholesterol 0 mg, sodium 150 mg, potassium 460 mg.
New Product–Documentation: Recipe booklet. 1979, dated. Comes in "regular or chunks."

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a dehydrated beef-like product.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1971.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1633. **Product Name:** Loma Linda Proteena (Meatless Peanut or Gluten Loaf or Cold Cuts–with Soy Flour).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1971.
Ingredients: Wheat protein [wheat gluten], unroasted peanut meal, tomato puree, soy flour, salt, yeast extracts, soy sauce, corn sugar, MSG, seasonings, onion powder, caramel color, water.
Wt/Vol., Packaging, Price: 20 oz (567 gm) can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: In 1988: Per ½ inch slice (2.5 oz–71 gm): Calories 140, protein 17 gm, carbohydrate 5 gm, fat 6 gm, cholesterol 0 mg, sodium 460 mg, potassium 260 gm.
New Product–Documentation: See next page. Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. The ingredients in "Proteena (Loma Linda)" are: Wheat protein [wheat gluten], unroasted peanut meal, tomato puree, soy flour, salt, yeast extracts, soy sauce, corn sugar, MSG, seasonings, onion powder, caramel color, water.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned peanut product resembling cold cuts. Can also be used in salads or sandwiches.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Proteena (Loma Linda)" are "wheat protein [wheat gluten], unroasted peanut meal, tomato puree, soy flour, salt, yeast extract, dextrose, L-lysine, HVP, MSG, caramel color, onion powder, flavorings."

Label sent by Loma Linda Foods. 1988. Oct. 5. The ingredients now are: Wheat gluten, raw peanut butter, water, tomato puree, soy flour, salt, natural (vegetable) flavors, dextrose, L-lysine, caramel color, onion powder spices, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). This product was introduced in 1963. A product called "Soy Beans with Proteena and Tomato Sauce" was introduced in 1934.

1634. **Product Name:** Loma Linda Vegeburger (Meatless Hamburger–With Soy Flour). Later renamed VegeBurger or Vege-Burger.
Manufacturer's Name: Loma Linda Foods.

© Copyright Soyinfo Center 2014

Manufacturer's Address: 11503 Pierce St., Riverside, California.
Date of Introduction: 1971.
Ingredients: In 1971: Wheat protein [wheat gluten], water, soy flour, hydrolyzed vegetable protein, salt, yeast extract, dextrose, powdered onion, caramel color, lysine, MSG, celery and parsley extractives.
Wt/Vol., Packaging, Price: 19 oz can. Retails for $2.13 (12/80).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per ½ cup (3.8 oz–108 gm): Calories 110, protein 22 gm, carbohydrate 4 gm, fat 1 gm, cholesterol 0 mg, sodium 190 mg, potassium 110 mg.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. The ingredients in "VegeBurger (Loma Linda)" are: Wheat protein [wheat gluten], water, soy flour, hydrolyzed vegetable protein, salt, yeast extract, dextrose, powdered onion, caramel color, lysine, MSG, celery and parsley extractives.

Patricia H. Black and Ruth L. Carey. 1971. *Vegetarian Cookery.* 5 vols. This set of vegetarian cookbooks contains at least one recipe calling for "Vegeburger" (see Vol. 3, p. 18; Oatmeal Herb Loaf).

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. VegeBurger is a canned steak or burger-like product based on wheat protein.

Recipe booklet. 1979, dated. Consumer Reports. 1980. June. p. 357-65. The protein PER is 1.21. Sensory comments: Slight meat flavor. Spicy. Salty. Smoky flavor. Vegetable-oil flavor. Too moist. Crumbly. Granular.

Label for Vege-Burger sent by Loma Linda Foods. 1988. Oct. 5. This product has been reformulated, so that one of the ingredients is now soy protein isolate.

1635. **Product Name:** Loma Linda Gluten Steaks.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, California.
Date of Introduction: 1971.
Wt/Vol., Packaging, Price: 14 oz can (1971).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Patricia H. Black and Ruth L. Carey. 1971. *Vegetarian Cookery.* 5 vols. This set of vegetarian cookbooks contains many recipes calling for "gluten steaks," which are sold in 14 oz cans.

1636. **Product Name:** Loma Linda Scallops.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, California.
Date of Introduction: 1971.
Wt/Vol., Packaging, Price: 14 oz can (1971).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Patricia H. Black and Ruth L. Carey. 1971. *Vegetarian Cookery.* 5 vols. This set of vegetarian cookbooks contains many recipes calling for "Scallops" or "Skallops" (See Vol. 1, p. 37; Green bean and gluten salad), a gluten-based product.

1637. **Product Name:** Primeburger.
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, California.
Date of Introduction: 1971.
Wt/Vol., Packaging, Price: 20 oz can (1971).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Patricia H. Black and Ruth L. Carey. 1971. *Vegetarian Cookery.* 5 vols. This set of vegetarian cookbooks contains several recipes calling for "Primeburger," a gluten-based product which is sold in 20 oz cans (See Vol. 3, p. 16-17).

1638. **Product Name:** Sanitarium Health Foods Vegelinks (Vegetarian Frankfurter).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1971.
Ingredients: Wheat protein, vegetable oil, yeast, soy protein, salt, Savex, hydrolysed vegetable protein, onion.
Wt/Vol., Packaging, Price: 430 gm can.
How Stored: Shelf stable.
New Product–Documentation: Letter from Sanitarium Health Food Co. 1981. Label. 10 by 4 inches. Full color. Photo shows a frankfurters on a bed of sauerkraut "Vegetable Protein–Serve fried, boiled, barbecued, roasted or grilled." Recipes for Party Pleasers and Danish Open Omelette.

1641. **Product Name:** Nutmete.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 614-885-9511.
Date of Introduction: 1971.
Ingredients: In 1971: Peanuts, corn flour, soya, salt, MSG, water to process.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 160. Lists the ingredients in "Nutmete (Worthington)."

1642. **Product Name:** Meat Loaf Mix.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1971.
Ingredients: Textured soybean protein [Fibroprotein spun soy protein fibers], rolled oats, vegetable shortening, rice flour, egg albumin, nonfat milk solids, bread crumbs, wheat protein [wheat gluten], dehydrated onions, potatoes, celery, carrots, parsley, sweet red and green peppers, hydrolyzed vegetable protein, salt, MSG, flavorings, caramel, U.S. certified color.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 163. Lists the ingredients in "Meat Loaf Mix (Worthington)." This is an institutional product.

1643. **Product Name:** Redi-Loaf Mix.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1971.
Ingredients: Textured soy protein, albumin [egg protein], vegetable oil, soy protein, vegetable shortening, plant flavorings and seasonings, rice flour, hydrolyzed vegetable proteins, brown sugar, caramel color, dried onion, salt, yeast, monosodium glutamate, soy lecithin, carrageenan, vegetable mono- and diglycerides, U.S. certified color.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 163. Lists the ingredients in "Redi-Loaf Mix (Worthington)." This is an institutional product.

1644. Black, Patricia Hall; Carey, Ruth Little. 1971. Vegetarian cookery. 5 vols. Mountain View, California, Omaha, Nebraska, and Oshawa, Ontario, Canada: Pacific Press Publishing Assoc. Illust. by Henry Rasmussen. Recipe index. 24 cm.
• ***Summary:*** These are lacto-ovo vegetarian cookbooks. "Most of the recipes in these cookbooks have been collected over many years. Some came from association in years past with Paradise Valley Sanitarium and Hospital and with White Memorial Hospital; others came from more recent association with Loma Linda University." The complete nutritional composition of each recipe is given in that back of each book. Note 1. Monosodium glutamate is used in many recipes (For explanation, see Introduction to each volume). Other interesting meaty seasonings include Savorex, Smokene, and G. Washington Broth. Apparently generic names for meatlike products are used ("gluten burger" rather than "Gluten Burger") when more than one Adventist company makes such a product.

Contents: Vol. 1. Appetizers, beverages, salads, dressings and relishes, cooking guides. Vol. 2. Breads, soups, sandwiches. Vol. 3. Main dishes, vegetables. Vol. 4. Pies, cakes, cookies, desserts. Vol. 5. Exotic foods, candies, cooking for a crowd.

Soy- and gluten-related recipes include: Vol. 1: Nut and Soyameat pinwheels (with light Soyameat, p. 16-17). Soyameat puffs (with canned Soyameat, p. 17). Soybean milk (homemade, p. 30). Green beans and gluten salad (p. 37; Skallops [also spelled Scallops, gluten based] or Soyameat may be substituted for diced gluten). Chop suey salad (with Soyameat, or light or dark nutmeat, p. 44). Note 2. This is the earliest vegetarian or health food cookbook seen (June 2004) with "Appetizers" as one of the recipe categories.

Vol. 2: Whole wheat soy bread (with soy flour, electric

© Copyright Soyinfo Center 2014

mixer recipe, p. 15-16; Sponge method, p. 17). Soy cheese spread (with canned tofu, p. 44). Soy cheese and egg filling (with tofu, p. 44). Gluten spread (with canned gluten burger, p. 45). Hot burger sandwich patties (with canned gluten burger, p. 46). Hot gluten sandwich (with canned gluten steaks, p. 46). Hot savory sandwich (with Proast or other nutmeat, p. 47). Nutmeat and olive filling (with Proteena or Nuteena, p. 47). Savory Soyameat filling (p. 48). Soyameat and egg filling (with light Soyameat, p. 48). Soyameat, nut and olive filling (p. 48). Grilled gluten sandwiches (p. 52).

Vol. 3: Homemade gluten (. 15). Gluten roast (p. 15). Gluten burger loaf (with canned "gluten burger," p. 16). Primeburger loaf (with Primeburger [gluten], p. 16-17). Normandy loaf (with Proteena, p, 17). Walnut Proteena roast. Holiday roast (with gluten burger). Oatmeal herb loaf (with Vegeburger, p. 18). Nut roast (with Proteena, p. 21). Cashew nut and gluten loaf (p. 22). Seaside loaf (with Soyameat, p. 23). Ocean fillets (with Soyameat, p. 23). Soy soufflé burger (with dry soybeans, p. 24). Savory soy loaf (with canned soy cheese [tofu], p. 24). Soy cheese (or tofu) loaf (p. 24). Tofu loaf (no eggs, p. 25). Tofu (or soy cheese) patties (p. 25). Browned tofu with mushrooms (p. 25). Nuteena balls (p. 26). Basic gluten balls (p. 26). Nutmeat and rice patties (with Proteena and Nuteena, p. 31). Cottage cheese gluten burgers (p. 31). Chum la King (with Vegesteaks, p. 33). Stroganoff (with canned Soyameat, p. 34). Gluten stroganoff (with canned gluten or Soyameat, p. 34). Savory gluten casserole (with canned Chickettes or other gluten preparation, p. 35). Scalloped Soyameat (with light or dark Soyameat, p. 36). Gluten steaks deluxe (with canned gluten steaks, p. 37). Gluten steaks with mushrooms (p. 37). Shish kebab (with gluten steaks or Tender Bits [made of gluten], p. 37-38). Hearty soybean casserole (with canned Zoyburger, p. 42). Garbanzo and cottage cheese loaf (with Vegeburger, p. 44). Stuffed green pepper (with canned Vegeburger, p. 46). Oriental rice casserole (with gluten or Chickettes, p. 49-50). Chop suey (with fresh tofu, p. 51). Quick chop suey or chow mein (with canned Soyameat, p. 51). Spaghetti marzetti (with canned Vegeburger and Smokene, p. 56). Lasagna (with gluten burger, p. 57). Tetrazzini (with canned white Soyameat, p. 57). Quick eggs Benedict (with beef-style smoked Soyameat, p. 61-62). Eggs con burger (with gluten burger, p. 62). Eggs Vienna (with 6 vegetable wieners, p. 63). Baked soybeans (p. 80). Soybeans creole. Soybeans southern style.

Vol. 4: Soy nut cookies (with 1 cup soy flour, p. 97). Vol. 5: Gluten stew (p. 14). Spanish gluten (p. 14). Gluten nut loaf (with canned gluten burger, p. 16). Ocean fillets (with gluten and Soyameat). Browned tofu (p. 22). Chop suey (with soy cheese [tofu], p. 23). Soy cheese patties (with canned tofu, p. 23). Gluten burger sandwiches (p. 31). Chinese sweet-sour gluten (with canned gluten steaks, p. 41). Sweet-sour Tender Bits (with canned Tender Bits or other gluten preparation, p. 42). Chinese evergreen tofu (p. 42). Japanese sukiyaki (with canned gluten, Tender Bits, or Scallops, p. 45). Scrambled tofu (p. 46). Philippine adobo (with gluten, Tender Bits, or Scallops, p. 48). Philippine gluten curry (p. 49). Philippine gluten escabeche (p. 49). Korean seasoned gluten (with canned gluten, p. 50). Indian gluten curry (with canned gluten, p. 52). Kurma (Indian, with Soyameat, p. 53). Soyameat Indian curry (with canned light Soyameat, p. 53-54). Brazilian Palmito soy loaf (with canned or cooked soybeans, p. 57). Brazilian-style gluten (p. 57).

Can sizes: Chickettes (20 oz). Gluten (14 oz or 20 oz). Gluten burger (14 oz, 28 oz, or 30 oz). Gluten steaks (14 oz). Nuteena (14 oz.). Primeburger (20 oz). Proteena (14 oz). Scallops (14 oz). Soyameat (9 oz or 13 oz). Soyameat, white (13 oz). Soy cheese (12 oz or 14 oz; tofu). Tender Bits (20 oz). Vegesteaks (14 oz). Zoyburger (19 oz). Address: 1. M.S.; 2. PhD.

1645. Kloss, Jethro. 1971. Back to Eden. New York, NY: Beneficial Books. ix + 671 + xiii p. *
• ***Summary:*** After the copyright for the original 1939 edition of *Back to Eden* expired in 1967, the Kloss family, because of a complex set of circumstances, neglected to renew it. The book then went into the public domain. For the sad story of how this book came to be published, see interview with Doris Kloss Gardiner (Nov. 1990).

1646. Seventh-day Adventist Dietetic Assoc. 1971. About nutrition. Nashville, Tennessee: Southern Publishing Assoc. 187 p. Illust. 21 cm. Revised ed 1974. *
• ***Summary:*** Authors: Alice G. Marsh and others. Coordinator: Darlene R. Schmitz. A layman's guide to vegetarian nutritional principles, including food groups, menu planning, and nutritional needs of various age groups.

1647. Seventh-day Adventist Dietetic Assoc. 1971. Diet manual, utilizing a vegetarian diet plan. Revised edition. Loma Linda, California: Seventh-day Adventist Dietetic Assoc. 174 leaves.
• ***Summary:*** A comprehensive loose-leaf handbook for the planning, selection, and coordination of vegetarian diets. The editors of this revised edition are listed alphabetically by surname (with their degrees) on the title page as: Phyllis Acosta, Ardis Beckner, Ruby Hayasaka, Eloise Jenks, Martha Miller, Shirley Oakley, Irma Vyhmeister, Elizabeth Wenz. The SDADA's main office is now Box 75, Loma Linda, California, 92354.

Table XXI (p. 160-64) is titled "Ingredients of vegetable protein foods." 57 commercial products, with their ingredients, are listed. Most of the manufacturers are Seventh-day Adventist food companies, mainly Worthington Foods and Loma Linda Foods, but also Madison Foods, Nu Vita (Lange), Battle Creek (acquired by Worthington Foods in 1960), and Nutrition International Corporation. The products are divided into three categories: 1. Egg free and

© Copyright Soyinfo Center 2014

gluten free (11 products). 2. Egg free but not gluten free (24 products). 3. Ingredients (22 products).

Interesting non-soy products include: Savita (Extract Brewer's yeast, fresh vegetable extracts [carrots and onions], salt, ferric citrate; the manufacturer's name is not given). Savorex (Extract Brewer's yeast, vegetable seasonings, salt; the manufacturer's name is not given).

1648. U.S. Department of Agriculture. 1971. The annual report on activities carried out under the Public Law 480, 83d Congress, as amended, during the period January 1 through December 31, 1970. Washington, DC: U.S. Government Printing Office. 132 p. See p. 113-20. Cover reads: Food for Peace: 1970 Annual Report on Public Law 480.

• ***Summary:*** Table 19 is titled "Title II, Public Law 480–Total commodities by program sponsor, fiscal year 1970." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), WFP (World Food Program). Each of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. Only two foods containing soy protein were distributed: CSM (Corn soya mix) and WSB (wheat soya blend). They were sent in the following amounts (in thousands of pounds) to the following continents and countries: Africa (50,362 CSM and 6,087 WSB): Cameroon (82 CSM), Ghana (1,104 CSM and 201 WSB), Malagasy [Madagascar] (425 CSM), Malawi (61 CSM), Nigeria (41,343 CSM and 5,886 WSB), Rwanda (200 CSM), Senegal (5,301 CSM), Sierra Leone (699 CSM), Tanzania (887 CSM), Togo (260 CSM).

Near East-South Asia (192,116 CSM and 2,504 WSB): Ceylon (50 WSB), Gaza [occupied by Israel since 1967] (814 CSM and 1,892 WSB), India (189,044 CSM and 105 WSB), Jordan (680 CSM), Jordan-West Bank [occupied by Israel since 1967] (1,110 CSM), Lebanon (160 CSM), Pakistan (457 WSB), Syria (308 CSM).

East Asia (21,530 CSM and 451 WSB): Hong Kong (384 CSM and 100 WSB), Indonesia (9,245 CSM and 150 WSB), Korea (4,586 CSM), Laos (275 CSM), Malaysia (220 CSM), Philippines (1,545 CSM and 201 WSB), Ryukyu Islands [located south of Japan, incl. Okinawa, Sakishima, and Amami island groups. Self governing from 1966. Returned to Japan in 1972] (50 CSM), Vietnam (5,225 CSM).

Latin America (53,761 CSM and 2,305 WSB): Antigua (37 CSM), Bolivia (555 CSM and 173 WSB), Brazil (29,919 CSM and 506 WSB), British Honduras [Belize] (225 CSM and 20 WSB), Chile (1,726 CSM and 151 WSB), Costa Rica (679 CSM and 100 WSB), Dominica (23 CSM), Dominican Republic (7,429 CSM and 105 WSB), Ecuador (1,295 CSM), El Salvador (836 CSM and 200 WSB), Grenada (114 CSM), Guatemala (1,944 CSM), Guyana (72 CSM), Haiti (1,010 CSM), Honduras (674 CSM), Jamaica (208 CSM and 100 WSB), Montserrat (18 CSM), Panama (765 CSM and 450 WSB), Paraguay (491 CSM and 400 WSB), Peru (5,842 CSM and 100 WSB), St. Kitts (59 CSM), St. Lucia (69 CSM), St. Vincent (30 CSM), Uruguay (81 CSM).

Grand total by commodity: 317,769,000 lb of CSM and 11,347,000 lb of WSB. Agencies distributing the most CSM and WSB (in million lb): CARE 180, CRS 68, UNICEF 42.

Countries receiving more than 1 million lb of CSM and WSB combined (in millions of pounds): India 189.1, Brazil 30.4, Indonesia 9.3, Dominican Republic 7.5, Peru 5.6, Vietnam 5.2, Korea 4.6, Guatemala 1.9, Chile 1.8, Philippines 1.7, Ecuador 1.3, Jordan-West Bank 1.1, Haiti 1.0.

Concerning "veg oil" (soybean oil) shipped under P.L. 480 Title II in fiscal year 1970: India received 54.227 million lb [24,597 metric tons] (p. 116). Address: Washington, DC. Phone: 703-875-4901 (1991).

1649. **Product Name:** Loma Linda Dinner Bits.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce Place, Riverside, CA 92515.
Date of Introduction: 1971?
Ingredients: In 1971: Wheat protein [wheat gluten], water, vegetable oil, soy flour, oat flour, dried yeast, salt, onion powder, monosodium glutamate, dextrose, lecithin, caramel.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Dinner Bits (Loma Linda)."

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned steak or burger-like product based on wheat protein.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 175. The ingredients in "Dinner Bits (Loma Linda)" are "wheat protein, vegetable oil, soy flour, oat flour, dried yeast extract, salt, onion powder, MSG, dextrose, lecithin, caramel."

1650. **Product Name:** Loma Linda Tastee Cuts (Imitation Beefsteak).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1971?
Ingredients: In 1971: Wheat protein [wheat gluten], water, yeast extract, salt, hydrolyzed vegetable protein, MSG, dextrose, onion powder, lysine, caramel color, celery and parsley extracts.

Ad in Natural Foods Merchandiser. 1984. Feb. p. 113. "A lot more than meats the eye. Loma Linda Foods taste great."

1651. **Product Name:** Lange Breakfast Style Vegetable Links.
Manufacturer's Name: Nu Vita.
Manufacturer's Address: -
Date of Introduction: 1971?
Ingredients: In 1971: Wheat gluten, potato meal, filberts, peanuts, unbleached flour, brown rice, dehydrated onion and garlic, hydrolyzed vegetable proteins, vegetable oil, soy sauce, salt, seasonings, processed in water and condensed smoke.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Lange Breakfast Style Vegetable Links (Nu Vita)."

1652. *Unknown newspaper* (*Fontana, California*). 1971? No meat on menu? Timely subject. March.
• ***Summary:*** "Vegetarian expert Dorothea Van Gundy Jones will conduct a class in vegetarian cookery from 7 to 9 p.m., March 26–29 at Cypress School, 9751 Cypress Ave.

"Mrs. Jones, a native Californian, is a graduate of Loma Linda University's School of Dietetics. and received her B.A. degree from Pacific Union College. Her background includes experience in the following capacities: head of a college home economics dept.; director of food service for a junior college; hospital therapeutic dietitian; hospital administrative dietitian; physician's diet counselor, and diet consultant for a clinic.

"For the past 20 years Mrs. Jones has conducted cooking classes and lectured for the International Nutrition Research Foundation and Loma Linda Foods in Riverside.

"Classes and lectures have been given in all major cities in the U.S., with attendance ranging from 50 to 1,200... In 1970, she was invited to be an observer at the Second World Food Congress in the Netherlands, under the sponsorship of the World Food Program and the Food and Agriculture Organization. Her work his called her to other countries in Europe and in the South Pacific.

"She is associate editor of *Today's Food*, a nationally circulated nutrition magazine, and has authored articles on nutrition that have appeared in man well-known journals. She also wrote the popular *Soybean Cookbook*..." A portrait photo shows Dorothea Van Gundy Jones.

1653. B.A.S. 1972. Food of the future? Hospital food notes. *Hospitals* 46(1):69. Jan. 1.
• ***Summary:*** Victor F. Froelicher, M.D., fellow in cardiology at the Univ. of Alabama Medical Center, Birmingham, Alabama, held a special luncheon for physicians, research fellows, and medical students "to demonstrate that fat-modified diets can be enjoyable and that soybean imitation products could be the 'food of the future.'" He believes these meatlike products, which are free of cholesterol and low in saturated fat, can and should be used to reduce the rate of heart disease. Seventh-Day Adventists make and have been using these products for many years.

1654. Jacobs, Sanford J. 1972. What tastes terrible and doubles in sales every 60 days or so? Crunchy Granola, that's what, and Layton Gentry is ready to sell the formula to you. *Wall Street Journal.* Feb. 16. p. 1.
• ***Summary:*** A great, original, funny front-page story on the modern origin and early modern history of granola. Collegedale, Tennessee: John D. Goodbrad, age 28, runs a small cereal factory in Collegedale; he makes Crunchy Granola, but neither he nor his employees are particularly fond of the stuff. He prefers Cheerios. An employee says that her kids don't like it much either, but she recalls that she once had a horse who really liked it.

Crunchy Granola is made of rolled oats, wheat germ, sea salt, sesame seeds, coconut, brown sugar, and soy oil. These are mixed and baked. "Crunchy Granola is the biggest thing to hit the cereal market since the cardboard box was invented." Goodbrad says his sales have been doubling every 60-90 days for the last 2½ years. He now makes 12,000 lb per day of Granola, which sells for 73 cents a pound, and runs his factory 24 hours a day. Another company, Lassen Foods, Inc., in Chico, California, is said to make even more; last year they sold $3 million worth of Granola. Total nationwide sales are estimated to be about $5 million. He says his family started the business, Sovex, Inc., in this idyllic valley in 1964.

Why are people eating so much Granola? No one sure. One theory: It is part of the anticommercialism movement of the younger generation. Another: It's a health food, making it part of the "back-to-nature" movement. But the main reason may be that many younger folks really like it–especially with milk poured over as a breakfast cereal.

Although it is clearly a fabled food in the underground, and sold mostly at health-food stores, some supermarkets are beginning to stock it. Rock singer Neil Diamond even has a popular song titled "Crunchy Granola Suite." The words are given.

While Crunchy Granola appears to have a bright future, it also has an interesting past. It seems to have been invented

© Copyright Soyinfo Center 2014

by a man named Layton Gentry who, in 1964, sold his recipe and oven to John Goodbrad's father for $3,000. He and his wife started making it at home, then built a little factory, and now it is made in a big factory–in the idyllic little valley.

After Layton Gentry left Tennessee he headed out West. In about 1968 (four years ago) he sold the recipe again–to Lassen Foods, but this time for at least $15,000. Not until the two Granola makers bumped into each other at a health food convention 2 years ago did they realize that they were both making the same product. No problem–both were doing just fine.

Mrs. Gentry says that Layton is a hard man to find. She says they separated after the move West, and her ex-husband had made some more money selling the recipe to folks in Hawaii, Canada, Australia, and Missouri.

But didn't he miss a golden opportunity to make more money? Not really. Mrs. Gentry explains that Layton never liked things to get too big. "'He was in the Army 12 years. You know what that does to a man.'"

Note 1. This is the earliest document seen (Aug. 2010) that tells the tale of Layton Gentry and the birth of Granola–in its modern incarnation.

Note 2. According to the Website www.ancestry.com, a person named "Layton S. Gentry" was born on 18 April 1918 in New Pine Creek, Lake County, Oregon. His parents were John Urban Gentry and Mildred G. Gentry. He was married in 1942. He died on 11 Feb. 2007 in New Pine Creek, Oregon. A 1989 obituary for his wife states: "Gentry: Myrtle Frona Gentry, 70, died July 1, 1989, at Lakeview Hospital in Oregon. She was born in Rosedale, daughter of the late William Preston & Lula (Davis) Franz. Surviving are her husband, Layton Gentry; 1 daughter, Karen Angelo of New Pine Creek; 1 grandchild; and 2 sisters, Vivian St. Clair of Molalla, Oregon, and Beulah Mawhinney of Bend, Oregon. 1 sister, Prudence Beilsmith, preceded her in death. Services were conducted at Pine Creek Baptist church, Oregon. Burial was in New Pine Creek cemetery." Address: Staff reporter, Wall Street Journal.

1655. Cohen, Charles A.; Hudson, A.R.; Clausen, J.L.; Knelson, J.H. 1972. Respiratory symptoms, spirometry, and oxidant air pollution in nonsmoking adults. *American Review of Respiratory Disease* 105(2):251-61. Feb. [34 ref]
• ***Summary:*** "A comparison of respiratory symptoms and pulmonary function tests in two similar groups of nonsmoking adults who were chronically exposed to essentially the same mean value but different peak values of oxidant air pollution did not show a difference in the prevalence of symptoms suggestive of pulmonary disease." Note: *Webster's Dictionary* defines spirometer (a term first used in 1846) as "an instrument for measuring the air entering and leaving the lungs." Spirometry is the use of this instrument. Address: Bio-Medical Research Branch, Div. of Health Effects, National Environmental Research Center, Research Triangle Park, North Carolina 27711.

1656. *Food Engineering.* 1972. Ingredients expand food frontiers. 44(5):69-73. May.
• ***Summary:*** Textured soy proteins "are creating new meat extenders and simulated meat products." For example, Maxten, made by Miles Laboratories, is formulated to have the appearance of cooked ground meat.

1657. Robinson, Radcliffe F. 1972. What is the future of textured protein products? *Food Technology* 26(5):59-60, 62-63. May.
• ***Summary:*** Contents: Introduction. How it all began. Two types of products developed: Spun protein (1957), and extruded protein ("Soy flour, soy concentrate, or soy isolate–individually or in combination, with or without fibers–can be combined with other ingredients, including colors and flavors, and extruded to form beef-like strips, meat-like nuggets, or various other analogs in various shapes and sizes. The extruded products are usually sold as a dehydrated ingredient for use in place of or in conjunction with fresh meat.") Products improved: New uses and products, improved characteristics, specifications, supply, and cost. Effect on industry. Effect on institutions. Effect on consumers. Educational program necessary. Major effort required (The plant protein industry has great potential).

"How it all began: Dr. John Harvey Kellogg started the plant protein industry in 1866. He was one of the early pioneers in the field of nutrition who are today referred to as food faddists."

"In 1879, Dr. Kellogg married a girl from New York whose hobby was running an experimental kitchen. They worked together to invent the toasted wheat flake, decaffeinated coffee, and a peanut butter and also made many clever products which tasted vaguely like beef or pork or veal–the first protein analogs. Dr. John Harvey Kellogg created an industry, but he never became a part of it. Plant proteins per se had no economic place in the food picture of 1879 when meat was plentiful, and his meat analogs were destined to be used only by vegetarians who for religious, ethnic, or health reasons preferred not to eat meat.

"He died in 1942, probably one of the greatest serendipitists of our times. Although he had pioneered the plant protein industry as a healthful and expedient way to escape the putrefactive and disease-causing factors in the meat and perishable commodities of his time, what he really did was develop a means of nourishing a world with high quality protein when the price of meat or its availability become factors in family nutrition.

"Plant protein products today differ greatly from the prototype veal steaks which Dr. Kellogg and his wife made from fresh wheat gluten." Address: Manager, Product Development- Food Ingredients, Marschall Div., Miles Laboratories, Elkhart, Indiana 46514.

• ***Summary:*** Article describes the increasing number of youths who are turning to vegetarianism. Cites various views of youths who have changed. Notes on institutional approach to vegetarianism provided by Seventh Day Adventists, who are vegetarians as part of their 'healthful living' regime. Describes church-operated New York Center, which includes health food department and book store that carries books on nutrition and recipe books to help vegetarians. Cites views of Drs. F.J. Stare and J. Mayer, who are writers on vegetarianism. Recipes for vegetarian main dishes' from *An Apple A Day,* published by Woman's Auxiliary to Alumni Association, Loma Linda University School of Medicine.

1659. Webber, Ella V. 1972. Perry A. Webber: Pioneer missionary in true education to Japan. Chattanooga, Tennessee: Southern Missionary College. 87 p. *
• ***Summary:*** Perry A. Webber was born on 15 June 1890 in Northville, Michigan. His parents became Seventh-day Adventists (SDAs) during his early childhood. In 1904 the family moved to Berrien Springs, Michigan, and Perry was educated there. In 1911 Perry graduated with a BA from Emmanuel Missionary College [in Berrien Springs] and in 1912 he was married to Ella Mae Verney.

In 1913 he was appointed by the SDA General Conference Foreign Mission Board to go, with his wife, as missionaries to Japan. In Tokyo they studied Japanese language for 2 years, then began pioneering educational work in Japan until 1927. For 4 years (1915-19) they worked in Fukuoka (in northern Kyushu), then returned to Tokyo. A son, Alfred B. Webber, was born in Dec. 1919; he later became a medical doctor. In Tokyo they worked at a school in Ogikubo. By 1921 Perry was teaching about the virtues of brown rice. In 1923 Perry found 25 acres of land in Sodegaura; in September of that year the Great Tokyo Earthquake (*Kanto Daishinsai*) took place. Later in 1923 the family returned to California because of the wife's respiratory problems. Harry Webber was born in Glendale. After a year in Honolulu, Hawaii, in 1934, they returned to Japan in the summer of 1925 and moved the college into the country. In the spring of 1926 the students and teachers started to build their own self-supporting school, with Perry as principal. This school later grew into the Japan Missionary College (*Saniku Gakuin*). The Japanese name means "three-sided school" since equal emphasis was placed on mental, moral, and manual development.

During these years Perry grew very fond of Japanese food and especially of Inari-zushi (made of deep-fried tofu pouches filled with vinegared rice). On his way to language school, he used to stop in regularly at the Shinoda Sushi Shop in Kanda (in Awaji-cho by the 1970s) to enjoy their Inari-zushi. The shop once developed a special Webber Sushi, named after him, and they used his name in some of their promotional materials. He was also very fond of regular tofu and of miso soup.

In 1927 the Webbers returned to America to educate themselves in good health. At this time Adventists believed that the true remedies are "pure air, sunlight, abstemiousness, rest, exercise, proper diet, the use of water, and trust in Divine power (*Ministry of Healing,* p. 127). In the fall of 1928 Perry entered Michigan State University to study biological chemistry while his wife, Ella Mae, studied nutrition; both were deeply interested in understanding the principles of good health. By May 1929 Perry was considered "one of our teachers" by Madison College in Madison, Tennessee.

During the early 1930s and the Great Depression, many students' only hope of getting an education was to rely on their own efforts. Madison, which offered a work-study program, became a very attractive alternative school.

In Sept. 1930 the family moved to Madison while Perry finished his thesis. In June 1931 Perry was awarded his PhD degree in biological chemistry, with special interest in chemistry and soyfoods development. At Madison he became a instructor of chemistry with a strong interest in food chemistry. In the following years he became the main person at Madison responsible for the school's growing involvement with soyfoods. In Nov. 1931 Perry wrote a long two-part article for *The Madison Survey* titled "Facts Concerning the Soybean." During the early 1930s he put a great deal of creative energy into expanding Madison's line of commercial soyfood products. Most of the products that were introduced between 1931 and 1934 were the result of his work. In August 1933 Perry Webber and Frances L. Dittes attended the annual convention of the American Soybean Association (ASA) in Baton Rouge, Louisiana. Webber presented a lecture with slides about the importance of soyfoods in Asia and their potential in America. He also prepared an exhibition of Madison soyfoods that was displayed at the convention. Webber was secretary-treasurer of the ASA for one year at this time. He visited Edsel A. Ruddiman at the Ford Motor Company and gave a talk to him and other leading research scientists about soyfoods. He was also a close friend of Dr. John Harvey Kellogg. He visited Kellogg, talked about soyfoods, and did some work developing a preservative for some of Kellogg's crackers.

Perry Webber worked at Madison until Sept. 1935 when, after a big farewell party, he returned to Japan to serve as principal of the Japan Missionary College (Saniku Gakuin). There he taught a lot about nutrition and the value of a vegetarian diet. In about 1936 Webber visited Dr. Harry Miller in Shanghai, China, and helped him set up a sanitation and research lab for analyzing the Vetose soymilk products at his new plant.

From 1939 to 1943, during World War II, Webber was back in the USA, teaching at Madison as head of the

© Copyright Soyinfo Center 2014

chemistry department. He was also at Madison from 1946 to 1953 and from 1959 to 1962, each stay punctuated by work in Japan. While serving as an administrator at Madison Foods (1959-1963) he and Sam Yoshimura pulled the factory out of debt and put it several thousand dollars into the black in one year's time.

During his trip to Japan that began in the spring of 1953, he taught one food plant how to make gluten, soymilk, and soy croquettes. Also in 1953 he started a self-supporting organization at Mt. Akagi, about 125 miles northwest of Tokyo; there he worked for more than 7 years. In the winter of 1956 he suddenly became ill with pneumonia. He returned to America in the summer of 1958 and was found to have Parkinsonism; no medicine was prescribed until 1962. In 1966 Perry was an outpatient at the Madison Sanitarium / Hospital for a time, then he became a inpatient from Oct. 1967 to Jan. 1968. In Sept. 1968 he went to a convalescent home in Lodi, California. His son, Dr. Alfred B. Webber, was living and practicing medicine in Lodi. In 1969 he returned to the Wildwood Sanitarium, a self-supporting Seventh-day Adventist convalescent home and health care facility in Wildwood, Georgia (northern Georgia). He passed away there in January 1973 at age 82 of Parkinsonism.

1660. Irwin, William E.; Hartman, Warren E. 1972. "Textured vegetable proteins:" Their method of manufacture, properties and use in food processing. Paper presented at the American Chemical Society National Meeting. 10 p. Held Aug. 27–Sept. 1, 1972 at New York, New York. [10 ref] Address: Worthington Foods (a subsidiary of Miles Laboratories, Inc.), 900 Proprietors Rd., Worthington, Ohio 43085.

1661. Orr, Elizabeth. 1972. Africa Basic Foods Co. in Uganda (Document part). *Tropical Products Institute Report* No. G73. p. 25. Aug.
• ***Summary:*** "The Africa Basic Foods Co. was set up in Uganda in 1965 by Dr. Warren Harrison, one time advisor on health and nutrition to the Government. A feasibility study by consultants had suggested the use of soya, a comparatively new crop in Uganda. UNICEF supplied raw materials, particularly full fat soya flour, for trial marketing. Full-scale marketing began early in 1968. The basic product produced is full fat soya flour. This is supplied to bakeries for the manufacture of enriched bread and buns. The company also produces enriched maize meal, porridge and soya nut 'butter'. Annual soya flour production is in the region of 75 tons. Sales of the products are approximately 110-135 tons of enriched bread, 50 tons of porridge and 100 tons of 'school' porridge per year. Institutions provide 60-75 per cent of the outlet, although retail sales are said to be increasing.

"The company has had a number of production difficulties. Originally the intention was to contract for production of the soya flour with local mills, but difficulty was experienced in getting regular production of a consistent quality in what was, to the firms, a new line of production. The fact that several varieties of maize and soya beans have to be purchased continues to give rise to problems. Technical problems have arisen, with which a private US firm has assisted on a goodwill basis. Sales have been slow to develop. An initial attempt to develop the market primarily through a single distributor failed. The major problem as seen by the company is the lack of local personnel with appropriate expertise, particularly in the marketing field. The company recognizes that a good deal of attention should be paid to promotion, particularly of the personal approach type and on the basis of blanketing particular areas, and would apparently like more Government support with promotion. There is also an indication that it is disappointed in the rate of growth of sales to institutions, which it considers should provide a basis for development of the market at large. It has also been suggested, although not by the company, that the slow growth in sales may be partly attributable to the failure of the products to fit into the local diet. Although there are parts of Uganda where maize is an important item of consumption, it is the case that the staple diet of the area in which the factory is situated is based on plantains." Address: Foreign and Commonwealth Office (Overseas Development Administration), TPI, 56/62 Gray's Inn Rd., London WC1 8LU, England.

1662. Worthington Foods, Divion of Miles Laboratories. 1972. Happy cooking: With recipes by Worthington (Leaflet). Worthington, Ohio. 3 panels each side. Each panel: 22 x 9 cm. Aug.
• ***Summary:*** Contains ten recipes using the following Worthington products: Frozen Chicken Style Slices. Wham (16 oz can). Granburger (dry). Prosage (frozen). Choplets (20 oz can). Veja-Links (19 oz can). Vegetable Skallops (20 oz can). Vegetarian Burger (20 oz canned). Soyameat Fried Chicken Style (13 oz can). Non-Meat Balls (19 oz can). The cover is gold and black on white. Address: Worthington, Ohio 43085.

1663. **Product Name:** GranBurger (Dehydrated Granular Burger-like Product).
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1972 August.
Ingredients: In 1975: Soy protein concentrate, Fibrotein [spun soy protein fiber], isolated soy protein, onion powder, HVP, sucrose, salt, caramel color, artificial color, niacin, iron, calcium pantothenate, vitamin B-6, riboflavin, thiamin, vitamin B-12.
Wt/Vol., Packaging, Price: Dehydrated in 10 oz Pure Pak paper carton (like milk). Retails for $2.70 (7/90, California).

New Product–Documentation: Worthington Foods, Division of Miles Laboratories. 1972. "Happy cooking: With recipes by Worthington" (Leaflet). Worthington, Ohio. 3 panels each side. Contains a recipe using Granburger (dry).

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a dehydrated beef-like product based on spun soy protein fiber.

Predicasts. 1974. World Manufactured Soybean Foods. p. 13. Horan. 1974. Meat analogs. p. 380. This product is made of textured soy flour (50% protein).

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 175. The ingredients in "Granburger (Worthington)" are given.

Worthington Foods. 1981. Feb. 1. Dealer wholesale price list–order blank. Lists Granburger.

Shurtleff & Aoyagi. 1983. History of Worthington Foods. p. 11.

Color photo of package in *Linda McCartney's Home Cooking.* 1990. p. 18. The package is a Pure-Pak gable-top carton (like a milk carton). The label is orange, brown, red, and white. 10 oz. 283 gm. "Vegetable protein granules. Artificial beef flavor. Contains no meat. Use like ground beef. Makes over 1.8 pounds."

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. Ingredients are now: Textured soy protein concentrate and isolate, onion powder, hydrolyzed vegetable protein, sugar, salt, artificial color, iron (as ferrous sulfate), niacinimide [niacinamide], natural smoke flavor, calcium pantothenate, vitamin B-6 (pyridoxine hydrochloride), sulfating agents, vitamin B-2 (riboflavin), vitamin B-1 (thiamine mononitrate), vitamin B-12.

1664. Hellman, Hal. 1972. The story behind those meatless "meats." *Popular Science.* Oct. p. 78-80, 164.

• ***Summary:*** Discusses the production of meat analogs from soybeans, with their economic and health advantages. The article focuses on meatlike products made from spun soy protein fibers by Worthington Foods of Ohio. Gives the history of how Robert Boyer and Henry Ford developed spun soy protein fibers. One color photo shows about 50 of Worthington's "meatless meats," most of which are canned. Four black-and-white photos show how spun protein fibers are made into meatless meats (such as Stripples and Add-A-Bits) in the Worthington plant. Frank Poston predicts that the "meat analogs will be generally available in supermarkets by 1975." Worthington president Jim Hagle is more cautious, putting the date at 1976 or 1977.

1665. Midwest Natural Foods Distributors, Inc. 1972. Catalog and price list 11/1/72. Offering the best in natural foods. Ann Arbor, Michigan. 58 p. Nov. 1. Index. Illust. 22 cm.

• ***Summary:*** This is a very early natural foods catalog, typewritten and mimeographed on pink paper; it contains a few logos of manufacturers but no ads. On the front cover is a stylized illustration of a rayed sun, with each ray represented as a fruit or vegetable. Contents: Hi! Who, where, phone, why. General information: Service, terms, freight, notes, contact (Henry Bednarz and Larry Kociela, p. 1-2). Special case lot discount–5%. Lines on which case lot discounts are not allowed (7). "Computerized billing by January 1, 1973 including Quantity, Unit, Description, Size, Sugg. [Suggested] Retail, Unit cost, extension, 10 day 2% discount, 10 day case lot discount" (p. 4).

The body of the catalog is an alphabetical listing of suppliers / manufacturers, with major brands or product categories a cross references (e.g. Bakon Yeast, see Sovex). Within each, products are listed alphabetically (shown below in parentheses). These include: Acme juicer Co. Appliances & utensils. Barth's Nutra Foods (Barth Soya Date Cereal). Books (Nutri-Books Corp., Denver, Colorado). Chico San (Rice Cakes, Lima Tamari Soy Sauce, Miso Soybean Puree, Sesame Salt, Sesame Butter, Salt Plums, Kuzu {wild arrowroot}, azuki beans, Mu Tea, kombu, soysauce tableserver–glass, chopsticks), Celestial Seasonings teas, Continental Culture Specialists (acidophilus culture, kefir grains, royal yogurt), Dr. Bronner & Assoc. (dulse sea lettuce, lecithin protein cereal, Do It Twice Soy Vege Base, pure peppermint oil soap), El Molino (7 Grain Cereal, soy beans–whole, soya flour, soya grits, soya meal, Graham flour), Fearn Soya Foods (Pancake S.F. [Soya Flour] Mix, liquid lecithin, High Protein (carob, chocolate, vanilla), soya protein 96%, Protein 600 Tablets (vanilla, chocolate), Muscle Protein, Soya Powder–Natural, Soya Powder–Low Fat, Soya Granules, cooking soybeans, Wheat Cereal Soya Mix, Corn Bread Soya Mix, Salted Plain SoyoSnax, Soybean–sprouting, lecithin granules, Soy O Snaks–Natural, barley–hulled organic, triticale flour–organic), Flavor Tree (Pernola, Pernuts {unsalted, sea salted, mild garlic, onion, carosel [carousel] carob covered}), Gides, Inc. (Nu-Life {vitamins & minerals–has the most products of any supplier}; A Soyadophilus, vitamin E natural mixed tocopherols), Lassen Foods (granola), Malt-O-Meal (Soytown) (salted soy beans [roasted], unsalted, barbecue flavor, garlic, soy spread, soy honey bar, soy nut bar), Miracle Juicer Co., Modern Products (Gayelord Hauser), Norganic (vegetable oils, incl. peanut oil, soy oil, safflower oil, sesame oil, sunflower oil, Gold Soya Mayonnaise), Richter Bros. (Familia cereals {Swissy Cereal, Fritini Mix}, Morga vegetable bouillon, Pero coffee substitute, Herbmare seasoning salt), A. Sahadi Co. (sesame tahini), Sourdough Jack's Country Kitchen (sourdough starter), Sovex (granola, Bakon Yeast), Seelect Dietary Products: Herb teas (incl. Bladderwrack, dulse leaves, saw palmetto, Irish moss), St. Laurant Peanut Butter, Sunshine Valley, Viobin (lists 16 products, incl. wheat germ oil), Mineral Waters (incl. Apollinaris, Vichy, Perrier, Mountain Valley), Grist Mill (granola, Wunder Bars, Honey Graham

© Copyright Soyinfo Center 2014

Cracker, Super Protein Concentrate), Norwalk Juicer Co., Parkelp (Ocean Labs, Inc.; lists 4 kelp products), Nuvita Foods (Langes; Soya Carob Macaroni). Organic Sun Valley Dried Fruits (incl. Calimyrna figs, Monukka raisins, Black Mission figs, Zahadi dates). Honey Preserves–No sugar added. Index by products and suppliers.

Note 1. This is the earliest document seen (May 2006) concerning Midwest Natural Foods.

Note 2. This is the earliest English-language document seen (June 2006) that mentions the "Acme Juicer" or the "Acme Juicer Co." Address: 310 W. Ann St. (P.O. Box 100), Ann Arbor, Michigan 48107. Phone: 313-761-2997.

1666. *Loma Linda University Observer* (*California*). 1972. China doctor noted surgeon, scientist, and missionary. Nov. 30. p. 7. [1 ref]

• ***Summary:*** A brief biography of Harry W. Miller, MD, "surgeon, scientist, financial genius, and missionary." He was "named alumnus of the year for 1968 by graduates of the School of Medicine [at Loma Linda University in California]. Dr. Miller, now 93, has been classed with Livingston, Judson, and Schweitzer as one of the greatest modern missionaries. When only 23 years of age, he turned his back on a promising career at the University of Chicago and went to China as a missionary."

"The Brilliant Blue Cross, highest awarded conferred by the government of the Republic of China, was presented to Dr. Miller by Generalissimo Chiang Kai-shek for his development of palatable milk from soybeans. This discovery is credited with saving the lives of countless Chinese children who otherwise would have starved."

A portrait photo shows Dr. Miller. Note: (1) Livingston was David Livingston (lived 1813-1873), Scottish missionary and explorer in Africa. Henry M. Stanley, who finally met him in Ujiji, Central Africa on 10 Nov. 1871 said "Doctor Livingstone, I presume?" (2) Judson was Andoniram Judson (1788-1850), American missionary to Burma. (3) Schweitzer was Albert Schweitzer, MD, (1875-1965), French theologian, philosopher, physician, and music scholar. Missionary physician and founder of Lambarene Hospital in French Equatorial Africa in 1913. He earned the PhD degrees and won the Nobel Peace Prize in 1952.

1668. Glyer, John. 1972. Diet healing: A case study in the sociology of health. *J. of Nutrition Education* 4(4):163-66. Fall. [7 ref]

• ***Summary:*** "There is an increasing interest in 'natural' and 'health' foods. This study compares and contrasts the attitudes, beliefs, and habits of the new 'hip' groups with those of the older movement." This article is based on research conducted during the summer of 1971 under a National Institutes of Health grant. Twenty-three questions were asked of the new groups, and the results tabulated. The older 'health food faddists' wrote books that about half the members the hip group read. Adelle Davis's books were the most popular. Others were *Zen Macrobiotics,* by George Ohsawa (1965); *Mucousless Diet Healing System,* by Ehret [1924?]; and *Back to Eden,* by Jethro Kloss (1939).

On Ninth Avenue in San Francisco are three 'natural' foods stores near each other. Two are actually part of New Age Natural Foods, which grew so large it had to move the granary section to another storefront. Fred Rohe is the owner; he sells no meat and the dairy products come from certified raw milk. Address: Univ. of California Medical Center, San Francisco.

1669. Schwarz, Richard W. 1972. The Kellogg schism: The hidden issues. *Spectrum: Journal of the Association of Adventist Forums.* Autumn. p. 23-39. [68 ref]

• ***Summary:*** A refreshingly candid essay about the conflict between Dr. John Harvey Kellogg and the Seventh-day Adventist church, by the author of the best biography of Kellogg. Dr. Kellogg was almost continually embroiled in controversy with one or another church leader after he became superintendent of the Western Health Reform Institute in 1876. The causes for these numerous controversies were many and varied. Of central importance, however, was Kellogg's observation that there was a wide and uncalled-for difference between Adventist teaching and practice in healthful living–particularly when it came to the renunciation of flesh foods in the diet. For instance, although Ellen White had begun to advocate vegetarian diet in 1864, it was not until thirty years later that she felt able to banish meat completely from her household. She herself had continued to eat flesh foods, occasionally at least, as late as 1891.

"Kellogg appears to have considered the practice of health reform doctrines to be intimately bound up with spiritual growth and perfection... In the 1880s he began publishing his own books and hiring his own subscription agents because he was dissatisfied both with the financial arrangements offered him by the Review and Herald Publishing Association after James White's death and because he was convinced that his health book were not being pushed as vigorously as they should be... Kellogg had been at perhaps the height of his power within the church in 1901."

On 10 Nov. 1907 Dr. Kellogg was "disfellowshipped" from the Adventist church. The charges: being antagonistic "to the gifts now manifest in the church" and allaying himself "with those who are attempting to overthrow the work for which the church has existed." In retrospect the affair appears to have been basically an unfortunate personal and political struggle between the sometimes haughty czar

© Copyright Soyinfo Center 2014

of the Adventist medical institutions and a group of ministers that included A.G. Daniells, General Conference president; W.W. Prescott, editor of the *Review and Herald*, and Willie White (Ellen White's son). Caught in the middle was an aging Ellen White, whose authority became the focal point of the conflict.

• ***Summary:*** A vegetarian cookbook from the SeVa Restaurant, printed on 100% recycled paper. Soy-related recipes include: Soy milk (p. 18). Tahini milk. Nut milk (p. 18). Miso vegetable soup (p. 25). Variety muffins (with soy flour, p. 36). Salad for Virgo (with green soybeans and roasted soybeans, p. 45). Miso-tahini sauce (p. 51). Brown sauce (with Tamari soy sauce or miso, p. 51). Stuffed cabbage rolls (with green soybeans and brown rice, p. 65). Campfire dinner (with cooked or canned soybeans, p. 65). Soy bean loaf (p. 73). Roasted soybeans (dry roasted, p. 84). Granola (with Soya granules, p. 84).

The glossary (p. 98-100) includes listings for cold-pressed oils, fertilized eggs, ginseng, glutin [sic, gluten], miso, seaweed, tamari soy sauce, and tofu ("a bean curd made from soybeans which is used for flavoring soups and sauces.")

Brand name products we use (p. 101; Note: Each contains soya). Smokene, Soyagen (spray-dried soymilk), and Vegeburger (Loma Linda Foods). Soya Granules (Fearn Soya Foods). Stripples (bacon alternative from Worthington Foods). Vege-Sal (Modern Products; flavored with soy bean extract). "Smokene: smoked seasoning spice made from toasted soy powder, dried yeast, soy sauce and condensed wood smoke. It is used for flavoring soups and sauces."
Address: Columbus, Ohio.

1681. Lockmiller, N.R. 1973. Increased utilization of protein in foods. *Cereal Science Today* 18(3):77-81. March. [13 ref]
• ***Summary:*** Details are given on each type of soy protein product and the way each is used. Table 4 gives the price per pound for various soy protein foods, the estimated annual production in 1972, and the current uses. Soy flour and grits, $0.15-$0.17/lb, 352-500 million pounds produced in 1972. Used as ingredients for baked goods, dog foods, sausages.

Soy protein concentrates, $0.21-$0.25/lb, 40-50 million pounds produced. Used in manufacturing textured products. Ingredients in processed meats, baby foods, and health foods.

Soy protein isolates: Regular $0.41-$0.45/lb, modified isolates $0.92-$1.33/lb. Production of both types: 35-40 million pounds. Regular isolates are used in manufacturing analogs such as meatless ham, bacon, hot dogs, etc. Modified isolates are used in whipping agents.

Textured soy protein products: Extruded flours, $0.27/lb and up. Spun isolates $0.50/lb and up. Production of

© Copyright Soyinfo Center 2014

both combined: 35-40 million pounds in 1972. Textured soy protein products are use in bacon bits, bacon strips and similar foods.

Table 6 shows what companies supply which of the following types of edible soy-based ingredients: Soy flour and grits (defatted, low-fat, full-fat), concentrates, isolates, spun fibers, textured soy prod. The companies are ADM (soy flour and grits–defatted, low-fat, and full fat, textured soy prod.), Cargill, Central Soya, Far-Mar-Co, General Mills, Griffith Labs, Gurley, Inc., Lauhoff Grain Co., Miles (Worthington), National Protein, Ralston Purina, A.E. Staley, Swift & Company. Address: A.E. Staley Mfg. Co., Decatur, Illinois.

1682. **Product Name:** Soy Protein Isolates, and Spun Soy Protein Isolates.
Manufacturer's Name: Miles Laboratories, Inc.
Manufacturer's Address: 1127 Myrtle St., Elkhart, IN 46514.
Date of Introduction: 1973 March.
New Product–Documentation: *Soybean Digest Blue Book.* 1973. p. 110.

1683. Register, U.D.; Sonnenberg, L.M. 1973. The vegetarian diet: Scientific and practical considerations. *J. of the American Dietetic Association* 62(3):253-61. March. [37 ref]
• ***Summary:*** "Without sound nutritional knowledge, following a vegetarian diet can be hazardous. However, as shown by a number of studies reviewed here, it is perfect possible to construct a vegetarian diet that provides all essential nutrients." One section in this article, titled "Soy products," discusses spun soy protein isolates, and textured soy protein products. Another discusses "The Pure Vegetarian [Vegan] Diet."

The introduction states: "The use of Zen macrobiotic diets is a well known example of problems that potentially may develop when the diet is improperly selected.

"The Zen macrobiotic regimen basically consists of ten diets, ranging from the lowest level (Diet -3) which includes fruits, vegetables, and some animal products in addition to cereals, to the highest level (Diet 7) made up entirely of cereals. Individuals who persist in following the more rigid diets are in great danger of developing serious nutritional deficiencies. Cases of scurvy, anemia, hypoproteinemia, hypocalcemia, emaciation due to starvation, and other forms of malnutrition, in addition to loss of kidney function due to restricted fluid intake, have been reported, some of which have resulted in death."

This review of the literature was reprinted in: Ioannis S. Scarpa and Helen C. Kiefer, eds. 1978. *Sourcebook on Food and Nutrition.* p. 220-28. Address: Dep. of Nutrition, School of Health, Loma Linda Univ., Loma Linda, California.

1684. *Forbes.* 1973. Why the makers of Alka-Seltzer want to help reduce your meat bill. April 1. p. 25-26.
• ***Summary:*** Miles Laboratories, the $319-million-a-year pharmaceutical company of Elkhart, Indiana, is famous as the maker of Alka-Seltzer. The company's food group [Worthington Foods] has sales estimated at $18 million a year. The company's "newest products are Morningstar Farms breakfast 'sausage' and 'ham.' They are currently being test-marketed in Florida and soon will be in Arizona and Southern California. Earlier tests, in Erie, Pennsylvania, and Fresno, California, were very successful. If the latest tests confirm the earlier results, Miles reportedly will go national next year, backed with a $9 million advertising campaign." Currently the biggest problem with these products is that they cost more than meat.

In one sidebar, titled "How it all happened," Robert Boyer tells how he developed spun soy protein fibers, starting with his work at the Ford Motor Co. "I first approached Worthington when I filed my first patent on an edible fiber in 1949 and they became interested immediately." A photo shows Boyer, who is now building a house in Florida, where he plans to retire eventually.

A second sidebar, titled "Verdict: Not as good, but not bad, either," gives the results of a 15-member taste panel test for taste and texture. 11 participants ranked the products as good in taste as their meat counterparts; 1 said excellent and 3 said fair. In texture, 4 said excellent, 9 said good, and 2 said fair. "As to price, four of the participants said they'd buy the products if they could save 10% on meat price; 11 said the prices would have to be 20% cheaper or more. One participant (middle-aged) said he'd consider buying the products at full meat prices because of the anticholesterol feature. The overwhelming conclusion was that most participants would prefer meat, but that price advantage could make them switch."

Note: This is the earliest English-language document seen (Jan. 2008) that uses the term "Morningstar Farms" to refer to products made from edible spun soy protein fiber.

1685. Fischer, Norman H. 1973. Beanburgers–More Americans turn to soybean products as meat substitutes: Restaurants, stores find consumers like the taste and especially the price. *Wall Street Journal.* April 3. p. 1, col. 1. Midwest ed.
• ***Summary:*** In the continuing struggle against high meat prices, King's Food Host, a restaurant chain based in Lincoln, Nebraska, has been adding TVP for several months now to its Big King burgers at about 20 of its 140 branches. It sells these "soyburgers" for $0.49, which is 10 cents less than usual. Sales have been very good, with no complaints.

In the past, soybean products have been slipped into a variety of consumer foods, but during the past few months, they have been increasingly advertised as extenders in hamburgers. Consumers seem to welcome the reduction in

© Copyright Soyinfo Center 2014

meat prices.

"The future is now: Over the past several years, such companies as General Mills Inc., Archer-Daniels-Midland Co., Ralston Purina Co., and the Worthington Foods subsidiary of Miles Laboratories Inc., have developed soybean products that have virtually the same appearance, texture and taste as beef, pork, poultry, seafood and even nuts. Some of these all-soy products already are on the market, and more are being added annually.

"U.S. Agriculture Department [USDA] researchers say that by 1980 soy protein could account for as much as 8% of the nation's 'meat' requirements."

This is good news for those who grow and process soybeans. The National Soybean Processors Association says that sales of soy protein products for use in human foods totaled about $75 million last year, a ten-fold jump from five years earlier. And buoyed by the growing use of soy as an extender for ground beef, sales this year are expected to reach $120 to $140 million.

"The biggest move was made in mid-March by Red Owl Stores Inc. in Minneapolis [Minnesota], when it introduced 'Juicy Burger II' in the fresh-meat counters of its 51 supermarkets in the Minneapolis-St. Paul area and its six Duluth stores. 'Juicy Burger II' is 75% ground beef and 25% soy protein, plus a few flavorings. It is selling for about 75 cents a pound, 20 to 25 cents less than all-beef hamburger sells for." Address: Staff reporter.

1686. Leonard, Agnes W. 1973. Grow your own protein. *New York Times.* April 8. p. 35. Supplement.
• ***Summary:*** One solution to the high cost of meat is to grow your own protein in the form of soybeans. Agnes grows green soybeans (Disoy variety) in her home garden in upper New York state. About 4 years ago she began hay mulching with spectacular results. Her worn-out sand heap responded like magic and weed growth–though not entirely eliminated–was greatly reduced.

Some excellent books about soybeans are: (1) "How to Have a Green Thumb without an Aching Back," by Ruth Stout. "The Soybean Cookbook," by Mildred Lager and Dorothea Van Gundy Jones. "The Useful Soybean," by Mildred Lager.

Illustrations by Matthew Kalmenoff show: (1) A soybean plant loaded with pods. (2) A cluster of soybean pods attacked to the plant stem.

1687. *Business Week.* 1973. Making it cheaper to eat protein. May 12. p. 184, 186.
• ***Summary:*** Skyrocketing food prices are forcing the food industry to develop new textured soy protein products to extend or substitute for meat, suing either of three general methods: Spinning (Miles Laboratories/Worthington Foods), concentrating (Central Soya Co. concentrates), or extruding (ADM, this is now the leading method for making textured vegetable protein).

"Archer Daniels Midland vigilantly protects both its broad product patent and its copyright on the initials TVP (for textured vegetable protein). The company cemented its patent position with a court suit in 1971. Today, five of its eight competitors–Cargill, Miles Laboratories, A.E. Staley, Swift, and Ralston Purina–sell vegetable protein lines under license from ADM.

"Burger mixes: TVP got its first big boost when the Agriculture Dept. [USDA] in 1971 approved its use in the national school lunch program. By the end of 1972, total demand had grown to about 55-million lb. a year, with ground beef as the largest single market.

"Red Owl Stores, Inc., sells such burger mixes across its butcher counters, usually in a mix of 75% meat to 25% vegetable protein. Called Juicy Burger II, or Juicy Blend II, the product sells for $0.75 a lb., compared with $0.99 a lb. for ground beef. Red Owl says that the mixture outsells whole meat by 3 to 1. Kroger Co., the nation's third-largest food chain, last month came out with its own mix of ground beef and textured vegetable protein, called Burger Pro.

"Dr. Virgil O. Wodicka, director of FDA's Bureau of Foods, says: 'Don't tell consumers what it isn't–tell them what it is.'"

1688. Dwyer, Johanna T.; Mayer, L.D.V.H.; Kandel, R.F.; Mayer, J. 1973. The new vegetarians: Who are they? *J. of the American Dietetic Association* 62(5):503-09. May. [18 ref]
• ***Summary:*** One hundred young vegetarians (age 35 or younger), not affiliated with any organized religious group, were interviewed and asked to fill out a 200-item questionnaire. None were Seventh-day Adventists or Trappist monks. 97 were Caucasian and 3 were Negro. 25 were students who responded to notices posted in dormitories and advertisement in the undergraduate newspaper of a university; 75 participants, "most of whom were not students, were recruited at vegetarian-oriented restaurants, food stores, and communal residences throughout the city [of Boston]. Interviews were usually conducted wherever the subject was found.

Data were collected for the following factors: Personal data (age, sex, marital status, present weight, maximum weight reached in adulthood, occupation, educational level, past and resent affiliations with religious, philosophical, and/or spiritual groups). History of diet (incl. use of alcohol, tobacco, and drugs). Sources of information on diet. Social aspects of diet. Opinions about nutrition and various diets. Types of nutrition information and health services subject desired.

The results showed diverse dietary habits, lifestyles, and attitudes toward physicians and other health professionals. Food and other avoidances are discussed. At least 40% of those interviewed consumed poultry and/or fish; none consumed red meat. 26% were lacto-ovo vegetarians. 23%

© Copyright Soyinfo Center 2014

were "vegans" who avoided all animal foods. Weight loss: 94% of the men and 79% of the women (for whom numbers were available) lost weight on a vegetarian diet. 41% said their views on diet differed from those of nutrition scientists. An additional 15% said their views differed in part.

Note: This was an extremely influential paper, identifying a new subject for investigation, and defining the terms of discussion and debate among health professionals for more than a decade. The word "macrobiotics" is not mentioned, but the study was conducted in Boston, and later publications show that a significant number of those studied followed a macrobiotic diet. Address: Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

1689. *Food Engineering.* 1973. TVP simulates pepperoni. 45(5):72. May.
• ***Summary:*** Temptein Pepperoni-like Links are made from spun soy isolate by the Marschall Division of Miles Laboratories. The product costs 25% less than meat pepperoni. Typical analysis of the links is: Protein 18.2%, fat 27.1%, carbohydrates 17.6%, ash 4.9%, and moisture 32.2%. Two photos show the product.

1690. Miles Laboratories, Inc. 1973. Which of your food ingredients is becoming too expensive? (Ad). *Food Processing* (*Chicago*) 34(4):Inside front cover. Spring. Foods of Tomorrow section.
• ***Summary:*** "Is it a meat product? Then Miles Laboratories can help cut your costs. With Temptein *spun* textured vegetable protein meat-like nuggets and beef-like granules."

"Temptein extenders, derived from soy isolate (over 90% protein), and spun into fibers. So the cost is significantly less than meat. After all, an acre of soybeans yields 10 times as much protein as the same land would feeding animals. Production, shipping and handling are less costly too.

"No skinning, boning, curing or trimming. And no waste or shrinkage. Temptein–a versatile product that can be stored conveniently at room temperature... Extenders engineered for up to 100% meat replacement. To cut ingredient costs in your existing food products. Or help you design delicious new foods."

The bottom half of the ad contains a photo of various colorful vegetables, mushrooms, grains, beans and pasta. Just above it is a smaller photo of Temptein spun fibers. Address: Marschall Div., Elkhart, Indiana 46514.

1691. *Food Engineering.* 1973. Cholesterol-free meat substitute: New products have all the advantages of real meat, but no cholesterol or animal fat. 45(6):60-61. June.
• ***Summary:*** Shows large labels of two Morningstar Farms products from Miles' new textured vegetable protein line. "Textured Vegetable Protein" and "Breakfast Patties." A nutritional comparison is made with an equivalent weight of pork sausage. An 8-oz package retails for $0.79.

1692. *Loma Linda Bulletin* (*Loma Linda, California*). 1973. China doctor [Harry W. Miller] decides against retirement at 94. July 18.
• ***Summary:*** Dr. Miller decided at the last moment to stay on for another year at the Seventh-day Adventist Hospital in Hong Kong. For 70 years he has served the Chinese people as a medical missionary. A large photo shows him, dressed in a shirt and tie, and holding a cop in one hand. The caption: "'Orient Angel–Dr. Harry Miller, Seventh-day Adventist medical missionary, doing what he loves best, passes out cups of soybean milk to undernourished children in a houseboat city on the Hong Kong waterfront."

1693. Rosenfield, Daniel. 1973. Feeding children through USDA programs. *Food Technology* 27(8):36-38. Aug.
• ***Summary:*** The author was formerly Director of Nutrition and Technical Services Staff of USDA's Food and Nutrition Service (FNS). The largest USDA program is the School Lunch Program, in which approximately 25 million children participate. These child food service programs, which have a turnover of over $2,600 million per year, encompass much more than feeding children lunch. The Child Nutrition Division of the U FNS operates three programs: School Lunch, School Breakfast, and Special Food Service. The FNS was established in 1969.

Textured vegetable proteins are now allowed to be used in combination with meat, poultry, or fish is the School Lunch Program and the lunch and supper of the Special Food Service Program. The maximum rate is 30 parts of hydrated textured vegetable protein to 30 parts of uncooked animal protein on the basis of weight. Address: Director of Nutrition Planning, Miles Laboratories, Inc., 1127 Myrtle St., Elkhart, Indiana 46514.

1694. Smith's Food King. 1973. Display ad: The best choice in meats. *Los Angeles Times.* Sept. 6. p. G21.
• ***Summary:*** The section titled "Frozen features" includes: "Morningstar Farms 75¢. Vegetable protein, links, patties, slices, 8-oz."

1695. Manchester, Harland. 1973. And a new way to trim your meat bill. *Reader's Digest.* Oct. p. 119-21.
• ***Summary:*** About the rise of TVP in the USA as a meat extender. It started to be used in school lunch programs but has now moved into supermarkets. In March 1973 "Red Owl Stores, Inc. of Minneapolis [Minnesota], placed a ground-meat product containing 25-percent soybeans and selling for about 20 cents a pound less than the all-beef hamburger at the meat counters of 51 of its stores in the Minneapolis-St. Paul area. It outsold all-beef hamburger three to one and is now marketed in all 136 Red Owl Stores, as well as 200 franchise stores. Red Owl also sells frozen pizzas and patties in which soybean proteins are used." Discusses ADM,

Worthington Foods, Henry Ford, and Robert Boyer.

1696. Miles Laboratories, Inc. Marschall Div. 1973. From Miles: Six specific ways to whittle costs in your meat and seafood formulations. And maintain quality (Ad). *Soybean Digest.* Nov. p. 19A-19B.
• ***Summary:*** "Meat and seafood prices are on the rise. And what a crimp that puts in your new food product development. Miles has designed special textured vegetable proteins to extend or replace these costly ingredients. To whittle the costs.

"Temptein, our spun textured vegetable protein, is derived from the most refined soy isolate (90% protein)." Temptein comes in: (1) Meat-like Nuggets (Think about: Enchilada casserole, meat loaf squares, Beef balls in blankets, Porcupines or Rigatoni). (2) Bacon-like Chips (Think about: Bacon-like chips and peanut butter toaster pop-ups, Bac-omelet, Bacon and cheese rarebit, Bac-olive appetizers). (3) Ham-like cubes. (4) Pepperoni-like Links. (5) Seapro (developed to improve seafood specialties). (6) Pro-Lean 45 ("The first vegetable protein to be used successfully at 45% meat extension levels in patty formulations"). A large color photo shows different types of meat and crab. Address: Marschall Div., Elkhardt, Indiana 46514.

1698. Turk, R.E.; Cornwell, P.E.; Brooks, M.D.; Butterworth, C.E. 1973. Adequacy of spun-soy protein containing egg albumin for human nutrition. *J. of the American Dietetic Association* 63(5):519-24. Nov. [20 ref]
• ***Summary:*** Nitrogen balance studies were carried out on 5 young adults and 3 teen-agers during 5 consecutive 1-week periods in which spun-soy protein foods constituted the principal source of dietary nitrogen. The spun-fiber soy product used in these studies was Soyameat, made by Worthington Foods, Inc., and available either canned or frozen in beef or chicken flavor. Egg albumin, added to facilitate the commercial spinning process, represented slightly less than one-third of the total available dietary protein in these studies. It enhanced the nutritional quality of the finished product. "We conclude that spun fiber foods of the type employed in this study represent a high quality of protein for teen-agers and adults." Address: The Nutrition Program, Univ. of Alabama School of Medicine, Birmingham, Alabama.

1701. **Product Name:** Loma Linda Tender Bits (Fish-like).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1973.
Ingredients: In 1973: Inc. spin soy protein fibers.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. Tender Bits is a canned fish-like products based on spun soy protein fiber.

Recipe booklet. 1979, dated.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. The ingredients are now: Vegetable protein (wheat [gluten] and soy), rice flour, corn or soy oil, oat flour, dried yeast, onion powder, soy lecithin, L-lysine, natural (vegetable) flavors, vitamins [niacinamide, D-calcium pantothenate, thiamine (vitamin B-1), vitamin B-6, riboflavin (vitamin B-2), vitamin B-12]. Broth: Water, salt, natural (vegetable) flavors, cottonseed oil. Label printed March 1990.

1702. **Product Name:** Loma Linda Little Links (Meatless Frankfurters Based on Spun Soy Protein Fibers).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Riverside, CA 92515.
Date of Introduction: 1973.
Ingredients: Inc. spun soy protein fibers.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: 1988: Per 2 links (1.6 oz–46 gm): Calories 80, protein 8 gm, carbohydrate 2 gm, fat 5 gm, cholesterol 0 mg, sodium 210 mg, potassium 40 mg.
New Product–Documentation: It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned frankfurter type product based on spun soy protein fiber which Loma Linda probably purchased from General Mills.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Linketts (Loma Linda)" are "wheat protein, vegetable oil, brown rice, defatted wheat germ, dried yeast, soy protein, salt, potato flour, onion powder, MSG, soybean lecithin, caramel color, HVP, garlic powder, L-lysine, flavorings."

Recipe booklet. 1979.

Label sent by Loma Linda Foods. 1988. Oct. 5.

The ingredients are now: Wheat gluten, corn oil, water, wheat germ, dried yeast, rice flour, soy flour, natural (vegetable) flavors, potato flakes, onion powder, oat flour, caramel color, soy lecithin, wheat flour, garlic powder, L-lysine, soy protein isolate, spice, vitamins, (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). Broth: Water, salt. This product was introduced in 1963. A less sophisticated version of this product with the same name was introduced in 1953.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1703. **Product Name:** Soyalac (Soymilk) [Sweetened].
Manufacturer's Name: Spicer Health Foods, Spicer Memorial College.
Manufacturer's Address: Aundh Road, Ganeshkind Post, Poona 1, Maharashtra, India.
Date of Introduction: 1973.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Note: This is the earliest known commercial soymilk made in India. Letter from Mr. Emerson David (Spicer Memorial College, Food Factory, Aundh Road, Ganeshkhind, Poona 411 007 India). 1975. July. He orders information about miso.

Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 110. The plant started in 1972 or 1973.

Color photo sent by Anders Lindner of STS. 1987. Nov. 14. 150 ml bottle. Orange, white, black and yellow Label, with photo of baby's face. "Concentrated formula for infants and children (Hypoallergenic). Add water." This product is still on the market, sold in sterilized bottles.

1704. **Product Name:** Fish Fillets (Imitation Fish). Later renamed Vegetarian Fillets.
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1973.
Ingredients: In 1975: "Wheat protein [wheat gluten], Fibrotein [spun soy protein fiber], cracker meal, corn oil, egg white solids, hydrogenated vegetable oils, dehydrated potato, nonfat dry milk, artificial flavoring, soy protein, HVP, MSG, dehydrated onions, salt, dextrose, disodium inosinate/disodium guanylate, niacinamide, thiamin, iron, vitamin B-6, riboflavin, vitamin B-12."
Wt/Vol., Packaging, Price: 6 fillets in 10½ oz paperboard box.
How Stored: Frozen.
New Product–Documentation: It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. Fish Fillets (9 oz. or 6 lb) is a frozen fish-like product based on spun soy protein fiber.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 175. The ingredients in "Fillets, frozen (Worthington) are given.

Label. 1976, undated. "A Vegetable Protein Product. Artificial Fish Flavor." Consumer Reports. 1980. June. p. 357-65. The protein PER is 2.53. Sensory comments: Faint fishy flavor and aroma. Spicy. Dry. Chewy. Flaky; dark tuna color.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. Ingredients for "Fillets, frozen, Worthington Foods" are "textured soy protein concentrate and isolate, flavorings (artificial flavors, salt, sugar, spices, onion, garlic, celery, parsley), egg whites, soybean and/or corn oil, partially hydrogenated soybean and cottonseed oil, modified tapioca starch, corn syrup solids, monosodium glutamate, disodium inosinate, vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12."

Note: This is the earliest commercial meat alternative seen which has a name clearly indicating that it is an alternative to fish fillets.

1705. **Product Name:** Worthington's Meatless Chili.
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1973.

1706. **Product Name:** FriPats (Meatless Hamburger Patties).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1973.
Ingredients: In 1984: Textured vegetable protein (soy protein concentrate and isolate, wheat gluten), soybean and/or corn oil, flavorings (hydrolyzed vegetable protein, salt, spices, spice extractives, onion, garlic powder, paprika), egg white solids, partially hydrogenated soybean and cottonseed oil, calcium caseinate, modified tapioca starch, caramel color, emulsifiers (mono- and diglycerides, glyceryl lacto esters of fatty acids), yeast extract, niacinimide [niacinamide], iron (as ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12.
How Stored: Frozen.
New Product–Documentation: It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118.

Manufacturer's catalog. 1984, undated. Frozen Products.

© Copyright Soyinfo Center 2014

Label reads: "Vegetable Protein Patties. Artificial Hamburger Flavor. Completely Meatless."

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1707. **Product Name:** Chic-Ketts (Meatless Chicken).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1973.
Ingredients: Textured vegetable protein (wheat gluten, soy protein concentrate and isolate), water, soybean and/or corn oil, yeast extract, salt, monosodium glutamate, onions, hydrolyzed vegetable protein, niacinamide, etc.
Wt/Vol., Packaging, Price: 1 lb (in 1973).
How Stored: Frozen.
New Product–Documentation: It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a frozen product with chicken-like flavor based on spun soy protein fiber. Each pack weighs 1 lb.

Manufacturer's catalog. 1984, undated. Frozen Products. Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

Note: This product was first introduced in 1960, but did not contain textured soy protein concentrate or isolate until 1973.

1708. Adams, Ruth B. 1973. Callaloo and pastelles too: Plus hundreds of other delightful recipes. Mountain View, California: Pacific Press Publishing Assoc. 192 p. No index. 21 cm.
• ***Summary:*** This Seventh-day Adventist lacto-ovo-vegetarian cookbook, hampered by its lack of an index, plays down the fact that it avoids flesh foods and contains a strong flavor of the West Indies. The chapter on Entrées has a recipe for making gluten, and uses gluten in many recipes, such as Glutenburger casserole (p. 41), Onions and gluten cutlets (p. 48), Gluten macaroni (p. 49), and Pastelles (p. 49; which also calls for "2 cups cubed soya meat or homemade protose"). The various Nut Meat recipes (p. 43-44, resembling Nuteena) each contain peanut butter; one contains gluten. The various Protose recipes (p. 44-45) each contain peanut butter or commercial Protose; one contains gluten. Marmite and soy sauce are sometimes used interchangeably as a seasoning, as in soups (p. 87). Very little soy is used.

1709. Chen, Philip S.; Chung, Helen D. 1973. Soybeans for health and longer life. New Canaan, Connecticut: Keats Publishing, Inc. (A Pivot Health Book). xii + 178 p. Index. 18 cm.
• ***Summary:*** A revised and condensed pocketbook version of Chen and Chen 1956. Contents: Preface. Foreword. Introduction. Part I: Nutritive value of the soybean. 1. Protein. 2. Fat. 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease.

Part II: Soy products. 8. Soybean oil: Phosphatides, margarine. 9. Soybean oil meal: Gelsoy, Multi-Purpose Food. 10. Soy flour. 11. Concentrated soy protein products: Soy protein concentrates (Griffith Laboratories makes Isopro and GL-301), soy protein isolates, and textured or spun soy proteins. 12. Soy milk. 13. Soy cheese (tofu). 14. Soy sauce. 15. Soybean sprouts.

Part III: Soybean culture and preservation. 16. Soybean culture. 17. Preservation of soybeans (preserving green soybeans by canning, freezing, and dehydration).

Part IV: Recipes. 18. Soybeans and soybean pulp. 19. Soy flour: Breads, cakes, cookies, pies, soups, other recipes. 20. Soy grits and soy flakes. 21. Soy milk. 22. Soy cheese. 23. Soybean sprouts. Appendix: Soybean utilization (chart). References.

p. 114). Soy nut milk (with soy milk powder, almonds, and cashews, p. 116). Soy half-and-half (with All Purpose Soyagen, p. 116).

Pages 118 and 119 list all commercial vegetable protein analogs made by Loma Linda Food Co (Arlington, California) and Worthington Foods, Inc. (Worthington, Ohio). Address: Glendale, California.

1712. Miller, Harry W., Jr. 1973. Observations from forty years of soy protein processing and engineering (Continued–Document part II). Cedar Falls, Iowa: Soypro International, Inc. 8 p. Undated. Unpublished manuscript.

• ***Summary:*** Continued: "Flavor was no problem as the public enjoyed the bean-like cereal flavor of soy. We calculated that, if we could produce a product of high keeping quality and automate the production, we could produce and sell soy milk for $0.20 a quart in comparison to cow's milk at $1.00 per quart. To do this we used wide mouth bottles with a metal crown cap. By sterilizing these bottles in a pressure retort, we had a milk that kept indefinitely without refrigeration. This allowed us to divide the city into four quarters, and by delivering a week's supply at a time we were able to provide house delivery with one fourth the equipment and personnel of our competitors. We had many customers living in other cities that bought a month's supply at a time and carried the empty bottles back to us.

"During our first month of operation, the cost was $1.10 per bottle. The second month was $0.40 per bottle, the third month $0.19 per bottle and the fourth month $0.12 per bottle, which allowed a reasonable profit. We were unable to proceed further as the Japanese blew up the plant on August 7, 1937.

"Realizing the nutritive value of soy and its possibilities, and no longer being able to continue in the Far East, we established the 'International Nutrition Laboratory' in Mt. Vernon, Ohio.

"At first our endeavor was to perfect manufacturing equipment so we could return to the Orient and develop foods for low-income population. As a result, we worked with soy flour manufacturers and oil meal developers. Although many experiments were conducted in testing baking and roasting the bean, we learned very early that moist heat was best for developing high assimilability of this rich protein source.

"I believe I built some 21 different types of moist heat processors from pressure steam cookers to blowing line steam jets through liquid falls of the extracted protein. One day my father remarked, 'Son, you have more equipment out on the scrap pile than you have in the plant.'

"As World War II progressed, we found ourselves producing high protein products for feeding of people that had been undernourished due to the enemies' confiscation of food materials. However, as the war drew to a close, we saw a need for a change of income source. So, with the assistance of Dr. Baxter of Ohio State University, Soylac was brought on the market. Although we had to overcome diarrhea and other feeding problems, it was found that, with proper moist heat treatment and a proper balance of various carbohydrates and vegetable oil, we produced an infant milk that was readily accepted by the pediatricians.

"As we had a greater amount of soy protein fiber [okara] than extracted protein, we at first dried this and sold it for livestock feed.

"It was felt that meat analogs could not be produced from this protein casein residue. Again special equipment had to be made to handle and process this product so that palatability and high food value would result. With specially designed heat processes and modified meat manufacturing equipment, bolognas and beef-like cutlets were produced at first with the addition of wheat protein, later with soy spun protein fibers. As discussed in the latter part of this dissertation, we were also able to produce very satisfactory meatlike products entirely from the residue.

"In the late summer of 1960, I received a call from my father inviting me to a luncheon conference. Here I met Ronald Hill of UNICEF.

"After being introduced I was informed that UNICEF intended to install an infant formula plant in Indonesia under the direction of Dr. S.S. De of F.A.O.

"We were invited to be designers of the plant and I was to supervise the installation and training of the personnel to operate the installation.

"I was most fortunate to be assisted in the project by Dr. E.L. Rowe, a graduate Ph.D. from the University of Southern California. With his help at the Institute of Nutrition of Indonesia, and the assistance of the College of Medicine of the University of Indonesia we were able to determine the causes of diarrhea in infant feeding and correct it in our formula and processing methods.

"As in every country the natives of that locale must have a product that suits their individual organic reaction to nutrition in-take.

"It has not been possible to produce a product acceptable in all countries and cultures. Thus it has been necessary to adapt both production methods and formula to each area individually. In Indonesia we had a very delicate pH balance to maintain, and moisture quantities had to be regulated so the infant obtained a nutritious substance that its body could absorb without ill effects.

"Shortly after my return to the United States and during a periodic visit of my father, Dr. Perry Webber called upon us to assist Madison Foods to develop their soy products for greater market acceptance. They had some very commendable meat analogs using the combination of both soy and wheat derivatives. However, they wished to explore in the infant formula field which was creating a sizable market. Infasoy was originated at this time and a process

© Copyright Soyinfo Center 2014

was developed to increase the normal extracted quantity of protein from the traditional extraction method. This was done by the use of mechanical equipment and formulations. It was here, with a great quantity of wheat fiber in use, that we derived a method of using the soy residues [okara] to manufacture meat loaves, sausages, wieners, and bolognas entirely of soy except for seasoning materials and added fats. This greatly increased the nutritional value as well as the income derived from the sale of these products.

"As we were perfecting and developing equipment and products at Madison, a call came from Brazil for assistance in developing a soy and cow milk formula.

"As the Brazilian government felt that some animal product should be incorporated in this kind of formulation, processing experiments were carried out. As a result much was discovered in flavor control. It had long been determined that you could not mask the flavor of the soybeans. It was entirely a matter of using some of the flavors in the bean and eliminating the objectionable ones.

"While still at Madison I had a call to install a traditional soy milk plant in the Far East. Our technologies had progressed to the point that we had difficulty at first to retain sufficient soy flavor to satisfy the palate of the local clients. However, this was accomplished to the satisfaction of the customers.

"The last three years have been used in developing sophisticated analogous types of meat and milk. This has been accomplished in the laboratory and we feel will soon be available for countries now pressed with shortage of milk. Should milk fall short in dairy farming countries, we know we can supplement this shortage with a vegetable source as acceptable as the product in shortage.

"In summary let me review:

"1. We are facing shortages in milk, which is produced with a ratio of 8 lbs. of feed to produce one gallon. We can produce a gallon of vegetable milk with a total of l lb. of fat, carbohydrate, and beans.

"2. A breakthrough in flavor control has been achieved, which eliminates the former taste objections.

"3. Breakthroughs have also been made in using the soy milk by-products for low cost meat analogues which are highly acceptable and nutritious.

"We have approached the time that the soybean protein will not only relieve food shortages but will also satisfy the most sophisticated taste." Address: Cedar Falls, Iowa.

1713. Miller, Harry W., Jr. 1973. Observations from forty years of soy protein processing and engineering. Cedar Falls, Iowa: Soypro International, Inc. 8 p. Undated. Unpublished manuscript.

• ***Summary:*** "It was a late summer morning 1922 in the State of Maryland that my father announced at the breakfast table that I would accompany him on a short trip to Frederick, Maryland to look at a stone burr mill he wished to purchase for some soy milk experiments he wanted to conduct.

"Protein had always been a high priority topic in our house as Dr. John Harvey Kellogg had made a deep impression on my father (Dr. Harry W. Miller, Sr.) during his student medical days at Battle Creek, Michigan.

"On the way to Frederick my father explained to me that the mill he wished to purchase was to be used to prepare soybeans so that a white milky fluid of suspensible protein could be extracted from the beans. Little did I realize that I was to be introduced to a research field that would dominate my work and studies the rest of my life.

"Having purchased the mill the next step was to find a proper location to conduct the experiment. One of Maryland's larger dairy farms was chosen for this, and after transporting the mill to the farm, it was bolted to heavy timbers and one of the dairy's tractors was used to turn the pulley on the mill.

"To a boy of ten it was more interesting than spectacular to see a white milky liquid run down out of the mill instead of seeing the milk being drawn from the udder of a cow. However, this experiment made a lasting impression on a ten year old who was always experimenting and constructing contraptions of his own.

"No, the liquid from that mill did not replace the milk produced on the farm. However, at the present rate of population increase, and ever-increasing shortages of grazing area to produce milk, we may in the future be looking to the use of this mill and its complementary equipment to supplement the animal products in lands of large dairy production.

"Shortly after my introduction to the first experiments on that dairy farm, I traveled to the land of the soybeans. This country was to become my home and source of information as my parents had accepted a call to mission service in China.

"Having been raised a strict vegetarian, the foods made from vegetables and grain sources were always a challenge to my curiosity.

"Roaming the streets of Shanghai every portable food caterer, street sidewalk restaurant, as well as the more sophisticated Buddhist (vegetarian) restaurant held a new horizon of future products made from the soybean.

"It was indelibly inscribed on my young mind that each procedure in each shop had a very definite and end-resulting purpose behind it.

"The first visit I made to a shop which produced these foods, the owner would address me. 'What is your honorable name,' and my answer would be, 'my humble name is "Show Me,'" translated small rice.

"My childish curiosity either amused the shop keepers or my youth intrigued them. Regardless, I was soon known as 'small rice.' in all these shops and home processing establishments and was allowed to roam at will and have my questions answered frankly–so much so, that I was able to

© Copyright Soyinfo Center 2014

get answers and ingredient names that my elders were unable to secure.

"Basically, the first step in extracting protein was to hydrate the bean. I found that each shop had some variation in soaking the bean. Hot water was used in one place and cold in another. Some added chemicals to the soaking water and others varied by prewashing the bean before soaking while others washed the beans after soaking.

"Although I knew that all their variations were vital to the end product, it was to be several years before I would be using these various steps to achieve end results.

"During my earliest experience with processing, I learned that enzyme action is definitely affected by these variations in procedure.

"The Orientals extract soy protein to produce soy curd, in its various forms, and soy skin or film membrane. Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "soy skin" or the term "film membrane" to refer to yuba.

"Soy curd is produced by coagulating the extracted, liquid-suspended protein. After being pressed from the granular residue [okara] of the bean, a liquid white protein suspension is left. Each shop had a different heat to bring the liquid to before adding the coagulatory chemical.

"Each producer had a different product for the customer. One would have a large cake of rather coarse curd. This they cut into blocks according to the purchaser's need. The buyer taking it would flavor and prepare it as he desired.

"Another shop would produce a firmer curd which was pressed into small cakes; some were flavored with sesame oil; some peanut oil in which they were deep fried; and others were boiled in soy sauce and sold in this form to the customers.

"They also had what I called the yogurt shop. This was a very exacting procedure of heat control and quantity of coagulant to produce a yogurt-like curd which was chilled in bowls and served with rice malt poured on top to flavor it.

"There was one shop that pressed a fine curd till it was rather dry. These cakes were cut into square pieces about 3/4 of an inch square, were stacked on bamboo mat trays and placed in a culture-inoculated, heat-controlled room for three days. After this period the mold-covered squares were put loosely in glass jars in a hot pickling juice with ginger, ground red peppers, rice wine, brown sugar, and salt, and were sealed so the sauce would preserve the curd and flavor it [to make fermented tofu]. This product is sent all over the world to delight the palates of the Orientals.

"Perhaps the most interesting to me was the film protein [yuba] produced by heating the liquid extract to a definite regulated temperature and allowing a film to form on the top of it. This is picked up with a long chopstick and hung on a wire line to dry.

"Here again, liquid flavored films were produced by temperature changes. One way of changing the thickness of the film was to allow the liquid to evaporate so that the last films to be produced from a pot of liquid would be thicker than the first. Also, the fuel used would change the flavor of the film as the smoke from coal, charcoal rice straw and wet saw dust, or bamboo splints each had a definite taste.

"Not being satisfied with seeing these products made, I was determined to see how they were used; so 'Small Rice' would go to the kitchen of the Buddhist Restaurant long before dawn to watch the cooks soak these film in various sauces, some to be rolled tightly into bologna-like rolls and broiled for hours in a soy sauce, ginger, and anise flavored juice. This roll, when sliced, had a beef-jerky like flavor. Another was to lay the films one after another on top of each other to be sprinkled (each one) with rice wine, sesame oil and monosodium glutamate. These films were folded into a half moon shape, placed in bamboo trays and steamed for several hours. They were then placed on a screen to dry the surface moisture, then fried in deep sesame oil or peanut oil whichever flavor was desired.

"When these foods with various seasonings were served you would have anything from fish to turkey or duck.

"It was the eating of these Buddhist meats that gave me the courage in later life to learn to eat animal tissue, as I had been raised a strict vegetarian.

"Had I not learned to eat and taste these various animal products, I am afraid I would be like the official in India: when describing to him how we could make meat analogs from soy milk residue he asked, 'Well, what does chicken taste like?'

"This early experience in China was a challenge to make extensive study into each country's dietary and food flavor habits before designing a product for them.

"In the early 1930's with the encouragement of W.J. Morse and La Clara Reed of the U.S. Department of Agriculture, my father and I, using equipment supplied jointly by the Department and ourselves, produced a spray-dried soy milk formula which was granted a patent by the U.S. Patent Office, and which the American Medical Association accorded its own highly valued seal of acceptance for an infant formula.

"The first commercial plant was installed in Shanghai, China, during 1936 and 1937. Although we were using soy milk for feeding babies and institutional employees, due to the high price of pasteurized cow's milk there was a challenge to install a soy dairy to produce a vegetable milk at a low price."

Note 1. This is the earliest document seen (Aug. 2013) that uses the term "soy dairy" to refer to a facility which makes soymilk and related products from soybeans. Continued. Address: Cedar Falls, Iowa.

1714. Mottern, H.H. 1973. Peanuts and human nutrition. In: C.T. Wilson, ed. 1973. Peanuts–Culture and Uses (A Symposium). Stillwater, Oklahoma: American Peanut

Research and Education Association. vii + 684 p. See p. 593-602. Chap. 18. [56* ref]
• ***Summary:*** Contents: Introduction. Shelled peanuts: Composition, protein. Peanut oil: Composition. Peanut butter: History, standards of identity. Peanuts in candies and cookies. Roasted peanuts. Peanut flour. Other peanut foods.

"Peanut butter: About 55% of shelled peanuts in the United States are used to make some 500 million pounds of peanut butter annually. Until about 1900, peanuts were consumed mostly roasted in the shell. The use as peanut butter had been practiced on a small scale, using crude equipment, for 20 years before the first patent was obtained by John H. Kellogg of Battle Creek, Michigan (1897). Kellogg produced a 'nut-meal' and a 'nut-butter' by his process, He stated that the nut butter had a slightly nutty flavor and is used as a substitute for butter either for table use or in cooking. A rather complete list of expired peanut butter patents is included in the list of references (47 patents from 1897-1951).

"Peanut butter was first used as a food for invalids because of its high nutritive value, easy digestibility, and palatability. It was first prepared and served in sanitariums. A physician in St. Louis [Missouri] was the first to manufacture peanut butter commercially. As a 'diet food,'it was priced too high for general use and consequently its preparation in the home using simple equipment was recommended. Because of the widely expanding use in the home it became a staple food and commercial production was encouraged. It was first used in sandwiches but uses in candies and cookies quickly developed.

"It appears that peanut butter was slow to 'catch on' in the beginning. Beech-Nut Packing Company was the first to popularize commercially prepared peanut butter and offer it on a national scale as exemplified in the accompanying reproduction of a an appearing in the 1911 Park and Tilford Catalog. More rapid growth occurred after 1940 as research was conducted to improve the quality of peanut butter by selection and blending of varieties, control of roasting, improved methods of grinding to small particle size, stabilization to prevent oil separation, improving spreadability, extending shelf life and by developing uses for peanut butter cookies and candies."

An illustration (p. 596–2/3 page) shows an ad for peanut butter appearing in the Park and Tilford Catalog of 1911. A smiling little girl is eating a slice of bread spread with peanut butter. The ad text reads: "'Don't you love it?' All little girls and little boys love Beech-Nut Peanut Butter. Good for grownups [grown-ups] too. Sold by the Park & Tilford Stores. Made by the Beech-Nut Packing Company, Canajoharie, New York." Address: Extension Agronomist–Peanuts, Univ. of Georgia (with acknowledgment to B.B. Higgins, original author of this chapter).

• ***Summary:*** This home study course contains a historical review of vegetarianism, a collection of articles from scientific literature. It discusses the principles and practice of a balanced vegetarian diet.

1717. U.S. Department of Agriculture. 1973. The annual report on activities carried out under the Public Law 480, 83d Congress, as amended, during the period January 1 through December 31, 1972. Washington, DC: U.S. Government Printing Office. See p. 103-10.
• ***Summary:*** Table 18 is titled "Title II, Public Law 480, total commodities shipped by program sponsor, fiscal year 1972." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), WRC (World Relief Commission). Each of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. The following foods containing soy protein were distributed: CSM (corn soya mix), WSB (wheat soya blend), and small amounts of soya flour. The vegetable oil which was shipped to many countries was soybean oil; it is not recorded here. The foods containing soy protein were sent in the following amounts (in thousands of pounds) to the following continents and countries: Africa (8,131 CSM and 5,311 WSB): Botswana (2,198 CSM), Burundi (99 CSM), Cameroon (220 CSM and 245 WSB), Central African Republic (153 CSM), Gabon (33 WSB), Gambia (271 CSM), Ghana (1,056 CSM and 150 WSB), Guinea (100 CSM), Liberia (243 CSM and 111 WSB), Malawi (132 CSM), Morocco (676 CSM and 54 WSB), Nigeria (867 CSM and 4,124 WSB), Rwanda (173 CSM), Senegal (300 CSM), Sierra Leone (1,510 CSM), Tanzania (96 CSM), Tunisia (4 CSM and 43 WSB), Upper Volta (33 CSM and 41 WSB), Zaire (510 WSB and 30 soya flour).

Near East-South Asia (348,766 CSM and 97,345 WSB): Afghanistan (699 CSM), Ceylon (1,462 WSB), Gaza [occupied by Israel since 1967] (1,622 CSM and 1,410 WSB), India (234,993 CSM and 27,006 WSB and 8,726 soya flour), Jordan (2,137 CSM), Jordan-West Bank [occupied by Israel since 1967] (758 CSM and 1,067 WSB), Lebanon (385 CSM), Nepal (55 WSB), Pakistan (1,197 CSM and 325 WSB), Syria (570 CSM), Turkey (275 WSB), NESA regional; emergency feeding of East Pakistani children by

© Copyright Soyinfo Center 2014

UNICEF (106,405 CSM and 65,745 WSB).

Note: This is the earliest document seen (Oct. 2010) concerning soybean products (CSM, WSB) in Bangladesh after it became an independent country. This document contains the earliest date seen for soybean products in Bangladesh (1972); soybeans as such have not yet been reported.

Far East [East Asia] (27,014 CSM and 4,121 WSB): China, Republic of [Taiwan] (15 CSM), Indonesia (6,791 CSM and 2,380 WSB), Korea (2,347 CSM), Laos (1,699 CSM and 1,741 WSB), Malaysia (102 CSM), Philippines (9,107 CSM), Vietnam (6,953 CSM).

Latin America (63,980 CSM and 31,274 WSB): Bolivia (2,197 CSM and 660 WSB), Brazil (25,171 CSM and 11,204 WSB), British Honduras [Belize] (507 CSM and 215 WSB), Chile (300 CSM and 2,812 WSB), Colombia (6,284 CSM and 4,608 WSB), Costa Rica (3,042 CSM), Dominica (2 CSM), Dominican Republic (8,118 CSM and 3,309 WSB), Ecuador (2,013 CSM and 1,722 WSB), El Salvador (1,195 CSM), Grenada (11 CSM), Guatemala (2,037 CSM and 962 WSB), Guyana (370 CSM and 474 WSB), Haiti (1,121 CSM), Honduras (716 CSM and 51 WSB), Jamaica (364 CSM and 198 WSB), Nicaragua (375 CSM and 760 WSB), Panama (409 CSM and 639 WSB), Paraguay (759 CSM), Peru (7,850 CSM and 3,806 WSB), St. Vincent (17 CSM), Surinam (2 CSM), Uruguay (950 CSM and 284 WSB).

Grand total by commodity: 447,891,000 lb of CSM and 138,051,000 lb of WSB. Agencies distributing the most CSM and WSB (in million lb): CARE 268, UNICEF 174, CRS 89.

Concerning "veg oil" (soybean oil) shipped under P.L. 480 Title II in fiscal year 1972: India received 196.069 million lb [88,029 metric tons] (p. 106).

Note: This is the earliest document seen (Aug. 2009) concerning soybean products (Corn-Soy Meal) in Botswana. This document contains the earliest date seen for soybean products in Botswana (1972); soybeans as such had not yet been reported by that date. Address: Washington, DC. Phone: 703-875-4901 (1991).

1718. Woodroof, Jasper Guy. 1973. Peanuts: Production, processing, products. 2nd ed. Westport, Connecticut: AVI Publishing Co., Inc. xi + 330 p. Illust. Index. 24 cm. [100+* ref]

• ***Summary:*** Contents: 1. Historical background. 2. World production and marketing of peanuts. 3. The culture of peanuts. 4. Harvesting, curing, and shelling. 5. Storing peanuts. 6. Composition and nutritive value of peanuts. 7. Peanut butter. 8. Salted peanuts. 9. Peanut confections. 10. Peanut oil. 11. Technological developments in peanut uses (incl. peanut milk, flour, protein, peanut cheese, peanut baby and invalid food, peanut paste for shortening, peanut butter ice cream). Appendices: U.S. standards for farmers' stock white Spanish peanuts, Virginia-type peanuts, and runner peanuts (unshelled or shelled), U.S. standards for grades of peanut butter, technical inspection procedures for peanut butter, peanut butter: definition and standard of identity.

Peanuts (*Arachis hypogaea*, of the Leguminosae family) are also called groundnut, earth-nut, monkey nut, goober, pinda, pinder, or Manilla nut. They are indigenous to South America, probably Brazil or Peru, where they were known as early as 950 B.C. They were taken from there to Africa by early explorers and missionaries. They were brought to North America from Africa by slave traders in the early colonial days and used as food for slaves while on shipboard. In America, peanuts were not extensively used until after the Civil War in 1865, and then for many years the crop was confined to Virginia and North Carolina. In about 1920 the ravages of the boll-weevil forced farmers in Georgia, Alabama, and Florida to substitute peanuts for cotton. In the early days peanuts were used almost entirely for fattening farm animals, especially pigs, turkeys, and chickens.

In 1899 a missionary, Archdeacon Thompson of the American Missionary Society, took quarts of peanuts in his luggage to China. Production of peanuts spread to every province of China and China is now the world's number two producer with approximately 2 million tons annually. India is by far the world's largest producer of peanuts, while the USA ranks fifth with 1 million tons. George Washington Carver made more than 300 food and industrial products from peanuts in Alabama before World War I. The American Museum of Peanut Butter History has been established in Chicago, Illinois; it covers the period from 1890 to 1925 [and is sponsored by Peter Pan Co.].

One of the first industrial organizations for the promotion of peanuts in America was the American Peanut Corp., founded by L.F. Bain in 1849 near Wakefield, Virginia. The next major company, Lummis and Co. in Norfolk, Virginia, was not founded until 1879, after the Civil War. The next four major companies, founded in 1890, 1892, and 1895, and 1900, were all founded in Virginia. Peanuts were the foundation of the swine industry in much of the Coastal Plain area of the Southeast. But peanuts were found to cause soft pork.

The spokesman for the industry since 1920 has been the *Peanut Journal and Nut World*, published in Suffolk, Virginia. The National Peanut Council was organized in 1940 in Pensacola, Florida, as a trade association for all branches of the industry.

Chapter 7, titled "Peanut Butter," contains a history of the subject: "Peanut butter is by far the most important product made from peanuts in the United States. Even though large quantities of peanuts are grown in other countries, practically none is consumed as peanuts. The history of peanut butter is obscure but dates from about 1890 when it was discovered that a very palatable paste or butter could be obtained by grinding peanuts. It soon became known as peanut butter, and presumably, was made from raw peanuts. A physician in St. Louis, Missouri, was reportedly the first

© Copyright Soyinfo Center 2014

to manufacture peanut butter commercially (Beattie 1936) [Note: Beattie 1936 makes no mention of any physician in St. Louis, Missouri in connection with peanut butter!] He recommended it for invalids because of its high nutritional value. It was said to be used in sanitariums elsewhere, especially at Battle Creek, Michigan, due to its high protein content, low carbohydrate content, and palatability. Due to the limited sale at first and lack of adequate equipment for manufacture, the price was too high for general use.

"Although roasted (parched) peanuts have been ground into a paste and mixed with honey and cocoa in South America for centuries, peanut butter as a North American food was apparently invented independently. The first product was shelled roasted peanuts chopped, ground, or beaten into a pulp in a cloth bag with salt added...

"About 1900 it was learned in the south that peanuts could be ground into a paste butter in the home. Soon it became a staple food and commercial production was greatly stimulated."

"The making of peanut butter was largely a local hit-or-miss operation until the Peanut Butter Manufacturers Association was organized about 1940. Until that time only 25% of edible peanuts were used in butter and little attention was given to varieties of peanuts, methods of roasting and blanching, grades of peanut butter, effect of particle size, means of preventing oil separation, improving speadability, preventing sticking to the roof of the mouth, extending the shelf-life, and formulas for using. By 1950, about half of all edible peanuts were used in butter, and by 1964 the proportion had risen to 63%."

As of 1962 about 53% of U.S. peanut butter was made from runner peanuts, 34% from Spanish peanuts, and 12% from Virginia peanuts.

Note: Talk with Jasper Guy Woodroof in Griffin, Georgia. 1993. Feb. 17. He does not know where he heard that a physician in St. Louis, Missouri, was the first to make peanut butter. Address: Prof. Emeritus of Food Science, Univ. of Georgia, Experiment, Georgia.

1719. Hardinge, Mervyn G.; Mann, George V. 1974. Raising infant on vegetarian diet. *J. of the American Medical Association* 227(1):88. Jan. 7. [3 ref]
• ***Summary:*** In a question and answer column the authors respond (separately) that lacto-ovo-vegetarian and lacto-vegetarian diets, if reasonably chosen and well managed, are adequate for infants and all other age groups. Mann, who is less enthusiastic about vegetarian diets than Hardinge, begins his statement: "I think it is now possible to raise a healthy child after weaning on a vegetarian diet, but to my knowledge this has not been done, nor, in my opinion, should it be tried."

"A sizeable group of vegans has located in south central Tennessee under the leadership of Stephen Gaskin. The group of 600 is raising the children by vegan standards. In time, this experience will demonstrate the feasibility of the question posed." Address: 1. Loma Linda Univ. School of Health, Loma Linda, California; 2. Vanderbilt Univ. School of Medicine, Nashville, Tennessee.

• ***Summary:*** Contents: Session I: World protein markets. Session II: Soy protein products, their production, and properties. Session III: Legal and regulatory aspects of soy utilization in foods. Session IV: Utilization of soy proteins in foods. Session V: Utilization of soy protein in foods. Session VI: Nutritional aspects of soy protein foods. Session VII: Future developments and prospects. Round-tables papers. Registration list (directory of participants). Directory of exhibitors and press.

Berwin Tilson, president of the American Soybean Assoc., notes in the introduction (inside front cover): In Oct. 1972 "It was felt that the time was right to gather together top representatives from all areas affecting the soy foods industry... 1,100 representatives from 47 countries actually attended." This was a pioneering and very important conference. It was opened by the U.S. Secretary of Agriculture Earl L. Butz, and senator Hubert Humphrey delivered a memorable, inspirational address. Many distinguished scientists and politicians also presented papers.

• ***Summary:*** Contents: Abstract. Introduction. History of the soybean in the U.S. Economic impact. Soybean protein. Textured soy protein. References.

Table XII states that U.S. producers of edible soy protein products are: ADM, Cargill, Central Soya, Far-Mar-Co, General Mills, Griffith Labs, Lauhoff Grain Co., Miles Labs (Worthington), National Protein, A.E. Staley, Swift & Co. All make textured soy protein products except National Protein (which makes only grits and flours). Central Soya, Ralston Purina, and Staley make soy protein isolates. Central Soya, Far-Mar-Co, Griffith Labs, and Swift & Co. make soy protein concentrates. Address: Archer Daniels Midland Co., Decatur, Illinois.

1723. Numbers, Ronald L. 1974. Dr. Jackson's water cure: And its influence on Adventist health reform. *Adventist Heritage* 1(1):11-16, 58-59.
• ***Summary:*** Dr. Jackson is Dr. James Caleb Jackson (of whom a portrait appears). His water cure is "Our Home on the Hillside" in Dansville, New York. Both had a major impact on the thinking of Ellen G. White. Address: Loma Linda Univ.

1724. Rosenfield, Daniel; Hartman, Warren E. 1974. Spun-fiber textured products. *J. of the American Oil Chemists' Society* 51(1):91A-94A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973. [7 ref]
• ***Summary:*** Contents: Abstract. Introduction. Spun-fiber production (a diagram shows the Miles process for spinning soy isolate into fibers). Textured product production. Nutritional considerations. Concluding remarks. References. Address: 1. Miles Laboratories, Elkhart, Indiana 46514; 2. Worthington Foods, Miles Laboratories, Worthington, Ohio.

1725. Sterner, Mark M. 1974. Low-cost protein foods: Increasing their supply and acceptance in developing countries. *Cereal Science Today* 19(1):14-17. Jan. [2 ref]
• ***Summary:*** Contents: Introduction. Poverty and hunger. Population factors. Inexperienced leadership. Culture-oriented protein foods. Soy products. A total-development approach. New solutions needed. The tragedy of protein deficiency. Technical assistance and training.

World population is growing at about 1.5% each year while world agricultural production is increasing at the rate of about 2% annually. However, the heart of the problem of world protein supply is not what is happening on average or on the whole. "It is the fact that there are great differences in the consumption of proteins between countries, between socioeconomic groups within a country, and between family members in the home."

Today 64% of the world's population are "protein hungry." They do not consume enough protein. Sterner lived in Korea until 5 months ago and has seen the problem first hand. To his surprise, he was told by the administrator of a college in Sri Lanka, Ceylon, that the school's small soy-milk plant (put there by the father of soy milk, Dr. Harry Miller) is kept running at full capacity, when soybeans are available, to keep up with the demand of the college cafeteria. He explained that the students much prefer this unsophisticated form of soy milk to the dried soy milk (DSM) provided by CARE.

The article discusses the work of Meals for Millions and contains four photos related to that organization. Address: Exec. Director, Meals for Millions Foundation, Santa Monica, California.

1726. Jewel Food Stores. 1974. Janie reports: How to use soy protein products! (Ad). *Chicago Tribune*. Feb. 28. p. S_A23.
• ***Summary:*** Jane Armstrong, Jewel's home economist, begins: "In a recent column I discussed what soy protein foods are and why they are important. This week I'd like to tell you how to prepare and use them.

"There are two primary uses for textured vegetable protein: as extenders for ground meat and analogs, used as alternatives for meat, fish or poultry protein." "TVP products" include "Burger Plus, Proteinettes, Williamson, and Red Skillet Dinners."

"Meat alternatives are available in frozen forms (Morningstar Farms breakfast foods and Freezer Queen skillet dinners for example), dehydrated, and fresh forms."

You may be surprised to learn that "One acre of land produces 500 pounds of soybeans, but only 58 pounds of beef! So, you can see what future implications are with TVP... Quite a few TVP products are now available at Jewel, so why not try one this week?

A portrait photo shows Jane Armstrong. Address: 1955 North Ave., Melrose Park, Illinois.

1727. *Changing Times* (*The Kiplinger Magazine*). 1974. Now there's "meatless meat:" It cuts your food costs and may be healthier too. 28(2):53-54. Feb.
• ***Summary:*** Discusses textured vegetable proteins. "With the exception of the imitation bacon bits, such as Bac-Os from General Mills and Stripples from Worthington Foods, the textured vegetable proteins have not been available on most supermarket shelves. Now you can expect to see more of them...

© Copyright Soyinfo Center 2014

"The big breakthrough for textured vegetable proteins came in February 1971 when the U.S. Department of Agriculture approved their use in the national school lunch program. Soy proteins, fortified with vitamins and minerals, can replace up to 30% of the meat in patties, stews, poultry and fish dishes served for school lunches...

When meat prices soared, soy processing companies began to market a new class of nutritious, dehydrated meat extenders in two- to three-ounce "envelopes," similar to dry soup. They are often sold near the meat counter or with "other semiprepared dinner mixes, such as Hamburger Helper. The packets may contain natural soy crumbles or caramel-colored granules that blend well with beef. They also come unflavored, so you can add your own seasonings, or preseasoned..."

Note: This is the earliest English-language document seen (Aug. 2011) that uses the term "soy crumbles," probably to refer to small chunks of textured soy flour.

"Last summer, a midwestern food chain took a full-page newspaper ad to inform shoppers of the advantages of TVP, the trademark for Archer Daniels Midland's product...

"Late last year Cargill, Inc., a large grain company, entered the consumer market in the Southwest with Burger-Plus, a lightly seasoned textured soy protein. It test-marketed three-ounce packages at two for 49 cents. Each package of mix and water stretched a pound of ground beef to a pound and a half. Other recent market entries include Grand Union's seasoned and unseasoned 'meat' mixes, General Mills's Burger Builder and A.E. Staley's Burger Bonus. More firms plan to package soy products."

1728. Zell, Fran. 1974. New on the shelves: Brown, serve, and get 'em going early (Ad). *Chicago Tribune.* March 14. p. W_A4.
• ***Summary:*** "(These products have been taste-tested by members of the Tribune food staff). Consumers trying to cut down on cholesterol and saturated fat now can try three new Morningstar Farm [sic, Morningstar Farms] breakfast products made from vegetable protein derived from wheat, soy, and yeast, Brown and serve Breakfast Patties, Links, and Slices, contain no cholesterol or animal fat and at least as much protein as the comparable cooked meat."

The products are distributed by Miles Laboratories.

1729. Dullea, Georgia. 1974. You don't have to be a Seventh-Day Adventist to like their cooking. *New York Times.* March 25. p. 37.
• ***Summary:*** They are teaching vegetarian cooking classes, and they are good at it. One couple took the classes and have been meatless for five months. To satisfy their taste for meat, they are eating the "vegetable protein food the Adventists produce under the Loma Linda label. Four soy patties cost 50 cents compared to about $2 for the same amount of meat."

The world's 2 million Adventists are not all strict vegetarians; while such a diet is recommended by the church, it is not considered a test of faith. Most Adventists avoid coffee, tea, cola beverages, and strong spices. A recipe for eggless "Soy mayo" (using ½ cup soy milk powder) is given.

1730. **Product Name:** Loma Linda Non-Meat Balls (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1974 March.
New Product–Documentation: *Soybean Digest Blue Book.* 1974. p. 120. "and 'meat' balls."

1731. *Tennessee Valley Authority, Bulletin.* 1974. Soybean: Production, marketing and use. Y-69. 187 p. March. Foreword by Gerald G. Williams, Agricultural Development, Tennessee Valley Authority. Illust. No index. 28 cm. [265 ref]
• ***Summary:*** Contents: The soybean, status and trends. Soybean production. Harvesting soybeans. Storage and handling. Marketing and use. Strategies for reaching potentials.

This conference was sponsored by the Tennessee Valley Authority, American Soybean Association, National Soybean Crop Improvement Council, and land-grant universities of seven valley states. It represents a multi-institutional, multi-disciplinary approach to identifying and developing the potentials for soybeans in this region.

On page 117, titled "Marketing and Use," a full-page black-and-white photo shows various soy-related food products: Soy Town Roasted Soy Beans (Sea Salted), Wesson Pure Vegetable Oil, Kroger Bac'n Buds, Jell-o Whip'n Chill (Deluxe Dessert Mix), Nabisco Famous Cookie (Sampler, incl. Oreo, Lorna Doone, Cameo, etc.), Worthington Stripples, Butternut Candy Bar, Red Bird Imitation Vienna Sausage, Kroger's Pro Beef and Hydrated Textured Vegetable Protein Mix (keep refrigerated), Soft Parkay Margarine, Nestlé Crunch, Lipton Onion Soup and California Dip, Kraft Creamy Dressing, plus frankfurters and bread. Address: Muscle Shoals, Alabama.

1732. Nagelberg, Alvin. 1974. They'll eat (soy) shrimp, (soy) ham, (soy) filet: Boyd [sic, Boyer]. *Chicago Tribune.* April 14. p. A7.
• ***Summary:*** This is a brief biography of Robert Boyer [mistakenly called "Robert Boyd" throughout], age 64. He predicts that within five years housewives will buy shrimp, ham, and filet mignon made from soybean protein. More than 40 years ago, during the Great Depression, he was hired by Henry Ford to find industrial uses for farm crops. World War I interrupted the experiments. Boyer resumed work at a laboratory in Cincinnati, Ohio [Drackett Co.]. and in 1949 he applied for his patent, which was issued in 1951.

© Copyright Soyinfo Center 2014

Today Boyer is a part-time consultant to the Marshall division of Miles Laboratories (Worthington, Ohio); his patent for making edible protein fibers from soybeans expired in 1971. Yet he has done well. He is semi-retired, has a 57-foot cruiser, and condominiums in Florida and Columbus, Ohio.

Miles' first products have been targeted at the vegetarian and health foods markets. One of Miles' latest products is Morningstar Farms sausage, a frozen product made of soy protein, egg albumen, and wheat gluten. "The egg is a binder and the wheat makes it chewy."

1733. *Advent Review and Sabbath Herald.* 1974. Bulletin Board: Deaths. Dr. George A. Johnstone. 151(17):459. April 25.

• ***Summary:*** "Johnstone, George Anthony–born Oct. 13, 1895, Sioux Falls, South Dakota; died March 2, 1974 in Glendale, California. In 1915 he went to Hinsdale Sanitarium and Hospital to study nursing. In 1917 he married Theresa Arntzen. During World War I they joined the staff of the White Memorial Hospital, Los Angeles, California. He graduated from the College of Medical Evangelists in 1923 and took his internship at the White Memorial Hospital. He established a heart clinic for animals in Los Angeles and donated this to the College of Medical Evangelists. He and his brother-in-law developed a resuscitating machine, known as the E & J Resuscitator, extensively used in hospitals and fire departments. He founded the John Johnstone Hospital in North Dakota, naming it in honor of his father. In 1947 he bought the Research Hospital in Glendale, California, and named it for his friend and partner, Dr. Charles Gehrens. It was later renamed the Verdugo Hills Hospital. More recently he was a co-founder of the Anaheim Memorial Hospital in California. He also established a store, market, and bakery known as Foods for Life in Glendale, California. Survivors include his wife; a daughter, Lois Fischer; a son, William and grandchildren."

A portrait photo shows George Johnstone in 1923 at the time of his graduation from medical school. Kindly sent to Soyinfo Center by Janice Little, Del E. Webb Memorial Library, Loma Linda, California (Nov. 2010).

1734. Moore, R.N. 1974. Food company finds growth with the times. *Dispatch* (*Columbus, Ohio*). April 28.

• ***Summary:*** A brief history of the life and work of James L. Hagle, president of Worthington Foods Inc. since 1948. A photo shows Hagle. The company "has been bursting through its seams the past year or two, doubling its employment to 460... Last year's national meat boycott gave Worthington Foods and its essentially two main competitors a boost into national prominence and bulging sales. Miles Laboratories bought the company in 1970."

1735. *Loma Linda University Alumni Journal.* 1974. In memoriam: George A. Johnstone. March/April. p. 36.

• ***Summary:*** Johnstone, George Anthony–born Oct. 13, 1895, Sioux Falls, South Dakota; died March 2, 1974 in Glendale, California.

"Dr. Johnstone became interested in health foods and established a store, market and bakery known as 'Foods for Life,' in Glendale."

1736. Edwards, Larry. 1974. Soy extenders remain 'food of the future' as category sales dwindle. *Advertising Age.* July 29. p. 3, 46.

• ***Summary:*** Sales of textured soy protein products have dropped along with the price of ground beef. "The category, which sources say peaked at about $4,000,000, now reportedly has dipped to about $3,000,000, with most of the products gathering dust on retail shelves."

"Last year, in response to consumer disenchantment with skyrocketing meat prices, a flood of branded consumer meat extender entries hit the market. To date only Plusmeat from Central Soya's J. H. Filbert Co. has moved into broad distribution. Among other extender entries in limited test markets: Burger Bonus and Tuna bonus from A. E. Staley's consumer products group; Betty Crocker's Burger Builder from General Mills; Armour-Dial's Burger Savor; Ac'cent ground beef extender from Ac'cent International, and Progresso Foods' Extend'n Flavor."

"Miles' Worthington Foods unit, forerunner to its development of Morningstar Farms, already has over a 50% share of an estimated $12,000,000 vegetable protein market for religious groups such as Seventh Day Adventists.

"According to researchers at Frost & Sullivan, New York, market research company, the total vegetable protein market jumped to about $115,000,000 during 1973, but has since leveled off. Its size was put at $82,000,000 for 1972, and the company predicts it will climb to $1,500 million dollars by 1980."

Miles Laboratories has stayed away from positioning their Morningstar Farms products as "meat substitutes." Other products that continue to do well are Gooch Foods' TVP Red Skillet Dinners and General Mills; Bac*O's, one of the original consumer vegetable protein products.

"Miles' Worthington Foods unit, forerunner to its development of Morningstar Farms, already has over a 50% share of an estimated $12,000,000 vegetable protein market for religious groups such as Seventh Day Adventists.

According to researchers at Frost & Sullivan, New York, a market research firm, the total vegetable protein market jumped to about $115,000,000 during 1973, but has since leveled off. Its size was put at $82,000,000 for 1972, and the company predicts it will climb to $1,500 million by 1980.

1737. Armstrong, Bruce K.; Davis, R.E.; Nicol, D.J.; van Merwyk, A.J.; Larwood, C.J. 1974. Hematological, vitamin B-12, and folate studies on Seventh-day Adventist vegetarians. *American J. of Clinical Nutrition* 27(7):712-18. July. [31 ref]

• ***Summary:*** Hematological, vitamin B-12, and folate levels were measured in 562 members of the Seventh-day Adventist Church, of whom 431 were vegetarians. Vegetarians had significantly higher folate levels and lower vitamin B-12 levels than non-vegetarians. Only one volunteer was found to have suffered from symptomatic dietary vitamin B-12 deficiency. Address: Depts. of Haematology and Diet Therapy and the Univ. Depts. of Medicine and Surgery, Royal Perth Hospital, Perth, Western Australia 6000, Australia.

1738. Iammartino, Nicholas R. 1974. Fabricated protein foods. *Chemical Engineering* 81(16):50-52, 54. Aug. 5. [2 ref]

• ***Summary:*** New sources of protein for human food are emerging as one way to relieve the growing protein crunch. Soy-based protein products are expected to maintain a lion's share of the expansion, with cottonseed a distant second. A spokesman for General Mills predicts that the market for textured vegetable proteins will double during the rest of the 1970s from a 1973 demand of 110 million lb (nearly all soy). Initial advances have been mostly in institutional "captive feeding" programs, such as school lunch and hospital feeding programs. Few household consumers have tried the product. A report titled "Engineering protein foods: What's happening" published by Business Communications Co. (Stamford, Connecticut; $400) predicts a less bullish but still hefty growth of 56% a year during 1973-1980. And a Cornell University [New York] study predicts that "vegetable analogs and extenders will constitute 10% of the U.S.'s total 'meat' diet by 1985.

The two main companies making "textured protein products based on spun soy fibers" are General Mills and Miles Laboratories, Inc.

One table on page 52 (from Frost & Sullivan's "The Fabricated Foods Market") shows estimated growth of the fabricated foods market ($ million) in 1972, 1976, and 1980 for 12 categories of human food. Vegetable protein products are expected to grow from $82 million in 1972, to $316.5 million in 1976, to $1,513.9 million in 1980.

Another table on page 52 (from Business Communications Co.) shows "Projected use of textured vegetable-protein, by market" (million lb) in 1975, 1980, 1985, 1990, and 2000. The markets are school lunch, public eating, federal institutions, and commercial & others. For each of these 5 years, the total is also divided into extruded type and spun type, in both pounds and dollar value. The totals and largest segments are as follows: In 1975–188 million lb of which 60% is school lunch. 62% extruded type by weight. Sales value is $111 million, of which 58% is from spun type. In 1980–1,807 million lb of which 69% is commercial & others. 59% extruded type by weight. Sales value is $1,093 million, of which 61% is from spun type. 1985–4,484 million lb of which 70% is commercial & others. In 1990–9,719 million lb of which 76% is commercial & others. 60% spun type by weight. Sales value is $6,801 million, of which 77% is from spun type. Year 2000–12,212 million lb of which 77% is commercial & others.

A sidebar titled "Single-cell protein may hold a long-term answer to the protein crisis" discusses several approaches: 1. Amoco Foods Co. (Chicago, Illinois) is building a plant in Hutchinson, Minnesota, expected to be completed next year. It will produce about 10 million lb/year of Torula yeast from a substrate of ethylene-derived ethanol. 2. Rank, Hovis, McDougall Ltd. (RHM, London) and Du Pont (Wilmington, Delaware) have a joint venture in the form of a 150 ton/year pilot plant that uses RHM's continuous-fermentation process to grow fungi on such substrates on such carbohydrates as beans, molasses, or cassava. The combine admits the product is a long way from being commercialized. Fungi-type protein "has a texture that makes for easy fabrication into meat analogs." 3. A team of Exxon Corp. (New York) and Nestlé (Vevey, Switzerland) has a pilot plant that is growing yeasts and bacteria on a petroleum substrate (that is neither gas oil nor paraffins); But will consumers eat "petroprotein"?

Also discusses proteins from cottonseed, rapeseed, sunflower seeds, alfalfa (leaf protein concentrate), fractionated whey, and fish protein concentrate.

Although leaf protein concentrate was proposed at least 30 years ago, the first plant has been running only since mid-1970. It makes 10 tons/day for animal feed and is operated by Batley-Janss Enterprises (Brawley, California).

In 1973 researchers at USDA's Western Regional Research Lab. in Albany, California, originated the alfalfa technique (*Chemical Engineering*, Jan. 22, 1973, p. 76-77). The quality of the concentrate is too poor for human consumption, mainly because of flavors and colors from the alfalfa chloroplasts. Now, however, USDA has two new processes that yield a bland, white concentrate. The first process removes the chloroplasts by coagulation and centrifuging, the second by ultrafiltration. Last summer leaf protein began to be produced commercially in Tamasi, Hungary, under the name Vepex.

Note: This is the earliest document seen (Aug. 1997) that mentions the work of Rank Hovis McDougall with fungal protein. Address: Assoc. editor.

1739. Dunham, Wayne. 1974. Filet of soybeans. *Chicago Tribune.* Aug. 28. p. C4.

• ***Summary:*** The "meatless meat dish" is about to become widely available in the United States. Through its ad agency, Tatham-Laird & Kudner, Miles Laboratories is about to start

• ***Summary:*** Textured soy protein products containing 50-60% protein have been successfully incorporated as lean meat replacements in a variety of meat products. Up to 45% of lean meat can be replaced using textured vegetable protein containing spun soy fibers. Address: Marschall Div., Miles Laboratories, Inc., Elkhart, Indiana 46514.

1743. Adolphson, L.C.; Horan, F.E. 1974. Textured vegetable protein products as meat extenders. *Cereal Science Today* 19(10):441-44, 446. Oct.
• ***Summary:*** "During the 1971-72 school year, about 23 million pounds of textured soy protein (hydrated) were used; in 1972-73 the amount was doubled; and during the past school year an estimate is that at least 50 million pounds (hydrated) were employed...

"In order for the commercial manufacturers to have a common goal in the development of novel protein systems, such as textured vegetable protein products, a number of industrial companies have banded together to form the Food Protein Council (Food Protein Council, Suite 1150, 1730 Pennsylvania Ave., N.W., Washington, D.C. 20006. George M. Perrin, Executive Secretary).

"The council consists of the following regular members: Archer Daniels Midland Co.; Cargill, Inc.; Central Soya Co., Inc.; Far-Mar-Co, Inc.; General Mills, Inc.; Grain Processing Corp.; Griffith Laboratories; Lauhoff Grain Co.; Miles Laboratories, Inc.; National Protein Corp.; Procter & Gamble Co.; Ralston Purina Co.; A.E. Staley Manufacturing Co.; and Swift Edible Oil Co."

A photo shows the two authors, with a brief biography of each. Address: Archer Daniels Midland Co., Decatur, Illinois.

1744. Brudnak, Joseph A. 1974. Emerging meat alternates. *Cereal Science Today* 19(10):447-48, 476. Oct.
• ***Summary:*** "There are basically two types of meat alternates–extenders and analogs, the latter sometimes being referred to as 'fabricated foods.'" In 1973 the latter market was approximately 20 million pounds, produced largely by 3 manufacturers: Miles Laboratories [Worthington Foods, Morningstar Farms], General Mills, and Loma Linda Foods. Address: Miles Laboratories, Marschall Div., Elkhart, Indiana 46514.

1745. Goossens, Alfred E. 1974. Protein foods–Flavors and off-flavors. *Food Engineering* 46(10):59-60. Oct.
• ***Summary:*** A tables shows "Off-flavors components in soybeans by functional group." There are 8 alcohols, 5 aldehydes, 5 ketones, 2 phenols, and one each amines, esters, acids, and sulfides. The real troublemakers in each group are marked with an asterisk. The off-flavors in soybeans may be divided into two groups: bitter off-flavors and grassy beany off flavors. Address: Director, Flavor Research, Miles Labs., Inc., Elkhart, Indiana.

1746. Peterson, Franklynn. 1974. The bean that's making meat obsolete. *Popular Mechanics* 142:84-87, 188. Oct.
• ***Summary:*** The subtitle continues: "Scientists are finding new ways to use the soybean, a staple for thousands of years, in creating new foods for a hungry world." A full-page flowchart shows how soybeans are processed to make a variety of end products. "Almost fully automated plants can process 200,000 bushels of soybeans a day. Every part of the bean is useful, even the hull, which goes into animal feed. Meat analogs are textured soy products made to look and taste like chicken or ham." A table, based on 1973 figures from Kansas State Univ., shows the comparative cost of a pound of protein from various sources: 50% [whole] soy flour is the least expensive at $0.14, followed by wheat germ $0.27, 70% protein [defatted] soy flour $0.30, wheat $0.38, isolated soy protein $0.40, milk solids $0.44, yeast $0.67, eggs $0.85, and beef $4.20. This a pound of protein from beef costs 30 times as much as a pound of protein from soy flour.

"Vegetarian members among the Seventh Day Adventists experimented with soybean foods as early as the 1930s, hatching at least two commercially successful companies in the process. To this day, one of them markets 50 meat look-alikes made from soybeans. The other company once invited Fidel Castro to lunch at a church school in Cuba. 'Best pork chops I ever ate,' said the Premier as he wiped his beard. But the soybean 'pork chops' had never even been close to a pig.

"Soybeans began to come into their own as an important food source in the United States after the 1969 White House Conference on Food, Nutrition and Health. Experts

© Copyright Soyinfo Center 2014

at that meeting concluded that over a third of the people in this affluent country were surviving on faulty diets. To help overcome the problem, scientists developed new food technologies to provide low-cost but highly nutritious foods for school-lunch programs, day-care centers, hospitals and other institutional feeding centers."

1747. Slater, Lloyd E. 1974. Engineered protein: Miles Labs sets fast course by Morningstar. *Food Engineering* 46(10):37. Oct.
• ***Summary:*** The company that has dominated the market for fizzling tablets with Alka Seltzer for the past 40 years recently introduced "Morningstar Farms 100% textured vegetable protein products, a proud offspring of Miles' Grocery Products Division." The flavor and appearance of breakfast links, patties, and slices were considered "first rate." Miles has special expertise in flavor development. The texture was not quite as good.

About a year ago the products were introduced in test markets in Chicago (Illinois), Florida, California, Arizona, and Wisconsin–with no price advantage over equivalent meat products. They have already become a number one dollar volume line in supermarket frozen breakfast sections. Last year General Mills was unsuccessful in the "debut of an analog sausage." Miles' Chicago ad agency TLK learned some valuable lessons, creating a "bucolic brand name and colorful old-fashioned package." Extensive commercials emphasize good tasting food with no cholesterol–rather than cuttnig-edge food science. A color photo shows three packages on a large, old-fashioned skillet and the logo with barn and rolling hills.

1748. Slater, Lloyd E. 1974. Engineered protein: Miles Labs sets fast course by Morningstar. *Food Engineering* 46(10):37. Oct.
• ***Summary:*** Last year Miles unsuccessfully debuted an analog sausage; it had a somewhat synthetic image. Now they have come back with a new line bearing the bucolic name "Morningstar Farms" in a colorful old-fashioned package. The writer tried it and loved it. A photo shows the packages of 3 Morningstar Farms products.

1749. Amchem Products, Inc. 1974. The soybean cookbook. Ambler, Pennsylvania: Amchem Products, Inc. 16 p. Nov. 21. 22 cm.
• ***Summary:*** "Acknowledgements: Most of the recipes contained in this booklet were prepared by: Miss Areva M. Abernathy, Univ. of Missouri; Univ. of Hawaii Extension Division; Miss. Dorothea Van Gundy Jones; Frances O. Van Duyne, Univ. of Illinois." Contents: The new food–Soybeans. History. Why use soybeans? Soybean varieties: Vegetable type and field variety. Soybeans are used in many forms: Green soybeans (served as a hot vegetable dish), freezing, canning. Soy flour and grits (14 recipes). Dried soybeans (9 recipes). Making and using soy milk (3 recipes). Grits (1 recipe). Soy sprouts (how to make + 5 recipes). Roasted soybeans (deep fat roasting or oven roasting; 2 recipes). Address: Ambler, Pennsylvania.

1750. Brand, David. 1974. The food crisis: New-food research isn't likely to ease poor nations' hunger. Technology is too complex, costly in many instances. *Wall Street Journal.* Dec. 18. p. 1, 21.
• ***Summary:*** Researchers are taking the basic building blocks, such as soy protein, and changing them into new shapes and textures. "So far, the researchers seem to have made the most progress in duplicating textures. General Mills' Country Cuts 'chicken' cubes and 'ham' cubes and Miles Laboratories' Morningstar Farms 'sausage' links and patties and 'ham' slices imitate the texture of the real meats with remarkable accuracy. But their flavor clearly is a problem." Address: Staff reporter.

1751. *SoyaScan Notes.* 1974. Chronology of soybeans, soyfoods and natural foods in the United States 1974 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1974 March. The first issue of *Vegetarian Times* published by Paul Obis in Chicago.

1974 April. Bob Gerner (of Westbrae) and William Shurtleff (guide) travel throughout Japan searching for quality sources of traditional miso and soy sauce. Right after the trip, Westbrae starts importing these products.

1974 Aug. 9. President Nixon, elected in 1968 and 1972, resigns after the Watergate scandal. Gerald Ford succeeds him as president. Butz continues as Secretary of Agriculture.

1974. Brazil passes West Germany to become the world's second largest soybean crusher, after the U.S.

1974 late. Miles Laboratories / Worthington introduces the Morningstar Farms line of meat analogs based on spun soy protein fiber. Sold nationally at U.S. supermarkets.

1974 late. The Farm in Summertown, Tennessee, publishes *Yay Soybeans!,* a 14-page booklet containing many innovative soyfoods recipes, such as "soy ice cream–ice bean," soy yogurt," "soy cheese," "soy cheesecake," "soy mayonnaise," and "soysage" (a meatless okara & soymilk sausage). Most of the dairylike products were made with fresh or cultured soymilk. The Farm now grows 150 acres of soybeans to feed its community of 800 people. It has just established Plenty, a non-profit corporation "To help share out the world's food, resources, materials, and knowledge equitably for the benefit of all."

1974. The Farm in Summertown, Tennessee, publishes *Hey Beatnik,* which contains the earliest know use of the term "Soy Dairy." The Farm's soy dairy now makes 60 gallons of soymilk a day at a total cost of $0.30 per gallon.

1974. *Tofu Recipes,* the first book on tofu in English, written and self-published by Grace Kikuchi in Ann Arbor,

© Copyright Soyinfo Center 2014

Michigan. Spiral bound and 47 pages long, it gives a recipe for homemade tofu and uses tofu largely with fish and meat.

1974 Nov. World Food Conference in Rome. Delegates from 130 UN member countries adopt an international strategy to overcome world hunger and malnutrition.

1974-1975? Eden Foods starts to import natural foods, including miso and shoyu, from Japan.

1752. Beek, L. van; Feron, V.J.; Groot, A.P. de. 1974. Nutritional effects of alkali-treated soyprotein in rats. *J. of Nutrition* 104(12):1630-36. Dec. [11 ref]

• ***Summary:*** Spun soy protein fibers, which are made by alkali treatment of soy protein, are increasingly used to make meatless meat alternatives. The "alkali-treated spun soy isolate" used in this study was provided by Worthington Foods and the research was supported, in part, by Miles Laboratories, owner of Worthington Foods. When this alkali-treated spun soy isolate was fed to rats at dietary levels of 5, 10, and 20%, the "results failed to reveal any adverse effects on general appearance, growth, feed efficiency, hematological indices, blood serum values, urine composition, kidney function, organ weights, and gross and microscopic pathology except for an increase in both the relative kidney weights and degree of nephrocalcinosis in females only. These renal changes were, however, shown to be related to the high dietary level of available phosphorus. Renal cytomegalia was not observed." Address: Central Inst. for Nutrition & Food Research TNO, Zeist, The Netherlands.

1753. Predicasts, Inc. 1974. World manufactured soybean foods. Special Study No. 108. Predicasts, Inc., 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, OH 44106. vi + 93 p. Dec. 24. No index. 28 cm. Research Analyst: Frederick M. Ross.

• ***Summary:*** Contents: 1. Introduction. 2. Summary. 3. Economics of Soybean Foods: Soybeans, soy flour, meat extenders (based on extruded textured soy flour), synthetic meat (based on spun isolates). 4. Industry structure: General, $1,000 million food and feed giants (ADM, Cargill, Central Soya, General Mills/Takeda Chemical, Nabisco, Ralston Purina/Fuji Oil, and Esmark [Swift]), other major manufactured soy food companies (Unilever, General Host [New York], Miles Laboratories/Worthington & Kyowa Hakko Kogyo, A.E. Staley Mfg. Co., Stange [Chicago, Illinois], Chambers & Fargus [Humberside, England]), food industry structure. 5. Demand for manufactured soybean products: Demand for meat & substitutes, supply of natural meat, demand for meat substitutes, demand for soy flour. 6. North America: United States, Canada. 7. Latin America: General, Argentina, Brazil, Mexico, Other Latin America (Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay). 8. West Europe: General, France, West Germany, Italy, Spain, United Kingdom, Other West Europe. 9. East Europe: General, Hungary, Poland, USSR, Other East Europe. 10. Africa: General, Egypt, Nigeria, South Africa, Other Africa & Mideast. 11. Asia: General, China, India, Indonesia, Japan, Pakistan, Other Asia. 12. Oceania: Australia, New Zealand, Other Oceania.

Most sections contain numerous tables, mostly on meat and meat substitute consumption, and raw protein consumption, by country. Address: 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, Ohio 44106. Phone: 216-795-3000.

1754. **Product Name:** Morningstar Farms Breakfast Strips (Meatless Bacon).
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1974 December.
Ingredients: Egg whites, soybean and/or corn oil, modified corn starch, textured soy concentrate, wheat gluten, flavorings (natural and artificial flavors, hydrolyzed vegetable protein, monosodium glutamate, spice, yeast), glycerin, soy isolate, salt, sodium citrate, caramel color, propylene glycol, monocalcium phosphate, carrageenan, sodium tripolyphosphate, locust bean gum, guar gum, malic acid, sucrose, sodium sulfite, artificial color including yellow 6, niacinamide, disodium guanylate, disodium inosinate, iron (as ferrous sulfate), thiamine mononitrate B-1, pyridoxine hydrochloride B-6, vitamin B-12.
Wt/Vol., Packaging, Price: 18 strips per 5 oz paperboard box. Retails for $0.89 (1974/12).
How Stored: Frozen.
Nutrition: Serving of three strips: Calories 70, protein 4 gm, carbohydrate 2 gm, fat 5 gm.
New Product–Documentation: Spot (half page) in *Food Product Development.* 1974. Dec. p. 64. A black-and-white photo shows the front panel of the package. Above the product name is written: "Cholesterol free textured vegetable protein." Below the name: Artificial Bacon Flavor. In a box to the left: "No Animal Fat. Protein rich." This product is an addition to the line of "meat analogs" developed by Miles Laboratories to meet the needs of consumers who want products that are low in cholesterol and saturated fats. The ratio of polyunsaturated to saturated fats is 2.0. To serve, the frozen product is browned in polyunsaturated vegetable oil in a skillet.

Product with Label copyright 1978. Sent by Dr. Walter Wolf. Label is identical to that described in the 1974 ad above except, on front panel, in lower left, in black letters on a yellow background: "Shrinks less–Yields about as much as a pound of bacon cooked."

Ad. 1980. "No cholesterol. No kidding." Label reads: "Cholesterol Free. Artificial Sausage Flavor. Textured Vegetable Protein. No Animal Fat. Protein Rich."

Manual, Including a Vegetarian Meal Plan. 7th ed. Appendix A.6-27.

Ad (full-page, color) with coupon in Vegetarian Times. 1993. July. p. 29. "A delicious way to cut down on meat without cutting down on your options." Shows new label designs for 4 Morningstar Farms meatless products.

Talk with Dick Leiss, Director of R&D for Worthington Foods. 1993. June 30. This product never contained spun soy protein fiber.

1755. **Product Name:** [GranoVita Pasta Asciutta: Bologna-style Spaghetti Sauce].
Foreign Name: GranoVita Pasta Chuta Bolognese {Nudelsauce}.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1974.
Ingredients: Tomato pulp, water, textured soya-protein, onions, grated cheese, soya-oil, salt, natural spices, corn-starch.
Wt/Vol., Packaging, Price: 200 gm can wholesales for DM 4; 400 gm for DM 6,40.
How Stored: Shelf stable.
Nutrition: Protein content: 10% protein.
New Product–Documentation: Full-page ad for 8 granoVita soy products in the book by Manfred Heide. 1977. *Vegetarische Ernährung: 193 Rezeptvorschläge und Speisepläne für ein Vierteljahr* [Vegetarian nutrition and food: 193 recipe suggestions and meal plans for a quarter of a year]. Stuttgart, West Germany: Paracelsus Verlag. This product is named "Pasta chuta Bolognese."

Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products. Note: In Italian, *pasta asciutta* refers to "macaroni and cheese."

1756. Duda, Zbigniew. 1974. Vegetable protein meat extenders and analogs; with special emphasis on proteins of soybean origin. Rome, Italy: Food and Agriculture Div. of the United Nations. Animal Production and Health Div. vii + 89 p. No index. 27 cm. [214 ref]
• ***Summary:*** Contents: Author's preface. Acknowledgements. Foreword. Introduction. Raw materials: Soybeans, other raw materials. Definitions: Meat extenders, meat analogues. Protein rich products originating from soybeans: Soy flour and grits, food utilization of soybean flours and grits, soy protein concentrates, soy protein isolates, texturized soy protein. Technological and functional properties of vegetable protein. Market considerations. A random selection of T.V.P. extenders and analogues with their characteristics and uses: Miles Laboratories, Inc., Marschall Division, Elkhart, Indiana, USA, Vegetable protein food products (Temptein TM spun textured vegetable protein, vegetable protein meat analogues, bacon-like flavoured chips, dehydrated ham-like flavoured cubes, R pepperoni-like flavoured links, Pro-lean 45 TM, Maxten textured vegetable protein, Morningstar Farms–breakfast links, patties, slices), Swift food protein, General Mills, Inc.–textured vegetable protein foods, Worthington Foods, Inc.–textured vegetable protein foods, Archer Daniels Midland Co.–textured vegetable protein products, Purdy Steak Corp.–textured vegetable protein products, A.E. Staley Manufacturing Co.–textured and untextured vegetable protein products (200 series textured vegetable protein products, 400 series), Ralston Purina Company–textured soy protein products, Central Soya International Inc.–soy protein products, Nabisco, Inc. Protein Food Division–textured vegetable protein products, Lucas Meyer–soy protein products. Possible sources of meat substitutes other than soybeans: Protein from beans, from rapeseed, from sunflower seed, from cottonseed, from peanuts, other sources of proteins. General technological considerations. Projected consumption and market penetration. Cost considerations: The scale of production, the degree of processing, the price of raw materials. Conclusions. Selected Bibliography. Appendix I: USA soybean processors and products manufactured. Appendix II: Selected recipes using TVP for type A school lunches. Appendix III: Addresses of some companies making soy protein products. Appendix IV: Soybean utilization chart.

This book is compiled from a British viewpoint and cites many British journal articles, thus making it a nice complement to the American articles and bibliographies on this subject. Its bibliography is excellent. Address: Meat and Milk Service, Animal Production andf Health Div., FAO, Rome, Italy.

1757. **Product Name:** Granose Soya Bean Pâte (Gluten Free). Later renamed Soya Bean Paste.
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in Denmark by Nutana Helsekost.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1974.
Ingredients: Soya beans, onion, egg, textured soya protein, soya oil, yeast, salt, hydrolised vegetable protein, spices, monosodium glutamate.
Wt/Vol., Packaging, Price: 205 gm (7 oz) can.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. Label. 1980?, undated. 9.5 by 2 inches. Green, black, yellow, and white.

© Copyright Soyinfo Center 2014

Text only "Granose soya bean pate makes delicious sandwiches with mushrooms, tomato, cucumber, etc." Labels in Danish, Dutch, and Finnish.

Form filled out and Labels sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Nutana, was introduced in 1974. It is now named Soya Bean Paste. Label. 1990. 9.5 by 2.25 inches. White, yellow, and black on green. Photo of a slice of bread spread with the paste garnished with a slice of tomato, avocado and a sprig of green. "Low calorie value. Gluten free. Ingredients: Textured soya protein, soya beans, water, onion, egg, soya bean oil, yeast extract, vegetable stock, leek extract. Directions for use: Soya Bean Paste is a delicious sandwich spread, which can be decorated with cucumber, tomato or mushroom."

1758. **Product Name:** Soyapro (Canned Texturised Vegetable Protein).
Manufacturer's Name: Granose Foods Ltd. (Marketer-Distributor). Made in Denmark by Nutana.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1974.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Clare Bryant. 1974. *Everyday Vegetarian and Food Reform Cooking.* p. 137. The following is included in a list of meat substitutes. "Soyapro: A tinned [canned] texturised vegetable protein. Many other brands of TVP will appear on the market in the years to come." Neither the name or address of the maker is included.

1759. **Product Name:** Loma Linda Meatless Entrees (Based on Spun Soy Protein Fiber) [Meatless Chicken Style, Meatless Roast Beef, or Meatless Turkey].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1974.
Ingredients: Roast Beef: Wheat gluten, soy protein isolate, water, corn oil, egg whites, artificial and natural (vegetable) flavors, corn starch, salt, dried yeast, caramel color, soy protein concentrate, dextrose, onion, guar gum, garlic, soy lecithin, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin), spice.
How Stored: Frozen.
New Product–Documentation: *Soybean Digest Blue Book.* 1977. p. 30. "New meatless chicken made with spun soy fiber." Recipe booklet, 1979, dated. Loma Linda probably purchased the spun soy protein fibers from General Mills. Sold frozen.

Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1974.
Ingredients: Wheat gluten, sauce [incl. soy sauce], onion, flour, vegetable oil, water added.
Wt/Vol., Packaging, Price: 430 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1974. "Soy sauce is the first ingredient in the sauce."

1765. **Product Name:** Sanitarium Health Foods Casserole Mince (Minced Vegetable Protein).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1974.
Ingredients: Wheat gluten, flour, soya sauce, hydrolysed vegetable protein, sauce, water added.
How Stored: Shelf stable.
Nutrition: Per 110 gm (¼ can): Protein 16 gm.
New Product–Documentation: Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1974.

1766. **Product Name:** Somos (Textured Soy Flour, and Protein Stew Flavors), MaxTen (Textured Soy Flour), and Sossies.
Manufacturer's Name: Tiger Miles Protein Industries (Pty) Ltd. Subsidiary of Miles Laboratories Inc. and Tiger Oats & National Milling Co. Ltd.
Manufacturer's Address: Plant: Fedler St., Randfontein 1760, Transvaal, South Africa. Office: P.O. Box 575, Randfontein.
Date of Introduction: 1974.
New Product–Documentation: Horan. 1974. Meat analogs. p. 401. This product is made of textured soy flour (50% protein). The manufacturer is given as Tiger Oats Ltd., South Africa.

1767. **Product Name:** Alborada (Beef-Flavored Textured Soy Flour).
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1974.
Wt/Vol., Packaging, Price: Paperboard box.
How Stored: Shelf stable.
New Product–Documentation: *Soybean Digest.* 1975. May. p. 8. "ASA [American Soybean Assoc.] promotes soy for nutrition." Alborada is beef-flavored TVP which is made by the Miles/Worthington group. Sold in an attractive paperboard box, it "has received very good acceptance by the public and is being sold in all the leading supermarkets. It is also sold in large quantities to institutions such as restaurants, hospitals, meal packaging plants and canned food producers." A photo shows the box.

H.L. Wang, et al. 1979. Soybeans as human food–Unprocessed and simply processed. p. 36. "Since 1973, other textured soy products have been independently manufactured and distributed in Mexico. For example, Miles/Worthington, Elkhart, Indiana, has produced a beef flavored TSP called ALBORADA..."

1768. **Product Name:** Morningstar Farms Breakfast Patties (Meatless Sausage).
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1974.
Ingredients: Textured vegetable protein (wheat gluten, soy concentrate and isolate), egg whites, soybean and/or corn oil, partially hydrogenated soybean and cottonseed oil, sodium caseinate, flavorings (artificial flavors, salt, monosodium glutamate, spices, lactose, dextrose, etc.).
Wt/Vol., Packaging, Price: 1998: 6 patties in 8 oz paperboard box. Retails for $2.29 (1998/10, Concord, California).
How Stored: Frozen.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 174. The ingredients in "Breakfast Patties are (Morningstar Farms)" are "textured soy protein, vegetable oils (corn, and partially hydrogenated soybean and cottonseed) oats, egg albumen, natural and imitation flavors, spices, salt, emulsifier, corn starch, sodium phosphates, HVP, caramel color, niacin, iron, thiamin, vitamin B-6, riboflavin, vitamin B-12."

Ad. 1980. "No cholesterol. No kidding." Label reads: "Cholesterol Free. Artificial Sausage Flavor. Textured Vegetable Protein. No Animal Fat. Protein Rich." Product with Label. 1989. Sept. 7. Sold at Diablo Foods, a supermarket in Lafayette, California. Label is copyright 1987. The cholesterol-free sausage-like patties (8 oz., 6 patties) retail for $2.25.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

Talk with Dick Leiss, Director of R&D for Worthington Foods. 1993. June 30. This product originally contained spun soy protein fiber. But after several years it was reformulated; the fiber was removed and replaced by other textured vegetable proteins.

Product (Meatless Breakfast Links) with Label (new design) purchased at Safeway supermarket in Lafayette, California. 1994. May 18. Price: $2.39. Frozen.

Product with Label (new design) purchased at Safeway supermarket in Lafayette, California. 1995. Aug. 1. Price: $2.19. Frozen.

Product with Label purchased at Trader Joe's in Lafayette, California. 2002. April 28. Ten links weigh 8 oz. Retail price: $2.89. New package design with strawberry near lower right corner of front panel. "78% less fat than pork sausage."

1770. **Product Name:** Morningstar Farms Breakfast Slices (Meatless Ham or Sausage Slices).
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1974.
Ingredients: Jan. 1974: Textured soy protein, water, vegetable oils (partially hydrogenated soybean and cottonseed oil, corn oil), natural and imitation flavors and spices, egg albumen, lactose, salt, sodium caseinate, sugar, modified tapioca starch, sodium phosphates (tripolyphosphate, pyrophosphate, hexametaphosphate, mono-phosphate), hydrolyzed vegetable protein, carrageenan, niacin, U.S. certified colors, iron (as ferrous sulfate), thiamin (vitamin B-1), pyridoxine (vitamin B-6), riboflavin (B-2), cyanocobalamin (vitamin B-12).
New Product–Documentation: Rosenfield & Hartman. 1974. *Journal of the American Oil Chemists' Society* 51(1):91A-94A. Jan. "Spun-fiber textured products." The ingredients in Breakfast Links are shown above.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 174. The ingredients in "Breakfast Slices (Morningstar Farms)" are basically the same as they were in Jan. 1974.

Shurtleff & Aoyagi. 1983. History of Worthington Foods. p. 9.

Talk with Dick Leiss, Director of R&D for Worthington Foods. 1993. June 30. This product originally contained spun soy protein fiber. But after several years it was reformulated; the fiber was removed and replaced by other textured vegetable proteins. In 1979 it was reformulated again and its name was changed to Morningstar Farms Luncheon Slices.

1771. Cottrell, Edyth Young. 1974. Soybean magic. Loma Linda, California: PHMS. 17 p. 12 cm. Accompanied by a color slide show.
• ***Summary:*** A title and brief description of each of the 79 slides is given. Address: Research Nutritionist, Loma Linda Univ. School of Health, Loma Linda, California.

1772. Cottrell, Edyth Young. 1974. The oats, peas, beans & barley cookbook. Santa Barbara, California: Woodbridge Press. 271 p. Illust. Index. 24 cm.
• ***Summary:*** This very creative Seventh-day Adventist vegetarian cookbook, featuring nature's most economical foods, contains 450 recipes including many using soybeans and gluten (see p. 59-68), and many color photos. One acre of soybeans will supply 34 times as many calories, 49 times as much protein, and 33 times as many vitamins as beef produced on one acre. Soy-related recipes include: Garbanzo-soy-oat patties with Brazil nuts (p. 39). Soybeans–Prairie gold (Boiled soybeans, p. 51. Freezing soaked soybeans helps to shorten the cooking time. The use of soft or spring water in soaking and cooking also helps to reduce the cooking time. The author adds salt to soybeans after they

© Copyright Soyinfo Center 2014

have been boiled for at least 1 hour. Baked soybeans (p. 52). Soy-oat patties with tomato sauce (with whole soybeans, p. 53). Tofu (p. 54, curded with calcium lactate or calcium carbonate, then seasoned with Vegex or Savorex). Creamed curd cheese: May be used as cottage cheese (p. 55; made with tofu curds and soy sour cream). Scrambled tofu (p. 56). Rice with tofu–Chicken style (p. 56-57). Home-baked bread (with soy flour, p. 70-76). Modified pioneer bread (with soy flour, p. 81). Pioneer soy bread (p. 82). Soy-oat waffles (p. 109). Barley-soy waffles. Cornmeal-soy waffles. Millet-soy waffles (p. 111). Rice-soy waffles (p. 112). Soya French toast (p. 116). Cornmeal with soy grits (p. 117). Corn granola (with soy flour, p. 118). Good earth granola (with soy flour, p. 119).

One chapter, titled "Soybean Magic" (p. 121-26) contains the following soy-related recipes: Soybean concentrate: Replaces milk and eggs in many recipes (Note: This is fresh soybean puree, or gô, made with the hot water grind method). Soy milk and concentrated soy milk. Cream sauces. Soy whipped topping. Soy cream. Soy sour cream. Sweet cream custard sauce.

Whipped soy topping (with fortified soy milk powder, p. 141). Cabbage baked in 'soy sour cream' (p. 165). Cauliflower baked in soy cream (p. 167). Soy mayonnaise (with concentrated soy milk, p. 195). Savory yeast spread with soy milk, p. 196).

Pages 255-67 give a nutritional analysis of each of the recipes in this book. A photo on the rear cover shows Cottrell. A second edition was published in 1980 by Woodbridge. As of early 1993 some 157,000 copies of this book are in print. Address: Research Nutritionist, Loma Linda Univ. School of Health, Loma Linda, California.

1773. Gaustad, Edwin S. ed. 1974. The rise of Adventism: Religion and society in mid-nineteenth-century America. New York, NY: Harper & Row. xx + 329 p. Index. 24 cm. [500* ref]

• ***Summary:*** This book contains a number of important essays on the cultural roots of the Seventh-day Adventist movement plus the most complete bibliography on 19th century Adventism, by Vern Carner (Instructor in Church History, Loma Linda University, California). A chapter by J. Blake, titled "Health Reform," contains a good treatment of Sylvester Graham and America's first health reform movement.

1774. Kloss, Jethro. 1974. The Back to Eden cookbook. Santa Barbara, California: Lifeline Books. "Published in arrangement with Woodbridge Press Publishing Company." 158 p. With Promise Kloss Moffett and Doris Kloss Gardiner. Illust. by Daniel Guild. 22 cm.

• ***Summary:*** For the bittersweet story of how this book came to be published, see interview with Doris Kloss Gardiner (Nov. 1990).

Facing p. 7 are photos of Jethro Kloss, his daughter Promise Kloss Moffitt, his granddaughter Doris Kloss Gardiner, and his son, Eden Kloss.

The chapter titled "Soy milk, soy cheese, soy butter and cream" (p. 35-40) has this contents: Introduction. Soy milk (homemade from whole soybeans). Quick soy milk (from soy flour). How to curd soy milk (with citric acid to make a smooth cheese [tofu]). Soy buttermilk. Soy butter (from soy flour and soy oil). Soy cream (from rich soy milk and soy oil). Soy cream cheese ("Use unsweetened Soy Milk. Let it stand until it thickens {not sour}, put it on the stove and boil a minute or two..."). Soy cottage cheese. Soy cheese (from raw peanut butter, tomato puree and Soy Milk). Quick soy cheese (from soy flour). Original soy cheese (using whole soybeans, hot water grind in a liquefier; curded with the juice of 2 lemons). A substitute for egg yolk (made from water, soy flour and soy oil). Address: USA.

1775. Larson, Jeanne R.; McLin, Ruth. 1974. The vegetable protein and vegetarian cookbook. New York, NY: Arco Publishing Co. 216 p. Illust. Index. 24 cm. Reprinted in 1980.

• ***Summary:*** The authors may be Seventh-day Adventists since they make widespread use of "meatless meats" made by Loma Linda Food Co. and Worthington Foods, both Adventist-run companies. Pages 11-14 list these meatlike products in the following categories: 7 dry vegetable proteins to which liquid must be added, or which are used for seasonings: Granburger. Vitaburger. Meat loaf mix. Burger aid. Stripple zips. Baco-Bits. Gravy quik.

35 canned foods: Rediburger. Vegeburger. Chopletburger. Vegetarian burger. Madison burger. Non-meat balls. Prime burger. Vitaburger. Chili. Choplets. Cutlets. Skallops. "209." Vegesteaks. Dinner bits. Tender bits. Dinner cuts. Tastee cuts. Dinner rounds. Salisbury steak. Frysticks. Numete. Protose. Proteena. Nuteena. Vegechee. Vegelona. Wham. Beef slices. Chicken slices. Linketts. Little links. Big franks. Saucettes. Veja-links.

30 frozen foods (said to be by far the tastiest of the vegetarian meats): Beef slices, loaf, and cubes. Corned beef slices, loaf, and cubes. Smoked beef slices, loaf, and cubes. Beef pie. Chicken slices, roll, cubes. Chicken pie. Chickettes. Wham slices, roll, cubes. Prosage. Vegetarian fillets [fish alternatives]. Holiday roast. Salisbury steak. Stripples. Smoked turkey slices or loaf. Fri-pats. Soy-chee. Vegechee. Soycheeze. Lentils. Garbanzos. Boston style soybeans. Green soybeans [probably harvested dry rather than fresh]. Savorex. Tastex. Savita. Vegex. Chicken seasoning. Beef seasoning. Smokene. Baco-bits.

Soy-related recipes include: Soybean loaf (with cooked mashed soybeans, p. 39). Tofu loaf (p. 149; "Tofu can be obtained at Chinese food stores. If not, use canned soy cheese found in most health food stores"). Tender crisp vegetables (soybean sprouts, p. 197).

1776. Parrett, Owen S. 1974. Diseases of food animals. Washington, DC: Review and Herald Publishing Assoc. 31 p. 21 cm. [10 ref]
• ***Summary:*** Contents: A closer look at flesh foods. Trichinosis and hogs. Other hog parasites. Undulant fever (brucellosis). Leukemia. Poultry diseases. Salmonellosis. Disease of fish. Why I don't eat meat. References. Address: Seventh-day Adventist physician.

1777. Seventh-day Adventist Dietetic Assoc. 1974. About nutrition. Revised ed. Nashville, Tennessee: Southern Publishing Assoc. 192 p. Index. 20 cm. 1st ed. 1971. [50 ref]
• ***Summary:*** A layman's guide to vegetarian nutritional principles, including food groups, menu planning, and nutritional needs of various age groups. Individual authors are listed as Alice G. Marsh, Dorothy Christensen, Rose G. Stoia, and Sylvia M. Fagal. Coordinator: Darlene R. Schmitz.

Chapter 1 introduces the "Four Food Groups" which resemble a simple preschool puzzle. They are: Fruits and vegetables, cereals & breads, protein foods, and milk products. Soy products (including soy beverages) and gluten (wheat protein) are included in the protein foods group. A surprisingly strong (apparently slightly defensive) anti-food-faddist message runs throughout this book. Chapter 16 is titled "Current quackery." Chapter 17, titled "Food fads and facts," gives 13 examples of commonly encountered fallacies with explanations of the facts.

1778. U.S. Department of Agriculture. 1974. The annual report on activities carried out under the Public Law 480, 83d Congress, as amended, during the period January 1 through December 31, 1973. Washington, DC: U.S. Government Printing Office. See p. 94-101.
• ***Summary:*** Table 18 is titled "Title II, Public Law 480–total commodities shipped by program sponsor, fiscal year 1973." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), and WRC (World Relief Commission). All of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. The following foods containing soy protein were distributed: CSM (corn soya mix), WSB (wheat soya blend), and small amounts of soya flour. The vegetable oil which was shipped to many countries was soybean oil; it is not recorded here. The foods containing soy protein were sent in the following amounts (in thousands of pounds) to the following continents and countries: Africa (24,340 CSM and 6,8857 WSB): Algeria (1 WSB), Botswana (1,398 CSM), Burundi (464 CSM), Cameroon (47 CSM), Central African Republic (67 CSM), Chad (1 CSM and 1 WSB), Congo (115 WSB), Dahomey (124 CSM), Ethiopia (395 CSM), Gabon (46 WSB), Gambia (211 CSM), Ghana (843 CSM and 1,272 WSB), Ivory Coast (546 WSB), Kenya (409 CSM and 400 WSB), Lesotho (299 WSB), Liberia (1,247 CSM and 487 WSB), Malagasy (365 CSM and 2 WSB), Malawi (210 CSM), Mali (230 CSM), Mauritania (235 CSM), Morocco (908 CSM and 890 WSB), Niger (289 CSM), Nigeria (1,197 CSM), Rwanda (82 CSM and 570 WSB), Senegal (643 CSM), Sierra Leone (2,309 CSM), Sudan (3,826 CSM), Swaziland (57 CSM), Tanzania (3,991 CSM and 5 WSB), Togo (1,083 CSM and 1,562 WSB), Tunisia (2,368 CSM and 485 WSB), Upper Volta (878 CSM and 14 WSB), Zaire (419 WSB and 190 WSB), Zambia (44 CSM).

Europe (27 CSM): Malta (27 CSM).

Near East-South Asia (269,188 CSM and 94,141 WSB): Afghanistan (1 CSM), Bangladesh (99794 CSM and 54,631 CSB), Egypt (3,593 CSM and 2 WSB), Gaza [occupied by Israel since 1967] (1,509 CSM and 3,564 WSB), India (156,216 CSM and 15,768 WSB and 775 soya flour), Iraq (997 CSM), Jordan (2,319 CSM and 536 WSB), Jordan-West Bank [occupied by Israel since 1967] (549 CSM and 1,186 WSB), Lebanon (227 CSM and 411 WSB), Nepal (1,000 CSM and 55 WSB), Pakistan (9,933 WSB), Sri Lanka (1,000 WSB and 50 soya flour), Syria (470 CSM and 473 WSB), Turkey (6,582 WSB), Yemen (People's Democratic Republic of Yemen, or South Yemen) (151 CSM), Yemen (Yemen Arab Republic) (2,513 CSM).

East Asia (41,450 CSM and 20,694 WSB): Fiji (2 CSM and 2 WSB), Indonesia (268 CSM and 12,981 WSB), Korea (1,997 CSM), Laos (2,378 CSM and 750 WSB), Macao (29 CSM), Malaysia (1,124 CSM and 65 WSB), Philippines (22,416 CSM), Singapore (10 WSB), Vietnam (13,236 CSM and 6,886 WSB).

Latin America (94,598 CSM and 42,404 WSB): Bolivia (1,534 CSM), Brazil (33,197 CSM and 5,676 WSB), British Honduras [Belize] (333 CSM and 110 WSB), Chile (548 CSM and 6,038 WSB), Colombia (13,043 CSM and 5,202 WSB), Costa Rica (2,792 CSM), Dominica (78 CSM), Dominican Republic (11,584 CSM and 3,486 WSB), Ecuador (2,253 CSM and 5,446 WSB), El Salvador (1,343 CSM and 2,466 WSB), Grenada (41 CSM), Guatemala (4,007 CSM and 1,090 WSB), Guyana (631 CSM), Haiti (1,581 CSM and 3,395 WSB), Honduras (1,297 CSM and 1,523 WSB), Jamaica (1,150 CSM and 657 WSB), Nicaragua (6,850 CSM and 4,126 WSB), Panama (853 CSM and 699 WSB), Paraguay (3,385 CSM), Peru (7,522 CSM and 1,993 WSB), St. Lucia (81 CSM), St. Vincent (51 CSM), Trinidad and Tobago (2 CSM and 1 WSB), Uruguay (442 CSM and 496 WSB).

Grand total: 429,603,000 lb of CSM and 164,124,000 lb of WSB. Agencies distributing the most CSM and WSB (in million lb): CARE 204, UNICEF 163, CRS 151.

Concerning "veg oil" (soybean oil) shipped under P.L. 480 Title II in fiscal year 1973: India received 61.881 million

lb [28,069 metric tons] (p. 97).

Note: This is the earliest document seen (Aug. 2009) concerning soybean products (soy flour, CSM, or WSB) in Chad, Mauritania, and Niger. This document contains the earliest date seen for soybean products (cereal-soy blends) in Chad, Mauritania, and Niger (1973); soybeans as such had not yet been reported by that date. Address: Washington, DC. Phone: 703-875-4901 (1991).

1779. Woolsey, Raymond H. 1974. Meat on the menu: Who needs it? Washington, DC: Review and Herald Publishing Assoc. 80 p. No index. 18 cm. [131 ref]
• ***Summary:*** Contents: Introduction. Let reason rule. What's to eat. What is meat? Hitchhikers in the kitchen. Where are the inspectors?... And alphabet soup. The cholesterol connection. Vegetable sources of protein. Going vegetarian. References. Recommended recipe books.

An abridged, 59-page edition was issued by the same publisher in 1988.

1780. American Soybean Assoc. 1974? Soybeans: From America's fertile soils the worlds versatile protein resource. Hudson, Iowa. 16 p. Undated. No page numbers. All color.
• ***Summary:*** On a page titled "Utilization," color photos show many soy products including: Milnot (can), Worthington Soyameat (can), Nabisco Sociables (paperboard box), Candied Pernuts: Toasted Soybeans (paperboard box), Bac*Os (glass jar), Crisco (shortening; can), Hain Soy Oil (glass jar), Dream Whip: Whipped Topping Mix (paperboard box), Hamburger Helper (paperboard box), Worthington Veja-Links (can), RG Lecithin (jar), Yoshihara Oil Mill, Ltd. Golden Soybean Salad Oil (can, 2 sizes), and 3 brands of bottled soymilk made in Korea. Another page shows Soyor bottled soy oil. The addresses of American Soybean Association offices in Hudson, Iowa (USA), Tokyo (Japan), Taipei (Taiwan), Brussels (Belgium), Hamburg (West Germany), Vienna (Austria), and Mexico City (Mexico) are given. Address: Hudson, Iowa.

1781. **Product Name:** Loma Linda Meatless Chicken Style or Beef Style (Based on Spun Soy Protein Fiber).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1974?
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Loma Linda probably purchased the spun soy protein fibers from General Mills. Sold in both canned and frozen forms.

1782. Pearce, Jean. 1975. Jean Pearce's How to get things done in Japan. Vol. 1. Tokyo: Japan Times Ltd. [iv] + 245 p. Jan. Index. 19 cm. [Eng]
• ***Summary:*** This book is composed of reprints of the popular and informative articles, answering questions from readers on a wide variety of subjects, that Jean Pearce wrote in her column in *The Japan Times* from 1 Jan. 1972 to 27 July 1974; they appear in this book in chronological order.

From 16 Oct. 1973 (p. 76): "Health foods" are now widely available in Japan, but familiar products are not always to be found. You can, however, find many soybean products, including natural soy sauce, and natural miso. "Try Nihon Kenko Shizenshoku in Shinbashi [Tokyo], phone 573-4181, or Shizenshoku Center in Shibuya, 461-7988. Both have restaurants that serve natural foods only."

Note: On pages 77-78 is a good history of Calpis.

From 8 Jan. 1974 (p. 118-19): "Health food remains a subject of interest... The basic Japanese diet, with a little discretion in the use of salt, is a health faddist's delight. Also on natural foods, a shop (Ishii Shoten, 1-2-7 Nishikata, Bunkyo-ku [Tokyo], phone 811-2457 in Japanese), that still makes by traditional methods roasted soybeans from mid-December through June, far superior, I'm told, to any of the imported varieties... 'A nice low-cal snack, and a good hors d'oeuvre...' They come with or without salt."

From 5 Feb. 1974 (p. 134): "A woman wants to learn how to make tofu. I have a recipe but I don't think I'll give it again. It is very difficult to do and the end result is more often failure than success. However, anyone can buy instant tofu at most Japanese food stores. It's easy to make, will be better than trying to do it yourself, and is inexpensive, ¥80 the last time I bought it but it has no doubt gone up. It makes two squares. The nigari she asks about is bittern, necessary for thickening [curding, coagulating]. Tofu is now available in many foreign countries. If you don't know where to look, call anyplace listed under Buddhist in the classified directory. Ask where they buy theirs."

From 12 March 1974 (p. 154-55): "Tofu lovers, united! There are lots of them and their sympathy was with the woman who was denied a do-it-yourself recipe in this very column. So kinder hearts provide the following.

"Two collectors [Shurtleff and Aoyagi] are compiling a book of tofu recipes, which includes a number for making tofu, using various solidifiers and soybean products. I'll let you know when it's published.

"A book, *Tofu Recipes*, was published by a tofu enthusiast after a year's visit to Japan. It is her first literary endeavor, a labor of love which will be understood by anyone who is a tofu devotee. Grace Kikuchi tells you how to make it and how to use it, relying on childhood memories and modern innovations. I'll be in the kitchen when I finish this column. You can be equally inspired if you send your order to Grace Kikuchi, 260 Sumac Lane, Ann Arbor, Michigan, U.S.A. Enclose $2.00. Somehow."

From 7 May 1974 (p. 184-85): "There is a new health food [natural food] restaurant in Tokyo, Hakumon ("White Gate"), just across from the Chuo University exit to the Shin Ochanomizu Station on the Chiyoda subway line, phone

© Copyright Soyinfo Center 2014

291-9762. French owner Jimmy Dejeammes... I'd like to go back daily for the tofu that they make. Try the mochi made of brown rice and prepared in a variety of ways... All bread is baked there; high nutritional value... Among the beverages is Soyalac, made of soybean milk." It is made and distributed here by Saniku Shokuhin, the Seventh Day Adventist health food company. Neuroca, a Swiss coffee substitute, is also available at Hakumon. Phone before you go. Hakumon may be moving soon. Address: The Japan Times, Tokyo, Japan.

1783. Tabuchi, Ichiro. 1975. Nijû seiki no mana: Majikku beenzu no deban; Daizu-nyû no eikyô narabini chiryô kôka ni kansuru hôkoku. II. ["The manna of the 20th century." Magic beans' turn to go on stage: Report on the nutritional and therapeutic effects of soymilk]. *Shokuhin Kaihatsu* (*Up-to-Date Food Processing*) 10(2):27-31. Feb. [3 ref. Jap]
• ***Summary:*** Contents: Introduction. About the soymilk and Soyalac program. (Soyalac is made by San-iku Foods in Japan.) Nutritional and healing effects of formulated soymilk (*chôsei daizunyû*). Summary of clinical experiments with premature infants who were fed soymilk and then had body measurements taken, as reported by Dr. W.B. Omans et al. in the 1963 *Journal of Pediatrics* (62:98). Experiments on raising infants on soymilk at the Shanghai Hospital (*Eisei Byôin*) in China. Report on dairy milk allergies and their cures. Follow-up research on users of Soyalac. Experiments on the effects of soymilk on the growth of elementary and high school students. Conclusion.

Note: This is the earliest Japanese-language document seen (Aug. 2013) that uses the word *daizunyû* ("soybean milk") or the term *chôsei daizunyû* ("formulated soybean milk") to refer to soymilk. Address: San-iku Foods, Japan.

1784. *Anchorage Daily News* (*Alaska*). 1975. Sukiyaki from soybeans. March 24.
• ***Summary:*** Dorothea Van Gundy Jones, age 72, is teaching a four-night vegetarian cooking class beginning today from 7-9 p.m. at Anchorage National Gas Co. Three large photos show Dorothea cooking.

1787. Miller, Harry W. 1975. Re: On soymilk, tofu, and their production. Letter to William Shurtleff, c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan, April 30. 2 p. Typed, with signature on aerogram.
• ***Summary:*** "Yesterday Apr. 28 your letter arrived and it was so helpful and interesting. I am answering your enquiries as best I can. The first is the hot and the cold grind. Soybeans are finding their way in so many types of foods these days and I think you will find depending on their place in the foods we will find varying procedures. On account of costs economy must be considered. Our research tells us that grinding with Stone Buhrs and disintegration with blenders equal same water soluble amount of solids. On a large scale Grinders are cheaper than disintegrators but [for] small production blenders are better.

"Also our findings keeping the temperature under 150 degrees Fahr. of the slurry before filtering gives us approximately the same yield as [if] brought to 212 degrees [boiling]. So when we make soy milk the higher temperature to filtering brings out of the fiber more of the bean taste. This is a question debatable, I know.

"When making ToFu we bring the slurry just up to boiling and our directions is wrong on saying the water extract is treated same for tofu as for soy milk. We know that long boiling or high pressure for at least 7 to 8 minutes at 100 Centigrade is needed to rid the bean of trypsin inhibiter or perhaps gas former. But not for the tofu. The figure of adding 556 grams cerelose or corn syrup to 16 lbs or 7½ kilos soy extract for milk is rather high, more than 7%. Though 7% is about the standard for carbohydrate in Mother's Milk. And we are inclined to follow the formula of human milk rather than Cows Milk for mankind. In our regular milk formula we aim to add 6% carbohydrate, as carbohydrates of soybeans are questionable.

"Providing you get the soy flavor out in processing. I agree that soymilk is good with less corn syrup. The sheet I

© Copyright Soyinfo Center 2014

sent you is the first run off and it needs some corrections and the sugar content should be lowered 1¼%. I have tried to calculate what the total solids are in your finished soy milk. Your water dilution may be less than ours. Out of 5 pounds of soybeans we make 50 pounds of soy milk, slightly over 6 gallons. To this has been added 3 pounds cerelose, 3O grams salt, 1 pound of corn oil. The resulting milk tests 13% solids.

"You make reference to our cutting the curd in 2 inch squares. It is general practise in cheese makers in this country to cut the curd by that, as the curd begins to form you run a sharp-edged stick, or in cheese plants a stainless steel long knife passing three the slit area is curd, so that the curd gathers together between the cuttings, and they know when best to separate and place in cheese pressing boxes. This may not be necessary in soy curd but it seems to be a guide to us when to place and or transfer to the cheese pressing box.

"We surely have something to learn [about] how to make so much Tofu out of a pound of soy beans. Your beans may be a little heavier in protein as we find the large beans we get yield more protein, but not that difference. We have reached 3 pounds but that depends on when we stop dewatering the curd, but any curd more than 3 pounds out of 1 pound of soy beans is hard to handle. But on Tofu we have much to learn, however on Soymilk and building up of maximum yield of total water soluble solids as also taste wise, that is getting rid of the beany flavor, we have definitely made progress and I think moved ahead of any that we have heard of. As for mouth feel, possibly more concentrated formula may be acceptable. The ratio of ingredients we take to the human milk formula and not cows milk made to rear a calf, a hairy animal and rapid grower. I did not have time this evening to review you chapter 10 on soy milk, as I am writing this at home and it is filed at my office with Loma Linda Foods. We have had experience in the above named coagulants, tried them all except sea water and sea salt. We mostly prefer Calcium sulphate and Glucono delta Lactone for convenience.

"I know that the Japanese are very meticulous in making the soy curd, and the people of using same. To translate their methods in writing, you have done very well, but still I can assure you that experience is needed in this field. Soy milk and Tofu the world as for western nations has yet to learn to use. Thanks for your letter and your points well taken and I remain, very sincerely yours, Harry Miller.

"Bill, I have written this letter at the end of a very busy day with many interruptions, so it is so poorly typed I almost decline to mail it but it does explain to you what we are doing. I assure you that soy foods are very hard to put over in U.S.A. but people are learning, they are very sensitive to soy flour and Tofu also soy Milk well made has a field for the future. HWM."

Note: Dr. Miller was age 95 years, 9 months and 28 days when he wrote this letter by himself, using a manual typewriter. He was born on 2 July 1879 in Ohio. Address: M.D., 11384 Norwood Ave., Riverside, California 92505.

1788. *Sunset* (*Menlo Park, California*). 1975. It's a year to grow soybeans. 154:244-45. April.
• ***Summary:*** Describes how to grow soybeans in a vegetable garden and how to use them as cooked green soybeans, as cooked dried soybeans, as sprouts, or roasted like peanuts. "For more complicated soybean uses like making soy milk or tofu, you might look at *The Soybean Cookbook* by Dorothea Van Gundy Jones (Arco Publishing, New York, 1974; $1.45).

"How to grow them: In the past, short or cool growing seasons in some areas made growing soybeans difficult. Now two varieties that can produce in shorter growing seasons are available. 'Early Green Bush' matures in about 85 days; you can order from Stokes Seeds, Box 548, Buffalo, New York 14240. 'Fiskeby V' is supposed to mature even faster, even in cool climates; order from Thompson and Morgan, Box 24, Somerdale, New Jersey 08083. In areas with long, hot summers, you can use 'Kanrich' or other slower but more widely available varieties."

1789. *Soybean Digest.* 1975. ASA promotes soy for nutrition. May. p. 8-9.
• ***Summary:*** American Soybean Assoc. market development activities from the Mexico City regional office helped production of soy protein products from less than 2 tons daily in 1971 to over 35 tons daily at present. Proteida resulted from the first government effort to introduce texturized soy protein (TSP) into meat products. The factory to produce Proteida was inaugurated by Mexico's President Echeverria in Sept. 1973. Initially only a few hundred pounds of meatballs and a pre-cooked patty called "Milanesa" were produced. "This patty requires no refrigeration and was developed by the National Nutrition Institute. Now this product is being sold in the government CONASUPO stores at a rate of approximately 110,000 lb/day at a very low price in low income areas. At a 25% TSP level this amounts to 27,500 lbs. of TSP daily." Proteida is produced by the Mexican government packinghouse.

Alborada is beef-flavored TVP which is made by the Miles/Worthington group. Sold in an attractive paperboard box, it "has received very good acceptance by the public and is being sold in all the leading supermarkets. It is also sold in large quantities to institutions such as restaurants, hospitals, meal packaging plants and canned food producers.

"Another TSP product, Protoleg, is the oldest product on the market. Its producer, Industrial de Alimentos, is now the largest manufacturer of soy protein products [in Mexico] and cannot keep up with the demand. It is the leader in Mexico with tasty and economically priced soy products that appeal to Mexican appetites.

"The largest volume of sales is soy flour for baking. The tortilla industry consumes some 60% of the total. The

© Copyright Soyinfo Center 2014

remaining 40% is about evenly divided between TSP and beverage or milklike products. The largest bakery in Mexico, Bimbo, plans to start producing a soy based milk substitute, containing sweet whey powder. The product will consume 5 million pounds of soy flour annually...

"Last December ASA's Mexico City office contracted for the services of an experienced home economist-nutritionist to give lectures, write articles and inform the public in general of the many benefits and advantages of soy protein. Mrs. Ruth S. Orellana has over 25 years experience in Mexico in human nutrition and diets and is doing an excellent job of promoting soy. ASA will soon publish a recipe booklet for soy based traditional dishes for Mexico and all Latin America. Mrs. Orellana will be travelling throughout the entire territory to spread the news about soy nutrition." A photo shows paperboard packages of the following products: Alborada, Protoleg, Rikiroz, Estrella Blanca, Soyacyt.

Note: This is the earliest English-language document seen (Aug. 2013) that uses the term "milklike products" (or "milklike product") in connection with soymilk.

1790. Miller, Harry W. 1975. Re: On soymilk, tofu, and their production. Letter to William Shurtleff, c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan, June 4. 2 p. Typed, with signature on aerogram.

• ***Summary:*** "Your much appreciated letter has been neglected along with considerable other correspondence. Two reasons we have been on a very crowded program of Research and that I have been away for a time. I do thank you for your notes on some of the items that we have written you.

"First point about the Cooking of soy milk. We are agreed on use of blender for home minimizing of soy bean particle size, though we do have a small Mexican mill use to grind soaked corn and works well but is hand driven and time consuming, can use for making peanut butter as well costs around US $15.00, hard to buy in U.S.A. The double boiler works quite well with brine in outer chamber and commercial salt is cheap here, but I also agree that by constant stirring, boiling can be carried on safely. The Chinese have an ideal system of steam jet cooking in which the lower chamber of a welded together double boiler in which steam is generated in the bottom pan and led by a pipe to the bottom of the cooking chamber so that you get no scorching and active boiling by the release of live steam into the milk of the upper pan. Its simple and takes the place of the steam boiler, except its adapted for milk and To fu making.

"Regards the richness of soymilk, we find the Americans like that thin soymilk best. Possibly its because the soy flavor is more diluted. The rule here in formulation is to make a gallon of Soy Milk out of one pound soybeans.

"As Soy milk keeps well for a week under refrigeration (40 degrees Fahr.) so the house wife likes to grind cook and prepare a weeks supply of soymilk for the family. But as yet the home method of making soymilk is just in the beginning and not many do it.

"You refer to the high percentage of cerelose used here in soymilk as compared with acceptance in Japan. Let me explain our position about the formulation of Soy Milk. The ratio of fat, protein and carbohydrate differs greatly as between cows milk, mare milk, pigs milk, water buffalo milk, human Milk and other animals. These proportions are reflected in the rate of growth, the question of a large hair coating as in the cow and sheep, the energy requirement as for energy nature does not choose to use Protein for combustion to work, its function is to repair muscles or care for protein loss in secretions and body regulators such as the ductless glands, Thyroid, adrenals etc., etc. for wach [?] animals growth an analysis should be the guide, for the first year of growth supplied by milk is a good guide. Human milk formula is fat 3.5%, protein 1.7 percent, Carbohydrate 6 to 7%. For an adult after growth 35 to 50 grams seems adequate Protein. Therefore we lean strongly to a standard formula for Soy Milk should be fat 3 to 3.5%, Protein 2 to 2.4%, Carbohydrate 6%. In a one to seven or eight dilution the soybean will yield almost 3% protein, a half the needed fat and so we add 2% fat in the form of liquid vegetable oil and as for carbohydrate edible carbohydrate is rated very low possibly not more than 1% so we add 5% sugar and prefer the cereal sugars with low sweetening effect such as corn syrup.

"Such a milk as I have just described and what we are making and aiming at can be used in cooking, baking as also for general beverage purposes.

"Now just a final word on Tofu, and we have much to learn to get 8 [?] pounds of marketable Tofu out of one pound of soybeans. Since To fu is exposed to heat after its made as milk is not, thus we pressure cook milk 10 minutes and Tofu just brought to boiling point and then curdled. In Tofu Making here when the curd jells, by raking a paddle a few times thru same seems to hasten the curd preparation to be transferred to the pressing box. It need not be two inches 3 or 4 inches divisions. What you have written on soymilk and Tofu is most interesting. Regret delays. with best wishes, very sincerely, Harry W. Miller.

"We have much to learn and am now working on making a loaf Cheese. We have made some progress and believe that we shall solve the problem in time." Address: M.D., 11384 Norwood Ave., Riverside, California 92505.

1797. Worthington Foods, Inc. Div. of Miles Laboratories, Inc. 1975. When you drop the meat from your diet, we make sure you don't drop the protein (Ad). *Mother Earth News* No. 35. Sept. p. 117. And No. 39. May 1976, p. 59.
• ***Summary:*** "A vegetarian diet can be a very a healthful diet. But you must take care to provide yourself enough protein to adequately replace what was lost in eliminating meat. Worthington Foods makes tasty, meatless dishes from nutrition-rich soy and wheat protein. And in a variety that makes your vegetarian diet not just healthful, but interesting.

"Whatever your reasons for choosing a vegetarian diet, Worthington will help to make it healthful.

"Worthington products are available in your local health food or specialty food store."

This ad also appeared in *Vegetarian Times* (May/June 1979, p. 13). Address: Worthington, Ohio 43085.

1798. *Quick Frozen Foods.* 1975. $100-million market by 1980 is foreseen for frozen soy extenders and analogues: Textured soy protein. 38:24-26. Oct.
• ***Summary:*** The market is growing for textured soy protein products that can "stand in" for more expensive meat, poultry and seafood in frozen usage. The trend is toward analogues that extend animal protein to the point of replacing it as the main component in new products entering the field. After industry consultation this magazine estimates that by 1980 these extenders and analogues combined will range from a low of $60 million to a high of $200 million in frozen food use.

Products discussed include: Central Soya Co.'s

© Copyright Soyinfo Center 2014

Response (textured soy protein concentrate). Ardex 700, one of the "TVP" [sic, soy protein concentrate] products from ADM. Nabisco's VMR line with its beef, chicken, and seafood extenders. General Mills' Bontrae "no-meat meats" (beef, chicken and ham products spun from soy protein isolate) and no-tuna tuna. Most Bontrae products are sold frozen to food service people for better flavor. Mott's Soyloin entree line available from the Foodservice Division of Duffy-Mott Company, Inc., New York, NY. "These frozen, pre-cooked products include soy-analogues resembling traditional Sloppy Joe, Chili Con Carne, Chili Hot Dog Sauce with Meat, Sliced Meat Loaf in Tomato Sauce, Salisbury Steak in Gravy or in Sweet 'N' Sour Sauce, Meat Balls with or without Spaghetti Sauce."

"In the retail field, complete lines of vegetable protein analogues of animal foods are exemplified by the products of Worthington Foods, Worthington, Ohio... and the Joshua Foods Division of Food Producers, Inc., Minneapolis, Minnesota, among others... Twenty-eight of the [Worthington] items are frozen, with sales amounting to almost half of the company's total. The frozen products are predominantly spun from high-protein isolates. Their primary advantage is their well-wrought texture, and they also have shipping and storing advantages.

"The Joshua Foods products include meatless 'sausage' pizza, meatless 'meat' casseroles with noodles and macaroni, meatless lasagna, stew and barbecue cubes. All are shipped frozen. The Joshua Foods Division is in partnership with the Israeli developer of the special structurization process the company utilizes. The firm first produced its basic Joshua Filet, simulating beef, in 1973, and offered it to hospitals and other institutions. Retail product development followed success in the institutional market in the same year–initially with ground beef extender."

"General Mills is producing retail frozen soy products under the 'Betty Crocker' label in addition to 'Bontrae.' First introduced were Betty Crocker Country Cuts–textured soy protein with a flavor like ham, and Country Cuts with a flavor like chicken. The precut chunks may be thawed and served in salads or added directly from the freezer and heated with various hot dishes.

"Two new Betty Crocker products, in three varieties each, are currently undergoing testing in the Fort Wayne and Tucson marketing areas–a croquette entree in ham, chicken and seafood flavors (with the seafood variety containing some real cod) and ham, chicken and barbecue beef meat sticks that blend real animal protein with vegetable protein in a potato crust. Each 11½-ounce box of Meat Sticks contains 12 sticks."

1799. Shurtleff, William. 1975. Chronology of early tofu and miso classes in California and Hawaii: 25 Oct. 1975 to 14 Feb. 1976. Lafayette, California. 1 p. Unpublished manuscript.

• ***Summary:*** Each class started with a talk about soybeans, soyfoods protein, world hunger, and meatless/vegetarian diets. Then a series of about 25 color slides demonstrated how to make tofu at home. Other slides showed favorite tofu recipes and how tofu was made in a traditional Japanese shop.

1975 Oct. 25–We do our first real "Tofu Class" at Westbrae Natural Foods in Berkeley, California, arranged by Bob Gerner and Liz Horowitz. Thrilling to have an audience of about 14 interested people. On Oct. 30 at Westbrae 16 people attend, and on Nov. 8, 18 people.

November tofu classes: Nov. 14th–Rainbow Grocery (arranged by Bill Crolius), 23rd–Esalen Institute in Big Sur (John Russel).

December tofu classes. 2nd–We do a big tofu class in living room of 790 Los Palos Dr. with lots of publicity from a big newspaper article on our work; 47 attend. 4th–Acalanes (Sandy Hills, 89 attend), 6th Westbrae (Bob Gerner), 7th–San Francisco Vegetarian Society (Dixie Mahy, 67 attend), 8th–Seventh-day Adventist Pacific Union College (Mary Eighme, 48 attend), 11th–Dawn Horse Bookstore in S.F. (Moe).

1975 Dec. 12–*Book of Tofu* in hand. Since we started it on 22 Oct. 1972, it had taken just about three years to write.

Dec. 13–Sept. 1976–I hand deliver *The Book of Tofu* to many bookstores and food shops that wish to sell it, typically selling 4–50 per stop at 40% discount: Communion Vegetarian Restaurant #2, Nutrition in a Nutshell, Open Sesame, Lafayette Natural Foods, San Francisco Vegetarian Society, Kinokuniya Bookstore, Rising Sun (440 Judah St. in San Francisco), Diablo Oriental Foods, San Jose Tofu Co., Soko Hardware, Effie Chow & East West Academy, Ted Nordquist (1536 Versailles Ave., Alameda, CA 94501), The Wok Shop (804 Grant Ave., SF), Westbrae Natural Foods, etc. By 24 July 1976, I had distributed 266 copies.

December tofu classes after we have our book: 13th & 14th–Jacques Delangre (Paradise, CA), 16th–East West Academy (Effie Chow), 17th–Westbrae, 18th–San Francisco Zen Center (Ed Brown), 19th–Fairfax (M. Squire).

Tofu classes/lectures in January 1976 in Northern California: 5th–Westbrae, 7th–St. Andrew's Church in Walnut Creek (Dorothy Headley), 8th–Kepler's Bookstore (Jeffrey Shurtleff & Hank Maiden) 12th–Odiyan, where I see David Mastrandrea after many years, 14th–Berkeley Co-op Natural Food Center at 1414 University Ave. (Susan Kishi, with Ted Nordquist and Janet Fehring [Ahava] helping to make tofu dip; 105 attended), 15th–San Francisco Medical School and East West Academy of Healing Arts (Effie Chow), 17th–Persimmon (Peter Godfrey), 20th–United Energy Co-op (Sri Ramon).

Jan. 16-18–Visit Bubba Free John at his community. Do and film a program on tofu.

Jan. 20-30?–Tofu trip to Los Angeles with mom and Akiko. Many tofu and miso classes. 22nd–East West

© Copyright Soyinfo Center 2014

Academy of Healing Arts (Effie Chow in a church), 24th–weird Los Angeles Vegetarian Society (Blanche Leonard, 150 people attend), 25th–East West Center (P. Retzsky), 27th–Dr. Harry Miller and Loma Linda Foods (70 attend), 29th–Ojai (Luke Gatto). We visit Frazier Farms, a huge natural foods supermarket in Escondido, then go to San Diego for an interview with *Well Being* magazine (David & Barbara Salat).

Feb. Tofu classes: 4th–Walnut Creek Co-op, 6th–Albany church (Nancy Dohur).

Feb. 10 to Oahu, Hawaii. Feb. 12th–tofu class for Seventh-day Adventist group (Naomi Yamashiro, 80 attend), 13th–Honolulu, Hawaii, Kyukendall Hall at Univ. of Hawaii at Manoa (David Lee "Kalm" Sukowske, 140 attend). Then Feb. 14 arrive in Japan. 30-minute KQED TV special on tofu we made shown in California after we left. Expected viewership is estimated at 45,000.

In summary, from October 1975 until February 1976 we did 35 tofu and miso programs in California and Hawaii plus numerous media appearances and interviews. 1,300 people attended these classes. We requested that an admission of no more than $1 per person be charged. Our honoraria, shared with the sponsors, totaled $600. We also sold 366 copies of our books.

Note 1. This is the earliest document seen (Dec. 2001) concerning a natural foods retail chain–Frazier Farms natural foods supermarket.

Note 2. This is the earliest document seen (Aug. 2013) concerning the work of Ted Nordquist with soyfoods. Address: 790 Los Palos Dr., Lafayette, CA 94549.

1800. Singer, Peter. 1975. Animal liberation: A new ethics for our treatment of animals. New York, NY: New York Review. Distributed by Random House. xix + 301 p. Oct. Illust. Index. 18 cm. Paperback edition published Sept. 1977 by Avon Discus. [200* ref]

• ***Summary:*** This book, a milestone in and "bible" of the animal rights movement worldwide, first popularized the concepts of animal rights and speciesism (pronounced SPEE-shees-iz-um, a term first used in 1973) as logical extensions of human rights and racism. It helped to make 1975 a year that saw explosive growth in the animal rights and vegetarian movements. Singer is an Australian academic.

The author, an Australian philosopher, argues for an end to oppression and exploitation of non-human animals, discusses animal experimentation and factory farming, and presents vegetarianism as an opportunity to take a political, economic, and moral stance in our daily lives.

Contents: Preface (It begins: "This book is about the tyranny of human over nonhuman animals. This tyranny has caused and today is still causing an amount of pain and suffering that can only be compared with that which resulted from the centuries of tyranny by white humans over black humans. The struggle against this tyranny is a struggle as important as any of the moral and social issues that have been fought over in recent years"). Acknowledgments. 1. All animals are equal... or why supporters of liberation for blacks and women should support animal liberation too. 2. Tools for research... or what the public doesn't know it is paying for. 3. Down on the factory farm... or what happened to your dinner when it was still an animal. 4. Becoming a vegetarian... or how to reduce animal suffering and human starvation at the same time. 5. Man's dominion... a short history of speciesism. 6. Speciesism today... defenses, rationalizations, and objections to animal liberation. Appendices: Cooking for liberated people (incl. Seventh-day Adventists, bread, peanut butter, tahini, miso, hummus, and Tartex, Chinese recipes, mung bean sprouts and tofu, Indian recipes, Middle Eastern recipes, flat Arabian bread, chickpeas and felafel, Italian recipes, macrobiotic recipes {incl. soy sauce, soybeans}, meat substitutes {incl. TVP, Granburger, Protoveg, Itona, Vitpro, Loma Linda meatless frankfurters, imitation bacon bits}, and milk substitutes–often made from soybeans), further reading, organizations.

Singer's book was not just a philosophical treatise. It was a call to action. Invoking the concept of speciesism, Singer deplored the historic attitude of humans toward non-humans as a "form of prejudice no less objectionable than racism or sexism," and urged that the liberation of animals become the next great cause after civil rights and the women's movement. Singer's popular book produced two important effects. First, it reintroduced to the anti-vivisectionist cause an intellectual basis, a philosophical orientation, and a moral focus. Second, it attracted to the animal rights cause a host of new activists who started many new organizations. The most active and visible of these has been PETA (People for the Ethical Treatment of Animals, in Washington, DC), which by 1988 was thought to have 200,000 dues paying members in the USA.

Singer maintains that: "to treat animals as resources and argue about when use is sustainable, is a classic example of economic rationalism running heedlessly over non-economic values. We should no more hand our wild animals over to the tender mercies of the market than we should hand our children over to the same market forces. Neither children nor wild animals are a 'product' or a 'resource' at all."

Note: This is the earliest document seen (Oct. 2009) that mentions Itona, a British maker of soymilk and meat alternatives. Address: Australia.

Vegeburger, Vegetarian Chili Burger, Vegetarian Chops, Turkettes, Sloppy Joe, Tender Tip, Hostess Cuts, Ready Roast, Meatlike, Chippettes (19 oz each), Breakfast Links, Luncheon Loaf (14 oz each). Note the spelling "Cedar Lakes," rather than "Cedar Lake." It may be an abbreviation of Cedar Lake Foods. Address: [Cedar Lake, Michigan].

1807. Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. '75. Ann Arbor, Michigan. [vii] + 93 + 8 p. Index. Illust. 28 cm.
• ***Summary:*** This catalog, largely printed by a computer, contains many ads on unnumbered pages. Contents: Hi! Ordering and service information. Bulk: Whole grains, beans, seeds and nuts, dried fruit, nut butters, etc. Refrigerated and frozen ("Frozen meats {beef}–No DES, steroids, female hormones, antibiotics, or stimulants used in feeding; Chickens–No hormones & antibiotics. Ask for turkeys and hens during Thanksgiving." "Frozen soy products: soy milk and tofu soybean curd"). Books. Packaged (by company and product category). Index by product. Index by manufacturer.
"We are happy to announce that Midwest and Mountain High are now one entity... We go into the fall and winter seasons with a fall and winter catalog, delivery schedule, and computer system." For new developments, watch the monthly newsletter and sale sheets. "Your Friends at Midwest."
Includes the following ads (the number is that of the facing page). Wheat Stalk Soya Burger (Cotati, California, p. 17). Arrowhead Mills (p. 27). Dr. Bronner's Magic Soap (p. 32). Chico-San (p. 35). Erewhon (p. 41, incl. "Trail Mix,

© Copyright Soyinfo Center 2014

Niks"). Fearn Soya Foods (p. 42; shows a package of Fearn Soy/o Buckwheat Pancake Mix). Flavor Tree–Pernut soy beans (p. 42). Hain (p. 49, "Cold pressed safflower oil," mayonnaise, and margarine). Health Main (p. 54; soy is not mentioned–only natural potato chips and yogurt dressing & dip). Infinity Herbal Products Ltd. (p. 56). Malt-O-Meal–Soy Town (dry roasted soy beans, p. 60). NF Factors (Lafayette, Calif., p. 67. A photo shows a can of Protesoy). Pure & Simple (p. 72, 795 West Hedding St., San Jose, California 95126; mainly fruits, fruit juices, fruit butters, vinegars). Sovex (p. 83-84. "The fastest selling natural cereal line on the market... Here's the one that started it all, the original Crunchy Granola"). Viobin (wheat germ oil, p. 85F, 89). Tiger's Milk Products (p. 86).

Companies whose products are listed with ads include: Back to Nature (granola, p. 28). Country Natural (granola, p. 36). El Molino (p. 38-39; incl. Cara Coa Crunch Bar, Carob Fruit & Nut Bar, Carob Mint Candy, Chia Seeds, Flaxseed–Whole, Pumpkin seeds, Soybeans–whole, Soya flour, Soya grits, Carob Coated Soybeans). Ener-G-Foods–Jolly Joan (incl. Instant Soy Milk Powder, Wheat & Soy P&W [Pancake & Waffle] Mix {regular and low salt}, p. 39). Flavor Tree (Pernola cereal, Pernut soy beans–salted, cinnamon, salt free, garlic, Pernut toasted soybeans–salted, salt free, garlic, onion). Wok sets in gift box, Quaker City grain grinder, Corona hand mill (p. 58). Lassen Foods (granola, p. 60, 60F). Mac Knives (p. 60). Orjene (p. 70-71). Parkelp–Ocean Labs (p. 71, incl. Sea Zun).

The Chico-San Inc. ½-page ad (facing p. 35) features four products; a photo of each is given and each is K-Parve: Rice Cake San-Wich (filled with sesame seeds and Yinnies Rice Syrup). Yinnies Rice Syrup (natural sweetener, made from rice and barley). Yinnies (traditional oriental confection, wrapped like individual candies). Rice Cakes in 4 varieties: Salted or Unsalted, Rice Cakes with Millet–Salted. Rice Cakes with Buckwheat–Salted. "Other Chico-San Products: Organically grown brown rice. Lima soy sauce, miso (soybean puree), rice malt vinegar, sesame butter, sesame oil, nigari, barley koji, tekka, sesame salt, sea salt, salt plums, kuzu, organic rice cream, organic rice flour, black soybeans, azuki beans, sea vegetables, mu tea, lotus root tea, twig tea, toothpowder, seaweed shampoo." Address: Ann Arbor, Michigan 48107. Phone: 313-769-8444 or in Area 313 1-800-552-6297.

1808. Phillips, Roland L. 1975. Role of life-style and dietary habits in risk of cancer among Seventh-day Adventists. *Cancer Research* 35:3513-22. Nov. [52* ref]
• ***Summary:*** "The Seventh-Day Adventist population abstains from smoking and drinking; about 50% follow a lacto-ovo-vegetarian diet [virtually all abstain from pork products]; and most avoid the use of coffee, tea, hot condiments and spices. Existing data on cancer mortality in Seventh-Day Adventists clearly document mortality rates that are 50 to 70% of general population rates for most cancer sites that are unrelated to smoking and drinking." Data collected here strongly suggest that the lacto-ovo-vegetarian diet practiced by Adventists protects against colon cancer, and that meat consumption, especially beef and lamb, increases relative risks of colon cancer. The results also show that vegetarians have a lower rate of breast cancer.

"Seventh-Day Adventists are an evangelical religious denomination with about 2.5 million members worldwide and about 500,000 members in North America. About 100,000 of these live in California." Address: Dep. of Biostatistics & Epidemiology, Loma Linda Univ. School of Health, Loma Linda, California 92354.

1809. Shubik, Philippe. 1975. Potential carcinogenicity of food additives and contaminants. *Cancer Research* 35(11):3475-80. Nov. [20 ref]
Address: Eppley Inst. for Research in Cancer, Univ. of Nebraska Medical Center, Omaha, Nebraska 68105.

1810. Wattenberg, Lee W. 1975. Effects of dietary constituents on the metabolism of chemical carcinogens. *Cancer Research* 35(11):3326-31. Nov. [58* ref]
• ***Summary:*** Seventh-day Adventists have a higher intake of flavones, which are strong inducers of enzyme systems responsible for detoxifying carcinogens such as benzo(a) pyrene and nitrosamines. Address: Dep. of Lab. Medicine and Pathology, Univ. of Minnesota School of Medicine, Minneapolis, MN 55455.

1811. Sternberg, M.; Kim, C.Y.; Schwende, F.J. 1975. Lysinoalanine: Presence in foods and food ingredients. *Science* 190(4218):992-94. Dec. 5. [13 ref]
• ***Summary:*** This unusual amino acid (LAL) has been implicated as a renal toxic factor in rats. It may be created when soy proteins are treated with alkali. "Although it has been reported to occur in both edible and nonfood proteins only after alkali treatment, it has now been identified in food proteins that had not been subjected to alkali. Lysinoalanine is generated in a variety of proteins when heated under nonalkaline conditions."

Table 1 (p. 993) gives the results of LAL analyses in home-cooked foods, food ingredients, and commercial food preparations (in micrograms of LAL per gram of protein). In home-cooked foods, the largest amounts are found in: (1) Egg white, pan fried 30 minutes at 150ºC 1,100. (2) Egg white boiled 30 minutes 370. In commercial food preparations: (1) Simulated cheese 1,070. (2) Evaporated milk 860. (3) Infant formula–milk 640. In food ingredients: (1) Whipping agent 50,000. Sodium caseinate 6,900. Egg white solids, dried 1,820. Hydrolyzed vegetable protein (a total of 18 commercial samples of different batches from five manufacturers) 40-500. Soya protein isolate (a total of 45 commercial samples from two manufacturers) 0-370.

© Copyright Soyinfo Center 2014

Table 2, titled "Formation of LAL in proteins by heating under nonalkaline conditions" (p. 994, varying concentration, temperature, time, and pH) shows: Bovine serum albumin 3,500. Casein 1,700. Lysozyme 1,000. Ovalbumin (150-570–increases with increasing pH). Soya globulin (120ºC for 16 hours) 40-130–as the pH rises from 2 to 6. Soya globulin (100ºC for 3 hours at pH 6.5) 130. Address: Miles Laboratories, Inc., Elkhart, Indiana 46514.

1812. Cohen, Francine. 1975. Peanuts: Man's best friend. *Herald of Health* 52(12):4-6. Dec.
• ***Summary:*** "Peanut butter has a history: The origin of peanut butter is somewhat obscure, but it appeared around 1890 and its 'discovery' has been credited to John Harvey Kellogg.

"This pleasantly palatable paste was used in sanitariums for patients because of its high protein and low carbohydrate content and easy digestibility. A St. Louis, Missouri, physician was the first to manufacture it commercially, and he recommended its use by invalids because of its high nutritional value.

"Another doctor recommended roasted peanuts for 'the corpulent, diabetics, and those with kidney diseases.' But for general use limited sales and high cost of grinding equipment kept the price too high."

1813. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]
• ***Summary:*** This pioneering work started the "tofu revolution" in America. Contents: Preface. Acknowledgments. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food: Introduction, rich in high quality protein (NPU, biological value, protein score, amino acid content), high protein complementarity (tofu contains an abundance of lysine, an essential amino acid that is deficient in many cereal grains; increase usable protein by combining tofu with wheat, rice, corn, etc.), easy to digest, an ideal diet food, low in saturated fats and free of cholesterol, rich in vitamins and minerals, a health-giving natural food, backbone of the meatless / vegetarian diet, free of chemical toxins, low in cost, easily made at home, quick & easy to use, versatile.

3. Getting started: Introduction, buying and storing tofu, basic ingredients (whole-wheat flour, miso {rice-, barley-, and soybean miso, special Japanese miso, Chinese chiang}, oil, brown rice, salt, shoyu {natural shoyu, shoyu, Chinese soy sauce, synthetic or chemical soy sauce}, sugar, vinegar, monosodium glutamate {MSG}), Japanese kitchen tools (each illustrated), preparatory techniques (salt rubbing, rinsing and pressing leeks and onions, soaking burdock root, reconstituting dried sea vegetables {dried hijiki, wakame, agar}, wheat gluten and kampyo [kanpyo], parboiling, cutting tofu and vegetables, using sesame seeds, toasting nori, preparing a steamer), basic recipes (soup stocks and broths {dashi}, basic shoyu dipping sauces {*tsuke-jiru*}, miso toppings {sweet simmered miso / *nerimiso*, miso sauté / *abura miso*, special miso toppings and dipping sauces, finger lickin' miso, and regular miso}, miso salad dressings, nut and seed butter toppings, spreads and dressings, basic sauces, rice, noodles and other basic preparations).

Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History of soybeans and "soybean foods," cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*, incl. a recipe for "Sweet emerald bean paste {*Jinda*}),*"* kinako (roasted full-fat soy flour, incl. Japanese health food treats such as *kinako amé, gokabo, kokusen, kankanbo,* and *abekawa mochi*), soybean sprouts (*daizu no moyashi*), natto ("sticky fermented whole soybeans," with "gossamer threads"), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein {TVP}, soy oil products). 5. Gô (a thick white puree of well-soaked uncooked soybeans). 6. Okara or Unohana. 7. Curds and whey. 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding, homemade tofu (basic, from powdered soymilk, fermentation method related to soymilk yogurt), tofu quick and easy {incl. Chilled tofu–Hiya-yakko}, tofu dressings, spreads, dips and hors d'oeuvre {incl. Creamy tofu dressings and dips, Tofu mayonnaise dressing, Tofu tartare sauce, Tofu cream cheese, Tofu sour cream, Tofu cottage cheese, Tofu guacamole}, tofu in salads {Western style and Japanese style salads incl. Shira-ae}, tofu with sandwiches and toast, tofu in soups {Western style and Japanese style soups, incl. miso soup}, tofu in sauces, tofu in breakfast egg dishes, tofu baked, tofu sautéed, stir-fried or topped with sauces {incl. Mabo-dofu [Ma Po doufu]}, deep-fried tofu, tofu with grains, tofu broiled {incl. Tofu dengaku}, tofu simmered in one-pot cookery and seasoned broths, tofu steamed, tofu desserts {incl. Tofu whipped cream or yogurt, Banana tofu milkshake, Tofu icing, Tofu ice cream, Tofu cheesecake, Tofu-peanut butter cookies}).

9. Deep-fried tofu: Thick agé or nama-agé (incl. *atsu-agé* meaning "thick deep-fried tofu," "three-cornered agé" {*sankaku-agé*} in Kyoto, agé cubes {*kaku-agé*}, "five-color agé" {*gomoku-agé*}), ganmo or ganmodoki (incl. *hiryozu / hirosu*, "Flying Dragon's Heads," "treasure balls," "Ganmo

© Copyright Soyinfo Center 2014

treasure balls"), agé or aburagé (incl. *kiji*, "agé pouches," "crisp agé", *kanso aburagé*, "agé puffs," "fried soybean cakes," "hollow agé cubes," "Smoked tofu," p. 189-91, 197).

Note 1. This is the earliest English-language document seen (April 2013) that contains the following terms related to deep-fried tofu (p. 180-90): "Thick agé," *nama-agé*, *atsu-agé*, *Hiryozu*, "Dragon," "Flying Dragon's Heads," "treasure balls," "five-color agé," *gomoku-agé*, "Ganmo treasure balls." "fresh or raw deep-fried tofu," "three-cornered agé," *sankaku-agé*, "agé cubes," *kaku-agé*, *kiji*. "agé pouches," "crisp agé," *kanso aburagé*, "agé puffs," "fried soybean cakes," or "hollow agé cubes."

10. Soymilk. 11. Kinugoshi ("*Kinu* means 'silk'; *kosu* means 'to strain'; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk." It is made from concentrated soymilk). 12. Grilled tofu (incl. sukiyaki). 13. Frozen and dried-frozen tofu. 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha's chicken, Buddha's ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}; see p. 258 for illustrations of many meat alternatives, incl. Buddha's fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig's head, and molded ham). One type of Korean soybean miso is called *kotsu jang* [sic, *kochu jang*]. When tofu is served with miso [Korean-style, *Tenjang*] as the dominant seasoning, and with rice, "it becomes the popular *Tenjang Chige Pekpem"* (p. 262). 16. Special tofu.

Note 2. This is the earliest (and only) English-language document seen (March 2009) that uses the word "Tenjang" to refer to Korean-style soybean jang (miso).

Part III–Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way.

Appendices: A. Tofu restaurants in Japan; many are vegetarian: In Tokyo: Sasa-no-yuki / Sasanoyuki, Goemon, Hisago, Sanko-in, Shinoda-zushi, Dengaku (south of Tokyo in Kamakura). In Kyoto: Nakamura-ro, Okutan, Takocho, Izusen, Junsei, Nishiki, Hakuun-an, Rengetsu, Sagano, Sorin-an. Tea ceremony cuisine (*Kaiseki ryori*), Zen temple cookery or Buddhist vegetarian cookery (*Shojin ryori*), Tea ceremony cookery from China (*Fucha ryori*), Wild gathered cookery (*Sansai ryori*). A directory of these and others, with addresses and phone numbers, is given (p. 312).

B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe, and 3-7 in Latin America {Mexico City, Rio de Janeiro and Sao Paolo, Brazil}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for "Mock tuna salad with deep fried tofu."

Note 3. This is the earliest English-language document seen (Sept. 2013) that uses the term "Tofu ice cream" to refer to soy ice cream or that contains a recipe for "Tofu ice cream."

Note 4. This is the earliest English-language document seen (April 2013) that uses the term "Tofu Cheesecake" and the first to give a recipe for a tofu cheesecake.

Note 5. This is the earliest English-language document seen (Oct. 2013) that uses the term "Tofu sour cream" (p. 109) or that contains a recipe for "Tofu sour cream."

Note 6. This is the earliest English-language document seen (April 2013) that uses the term "tofu milkshake" or that gives a recipe for a shake made with tofu.

Note 7. This is the earliest English-language document seen (Jan. 2012) that uses the term "sticky fermented" to refer to natto.

Note 8. This is the 2nd earliest English-language document seen (April 2013) that uses the term "dried-frozen tofu."

Note 9. This is the earliest English-language document seen (April 2013) that describes preparatory techniques for tofu (p. 96-98).

Note 10. This is the earliest English-language document seen (April 2013) that contains the term "smoked tofu."

Note 11. This is also the earliest English-language document seen (April 2013) that uses the term "kinugoshi tofu" to refer to silken tofu.

Note 12. As of March 2007, the various English-language editions of this book have sold more than 616,000 copies.

Note 13. This is the earliest English-language document seen (Aug. 2011) that contains the term "Modern Western soybean foods" (see p. 69), a term that Shurtleff would soon (by 1983) replace by the more accurate "Modern soy protein products."

Note 14. This is the earliest published English-language document seen (Jan. 2012) that contains the term "creamy

© Copyright Soyinfo Center 2014

tofu dressings" (or "dressing").

Note 15. This is the earliest English-language document seen (Sept. 2012) that contains the term "Soymilk yogurt."

Note 16. This is the earliest document seen (Oct. 2012) that contains an adequate or detailed description of how to make yuba at home.

Note 17. This is the earliest English-language document seen (June 2013) that contains the term "whole dry soybeans."

Note 18. This is the earliest published English-language document seen (Oct. 2013) that contains the term "Tofu whipped cream" (regardless of capitalization). This term appears on pages 113, 148 (with recipe), 149, 153, and 179. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

1814. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind (Illustrations–line drawings). Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• ***Summary:*** Continued: Illustrations (line drawings, both numbered and unnumbered) show: A hearth in a traditional Japanese farmhouse with tofu dengaku roasting around a bed of coals in a sunken open-hearth fireplace. An old Japanese plum tree blossoming in winter. Three pieces of skewered tofu dengaku with a sansho leaf atop each in a special serving box. A sprig of sansho with berries. Stylized top of a soybean plant in a circle. Fig. (4) Tofu products available in the West (tofu, dofu, kinugoshi, thick agé triangles, cubes, and cake, agé and agé puffs, hollow agé cubes, soymilk, tofu pudding, doufu-ru {white and red}, ganmo {patties, small balls, and treasure balls}, grilled tofu, dried-frozen tofu, instant powdered tofu, okara, dried yuba, soymilk curds, pressed tofu, savory tofu). A wooden cutting board and Japanese broad-bladed vegetable knife (*nagiri-bôcho*) with vegetables and tofu on a woven bamboo tray.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "treasure balls" to refer to Chinese-style tofu mixed with various finely-chopped vegetables, rolled into balls, and deep-fried tofu. (8) A wooden keg of red miso and a plastic bag of barley miso. (9) Shoyu in a metal can, wooden keg, glass bottle, and table-top dispenser. Traditional Japanese kitchen tools: *Miso-koshi* (woven bamboo strainer used in making miso soup). cutting board, Japanese vegetable knife, wooden spatula, bamboo rice paddle (*shamoji*) and spoon, woven bamboo colander or tray (*zaru*), suribachi, Japanese grater (*oroshi-gané*), *sudaré* (bamboo mat), pressing sack for tofu or soymilk, serrated tofu-slicing knife, tawashi scrub-brush (made of natural palm fiber), wok with draining rack and wooden lid, stir-frying ladle and spatula, long cooking-chopsticks, mesh skimmer, deep-frying thermometer, Chinese bamboo steamer (*seiro*), charcoal brazier (*konro, shichirin*), broiling screen. Covered pot steamer. Small lidded pottery pot. More kitchen tools (p. 50-51). (10) A soybean measuring box (*isshô-bako*). (11) The soybean plant. Two views of a soybean seed with seed coat, hilum, and hypocotyl labeled. A bag full of soybeans. Roasted soybeans in a woven bamboo tray (*zaru*). Edamamé in the pods. Three shapes of kinako treats. Soybean sprouts. Natto on a bamboo mat (*sudare*). Natto wrapped in rice straw as it ferments. A hand holding chopsticks that lift natto up from a bowl of natto–connected by gossamer threads. Tempeh (round and square pieces). Wrapping a small packet of inoculated soybeans to make tempeh. (15) Two Japanese women in traditional clothing using hand-turned grinding stones (quern) to grind soaked soybeans when making tofu. (16) Push-pull grinding stones. (17) Motor-driven grinding stones. (18) Water-powered millstones. (19) Wind-powered millstones. (20) Unohana. (21) A tofu maker sitting on a traditional lever press that presses soymilk from the okara in a pressing sack on a rack. A heavy iron skillet. (22) Folding okara omelet pouches. Okara doughnuts. (23) A bamboo colander. (24) A tofu maker weighting a colander with a brick so that whey will collect in it. (25) Ladling whey from curds; it foams! (27) A horse drinking whey from a wooden vat. Soymilk curds in a bamboo mat. (28) Ladling curds for Awayuki. (29) Fresh tofu in a plastic tub. (30) A tofu maker placing a weight on pressing lids as tofu is pressed in settling boxes (forming boxes). Transferring tofu-filled settling box to sink. Cutting a block of tofu into cakes under water. Eggplant halves in a yin-yang dance. Preparatory techniques used with tofu (slanting press, sliced tofu, squeezing, scrambling, reshaping, crumbling). (32) Utensils for making tofu at home. (33) Three designs for a homemade settling container. (34) Preparing homemade tofu (a-l). (35) Removing tofu from a farmhouse-style settling container (forming box). (36) Chilled tofu. Iceberg chilled tofu. A hot, moist, white towelette (*o-shibori*) is used to wipe the face and hands before (or occasionally after) a meal. Tofu salads in three Japanese pottery dishes. Japanese soups in three types of containers. (37) Chrysanthemum tofu. (38) Tofu poached egg. Tofu-stuffed green peppers. A wok. (39) Filling a wok with oil. (40) Testing oil temperature in a wok. (41) Deep-frying tofu tempura–and (42) Serving it in a shallow bamboo basket. (43) Making *Kaki-agé.* (44) *Dengaku Hoshi* (from *Tofu Hyaku Chin*). (45) Skewered Tofu dengaku. Preparing Tofu dengaku in old Japan (from Hokusai's sketchbooks). (46) A variety of skewers. (47) Chinese firepots. (48) A Simmering Tofu wooden serving container heated by coals from within. (49) Miso oden. (50) Tofu wrapped in rice straw. (51) Nanzenji wrapped tofu. (52) Gisei-dofu. (53) Serving freshly deep-fried agé. (54) The deep-frying area of a traditional tofu shop. (55) Deep-frying tools. (56) Wooden bamboo tray with raised sides. Chinese cleaver. (57) Nori-wrapped sushi with agé (making and serving; six drawings). Eating noodles from old Japan (from Hokusai's sketchbook). (58) Preparing homemade noodles.

(59) The Oden man on a winter's eve. A pottery bowl of Oden. Kombu rolls. (60) Making konnyaku twists. (61) Nishime in a multi-layered lacquerware box. (61) Pressing tofu for thick agé in a tofu shop. (62) Deep-frying tofu for thick agé. (63) A tofu maker with deep-fried thick agé triangles on screen trays.

Note 2. This is the earliest English-language document seen (May 2012) that contains the terms "deep-fried thick agé triangles" (p. 181) or "hollow agé cubes" (p. 23).

(64) Stuffing thick agé. (65) Thick agé stuffed with onions. (66) Pressing tofu for ganmo. (67) Adding seeds and vegetables. (68) Deep-frying ganmo. (69) A farmhouse open-hearth fireplace with nabe kettle. (70) Preparing homemade ganmo. Ganmo balls in a draining tray. Ganmo cheeseburger. (71) Cutting tofu to make agé slices (*kiji*). (72) Deep frying agé. (73) Opening agé into pouches. Agé treasure pouches.

Note 3. This is the earliest English-language document seen (April 2013) that contains the term "treasure pouches" or the term "Agé treasure pouches" They refer to a Kyoto-style delicacy made with deep-fried tofu pouches.

(74) Agé pouches sealed with foodpicks. Inari shrine with Shinto torii. (75) Kampyo-tied pouches [kanpyo]. (76) Making rolled agé hors d'oeuvre. (77) Tofu maker ladling gô (fresh soy puree) into a cauldron. (78) Stirring down the gô. Pressing soymilk from okara with a hand-turned screw press. (79) Serving fresh soymilk in a tofu shop. Six Japanese commercial soymilk products. Little girl at The Farm (Summertown, Tennessee) seated on a small chair drinking a cup of soymilk. Chinese breakfast soymilk soup with deep-fried crullers (*Siento-chiang* with *yu-chiao tsao pi*). (80) Takigawa-dofu. (81) Tofu maker pouring the soymilk for kinugoshi tofu. (82) Adding solidifier. (83) Trimming kinugoshi from sides of box. (84) Modern lactone kinugoshi (with GDL). (85) Modern kinugoshi factory. (86) Sasa-no-Yuki's Gisei-dofu container. (87) Kinugoshi with ankake sauce. The entrance way to a traditional Japanese restaurant featuring tofu. Traditional metal skewer for making grilled tofu. (88) Traditional tofu maker grilling tofu over a charcoal brazier (*hibachi*). Grilling tofu in a traditional open hearth. (89) An early method of elaborate grilling. Pieces of tofu on different types of skewers. Farmhouse sukiyaki with grilled tofu. (90) Tying frozen tofu with rice straw. (91) Drying farmhouse frozen tofu. (92) Pressing frozen tofu at home. (93) Deep-fried frozen tofu with cheese. (94) Making deep-fried frozen tofu sandwiches (*Hakata-agé*). (95) Frozen tofu wrapped in kombu. (96) Steaming table in a yuba shop. Ten different types / shapes of yuba. (97) Lifting yuba away from soymilk. (98) Yuba sashimi. (99) Yuba envelopes. (100) Deep-fried yuba dengaku. (101) Folding yuba into bundles. Trimming half-dried yuba from a skewer. (102-113) Tofu and yuba in Taiwan, China, and Korea (see separate record). Sesame tofu in pottery bowl. (114) Traditional farmhouse tofu, tied into a package with rice straw rope. (115) Shirakawa-go farmhouses with water-powered rice-dehusker in foreground. (116) Making seawater tofu at Suwanose. Mortar and pestle for pounding mochi. Making community tofu: Western metal hand mill, hand-turned stone mill apparatus, faces of upper and lower stones, colander and cloth, two shapes of cooking pots, Japanese farmhouse earthen cooking stove, cooking pot set on cut-off oil drum, ladle, two wooden paddles, pressing rack, pressing okara, lever press, pressing sack, wooden settling [forming] container with cloths. (117) Making nigari with salt in bamboo colander, a traditional "salt boat" for refining salt of nigari. (119) Country farmhouse tofu (5 illust.). (121) Morning shopping at a tofu shop. (122) Diagram of a tofu-shop floor plan. (123) Modern pressure with hydraulic press. (124) Modern centrifuge with 3 soymilk barrels. Thirty-one unnumbered illustrations showing every step in making and selling tofu in a traditional Japanese shop (p. 299-306). (125) Cutting tofu for Dengaku (from *Tofu Hyaku Chin*). (126) Ladies busy making dengaku (from *Tofu Hyaku Chin*). (127) Hearth at Nakamura-ro. (128) The garden at Okutan. Six types of Japanese sea vegetables: Hijiki, aonori, wakame, agar, nori, kombu. (129) Japanese vegetables (27 illustrations). Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

1815. Shurtleff, William; Aoyagi, Akiko. 1975. Soymilk (Document part). In: W. Shurtleff and A. Aoyagi. 1975. The Book of Tofu. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. See p. 199-210. Chap. 10.

• ***Summary:*** Contents: Making soymilk in a Japanese tofu shop as part of the tofu-making process. Comparative analysis of the composition of soymilk, dairy milk, and mother's milk (human), each adjusted to the same percentage of water (88.6%) (with table). "Vegetable milks" prepared from other nuts (almonds, peanuts, walnuts, and coconut) and seeds (sunflower and sesame). Low cost of fresh soymilk, in East Asia and on The Farm (Summertown, Tennessee). Soymilk in Taiwan. History of Vitasoy and K.S. Lo. UNICF / FAO / WHO soymilk plant making Saridele dry soymilk in Indonesia. Smaller plants in Manila, Philippines, and Bangkok, Thailand. History of the work of Dr. Harry W. Miller in China (starting in 1936) and the USA (Soya Lac / Soyalac, 1939). Current status of soymilk sold as a beverage in Japan: Sold in tetrapak cartons or, in condensed form, in cans. Sold "in a variety of flavors (plain, honey, barley-malt, strawberry or chocolate) in virtually all natural and health food stores and at most supermarkets; some types are even dispensed from vending machines or delivered door to door." "Many Japanese tofu makers used to deliver a bottle of soymilk each morning to a large number of their regular customers, but the tradition has gradually declined with the increasing availability of commercial soymilk and the post-was trend toward drinking dairy milk." Address: Lafayette, California.

1817. **Product Name:** Loma Linda Turkey Deli Slices (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1975.
Ingredients: Water, corn oil, soy protein concentrate, soy protein isolate, wheat gluten, egg whites, potato flakes, salt, artificial and natural (vegetable) flavors, whole wheat flour, brown sugar, dried yeast, onion powder, spice, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: Paperboard box.
How Stored: Frozen.
Nutrition: Per 2 slices (2.0 oz–57 gm): Calories 160, protein 10 gm, carbohydrate 3 gm, fat 12 gm, cholesterol 0 mg, sodium 1350 mg, potassium 110 mg.
New Product–Documentation: Recipe booklet. 1979, dated.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1975, but this label is copyrighted 1985.

1818. **Product Name:** Loma Linda Bologna (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1975.
Ingredients: Wheat gluten, water, vegetable shortening, corn oil, soy protein concentrate, dried yeast, soy protein isolate, natural (vegetable) flavors, salt, egg whites, dextrose, corn starch, onion powder, garlic powder, vegetable mono- and diglycerides, soy lecithin, artificial flavors, whole wheat flour, caramel color, spices, artificial colors, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
How Stored: Frozen.
New Product–Documentation: Recipe booklet. 1979, dated. Loma Linda probably purchased the spun soy protein fibers from General Mills. Sold frozen. See also Vegelona.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1819. **Product Name:** Loma Linda Salami Deli Slices (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1975.
Ingredients: Wheat gluten, soy protein isolate, water, corn oil, egg whites, salt, dried yeast, natural (vegetable) flavors, corn starch, soy protein concentrate, dextrose, onion powder, artificial flavor, guar gum, caramel color, garlic powder, soy lecithin, spices, artificial colors, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 8 oz paperboard box.
How Stored: Frozen.
Nutrition: Per 2 slices (2.0 oz–57 gm): Calories 130, protein 13 gm, carbohydrate 2 gm, fat 7 gm, cholesterol 0 mg, sodium 640 mg, potassium 70 mg.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1975, but this label is copyrighted 1985.

1820. **Product Name:** Loma Linda Savory Meatballs (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1975.
Ingredients: Wheat gluten, soy protein isolate, water, corn oil, wheat flour, egg whites, soy protein concentrate, corn starch, soy flour, dried yeast, artificial flavors, dextrose, onion, oat flour, natural (vegetable) flavor, onion powder, salt, garlic powder, caramel color, guar gum, artificial colors, spice, vitamins (niacinamide, D-calcium pantothenate, thiamine monotrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 7 meatballs (2.5 oz–70 gm): Calories 190, protein 22 gm, carbohydrate 7 gm, fat 8 gm, cholesterol 0 mg, sodium 420 mg, potassium 170 mg.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1975.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1821. **Product Name:** [Soyalac {Soymilk} (Plain, or Cocoa)].
Foreign Name: Soiyarakku Sutoreeto, Kokoa Soiyarakku.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.

© Copyright Soyinfo Center 2014

Date of Introduction: 1975.
Wt/Vol., Packaging, Price: 250 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Both products purchased by William Shurtleff and Akiko Aoyagi in Japan. 1975-1976.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Sutoreeto, and Kokoa Soiyarakku were introduced in 1975 by Saniku Fuuzu in a 425 gm can and distributed nationwide.

1822. **Product Name:** Non-Meat Balls (Or: Non-Meatballs).
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1975.
Ingredients: In 1975: Soy protein concentrate, hydrogenated vegetable oils, modified tapioca starch, non-fat dry milk, isolated soy protein, dehydrated potato, dehydrated onions, artificial flavors, egg white solids, wheat flour, fats, sucrose, salt, HVP, garlic powder, oregano, caramel color, niacin, thiamin, iron, vitamin B-6, riboflavin, vitamin B-12.
Wt/Vol., Packaging, Price: 19 oz can. Retails for $2.79 (7/90, California).
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Non-meat Balls (Worthington)" [non-frozen] are given (see above, incl. soy protein concentrate and isolated soy protein).

Shurtleff & Aoyagi. 1983. History of Worthington Foods. p. 11.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. The ingredients are: Broth: Water, modified corn starch, hydrolyzed vegetable protein. Non-meatballs: Textured vegetable protein (wheat gluten, soy protein isolate and concentrate), partially hydrogenated soybean oil, skim milk, soybean and/or corn oil, egg whites, potatoes, flavorings (hydrolyzed vegetable protein, salt, yeast extract, monosodium glutamate, disodium guanylate, disodium inosinate), tapioca starch, onion, onion powder, garlic powder, spice, niacinimide [niacinamide], iron (as ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12.

1823. **Product Name:** Non-Meat Balls (Frozen; Or: Non-Meatballs).
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1975.
Ingredients: In 1975: Soy protein, Fibrotein [spun soy protein fiber], hydrogenated vegetable oils, nonfat dry milk, corn oil, egg white solids, wheat flour, artificial flavors, onion powder, sucrose, salt, HVP, MSG, garlic powder, oregano, caramel color.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Non-meat Balls, frozen (Worthington)" are given.

1824. **Product Name:** Sandwich Spread.
Manufacturer's Name: Worthington Foods, Inc. Div. of

Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1975.
Ingredients: In 1975: Wheat protein [wheat gluten], corn oil, soy flour, dextrose, dehydrated onions, salt, corn syrup solids, soy protein, soy oil, yeast extract, MSG, dehydrated bell peppers, HVP, garlic powder, vegetable gum, celery and sage extracts, niacin, thiamin, iron, vitamin B-6, riboflavin, vitamin B-12.
Wt/Vol., Packaging, Price: Dehydrated in 10 oz Pure Pak paper carton (like milk). Retails for $2.70 (7/90, California).
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 177. The ingredients in "Sandwich Spread (Worthington)" are given.

1825. **Product Name:** Beef Style Soyameat.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1975.
Ingredients: In 1975: Fibrotein [spun soy protein fiber], corn oil, dried egg white, flour, yeast extract, starch, flavorings, corn syrup solids, salt, caramel color, onion powder, dextrose, nucleotides.
Wt/Vol., Packaging, Price: Canned.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 174. Lists the ingredients in "Beef Style soyameat."

1826. **Product Name:** Chicken Style (Meatless; Resembles White Meat).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1975.
Ingredients: In 1975: Fibrotein [spun soy protein fiber], corn oil, egg white solids, soy protein, salt, MSG, natural and artificial flavorings from vegetable sources, carrageenan, niacinamide, soy flour, thiamin mononitrate, iron, vitamin B-6, U.S. certified color, riboflavin, vitamin B-12.
How Stored: Frozen.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 174. The ingredients in "Chicken Style, frozen (Worthington)" are given.

1827. **Product Name:** Protose (Meatlike Product Made of Wheat Gluten with Soy Flour).
Manufacturer's Name: Worthington Foods.
Manufacturer's Address: Worthington, Ohio.
Date of Introduction: 1975.
New Product–Documentation: This product, introduced in 1900 by the Sanitas Nut Food Co. of Battle Creek, Michigan, was originally based on peanuts. Worthington Foods acquired this company, which had been renamed Battle Creek Foods, in 1960. By 1975 (as shown below), wheat gluten was the main ingredient, and soy flour had been added to formulation.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in "Protose (Battle Creek)" are "wheat protein [wheat gluten], peanuts, wheat and soy flour, corn oil, yeast extract, soy sauce, salt, HVP, niacinamide, thiamin, iron, vitamin B-6, riboflavin, vitamin B-12."

1828. Barkas, Janet. 1975. The vegetable passion: A history of the vegetarian state of mind. New York, NY: Charles Scribner's Sons. London: Routledge and Kegan Paul. xi + 224 p. Illust. Index. 22 cm. [400* ref]
• ***Summary:*** This is the earliest known book on the history of vegetarianism written in the United States since World War II. It contains much interesting information and leads for further research.

Contents: Author's note. 1. Roots: Evolutionary trends [and primitive diets], tilling the soil. 2. Land of the sacred cow: Hinduism, Jainism, Buddhism, King Asoka, vegetarianism develops in India, Mahatma Gandhi, Krishna Consciousness. 3. Orpheus ascending: Greek thinkers, Pythagorean serum, Roman sympathy, a return to Greece. 4. Judeo-Christian ethics: Jewish seeds, the Essenes, Christianity. 5. Da Vinci and the dietetic renaissance: Middle phases, Leonardo da Vinci, enthusiastic Cornaro, France. 6. British advocates: Forerunners (John and Charles Wesley, John Howard, James Oglethorpe in Georgia, Bible Christian Church, Dr. William Lambe, John Frank Newton, Percy Bysshe Shelley), modern organizers flourish (Joseph Brotherton, Anna Kingsford, Annie Besant), George Bernard Shaw, today (Malcolm Muggeridge, Brigid Brophy, Sir Stafford Cripps and Lady Cripps). 7. Wagner, Hitler, and Germany: Early converts (Gustav von Struve, Dr. Heinrich Lahmann, Eduard Baltzer), Richard Wagner, Adolf Hitler (long section; p. 105-131), the Puritan Fuehrer, Mealtime for Hitler, Albert Schweitzer. 8. Back–and forth–to nature (the USA): Benjamin Franklin experiments, early American vegetarianism (William Metcalfe, Sylvester Graham, Dr. William Alcott, the first American Vegetarian Convention in New York on 15 May 1850, *The American Vegetarian and Health Journal* begins publication in Nov. 1850 with William Metcalfe as editor, Horace Greeley), meatless communes (Bronson Alcott, Louisa May Alcott, and Fruitlands in Massachusetts; John Humphrey Noyes and the Oneida Community in upstate New York; John A. Collins and The Utopian community in Skaneateles, New York; the Harmonial Vegetarian Society in Benton County, Arkansas), Thoreau, The Seventh-day Adventists and Dr. John Harvey

© Copyright Soyinfo Center 2014

Kellogg, Upton Sinclair, vegetarians for president and the American Vegetarian Party (Dr. John Maxwell and Symon Gould; presidential and vice-presidential candidates were fielded in 1948, 1952, 1956, and 1960), modern times (Will Durant, Dick Gregory, Helen and Scott Nearing, the Vegetarian Feminists, the Mazdaznan movement, Herbert Sheldon and the Natural Hygienists, the American Vegan Society and Jay Dinshah). 9. Tolstoy and the Doukhobors: From hedonist to celibate, the Doukhobors (Russian Christians who became vegetarians in 1895 under Peter Verigen), the Doukhobors in Canada, Tolstoy's later years. 10. Nutritional controversies: Basic issues, protein, soybeans (p. 172-73, 175), vitamin B-12, what about a lactarian diet?, meat, plant hazards, economics, the Abkhasians in the Soviet Republic of Abkhasia [Abkhazia]. 11. Summing up. List of illustrations (mostly photos with a few illustrations). Selected sources. Acknowledgments.

The word "vegetarian" was not used until 1847. Gorillas are vegetarian but will eat meat in zoos. Rampithecus, the first primate, ate insects and small animals. Homo sapiens have existed for 100,000 years. 35,000 to 8,000 B.C. marks the beginning of the agricultural (neolithic) revolution, the first major human revolution. During the Vedic period, Hindus in India were not vegetarian; they ate cattle, fish, etc. Jainism and Buddhism converted India to vegetarianism, but vegetarianism was not a basic tenet of Buddhism as it was for Jainism. King Asoka, who reigned in Magadha, India, until 232 B.C., killed tens of thousands of opponents during his bloody rise to power. Then he became a born-again Buddhist. He induced priests who sacrificed animals to become strict vegetarians.

The vegetarian Orphic cults, which also advocated celibacy, laid the foundations for Pythagoras and Plato. The first western advocate of a meatless diet was Pythagoras, the "father of vegetarianism." He denounced beans. Socrates and Plato supported a vegetarian diet but there is little evidence that they practiced it. The Romans considered beans and onions to be foods that were too heavy for most people. Plutarch hailed vegetarianism, but was not one. Porphyry, Plotinus, and the Essenes were vegetarians. In Judaism, the law of Basar BeHabab says "do not eat meat and milk together." Orthodox Jews follow this. St. Francis of Assisi (1181-1226) ate no meat but condoned eating fish. Leonardo da Vinci was the first vegetarian in modern western civilization. He was a celibate bachelor who ate no honey. Rouseau was not a vegetarian but he wrote of and praised it.

The first organized vegetarian groups were in England. The British Vegetarian Society was founded in 1847. John Wesley (1703-1791), the English theologian, evangelist, and founder of Methodism was a vegetarian. In 1809 a vegetarian coalition was established in Manchester. Other early British vegetarians were Percy Bysshe Shelley (1792-1822, poet), William Lambe, John F. Newton, Anna Kingsford, Annie Besant, George Bernard Shaw (who also did not smoke or drink alcohol, coffee or tea). Other non-British European vegetarians include Richard Wagner, Albert Schweitzer, Leo Tolstoy and the Doukhobors, Romain Rolland. American vegetarians include Benjamin Franklin (mostly), Sylvester Graham, William Alcott, Bronson Alcott, Ellen G. White, John Harvey Kellogg, many Seventh-day Adventists, most Trappists. Thoreau practiced it for only a few years. Horace Greeley supported it. Upton Sinclair advocated it lifelong but only practiced it for 3 years.

Also discusses: Fruitlands, Oneida community, Abkhasians, Gandhi.

Concerning Oneida: Long before anyone ever heard of genetic engineering or sperm banks, social reformer J.H. Noyes put his ideas on stirpiculture (the breeding of special stocks or races) into practice by founding in 1847 the Oneida Community, wherein men and women were paired off to produce the best possible offspring.

The author graduated from Hofstra University in Hempstead, New York, and now teaches at the New School for Social Research in Manhattan, New York. Address: Manhattan, New York.

1829. Hur, Robin. 1975. Food reform: Our desperate need. Austin, Texas: Heidelberg Publishers. x + 260 p. 24 cm. [1500+ ref]

• ***Summary:*** One of earliest well-documented books on the advantages of a low-fat, low-protein, high-carbohydrate diet. Presents evidence linking chronic, degenerative diseases to a diet high in protein, fat, and meat. Advocates the SGA diet, a vegan diet based on sprouts (including spy sprouts, see p. 193), greens, and small amounts of algae. Although the book's major emphasis is nutrition, its last chapter discusses diet, resources and the environment–another first.

In chapter 4, titled "Aging," the author notes that scientists are paying a lot of attention to the Vilacabambans, Hunzas, and Abkhasians, because their life spans are far greater than those of Americans or Europeans. The diets of all three groups are very similar, bordering on vegetarianism. The Hunzas eat almost no animal products and consume meat only once a year. Also discusses the Seventh-day Adventists.

Talk with Robin Hur. 1990. Dec. 12. "I saw that the resource implications of diet–how what we ate affected the land and water–were much more important issues than the things other people were looking at at the time, namely protein." This is a rare book by a mathematician and Harvard graduate. The author wrote a second book just on diet and the environment but it was never published. One of its discoveries was the deforestation in the U.S. was rampant (62 million acres were cut to raise livestock) and the figures were being concealed by the U.S. forest service. In 1990 he was writing a book on diet and economics.

Note: This book heavily influenced Keith Akers' *A Vegetarian Sourcebook* (1983). Address: Austin, Texas.

1830. Keys, Ancel; Keys, Margaret. 1975. How to eat well and stay well the Mediterranean way. Garden City, New York: Doubleday & Co. xvi + 488 p. Foreword by Jean Mayer, PhD, ScD., Prof. of Nutrition, Harvard Univ. School of Public Health. Index. 22 cm.

• ***Summary:*** Foreword: Ancel Keys, a very great scientist, revolutionized the science of nutrition. Before his work in the 1940s and 1950s, nutritionists studied nutritional "requirements" and were concerned with deficiency diseases. He refocused attention on diseases of excessive consumption of certain nutrients, especially fats. In his famous laboratory, located under the Stadium of the University of Minnesota, "he demonstrated the crucial role of the fat level of the diet in determining the risk of death from diseases of the heart and blood vessels. He went on to... show that saturated fats and cholesterol were the villains in this effect..." The concept of risk factor in cardiovascular disease originated with Keys.

Chapter 3, on "Diet and health," contains a wealth of interesting information on many subjects including Linus Pauling and vitamin C, vegetable oils and vitamin E ("a teaspoon of soybean oil provides as much vitamin E as most of the packages sold by the druggist"), Dr. John Ludkin of London and sugar as a cause of coronary heart disease (not true), salt, vegetarians ("recently careful studies on the health of Seventh Day Adventists have produced surprising evidence that there is some truth in the health claim"), autointoxication, aging, yogurt and Elie Metchnikoff ("Louis Pasteur's successor as director of the Pasteur Institute"), the milk-drinking Masai of East Africa (their bodies handle cholesterol quite differently from our own), "natural foods" (grown without chemical fertilizers or pesticides), DDT, lecithin (made commercially from soy beans), fad and "kook" diets unlimited (incl. Dr. Atkins "dietary revolution" and–even worse–"the 'Zen macrobiotic diet,' violently condemned by all who know anything about nutritional science, because it is likely to cause real trouble if actually adhered to").

The Mediterranean diet is found in Greece, Italy, southern France, and Spain. Characteristics include: Use of olive oil, wine in moderation for dinner, fruit for dessert, meats that contain less fat than their U.S. counterparts. Address: 1. Director, International Cooperative Study on Cardiovascular Epidemiology (in 7 countries), Univ. of Minnesota, Minneapolis and St. Paul, Minnesota.

1831. Kloss, Jethro. 1975. Back to Eden. Santa Barbara, California: Woodbridge Press. xx + 684 p. Illust. Index. 18 cm.

• ***Summary:*** After the copyright for the original 1939 edition of *Back to Eden* expired in 1967, the Kloss family, because of a complex set of circumstances, neglected to renew it. The book then went into the public domain. Woodbridge Press decided to publish it as a facsimile edition, but with pages xiii–xx of the front matter containing a new chapter titled "Jethro Kloss–the man and the legend" by Promise Kloss Moffett." It was billed on page 1 of that chapter as "An exclusive feature only in this Kloss family edition. An intimate, personal account by his daughter." This chapter contains four photos: (1) "Jethro Kloss in his early years of teaching and healing." (2) "Jethro Kloss with Amy, his second wife, in Minnesota with his daughter, Promise; her daughter, Mabel; and their first child, Lucille." (3) "Jethro Kloss operating men's hydrotherapy treatment room at Home Sanitarium." He is dressed in a sort of white togo; a patient is inside a large cylindrical chamber (resembling but larger than a 55-gallon drum with a horizontal axis) apparently filled with steam. (4) Labeling and packing cereal foods in Kloss' Tennessee manufacturing operation. On the cover of the paperback edition they put the famous Michelangelo scene from the Sistine chapel of God reaching out to touch Adam's extended finger, thus transmitting the gift of life. New text was added to the cover: "The complete text. A public domain edition. Not authorized by the Kloss family. The classic Back to Eden belongs to the public. There is 'provision in Nature for all the ills of man... and a remedy for every disease.' The secrets of Natural Healing made plain by the preeminent leader of the natural health movement. Herbs, foods, treatments. World's best-known health book!"

On the cover of the hardcover edition was written "The Kloss family heirloom edition. The classic guide to herbal medicine, natural foods, and home remedies. The copyright page stated: "Copyright 1972, 1973, 1974, 1975 by Promise Kloss Moffett, Eden Kloss, and Doris Gardiner.

On the title page was written: "With exclusive features only in this Kloss family edition. American herbs for pleasure and health: natural nutrition with recipes and instructions for living the Edenic life."

For the bitter-sweet story of how this book came to be published, see interview with Doris Kloss Gardiner (Nov. 1990).

1832. Labuza, Theodore P. 1975. The nutrition crisis: a reader. St. Paul, New York, Boston, Los Angeles, San Francisco: West Publishing Co. xiv + 512 p. Index. 25 cm.

• ***Summary:*** This book contains 43 chapters by various authors in seven parts. Many of the chapters are reprinted from previous publications. Contents: Preface. Acknowledgments. A. Nutritional standards for humans: the scientific crisis. B. Nutritional status of humans: the crisis. C. Nutrients in the diet: the controversy and crisis. D. The crisis surrounding certain foods and unusual dietary practices. E. The overweight crises. F. The nutrition crisis in heart disease and atherosclerosis. G. The food-people-energy crisis. Epilogue.

Chapter 27, titled "Zen macrobiotic diets," is by the Council on Foods and Nutrition. The believe that this diet, which "has been shown to cause irreversible damage to

© Copyright Soyinfo Center 2014

health and ultimately lead to death." should be condemned. In Chapter 28, "The vegetarian diet," by U.D. Register and L.M. Sonnenberg (Loma Linda University), soy products are discussed on pages 263-65.

Also discusses: Lactose intolerance (p. 59-64). Food of the future (p. 443-55). Address: Univ. of Minnesota.

1833. Noorbergen, Rene. 1975. Programmed to live: A scientific confirmation of health reform. Mountain View, California: Pacific Press Publishing Assoc. 159 p. No index. 18 cm. [158* footnotes]
• ***Summary:*** Contents: 1. Health care–The nation's vital problem. 2. Meat and fat–are they fit for consumption? 3. Sugar and alcohol–The fingers of death. 4. Cancer–Curse of the good life. 5. Nicotine and caffeine–The twin dangers. 6. Don't upset the body clock. 7. Forget the steak! Have an analog. 8. Embrace life–Don't be a statistic.

Quoting extensively from medical research and the writings of Ellen G. White, this book states the case for the Seventh-day Adventist diet and lifestyle, and against the unhealthy products listed above.

In 1904 only 67.7 deaths per 100,000 U.S. population were caused by cancer; today the figure has grown to 166.6–2.46 times as many. In 1904 heart disease caused 359.5 deaths per 100,000 population, but by 1972 it had jumped to 493.9–up 37%. Each hour in America, 144 heart attacks occur, and each year 600,000 people die of heart attacks. Thus more Americans die of heart attacks each year than died in all of World War II (400,000).

Before the Biblical deluge, God told humans to eat plants. But after the Flood, God granted Noah and his family permission to eat the flesh of the clean animals that had been preserved in the ark (Genesis 9:3) since every green thing had been destroyed by the food.

1836. U.S. Department of Agriculture. 1975. The annual report on activities carried out under Public Law 480, 83d Congress, as amended, during the period July 1, 1973 through June 30, 1974. Washington, DC: U.S. Government Printing Office. See table 17.
• ***Summary:*** Table 17 is titled "Title II, Public Law 480–total commodities shipped by program sponsor, fiscal year 1974." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), and WRC (World Relief Commission). All of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. The following foods containing soy protein were distributed: CSM (corn soya mix), CSB (corn soya blend), WSB (wheat soya blend), and small amounts of soya flour. The vegetable oil which was shipped to many countries was soybean oil; it is not recorded here.

Foods containing soy protein were distributed to the following countries or areas:

Africa: Botswana, Burundi, Cameroon, Central African Republic, Chad, Congo–Belgian, Dahomey, Ethiopia, Gabon, Gambia, Ghana, Ivory Coast, Kenya, Lesotho, Liberia, Malagasy, Mali, Mauritania, Morocco, Niger, Nigeria, Rwanda, Senegal, Seychelles, Sierra Leone, Somali Republic, Sudan, Swaziland, Tanzania, Togo, Rhodesia, Upper Volta, Zaire, Zambia.

Near East–South Asia: Bangladesh, British Solomon Islands, Egypt, Gaza, India (incl. soy flour), Gaza, Jordan–East, Jordan–West Bank, Nepal, Pakistan, Sri Lanka, Turkey, Yemen, Palestine Refugee Program.

East Asia: Cambodia, Indonesia, Korea, Laos, Malaysia, Philippines, Singapore, Vietnam.

Latin America: Antigua, Bolivia, Brazil, British Honduras, Chile, Colombia, Costa Rica, Dominica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Nicaragua, Panama, Paraguay, Peru, St. Kitts, St. Lucia, St. Vincent, Uruguay.

Concerning "veg oil" (soybean oil) shipped under P.L. 480 Title II in fiscal year 1974: India received 43.325 million lb [19,652 metric tons] (p. 84). Address: Washington, DC. Phone: 703-875-4901 (1991).

© Copyright Soyinfo Center 2014

• ***Summary:*** A natural foods and vegetarian cookbook, with considerable nutritional information. On spine: "Eat for strength." Chapter III, titled "Dairy product substitutes" (p. 43-59) contains numerous recipes that use soy as an ingredient. Soy-related recipes include: Soy bread (p. 15, with soy flour). Soy-bran crackers (p. 25, with soy flour, lecithin, whole wheat flour, and bran). Soy crackers (p. 27, with whole soaked soybeans and lecithin). Soy noodles (p. 28, with Soy Base–see p. 46). Soy waffles (p. 41, with whole soaked soybeans). Double strength soy milk for cream (p. 45–Save pulp [okara] to use in Soy Crackers. Use rich soy milk as a base for Mayonnaise or Sour Cream, as Soy milk, or as Soy yogurt). Sour cream (p. 45, made with soy milk). Madison milk (p. 46, with whole dry soybeans). Banana soy milk (p. 46). Soy base and milk with various flavors (p. 46). Soy sour cream (p. 47). Vegetarian cream (p. 47, with double strength soy milk). Sesame spread (p. 48, with soy base). Soy cottage cheese (p. 52, with soy grits). Scrambled tofu–Soy cheese (p. 53). Tofu (homemade, 3 methods, from soy flour or whole soybeans). Soy yogurt (p. 54, from soy milk). Simple soy butter (p. 55, with soy flour or dry soybeans). Food yeast butter (p. 55, with Soyannaise). Soy butter (p. 57, with soy flour, lightly browned). Margarine [non-hydrogenated] (p. 58, with coconut oil, oil, hot water, lecithin, lemon juice, and onion salt). Carrot pie (p. 69, with soy milk and soy flour). Banana cream toast (p. 72, with soy or nut milk). Carob drink (p. 74, with soy or nut milk). Bread pudding (p. 75, with Soy base). Soaked soybeans (p. 85, 210). Soynuts I and II (p. 85-86). Soy patties I and II (p. 86, with mashed soybeans and peanut butter). Soy loaf (p. 87, with soaked soybeans). Soy cheese balls (p. 88, with Soy cottage cheese or chopped Tofu). Soy soufflé (p. 88, with soaked soybeans). "Salmon loaf" (p. 90, with soy flour). Soy corn chowder (p. 105, with Soy milk or Basic Cream Sauce). Cucumber soup (p. 106, with Soy milk or Basic Cream Sauce). Fresh cream of corn soup (p. 107, with Soy or nut milk). Vichyssoise (p. 109, with Soy or nut milk). Corn chowder (p. 110, with Soy or nut milk). Rice and soybean loaf (p. 119, with cooked soybeans). Basic cream sauce (p. 127, with Soy base). Soyonnaise I-IV (p. 133-34, incl. with Soyagen or canned Soyalac).

Recipes containing peanuts or wheat gluten: Nut cheese (p. 54). Emulsified peanut butter (p. 55). Peanut butter balls (p. 65). Peanut butter loaf (p. 86). Peanut butter Creole (p. 89). Chinese pepper steak (p. 93, with gluten). Nuttose (p. 95, with nut butter). Gluten (p. 96). Peanut butter gravy (p. 126). Grandmother's gravy (p. 126, with peanut butter).

A table titled "Irritating substances" (p. 123) lists the name of the substance, the chemical, and the effect. The substances are: Black pepper, chili peppers, cayenne, horseradish, cloves, cinnamon, mustard seed, ginger, nutmeg, vinegar, baking soda, baking powder, salt (sodium chloride). On the facing page is a list of 25 "Safe herbs."

Note: A later edition of the book was copyrighted in 1979, then revised in 1983. The title was changed to "East for Strength" and the author was listed as Dr. Agatha Thrash. Yuchi Pines Institute (renamed Uchee Pines Inst. in the late 1980s or early 1990s) was founded in 1970 by Drs. Agatha and Calvin Thrash, who are both physicians and Seventh-day Adventists. As of April 1992 both are still living at Uchee Pines.

Talk with Dr. Agatha Thrash. 1999. June 4. This book was first published (with the above title) in 1975. They copyrighted it in 1979. Address: Route 1, Box 273, Seale, Alabama.

1839. Gallagher, James R. 1976. 'China Doctor' Harry Miller dies at 97 (News release). Washington, DC: Seventh-day Adventist Church. 4 p. Jan. 4.

• ***Summary:*** "Washington, D.C.–Harry Willis Miller, M.D., known to generations of Asians and Americans as the 'China Doctor,' died Saturday, January 1, in Riverside, California. He was 97.

"Dr. Miller reportedly suffered a massive heart attack on his way to Seventh-day Adventist morning church services.

"Famous in the Orient for his skill as a thyroid surgeon, Dr. Miller was also a pioneer in the field of nutrition. He developed the process of making soybean milk to feed malnourished Chinese children in areas where cow's milk was unavailable.

"Dr. Miller served as a physician to Chou En-lai, Madame Chiang Kai-shek, and once treated the Republic of China's first leader, Sun Yat-sen. During his first stay in mainland China he cured a Manchurian leader, Marshal Chang Hsueh-liang of the opium habit.

"His later years were devoted to research in vegetarian proteins and fund-raising for the establishment of 20 hospitals throughout the Far East. He returned from his work at the Hong Kong Adventist Hospital, which he helped found, just two years ago.

"Born in Ludlow Falls, Ohio, in 1879, Dr. Miller received his medical degree from American Medical Missionary College in 1902. The following year he was sent by the Seventh-day Adventist Church as one of its first missionaries to Central China. He went first to the small town of Hsintsai in Honan Province.

"Living in the shadow of the Boxer Rebellion, when many foreign missionaries were killed, Dr. Miller and his wife, Ethel, dressed as Chinese and gained the respect of rich and poor alike."

Ill health forced Dr. Miller to return to Washington, DC, where he remained until 1925. "The years 1925 to 1935 again saw Dr. Miller in mission service to China. He built Shanghai Sanitarium and Hospital, the first Adventist medical institution outside the United States, and the Wuhan Sanitarium and Hospital in Central China."

"The years of World War II found Dr. Miller in the United States once again, this time as medical director of the

© Copyright Soyinfo Center 2014

Mount Vernon Hospital in Ohio. While there, he founded the International Nutrition Laboratory, which carried out experiments on vegetarian protein products. The laboratory is now part of Loma Linda Foods, an Adventist-owned company.

"Dr. Miller returned to Shanghai in 1949, only to be evacuated in 1950 as the Communist revolution overflowed China."

During the 1950s Dr. Miller returned to research work in nutrition [related to his soy products] in both Ohio and California. He also worked as a surgeon and administrator in many countries worldwide. Then in 1960, at age 81, Miller was called to establish a hospital in Hong Kong. He remained in Hong Kong until 1974, practicing surgery and seeing patients in a weekly clinic. "By his own estimate, Dr. Miller performed 6,000 thyroid operations and 'about 30,000' operations during the span of his 70-year career in medicine." In 1997 he returned to Riverside, California where [at Loma Linda Foods] he actively continued his nutrition research until his death.

"Dr. Miller served on the American Relief Administration at the appointment of President Woodrow Wilson. Among his famous American patients were Alexander Graham Bell and William Jennings Bryan, as well as several senators and congressmen.

"A book by Dr. Raymond Moore, *China Doctor* (Harper & Row, 1961), is available on the life and career of Dr. Miller. In a 1974 letter, President Richard Nixon commended him by writing, 'You leave an admirable legacy of compassion and accomplishment.'

"Dr. Miller is survived by his wife, the former Mary Greer, and four children by a previous marriage.

"Funeral services are scheduled in Loma Linda, California, on Wednesday, January 5. Willis H. Hackett, chairman of the Board of Trustees of Loma Linda Food Company, and Charles Taylor, associate director of the Department of Education of the General Conference of Seventh-day Adventists, will represent the world headquarters of the Adventist Church."

1840. *USDA Farmer Cooperative Service. FCS Research Report.* 1976. Appendix–Companies producing and distributing soy products. No. 33. p. 53-82. Jan. Edible Soy Protein: Operational Aspects of Producing and Marketing. [60 ref]

• ***Summary:*** Part I. "Companies producing and/or distributing under private label brands of textured vegetable protein products that meet the requirements of FNS Notice 219." (Note: FNS is USDA's Food & Nutrition Service). Lists every known company making such products (as of Sept. 1974), with the company address and the full name of each product. The following companies and brands are listed; (D) = Distributors: Allen Foods (D) Lasco; Archer Daniels Midland Co. TVP; Biggers Bros. (D) Farmbest Promate; Cargill Inc. Textratein; Central Soya Co. Inc. Promosoy, Centex; Continental Coffee Co. (D) Continental; Continental Organization of Distributor Enterprises, Inc. (D) Code Fortified; Embassy Grocery Corp. (D) Lucky Boy Pro-Tenda; Far-Mar-Co, Inc. Ultra-Soy; Federated Foods, Inc. (D) Parade Promate; First Spice Mixing Co., Inc. (D) Texite; Frozen Food Forum, Inc. (D) Frosty Acres; Galanides, Inc. (D) Galanides; General Mills, Inc. Bontrae (Frozen Hydrated or Dehydrated); Griffith Laboratories Griffith's GL-219, Promate, GSVP, GSPC; B. Heller & Co. (D) Heller's; Hollymatic Corp. (D) Hollymatic; Institutional Wholesalers, Inc. (D) Saxony; Lauhoff Grain Co., Inc. Vita-Pro; Marshall Produce Co. (D) Marshall; Miles Laboratories Maxten, Temptein; Nabisco, Inc. VMR I or II; National Institutional Food Distributor Associates, Inc. (D) NIFDA Promate; National Protein Corp. Textrasoy; National School-Pak (D) Promate; Nugget Distributors, Inc. (D) Nugget Promate, Nugget Magi-Pro; Oppenheimer Casing Co. (D) Textured Oppenheimer Pro; Portland Wholesale Grocery Co. (D) Preferred Stock; Ralcon Foods SPF-200; Ralston Purina Co. SUPRO; S.E. Rykoff & Co. (D) S.E.R.; John Sexton & Co. (D) Sexton Protein Plus; A.E. Staley Mfg. Co. Food Service Div. Nutra-Mate; A.E. Staley Mfg. Co. Mira-Tex; Swift Edible Oil Co. Swift's Texgran, SFP-TA, Burger-Aide I; Sysco Corp. (D) Sysco and Sysco Promate.

New additions to the list: Custom Food Products, Inc. (D) CFP; Miles Labs. Pro-Lean; Industrial Grain Products Ltd. Perplus; General Spice, Inc. Sotex.

Part II (p. 70-81). "Companies producing and/or distributing under private label acceptable textured vegetable protein product mixes." Alberto-Culver Co. Milani; Bernard Food Industries, Inc. Tex-Pro; Biggers Brothers Inc. Farmbest; Continental Organization of Distributor Enterprises CODE; Federated Foods, Inc. Red & White or Parade; Kraft Foods. Kraft School Lunch Chili Mix & Textured Vegetable Protein. Kraft School Lunch Sloppy Joe Mix & Textured Vegetable Protein. Footnote: The textured vegetable protein component of the Kraft mixes is Promate #500-SL or Promate #100-SL manufactured by Griffith Labs. Lawry's Foods, Inc. Stretch; Milwaukee Seasoning Laboratories, Inc. MSL TVP, Flavormate; National Institutional Food Distributor Associates, Inc. NIFDA; National School Pak; North American Laboratory Co., Inc. Magic Menu; Nugget Distributors, Inc. Nugget; Sysco; Williams Foods, Inc. Williams Expand; The Golden Dipt Co. Golden Dipt/DCA.

Note: The above product mixes are used in the Type A school lunch. Typical mixes are for chili mix, meat loaf or meatballs, patty mix, pizza sauce, sloppy joe, spaghetti sauce, or taco filling. The name of the manufacturer of the textured soy protein ingredient is given for each. Address: Farmer Cooperative Service.

1841. Woollen, Anthony. 1976. The secret of solnuts. [A nut

© Copyright Soyinfo Center 2014

analogue from soybeans made by Solnuts BV of Tilburg]. *Food Manufacture* (*London*) 54(1):55, 57. Jan. [1 ref]
• ***Summary:*** This "nut analogue from soybeans has tremendous possibilities in bakery and confectionery products." The plant, very similar to one operating in the USA, was built in Tilberg under the supervision of Mr. Jim Becker and was originally scheduled to come on stream in August 1977. But initial teething troubles delayed the start and it was not until November 1978 that the plant began to produce Solnuts of the quantity required. Now, after an investment approaching £1M, the plant is producing about 1,600 tons/year. When designed capacity is eventually fully utilised, production is expected to be between 8,000 and 10,000 tons/year.

Jim Becker, an American, developed/invented a method of preparing and roasting soya beans. The company director is Mr. F. van der Marel. Several important contracts have been obtained to supply major food manufacturers in Holland, Germany, Switzerland, Austria, Spain, Greece and the UK, including in the last-named Kelloggs and Granose Foods. Holland and Germany are where the company's main markets are at present. The final composition of the product is: fat 19%, protein 47.4%; carbohydrate 3.7%, fibre 3.6%, ash 3.6%, and moisture 2%. The big advantage of Solnuts over any other soya product is their texture. The first Solnuts became available in the course of 1978.

1842. Yim, Susan. 1976. One man's bread, another man's tofu. *Star-Bulletin* (*Honolulu, Hawaii*). Feb. 12. p. D-1, D-2. [1 ref]
• ***Summary:*** About the work of William Shurtleff and Akiko Aoyagi. A photo shows the two holding their *Book of Tofu.* "Five thousand copies of the book came out in December [1975], and all were sold in a week. There will be a second printing soon." During Shurtleff's first year in Japan, in 1971, he lived in Kyoto on 30 cents a day. His key source of protein was tofu.

"They will present a lecture tonight at 7:00 at the Kailua Seventh-Day Adventist Church. They will speak again tomorrow night at 7 at the University of Hawaii's Kuykendall Hall." Address: Star-Bulletin writer.

1843. Shurtleff, Barbara R.; Hills, Sandy. 1976. Ledger of book sales and expenses, related to *The Book of Tofu.* 790 Los Palos Manor, Lafayette, CA 94549. 31 p. No index. 20 cm.
• ***Summary:*** Barbara ("Bobbie") Shurtleff started this ledger on 2 Feb. 1976 to keep track of the name, address, date of order, and amount received from sales of the newly published *Book of Tofu* by William ("Bill") Shurtleff (her eldest son) and Akiko Aoyagi. Pages 1-21 are in her very clear handwriting and cover sales through 20 July 1976. Some sales are to friends of the Shurtleff family, but most are to people interested in tofu, and many of these live in Hawaii where Bill and Akiko did two public programs about tofu in mid-February (Feb. 12th–tofu class for Seventh-day Adventist group hosted by Naomi Yamashiro, 80 attend; Feb. 13th–University of Hawaii's Kuykendall Hall, hosted by David Lee "Kalm" Sukowske, 140 attend).

Among the book buyers are: Feb. 12–Harry W. Miller [Loma Linda Foods], 11384 Norwood Ave., Riverside, California. Feb. 18–Nancy Arakaki, Kaneohe, Hawaii. Feb. 18–Naomi Yamashiro, Kailua, Hawaii. Feb. 26–Quong Hop & Co. March 3–San Francisco Vegetarian Society (Dixy Mahy, 10 books wholesale, $4.17 each = 40% discount). March 3–Lafayette Natural Foods (10 books wholesale). March 4–The Wok Shop, San Francisco (Albert Chan, 25 books wholesale). March 4–Rising Sun Natural Foods, 440 Judah St., San Francisco (6 books). March 8–East-West Academy, Effie Chow, 33 Ora Way, San Francisco (100 books wholesale). March 8–Dharma Publishing Bookstore, Nyingma Meditation Center, 5856 Doyle St., Emeryville (10 books wholesale). March 10–David Lee Sukowske, 1923 Keeaumoku St., Honolulu. March 30–Carmelite monastery, Kaneohe, Hawaii. April 23–Wo Chong Co., 101 16th Street, San Francisco. May 10–Kinokuniya Japan Center, 1581 Webster St., San Francisco. June 7–Ted Nordquist, 1536 Versailles Ave., Alameda (20 books, wholesale). June 11–Dr. Harry W. Miller (send 1 book to India). June 17–Winston Lo, Hong Kong Soya Bean Products Co. Ltd., 52-54 Hoi Yuen Rd., Kwun Tong, Kowloon, Hong Kong.

Pages 22 and 23 list itemized expenses from 28 Sept. 1976 to 21 Dec. 1976. Entries from Sept. 28 to Oct. 8 are in Bobbie's handwriting, whereas those from Oct. 9 to Dec. 21 were written by Sandy Hills. Bobbie died on 15 Oct. 1976 of cancer of the colon.

Pages 25-31 continue listing sales of *The Book of Tofu* from 29 Sept. 1976 to 19 Oct. 1976; they are similar in format to pages 1-21, with entries from Sept. 29 to Oct. 8 in Bobbie's handwriting. Subsequent entries were written by Noralee and Sandy Hills. The last 1½ pages of entries are undated.

The following is a brief chronology of events related to Bobbie, Bill, and Akiko during late 1975 and 1976.

1975 Sept. 15–Bill and Akiko return to California from Japan; they stay with Bobbie at 790 Los Palos Dr.

Oct. 25–They do their first real "Tofu Class" at Westbrae Natural Foods in Berkeley. About 14 people attend.

October 2-6–The three visit Ananda community then Lake Tahoe together. Nov. 23+ The three put on a tofu class at the Esalen Institute in Big Sur, spend the night at Esalen as guests of Michael Murphy, visit Emile Norman at his home in Big Sur, then drive to Los Angles and back.

Dec. 2–Bill and Akiko put on a big tofu class in Bobbie's home, followed by 6 other tofu classes in central California.

Dec. 10–They hold a family party and reunion at the family home to announce the publication of their *Book of*

© Copyright Soyinfo Center 2014

Tofu–which arrived two days later. Soon orders for books began to arrive.

1976 Feb. 10–Bill and Akiko return to Japan, via Hawaii, leaving Bobbie alone at 790 Los Palos. In Hawaii they did several tofu programs and asked Bobbie to take orders for books.

March 19-April 10–Bobbie takes a group trip to the Galapagos Islands (Ecuador), Bogota and Cali (Colombia), and the Andes.

May–Bobby has a large malignant tumor removed from her colon at Peralta Hospital in Oakland.

July–Bobbie and her friend Niki spend 10 days together at the Shurtleff honeymoon cabin at Lake Tahoe.

Sept. 29–Bill and Akiko leave on their Tofu & Miso America Tour. Bobbie attended their first class in San Rafael. As they said good-bye (for the last time) Bobbie said, "Have fun on the way." Address: Lafayette, California. Phone: 283-3161.

1844. Drachenberg, Frederick G.; Allred, Paul E. 1976. Method of making soy milk. *U.S. Patent* 3,941,890. March 2. 6 p. Application filed 23 Oct. 1974. [3 ref]
• ***Summary:*** Dehulled soybeans are first cooked in a microwave oven for a long enough period of time to destroy the trypsin inhibitor present in the beans, but not long enough to roast the beans. After being milled with water, suitable enzymes are added to the slurry to dissolve or partially reduce in size particles which would otherwise form sediment in the finished product. Address: 1. 11674 Valverde, Riverside, California, CA, 92505; 2. Box 373, Loma Linda, CA, 92354.

1845. Clayton, Hugh. 1976. Vegetable protein: A new ingredient in the British diet. *Times* (*London*). March 19. p. 19, cols. 4-8.
• ***Summary:*** "Students of propaganda will find an interesting field for study in the debate about the use of textured soya protein where only meat was used before. Farmers and butchers are pursuing a loud campaign against 'moc meat' [mock meat] and appear to be winning the argument."

Representatives of the National Farmers' Union (NFU) have "spoken darkly about the 'disquieting reports' about the long-term effects of using" textured vegetable protein (TVP). "The soya lobby is less vocal but no less influential." Since 30% TVP is now allowed as a meat extender, some of Britain's largest meat processors, such as Unilever and Spillers, now sell catering packs of TVP.

The retail market was harder to crack. Nestlé, the first to jump in, "used the prestigious and long-standing Crosse & Blackwell label as a vehicle for a meat extender." A table shows companies that followed Nestle's lead with tinned [canned] products: Cadbury Schweppes (Cadbury's Soya Choice, canned chunks in beef gravy, 15 oz for 30*p*. The product contains 6% by weight of beef fat). S. Daniels, a distributor of Danoxa hams, sausages, and tinned stew (Danoxa Kesp Curry, 15¼ oz for 30*p*. Based upon the Cortauld spun protein product Kesp). Spillers (Tyne, large stewed steak, 43½ *p.*). Unilever (Walls 15 oz stewed steak with gravy, 46 *p.*). RHM (Chesswood 15 oz curry with beef, 38*p.*). Allied Breweries (Appleford, 15 oz meatless steak, 36*p.*)

Two companies sell canned, precooked beans in sauce: Allied Breweries (Delicia 10 oz soya beans in tomato sauce, 24 *p.*). Heinz (Heinz 20 oz baked beans in tomato sauce, 19½ *p.*). Miles Laboratories, which markets TVP in Britain, sells an imitation bacon in the USA. Address: Agricultural correspondent.

1846. Juberg, Mort. 1976. 18 varieties of waffles and all nutritious. *North Pacific Union Conference Gleaner* (*Portland, Oregon*). April 19. p. 11.
• ***Summary:*** About Mrs. Edyth Young Cottrell of Clear Lake, Washington. For 30 years she taught home economics in the western Washington area. Then she changed occupations, and enrolling in Loma Linda University, "supposedly to take some refresher courses. She remained there for the next eight years as a research nutritionist in the school of Health." Now age 75, she has written *Oats, Peas, Beans & Barley Cookbook.* Many of her waffles are rich in protein, sometimes from peanuts or soybeans. She now resides at Rt. 3, Box 406, Sedro Woolley, WA 98284. A photo shows Edyth cooking.

1847. Churella, Helen R.; Yao, Benita Co; Thomson, William A.B. 1976. Soybean trypsin inhibitor activity of soy infant formulas and its nutritional significance for the rat. *J. of Agricultural and Food Chemistry* 24(2):393-97. March/April. [22 ref]
• ***Summary:*** The soybean trypsin inhibitor (SBTI) activity of five soy-based infant formulas was determined by a method specifically designed to test their relatively low levels of SBTI. All formulas, except one, contained 15% or less of the SBTI activity of a soy protein isolate source typically used in the manufacture of such formulas. Resterilizing two of these formulas did not significantly reduce residual SBTI activity.

Weanling rats were fed a variety of soy-based formulas ranging in processing from unprocessed to fully processed commercial products. "No pancreatic hypertrophy or hyperplasia was observed in any of the rats. Our results show that the level of SBTI in the soy infant formulas tested is low and of no nutritional significance for the rat."

The following commercial soy-based infant formulas were tested: Isomil (Ross Laboratories, Columbus, Ohio), ProSobee (Mead Johnson Lab., Evansville, Illinois), Neo-Mull-Soy and Mullsoy (Syntex Lab., Palo Alto, California), and Soyalac (Loma Linda Foods, Riverside, California). Trypsin inhibitor activity is expressed as trypsin units inhibited (TUI), and it was measured in trypsin units

© Copyright Soyinfo Center 2014

inhibited (TUI) per gram of protein. The soy protein isolate used to manufacture Isomil had an activity of 14.4. The activity of the five commercial products, each sold in concentrated form, ranged from 0.7 (for ProSobee) to 2.1 (for Mullsoy and Soyalac). The activity in ready-to-feed forms ranged from 1.6 to 8.1. Address: Ross Laboratories, Div. of Abbott Labs., Dep. of Product Development, Columbus, Ohio.

1848. Hartman, Warren E. 1976. Plant protein foods: From whence they came to where they are going? Paper presented at the American Chemical Society Symposium, "One Hundred Years of Agricultural and Food Chemistry–Challenges of Food Processing and Flavor: Past, Present, and Future." 20 p. April 7. Unpublished manuscript. [21 ref]
• ***Summary:*** Contains a detailed discussion of the work of Dr. John Harvey Kellogg, and other Seventh-day Adventist vegetarians, which greatly influenced Worthington. Their pragmatic approach led to the development of various meat analog products called "nutmeats." "Usually nuts were finely ground into a paste or nut butter and water was then added to produce an emulsion. To this emulsion was added flours, starches, cereals, or other ingredients. This white milk-like oil and water emulsion was then retorted or cooked to set up into a solid mass. This product could be diced or sliced for salads or used as a main entree. The texture of the resulting product depended mainly upon the degree of emulsification and the varying degree of particle sizes incorporated within the product.

Extracted wheat proteins or wheat gluten was also used as one of the basic raw materials for the early vegetarian protein products. The gluten or protein extraction process usually starts with a high protein hard wheat flour which is mixed with water to form a dough in a conventional dough mixer. This dough is repeatedly washed with water to remove the starch. The carbohydrate water is decantered off and the process repeated several times until the gluten reaches the desired protein content, typically around 72% protein on a dry basis. This dough-like elastic mass of gluten is cut into slices or cubes and cooked in boiling water where it expands and the protein simultaneously denatures, giving an expanded cellular chewy texture to the product. This product may be canned in a bouillon-type broth or may be ground through a chopper to simulate minced meat or hamburger. The wheat gluten also provided an elastic matrix for incorporation of nuts, grains, flours, legumes, and other vegetable material into a mass, when mixed vigorously at high speed with considerable shear for an extended length of time would yield a thin, string-like fibrous textured dough mass in which other materials could be incorporated. This product was also canned and cooked to produce a solid textured loaf-type product which served as a vegetarian entree, or was diced or ground for use in home recipes.

"Similar products are being manufactured today and wheat protein or wheat gluten is still an important basic raw material for its contribution to texture. The Worthington division of Miles Laboratories presently has a number of products based almost exclusively on wheat gluten which are peculiar, yet significantly textured protein products. Miles Laboratories also is becoming basic in the production of vital wheat gluten for utilization by industries throughout the world."

"Worthington Soyamel was the first soymilk-type beverage to be based on or formulated primarily from soy protein isolate." Also discusses spun soy protein fibers. Address: Worthington Foods, Worthington, Ohio.

1849. **Product Name:** [Soyalac {Soymilk} (Reduced Sugar, or No Added Sugar)].
Foreign Name: Soiyarakku (Gentô, Mukatô).
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1976 April.
Wt/Vol., Packaging, Price: 425 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Both products tasted by William Shurtleff in Hayama, Japan, at the home of Nahum and Beverly Stiskin while doing final proofreading and editing on *The Book of Miso.* 1976. May 19-23.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Gentô was introduced in April 1976 and Soiyarakku Mukatô in June 1976. They are both now sold by Saniku Fuuzu in a 425 gm can and distributed nationwide.

1850. Garino, David P. 1976. Foreign demand for soy protein is seen tied more to economics than nutrition. *Wall Street Journal.* May 17. p. 28 (East). Or West Coast ed. p. 22.
• ***Summary:*** "Foreign countries are developing quite an appetite for soy protein." Although soy protein is being used in an ever increasing number of foods, its main use continues to be as a meat extender and substitute, largely for economic rather than nutritional reasons. It generally takes 2-2½ lb of feed to produce one lb of chicken (live weight), 3½-4 lb of feed for one lb of pork, and 4-5 pounds of feed for one pound of beef–all live weight. So when feed prices rise, as they have in recent years, meat production becomes more costly and soy protein extenders look more attractive. Sales of soy protein isolates climbed 60% last year, following a gain of about 40% in 1974 according to Ralston Purina. In 1976 sales of textured soy flour in Europe are growing at 15-20% a year. West Germany doesn't permit use of soy protein in meat.

The percentage of disposable income spent on food is 18% in the USA, 25% in Western Europe, more than 25% in Eastern Europe, and about 40% in developing countries. Address: Staff Reporter.

1851. Gonzalez, Nicholas. 1976. Preventing cancer: You won't die of cancer if you never get it. And there are ways to reduce the risk. *Family Health* 8(5):30-33, 70, 72, 74. May.
• ***Summary:*** Lacto-ovo-vegetarian Seventh-day Adventists have lower cancer rates than the general population. Although heart disease is America's leading killer, we fear cancer the most. Last year 365,000 Americans died of cancer–1,000 every day. One out of every four Americans alive today will contract some form of cancer, and one out of four will die of it. But "cancer is largely a *preventable* disease, a disease of the way we live–a disease we can avoid. "'I think the most profound thing we've come to realize after years of cancer research,' explains Dr. Frank J. Rauscher, director of the National Cancer Institute, 'is that 90 percent or more of cancers are extrinsically induced. That means it's not your fate or mine to develop cancer simply because we're born people. Cancer occurs because of something we do–we eat certain foods, we drink, we smoke, we choose a certain way to live.' And the people who know most about cancer, the scientists and physicians who study and treat it, are emphasizing more and more not the search for a cure, but the need for prevention."

The fight against cancer began in earnest in 1937 when President Franklin Roosevelt signed the National Cancer Institute Act, creating the NCI with an initial budget of $700,000. In 1971 the fight escalated when President Nixon, in his State of the Union Message, announced plans for a greatly expanded war on cancer, with a greatly expanded budget. By 1975 NCI's budget was $691 million, and the total national research budget, including contributions from such private organizations as the American Cancer Society, and from state and local governments, was $900 million. But scientists believe that the public is misled in thinking that we will ever "conquer cancer" until individuals change the way they live. If we would eliminate cigarette smoking, at least 70,000 to 80,000 lives would be saved each year. Last year cigarette manufacturers spent over $250 million on advertising alone.

"Scientists now believe that the foods we eat may have an important influence–perhaps the most important–on cancer incidence around the world. For example, evidence indicates that the typical American diet, loaded with fat, sugar, and highly refined foods, is responsible for our high rates of intestinal and breast cancer. Our second and third biggest cancer killers respectively, they claim 50,000 and 30,000 lives a year."

1852. Klaw, Spencer. 1976. Pursuing health in the promised land: Clues to why your grandfather probably was, and your daughter probably is, an ovo-lacto vegetarian. *Horizon* 18(2):24-29. Spring.
• ***Summary:*** Americans are currently are pursuing the holy grail of perfect health with unprecedented intensity and passion. Gives a history of vegetarian and health food movements in the U.S., and tries to interpret the motivations of advocates of natural foods. Dr. William A. Alcott, the prominent Boston physician and prolific writer on hygiene, announced in 1850 at a vegetarian convention in New York that "a vegetable diet lies at the basis of all reform." Not long afterward Horace Greeley presided over a vegetarian feast whose honored guests included Amelia Jenks Bloomer and Susan B. Anthony.

William Alcott's cousin, Bronson Alcott, founded a short-lived utopian community named Fruitlands, which was run on strict vegetarian lines. Note: KQED-TV aired a program in early May 1992 on 19th century American utopian communities, titled "America Past" and produced by Jim Fleet. It had a 10-minute segment on Fruitlands, which was portrayed as a vegan community. The members ate only fruit and vegetables that looked to the sky/heavens (thus root vegetables were avoided), and they refused to use animals to plow their fields or as a source of wool. The women did most of the work. The community lasted for only about 6 months.

The English mystic Annie Besant wrote *Vegetarianism in the Light of Theosophy.* Sylvester Graham, a noted diet reformer and advocate of the use of whole grains, argued that the main thing wrong with meat was that it was bad for the eater. In the 1830's Graham hotels and boarding houses sprang up all over the East Coast from Boston to Philadelphia. The radicals of the day assembled over a cup of cold water and a slice of Graham bread to plan the future. In one such club Horace Greeley met and fell in love with his future wife. "Graham's views were enthusiastically ingested by Dr. John Harvey Kellogg, one of the founders of the breakfast food business. Dr. Kellogg also founded the Battle Creek Sanitarium [in Michigan], an enormously successful spa that earlier in this century attracted such oddly assorted notables as Johnny Weissmuller [Olympic gold medalist in swimming in 1924 and 1928] and Carrie Chapman Catt. Kellogg did not insist that his guests give up meat, but he did warn them that it was bad for their dispositions as well as their health. To make things easier for vegetarians, Kellogg invented some eighty grain and nut products, including a meat substitute called Protose, which was supposed to taste just like beefsteak, and one called Nuttose, which was supposed to taste like veal."

Other "health gurus" profiled include Emile Coué (1920s, mind over matter), Gayelord Hauser (1930s and 1940s, wonder foods), Carlton Fredericks (1950s, vitamins), Adelle Davis (1960s), Helen & Scott Nearing (1970s).

1853. Numbers, Ronald L. 1976. Prophetess of Health: Talk given at San Bernardino County Museum on May 29, 1976 (Website printout–part). www.ex-sda.com/experience_numbers.htm Printed 4 May 2004.
• ***Summary:*** Dr. Numbers has written: "The first serious and scholarly effort to see Ellen White's development as a

© Copyright Soyinfo Center 2014

'prophetess of health' in the full context of her social and spiritual milieu" (Edwin S. Gaustad, Univ. of California, Riverside).

Dr. Numbers now states in this talk: "I want to address myself to four questions: the (1) being, what was I really trying to say in this study? What do I see as the most important points? (2) What methodology have I used? (3) What were my motives? And (4) what has been my relationship with the Ellen G. White Estate.

Dr. Numbers taught the history of medicine to medical students at Loma Linda University. He wanted to "find out why a small group like the Seventh-day Adventists has become so committed to medical education and to health reform." He was equally interested "to discover the truth." Yet he was forbidden "to hold this meeting on the campus of an Adventist University." The history of his efforts to obtain documents from the Ellen G. White Estate, starting in the summer of 1972, is very interesting and revealing. He was discouraged from having an "outside" publisher publish his book. He was not allowed to browse documents in Ellen White's personal papers. "You must request a specific manuscript or letter. It is then brought to you if it is not restricted. You may read it, but you are not allowed to take notes." Most of the documents he requested were sent, but five were withheld because they involved "personal family matters."

One of the issues was vegetarianism. In 1908 [letter D-162-1908], "after a lapse of several decades Mrs. White once again enthusiastically embraced health reform and vegetarianism, and she suggested to the President of the General Conference [Elder A.G. Daniells] that Seventh-day Adventists now begin to circulate an anti-meat pledge analogous to the temperance pledge that had gone over so well in the church." He responded that this would be impractical, since it would undoubtedly split the church in two.

Dr. Numbers then summarizes the basic content of each document that Arthur White and the White Estate would not release. For example: "(1) a passage from a letter (L-6-1864) describing James Caleb Jackson's physical and phrenological examination of Edson and Willie White, the two sons of Ellen White." (4) An "account written by Ellen White on the 1870s in which she describes a vacation trip to the Rocky Mountains in which she and the members of her family dined on wild duck..."

Not "one of the documents not released was related to any revelation of personal sin in an individual's life, the Ellen G. White Estate's only publicly stated reason for withholding material. The concern was solely in protecting a certain image of Mrs. White carefully constructed by the White Estate over a period of many years." The "officials of the White Estate had repeatedly stated that the Trustees had no interest in restricting significant historical data..."

In Sept. 1974 Numbers sent Elder White (of the White Estate) a copy of his revised manuscript "asking him for corrections and criticisms. At the same time he sent a copy to the editors of Harper & Row, who had previously agreed to publish this volume when it was completed. There followed great conflict–which is described in detail. The trustees made extensive criticisms.

The talk is followed by questions from the audience and answers.

After Ellen White's vision on health in June 1863, she traveled about the country preaching on health reform. Repeatedly individual Seventh-day Adventists came to her and said, "My, your views are so similar to the writings of Dr. [Russell] Trall and Dr. [James Caleb] Jackson. Were you familiar with them?" The questions of "literary dependence" and citing sources are discussed at length. Dr. Numbers states he is sure that plagiarism, "the conscious borrowing of material from others without giving credit," was "not morally condoned in the 19th century."

1854. **Product Name:** [Breakfast Cereal].
Manufacturer's Name: Alimentos Colpac.
Manufacturer's Address: Apartado 407, Navojoa, Sonora, Mexico.
Date of Introduction: 1976 June.
New Product–Documentation: *Soybean Digest Blue Book.* 1976. p. 34. Also listed in 1980.

1855. Ruys, J.; Hickie, J.B. 1976. Serum cholesterol and triglyceride levels in Australian adolescent vegetarians. *British Medical Journal.* ii(6027):87. July 10. [5 ref] Address: 1. Scientific officer; 2. Prof. of medicine. Both: Medical Professorial Unit, Univ. of New South Wales, St. Vincent's Hospital, Sydney, Australia.

1856. Boyer, Robert A. 1976. Early history of the plant protein industry. *Cereal Foods World* 21(7):297-98. July.
• ***Summary:*** "Shortly after the turn of this century, there appeared on the American scene one of the first examples of a food product based on a processed plant protein. Dr. John Harvey Kellogg, in an effort to add more vegetable protein foods to the menu of his famed Battle Creek Sanitarium [in Michigan], developed a method for producing wheat gluten from ground wheat and converting it into an attractive entree resembling a cut of meat."

Yet long before, people of the Orient have obtained a major portion of their protein from bean curd or tofu. There follows a good history of modern soy protein development from 1930 to the present. In the "late 1950s, the first edible soy protein plant went on stream in Chicago [Illinois, where Central Soya made Promine]. This was followed a few years later at another edible plant in Louisville, Kentucky [owned by Ralston Purina Co.]. Soon products began appearing on the marketplace listing 'soy protein' or 'vegetable protein' in their ingredient lists... This triggered a rapid growth in

© Copyright Soyinfo Center 2014

the plant protein industry starting in the mid-1960s... To summarize, it can be said that the first 65 years were the hardest for this new industry, but after that the progress was irresistible. Nothing is as powerful as an idea whose time has come."

A portrait photo shows Boyer, who "attended the Edison Institute of Technology before serving as Manager of the Soybean and Chemurgic Laboratory, Ford Motor Co. from 1931 to 1943. He spent the next six years as Director of Research for Drackett Co. Boyer worked as a Protein Consultant for the next 13 years with such companies as Swift and Co., Unilever Ltd., Worthington Foods Inc., Nabisco, General Mills and Ralston Purina. In 1962 he joined Ralston Purina as Protein Scientist. He served in this capacity until his retirement in 1971, at which time he assumed his present position." Address: Protein Consultant, Miles Laboratories, Inc., Elkhart, Indiana, 46514.

1857. Rosenfield, Daniel. 1976. The changing climate for plant protein foods: 1965-1976. *Cereal Foods World* 21(7):302-03, 305-06, 338. July. [11 ref]
Address: Dir. of Nutrition Affairs, Dep. of Nutrition, Miles Laboratories, Inc., Elkhart, Indiana 46514.

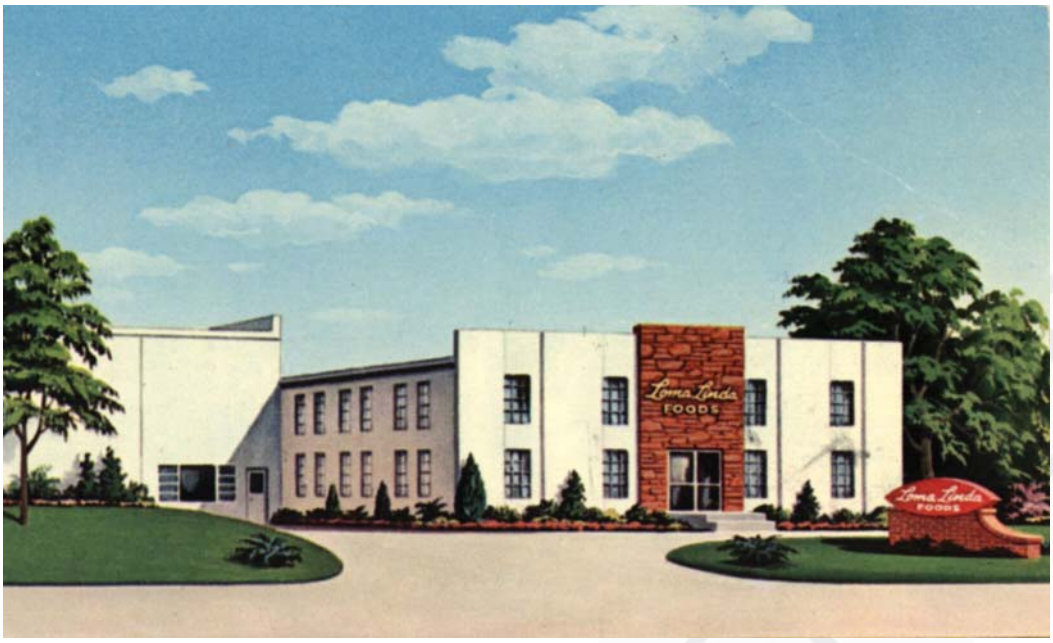
1858. *Time.* 1976. Prophet or plagiarist? 108(5):43. Aug. 2. [1 ref]
• ***Summary:*** In 1847 in Topsham, Maine, Ellen Gould White, age 19, fell into a trance in the presence of friends and had a vision in which Jesus allowed her to see the tablets on which the Ten Commandments were written. "At the very center in a halo of light was the Fourth Commandment, requiring observance of the seventh day. This meant, an angel explained, that Saturday must be kept as the Christian Sabbath."

Following the Great Disappointment of 22 Oct. 1844 among the Millerites, some continued to believe that Christ's Second Advent was immanent. Among them was Ellen White, whose conviction grew out of several visions as vivid as the one about the Fourth Commandment.

"Ellen White is far less well known today than her contemporary Mary Baker Eddy, the founder of Christian Science. But the Adventists–who still expect the Second Coming to occur shortly–have grown into a remarkable denomination, with 2.5 million members in 185 countries, including 480,000 in the U.S. On average, Adventists contribute more to their church ($486 a year per capita) than do members of any other U.S. denomination. Worldwide, they operate an extensive system of 4,218 schools and 421 medical institutions."

Among White's 2,000 or so visions, many concerned diet. "Belief in White as divinely inspired, a tenet for Adventists since her death in 1915, is now under scrutiny. In *Prophetess of Health: A Study of Ellen G. White* (Harper & Row). University of Wisconsin Historian Ronald L. Numbers contends that many of White's supposedly unique revelations simply reflected contemporary views, and may sometimes have been plagiarized from the writings of 19th century health reformers and diet faddists. Numbers, 34, formerly taught at two Adventist colleges and is the son of a minister and grandson of a president of the sect."

Among those whose writings influenced White, says Numbers, were Sylvester Graham, and Dr. John Harvey Kellogg, "the most prominent Adventist of his time" and a famous physician. "Searching for palatable vegetarian foods, Kellogg invented both peanut butter and corn flakes. Though official Adventist historians say the records are ambiguous, Numbers states that Kellogg offered his church the patent rights to wheat flakes and corn flakes, which would have made it fabulously wealthy. But White rejected the idea as tying up too much time and talent in manufacturing mere temporal foods. Kellogg finally had to leave the church after he questioned the infallibility of White's visions.



"Adventist leaders consider Numbers' book and important challenge to the faith. In June their North American president, Neal C. Wilson, sent his pastors a letter warning against those who question whether White was 'a channel of God's supernatural revelation of Himself to his people.' The church then provided its ministers with a 23-page booklet of rebuttal against Numbers' book. The booklet reminds Adventists of Ellen White's prediction that 'the very last deception of Satan will be to make of none effect the testimony of the Spirit of God.' It goes on to suggest that 'the enemy of souls will use such a book to accomplish this very work.'"

Photos show Ellen G. White, Sylvester (Graham Crackers) Graham, and John (Corn Flakes) Kellogg.

1859. Anderson, Sylvia. 1976. Re: Tofu made from soy flour on The Farm in Summertown, Tennessee. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 12. 2 p. Typed.
• ***Summary:*** Before Sylvia went to live on The Farm in Summertown, Tennessee, in June 1971, she had never heard of tofu. She first saw firm, pressed tofu in cakes about a year ago. The tofu they made on The Farm was a staple of her diet and one of her favorite foods. This was made from soy flour, and all the pulp [okara] was left in; it was squeezed to a roundish in cloth as the last step rather than being pressed into cakes. She suggests it be called "Tennessee Farm Tofu" or "Squeezed Tofu." It may be a new invention.

"Here's how it came to be: Stephen and his students gave up dairy (cow) products before or during the Caravan, and in the early days of The Farm folks were into commercial soy products like Soyagen and Soyamel (powdered soymilk, made by Worthington Foods) and Fearn's Soya Powders. The Farm store bought and distributed soy powder (Fearn's, I guess), from which we made cardboard tasting soymilk and chalky squeezed tofu

© Copyright Soyinfo Center 2014

from directions in *Ten Talents* (by Frank and Rosalie Hurd, 1968), which was The Farm's cooking scripture of that era.

"As priorities began to get shuffled around and we started growing our own soybeans, soy flour ground in The Farm mill replaced the old soya powder, and as the soy dairy got together, folks stopped making [soy] milk at home, but they kept on making tofu at home, converting the old soy powder recipe to soy flour. At first we strained the pulp out of the milk before we solidified it, but that meant double straining, and you never could get all the very fine flour-pulp out anyhow, so somewhere along the way we tried it without straining out the flour and found that it made fine 'tofu'–by our standards, which were certainly far from those of a tofu master. But this kind of tofu has become a staple in the diet of several thousand people in America by now... And I'm teaching folks her in New Jersey how to make it as fast as I can... I've tried your homemade tofu method and its fun but a whole lot more energy-expensive than the method I'm used to, so I feel inclined to use it only for special occasions, and use the Tennessee Farm method for my every-day tofu cooking.

"So what I'm pushing here in New Jersey is this new American folk food... People here are digging it and wanting to know how to make it. I've been giving small demonstrations in people's homes quite a bit lately, and have at least three more scheduled this month. Two of these will be at Mormon church ladies' meetings. I didn't realize until recently, but the Mormons have a dietary teaching that goes: 'Yea, flesh also of beasts and of the fowls of the air, I, the Lord, have ordained for the use of man with thanksgiving; nevertheless they are to be used sparingly; And it is pleasing to me that they should not be used, only in times of winter, or of cold, or famine' (*Doctrine and Covenants*, SEct. 89:12-13). So the Mormon ladies in the area want to know how to feed their families soybeans!

"Here's a recent quote from Stephen: 'We *are* our brother's keeper. And our brother is the population of the planet.'" Address: 109 West Park Ave., Pleasantville, New Jersey 08232.

1860. Howes, Charles. 1976. Re: Please send me the price of The Book of Tofu, II... (Postcard). Postcard to Mr. William Shurtleff, Sept. 27. 1 p. With signature.
• ***Summary:*** "... Your address was given me by the Autumn Press." An illustration on a 3½ by 5½ inch color postcard shows a front view of the Loma Linda Foods factory in Mount Vernon, Ohio.

Note: This factory was built by Dr. Harry Miller and his sons, then transferred to Loma Linda Foods. Address: Loma Linda Foods, Eastern Division Factory, Box 388, Mount Vernon, Ohio 43050. Phone: -.

1861. Mayer, Jean. 1976. TVP: Can you tell the meat substitutes from the 'real' thing? (Only chickens, pigs and cows know for sure)! *Family Health* 8(9):40-41, 69. Sept.
• ***Summary:*** Discusses TVP and soy-based meat analogues, their history, how they are made, and reasons for eating them. These foods are an outgrowth of the "extenders" added to ground beef after the 1973 rise in meat prices. "Today, the canned and frozen-foods sections in many large supermarkets sport long rows of soy-based meat analogs (definition: something similar in function to, but differing in structure from, something else)–diced 'ham,' sliced 'bacon,' or 'chicken' or 'sausage' patties, 'cheese' bits, chili-con-TVP, and dried stuffing-like mixtures that can be shaped into 'meat' loaves or 'hamburgers' or used as extenders." The future for TVP looks bright. Some experts predict growth of 25-50% a year, "and its estimated that by 1985 extenders and

© Copyright Soyinfo Center 2014

analogues will comprise about 10 percent of the total meat consumed in the United States!"

But such foods are not new. For centuries, Chinese and Japanese have processed soybeans and wheat into products resembling meat and cheese. "Similarly, prototypes of many of today's vegetable-protein foods were developed at the turn of the century by Dr. John Harvey Kellogg for his Seventh-Day Adventist patients–all vegetarians–at the Adventist sanitarium in Battle Creek, Michigan... Determined to provide his patients with a nutritious, balanced and tasty vegetarian diet, he produced 'coffee' made from cereals, decaffeinated coffee and peanut butter. His first meat analogues, which he called 'nutmeats,' combined nut butters with water in an emulsion. Then flours, starches, and cereals with different textures and flavors were added to the line. These mixtures were cooked and served as entrées or diced and added to salads. Kellogg made the analogues by extracting gluten, the main protein of wheat, washing away the starch, and mixing the gluten at high speed with nuts, grains and beans. The result: a fibrous, stringy dough that could be cooked as a loaf, diced, and canned for making vegetable bouillon or ground like hamburger." Dr. Kellogg's peanut butter and breakfast cereals soon became popular across America. But the "meat substitutes" were sold only to a small, specialized clientele. A photo shows various meat analogues served on plates. Address: Prof. of Nutrition at Harvard Univ. from 1950 to 1976, is the new president of Tufts Univ. [Medford, Massachusetts].

1862. Phillips, R.L.; Kuzma, J.W. 1976. Estimating major nutrient intake from self-administered food frequency questionnaires (Abstract). *American J. of Epidemiology* 104(3):354-55. Sept.
Address: Loma Linda Univ., Loma Linda, California.

1863. Shurtleff, William; Aoyagi, Akiko. 1976. Tofu & Miso America Tour: 29 Sept. 1976 to 3 Feb. 1977 [Itinerary with two maps]. Lafayette, California: New-Age Foods Study Center. Unpublished manuscript.
• ***Summary:*** On 13 Sept. 1976 the authors bought a large, white 1975 Dodge Tradesman 300 van (used, with 40,000 miles on it). On one side Akiko painted in large, bold letters "Tofu and Miso America Tour 1976-77." Their *Book of Tofu* had been published in December 1975 and *Book of Miso* on 23 Sept. 1976. On Sept. 29 they packed the van full to the ceiling with their books on tofu and miso, plus Larry Needleman's tofu kits–and departed. In the van was an itinerary of hosts and places to which they had been invited and the route drawn on a large map of the USA.

This trip had four main purposes: (1) To introduce tofu and miso to America; (2) To introduce people to the many benefits of a meatless / vegetarian diet; (3) To encourage people to start soyfoods companies, especially tofu shops; and (4) To promote the authors' newly-published *Book of Tofu* and *Book of Miso.*

This itinerary includes the name and address of 64 people and organizations visited. Many of these were pioneers in the soyfoods and natural foods movements: Sept. 29–David and Kathleen Sandler, Robert Dolgin, Don Wilson, Farm Food Co. (San Rafael, California; we observed and recorded in detail how Don Wilson made tempeh and tempeh starter / inoculum, and how soymilk ice cream was made at Farm Food Co.). Oct. 1–Petaluma, California. Oct. 2–Josephine County Food Center, Grants Pass, Oregon. Oct. 3. Heliotrope Natural Foods (Salem, OR). Oct. 4–West Bank Cafe (Corvallis, OR). Oct. 5. Visit Linda Shurtleff (McMinville, OR). Visit *Rain Magazine* (Portland, Oregon). They do an interview which is published in their Nov. 1976 issue. Oct. 6. Blake Rankin and Janus Natural Foods (Seattle, Washington). Oct. 7. Janus. Oct. 8–Luke Lukoskie and Sylvia Nogaki of Island Spring (Vashon, Washington). Oct. 10–Jack Grady, a macrobiotic (Spokane, WA). Oct. 13–Univ. of Minnesota. Oct. 14–Georgie Yiannias of Wedge Food Co-op and Ananda Marga (Minneapolis, Minnesota). Our largest class with 300 people. Oct. 15–Barbara ("Bobbie") Reinhardt Shurtleff dies of colon cancer at Alta Bates Hospital, Berkeley, CA. Oct. 15. Famine Food Co-op (Winona, Minnesota). Oct. 16–Bonnie Maroney of The Wisconsin Farm (Ettrick, WI). Oct. 19–Visit George Strayer and Larry Krueger of the American Soybean Assoc. (Hudson, Iowa). Visit David and Ann Tucker (Iowa City, Iowa). Oct. 20. Outpost Natural Foods (Milwaukee, WI). Visit Bountiful Bean Co-op. Oct. 21. Visit Dr. Danji Fukushima and Kikkoman Foods (Walworth, Wisconsin). Oct. 22–Visit Drs. Hesseltine, Wang, Wolf, Mustakas, Cowan at Northern Regional Research Center (Peoria, Illinois). Oct. 23–Morning class on commercial production for Les Karplus and 5 people at Vegetarian Incorporated (Urbana, Illinois). Oct. 23-24. Side trip to visit ADM and Staley (Decatur, IL). Oct. 24–Les and Debbie Karplus of Vegetarian Inc. (Urbana, IL). Oct. 25–Visit Dr. L.S. Wei of the Univ. of Illinois Dept. of Food Science (Urbana, Illinois). Evening program for Karplus in Urbana. Oct. 26. Purdue University (Indiana). Oct. 27–Chris Steele (Lansing, Michigan). Oct. 28–Mike Potter and Louis Howie of Eden Foods (4601 Platt Rd., Ann Arbor, Michigan). Oct. 29–Calico Market (Erie, Pennsylvania). Oct. 30–Visit Greg Weaver and Jay Thompson of Rochester Zen Center (Rochester, New York; Later Northern Soy). Visit Genesee Co-op. Oct. 31–Alternative Health Education Center (Rochester).

Nov. 1–Visit Arnold Karmody at Empty Cloud (Canandaigua, New York). Meet Dr. Keith Steinkraus (Geneva, New York). Nov. 2–Visit with Dr. Steinkraus at New York Agric. Exp. Station (Geneva, NY). Lunch together with his wife, Maxine. Nov. 3–Tom MacDonald at Hannibal, New York. Nov. 4–Ira and Kathy Leviton of Corncreek Bakery (South Deerfield, Massachusetts). Visit Laughing Grasshopper tofu shop just before it begins operation. Nov.

© Copyright Soyinfo Center 2014

5–Fritz Hewitt of Common Ground Restaurant (Brattleboro, Vermont). Visit Tom Timmins of Llama, Toucan & Crow (Brattleboro). Nov. 6. Shep Erhard (Franklin, Maine). Nov. 7–Ann S. Johnson, assistant manager of dining halls, Univ. of Maine (Orono, ME). Nov. 8–Visit Marine Colloids (Rockland, Maine). Nov. 10–Drive to Boston, stay with Nahum & Beverly Stiskin (Brookline). Nov. 13–Tofu & Miso program in Boston. Visit Erewhon Natural Foods (33 Farnsworth St., Boston, Massachusetts), Martha Trundy, Jeffrey & Gretchen Broadbent. Nov. 14–Visit to shops in Boston's Chinatown. Michio and Aveline Kushi give a big party in our honor at their home at 62 Buckminster Rd., Brookline, then take us out to dinner at the Seventh Inn. Nov. 15–Tofu-making class at a home in Boston. Nov. 17–Visit offices of *East West Journal.* Sherman Goldman conducts long interview, later published in Jan. 1977 issue. Misomaking class at home of Ken Burns. Nov. 18–Visit Joel Wollner in Cape Cod. Nov. 19–Radio show then program for Joel. Nov. 20–Peter Smith at Quaker group in Pennsylvania. Nov. 22–Visit Woods Hole, Massachusetts to study sea vegetables. Evening program at New Bedford, MA. Nov. 23–Stay with Seung Sahn, Sa Nim at Providence, Rhode Island Zen Center. Meditate and show students how to make tofu. Evening at Insight Meditation Center, Barre, MA, a Vipassana center in a former Catholic seminary, co-founded in 1976 by Jack Kornfield, Joseph Goldstein and 3 others. We have dinner, meditate with the sangha, and hear Jack talk about Vipassana. Nov. 24 Sit morning zazen with master and students at Providence zendo. Nov. 25–Thanksgiving. Akiko and I stay alone in a house near Hartford, Connecticut and taste a good tofu pumpkin pie. I read about seaweeds. We take a long walk in the countryside. Nov. 26–Program for Erewhon Natural Foods in Hartford (stay with Maria Orefice, owner of Garden of Eating restaurant in Hartford). Article in *The Hartford Courant* (Dec. 1). Nov. 27–Long River Food Coop in Connecticut. Nov. 28–Stay with Susan and Kirk Gershuny of Snowflower (Tivoli, New York). They plan to make soy ice cream soon. Nov. 29–Drive in Deep snow to the New York Farm in Franklin, New York. Stay in a big house they built. Nov. 30–Carl Bethage of the East West Center in Gardiner, New York. Also did a radio program.

1976 Dec. 1–Visit Frances Moore Lappé at her upstairs office in Hudson-on-Hastings, New York. Then visit her large home on the hillside. Dec. 1-5–We missed a program for Annemarie Colbin in New York City (partly because we feared our van would be burglarized on the street) so we stayed Dec. 1-5 at the luxurious home of Leo S. Nikora (Niki; Bobbie's friend). I work on writing *The Book of Kudzu.* Dec. 6-7. Program for 40 people (Hosts: Nancy N. Bailey and Robert Rodale) at Rodale Press (Emmaus, Pennsylvania); I am surprised they serve white sugar on their dining tables. Dec. 8–Tim Snyder of Ecology Co-op in Philadelphia. Dec. 9–Stay at home of Sylvia Anderson in Pleasantville, New Jersey and do a program upstairs in a modern university. Study magnificent photos of Native Americans by Edward S. Curtis. Dec. 10–Visit Jay and Freya Dinshah of the North American Vegetarian Society (Malaga, New Jersey); their poor vegan child has bowed legs. Dec. 12–Cindy Blouse in Dallastown, Pennsylvania. Dec. 13–Visit Laurelbrook Foods, a natural foods distributor in Forest Hill, Maryland. We meet Rod and Margie Coates. Dec. 14–Big program hosted by Ella May Stoneburner and Seventh-day Adventists near Washington, DC. Dec. 15–Michael Rosoff (who ran the East West Center in Washington, DC) planned to host a class in a DC church. After we witness a robbery, we are afraid to leave our van on the street. So we do a scaled-down program in the home of Murray and Pam Snyder, which was the East West Center in Baltimore, Maryland. Visit Laurelbrook Foods Warehouse #2 in Durham / Chapel Hill. Dec. 16–Roanoke Food Co-op in Copper Hill, Virginia. Dec. 17-18–John Shuttleworth and Jim Morgans of *Mother Earth News* (Hendersonville, North Carolina). They do a long interview and take photos. Program at night. Note: An audio tape of Bill's talk at this program is filed with Soyfoods Center documents for 1976. Dec. 19–Chandler Barrett in Atlanta, Georgia.

Dec. 28 & 29–Workshop on tofu and miso at East West Foundation, Coconut Grove, Florida. Not on written schedule, but shown in two published articles. Handwritten trip notes show: "Dec. 27-29. Heartsong, Miami. Bob & Toni Heartsong, 6051 S.W. 46th Terrace, Miami, FL 33155. Was this also related to Mary Pung, who flew from Florida to attend one of the programs on our tour? At the time, she invited us to come to Florida–which was not on our planned route.

Note 1. This is the earliest document seen (April 2013) concerning the work of Ira Leviton or Tom Timmins with soy. One evening, before Shurtleff was scheduled to speak at Leviton's Corncreek Bakery, Leviton drove Shurtleff to see the Laughing Grasshopper Tofu Shop which was under construction on the second story of an old wooden building in the nearby town of Millers Falls, Massachusetts. Much of the equipment was made out of wood–including wooden curding vats and a wooden cider press. The company opened in Jan. 1977.

Note 2. This is the earliest document seen (April 2006) concerning Llama, Toucan & Crow in Brattleboro, Vermont.

Note 3. This is the earliest document seen (May 2006) concerning the forerunners of United Natural Foods, Inc. (INFI)–in the form of Llama, Toucan & Crow. Address: 790 Los Palos Manor, Lafayette, California 94549. Phone: 283-3161.

1864. Worthington Foods, Inc. Div. of Miles Laboratories, Inc. 1976. Why textured vegetable protein? The real facts about meat substitutes and how they contribute to balanced nutrition (Ad and booklet). *Mother Earth News* No. 41. Sept. p. 45. Also in No. 42. Nov. p. 57.

© Copyright Soyinfo Center 2014

• ***Summary:*** Shows peanuts in the shell, soybeans, and ears of wheat on a plank of wood. "Vegetable protein foods are made primarily from soybeans, wheat and peanuts... Worthington products average more than 16.5% of the U.S. Recommended Daily Allowance for protein in each serving... There are no animal derivatives of any type, no preservatives and no cholesterol. Ingredients are primarily from natural sources. Vegetable protein foods help make the transition to a non-meat diet quick and easy... Most Worthington products contain important minerals and vitamins (like B-12) that are sometimes lacking in vegetarian diets."

The booklet lists Worthington product names: 3 are dry, 18 are canned, and 25 are frozen. Address: Worthington, Ohio 43085.

1865. O'Donovan, C.J. 1976. Recent studies of lysinoalanine in alkali-treated proteins. *Food and Cosmetics Toxicology* 14(5):483-89. Oct. [25 ref]
Address: Miles Laboratories, Inc., Elkhart, Indiana 46514.

1866. Taylor, C.B.; Allen, E.S.; Mikkelson, B.; Kang-Jy, Ho. 1976. Serum cholesterol levels of Seventh-day Adventists. *Paroi Arterielle* 3(4):175-79. Oct. *
• ***Summary:*** Lacto-ovo-vegetarians had lower serum cholesterol levels than the general U.S. population; these levels showed no sex difference, but they increased with age and weight. Cholesterol levels in lacto-ovo-vegetarians were higher than those in strict vegetarians (vegans).

1867. Dahlke, Connie I. (Mrs.). 1976. Re: "Ten Talents" Cookbook. Letter to Mr. Wayne Darnell, Book Store Manager, Colorado Conference of SDA's, 2520 S. Downing, Denver, Colorado 80210, Nov. 5. 3 p. Typed, with signature (carbon copy).
• ***Summary:*** This a 21-point negative review of the well-known book; the reviewer has nothing good to say about it. Sample points are given below. The review begins: "Dear Mr. Darnell. "As per our recent conversation, I have reviewed the cookbook *A Good Cook, Ten Talents* by Frank and Rosalie Hurd. I have marked my comments in the copy I am sending you. However, I will summarize them here.

"1. Raw sugar and honey are consistently recommended, while brown and whit sugar (refined) are considered poison (p. 13). Nutritionally this is incorrect. Brown sugar has a very small advantage over honey which in turn has a very small advantage over white sugar. Raw sugar is not recommended because it is quite often contaminated."

"3. Raw foods are touted as being of much assistance in digestion due to the high enzyme concentration (pp. 213, 227). Such enzymes, it is claimed, help digest protein in the stomach (p. 227). The truth is, the body manufactures all enzymes needed for digestion. Raw foods have their place but not for the reasons claimed, nor in the amounts recommended. ("Ten Talents" recommends at least one-half to three-fourths of the diet should be from raw foods (pp. 33, 44)), and it says all nuts should be eaten raw (p. 213).

"4. Remedial properties of various herbs are listed which are not supportable with current scientific knowledge (pp. 170-175). No references are given."

"8. It is claimed that sunflower seeds, almonds and coconut are 'valuable sources' of Vitamin D (p. 20) when in fact they contain no vitamin D.

"9. Many false claims are made for Vitamin E (p. 21).

"10. Avocadoes are touted as being non-fattening and as having 'wonderful properties." (p. 260) They are also highly recommended as a wonderful first solid food for infants. (p. 53)."

"20. The medical profession is denounced as not consulting 'the manual that our Creator has given us" with the implication that physicians are not reliable sources of medical information (p. 26). (However, Hr. Hurd does not prove to be a reliable source of information himself.)

"21. Monstrous statements about the ingredients of ice cream (pp. 124-125) and objections to meat eating (p. 176) reveal emotionalism and poor judgment. Enough *good* reasons are available in these areas that there is no need to rely on questionable statements and unproven 'facts.'

"I could make additional comments, but I will refer you to the notations I have written in the book.–.

"I am sure that Mr. and Mrs. Hurd wrote this book with the best of intentions, however its merits are far outweighed by the gross misinformation that it contains. I therefore strongly recommend that this cookbook not be offered for sale by the Colorado Conference Office, nor by any other outlets [bookstores] authorized by the Seventh-day Adventist Church.

"Thank you for your consideration." Copies of this review were sent to:

"Mrs. Medford, Porter Memorial Hospital, Denver

"Ella Mae Stoneburner, Health Dept., Gen. Conf. of SDA's

"U.D. Register, Ph.D., Chairman, Dept. of Nutrition, Loma Linda

"Fonda Chaffee, Ph.D., Dept. of Home Economics, Andrews University

"Alice Marsh, Dept. of Home Economics, Andrews University

"Seventh-day Adventist Dietetic Association, Loma Linda

"Mr. and Mrs. Frank J. Hurd, Chisholm, Minnesota

Note 1. The Hurds quickly responded to this review by making many changes in their book before it was reprinted.

Note 2. Dr. Hurd is apparently not recognized as a doctor by the reviewer. Address: R.D., Chief Therapeutic Dietitian, Boulder Memorial Hospital, 311 Mapleton, Boulder, Colorado 80302.

1868. Carlson, J. 1976. New interest in soy milk. *Soybean*

Digest. Nov. p. 23-25.

1869. Miller, Harry W. 1976. Re: Your good work in introducing foods from the soya bean. Letter with Christmas card to William Shurtleff at New-Age Foods Study Center, Dec. 21. 1 p. Typed with signature.
• ***Summary:*** "My Dear Mr. Shurtleff–Your name comes to mind very often on account of our close association in the interest of nutrition to the people in America, and I feel you have done a wonderful job in educating the people regarding the value of using foods from Soya Beans. I think now that I have secured three of your Tofu books, but they are all gone, loaned and not returned, so I am ordering another to have sent to my home address on this envelope. I would be glad to mail a check for the exact amount including Postage so if you will send me that by return postage I will send a check for the same at once as I need some data you have given in same.

"Dr. Tojima Yamagata, Minister of Forestry and Agriculture for Japan, paid me a visit about a month ago and has supplied me with some recent pamphlets from his Dept. on Soy Milk. I have wondered if at anytime you are planning a trip to the Los Angeles or Riverside area. The book store here at La Sierra usually handles your book but they are all sold out. Therefore I am hastening to order from you direct, and always glad to hear from you, Yours very sincerely, Harry W. Miller, M.D."

This is a poignant letter and card. On 26 July 1977 Dr. Miller's wife, Mary E. Miller, (now a widow) sends the money Dr. Miller owed for *The Book of Tofu* he ordered and adds: "Please forgive my husband for this long delay, he died on Jan. 1 of this year. He went into the hospital on Nov. 19 of last year and never recovered from a severe heart attack at the age of 97." Address: M.D., 11384 Norwood Ave., Riverside, California 92505.

1870. Phillipps, Stanley N. 1976. The HF [health food] industry has come of age. *Health Foods Retailing.* Dec. p. 70-78, 238, 240, 242, 244, 246, 248, 250, 252, 254, 256-56.
• ***Summary:*** In this, the 40th anniversary issue of this publication, the author, a two-time president of the National Nutritional Foods Association (NNFA), reminisces about the history of the industry and the NNFA. He has been in the health food business for almost 56 years. In 1920 in Cincinnati, Ohio, he began selling the full line of 25 products from Battle Creek Sanitarium Foods. Hain Health Foods of California was one of his first suppliers. Figco was a big selling coffee substitute. Early lecturers who drew large audiences were Paul C. Bragg (1932), Gayelord Hauser (very high class), Edward McCollum, and Walter Hadson. A major industry change came at the end of the 1930s when new FDA laws prevented manufacturers or retailers from saying much about their products. The 1930s was the golden era, when people became aware of "the harmful effects of devitalized foods." The main product lines during the 1930s and 1940s were Paul Bragg's Live Vital Foods [sic, Live Food Products], Gayelord Hauser's Modern Products, American Dietaids (formerly Tam Products, Inc.), and Alberty Foods. *Better Nutrition* was a major health food magazine. Eugene Schiff was a pioneer who brought stores some of the first natural vitamins.

"The real booms in the industry came at many different times and I will mention a few of them. Gayelord Hauser's book, *Look Younger, Live Longer,* was one of the books that in 1950 did a terrific job on the five wonder foods, brewers yeast, blackstrap molasses, wheat germ, low-fat skim milk powder and yogurt. This book was the top seller on the non-fiction list for weeks and weeks, and it brought people into the health food stores for these and many other foods so that a real demand for products began to cause scarcities in these items. The business boom from this book was tremendous and it lasted for a long time...

Calories Don't Count, by Herman Taller, M.D., was another book that created an unbelievable demand for protein foods and low carbohydrate foods... Then came the Dextrose boom... The biggest boom and perhaps the most long lasting was the Adelle Davis books that brought people to the stores in droves seeking the natural vitamins and supplements.

"From her first book, written in story-book fashion, and called *You Can Get Well* in 1939, Adelle Davis became the queen of the health food movement.

"Hauser's books, Kordel's books, Bragg's books, Ancel Keys book, N.S. West, Mildred Lager, Dr. Wm. Howard Hay, and H. Curtis Wood, M.D., all wrote interesting and well studied books that brought lots of business to our stores across the nation. Linda Clark, Rachel Carson. Dr. Jarvis and many others have written books that bring customers to your door."

Concerning the history of the NNFA, in 1937 Anthony Berhalter had a consumer organization started called the American Health Food Association. Berhalter, a man of great foresight, operated a bakery and health food shop on North Clark Street in Chicago. He made fresh-fruit coffee cakes from whole wheat flour, which he procured from Elam Mills on Damen St. in Chicago. The Association's first convention was in the spring of 1937 in Chicago. About 150 people attended. Walter Hodson was one of the speakers. Companies that exhibited included Live Food Products [Paul Bragg], Alberty Products, American Dietaids (at that time known as Tam Products, Inc.), Battle Creek Scientific Foods, Chippewa Spring Water Co, Dietetic Food Co. of New York (Diamel), Elam Mills, Health Food Jobbers, H.W. Walker Company, Loeb Dietetic Foods, Modern Diet Products, Inc., Natural Health Products of New York, Nutty Brown Mills of Texas, Parkelp of California and Vegetable Juices Inc. of Chicago.

After the 1937 meeting a new organization was formed named the National Health Foods Association. Its first

© Copyright Soyinfo Center 2014

convention was in the summer of 1938 in Chicago, which then became its headquarters. The convention lasted 3 days and the 800 to 900 attendees listened to speakers like Paul Bragg and Edward McCollum. Thereafter conventions were held each year; retailers, manufacturers, and distributors all met. 1947 was a low point in the association's history, then Stanley Phillips stepped in and helped create a comeback. The 1948 meeting was in Coronado, California. In 1948 the Association was named the National Dietary Foods Assn. In 1964, with $30,000 in the treasury, the Association acquired its first full-time secretary. *Health Foods Retailing* magazine, published originally by Lelord Kordel and then by Jack Schwartz, became designated as the association's official publication. In 1966 Phillips resigned from the NDFA and helped start a new retailers organization, ADRA, which merged back into NDFA in 1970. The new organization was called the National Nutritional Foods Assoc. (NNFA). The 1975 convention at the MGM Grand Hotel in Las Vegas was a highlight of the NNFA in its heyday. Throughout its history, and especially in more recent decades, the industry's greatest adversary has been the U.S. Food and Drug Administration (FDA).

1871. Walker, Alexander R.P. 1976. Colon cancer and diet, with special reference to intakes of fat and fiber. *American J. of Clinical Nutrition* 29(12):1417-26. Dec. [74 ref]
• ***Summary:*** The author discusses colon cancer epidemiology in western populations (both past and present), immigrant populations, rural-urban populations in western and developing countries, and special populations. He concludes: "Colon cancer, rare in the past, and in developing populations, currently accounts for 2 to 4% of all deaths in Western populations. Evidence suggests the primary cause to be changes in diet... Evidence suggests that the following may have etiological importance: (1) the fall in intake of fiber-containing foods with its effects on bowel physiology, and (2) the decreased fiber but increased fat intakes, in their respective capacities to raise concentrations of fecal bile acids, sterols, and other noxious substances. For possible prophylaxis against colon cancer, recommendations for a lower fat intake, or a higher intake of fiber-containing foods (apart from fiber ingestion from bran) are extremely unlikely to be adopted. For future research, western populations with considerably lower than average mortality rates, e.g., Seventh Day Adventists, Mormons, the rural Finnish population, as well as developing populations, demand intensive study." Address: Human Biochemistry Research Unit, South African Inst. for Medical Research, P.O. Box 1038, Johannesburg, 2000, South Africa.

1872. **Product Name:** [Soy Flour, Textured Soy Flour {Extruded}, and Bread with Soy Additives].
Manufacturer's Name: Alimentos Colpac. Affiliate of Liga Mexico Pan-Americana Medio Educational A.C.
Manufacturer's Address: Apartado 407, Navojoa, Sonora, Mexico.
Date of Introduction: 1976.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: *Soybean Digest Blue Book.* 1976. p. 38 (meat analogs and misc.), 45, 50. The Liga Mexico Pan-Americana Medio Educacional A.C. is located at KM 13 Carratera Huatabampo, Apartado 502, Navojoa. Letter from Robert Folkenberg. 1983. Feb. 15. The company is presently producing about 10 tons/week of textured vegetable protein (textured soy flour). Talk with Gil Harrison of American Soybean Assoc. 1989. April 21. This is a Seventh-day Adventist company that is on the grounds of a college called Collegio de Pacifico (College of the Pacific). The company was set up to prepare vegetarian foods for the students, and then they went into business commercially. The food company is run by the students. They got the first laboratory model of the Wenger X-25 extruder in the early 1970s, and they still have. It was bought by Loma Linda from Wenger. They started out making a full-fat flour, which they ground to 100 mesh with an Alpine Contraplex mill. Then they started buying defatted soy flour from a local soybean crusher, and from that made the texturized products, both canned and dry: Weenies/hot dogs, canned soy milk, a cereal named Trisoy (an excellent wheat-soy like puffed wheat). They still make these products and going strong. About half of the products go into their own group of 11 Adventist schools around Mexico. College of the Pacific is the biggest of these.

1873. **Product Name:** [Canned Whole Soybeans].
Manufacturer's Name: Alimentos Colpac.
Manufacturer's Address: Apartado 407, Navojoa, Sonora, Mexico.
Date of Introduction: 1976.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: *Soybean Digest Blue Book.* 1976. p. 34. Last listed in 1982.

1874. Cedar Lake Foods. 1976. Wholesale price list. March 15. Box 116, Cedar Lake, MI 48812.
• ***Summary:*** The following products are listed: Chops, Vegeburger, Terkettes, Sloppy Joe, Soynut Loaf, Chili Burger, Chipetts, Tender Tips, Breakfast Links, and Hostess Cuts. Terkettes and Tender Tips (and perhaps some others) contain no soy. Address: Cedar Lake, Michigan. Phone: 517-427-5590.

1875. **Product Name:** [GranoVita Soyameat Balls; Renamed Soya Balls by 1983].
Foreign Name: GranoVita Sojafleisch-Kloesschen (Renamed Soja-Kloesschen by 1983).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.

© Copyright Soyinfo Center 2014

Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1976.
Ingredients: Soya protein, water, corn germ oil, egg protein, bread crumbs, spices, sea salt, wheat protein, wheat flakes, yeast, onions, potato starch.
Wt/Vol., Packaging, Price: 350 gm can wholesales for DM 6,4.
How Stored: Shelf stable.

of the prepared dish, three wieners on a plate with rice and vegetables against a brown background. Vegetarian. Ingredients: Water, soya bean oil, egg white powder, textured soya protein, tomato puree, onions, soya protein isolate, salt dextrose, spices, soya sauce, oatmeal, guar gum (E412), sodium alginate (E401), hydrolized vegetable protein, smoke flavor. Serving suggestion: Heat or roast Soya Wieners and serve with spaghetti or mashed potatoes. Sliced Soya Wieners are delicious in salads. Ideal for lunch and dinner. Dietary analysis available on request.

1880. **Product Name:** Granose Soyapro {Canned Slices} [Beef Like, Chicken Like, or Ham Like].
Manufacturer's Name: Granose Foods Ltd. (Marketer-Distributor). Made in Denmark by Nutana.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1976.
Ingredients: 1980: Soya protein, vegetable oil, egg albumen, hydrolised vegetable protein, salt, flavourings.
Wt/Vol., Packaging, Price: 400 gm can.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Manufacturer's catalog. 1980. April. "Slices of flavoured soya protein fibre canned in sauce. May be used hot or cold as slices or added in pieces to pies, casseroles, etc. Beef like flavour only contains in addition, wheat protein."

Form filled out and Labels sent by Granose Foods Ltd. 1990. June 13. States that the product was introduced in 1976. Made by Nutana. Subtitle is now, for example, "Chicken Like Flavour Soya Fibre in Brown Sauce." Can Label. 1990. 9.5 by 4 inches. Photo of the prepared dish on a plate with rice and vegetables against a brown background. "Ingredients: Water, textured soya protein, soya bean oil, egg white powder, starch, hydrolysed vegetable protein, yeast extract, vegetable stock, wheat flour, celery powder, salt, stabilizer. Serving suggestion: Cut into shreds and place in a stew of carrots and peas, sprinkle with parsley, serve with potatoes and a salad. Ideal for lunch and dinner."

1881. **Product Name:** Loma Linda Roast Beef Deli Slices (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1976.
Ingredients: Water, corn oil, soy protein concentrate, soy protein isolate, wheat gluten, egg whites, artificial flavors, potato flakes, salt, natural (vegetable) flavors, whole wheat flour, caramel color, dried yeast, onion powder, dextrose, oleoresin paprika, monosodium glutamate, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 8 oz paperboard box.
How Stored: Frozen.
Nutrition: Per 2 slices (2.0 oz–57 gm): Calories 150, protein 11 gm, carbohydrate 2 gm, fat 11 gm, cholesterol 0 mg, sodium 670 mg, potassium 120 mg.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1976, but this label is copyrighted 1985.

1882. **Product Name:** Loma Linda Chicken Deli Slices (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1976.
Ingredients: Vegetable proteins (soy protein concentrate, soy protein isolate, wheat gluten), water, corn oil, egg whites, potato flakes, artificial and natural (vegetable) flavors, salt, whole wheat flour, dried yeast, sugar, onion powder, spices, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 8 oz paperboard box.
How Stored: Frozen.
Nutrition: Per 2 slices (2.0 oz–57 gm): Calories 160, protein 10 gm, carbohydrate 1 gm, fat 13 gm, cholesterol 0 mg, sodium 330 mg, potassium 120 mg.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1976, but this label is copyrighted 1985.

1883. **Product Name:** Loma Linda Fried Chicken (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.

1885. **Product Name:** [Maxten, and Temptein {Extruded Textured Soy Protein}; Pro-Lean].
Manufacturer's Name: Productos Nutricionales S.A. (Pronasa). Subsidiary of Miles Laboratory.
Manufacturer's Address: A Garcia y Flo. Juarez, Celaya, Guanajuato, Mexico. Offices at Lago Muritz 84-A, Mexico 17, DF.
Date of Introduction: 1976.
New Product–Documentation: *Soybean Digest Bluebook.* 1976. p. 38; 1977. p. 37. Talk with Gil Harrison of American Soybean Assoc. 1989. April 21. This company was run by Donald Reese, a graduate of Stanford University. He made defatted soy flour, and cereal-soy blends. General Mills was the first company to make a defatted soy flour in Mexico. They had had their own little cereal-soy mixing plant. Their first experiments were done with a soy beverage (made from defatted soy flour and flavor) served to government dam workers. They probably started in the late 1960s and were definitely there by 1971. When they couldn't make it go, Don Reese purchased all the machinery from General Mills. He wouldn't let Gil Harrison into his plant on Lago Muritz in 1971. He made cereal-soy blends and a soy beverage, both containing sesame. He ended up making all the infant formulas for Mead Johnson and others. The plant finally closed over a labor dispute. He is still is in Mexico but is no longer doing soy.

1886. **Product Name:** Sanitarium Health Foods Canned Vegetable Protein Sausages.
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.

1891. Inprint Caribbean Ltd. 1976. Soybean cookbook: A guide to more nutritional cooking. Port of Spain, Trinidad: Inprint Caribbean Ltd. 48 p.
• ***Summary:*** After discussing the nutritional value of soybeans, this cookbook gives recipes, mostly for using whole soybeans, but also for making and/or using full fatted soyflour, soymilk, okara, and soynuts. Early in 1976 the publisher was "approached by representatives of the Chaguaramas Agricultural Development Project to edit and publish a soybean cookbook for distribution in Trinidad and Tobago. The German partners in the project at Chaguaramas were about to hand over the project to the Trinidad and Tobago Government, after six years of a cooperative effort, and it was felt that such a publication would make the project, and soya, more widely known to the people of Trinidad and Tobago." The cookbook was the idea and dream of Dr. H. Seidel, one of the German agricultural experts on the project. Publication costs were supported by local companies who advertised in the book and some of whose food products were listed by name in various recipes. Soy-related advertisers include Worthington Foods (via Trinidad Health Foods; p. 31) and Bontrae (via Quesnel & Fernandez; p. 32).

"Over the past four years in Trinidad and Tobago, through efforts at the Chaguaramas Agricultural Development Project (a cooperative venture between the Government of Trinidad and Tobago and West Germany), considerable success has been achieved in the production of this rich bean" (p. 6-7). Address: Trinidad.

1895. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: Loma Linda Foods. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 797-98.
• ***Summary:*** "A nonprofit corporation manufacturing and distributing health foods in the United States and Canada. It is owned and operated by the General Conference of Seventh-day Adventists for the purposes of (a) furthering by all proper means a better knowledge of the laws of healthful living, (b) manufacturing and selling healthful foods and related products, and (c) encouraging and supporting benevolent, educational, and religious enterprises of the SDA Church. The main office, factory, and headquarters are at 11503 Pierce Street, Riverside, California; the second factory (featuring the production of soy milk in liquid and powdered form) is on Wooster Road, Mount Vernon, Ohio.

"Products include vegetarian protein foods (canned and frozen), soy milk, cereal coffee, gravy mixes, and canned soy beans.

"History. Forerunner of Loma Linda Foods was the Loma Linda Sanitarium bakery, which began operation in 1905. It was called The Sanitarium Food Company and its plant was situated on Anderson Street in Loma Linda. At first it manufactured a variety of breads and wafers, but it soon added other health food items. On Feb. 6, 1933, the name 'Loma Linda Food Company' was adopted, and on July 1, 1935, the first articles of incorporation were filed for a perpetual, nonprofit organization with a 12-member board of directors... On Nov. 14, 1937, groundbreaking ceremonies for a factory building were held on a nine-acre site donated by the Southern California Junior College (now La Sierra College) at Arlington (Riverside). The new factory began operations on July 16, 1938, the main product being Ruskets, a flaked whole-wheat biscuit cereal, but later more than 30 other products were added, the main emphasis being upon the development and perfection of high-protein foods of vegetable origin. The company also distributed related food items processed and packaged by others under the Loma Linda Foods label.

"On Jan. 1, 1951, Loma Linda Foods took over the business of the International Nutrition Laboratories, Inc., Mount Vernon, Ohio, purchased from Harry Willis Miller, M.D. Charles Percy Miles was named manager. The Canadian Division of Loma Linda Foods was established at Oshawa, Ontario, in 1962, on a site donated by Oshawa Missionary College (now Kingsway College). Frank L. Wessely was appointed its manager. It was closed in 1965.

"Loma Linda Foods has afforded financial support to the Seventh-day Adventist Dietetic Association and has provided fellowships to selected postgraduates of the School of Dietetics of Loma Linda University. By Jan. 1, 1965, it had also contributed to the denominational mission program more than $300,000, through the Loma Linda Foods label-saving plan for Sabbath school Investment.

• ***Summary:*** This indispensable reference work, which is about 10% longer that the original 1966 edition, contains excellent short histories with some updated or additional financial and/or production statistics for the food companies.

A complete list (with city and country) of all SDA food companies is given at "Food companies."

New entries: World Foods Service (1968): "A department of the General Conference whose director coordinates the various phases of the denominational food production and marketing activities throughout the world field. Each division (except North America) has a world food service secretary to further the development of the food ministry within his area of operation.

At the Autumn Council of 1967 a health food department at the General Conference level was created. At the Autumn Council of 1968 this department was named World Foods Service.

"Secretary (until 1974) and Director: E.W. Howse, 1969- ." Address: Washington, DC.

1897. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: DE-VAU-GE Gesundkostwerk GmbH (German Health Food Factory, Ltd.). Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 389-90.
• ***Summary:*** "A firm in Hamburg, Germany, owned by the Euro-Africa Division, which makes a wide variety of products ranging from bread and cereal flakes to nut creams, vegetable spreads, meat analogs from soybeans, and diabetic food. The products are distributed through several channels, but mainly through health-food stores. The factory was

© Copyright Soyinfo Center 2014

founded in 1899 at Friedensau, near Magdeburg, and began operation in an old mill under the management of Augusto Pages. But since the factory was too small and too far from markets and sources of imported raw materials, such as fruits and nuts, to operate economically, a new plant was built at Hamburg shortly before World War I.

"In 1940 the political conditions in Germany forced the denomination to transfer the factory to four SDA trustees–Willie Luhr, the former manager, A. Vollmer, O. Schildhauer, and H. Niemann–who continued to operate it as a private company until the building was almost completely destroyed in an air raid on July 28, 1943. Some 12 months later the factory resumed production, but on a diminished scale.

"After World War II, in 1947, a new organization, formed by the former Central European Division, took over operation of the food factory from the remaining trustees. In 1966 a new building was constructed in north Hamburg, at Brodermannsweg 17. New soy products were developed, and a new sales force was organized. The rapid growth of sales, both in and outside Germany, made it necessary to lay plans for more space and greatly expanded facilities. Early in 1974 a new property was purchased in Lueneburg, an attractive industrial area of Germany. The yearly turnover exceeds $5 million."

Note: DE-VAU-GE is an abbreviation for "Deutscher Verein für Gesundheitspflege" (German Society for Health Care). They owned and used the brand GranoVita from at least 1958 until 1991. After that, the story becomes very complicated (See Drosihn 2010). Address: Washington, DC.

1898. Neufeld, Don F.; et al. ed. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: Granose Foods Limited (British Health Food Factory). Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 527-28. Or. p. 624.
• ***Summary:*** "A health-food factory situated in Stanborough Park, Watford, Hertfordshire, England, manufacturing several varieties of vegetarian protein foods and breakfast cereal biscuits, one of the latter being called Sunny Bisk. In 1973 business volume totaled £400,000, made possible by updating the processes with modern machinery.

"The SDA [Seventh-day Adventist] health food work in Great Britain was begun by a group of laymen who, under the name The London Health Food Company, purchased health foods from Dr. J.H. Kellogg, of Battle Creek, Michigan, and distributed them to the public. After a few years SDA leaders in Great Britain sent J. Heide, a master baker, to Battle Creek to learn how to make the foods. In 1899 a manufacturing company was formed under the name The International Health Association Limited, changed in 1926 to Granose Foods Limited. The company purchased a flour mill in Salford, near Redhill, Surrey, to serve as the factory... A fire burned the factory to the ground in 1900. Health foods were again temporarily imported from America, but gifts and loans from SDA's re-established the company in Birmingham.

"In 1907 all SDA institutions in England, including the food factory, were centralized at Stanborough Park, Watford. The factory has grown until in 1973 it had a floor space of approximately 44,000 square feet, and still further extensions were planned." Address: Washington, DC.

1899. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: Nutana (Danish Food Factory). Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 1015.
• ***Summary:*** "A health-food factory owned and operated by the Nordic Philanthropic Society in Copenhagen, Denmark. The factory was established by Dr. Carl Ottosen in 1898 to provide healthful food for the Skodsborg Sanitarium, which he had founded that year.

"In 1966 the factory moved from Copenhagen to the middle of Zealand between Koge and Ringsted.

"During the first years the chief items manufactured were bread made from whole wheat; various nut preparations, such as Nuttolene, Protose, and Granola; various malt preparations; and substitutes for coffee and tea. Today the newest product is soya-meat. Nutana produces products of corn, nuts, soybeans, and gluten, as well as vegetable margarine. The greatest sales are on vegetarian cutlets, soya-sausages, and pate. The total sales for 1973 was $750,000. Nutana provides Denmark, Faroe Islands, Greenland, Finland, Iceland, Norway, and Sweden with products."

Note: This is the earliest document seen concerning soy products in Iceland (probably). Nutana was selling soyfood products at this time, and it seems likely that some were going to Iceland. We know of no publications that clearly refer to soybeans or soybean products in Iceland, or the cultivation of soybeans there. Address: Washington, DC.

1900. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: Sanitarium Health Food Company. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 1285-86.
• ***Summary:*** "A chain of health food factories, wholesale branches, and retail shops in Australia and New Zealand, operated by the Health Food Department of the Australasian Division... Headquarters for the firm are at 148 Fox Valley Road, Wahroonga, New South Wales, Australia.

"Products include Weet-Bix, a flaked-wheat breakfast-food biscuit; cornflakes, and other cereal foods; Marmite, a yeast-extract flavoring; peanut butter; vegetarian meats and textured vegetable protein; and soybean milk

"In 1973 the company was operating 12 factories in Australia and New Zealand and 8 large wholesale branches. There were 68 shops and 4 cafes scattered in the main cities of the two countries; 11 of these retail branches were in company-owned buildings. Total net worth was

© Copyright Soyinfo Center 2014

approximately $24.2 million. Approximately 1,700 workers were employed, and the company's products were stocked throughout the grocery trade in Australia and New Zealand. A growing export trade was also being developed, principal markets being the Southern Pacific and nearby Asian countries.

"The gross annual revenue sales were $46 million. In 1973 the company realized a profit of $2.7 million, of which $1.362 million went directly to the treasury of the Australasian Division for mission use. In addition, nearly half of the general administrative expenses of the division are met by the company as operational costs.

"History. The motivating influence leading to the establishment of health food work in Australasia is found in addresses given by Mrs. E.G. White at the Brighton, Victoria, camp meeting in 1893 and in Melbourne, Victoria, in 1895. She spoke of different aspects of the work, and urged the leaders to move forward along medical lines, including manufacturing of health foods and establishing of vegetarian restaurants. In response the Australasian Union Conference on Oct. 31, 1895–Resolved that the Executive Committee be urged to take steps to commence such work in the various large cities of these Colonies by the establishment of both houses and depots for the supply of Health Foods, Sanitary Clothing, etc. as the way may open (Minutes, p. 30).

"In 1897 a consignment of wheat biscuits, granola, gluten, and caramel cereal [grain coffee] arrived from Battle Creek, Michigan. A small factory was rented in North Fitzroy, Melbourne, where the production of granola and caramel cereal was begun. The firm, registered April 27, 1898, was first known as the Sanitas Supply Company and then as the Sanitarium Health Food Agency. Processing was done under the direction of E.C. Halsey, from Battle Creek.

"The results of the Melbourne enterprise were not satisfactory, and Mrs. White counseled that the factory be moved to Cooranbong to be operated in conjunction with the Avondale School for Christian Workers (now Avondale College), to which the managing committee agreed... At this time the firm's present name was adopted. Operations at Cooranbong began in 1899.

"In all these early moves Mrs. White, who was residing in Australia at the time, gave important counsel for the health food work and shared in many of the major decisions relative to the development of the business. At first all sales of health foods were made through conference tract societies, but a retail shop was opened in Sydney in 1902 in association with the first vegetarian restaurant. However, the business was not financially successful, and by 1904, when the whole health food enterprise was heavily in debt, many of the denominational leaders favored closing it... Success was achieved, and in 1906 the first donation by the food company for island mission work was made.

"Between 1907 and 1913 shops and cafes were opened in Melbourne, Brisbane, and Adelaide, followed later by branches in Hobart and Perth. The manufacturing and wholesale sections of the business expanded rapidly in the period 1920-1935... In 1927 the company began to sell directly to retail grocery stores, bypassing the wholesale merchants.

"Two competing businesses were acquired in 1928 and 1929, respectively–Grain Products, manufacturers of Weet-Bix, and the Cerix Company, manufacturers of puffed cereals. These acquisitions widened and strengthened the company's activities.

"The development of the health food work in New Zealand paralleled that in Australia. Manufacturing began at Christchurch in 1900 in a small plant operated by E.C. Halsey, who had been transferred from Australia. Shops and cafes were opened in the main cities, and in 1921 a new factory was built in Christchurch under the management of A.J. Dyason. This was the beginning of an era of rapid growth, which has since continued. The Auckland and Christchurch factories of Grain Products, Ltd., were acquired in 1930. A third factory, in Palmerston North, began operation in 1952." Address: Washington, DC.

1901. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: Madison Academy and Madison Institutions. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 827-32.

• ***Summary:*** Madison Academy was the school on the senior high school level that came into being with the closing of Madison College in the summer of 1964.

Madison Institutions. Introduction. This "group of institutions situated at Madison, Tennessee, 10 miles northeast of Nashville, was owned and operated from 1904 to 1963 by the Nashville Agricultural Normal Institute Corporation independently as a self-supporting institution, but closely allied to the Seventh-day Adventist (SDA) church. Included were a school (grades one through 16), a sanitarium-hospital, a food factory and a farm of 800 acres.

"Ownership of the college and hospital was transferred to the SDA denomination in April, 1963. In 1964 Madison College was closed, and Madison Hospital became a Southern Union institution. Madison Academy continued to operate under the ownership of the Kentucky-Tennessee Conference. Madison Foods was turned over to the Southern Union Association in 1964, and became a division of Nutritional International Corporation (Worthington Foods). The food factory was operated on the Madison Campus until 1972 when it was moved to Worthington, Ohio."

"Origin of the School. The idea that bore fruit at Madison originated with David Paulsen, M.D. during a talk with Edward A. Sutherland. The latter was the first president of Walla Walla College, president of Battle Creek College when it moved to Berrien Springs [Michigan], and first president of Emmanuel Missionary College [in Berrien Springs]. The school was to be self-supporting by work from

© Copyright Soyinfo Center 2014

the students. In Oct. 1904 possession of a farm was secured and the first term of the Nashville Agricultural and Normal Institute (NANI) began with 11 students. E.A. Sutherland was president, an office he held until 1946."

Self-supporting "Units" Established. Madison was founded to train home and foreign missionary teachers. It soon began to send out self-supporting workers. Some units included vegetarian cafeterias and treatment rooms in several large cities of the South–Nashville, Knoxville, Louisville, Memphis (Tennessee), Birmingham (Alabama), and Asheville (North Carolina). "Wildwood Sanitarium and Institute, Wildwood, Georgia, is another self-supporting institution of note."

The Madison Rural Sanitarium was a major institution at Madison from the very beginning. The first physician there was Dr. Lillian Magan, wife of Prof. Percy T. Magan. In the early years, Mrs. Nellie Druillard (Mother "D") trained 3 nurses. After 1963 when the Southern Union assumed ownership, "Sanitarium" was dropped from the name and the institution was called Madison Hospital.

Industries. "The 20 campus industries provided employment as well as learning skills for the students, who could earn all their expenses. The sanitarium-hospital might have been considered the biggest industry and chief source of income for the school. The food factory and the large farm also provided employment and food to feed both students and staff as well as patients.

"As early as 1907 Mrs. White had advised operating a food factory in connection with the Madison school. A decade later, in 1917, a food factory was purchased and moved to the campus. The industry became known as Madison Foods.

"At one time 100,000 copies of the *Madison Health Messenger* were sent out each year. The food factory building, which also contained a bakery, was a five-story structure with a tower, and was situated on the east end of the campus. Madison Foods went through a series of managements until taken over by Worthington Foods in 1964, and in 1972 was moved to the main office in Ohio. In 1973 the building was put to use by the Madison School of Industrial Services.

"For many years the dairy herd was rated among the best herds in the State. There was also a poultry industry with 1,000 hens housed in seven modern units in 1948."

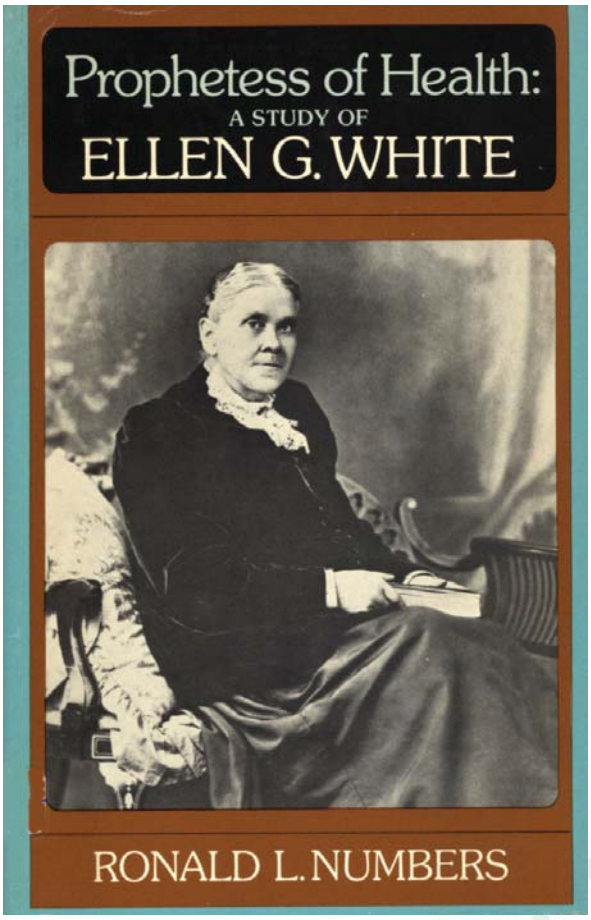
Madison College. "The name given in 1904 was Nashville Agricultural Normal Institute (NANI), indicating training in agriculture and 'normal' courses, or teaching. It was not until 1937 that the name became Madison College...

"In 1928 Madison was accredited as a junior college. In 1933 it was accepted as a four-year college by the Tennessee College Association. The first senior college class was graduated August 27, 1933..."

Madison College Graduates. "In 1960 the Madison College Alumni Association obtained a full-time executive secretary and editor of *The Madison Survey*, Mable H. Towery. A room was set aside on the ground floor of the Druillard Library for headquarters... *The Madison Survey* had been published continuously since 1919. At one time 21,000 copies of the *Survey* were sent out each month free of charge as the voice of Madison College."

Changes in the 1960s. Madison College had become heavily in debt. On November 6, 1963, the news came that the accreditation for the nursing education program at Madison College had been withdrawn by the State of Tennessee. This loss of accreditation, coupled with the heavy debt on the institution, ultimately caused the closing of the college on 1 Sept. 1964.

"Presidents: E.A. Sutherland, 1904-1946; T.W. Steen, 1946-1948; W.E. Straw, 1948-1950; W. Amundsen, 1950-1952; A.A. Jasperson, 1952-1957; W.C. Sandborn, 1957-1961; R.M. Davidson, 1961-1963; Horace R. Beckner, 1963-1964."



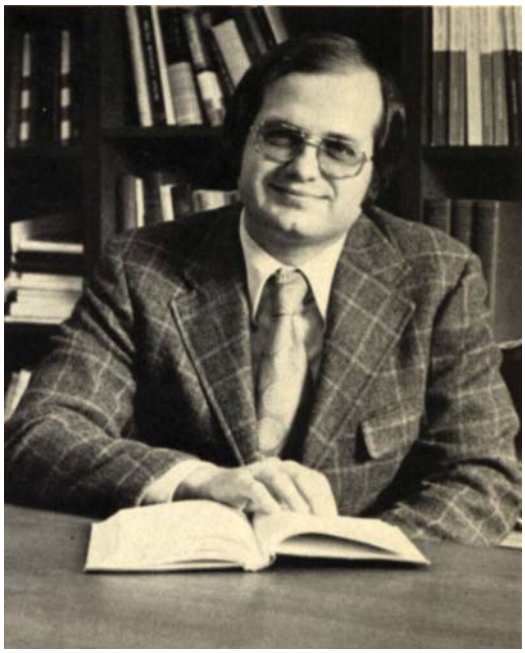
Note: The entry for Madison in this 1976 Encyclopedia is much longer and more detailed than the entry in the 1966 encyclopedia. Address: Washington, DC.

1902. Numbers, Ronald L. 1976. Prophetess of health: A study of Ellen G. White. New York, NY: Harper & Row. xiv + 271 p. Illust. Index. 21 cm. [400+* ref]

• ***Summary:*** An outstanding book–one of the best on the early history of health reform in America (1830-1915). A review on the rear dust jacket states: "The first serious and scholarly effort to see Ellen White's development as a 'prophetess of health' in the full context of her social and spiritual milieu. A bright and steady light on the often darkened arena where religions and science interact." Edwin S. Gaustad, Univ. of California, Riverside.

Contents: Abbreviations. Preface. 1. A prophetess is born. 2. In sickness and in health. 3. The health reformers: Contains excellent biographies of: Sylvester Graham (with portrait), William Metcalfe and the Bible Christian Church in Philadelphia, Pennsylvania, William A. Alcott (with portrait), Horace Mann, Dio (Dioclesian) Lewis, Larkin B. Coles, Samuel Thomson, Samuel Hahnemann (German physician) and homeopathy (arrived in the USA in 1825), the law of similars and the law of infinitesimals, hydropathy, Joel Shew, Russell T. Trall (with portrait), Mary Gove, Orson and Lorenzo Fowler, James Caleb Jackson (with portrait), Gerrit Smith, Silas O. Gleason, Glen Haven on Skaneteles Lake, Harriet N. Austin, Bloomer costume and dress reform, National Dress Reform Association founded in Feb. 1856 at Glen Haven, the "American Costume," fire destroys Glen Haven in 1858, undaunted Jackson and Austin purchase defunct water cure near town of Dansville, on Oct. 1 they open "Our Home on the Hillside" to patients, vegetarian meals served, meat, butter, white-flour bread, tea and coffee not allowed on the premises, Jackson prescribes no drugs in treating patients instead using ten natural remedies (air, food,

© Copyright Soyinfo Center 2014



water, sunlight, dress, exercise, sleep, rest, social influence, mental and moral forces), Jackson's extensive writings on health reform during the 1850s, article by Jackson on diphtheria published on 15 Jan. 1858 which introduced Ellen G. White to Jackson

4. Dansville days: Ellen G. White was not the first Adventist to encounter the health reform movement, in the early 1860s, James Caleb Jackson's water cure named "Our Home on the Hillside" (illustration from 1860s) (in Dansville, New York) becomes a favorite retreat for ailing Seventh-day Adventists, Joshua Himes' remarkable cure at Dansville, Joseph Bates adopts Grahmism in 1843 and spends decades as a temperance crusader, John Loughborough, J.P. Kellogg of Tyrone, Michigan (father of John Harvey, Will Keith, and 14 other children), reform-minded Oberlin College [Ohio], Roswell F. Cottrell, many Adventists experiment with health reform and vegetarianism in 1840s, despite early signs of interest, Seventh-day Adventists as a body did not awaken to health reform movement until 1863, Ellen G. White's vision of 5 June 1863 in Otsego, Michigan, first published account does not appear until 15 months after the event, encourages vegetarian diet, conversion of Adventists to new way of eating, visits of Whites to Dansville and major influence of Jackson, writing of Ellen G. White on health reform is strikingly similar to that of earlier health reform writers.

5. The Western Health Reform Institute (in Battle Creek, Michigan, run by John Harvey Kellogg from 1876). 6. Short skirts and sex. 7. Whatsoever ye eat or drink. Like Larkin B. Coles (*Philosophy of Health*, 1853), Ellen G. White was a strong critic of coffee, as well as spirituous liquors, flesh-meats, tobacco, etc. (see p. 160, 166). 8. Fighting the good fight (against Dr. John Harvey Kellogg). Appendix: The 1864 Dansville visit. A note on sources. References.

This is the most interesting, well-researched, and well-written scholarly book on Ellen G. White's health reform work that we have seen. It critically examines the development of the Adventist leader's health ideas, particularly their relationship to the 19th century health reform movement. Drawing on a host of primary documents, the author fully situates her teachings in the social and medical currents of her time without losing sight of a unique woman whose accomplishments were very much her own. The author neither relishes nor shies from his controversial findings. This book "seeks not to condemn or to defend, but simply to understand a multi-faceted woman who has encouraged millions to live healthier and more productive lives."

Concerning his reason for writing this book (p. xi): "My initial goal was modest: to look at Mrs. White's major writings within the context of nineteenth-century health reform. My scope expanded, however, when I accidentally ran across a copy of Dr. L.B. Coles's *Philosophy of Health* in the Loma Linda medical library. Scattered throughout the margins of this book were shorthand notes and pages numbers in the hand of Dr. John Harvey Kellogg, former owner of the volume and a onetime protégé of the prophetess. Unable to find anyone who could decipher the

© Copyright Soyinfo Center 2014

shorthand, but suspicious that the page numbers referred to one of Mrs. White's works, I began a volume-by-volume search for a correlation. A check of her *Christian Temperance and Bible Hygiene* finally revealed what Dr. Kellogg had discovered three-quarters of a century before: a strikingly close similarity between Dr. Coles's language and Mrs. White's. This serendipitous discovery spurred me to undertake a thorough examination of Ellen White's development as a health reformer, the result of which is this book."

Concerning the founding of the American Vegetarian Society (p. 70): "In May, 1850, Clinton Hall [in New York City] was the setting for the organizational meeting of the American Vegetarian Society, which brought together many of the biggest names in health reform. Among the officers elected were William Alcott, president; Sylvester Graham and Joel Shew, vice-presidents; R.T. Trall, recording secretary; William Metcalfe [of the Bible Christian Church], corresponding secretary; and Samuel R. Wells, brother-in-law and associate of the Fowlers, treasurer. Indeed by the 1850s, as Sidney Ditzion has observed, 'the vegetarians, phrenologists, water-cure doctors, and anti-tobacco, anti-corset, and temperance people' were so often crossing paths, 'they began to look like participants in a single reform movement.' The outbreak of civil war in [April] 1861 diverted much of the nation's attention from bran bread, baths, and Bloomers, to other, more pressing issues.'"

Photos show: (1) Ellen G. White. (2) Ellen White and her twin sister, Elizabeth Bangs. (3) The Ellen and James White family and Adelia P. Patten at about the time of their first visit to the Dansville water cure. (4) The title page of the first number of *Health: or How to Live*, Mrs. White's second volume on health reform. (5) The original Health Reform Institute in Battle Creek, Michigan (about 1864). (6) Horatio S. Lay. (7) Phoebe Lamson. (8) The new Western Health Reform Institute in the 1870s. (9) Elizabeth Smith Miller in a dress reform costume she designed. (10) Ellen White in her short skirt and pants, about 1874. (11) Two young Adventist sisters, Hannah Sawyer and Josie Chamberlain, in their reform dresses. (12) Title page of *An Appeal to Mothers. The Great Cause of the Physical, Mental, and Moral Ruin of Many of the Children of our Time* (1864), Ellen G. White's first book on health reform, based on her vision of 5 June 1863. (13) Five photos of water treatments at the Battle Creek Sanitarium around the year 1900. (14) Ronald L. Numbers (inside rear dust jacket).

Illustrations show: (1) Sylvester Graham. (2) William Alcott. (3) Russell T. Trall. (4) Phrenology lines on two heads. (5) James Caleb Jackson. (6) Our Home on the Hillside, Dansville, New York, in the 1860s. (7) Trall's Hygeian Home and Hygeio-Therapeutic College at Florence Heights, New Jersey. (8) Young John Harvey Kellogg shortly after he became superintendent of the Western Health Reform Institute. (9) Amelia Bloomer. (10) Harriet N. Austin in the American Costume. (11) Mrs. White's model reform dress, from her book *The Dress Reform.*

Talk with Prof. Numbers. 1991. July 10. Dr. James Caleb Jackson invented Granola (Granula); Dr. John Harvey Kellogg got the idea from him. Ellen Gould Harmon White lived 1827-1915. Address: Asst. Prof. of the History of Medicine and the History of Science, Univ. of Wisconsin, Madison.

1903. Portrait of Dr. Harry W. Miller speaking on the bicentennial of the United States (Photograph). 1976.
• ***Summary:*** This 3½-by-5 inch black-and-white photo shows Dr. Harry Miller, standing behind a microphone at a podium.

1904. U.S. Department of Agriculture. 1976. The annual report on activities carried out under Public Law 480, 83d Congress, as amended, during the period July 1, 1974 through June 30, 1975. Washington, DC: U.S. Government Printing Office. See table 17.
• ***Summary:*** Table 17 is titled "Title II, Public Law 480–total commodities shipped by program sponsor, fiscal year 1975." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief

© Copyright Soyinfo Center 2014

Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), and WRC (World Relief Commission). All of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. The following foods containing soy protein were distributed: Soy fortified sorghum grits (SFSG), CSM (Corn soya mix), WSB (wheat soya blend), and small amounts of soya flour. The vegetable oil which was shipped to many countries was soybean oil; it is not recorded here.

Foods containing soy protein were distributed to the following countries or areas: British Solomon Islands, India, Indonesia, Khmer Republic [Cambodia], Korea, Laos, Nepal, Philippines, Singapore, Sri Lanka, Vietnam.

Afghanistan, Egypt, Gaza, Jordan–East Bank, Jordan–West Bank, Morocco, Tunisia, Yemen.

Benin, Botswana, Burundi, Cameroon, Cape Verde, Central African Republic, Ethiopia, Gambia, Ghana, Guinea, Ivory Coast, Kenya, Lesotho, Liberia, Malagasy Republic, Mali, Mauritania, Mauritius, Niger, Nigeria, Rwanda, Senegal, Seychelles, Sierra Leone, Somalia Republic, Sudan, Tanzania, Togo, Upper Volta, Zaire.

Belize, Bolivia, Brazil, Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Nicaragua, Panama, Peru.

Concerning "veg oil" (soybean oil) shipped under P.L. 480 Title II in fiscal year 1975: India received 14.189 million lb [6,436 metric tons] (p. 116). Address: Washington, DC. Phone: 703-875-4901 (1991).

1905. Wilson, Barry. 1977. Soya meat on the threshold of a boom. *Agra Europe* (*London*) No. 706. p. M/3-M/8. Jan. 7.
• ***Summary:*** By "soya meat" or "vegetable meat" the writer means "TVP (textured vegetable protein)" which is actually textured soy flour (defatted). A good history of TVP in Britain and Europe; it was launched in Britain three years ago at a time when the UK and most of western Europe was beginning an unprecedented beef glut. With beef prices low, TVP struggled.

During the second half of 1976 TVP sales began to increase and they are expected to increase even faster in 1977.

The launch of Kesp (a spun soy protein product) by Courtaulds in 1973 was a fiasco.

Manufacturers of TVP in the UK include: (1) British Arkady, Old Trafford, Manchester. (2) Spillers (Lucas & Co.), Kingswood, Bristol. (3) British Soya Products, Puckeridge, Herts. [Hertfordshire]. (4) Courtaulds, Kesp Protein Foods, Coventry. (5) GMB Proteins, Blackhorse Lane, London. (6) Miles Laboratories, Slough, Bucks.

The names of six distributors and five users are also given.

"There is no doubt that British Arkady has the lion's share of the British TVP human consumption market." The best guess is that British Arkady now has about 40-50% of the UK market, followed by Spillers, then British Soya Products.

It is clear that all the raw material for the TVP [defatted soy flour] sold in the UK is imported from the United States. Briefly describes five commercial products that are on the market. Address: London.

1906. Dugan, George. 1977. Dr. Harry W. Miller, 'China Doctor,' dies: Surgeon, 97, served as physician to Chou [En-lai] and Madame Chiang [Kai-shek]–a pioneer in nutrition. *New York Times.* Jan. 9. p. 36.
• ***Summary:*** Dr. Miller died on 1 Jan. 1977 in Riverside, California, at age 97 of a heart attack. A Seventh-day Adventist, he "developed a process for making soybean milk to feed poorly nourished Chinese children in areas where cows milk was unavailable."

In an interview 3 years ago at his clinic in Hong Kong, he "predicted that the world could become a vegetarian society by the end of this century." By then, he hoped people would realize that raising beef cattle requires the use of too much land and fodder. In recent years his main interests have been raising money for Adventist hospitals in Hong Kong and other parts of Asia, and helping people to switch from eating meat to a vegetarian diet.

He is survived by his wife, the former Mary Greer, and 4 children by a previous marriage. A portrait photo shows Dr. Harry Willis Miller.

1907. *Spectrum: Journal of the Association of Adventist Forums.* 1977. Special section: Commentary on: *Prophetess of Health: A Study of Ellen G. White,* by Ronald L. Numbers. 8(2):27-36. Jan. [41 ref]
• ***Summary:*** A very lively and interesting exchange of views, not only about this book but also about the philosophy, study, and writing of history.

Note: The reviews of Norwood, Brodie and Sandeen are essentially favorable. Those of Schwarz and Guy raise what we think are very interesting points. Contents: Ellen White and Health. I. The prophet and her contemporaries, by W. Frederick Norwood (retired prof. of medical history at Loma Linda University). This section begins: "The lead article in the April 1976 number of *Spectrum*, written by Gary Land, offers some wisdom for this review. Land draws a distinction between the work of a historian and that of a theologian or theologian of history. 'The historian,' he declares, 'interprets history at a different level than the theologian.'"

II. A Biased, Disappointing Book, by Ellen G. White Estate (located at the headquarters of the General Conference in Washington, DC; 32 references).

III. Ellen White's Emotional Life, by Fawn M. Brodie (teacher of history at the Univ. of California at Los Angeles {UCLA}). "Ellen G. White, like the Mormon prophet Joseph Smith, was an eclectic. Both leaders drew from multiple

© Copyright Soyinfo Center 2014

sources the ideas they incorporated in their 'revelations.' Mrs. White was indebted chiefly to the health reformers of her time, James C. Jackson, William Alcott, Sylvester Graham and L.B. Coles. Devout believers in the divine origin of her ideas will be disturbed to see the evidence in this volume of how closely some of her revelations parallel paragraphs in Coles' *Philosophy of Health* (1853), a book she knew intimately. But there is no malice in Numbers' exposure of her plagiarism. He writes with great respect for the Adventist movement and for the extraordinary little lady who was responsible for its consolidation and expansion."

IV. The State of a Church's Soul, by Ernest R. Sandeen (teaches at Macalester College, St. Paul, Minnesota. He is considered the foremost historian of American Fundamentalism). "Ronald Numbers' account of Ellen White conforms to the highest canons of historical craftsmanship, and his narrative seems free of special pleading or bias. His is a mature work of great value outside Adventist circles."

V. On Writing and Reading History, by Richard Schwarz (chairman of the history and political science department at Andrews University, he wrote *John Harvey Kellogg, M.D.*). "Dr. Ronald Numbers and I, using essentially the same facts, come up with very different viewpoints on the development of Ellen G. White as a health reformer." Dr. Numbers "states frankly in the preface of his book that he has 'refrained from using divine inspiration as an historical explanation.'" "I would argue that a consideration of the entire life, work and writings of Mrs. White makes the supernatural explanation more satisfying to me." (2 references).

VI. What Should We Expect From a Prophet? Fritz Guy (holding a doctorate of theology from the University of Chicago, Guy is dean of the College of Arts and Sciences of Loma Linda University. 7 references).

VII. An author replies to his critics, by Ronald L. Numbers. R.L. Numbers is author of the book *Prophetess of Health: A Study of Ellen G. White* (1976) (associate prof. of the history of medicine and science, Univ. of Wisconsin at Madison). He received his graduate education at the University of California, Berkeley.

1908. *Canadian Adventist Messenger.* 1977. Ten Talents cookbook not recommended. Feb. 1. p. 4.
• ***Summary:*** "The cookbook *A Good Cook, Ten Talents* has been placed on the not recommended book list by the General Conference Health Department. A review by dietitians, pharmacists and physicians has found the nutritional and medical information contained in the book to be generally unsound and in several instances actually dangerous.

"Persons using this cookbook are advised to view with caution any nutritional statements or medical advice which it contains. Especially dangerous are the recommendations regarding formulas and foods for infants and small children, certain herbal remedies (some of which are poisonous), the listing of several plant foods as 'valuable' sources of Vitamin B-12 or Vitamin D, and the recommendation that apricot kernels be added to soy milk to improve the flavor (apricot kernels are poisonous).

"For further information, please contact: Ella Mae Stoneburner, R.N., M.S., Associate Director, Dept. of Health, General Conf. of Seventh-Day Adventists, 6840 Eastern Ave., N.W., Washington, DC 20012."

1909. Sirtori, C.R.; Agradi, E.; Conti, F.; Mantero, O.; Gatti, E. 1977. Soybean-protein diet in the treatment of type-II hyperlipoproteinaemia. *Lancet* i(8006):275-77. Feb. 5. [18 ref]
• ***Summary:*** This is Dr. Sirtori's major and most influential study on lowering plasma cholesterol by substituting soy proteins for animal proteins. Temptein (textured soy protein isolate) completely replaced animal protein in a diet fed to 20 human subjects. Total cholesterol was lowered 14% after 14 days and 21% after 21 days.

However A.S. Truswell (in Heaton 1979, p. 109) states: "In Milan, Sirtori and co-workers (1977) recently reported impressive reductions of plasma cholesterol and low-density lipoprotein cholesterol in patients with type II hyperlipidaemia given a soya-bean 'isolate'. They attribute the effect to the soya-bean protein. However the preparation they used, 'Temptein,' is a concentrate, not an isolate. It contains 80 per cent of protein but 10 per cent of polysaccharide, most of this indigestible. We and others (Helms, 1977) think it likely this latter fraction had the cholesterol-lowering effect." Address: 1-2. Centre E. Grossi Paoletti for the Study of Metabolic Diseases and Hyperlipidaemia, Univ. of Milan, Italy; 3-4. Maggiore Hospital, Milan.

1910. *Review and Herald.* 1977. Deaths: Harry W. Miller. Feb. 24. p. 23.
• ***Summary:*** This obituary states that Dr. Miller was born on 2 July 1879 in Ludlow Falls, Ohio. He died on 1 Jan. 1977 in Riverside, California. As well as being a famous physician in Asia and the USA, "Dr. Miller was also a pioneer in the field of nutrition. He developed the process of making soybean milk to feed malnourished Chinese children in areas where cow's milk was unavailable."

He graduated from the American Medical Missionary College [at Battle Creek, Michigan] in 1902. Shortly thereafter he married Maude Thompson and they went together to China, where he was one of the first medical missionaries. Two years after their arrival his new wife died, and in 1907 he returned to the United States. In 1908 he married Marie Iverson; they remained in Washington, DC until 1925. Then they returned to China.

During World War II Dr. Miller was once again in the United States, where he served as medical director of the Mount Vernon Hospital in Ohio. While there he founded the

© Copyright Soyinfo Center 2014

International Nutrition Laboratory, which [produced soymilk and a line of soy-based vegetarian food products and] carried out experiments in vegetarian protein products (now part of the Loma Linda Foods Company). He returned to Shanghai in 1949, but had to be evacuated in 1950 because of the political revolution. His second wife died in late 1950 in Washington, DC. In 1954 [at age 76] he married Mary Greer.

Survivors include his wife, Mary; three children by his second wife, Marie: Maude Anderson, Harry Miller, Jr., and Clarence Miller; and a sister, Alice (Mrs. Harry Morse). A small photo shows Dr. Miller. Address: Field Secretary, Far Eastern Div.

1911. MacNaughton, Nancy; Castro, Roberto. 1977. Procesamiento de soya en Honduras [Soybean processing in Honduras]. Tegucigalpa, Honduras: Secretaria de Recursos Naturales, Dirección de Planificación Sectorial, Departamento de Proyectos. iii + 69 leaves. Feb. Illust. 28 cm. [37 ref. Spa]

• ***Summary:*** Contents: Summary and conclusions. 1. Introduction. 2. Antecedents: Work conducted (in the rest of the world {USA, Dr. Harry Miller in Shanghai}, China, Philippines, Rhodesia, Sierra Leone, Mauritania, Ethiopia, Ruanda, Nigeria, Nepal, Sri Lanka, Brazil, Bolivia & Maisoy, Paraguay, Chile, Ecuador {Meals for Millions}), in Mexico and Central America ({INCAP in Panama, Dr. Steven Youngberg, Guatemala, Belize, Costa Rica, Nicaragua}, in Honduras), the role of soya in human nutrition. 3. The project: Objectives, goals, development of the study (processing of soymilk {in the home, at the level of an organized group, at the semi-industrial level}, processing of other derivatives of soya / soyfoods {Queso de soya / tofu, harina de soya / soy flour, Brady Crop Cooker}, investments required {in the home, at the level of an organized group, at the semi-industrial level}). 4. Conclusions and recommendations: Conclusions. Recommendations. Bibliographic references (leaves 63-65). Appendix: Nutritional aspects of soya.

Figures show: (1) Flow diagram, with equipment, for the production of Vital soymilk. (2-3) Flow chart for the processing of full-fat soy flour by a simple village process. (4) Flow chart for the processing of full-fat soy flour to make soymilk. (5) Flow chart: Traditional process for the production of soymilk. (6) Flow chart: Process for the production of soymilk on the level of organized groups of farmers; INTSOY process. (7) Construction of a sock filter (INTSOY). (8) Flow chart: Process for the production of soymilk using the Unidad Portatil miller. (9) Flow chart: Process for the production of soymilk [with coco] used in the soymilk factory of Stephen Youngberg, in Peña Blanca, Honduras. Note: Dr. Youngberg is a Seventh-day Adventist. (10) Three flow diagrams: Process for the production of whole soy flour in the home–simple, toasted, and blanched. (11) Koehring Brady 206 Crop Cooker; 2-page brochure insert. (12) Koehring Brady Extruder Cooker; 2-page brochure insert.

Tables show: (1) Equipment needed for processing defatted soy flour; capacity 136 kg (300 lbs.) of soy flour in 8 hours of operation. (2) Characteristics and nutritional composition of soy beverage after filtration. (3) Initial investment in equipment used in making soymilk at the factory of Dr. Stephen Youngberg, in Peña Blanca, Honduras. (4) Cost estimates for the production of soymilk as made at the factory of Dr. Stephen Youngberg, in Peña Blanca, Honduras (in Lps. = lempiras). (5) Equipment and costs of the proposed Maisoy project in Honduras.

Page 20: Work with soy in Africa is relatively recent if compared with early recorded work with soy in Asia. Many of the developing African nations recognize the nutritional needs of their population and have started to experiment with the soybean and soy products. Soybean variety trials have been conducted in the Ivory Coast, Rhodesia, Sierra Leone, and Mauritania. Ethiopia has incorporated soy flour and soybeans into traditional dishes. Ruanda and Nigeria have introduced soybean cultivation technology and local consumption, on account of the severe malnutrition that exists in those countries. Nigeria is producing soybeans for export."

Note: Looking at endnote 5 in this bibliography, which cites the source of this information about soy in Africa, it seems quite clear that the word "Mauritania" was accidentally and incorrectly substituted for the word "Mauritius" in the "Country Reports" (see p. 218 of these Reports).

Page 20: In Honduras. The Ministry of Natural Resources, in cooperation with other organizations, has conducted soybean cultivation / production trials in selected areas in Honduras. In Comayagua, the company named Compañía Mejores Alimentos [Best Foods Company] initiated commercial soybean production within the last few years. Small projects of soybean production and consumption are prospering in communities in the following areas: Sonaguera, Colón; Tela, Atlántida; Buena Fé, Santa Bárbara; Las Animas, El Paraíso; Olanchito, Yoro y Barrancho, Choluteca.

The goal of these projects is to introduce soya as a nutritional supplement in the local diet. These projects are carried out within homemaker's clubs, schools, child dining halls, and various communities, with the support of CARE, CARITAS, The National Board of Social Comfort, like our communities and local agronomics. The largest area for cultivating soybeans is five blocks and the smallest is a quarter block. The majority of these projects can be found in the first stages of experimentation but the participants foresee good results. These small-scale projects are important to note because they consist of cooperative efforts and are self-sufficient. On the other hand, the participants will manage their time and labor, and will be twice as motivated to

© Copyright Soyinfo Center 2014

incorporate soy into their daily menus. Address: Honduras.

1912. *Soybean Digest.* 1977. Harry Miller dies. Feb. p. 41.
• ***Summary:*** "Harry W. Miller, M.D., died New Year's Day in California. Dr. Miller was renowned for his contributions to the use of soy products in human diets. He became interested in soy nutrition 74 years ago while visiting in China. His studies later led to the establishment of a soy milk dairy in Shanghai in 1937. Later plants were built in Hong Kong, Manila [Philippines], Bangkok [Thailand] and Malaysia.

"Dr. Miller will be missed by his many friends in ASA. He was 97 last July."

1913. Vyhmeister, Irma B.; Register, U.D.; Sonnenberg, Lydia M. 1977. Safe vegetarian diets for children. *Pediatric Clinics of North America* 24(1):203-10. Feb. [24 ref]
• ***Summary:*** A guide for management of vegetarian diets for infants and children. The three main categories of vegetarianism are lacto-vegetarian, lacto-ovo-vegetarian, and "total or strict vegetarian (vegan)." The latter diet, excluding all foods of animal origin, consists only of plant foods. Gives charts of food groups with sources, and sample menus for children of different age groups. "A variety of foods as unprocessed as practical is important when no animal foods are used in a vegetarian diet." Fortified soymilk and soya meat products are mentioned as providing necessary nutrients. Address: 1. Assoc. Prof. of Nutrition; 2. Prof.; 3. Assoc. Prof., All: Dep. of Nutrition, School of Health, Loma Linda Univ., Loma Linda, California.

1914. Worthington Foods, Inc. Div. of Miles Laboratories, Inc. 1977. Why textured vegetable protein? Because how many ways can you cook a soybean (Ad). *Mother Earth News* No. 43. Jan/Feb. p. 3.
Address: Worthington, Ohio 43085.

1915. Register, U.D.; Blankenship, J.W.; Mak, J.L.; Zimmerman, G.J. 1977. Effect of diet on serum, fecal, and urinary vitamin B-12 levels of total vegetarians (Abstract). *Federation Proceedings* (*FASEB*) 36(3):1121 (Abst. #4500). March.
• ***Summary:*** The subjects in this study were a special group of raw food vegetarians who had been on this type of diet for 2 to 20 years. Serum vitamin B-12 levels of 18 total vegetarians [vegans], 10 lacto-vegetarians, and 11 non-vegetarians were assayed by the radioassay method. The results were 440, 680, and 1,159 picograms per milliliter respectively. The amount of vitamin B-12 excreted in the urine and feces was measured. These studies indicate that a significant amount of vitamin B-12 synthesized by intestinal bacteria is absorbed. Address: Loma Linda Univ., Loma Linda, California 92354.

1916. Tabuchi, Ichiro. 1977. Tônyû no chichi Miraa hakase: Soibinzu wa nijû seiki no mana desu yo [Dr. Miller, the father of soymilk: "Soybeans are indeed the manna of the 20th century"]. *Shin Eiyo* (*New Nutrition*) No. 90. p. 90-96. March. [Jap]
• ***Summary:*** The story of how Dr. Miller, San-iku Gakuin, and San-iku Foods pioneered soymilk in Japan. Contains 3 photos of Dr. Miller. Address: Nihon San-iku Gakuin Kôtô Gakkô, Fuku-Kôchô, Japan.

1917. *Wall Street Journal.* 1977. Miles Laboratories says '76 sales of some foods trailed expectations. April 7.
• ***Summary:*** The company's annual report stated that sales of textured vegetable protein food products have not reached expectations. In 1976 the company's Morningstar Farms breakfast line of Links, Patties, Slices, and Strips lost money for the 2nd year in a row. A new product, Scramblers, has shows good acceptance in test marketing. Two new products are Grillers (a hamburger-like patty) and Stakelets (which tastes like a chapped steak). One promising fact is that 56% of all U.S. families "have one or more members concerned about the cholesterol in their diet."

1918. **Product Name:** Loma Linda Soyagen (Milk Free Soy Beverage Powder Containing No Cane or Beet Sugar).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505. Phone: 714-687-7800 (3/88).
Date of Introduction: 1977 April.
Ingredients: Soy solids, corn syrup, soy oil, soy lecithin, salt, di-calcium phosphate, tri-calcium citrate, calcium carbonate, di-potassium phosphate, artificial flavors, vitamins (ascorbic acid, DL-alpha tocopheryl acetate, vitamin A palmitate, cholecalciferol, riboflavin, phytonadione, cyanocobalamin), ferrous sulfate, tri-potassium citrate.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
Nutrition: Per 1 oz powder (approximately ¼ cup): Calories 130, protein 6 gm, carbohydrate 14 gm, fat 6 gm, cholesterol 0 mg, sodium 210 mg, potassium 210 mg.
New Product–Documentation: See next page. Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1977. A less sophisticated version with the same name appeared in 1948.

1919. Worthington Foods, Inc. Div. of Miles Laboratories, Inc. 1977. Why textured vegetable protein? Because beans for breakfast aren't worth waking up to (Ad). *Mother Earth News* No. 44. March/April. p. 4.
• ***Summary:*** Shows a plate with a few whole dry soybeans on it. Advertises a free brochure titled "Why Textured Vegetable Protein?" Address: Worthington, Ohio 43085.

1977. Blood pressure in Seventh-day Adventist vegetarians. *American J. of Epidemiology* 105(5):444-49. May. [14 ref]
• ***Summary:*** Seventh-day Adventist vegetarians had significantly lower blood pressure readings than a comparable group of non-vegetarians. Address: Depts. of Medicine and Surgery, Univ. of Western Australia, Nedlands, Australia.

1921. *New York Times.* 1977. Herbal power: Despite debate, business is booming. June 20. p. 47.
• ***Summary:*** "Other well known herbals are 'Back to Eden,' by Jethro Kloss." A photo shows a man on a ladder in front of a huge selection of bulk herbs in glass jars at Aphrodesia in Greenwich Village, Manhattan, New York City.

1922. Worthington Foods, Inc. Div. of Miles Laboratories, Inc. 1977. Why textured vegetable protein? Because meat isn't all it's fattened up to be (Ad). *Mother Earth News* No. 45. May/June. p. 3.
• ***Summary:*** Shows cattle standing in a field. "Waste not, want not. Raising animals for meat protein is grossly inefficient. And a luxury the world can little afford. While an acre of land, when planted in soybeans, can provide almost 6 years of your daily protein requirements, this same acre provides only a 78-day supply when used to raise beef cattle for meat protein.

"Plant protein: The sensible alternative. Worthington Foods produces more than 40 different textured vegetable protein foods. All are completely meatless, with no cholesterol and no preservatives. And they maintain a favorable polyunsaturated-to-saturated fatty acid ratio. Worthington products are made from protein-rich soybeans, wheat and peanuts, with ingredients derived predominantly from plant sources." Address: Worthington, Ohio 43085.

1923. Howes, Charles D. 1977. Re: The influence of Dr. John Harvey Kellogg on substitute foods and their developers in the USA. Letter to Mr. Stephen H. McNamara, Associate Chief Counsel for Food, U.S. Food and Drug Administration, Washington, DC., July 15. 2 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "Your paper in *Food Engineering*, June 1977 was read with interest. I do not intend to dispute any of the points made in it here, but would like to share with you a historical perspective of the development of substitute foods, A brighter future may be assured if we remind ourselves of the progress of the past.

"John Harvey Kellogg, M. D. promoted a simple vegetarian diet at the Battle Creek Sanitarium in Michigan which he headed during most of his 67 years at the medical institution (beginning in 1875/76). During this period he developed a unique program of diet, hydrotherapy and expert surgery which attracted people from around the country and the world. Patients included a number of leading people such as William Howard Taft, William Jennings Bryan, Roald Amundsen, Lowell Thomas, Alfred DuPont, John D. Rockefeller, Jr., J.C. Penney, Montgomery Ward, S.S. Kresge, etc., etc.

"As might be guessed, Kellogg's views on diet and health were widely spread throughout America and the world. In order to provide a satisfactory vegetarian breakfast Kellogg developed the breakfast cereal and Battle Creek

© Copyright Soyinfo Center 2014

became the prepared-cereal capital of the world. The breakfast cereal was a substitute for ham & eggs and other high meat breakfasts.

"Kellogg also invented vegetable protein foods which he served as substitutes for meat. This was the beginning of the meat analogue industry.

"Henry Ford II [sic, Henry Ford] was a patient of Dr. Kellogg and Kellogg was a man who liked to share his ideas with anyone who would listen intelligently. Exactly what was shared we do not know, but back in Detroit Ford established a soy research team. The soy research team invented soy plastic (which was used in Ford automobile steering wheels for several years), soy fabric, and soy fiber [spun soy protein fiber]. When the research team was broken up the leading members joined the food industry and with additional developments produced vegetable fiber suitable for food products. This was the beginning of textured vegetable protein fiber.

"In order to promote his ideas more fully and leave a more lasting impression on the health of the world, Kellogg founded a medical school in connection With the Battle Creek Sanitarium. The American Medical Missionary College was granted a charter in 1895 and had two campuses–Battle Creek & Chicago. Much of the support for the medical school came from the food business. The school gave an excellent education and was soon fully accredited. Into this situation came Harry W. Miller, a medical student from Ohio. Harry Miller started working as a guide in the cereal factory to help support himself as a medical student. He became interested in the food business and became such an expert guide that Kellogg developed an interest in him. Miller was instructed by Kellogg in the area of food processing and read into food development as well as studied medicine. He became well-versed in both areas.

"When Miller graduated he married and soon sailed for China as a medical missionary. He noted malnutrition among infants and a high death rate among them. He also noted that soymilk was made by the people, but only the old people (no doubt those without teeth) drank it. In time Miller applied his knowledge of food processing methods to taking soymilk production out of the kitchen and making it on a large scale in a formulation suitable for infants. In the late 1930's China was invaded by the Japanese and the soymilk plant was bombed. After several adventures he was able to return to the U.S. and founded the first American soymilk plant.

"Thus a "Whole Picture" of substitute foods may be outlined in perspective thus:" A diagram shows John Harvey Kellogg, M.D. on the top line. Arrows point downward from him to those he influenced on the 2nd line: (1) Henry Ford II and the Soy Research Group. (2) Vegetable Protein Foods. (3) Breakfast Cereal. (4) Harry W. Miller, M.D. Arrows point downward to the 3rd row showing that: (1) Ford and the Soy Research Group developed Vegetable Protein Fiber. (2) Dr. Miller developed Soymilk & Soycheese. Arrows point downward to the 4th row showing that both Vegetable Protein Fiber and Vegetable Protein Foods led to the [commercial] development of Textured Vegetable Protein foods.

"I hope this background material will be helpful to you as you deal with the nutritional problems of engineered foods.

"Sincerely,..." Address: PhD, Technical Director, Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

• ***Summary:*** "On Oct. 17 after a long illness, at Nunawading [about 20 miles east of Melbourne, Victoria, Australia]. Fred. Beloved husband of Gladys. Loved father of Fred (dec. [deceased]), Horace (dec.), and Gladys (Mrs. Hawken)."

Note from Leeann Erickson, his great granddaughter. 2007. Oct. 8. F.G. Roberts died while a resident at Coronella Nursing Home in Nunawading; it is one of the Seventh-day Adventist Retirement Homes in and around Melbourne.

1927. *Wall Street Journal.* 1977. Board of Miles Labs approves merger with German firm [Bayer AG]. Oct. 18. p. 23, col. 1.
• ***Summary:*** Bayer A.G. [makers of Aspirin] in Germany plans to acquire Miles Laboratories of Elkhart, Indiana, shortly. Through a newly formed indirect subsidiary, Rhinechem Laboratories Inc., Bayer said it intends to

© Copyright Soyinfo Center 2014

buy all Miles common stock for $47 a share cash–up from $40 offered last month. Miles has about 5.4 million shares outstanding, making the offer worth about $253.8 million. Miles is a family-dominated firm that makes consumer pharmaceuticals, foods, chemicals, and diagnostic instruments.

Based in Leverkusen, West Germany, Bayer is not related to Sterling Drug Inc., New York, which owns rights to the Bayer name in the U.S. and makes the Bayer-brand aspirin sold in the USA.

Other articles about this transaction in the Wall Street Journal in late 1997: Bayer offers to acquire Miles Labs (Sept. 27, p. 5:2). Federal antitrust officials examine the bid (Sept. 30, p. 6:3). Board of Miles votes to approve the merger (Oct. 18, p. 23:1). A number of shares of Miles Labs are tendered to Rhinechem Lab (Nov. 11, p. 22:3).

1928. Lublin, Joann S. 1977. Soybean saga: Revival is attempted for meat substitutes that flopped after '73. But new line of Miles Labs is still facing resistance to the taste and the price. Pitch to the health-conscious. *Wall Street Journal.* Oct. 26. p. 1, 27.
• ***Summary:*** Miles Laboratories Inc. is coming out with new versions of its meatless products "that it says taste, feel and smell more like the real thing. A sampling of the new Morningstar Farms line of vegetable-protein products, just now starting to be marketed, largely supports Miles's claim. The products are tastier and juicier, they feel meatier and smell less spicy than earlier versions. But the bacon substitute in particular falls short of the real thing. In the words of one impartial taster, it looks and tastes more like painted cardboard than real bacon."

"When Miles offered its original meat substitutes in 1973, officials predicted sales of more than $100 million a year within the decade. Now, 4 years later, Morningstar Farms sales are running around $15 million a year, less than half the levels expected by now. The products, moreover, have registered pretax losses of $33 million since their development. Others in the food business were similarly overoptimistic. Industry-wide sales of soy protein products last year totaled about $120 million, up from $75 million in 1972 but far short of forecasts of $1.5 billion by 1980... When the original products were offered, meat prices were soaring to 1973 peaks and the public was eager for alternatives."

"Miles Laboratories, best known for its Alka-Seltzer antacid, had great expectations for meat substitutes in 1970 when it bought Worthington Foods Inc., a pioneer in textured-vegetable-protein technology. Miles reformulated several Worthington products and began test-marketing sausage-like links and patties, ham-like slices and bacon-like strips in 1972.

"Consumer surveys at the time showed that more than half of all U.S. households had at least one member concerned about heart-disease risks from excessive cholesterol in his diet. Miles marketers reasoned that many of the 40 million concerned families would welcome cholesterol-free replacements for their breakfast protein. The company spent $7.5 million on a nationwide promotion campaign in 1974, featuring prime-time television commercials emphasizing the nutrition angle.

"About 10 million American families tried the Morningstar Farms breakfast line in the first 18 months, meeting the company's goal. But fewer people than expected came back for seconds, and outside analysts suggest the current sales are half the anticipated volume."

1929. Ellis, Mark. 1977. Inventor's alchemy transforms lowly soybean. *Dispatch* (*Columbus, Ohio*). Oct. 28. Section C. p. 1.
• ***Summary:*** About Bob Boyer, who lives at 5026 Wintersong Lane in Columbus, Ohio; a photo shows him holding a plate of meatless bacon. A consultant for Worthington Foods, Boyer is in the final months of a 5-year contract. Boyer has over 30 patents, some shared with Henry Ford. "Boyer developed the [his] first simulated meat in a kitchen lab after taking a year in 1950 to make a fruitful patent search. He decided to make a simulated pork chop because the meat is white and he had no food dye."

the Seventh-day Adventist faith.

1933. **Product Name:** Soymilk.
Manufacturer's Name: Adventist Health Education Foundation (Egypt Food Factory).
Manufacturer's Address: P.O. Box 12, Heliopolis, Cairo, Egypt.
Date of Introduction: 1977.
New Product–Documentation: Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Habib Banna. Seventh-day Adventist soy dairy.

Note: This is the earliest known commercial soy product made in Egypt.

1934. **Product Name:** Cedar Lake Vegeburger (Meatless).
Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).
Manufacturer's Address: Cedar Lake, MI 48812.
Date of Introduction: 1977.
Ingredients: Wheat protein, water, cornmeal, soy flour, soy sauce, oatmeal, corn oil, vegetable seasoning, salt.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 22. Cedar Lakes. "Vegeburger" (19 oz).

Label.

1935. **Product Name:** Cedar Lake Chops (Meatless).
Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).
Manufacturer's Address: Cedar Lake, MI 48812.
Date of Introduction: 1977.
Ingredients: Wheat protein, water, soy sauce, vegetable seasoning, salt.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label printed on 12 March 1977.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1936. **Product Name:** Cedar Lake Vege-Bits (Meatless).
Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).
Manufacturer's Address: Cedar Lake, MI 48812.
Date of Introduction: 1977.
Ingredients: Wheat protein, water, soy sauce, vegetable seasoning, salt.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label.

1937. **Product Name:** Cedar Lake Grain Burger–Meatless Vegetarian Patties.
Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).
Manufacturer's Address: Cedar Lake, MI 48812.
Date of Introduction: 1977.
Ingredients: Wheat gluten, whole wheat flour, rye flour, barley flour, soy sauce, vegetable seasoning, salt.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

1938. **Product Name:** [GranoVita Seasoned Patty Mixture with TVP].
Foreign Name: GranoVita Soja-vita.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1977.
Ingredients: Soya protein, bread crumbs, wheat gluten, wheat flakes, glucose, egg protein, yeast, potato starch, onion, spices, sea salt, celery, parsley.
Wt/Vol., Packaging, Price: 200 gm box retails for DM 5.
How Stored: Shelf stable.
Nutrition: Protein content: 36% protein.
New Product–Documentation: Full-page ad for 8 granoVita soy products in the book by Manfred Heide. 1977. *Vegetarische Ernährung: 193 Rezeptvorschläge und Speisepläne für ein Vierteljahr* [Vegetarian nutrition and food: 193 recipe suggestions and meal plans for a quarter of a year]. Stuttgart, West Germany: Paracelsus Verlag. "This product is named "Soja-vita" (Fertig gewuerzte Bratlings-Mischung)."

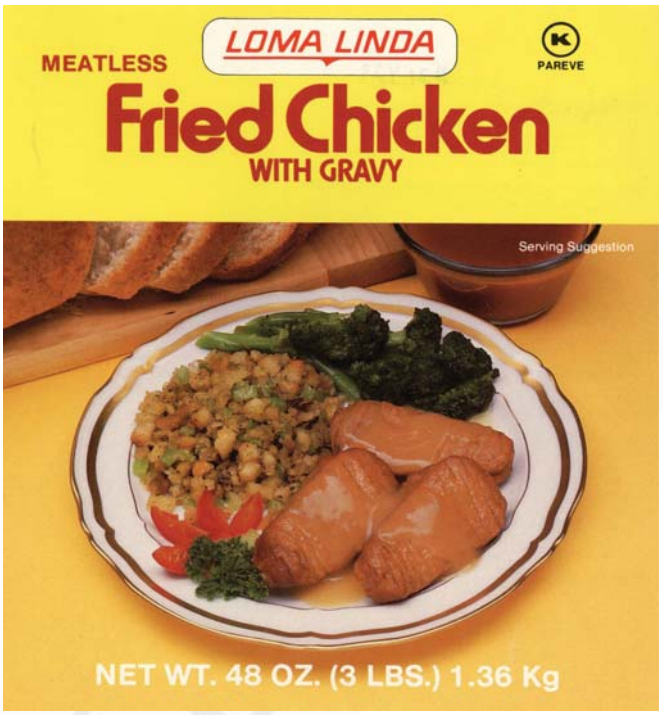
DE-VAU-GE leaflet. 1980? Rezepte aus der GranoVita Versuchskueche. DVMC. Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products.

1939. **Product Name:** Granolac Infant Soya Milk (Powdered).
Manufacturer's Name: Granose Health Foods Ltd. (Marketer). Made in the USA by Loma Linda Foods.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1977.
Ingredients: Soya bean solids, corn syrup, soya oil, sugar,

© Copyright Soyinfo Center 2014

salt, lecithin, vitamins.
New Product–Documentation: *The British Vegetarian.* 1961. March/April. p. 93. "Soya milk for household use." Granose Foods will soon be in a position to supply two varieties of spray-dried soya milk, Soyalac and Soyagen, made by one of their associated companies, Loma Linda Food Company in Arlington, California. Soyalac is specially prepared for infants, whereas Soyagen is for general use. A table compares the nutritional composition of the two products.

Listing in International Vegetarian Health Food Handbook (UK). 1977-78. p. 189. "Granolac Infant Soya Milk by Granose Health Foods Ltd." Manufacturer's catalog. 1980. April. "Infant formula soya milk. As near to the taste, texture and nutritional value of mother's milk as is possible. Basic ingredients similar to Granogen, with modifications. Full analysis available."



Dorothy E.M. Francis. 1984. "Alternatives to Cow's Milk: Comparisons." p. 147-48. In: David L.J. Freed, ed. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Ballière Tindall. Granolac Infant, from Granose, is for infants older than 3 months.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product was introduced in 1980. It is no longer on the market, and no label is available.

1940. **Product Name:** Loma Linda Fried Chicken with Gravy (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1977.
Ingredients: Fried chicken: Soy protein isolate, water, corn oil, egg whites, potato flakes, wheat gluten, artificial and natural (vegetable) flavors, dried yeast, salt, dextrose, onion powder, spices, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). Broth: Water, natural (vegetable) flavor, corn starch, wheat flour, dextrose, onion, sugar, salt, artificial flavor.
Wt/Vol., Packaging, Price: 48 oz can. Retails for $2.35 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 2 pieces (3.0 oz–85 gm): Calories 140, protein 9 gm, carbohydrate 4 gm, fat 10 gm, cholesterol 0 mg, sodium 340 mg, potassium 250 mg.
New Product–Documentation: Ad in Mother Earth News. 1977. No. 48. Nov/Dec. p. 3. "Avoid animal fat and cholesterol without losing flavor and protein." Recipe booklet. 1979, dated. Sold frozen.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1977.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. This is now a 13

oz can that retails for $2.35. The major ingredients in the fried chicken are now "Vegetable protein (soy and wheat [gluten]), corn oil, water, egg whites, potato flakes..."

1941. Stoia, Rose M. 1977. Vegetarianism: Cultural and nutritional aspects, a bibliography. Seventh-day Adventist Dietetic Assoc., Box 75, Loma Linda, CA 92354. 5 p. *
• ***Summary:*** Cites both professional and popular literature published from 1974 to 1977 in periodicals. Address: Loma Linda, California.

1942. Chen, Philip S. 1977. The joy of being a vegetarian. Mountain View, California, Omaha, Nebraska, and Oshawa, Ontario: Pacific Press Publishing Association. 127 p. 22 cm. [81 ref]
• ***Summary:*** Contents: About the author (a 1-page autobiographical sketch). Preface. 1. Vegetarianism, form fad to favor. 2. Food for philosophers. 3. Is man carnivorous. 4. Food for champions. 5. Mineral content of animal and vegetable foods. 6. Roughage and health. 7. The number one killer. 8. How wholesome is our meat? 9. What else is wrong with meat eating? 10. Animal protein versus vegetable protein. 11. The wise abstainers. 12. The joys of being a vegetarian. 13. The problem of animal waste. 14. The coming food crisis. 15. The soybean–A vegetarian's best friend. 16. Selected vegetarian recipes (using commercial meat substitutes or analogs). 17. Selected recipes (using homemade gluten and tofu). 18. Selected recipes (using natural, readily available ingredients).

Chapter 1 begins: "Vegetarianism in America used to be the butt of ridicule. But now the situation has changed. The laughter that once greeted mention of a vegetarian diet

© Copyright Soyinfo Center 2014

has died, thanks to discoveries made in biochemistry and nutrition during the last fifty years." It concludes: "Dr. Jean Mayer, professor of nutrition at Harvard University School of Public Health [in Boston, Massachusetts] and chairman of the 1969 White House Conference on Food, Nutrition, and Health, says that vegetarianism has three things going for it all at once–economics, health, and compassion."

Chapter 15, titled "The soybean–A vegetarian's best friend," begins by stating: "The soybean is a food without peer..." It discusses: Efficiency of soy protein (and supplementary value), soybean oil, minerals, vitamins, and simulated meats. Address: Camarillo, California.

1943. Deutsch, Ronald M. 1977. The new nuts among the berries. Palo Alto, California: Bull Publishing Co. viii + 359 p. Index. 22 cm. [260* ref]

• ***Summary:*** This is a follow-up to the author's 1961 work (revised in Feb. 1967) titled "The nuts among the berries: An exposé of America's food fads." The basic premise of both books is the same–That all popular books and people advocating health foods, natural foods, vegetarian or macrobiotic diets are nuts (crazy). The book is well researched but the tone is again that of an exposé of popular nutrition, one-sided and derogatory. There are two excellent bibliographies. The first, titled "Some controversial books in nutrition, contains 223 citations, listing almost every book ever published on the subjects noted above, including books such as *Diet for a Small Planet.* The second, titled "The factual resources for this book," includes 37 basic nutrition books, textbooks, and articles.

Contents: 1. The magical feast (Adelle Davis; Daisey Adelle Sieglinger). 2. Of cabbages and things (a brief history of "foodism"). 3. Mr. Graham bakes a cracker (Sylvester Graham). 4. Little men, little women, little food (Amos Bronson Alcott, Louisa May Alcott, and vegetarianism). 5. Water, water everywhere (The naturopaths, James Caleb Jackson, Ellen G. White, Father Kneipp). 6. Snap! Crackle! Enter Dr. Kellogg! (Dr. John Harvey Kellogg). 7. The battles of Battle Creek (Michigan and Seventh-day Adventists). 8. Life along the alimentary canal (Metchnikoff). 9. The jungle, the sausage, and the law (Upton Sinclair, Harvey W. Wiley, and the formation of the FDA). 10. Chew, chew Horace (Fletcher, Chittenden). 11. The bare torso king goes public (Bernarr Macfadden, Jack La Lanne, macrobiotics). 12. How to stop your cow from drooling (selling nutrition). 13. Eating for the hull of it (raw sugar, bran, fiber, and foodist or food extremist Alfred Watterson McCann). 14. The drinks are on the Hauser (Gayelord Hauser, macrobiotics). 15. Old proteinaceous Joe or Is there sex after dinner (Lelord Kordel, protein myths, and sex). 16. Mrs. Spratt's millions or Diet is a four-letter word (fat and dieting). 17. Protomania or Richard Nixon's diet revolution (high-protein diets). 18. Swing low, sweet glucose tolerance (hypoglycemia or low blood sugar). 19. How to sell a vitamin (Linus Pauling). 20. My mother squeaked or How to write about health foods (popular health books and articles). 21. The red faced confession and other tales of food cures and law (fraudulent advertising, the FTC). 22. Quick, nurse! The bean sprouts! (unproven therapies and cures, megavitamin therapy). 23. Meanwhile, back at the organic ranch (Jerome I. Rodale). 24. Organic politics or Gloria Swanson goes to Washington (toxic chemicals in foods). 25. How the poison gets into your health food (Center for Science in the Public Interest, Gary Null, and other health promoters).

Let us examine one chapter, 13, titled "Eating for the hull of it." It was well known by the 1990s that dietary fiber was the one nutrient in shortest supply in the American diet, and that this shortage is the cause of many diseases, from simple constipation to various disorders of the digestive tract. Those advocating a natural foods diet argued that we should return to eating whole-grain bread, primarily for the dietary fiber it contains, but also for its extra vitamins and minerals lost in the process of making white flour. Instead of dealing with these important issues, the author spends most of the chapter ridiculing a "foodist" and "food extremist" named Alfred Watterson McCann (born in 1879) and a physician named Dr. William Howard Hay (who graduated in 1891 from the medical school of the University of the City of New York), and comparing the nutritional value of raw vs. white sugar. He also notes that before the Civil War, the wheat used to make most American bread was soft winter wheat. It was easily ground between stones, then "bolted" through a soft cloth to sieve out some of the larger bran particles–a process which Sylvester Graham "felt was against God's purpose." After the Civil War, Scandinavian and German emigrées moved into the virgin lands of Wisconsin, Minnesota, the Dakotas, and Iowa, bringing with them a new tough wheat–the hard spring wheat. When the millers began to grind and bolt it, they found that much of the valuable gluten stuck to the bran. "To leave the bran in the flour meant creating a product that only a Graham or an Alcott would buy; dark coarse in texture, and hard to chew. Not surprisingly, the public rejected it." The first solution was the "middlings purifier" first installed in Minneapolis in about 1871; the purifier used a blast of air to blow away the bran. The primary solution was the Hungarian Mill, or highmilling machine–which had 6-7 sets of porcelain or chilled steel rollers. Sylvester Graham, James Caleb Jackson, and others said it was "unnatural" to take the bran out of bread. "Dr. [John Harvey] Kellogg's protests, which began about the time that the new wheat and new milling methods arrived, were based on his belief in 'auto-intoxication,' which called for bran to 'sweep out' the intestines and clear away their 'toxins.'" Address: Popular scientific and medical reporter.

1944. Heide, Manfred. 1977. Vegetarische Ernaehrung: 193 Rezeptvorschlaege und Speiseplaene fuer ein Vierteljahr [Vegetarian nutrition and food: 193 recipe suggestions and

© Copyright Soyinfo Center 2014

meal plans for a quarter of a year]. Stuttgart, West Germany: Paracelsus Verlag. 133 p. Illust. (some color). Index. 24 cm. [13 ref. Ger]

• ***Summary:*** Chapter V, titled "Soya, and important food," discusses the nutritional value of soya and various soyfoods including soy oil, soy lecithin, soymilk, soy flour (and its use in diabetic diets), whole soybeans, textured soy protein (*Soja-Pflanzenfleisch*), soy sprouts, "We have every reason to incorporate soya into our diets!" Soya is so versatile. The introduction of soya into our kitchens can serve our health and keep our fitness for work. Soy-related recipes include: How to cook whole soybeans. How to make soy flour at home. How to sprout soybeans. Soy sprout salad. Soy sprouts with soy noodles and vegetables.

In other parts of the book, textured soy flour (*Sojafleisch*) is served with rice. Soy flour can be added to soups and sauces.

One half-page ad titled "No meal without protein" is run by Henselwerk GmbH, 7031 Magstadt bei Stuttgart. It states that Henselwerk in Magstadt is the pioneer company in processing soybeans. The company's products include: Hensel Vollsoja [Hensel whole soy flour], Hensel Soja fettarm [low-fat soy flour], Hensel Soja-Kost nach Hackfleischart [textured soy protein granules], Hensel Soja-Fleisch in Trockenwuerfeln [textured soy protein cubes], Hensel Soja-Flocken (whole soy flakes), Hensel Kleine gruene Sojabohnen zum Keimen (small green soybeans for sprouting).

A full-page ad titled "For your healthy day" is run by granoVita Soja-Kost. The 8 soy products shown are sold in Reform Houses. All but the first is sold in a can. Soja-Vita (*Fertig gewuerzte Bratlings-Mischung*). Pasta chuta Bolognese. Koletts (Cutlets). Soja-Goulasch (Soy Goulash in Tomato Sauce). Soja-Curry (Soya Meat in Curry Sauce). Sojamilch (Soymilk). Soja-zart. Soja Wuerstchen (Soy Sausages). The author was born in 1934. Address: Germany.

1945. Johns, Warren L.; Utt, R.H. eds. 1977. The vision bold: An illustrated history of the Seventh-day Adventist philosophy on health. Washington, DC: Review and Herald Publishing Assoc. vii + 208 p. Illust. Index. 29 cm.

• ***Summary:*** An excellent book, loaded with old photos, cartoons, illustrations, and other graphics. Contains a colorful and accurate history of the subject. Contents: Elmshaven: The little elderly lady of Elmshaven (Ellen G. White). Pills, potions, purges, and prussic acid [hydrocyanic acid]. Battle Creek: Will success spoil John Kellogg? (Dr. John Harvey Kellogg). Granola, Postum, Corn Flakes, and peanut butter (W.K. Kellogg, C.W. Post). That's a wonderful bargain, but we haven't a cent (David and Mary Paulson). Westward: Another Kellogg, another San (Saint Helena Sanitarium). Where koala bears munched gum tree leaves: Health reform leaps the Pacific (Work in Australia and New Zealand, Sanitarium Health Food Co. makes Granose Biscuits and Weet Bix). God will give the thirsty elephant a drink (Paradise Valley Sanitarium). What makes Burden borrow? (Glendale Sanitarium and John Burden in Southern California). Ernest Lloyd remembers: Present at the purchase of Glendale Sanitarium (J.H. Kellogg, Harry Miller, David Paulson). Loma Linda: The resurrection of Lonesome Linda: New medical center gets off to a very shaky start (Loma Linda Sanitarium and College of Medical Evangelists). "They have gone and done what I told them not to" (American Medical Assoc., Percy Magan and Sutherland).

Photos show: Ellen G. White (p. 8, 11, 14). Ann Stanley Kellogg and John Preston Kellogg, the parents of John Harvey and Will K. Kellogg (p. 23). John H. Kellogg (p. 36, 38, 48, 52, 60, 68-71). Dr. James Caleb Jackson and Dr. Russell T. Trall (p. 40). The Western Health Reform Institute (p. 46, 49). Battle Creek Sanitarium (p. 56). Graph showing yearly patronage of the Battle Creek Sanitarium, 1866-1939. It grew from 53 patients in 1866 to a peak of 7,462 in 1926, then fell to 3,283 in 1935, and rose back to 3,691 in 1939. W.K. Kellogg (p. 74-80). Sydney, Australia, Sanitarium (p. 126). Sanitarium Foods Labels (Australia) including Gluten Meal (p. 142-43). Paradise Valley Sanitarium (California, p. 158-59). Percy Magan (p. 188, 201).

A bar chart (p. 73) shows yearly patronage of the Battle Creek Sanitarium from 53 people in 1866, to 1,174 in 1886, to a local peak of 7,034 in 1916, to an all-time peak of 7,462 in 1962; by 1939 yearly patronage had declined to 3,691. In "1933 the institution went into receivership. The Federal Government eventually turned it into an army hospital." Address: 2. Freelance writer and editor, Wrightwood, California.

1946. Johns, Warren L.; Utt, R.H. 1977. Chronology of the early history of Loma Linda Sanitarium and the College of Medical Evangelists [later Loma Linda University] (Document part). In: W.L. Johns and R.H. Utt, eds. 1977. The Vision Bold: An Illustrated History of the Seventh-day Adventist Philosophy on Health. Washington, DC: Review and Herald Publishing Assoc. 208 p. See p. 174-201.

• ***Summary:*** Loma Linda: The resurrection of Lonesome Linda: New medical center gets off to a very shaky start (Loma Linda Hotel, Loma Linda Sanitarium and College of Medical Evangelists). "They have gone and done what I told them not to" (American Medical Assoc., Percy Magan and Sutherland).

1906 April 15–Dedication of Loma Linda Sanitarium; Ellen White spoke to an audience of about 500. "Loma Linda is to be not only a sanitarium but an educational center... A school is to be established here for the training of gospel medical missionary evangelists" (TVN, p. 186). In 1908-09 120 students were enrolled, incl. eight in the first year of the medical-evangelistic course and seven in the second year–all no doubt medical students hoping to become licensed to practice medicine.

© Copyright Soyinfo Center 2014

1909 Dec. 9–The college secured a charter from the State of California in the name of the College of Medical Evangelists; it was authorized to grant degrees in the liberal arts and sciences, dentistry, and medicine. But how would SDAs finance and staff a genuine, fully equipped school of medicine, whose students could pass state board examinations. Ellen White said to go ahead.

1910 June 15–The transfer of Loma Linda Sanitarium assets to the College of Medical Evangelists made the sanitarium legally an integral part of the college. The 1910 council also defined the constituency, named a board of trustees, outlined a curriculum, and elected a faculty. The goal was to develop a fully accredited school of medicine.

1910–Abraham Flexner published *Medical Education in the United States and Canada*, a report that exposed the deplorable state of medical education in the majority of medical schools, many of them little more than diploma mills. Flexner visited 155 medical schools, only 38 of which had budgets. "Some had started without approval or permission. Many students entered them without a high school diploma. Only the best schools had a four-year curriculum of six months each year.

In 1962 College of Medical Evangelists still existed. Address: 2. Freelance writer and editor, Wrightwood, California.

1947. Schaefer, R.A. 1977. Legacy: The heritage of a unique international medical outreach. Mountain View, California: Pacific Press Assoc. xiv + 240 p. 18 cm. [75 ref]

1948. U.S. Department of Agriculture. 1977. The annual report on activities carried out under Public Law 480, 83d Congress, as amended, during the period July 1, 1975 through September 30, 1976. Washington, DC: U.S. Government Printing Office. See table 17.

• ***Summary:*** Table 18 is titled "Title II, Public Law 480–total commodities shipped by program sponsor, fiscal year 1976." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), and WRC (World Relief Commission). All of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. The following foods containing soy protein were distributed: Soy fortified sorghum grits (SFSG), CSB (corn soya blend), CSM (corn soya mix), WSB (wheat soya blend), and small amounts of soya flour. The vegetable oil which was shipped to many countries was soybean oil; it is not recorded here.

Foods containing soy protein were distributed to the following countries or areas: Near East: Bhutan, Egypt, Gaza, Jordan, Jordan West Bank, Morocco, Tunisia, Yemen.

Latin America: Bolivia, Brazil, Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Nicaragua, Panama, Paraguay, Peru.

Africa: Benin, Botswana, Burundi, Cameroon, Cape Verde, Central African Republic, Ethiopia, Gambia, Ghana, Kenya, Lesotho, Liberia, Malagasy, Malawi, Mauritania, Mauritius, Niger, Rwanda, Senegal, Seychelles, Sierra Leone, Sudan, Tanzania, Togo, Zambia.

Asia: Bangladesh, India, Indonesia, Korea, Nepal, Pakistan, Philippines, Singapore, Sri Lanka.

Concerning "peanut oil" shipped under P.L. 480 Title II in fiscal year 1970: India received 37,776 million lb (Table 18). Address: Washington, DC. Phone: 703-875-4901 (1991).

1949. Anderson, C.; Taranto, M.V. 1977? Lactic acid fermentation of soy milk. Champaign-Urbana, Illinois: University of Illinois. 21 p. Unpublished typescript. Undated. 28 cm. [26 ref]

• ***Summary:*** "Soy milk without added sugar dos not appear to be a very favorable medium for lactic fermentation. The addition of 2-4% (w/v) glucose enhanced acid production but the addition of citrate had little effect. Adding 10% (w/v) skim milk solids, in addition to glucose, significantly enhanced acid production. When skim milk solids were added to the medium, a 50:50 mixed culture of lactic starter and *Lactobacillus cellobiosus* or *Lactobacillus acidophilus* resulted in the production of the greatest amount of titratable acidity."

"One of the first attempts in using lactic cultures to ferment soy beverage was by J.H. Kellogg in 1934" (U.S. Patent No. 1,982,994).

Note: In 2004 *Lactobacillus cellobiosus* Rogosa et al. 1953 was reclassified as *Lactobacillus fermentum* Beijerinck 1901. Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL 61801.

1950. **Product Name:** [GranoVita "Cutlets"].
Foreign Name: GranoVita Koletts.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1977?
Wt/Vol., Packaging, Price: 400 gm can wholesales for DM 6.
How Stored: Shelf stable.
New Product–Documentation: Full-page ad for 8 granoVita soy products in the book by Manfred Heide. 1977. *Vegetarische Ernährung: 193 Rezeptvorschläge und Speisepläne für ein Vierteljahr* [Vegetarian nutrition and food: 193 recipe suggestions and meal plans for a quarter of a year]. 1953. Edwards, R.A. 1978. Social and legislative constraints [on soy protein foods]: The Australian situation. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 12-13.
• ***Summary:*** There are somewhat less than 200,000 vegetarians in Australia, mostly Seventh-day Adventists, Hindus, and Jains. Their dietary needs have been met for the last 40 years by the Sanitarium Health Food Company, which is owned by the Adventist Church. Their meatlike products include Nutmeat, Rediburgers, Vegecuts, and Vegelinks. Initially the protein in these foods came exclusively from nuts, then wheat gluten was added, and more recently they have also included low-fat soy flour imported from the USA. The company imports texturized soy protein products and also makes their own, but they have found that their traditional untexturized vegetable protein foods outsell TVP by a factor of 50 to 1. Sanitarium appears to be the only supplier of non-meat protein foods to Australian and New Zealand consumers, presumably because the market is not big enough to attract a second company of the type.

As far as the author knows, the only Australian manufacturer of TVP other than Sanitarium is Griffith Laboratories, which makes an unflavored TVP for the very large and lucrative pet food market; they also make a low-fat soy flour.

In Australia, heart disease is the most serious disease, accounting for more than 30% of all deaths. With health professionals advocating a reduction in animal products, total fats, saturated fats, and cholesterol, and with the increasing awareness during the last few years of the relation between nutrition and health, "it would seem to me to be an opportune time to give the marketing of soy bean products a deeper and more searching examination than the superficial approaches that have been taken in the past." Address: Prof., School of Food Technology, Univ. of New South Wales, P.O. Box 1, Kensington 2033, Australia.

1954. Anholm, Anne C. 1978. The relationship of a vegetarian diet to blood pressure (Abstract). *Preventive Medicine* 7(1):35. March.
• ***Summary:*** Vegetarian Seventh-day Adventists had significantly lower blood pressure levels than non-vegetarian Mormons, matched for age and sex. Address: Seattle Pacific Univ., Seattle, Washington.

1955. *British Medical Journal.* 1978. Exotic diets and the infant. i(6116):804-05. April 1. [8 ref]
• ***Summary:*** This editorial expresses concern for two groups of children: (1) Those of the Asian immigrant community in the United Kingdom who may become deficient in vitamins D and B-12, and (2) those of the so-called cult diets in the United States, e.g. vegans, members of yogic sects, Zen macrobiotics, and Seventh-day Adventists. Address: England.

1956. Blair, Betty J. 1978. New vegetarianism takes on flavor of respectability. *Detroit News.* April 9. p. 1C, 22C.
• ***Summary:*** Discusses the rise in popularity of vegetarianism, its health benefits, vegetarian researchers, and vegetarian organizations. In the past few years, more and more nutritionists are admitting that a well-planned

© Copyright Soyinfo Center 2014

vegetarian diet is a healthy way to eat. "'We have found over and over again that there are no deficiencies in the diets of vegetarians who use the diet properly,' said Dr. Kenneth I. Burke, associate professor of nutrition at the Seventh Day Adventist Loma Linda University in California. 'In fact,' said Dr. Burke, 'studies show that vegetarians generally weigh less and are less disease-prone than the general population.

"Today in the United States an estimated 10 million vegetarians shun all meat in their diets, compared to about three or four million 15 years ago."

Bob Lewanski is co-president of the 400-member Michigan Vegetarian Society (246 Madison, Detroit, Michigan 48226); about 125 people attend the Society's monthly meetings.

1957. Ochetim, S.; Nicholson, H.H. 1978. Soyabeans in diets of growing pigs. *East African Agricultural and Forestry Journal* 43(4):298-304. April. [28 ref]

• ***Summary:*** In Uganda, there are two soybean processing plants. One [Kawempe Flour and Groundnut Mill, Kawempe] produces soybean meal (SBM), and the other [Africa Basic Foods Ltd. in Kampala] produces a number of soybean products including whole extruded soybeans.

The object of this investigation was to study the feeding value of maize-based diets containing either extruded whole soybeans (MES, with 22% soybeans), soybean meal (MSM, with 20% soybean meal), or commercial cereal balancer (MCB, with no soy), and the complete commercial ration on the performance, nutrient digestibility, and carcass quality of growing pigs. Feeding whole cooked soybeans to pigs at this level led to soft or oily carcasses. Address: Dep. of Animal Production, Faculty of Veterinary Medicine, Univ. of Nairobi, P.O. Box 29053, Kabete, Kenya.

1958. Trahms, C.M.; Larson, L.D.; Worthington, B.S. 1978. Dietary intakes and growth of Seventh Day Adventist preschool children (Abstract). *American J. of Clinical Nutrition* 31(4):720. April. Introduction by E.R. Monsen. Address: Dep. of Human Nutrition and Dietetics, Univ. of Washington, Seattle, WA.

1959. Ward, A.G. 1978. Commercial development of soya bean protein products in the EEC. In: Commission of the European Communities. Agriculture. 1978. Report of the Study Group on Vegetable Proteins in Foodstuffs for Human Consumption, in Particular in Meat Products. See p. 83-85. Appendix IV. April.

• ***Summary:*** "The soya bean is the main source of specialized vegetable protein products for human consumption within the EEC. Wheat gluten is also used but only to a very limited extent." It is difficult to estimate the current scale of usage for human consumption.

"Belgium: N.V. Vamo Mills produces toasted defatted flour and grits. No extruders known to occur in Belgium. Production of isolates being undertaken by Purina Protein Europe (associate of Ralston Purina Company USA).

"Denmark: Aarhus Oliefabrik A/S produces defatted flour, soya concentrate (Danpro) and textured soya concentrate. The company operates the only extruder in Denmark. Dansk Sojakagefabrik A/S produces defatted soya flour and grits as well as full fat soya flour.

"France: Société Industrielle des Oléagineux produces defatted soya flour and grits as well as full fat soya flour. Rhône Poulenc is reported to be working with an experimental soya protein spinning plant (not yet commercial). No information has been received about extruders functioning in France.

"Germany: Ölwerke Noury and Van Der Lande, Ölmühle Hamburg A.G. and Holtz and Willemsen all produce defatted soya flour and grits and the first two also produce full fat soya flour and grits. No information has been received about extruders functioning in Germany.

"Netherlands: Cargill Soja Industrie B.V. (associated with Cargill Inc., USA) produces defatted flour and grits. The company has three extruders for textured soya products, each with a capacity of about 7,000 to 10,000 tons per annum. These are not thought yet to be working to capacity. Unimills B.V. produces defatted soya flour, soya concentrate and products textured by extrusion with a single extruder. ADM–De Ploeg B.V. produces defatted soya flour and grits and also textured soya flour. The company has a single extruder of capacity 7,000 to 10,000 tons per annum, and is an associate of Archer Daniels Midland Co., USA.

"United Kingdom: British Soya Products produces defatted soya flour and grits as well as full fat flour. The company also produces by its own techniques (not conventional extrusion) the "Bespro" range of textured products. These may include gluten with the soya material. Spillers Ltd (Soya Food Ltd and Lucas Ltd) produces defatted flour and grits as well as full fat flour. Soya concentrate (Newpro) and textured soya flour are also produced. It is believed that the company now has the production capacity of two extruders (14,000 to 20,000 tons per annum). GMB (Proteins) Limited (jointly owned by General Mills Inc., USA and Bush, Boake Allen Ltd) produces a textured soya product ("Bontrae"), not by conventional extrusion. It is thought the current production capacity is a few thousand tons per annum. Miles Laboratories (U.K.) is linked to Miles Laboratories Inc., USA. Information is lacking as to whether the company has production capacity in the U.K. for textured products, as well as importing U.S. products. Courtaulds Limited produces a range of spun soya protein products (Kesp), some of which may incorporate gluten. Annual production is not known. The British Arkady Co. Ltd is associated with Archer Daniels Midland Co., USA. Defatted soya flour and grits, full fat soya flour and textured soya products (by

© Copyright Soyinfo Center 2014

extrusion) are produced. The single extruder has a capacity of 7,000 to 10,000 tons per annum. Extensive research and development has been carried out by Unilever Ltd. (in close association with Unilever in the Netherlands) to develop the "mesophase" process for the preparation of soya protein products and to utilize them in foods. The processes have not yet been commercially exploited.

"No information has been received concerning the production of soya protein products for human consumption and in particular textured products from Ireland, Italy and Luxembourg but Italy has very substantial capacity for the production of oil and meal from soya beans." Address: Procter Dep. of Food and Leather Science, Univ. of Leeds, Leeds.

1960. Granose Foods Limited. 1978. Now our range is even more wholesome (Ad). *Alive* (*England*). May. p. 28.
• ***Summary:*** "We've added five exciting new products to our range of healthier wholesome foods.

"Sausfry, the versatile soya-based sausage mix."

"Vegex Chunks, delicious spun soya protein for casseroles and pies.

"Vegex Mince for Moussaka, Lasagne or Cornish Pasties."

"Se us at Helfex, London."

An illustration shows a basket filled with each of the new Granose products. Address: Stanborough Park, Watford, Herts WD2 6JR [England].

1961. **Product Name:** Granose Sausfry: Seasoned Soya Protein Sausage Like Mix.
Manufacturer's Name: Granose Foods Ltd. (Marketer-Distributor). Made in the UK by British Arkady.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1978 May.
Ingredients: 1980: Vegetable fat, textured soya protein [textured soy flour], rusk, glucose, stabiliser, salt, herbs, spices, colouring, added vitamins.
Wt/Vol., Packaging, Price: 500 gm (1.1 lb) bag.
How Stored: Shelf stable.
New Product–Documentation: Ad in *Alive* magazine (UK). 1978. May. p. 28. "Now our range is even more wholesome." "Sausfry, the versatile soya-based sausage mix."

Manufacturer's catalog. 1980. April. "Textured soya protein in a beef sausage like flavour which only requires the addition of water to make it usable in any of the ways in which sausage meat can be used."

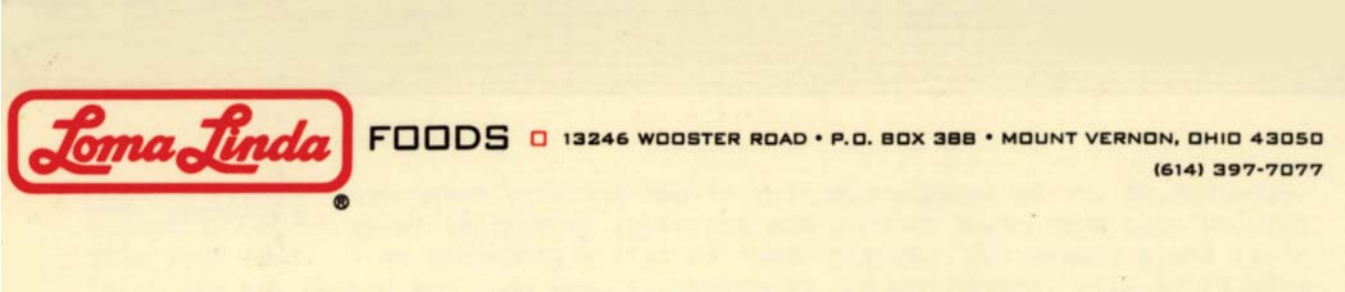
Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the product, made by British Arkady, was introduced in 1980. Address on bag is now Newport Pagnell. Label. 1990. 3.5 by 8 by 2 inch white coated paper bag. Red, yellow, brown, and black on white. An illustration (line drawing) on front panel shows a woman standing behind a table of baked goods. "Healthier wholesome food." Pack panel: "Make it plain... Add 750 ml (1.33 pints) of cold water to contents and leave the mixture for five minutes. Divide and form into sausage shapes, fry gently until golden brown.

"Make it fancy... Cook Sausfry shapes in hot batter for a tasty toad-in-the-hole or wrap in pastry to make savoury Sausfry rolls. Add onion, tomato, sage–any of your favourite flavours–and create exciting new ways to serve Sausfry.

"Note: Sausfry contains no animal matter and no Monosodium Glutamate.

"Ingredients: Textured defatted soya flour (defatted soya flour, iron, thiamin, riboflavin, vitamin B-12), hydrogenated vegetable oil, rusk, stabiliser (Methyl Cellulose, of plant origin), sea salt, hydrolysed vegetable protein, herbs, spices, colour (beetroot red)."

Color photo of package in *Linda McCartney's Home Cooking.* 1990. p. 18.



1962. Granose Foods Ltd. 1978. The Granose grain harvest (Ad). *Alive* (*England*). June. p. 36-37.
• ***Summary:*** Products (non-soy) include Sunnybisk (crispy whole wheat cereal biscuit made since 1895), Muesli, Fruit Bran (breakfast laxative food), Bran, Stabilised Wheatgerm, Swiss-Cup (Coffee Substitute). Granose products "also include exciting soya-based foods... Granose is a member of the worldwide organization, World Food Services, itself a division of the Seventh-day Adventist Church." The Services own over 30 other health food factories. Address: Stanborough Park, Watford, Herts. WD2 6JR, England.

1963. **Product Name:** Granose Curry Sauce.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1978 July.
Ingredients: Textured soya protein, sultanas, wheat flour, starch, salt, pineapple, onion, sugar, tomato powder, apple flake, coconut, spices, herbs.
New Product–Documentation: Manufacturer's catalog. 1980. April. "Spiced curry sauce with textured soya protein and fruit. Serve with rice."

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in July 1978. It has been discontinued.

1964. Possingham, R.E. 1978. Obituary: Roberts. *Australasian Record and Advent World Survey* (*SDA, Warburton, Victoria, Australia*). Aug. 1. p. 15.
• ***Summary:*** "Just one day before her eighty-third birthday, on July 12, 1978, at St. Michael's Hospital, Murrumbeena [a small suburb in Melbourne, to the south east], Victoria, Gladys Maude Roberts fell asleep in Jesus. Born on July 13,

1971. Howes, Charles D. 1978. Re: Seventh-day Adventist soymilk plants. Letter to William Shurtleff at Soyfoods Center, Oct. 1 p. Typed. [1 ref]
• ***Summary:*** Lists the soymilk plants in Central & North America (4, in Mt. Vernon, Ohio; Sonora, Mexico; Montemorelos, Nueva Leon, Mexico; San Pedro Sula, Honduras), Asia (2, in Chiba-ken, Japan, and in Poona, India), and the Middle East (1, in Cairo, Egypt). Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

1972. MacDonald, Ian A.; Webb, G.R.; Mahony, D.E. 1978. Fecal hydroxysteroid dehydrogenase activities in vegetarian Seventh-Day Adventists, control subjects, and bowel cancer patients. *American J. of Clinical Nutrition* 31(10):S233-S238. Supplement. Oct. [30 ref]
• ***Summary:*** Compares the fecal anaerobic bacteria, enzyme activity, and pH values of the stools of bowel cancer patients, vegetarians, and controls. The pH values of stools were

© Copyright Soyinfo Center 2014

significantly higher in cancer patients compared to Seventh-Day Adventists. A plot of pH value versus NADP-dependent 7 α-hydroxysteroid dehydrogenase tended to separate the cancer patients from the other groups. Address: Depts. of Medicine and Microbiology, Dalhousie Univ., Halifax, Nova Scotia, Canada.

1973. Phillips, R.L.; Lemon, F.R.; Beeson, W.L.; Kuzma, Jan W. 1978. Coronary heart disease mortality among Seventh-Day Adventists with differing dietary habits: A preliminary report. *American J. of Clinical Nutrition* 31(10):S191-98. Supplement. Oct. From Symposium on Role of Dietary Fiber in Health. [20 ref]

• ***Summary:*** A six-year study of over 24,000 Seventh-day Adventists (SDA) in California, ages 35 to 64, has found that the risk of fatal coronary heard disease (CHD) among non-vegetarian SDA males is three times greater than vegetarian SDA males of comparable age, suggesting that the SDA diet may account for a large share of their low risk.

Table 2 shows that in 1960 some 44.2% of California SDAs reported no consumption of meat, poultry, or fish whatsoever. 4.9% consume these foods less then once a week, 19.5% consume them 1-2 times a week, 7.3% consume them 3 times per week, 20.2% consume them for or more times per week, and 3.9% do not know their frequency of consumption.

The CHD death rate for Adventist men in California with various dietary habits compared with the general population is as follows: Vegetarian 12%, pure vegetarian (vegan) 14%, lacto-ovo vegetarian 39%, nonvegetarian 37%.

SDAs are a small evangelical religious denomination with about 500,000 members in North America and 3 million members worldwide. THey follow a rather unique lifestyle. By church proscription SDAs completely abstain from smoking and from drinking alcoholic beverages. The church highly recommends, but does not require, adherence to several other lifestyle characteristics such as a lacto-ovo-vegetarian diet containing no meat, fish, or poultry, but which does contain dairy products and eggs. Almost all SDAs abstain from pork products and other biblically defined unclean meats. They also tend to avoid coffee and other caffeine-containing beverages, hot condiments and spices, and highly refined foods. Address: Dep. of Biostatistics and Epidemiology, Loma Linda Univ., Loma Linda, California; Univ. of Kentucky, Lexington, KY.

1974. Trowell, Hugh. 1978. The development of the concept of dietary fiber in human nutrition. *American J. of Clinical Nutrition* 31(10):S3-S11. Supplement. Oct. In: H.P. Roth and M.A. Mehlman, eds. Symposium on the role of dietary fiber in health: Proceedings of a workshop sponsored by the Nutrition Coordinating Committee of the National Instutes of Health; held in March 1977 at Bethesda, Maryland. [60 ref]

• ***Summary:*** Contents: Early clinical observations. Refined flour and refined sugar. Available and unavailable carbohydrates. Studies of fiber in Africa. Cleave's hypothesis: the saccharine disease. Burkitt's epidemiological studies (1964). Decision to define fiber (1971-72). Refined carbohydrate foods and disease. Physiological definition of dietary fiber. Components of dietary fiber. Dietary fiber complex. Objections to the concept and the term dietary fiber. Western-risk diseases. Bran supplementation or multiple switchover diet.

Since the time of Hippocrates it has been observed that wheat bran is laxative. In 1542 a British book on diet and health noted that dark bread was laxative and slimming. When Dr. John Harvey Kellogg, an American cereal manufacturer, advocated the use of bran in 1923 in *The New Dietetics*, he stimulated much research. Note: As early as 1909, Dr. Kellogg's company, Battle Creek Foods in Battle Creek, Michigan, was selling and advertising "Sterilized bran (a gentle laxative)."

"Over the next 17 years at least 35 articles were published in the United States on various aspects of fiber and the laxative action of wheat bran. Fundamental studies by Cowgill and Sullivan [1933] demonstrated that wheat bran increased stool weights. Williams and Olmsted [1935, 1936] estimated the degradation of cellulose, hemicellulose, and lignin in the gut.

"Concurrently many studies were underway in Britain on the action of wheat bran. For example, Dimmock [1936, 1937] reported that he had used bran in the successful treatment of 100 patients suffering from constipation, seven with hemorrhoids, two with colitis, and several others diagnosed as having irritable colon. He cited some 75 references in American and British medical literature.

"Other clinical and experimental studies came from India. McCarrison [1921, 1936] reported that Hunza tribesmen and Sikhs, who ate whole wheat bread, legumes, and fruit, were healthier than Madras Indians who ate polished white rice. These observations were made before vitamins had been identified or the benefits of fiber even postulated. Several years later [1967] Malhotra described the relationship between many diseases and diet, including amounts of fiber."

"Walker in South Africa [1947] extended these studies among African blacks and later suggested that cereal fiber protected them against certain metabolic disorders. Trowell in Uganda elaborated this concept with regard to the rarity of common noninfective diseases of the colon. Another stream of inquiry stemmed from the hypothesis of Cleave who postulated that the presence of refined sugar, and to a lesser extent white flour, caused many metabolic diseases, while the loss of fiber caused certain colonic disorders. Meanwhile Burkitt had collected massive evidence of the rarity of appendicitis and many venous disorders in rural Africa and parts of Asia."

"In 1971 the status of fiber research in human nutrition

© Copyright Soyinfo Center 2014

appeared to be in a state of confusion, almost as if there had been a concerted plan to conceal the presence of fiber, to avoid defining its constituents or analyzing them, to refrain from reporting even crude fiber in the food data of experiments, or to plan prospective experiments to assess whether it was an inert substance, merely cellulose, or a group of substances... In 1972 Trowell proposed a new physiological definition of fiber in terms of the residue of plant foods that resisted digestion by alimentary enzymes of man." Initially Trowell stated frequently that fiber was derived entirely from plant cell walls. In 1975 gastroenterologists pointed out that storage polysaccharides (often water soluble), pectic substances, plant gums, and mucilages should be included as undigested polysaccharides in a redefinition of dietary fiber. Trowel and others published this redefinition in the journal *Lancet* in 1976.

Table 1 shows the components of dietary fiber. 1. Structural materials of plant cell-wall: 1A. Structural polysaccharides (cellulose, hemicelluloses, pectic substances). 1B. Noncarbohydrate constituents (lignin). 2. Nonstructural materials, natural or used as food additives: 2A. Polysaccharides from a variety of sources (storage undigested polysaccharides, gums, mucilages, algal polysaccharides, fungal chitins, chemically modified polysaccharides). Address: Dep. of Medicine and Pediatrics, Makerere Univ. and Uganda Govt., Uganda. Address reprint requests to: Dr. Hugh Trowell, Woodgreen, Fordingbridge, Hampshire SP6 2AZ, England.

1975. Chen, Philip S.; Chung, Helen D. 1978. Soybeans for health and longer life. New Canaan, Connecticut: Keats Publishing, Inc. xii + 178 p. Index. 18 cm. (A Pivot Health Book).

• ***Summary:*** A revised and condensed pocketbook version of Chen and Chen 1956. Contents: Preface. Foreword. Introduction. Part I: Nutritive value of the soybean. 1. Protein. 2. Fat. 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease.

Part II: Soy products. 8. Soybean oil: Phosphatides, margarine. 9. Soybean oil meal: Gelsoy, Multi-Purpose Food. 10. Soy flour. 11. Concentrated soy protein products: Soy protein concentrates (Griffith Laboratories makes Isopro and GL-301), soy protein isolates, and textured or spun soy proteins. 12. Soy milk. 13. Part III: Soybean culture and preservation. 16. Soybean culture. 17. Preservation of soybeans (preserving green soybeans by canning, freezing, and dehydration).

Part IV: Recipes. 18. Soybeans and soybean pulp. 19. Soy flour: Breads, cakes, cookies, pies, soups, other recipes. 20. Soy grits and soy flakes. 21. Soy milk. 22. Soy cheese. 23. Soybean sprouts. Appendix: Soybean utilization (chart). References. Address: 1. PhD; 2. M.S. Both: USA.

1976. *Focus* (*The Andrews University Magazine*). 1978. Obituaries: Philip Stanley Chen. Fall. p. 56.

• ***Summary:*** Born on 17 Aug. 1903 near Shanghai, China, he died on 29 July 1978 in Camarillo, California. "His parents died of opium use when he was small and he was reared by his grandfather who sent him to the newly opened Adventist mission school near Shanghai." He arrived at Emmanuel Missionary College [later renamed Andrews Univ.] in 1929 and received his BS degree in 1929. "He then went to Michigan State College and completed a masters and a PhD in organic chemistry by 1933. During this time he met Helen Feng, a teacher of Mandarin and the first Chinese coed at Michigan State. They were married Aug. 3, 1931. He was head of the chemistry department at Madison College for a number of years. Here he continued his research on the nutritional value and methods of the soyabean."

"Survivors include his wife, Helen; a sister in Peking; four sons, Philip, Bethesda, Maryland; John, Cold Water, Idaho; George, Weimar, California; and Sam, Glendale, California; two daughters, Helen, Camarillo; and Ruth, Santa Rosa, California." Address: Berrien Springs, Michigan.

1977. **Product Name:** [Granix Crackers with Soy Flour].
Foreign Name: Granix Galletitas con Soja.
Manufacturer's Name: Alimentos Granix.
Manufacturer's Address: Av. San Martin 4625 (C.P. 1602), Florida, Prov. de Buenos Aires, Argentina. Phone: 760-0307/7292/5676.
Date of Introduction: 1978.
Ingredients: 1990: Wheat flour, vegetable oil (contains soy and/or sunflower), defatted soy flour, salt, malt extract, sodium bicarbonate, butter flavor (esencia de manteca).
Wt/Vol., Packaging, Price: Plastic bag. Normal 270 gm. Family size 750 gm. Secretarial 23 gm. Fresh pack 3.6 kg. Tin can 3.5 kg.
How Stored: Shelf stable.
Nutrition: Per 100 gm.: Calories 442, protein 15.6 gm, fat 12.8 gm, carbohydrates 67.7 gm, fiber 0.7 gm, calcium 64 mg, phosphorus 220 mg, iron 0.9 mg, sodium 1500 mg, vitamin B-1 0.18 mg, vitamin B-2 0.24 mg, niacin 5.020 mg.
New Product–Documentation: Manufacturer's brochure. 1989? "Granix por excelencia." A color photo shows the labels of these square crackers in 4 packet sizes. Letter sent by Jorge Manrique of Alimentos Granix. 1990. July 13. This product was introduced (without an English name) in 1978. Then in 1986 it was introduced with an English name (Granix Soy Plus Crackers) printed as prominently as the Spanish name on the package. Label. 12 inches square, unfolded. Red, white, orange, and black on clear plastic. "Made with hydrogenated vegetable oils. Contains 9.35% fat. With artificial essence of shortening (Fantasia-lard)." The latter term may refer to either butter flavor or shortening (imitation lard). Note: This is the earliest known commercial

© Copyright Soyinfo Center 2014

soy product made in Argentina.

1978. **Product Name:** [Like Liver-Sausage (Meatless Liverwurst)].
Foreign Name: WieLeberwurst.
Manufacturer's Name: Bruno Fischer GmbH.
Manufacturer's Address: Taunusstrasse 13, 5000 Köln [Cologne] 91, West Germany. Phone: 02 21 / 83 26 51.
Date of Introduction: 1978.
Ingredients: Includes whole cooked then ground soybeans.
New Product–Documentation: Talk with Bruno Fischer. 1995. March 22. His company's first soy product was introduced in 1978. See interview for company history and context.

Talk with Bruno Fischer. 1998. May 14. His company's first soy product was named WieLeberwurst ("Like Liver-Sausage"). It contained less than 30% of cooked, ground soybeans.

Note: This is the earliest commercial soy product seen (Feb. 2013) made Bruno Fischer GmbH. The company's next product, *Soja Drink* (soymilk) was launched in 1991.

1979. **Product Name:** [GranoVita Vegetarian Soy Sausages (Spicy)].
Foreign Name: GranoVita Vegetarisch essen Soja-Wuerstchen (Pikant Gewuerzt).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1978.
Ingredients: Vegetable oils and fats in varying proportions by weight, water, whole soybean puree, egg protein, onions, red cabbage, garlic, wheat gluten, glucose, spices, salt, seasonings, smoke seasoning, yeast flakes, rolled oats, thickeners (carob seed meal and guar seed meal), Graham flour, citric acid as an acidifier. Sauce: Water, salt, soy sauce.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Form filled out and Labels sent by DE-VAU-GE. 1990. June 11.

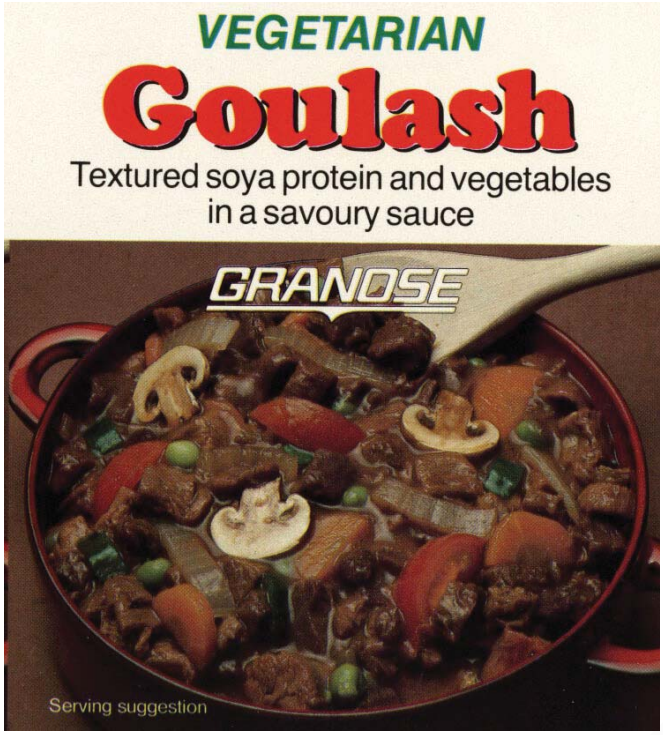
1980. **Product Name:** Granose Vegex [Beef-Flavoured Chunks, or Mince].
Manufacturer's Name: Granose Foods Ltd. (Marketer-Distributor). Made in the UK by Courtaulds.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1978.
Ingredients: Soya protein, vegetable oil, edible starch, salt, flavouring, natural colour.
New Product–Documentation: Ad in *Alive* magazine (UK). 1978. May. p. 28. "Now our range is even more wholesome." "Vegex Chunks, delicious spun soya protein for casseroles and pies."

Manufacturer's catalog. 1980. April. "Textured spun protein which has a similar texture to meat. Beef like flavour. It has a long shelf life, and is a balanced protein."

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Courtaulds UK, was introduced in 1978. It has been discontinued.

1981. **Product Name:** Granose Ravioli (Vegetarian).
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1978.
Ingredients: Durum wheat flour, tomato paste, vegetable oil, bread crumbs, salt, corn starch, spices, textured soya protein (textured soy flour), groats, yeast extract, mushroom, egg albumen, carrot, onion flakes, egg whole powder, caramel.
New Product–Documentation: Manufacturer's catalog. 1980. April. "Traditional Italian style pasta filled with savoury soya protein in a spicy tomato sauce. Serve hot on toast or with potatoes or other vegetables."

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1978. But a note says "Not Applicable."



Label sent by Granose. 1990. July 11. The soy is textured soy flour.

1982. **Product Name:** Granose Cannelloni.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1978.
Ingredients: Durum wheat flour, tomato puree, vegetable oil, sugar, textured soya protein (textured soy flour), onion, carrots, salt, celery, oats, cornstarch, mushroom, spices, yeast extract, egg albumen, egg whole powder, caramel.
New Product–Documentation: Manufacturer's catalog. 1980. April. "Traditional Italian style Cannelloni filled with spicy soya protein in a tangy tomato sauce. Heat in ovenproof dish topped with grated cheese."

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1978. It has been discontinued.

1983. **Product Name:** Granose Vegetarian Goulash.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1978.
Ingredients: 1980 and 1990: Water, textured soya protein, maize starch, hydrolised vegetable protein, tomato puree, wheat flour, salt, yeast, carrot, onion, potato, leek, capsicum, mushroom, sugar, paprika, spices, herbs, vegetable oil.

© Copyright Soyinfo Center 2014

Wt/Vol., Packaging, Price: 425 gm (15 oz) can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Manufacturer's catalog. 1980. April. "Soya protein and vegetable stew in a sauce flavoured with paprika. May be heated as in the can or have added vegetables."

Form filled out and Labels sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1978. Label. 1990. 8.5 by 4.25 inches. Photos on front and back panels show a kettle or wok full of the ready-to-serve product, which resembles a meat casserole. "Textured soya protein and vegetables in a savoury sauce... A traditional stew with soya protein and vegetables in a tasty sauce seasoned with paprika and tomato. Contains no animal products."

1984. Gridley, Daila S. 1978. Effect of time and diet on the immune status of mice challenged with herpes-transformed cells. PhD thesis, Loma Linda University, California. *
• ***Summary:*** Meat and high-soy protein depressed immunity and enhanced tumor development in rats. A high-fat diet was tumor enhancing when combined with casein, but tumor inhibiting when combined with soy protein.

1985. **Product Name:** Loma Linda Sizzle Burgers (Meatless Hamburger Patty based on Spun Soy Protein Fiber).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1978.
Ingredients: Soy protein concentrate, wheat gluten, corn oil, rolled oats, water, egg whites, onion, artificial and natural (vegetable) flavors, corn starch, dried yeast, salt, whole wheat flour, caramel color, dextrose, spices, guar gum, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 10 oz paperboard box.
How Stored: Frozen.
Nutrition: Per 1 burger (2.5 oz–71 gm): Calories 210, protein 15 gm, carbohydrate 13 gm, fat 11 gm, cholesterol 0 mg, sodium 320 mg, potassium 180 mg.
New Product–Documentation: See next page. *Soybean Digest Bluebook.* 1979. p. 93. "Sizzle Burger." Ad in Vegetarian Times. 1980. No. 40. Aug. p. 25. "Sizzle Burgers. A tasteful way to avoid cholesterol, preservatives and added MSG." Ad in Mother Earth News. 1980. Nov/Dec. p. 2.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1978.

1986. **Product Name:** Loma Linda Swiss Steak with Gravy (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1978.
Ingredients: Soy protein concentrate, wheat gluten, corn oil, water, rolled oats, egg whites, corn starch, onion, artificial flavors, natural (vegetable) flavors, dried yeast, whole wheat flour, salt, caramel color, dextrose, spices, guar gum, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 25 oz (710 gm) can. Retails for $3.99 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 steak (2.6 oz–74 gm): Calories 140, protein 9 gm, carbohydrate 8 gm, fat 8 gm, cholesterol 0 mg, sodium 350 mg, potassium 180 mg.
New Product–Documentation: See page after next. *Soybean Digest Bluebook.* 1979. p. 93. "New meatless swiss steak." Sold frozen or canned. Ad (full page, color) in Bestways. 1980. June. p. 47. "Swiss Steak. Its a real no-meat and potatoes dinner. No cholesterol, no preservatives or added MSG." Now available in 13 oz and 28 oz cans. They are made by "combining two nutritious vegetable proteins."

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1978.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19.

1987. **Product Name:** Loma Linda Tender Rounds (Meatless Meatballs with Gravy).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA

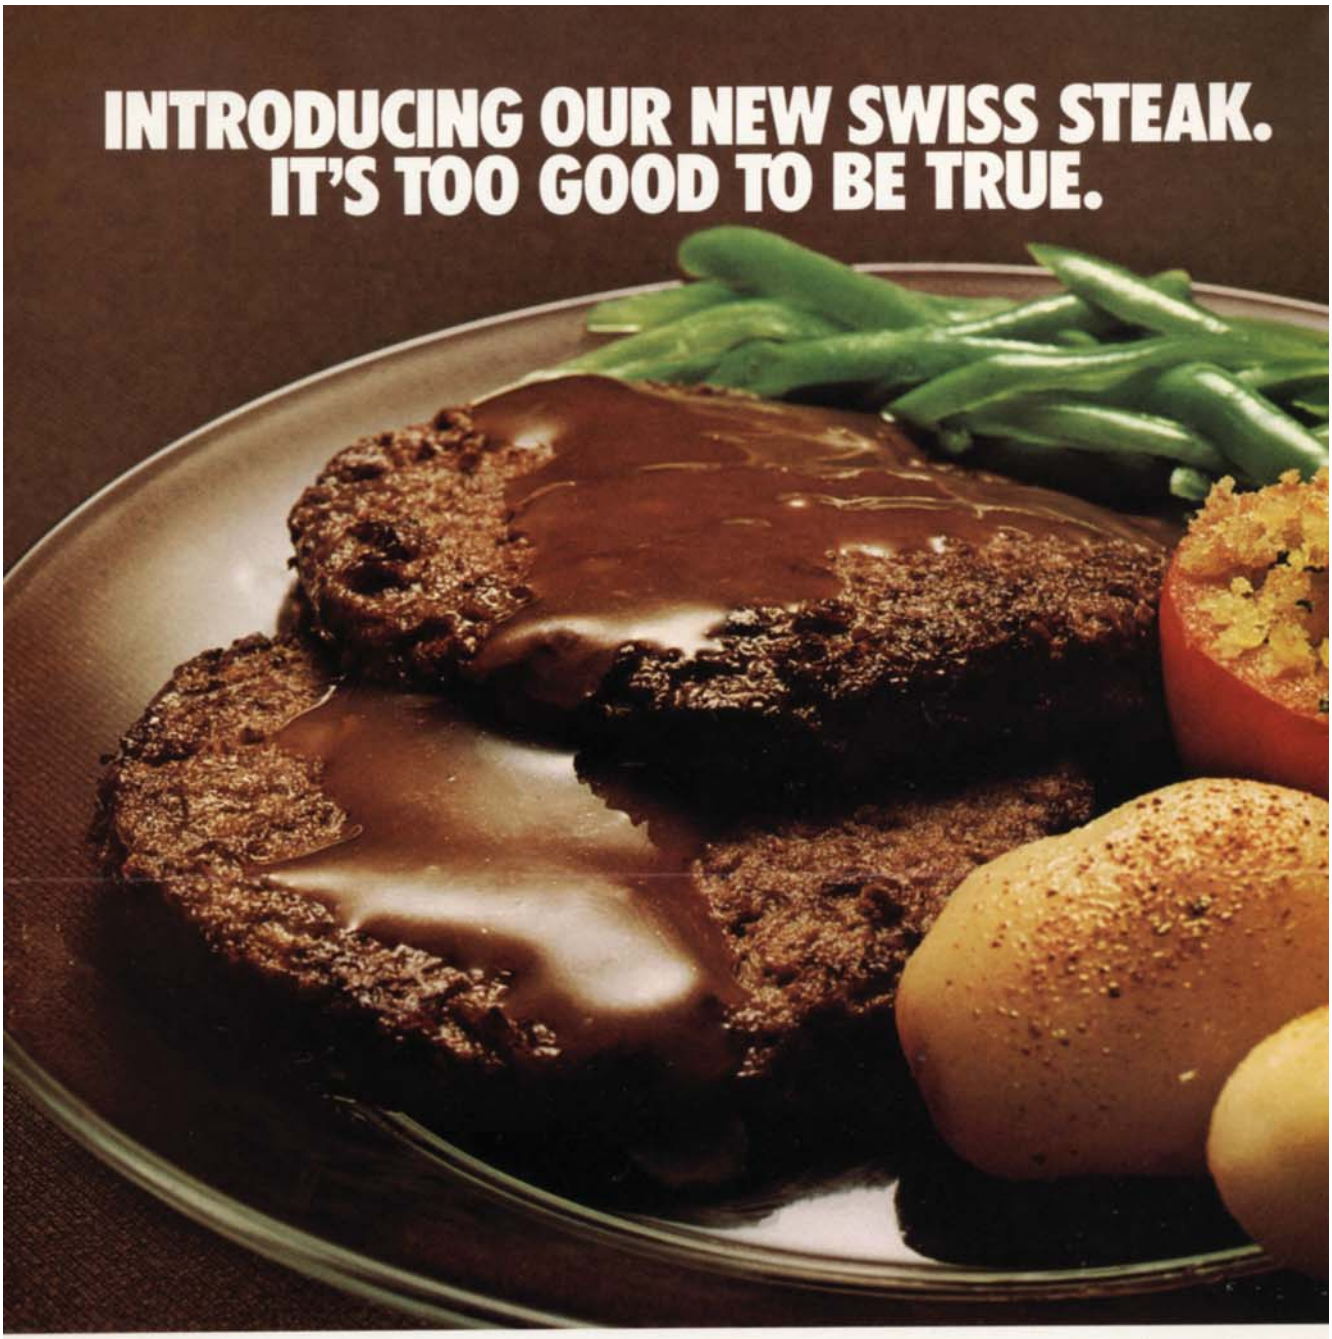
© Copyright Soyinfo Center 2014

Loma Linda Sizzle Burgers capture the wonderful flavor and texture of meat hamburgers, and there's no cholesterol. They're made from Loma Linda's special ingredient, combining two nutritious vegetable proteins. Thanks to our continuing food and flavor advancements, you get terrific taste without preservatives or added MSG. No animal fat or cholesterol, either!

Loma Linda Sizzle Burgers are pre-cooked, then frozen to lock in flavor. Just heat and serve like meat burgers, with buns and fixings. Or, serve as a family-pleasing main dish.

Check out the whole line of Loma Linda meatless foods today. And write us directly for your free Sizzle Burger recipe folder.

Loma Linda Foods®
SINCE 1906 RIVERSIDE, CA 92515



Sizzle Burgers. A tasteful way to avoid cholesterol, preservatives and added MSG.

THE MOTHER EARTH NEWS®

© Copyright Soyinfo Center 2014

Loma Linda's new Swiss Steak with Gravy has so much of the taste and texture of steak that you may even think it's better than the real thing.

That's because it contains Loma Linda's own special ingredient, combining two different vegetable proteins. This special blend results in better texture plus a more favorable nutritional balance.

Loma Linda's new Swiss Steak is precooked and comes smothered in its own rich gravy. So you just open a can and it's ready to heat and serve.

Our Swiss Steak makes a scrumptious main dish entree when served with cooked vegetables and a salad. Or a really hearty lunch served as an open-faced steak sandwich. It can be featured in stews and casseroles.

So try Loma Linda's new Swiss Steak with Gravy soon. It has the flavor of steak with none of the animal fat, preservatives or cholesterol. Which is why we say it's too good to be true.

Loma Linda Foods®
SINCE 1906

92515.
Date of Introduction: 1978.
Ingredients: Tender Rounds: Wheat gluten, soy protein isolate, water, corn oil, wheat flour, egg whites, soy protein concentrate, corn starch, soy flour, dried yeast, artificial flavors, dextrose, onion, oat flour, natural (vegetable) flavor, onion powder, salt, garlic powder, caramel color, guar gum, artificial colors, spice, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). Broth: Water, corn starch, natural (vegetable) flavors, wheat flour, dextrose, onion, sugar, salt, caramel color.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per approximately 6 meatballs (2.6 oz–73 gm): Calories 120, protein 15 gm, carbohydrate 7 gm, fat 4 gm, cholesterol 0 mg, sodium 310 mg, potassium 115 mg.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1978. A product with the same name but with different soy protein ingredients was introduced in 1953.

1988. **Product Name:** [Textured Soy Flour].
Manufacturer's Name: Produtos Alimenticios Superbom.
Manufacturer's Address: Caixa Postal 8633, 01051 Sao Paulo, Brazil.
Date of Introduction: 1978.
New Product–Documentation: John. 1981. Spectrum. Feb. "Adventist Food Companies: Recent Developments. p. 32-33. In about 1978 Superbom in Brazil and Granix in Argentina entered the soy protein business and by 1981 were producing a total of 700 tons a year of TSF. The demand for these products was caused in part by government proclaimed "meatless days" so that those two countries could export more meat. In 1978 Superbom's sales from all food products was over $7 million, way up from $4.3 million in 1975. It also had a chain of three vegetarian restaurants."

1989. **Product Name:** Sanitarium Health Foods Bologna (Canned Frankfurter Flavored Loaf).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1978.
Ingredients: Wheat protein, vegetable oil, yeast, soy protein, salt, Savex, hydrolysed vegetable protein, rice, garlic, onion.
Wt/Vol., Packaging, Price: 430 gm can.
How Stored: Shelf stable.
New Product–Documentation: Letter from Sanitarium Health Food Co. 1981. Label. 10 by 4 inches. Full color. Photo shows a cylindrical Bologna loaf on a bed of rice and mushrooms. "Vegetable Protein–Ideal for salads, casseroles, sandwiches, etc." Recipes for Spanish Salad and Bologna Contadini.

Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1978.

1990. **Product Name:** Sanitarium Health Foods Vita-Burger (Flavoured T.V.P.).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1978.
Ingredients: Soy flour, salt, hydrolysed vegetable protein, flavouring, syrup, caramel.
Wt/Vol., Packaging, Price: 200 gm box.
How Stored: Shelf stable.
Nutrition: Protein 50%, moisture 8%, ash 8%, fibre 3%, carbohydrate 30%, fat 1%.
New Product–Documentation: Letter from Sanitarium Health Food Co. 1981. Label. Box. 13 by 9.5 inches. Full color. Photo shows 7 burgers in tomato sauce in a skillet. "Textured Vegetable Protein. Main course vegetable protein. Ideal for patties, burgers, casseroles." Recipes for Spaghetti Sauce and Vita-Burgers (hamburgers).

Letter from Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1978.

1991. **Product Name:** Sanitarium Health Foods Pelletized Flake Biscuits.
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia.
Date of Introduction: 1978.
New Product–Documentation: *Soybean Digest Blue Book.* 1978. p. 26.

1992. Stoia, Rose Greer. 1978. Feeding the vegetarian infant. Loma Linda, California: Seventh-day Adventist Dietetic Assoc. *

Public policy considerations.

Page 119 states: "The term, 'textured meat alternatives,' refers primarily in the context of this report to products of vegetable protein made from the soybean, although it embraces protein products from other sources." Address: 1-3. Harvard Business School, Boston, Massachusetts 02163.

1994. Boyer, Robert A. 1978. Technological gaps in vegetable protein texturization. *J. of Texture Studies* 9(1/2):179-89. [14 ref]

• ***Summary:*** Contents: Introduction. Vegetable protein raw materials. Raw material flavor problems. Current texturizing methods. Binders. Scientific literature gaps. Proposed new texturizing techniques. Conclusions.

"The growth of the textured vegetable protein industry has not kept pace with early predictions. High costs and marginal quality are among the factors retarding progress. Some of the technological gaps handicapping the industry are: lack of a process for preventing formation of off-flavors by enzymes while maintaining protein functionality, lack of a low cost thermosetting binder, lack of a protein suitable for spinning, and the indigestibility of certain soybean fractions."

"Two methods of texturization dominate the industry today: extrusion by screw presses and wet spinning... Extrusion accounts for a majority of the tonnage of textured vegetable protein (TVP) being produced today." The relatively inexpensive soy flour (about one-third the cost of soy protein concentrate and one-sixth the cost of soy protein isolate) can be used as the starting material. The extruded products are usually in the form of dry granules or expanded and porous chunks.

Perhaps the most serious problem confronting any process based on the use of soy flour is the lack of digestibility and frequent incidence of flatulence. Address: Miles Laboratories, Worthington, Ohio 43085.

1995. Calella, John R. 1978. Cooking naturally: An evolutionary gourmet cuisine of natural foods. Berkeley, California: And/Or Press. ix + 112 + 5 p. Illust. by Pedro J. Gonzalez. Index. [81 ref]

• ***Summary:*** The author of this vegetarian cookbook, of Italian ancestry, is popularly known as "Organic John." He likes to use fresh foods, and he has a call-in radio show in San Francisco. In chapter 4, Ingredients (p. 16-), he discusses soya butter [margarine], miso, tamari, instant protein powder (incl. Shaklee's Instant Protein), lecithin granules, Soyamel powder (powdered soymilk made by Worthington Foods), Balanced protein seasoning (powdered HVP made from soybeans).

Chapter 10 (p. 79-83) contains a long section on soya beans, with recipes: Homemade soya bean curd (tofu). Things you can do with tofu. Soya patties (with dry soya beans). Soya bean loaf. Green soya bean mix (with dry green soya beans). Soya beans in a beet stew. Soya bean spread.

In the section on Fruit Sherbets, many of the recipes contain 2 tablespoons Soyamel (powdered soymilk) and lecithin granules. Address: Berkeley, California.

1996. Eckstein, Eleanor F. 1978. Menu planning. 2nd ed. Westport, Connecticut: AVI Publishing Co. xiv + 416 p. See p. 312-23. [24 ref]

• ***Summary:*** This textbook on foodservice and menu planning contains sections on culturally-based food preferences. Chapter 28 (p. 312-23) is titled "Foodways of Vegetarians and Fruitarians." Contents: Introduction. Religious avoidance of meat (Seventh-day Adventists, Hare Krishnas). Neo-vegetarianism (since about 1965; many article by J. Dwyer). Hospitals. Colleges and universities. Restaurants.

Table 28.1 is titled "Food patterns of vegetarians and fruitarians." In the left column is various groups and subgroups, and in the right column the food pattern of each. The left column reads: Religious: Buddhists, Seventh-Day Adventists, Catholic Trappist monks (lacto-vegetarian), Jains, Hare Krishnas (lacto-vegetarian), Macrobiotics. Food faddists: Non-violence philosophy, lacto-ovo vegetarians, moderate vegetarians, strict vegetarians (vegans; "Will not eat animal products in any form. Do not eat cooked foods, refined, or processed foods."), moderate fruitarians, strict fruitarians ("Eat only fruits and nuts."). Economic: Financially and geographically motivated. Address: Consultant, Nutrition and Food Service Management, Reno, Nevada.

1997. Ford, Barbara. 1978. Future food: Alternate protein for the year 2000. New York, NY: William Morrow and Company, Inc. 300 p. Index. 22 cm. [40+ ref]

• ***Summary:*** The author concludes that soybeans are most likely to be the protein source of the future. Chapter 2, "The Cinderella Bean" (p. 32-53) and Chapter 3, "Soybeans, Oriental Style" (p. 54-71) both discuss the benefits of soybeans. Pages 37-38 note that soybeans were once called "haybeans" and their hay was called "haybean hay."

Note: This is the earliest English-language document seen (Oct. 2011) that which uses the term "haybean" or "haybeans."

The work of the USDA Northern Regional Research Lab. (NRRL) with soyfoods is described at length. While at the NRRL she first encountered "sufu." In "Chinese markets, sufu is not called sufu but 'bean curd' or 'bean cake.' As soon as I saw sufu I realized it has an image problem–not as unappetizing as natto, but distinctly unpleasant. Picture

© Copyright Soyinfo Center 2014

grayish chunks of some odd-looking material floating in a murky liquid, like biology specimens in a bottle, and you have a typical bottle of sufu.

"Sufu looks so bad that my husband, who has faithfully eaten a number of odd-looking sources of protein that I have purchased over the years, refused it. It took a little courage for me to tackle one of the grayish lumps myself but I finally ate one. To my surprise, it was good, rather like a tangy dairy cheese but with a distinctive, nonbeany flavor of its own" (p. 60-61).

Chapter 6, "It Ain't (Just) Hay," is about alfalfa leaf protein and leaf protein concentrate. Research on leaf protein "really started during World War II, when British scientist N.W. Pirie suggested the use of leaves to augment dwindling meat supplies... Pirie's proposal never got underway during the war because of the costs involved, but after the war he was given a laboratory where he carried out most of the pioneering work on leaf protein."

Chapter 9, "SCP: Promises, Promises," is about single-cell proteins such as the bacteria *Cellulomonas* and *Pseudomonas* (the champion, which can double its weight in 9 minutes). A probable culprit in SCPs is "nucleic acids, which have been shown to cause elevated uric acids in humans if used over an extended period of time. Raised uric acid levels lead to gout, kidney stones, and gallstones. Some bacteria contain from 15 to 16 percent nucleic acids, a fairly high level. Yeasts and fungi contain from 6 to 11 percent, still a high level. Algae have less." It is recommended that humans not consume more than 2 grams (0.7 ounces) of nucleic acids per day. Address: USA.

1998. Hardinge, Mervin [sic, Mervyn] G.H. 1978. Plant fibers and human health. In: Gene A. Spiller, ed. 1978. Topics in Dietary Fiber Research. New York: Plenum Press. x + 223 p. See p. 117-26. Chap. 5. [20 ref]
• ***Summary:*** A review of the literature on the health and nutritional aspects of dietary fiber in vegetarian diets. Contents: Introduction. Dietary fiber in vegetarian and non-vegetarian diets. Dietary fiber and epidemiological aspect of disease: Fiber intake and digestive system function, fiber intake effect on character and transit time of stools, fiber intake and body weight, fiber intake, blood pressure and serum cholesterol, fiber intake and colorectal cancer. Conclusion. Address: Loma Linda Univ., Loma Linda, California.

1999. Holmes, Charlotte Van Gundy. 1978. Cooking for living. The art of healing. Sulfur Springs, Arkansas: Philadelphia Institute, Inc. 102 p. No index. 20 cm. [11* ref]
• ***Summary:*** The section titled "Soy beans" (p. 31-33) has the following contents: Introduction and list of different food products made from soy beans. Drying, freezing, canning, and tenderizing whole dry soybeans. How to make soybean milk: From beans, from soy flour, how to use the residue [okara] left from making soy milk. Soy cheese (also called "vegetable cheese" or "tofu"): How to make soy cheese from soy milk, how to make soy cream, how to make soy mayonnaise.

Also discusses: Homemade soy butter [soynut butter] (p. 57-58). Entrees (p. 58-60): Soy bean loaf, Soy cheese patties, Soy loaf, Soy grits loaf, Peanut butter patties. Soy sauce and Sovex (p. 83).

Note 1. The author's father, Theodore Van Gundy, was a soyfoods pioneer in southern California. The first printing of this book was in 1967, the second in 1970, and the third in 1973.

Note 2. On the cover is written (as if it were the title): *Keys to Cooking for Living: Recipes and Menus.*

Note 3. With This book, Charlotte encloses a pamphlet about Sulphur Springs, Arkansas. It is a sort of spa where people go to use the not mineral waters to help them recover from certain kinds of illnesses. Address: M.D., P.O. Box 308, Sulphur Springs, Arkansas 71768.

2000. Milner, Max; Scrimshaw, N.S.; Wang, D.I.C. eds. 1978. Protein resources and technology: Status and research needs. Westport, Connecticut: AVI Publishing Co. xxi + 629 p. Illust. Index. 26 cm. [400+ ref]
• ***Summary:*** Contents: Contributors. Preface. Acknowledgments. Section I: Summary and research recommendations. 1. Objectives and research recommendations. 2. Factors affecting protein supply and demand. 3. Common issues in the development and utilization of protein resources. 4. Status and potential of specific resources. Section II: Common issues and problems in protein resource development. 5. United States and world protein production and consumption. 6. Energy constraints in protein production. 7. Legal and regulatory barriers to the introduction of novel protein foods. 8. The politics of new protein: Obstacles and opportunities facing research and development. 9. The marketing factor for nonconventional-protein products. 10. Nutritional evaluation of proteins and protein requirements. 11. Toxicological aspects of protein production and processing. 12. Basic food science and technology problems affecting the properties and processing of protein resources. 13. The constraints on improving protein quality in plants by genetic means. 14. Research on nitrogen and carbon input to increase domestic crop protein production. Section III: A review of specific protein resources. 15. Grain crops. 16. Cereal proteins from grain processing. 17. Oilseed proteins. 18. Food legumes as a protein source. 19. Livestock animal production. 20. Proteins from dairy products. 21. Animal protein from meat, poultry and eggs. 22. Aquatic proteins. 23. Potatoes. 24. Nonphotosynthetic single-cell protein. 25. Photosynthetic single-cell protein. 26. Leaf protein in relation to forage crop production and utilization. 27. Chemical synthesis of nutrients. Address: MIT, Cambridge, Massachusetts 02139.

2001. Moore, Shirley T.; Byers, Mary P. 1978. A vegetarian diet: What it is; how to make it healthful and enjoyable. Santa Barbara, California: Woodbridge Press Publishing Co. 120 p. With 7 color photos. 23 cm. [111 ref]
• ***Summary:*** A sound, readable, and well documented book written by Seventh-day Adventist nutritionists. Covers up-to-date information on nutritional adequacy of vegetarian diets, types of vegetarians, daily food guides, and sample menus. The tone of Chapter 1 is quite defensive, as if Seventh-day Adventists had been previously accused of being unscientific, faddists, and/or quacks.

Contents: Acknowledgments. Preface. 1. A vegetarian diet: What it is; what it is not. 2. Filet mignon or pecan patties. 3. Food and people. 4. Now for the menu. 5. The littlest vegan: A nonmeat diet for infancy. 6. Why the vegetarian lifestyle. Conclusion. Appendixes: A. Sample menus for a week. B. Suggestions for dining away from home: Full-fledged vegetarian restaurants, restaurants catering to cultural food tastes (Chinese, Japanese, Greek, Italian, Mexican), cafeterias, smorgasbords, restaurants, salad bars, airlines, supermarket meals (no specific restaurants are mentioned–only these types). C. A sampling of vegetarian cookbooks [28 books are listed, many of them by Seventh-day Adventist authors]. D. Meat analog manufacturers [ADM, Cedar Lake Foods, General Mills, Loma Linda Foods, Miles Laboratories / Worthington, Millstone Foods]. Address: 1. PhD; 2. M.A. Both: Loma Linda Univ., Loma Linda, California.

2002. Schaeffer, Richard A. 1978. Legacy. Mountain View, California: Pacific Press Publishing Assoc. *
• ***Summary:*** Pages 66 and 67 describe how Dr. John Harvey Kellogg invented peanut butter. Unfortunately no date is given for the anecdote.

2003. Seventh-day Adventist Dietetic Assoc. 1978. Diet manual, utilizing a vegetarian diet plan. 5th ed. Loma Linda, California: Seventh-day Adventist Dietetic Assoc. 280 p.
• ***Summary:*** This comprehensive loose-leaf handbook for the planning, selection, and coordination of vegetarian diets was edited by Judy Dean Baloga, M.S., R.D., with Marilyn Delinger, Margaret Kemmerer, Lydia Sonnenberg, Kathleen Zolber.

Table M-1 titled "Ingredients of selected vegetable protein foods" (p. 248-57) gives all the ingredients in 85 such products, most of which are made by Seventh-day Adventist companies. Table M-2 (p. 258-66) gives the nutrient composition of each of these products. Address: P.O. Box 75, Loma Linda, California 92354.

2004. U.S. Department of Agriculture. 1978. The annual report on activities carried out under Public Law 480, 83d Congress, as amended, during the period October 1, 1976 through September 30, 1977. Washington, DC: U.S. Government Printing Office. See table 18.
• ***Summary:*** Table 18 is titled "Title II, Public Law 480–total commodities shipped by program sponsor, fiscal year 1977." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), and WRC (World Relief Commission). All of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. The following foods containing soy protein were distributed: Soy fortified corn meal (SFCM), soy fortified sorghum grits (SFSG), CSM (corn soya mix), WSB (wheat soya blend), and small amounts of soya flour. The vegetable oil which was shipped to many countries was soybean oil; it is not recorded here.

Foods containing soy protein were distributed to the following countries or areas: Near East: Bhutan, Egypt, Gaza, Jordan, Jordan West Bank, Lebanon, Morocco, Tunisia, Yemen.

Latin America: Bolivia, Brazil, Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Jamaica, Panama, Peru.

Africa: Benin, Botswana, Burundi, Cameroon, Chad, Congo, Ethiopia, Gambia, Ghana, Ivory Coast, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mauritania, Mozambique, Niger, Rwanda, Sao Tome & Principe, Senegal, Seychelles, Sierra Leone, Somalia, Sudan, Swaziland, Tanzania, Togo, Upper Volta, Zambia.

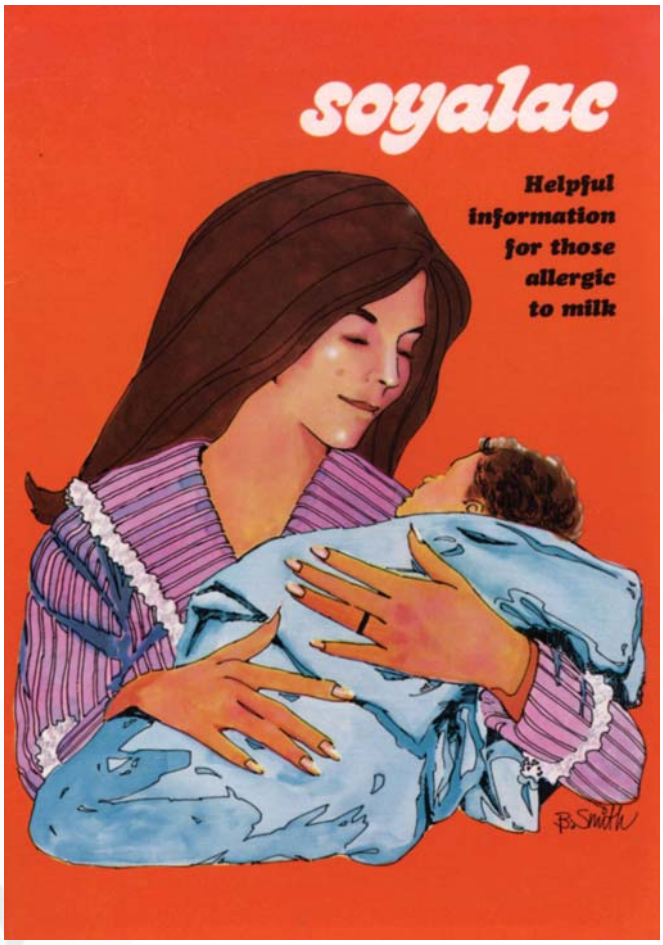
Asia: Bangladesh, India, Indonesia, Nepal, Philippine Islands, Singapore, Sri Lanka. Address: Washington, DC. Phone: 703-875-4901 (1991).

2005. **Product Name:** [Granix Nutrisoja Textured Soy Flour].
Foreign Name: Granix Nutrisoja Granulado.
Manufacturer's Name: Alimentos Granix.
Manufacturer's Address: Av. San Martin 4625 (C.P. 1602), Florida, Prov. de Buenos Aires, Argentina.
Date of Introduction: 1978?
Ingredients: Defatted soybeans.
Wt/Vol., Packaging, Price: 250 gm poly bag.
How Stored: Shelf stable.
Nutrition: Per 100 gm.: Calories 349, protein 50.5 gm, fat 1.0 gm, ash 6.3 gm, moisture 6.0 gm, carbohydrates 34.5 gm, fiber 1.7 gm.
New Product–Documentation: John. 1981. Spectrum. Feb. "Adventist Food Industries: Recent Developments." p. 32-33. "Granix keeps its 300 workers busy 24 hours a day in 3 shifts. 40% of the companies profits are passed directly into the church budget, with considerable sums going to finance evangelism. There are plans to expand production by 500%.

© Copyright Soyinfo Center 2014

Net profits for Granix in 1979 were $1,055,000. During the first 9 months of 1980 they were $1,452,000."

Manufacturer's brochure. 1989? "Granix por excelencia." A color photo shows the package label and a table gives the nutritional composition. The package is red and blue on white, with a large oval window in the front. Letter and label sent by Jorge Manrique of Alimentos Granix. 1990. July 13. He forgot to give the date that this product was introduced. Label. 3.75 by 9.5 by 1.5 inch plastic bag. Red, blue, gold, and white.



2006. **Product Name:** [Soymilk].
Manufacturer's Name: Alimentos Integronaturales.
Manufacturer's Address: Apartado 16, Montemorelos, NL, Mexico.
Date of Introduction: 1978?
New Product–Documentation: Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants.

Shurtleff. 1981. Overseas Adventist Food Companies. p. 8. Letter from Robert Folkenberg. 1983. Feb. 15. The company is presently producing about 3,000 liters/week of soymilk.

2007. Loma Linda Foods. 1978? Soyalac. Helpful information to those allergic to milk. Riverside, California. 34 p. Undated. Illust. 18 cm.
• ***Summary:*** On the cover is a mother (with long brown hair) holding a child in a blue blanket against an orange-red background.

Contents: Presented to. What is allergy? Asthma, eczema and colic. Soyalac: For infants, children and adults–milk free recipes for your pleasure. Four types of Soyalac are available (hypoallergenic, fiber free): i-Soyalac Concentrated, Soyalac Concentrated, Soyalac Ready-to-Serve, and Soyalac Powder. Suggestions on infant feeding: Ready to serve, concentrated liquid. Baby's birth record. Baby's immunization record [against 10 diseases + Schick test]. Baby's appointments for check-up. Growth record for. Beverages (each recipe in the recipes section calls for Soyalac). Hot breads. Main dishes. Soups, sauces and mayonnaise. Cookies. Desserts. Allergic foods checklist. Address: Riverside, California.

2008. **Product Name:** Loma Linda Gravy Quick [Brown, Chicken Style, Country Style, Mushroom, Onion].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1978?
Ingredients: Brown: Enriched wheat flour, salt, cottonseed oil, natural (vegetable) flavors, soy flour, onion powder, monosodium glutamate, caramel color.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian*

Meal Plan. 7th ed. Appendix A.6-27. Soy flour is typically about the fifth ingredient in each flavor of gravy.

2009. Meal plans for total vegetarians. 1978? Loma Linda, California: Loma Linda University, School of Health, Dep. of Nutrition. Undated. *
• ***Summary:*** A brochure of simple, inexpensive menus with cost and nutrient data, plus recipes and shopping suggestions.

2010. Meals without meat (Leaflet). 1978? Loma Linda, California: Seventh-day Adventist Dietetic Assoc. Undated. Revised 1990. *
• ***Summary:*** Discusses the health advantages of a vegetarian diet, protein, and meal planning.

2011. **Product Name:** [Soymilk].
Manufacturer's Name: Pan American Health Service.
Manufacturer's Address: Box 191, Peña Blanca, San Pedro Sula, Honduras.
Date of Introduction: 1978?
New Product–Documentation: Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants.

Soyfoods Center. 1980. Sept. Tofu shops and soy

© Copyright Soyinfo Center 2014

dairies in the West (2 pages, typeset). "Pan American Health Service, Box 191, San Pedro Sula, Honduras. Owner: Dr. Steven Youngberg. Seventh-day Adventist soy dairy."

Letter from Eric C. Fehlberg, Director, International Health Food Assoc. 1990. May 24. This organization no longer exists. Talk with Don Meinders of Pan American Health Service. 1992. Feb. 4. Dr. Steven Youngberg was the son of missionaries in India. When the family returned to the USA, he got his medical degree at Loma Linda University in the mid-1950s. His first medical practice was in the Texas border area, where he worked with poor Mexican laborers. He had a little medical van, and was very active with tuberculosis work. Then he went to Tabasco, the state in Mexico, and started a tuberculin hospital there. Then he went to Honduras in about 1961, bought land, and started the Pan American Health Service (PAHS) in the jungle. In about 1972 he started a soymilk plant and a bakery on the PAHS grounds. PAHS still exists and is very active, with a medical clinic, an orphanage for malnourished children, and a farm. The bakery produces the only whole-wheat bread in Honduras. But the soymilk plant is not presently in operation. About 6-8 years ago the soymilk equipment was disassembled by an administrator who wanted to sell it. Dr. Youngberg was in the USA at the time undergoing heart surgery. When he returned to Honduras, he immediately stopped any ideas of selling the soymilk plant. The parts are now in boxes. This soymilk was never sold commercially. It was only served at the clinic. Don was at the PAHS recently; he has been there for about 1 year and plans to stay down there. Dr. Youngberg is now about age 74-75, living in Texas, and well enough to talk. PAHS is a private foundation, privately funded with about half the funds coming from Seventh-day Adventists. A Mennonite group run by a woman doctor from the East Coast of the USA in San Pedro is producing a protein-rich "Soy Bar," like a granola bar.

Note: This may be the earliest known commercial soy product made in Honduras. However it is unclear whether or not this product, or any other soy product made by the PAHS was ever sold commercially. On the PAHS website (panamhealth.org), retrieved 3 Feb. 2009, the soymilk is mentioned but there is no indication that it was ever sold commercially. In 2001 Dr. Stephen Youngberg died in Ft. Worth, Texas; his body was buried in Peña Blanca, Honduras. We do not know enough about the "Soy Bar" to give it a "Commercial Soy Product" record.

2012. Blair, Betty J. 1979. Fruitarians squeeze [vegetarian] diet to the limits. *Detroit News.* Jan. 2. p. 1D, 2D.
• ***Summary:*** Discusses the philosophy and nutritional value of a fruitarian diet. "Many fruitarians eat some vegetables, seeds and nuts–broadly defining 'fruit' as any plant-product which drops off its tree, vine or stem naturally and does not require the destruction of the plant... Such plant delicacies as carrots, cabbage, lettuce, broccoli, and all leafy green vegetables, grains, potatoes, and peanuts are taboo."

Mrs. Nellie Shriver, a former history teacher, is coordinator of the 5-year-old Fruitarian Network in Washington, DC. It has about 6,000 members of the estimated 7-10 million vegetarians nationwide. Shriver personally prefers an uncooked, total fruit diet. Studies by Loma Linda University show that a fruitarian diet is most likely to be deficient in protein, calcium, and calories. Fruitarians believe that growing fruit makes the best use of land. Fruit yields as high as 140,000 pounds per acre, while vegetables yield only 20,000 to 40,000 lb/acre. Address: News staff writer.

2013. Hartman, Warren E. 1979. Re: Visit to Worthington plant in Ohio. Letter to William Shurtleff at New-Age Foods Study Center, Jan. 20–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "In regard to our facilities here at Worthington, we would be happy to have you visit our facilities–most of the production is done here, however, we do have a plant in Schaumburg, Illinois, which does some manufacturing of the plant protein products for the Morningstar Farms label... I would be happy to edit or proof read any copy you have concerning the Worthington line and make such corrections and additions as I feel would be valuable."

Note: Schaumburg, Illinois, is about 25 miles northwest of Chicago. Thus it is about 295 miles northwest of Worthington, Ohio. Address: Technical Consultant, Worthington Foods, Worthington, Ohio.

2014. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tofu: Food for mankind. Condensed and revised. New York, NY: Ballantine Books. A division of Random House, Inc. xii + 433 p. Jan. Illust. by Akiko Aoyagi Shurtleff. Index. 18 cm. [60 ref]
• ***Summary:*** This book has been extensively revised and updated. Many names of Japanese tofu have been Americanized. Contents: Preface. Acknowledgements. 1. Protein East and West. 2. Tofu as a food. 3. Getting started: Favorite tofu recipes. 4. Soybeans. 5. Fresh soy puree. 6. Okara (Soy pulp). 7. Curds and whey. 8. Tofu & firm tofu. 9. Deep-fried tofu: Deep-fried tofu cutlets, deep-fried tofu burgers & treasure balls (tofu treasure balls, p. 269), and deep-fried tofu pouches. 10. Soymilk. 11. Silken tofu. 12. Grilled tofu. 13. Frozen & dried-frozen tofu. 14. Fermented tofu. 15. Yuba. Appendices: A. Tofu restaurants in Japan. B. Tofu shops and soy dairies in the West. C. Varieties of tofu in East Asia. D. Table of equivalents. Bibliography. Glossary. Contains 250 recipes and 100 illustrations. Price: $2.95.

This new edition features: (1) New recipes: Over fifty new American-style tofu recipes including Creamy Tofu Dressings, Tofu Teriyaki, Tofu Burgers, Tofu Eggless Egg Salad, and the like. The key to the book is an updated list of favorite tofu recipes plus suggestions for incorporating them

© Copyright Soyinfo Center 2014

into a weekly menu (p. 56). (2) New sections: An extensive new introduction to Soy Protein Foods (p. 66), dairylike products made from tofu (p. 150), dairylike products made from soymilk (p. 302) including soymilk yogurt (fermented), ice cream, kefir, mayonnaise, whipped cream, popsicles, buttermilk, and soy shakes. (3) New chapters: Fermented Tofu and Varieties of Tofu in East Asia. (4) New basic methodologies: The key recipes for homemade tofu and homemade soymilk have been simplified and improved. (5) Updates: A complete listing of the 120 tofu shops and soy dairies now operating in the West; over 60 Caucasian-run shops have opened in the past two years. (6) New Americanized tofu names: Including deep-fried tofu burgers, deep-fried tofu cutlets, deep-fried tofu pouches, deep-fried tofu puffs, silken tofu, wine fermented tofu, and fresh soy puree. A major goal of this book is to coin English names for tofu products that will catch on and come to be used in labeling commercial products, in cookbooks, etc. (7) No sugar.

Note 1. This is the earliest English-language document seen (April 2013) that contains the following terms related to deep-fried tofu: "fried tofu cutlets" or "deep-fried tofu cutlets" (p. v, to refer to *nama-agé*), "fried tofu burgers" or "deep-fried tofu burgers (to refer to *ganmodoki*), "tofu treasure balls" or "deep-fried tofu treasure balls" (p. v, 269, to refer to *Hiryozu*), "fried tofu pouches" or "deep-fried tofu pouches" (p. v, to refer to *aburagé*).

Page 110: "In Japan, tofu is also called *momen-goshi* ('cotton-filtered') to distinguish it from its popular counterpart *kinu-goshi* ('silken tofu')." Note 4. This is the earliest English-language document seen (April 2013) that uses the term "silken tofu."

Note 5. This is the 2nd earliest English-language document seen (Oct. 2011) that contains the term "Wine-fermented tofu" (p. 361).

In Jan. 1988 a new printing (but not a new edition) of this book (the 13th), slightly revised, appeared. It had a new cover and many new small illustrations. The subtitle was "Protein Source of the Future–Now!" The heading: "The World's Bestselling Book on Tofu." Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2015. Howes, Charles D. 1979. Re: More about soymilk at Loma Linda Foods. Letter to William Shurtleff at New-age Foods Study Center, Feb. 12–in reply to inquiry. 2 p. Typed, with signature on letterhead. [3 ref]

• ***Summary:*** "We only use an isolate [soy protein isolate] in the infant formula i-Soyalac, all of our other products are made starting with the whole bean. i-Soyalac was developed several years ago in response to market demands. The main reason for the demand, I rather suppose, was due to the reduced flatulence associated with an isolate product. It is much more simple to make a product starting with the isolate so that if only one line were to be built it might be a little less expensive to formulate starting with the isolate due to reduced capital investment. However, even when all the necessary equipment is in, there is still some trade-off in making the isolate product vs. the whole bean product. Some of these are (a) reduced time for production when starting with an isolate, (b) reduced clean-up and sanitation because less equipment is used, (c) reduced need for storage space for bulk beans since the isolate comes in bags (d) no soy fines [okara].

"The advantages of starting with the bean over the isolate include (a) a better flavor (at least to some people), (b) better stability, (c) some oil from the bean is utilized, (d) the cost [of ingredients] is a little less than starting with isolate, but as mentioned above there is a trade-off and more equipment, steam, time, etc. are required and the problem of dealing with the soy fines must be handled.

"Trypsin inhibitor inactivation is approached realistically in our process. The paper by Baker & Mustakas (1973) is enclosed and might be helpful to you in your discussion of this problem. Infant formulas such as Soyalac contain only residual amounts of trypsin inhibitor since about 95-97% is destroyed during processing (see *J. Agric. Food Chem.* 24: 393-397 for exact levels).

"Dr. Harry W. Miller's International Nutrition Laboratory started making soymilk in the United States in the autumn of 1939. Production ended in the Shanghai plant on 13 August 1937 due to the war. The plant was destroyed by fire and bombing at the beginning of World War II. A copy of the rare booklet "The Story of Milk from the Soya Bean" published by Dr. Miller in 1944 is enclosed and will give some interesting details.

"The first American to work with soymilk (I believe) was John Harvey Kellogg under whom Dr. Miller worked and studied while in medical school. Dr. Kellogg was not only Harry Miller's supervisor at the food plant, but also the president of his medical school, and his professor in several classes. Enclosed are a couple of pages from Schwarz's biography of Kellogg that might be helpful in your study. Miller took a good idea and developed it into a manufactured product. Miller did a lot of research and development as well as engineering to make his idea a reality. The plant became part of Loma Linda Foods in 1950.

"Sincerely,... 3 enclosures." Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

2016. Howes, Charles D. 1979. Re: Details about soymilk at Loma Linda Foods. Letter to William Shurtleff at New-age Foods Study Center, Feb. 27–in reply to inquiry. 1 p. Typed, with signature on letterhead. [1 ref]

• ***Summary:*** Discusses: His views on the boiling water grind. The researchers at Cornell University (Ithaca, New York) deserve full credit for the important work they did.

Loma Linda was issued patent No. 3,288,614 in 1966 on the process they were using during the 1960s. Describes the steps in that patent issued to C.P. Miles. Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

2017. Shultz, Terry D.; Leklem, James E. 1979. Vitamin B-6 status in Seventh-day Adventist vegetarians and non-vegetarians (Abstract). *Federation Proceedings* (*FASEB*) 38(3):452 (Abst. #1186). March.
• ***Summary:*** Vegetarian diets tend to contain higher amounts of fiber than non-vegetarian diets. Vitamin B-6 status may be adversely affected by high-fiber diets. Blood and urine samples were obtained from 41 Seventh-day Adventist (SDA) vegetarians, 16 SDA non-vegetarians, and 31 other non vegetarians. The groups were subdivided into vitamin supplement users (VU) and non-users. Vitamin B-6 status did not differ significantly among non-vitamin-users in the 3 groups. Address: Oregon State Univ., Corvallis, OR 97331.

2018. Smith, S.; Shultz, T.; Ross, J.; Leklem, J. 1979. Nutrition and cancer attitudes and knowledge of Seventh-day Adventists (Abstract). *Federation Proceedings* (*FASEB*) 38(3):713 (Abst. #2559). March.
• ***Summary:*** Questionnaires on attitudes toward and knowledge of nutrition and its relationship to cancer were sent to 1,000 randomly selected Oregon Seventh-day Adventists (SDA). 208 of 500 females and 123 of 500 males responded. 61% of the respondents strongly agreed that there is a relationship between diet/nutrition and cancer. From 90-95% of both males and females agreed that some foods contain cancer causing substances. Vegetarians more strongly than non-vegetarians agree that there is a relationship between diet and cancer and that specific nutrients are related to cancer risk. Address: Oregon State Univ., Corvallis, OR 97331.

2019. Thomson, W.A.B. 1979. Infant formulas and the use of vegetable protein. *J. of the American Oil Chemists' Society* 56(3):386-88. March. [15 ref]
• ***Summary:*** Contents: Abstract. Infant formulas and the use of vegetable protein. A photo shows Thomson. Table 2, titled "Soy-based infant formulas," gives the name, product form (P = powder. R = ready to eat. C = concentrated liquid) and manufacturer or each. Bon Lact, P, Wakodo Pharmaceuticals, Japan. Espelin, P, Med-Nim (PTY) Ltd., South Africa. Isomil, R C P, Abbott Laboratories (Ross), USA. Lactopriv, P, Topfer, West Germany. Mull-Soy, C, Syntex Laboratories, USA. Multilac, P. Carlo Erbe S.p.A., Italy. 2020. Welsh, Thomas L. 1979. Meat and dairy analogs from vegetable proteins. *J. of the American Oil Chemists' Society* 56(3):404-06. March.
• ***Summary:*** Contents: Abstract. Introduction. Definitions: Meat analogs, dairy analogs. Design of meat analogs: Nutrition, protein efficiency. Marketing of meat and dairy analogs. Regulatory aspects. Other protein sources. A photo shows Welsh. Address: Vice President, R&D, Grocery Products Div., Miles Laboratories, Inc., 7123 West 65th S.E., Chicago, Illinois.

2021. Worthington Foods, Inc. Div. of Miles Laboratories, Inc. 1979. Nutritional data sheet [Nutritional analyses of 64 Worthington products]. Worthington, Ohio. 6 p. Manufacturer's catalog.
• ***Summary:*** Products are divided into canned and frozen. Address: Div. of Miles Laboratories, Inc., Worthington, Ohio 43085.

2022. **Product Name:** Soy Coffee with Chicory, Soya Meat, Soya Soft Drink.
Manufacturer's Name: Spicer College Products & Services (dba Spicer's Food Specialties).
Manufacturer's Address: Aundh Road, Poona, 411 007, India.
Date of Introduction: 1979 April.
New Product–Documentation: Label and color photo. 1986. Shows package (box). Red, yellow, white, and brown with coffee in cup on front panel. "Delicious Drink. Caffeine Free." Net Wt. 200 gm.

Full-page ad in *The Times of India.* 1979. April 23. p. 11. "From the seed of the soya an idea is born." Spicer's Food Specialties now offers four unusual products for your health: Soya Meat, Soya Coffee (with the full, rich flavour of chicory), soya "milk substitute" (Soyalac–formulated to provide the full nutritive value of buffalo's milk), Soya soft drink–Plus! Wholesome Granola breakfast.

2023. Spicer's Food Specialties. 1979. Display ad: From the seed of the Soya an idea is born. *Times of India* (*The*) (*Bombay*). April 23. p. 11.
• ***Summary:*** A very interesting full-page ad, with lots of white space. In the very center is a large photo of a soyabean. Below it is the caption: "The world's richest source of protein."

In the left column: "4 unusual products for your health. 1. Soya Meat: Now you can eat meat yet stay vegetarian. The secret? Delicious protein-packed soya meat. It comes frozen fresh–just like regular meat. And you can mince it, fry it or roast it–to make korma, keema mutter, seekh kababs and

© Copyright Soyinfo Center 2014

more.

"2. Soya coffee: Now you can drink coffee to your health. Because we've taken out the coffee beans (and the caffeine) from your favourite beverage. Instead we've put in the goodness of soya beans and the full, rich flavour of chicory.

"3. Soya "milk substitute": Soyalac [canned soymilk]. Formulated to provide the full nutritive value of buffalo's milk. It's easy to digest–recommended by doctors around the world for children allergic to regular milk. It's easy to preserve–needs no refrigeration.

"4. Soya soft drink. When you're hot and thirsty, reach for the drink with a difference. A drink that nourishes as it refreshes. Low in fat, high in protein, its perfect for growing children as well as hardworking adults. Fill up the fridge at home. Introduce it to your workers in the company canteen. (Limited distribution).

"Plus! Delicious egg noodles. Wholesome Granola breakfast cereals. Spicy peanut bread."

In the right column: "From a very unusual company. At the age of 23, a young man gave up a promising medical career in America to come to Asia and serve the poor and the sick. In Japan and China he 'discovered' the soya bean and its extraordinarily high protein content.

"That man was Dr. Harry Miller, the inspiration behind Spicer's Food Specialties division. The institute, located near Poona, has its own farms and manufacturing facilities.

"Dr. Miller personally invented several soya products and initiated a continuing programme of developing and manufacturing soya and other health foods around the globe. Spicer's Food Specialties division is part of this world-wide programme.

"Its your assurance of up to date know-how, world class standards of hygiene and uncompromising quality control behind every product from Spicer's.

"Good taste and good sense. Spicer's Food Specialties. Exclusively marketed by Argosy Foods Division, 1st Floor, Dhiraj Chambers, Waudby Road, Bombay 400 001.

"Free! Mini information ad recipe booklet "Food for Thought" at your dealer–or write to Argosy Foods Division.

"Distributed by:" The names, addresses and phone number of four local distributors are given. "Available at better stores and supermarkets everywhere!"

Note: The first soy dairy in India was opened by Seventh-day Adventists in at Spicer Memorial College in Poona. In 1973 they began making soymilk (Soyalac) and related products. As of Sept. 2010 Spicer Memorial College (which was established in 1915) is active and doing well at their original location, Aundh Road, Ganeshkind. Pune–411 007, India.

Note: An article in this newspaper on 17 Aug. 1973 titled "Ten, plus two, plus three: Time and the educator, by V.V. John, states: "Spicer Memorial College in Poona does the four-year degree syllabus of Poona university in less than half the time, and devotes the rest of the time to vocational and enrichment courses." One of the vocational courses may well have been working in the school's food factory and making soyamilk.

A subsequent article in the same newspaper on 19 Nov. 1974, titled "Career education," also by V.V. John, stated: "In fact, the work of this college qualifies it to be acclaimed a pace-setter." Address: [Poona / Pune, Maharashtra state], India.

2024. Loma Linda University, School of Health. 1979. The exciting world of tofu. Loma Linda, California. 20 p. April. 22 cm. [4 ref]

• ***Summary:*** Compiled for the Loma Linda Market and its patrons. Contents: Introduction (from *Japanese Country Cookbook*). Nutritional composition. Recipes–Appetizers and dips. Dressings and spreads. Entrees. Vegetables. Recipes taken from: *Laurel's Kitchen, The Book of Tofu, The Farm Vegetarian Cookbook.* A simple black on white booklet, saddle stitched. Address: Loma Linda, California.

2025. *Times of India* (*The*) (*Bombay*). 1979. Classified ad: Wanted–Soya-Milk distributors. May 19. p. 15.

• ***Summary:*** A fairly small ad with a bold title and border: "A company manufacturing Soyabased products for the first time in India wishes to appoint Distributors in Bombay for Soyamilk–a 'Milk Substitute' for people allergic to regular milk and also for children with hyperallergenic conditions.

"Only parties with good financial standing and preferably experienced in distributing over-the-counter products need apply to Box W 809-S Times of India, Bombay 1."

Note: This ad was probably run by Spicer Memorial College, for several reasons: (1) They are located in Pune, southeast of Bombay. (2) On April 23 of this year (a little less than a month ago), their Spicer's Food Specialties ran a full page ad in this same newspaper advertising "Soya 'Milk Substitute.' Soyalac."

2026. Webster, Ian W.; Rawson, Graeme K. 1979. Health status of Seventh-day Adventists. *Medical J. of Australia* 1(1):417-20. May 19. [24 ref]

• ***Summary:*** A comparison of the health status was made between three groups from New South Wales: 779 Seventh-day Adventists, 8,363 persons referred by general practitioners, and 9,825 volunteers. The Adventists showed less impairment of systolic and diastolic blood pressures, of plasma cholesterol and plasma urate concentrations, and of lung ventilatory capacity; and less obesity at most specific ages. Depression, sleeplessness, and use of sedatives and tranquilizers was lower in Adventists. "It is concluded that the life style of the Seventh-day Adventists is conducive to lessened morbidity [illness], delayed mortality [longer life], and decreased call on health services in comparison

© Copyright Soyinfo Center 2014

with the general population." Address: 1. Head, School of Community Medicine; 2. Lecturer, School of Health Administration, The Univ. of New South Wales, Australia.

2027. Gori, Gio Batta. 1979. Dietary and nutritional implications in the multifactorial etiology of certain prevalent human cancers. *Cancer* 43(5):2151-61. Supplement. May. [100 ref]

• ***Summary:*** "It has been estimated that 80-90% of the cancer rate in the U.S. can be attributed to environmental factors. For the last 20 years the role of smoking has been recognized by the scientific community. However, it is only recently that the role of diet, i.e., food and beverages in carcinogenesis has begun to be recognized. It is likely that diet is more important than smoking in cancer causation. Both human and animal studies support this assumption. The study of special populations in the U.S. such as the Mormons and the Seventh Day Adventists also point to the potential of reducing U.S. cancer rates and individual risk factors through the modification of dietary habits."

Contents: Introduction. Epidemiologic studies: Migrant studies, special populations, worldwide high/low correlations, U.S. trends. Animal studies. Theories on the role of diet and nutrition in the causation of cancer: Bile acids, protease inhibitors, antioxidant deficiency, fiber, hormone production, excess nutrient and caloric consumption, deficient nutrient consumption, carcinogenic absorption, food-born carcinogens, dietary inducers of the mixed-function oxidase system, dietary guidelines. Address: Deputy Director, Div. of Cancer Cause and Prevention, National Cancer Inst., Bethesda, Maryland 20014.

2028. Midwest Natural Foods Distributors, Inc. 1979. Catalog 13. Spring, 1979. Ann Arbor, Michigan. iv + 290 p. Index by product category. Index of manufacturers. Index of advertisers. Illust. 28 cm.

• ***Summary:*** On the cover are two kites (colored orange and red) flying in the sky. This catalog, largely printed by a computer, contains many ads on numbered pages. Contents: Policies and terms. Catalog information. Packaged. Books. Refrigerated and frozen. Bulk. Literature and flyers. Indexes (3).

"One stop shopping... We are now a Full Line distributor." List of new lines. List of new products within existing lines. Symbols and abbreviations.

Suppliers are listed alphabetically: Arrowhead Mills, Balanced Brand [Balanced Foods, New Jersey], Bragg's (Liquid Aminos), Dr. Bronner's (with full page ad showing the doctor), Carmé (lecithin), Cedar Lakes, Cellu (Soy bean flour), Chico-San, A.A. Debole (Spaghetti sauce–soy conc), Dragon's Milk (Arica), Elam's (soy flour), El Molino, Ener-G–Jolly Joan, Erewhon (with "Erewhon West" full-page ad), Family Orchards (Tamari mixes, Trail mix), Fantastic Foods, Fantastic Falafel [Felafel], Fearn Soya Foods, Flavor Tree, Hain Pure Foods ("Cold pressed" vegetable oils, mayonnaise, nut butters), Hansen's juices, Health Valley (incl. Vegetarian Chili), Hi-Energy Foods (food bars), Hoffman's (protein powders, snack bars), Lact-Aid (p. 109, ad p. 118), Jack La Lanne, Lange's, R.G. Lecithin, Lifestream (p. 113, 251, ads p. 249-50), Malt-O-Meal, Maya Grainburgers (p. 119, ad p. 126–mix with tofu), Midland Lecithin, Miso Cup, Modern Products (Gayelord Hauser), Mus-L-On (MLO), NF Factors, Niblack ("Tamari toasted sunflower seeds," Tamari pumpkin seeds," raw or toasted wheat germ, unprocessed miller's bran), Old Stone Mill (soy), Orjene, Parkelp, Plus Produces (incl. Tiger's Milk), Richter Bros., Soken, Sovex, Viobin, Waring (blender, juicer), Westbrae.

Books, Talking Foods, Meats (nitrate and nitrite free), Poultry (no hormones or antibiotics), Soy Products (Health Valley soy milk, tofu), Soy Plant Tofu (nigari, and tofu sausage, p. 259-60), Tumaro's, Willow Run (Soybean spread [margarine]). Bulk–Beans, dry roasted soybeans, fruit & nut mixes (trail mix), nut butters, condiments, vegetable oils, pasta (with nomenclature), granola, teas & herbs. Literature & flyers. Indexes. Note: Many companies have a large selection of herbs. Address: 170 Aprill Dr., Ann Arbor, Michigan 48103. Phone: 313-769-8444 or in Area 313 1-800-552-6297.

2029. *Spectrum: Journal of the Association of Adventist Forums.* 1979. The Bible Conference of 1919. 10(1):23-57. May.

• ***Summary:*** This issue of *Spectrum* is titled "1919 Bible Conference." There is also a "special section" with the same title. However: (1) All of the copies of this issue except one (which the magazine will not sell) have been purchased, so it is not available from the publisher. (2) The 64-page issue appears to be available on the Andrews University website, however it takes about 90 minutes to download using a fast computer, whereas it would typically take 1-4 minutes. Very suspicious!

Contents: Introduction, by Molleurus Couperus (p. 23-26). The use of the spirit of prophecy in our teaching of Bible and history (p. 27-44). Inspiration of the spirit of prophecy as related to the inspiration of the Bible (p. 44-57).

The Bible Conference took place from July 1-21, 1919, in Takoma Park. The president of the General Conference at that time was Arthur G. Daniells. He and many other leaders of the church were present at that 3-week meeting. "The record of the 1919 Bible Conference was lost until December 1974, when Dr. F. Donald Yost found two packages wrapped in paper at the General Conference of Seventh -day Adventists in Takoma Park. The packages contained some 2,400 pages of typewritten material, transcribed from stenographic notes taken at the Conference. It seems a tragedy that this material was not made available to Adventist teachers and ministers after the Bible

© Copyright Soyinfo Center 2014

Conference, and that the message which the participants in that Conference wanted to share with the church membership never was transmitted" (p. 26). A.G. Daniells: "In Australia I saw 'The Desire of Ages' being made up, and I saw the re-writing of chapters, some of them written over and over and over again. I saw that, and when I talked with Sister Davis about it, I tell you I had to square up to this thing and begin to settle things about the spirit of prophecy. If these false positions had never been taken, the thing would be much plainer than it is today. What was charged as plagiarism would all have been simplified,..." (p. 51).

A.G. Daniells: "Yes; and now take that 'Life of Paul,'–I suppose you all know about it and know what claims were put up against her, charges made of plagiarism, even by the authors of the book, Conybeare and Howson, and were able to make the denomination trouble because there was so much of their book put into 'The Life of Paul' without any credit or quotation marks" (p. 51).

Note: A significant amount of material in Ellen G. White's the book, *Sketches from the Life of Paul*, published in 1883, was taken directly from the book *Life and Epistles of Saint Paul*, by W.J. Conybeare and J.S. Howson, written some 30 years earlier. Yet in the preface to the 1883 version of Mrs. White's book the following claim is made: "The writer of this book, having received especial help from the Spirit of God, is able to throw light upon the teachings of Paul and their application to our own time, as no other authors are prepared to do."

2030. Smith, Allan K. 1979. Re: History of soybean foods in the United States. Letter to William Shurtleff at New-Age Foods Study Center, June 3. 2 p. Typed, with signature. [1 ref]
• ***Summary:*** Gives a brief overview of the history. Discusses what Dr. Smith sees as the bright future of tofu and fermented tofu, and the work of Dr. Harry Miller.

"I do know from past experience that an excellent fermented cheese product can be prepared [from soybeans]. You will find a description of the use of soy milk in making cheese in chapter 10 and eleven in our book" [*Soybeans: Chemistry and Technology*]. Address: 4 Nacozari Lane, Hot Springs Village, Arkansas 71901.

2031. *Madison Survey & Alumni News* (*Madison, Tennessee*). 1979. Dr. Frances Linda Dittes: Obituary. June.
• ***Summary:*** Frances arrived at Madison College in 1910 from Monticello, Minnesota, and joined the faculty in 1912. She was the first Seventh-day Adventist to earn a PhD in nutrition, obtaining hers from Peabody College in August 1935. She was the 9th person in the USA to receive a degree in that field. From 1935 to 1955 she worked at Madison College and Hospital, expanding its nutrition department. "At the time of her retirement she had served 48 years, more than any other staff member at Madison College and Hospital, as teacher and head of the department of nutrition." Dr. Dittes was listed in *Who's Who Among American Women.* She also gave free dietetic service through a Nashville vegetarian restaurant.

She died in Nashville, Tennessee, at the Trevecca Health Center, on 7 April 1979 at age 88. "Following funeral services at Madison Funeral Home, Dr. Dittes' body was sent to Monticello, Minnesota, for burial. She is survived by several nieces and nephews, among them Dr. Albert Dittes of Portland, Tennessee, and William H. Dittes of Red Wing, Minnesota."

Note: Frances Dittes was born in 1891.

2032. Scharffenberg, John A. 1979. The meat debate (Sound recording). Health Leadership Seminar. *
• ***Summary:*** Dr. Scharffenberg, M.D., presents an account of a debate on the pros and cons of meat consumption held at the annual meeting of the American Association for the Advancement of Science. He cites numerous medical studies demonstrating the relationship between meat consumption and chronic diseases. Address: Assoc. Prof. of Applied Nutrition, Loma Linda Univ., Loma Linda, California.

2033. Shurtleff, William; Aoyagi, Akiko. 1979. Tofu & soymilk production: A craft and technical manual. Lafayette, California: New-Age Foods Study Center (Renamed Soyfoods Center in Sept. 1980). 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. First published in Aug. 1977 as a rough photocopied manuscript with a yellow cover. [223 ref]
• ***Summary:*** Contents: Preface. 1. How to start a tofu shop or soy dairy. 2. Setting up shop; The community or village shop; The traditional caldron shop; The steam cooker plant; The pressure cooker plant; The soy dairy; The automatic steam cooker plant; The modern factory. 3. Ingredients. 4. Sanitation and safety. 5. Principles of tofu & soymilk production. 6. Tofu. 7. Firm tofu, pressed tofu & smoked tofu. 8. Foods made from tofu: Introduction, creamy tofu dressing, tofu chip dip, tofu mayonnaise, tofu cream cheese, cottage cheese, sour cream, tartare sauce, tofu eggless egg spread or missing egg salad, tofunafish spread or salad, tofu rice salad, tofu cheesecake (Sprucetree Baking Co. and White Wave), tofu pies, tofu creamies or tofu-coconut cream bars, tofu tarts, tofu turnovers, tofu puddings, fruit whips, custards and parfaits, tofu cinnamon rolls, tofu whipped cream, tofu icing and cream cakes, marinated tofu (fried or baked, p. 166), tofu jerkey [sic, jerky] (p. 166), teriyaki tofu, tofu teriyaki, savory baked tofu, savory pressed tofu (with five spice powder, *wu-hsiang toufu-kan*), nori rolls with brown rice & tofu, tofu & brown rice burgers, tofu baby foods, tofu in ready-made sandwiches. 9. Using okara, whey, curds & hulls. Deep-fried tofu (cutlets, cubes, burgers, treasure balls, burger balls, pouches, puffs). 11. Soymilk. 12. Dairylike products made from soymilk: Frozen soymilk

© Copyright Soyinfo Center 2014

desserts (soymilk ice cream, frozen soymilk yogurt, soymilk sherbets, soysicles, frozen soymilk custard, ice soymilk), fermented or cultured soymilks (soymilk yogurt, acidophilus soymilk, soymilk kefir, soymilk piima, soymilk buttermilk and other fermented milks), soymilk cheeses (unripened fresh, unripened soft {quark, queso blanco, panir, etc.}, ripened soymilk cheeses), soymilk mayonnaise, soy shakes and energy drinks, soymilk eggnog (soy nog), soymilk whipped cream, chip dips, puddings, custards. 13. Silken tofu & pressed silken tofu (Silken tofu is made from concentrated soymilk). 14. Lactone silken tofu (GDL). 15 Grilled tofu. 16. Fermented tofu. 17. Dried-frozen tofu. 18. Yuba. Appendix A: Resources. People & institutions connected with tofu & soymilk production. B: Weights, measures & equivalents. Bibliography. About the New-Age Foods Study Center.

See ¼-page ads in *East West Journal.* 1979. Dec. p. 4. 1980. Jan. p. 19.

Note 1. This is the earliest English-language book seen with the term "soymilk," spelled as one word, in the title.

Note 2. This is the earliest document seen (Feb. 2002) that mentions tofu jerky or any kind of soy jerky.

Note 3. This is also the earliest English-language document seen (April 2013) that uses the word "quark," or "queso blanco" in connection with soy cheese or tofu.

Note 4. This is the earliest English-language document seen (Sept. 2012) that contains the term "cultured soymilks" (or "cultured soymilk").

Note 5. This is the earliest English-language document seen (Sept. 2012) that contains the term "ripened soymilk cheeses" (or "ripened soymilk cheese").

Note 6. This is the 2nd earliest English-language document seen (April 2013) that uses the term "smoked tofu," but the first that uses it in its modern sense.

Note 7. This book contains the most detailed and complete descriptions seen to date (Oct. 2012) of how to make tofu, soymilk, and yuba on a commercial scale.

Note 8. This book was first printed on 1 Aug. 1977 in a photocopied and rough-typed edition with a yellow and black cover.

Note 8. Reviews of this book appeared in many publications: (1) Richard Leviton. 1980. *Soycraft* (Massachusetts). 2(1):63-64. Winter. "An indispensable operating manual for soyfoods entrepreneurs... The illustrations alone make the book a valuable reference tool... a sustained inspiration. The only book of its kind in English." (2) *Food Chain* (Intermediate Technology, England). 1997. No. 20. March. p. 6. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2034. Simons, Leon; Gibson, J.; Jones, A.; Bain, D. 1979. Health status of Seventh-Day Adventists. *Medical J. of Australia* 2(3):148. Aug. 11. [5 ref]
• ***Summary:*** This letter states that the authors have recently assessed cardiovascular risk-factor profiles in a group of 97 healthy Adventist students, ages 18-35 years, residing at a College of Advanced Education conducted by the SDA church near Newcastle in New South Wales. The findings were compared with matched non-vegetarian control subjects. "Not one Adventist student had evidence of hypertension, hyperlipidaemia, or cigarette smoking." The Adventists also had lower serum cholesterol levels. Address: St. Vincent's Hospital, Darlinghurst, NSW 2010, Australia.

2035. Howes, Charles D. 1979. Re: Soymilk processes developed by Seventh-day Adventists. Letter to William Shurtleff at Soyfoods Center, Aug. 15–in reply to inquiry. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "The microwave process of making soymilk was developed by Paul Allred who has had some past experience in soymilk production. For example, he established a soymilk plant in Mexico while he was an Adventist missionary and educator there. He has also been a moving force behind the plant in Egypt. The initial patent for the process (#3,941,890) is enclosed. This outlines the microwave process in some detail. Mr. Allred is located at the Loma Linda Foods plant in Riverside so if you would like to visit with him and perhaps see his cooker you might give him a call and arrange for a visit."

"I do not think that we will be using this process in the U.S. in the immediate future due to relatively low throughput and capital investment problems. However, as higher powered equipment becomes available this may well change." Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

2036. *Pacific Union Recorder* (*Westlake Village, California*). 1979. At rest: Jones, Dorothea Van Gundy. Sept. 24.
• ***Summary:*** Born: 16 Feb. 1903, San Jose, California. Died: 30 Aug. 1979, Sedro Woolley, Washington. "Survivors: daughters, Lois Bower, Evelyn Mundall; sister, Dr. Mary Charlotte Holmes; niece, Sue Muff; cousin, Dr. Lloyd Waller; 14 grandchildren; 17 great-grandchildren. For 23 years Dorothea Van Gundy Jones was an internationally-known nutritionist for Loma Linda Foods where she developed the cooking classes and seminars that made her and Loma Linda Foods so well known."

2037. Stoia, Rose M. 1979. Vegetarianism: Cultural and nutritional aspects, a bibliography. Prepared for the Seventh-day Adventist Dietetic Assoc., Box 75, Loma Linda, CA 92354. 3 p. Sept. *
• ***Summary:*** Lists journal articles dealing with medical aspects of the vegetarian diet. Address: Loma Linda, California.

2038. *North Pacific Union Conference Gleaner* (*Portland, Oregon*). 1979. Obituaries: Jones, Dorothea Van Gundy. Oct.

1. p. 31.
• ***Summary:*** "Dorothea Van Gundy Jones was born Feb. 16, 1903 in San Jose, California, and died Aug. 30, 1979 in Sedro Woolley, Washington. She leaves to mourn two daughters Lois Bower of Redding, California, and Evelyn Mundall of Belize, Central America; one sister, Dr. Mary Charlotte Holmes of Sulphur Springs, Arkansas; a niece, Sue Muff, Sedro Woolley; a cousin, Dr. Lloyd Waller of Chehalis, Washington. After graduating from Pacific Union College, she worked as a dietitian for the White Memorial Hospital, dietitian for La Sierra College for two years and taught three years at Walla Walla College. For 23 years, she was internationally known nutritionist for Loma Linda Foods. Her lectures on nutrition took her around the world; to India, Bangkok [Thailand], Indonesia, the Philippines, Japan, Australia, New Zealand as well as to most major cities in the U.S."

2039. *Adventist Review* (*Hagerstown, Maryland*). 1979. Deaths: Jones, Dorothea Van Gundy. Oct. 25. p. 31 (p. 1175).
• ***Summary:*** Born: 16 Feb. 1903, San Jose, California. Died: 30 Aug. 1979, Sedro Woolley, Washington. At Loma Linda Foods, "she developed the cooking classes and seminars that made her and Loma Linda Foods well known. Her lectures on nutrition took her around the world and to the major cities of the U.S.A. In 1964 she was invited to represent the United States Government as a lecturer in Tokyo, Japan, at the Soy Bean Seminar and Food Fair. Loma Linda University awarded her the Certificate of Commendation for her contribution in the field of nutrition. Survivors include her two daughters, Mrs. Lois Bower, and Mrs. Evelyn Mundall; one sister, Dr. Mary Charlotte Holmes; 14 grandchildren; and 17 great-grandchildren."

2040. **Product Name:** Morningstar Farms Scramblers (Cholesterol Free Egg Substitute) [Regular, or Institutional].
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1979 October.
Ingredients: Institutional: Egg whites, nonfat milk, soybean and/or corn oil, calcium caseinate, modified corn starch, flavorings (artificial flavors, monosodium glutamate, disodium guanylate, disodium inosinate), salt, lecithin, aluminum sulfate, mono- and diglycerides, lacto esters of propylene glycol, vitamins [D, calcium pantothenate, A palmitate, riboflavin (B-2), thiamine mononitrate (B-1), pyridoxine hydrochloride (B-6), B-12], iron (as ferric orthophosphate), zinc (as zinc sulfate), artificial color (beta-carotene).
How Stored: Frozen.
New Product–Documentation: Worthington Yesterday and Today. 1984. p. 10. Label. 1989. Sept. 7. Sold at Diablo Foods, a supermarket in Lafayette, California. The cholesterol-free egg-like product (12 oz., 3 cartons) retails for $1.95. "Half the fat of whole eggs. One-third fewer calories."

"Help yourself to a healthier heart: What you eat makes a difference" (Brochure, color). 1988. 18 p. Promotion for Morningstar Farms Scramblers.

ages ranged from 4 to 58 months. All infants had been breast fed and were black. "Ingestion of vitamin D was limited by exclusion of meat and/or dairy products in 21, and no infants had consistently taken supplemental vitamins. Nineteen were members of [Black] Muslim or Seventh Day Adventist faiths." Address: Children's Hospital of Philadelphia, and the Dep. of Pediatricsd, Univ. of Pennsylvania Medical School, Philadelphia.

2045. Enstrom, James E. 1979. Cancer mortality among low-risk populations. *Ca–A Cancer Journal for Clinicians* 29(6):352-61. Nov/Dec. [27 ref]
• ***Summary:*** This article focuses on cigarette smoking as a cause of cancer. If all Americans did not smoke, it is estimated that the 390,000 cancer deaths that occurred in 1978 would be reduced by 26%. There would be a reduction of about 80,000 lung cancer deaths and 22,000 other cancer deaths. Table 2 summarizes studies that have been conducted on 5 large groups of non-smokers and 3 groups of healthy people. California Seventh-day Adventists, studied from 1958-1965, had the lowest rate of cancer at smoking-related sites, only 58% of the rate of U.S. whites. Address: Cancer Epidemiology Researcher, School of Public Health and Program Director for Cancer Control Epidemiology, Jonsson Comprehensive Cancer Center, Univ. of California, Los Angeles, California.

2046. **Product Name:** Granose Dinner Balls: Savoury Protein Balls in Sauce.
Manufacturer's Name: Granose Foods Ltd. (Distributor). Made in Denmark by Nutana Helsekost.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1979.
Ingredients: Textured soya protein, wheat protein, soya oil, bread crumbs, oat flakes, egg white powder, vegetable margarine, wheat flour, maize starch, salt, yeast, hydrolised vegetable protein, onion powder, herbs, celery powder, spices, monosodium glutamate.
Wt/Vol., Packaging, Price: 400 gm (14 oz) can.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. Label. 1980, undated. 9.5 by 4.25 inches. Second best.

We formulated i-soyalac to provide your baby a nutritionally balanced food that is

complete with the vitamins, minerals and essential amino acids all infants need. At least 100% of the U.S. RDA.

Also i-soyalac is entirely free from both cow's milk and corn derivatives and very low in soy carbohydrates.

In addition, our two-piece 14-ounce cans contain no soldered seams, thereby reducing the possibility of contamination from environmental exposure to lead.

We also make Soyalac, the only soy-based infant formula made from an extract of the whole soybean. That means Soyalac retains the natural goodness of the soybean for complete nutrition, yet it is still a completely milk-free product.

Loma Linda infant formulas are available in concentrate, ready-to-serve or powder form.

So as you can see, both i-soyalac and Soyalac have been formulated to provide complete nutrition for all babies. In fact, because it simulates it nutritionally, i-soyalac is the next best thing to mother's milk.

Loma Linda®

2064. Gish, Ira; Christman, Harry. 1979. Madison–God's beautiful farm: The E.A. Sutherland story. Mountain View, California: Pacific Press Publishing Assoc. 187 p. Illust. No index. 17 cm.
• ***Summary:*** An outstanding history of Madison College in Madison, Tennessee, focusing on the founding and early years. Contents: Crisis in the Cumberland. Battle of the angels. Trailblazing. Years of decision. A college in the northwest. Changing times. Prisoners of hope. The little people. Out on the land. Men of great faith. The Madison School. Strengthening the stakes. Health evangelism joined

to educational progress. With undiminished faith. God's plan unfolds. World response. At evening time–light. After fifty years. Portrait of a heroic leader. Epilogue.

Note: Page 105 states that in 1930 the name of the school was changed to Madison College from Nashville Agricultural and Normal Institute. Others (Sandborn 1953, p. 67; Neufeld 1976, p. 830) give the date as 1937.

A portrait photo (p. 39) shows "Sally and Edward Sutherland shortly after their marriage."

The 1989 edition of this book states on p. 186: "Mrs. Ellen G. White had a leading part in the founding of Madison College. It was she who selected the spot–'the beautiful farm,' as she called it–upon which the school was built. She became a charter member of the N.A.N.I. board and remained on the board until the year before her death in 1915. This was the only College board she ever served on. During all these early years she continued in active support of the work at Madison.

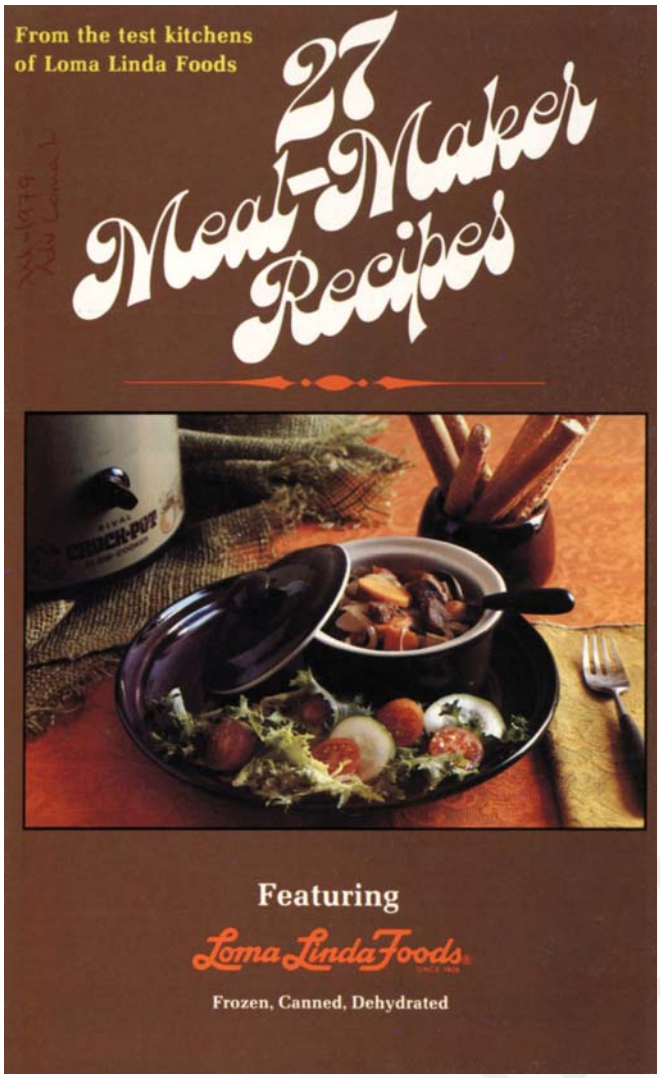
• ***Summary:*** "The contents of this book are the edited proceedings of the third Kellogg Nutrition Symposium presented at the Royal Society of Medicine, London, by Kellogg Company of Great Britain Limited." This same book was published in 1978 in London by Libbey.

The first Kellogg symposium was held in 1974. Contains 17 papers by various authors. Editor's preface. Recent developments in dietary-fibre hypotheses, by H.C. Trowell. The definition, analysis and properties of dietary fibre, by D.A.T. Southgate. Critical evaluation of some suggested methods of assay of dietary fibre, by N-G. Asp. The digestion and metabolism of polysaccharides by man and other animals, by J.S.D. Bacon. Mechanical effects of fibre, with reference to appendicitis, hiatus hernia, haemorrhoids and varicose veins, by D.P. Burkitt. Dietary fibre from cereals and incidence of coronary heart disease, by J.N. Morris, Jean W. Marr and D.G. Clayton. Dietary fibre and asymptomatic diverticular disease of the colon, by J.S.S. Gear. The treatment of diverticular disease with dietary fibre, by A.J.M. Brodribb. Epidemiology of diverticular disease, by Martin Eastwood. Diet and transit through the gut, by J.H. Cummings. Effect of bulk additives on constipation and in diverticular disease, by A.N. Smith. Effect of different types of dietary fibre on plasma lipids, by A. Stewart Truswell (discusses soy). The effects of dietary fibre on mineral availability, by N.T. Davies. Maintenance of remission in ulcerative colitis with sulphasalazine or a high-fibre diet: a clinical trial, by P.S. Davies and J. Rhodes. Effects of dietary fibre on intestinal absorption, by M.S. Losowsky. Fibre, satiety and insulin–a new approach to overnutrition and obesity, by K.W. Heaton. Practical experience in fibre, by C. Latto. Address: Consultant Senior Lecturer, Univ. of Bristol; Honorary Consultant Physician, Bristol Health District, Bristol Royal Infirmary, Bristol BS2 8HW, England.



2066. Loma Linda Foods. 1979. 27 Meal-Maker recipes. 11503 Pierce St., Riverside, CA 92505. 16 p. 21 cm.

• ***Summary:*** See next page. This color booklet shows how to use the following Loam Linda products in recipes: Sizzle Burgers, Meatless Fried Chicken, Meatless Turkey, Breakfast Sausage, Sizzle Franks, Meatless Bologna, Little Links, Meatless Salami, Vege-Burger, Meatless Roast Beef, Chili Beans, Meatless Chicken Roll, Proteena, Meatless Fried Chicken with Gravy, Vita-Burger Chunks, Linketts, Nuteena, Big Franks, Redi-Burger, Dinner Cuts, Vegelona, Tender Rounds, Sandwich Spread, Vita-Burger Granules, Green Soybeans, Tender Bits, Loma Linda foods hors d'oeuvres [not a commercial product]. A small photo shows each product and label. Address: Riverside, California.

2067. NV Vandemoortele. 1979. Soyamel: A new source of proteins. NV Vandemoortele, Protein Division, Prins Albertlaan 12, B-8700 Izegem, Belgium; NV Befico, Marsveldplein 5–bus 28, B-1050 Brussels–Belgium. 9 p. 30 cm. [Eng]

• ***Summary:*** Contents: Soya: A source of proteins. Agronomy of soya (a hectare of land planted to soya will yield 500 kg of protein; this is more than any other plant or animal. Beef makes least efficient use of the land). Nutrition (soy proteins are high in quality). Soyamel: A new protein source ("The industrial process developed by the Vandemoortele Group yields as high-quality soya bean-based drink" containing

© Copyright Soyinfo Center 2014

3.3% protein and 44 calories per 100 gm. An illustration (line drawing) shows imaginary (never commercially produced) 1-liter and 500 ml Tetra Brik Aseptic cartons of Famalac energy drink in chocolate and vanilla flavors. A child is shown drinking the product from a glass with a straw). Soyamel: A reliable production process (shows the equipment and a flowchart of the process).

Vandemoortele, your partner: "The industrial concept of the Soyamel processing plant has been developed by the Protein Division of the Vandemoortele Group. Established in 1879, the Belgian Food Group Vandemoortele ranks among the most important food processing industrial companies of Europe in the field of edible oils and fats, and protein foods. The Group operates wholly-owned manufacturing and marketing subsidiaries in Belgium, the Netherlands, France, Great Britain, and the Federal Republic of Germany... The group employs over 1,700 persons and achieved a total turnover of $600 million (US) in 1978." Photos show three large Vandemoortele plants.

A foldout on the last page shows a cutaway view of a large soymilk plant. "Standard production capacities: 4,000 liters/hour or 20 million liters/year; 6,000 liters/hour or 30 million liters/year; 8,000 liters/hour or 40 million liters/year. The Vandemoortele Group has developed a compact installation.

"Yield: 1 kg soya beans produces an average of 5 to 8 liters [= 6½ quarts] soya bean milk and some residues for animal feeding. Vandemoortele is also willing to assume the technical management of the plant for a limited period of time. In this way Vandemoortele will be able to guarantee the best plant start-up in relation to local circumstances."

Note 1. Talk with Philippe Vandemoortele. 1990. June 4. This booklet, published before Alpro was established, was designed to sell turnkey soymilk plants. The protein division of N.V. Vandemoortele started the company's soymilk research. As long as it was only doing research and losing money there was no need to start a new company. Alpro started when it was clear that there would be income from the sale of the first turnkey plant. At that time, the protein division of N.V. Vandemoortele turned into Alpro, and the former then ceased to exist. Soyamel was a term that was coined for future soymilk products. Alpro first began to actually sell Soyamel in March 1981. In about 1983 it looked as if a company named Soyamel Nigeria Ltd. would buy a turnkey plant, but the deal never went through.

Note 2. This is the earliest document seen (July 2013) concerning Alpro or its predecessors in Belgium.

Note 3. The term Soyamel, a registered trademark of Worthington Foods Inc., was first used in about 1954 to refer to a powdered soymilk made by Worthington. Address: Izegem, Belgium. Phone: (051) 30 22 22.

2068. Riker, Tom; Roberts, Richard. 1979. Directory of natural and health foods: A sourcebook for dietary revolution. New York, NY: Putnam (A Paragon Book). 320 p. Index. 37 cm.

• ***Summary:*** The first part of this book (p. 7-49) consists of essays on natural foods and nutrition (some reprinted). Part two is a commercial catalog/directory of natural foods available in 1979; it lists and describes (with may photos and labels) products from most of the major U.S. natural foods manufacturers. An Index (p. 293-308) lists participating companies alphabetically.

Soy-related products include: Hain Super-E Soy Oil and Crude [unrefined] Soy Oil (Los Angeles, California, p. 55). Health Valley Soy Moo (Montebello, California, p. 56). Edward & Sons Miso-Cup (Union, New Jersey, p. 57). Family Orchards Fruit & Nut mixes, incl. Back Packer+*, Hi-Fiber Mix+, Hi-Iron Mix+, Hi-Protein Mix+*, Hiker's Helper, Mixed Nuts*, Mountain Munchies*, Tamari Mixed Nuts* (+ = contains Soy Nuts; * = contains Tamari Peanuts) (Berkeley, California, p. 60-61). Niblack Tamari Pumpkin Seeds (Pepitas), Tamari Roasted Sunflower Seeds, Liquid Lecithin, Granular Lecithin (Rochester, New York, p. 72-73).

© Copyright Soyinfo Center 2014

Arrowhead Mills Unrefined Soybean Oil (Hereford, Texas, p. 75). Good Morning New England Granola incl. Cashew-Raisin Bran-ola (with okara soy fiber), Happy Trails Mix (with roasted soynuts) (Amherst, Massachusetts, p. 79). Elam's Soy Flour (Broadview, Illinois, p. 81).

A long section on Erewhon and its products (p. 84-108) is probably the reproduction of an Erewhon catalog. Erewhon is now located at 3 East Street, Cambridge, MA 02141. Following several pages about the company and its philosophy and standards, each of its major products is discussed in detail, often with nutritional analyses. A label for Soy Flour (organically-grown stone-ground, 24 oz.) is shown; the main recommended use is for making soy milk! A major part of the presentation is titled "Japanese food guide." Products described include: Umeboshi (2 pages): Plums pickled in brine (umeboshi). Umeboshi paste. Plum concentrate (*bainiku ekisu*). Miso (2 pages): Hatcho, waka-Hatcho, soybean, barley, brown rice, rice, and natto miso varieties. Tekka (made with Hatcho miso). Sweets made from mizu ame [rice syrup]. Nigari. Gomashio. Koji starters for various types of miso or shoyu. Goma-muso (60% barley miso and 40% whole sesame seed butter). *Gomamiso furikake* (with barley miso, whole roasted sesame seeds, and shredded nori seaweed). Kombu candy. Kokkoh. Dried tofu (*Kohya-dofu*). Brown rice sake. Mirin. Gluten cakes (*Kuruma-fu*). Seitan (Gluten cooked in shoyu). Rice crackers seasoned with tamari soy sauce. Kuzu (3 pages). Tamari and shoyu (4 pages; Johsen Shoyu is made in Sendai and tamari is made by San-jirushi Co.). Seaweeds (4 pages): Kanten, arame, hijiki, kombu, ne-kombu, nori, seasoned nori, kanten, kanten flakes, wakame, and mekabu.

Good Food brand Soy-Millet Bread (Austin, Texas, p. 120). Arrowhead Mills Bulgur-Soy Grits (p. 121). Erewhon Morning Cereal, and Infant Cereal (each containing soy beans). Chico-San Black Soybeans (imported), and Azuki Beans (Dainagon imported small red), and Lima Soy Sauce (Chico, California, p. 126-27). Arrowhead Mills 7 Grain Cereal, and Deaf Smith Crunch (granola-type cold cereal) (each contains soybeans, p. 130).

The section on pages 188-197 is titled "Soy." It lists Farm Foods Tempeh Kit, Tempeh Starter, Natural Nigari for Curding Tofu, Soyflour, Whole Cleaned Soybeans, Good for Ya Textured Vegetable Protein (Summertown, Tennessee, p. 189). New England Soy Dairy Tofu (with many tofu recipes, Greenfield, Massachusetts, p. 192-96).

The Redwood Sprouter Co. sprouter containing Soy Sprouts (1976, Austin, Texas, p. 202-04). Worthington Foods (a photo shows their line of 38 products). Millstone Burger-Like (with soy flour and TVP), Wheat Fries (with wheat gluten), Tender Cuts (with wheat protein and soy flour) (Penryn, California, p. 222-23). Sunrise Health Products Lecithin Granules (p. 274-75).

2069. Scharffenberg, John A. 1979. Problems with meat. Santa Barbara, California: Woodbridge Press Publishing Co. 110 p. No index. 22 cm. Based on a presentation at an annual meeting of the American Assoc. for the Advancement of Science. [93 ref]

• ***Summary:*** Contents: List of tables and figures. Preface. Introduction: Meat- Dangerous and difficult. Potential health hazards in the use of meat: Meat and atherosclerosis, meat and cancer (incl. benzopyrene), longevity, kidney disorders, salmonellosis, osteoporosis, trichinosis, meat inspection. Population growth and economics. Nutritional problems of meat. Complete protein not required at every meal. Vegetable sources of protein. Good nutritional status of non-meat users. A rating of health hazards. A final word. References.

• ***Summary:*** This college-level text is perhaps the best scholarly history of the Seventh-day Adventist church. Address: Andrews Univ., Berrien Springs, Michigan 49104.

2071. Theobald, Robin. 1979. The Seventh-day Adventist movement: A sociological study with particular reference to Great Britain. PhD thesis, University of London (School of Economics). 437 p. *

2072. Trowell, H.C. 1979. Recent developments in dietary fibre hypotheses. In: Kenneth W. Heaton, ed. 1979. Dietary Fibre: Current Developments of Importance to Health. Kellogg Symposium, December 1977. Westport, Connecticut: Technomic Publishing Co., Inc. 158 p. See p. 1-8. [40 ref]

• ***Summary:*** Contents: Summary. History of dietary fibre. Definitions of dietary fibre and edible fibre. Western diseases. Essential hypertension. Diets, Western and developing. Supporting evidence. Thrombosis. Prospective studies.

"Summary: Kellogg (1923) and others stimulated the study of 'fibre' in the United States 1925–1940; he preferred 'whole cereal foods.'" "Some of the early basic research on bran and fibre in the United States in the 1930s owed much to his [Kellogg's] interest and financial support."

Starting in about 1969 interest in dietary fiber suddenly quickened. Now about 150 articles are published each year on the subject. "Over 100 of these are in journals cited in the Cumulative Index Medicus, although dietary fibre was not one of the listed subjects until 1977." Trowell has assembled some 600 citations on dietary fiber for the modern period 1935-1977, and is preparing these for publication. "Many of these refer to the wholemeal versus brown bread controversy

© Copyright Soyinfo Center 2014

so well summarised by McCance & Widdowson (1956). In that prolonged controversy almost everyone argued in terms of value of the absorbed nutriments, for fibre, often called roughage, was considered to be a gastro-intestinal irritant."

One pioneer in this field was A.R.P. Walker, who knew about the U.S. studies on fibre. He "started conducting his experiments on the high-fibre South African Bantu diets early in World War II and spoke to me about them in 1947. He has been writing many articles on fibre each year ever since. Without him and the stimulus of Surgeon Captain Cleave (1974) many of us would not be here to-day."

"My recent attempt to compile a bibliography of dietary fibre convinced me that Godding (1976) was right when he suggested that some 'terminological umbrella' was necessary to include a large group of allied substances. (1) Dietary fibre derived exclusively from plant foods of man (plantix) is almost rhe only source of fibre in the food of mankind. (2) Special groups such as Eskimos and Masai may derive most of their 'fibre' from undigested aminopolysaccharides of animal connective tissues, liver, lung and blood. Carnivorous animals eat this form of 'fibre.'..." Address: Woodgreen, Fordingbridge, Hampshire SP6 2AZ. Formerly: Dep. of Medicine and Paediatrics, Makerere Univ. and Uganda Government, Uganda.

2073. U.S. Department of Agriculture. 1979. The annual report on activities carried out under Public Law 480, 83d Congress, as amended, during the period October 1, 1977 through September 30, 1978. Washington, DC: U.S. Government Printing Office. 51 + [38] p. See table 18. 27 cm.

• ***Summary:*** Table 18 is titled "Title II, Public Law 480–total commodities shipped by program sponsor, fiscal year 1978." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), and WRC (World Relief Commission). All of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. The following foods containing soy protein were distributed: Soy fortified corn meal (SFCM), soy fortified sorghum grits (SFSG), CSM (corn soya mix), WSB (wheat soya blend), and small amounts of soya flour. The vegetable oil which was shipped to many countries was soybean oil; it is not recorded here.

Foods containing soy protein were distributed to the following countries or areas: Near East: Bhutan, Egypt, Gaza, Jordan, Jordan West Bank, Morocco, Tunisia, Yemen.

Latin America: Bolivia, Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Jamaica, Panama, Paraguay, Peru.

Africa: Benin, Botswana, Burundi, Cameroon, Central African Empire, Chad, Comoro Islands, Congo, Djibouti, Ethiopia, Gambia, Ghana, Guinea Bissau, Ivory Coast, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mozambique, Niger, Rwanda, Sao Tome & Principe, Senegal, Seychelles, Sierra Leone, Somalia, Sudan, Swaziland, Tanzania, Togo, Upper Volta, Zaire, Zambia.

Asia: Bangladesh, India, Indonesia, Nepal, Philippine Islands, Sri Lanka.

Note: This is the earliest document seen (Aug. 2009) concerning soybean products (soy flour) in Djibouti, or Guinea Bissau. This document contains the earliest date seen for soybean products in Djibouti, or Guinea Bissau (1978); soybeans as such had not yet been reported by that date. Address: Washington, DC. Phone: 703-875-4901 (1991).

2074. Loma Linda Foods. 1979? To your health, naturally! Recipes and catalog. Riverside, California. 10 panels. Undated. Front and back. Each panel: 16 x 10 cm.

• ***Summary:*** The cover of this very informative catalog is dark brown and orange-brown on beige, with a rustic illustration of a man and a woman with two horses and a plow in front of a small barn. Loma Linda Foods–Since 1906." Contents of the front panels: The Loma Linda story (history). Names of vegetarian products made by Loma Linda with a recipe for each: 1. Stew-Pac, Dinner Cuts, Tender Bits (canned). 2. Meatless Fried Chicken (frozen in carton). 3. Sandwich spread (canned). 4. Soybeans–Boston Style, Chili Beans, Green Soybeans (canned). 5. Savorex (plastic tub). 6. Tender Rounds (meatless meatballs) with Gravy. Fried Chicken with Gravy (canned). 7. Soyalac. i-soyalac (canned). 8. Meatless Breakfast Sausage (chub). 9. Redi-Burger. Vege-Burger (canned). Vita-Burger (Chunks or Regular; dry in box). 10. Nuteena (with peanuts and soy flour). Proteena (nut loaf). Vegelona (canned). 11. Gravy Quik (Meatless Gravy–Chicken Style, Brown, Mushroom, Onion, Smoky Bits, Country Style). Spaghetti Sauce Mix (foil pouches). 12. Long Links. Linketts. Big Franks. Little Links (canned). 13. Meatless Slices (Roast Beef, Bologna, Chicken, Turkey, Salami; frozen in carton). 14. Soyagen (soy beverage; Carob, All Purpose {liquid}, Carob, All Purpose, No Sucrose {dry in canister}).

The back is divided into 14 rectangles of various sizes, one for each family of products described on the front. A color photo and description accompanies each of the 46 products. Address: Riverside, California.

2075. Loma Linda Foods. 1979? Recipes from around the world to break the monotony of meat, meat, meat, meat, meat, meat (Leaflet). 11503 Pierce St., Riverside, CA 92505. 5 panels each side. Each panel: 17.8 x 13 cm. Front and back. Undated,

• ***Summary:*** This glossy color leaflet shows how to use the following Loma Linda meatless products in recipes: Proteena, Little Chunks, Sizzle Burgers, Linketts, Sizzle

© Copyright Soyinfo Center 2014

Franks, Chicken, Meatless Bologna, Redi-Burger / Rediburger, Dinner cuts, Nuteena, Fried Chicken. A large photo shows each prepared dish. A photo on the last panel shows each of these products in its package on a wooden table with flowers, utensils, and vegetables. All are canned, except for Meatless Bologna and Sizzle Burgers. The slogan running across the bottom of the first and last panel is: "The people who believe food should not only taste good–it should be good for you." Address: Riverside, California.

2076. White, Jim. 1980. Close encounter of the tofu kind: A white custardy thing zooms out of the Orient onto your lunch counter. *Toronto Star* (*Ontario, Canada*). Jan. 18. Family section.

• ***Summary:*** This full-page feature states: "Brace yourself, Toronto, for the experience, because there's every indication tofu's going to do more than hover on the horizon like a fleet of sci-fi spacecraft." Victor Food Products in Scarborough [a suburb of Ontario] says that sales of tofu have nearly tripled in one year, from 720 lb/day to more than 1,900 lb/day. Shoppers can now buy tofu in selected Dominion, Lowlaws, Miracle Mart, and A&P outlets. "When the big boys take a bite of the action, you know something is cooking."

The article includes a listing of tofu makers and retailers in the Toronto area. Makers: (1) Pyung Hwa Co., 2139 Dundas St. W. Jhasun Koo. Phone: 534-0237. Korean-style tofu. Firm, 10-oz. cakes cost $0.55. (2) Wah Chong Co., 88 Ossington. Phone: 532-0841. Chinese style. $1.20/dozen. (3) Yet Sing Co., 11 Baldwin St. Phone: 863-0818. Custardy tofu. $0.70/dozen. (4) Victor Food Products. A photo shows Stephen Yu, standing with has packaged tofu and soymilk products.

Paul Smith, owner of Baldwin St. Natural Foods, runs a small night class once a month on making tofu. Branson Hospital (Seventh-day Adventist) has been serving vegetarian meals to patients for 22 years. Much of the protein comes from soyamilk, soya curd, and other soya products. Interest in tofu has been spread by the publication of *The Book of Tofu*, by William Shurtleff and Akiko Aoyagi. Address: Star Food Writer.

2077. **Product Name:** [GranoVita Soja Drink, and Carob Drink].
Foreign Name: GranoVita Soya Drink, Caroba Drink.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH (Marketer). Made in Belgium by Alpro.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1980 January.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 123; STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Orange and green on white. "Made purely from plants. Free of cholesterol. Rich in protein (Rein pflanzlich. Cholesterinfrei. Eiweissreich)." Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products. Retail price is DM1 for 0.5 liter. R. Leviton. 1983. Report on trip to Europe with American Soybean Assoc. Oct-Nov. p. 17. Product seen in Reformhaus health food store in Zurich, Switzerland. Sold for F1.75/500 ml.

Form filled out by Alpro. 1990. May 30. Alpro began making this product (2 flavors) in Jan. 1980 in 500 ml cartons.

2078. Kalish, Jon. 1980. Let 'em eat tofu. *Soho Weekly News.* Feb. 6. p. 5.

• ***Summary:*** "This spring a dozen schools with heavy populations of Seventh-day Adventists, observant Jews and Muslims (all of whom follow strict dietary laws regarding meat) will be served meals prepared with tofu. Initially the experiment will involve about 2,000 kids. The New England Soy Dairy has already begun teaching school lunch

© Copyright Soyinfo Center 2014

personnel how to prepare tofu burgers, tofu fish cakes, tofu egg salad, and tofu Parmesan." Tofu is also served in schools in Rochester, New York, and Santa Barbara, California.

2079. Leviton, Richard. 1980. Soycrafters Conference: The birthing of a new industry. Director's report: Missed all the meals. *Soycraft* (*Colrain, Massachusetts*) 1(2):16-23. Winter.
• ***Summary:*** A report on the Second Soycrafters Conference, held 26-29 July 1979 at Hampshire College, Amherst, Massachusetts. Over 50 workshops and lectures were presented on all phases of the soyfoods industry. "Miraculously, the $19,000 conference broke even financially, and attracted significant national press in the following three months."

The section titled "The view from the guests" (p. 20-23) contains brief statements (all positive) about the conference from the following attendees: Luke Lukoskie (Island Spring), Rebecca Uchida (Mu Tofu Shop), Michelle Ajamian (Amesville, Ohio), Shag Kiefer (Redbud Creek Tofu), Will Truslow (Jamaica Plain, Massachusetts), Dr. Joseph Rakosky (Rakosky Services, Melrose, Illinois), Marvel Huffman (Lecanto Tofu), Francine Watanabe (La Soyarie, Hull, Quebec, Canada), Dr. Charles Howes (Loma Linda Foods, Mt. Vernon, Ohio), Timothy Metzger (Dannon Milk Products, Long Island City, New York), Lee Cunningham (Wonder Life Corp., Des Moines, Iowa), Joseph Jaffer (Waymart, Pennsylvania), Chico Wagner (Yaupon Soyfoods), Dr. Malcolm Bourne, Frank Pilotte (Golden Key Farm, Grant Park, Illinois), David Patten (Brightsong Tofu, {Redwood Valley}, California), Patti Smith (Erewhon, Cambridge, Massachusetts), Larry Needleman (Bean Machines, Bodega, California), Peter Driscoll, Goodhart Foods (Petosky, Michigan), Bill Shurtleff (New-Age Foods Study Center), George Strayer (Agricultural Exports, Hudson, Iowa), David Blumberg (San Francisco, California), Dr. Keith Steinkraus (Cornell Univ., Ithaca, New York), Bob Bergwall (Nasoya Foods, Leominster, Massachusetts).

Photos show: (1) Overview of the conference registration hall incl. Richard Leviton talking with George Strayer. (2) Kathy Leviton adding finishing touches to large trays of tofu cheesecake. (3) A woman preparing scrambled tofu and fried soysage patties in the Hampshire College kitchens. (4) Members of Okita Enterprises and the Tennessee Farm: Charles Ishigawa, Robert Dolgin, Eddie Okita, and Michael Moorman. (5) Dr. Walter Wolf (Northern Regional Research Center, Peoria, Illinois). (6) Robert Rodale, Rodale Press, Emmaus, Pennsylvania. (7) Dr. Malcolm Bourne, Cornell University, Geneva, New York. (8) Michael Cohen, holding a baby and talking with Dr. Clifford Hesseltine.

Note: This is the earliest publication seen (Feb. 2003) that mentions Brightsong Tofu. Address: Colrain, Massachusetts.

2080. Marsh, Alice G.; Sanchez, T.V.; Mickelsen, O.; Keiser, J.; Mayor, G. 1980. Cortical bone density of adult lacto-ovo-vegetarian and omnivorous women. *J. of the American Dietetic Association* 76(2):148-51. Feb. [21 ref]
• ***Summary:*** The lacto-ovo-vegetarians were Seventh-day Adventists, who have reduced risk of osteoporosis. They lost 18% of bone mineral mass while omnivorous women lost 35%. It is concluded that a lacto-ovo-vegetarian diet may be beneficial in extended protective health care in terms of defense against, or control of, bone mineral loss in the later years of a woman's life. Address: Dep. of Home Economics, Andrews Univ., Berrien Springs, Michigan; Depts. of Medicine and Surgery, Michigan State Univ., East Lansing.

2081. Strayer, George M. 1980. The battle of the coconut cow. The early days of the American soybean industry and its surprising similarity with today's soyfoods movement. *Soycraft* (*Colrain, Massachusetts*) 1(2):50-53. Winter.
• ***Summary:*** Contains an excellent history of Strayer's work with soybeans, and an early history of the American Soybean Association. So far as George has been able to determine, his father, Bert Strayer, "was the first man west of the Mississippi River to use a combine on soybeans." One had been used successfully the year before by the Garwood brothers in Illinois. "We worked with the International Harvester Company and bought the first of their combines to be used on soybeans. It was a power take-off drive machine with a folding platform. The outer end of the cutting platform folded up so that the combine could be driven through farm gates. It was a machine designed for farm use on grains and for a one-man operation. We soon learned that on soybeans the operation was a two-man job–one man driving the tractor and keeping the cutting platform in the right position on the rows, while the other man controlled the cutting height while riding on the tractor platform.

"For a period of several years, we had the only combine being used on soybeans in this entire area. The combine carried a tank, the top of which held about twenty-five or thirty bushels that could be removed from the tank by driving a wagon or truck under the edge of the tank and pulling a lever which opened four holes along the tank bottom and allowed the soybeans to run out."

In Sept. 1927 George Strayer attended his first meeting of the American Soybean Association, held at the University of Illinois. "One thing that sticks indelibly in my mind is a statement made by W.K. Kellogg, of Kellogg's cereals, Battle Creek, Michigan. He said: 'Some day people in the U.S. will realize how foolish it is to feed one hundred pounds of soybeans to livestock and get back a very small poundage of meat products which have a protein inferior to the protein fed to the livestock."

The "Battle of the coconut cow," as Strayer calls the margarine-butter controversy, was the battle to get margarine legalized in America. First they had to work on the federal

© Copyright Soyinfo Center 2014

level, which took six years of cooperative work by the soybean, cotton and the margarine industries. Then we went into fourteen different states to change the state laws. We were successful in getting a small tariff placed on coconut oil in favor of soybeans at the federal level."

Describes how the *Soybean Digest* was started with Strayer as the first editor, the huge expansion of U.S. soybean acreage during World War II as a source of edible oil, the soybean in Germany during and after World War II, Strayer's 1955 trip to Japan to study whether American growers ought to be looking at Japan as a market for their soybeans (prior to World War II the U.S. was not generally an exporter of soybeans), his 1956 trip to ten countries of northern Europe, the worldwide potential of soy protein as the most nearly complete of all known vegetable proteins, the importance of the work of the Soyfoods Association and of the books written by Shurtleff and Aoyagi in providing accurate information soy protein foods.

Photos show: (1) George Strayer, happily lecturing. (2) A $75,000 grain combine, used to harvest soybeans. (3) Harvested soybeans being discharged into a waiting truck at a small New England farm. Note: This is the earliest document seen (Oct. 2003) that contains the term "soyfoods movement." Address: President, Agricultural Exports, Hudson, Iowa.

2082. Phillips, Roland L. 1980. Cancer among Seventh-day Adventists. *J. of Environmental Pathology and Toxicology* 3(4):157-69. March. [34 ref]

• ***Summary:*** "Considerable evidence has accumulated over the past decade that various lifestyle characteristics are associated with an increased risk of some of the major cancer sites in humans... Seventh-day Adventists are a small, conservative, evangelical religious denomination with about 100,000 members in California, 400,000 in the rest of North America, and 3 million worldwide, many of whom follow a unique lifestyle. By Church proscription, they completely abstain from smoking and the use of alcoholic beverages. The Church highly recommends, but does not require, that its members follow other unique dietary practices. For example, many follow a lacto-ovo-vegetarian diet, which is free of any type of meat, poultry or fish but does contain milk products and eggs. Virtually all Adventists abstain from pork products and other biblically defined unclean meats. In addition, they avoid the use of coffee, other caffeine-containing beverages, hot condiments and spices, and highly refined foods. As a natural consequence of these restrictions, they make abundant use of fruits, whole grains, vegetables, and nuts in their diets. These dietary habits have been recommended by the Church for over 100 years."

"Hopefully, our ongoing prospective study of 75,000 Seventh-day Adventists (SDAs) which is collecting detailed information regarding lifestyle and dietary habits, in addition to site-specific cancer incidence rates, will definitively establish whether SDAs are indeed at low risk of acquiring cancer, as well as dying from cancer. This study should also be able to provide the explanation for the reduced risk among SDAs of cancers unrelated to smoking or alcohol use, as well as providing additional evidence regarding the possible role of dietary habits in the etiology of bowel and breast cancer." Address: Dep. of Biostatistics and Epidemiology, School of Health, Loma Linda Univ., Loma Linda, California 92350.

2083. Granose Foods Ltd. 1980. Granose–Britain's leading health foods: Product information. Stanborough Park, Watford, Herts., WD2 6JR, England. 5 p. April. Unpublished typescript.

• ***Summary:*** The name of each product is given, usually with a basic description and ingredients. Product categories include: Breakfast cereals. Protein foods–soya based: Soya beans in tomato sauce, Goulash, Curry sauce, Bolognese sauce, Chicken flavoured pie filling, Chicken flavoured savoury pudding, Ravioli, Cannelloni, Soyapro wieners, Soyapro slices, Beef like, Chicken like, Ham like. Dried foods–soya based: Vegex (Chunks and Mince), Sausfry, Granogen, Granolac. Dried foods–nut based: Rissolnut (with soya nuts). Address: Watford, Hertfordshire (Herts.), England.

2084. Monte, Tom; Machta, Phyllis; Hausman, Patricia. 1980. 'Miracles' of Pritikin diet fail to spur federal scientists. *Nutrition Action* 7(4):3-7. April. [2 ref]

• ***Summary:*** In 1976 Nathan Pritikin, along with a team of physicians, opened what has become known as the Longevity Center, which now makes its home in Santa Monica, California. The team has been treating patients suffering from cardiovascular disease with a diet composed of 10% calories from fat, about 10% from protein, and the remaining 80% from complex carbohydrates. It prohibits foods high in fat and cholesterol, such as beef and eggs, and also prohibits simple sugars and caffeine. Coupled with the diet is an exercise program that includes walking and jogging.

"More than 3,000 patients have completed the 4-week program since the Longevity Center opened its doors, and by now the stories of patient recovery have become so legendary that they rival those emanating from Lourdes, France...

Nearby Loma Linda University–which did a statistical analysis on the center's first 900 patients–reported an average drop in blood cholesterol of 25%. Half of the people who were taking insulin for diabetes when they arrived left insulin-free. Of the 218 patients who had been treated by their local doctor with anti-hypertension drugs, 186 [85.3%] left the Longevity Center with normal blood pressure and weaned of the medication. But the American medical establishment has largely ignored the Pritikin team's results. The American Medical Association believes that the "are no dietary diseases in the U.S. today."

2085. **Product Name:** [Soyalac {Soymilk} (New Plain Type)].
Foreign Name: Soiyarakku Neo Sutoreeto Taipu.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1980 May.
Wt/Vol., Packaging, Price: 250 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Neo Sutoreeto Taipu was introduced in May 1980 by Saniku Fuuzu in a 250 gm can and distributed nationwide.

2086. Shurtleff, William; Aoyagi, Akiko. 1980. Soyfoods America Tour: May 5 to June 10; July 25 to Aug. 3, 1980 (Log and trip report–unpublished, including Itinerary with map). Lafayette, California: New-Age Foods Study Center. Unpublished log.
• ***Summary:*** This trip had five purposes: (1) To introduce tempeh to America; (2) To promote the authors' newly published *Book of Tempeh.* Harper & Row, the publisher, paid most of the trip expenses; (3) For William Shurtleff to attend the University of Illinois Short Course in Soybean Processing; (4) To visit and study soyfoods companies in America; (5) To introduce people to the many advantages of a meatless / vegetarian diet.

A photo shows: Shortly before the trip, Akiko (left) and Valerie Robertson (right) (working in the Shurtleff's small home kitchen) "canned" many quart Mason jars of Tempeh Cacciatore to serve at the intermission of each lecture / presentation.

Includes the name and address of 37 people and organizations visited. Many of these were pioneers in the soyfoods and natural foods movement: April 25–Optimum Foods (Napa, California). April 27–David Burns (Sebastopol, CA). May 5–Jeremiah Ridenour of Monterey Bay Soyfoods (Santa Cruz, CA). May 6–Thelma Dalman, Foodservice Director for the Santa Cruz City Schools, *Monterey Peninsula Herald,* Ted & Marie Fehring (Carmel), Paula Welch Terui of Jack and the Beanstalk (Carmel Valley, CA). May 8–Al Jacobson of Garden of Eatin', Mr. Kaye Dunham of Tumaro's, Hugh Roberts of Meals for Millions. May 9–Eddie Okita of Okita Enterprises, and Noritoshi Kanai of Mutual Trading Co. (Los Angeles, CA). May 10–Kay Glass (La Cañada, CA). May 11–Frazier Farms natural foods supermarket (Escondido, CA), Bill Walton vegetarian and basketball star (San Diego, CA; we stay with Craig Wright and Andrew Solony of TriLife; they hope to market Bill Walton's tofu under the TriLife brand). May 12–Clare Quinn of The Farm (Tucson, Arizona; her check bounced so we never got paid). May 13–Kathryn Bennett of Southwest Soyfoods (Santa Fe, New Mexico), Tracy McCallum, Taos. May 14–Leslie Wertz (Alamosa, Colorado). May 16–Stay with Christie and John Baker (Boulder, Colorado). May 17–Steve Demos of White Wave Soyfoods and Good Belly Deli. May 18–Sanford and Rebecca Greenwood of East West Center (Boulder, Colorado). May 19–Judson Harper and the low cost extrusion cooker program at Colorado State Univ., Carol Hargadine of Nupro Foods & Soywaze Tofu (Fort Collins, CO). May 21–Gale Randall of the Indonesian Tempeh Co. (Palmyra, Nebraska). May 22–David Tucker of New Pioneer Co-op Society (Iowa City). May 23–George Strayer of Edible Soy Products (Makers of Pro-Nuts, May 23) and Agricultural Exports (Hudson, and Cedar Falls, Iowa). May 24–Cedar Falls (Iowa) and Minneapolis media. May 25–Pat Aylward and Jamie Stunkard of Joy of Soy Tofu (Minneapolis, Minnesota). May 27–Richard Cihoski (Duluth, MN). May 28–Chris Burant of Bountiful Bean Plant and Jehan Ziegler of Higher Ground Cultured Foods (Madison, Wisconsin). May 29–Danji Fukushima of Kikkoman Foods (Walworth, Wisconsin), Diane Loomans of The Magic Bean Co-op (Milwaukee, Wisconsin). May 30–Susan Dart (Lake Forest, Wisconsin), Research staff of Kraft Foods (Glenview, Illinois), Brian Schaefer of It's Natural (Evanston, Illinois). May 31–Paul Obis of *Vegetarian Times* magazine (with Brother Ron Pickarski) (Oak Park, Illinois). June 2–Lou Richard of Fearn Soya Foods, Leonard and Irene Stuttman of INARI, Ltd. June 3–John Gingrich of The Soy Plant. June 4–Tim and Carol Ann Huang of Yellow Bean Trading Co. (Detroit, Michigan). June 5–Glen Blix and Charles D. Howes of Loma Linda Foods (Mt. Vernon, Ohio; furthest point east on tour). June 6–Warren Hartman of Worthington Foods (Worthington, Ohio). June 7–Mick Vissman and Bill Lutz of Hip Pocket Tofu Deli and Rain Star (Columbus, Ohio), Ed Willwerth of Soya Food Products (Cincinnati, Ohio). June 8–Jay McKinney of Simply Soyfoods (Bloomington, Indiana). June 9–Lynn Adolphson and Bob Thompson of Archer Daniels Midland Co., and Grant Smith of A.E. Staley Mfg. Co. (Decatur, Illinois). June 10-11–Les Karplus of Corn Country Foods and Strawberry Fields. June 11–William Thompson and John Santa of INTSOY (Champaign, Illinois).

During the INTSOY Short Course: July 6–We did a program hosted by Patricia Mutch at Andrews University (Berrien Springs, Michigan). July 9-13–Third Annual Soycrafters Association of North America conference was held at the University of Illinois, produced by Richard Leviton. There were 270-285 attendees, and it made good money.

People at the University of Illinois we met during the course: Dr. William Thompson, Frances Van Duyne, Harold Kauffman, John Erdman, L.S. Wei, A.I. Nelson, M.P. Steinberg, Munir Cheryan, Ted Hymowitz, Woody Yeh.

Return trip after course: July 28–Bob Davis of Light Foods (St. Louis, Missouri). July 30–James Lowrie of Iowa State University (Ames, Iowa). Aug. 2–Lake Tahoe. Aug. 4–

© Copyright Soyinfo Center 2014

Home in Lafayette, CA.

At most of the public classes/lectures on this trip, Shurtleff and Aoyagi served their favorite tempeh and tofu dishes. They wanted to find out how Americans liked tempeh, so they asked for a show of hands as to which the attendees liked best. The tempeh dish was usually Tempeh Cacciatore, and the results were, on average, that the tempeh was preferred by a ratio of 2 to 1 over the tofu.

On this trip, Shurtleff and Aoyagi did 27 public programs, had 28 media interviews and appearances, traveled 9,000 miles, earned $13,000 gross income and $8,500 net income. Address: P.O. Box 234, Lafayette, California 94549.

2087. Blix, Glen. 1980. Dr. Harry Miller and his International Nutrition Laboratory (Interview). *SoyaScan Notes.* June 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Shurtleff and Aoyagi drove their large white Dodge van to visit the Loma Linda Foods plant in Mt. Vernon, Ohio. As they were welcomed by Glen Blix (super guy) and invited to be seated at his desk, the first thing they noticed with a sign, about 15 inches long and triangular in cross section, which stated clearly: "Do unto others as you would have them do unto you." Wow!

History: Dr. Harry W. Miller was born north of Dayton, Ohio. He returned from China after the Chinese occupation of 1937, to Mount Vernon, a lovely remote rural area, where he had attended secondary school (Adventist). While building his soy dairy building, he taught at the local secondary school; also bought a local hospital with his brother and served as a physician. He lived in the big white house by the plant.

He bought a 120-acre farm for $7,000. He got free bricks from a demolished schoolhouse. He and his son collected these, hired academy students to clean the bricks, then he and his son built the original building for the soy dairy about 1937-38. It was called the International Nutrition Laboratory.

Here he set up the soymilk process he had developed in China. He also set up a plant to can fresh green soybeans; this paid his way. And he developed a gluten meat analog, Miller's Cutlets, a gluten patty with flavorings added, based on research done by Dr. John Harvey Kellogg. It contained no soy; he later sold it to Worthington Foods. Dr. Kellogg was Dr. Miller's professor in a small class at Battle Creek Sanitarium; Dr. Kellogg taught the class lots about nutrition. All students in the class lived past the age of 80. Miller lived to 97½. In 1951 Miller sold his soy dairy at Mt. Vernon, Ohio, to Loma Linda Foods and went back to Hong Kong. He returned to America in 1972.

When he sold the plant he felt he could not sell the soymilk process, which he felt had been taught to him directly by God, who spoke to him and told him to try certain ideas that had eluded him. Thus he gave this process to the Adventist church, but sold the building to Loma Linda Foods and loaned them the money to buy it. They paid him in installments and he used this income to set up the International Nutrition Research Foundation in 1951.

One product he developed and felt he perfected here was Acidophilus soymilk. but it couldn't be canned or the organism would be killed. Oliver Miller, no relation to Harry, is a top director in Loma Linda; he is a poor correspondent, so best to phone him.

Loma Linda Foods started in 1906 in Southern Calif 20 miles from Riverside. Kellogg in the early days had a philosophical / ideological split with the Adventist church and took back for himself the Battle Creek Sanitarium, whole wheat bread bakery, and breakfast cereal operation/plant (no soyfoods). The Loma Linda Riverside plant was built about 1936. It started making meat analogs, pressed wheat flakes, rusket biscuits. Now only two Adventist plants in the world make soymilk. Ohio and Saniku in Japan. The method now used is an improved variation on the Cornell method. The Ohio plant used the method patented by Miles Laboratories from 1968-69. Blix thinks that the Illinois whole-bean method has poor mouthfeel and problems with flatulence. Their claims were overexaggerated. Dr. Miller found / felt that the highest percentage of oligosaccharides were located just under the soybean hull. The present hot soak leaches them out. A high fiber diet may cause more gas than usual, so maybe some flatulence in fiber itself explains why whole soybeans cause more gas than soymilk. Most now use the word "lipoxydase" rather than lipoxygenase. More comments on Illinois whole-bean method. Chalky mouthfeel, corrosive on the homogenizer. Best to use stellite for homogenizer valve seats. At Loma Linda they also homogenize whole beans, then extract soymilk, and rehomogenize the soymilk etc. Loma Linda sells two types of soymilk products. Soyalac is for infants and Soyagen is for adults. About 75-80% of their sales are the infant Soyalac, so flavor is not so crucial. Nutritional properties are more important. Concerning protein quality: Rats have a large demand for sulfur-containing amino acids since they have lots of hair, for which these amino acids are largely used. Commercial cystine is hydrolyzed hair protein, so its not vegetarian.

Loma Linda started making isolate soymilk out of pressure from salesmen since all other infant formula makers have an isolate soymilk. They feel it is inferior to their regular Soyalac since it is less natural (has less all-natural ingredients) and has poorer flavor. But it is lighter colored, It is acceptable to Feingold hyperactive kids since it contains no additives, and it gives lower flatulence since it contains no carbohydrates (but this is not a significant problem), and the stools do not smell bad, i.e. different from the stools from animal milks. Loma Linda non-isolate soymilk sells best by 2:1 among the Loma Linda products. LLF makes 8 basic soymilks. (1) i-soyalac is the isolate and Soyalac is the natural. Both come in concentrate, ready to

© Copyright Soyinfo Center 2014

feed, and powdered. Soyagen, the adult preparation, comes in powdered, with either all purpose or no cane sugar (it uses corn syrup as a sweetener), Also carob. All Soyagen brands are powdered. The number 1 best seller is Soyalac concentrate, #2 is isolate concentrated, #3 is ready to feed Soyalac, #4 is powdered Soyalac. Their only competitor is Worthington Soyamel, sold powdered in Pure Pak cartons in health food stores.

Dorothea Van Gundy Jones died in 1979.

Soymilk regulatory problems: Lots of hassle from FDA. (1) Cook time in cans. (2) waste disposal.

Do old soybeans cause low protein extractability? They feel extractability is more directly affected by the hardness or pH of the water. Alkaline pH gives good extractability; that's why some people cook beans with baking soda. In late summer as the water table falls, the pH rises to pH = 8 in late summer, then drops to 6.3 in the spring.

Loma Linda soymilk has 65 employees. They grow much of their own beans on 500 acres of nearby land. They use field-type soybeans. Best is Williams, which has good flavor and extractability. Beeson and Amsoy are also good. Beans are not strictly organically grown but use less and milder herbicides so herbicides residues are near the lower limits of detectibility. They use 30,000 bu per year = 900 tons/yr of dry beans. Beans are stored in silos by the plant and dried there to 12% moisture. If lower moisture, they crack and split. (Honey is not acceptable in baby formulae). Botulism problem; also it gets very dark when sterilized in cans. Babies can't digest starch. So LLF uses corn and beet sugars.

The process: Weigh beans in a dry batch, wash, and run over stainless steel "stone pans" that look like a sloping scrub board to pick up metal and stones. Float off stems and sticks. Spray wash beans over a screen. Run into a large Rietz screw cooker (open top, 3 feet diameter by 20 feet long) and blanch beans at a little above 80*C for about 1 hour to draw off oligosaccharides, deactivate lipoxydase, and hydrate to double weight. This is a key innovation in the process. Drain. Mix with hot water (but no steam) and run into a Rietz disintegrator to do a hot grind at over 80ºC. Repump some of the slurry back into the hopper of the Rietz as the hot "water" for the hot grind. When the batch has been ground, do a semi-high-temperature short-time cook for sterilization in a pressure cooker; this prevents subsequent bacterial growth in the holding vats. Then run through a high pressure Gaulin homogenizer at 5,000 psi to get high soymilk extractability; it works like a colloid mill to break up the cooked beans to particles of 20 microns diameter. This is essential if you do a hot pre-soak. Continued. Address: General Manager, Loma Linda Foods, Mt. Vernon, Ohio.

2088. Blix, Glen. 1980. Dr. Harry Miller and his International Nutrition Laboratory (Interview) (Continued, Document part II). *SoyaScan Notes.* June 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Then run through a Scharppel (best maker) horizontal axis decanter centrifuge, specially made for soymilk. The okara (they call them "soy fines") have "tenacious water binding capacity." Used in vegeburgers almost causing them to gel. Some soy fines (okara) are spray dried but this is expensive. Dehulling has been found to make soymilk with a worse flavor so don't dehull. In a "formulation tank" mix soymilk, oil, syrup, sugar, and micronutrients, and dairy flavoring. Set the amount for each batch. Soymilk contains 6% sugar on a ready to feed basis. Now rehomogenize in 2 stages at 2,500 pounds each, run into a vertical vacuum pan evaporator to concentrate the soymilk to double strength (26-22% solids) while also removing some volatiles. Cool in a plate-cooler to 35ºF, then run into a refrigerated storage tank that holds 10 batches. All milk in one such tank is marked with one code. Refrigerate in the tank at 38ºF. Try to can or spray dry within 12 hours, usually immediately.

Soy fines (okara) contain 20% protein in a dry basis. Wanted to market as a bran to the bakery industry; also gives soy protein complementarity.

The canner is a continuous retort. Sterilize for 12 minutes at 257ºF, especially for botulism. Then run thru a continuous cooler, for 8 minutes to cool to 100ºF. Discharge and pack in cartons. See that there is a vacuum in each can so less rancidity. Check for leaks. The milk has a 2 year shelf life. Some vitamin loss takes place during storage, as well as some separation of oil, and some protein coagulation. To spray dry, spray in the concentrated form into a chamber 50 feet high. The soymilk falls through air whose maximum temperature is 400ºF for 2-3 seconds dwell time. The discharge temperature, maximum for the product, is 200*F. Then can and label.

Daily dry soybean usage at this plant is 5.7 tons. They work 4 days a week. The equipment in the plant is worth $3 million plus $1.5 million for the building.

Evaluation of products: Fresh Soyalac is best of all; 3.8% fat and 2.1% protein. Reconstituted powdered Soyalac is also excellent when it's new. Powdered Soyagen is salty and has a cereallike, haylike flavor. Not as good. Corn syrup sweetener. All powdered soymilk is best if mixed and allowed to stand overnight. Diluted canned concentrate is very close to the fresh Soyalac but slightly inferior from heat of sterilization. Powdered Soyagen is not so hot (see above). 2.6% fat but only about 1/3 as much oil added per vat-batch.

Basically the product is sold by "detailing" = educating doctors who recommend it to the 2% of infants who are allergic to cow's milk. Methionine has a bad, slightly fishy aroma. Of the infant formula market, 75% is dairy based, 25% is soy based. About 25-30% of all US mothers are now breastfeeding their babies–a big recent increase. Soyalac is also used as a weaning food after 3 months breastfeeding, for 6 more months. Some infants are allergic to lactose in

© Copyright Soyinfo Center 2014

mother's milk, or use Soyalac is used when the mother smokes, drinks, etc. and should not breast feed.

The chemicals in Loma Linda soymilk are there for nutrient fortification. They try to use only "natural" sources but the chemical methionine is preferred to animal based methionine.

In Worthington analogs the chemicals serve various functions: functional, organoleptic, caramel coloring, and nutritional (equivalency of product being replaced).

Note: if a coloring or flavoring is added, it must be called an "artificial" coloring or flavoring, even if it is natural ("natural artificial coloring"). Loma Linda is uncomfortable with mono- and diglycerides. In MSG, the problem may be with the sodium, especially in the case of headaches. Glen Blix and most people at Worthington use MSG discreetly at their homes. Address: General Manager, Loma Linda Foods, Mt. Vernon, Ohio.

2089. Ruchi Pvt. Ltd. 1980. Display ad: Soya–The high-protein food. *Times of India* (*The*) (*Bombay*). June 11. p. 15.
• ***Summary:*** This large ad is for Nutrela, a "high protein soya food," which Ruchi will soon be introducing. Below the title, in large bold letters, is this quotation: "'Soyabeans are the only natural food in the vegetable kingdom which contain higher protein nutritive value than meat, milk and eggs'–Jethro Kloss; from his million-copy bestseller, 'Back to Eden.'"

To the right of this quotation is a portrait illustration of Jethro Kloss.

The text of the ad begins: "A summer leguminous plant, soyabean has been the major source of proteins for millions of people in the Orient. Cultivated in China and Japan long before written history (some records date back to 2207 B.C. [sic]), its popularity has rapidly spread to the western world. Today the U.S. alone accounts for nearly 60% of the world production!

The rest of the ad contains these heads: "Soya. Higher protein nutritive value than meat, milk, eggs." "Soya vs. other items." "Soya. Vitamins and minerals too!" "Soya. Essential for everybody." "Soya. The most versatile food." Soya. Delicious economy." "Ruchi's. Pioneers of soya foods in India."

Photos show the front and right side of two packages of Ruchi's Nutrela, in tasty granules and tasty chunks.

A coupon at the lower right is titled: "I am interested in knowing more about soya: the food of the future." It is designed to be clipped, filled out, and sent to Ruchi's address across the bottom.

Note 1. This is the earliest document seen (Sept. 2010) concerning Nutrela or Ruchi Pvt. Ltd.

Note 2. This is the earliest article or ad seen (Sept. 2010) in *The Times of India* that contains the term "soya food" (or "soya foods," regardless of hyphenation). Address: 214, Tulsiani Chambers, Nariman Point, Bombay 400 021.

2090. *Consumer Reports.* 1980. Vegetarianism: Can you get by without meat? 45(6):357-61. June.
• ***Summary:*** Large sidebars include "Soybeans–the 'meat' that grows on vines," two sample menus for one day–one vegan and one with milk and eggs, and "The vitamin B-12 brouhaha" (tempeh is listed as a source). See also "Meatless meats" in this same issue.

"According to a recent survey, some seven million people in the U.S. now consider themselves vegetarians–nearly three times the number estimated a generation ago." Health is the reason most often cited by U.S. vegetarians. They believe that foregoing meat is better for them. The word "vegetarian" was coined in 1842 by English vegetarians to describe people, such as themselves, who ate no meat, fish, or fowl. Address: Mt. Vernon, New York.

2091. *Consumer Reports.* 1980. Vegetarian meats. 45(6):362-65. June.
• ***Summary:*** Many meatlike commercial soy products are shown or described including Worthington Vegetarian Fillets (which got the highest entree ratings), Worthington FriChik, Worthington Vegetable Skallops, Loma Linda Foods Vege-burger, Hain Soy Oil, Cedarlake Meatless Sloppy Joe. Of the meat analogs, most were quite low in iron and protein, and high in sodium, compared with red meat. A table shows analyses of ten products in terms of their cost per package and per serving, serving size, protein PER, nutritional composition per serving, and sensory comments.

Samples of meatlike products showed considerable variation in nutritional labeling, the addition of some food additives in some products, and little taste correlation with meat.

2092. **Product Name:** Granose Sausalatas (Meatless Sausages Canned in Brine) [Plain, or Smoked].
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1980 June.
Ingredients: 1980: Water, wheat protein, rusk, peanuts, soya flour, vegetable fat, onion, hydrolised vegetable protein, spices, herbs, oat flour, textured soya protein comprising defatted soya flour, niacin, calcium pantothenate, iron, vitamins B-6, B-2 and B-12, salt, yeast, soy isolate.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Manufacturer's catalog. 1980. April. Shurtleff. 1981. "Delicious when fried, grilled, or baked."

Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1948. It is still on the market. Label. 1990. 8.5 by 4 inches. Brown, beige, and black on tan. Color photo

© Copyright Soyinfo Center 2014

of three sausages on a dish with vegetables. "Vegetable protein sausages containing no animal products whatsoever. Delicious when grilled, baked or fried. Ingredients (1990): Water, wheat protein, rusk, peanuts, soya flour, vegetable shortening, seasoning (comprising dehydrated onion, hydrolised vegetable protein, spices and herbs), oat flour, textured soya protein (comprising de-fatted soya, niacin, calcium, pantothenate, iron, vitamin B-6, B-2 and B-12), salt, yeast, soy isolate." Address is now Newport Pagnell, Bucks.

Color photo of package in *Linda McCartney's Home Cooking.* 1990. p. 18. The label is black, brown, and white on tan.

Note: This product was first introduced in 1948, but did not contain textured soy protein at that time.

2093. Hartman, Warren. 1980. History of Worthington Foods' development of soyfoods (Three interviews). Conducted by William Shurtleff of Soyfoods Center; June 6, Oct. 29, Nov. 3. 6 p. transcript.
Address: Worthington Foods, Worthington, Ohio.

2094. Schwarz, Richard W. 1980. Re: Early work of Dr. John Harvey Kellogg with soyfoods. Letter to William Shurtleff at Soyfoods Center, July 30–in reply to inquiry. 2 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** Dr. Kellogg first became interested in food uses of soybeans in about the early 1930s. "I suspect that the first soy acidophilus milk also dates from the early 1930's... According to my records, his earliest paper on food uses of soybeans was one entitled 'Special Health Values of the Soybean,' which was presented before the food and nutrition section of the American Public Health Association on October 5, 1937." The paper is probably in "Michigan Historical Collections, Kellogg Papers, at the University of Michigan in Ann Arbor."

"Kellogg's original meat analogs depended heavily upon wheat gluten and peanuts." Dr. Schwarz encloses one of the last available copies of his book *John Harvey Kellogg, M.D.*
Address: Vice President, Andrews Univ., Berrien Springs, Michigan 49104. Phone: 616-471-7771.

2095. Blix, Glen. 1980. The story of Dr. Harry Miller, soyfoods evangelist. Paper presented at the Third Annual Soyfoods Conference. 4 p. Held in 13-19 July at Univ. of Illinois, Urbana, Illinois.
• ***Summary:*** No notes of this speech survive. For an expanded version of the talk see: Shurtleff, William. 1981. "Dr. Harry Miller: Taking soymilk around the world." *Soyfoods* 1(4):28-36. Winter. Address: Loma Linda Foods, Mt. Vernon, Ohio.

2097. Recchia, Camille. 1980. Takoma Park changing: Influence of Seventh-day Adventists wanes before influx of newcomers. *Washington Post.* Aug. 10. p. B1.
• ***Summary:*** Takoma Park, Maryland, has long been the world headquarters of the Seventh-day Adventist Church. Thousands of Adventists, a group that is largely vegetarian and known to eat a healthy diet, live in the area. But today at a local health food store, "Adventist grandmothers buying soy bean curd and organically grown cantaloupes are outnumbered by young people who are only dimly aware of the church's connection with Takoma Park."

In addition, "the influence of the Adventists, who were once a dominant force in the town's politics, real estate, and commerce, is beginning to wane." Church leaders are becoming more sensitive to community issues and more willing to solicit and listen to the views of others. Address: Staff writer.

2099. Loma Linda Foods. 1980. What could be more appetizing than Loma Linda advertising? (Ad). *Health Foods Retailing* 44(8):110-11. Aug.
• ***Summary:*** A two page ad. A large photo shows a full page Loma Linda ad for Swiss Steak in a magazine on a dish on the dinner table, with two forks and a napkin to the left. "Loma Linda's been making great tasting vegetable protein foods for almost 75 years. Foods that... contain absolutely no cholesterol, preservatives or added MSG. Today, there are 59 Loma Linda brand food products available–proof of our growing popularity.

"In 1980, our advertising will deliver 22,000,000 reader impressions!" Below the company logo, photos show cans of: Swiss Steak, Breakfast Cup, and Sizzle Franks. Address: Riverside, California 92515. Phone: (714) 785-2444.

2100. Patel, A.A.; Waghmare, W.M.; Gupta, S.K. 1980. Cultured soymilk and related products. *Indian Food Packer* 34(4):47-56. July/Aug. [55 ref]
• ***Summary:*** This is an excellent and very useful review of the literature (with 55 references) on fermentation of soymilk with lactobacilli, mostly to make soy yogurts, lactic fermented soy beverages, or soy cheeses. As long ago as the 1930s, Dr. John Harvey Kellogg popularized soy acidophilus milk, and the first systematic studies of the growth of lactic cultures in soymilk were conducted by Gehrke in the 1940s. Yet only in the last two decades has lactic fermentation of researchers interested in soybean utilization. "Scientists at the University of Wisconsin, Cornell University [Ithaca, New York], and the Northern Regional Research Laboratory of the USDA [at Peoria, Illinois] have made valuable contributions in this field.

Contents: Introduction. Soymilk as a substrate for the growth of lactic cultures: Effect of heat treatment, effect of other processing parameters, effect of the presence of fermentable carbohydrates, effect of certain additives. Other culturing conditions affecting the growth of lactic cultures in soymilk: Incubation time, temperature. Quality of cultured soymilk: Flavor, texture. Growth of aroma bacteria and development of flavor compounds in soymilk. Special products from lactic-fermented soymilk: Soy yogurts, soy cheeses (with or without the use of coagulants). Conclusion. Address: National Dairy Research Inst., Karnal–132001.

2101. Phillips, Roland L.; Kuzma, J.W.; Beeson, W.L.; Lotz, T. 1980. Influence of selection versus lifestyle on risk of fatal cancer and cardiovascular disease among Seventh-day Adventists. *American J. of Epidemiology* 112(2):296-314. Aug. [13 ref]
• ***Summary:*** Mortality from coronary artery disease is lower in vegetarians than in nonvegetarians. Address: Dep. of Biostatistics and Epidemiology, School of Health, Loma Linda Univ., Loma Linda, California 92350.

2102. Reddy, Bandaru S.; Sharma, C.; Darby, L.; Laakso, K.; Wynder, E.L. 1980. Metabolic epidemiology of large bowel cancer. Fecal mutagens in high- and low-risk population for colon cancer: A preliminary report. *Mutation Research*

© Copyright Soyinfo Center 2014

72(3):511-22. Aug. [36 ref]
• ***Summary:*** The low-risk population was vegetarian Seventh-Day Adventists whose diet was relatively low in fat and high in vegetables. "The incidence of fecal mutagen activity was higher in volunteers from New York consuming a high-fat, high-meat diet compared to low-risk rural Kuopio [Finland] population. None of the vegetarian Seventh-Day Adventists showed any mutagenic activity." Address: Naylor Dana Inst. for Disease Prevention, American Health Foundation, Dana Rd., Valhalla, New York 10595.

2103. Reddy, Bandaru S.; Sharma, C.; Wynder, E. 1980. Fecal factors which modify the formation of fecal co-mutagens in high- and low-risk population for colon cancer. *Cancer Letters* (*Shannon, Ireland*) 10(2):123-32. Aug. [21 ref]
Address: Naylor Dana Inst. for Disease Prevention, American Health Foundation, Valhalla, New York 10595.

2104. Sovex Natural Foods. 1980. From Sovex Natural Foods–Without sugar (Ad). *Health Foods Retailing* 44(8):182. Aug.
• ***Summary:*** A half page black and white ad. "No sugar. Good Shepherd cereals–6 varieties. Sovex granolas–5 varieties. Honey sweetened natural cookies–6 varieties. Prothins–5 varieties. Bulgur wheat. Miller's bran. Corn germ flakes. Sovex flavor concentrate. New! Veg-Pats–vegetable burger, vegetable sausage." Address: Collegedale, Tennessee 37315.

2105. Worthington Foods. 1980. Play it again Sam! (Ad). *Health Foods Retailing* 44(8):189. Aug.
• ***Summary:*** A full page black and white ad, with the Worthington logo. "Let's have another prosperous 40 years. Congratulations to Sam Reiser and all the fine people at Balanced Foods." Address: Worthington, Ohio 43085.

2106. Pinnick, Sinclair. 1980. Re: Dr. Harry Miller and his work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Sept. 10. 1 p. Typed.
• ***Summary:*** "Dr. Miller was always the first one to start the day's work at his Mount Vernon plant. One morning he climbed into the starch tank and was overcome by the fumes. Another worker came in and found him and pulled him out thus saving his life. Another time he was experimenting with a new formula and cut the end of his finger off in the food grinder. He calmly picked up the severed part, walked into his office and sewed it back on.

"In 1948 he sent me to the Philippines to set up the plant there. He and his second wife came over during my stay there. In Manila he was treated as a very important person. In Mt. Vernon he was just Dr. Miller, a friend of all.

"In 1972 the Southern Asia division asked me to go to Poona [Pune, southeast of Bombay, in Maharashtra state], India and set up a plant at Spicer Memorial College. In March of 1973 Dr. Miller flew over from Hong Kong to get us started in production. He would work all day with us at the food factory and then spend nearly every evening speaking to some group on healthful living. There seemed to be no limit to his endurance."

Note: Dr. Harry W. Miller was a life-long vegetarian. Address: 16042 Bivelbliss, Mt. Vernon, Ohio. Phone: 614-397-8213.

2107. Thalman, Margaret Morse. 1980. Memories of her father, William J. Morse (Interview). Conducted by William Shurtleff of Soyfoods Center, Sept. 18 and Oct. 3. 1 p. transcript.
• ***Summary:*** William Morse, her father, as born on 10 May 1884 in Lowville, New York (upstate). His father was a butcher. W.J. Morse's wife, Edna, went on the trip to East Asia, as did Margaret, who was an only child. Edna kept diaries for her daughter and wrote down what happened every day–in child's language such as "Played in the park."

William Morse wrote much of the book about soybean foods that he hoped to publish. He wrote it by hand on yellow lined paper; it was never published and she has sent the manuscript to the American Soybean Association.

During World War II W.J. Morse was under a great deal of pressure. A great many people called on him for information. He first became aware that he had an ulcer in about 1943, and this affected his diet. He lost a lot of weight (you can see it in the photos of him from that period) and he had to go on a "baby food diet." He ate soft, bland foods including soymilk, tofu and acidophilus soymilk and yogurt. He bought soyfoods at the Seventh-day Adventist health food store in Takoma Park, Maryland–including the soy ice cream he loved. She does not recall that he ever made tofu or soymilk at home.

After returning from their two years in East Asia, he and his wife used soyfoods regularly in their diet. He liked very much to make sukiyaki for dinner, especially for guests or special occasions. He had a low sukiyaki table made by having the legs cut of a regular table. Everyone would sit on cushions on the floor, with an electric hot plate on the table. His sukiyaki recipe always included tofu.

He and his wife liked to put soy flour in homemade breads and waffles. He did not eat a lot of meat but neither was he a vegetarian. He ate Boston baked soybeans when his wife fixed them.

William Morse bought the house in Tacoma Park, DC, in 1917 and lived there until he retired, shortly after which he and his wife moved to Eastchester New York, where he lived the rest of his life.

He spent the last ten years of his life writing his book (from time to time she typed up his notes), doing lots of gardening and reading, and writing many letters. He kept in touch with the world of soy.

© Copyright Soyinfo Center 2014

His office, where he had shelved with packaged soyfoods, was in Washington, DC. He did not move his office to Beltsville until about 1939–when all of USDA moved there.

Note: P.H. Dorsett was born on 21 April 1862. So at the time the expedition first arrived in Japan he was age 67. Dorsett had a grown daughter.

"William Morse was a gentle, soft-spoken person, who liked others and they liked him. He liked to tease, and the secretaries at his office all loved it. He was a very easy person to get along with; he was slow to anger and never cursed. He wasn't aggressive; where some might push, he would give in. He was intelligent. His work came first. He was not financially ambitious." He was a rather heavy cigarette smoker. His daughter remarked that "If anything upset him, he didn't let it out on his fellow workers."

"His friends and co-workers called him "Bill." His family called him "Will."

She still has her diaries and some of her father's small notebooks of the trip plus many photographs glued into scrapbooks. She has no files of his left; she sent them all to the American Soybean Association.

Verna Donavan was W.J. Morse's secretary at USDA starting not long before he went to the Orient to study soybeans. After Morse returned, when the Bureau of Home Economics became interested in soybeans, the two of them were often asked to come over and to taste the soybean dishes they had prepared.

Update. 2004. April 14. She has a book that was given to her father when he retired from USDA. In it are letters from many companies (cereal companies, oil companies, etc.) praising his work. It also has letters of praise from his co-workers and his superiors. Address: 22 Interlaken Rd., Eastchester, New York 10709. Phone: 914-632-2508.

2108. Blix, Glen. 1980. Soymilk and soy-based infant formula in America (Interview). *SoyaScan Notes.* Sept. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1979 Loma Linda made 2.24 million gallons of ready-to-use Soyalac infant formula, and 1.0 million gallons of Soyagen (soymilk for adults, plus small amounts [400-500 per year] of Granolac and Granogen which are sold in the United Kingdom), for a total of 3.24 million gallons. Some of the Soyalac (named i-Soyalac) is made with isolated soy protein. In 1979 Loma Linda used 1.5 million lb of soybeans to make soymilk, working 190 days a year.

Only two companies in America make soymilk for adults. Loma Linda has 60% of the market and Worthington Foods has 40%.

Market shares in the soy-based infant formula market are approximately: Ross Laboratories 50% (Isomel; 14,720,000 gallons ready to serve), Mead Johnson 40% (Prosobee; 14,080,000 gallons), Loma Linda 7% (Soyalac; 2,240,000 gallons), and Wyeth Laboratories (in Pennsylvania) 3% (Nursoy; 960,000 gallons). Syntex is now out of business. Note that Worthington Foods does not make any infant formula. Ross and Mead Johnson originally entered the infant formula market with dairy-based products, then later added soy-based products. Glen thinks that ProSobee, which is made in the USA, is a powdered product sold only outside the USA. Loma Linda sells infant formula in a 32-ounce can. It is given a UHT short time sterilization at Pet Milk in Coldwater, Ohio, then packed. Address: Loma Linda Foods, Mt. Vernon, Ohio.

2109. **Product Name:** [Soymilk].
Manufacturer's Name: Alimentos Colpac.
Manufacturer's Address: Apartado 134 Navojoa, Nuevo Leon, Mexico.
Date of Introduction: 1980 September.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). "COLPAC, Apartado 134, Navojoa, Nuevo Leon, Mexico. Owner: Jose Farrara. A Seventh-day Adventist soy dairy."

2110. Myers, Steve. 1980. [Farm Foods' original soy Ice Bean is on the market again (News release)]. Summertown, Tennessee: Farm Foods. 1 p. Undated.
• ***Summary:*** "Dear People, Our plant moves are complete and Farm Foods' original soy 'Ice Bean' is back. It is now available in these flavors: carob, vanilla, and strawberry, and comes in pints, 5 oz. cups, and 3 gallon tubs.

The original soy 'Ice Bean' is similar in flavor and texture to ice cream, but contains no milk products and no cholesterol. "Ice Bean" is completely vegetarian and contains all natural ingredients: soy powder, pure honey, soy oil, natural fruit and flavors, lecithin, guar gum, and salt. But best of all it tastes great and it's good for you."

To help understand this news release, we will quote from *Tofutti and Other Soy Ice Creams,* by Shurtleff and Aoyagi (1985, p. 46-47). "In 1980 Ice Bean was America's best known non-dairy soy-based frozen dessert, though its following was still relatively small, and concentrated in California. In February or March of that year, Farm Foods moved its operations from San Francisco to headquarters in Tennessee, signaling a commitment to expand Ice Bean's market from regional to national. Farm Foods realized that they had a virtual monopoly on soymilk ice cream, for which national demand was growing faster than they could supply. The company was also aware of the huge potential market on the East Coast from kosher Jews and natural foods devotees. Moreover, the landlord had tripled the rent on their building in San Francisco. So they sold their big ice cream freezer to a frozen dairy yogurt maker and pulled up roots.

"Back on the land in rural Tennessee, Farm Foods' directors reformulated Ice Bean and had it manufactured at a dairy ice cream plant in Nashville, later in Memphis. The

© Copyright Soyinfo Center 2014

Farm Foods' crew made the soy ice cream there with the help of a plant technician. They applied to register the name Ice Bean as a trademark in 1980 and were granted this in October 1982. When they applied for kosher certification in New York with the oldest and largest certifier (O-U), the rabbi told them that this was the first non-dairy frozen dessert that he had ever certified as kosher and pareve. 1980 was the year that Ice Bean really began to go national, and in December Farm Foods started its first national advertising campaign, with full-page color ads in at least four national health food, counter culture, and vegetarian magazines."

"Initially the reformulated Ice Bean was made using powdered soymilk produced by Loma Linda Foods (at the plant in Mt. Vernon, Ohio, built by Dr. Harry Miller); the vacuum-pan deodorization process reduced volatile beany flavors found in typical soymilk. But in about 1983 Farm Foods switched to fresh soymilk made by Dr. Miller's son, Willis Miller, at nearby Miller's Soy in Tennessee, using a special patented process. Starting in mid-1984 (after Miller's Soy went out of business) all of the soymilk was produced in Summertown, Tennessee, at The Farm's own soy dairy." Address: President, Farm Foods, 156 Drakes Lane, Summertown, Tennessee 38483.

2111. Goodbrad, John. 1980. Re: Soy products made by Sovex Natural Foods, Inc., "The Granola People." Letter to William Shurtleff at New-Age Foods Study Center, Oct. 23. 1 p. Typed, with signature.

• ***Summary:*** "A couple of months ago, we received a form letter from you indicating interest in what we produce primarily from soy products.

"Under separate cover we are sending you a package of our Prothin Snack Chips, Vege-Pat Sausage flavor, Vege-Pat Burger flavor, and Chili.

"If these meet with your definition of soy foods, please drop us a line and we will give you additional information about these products. Yours truly, John Goodbrad, President." Address: President, Sovex Natural Foods, Inc., Box 310, Collegedale, Tennessee 37315. Phone: 615-396-3145.

2112. Boyer, Robert A. 1980. Work with Henry Ford and soybeans. II (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 30. 2 p. transcript.

• ***Summary:*** It seems very possible that soyfoods were being sold in the Ford stores in 1923–though Boyer has no firsthand knowledge of this. Dr. Edsel Ruddiman started his research on food uses of soybeans in the late 1920s, about 2 years before Boyer started his work with soybeans. Ford converted an old residence into a lab for Ruddiman, his boyhood pal.

Boyer attended the Henry Ford Trade School, located at the Rouge Plant, from 1927 to 1929. It was a work-study program and he spent one month in each of the major departments at the plant. Then he went to the Edison Institute of Technology Lab. It was both a school and a research lab. Boyer was part of the first class of students. The idea was to learn by doing. It was a "school for inventors." Over the door was a sign that read "Place for Damn Fool Experiments." Consultants were sometimes brought in to help with research projects and answer questions. "In 1930 we started building the soybean laboratory." Boyer knew John Harvey Kellogg, but he does not think Henry Ford knew him.

Boyer uses some meat analogs in his daily diet but he is disappointed in the quality so they are not a regular part of his diet. Manufacturers have to make compromises in equipment and to keep costs down. He can make a much better flavor and texture in the laboratory, but it takes time and hand work. One major problem is that all isolates are made from defatted soybean meal which already has a strong beany flavor. There is no way to control the off-flavors that far back in the process. Boyer prefers the meat analogs made by Worthington to those made by Loma Linda. Boyer uses both tofu and Bacon Bits quite a bit in his daily meals.

Concerning the plastic car: The importance of soy decreased as the researchers got farther into the project since they could not make soy 100% waterproof no matter how much resin they mixed with it. So in the 1941 car body, soy was only a very minor component–but the popular notion that it was a major component persisted; that was a distortion. Soy was, however, a major component in non-structural car parts. The real importance of the soybean was as a renewable resource. When the "plastic car" made its debut in 1941, an all-soy luncheon was served.

When Ford struck the trunk of his car with an axe, he used the back/blunt side of the axe, and it was covered with a plastic guard to help cushion the blow. Once Walter Chrysler hit the body with an ax and fractured it slightly. Boyer drove the plastic car. The whole white body of the car was plastic, but it contained little soy.

The idea of using spun soybean fibers in food occurred to Boyer while he was working for Ford in about 1942. He left Ford in 1943 and applied for his first spinning patent in 1949. It was allowed in 1951. He abandoned this first application since everyone realized it was a much broader patent. So the 1954 patent application was the best and most important one that everyone worked under. "No one can use a man-made fiber in a food without violating that claim."

The industry that makes spun soy protein fibers for food use reached a plateau starting in early 1979. He is now aware that there are 2 companies in Europe very actively spinning soy fibers and advertising their products. Two are Dutch and one is in Belgium. The patents are now public property. Dawson Mills bought General Mills' soy protein fiber spinning equipment. In an article in the *Journal of Textural Studies* Boyer explained why the spinning part of the program has now grown as much as expected. "This is still a product whose time has not yet arrived. It was mushroom

© Copyright Soyinfo Center 2014

when meat prices become 10-20% high than soy. The danger is that some of the techniques we've developed in the past 2-3 years for improving texture and flavor might get lost if they are not actively pursued. Worthington is in a state of change and Bayer may try to sell it. All the work is secret." Boyer may someday write a book about it, but his eyes are very bad now.

Boyer felt Ford was a great man, great to work with and for. He knew how to judge men and he always picked the right men for the job. Ford would drive the 4-5 miles up from the Rouge Plant and be in Boyer's office by about 8:00 every morning for years and years. He was always very generous money and essentially gave Boyer a blank check to pursue any research project he wanted. But he could be pretty tough with some guys, especially if they did not produce results. Ford was a real thinker, always trying to find the basic reasons behind what was going on.

Worthington bought the patent rights for the health food industry. Loma Linda started spinning soy protein fibers after Boyer's patents expired. He did not known that Loma Linda made soy meat analogs; he thought they used only gluten.

Note: This is the earliest English-language document seen (Dec. 2004) that uses the term "spinning soy protein fibers." Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

2113. Boyer, Robert A. 1980. Work with Henry Ford and soybeans. III (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 3. 3 p. transcript.

• ***Summary:*** Floyd Radford was head of Ford's soy farms. At the Chicago World's Fair the Ford exposition was producing soybean oil by solvent extraction of soybeans. The soybean oil was the sole fuel used to power a diesel engine, which ran an electric generator, which produced all of the electricity for the exhibit. It was very neat.

Boyer developed the first plant protein fiber in about 1938. That year the Ford Motor Co. had a machine to spin soy protein fibers at the World's Fair in New York. He was aware of work in Italy spinning casein into fibers from reading technical journals prior to 1936. He used the term "spinning" because the textile industry uses that term to describe how rayon is produced. In both cases, a more correct term would be "extruding," since the dope is extruded through spinnerettes.

Ford's soybean fiber spinning pilot plant had a capacity of 1,000 pounds of fiber a day, but they probably produced less than that. They would send the fiber to the mill, where 1 part of soy fiber would be blended with 3 parts wool to make sidewall (not seat) upholstery, which got less wear and wouldn't mark like cotton.

When making soy protein isolates, the fiber (insoluble cellulose) is removed during clarification by centrifugation; no one had ever been successful in removing it by filtration, which would be better. After dissolving the soybean meal in alkali, it is clarified by centrifugation, then precipitated. Practically the same process is still used to make soy protein isolates.

Just a few plastic trunk lids were ever made, and they were used only on demonstration or experimental cars; they were never part of commercial Ford vehicles.

When Boyer left Ford Motor Co. he went to work for The Drackett Co., which bought Ford's soy protein operations. Mr. Drackett sold [actually shut down] his soy fiber spinning operation in 1949. Drackett later sold all its soybean operations to ADM. After Boyer left Drackett in 1949 he filed for his first edible soy fiber spinning patent the same year; it may have been granted in 1951. He applied for a new, expanded patent, with much broader claims to a food product manufactured form man-made protein fibers, in 1951; it was granted in 1954.

In Aug. or Sept. 1949 Boyer paid his first visit to Worthington Foods. Worthington was the first company to whom he disclosed what he was doing, and showed a sample of a prototype product (pork chops) made from spun soy protein fiber. He did not go to Swift initially because he had been advised to keep away from meat companies, which might buy then bury his patents. If Worthington hadn't been interested in his spinning process when he first visited them, he might have just given up then. He wasn't sure if it was a screwball idea or not. Moreover, he had been out on his own for almost a year and was running out of money. Worthington was excited with Boyer's idea but they needed a source of fiber.

So Boyer went to the Virginia Carolina Chemical Co. (VCCC) in Taftville, Connecticut. They were spinning fibers for cloth and they allowed him to use their spinning pilot plant in 1949 to produce the first edible spun soy protein fibers for research purposes and prototypes; he was not employed by them. VCCC was interested enough to call in Corn Products Corp. (CPC), which was interested–but they said they wanted to use corn gluten instead of soy protein. Boyer said "Fine." After the first successful run, using the VCCC pilot plant, CPC got very interested. Fibers were spun from casein, corn gluten, and soy. CPC bought the first license to his soy fiber spinning process for food use in 1949. They took an exclusive option on the license for 9 months. The first sale of edible protein fiber was made by CPC to Worthington Foods; the fiber was made of corn gluten. After working for a year with CPC, everyone in the project realized that the flavor of corn gluten was so horrible that it would never work in foods. So CPC converted to a non-exclusive license. Boyer, now a bit desperate and against the advice he had been given, decided to approached a meat company. He chose Swift & Co., which took an option immediately; they were the second company to license his patent and from 1950 to 1954 they retained exclusive rights to his patent. In about 1955 Swift converted to a non-exclusive, and Boyer immediately went back to Worthington

© Copyright Soyinfo Center 2014

to see if they were interested in a license yet. They were.

So after having waited 7 years, Worthington finally purchased a spinning license in 1956. At that time, Boyer began to spend 50% of his time at Worthington for a year after they took the license. Initially Worthington did not spin their own soy fibers since it was too expensive for them and they did not have much money at the time. Ralston Purina was well equipped to make these fibers for them. It was not until the mid-1960s that Worthington started to spin their own fibers.

By 1977 seven large food companies had licenses on the patent: Swift & Co., Unilever/Lever Brothers in England, General Foods, Nabisco, General Mills, Ralston Purina, and Worthington.

The original Bac*O's were made from spun soy protein fibers. Today he thinks they are made from textured extruded soy flour. General Mills took a license from Boyer. They got 25% of his consulting time, Ralston Purina got 25% and Worthington got 50%. Bac*O's came on the market in about 1965 and were a real sensation. It was the biggest thing that had happened with Boyer's idea to date.

Loma Linda is now spinning soy protein fibers, as is some company in Japan–or at least they used to be.

How big is the market for foods made from spun soy protein fibers? Boyer would guess at least $30 million a year. Worthington's total sales was $20 million including gluten. Miles got Worthington a new plant shortly after they bought Worthington. Now Bayer owns Miles and Worthington. The Morningstar Farms line is not making the profits they would like it to make.

Note: This is the earliest English-language document seen (Dec. 2004) that uses the term "spin soy protein fibers." Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

2114. Shurtleff, William; Aoyagi, Akiko. 1980. Henry Ford and Robert Boyer: History of work with soya. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 25 p. Nov. 3. Unpublished typescript. Available online at www.soyinfocenter.com.

• ***Summary:*** A comprehensive history of the subject. Contents: Introduction: Ford. Early research with soybean oil and meal: 1928 chemurgic movement (joining of farm and industry), setting up Edison Lab, Dec. 1931 soybean chosen as most promising crop for use in industry and as a food, 1931 encouragement of farmers to grow soy, biographical sketches of Boyer and Ruddiman, soy oil (used in car paints and pioneer work in solvent extraction), meal, isolates, molded parts, plastic pilot plant, cottage industries, barn solvent mills, 1934 World's Fair. Ford, Ruddiman, and soyfoods: Soyfoods press luncheons (not all were impressed), 50 recipe cookbook, soymilk (commercial and personal), personal interest in soyfoods, Greenfield Village (soy flour and green vegetable soybeans), Ford's views on health. Development of the plastic car: Glidden first commercial plant for industrial soy protein isolates (1935), Ralston's food use plant in 1960, Ford built 3 small oil plants 1937-39, grew own soybeans, connection with American Soybean Association, soybean plastic car (trunk lid unharmed when hit by ax), jokes, soy a minor element in later structural plastics, idea lost in files, General Motors' plastic Corvette introduced 1953, lots of plastic by 1980 (but not from renewable resources like soy). Boyer's soybean wool and edible protein fibers: Soybean wool and history of fibers, wool pilot plant, how to make edible soy fibers, discovery of food protein idea. Henry Ford's passing: Death in 1947, his contribution (quotes), actually not much soy used in Ford's auto and tractor factories. Boyer's development of meat analogs: Drackett purchase of Ford protein spinning operation, first visit to Worthington (Sept. 1949), Corn Products Company purchase of first license on edible protein fiber patent, Swift purchase of exclusive rights from 1950-54, 1951-52 Unilever license for production outside U.S., Worthington purchase of license 1956, advantages and limitations, licenses after Worthington, royalties and consulting, Boyer's quality evaluation, the future. Address: Lafayette, California. Phone: 415-283-2991.

2115. Harding, George, Sr. 1980. Early days of Worthington Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 5. 2 p. transcript.
Address: Worthington Foods, Worthington, Ohio.

2116. Miller, Oliver H. 1980. Work with Loma Linda Foods and Dr. Harry Miller (Interview). *SoyaScan Notes.* Nov. 5.

• ***Summary:*** Oliver worked with Dr. Harry Miller for about 3 years before he died; Dr. Miller taught Oliver how to make tofu. Dr. Miller took the money from the sale of his soymilk business in Ohio and turned around and gave (or loaned) it to Loma Linda Foods (LLF) to build a research center now named the International Nutrition Research Foundation. Harry co-signed a note so that they could borrow the money to buy it from him. Harry told Oliver that. Loma Linda Foods is an integral part of the Seventh-day Adventist (SDA) church, not "an Adventist firm."

There is a stone and a plaque on Dr. Harry Miller's birth site in Ludlow Falls, Ohio. Harry was about age 12 when his parents became Adventists. Harry was reluctant to take up the religion. He was embarrassed because he could not work on Saturdays–so he had to work on Sundays. Harry went to the academy at about age 15. That same year he went to a SDA camp meeting.

Mary Miller, Dr. Miller's wife, now lives about half a mile from Loma Linda Foods, at 11384 Norwood. Riverside, CA 92505. She has photos and she might like to read this manuscript.

Frank Bateman has been very keen on building an archives and museum on the history of Loma Linda Foods.

© Copyright Soyinfo Center 2014

Pauline Mostert, the president's secretary, is now in charge of the project. Oliver has a collection of old products with old labels. Another key man is George Chapman, who was with LLF for many years. He was the general manager from 1938 to 1960. He is now age 80, lives in southern California, and is still very alert and clear of mind. He claims that in 1937, when he first went to Loma Linda Foods, they were already making their own soymilk. He thought it was better than Dr. Miller's, so there was a little friction over that.

Dorothea Van Gundy was the dietitian at LLF for many years. She often presented nutrition and diet lectures at church camp meetings. Oliver felt irritated by her dogmatism. There were only two ways to do something; her way and the wrong way. She died 1½-2 years ago. Oliver knew her well; she married late in life and had no children.

Suggests I contact Dr. Alice Marsh at Andrews University in Michigan. She is a retired Home Economics Teacher; very well read and intelligent. She is now professor emeritus at Andrews in the Home Economics Department. She has a book, a treasure, a vegetarian recipe book written by Dr. J.H. Kellogg's wife. Address: PhD, Vice-President, Research & Development, Loma Linda Foods.

2117. Pugh, Mary Jo. 1980. Re: The John Harvey Kellogg archives at the University of Michigan. Letter to William Shurtleff at Soyfoods Center, Nov. 6. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "The John Harvey Kellogg Collection here consists of some 22 feet of correspondence, notebooks, drafts of speeches and lecture notes, newspaper clippings, scrapbooks and topical files. In addition we also have some 15 feet of published materials–books, pamphlets, periodicals. We have a 14 page inventory of the manuscript materials and a 15 page inventory of the published materials." Address: Reference Archivist, Bentley Historical Library, The Univ. of Michigan, 1150 Beal Ave., Ann Arbor, MI 48109. Phone: (313) 764-3482.

2118. Chapman, George. 1980. Work with Loma Linda Foods (Interview). *SoyaScan Notes.* Nov. 13.
• ***Summary:*** George (who speaks with an Australian accent) came from Australia in 1937 to take over the business of Loma Linda Foods (LLF); they were making soymilk at that time and had been for a year or more–say 1936. George was the general manager of LLF for 26 years, from 1937-1963. He is now age 84. He is not aware of any history of the company.

Dr. Harry Miller wanted to sell LLF his soymilk process and formulation, but LLF felt theirs was as good or better than his.

George thinks LLF was pressure canning by 1937, when he arrived. LLF was not making any meat analogs at that time. In 1937 LLF's main products were several breakfast cereals, and several meat substitutes (such as Proteena / Proteina and Nuttena) made from gluten and/or peanuts.

George met T.A. Van Gundy in 1933 in his little factory in La Sierra, California, near Riverside. He was a Seventh-day Adventist. He had a soybean butter [soynut butter] that resembled peanut butter. He does not remember the product name or the company name.

Dorothea, his daughter, was a dietitian and a food demonstrator for LLF for many years.

All products sold by LLF kept being made in Ohio; none were or are being made in California. Address: Retired; Former General Manager of Loma Linda Foods.

2119. Watanabe, Hidekazu. 1980. Re: Early work by San-iku Foods in Japan with tofu and soymilk. Letter to William Shurtleff at Soyfoods Center, Nov. 20. 5 p. Handwritten, with signature on letterhead. [Jap; eng]
• ***Summary:*** Starting in about 1955 Dr. Harry Miller began to recommend that the Saniku school in Japan serve soymilk instead of dairy milk to its students. But the school decided not to do this because they thought the taste of the soymilk was not very good and it was considered less nutritious than cow's milk; moreover, it would cost a lot of money to buy soymilk equipment.

In 1957 Mr. Hanzo Ueda (who had previously worked at the post office in Hachioji and was a Seventh-day Adventist) was running a tofu shop. He and Mr. Hidekazu Watanabe were making soymilk at the tofu shop, packing it in 180 ml bottles, and selling it around Hachioji–under Dr. Miller's guidance.

In 1959 people from the Saniku school visited the tofu shop and gained confidence. They bought similar (but not identical) equipment, and started to produce soymilk at the school. They bottled it in 180 ml containers and started to serve it to 500 students at every meal.

Ten years later, in 1969, they started to produce Soyalac infant formula soymilk with help from Loma Linda Foods in America. They produced it at College Health Foods–a separate organization from the Saniku school.

Dr. Miller gave us helpful advice on technical and nutritional matters, and furthermore he always supported our spirit and spirituality as we developed the soymilk plant (1959) and the infant formula (1969). In 1969 Luppy Kôsan began to make Luppy soymilk. This was the first really serious commercial soymilk product in Japan.

Note: See also Mr. Watanabe's follow-up letter of July 1981. Address: San-iku Foods, Sodegaura-machi, Chiba-ken 299-02, Japan.

2120. Goodbrad, John. 1980. History of Sovex Natural Foods, Inc. and other small Adventist food companies (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 26. 1 p. transcript.
• ***Summary:*** Sovex is a private company. John and his wife are Seventh-day Adventists, as are many of the company's

© Copyright Soyinfo Center 2014

employees. John worked at the Boulder Sanitarium (also called the "San," in Boulder, Colorado) from 1947 to 1953; the Sanitarium owned 8 health food stores and he was in charge of them. During the time he was in Boulder, the Sanitarium did not manufacture any foods; they had already gotten out of that business.

Then he went to work for Collegedale Distributors (in Collegedale, Tennessee), which was owned by Southern Missionary College. They made, and still make, granola.

Sovex was founded in 1953 by the Hurlingers in Holly, Michigan. The company's original product was Sovex, a flavor concentrate paste, made from a mixture of brewer's yeast and soy sauce. In 1964 John bought the business and moved it to Collegedale, Tennessee, where he worked.

In 1981 Sovex products containing soy include Prothin Snack Chips, Vege-Pat (textured soy flour, in sausage, burger, and chili flavors), and Granola (their main product line, in nine flavors, many of which contain soy grits).

Sovex had no relationship with Madison Foods (of Madison, Tennessee). Madison was one of the pioneers in the meat substitute field. They were purchased by Worthington Foods, which phased out the Madison products. John has eaten Madison products on and off for over 50 years, but has had no direct contact with them for a number of years. John has a copy of *Back to Eden*, autographed by Jethro Kloss.

A Mr. White, who was a grandson of Ellen G. White, had a super soymilk recipe about 20 years ago. He started with soy flour, ran it through an homogenizer, then sweetened it with honey. People loved the flavor; it was fresh, not canned. He called it Nu-Milk and made it on the sly at the Southern Missionary College dairy in Collegedale, Tennessee. It was illegal because there are laws against putting anything but milk in a milk processing plant.

John just talked with Frank Miller (phone: 817-641-8343), who used to work for Madison Foods and who now owns Texas Protein Products, a company that sells TVP in Texas. Another key man was Bruce Stepanske, who made soymilk at Madison until it was discontinued. Address: President, Sovex Natural Foods, Inc., Box 310, Collegedale, Tennessee 37315. Phone: 615-396-3145 (or 2111).

2121. Miller, Oliver H. 1980. Use of soya proteins in the vegetarian market. Paper presented at World Conference on Soya Processing and Utilization, Acapulco, Mexico. Nov. 4 p.

• ***Summary:*** "Vegetarians can usually be divided into two groups: Strict vegetarians, who use no animal products, and lacto-ovo vegetarians, who use milk and egg products along with plant products... The lacto-ovo segment appears to comprise the largest portion of the Loma Linda Foods market... 'Better Health' appears to be the largest single motive for altering former eating habits."

"The Loma Linda Foods product line appears to have limited appeal to the strict vegetarian, who wants no flesh and wants nothing that resembles flesh in their diet. Canned Green Soybeans and Boston Style Soybeans are two products that have some appeal to the strict vegetarian."

"Loma Linda Foods produces approximately 60 different products." Address: PhD, Vice-President, Research & Development, Loma Linda Foods.

2122. Patel, A.A.; Waghmare, W.M.; Gupta, S.K. 1980. Lactic fermentation of soymilk–A review. *Process Biochemistry* 15(7):9-10, 12-13. Oct/Nov. [55 ref]

• ***Summary:*** This excellent article is identical on one published earlier this year (July/Aug. 1980) by the same three authors in *Indian Food Packer* (p. 47-56). Address: 1. Indian Dairy Assoc.

2123. Phillips, Roland L.; Garfinkel, L.; Kuzma, J.W.; Beeson, W.L.; Lotz, T.; Brin, B. 1980. Mortality among California Seventh-Day Adventists for selected cancer sites. *J. of the National Cancer Institute* 65(5):1097-1107. Nov. [10 ref]

• ***Summary:*** Mortality from cancer is lower in vegetarians than in nonvegetarians. "In previous reports concerning cancer among Seventh-Day Adventists (SDA), comparisons were made only with the general population. This report compared California SDA to a sample of non-SDA who were demographically similar to SDA. The study consisted of 17 years of follow-up (1960-76) on 22,940 white California SDA and 13 years of follow-up (1960-72) on 112,725 white California non-SDA. Both groups completed the same base-line questionnaire in 1960. Deaths were ascertained by annual contacts with each study member and by computer-assisted record linkage with the California State death certificate file. Results indicated that, with the exception of colon-rectal cancer and smoking-related cancers, the difference in risk of fatal cancer between SDA and non-SDA was substantially reduced when SDA were compared with a more socio-economically similar population. The persistence of the low risk for colon-rectal cancer can probably be attributed to some aspect of the diet or life-style of the SDA."

The Seventh-Day Adventists (SDA) are a conservative religious denomination that was founded in 1863 and currently has about 3 million members worldwide, 600,00 in North America and 120,000 in California. By Church proscription, virtually all SDA abstain from the use of tobacco and alcohol. Presently, about 54% of SDA follow a vegetarian diet that includes milk and eggs, and 41% rarely or never use caffeine-containing beverages. They also tend to abstain from sweets, other highly refined foods, hot condiments, and spices. Regularity in vigorous exercise, adequate rest, and conservative social mores are strongly encouraged. Address: 1&3-5. Dep. of Biostatistics and Epidemiology, School of Health, Loma Linda Univ., Loma Linda, California 92350; 2. American Cancer Society, Inc.,

2124. Miller, Frank. 1980. Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 3. 1 p. transcript.
• ***Summary:*** Reminiscences on his years as a salesman with Madison Foods, Madison, Tennessee. Address: Texas Protein Sales.

2125. Miller, Frank. 1980. History of Texas Protein Sales and other Adventist food companies (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 3. 1 p. transcript.
• ***Summary:*** Texas Protein Sales was founded in 1972 in Keene, Texas, by Frank Miller. The company is privately owned and Frank is a Seventh-day Adventist. He was formerly in the sales department at Madison Foods. Frank buys textured soy flour from Cargill, Staley, and Central Soya, then distributes it to meat plants. Texas Protein Sales also handles survival or disaster foods, but is not an actual manufacturer. Address: Texas.

2126. Allred, Paul. 1980. Re: Work with soymilk and Loma Linda Foods. Letter to William Shurtleff at Soyfoods Center, Dec. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "I became interested in the soybean potential at the World's Fair in Chicago in 1934 when Henry Ford displayed all of the parts that he made from the soybean. They... made gear shift knobs to sell. This made quite an impression on me and I bought one of the knobs. Later around 1940 I learned of the work Harry Miller was doing and followed his work through the years and became personally acquainted with him. I began to experiment with soy milk as early as 1940 and at present am with Loma Linda Foods still experimenting." Address: California.

2127. *Madison Survey & Alumni News* (*Madison, Tennessee*). 1980. Obituaries: Ella Mae Webber. Dec.
• ***Summary:*** Ella (Verney) Webber was born 17 June 1886 in southern Michigan, and died 22 Oct. 1980, at age 94, at Dunlap, Tennessee. In 1912 she was married to Perry A. Webber. In 1913 they were appointed by the General Council (G.C.) Foreign Missions Board to go to Japan, where they pioneered Seventh-day Adventist educational work in that country. From a very small beginning in the crowded compound in Ogikubo, a suburb, the school has grown into Japan Missionary College with hundreds of students.

Their two sons, Alfred B. Webber and Harry V. Webber, were born in 1919 and 1923 respectively. After a year in Hawaii, the Webbers were sent back to Japan in 1925 to move the college into the country. The buildings were erected by the teachers and students. Industries were started and farm work carried on. The Food Factory, small in its beginnings, grew into a major industry.

Feeling the need for more education, in 1928 the Webbers enrolled in Michigan State University. After 3 years of training, several years were spent at Madison College, where they taught and Ella earned her B.S. degree in 1935. Also in 1935 the G.C. Mission Board again asked the Webbers to return to Japan to carry on the school program of the Japan Missionary College.

In 1953 the Webbers started a self-supporting work at Mount Akagi, Japan. This pioneering program included educational, industrial, and medical work.

Before retiring, Ella again taught at Madison college. Before Perry's passing in January, 1973, much of Ella's time was spent in his care. Her later years were spent in Lodi, California, with her son, Alfred, until he received his appointment to return to Japan, then she moved to Wildwood [Wildwood Sanitarium, a self-supporting Seventh-day Adventist convalescent home and health care facility in Wildwood, northern Georgia].

They returned again to Madison in 1959, and worked there for about ten years until Perry's health failed. He died at Wildwood Sanitarium and was buried in their cemetery.

The last 5 months of her life were spent at Stone Cave Institute, Dunlap, Tennessee. She died in a hospital in Dunlap and was buried in Wildwood Cemetery Hill. She is survived by her two sons–Dr. Alfred B. Webber, missionary in Tokyo, Japan; Dr. Harry V. Webber of Modesto, California; and 5 grandchildren.

2128. **Product Name:** [Granix Pizza with Soya and Tomato].
Foreign Name: Granix Masa Precocida con Soja para Pizza con Tomate.
Manufacturer's Name: Alimentos Granix.
Manufacturer's Address: Av. San Martin 4625 (C.P. 1602), 1602–Florida, Prov. de Buenos Aires, Argentina.
Date of Introduction: 1980.
Ingredients: Incl. wheat flour, soy flour, tomato.
Wt/Vol., Packaging, Price: 300 gm plastic bag.
How Stored: Refrigerated.
New Product–Documentation: Letter and label sent by Jorge Manrique of Alimentos Granix. 1990. July 13. This product was introduced in 1980. Label. 15 inches square. Plastic bag. Red, black. blue, and white on clear plastic. No ingredients are listed. This is masa that is meant to be stored refrigerated, then baked for pizza.

2129. **Product Name:** [Granix Soy Nuggets {Chunks of Textured Soy Flour}].
Foreign Name: Granix Porotos de Soja.
Manufacturer's Name: Alimentos Granix.
Manufacturer's Address: Av. San Martin 4625 (C.P. 1602), 1602–Florida, Provincia de Buenos Aires, Argentina. Phone: 760-7292/0307.
Date of Introduction: 1980.
Ingredients: Textured soy flour.

© Copyright Soyinfo Center 2014

Wt/Vol., Packaging, Price: 500 gm plastic bag.
How Stored: Shelf stable.
New Product–Documentation: Letter and label sent by Jorge Manrique of Alimentos Granix. 1990. July 13. This product, which was introduced in 1980, apparently consists of chunks or balls of textured soy flour. Label. 5.4 by 8 by 2.5 inch plastic bag. Red, white, blue, and yellow. One side of the bag, titled "protein equivalents," shows with cartoon illustrations that 1 kg of soya equals 2 kg of beef, 5 kg of rice, 1.5 kg of cheese, 5 dozen eggs, and 12 liters of milk. The other side describes the product and gives directions for use.

2130. Chaij-Rhys, S. 1980. A diet pattern for total vegetarians. *Adventist Review* (*Hagerstown, Maryland*) 157:1014-15. *
• ***Summary:*** This food guide was prepared specifically for vegans, especially vegan Seventh-day Adventists. An attractive feature of this guide is its use of a simple numerical formula to help the user remember serving recommendations. The plan calls for 1 daily serving of nuts, seeds, or legumes; two servings of fortified protein-rich foods such as fortified soymilk or meat analogs; three servings of vegetables; four servings of fruit; and five servings of grains and cereals.

2131. **Product Name:** [GranoVita Cutlets].
Foreign Name: GranoVita Phag-Schnitten.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1980.
Wt/Vol., Packaging, Price: 270 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: DE-VAU-GE leaflets. 1980? Rezepte aus der GranoVita Versuchskueche. And Neue Rezepte mit Soja-Goulasch. Manufacturer's catalog. 1981. May 1. DE-VAU-GE Sortiments-Preisliste. 4 p.

Form filled out and Label sent by DE-VAU-GE. 1990. June 11.

Note: This product was first introduced in 1958, but did not contain textured soy protein at that time.

2132. **Product Name:** Soy Ice Bean (Named Soy Ice Bean from mid-1979 to early 1982. Honey Sweetened) [Honey Vanilla, Carob, Strawberry, Orange, Banana, Chocolate, Wildberry, Mocha, or Peanut Butter Carob Chip].
Manufacturer's Name: Farm Foods.
Manufacturer's Address: 156 Drakes Lane, Summertown, TN 38483.
Date of Introduction: 1980.
Ingredients: Almond Espresso: Water, soy powder [powdered soymilk], honey, soy oil, almonds, pure coffee concentrate, soy lecithin, locust bean gum, guar gum, Irish moss.
Wt/Vol., Packaging, Price: 16 fluid oz (1 pint) carton.
How Stored: Frozen.
New Product–Documentation: Labels. Brown and white on orange wood motif. "Serve soft for full flavor. Non dairy frozen dessert."

Ad in *Whole Foods.* About 1980-81. p. 69. "Farm Foods Soy Ice Bean. The completely vegetarian frozen dessert." Note: The powdered soymilk in this product was made by Loma Linda Foods in Mt. Vernon, Ohio.

Talk with Robert Dolgin of Farm Foods. 1981. Dec. 26. In San Rafael, The Farm made soy ice cream with a batch Emery Thompson ice cream machine. Most of it was sold as [soft serve] cones over the counter or in pints in the freezer, but a little was distributed locally. Strawberry was the favorite flavor. Farm Foods expanded operations after moving into their soyfoods manufacturing plant on King Street in San Francisco. At least a year passed between the time that the San Rafael soy deli closed and the King Street plant opened. Robert is now working with David Burns; they have capital and a warehouse. They plan to do secondary soyfoods manufacturing and distribution.

Shurtleff and Aoyagi. 1985. *Tofutti and Other Soy Ice Creams.* p. 46-47.

2133. **Product Name:** Granose Chicken Flavoured Savoury Pudding.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1980.
Ingredients: Wheatmeal flour, vegetable fat, textured soya protein, maize starch, soya flour, salt, onion, hydrolised vegetable protein, milk powder, leek, mushroom, yeast, vegetable oil, herbs, silica, spices, natural monosodium glutamate.
New Product–Documentation: Manufacturer's catalog. 1980. April. "Chicken flavoured pie filling in the same delicious pastry case as the original Granose Savoury Pudding."

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1980. This product has been discontinued.

2134. **Product Name:** Granose Soya Oil.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1980.
Ingredients: Soya oil.
Wt/Vol., Packaging, Price: Bottled.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog.

Date of Introduction: 1980.
Ingredients: Water, textured vegetable protein (soy protein concentrate and isolate), wheat gluten, flavorings (artificial flavors, onion and garlic powder, onion, spices, disodium guanylate, disodium inosinate), soybean and/or corn oil...
Wt/Vol., Packaging, Price: 14 oz (398 gm) paperboard box.
How Stored: Frozen.
New Product–Documentation: Label. 1980, dated. "Meatless and Delicious. Contains Vegetable Protein."

2153. Calkins, Fern; Register, U.D.; Sonnenberg, Lydia. 1980. It's your world vegetarian cookbook. Enlarged, 2nd ed. Washington, DC: Review and Herald Publishing Association. 304 p. Illust. Index. 24 cm. Sponsored by Dept. of Nutrition, School of Health, Loma Linda University, and Southern California Conference of Seventh Day Adventists.
• ***Summary:*** It's Your World" is a television series hosted by Art Linkletter and sponsored by the Seventh-day Adventist Church in Glendale, California. The original edition was published in 1973. Contains a number of quotations on diet and health by Ellen G. White.

Soy-related recipes include: Catalina cutlets (with cooked soybeans, p. 13). Florentine fritters (with soybeans,

© Copyright Soyinfo Center 2014

p. 18). Frontier fritters (with soybeans, p. 21). Saucy soy sizzlers (with soybeans, p. 23). Hawaiian chestnut balls (with tofu, p. 24). Tofuburgers (p. 24). Tasty tofu timbales (p. 25). Millet gourmet casserole (with soybeans, p. 34). Tender soya broccoli (with FriChik and Soyannaise, p. 40). Savory baked beans (p. 45). Baked soybeans Americana (p. 48). Beans 'n' apples (p. 50). Soybeans Hawaiian (p. 54). Mandarin garden soys (using Loma Linda Green Soybeans, p. 60). Celebrated red rice (with adzuki beans, p. 63). Oriental tofu (p. 69). Stir-fry vegetables with tofu. Luncheon tofu (p. 70). Tofu dippers (p. 71). Pepper-olive tofu (p. 78). Emperor's feast (with tofu, p. 78). Tofu "steak" (p. 79). Tofu scramble (p. 88). Quick 'n' easy tofu (p. 89). Crispy tofu sticks (p. 89). "Cheesy" spread (with tofu, p. 96). Soybean soup a la Creole (p. 106). Tokyo special (with tofu, p. 111). Tofu salad (p. 130). Tofu stuffing (p. 132). Garlic-dill dressing (with tofu, p. 145). Tofu sour crème topping (p. 151). Garden vegetable dip, or Confetti dip (with tofu, p. 152). Whole-wheat bread (with tofu, p. 174). Wabash fried mush (with soy beans and soy flour, p. 182). Tofu "jerky" (p. 200). Roasted soy smacks (dry-roasted, seasoned soynuts, p. 201).

Pages 42-43 contain a cooking guide for dry beans, peas, and lentils. Adzuki (or Chinese red) beans are included. Concerning soybeans: "It is better to soak soybeans longer than other beans–2 or 3 hours or overnight. Soaked beans in small quantities may be frozen in containers as a convenience. Thaw before cooking or drop frozen into boiling water. 2/3 teaspoon of salt is enough for each cup of dry soybeans, or use 1 tablespoon chicken-like seasoning and ¼ to ½ teaspoon salt. When pressure cooking 1 cup soybeans, use 2 cups water; 1 teaspoon of oil may be added to keep from foaming; at the end of cooking time cool immediately under cold running water. Soybeans have a more nutty flavor and are more tender when they are served immediately after cooking."

Many recipes also called for commercial branded soy-based products made mostly by Loma Linda Foods or Worthington Foods. Pages 273-75 give a list of "Vegetable Protein Alternates (Analogs)." Those made by Loma Linda Foods or Worthington Foods are so marked. Details on tofu are given on pages 24, 69, 79, 275, and 298. Address: 1. B.A.; 2. PhD, RD, Chairman, Dep. of Nutrition; 3. M.A., R.D., Assoc. Prof., Dep. of Nutrition. All: School of Health, Loma Linda Univ., Loma Linda, California.

2166. Webber, Harry. 1981. Perry Webber, Madison College, and Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 8. 2 p. transcript.
• ***Summary:*** Harry Webber, the son of Perry A. Webber, attended Madison College from 1930 to 1935, then 1939-1943. He left in 1943 to go to medical school. Harry remembers the foods served at Madison. Vigorost was a gluten meat invented by Perry. There was also Nutmete or Notmete, and several others. They were served to students and widely retailed at health food stores. Ed Bisalski, the sales manager, traveled around the USA selling these foods.

Perry Webber first went to Madison in about 1931. He earned his doctoral degree at Michigan State, graduating in about 1930-31, then went to Madison. Years before that he had been a missionary in Japan.

Harry went to Japan with his father, Perry, for 3 years. Harry's mother has written a biography of Perry; he will send Soyfoods Center a copy. Emmanuel Missionary College asked that she write the book. His interest was in food chemistry. He was head of the chemistry department at Madison. In the early 1930s he got interested in soy.

P.A. Webber and his family went to Japan from 1935 to 1939, then came back to the USA just before World War II, and went to Madison College–where Perry did lots of work with soyfoods.

Perry Webber was good friends with Dr. Harry Miller and he got interested in soymilk through Dr. Miller, probably first in Japan. He visited with Dr. Miller in Japan and saw his program, but Perry was interested in soymilk before 1935. His brother was in Tokyo at the Adventist hospital.

Sam Yoshiwara knew Perry Webber well and was one of his students in Japan. Perry sponsored him to come to the USA. Sam worked in the food factory at Madison College.

There is a small book about Sutherland and Madison by a man who taught Spanish at Madison. Address: M.D., 913 Meadowwood Dr., Modesto, California 95355. Phone: 209-521-1410 OF. 209-529-4291 HM.

2171. Fischer, R.W. 1981. Re: History of soyfoods manuscript. Harry W. Miller, Jr. Letter to William Shurtleff at Soyfoods Center, Feb. 19. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Thanks for your good letter of February 7...

"I would be glad to read the manuscript on soyfoods history. Am glad you are undertaking this very worthwhile effort. You might also want to get the benefit of the truly vast knowledge in this are of Harry W. Miller, Jr. He worked closely with his father on soy foods for nearly 50 years. His address is:

"Harry W. Miller, Jr., 431 Citadel Street, Gahanna, Ohio 53020.

"I, too. hope I can attend the Soyfoods Conference in Colorado." Address: President, Soypro of Iowa Inc., 314 Main St., Cedar Falls, Iowa 50613. Phone: 319/266-0678.

2172. Yoshimura, Sam. 1981. Re: Chronology of work at Madison Foods and reminiscences. Letter to William Shurtleff at Soyfoods Center, Feb. 20. 2 p. Typed, with signature.
• ***Summary:*** 1937-1943. Sam attended Madison College and received a B.S. degree in nutrition in 1941. "At that time extensive study on soy beans and human nutrition was conducted at the college under the direction of Francis Dittes, (Ph.D. in nutrition) Phillip Chen, (Ph.D. in chemistry) and Perry Webber (Ph.D. in nutrition). Madison Foods (owned by the college) was manufacturing various canned and dried vegetable protein products including Kre-O-Soy

© Copyright Soyinfo Center 2014

(soy milk) and Cheze-O-Soy (seasoned tofu) and marketed them nationally. I received valuable experience working in the food plant.

1943-1946. Sam went to Emmanuel Missionary College located in Berrien Springs, Michigan (now renamed Andrews University), and received a B.S. degree in agriculture in 1945.

1945-1956. Sam returned to Japan and re-established San-iku Foods (owned by the Japan Missionary College). The college was closed during World War II. The company made canned and baked products based on wheat and soy proteins and marketed them extensively, including at Mitsukoshi, Seibu and other department stores. A series of pilot scale tests of soy milk production was conducted under the direction of Dr. Harry Miller. However, they did not start commercial production due to the somewhat weak public response to the product.

1956-1963. He worked for Madison Foods in Tennessee, where he was responsible for managing the production, research, and development program. Various canned vegetable protein products were produced. Madison Burger based on wheat and soy protein and improved Cheze-O-Soy were well accepted by the market. At the beginning of 1962, production of Infa Soy using Dr. Harry Miller's formula, was started under the direction of his son, Willis Miller; J.B. Craw was general manager at that time.

1963-1964. Sam left Madison Foods and went to work for Madison Hospital (owned by the organization). He was assigned to develop economical vegetable protein products suitable for hospitals, schools and other institutions. A series of frozen products including the so-called "Sam's Chicken," made with wheat protein [gluten] and tofu, were formulated. The product was well accepted by institutions as it had a torn chicken-like texture. "It was a least expensive product. I understand a dish prepared with Sam's Chicken (supplied by Southern Missionary College) received recognition at the International Restaurant Show in Chicago several years ago.

1965 to present. He joined Worthington Foods after Worthington acquired Madison Foods. Worthington sent him to Africa Basic Foods Inc. in Uganda, East Africa, to assist development of soy protein products. During his 6-month stay the company produced soy milk, tofu, CSM (combination of corn, soy and powdered skim milk) and other high protein products for hospitals and the school lunch program. It was a missionary project for the company to take part in solving kwashiorkor problems. It was an unforgettable and rewarding experience for Sam. He is a staff member of the R&D department, especially assigned to develop new products. He is also a professional member of the Institute of Food Technologists.

For information regarding Krem-O-Soy and other products from the early days of Madison Foods, contact Dr. Register (Chairman, Dep. of Nutrition, Loma Linda Univ.) or Dr. Shirou Kunihara at the same university. They were students at Madison College and did R&D work for the food plant. The son of Dr. Philip Chen (deceased) is at the Weimar Institute, Box A, Weimar, California 95736. Address: 8200 Colonial Meadows, Westerville, Ohio 43081. Phone: 614-882-0625.

2173. John, Harrison W. 1981. Adventist food industries: Recent developments. *Spectrum: Journal of the Association of Adventist Forums* 11(3):28-36. Feb.
• ***Summary:*** One of the most informative articles ever written about Seventh-day Adventist food companies worldwide. "Ever since Ellen G. White's health reform message of 1863, Seventh-day Adventists have had a 'theology' of nutrition." In 1979 food sales for Adventist manufacturing and marketing companies totaled $188 million, up 95% over 1974 sales of $96 million, and up 3.68 times over 1970 sales of $51 million. The most successful company is Sanitarium Health Food Company in Australia. Sales for the 5-year period 1975-75 totaled $400 million. Their most popular product is read-to-eat "Weet Bix," a breakfast cereal that outsells Kellogg's Corn Flakes.

In Europe: Earned income figures for 1978 were impressive. DE-VAU-GE's income was $12.2 million (second only to Sanitarium Health Foods in Australia). Nutana's was $7.6 million ($10 million in 1979), and Granose's was $1.8 million. Nutana showed an impressive tenfold sales increase from 1973 to 1979.

Profit figures, however, were not impressive. In 1978 Granose lost about $295,000 and Nutana $5,903. DE-VAU-GE's profits were unknown. Granose had been a consistent money looser; between 1975 and 1978 it lost an average of $101,000 a year and its net worth decreased from $331,902 in 1975 to $113,515 in 1978. Thus in October 1979 Sanitarium Health Foods of Australia was asked to take over the management of ailing Granose. Loma Linda Foods in the USA has also had problems. Though 1978 sales were $11.7 million, they lost $390,000. In April 1980 management and control of LLF was transferred to Sanitarium of Australia. In about 1978 Granix in Argentina and Superbom in Brazil entered the vegetable protein market with TVP and are currently producing 700 tons/year. In 1976 a "World Foods Service Expansion Program" was started to finance expansion of food production into countries having serious nutritional problems. Low-cost extrusion cookers making TVP were a key part of this program. Address: Rockville, Maryland.

2174. Leviton, Richard. 1981. Making soymilk in America. *Soyfoods* 1(4):16-24. Winter.
• ***Summary:*** A review of soymilks available nationwide and a detailed analysis of Numu, New England Soy Dairy's problematic soymilk and the reasons for its failure in September 1980, at a cost of $40,000. Also discusses: Vitasoy (imported to California). President Soybean Drink

(imported to California). Soy Fresh (made by Quong Hop in California since 1972). Soy Moo (made by Health Valley in California). Fresh Soybean Juice (made by Wy Ky of Los Angeles). Soymilk (made by Mighty Soy). Soybean Beverage (made by Hoven Foods, Seattle). Soy Juice (made by Redwood Valley Soyfoods Unlimited [Richard Rose]). Plain Soymilk (made by Island Spring, Vashon, Washington). Nutrisoya (made by Victor Food Products, Toronto, Canada). Soy-Ya! (made by Joy of Soy, Minneapolis, Minnesota). Soy Milk (made by White Wave of Boulder, Colorado). Soyalac and Soyagen (made by Loma Linda of Mt. Vernon, Ohio). In 1978 Nasoya introduced Vidasoy–prematurely; it was a disaster. A photo shows Stephen Yu holding a bottle of Victor Foods' Nutrisoya. Address: Colrain, Massachusetts.

2175. **Product Name:** [PHAG Soya Drink].
Foreign Name: PHAG Soja-Drink.
Manufacturer's Name: PHAG Sàrl (Produits Hygièniques Alimentaires Gland) (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: La Ligniere, CH-1196 Gland, Switzerland. Phone: 022/64 11 18.
Date of Introduction: 1981 February.
Wt/Vol., Packaging, Price: 0.5 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: This company was founded in 1895. Leviton. 1983. Report on soyfoods research and speaking trip to Europe with American Soybean Assoc., Oct. 8–Nov. 15. p. 17. Product seen at Reformhaeuser in Switzerland. Retailed for F1.65/500 ml.

Letter from Remy Mayer of PHAG. 1990. Oct. 2. This product was introduced in Feb. 1981. His company distributed the product, which was made by a manufacturer in Belgium [probably Alpro]. "PHAG is written officially in capital letters. It is an abbreviation of 'Produits Hygièniques Alimentaires Gland.'" On the company's letterhead, the logo is an illustration of the profile of a squirrel. Below the logo is written: "Force de la nature–Kraft der Natur" ("The Power of Nature"). After the company's name is written "Alimentation naturele–Neuzeitliche Nahrungsmittel" ("Natural foods–Modern foods"). New labels were created in 1985 after DE-VAU-GE began soymilk production.

Labels sent by Mayer. 1991. Jan. 24. 500 ml and 1 liter Tetra Brik Aseptic cartons. Red and green on white.

2176. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world. *Soyfoods* 1(4):28-36. Winter.
• ***Summary:*** Contents: Introduction. Growing up (1879-1902): Birth, early contact with Dr. J.H. Kellogg, marriage. Early years in China (1903-1911). Washington, DC (1912-1925). Pioneering soymilk in China (1925-1939): Research, development of plant, destruction of plant 13 Aug. 1937, U.S. patent, No. 2,078,962 for soymilk process and equipment, work before return to U.S. Introducing soyfoods to America (1939-1949): In Mt. Vernon, new products, work with AMA, American Soybean Assoc. speaker and lifetime member 1958, contact with K.S. Lo and Vitasoy. Research and work around the world (1949-1977): Quick visit to Shanghai, death of second wife, sale of International Nutrition Foundation, Taiwan work, Indonesian plant, Trinidad, Libya, Japan, old age and relationship with William Shurtleff, the "Great Man." Contains 5 photos, and a sidebar titled "Early History of Soymilk."

Among the many people who pioneered in bringing soyfoods to America and to the West, two men of great vision, dedication, and perseverance deserve special mention: Dr. Harry W. Miller and William J. Morse. Dr. Miller, the well-known 'China Doctor'(after his biography by that title), was a world-famous missionary doctor and surgeon, and founder of more than 15 Seventh-day Adventist hospitals around the world. He was one of those unique individuals who was both a dreamer and a doer, and who inspired almost everyone who knew him.

"Like W.J. Morse, he considered it his personal 'responsibility to awaken the West to the wonders of the soybean and to promote its use as food. (But where Morse was interested in soybean agronomy, livestock feeding, and food, Miller was interested only in food uses.) Dr. Miller can also be considered the founder of the modern soymilk renaissance in Asia. The development and popularization of soyfoods, and especially soymilk, was his lifelong hobby and despite his other numerous and demanding careers, he never lacked the time, over a span of almost 75 years, to continue his ongoing research and work in this new field that he loved so well.

"Growing Up (1879-1902): The first of five children of Amanda Ehlers and John Oliver Miller, Harry was born in a log cabin on a farm in the small town of Ludlow Falls, Ohio (just north of Dayton) on 2 July 1879. His father was a school teacher. He later wrote that he delighted in working on the family farm but found it 'disgusting' to have to kill and eat the animals he had raised. When he was 12, Harry's parents became Seventh-day Adventists. Two years later, after much study, at the annual camp meeting, he and a friend decided to be baptized and become Adventist church members.

"At age 15 Harry entered secondary school at the Adventist-run Mt. Vernon Academy in Mt. Vernon, Ohio. He loved the strict, puritan atmosphere, the vegetarian diet, and the teachings of the church. In 1898, at age 19, he enrolled in medical school at the newly opened, Adventist-run American Medical Missionary College in Battle Creek, Michigan, which was associated with Dr. John Harvey Kellogg's Battle Creek Sanitarium (founded in 1866), the largest and most progressive medical institution of its kind in America at that time, and the birthplace of modern dietetics. Opposing the popular cures of the day (drugs, bleeding,

© Copyright Soyinfo Center 2014

etc.), the sanitarium recommended diet (especially a simple grain-based vegetarian diet), exercise, hydrotherapy and good mental health as the foundations of healthful living and natural healing. These teachings had a lifelong effect on Miller.

"Working to pay his own tuition, room, and board, Miller led guided tours through the sanitarium and food factory, which forced him to learn more about the various foods (America's first meat analogs and breakfast cereals) and how they were made. Miller was deeply influenced by the personality and teachings of Dr. J.H. Kellogg, who personally taught a number of the classes Miller attended, treated him like a son, and helped put him through college. One of America's great pioneers of both nutrition and of soyfoods, Kellogg stressed to the small class the importance of preventive medicine, nutrition, and diet. He strongly opposed the use of alcohol, tobacco, caffeine, and narcotics. Miller later noted that almost all the students in the small class lived past the age of 90; Kellogg lived to age 91, Miller to 97½ and one classmate to 101.

"Miller graduated in 1902 and was married to a classmate-doctor, Maude Thompson, the same year. During an internship autopsy, Dr. Miller cut his finger badly and suddenly contracted systemic blastomycosis, an infection considered at the time to be fatal. With deep faith he prayed to God, promising that if he were to be healed, he would go anywhere in the Lord's service. To the astonishment of his doctors, Miller was miraculously healed. This greatly deepened his faith. Shortly thereafter a call came from the Adventist church for a missionary doctor in China. Miller accepted the challenge. For the rest of his life he prayed for his patients before all operations (minor or major), and, according to others, apparently his great faith was rewarded by their recovery.

"Early Years in China (1903-1911): In October 1903, Dr. Miller and Maude, together with another physician couple, sailed for China, stopping briefly in Japan. In Kobe, at the home of fellow Adventists, Myrtle Lockwood first introduced Miller to soyfoods serving an entree called Tofu Loaf, with which Miller was particularly impressed. In China the couple went deep into the interior, near the center of Honan Province, where they found great poverty and malnutrition. They both learned Chinese, dressed like the local people, and even adopted the hair style of a long queue and shaved pate. They also ate Chinese foods, and soon Miller was visiting local tofu shops, learning about and sampling tofu, yuba, curds, soymilk, and the like. He found that tofu was much more widely consumed than soymilk, although the latter was quite widely used as a spicy hot breakfast soup and a warm, sweetened beverage. Dr. Miller later said (1961) that many Chinese and other East Asians told him that they did not drink much soymilk since they believed it caused them intestinal disturbances, which tofu did not. Perhaps this was why soymilk was not generally fed to infants-and children.

"In 1905, Dr. Miller's beloved wife died suddenly of an unknown disease. He was 26. 0ut of his deep sadness grew an even deeper commitment to help the impoverished and suffering millions of China. After a brief return to America two years later, where he married Marie Iverson, Miller returned to Shanghai. Two daughters were born in 1908 and 1910. Then Dr. Miller contracted a severe unknown disease and was forced to return to America in 1911.

"Washington, D.C. (1912-1925): Miller eventually managed to heal himself of what he later learned was a vitamin deficiency illness called sprue. During recovery he taught the Bible at Mt. Vernon Academy, his former alma mater and in 1912 his first son. Harry Willis, Jr., was born. Soon he was called to the position of medical superintendent and surgeon of the Adventist-run Washington Sanitarium and Hospital, which he developed into a Mecca for congressional leaders of the day. He became consulting physician to three U.S. presidents. In Washington he pioneered new techniques of thyroid goiter surgery, which lowered fatalities from 50 percent to about one percent. He eventually performed over 6,000 goiter surgeries around the world. In Washington he also met Dr. W.J. Morse and Dr. J.A. LeClerc, both soy pioneers from the USDA. He later wrote that these men filled him with 'inspiration, enthusiasm, and information,' and both later made frequent visits to Miller's soymilk plant in Ohio. In 1915 a fourth child, Clarence, was born.

"Prior to 1917 the Sanitarium had used a lot of dairy products on its vegetarian menus, but in that year, with World War I under way, all milk supplies from the local dairy were requisitioned by the Walter Reed Military Hospital. The sanitarium bought its own herd, but the problems that Miller found with contamination, animal disease (tuberculosis), and the like, convinced him of the need to develop a good alternative to dairy milk. In the small food plant connected with the hospital, where several soyfoods were already being produced for use in the lacto-vegetarian diet, Miller began a few basic soymilk experiments in 1925." Continued. Address: Lafayette, California.

2177. Shurtleff, William. 1981. Soymilk at Loma Linda. *Soyfoods* 1(4):24-26. Winter.

• ***Summary:*** This is a detailed, step by step description of how soymilk is made by Loma Linda Foods at their plant in Mt. Vernon, Ohio, based on the author's visit to that plant. Loma Linda sells nine types of soymilk under two brand names: Soyalac is specially formulated for infants and Soyagen is for adults. Soyalac constitutes 75-80% of the companies total sales. i-Soyalac is an infant soymilk made from soy protein isolates; like regular Soyalac it is sold canned in 3 forms: concentrated, ready-to-feed, and powdered. Regular Soyalac outsells the isolate-based product by 2 to 1. "Of all the Loma Linda soymilks, their best seller is Soyalac concentrate, followed by their i-Soyalac

© Copyright Soyinfo Center 2014

concentrate, their ready-to-feed Soyalac, and then their powdered Soyalac. Their main competitor is Worthington's Soyamel, which is sold powdered in Pure Pak cartons at health food stores.

"Of the 70-75% of all babies in the U.S. that are raised on a formula rather than breastfed, 25% of these are fed a soy-based formula and 75% a dairy-based formula. Loma Linda presently has about 7% of the soy-based infant formula market. The largest shares of that market are held by Ross Labs' Isomel (approximately 50%), and Mead Johnson's Prosobee (40%). Wyeth Labs in Pennsylvania also has a 3% share... Of the adult soymilk market, Loma Linda's Soyagen (made with whole soyabeans) has about 60% and Worthington's Soyamel (made with soy protein isolates) has about 40%."

One interesting observation is that babies raised on a soy-based infant formula generally have a strong dislike for the flavor of cow's milk. Some 7% of U.S. babies are allergic to cow's milk and a small percentage are allergic to the lactose in mother's milk. Address: Soyfoods Center, Lafayette, California.

2178. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part II). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "Pioneering Soymilk in China (1925-1939): In 1925 Miller accepted the church's invitation to return to Shanghai to develop a network of Adventist health care facilities, the first of which was the Shanghai Sanitarium and Hospital, which opened January 1, 1928, with Dr. Miller as medical director. Deeply touched by the high infant mortality rate caused by malnutrition, Dr. Miller began again in 1926 to turn his attention to soymilk, working on it steadily in his spare time at a small food plant located behind the hospital building. A growing number of orphaned infants began to appear at the hospital. Their only hope of finding food was to find a wet nurse or to be fed cow's milk, which was very expensive in China and which not all infants tolerated well.

"Dr. Miller was determined to develop a soymilk that had good flavor and digestibility, could be formulated to nutritional equivalency to mother's milk, was low in cost, and had a good storage life. Preparing his soymilk at the small soy plant in the typical Chinese way, with cold extraction of the soymilk from the okara, followed by cooking, he began to study ways to remove the beany flavor and make the soymilk more digestible.

"On his medical travels in other parts of China, and in Korea and Japan, he visited tofu shops and studied their methods. He believed that the beany flavor resulted from natural oils in the soybean; perhaps if the soymilk were spray dried and then reformulated with fresh soy oil, the flavor would improve.

"In the early 1930s, returning to America on furlough, he purchased the necessary equipment for a small soy dairy and had it shipped to China; a motorized stone mill, an American extractor, and a small homogenizer. Soon he was making improved formulated soymilk for the babies, patients, and staff at the Shanghai Sanitarium. The Chinese, too, liked the flavor. Some friends cajoled that it was 'undignified for a talented surgeon to be always playing around with beans.' Miller was undaunted, yet the beany flavor persisted.

"One day, in the mid 1930s, the breakthrough came as he was standing in the kitchen of the compound working with slurry from a tofu maker. He later wrote: 'I heard a divine voice behind me that said "why don't you cook it longer with live steam?" No one had ever thought of that before. Soon the staff and patients noticed the improved flavor and digestibility, and he added some soy oil or peanut oil during homogenization to make it even better. With new enthusiasm he began more baby feeding experiments. Soymilk was added to what was called the sanitarium's 'Universal Diet,' which also included whole wheat bread and half polished rice, plus other soyfoods. During a trip to the Philippines at this time he learned from refiners of coconut oil that steam distillation and flash pasteurization improved flavor of foods containing fats by driving off volatile oils and gases.

"So promising was the new product that Miller began to move forward on three fronts: controlled feeding studies on infants, establishment of a commercial soy, dairy, and application for a U.S. patent. In 1932 Dr. Miller had established the Vetose Nutritional Laboratory for furtherance of his research. For two years (1936-37) he fed formulated soymilk to several hundred small children at the Shanghai Clinic, running control tests with fresh cow's milk and various types of American and European prepared baby foods. The study turned out well and the results were published in the April 1936 issue of the prestigious *Chinese Medical Journal*, an English-language publication read widely in the U.S. and China. Here it was officially noted that babies could be nourished from birth fully as well with soymilk as with animal milks. This led to increased interest in the product. Dr. Miller later wrote: 'I regarded that work as of far greater importance than the building up of the sanitarium because it had to do with the preservation of thousands of lives that otherwise would be lost if they did not have a proper substitute for mother's breast milk, since cow' milk is beyond the economic level of the Chinese people and almost all Oriental races.' In later years follow-up infant feeding studies were done by other researchers using Dr. Miller's soymilk at the Indigent Hospital in the Philippines, at Tokyo University, and at Ohio State University at the Children's Hospital in Columbus, Ohio.

"In January 1936 Dr. Miller and his oldest son, Willis (who did much of the plant design and equipment construction and was the production manager), opened a full-scale soy dairy, the first of its kind in the world, on Pingliang

© Copyright Soyinfo Center 2014

Road in Shanghai, not far from the Shanghai clinic. The milk was cooked with live steam in open-top kettles. Soon a fresh liquid beverage, called Vetose Soya Milk, was available in natural, chocolate, and acidophilus flavors, in half-pint and quart bottles. The tangy acidophilus, cultured, bottled (but not sterilized) and delivered chilled was a real favorite. Ice cream was sold to institutions and meat analogs were under development. Production skyrocketed, doubling each month. Eventually the entire city of Shanghai had a soymilk route with thousands of families receiving door to door deliveries (by three-wheel pedicycles with carts behind them) of 3,000 quarts and 4,000 half-pints a day. The commercial product sold for less than dairy milks and cost less than one-fourth as much to produce. The soymilk proved so successful that it was soon included in rations for the Chinese army. A system for making dehydrated soymilk was also set up using a locally made Grey Jensen spray dryer; the government planned to use the dehydrated soymilk in rations that were lighter in weight and could be stored longer.

"But the Japanese were now invading China and on August 13, 1937, just eight months after the plant opened, it was totally destroyed by Japanese crossfire and bombs. (At the same time another soy dairy was being run by Julean Arnold of California and Nellie Lee, a Chinese, both of the China Nutritional Aid Council, in Dr. Fu's Children's Hospital in Shanghai. They provided their soymilk to 25,000 to 37,000 refugee children a day and distributed millions of biscuits containing 40 percent okara from their soy dairy.) The Japanese occupied Shanghai in November, 1937, and soon thereafter the Shanghai Sanitarium was closed, to become a refugee center. The political situation forced Miller to leave Shanghai.

On May 4, 1937, while his Shanghai soy dairy was still in full swing, Dr. Miller was awarded U.S. Patent No. 2,078,962. He introduced methods for eliminating beany flavor, and for the use of a centrifuge, and an homogenizer. In the patent he referred to his product as 'vegetable milk;' however subsequent pressure from the powerful dairy industry and the USDA convinced him to Latinize the name to Soya-Lac. This term was first used in late 1939 for Miller's first American soymilk; the spelling had been changed to the present one-word Soyalac by September 1941.

"Miller's patented process was as follows: Soak 1 part by weight of soybeans in 8 parts of water at 60 to 75ºF for 6 to 10 hours. Grind well in a burr mill, adding a little water while grinding, to produce a mixture of 20 gallons water and 25 pounds ground beans. Extract the soymilk through a fine cloth in a centrifuge at 2,500 RPM in either of two ways: (1) before heating; or (2) after bringing to a boil, stirring constantly, in a caldron and simmering briefly. Now to the simmering soymilk add 7 pounds each grain sugar (dextrose, maltose) and oil plus 3 ounces salt. Return to the boil and simmer, stirring constantly, for 30 to 60 minutes, or until the flavor changes from 'beany' to 'nutty.' Homogenize in a colloid mill or homogenizer to give a milk containing 3.5 to 4 percent protein and 5 percent fat. Cool, bottle, and refrigerate, or dehydrate.

"From late 1937, Dr. Miller was in Hankow-Wuhan establishing the Wuhan Sanitarium Hospital, where he also had a small soy dairy. Eventually over 15,000 Chinese refugees, escaping the Japanese troops in the north, filled the hospital compound. Finally in January 1939, as the war got too hot, Dr. Miller left China and returned to America in April of that year." Continued. Address: Lafayette, California.

2179. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part III). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "Introducing Soyfoods to America: Undaunted, Dr. Miller returned to the U.S., convinced that soymilk was destined for worldwide acceptance. He decided to settle in Mt. Vernon, Ohio, where he had formerly gone to school and later taught. Dr. Miller's oldest son, Willis, had returned from Shanghai after the plant there had been destroyed and in 1938 started his own business, Miller's Soy Foods, in Utica, New York. Later that year it moved to Washington, DC, and was successfully marketing canned soymilk, okara spreads, and gluten cutlets.

"When Dr. Miller returned to the U.S. he suggested that he and his son go into business together; Willis liked the idea. Working with his son, Dr. Miller set up a company called the International Nutrition Foundation and then began searching for a suitable site in Mt. Vernon for their new soy dairy. Soon they found a 140-acre farm, containing a number of fine springs, located several miles outside of town–and for the remarkably low price of $7,000. Dr. Miller borrowed money from his brother Clarence to purchase this farm, then moved into the one large house on the property. Willis moved his soyfoods equipment from Washington, DC, into a garage near the house and got the plant running while the new buildings were being built. In April 1939 Clarence, Dr. Miller's second son, left his job in Washington, DC, and went to Mt. Vernon to help with the work; he later became accountant and treasurer of the soy business. To help raise money for the soymilk operation, Dr. Miller set up a private part time medical practice, with an office in one wing of the local hospital. Although he had very little money, Dr. Miller made plans for a 60- by 130-foot building, which he planned to enlarge later by adding a second story. A local high school had been recently torn down and he obtained all the bricks for free if he would haul them away. So each evening after his medical work was done, Dr. Miller and his sons trucked the bricks over to their land, cleaned them, and built the new soy dairy building. The surgeon's skilled hands were not too delicate for the rough work. The original building still stands strong; today it houses the office, lab, and pilot plant where

© Copyright Soyinfo Center 2014

Loma Linda still makes Soyalac.

"The new plant was completed in the fall of 1939 and the first products, canned Soya Lac (made in a pressure cooker and fortified with vitamins and minerals) and Soy-A-Malt were available late that year; powdered Soya Lac was first produced in 1940. But contrary to Miller's expectations, the American public was simply not ready for soymilk; acceptance was painfully slow. He decided that, in order to survive, he would have to develop new products, try to get his soymilk approved by the American Medical Association, and, in the meantime, sell his soymilk and related soyfoods to ready markets in East Asia.

"With his typical boundless energy, Dr. Miller, now 61 years old, started by setting up a plant near the soy dairy to can fresh green soybeans of the tasty, large-seeded or vegetable variety, which were grown on the farm. Partially because of the mushrooming growth of interest in soyfoods during World War II (due to the rationing and high prices of meat, milk, eggs, and cheese), these found a ready market and became his most profitable product, with 40,000 cases a year being sold at supermarkets and health food stores around the Midwest by 1943. The company's best selling product (which was not as profitable due to the high production costs) was Miller's Cutlets, a canned gluten entree. He began to develop other meat analogs similar to those developed initially by Dr. J.H. Kellogg at Battle Creek. He now perfected his acidophilus soymilk but sold it only to the local Mt. Vernon hospital since he did not want to kill the culture by sterilization required for long distance distribution. (In 1934, Kellogg had patented a similar acidophilus soymilk.) He made tofu from his basic soymilk and did extensive experiments, working with Ohio State University, in making a fermented tofu cheese; tofu was pressed as hard as possible, inoculated with Cheddar microorganisms, then allowed to ripen. The product was fairly good but often excess moisture in the tofu led to the growth of unfriendly bacteria. Next came a soymilk ice cream. Dr. Miller put all of his medical income into the soyfoods business and by 1940 the company was producing an exciting line of vegetarian soyfoods and meat substitutes, sold nationwide, mostly at health food stores. A pamphlet of that year lists the following, all sold under the brand name 'Miller's': Soya Lac, a liquid soymilk in natural and chocolate flavors sold in 13 ounce and 30 ounce cans. Soy-A-Malt, spray dried soymilk in natural and chocolate flavors in one-pound cans. Soya Sauce, produced in South China. Soya Curd, made by coagulating Soya Lac with lactic acid to make curds, then blending this with tomato puree, pimento, and soy sauce. Soya Loaf, made from a seasoned mixture of okara (soy pulp and gluten). Soya Spread, for sandwiches, also made from okara and sold in 16-ounce jars. Whole Soya Bean Flour, a naturally alkaline full-fat soy flour. Green Soya Beans, canned, vegetable type. Giant Soya Beans, cooked and canned mature vegetable-type soybeans, and Soya Beans with Tomato Sauce, edible soybeans canned with tomato puree and malt.

"Products added years later included Vegetable Chili Con Carne and Vegetable Chop Suey, both sold in 16-ounce jars with wheat gluten used in place of meat. In 1942 Kellogg's Battle Creek Food Company had a similar line of soyfoods: Soy Protose (a meat analog), Soy Gluten Wafers, canned Green Soybeans, Soy Flour, Soykee (soy coffee), and Soy Acidophilus. A few years later Dr. Miller developed Vege-Links, the world's first meatless wiener, made of seasoned okara and wheat gluten packed in a sausage casing, and Vege-Chee, a cheese analog made of curdled soymilk."

Note: This is the earliest English-language document seen (Oct. 2013) that uses the term "cheese analog" to refer to a Western-style soy cheese.

"During the years that he was developing new products, Dr. Miller made countless trips to the American Medical Association trying to convince them that the research he had done in China proved that his Soyalac was an acceptable substitute for dairy milk in feeding both infants and adults. But the AMA, apparently strongly influenced by the dairy industry, refused to grant any recognition to the product. Finally, after one fruitless trip, a member of the board took Dr. Miller aside and explained frankly that he would never get endorsement for his product unless he started to market his product specifically for that 7 percent of U.S. infants who are allergic to cow's milk, and avoided unfriendly comparisons with cow's milk. Dr. Miller was not too pleased, since he had hoped that soymilk would gradually replace cow's milk in the American diet. He felt that soymilk made much more efficient use of the world's land to feed people, and that it was a lower cost, more healthful product of comparable nutritional value. Yet he reluctantly accepted the AMA's advice and within a few months had their approval. Soyalac began to be prescribed by physicians for allergic infants and soon started to sell quite well." Continued. Address: Lafayette, California.

2180. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part IV). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "From 1939 to 1941 most of Miller's powdered soymilk and some of his other soyfoods were sold in the Philippines and China. However World War II cut off his business, so he began to promote his soymilk more vigorously in the U.S. not only as an allergy-free infant formula that would not clog the nipple, but as a healthful beverage that alkalized the bloodstream and was good for diabetics, postoperative patients, ulcer and colitis patients, and those with atherosclerosis.

"Before World War II started, Dr. Miller had set up a branch of his International Nutrition Laboratory and a Soymilk plant in the Philippines at 41 Nagtahan in Manila. It was run by Paul Sycip (pronounced SIS-up), a private

© Copyright Soyinfo Center 2014

Chinese Christian (but not Adventist) businessman, who had come briefly to Mt. Vernon to learn Miller's process, and buy equipment. Miller was in the Philippines helping to set up the plant when the Japanese attacked. During the war the Japanese stole all of the soymilk equipment but did not harm the building. In 1948 Mr. Sinclair Pinnick, a foreman at the Mt. Vernon plant since 1944, went to the Philippines, took new equipment, and got the plant reestablished. It produced regular soymilk, the first ever in the Philippines.

"The expanding success of Soyalac encouraged the growth of competing products but Dr. Miller didn't mind. A true evangelist, he was happy to see the message finally reaching the people.

"To fully appreciate Dr. Miller's great energy and diverse talents, we should note that during the early 1940's, as he developed, produced, and marketed his line of innovative new soyfoods, he also maintained an active medical practice, partially because the other two doctors at the hospital where he worked were called for military duty, and partially to support his work. Prior to World War II he would fly to the Philippines about once a year, do 12 to 15 thyroid surgeries a day for two to three weeks, give half of his income to the hospital there, then return to America with the balance. In 1942 he and his brother bought the local hospital in Mt. Vernon where he worked; his son Clarence came in to manage, renovate, and expand it. Miller was the only surgeon in Knox County (population 35,000).

"At his Mt. Vernon soy dairy, Miller was always the first one to start the day's work. One day, while experimenting with a new formula, he cut off end of his finger in a food grinder. He calmly picked up the severed part, walked into his office, and sewed it back on.

"During the years he spent introducing soyfoods to America, Dr. Miller was one of the most active supporters of the American Soybean Association, a regular speaker at conventions and contributor of articles to the Soybean Digest. His first speech was "The Role of the Soybean in Human Nutrition" (1940) and his first article "Soybeans and the Orient" (1943), was followed by "Feeding the World with Soya" (1946), "Survey of Soy Foods in East Asia" (1948), and others. Then in September 1958 he was made an honorary member of the Association and awarded a gold medal.

"By the late 1930s the seeds that Dr. Miller had planted in East Asia began to sprout. It is interesting to note that most of the remarkable expansion of interest in and production of soymilk that has taken place throughout Asia during the last half of the twentieth century can trace its origins directly back to the work of Dr. Miller.

"While Dr. Miller was in Shanghai, an Adventist named Howard Hoover had come and learned the soymilk process, then started his own soy dairy and health food plant in a mission school in Canton in about 1938. This was the first offshoot.

"In 1940 Mr. K.S. Lo of Hong Kong asked Hoover if he would help him set up a plant. Hoover got approval from Miller, then went to Hong Kong and designed Lo's first plant. [Note: K.S. Lo recalls the origin of has company quite differently; we accept his version of the story]. By 1940 Lo's Hong Kong Milk Factory was making homogenized soymilk and selling it in natural and chocolate flavors, like dairy milk, in standard half-pint bottles sealed with a paper cap and hood. The soymilk was sweeter and a little thinner than Miller's and had more of the natural (so-called beany) flavor, which the Chinese prefer. By 1942, when the Pacific War broke out, Lo's company had gone broke. But in 1945, after the war, the company reopened as the Hong Kong Soya Bean Products Co., Ltd, and reintroduced their product, now called Vitasoy, not as a milk substitute, but as the world's first soymilk soft drink. By 1974 Vitasoy passed Coca Cola to become Hong Kong's best selling soft drink, with sales of 150 million bottles a year. In the meantime many other large soymilk plants had started up in Singapore, Malaysia, and Thailand.

"In 1948 the Chinese Quartermaster Department, with the help of Dr. Miller's son, Willis, set up the largest soymilk plant in the world in Shanghai, using a process patterned after that used in Ohio, to make spray-dried soymilk. Costing over $1,000,000, it had a capacity of 5 tons of dry soymilk every 12 hours. The dried soymilk would be mixed with puffed rice, pressed into wafers, and packed into cans, then opened in the field and soaked with hot water for rations. The plant was completed and ready for operation (Dr. Miller was at the dedication ceremony) just prior to the Communist takeover of Shanghai in 1949.

"Research and Work Around The World (1949-1977): In 1949, at age 70, Dr. Miller accepted the invitation of the Adventist church to take over the direction of the Shanghai Sanitarium and reestablish a soy dairy there. China was in the throes of revolutionary war and Shanghai was still held by the Nationalist forces. A daring pilot dropped Miller at the besieged Shanghai airport, hardly pausing to stop. But Shanghai fell to the Communists in May 1949; Miller was soon evacuated, and returned to America.

"In 1950 Dr. Miller's second wife died. Shortly thereafter he decided to sell his Mt. Vernon business. There was the increasing pressure of running a food plant and although sales were good ($1.25 million gross in 1950) profits were only $120,000 due to high taxes. He wanted to devote more of his time to research and medicine. Although offered a large sum of money by a private company outside the Adventist denomination, he decided to divide the company into two parts, the meat analogs and the soymilk plus related products, and sell these to Adventist-run firms. In June 1950 he sold the meat-analog part of his business (gluten meats, nut loaves, frankfurters, etc.) to Worthington Foods in Worthington, Ohio, a private company owned by Adventist laymen that had been making meat analogs

© Copyright Soyinfo Center 2014

since 1939. They bought the patents, recipes and formulas, equipment, technology, and good will that went with Miller's meat analog business. Most of these analogs contained no soy. Worthington kept the brand name "Miller's" for several years thereafter as they sold Miller's Cutlets, Miller's Burger, Miller's Stew, Vege-Links, and the like. Willis Miller worked with Worthington for some time after the sale.

"In early 1951, Dr. Miller sold the rest of his business at a very low price (book value) to Loma Linda Foods of Riverside, California. This sale included the Mt. Vernon land, buildings, equipment, technology, and recipes and formulas for soymilk, canned fresh green soybeans, Vege-Cheese (a canned tofu cottage cheese) and related products. All these products continued to be produced in Ohio. Loma Linda Foods, an integral part of the Seventh-day Adventist Church, was founded in 1906 and had run a plant in Riverside making meat analogs, soymilk, and other foods since 1936. Dr. Miller had always believed that the process for making soymilk was not something that he had originated; the key to it had been a gift to him from a higher power. Thus, he felt it was simply not his to sell. So he gave the process to the Adventist church but sold the rest of the business to Loma Linda Foods (they operate the Mt. Vernon plant to this day), and loaned them the money to buy it. They paid him in installments and he returned half of the money to them for them to set up laboratories and a pilot plant in their headquarters at 11503 Pierce Boulevard in Riverside (the town was then called Arlington). Here he established the International Nutrition Research Foundation, which he further endowed heavily with his own funds; 95 percent of its future research was on soyfoods. He bought a home nearby. For the three years following his wife's death he worked intensively on soyfoods research. In 1951 Loma Linda first introduced Soyagen, a lightly fortified soymilk for adults to match their Soyalac for babies. Miller did extensive work on further eliminating the beany flavor from soymilk using a vacuum pan and flash pasteurization. By 1958 his labs had developed new and improved soymilks, soy cream, improved acidophilus soymilk and ice cream, cottage cheese, a soy-cream cheese spread, cholesterol-free cheese, and a non-dairy margarine." Continued. Address: Lafayette, California.

2181. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part V). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "In 1953, at the age of 74, he married for a third time (his wife was about 35) and shortly thereafter was asked to establish an Adventist Sanitarium in Taipei, Taiwan. With it, of course, he started a soy dairy at a school, which supplied the school, the Sanitarium, and the surrounding community with soymilk daily. In 1956, when it came time for Miller to leave Taiwan, Generalissimo Chiang Kai-shek personally gave him China's highest award, the Blue Star of China, in appreciation for his tireless service to the people of China in saving the lives of thousands of infants with the use of soymilk and in establishing some twelve sanitarium-hospital clinics. At the time, the Generalissimo, who had been a former patient of Dr. Miller's, recalled how he had become so fond of the sanitarium's soymilk that he had once sent his private plane over 1,000 miles to Shanghai to replenish his supply.

"In 1954 the World Health Organization became interested in Miller's work with soymilk. His oldest son, H.W. (Bill) Miller supervised the construction of a joint FAO / UNICEF soymilk plant in Yogyakarta, Java, Indonesia, which opened in 1957 and produced about two tons a day of a spray-dried soymilk called Saridele.

"After filling in for other surgeons in Trinidad and Libya from 1956 to 1957, Miller went to Japan in 1957 to spend seven months as medical director and surgeon at the Tokyo Sanitarium-Hospital. He was now 79. Despite his busy medical routine, he found time to set up a small soymilk pilot plant in the hospital kitchen where they made soymilk, soy whipping cream, soy ice cream, and soy spread, which were served to the staff and patients. In cooperation with the Japanese Ministry of Health, he then developed the concept of helping existing small tofu producers to set up a soymilk operation right in their shops by adding on a boiler, pressure cooker, homogenizer, cooler, and bottler. The equipment could be installed for less than $2,000 and would enable each plant to produce 150 pounds of tofu and 200 gallons of soymilk a day using three trained workers. Miller personally helped at least one small rural tofu shop set up such a system; their soymilk was sold fresh and hot or cold and bottled for half the price of fresh dairy milk.

"Starting in about 1955 Dr. Miller began to recommend that the Adventist-run Japan Saniku School serve soymilk instead of cow's milk to the students; however the staff hesitated because of questions about its nutritional value and flavor. In 1957 two Japanese Adventists, Mr. Hidekazu Watanabe and Mr. Hanzo Ueda (who ran a tofu shop at the time) started making Japan's first soymilk on a small scale in Hachioji, Tokyo, bottling it in 180-ml bottles, and selling it locally. Mr. Watanabe later described the great value to them of Dr. Miller's ongoing technical, nutritional, and spiritual guidance.

"After some time, directors of the Saniku School visited the small soymilk plant, liked the soymilk flavor, and understood its nutritional value. In 1959 they bought similar equipment, set up a small plant in the school, and started to produce soymilk, which was bottled in 180-ml bottles and served to the students at every meal. In 1969 the Saniku School set up an independent food production company called College Health Foods (which later became today's Saniku Foods) and through it, with the help of Loma Linda Foods in America, began to produce Soyalac soymilk infant formula. That same year, the Luppy Soymilk Company

© Copyright Soyinfo Center 2014

started and went on to produce Japan's first widely popular commercial soymilk.

"By 1980 Japan's largest soymilk producers were Kibun Foods (33,000 pacs a day), Saniku Foods (23,000 pacs a day), Okazaki Marusan (23,000 pacs a day), and Mitsubishi Kasei (18,000 pacs a day), A typical pac is 200 ml (6.8 fluid ounces).

"Prior to 1960, a small soymilk plant similar to those established by Miller in Japan, was set up at the Adventist-run Mountain View College in Central Mindanao, Philippines. The college farm raised edible soybeans and the 700 students were served fresh soymilk each morning for breakfast and fresh tofu for lunch.

"In 1960 Dr. Miller again accepted the invitation of the Adventist church to start a new hospital, this time in Hong Kong. As always, it was accompanied by a little soymilk plant. By 1960 soy dairies had also been established in Hong Kong at the South China Union College and at an Adventist-run college in Bandung, Indonesia.

"Dr. Miller spent most of his time from 1960 to 1973 in East Asia. He practiced surgery until the age of 93. In 1961 his biography *China Doctor* by Raymond S. Moore was published by Harper & Bros. In 1963 Dorothea Van Gundy Jones in *The Soybean Cookbook* wrote: 'Certainly Dr. Miller has done more than any other person to introduce soybeans and soybean products, especially the milk, to the population of this country.'

"In 1973 Dr. Miller formally retired from medical practice and returned to California, where he spent the last few years of his life doing the work he loved so much: soyfoods research. He lived about one mile from Loma Linda Foods in Riverside, and he walked to work each morning. He continued his experiments with tofu and soymilk, making improved acidophilus soymilk, tofu-based cheese, and cheese spreads. He made a good tofu-based Cheddar cheese but could not make it melt. His later years were not as productive as they might have been since, in old age, he had lost most of his sense of smell; when he would ask others how new products tasted, they would often tend to flatter him instead of giving an honest and objective response. Yet this work was still of real potential value.

"In 1972 the Southern Asia Division of the Adventist church asked Mr. Pinnick of Mt. Vernon to go to India to set up a soymilk plant at their Spicer Memorial College in Poona. In March 1973 Dr. Miller flew over from Hong Kong to help the operation get started. Pinnick writes: 'He would work all day with us at the plant (at age 94) then spend nearly-every evening speaking to some group on healthful living. There seemed to be no limit to his endurance.'

"Starting in 1975, while in Japan, I exchanged numerous letters with Dr. Miller. He typed each letter himself and was always full of questions about new developments in tofu and soymilk production in Japan. In 1976 he sponsored and hosted a program about tofu and soymilk that my wife and I did for several hundred members of the faculty and community of Loma Linda University, La Sierra campus. During the day of our visit he took us through his pilot plant and described his latest experiments making tofu-based fermented cheese spreads. He seemed extremely alert and well informed.

"Dr. Miller died on New Year's Day, 1977, at the age of 97, just as he was getting ready to go to his beloved church.

"Harry Miller was a shining example of what the Chinese call 'The Great Man.' He dedicated his life to the welfare of all beings, human and nonhuman. He chose a life of voluntary simplicity, finding his real joy in giving. Close associates estimate that, in professional fees alone, he turned over some $2.5 million to the hospitals, church, and nutritional work with which he was connected. Spiritual values were at the center of his life. Though world famous, he was the most humble of men; though very busy, he had time for each person who needed him. His vision was fifty years ahead of his time. He left an indelible impression on the world. Would that he could he here with us now to see the blossoming of his work in America and around the globe.

"The author wishes to give special thanks to Dr. Miller's two sons, Willis and Clarence, and to Glen Blix, plant manager at the Loma Linda Mt. Vernon plant, for extensive information provided in interviews and letters. For a bibliography of Dr. Miller's publications, send a SASE to *Soyfoods* magazine." Address: Lafayette, California.

2182. Shurtleff, William. 1981. Early history of soymilk. *Soyfoods* 1(4):31. Winter.

• ***Summary:*** Note: This was published as a sidebar to the article "Dr. Harry Miller: Taking soymilk around the world."

"It is important to understand Dr. Miller's soymilk research, writing, and product development in their proper historical perspective.

"Soymilk is thought to have been developed in China by Liu An, King of Huai-nan in about 164 B.C. In most parts of China, soymilk has long been used as a spicy hot breakfast soup (*sien tou-chiang*) or as a warm, sweetened beverage (*t'ien tou-chiang*). Yet it had not traditionally been used as a substitute for mothers milk or cow's milk in infant feeding. and its nutritive value for infant feeding was virtually unknown. By 1923, as described with photographs by Piper and Morse in their classic, *The Soybean*, a soymilk factory in Changsha, China (p. 231) was selling soymilk in bottles, each sealed with paper, and carried in baskets suspended from shoulder poles. This was 13 years before Dr. Miller's soy dairy opened in Shanghai.

"The first known mention of soymilk in a Western publication was in 1895 by H.C. Prinsen Geerligs, a Dutch scientist who lived and traveled in Southeast Asia, and wrote an article entitled *'Einige Chinese Voedingsmiddelen Mit Soyabonen Bereid'* [Some Chinese Foods Made with Soybeans]. The first English-language article on

© Copyright Soyinfo Center 2014

soymilk, entitled 'Soybeans and Soybean Products,' was published by H. Trimble in 1896 in the *American Journal of Pharmacology.* In 1906 Katayama in Tokyo wrote 'Condensed Vegetable Milk,' and in 1907 J. Rurah published the first article on infant formulas entitled 'The Soybean in infant Feeding' in *Archives of Pediatrics,* followed in 1910 by 'The Soybean as an Article of Diet for infants.' Some 30 journal articles had been published by 1928 and at least 66 by 1936. In 1926 Dr. Ernest Tso of the Peking Union Medical College published his first of many studies in English on feeding infants water-extracted soymilk. Entitled 'Soybean Milk–Infant Feeding,' it appeared in the *American Journal of Physiology.* He published five more similar studies prior to 1931.

"The first patent for soymilk was issued to Li Yu Ying in Britain in 1910. A German patent was issued to Goessel in 1911. The first U.S. patents were issued to Goessel (1913), Li Yu Ying (1913) and Monahan and Pope (1915); the latter was the first issued to American citizens. By the time Dr. Miller started his soymilk research in 1925, some 30 patents had been granted; there were 66 patents by the time Dr. Miller received his in 1936.

"Soymilk was being produced in the West as early as 1911, when a Chinese plant near Paris was reported to produce soymilk, fermented soymilk, tofu, soy sauce, soy flour, soy bread, soy preserves, etc. (Beltzer 1911). Allergy to cow's milk and lactose intolerance stimulated the development of the first soy-based infant formulas in the U.S. Most of these were made from soy flour and contained the fiber in the soymilk. In 1929 Mead Johnson Co. produced the first soy-based infant formula in America. Called Sobee, it was made from a mixture of full-fat soy and barley flours homogenized with olive oil, had a dark tan color and beany flavor, and contained many complex carbohydrates that led to intestinal gas (flatus) and poor-smelling stools, but in 1929 it was a godsend to infants allergic to cow's milk (Sarett 1976). Also in 1929 Dr. Ernest Tso in Peking published a nutritional study of Sobee, entitled 'A Vegetable Milk Substitute in North China,' in the *American Journal of Physiology.* (At this time Dr. Miller knew both Dr. Tso and Sobee well). The second commercial soymilk in America was developed by Dr. Julius F. Muller. In 1934, while director of allergy research for the Borden Company, he developed a soymilk product for his own child, who was highly allergic to dairy milk. in 1936-37 this liquid milk, made from homogenized soy flour, was introduced by Borden as Mull-Soy. In 1934 Dr. J.H. Kellogg received the first U.S. patent on a method for making acidophilus soymilk; Miller had produced a similar product in China in 1936.

"By 1935 Henry Ford was running a soymilk pilot plant near his main automobile factory in Michigan. By 1936 Loma Linda Foods was making soymilk in southern California. By 1938 Dr. Miller's son, Willis, was making canned soymilk in New York and Washington, DC, and in early 1939 Jethro Kloss had written *Back to Eden* containing many creative soymilk recipes and he may have been producing soymilk at his health food factory near Nashville, Tennessee... all this prior to Dr. Miller's introduction of Soyalac to America in the fall of 1939.

"Although it is clear that Dr. Miller was not the first to do research on soymilk, receive a patent, or produce a commercial product, he still deserves great credit for almost single-handedly popularizing the use of soymilk on a large scale around the world, especially for feeding infants suffering from allergies or malnutrition, for starting the first large scale commercial soy dairy in East Asia and assisting in the foundation of many subsequent ones, and for producing the first major commercial fiber-free soymilk in America, a product that was generally considered to be better tasting and less prone to clog nipples than the various flour-based products, although at least one set of tests showed it to have a significantly lower protein quality as measured by PER (Gyorgy 1962).

"Although Dr. Miller originally intended soymilk for general consumption, it has come to be most widely used in America for feeding babies. Today, the U.S. infant formula market is comprised of 75 percent dairy milk based products and 25 percent soymilk; Soyalac has only five to six percent of the latter market (all competing products are made from soy protein isolates). A full 75 to 80 percent of all Loma Linda's soymilk goes to feed babies." Address: P.O. Box 234, Lafayette, California.

2183. Stepanske, Kenneth. 1981. Madison Foods, Worthington Foods, and Loma Linda Foods (Two interviews). Conducted by William Shurtleff of Soyfoods Center, Feb. 12 and Feb. 15. 4 p. transcript.
• ***Summary:*** Kenneth started work at Madison in 1964, when the college lost its accreditation. He had been working at Worthington before that. Discussion of how Sam's Chicken was made, using tofu.

2184. MacIvor, Charles R. 1981. Re: Dr. John Harvey Kellogg's work with meatlike products and soyfoods. Letters to William Shurtleff at Soyfoods Center, March 4 and April 28. 3 p. and 1 p. Typed, with signature.
• ***Summary:*** Protose was the first meat analog made by Dr. Kellogg, introduced in 1896. Nuttolene was next. It was named Nuttose later to rhyme with Protose. Battle Creek Steaks and Battle Creek Skallops followed later, sometime before 15 Oct. 1944, as they were listed in the 1944 dealer retail price list. None of these products contained any soya. Peanut butter was first made by Dr. Kellogg in 1892. "I never heard that it was patented."

In 1960 when Battle Creek Food Co. was purchased by Worthington Foods, Protose was a mixture of wheat gluten and peanut meal. Vegetable Steaks and Vegetable Burger were made of pure gluten with certain seasonings.

Mr. MacIvor worked in the sales division of Battle Creek Food Co. from 1929 to 1939. He was writing a book on Dr. Kellogg but it will probably never be published because it is too big and he can't condense it.

Update: Talk with Lenna M. MacIvor. 1995. Oct. 20. Charles MacIvor, her husband, died of a massive stroke about 10 years ago, on about 28 Dec. 1985. He was age 85 at the time. He was very clear of mind until days before his death. His book on Dr. Kellogg, which he titled "The Lord's Physician," was never published. She and her daughter each have a copy of the manuscript, which is about 700 pages long, and contained extensive original information. She will try to send a photocopy of the pages concerning the development and manufacture of Protose. She now lives at P.O. Box 32, Route 11, Hendersonville, North Carolina 28792-8233. Address: Route 8, Box 164, Hendersonville, North Carolina 28739. Phone: 704-684-8329.

2185. Miller, Harry Willis, Jr. ("Willis"). 1981. Work with soymilk in the United States and China (Interview). Conducted by William Shurtleff of Soyfoods Center, March 8. 2 p. transcript.
• ***Summary:*** Discusses his work with soymilk around the world. Address: 450 Neeleys Bend Rd., Madison, Tennessee 37115. Phone: 615-868-2483.

2186. Crites, Eva, 1981. Dorothea Van Gundy Jones (Interview). *SoyaScan Notes*. March 13.
• ***Summary:*** Eva will send Dorothea's address, to whom she is sending payments.

The best person to ask about Dorothea is Ella Mae Stoneburner.

Dorothea collaborated with Mildred Lager on a book about arthritis; this hurt her professionally.

Dorothea got interested in soy because of her father. She was an authority on soy; she went al over the world. She worked closely with Dr. Harry Miller at the International Nutrition Foundation. "Dr. Miller would bring around samples of products he was developing and we'd all taste them. Everybody loved him. Dorothea asked him questions.

Dorothea was very sold on soy. She refused to use any milk or eggs in anything. Soy is sufficient–she felt. This led to a little friction. Although this was not a popular position, she was not too pushy about it. Hers was a 'total vegetarian diet'" [vegan]. "She felt the soybean was a gift from God for vegetarians. Eva thinks we need caution for infants, young children, pregnant and lactating mothers

Dorothea, who died in 1979, was very generous, outgoing, kind, always interested in everything, a very vital, alive person. She had a dynamic personality and was a dynamic speaker. She spoke at both Adventist and non-Adventist conferences. She carried her audience on subjects most people would flop on. To be as much of a leader as she was and to accomplish as much as she did, she was a little on the aggressive side–but never obnoxious. Yet nobody stood in her way.

Ela Mae and Dorothy traveled in Africa, teaching cooking schools and how to teach cooking schools.

"Dorothea's big handicap: she graduated from a 3-year dietetic course from Loma Linda University, so she didn't even have a BA degree; she was not even a university graduate, in the professional sense. She was too busy to go back and get a degree. She came in contact with a lot of food faddists." Address: 907 Walnut, Redlands, California 92373.

2187. Lo, K.S. 1981. Re: Early history of Hong Kong Soya Bean Products Co., Ltd., makers of Vitasoy. Letter to William Shurtleff at Soyfoods Center, March 19. 3 p. Typed, with signature on letterhead.
• ***Summary:*** William Shurtleff sent K.S. Lo a copy of an article he [Shurtleff] had written about Dr. Harry Miller, and asked for Mr. Lo's comments. "Strangely enough, it was Julian [sic, Julean] Arnold and not Dr. [Harry] Miller who first launched me onto the road of making soya bean milk. I happened to be in Shanghai in the Winter of 1936, and, while there, I attended a talk given by Julian Arnold on the subject: 'Soya Bean, the Cow of China'. I soon left Shanghai to return to Hong Kong, but, Arnold's message kept ringing in my head. Not long after, Japan invaded China and the first wave of refugees started to arrive in Hong Kong in 1938 [sic, 1939]. As I recall, a refugee camp was set up in Argyle Street on Kowloon side to receive them. Most of these refugees were either sick or suffering from malnutrition and required urgent medical care. Some of them were suffering from beri-beri. A small group of volunteers including myself used to visit the camp to find out what could be done for them. And when I saw so many were unable to walk because of beri-beri, the story of the wonder bean, as related to Arnold, came to my mind. I, therefore, suggested to our group to buy some soya bean, a stone-mill and a cooking pan and sent them to the camp. We enlisted a group of people from the camp to prepare soya bean milk in the crudest form and gave one bowl to each person every morning. The results were quite startling, as many of them showed significant improvement in their health after the first month. This little experiment gave me the full confidence in the nutritional value of soya bean milk and I decided to make it available to the masses of people in Hong Kong who could not afford to buy cows' milk.

"It is far from my intention to try to belittle Dr. Miller's contribution in the development of soya bean food, but, I think it is fair to say each of us develop our own products and marketed them independently. He concentrated more in promoting it among medical profession, hospitals and churches; whereas I took it to the street level and catered to the mass market in competition with the soft drinks. As the result, the sales of my Company are far greater than any governmental or private institution could have hope to reach.

© Copyright Soyinfo Center 2014

Last year alone, my Company sold over 8 million cases of soya bean milk in Hong Kong, and, since 1979, we had been exporting our products, packed in tetrabrik, to all parts of the world. There can be no question that our commercial success in Hong Kong has inspired many other companies throughout Asia and other parts of the world to follow suit.

"I thank you once again for sending me your article and I hope that my comments will help to put the record straight."

"P.S. After 45 years when it first started in a refugee camp, Vitasoy is still serving the refugees of another era. To-day, they are distributed daily to all the Vietnamese Refugees Camps in Hongkong to bring better nutrition to the Vietnamese children. I am also send you a copy of the 40th Anniversary Brochure of my Company." Address: Chairman, Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong. Phone: 5-528211.

2188. Yoshimura, Sam. 1981. Re: Reminiscences of work at Madison Foods. Letter to William Shurtleff at Soyfoods Center, March 19–in reply to inquiry. 3 p. Handwritten.
• ***Summary:*** Sam attended Madison College from 1937-1943, then worked for Madison Foods 1956-63. As far as he knows, no graduate of Madison College owns or presently operates a viable soy food plant.

Mr. H.J. Miller was supervisor for canned and cereal sections of the Madison plant when Sam was there. He was not related to Dr. Harry W. Miller.

Okara was used in the Madison Zoyburger exclusively. The product consisted of wheat gluten, okara, tomato paste and seasonings. It was a canned, meat loaf type of product.

Compro was a canned product made of wheat gluten, soy cheese [tofu] and seasonings. It was first distributed commercially in 1957.

Sam's Chicken was modified and called Chickettes. The product contained wheat gluten, soy protein, and seasonings. Address: 8200 Colonial Meadows, Westerville, Ohio 43081. Phone: 614-882-0625.

2189. Chen, Philip S., Jr. 1981. Re: The life and work of his father, Philip S. Chen. Letter to William Shurtleff at Soyfoods Center, March 20. 2 p. Handwritten–in reply to letter of March 10.
• ***Summary:*** "1. Dr. Philip Stanley Chen was born on Aug. 17, 1903 near Shanghai, China. He died July 29, 1978 in Camarillo, California.

"2. Dr. Philip Chen received his early education in Seventh-day Adventist mission schools in China. He came to the United States in 1925, attending college at Emmanuel Missionary College (now Andrews University) in Berrien Springs, Michigan where he majored in chemistry. From 1929 to 1933 he attended graduate school at Michigan State College (now Michigan State University) and received the Ph.D. degree in organic chemistry from that institution.

"His first teaching and research position was at Madison College near Nashville, Tennessee. It was there that he first began his extensive studies on the beneficial nutritive value of soybeans.

"3. Dr. Chen's first book about soybeans was entitled: *Soybeans for Health, Longevity, and Economy.* It was published in 1956 by The Chemical Elements, Publishers, South Lancaster, Massachusetts. It went through several printings, copyright 1956, 1962, 1968, 1973.

"4. The above hardcover book was republished as a paperback book entitled: *Soybeans for Health and a Longer Life* by Pivot Books, Keats Publishing Inc., New Canaan, Connecticut, in 1973." Address: 10093 Dudley Drive, Ijamsville, Maryland 21754. Phone: 301-831-6471.

2190. Stoneburner, Ella Mae. 1981. Recollections of Dorothea Van Gundy Jones (Interview). *SoyaScan Notes.* March 24.
• ***Summary:*** After doing some real detective work, Ella Mae has been able to find some relatives of Dorothea. Her younger sister is Charlotte Holmes, who took a medical course at Loma Linda University, but lost her license. Charlotte's daughter is Sue Nicholas Muff, 1044 Rolling Ridge Estates, Sedro Wolley, Washington 98284. Phone: 206-856-2250. Charlotte is not an Adventist. She has some radical, far-fetched ideas. She was a friend of Mildred Lager, who was all crippled up with arthritis. Dorothea talked about Mildred a lot in a friendly way. It was agreed that Dorothea would take over their soybean book after Mildred was gone. She lectures and sells stainless steel ware.

Dorothea talked a lot about her father, Theodore. She first got her interest in soy through her father, who thought that soy was the answer to many, many problems. Her interest in soy deepened after she met Mildred Lager. As Ellla Mae recalls, he lived by San Jose / Gilroy and raised soybeans as a farmer. He lived in San Francisco for a while. Best to get these details from Charlotte Holmes.

Character sketch: "Dorothea was the most cheerful person I ever met. She saw the bright side of everything. She lived what she believed, but she was never an extremist. She was very humorous, naturally funny. She loved to travel and be with people from other cultures. She was a joy to be with. She died of cancer."

Dorothea was a nutritionist for Loma Linda Foods, a dietitian from Loma Linda University, and food service director at Pacific Union College (Angwin, California).

Ella Mae was health educator at the General Conference, including nutrition.

2191. Boles, Frank. 1981. Re: Second summary of archival research on Dr. John Harvey Kellogg, with many photocopies of documents. Letter to William Shurtleff at Soyfoods Center, March 28. 2 p. Typed, with signature on letterhead.

© Copyright Soyinfo Center 2014

Address: Bentley Historical Library, The Univ. of Michigan, 1150 Beal Avenue, Ann Arbor, MI 48109.

2192. Lo, K.S. 1981. Re: Two letters of appreciation for Vitasoy soya bean milk. Letter to William Shurtleff at Soyfoods Center, March 31. 3 p. Typed, with signature on letterhead.
• ***Summary:*** Mr. Lo encloses letters from H.D. Dale, M.D., Medical Director, Sham Shui Po Transit Centre, Kowloon, and Walter Schmidt, Coordinator of Refugee Activities, Hong Kong Christian Service, Migration Services Dept. The Vitasoy was given to refugees from Vietnam in late 1979–children under age 5 and old people over age 65, and to all pregnant women. "There was a marked improvement in the general health of all those receiving this added supplement." Address: Chairman, Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong. Phone: 5-528211.

2193. Twomley, Dale. 1981. James L. Hagle: An uncommon businessman. *Andrews University Record.* March 31. p. 27-31.
• ***Summary:*** This excellent biography of Hagle and history of Worthington Foods begins with a quote from Hagle: "'You can get away with all kinds of sharp little practices in business. You have the opportunity every day to do things they won't put you in jail for. But if in the back of your mind it's not whether the IRS or some other company is watching, or whether God knows, then you don't take advantage of people. You don't do dishonest things.'" Address: PhD, Dean, School of Business, Andrews Univ., Berrien Springs, Michigan.

2194. **Product Name:** Soyamel (Plain Soymilk with Vitamins).
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1981 March.
New Product–Documentation: N.V. Vandemoortele Protein Division (manufacturer's brochure). 1979. "Soyamel: A New Source of Proteins. 9 p. Gives details about Soyamel soymilk, including the nutritional composition and technology used to manufacture it, but does not say that the product is being made commercially.

Soyfoods Center Computerized Mailing List. 1982. Feb. 22. The company is listed as N.V. Vandemoortele. The first listing for Alpro appears on 20 June 1983. Chr. Daems is Marketing Manager. Phone: 51 30 96 01.

Form filled out by Alpro. 1990. May 30. Alpro began making this product (plain with vitamins) in March 1981 in 500 ml cartons. This was the first of Alpro's own soymilk brands, sold only in drug stores and pharmacies.

Note 1. The product was announced about 2 years before it was available.

Note 2. The term Soyamel, a registered trademark of Worthington Foods Inc., was first used in about 1954 to refer to a powdered soymilk made by Worthington.

2195. Holmes, Charlotte Van Gundy. 1981. The life of T.A. Van Gundy (Three interviews). Conducted by William Shurtleff of Soyfoods Center, March-May 1981. 6 p. transcript. Also 3 letters from Charlottte in March, April, and May 1981.
• ***Summary:*** Birth and early life: Theodore Ananias Van Gundy (his friends called him "Van") was born on 8 July 1874 in the tiny rural community of Osoflaco, near Arroyo Grande, on the California Coast midway between San Francisco and Los Angeles. In 1886, at age 12, he became a Seventh-day Adventist, and began to show his mechanical talent by building an engine powered by steam from his mother's stove. He went to college in Healdsburg, California.

Early work with peanut butter: In 1897, at about age 23, he began his first commercial food production, making peanut butter (which, at the time, was a new food) with Dr. Hare in Fresno, California. In February 1898 he married Lulu Pond and moved to San Jose. It is not known what became of his peanut butter business.

Founding La Sierra Industries in 1928: In the fall of 1928 (probably not in 1927 as reported by Dorothea Van Gundy Jones in 1963), T.A. Van Gundy moved to La Sierra, California (now a suburb of Riverside) and started La Sierra Industries, the business that would make him famous as a soyfoods pioneer. The plant was on a lot behind his brother-in-law's home. By continuous experimentation and using equipment he designed and built himself, he soon developed a line of eleven soyfood products, plus canned garbanzos (chick peas), brown rice, and whole wheat. The first eight La Sierra-brand soyfood products were probably on the market by late 1929. They included Smoein (bacon-flavored smoked soy powder), Soy Beans (canned, unseasoned green-seeded type or with tomato sauce; his next products developed after Smoein), Soy Milk (canned, with the beany flavor removed by processing with live steam), Soy Cheese (canned tofu, with pimiento added to prevent graying after canning), Soy Flour, Soy Mamenoka (roasted soy flour; a Chinese name), Soy-Co (soy coffee substitute with an excellent coffeelike flavor; coarse grind or fine), B-Nuts or Beanuts (oil-roasted soynuts), B-Nut Butter (soynut butter made from B-Nuts), Soy Spread (canned okara or soy pulp, salt, mace, and other seasonings; it had a soft consistency and was said to taste and smell like "potted chicken"), Soy Gluten (a meat analog made of soy spread mixed with ground wheat gluten, resembling Dr. John Harvey Kellogg's Protose, but with soy), and Soy Cereal. In 1929 or 1930 he designed and built the mill that produced this Soy Cereal, a ready-to-eat, toasted and shredded, all-soy product.

"When we started work at La Sierra Industries each

© Copyright Soyinfo Center 2014

morning, soy milk was the first thing made, then cheese [tofu], And the residue [okara] had to be worked up and canned–gluten made–when soy protose was made. When we made spread it was an easier day. This work went far into the night and my brother Ted (Theodore Romayne) was the last one on the job–working into the wee morning hours, watching the retorts and bringing the cans out for labeling. We (five) all worked hard. We were all vegetarians and (as I said) for these two years we used no cow's milk or eggs. Yet we were all strong as oxen. Dad age 62, Mother 64, Ted 35, Dot [Dorothea] 32, and Charlotte (me) 30. I was taking medical courses and worked as much as I could.

"My folks were having a hard time after loss of the business. After 1 year of internship, I landed back in Los Angeles with 50 cents in my pocket–to start a practice in Beverly Hills [home of many movie stars, surrounded by the city of Los Angeles]–where I remained for 8 years. I went there because I wanted to use nutrition and diet for my patients, and this place was wide open for new ideas. It is so satisfactory to see severe cases getting well from good nutrition. I wanted to be another pioneer like Dad." Address: Star Route 2, Bosse Rd., Jackson, California 95642.

2196. *Madison Survey & Alumni News* (*Madison, Tennessee*). 1981. We moved to Heritage House on Jan. 29, 1981. 63(1):1. Jan.
• ***Summary:*** See next page. "On January 29, 1981, the move from Parkview Building at the hospital was completed." "Dorothy Mathews deserves the lion's share of the credit for her unflagging interest in heading up the project..." "We hope you can come and see Heritage House and its collection of Madison mementos."

2197. McDonnell, Kathleen. 1981. From fodder to fast food: Soybeans crop up more than ever on farms and in stores. *Maclean's* (*Canada*). March.
• ***Summary:*** Recently soybean breeders have created early-maturing varieties which are enabling soybeans to spread northward "beyond their traditional growing area in extreme southern Ontario, which now produces more than 90 per cent of Canada's total harvest." This year substantial acreage will be seeded in Alberta, Manitoba, P.U.I. [Prince Edward Island], Quebec and eastern Ontario.

"With last year's harvest of 26.2 million bushels worth more than $200 million, Canada has now moved into fifth place among world soybean producers–after the U.S., Brazil, China, and Argentina.

Human consumption of soybeans is definitely catching on in Canada. At one health food store in Vancouver, BC, the most popular item is tofu, or soybean curd, which is now "being touted as the 'yogurt of the '80s.' Packaged tofu is now being sold in major supermarket chains across the country..."

The largest consumers of soy products by far are vegetarians. Elsie Sokol, chief dietitian at Toronto's Branson Hospital (run by Seventh-Day Adventists) "receives 'thousands' of requests from across the country for information about soybeans and gives lectures on their nutritional value and preparation." She believes the day will come when people in general will praise soybean growers. Mary Anderson, who shares her enthusiasm, is one of three partners who run a soy-food restaurant named Soja in Kensington Market. A photo shows Mary, with a tray of soy cheesecake and burgers, in front of her restaurant's sign.

2198. Moretti, R.H. 1981. Soy milk developments in Latin America. *J. of the American Oil Chemists' Society* 58(3):521-22. March.
• ***Summary:*** Dr. Harry Miller introduced soy milk into Latin America. From his writings, a Brazilian, Dr. Barretto of Laticinios Mococa, developed Solein, a mixture of 30% soya milk and 70% cow's milk; it was introduced in 1967. Still sold, it is powdered and canned. Almost simultaneously Dr. Suberbie in Mexico developed Sustilac, introduced in 1968, and made from sprouted soybeans. The pregermination reduces the amount of oligosaccharides. His company, Compañia Industrial de Alimentos, still produces soya milk, with all products being in powdered form. They also developed Isolac (20.3% protein) and Soyamalt (24.4% protein). Soyamalt is sold in strawberry, vanilla, and nut flavors. In 1968 the Coca Cola Co. introduced into Brazil the soya milk Saci in 200 ml bottles.

During the 1970s powdered Provesol was developed in IIT, Colombia, by Dr. Diaz Delgado. The process was later sold to a Brazilian company, Olvebra, which started production in 1975 with the Coca-Cola pilot plant. The canned powdered product is sold as Novo Milk (sweetened, with orange, chocolate, banana, and strawberry flavors), and as Novo Vida, which has the same composition as Provesol (50% protein, 25% fat, 19% carbohydrates, and 19% fiber). Novo Vida is widely used in the school lunch program in Brazil, and well accepted.

In 1975-76 ITAL, the Inst. of Food Technology in Brazil, developed a soya milk brand named Vital. It was packaged in Tetra Pak cartons. Several flavors were developed and tested by school children and industrial workers. It was well accepted but limited by the high cost. In 1977 it was packed in polyethylene bags with a 2-3 day shelf life.

"In 1976 a new concept of soya milk processing was developed in Brazil. This technique consists of producing on a small scale, the soya milk at the market spot. The project was called 'mechanical cow' and produces 200 liters/hour of sterilized soya milk with 3.0% protein, 1.9% fat, 1.2% carbohydrates, 0.5% ash, 8.0% added sugar and at pH 7.0.

"This project was introduced in 1977 and, presently, there are 80-90 'mechanical cows' in Brazil." The is idea already being exported to Paraguay, the Seychelles Islands,

The Madison Survey
and ALUMNI NEWS

Vol. 63 March, 1981, Madison, Tenn. No. 1

Madisonites, Come Home

Homecoming Slated for June 19-21

The Madison College Homecoming is scheduled for June 19-21, 1981. We hope you are planning to come.

Graduates, former students and staff, friends of Madison College, Academy, and Hospital are cordially invited to the meetings.

HONOR CLASSES this year are 1931 (50 years ago); 1941 (40 years ago); 1956 (25 years ago); and 1971 paramedical classes of ten years ago. Each year we spend a lot of time and effort in compiling names and addreses of honor classes. We plan to send out letters and a list to the members whose address is known.

You don't have to be a member of an honor class of course, to be welcome at Homecoming. Madisonites, come one, come all!

All Homecoming meetings will be held in the Madison Campus Church across from the hospital. On Sabbath a potluck dinner and a supper will be served. The hospital does not serve breakfast, but will be open to visitors on Friday and all day Sunday.

Please do notify us if you plan to come, even if you plan to stay with relatives or friends, as it will help in preparing for the two potluck meals on Sabbath.

It is suggested that those coming in from a distance try to bring some food items, or better yet, donate some money for these two Sabbath meals. Breakfast is not served at the hospital on Sabbath morning, but the cafeteria will be open for all three meals on Friday and Sunday.

There are two motels in Madison--the Madison Motel at 625 Gallatin Road, Tel. 615-865-2323; and the Madison Square Motel across from Madison Shopping Center at 118 Emmitt Ave., Tel. 615-865-4203. (Please make your own reservations but do let us know if you plan to come.)

There are two KOA's near Madison--one on Elize Miller Rd. (Near Opryland) Tel. 889-0282, and one at 708 Dickerson Rd. (Goodlettsville) Tel. 859-0075.

(For the telephones and address of the alumni office and secretary, see back page. Other numbers: Dorothy Mathews, 615-865-5350; Edith Johnson, 865-6076; Velma Jeffus, 865-8786.) Katherine Marshall (868-2133).

The first meeting starts Friday evening June 19, at 7:45. Try to arrive Friday afternoon in time to register at the alumni office and Heritage House--the small rock house across from Madison Hospital. You will enjoy looking around at the many interesting items on display.

We Moved to Heritage House on Jan. 29, 1981

On January 29, 1981, the move from Parkview Building at the hospital was completed. Painting, alterations, repairs, carpentry, carpeting, curtain and picture hanging had been going on for a couple months. Then began the arduous task of moving furniture, equipment, files, supplies and historical materials. Trucks were loaded and taken over by Bill Campbell and sons, George Schwarz, and Bruce Collins, assisted by George Brashears and Maurice Patton.

As reported in the December *SURVEY*, Dorothy Mathews deserves the lion's share of credit for her unflagging interest in heading up the project, assisted by Vel Jeffus, Gary Schueler and others. Many have sent money, We had planned to list the donors, but haven't found time or space yet.

COMING EVENTS

Madison College Homecoming
June 19-21, 1981

ASI Convention, Sept. 23-26
Four Seasons Motor Inn
Colorado Springs, Colo.

Laymen's Extension League
P. F. A., Chunky, Miss. Oct. 15-17

We hope you can come and see Heritage House and its collection of Madison mementos. Among the things to see and savor are the large portraits of the three founders--Sutherland, DeGraw, and Druillard; bound volumes of *MADISON SURVEY*, from the beginning in 1919; Cumberland Echoes from the beginning in 1948; the picture tree, containing most of the class pictures; the sun dial; plaque saved from the Science Building fire on a cold November night in 1967; pictures and books and scrapbooks; a world map depicting where Madison Missionaries served; and many more.

One item of unusual interest is a "geode" from the old san parlor fireplace, saved by E. E. Schlenker. (A beautiful stone, having a cavity lined with crystals.)

• Have you contributed to the Heritage House?" It is not too late. Make sure too, that your dues or *SURVEY* subscription is paid up.

Spiritual Emphasis Week at Madison Hospital

"Health, Heart, and Healing Hands That Care" was the theme of "Spiritual Emphasis Week" at Madison Hospital on February 16-20. Four daily programs were held in Gant Hall so that each shift could attend. According to Judy Silva, director of Nursing Service, and program coordinator, the purpose of the week was not only to acquaint employees with Madison Hospital's philosophy and history of health care, but to give them a chance to interact on the subject of "Healing Relationships."

Among the speakers was hospital chaplain, Dr. Robert Hirst, who covered the Adventist philosphy on diet, healthful living, and health education.

Jan Rushing, regional vice-president for Adventist Health System, brought a bit of history concerning the early days of Madison Rural Sanitarium (as it was called at first). A few years after the school, Nashville Agriculture Normal Institute, was established

© Copyright Soyinfo Center 2014

and Ecuador. A detailed description of the process and its main advantages are given. Being very inexpensive, "the equipment can be bought by very small entrepreneurs, or by the government to implement school lunch programs or health programs. The equipment uses only water and electricity and does not need a steam generator.

"Presently, the Brazilian federal government gives tax exemptions for this equipment when it is bought in a full package: Mechanical Cow, polyethylene bag filler, and residue [okara] dryer, which shows Brazil's interest in the project and also the success of the product all over the country.

One kg of soybeans can produce 8 liters of 3% soya protein milk, which has the antitrypsin factor correctly inactivated. Packed soya milk can stand for 2 days at room temperature and 10 days refrigerated at 5ºC. The cost to make 1 liter of this formulated soya milk is US $1.10. Address: Dep. Food Technology, FEA/UNICAMP, Sao Paulo, Brazil.

2199. McCalla, M. Beth. 1981. Re: Dorothea Van Gundy Jones and Loma Linda Foods. Letter to Dr. Charlotte Holmes, Star Route #2, Bosse Road, Jackson, California 95642, April 1–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Mrs. Dorothea Van Gundy "Jones worked for Loma Linda Foods from November 1, 1952 to December 31, 1972. She went to Japan in 1964 representing the U.S. Government at the Soy Bean Seminar and Food Fair."

"I am enclosing a copy of *Today's Food* [a periodical published by Loma Linda Foods] which tells of Dorothea's trip to Japan.

Note: Charlotte Holmes forwarded this letter to Soyfoods Center with this note handwritten at the bottom: "Sister [Dorothea] put in her resignation, but new labeling of products & writing a cook [book] prevented her retirement at this time. She worked [for Loma Linda Foods] for 23 years I know." Address: R.D., Loma Linda Foods, Marketing Dep., 11503 Pierce St., Riverside, California 92515. Phone: (714) 687-7800.

2200. Webber, Alfred B. 1981. Perry Webber, Madison College, and Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, April 3. 2 p. transcript.
• ***Summary:*** Alfred is a son of Perry Webber. Perry's first interest in soyfoods started in Japan, during his first stay there in 1912. He loved Japanese food, and he ate lots of it, but he especially liked Inari-zushi, which contained aburage [deep-fried tofu pouches]. He used to go to the Shinoda sushi-ya, a sushi shop in Kanda (now Awajicho)–stopping in on his way to language school. At one time they named a type of sushi type after him, calling it the "Webber Sushi. He was used in some of their promotional material. Perry was also very fond of tofu and of miso soup, but he got interested in soyfoods via aburage. The thought is was a delicious form of protein, not known or used in U.S.

2. Perry met Dr. Harry Miller in about 1936 when Miller was a missionary in China; a number of meetings were held in Shanghai. Alfred was attending the SDA Far Eastern Academy in Shanghai, when his dad came from Japan to China. The main reason for Perry's trip was for him to set up a research lab for analyzing soymilk products in Dr. Miller's soymilk plant in Shanghai. Perry was biochemist and had graduated with a PhD.

Not much soy used in the early days of Saniku Foods. In 1935 Saniku started using soy, he thinks. But mostly they used puffed rice and wheat, and nutmeat.

Madison Foods had difficulty processing soy flour to make into milk, before it was made into tofu. They ordered a mill from Japan for this and began grinding whole soaked soybeans to make tofu. Perry liked plain tofu and wanted to sell it like this in the U.S., but at Madison they wanted to season it to make "Soy Cheese" [seasoned tofu]. Perry helped to develop Vigorost (which Alfred loved) and Yum.

Alfred thinks production of soymilk at Madison was started in 1935-37, when Perry had returned to Japan. During those years it really became a commercial product. When Perry returned to Madison in 1939-40, Madison was already well into production. So Alfred does not know to what extent Perry helped to develop it.

Another person who knows details is Sam Yoshimura, a student of Perry's in Japan. He is the best man to talk to about production of soyfoods in the U.S. He was a great friend of Perry's, and he developed new food products.

Perry was treasurer of the American Soybean Association (ASA) in about 1933 or 34. He may have been

© Copyright Soyinfo Center 2014

secretary too. Alfred went with Perry to the ASA convention at Baton Rouge, Louisiana, where Perry gave a slide show and lecture on soybeans and soyfoods in the Orient. Alfred also went with Perry to the research labs at Ford Motor Co. and talked with Edsel Ruddiman; they did not meet Henry Ford, however Perry gave a talk to leading Ford research scientists.

Perry was a great friend of Dr. John Harvey Kellogg. He did research work for the Kellogg Food Co. He visited Dr. Kellogg and talked about soyfoods. He also developed preservatives for crackers for the Sanitarium Food Co.

Alfred suggests I talk with Ed Bisalski, who is now in Arkansas. Address: M.D., 24424 Univ. Ave., No. 122, Loma Linda, California 92354.

2201. Kempadoo, Peter. 1981. Re: My work with soyfoods in Guyana. Letter to William Shurtleff at Soyfoods Center, April 12. 2 p. Typed, with signature on letterhead.
• ***Summary:*** Peter started making tofu in 1972, when he learned the process from an elderly Chinese gentleman in Guyana. Since then he has made tofu for his family and for the local Seventh-day Adventist Hospital. Two years ago he started a vegetarian society. They enjoy Soyburgers (made from whole soybeans), tokara (tofu with the okara fiber), soynut butter (75% peanuts, 25% soybeans), soy bread (10% okara in whole wheat bread). Address: The Sarvodaya Development Education Organisation Ltd., 423 Golden Grove, E.C.D., Guyana.

2202. Holmes, Charlotte Van Gundy. 1981. Re: Loma Linda Foods and T.A. Van Gundy's La Sierra Industries. Letter to William Shurtleff at Soyfoods Center, April 27–in reply to questions. 3 p. Handwritten answers between the typewritten questions from Shurtleff.
• ***Summary:*** Q1. You said the lights in your home were turned off for three months. Did you turn them off or did the electrical company because of unpaid bills? Ans: "Yes [the electrical company turned off the lights], we were too involved with the soy company. All our money went into it. Our necessities were limited to our needs."

Q2. You said you canned green soybeans. Were these the fresh immature green soybeans or mature dry soybeans with green seedcoats? Ans: "Green dried beans. Green after drying. We use Mammoth Yellow soybeans for milk [soymilk]."

Q3. In your letter you used various terms for the Protose-like product. You said "Soy Gluten, Soy & Gluten Protose, and Soy Protose." Which of the three actually appeared on the label of the product? Ans: "Soy Gluten–I believe–it was. Similar to Protose but that was Loma Linda's name & we could not use it.

Q4. Could you make an estimate of the company's annual sales in the best year? What year was that? Did the company ever make a profit? Ans: "Yes, but it had to be plowed right back in because of constantly increasing demand. La Sierra was in the embryo state but was successful."

Q5. In approximately what year did Mr. Kingman start making dairy acidophilus milk? Ans: "Don't know." In what year did he start making soy acidophilus milk? This is important since Dr. Kellogg started in 1933 to make Soy Acidophilus milk. Ans: Mr. Kingman asked Dad to help him make soymilk for his soy acidophilus milk in La Sierra. It must have been 1929 or 1930, but it was before we went to Ontario, I'm sure. Mr. Kingman coming to Dad made a profound impression on us. To my knowledge, Mr. Kingman never used dairy milk after finding soy milk. I have used this product and I know the source–even before I became a doctor.

Q6. You said your mother was blind. Since what year? What caused the blindness? Was she totally blind? Ans: "She was blind since 1929. The doctor's diet caused it–malnutrition. She was considered totally blind." On Sunday we washed and ironed all day and got ready for the next 5 days run.

In the 1st of school, about Sept. 1929, Mother's eyes (the whites) became fiery red. It was diagnosed as 'iritis.' Just the August before we had heard of iritis for the 1st time. Mother was also in her menopause, which no doubt added stress to her already overloaded school work and home duties. Don't forget we all worked and carried our own share, yet Mom and Dad had the brunt of it. We went to doctor after doctor. One doctor would send us to another. From White Memorial we were sent to specialists. One Loma Linda graduate doctor put her in bed for 6 weeks on 'white crackers' (which we hadn't used for years) and water–or thin oatmeal gruel & nothing else. Why? God only knows. This developed ulcers (corneal) on booth eyes, Then the treatment for this was to burn corneas at 135º with a platinum instrument until a thick scar was formed. This was done so mother's body had to absorb pus from carbuncles (another name for ulcer in another location) so that the bursting or opening of the ulcer would not let the fluid out of her eye. The redness still continued. God was very merciful. This did not pain mother very much. Only God's mercy, nothing else, because she did not take pain medication. After this we moved to La Sierra and Dad made soy milk. Mother begged for carrot juice and soy milk. So we put her to bed (for fear she'd fall to pieces–I guess on such a limited diet). She had these two every hour for 10-12 hours daily. This cleared mother's eyes of inflammation, but the damage was done. She was blind from the scar black white over pupils.

Q7. Are you aware of any exchange of information between Madison College and Van Gundy? Ans: "No." (Incidentally note that I put in the information about when Madison started making soymilk and tofu). Ans: "I wouldn't be surprised if they got Dad's info for their cannery–but I have no proof. They always said they were first; I always

© Copyright Soyinfo Center 2014

doubted it.

Q8. Do you have any idea when Mildred Lager's book on soybeans eventually became Dorothea's book? What prompted Mildred to write her first book about 1943? Since when had Mildred and Dorothy been friends? Ans: "No. Competitors for the same man. Ha! They were never friends."

Q10. Not important. Q11. Can you tell me where the family was living throughout the period from 1915 to 1920? Was part of this time spent in San Jose? Ans: "On Ranch in San Jose, 10 miles out, 1920. Mom taught in San Jose; Dad was foreman of a ranch–1920-1921. Tired of [?] & indoors. Sonoma 1913-1916, Vallejo 1919 school year only. Dad at Mare Island. Napa 1916-19. Back to Napa 1919-1920. Then to San Jose. Loma Linda 1921. We were not fickle or unstable people, but moving seemed to be in our blood or in Mother's. Dad worked at night on Mare Island, and would come home to find a note that we had moved and the new address. Even if we lived in some town we'd move every year. We had a family joke if we got past Oct. of the year we would not move.

In 1915 Dad had a hernia operation at the St. Helena Sanitarium so he couldn't work on Mare Island. That was his only defect. He as rarely ever sick. He worked always 16-18 hours per day. When we was a mechanic in Sonoma for a few months he often worked day & night or into the wee hours of morning in order to get a salesman's car back on the road. You really have gotten more than you asked for. I hope you can read it & it is more accurately told. You are doing a fine job.

While Dad taught in the College of Medical Evangelists as a technician, mother taught in the academy located there on Anderson & Colton Ave. in Loma Linda. Because they were husband and wife, mother's and dad's wages & did not give them their full worth that any other one person received. It was due to this that Dad went to Los Angeles and started teaching so he could get enough money to pursue his lifelong dream of manufacturing [food] products.

"Again I say his first products in 1929 were soy beans, wheat, garbanzos & brown rice–4 products. That year he added soy milk and soy cheese–cereal coffee–soy spread and soy gluten as he could make his own equipment and machinery. The last 3 products were sold only on order and soon soy prod back them off the market or little used.

Now about mother's blindness. We lived 3 blocks south of Valley and one block west of San Gabriel Blvd.–South of the city of San Gabriel. This was 9 miles form Dad's school in L.A and 9 miles from Mother's school in Pasadena–an SDA church school. Dot and I went with mother to Pasadena Junior College. I was taking 1st year pre-med & Dot was getting a B.S. degree & finishing college. Dot took part-time work at Pasadena Jr. College, then went on to UCLA for other classes, going to both schools at once. We left at 7:30 to 8 a.m. except Saturdays and Sundays. Got home at 5:30 to 6:00. We also had two boys, ages 11 and 13, friends whose father had died and needed a home. 7 lunches we packed five days a week.

Mother's retinal optic nerves were OK but scars formed a blank curtain over each pupil. Once in a while she could see around at once side if she could tip her head just right and if the light was She could see our faces or color of flowers or bright colors of sunset a rare treat. Mother accepted her cross in Christlike style & gave an inspiration to many of her young visitors. Now if corneal implants had been older and mother younger I would have it done–but not advisable. I had to stay out of school for 3 years on [behalf of] Mother's health and I was glad to do it–while Dot finished college at P.U.C. in 1928. I finished 1929 & was out a year on daddy's death. So I was nine years getting my 5 years of medicine. I would do it over.

Now about Dot. As soon as Dot graduated from La Sierra Academy (1924) she went right to Loma Linda into dietetics. 1924 Fall Mother wanted Dot to be a teacher & did not want Dot to be a dietitian. But she went anyway, not stubborn but steadfast, as soon as she graduated 1927. She became Matron of La Sierra Academy. Good experience for later life. For about 3 months (summer to Sept. of 1927) she was dietitian for White Memorial. I worked any or all shifts setting trays at the White. 1927 Sept. we both went to Pacific Union College (PUC). Dot got B.S. in May of 1928–She carried a heavy course–last 6 weeks school took her out of lab work and she taught the girls in Home Economics classes. The teacher got sick and unless Dot did the teaching the girls would lose the year. At PUC Dot took sewing. She was a past master–could make hats, coats, gloves–anything she wanted. I was slowing. I came in second. Dot took speech classes and was always out in front. I was never jealous, but glad to be less brilliant!–or in her shadow. She was a marvelous sister & we never quarreled. Now about Dot's flare [love]. Dot 1st met Ed in the course of work she did. Now Mildred Lager lectured and knew Ed. Ed loaned her money ($10,000 I think). After Hulda's death, Dot started going with Ed. But Mildred said or made her boasts she would marry Ed–& if not make him lose the loan–so he married Mildred. Mildred died from cortisone drug taken for arthritis that she had. Mildred was sick most of the years she was married to Ed. After Dot & Ed married. Dot said 'Now Ed, you really have married a well wife' & in 10 days she broke out from head to foot with chicken pox. That was her only sickness though. Address: Jackson, California.

2203. Kjeldal, Inge (Mrs.). 1981. Re: Nutana and the soya products it now makes. Letter to William Shurtleff at Soyfoods Center, April 27–in reply to letter of Feb. 15. 1 p. Typed, with signature on letterhead. [Dan]

• ***Summary:*** See next two pages. This letter is accompanied by a portfolio of the following documents: (1) A list of Nutana products (3 p., in English); the 21 products

© Copyright Soyinfo Center 2014

marked with a handwritten "S" contain soya. (2) "Nutana: Producer and wholesaler of health food. Export and import. Established 1898. Member of World Foods Service" (17 p., 30 cm, with some large color photos). Address: Nutana Helsekost, Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.. Phone: (03) *67 00 19.

2204. Bower, Lois. 1981. Mildred Lager: Recollections of her life and work (Interview). Conducted by William Shurtleff of Soyfoods Center, April 28. 2 p. typed transcript. [1 ref]

• ***Summary:*** Lois is Mildred Lager's stepdaughter, the daughter of Ed Jones' former wife before he married Mildred. Lois' mother died in about 1943-44, about 2 years before Ed remarried to Mildred. Mildred and Ed were married in 1946; Lois was about age 30 at the time. Mildred died in 1960; they were married for 14 years. She died of osteoporosis caused by cortisone or a cortisone derivative. She had been on steroid hormones because of her arthritis. She apparently used too much cortisone, and suffered from spinal collapse.

The House of Better Living was a health food store in Los Angels that published its own newsletter and catalogs, which were sent to a mailing list. Mildred also gave nutrition classes there. Lois has a guestbook from The House of Better Living, and she has newspaper articles about Mildred in Los Angeles plus several of Mildred's books, which she will send to Soyfoods Center.

Mildred's interest in nutrition started when she got rheumatoid arthritis. Her interest in soy developed after that. Mildred probably learned a lot about soy from Ed Jones, who was a health food jobber. He called on Mildred, and sold her various products, including soy products. Ed Jones also worked for T.A. Van Gundy. Ed could have known Mildred for as much as 10 years before their marriage.

Dorothea was Lois' 2nd stepmother. Mildred and Dorothea did NOT co-author the book. After Mildred died, Dorothea rewrote the book. After Lois' mother died, both Mildred and Dorothea were going out with Ed Jones; that was how they met. There was not a close relationship between Dorothea and Mildred; as competitors for the same man, they were cordial but not friendly. Ed chose to marry Mildred.

By 1946, when she married Ed, Mildred was no longer involved with her health food store or her radio program. She has a regular news column in the Los Angeles Times; she was very well known in her field.

Mildred was in a wheelchair when she was young. Lois does not know how long she had been in a wheelchair. Mildred's engagement to a young man was broken because of her illness. She had very painful, difficult years, but she had a tremendous spirit. "She was a tiny little thing, very slight, just skin and bones, but with a twinkle in her eyes. Always a laugh. A very pretty woman. She just forged ahead, with a brisk walk and a little swing of one leg–but no one would call it a limp. She was no longer crippled in her later years, so she conquered her disease. All the time she operated The House of Better Living she was on her feet. She was eager to help others."

How did others see her? "She was extremely likeable and friendly, but very thrifty, almost stingy. Her parents were immigrants from Sweden. She was rather sharp; nobody would take advantage of Mildred.

Mildred wrote *The Useful Soybean.* When Ed married Dorothea he probably said, "You know about soy too. Why don't you rework it and we'll re-issue it and keep it alive as a source of family income." Ed was at work selling those books long after Mildred died. Address: 825 Redbud Drive, Redding, California 96001.

2205. Holmes, Charlotte Van Gundy. 1981. Re: Chronology of T.A. Van Gundy and La Sierra Industries. Letter to William Shurtleff at Soyfoods Center, April 28. 2 p. Handwritten.

• ***Summary:*** 1874 July 8–Theodore A. Van Gundy born. His parents and their family (in which he was a child) moved to Morgan Hill, California, where his elder sister died; she was age 16–4 years older than he.

1898 Feb. 16–T.A. Van Gundy married. He left Dr. Hare that spring, because he had been with Dr. Hare for 4 years. During this time he was indoors most of the time. He felt a change to the outdoors would be invigorating. So he and his wife, Lulu, moved into Yosemite Valley. They were taken in by stage coach drawn by horses–eight horses, if I remember; that seems like a lot of horses. Dad was mechanic and maintenance man for the old hotel.

They remained all summer, living in a tent–gathered mushrooms. Dad made running water come to the tent by placing a pipe upstream for gravity flow to the tent. At the end of summer, they moved to San Jose, California, where dad drove one of the 2 autos in San Jose 1898 to 1906.

1906–They moved to St. Helena Sanitarium [California, where many Seventh-day Adventists also lived].

1906-1912–Worked in food factory [in St. Helena]. I can remember, I was 7 (1912) before Dad left St. Helena, He, Mother and I visited on a Friday 12 canneries in S.F. At Heinz 57 Varieties, I got a pickle pin. Campbell Soup–I can still see those soup pots boiling & many others.

1912-1915–Ran a cannery for Mr. Ritz–canned st beans [stringed beans?], pears, peaches, tomatoes, quince jelly. In 1915 Mr. Ritz closed the cannery. Turned Dad & family out without the wages he owned to my Father. Dad was an honest & too trusting genius & always was left on little, and it seemed because no papers were signed.

1915 Oct.–Dad made Smoein out of fava beans. Mother that spring demonstrated this Smoein in a Household show at Lake Merritt in Oakland. The biggest of its kind then.

1915 Oct.–We moved to Napa. Dad started working at Mare Island as a fine precision mechanic. He did fine lathe work–could make anything from metal asked for.

1919 Sept.–Moved back to San Jose. Dad was foreman of a 200 acre ranch.

1921–Moved to Imperial Valley, California. Dad taught school at New River, a SDA [Seventh-day Adventist] church school.

1921/22–Moved to Loma Linda, California. Father was head of Psychology Lab.

1922-23–La Sierra, near Riverside. Dad made Smoein here out of soy beans.

1923-25. Pomona–Dad taught L.A, [Los Angeles] schools. 1925-29–San Gabriel. Here dad made a feed mixer for a chicken ranch to mix soy beans for feed.

1929-32–La Sierra–Made soy products.

1931-35. Ontario [California]. California St. Died June 1st 1935. (Note–Not June 3) at the White Memorial Hospital after a 10 day bout with life and death coronary occlusion; the last 4 days he was unconscious. I stayed by his side day and night for fear I would miss his last words, if any. As a result, I missed all of my final exams. (And, in passing, had to stay out of my class & audit that year over). Politics I think–but I was the gainer. I was Dad's birthday present [Charlotte was born on her father's birthday]. We had a father-daughter relationship few have ever had the privilege of having. I cherish the memories. Address: Jackson, California.

2206. Buller, Allan. 1981. Re: History of Worthington Foods and its work with soyfoods. Letter to William Shurtleff at Soyfoods Center, April 29. 2 p. Typed, with signature on letterhead.

• ***Summary:*** "Dear Bill: In response to your letter and telephone call, I'll try to provide you with some information that will be useful to you as you prepare material for your book on soy foods. I'll begin by trying to answer some of the questions you raised in your letter.

"One of the first products which Worthington Foods made containing soy was our Soyloin Steaks product introduced in 1949. That was the same year we also began the manufacture of Meatless Wieners which we later identified as Veja-Links. The change in name was made in 1955. Meatless Wieners, as we began making them in 1949, also contained soy.

"We acquired the rights to manufacture and market products developed by Dr. Harry Miller, who founded and operated International Nutrition Laboratories, at Mount Vernon, Ohio. We made this acquisition in 1950. Among the products involved were Miller's Cutlets, Miller's Cutletburger, and Meatless Vegetarian Stew.

"We began marketing our Soyamel soy milk in the year 1954. By 1956 we had discovered a way to instantize the product so we sold both a non-instantized and an instantized Soyamel for a number of years. We used a spray-dried material in making our Soyamel. The protein we used was Gunthers.

"I might mention that at the time we acquired the rights to manufacture and market vegetable protein foods developed by Dr. Harry Miller, the Loma Linda Food Company acquired rights to manufacture and market the soy milk that Dr. Miller had developed. The Loma Linda Food Company also purchased Dr. Miller's plant at Mount Vernon. Because we had the equipment necessary to produce textured vegetable protein foods, we were not interested in Dr. Miller's factory or equipment.

"In 1960 Worthington Foods acquired the rights to manufacture and market the Battle Creek Food Company products. Because Worthington Foods did not need the plant facilities including equipment, only the rights to the trademarks and recipes were purchased.

© Copyright Soyinfo Center 2014

"In 1962 Worthington Foods began the production and marketing of frozen foods utilizing spun protein fibers which We produced under license received from Robert Boyer, the inventor and holder of the patent. The first frozen foods we produced were chicken analogs. We had a frozen sliced chicken that resembled white meat of chicken pressed into chubs. We also had a chicken-like analog that was deep-fat fried and sold in a form that resembled fried chicken. The fried chicken-like product was sold in both frozen and canned form. It was at this time that we began use of the Word Soyameat to describe our canned meat analogs made from spun protein.

"In 1964 Worthington Foods acquired the rights to manufacture and market Madison Foods. Again the acquisition included trademarks and recipes. We operated the Madison Food plant for a couple of years but this proved to be unprofitable; therefore, all manufacturing operations were moved to Worthington.

"Going back in history a bit, I might point out that Worthington Foods was founded in 1939 under the name Special Foods. We were incorporated in December of 1945 under the name Worthington Foods, Inc. In 1970 Worthington Foods merged with Miles Laboratories.

"In response to your request, I am sending you photocopies of price lists dating back to the early beginnings of our company. I have included price lists printed at various intervals to give you some idea of the growth of the product line.

"While this information does not make a history, it may be helpful to you in putting together some information about our company. Certainly it's better to work from the basis of a few facts than from hearsay. Very truly yours,..."

Allan sends price lists / order forms dated October 1, 1941. Feb. 15, 1945. Aug, 1, 1946. July 31, 1950. Dec. 10, 1950. Nov. 15, 1954. April 1, 1959. May 1, 1961. Dec. 15, 1969. Oct. 1, 1962. July 1, 1964. Address: Executive Vice President, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085.

2207. Towery, Mable. 1981. Re: Basic information on people involved with soy at Madison College. Questions answered on Soyfoods Center letterhead (dated 25 April 1981) and returned to SC on 2 May 1981. 1 p. Handwritten.
• ***Summary:*** Basic information about Miss Frances Dittes and Ed Bisalski. Francis was born in 1891. She first came to Madison in Oct. 1910 as a student. Then she attended Peabody College, where she earned MA (1929) and a PhD (1935) degrees. In 1935 Madison started offering a major in nutrition. Frances is no longer living.

Ed Bisalski is still living, at 3123 East Miller Road, Bancroft, Michigan 48414. Phone: 517-634-5203. He first came to Madison in Sept. 1933 as a student. He started working for Madison Foods in about 1940.

Not all of Madison's students were Seventh-day Adventists (SDAs). About 26% were SDAs after the article about Madison College was published in *Reader's Digest* in 1938, but only 10% or less during the 1950s. Willis Miller, the son of Dr. Harry Miller, guesses that Dr. Miller first visited Madison College in 1924 or 1925.

Note: Dorothy Mathews dug out extensive information about soybeans and soyfoods from early, unindexed issues of the *Madison Survey* and sent it to Shurtleff at Soyfoods Center. Address: Editor, Madison Survey, Box 1303, M.C. Station, Madison, Tennessee 37115. Phone: 615-865-1615.

2208. Holmes, Charlotte Van Gundy. 1981. Re: Mildred Lager, Ed Jones, and Dorothea Van Gundy. Letter to William Shurtleff at Soyfoods Center, May 9. 2 p. Handwritten, with signature.
• ***Summary:*** Mildred Lager "was certainly a go-getter. And she got Ed [Jones] the same way." "I will say Ed was good to his wives–tho' the first two were very sick." "Mildred was a Unitarian, yet Ed took her to the White Memorial Church on Sabbath, but she never accepted the [Seventh-day Adventist] faith. I believe she was quite crippled before she died & suffered greatly... Ed was 13 years older than Dot [Dorothea Van Gundy] when they married, so Mildred died at age 51 (?) and Ed was 19 years older than Mildred. Ed was 77 when he died in 1968–March. He was a twin."

Note: Mildred Lager died on 25 Jan. 1960 for various factors, but mainly from the increasingly large doses of steroid hormones, cortisone derivatives, she was taking to treat her severe arthritis. She also had severe osteoporosis at the time of her death. Address: California.

2209. Sias, Vep C. 1981. Re: Brief history of Cedar Lake Foods. Letter to William Shurtleff at Soyfoods Center, May 19. Following interview of Feb. 18. 1 p. Typed, with signature.
• ***Summary:*** "Cedar Lake Foods started in 1949 by Vesper Sias, former employee of Butler Food Products and Cedar Lake Academy. This company began in rooms in the back of the Sias home on a kitchen scale making a similar line of foods as Butler Food Products. The line started with vegetarian chops, vegeburger, soynut cheese, soynut loaf and meatlike. In 1968, Cedar Lake bought the production of Sunnydale Foods of Centralia, Missouri. At the same time, Lang Foods canning division was also purchased and the products called Turketts, Hostess Cuts, Vegebits, Lentil Roast and Breakfast Links were added to the Cedar Lake Line. In 1975, after several months of illness Sias sold Cedar Lake Foods to a corporation of five stockholders who operated business under the name Cedar Lake Foods Inc. of Tennessee. In the spring of 1981 the business was sold to Country Life Natural Foods, a non-profit corporation. At this time, Cedar Lake Foods are produced as a department of Country Life Foods."

Note: Country Life is a self-supporting Adventist group

© Copyright Soyinfo Center 2014

with other health food items such as juices and nut butters. In 1975 Cedar Lake employed 26 people and had sales of $500,000. Address: 740 N.E. 42nd Terrace, Ocala, Florida 32671. Phone: 904-236-3766.

2210. Miller, Roger W. 1981. Vegetarianism: A healthy diet is quite possible. *Chicago Tribune.* May 21. p. W_A30D.
• ***Summary:*** A long article in praise of vegetarianism, and explaining the many benefits of a vegetarian diet. Philosophers ask: What right do humans have to kill and eat other creatures. Nutritionists admit that a balanced vegetarian diet is healthier and leads to less obesity than the standard American diet. Cattle have to eat 16 pounds of grain to produce 1 pound of meat, so ecologists applaud vegetarians.

In 1974 the Food and Nutrition Board of the National Academy of Sciences put an end to the myth that humans need to eat meat in order to be healthy. Their statement on vegetarian diets concluded: "A vegetarian can be well nourished *if* he eats a variety of plant foods and gives attention to the critical nutrients (needed by all people)." The writer summarizes the Board's recommendations for vegetarians, focusing on legumes, grains, nuts and other seeds, dark green leafy vegetables, and meat alternatives.

Defines vegans, lacto vegetarians, and lacto-ovo vegetarians.

Trappist monks shun meat because they consider it a luxury, and this in conflict with their quest for the simple life. Seventh-Day Adventists, who are vegetarians, generally have fewer death due to heart disease, but this may be due to the fact that many of them do not smoke or drink, and they consume lower levels of fats and cholesterol.

Meat contains no dietary fiber; this it contributes to the U.S. laxative habit that costs several hundred million dollars a year.

Legumes (such as soybeans, lentils, peanuts, or chickpeas), nuts, and "meat substitutes made from plant protein (usually with a soybean base) are also protein sources for a vegetarian diet. In addition to providing protein, these meat alternatives supply varying amounts of other essential nutrients."

2211. Bisalski, Ed. 1981. Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, May 30. 2 p. transcript.
• ***Summary:*** Edwin M. Bisalski, along with Perry A. Webber and Frances L. Dittes, was one of Madison's soyfoods pioneers. Ed was born in 1903 in Pennsylvania. He arrived at Madison in 1931 as a college student, then in Sept. 1933 he went to work with Madison Foods, eventually being made General Manager and Chairman of the Board, a post he held until March 1945. During this time he did an outstanding job building up the small food company, introducing soyfoods to America and to other Adventist Groups, getting endowments, enlarging the plant, and directing soyfoods research and development efforts. In 1935, Bisalski spoke about soyfoods and Madison at the American Soybean Association's annual convention / meeting at Evansville, Indiana. In 1939 U.D. Register and Shiro Kunihara joined Madison Foods' R&D staff and made key contributions at this critical stage.

In 1941, under his direction, a major expansion of Madison Foods took place. A practically new plant, with one section five stories high, was constructed. The work was completed in Oct. 1942 at a cost of $35,000. By late 1942 Madison was distributing its foods to the 48 states and to some countries overseas. In 1945 Bisalski left the food company to finish his education. Shortly thereafter, also because of the end of World War II, sales began to fall, so it was never necessary to use the new plant to capacity. During the 1950s sales continued to drop sharply; during that decade, Madison foods just managed to break even.

In 1946 Ed received his BS degree in nutrition from Madison then did graduate study in nutrition and education at Peabody College and Michigan State University. In 1948 he returned to Madison Foods this time as sales manager, a position he held until leaving in 1951 to continue private work in the area of healthful foods. He later became a science teacher, retired in 1971, and in 1981 (at age 78) was writing a book on nutrition. Address: 3123 E. Miller Rd., Bancroft, Michigan 48414. Phone: 517-634-5203.

2212. Schwarz, Richard W. 1981. Re: John Harvey Kellogg's development of peanut butter. Letter to William Shurtleff at Soyfoods Center, June 9. 1 p. [2 ref]
• ***Summary:*** "I am not certain I should have ever given an exact date for the first peanut butter. My impression is that it was 'shortly after 1890' or 'early in the 1890's.' My dissertation references on this are to a *Good Health* article, April 1920, p. 190, and in Dr. Kellogg's testimony in his major lawsuit against his brother's company. If you have access to a *good* law library you might check the case of John Harvey Kellogg, the Kellogg Food Company, and the Sanitarium Equipment Company vs. Kellogg Toasted Corn Flake Company, et al. My citation is to the Michigan State Supreme Court *Record* of this case (1920), the second volume of this case transcript, p. 369.

"You may find it helpful in the future to check the documentation in my Ph.D. dissertation, which is available in the Loma Linda University Library system." Address: Vice President, Andrews Univ., Berrien Springs, Michigan 49104. Phone: 616-471-7771.

ying and Beltzer (1910-1912). History of investigations on the growth of lactic acid bacteria in soymilk from Gehrke and Weiser (1947). History of soymilk yogurt. History of fermented soymilk cheeses. History of soymilk piima and viili. History of soymilk kefir, kumiss, and buttermilk. Address: Lafayette, California. Phone: 415-283-2991.

2214. *Toronto Star* (*Ontario, Canada*). 1981. Meals are meatless for many families (Advertorial). June 30. p. B13. Advertising supplement.
• ***Summary:*** "There's a quiet revolution shaping up on your dinner table.

"Many families are eating meat analogue (meat substitute to you and me). Long acclaimed by many vegetarians and members of the Seventh-Day Adventist church, the meat analogue looks and tastes about as much like meat as margarine resembles butter, and that's close enough for many.

"Some are frozen and ready to serve, some come in sealed tins and complete a recipe, others in packages, dehydrated so that you can slip them into your knapsack when you aren't making stews and casseroles at home. Names like Vegetarian Burger, Sizzleburgers, Prosage Links and Big Franks abound, not to mention Vegetarian Stakelets, Stripples (like bacon). You name your favorite meat, fowl, or fish and manufacturers such as Loma Linda Foods or Worthington Foods will probably be able to offer a reasonable facsimile.

"The soybean has been a staple of the oriental diet for hundreds, if not thousands of years. It is a complete protein, and enthusiasts are quick to note the absence of cholesterol and animal fat content. Add wheat gluten to capture the 'mouth feel' of flesh food, peanuts for the taste and fibrous texture, a bit of seasoning here and there, extrude the whole, cook to taste, and voila, the meat analogue!

"Soybean drink [soymilk] is another entrant in the huge North American beverage sweepstakes. With its white colour and nut-like flavour, it offers an alternative to milk for drinking and cooking."

2215. Anderson, Bonnie M.; Gibson, R.S.; Sabry, J.H. 1981. The iron and zinc status of long-term vegetarian women. *American J. of Clinical Nutrition* 34(6):1042-48. June. [55* ref]
• ***Summary:*** The iron and zinc status of 56 Seventh-day Adventist Canadian women (mean age 52.9 years) following vegetarian diets for an average of 19 years were investigated. Plant products provided 92% and 77% of their total dietary iron and zinc intakes, respectively. "The iron and zinc status of these long-term Seventh-day Adventist vegetarian women appeared adequate despite their low intake of readily absorbed iron and zinc from flesh foods and their high intake of total dietary fiber and phytate." Address: Applied Human Nutrition, Dep. of Family Studies, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1.

2216. **Product Name:** [Soyalac Healthy Child {Soymilk}].
Foreign Name: Soiyarakku Genki na Ko.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1981 June.
Wt/Vol., Packaging, Price: 425 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Genki no Ko was introduced in June 1981 in a 425 gm can and distributed nationwide.

2217. Smith, Paul. 1981. Re: Pioneering work with debittered full fat soy flour and with soybeans in Australia. Soybean production in Australia. Letter to William Shurtleff at Soyfoods Center, undated. 2 p. Handwritten. Plus comments on draft of History chapter.
• ***Summary:*** Comments on "History of Soya in Australia" manuscript: Vincent R. Smith was a soyfoods pioneer in Australia. In 1951-52 he began to manufacture Australia's first whole (full-fat) heat-treated (debittered) soy flour. From 1953-54 to 1974-75 V.R. Smith also canned soybeans in tomato sauce or puree. In 1956 he founded Soy Products of Australia Pty. Ltd. Between 1965 and 1974-75 Mr. Smith developed and manufactured two soyabean meat substitutes–Soya Bean Luncheon Loaf, and Savoury Roast–for Bellevue Health Supplies, as part of his product range within F.G. Roberts' Health Foods Proprietary Ltd. This latter company has since been absorbed within Soy Products of Australia Pty. Ltd. Technically and nutritionally these products were excellent, but they were discontinued due to rising labour costs, the small Australian market, and competition from larger, more highly automated companies like Sanitarium and Heinz. At the time, possibly due to the very cheap cost of meat in Australia, there was very little market interest in soyabeans either as a food, meat substitute, and/or extender.

By 1981 Soya Products of Australia Pty. Ltd. was making debittered full-fat soy flour and grits, Soy Crunch (a breakfast cereal containing soy grits), Soy Compound (containing dry soymilk, whole soy flour, malt, and lactose), and several types of Muesli containing soy grits. The company's main role is in supplying high grade, human consumption quality raw (enzyme active) and debittered (heat-treated) soy grits and soy flour to industry [food processors] for a wide variety of uses: cakes, biscuits, bread, bread premixes, pizzas, breakfast cereals and mueslis, hamburgers, smallgoods, baby foods, soy milk, soy ice cream, tofu, and calf- and piglet rations.

Interest in soyfoods is growing in Australia, and will continue to grow fostered by increasing health consciousness and the rising prices of meats of all kinds. After the end

© Copyright Soyinfo Center 2014

of the Vietnam war in 1975, there was a big influx of Vietnamese into Australia, swelling the number to 50,000, of which 30,000 are ethnic Chinese. There are also some 10,000 Indonesians currently residing in Sydney alone.

Letter: "Thank you for your hospitality during my visit to the USA... We are now more than fully occupied running, maintaining, and expanding our soy flour mill and our health food business. In the last two years we have made substantial improvements in our quality control, throughput, and heat-treatment process. We have also been working on improving our bulk unloading and grain cleaning system, and plans for extending and further automating our plant are well in hand... We are actively participating in research and development work on soy flour and its end uses: particularly in the areas of liquid and powdered soymilks and soy ice cream.

"We were amongst the first people in Australia to use soya beans to make products for human consumption, in particular heat-treated or debittered full fat soy flour. We were actively involved with the first commercial crops of soybeans grown in Australia in the early 1950s at Kingaroy; we even had a plot of several varieties of soyabeans growing in our own backyard for several years from about 1953-55. Though the bushes grow, the soybeans never mature properly. We also did some interesting work in canning beans in tomato sauce or purée and in manufacturing soy meat substitutes. In addition to our conventional bakery and small goods outlets, our own specialty products and breakfast cereals, we are now supplying several small manufacturers of tofu, soymilk with soybeans, soy flour (raw), and soy grits (raw) and have recently become involved in tempeh manufacture. The trend here in Australia is definitely following that in the USA and interest seems to have grown dramatically in the last year or so. Soyfoods seem to have taken off... Unless you can afford shiploads, freight to Australia is a killer, so we do our best to avoid importing soybeans.

"I am enclosing a recent newspaper article about a tofu producer. We supply him with soy flour for making his tofu and soymilk."

Concerning soyabean production in Australia: "Soyabeans are widely grown in Australia from just north of Shepparton in Victoria (120 miles north of Melbourne), through the Riverina district of southern New South Wales (NSW), through central, north, and northeastern NSW; the Darling Downs area (around Toowoomba) and Kingaroy districts of Queensland. More recently soyabeans have been grown in Western Australia, near Perth.

"A great deal of work has gone into developing suitable varieties of soyabeans for Australian conditions; much of this has been built on American research and experience. U.S., Chinese and Australian beans, while generally similar, are very different to handle and process, in our experience.

"Initially, soyabeans were grown under natural rainfall but this is now rare as bean size tends to be small and yield poor. Soyabeans are definitely not suited to dryland farming techniques. Nearly all soya beans now grown in Australia are grown under irrigation."

Update (March 1995): Paul Smith joined this family-run company in April 1980. In 1981 he was just starting to learn about its history. By 1986 he had done extensive research and writing (which see) on the company history, which showed that it had much earlier and very interesting origins. Address: Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

2218. *South African Medical Journal.* 1981. News and comment: Health and longevity among Seventh-Day Adventists. 59(26):925. June.
• ***Summary:*** This editorial notes: "Studies in English-speaking countries have established that those who belong to the Seventh-Day Adventist Church tend to be more healthy and to live longer than the average population." A recent study from Norway by Waaler and Hjort (*T. norske Laegeforen.*, 1981, 101:623) shows that the 5,000 Adventists there live longer than anyone else. The men live 4 years longer and the women live 2 years longer than anyone other Norwegians.

The likeliest explanation for this difference is that Adventists do not use tobacco, alcohol, coffee, tea or any addicting drugs, and that they use fruit and vegetables freely–in fact 50% are entirely vegetarian. They also encourage exercise, good working habits, and regular sleep.

2219. Watanabe, Hidekazu. 1981. Re: Early work by San-iku Foods in Japan with tofu and soymilk. Letter to William Shurtleff at Soyfoods Center, July 19. 2 p. Handwritten. [Jap]
• ***Summary:*** Discusses the early history of this product. "The Ueda Tofu Shop in Hachioji helped with the development of our first soymilk in 1957; I was there at the time. In those days our name was *San-iku Gakuin Shokuhin-bu,* not San-iku Foods. The purpose was to provide a place of labor for the students and opportunities to learn food processing. It was not a business. Dr. Perry Webber was the principal of our school at the time. I think that our company did not make commercial soymilk before 1957. The food company is said to have been founded in 1928 in connection with the school, but legally it did not become an independent company until December 1970."

Note: In 1969 the food company, named College Health Foods (later renamed San-iku Foods), introduced Soyalac soymilk. Address: San-iku Foods, Sodegaura-machi, Chiba-ken 299-02, Japan.

2220. *Toyo Shinpo* (*Soyfoods News*). 1981. [Japanese soymilk companies and their products]. July 21. p. 25. [Jap]
• ***Summary:*** A large and very interesting table shows that 14 companies are now selling soymilk in Japan, and

© Copyright Soyinfo Center 2014

7 companies are making it. For each company is given: Soymilk product name in Japanese [and English]. Volume (all are 200 ml). Retail price in yen: Either 70 or 80 yen. Package type (all are Tetra Brik Aseptic; each has a straw attached to the back). Shelf life: All are 60 days.

The manufacturers are: (1) Kibun Foods: Plain Soymilk (Tonyu Sutoreeto [Straight]). Vegetable Soymilk (Tonyu Yasai). Fruit Soymilk (Tonyu Kaju). Barley Malt Soymilk (Tonyu Bakuga).

(2) Okazaki Marusan: Marusan Soymilk (Marusan Tonyu). Marusan Orange (Marusan Orenji). Marusan Barley Malt (Marusan Bakuga).

(3) Mitsubishi Kasei: Maburon. Maburon Orange (Maburon Orenji). Maburon Coffee (Maburon Koohii). Maburon Honey (Maburon Hachimitsu).

(4) Meiji Nyugyo: Sunglow Soymilk (Sanguroo Tonyu).

(5) Midori Shokuhin. Midori Soymilk Plain (Midori Tonyu Sutoreeto). Midori Soymilk Soft (Midori Tonyu Sofuto).

(6) Asahi Shokuhin: Soymilk (Soimiruku). Soymilk Orange (Soimiruku Orenji). Soymilk Coffee (Soimiruku Koohii).

(7) Saniku Foods: Soya Neo Cocoa (Soia Neo Kokoa).

Note: A large black-and-white photo in this issue or a nearby issue this year shows 25 different soymilk packages, including 3 Soyalac cans.

2221. Schwarz, Richard W. 1981. Re: Small Seventh-day Adventist food companies in the USA. Letter to William Shurtleff at Soyfoods Center, July 22. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "I suspect that the production of all of these small companies (and there were many more than you list in your chapter) was very limited and was largely with wheat gluten products. Their heyday was 1895-1915.

"Part of the reason each little sanitarium developed its own local products was due to distribution problems; part because these were seen as a potential financial support to the evangelistic-humanitarian goals of the sanitariums. Also, Ellen White feared monopolies as concentrating too much power in one person's hands–she favored free enterprise in the production of the various Battle Creek type "health foods." The problem was that the market was not great enough to allow most of these small operations to survive."

2223. Shurtleff, William. 1981. William Morse: The father of soybeans in America (Continued–Part III). *Soyfoods* No. 5. p. 56-60. Summer.

• ***Summary:*** Continued: "Later years in America (1931-1959): Morse returned to America in March 1931 with great enthusiasm and interest in transmitting to America all that he had learned in East Asia. He was now a principal agronomist at the USDA Bureau of Plant Industry. With the stage set for the fruition of years of work and research that would transform the place of the soybean in the Western world, let us pause for a minute to ask, 'What kind of a man was Bill Morse?'

"In appearance, he was tall and lean, with a kind face and soft features. Farmers all over America, with whom he had met and talked in their fields, might remember his baggy suspendered pants, loose tie, and slouched hat, his great interest in their problems and successes.

"George Strayer, editor for 27 years of the American Soybean Association's *Soybean Digest*, who had known Morse since 1927, said of him: 'He was a quiet, unassuming, yet brilliant fellow, not particularly dynamic as a speechmaker, but intensely interested in seeing soybeans progress. He would sit up half the night talking with people about soybeans and soyfoods.'

"An article by Mary Burr Pieters in the September 1944 *Soybean Digest* described Morse as 'modest and retiring but sure and right as rain... He studied, he traveled, he toiled, he experimented–he exhorted–and the result of all of this singleness of purpose and devotion surely borders on fantastic.'

"Edward J. Dies, his close colleague, described him in Gold from the Soil as 'heedless of material gain or personal honor, shy, modest, agreeable, and easy going, but with the repressed intensity of a crusader.' Martin G. Weiss, who worked under Morse for many years and succeeded him when Morse retired, said of him: 'He was a kindly man, always willing to encourage and give moral support to his subordinates. He was loved by all, and his employees worked hard–they never wished to disappoint him.' His daughter Margaret described him in 1980 by saying: 'He was a gentle, soft-spoken person, who liked others and they liked him. He liked to tease, and the secretaries at his office all loved it. He was a very easy person to get along with; he was slow to anger and never cursed. He wasn't aggressive; where some might push, he would give in. He was intelligent. His work came first. He was not financially ambitious.'

"After returning from East Asia, Morse was more interested than ever in soyfoods, and much of the subsequent increasing interest in America derives from his efforts. He expanded his work with the USDA Office of Home Economics in Washington, D.C. and interested researchers

© Copyright Soyinfo Center 2014

in the Department of Home Economics at the University of Illinois to get involved with research on soyfoods, especially on use of the large-seeded, vegetable-type soybeans he had brought back from East Asia. He encouraged development of soyfoods recipes suited to American tastes and talked a lot about soyfoods at American Soybean Association meetings and many other gatherings. Working with others, he was largely responsible for the development of soy flour and grits. One entire wall of Morse's Washington office was covered with floor-to-ceiling shelves, filled with soyfood samples from Asia.

Except for Dr. Harry Miller, Morse was probably the first soy researcher in America to make soyfoods a regular part of his diet. While in East Asia, he and his family had become very fond of Oriental cooking, and especially of soyfoods, and they enjoyed them often after returning to America. Of the many recipes they brought back from the Orient, Morse's favorite was sukiyaki. He built a low sukiyaki table with a hot plate on top and cushions around it on the floor in his home and at every opportunity would invite over guests to serve them his specialty which of course featured tofu and sprouts. He also liked to take family and friends out to a good Chinese or Japanese restaurant. The family enjoyed using soy flour when making breads, muffins, or waffles. Morse's mother [Edna] liked to cook him fresh green soybeans and his wife regularly fixed him her favorite Boston Baked Soybeans. Morse loved soymilk ice cream; one magazine ran a full-page photo of him happily eating it. He also regularly enjoyed tofu, soymilk (plain and acidophilus), and soymilk yogurt, and these foods became increasingly important in his largely meatless diet after he found he had an ulcer. In fact he once told George Strayer that, with his ulcer, he felt these soyfoods had greatly extended his life and good health.

"Morse also actively continued his soybean selection and propagation work at the Arlington Farm. He realized more than ever that if the soybean was to become a national crop that hundreds of different varieties, adaptable to different latitudes, soils, and climates, would have to be found and developed by breeding. He was especially interested in working with farmers and the USDA to stimulate research and development on the vegetable-type soybeans, which had been little more than a curiosity prior to his trip to East Asia. While Morse was the first to popularize the vegetable-type soybeans, he was not the first to introduce them. The variety Easycook (which took less than half as long as most field-type soybeans to become tender after boiling) was introduced to the U.S. in 1894 and the Hahto was introduced in 1915. Morse mentioned both of these in *The Soybean* in 1923 but did not mention the term 'vegetable-type soybeans,' and was apparently unaware of their significance. Many of the vegetable-type soybeans that Morse brought back from East Asia were grown out and starting in 1934, distributed to various state agricultural experiment stations for trial.

"Up until 1928, Morse, in charge of soybean research, had been the only USDA employee working full time in this field. In 1928 the USDA hired a second full-time soybean researcher, Jackson L. Cartter, who had just graduated with a master's degree from Iowa State College. From 1928 to 1933 Cartter did soybean research on a farm in Holgate, Ohio that was managed by the Ohio Experiment Station. From 1933 to 1936 Cartter worked directly under Morse at the USDA Experiment Station, Arlington Farm, Virginia; he tested, grew out, and classified many of the soybeans from Morse's trip to East Asia. In 1936 Cartter helped to organize the U.S. Regional Soybean Laboratory at the University of Illinois. He became the first director of its agronomic division and was placed in charge of the soybean breeding program for the 12 Midwestern states; he studied the soybean's oil and protein composition, and served as director of the laboratory until his retirement in 1965.

"Unfortunately the long-term results of Morse's collection efforts in East Asia are not what they might have been. It was estimated in 1980 that only 25,000 acres of the 70.1-million-acre U.S. soybean crop were planted in vegetable-type soybeans, a mere 0.04 percent of the total. They have never become popular here for various reasons; they give 20 to 30 percent lower per-acre yields than field-type soybeans, tend to shatter easily at maturity and are thus hard to harvest, and consequently sell for 12 to 18 percent more than other soybeans. If they were less expensive, large amounts would probably be used in East Asia to make tofu, soymilk, tempeh, and miso by producers who already buy their beans from America." Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

2224. Shurtleff, William. 1981. Soynut butter–Economical soy spread. *Soyfoods* No. 5. p. 22-23. Summer.
• ***Summary:*** "The heat waves and drought of the summer of 1980 devastated peanut crops across America and especially in the Deep South where most of the crop is grown–the leading states being Georgia, Alabama, and Texas in that order.

"The American peanut harvest was down almost 50 percent (from 2.0 to 1.1 million tons), the price of unprocessed peanuts leaped from $455 to $1510 a ton (up 332 percent) and the price of peanut butter roughly doubled. A creamy sunflower spread, selling for 49 cents a jar less than peanut butter, was quickly put on the shelves at Star Markets, a New England grocery store chain, and was reported to be selling 'very well.' Yet as of April 1981 not a single soyfoods processor had grasped this golden opportunity to put a tasty, low-priced soynut butter on the market; and to once again demonstrate the soybean's amazing versatility.'

"The peanut, as everyone knows, is not a nut; like the soybean it is a legume and an oilseed. The soybean, like

© Copyright Soyinfo Center 2014

the peanut, when roasted, makes a delectable soynut butter. The tastiest product is made by oil-roasting the soybeans. But a good product can also be made from dry-roasted soy flour (called kinako in Japanese). The addition of peanut oil to soynut butter or dry roasted soy flour gives a flavor very close to that of peanut butter. Or soynut butter can be mixed with peanut butter as a lower-cost extender.

"While peanut butter is a surprisingly new food, soynut butter is surprisingly old. Both products were first developed in America. Peanut butter was first produced about 1890 by the remarkable Seventh-day Adventist health reformer Dr. John Harvey Kellogg of Battle Creek, Michigan. He chose not to patent the product, believing it was a product that 'the world ought to have; let everybody that wants it have it, and make the best use of it.' As mentioned above, the first soynut butter was patented by another Kellogg (no relation) John L. Kellogg, in 1915. Piper and Morse in their classic *The Soybean* (1923) described the production of soynut butter (including the suggested addition of peanut oil) and commented that it had 'much the same appearance as peanut butter and a very agreeable flavor.' In 1927 Mr. T.A. Van Gundy, a Seventh-day Adventist and father of Dorothea Van Gundy Jones (author of *The Soybean Cookbook*) made America' first commercial soynut butter at his La Sierra Industries in La Sierra, near Riverside, California. He sold the product through health food stores. In 1967 Pichel and Weiss took out America's second patent for soynut butter; and in 1971 Badenhop and Hackler suggested grinding soynuts with oil to make a peanut butter analog. In 1972 Herbert Horn, a student in the Department of Food Science at the University of Illinois, wrote an excellent master' thesis entitled *Quality of Soybean Butter as Determined by Processing Variables.* The key step in his process was inactivation of the beany flavor in soybeans by a bicarbonate blanch, which also removed flatulence-causing oligosaccharides. He ground his oil roasted soynuts with 8% oil, plus salt and dextrose.

"Horn mentioned that there was a commercial soynut butter on the market in 1972 but he did not mention the name of the manufacturer. Subama Food Company in Iowa started to make soynut butter commercially in 1973; unsalted and made from oil roasted soynuts, it was sold only in bulk (30-pound pails), mostly to local food co-ops. As of 1981 the world's best selling soynut butter was probably produced by Itona Products Ltd. in Wigan, England. Called *Beanoot Butter* and sold as a dry mix in a plastic bag, this product consists of roasted soy flour, malt extract (a natural sweetener), vegetable oil, and salt. To serve, mix with a small amount of water and use like peanut butter.

"To make soynut butter on a commercial scale according to the method developed by Horn, a company would need a blancher (steam-jacketed kettle), an oil roaster (deep-frying unit), and a colloidal mill (which both grinds the soynuts and homogenizes them with the added oil to prevent oil separation). The oil-roasting process is much faster than a dry roast: three minutes at 190ºC versus 35 minutes at 400ºC. If it is desirable to simulate the consistency of peanut butter, soynut butter should contain about 50 percent oil. Horn found that oil-roasting dehulled soybeans increased the oil content from 20 to 42 percent; thus 9 percent of the oil was added afterwards. Grade A peanut butter contains 1.0 to 1.8 percent added salt and not more than 55 percent total oil. Peanuts typically contain 46 percent protein as compared with 20 percent oil and 38 percent protein for soybeans.

"Horn's process, slightly modified by Dr. L.S. Wei, is as follows: clean, dry and dehull five pounds of (Corsoy) soybeans. Drop the dry dehulled cotyledons into boiling solution of water and 0.25 percent by weight of sodium bicarbonate (baking soda). Return to the boil and blanch (simmer) for 30 minutes. Drain well. Oil-roast (deep-fry) at l90ºC (375ºF) for three minutes. Combine the oil-roasted soynuts (1610 gm.) in a large container with the following ingredients and mix thoroughly: 274 gm. each liquid vegetable oil and hydrogenated vegetable oil, 110 gm. dextrose (a sweetener), 26 gm. salt, and 15 gm, monodiglyceride [hydrogenated oils]. Using a stone-type colloid mill with a No. 120 corundum stone, grind one or more times until the desired consistency is attained; first grind at 0.8 mm. setting, second at 0.4 mm., third at 0.2 mm., etc. For a very smooth texture; run through a minisonic homogenizer. Run into jars at approximately 55ºC (130ºF), cure for 24 hours at 1ºC (34ºF) to allow for setting, then store at 21ºC (70ºF). Some producers interested in natural foods will want to reduce or eliminate the dextrose and the monodiglyceride emulsifier. As little a as 1 percent hydrogenated oil is sufficient to prevent oil separation.

"To make soynut butter from dry-roasted soy flour, mix with each cup of the dry-roasted soy flour: 5 tablespoons oil, 1/3 teaspoon salt or 2 teaspoons miso (red, barley, or Hatcho), 2 tablespoons honey or other sweetener of equivalent sweetness, and 3 to 4 tablespoons water. For best flavor, heat while mixing."

Note: This is the earliest English-language document seen (Dec. 2012) with the term "soynut butter" in the title. Address: Soyfoods Center, Lafayette, California.

2225. Spencer, Colin. 1981. Food: Bean feast. *Guardian* (*Manchester*). Aug. 14. p. 7.

• ***Summary:*** A recent cartoon in the *New Yorker* showed a wife serving a suckling pig, as her husband sourly remarked, "Not tofu disguised again." "Tofu is a soybean curd" that has been made in China more 2,000 years. In the 6th century, Buddhist monks made elaborate imitations of fish and poultry out of tofu. "In the United States, thanks to the moral health movement, tofu has become an 'in' food."

Although Americans constitute only 6% of the world's population, they consume 30% of its meat and dairy products. "The vegetarian minority–estimated at 10 million–

© Copyright Soyinfo Center 2014

are blazingly articulate in their diatribes against this injustice.

"William Shurtleff and Akiko Aoyagi have again written the definitive work, *The Book of Tofu* [Autumn Press] £4.50, available at Cranks and all health stores which stock a wide range of publications."

In England, Granose Foods Ltd. makes soya milk; it is delicious and such a book for vegans and children allergic to dairy milk. A new brand of tofu is now available. Sunwheel Foods, whose products are always impeccable in quality, are selling a tofu made by Morinaga and imported from Japan. It retails for 60 pence for 297 gm. Contains 4 recipes using Morinaga [silken] tofu: Stir-fried tofu. Sesame tofu. Tofu salad dressing. Tofu-stuffed pancakes. Address: [England].

2226. Miller, Dwight L. 1981. A chapter in the history of soy fiber meat analogs. *Northern Regional Research Center: Notes from the Director* No. 1473. p. 3. Aug. 21.
• ***Summary:*** "The concept of spinning soy protein isolates into fibers and then converting them into meat analogs has been around since at least 1954 when Robert A. Boyer first patented the idea. Subsequently, several companies licensed the process, and in the 1960's General Mills introduced a series of meat analogs made by the spinning operation. After opening a plant in 1970, General Mills closed down operations in 1976. The equipment and process were sold to Dawson Mills" and Dawson built a new plant (just east of Dawson, Minnesota) "to produce soy isolates plus meat analogs from spun isolate. Early this week, Daniel E. Hooten (President, Dawson Food Ingredients) was here for an update on our soy protein research and to discuss functional properties of various soy protein fractions with Walter J. Wolf and A.C. Eldridge (OC [Oilseed Crops Lab]). We learned that Dawson's parent company, Land O'Lakes, Inc. has recently sold the soy isolate and protein spinning plant to American [sic, Associated] Milk Products, Inc. [AMPI in Texas], a Houston-based milk cooperative. They apparently plan to use the plant to process milk products. Dawson's withdrawal leaves Miles Laboratories [Worthington Foods] as the only company that currently manufactures meat analogs from spun soy protein fibers." Address: Acting Center Director.

2227. Country Life Natural Foods. 1981. Wholesale price list. April 15. Place orders to: CLNF, P.O. Box 487, Edmore, MI 48829. National Sales Office: P.O. Box 838, Collegedale, TN 37315.
• ***Summary:*** The 1-page green sheet lists the following product lines: Cedar Lake Foods, incl. Chops, Vegeburger, Terkettes, Sloppy Joe, Soynut Loaf, Chili Burger, Chipetts, Tender Tips, Breakfast Links, and Hostess Cuts. Terkettes and Tender Tips (and perhaps some others) contain no soy. Address: Edmore, Michigan; or Collegedale, Tennessee. Phone: 517-427-5143 or 615-396-2192.

2228. Mayell, Mark. 1981. The rise and fall of the Cornflake: How Kellogg's became a household word. *East West Journal.* Aug. p. 46-55.
• ***Summary:*** This history of brothers Dr. John Harvey and Will Keith Kellogg, which contains many photos, was largely borrowed from the book *Cornflake Crusade.* Concerning Granola: Dr. James Caleb Jackson of New York developed Granula, trademarked the name, and formed a company to make the product which he promoted. One of the first of Dr. Kellogg's "new" foods was "suspiciously similar to Jackson's Granula. The doctor mixed wheat, oatmeal, and cornmeal to form a biscuit which was slowly baked and then ground into granular form. When J.H. went so far as to dub his food Granula, the Jackson folks had had enough. They sued and won. Kellogg changed the name to Granola." Also discusses Ellen G. White, Sylvester Graham, Henry Perky, Charles W. Post, and Charles Bolin. Address: Freelance writer based in Washington, DC. On the staff of the Center for Science in the Public Interest.

2229. Shurtleff, William; Aoyagi, Akiko. 1981. History of Butler Food Products (Document part). In: William Shurtleff and A. Aoyagi. 1981. History of Small Seventh-day Adventist Food Companies and Sanitariums. 8 p. See p. 4-6. Unpublished manuscript. Available online at www.soyinfocenter.com. [1 ref]
• ***Summary:*** In operation from 1939 to 1946, this was a private company in Cedar Lake, Michigan. "This creative company was founded in 1939 by Howard O. Butler and run primarily as a family enterprise. Butler got interested in soyfoods from people he knew at Madison Foods in Tennessee. He hired people with prior experience in soyfoods production; Howard Hoover (who made soymilk with Dr. Miller in East Asia) and a Mr. Roose. An initial aim of the business was to offer jobs for Adventist youth to pay their tuition at nearby Cedar Lake Academy, although the business was not formally connected with the Academy. The company's primary product, first produced in 1942, was 'Soya Butter,' actually what we would now call soy margarine; it contained 79% lightly hydrogenated soy oil, soymilk (18% by weight), salt, vitamin A carotene (as a natural coloring), and butter flavor. The melting point was 110ºF (43ºC). Butler advertised the product as being nonfattening.

"He soon ran into problems with the government concerning his soya butter. In August 1944 the *Soybean Digest* reported that 'H.L. Hoover, manager of the firm, claims that he is the victim of conflicting federal and state regulations, and that he cannot comply with one set of regulations without violating others. Hoover points out that while the Food & Drug Administration prohibits his company from labeling the product oleomargarine without the addition of dairy products to it, the Bureau of Internal Revenue classifies it as oleomargarine for taxing purposes.'

© Copyright Soyinfo Center 2014

Margarine was then defined as vegetable oils churned with dairy milk; Butler used soymilk in place of dairy milk to give a completely vegetarian product. Furthermore, it was claimed by the Bureau of Dairying in Lansing, Michigan, that the product had been illegally colored in imitation of butter, and in several instances had been sold as butter. In August 1944 cases were pending in circuit and U.S. courts, awaiting trial. In May 1945 a federal judge in Cleveland, Ohio ruled that Butler's Soya Butter was not taxable as margarine and should not be labeled as margarine, but shortly thereafter the Ohio Department of Agriculture, in variance with the federal ruling, classified soya butter as colored margarine, which could not be sold legally in Ohio. In June 1945 the American Soybean Association came out in favor of a congressional bill to define soya butter as being distinct from margarine. Finally in December 1945, at which time the company was manufacturing 100,000 units of soya butter a month, a federal judge in Detroit ruled that the product was oleomargarine as defined by the internal revenue code, and therefore subject to back taxes of 10 cents a pound on every pound made to date. The three-year battle and the ruling assessing an estimated $150,000 in back taxes drove the company out of business in 1946. In about 1950, while typing out an appeal to the government to reconsider his case, Butler suffered a fatal heart attack. Shortly after his death, the margarine law was changed and the tax (on other companies) removed.

"During the early 1940s, Butler Foods was a thriving operation. In early 1942 they were making a nice line of nine soyfoods including ready to eat Soy-Fruit & Nut Cereal (with figs, dates, and bran), ViM-eat Soy-Nut-Loaf, ViM Soy-Nut Cheese, Soy-Kawfee, Entire Soybean Flour (i.e. full-fat), Entire Soybean Wheat Flour Mix (70:30), Soybeans with Tomato Sauce, ViM-ilk (soymilk) and Soy-Nuts. An attractive brochure, which described the company's products and gave recipes, noted that some of the soybeans were 'grown on Butler's own mineralized farm.' In mid-1942 Soya Butter was added to the line. The company also made bulk soymilk for use in its Soya Butter. In September 1943 Butler Foods ran a full-page ad in the *Soybean Digest* headlined 'New Foods from the Wonder Bean' showing pictures of cans of Butler's Soynut Cheese, Vegeburger, Soya Nut-Loaf, Soya Butter, and Vegetarian Chops. The chops, his most popular meat analog, were a blend of wheat gluten and soy flour, sliced, pre-cooked, then canned in a broth made of soy sauce and other savory seasonings. A September 1945 ad showed that Butler's Meatlike had been added to the line.

"After the government tax ruling of 1946, Cedar Lake Academy leased Butler's property and tried to operate the food business for 2 years, but the plant was too big and the company had now lost its vital income from sales of soya butter. The Academy food business ceased operation in 1949. The supervisor at that time, Vesper Sias, who had worked at Butler Foods since 1942, then left and started his own company, Cedar Lake, in November 1949." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2230. Shurtleff, William; Aoyagi, Akiko. 1981. History of Cedar Lake Foods (Document part). In: William Shurtleff and A. Aoyagi. 1981. History of Small Seventh-day Adventist Food Companies and Sanitariums. 8 p. See p. 6-7. Unpublished manuscript. Available online at www.soyinfocenter.com. [1 ref]

• ***Summary:*** In operation from 1949 to the present, this was a private company in Cedar Lake, Michigan. "In 1949 when the Cedar Lake Academy ceased operating the former Butler Foods, Vesper Sias, a former employee of both companies, purchased the name Cedar Lake Foods and the food manufacturing rights from the Academy. He then started a business in rooms in the back of his home, working on a kitchen scale with his wife, making meatless products similar to those developed by Butler Food Products. The line started with Vegetarian Chops (like a veal cutlet with a savory soy sauce), Vegeburger, Soynut Cheese (whole soaked soybeans and nuts milled together, slurried, then cooked down to form a spreadable or sliceable loaf), Soynut Loaf, and Meatlike. They also made tofu. In 1959 the business expanded into a newly constructed plant, and four workers were kept busy meeting a growing demand and adding new products such as meatless frankfurters. Sias soon opened a storefront in his plant where all of his products were retailed (*Grand Rapids Press* 1962). In 1968 Cedar Lake bought the production of Sunnydale Foods of Centralia, Missouri. At the same time, Sias purchased the canning division of Lange Foods. The product Turkettes, Hostess Cuts, Vegebits, Lentil Roast, and Breakfast Links were added to the Cedar Lake line. In 1975, after several months of illness, Sias sold Cedar Lake Foods (which employed 26 people and had $500,000 yearly sales) to a corporation of five stockholders, who operated the business as Cedar Lake Foods Inc. of Tennessee. In the spring of 1981 the business, after being closed for 6 months, was sold to Country Life Natural Foods, a non-profit corporation and self-supporting Adventist group that made other vegetarian health food items such as nut butters, pastas, and juices, and ran several natural food restaurants. Many of the new company's foods contained soy products. TSF (textured soy flour) and soy sauce were used in the Vegeburger. Defatted soy flour was used in the Soynut Loaf. And soy sauce was the only soyfood used in the Hostess Cuts, Sloppy Joe, Vege-bits, Chops, and Chipettes. Wheat gluten served as the primary ingredient in most of the products. In March 1981 a typical 19-ounce can retailed for $1.75-$1.95. The plant continued to be located in Cedar Lake, Michigan, near the original Cedar Lake Academy, founded in 1898." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

Millstone Foods (Document part). In: William Shurtleff and A. Aoyagi. 1981. History of Small Seventh-day Adventist Food Companies and Sanitariums. 8 p. See p. 8. Unpublished manuscript. Available online at www.soyinfocenter.com. [1 ref]

• ***Summary:*** In operation from 1977-1985, this was a private company in Penryn, California (near Sacramento). "Founded in 1977 and run by Ken Innocent, who formerly worked in the personnel department at Worthington Foods. Millstone Foods makes canned products that contain soy, including Burger-Like (an imitation ground beef of textured soy flour {TSF} in a rich broth), Dehydrated Vegetarian Stew with TSF, and Tender Cuts (a gluten patty containing a little soy flour). While the products contain no MSG, some contain HVP (hydrolyzed vegetable protein)."

In 1985 the company was sold to Loma Linda Foods in Riverside, California. Basically the same product line continued to be manufactured, with new green and yellow labels. They were still available in July 1990. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2247. Boyer, Robert A. 1981. Work with Henry Ford and soybeans (Interview). *SoyaScan Notes.* Oct. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Floyd Radford, a secretary to Ray Dahlinger, did a lot of farm work for Dahlinger, who was a very high assistant to Henry Ford. Radford was involved with farming in southern Michigan, not with soybean processing.

Henry Ford was probably the first American manufacturer of solvent extractors. He made them for use in his factories, including his village industries. The first one was only 6 tons, but later he made a 24-ton extractor.

Henry Ford's soybean operations were conducted in various plants. The plastic molding machines were located in the glass plant within the River Rouge plant. The soybean operations in the glass plant were set up in about 1934-35. Then he decided to build the solvent extraction plant outside in the next lot. There he built a brand new building with 4 big extractors. The soybean meal produced by these extractors went into the plastics made in the glass plant. Then in the coke oven building, constructed in about 1940, Ford built a new extraction plant. He also used this plant for

© Copyright Soyinfo Center 2014

forming the plastic rear trunk lid.

CPC (Corn Products Company) purchased the first license to manufacture edible spun soy protein fiber under Boyer's patent; Swift purchased the exclusive rights from 1950-54. CPC was the first company to actually sell this spun soy fiber; they did it as a legal tactic in early 1950 to establish an interstate sale allowing them rights to the name they wanted to use for the product. Worthington accommodated them, and mixed the rest of the batch in with their products to use it up.

In 1955 changed their license from an exclusive to a non-exclusive. Boyer then went to Central Soya [actually probably to Glidden] in Chicago, then Ralston Purina, then Worthington to ask them to license the patent. Ralston agreed and decided to get into edible soy protein. In 1956 they took a non-exclusive license at the same time as Worthington and General Mills.

When Boyer was working with Swift & Co., they were pushing The Glidden Co. to make a food grade isolate. Before Glidden developed this edible soy protein isolate, the only alternative was casein. In Nov. 1957 The Glidden Company announced that it was building a plant to make food-grade soy protein isolates. Their product was named Promine. In 1958 Central Soya purchased The Glidden Co. and built the world's first plant to make food-grade soy protein isolate in Chicago; their Promine D was introduced in Oct. 1959. So in 1956 when Worthington Foods purchased a license to spin soy protein fibers for the health food market, the only food-grade isolate on the market was Promine made by Central Soya–which Boyer felt had a "terrible taste." For this reason, Boyer went to Ralston Purina and urged them to make an edible isolate.

Ralston Purina made the world's first edible spun protein fiber in a pilot plant from about 1956-1960. Boyer first started to consult with Ralston Purina in 1960, when they decided to scale up from a pilot plant to a commercial one in Louisville, Kentucky; he then joined their staff in 1962. Ralston Purina started selling their fiber in about 1961 or 1962; they sold most of it to Worthington. Worthington and General Mills began experimenting with their own pilot spinning units to develop prototype products, but they bought their commercial fiber from Ralston Purina. Later Worthington started to spin their own fiber because of cost and quality factors; aging between the time the fiber was produced and the time it was shipped caused a decline in quality.

Today there is a lot of soy protein spun in Holland. The isolates are probably made at the Ralston Purina plant in Belgium. Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

2248. Boyer, Robert A. 1981. Development of meatlike products based on spun soy protein fibers. Part I (Interview). *SoyaScan Notes.* Oct. 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This history is compiled from 5 interviews conducted with Robert Boyer from Oct. 1980 to Oct. 1981.

One day at the Ford plant in 1942, Boyer, while sampling fibers of his "soybean wool," realized that these same soy protein fibers, if made tender by omitting the protein denaturation, hardening, and insolubilization, could be used as a basic ingredient in making meatlike textured soy protein foods. Already he had developed an analog for the protein fibers that grow on the *outside* of a sheep (wool), why not develop an analog for those on the *inside*, a meatless meat or meat analog?

Throughout the years of World War II, the idea of using spun soy protein fibers as the basic of human foods, in the form of meat analogs, returned to Boyer again and again. In late 1943 The Drackett Co. in Cincinnati, Ohio (which had a fairly large soybean crushing operation and also made consumer household cleaning products such as Drano and Windex), purchased the Ford Motor Company's soy protein and protein spinning operations. Boyer went with the equipment and processes to Cincinnati. Boyer, now Drackett's director of research, told the company of his interest in producing foods from soy proteins, but Drackett was only interested in industrial products at the time. In early 1949 H.R. Drackett died; the company shut down its plant that was spinning Soybean Azlon fibers, and closed part of its protein R&D laboratories. Boyer left Drackett to work on his own.

On 28 September 1949 Boyer filed for his first patent on edible protein fiber (application serial no. 118,445). It was issued in 1951, then rewritten that year in a much broader format and issued in final form in 1954 (No. 2,682,466). According to this patent (which expired in 1971 and has come to be regarded as a classic), no one can use a man-made protein fiber in a food without violating the basic claim. The patent called for the use of various proteins (including soy, casein, and peanut protein) to make edible protein fibers that could be transformed into meat analogs or extenders that are low in saturated fats and virtually free of cholesterol.

In September 1949 Boyer took his patent idea to his first company, Worthington Foods, Inc., a small company in Worthington, Ohio, operated by a group of businessmen and doctors, that produced meat analogs and vegetarian foods primarily for Seventh-day Adventists and Adventist institutions. Boyer had now been on his own for over eight months and was almost out of money. He still wasn't sure of whether the whole idea was a screwball one or not. He later commented that if Worthington had shown no interest, he probably would have just given up then and done something else. Advised to keep away from the large meat companies, who might buy up the patent and "bury" it, he went to Worthington and disclosed his concept and a pork chop prototype. Mr. Hagle, president of Worthington, was

© Copyright Soyinfo Center 2014

immediately very excited with the idea, but the company was reluctant to take a license until there was a source of soy protein fiber. Harrison Evans, a top Worthington employee, later recalled: "I'll never forget the day Bob Boyer came by. They brought him down with this textured protein wrapped in a piece of aluminum foil and all it looked like was rope. Just unattractive, white... It certainly did not look like real meat."

Worthington waited, so Boyer went to Virginia Carolina Chemical Company (VCCC) in Taftville, Connecticut; they were spinning fibers for textiles and Boyer hoped they would be able to produce soy fibers for Worthington. VCCC allowed Boyer to use their protein spinning pilot plant for research; he provided his own materials. Here he made the world's first edible protein fibers, which were used to make meat analog prototypes. Incorporating egg albumen binder plus vegetable fats and flavorings into the spun fibers, he fabricated the first man-made meatless pork chops and then made hams from soy protein. After the first successful run, nearby Corn Products Company (CPC) got very interested and ended up buying the first license on Boyer's patent (an exclusive option), which gave Boyer his first income from the project. Boyer then consulted for CPC for 9 months. The first sale of commercial edible protein fiber (produced from corn gluten) was made by CPC to Worthington. Eventually, however, it was realized that corn gluten would not work well in foods because of its unpleasant and dominant flavor. The project was dropped. Continued. Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

2249. Boyer, Robert A. 1981. Development of meatlike products based on spun soy protein fibers. Part II (Interview). *SoyaScan Notes.* Oct. 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Now somewhat desperate, Boyer decided to try a meat company anyway. He went to Swift & Co. in Chicago, Illinois, in 1950 and they immediately liked these ideas and bought exclusive rights to the patent from 1950-1954 (in 1955 they converted to nonexclusive). In 1950, the war scarcity psychology still prevailed. American consumers and food produces had watched in astonishment during the war as meats became so scarce and expensive that only a few could afford them. Thus it was easy to sell the notion that even after the war, as world population continued to rise, plant proteins would play an increasingly important role in diets throughout the world. Boyer worked with Swift for five years, but in considerable secrecy. Swift told him that if their Livestock Relations Department found out that Swift was doing research on meat analogs, "all hell would break loose." Eventually Swift made and test marketed new soy protein products. However in 1952-53 livestock producers in America were in such bad shape economically that they marched on Washington, DC, demanding a better price for their products. Swift, fearing the possibility that the media might get word of their new project and come out with headlines reading "Swift Making Synthetic Meats from Soy Protein," decided to shut down the project. None of the products was ever marketed commercially.

In 1951-52 Unilever bought a license from Boyer for spun protein isolate production throughout the rest of the world. Boyer went to England and worked with Unilever in their peanut protein isolate plant and research labs near Liverpool. Here, for the first time, his process was used in the making of sausages containing fibers of peanut protein isolate.

In 1956 Boyer returned to America and went immediately to Worthington, who had now been thinking about taking a license on Boyer's spinning patent for seven years. The first food-grade soy protein isolates were just becoming available, so the company bought the patent rights for the health food industry and asked Boyer to work with them as a consultant. Worthington eventually did more with Boyer's discovery than any company in America.

After Worthington purchased Boyer's license (for the health food trade), other large food companies followed suit: Ralston Purina, General Mills, and Nabisco. General Foods developed their own related process. In 1962 Boyer joined the research staff of Ralston Purina as a Protein Scientist; he worked there until his retirement in 1971, at which time he became a Protein Consultant for Miles/Worthington.

After General Mills took a license on Boyer's product, they built a commercial-sized fiber spinning plant at Cedar Rapids, Iowa, and developed their Bontrae line which featured Bac-O's, a spun fiber analog resembling cooked bacon bits and launched in 1965. The venture was impressive in scope and the product was a real sensation, the biggest thing that had happened to Boyer's idea to date. (The product is now made with extruded soy flour.) The whole venture had a profound effect on the thinking of other large food producing companies concerning soy protein foods. Boyer was now spending 50% of his time with Worthington and 25% each with General Mills and Ralston.

Boyer's years of research eventually began to pay off in terms of handsome royalties from his patents, of which he now had more than thirty, some shared with Ford. These lasted until the patent expired in 1971. Now any company can use the protein spinning process without having to buy a license or pay fees. In 1981 the main American companies using spun protein fibers in foods were Worthington Foods, Dawson Mills in Minnesota (which bought General Mills' equipment), Loma Linda Foods in California, and Ralston Purina. In Europe there are two companies in the Netherlands, one in Denmark (Nutana), and one in Belgium using food-grade spun protein fibers. In Japan, Nisshin Oil Mills Ltd. built the first plant to spin edible soy protein fibers in 1968. In 1976 Fuji Purina Protein Ltd., a subsidiary of Fuji Oil Co. and Ralston Purina, introduced Fujipur SP-90 spun

© Copyright Soyinfo Center 2014

soy protein fibers.

Most manufacturers of meat analogs in the U.S. agree that the general market has been disappointing, but that the idea is simply ahead of its time, which will inevitably come as meat prices continue their rapid rise. The vegetarian or "motivated" market (and especially the Seventh-day Adventist sector) showed a steady increase each year. No sales figures are available on the total market size.

When asked in 1980 how he liked the newest generation of meat analogs, Boyer replied that he found the quality disappointing, since the producers have to make compromises in equipment and processing to keep costs down. A researcher can get much better textures and flavors in his lab working by hand. Another problem is the subtle beany flavors that result from isolates and from typical defatted soy meal rather than specially defatted soy meal that can be made to contain almost no beany flavor. Boyer eats store-bought meat analogs (including bacon bits) from time to time but not as a regular part of his diet. He prefers Worthington products to Loma Linda. He likes meat, too, and also uses tofu quite a bit.

How about the future? Harkening back to the years of his work with Ford, Boyer said in 1981, "We're at the Model T stage right now with analogs. I'm impatient to get to the Lincoln Continental stage." He feels that the products still have a very bright future, and that when the price of meats rises to 10 or 20% above those of the analogs, sales will start a period of steady growth. Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

2250. Photographs of Worthington Foods' products and buildings. 1981. Worthington, Ohio

• ***Summary:*** These 8 x 10-inch black-and-white photos were sent to Soyfoods Center by Frank Poston (Manager, Product Marketing) of Worthington Foods on Oct. 13, 1981. (a) First generation products–canned. (b) Second generation products, canned and frozen. (c) Third generation products–canned and frozen. (d) Worthington's bacon-like product, Stripples, being reviewed by its counterpart.

(e) Spun soy protein coming out of a spinnerette head. (f) An old photo showing spun soy protein fiber being processed; the line is now much more automated. (g) Veja-Links–Worthington Foods' meatless frankfurter being packed. This is an earlier photo–the line is more streamlined now. (h) Miles Laboratories and Worthington Foods personnel breaking ground for a new plant–1970.

(i) The Worthington Foods' facilities on Jan. 26, 1972 (a Division of Miles Laboratories). Lower right building is shipping. Center is the plant. Upper left is storage, R&D, and general offices. Address: 900 Proprietors Road, Worthington, Ohio 43085. (j) New addition to Research and Development building. (k) Worthington Foods' smoked beef-like roll and sausage, like Prosage, being wheeled into the freezer after processing.

Worthington Foods letterhead (Oct. 1981). Address: Worthington, Ohio.

• ***Summary:*** Seventh-day Adventist (SDA) women, some 50% of whom are vegetarians, have a lower mortality from breast and endometrial cancers than do other women. In this study 50 volunteer SDA vegetarian post-menopausal women aged 50-79 years were matched by age to 50 volunteer nonvegetarian women resident in similar circumstances. The "vegetarian women were found to have lower urinary levels of estriol and total estrogens, lower plasma prolactin levels, and higher plasma sex hormone-binding globulin (SHBG) levels. These differences were not explained by differences in body weight or obesity. Plasma SHBG levels were highly correlated with plasma high-density lipoprotein cholesterol levels, which were also higher in vegetarians than in nonvegetarians. These hormonal differences may explain the lower rates of endometrial and possibly breast cancer that have been observed previously in vegetarian women."

The increase in the years of menstruation and the onset of menopause are the result of the effects of the additional estrogens in a younger and older woman's body caused by the high fat in her diet. Address: 1&3. Univ. Dep. of Medicine, The Univ. of Western Australia, Nedlands, Western Australia 6009.

on class background (p. 384-87).

Part III. The structure of the ideology: Nature and wholeness, life, death and Eden, the pure body, newness, non-structure, boundaries (p. 388-429). Bibliography: Journals. other journals, yearbooks, other published material (p. 430-56). Address: London, England.

2260. Strayer, George M. 1981. Re: Pioneers in introducing and producing soybeans in America, and in starting the American Soybean Association. Letter to William Shurtleff at Soyfoods Center, Nov. 5. 2 p. Typed, with signature on letterhead.

• ***Summary:*** Concerning Iowa: The first work was done by H.D. Hughes, who was the head of the Department of Farm Crops and Soils. He was assisted by F. Scott Wilkins and E.S. Dyas, both of whom were extension agronomists. Martin G. Weiss came on the scene in Iowa at the same time that Probst started in Indiana and Williams started in Illinois, all of them part-time USDA and part-time local experiment station employees specializing in soybean breeding work. "Martin Weiss is a highly skilled plant breeder, a geneticist and a mathematician. He is responsible for the development of the cross-pollination and back-crossing techniques which have become the basis of practically all soybean breeding being done in the United States, and practically every soybean variety which has been developed since about 1940 has been developed through the techniques developed by Weiss...

"There are a number of theories on why so many men gave so generously of their time and effort to support the introduction of soybeans into the United States, and to support ASA. Certainly W.J. Morse was a part of the reason. Many changes were taking place in agriculture, and the people in the land grant colleges were looking for new crops and new uses for crops. The whole face of agriculture was changing from the use of horses and the large consumption of oats, corn and hay by those horses to the use of tractors and other petroleum fueled mechanical units. This meant we had to find new crops to grow on the acreages no longer needed for oat and hay production.

"For some reason the soybean crop always had a kind of halo around it, placed there by men such as Henry Ford, W.K. Kellogg, I.C. Bradley, W.J. Morse, 'Soybean' Johnson and others who had access to the news media and who used it. This was an era when farmers were still expanding acreage, looking for new crops and new uses for those crops and the publicity given to soybeans was being well received by farmers.

"This was also an era when the farmer was leaving the typified hayseed status and becoming a businessman. Extension work through Farm Bureau and the local extension offices was becoming an important factor in decision-making among farmers. Extension agronomists and other persons were listened to. Farm cooperatives, farmers elevators, and other organizations of farmers were coming into prominence. It was an era of growth in information and growth in knowledge in the field of agriculture, and soybeans lent themselves to the enchantry of the period.

"You're having a tough time getting anyone to do comparable work for the Soycrafters Association because you are dealing with an entirely different type of people. Most of them are small entrepreneurs who have come out of an era when it was every man for himself and the Devil take the hinder-most. The farmers whom we were considering were looking for ways to cooperate and work with their neighbors. When someone got sick the neighbors did the field work. When a new barn was to be built there was a barn-raising held. Contrast this with the people in the cities, where most of your tofu plants are located, and where no one stepped in to help his neighbor. This is still pretty much true. You are talking about people with two very different philosophies, two quite different backgrounds. When a farmer gets sick, even today, his neighbors do his chores for him. When a small business operator gets sick he closes the doors and no one particularly cares." Address: President, Agricultural Exports, Inc., P.O. Box 266, Hudson, Iowa 50643. Phone: 319-988-4593.

2264. White, Arthur L. 1981-1986. Biography of Ellen G. White. 6 vols. Washington, DC, and Hagerstown, Maryland: Review and Herald Publishing Assoc. Illust. 23 cm. *
• ***Summary:*** This biography, considered the best to date of Ellen G. White, was written by her grandson, Arthur. The titles of the individual volumes are:

(1) "The Early Years, 1827-1862."
(2) "The Progressive Years, 1862-1876."
(3) "The Lonely Years, 1876-1891."
(4) "The Australian Years, 1891-1900."
(5) "The Early Elmshaven Years, 1900-1905."
(6) "The Later Elmshaven Years, 1905-1915."

Each of these volumes has an index, which helps locate materials. The Health Reform visions are mentioned in volume 2 on pages 11, 16-22 (3rd. vision), 71, 73, 80-81,83, and 111.

Ellen apparently never used the word "gluten" in her own writings. This word "gluten" appears in connection with her, in her biography, Vol. 4, p. 433. Her biographer quotes an article from the *Union Conference Record* (a Seventh-day Adventist publication in Australia) of 1 Dec. 1899, to show what products are being made by the Sanitarium Food Co. in Australia. "They are now manufacturing granose biscuits, granose flakes, bromose, nuttose, antiseptic tablets [charcoal tablets], granola, caramel cereal [grain coffee], nut butter, wheatmeal biscuits, gluten biscuits, and gluten meal."

2265. **Product Name:** Granose Soya Dessert (Vanilla, Chocolate, Strawberry, or Banana).
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in Germany by DE-VAU-GE.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1981.
New Product–Documentation: Lindner. 1987. The World Soymilk Market.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by DE-VAU-GE, was introduced in 1981 in Vanilla, Chocolate, Strawberry, and Banana flavors. The desserts were made by Alpro in Feb. 1984.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. The desserts were first made for Granose by Alpro in Feb. 1984 in Vanilla and Chocolate flavors.

2266. **Product Name:** Loma Linda Griddle Steaks (Meatless Beefsteak. Based on Spun Protein Fiber).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1981.
Ingredients: Soy protein concentrate, wheat gluten, corn oil, water, egg whites, onion, soy protein isolate, natural (vegetable) flavors, corn starch, whole wheat flour, artificial flavor, soy lecithin, guar gum, caramel color, salt, garlic powder, stabilizer (cellulose gum, gum arabic), spices, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 10 oz paperboard box.
How Stored: Frozen.
Nutrition: Per 1 steak (1.7 oz–47 gm): Calories 160, protein 11 gm, carbohydrate 4 gm, fat 11 gm, cholesterol 0 mg, sodium 385 mg, potassium 250 mg.
New Product–Documentation: Ad. 1980. "Two new ways to nourish your business. The meatless meals they'll be asking for." Label reads: "Meatless. Hearty Steak Flavor. Cholesterol Free. 8 Steaks." Sold frozen. Soya Bluebook. 1982. p. 60.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1981.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

2267. **Product Name:** [Maxten {Textured Vegetable Protein}].
Manufacturer's Name: Miles-Kyowa Co. Ltd.
Manufacturer's Address: Aoyama Building 2-3, Kita-Aoyama 1-chome, Minato-ku, Tokyo, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 58.

2268. **Product Name:** Sanitarium Health Foods Textured Vegetable Protein TV [Flavour-Like Beef, Flavour-Like Fish, or Minced].
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1981.
Ingredients: 1990: Soya flour, vegetable oil, salt, Savex, artificial flavour.
Wt/Vol., Packaging, Price: 430 gm can.
How Stored: Shelf stable.
New Product–Documentation: Letter from Sanitarium Health Food Co. 1981. Label. 10 by 4 inches. Full color. Photo shows round slices or minced chunks on a bed of rice. "Just heat and eat."

Letter and Labels sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1981, and address as Sydney, N.S.W.

2269. **Product Name:** [Soymilk].
Manufacturer's Name: Seventh-day Adventist Food Company in Colombia.
Manufacturer's Address: Colombia.
Date of Introduction: 1981.

[Nor]*

2272. **Product Name:** Dixie Dogs (Meatless Hot Dogs in Batter) [Regular, or Institutional].
Manufacturer's Name: Worthington Foods, Inc. Div. of Miles Laboratories, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1981.
Ingredients: Regular: Batter: Water, wheat flour, yellow corn meal, sugar, partially hydrogenated soybean oil, modified corn starch, soy flour, egg yolk, nonfat dry milk solids, baking powder, sodium caseinate, salt, wheat starch, lecithin, potato flour. Textured vegetable protein (soy protein concentrate and isolate, wheat gluten and flour), egg whites, soybean and/or corn oil, sodium caseinate, water, partially hydrogenated soybean and cottonseed oil, flavorings (artificial flavors, monosodium glutamate, onion and garlic powder, spices, disodium guanylate, disodium inosinate), salt, corn syrup solids, dextrose, sodium phosphates (tripolyphosphate, pyrophosphate, hexametaphosphate, monophosphate), artificial colors, calcium chloride, niacinimide [niacinamide], iron (as ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12.
How Stored: Frozen.
New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. The food chemists went berserk on the ingredients for this one, treating it as a PhD exam for every long-named ingredient in the book.

2273. Cottrell, Edyth Young. 1981. Mrs. Cottrell's stretching-the-food-dollar cookbook. Santa Barbara, California: Woodbridge Press. 127 p. Recipe index. 22 cm.
• ***Summary:*** A natural foods, vegetarian cookbook. Incorporates *Stretching the Food Dollar* and *Supplement to Stretching the Food Dollar.* A color photo on the cover shows the author.

Page 15 discusses soy milk, soy milk powder, soy flour, and nut milk. Many recipes (especially recipes for breads and other baked goods) call for the use of these products. Soy-related recipes include: Basic wheat-soy bread I & II (with soy flour, p. 21-22). Golden triple-rich bread (with soy flour and soy milk, p. 23). Rice-soy bread (with soy flour p. 27). Soy-nut bread (with soy flour and ground cooked soy beans, p. 30). Soy mayonnaise (with soy milk powder, p. 71). Savory soy loaf or patties (with soy sprouts, p. 80). How to sprout soybeans (p. 89). Soy sauce (p. 90). Address: Formerly, Research Nutritionist, Loma Linda Univ., Loma Linda, California; As of March 1993, living in Spokane, Washington.

2274. Fraser, G.E.; Swannell, R.J. 1981. Diet and serum cholesterol in Seventh-day Adventists: A cross-sectional study showing significant relationships. *J. of Chronic Diseases* 34(9/10):487-501. [40 ref]
Address: 1. Dep. of Community Health, Auckland School of Medicine, Univ. of Auckland; 2. Auckland Adventist Hospital, St. Heliers Bay Rd. Both: Auckland, New Zealand. Fraser's current address is: Dep. of Biostatistics and Epidemiology, Loma Linda Univ., Loma Linda, California 92350, USA.

2275. Kloss, Jethro. 1981. Back to Eden: A human interest story of health and restoration to be found in herb, root, and bark. Loma Linda, California: Back to Eden Books. xxxii + 684 p. Illust. Index. 18 cm. Kloss Family Heirloom Edition.
• ***Summary:*** One of the most creative and original sources of early soyfoods recipes, which include "Soybean Cream" and "Soybean Ice Cream." This revised edition contains the complete original text of this classic work on healing herbs, home remedies, diet, and health–plus 16 pages of new family recollections by Jethro Kloss' daughter, son, and granddaughter at the beginning of the book, and 16 pages of previously unpublished photographs in the middle of the book. This edition was first copyrighted in 1972. The book has been published continuously by the Kloss family since 1946. A blurb on the cover of the 1981 printing (which retails for $2.95) states: "Two million copy bestseller. The complete original text [with the same page numbers]. New family additions!" A color illustration by Harry Anderson shows a man and woman seated by an idyllic river, surrounded by birds and animals, in the Garden of Eden. The rear cover states that this is "The heirloom authorized Kloss family edition."

The contents of the book, except for the new sections mentioned above, are identical to the original 1939 edition. But the recollections of Jethro Kloss by his children and granddaughter contain a wealth of new and interesting information. The recollections by his daughter Promise Kloss Moffett note: "My father was born on a large farm near Manitowac, Wisconsin, on April 27, 1863. The ninth of eleven children born to his pioneering parents lived a healthy

© Copyright Soyinfo Center 2014

and happy life in that primitive Indian country...

"When he was about twenty, he went to Florida and worked in the orange groves, finally owning a large grove at Deland. Later he attended school in Nebraska and then in Battle Creek, Michigan. While in Battle Creek he worked closely with the then revolutionary medical leadership of the world-renowned Battle Creek Sanitarium. He saw clearly the disastrous results of the use of dangerous drugs then prevalent in caring for the sick. He developed further his own philosophy and understanding of the laws of nature...

"He was married March 5, 1900 to Miss Carrie Stilson, who had trained as a Bible worker and teacher and had labored in a mission in Madison, Wisconsin and taught several terms of grade school. At that time he was a licensed minister in Wisconsin and they established their home at Rose Lawn. Two children were born to this union, Promise Joy and Paul, who died when only four weeks old of whooping cough. During these years, besides my father's ministerial work, my parent's operated a branch of the Battle Creek Sanitarium and also sold Battle Creek Sanitarium health foods. My mother died in July of 1905.

"In March, 1907, my father married Mrs. Amy Ponwith, a widow with a small daughter, Mabel. My father and step-mother owned and operated an attractive sanitarium in pleasant surroundings in St. Peter, Minnesota, which they named *The Home Sanitarium*... Their daughter Lucile was born here in St. Peter in 1908 and their son, Eden, in 1910.

"Next the Kloss's became interested in the self-supporting work being conducted in the south and visited some of the schools in North Carolina and Tennessee. About 1911 they sold the sanitarium in Minnesota and moved to Fountain Head, Tennessee, where their youngest daughter, Naomi, was born in 1913. Here they bought a 250 acre farm, built a large house and barn, and raised many kinds of fruits and vegetables...

"A later development in good health was his creation of a significant health food manufacturing operation in Amqui, Tennessee after receiving a call from them to take charge of their food factory...

"Before this factory was sold to the Nashville Agricultural Normal Institute he was shipping health foods all over the United States and Canada. It was during this time at this place that he originated many new health food recipes. This establishment later became a part of what has since become the well-known Madison College near Nashville, Tennessee.

"Our next move was to Brooke, Virginia where [in 1921] papa established a health food factory and retail market. Each of us children was pressed into service in one way or another with this family enterprise. At times we would be helping with some food experiment, or perhaps in typing and retyping the material that later became *Back to Eden*, which was many years in preparation. Jethro Kloss's son Eden was for many years his right hand helper. Whatever my father did in spreading the gospel of health and natural living, he did with all his might and trained his children in that same pattern of living...

"One of my favorite memories as a family is the daily worship hour when Father would gather his family of seven about him and we would sing hymns, read Bible verses around the circle, and pray together. He was a gentle but firm family leader.

"Although a strict disciplinarian, my father was warm-hearted and affectionate–devoted to his family. When he was away from home, we invariably received a letter from 'papa' every day...

"Eventually this health food factory at Brooke, Virginia was taken over by my step-sister, Mabel and her husband.

"The Kloss's then moved to Washington, D.C. and carried on his work of treating the sick, lecturing on health and a more intensive study of herbs and preparation of his book, *Back to Eden.* I still have in my possession an attractive menu... for a Demonstration Dinner he gave March 27, 1933, at the Dodge Hotel in Washington, D.C. The menu was completely vegetarian and included 'Sweetbreads a la Kloss.' The pumpkin pie and strawberry sundae were made with soy milk...

"*Back to Eden* was at last published in 1939, the fruition of much toil and sacrifice for many years by the entire Kloss family... [Jethro's] wife Amy [Pettis] Kloss died in 1944 at Fredericksburg, Virginia...

"In 1945 papa became acquainted with Mr. and Mrs. Deloe Robert Hiatt on a trip to Madison, Tennessee. Together they found a property at Coalmont, Tennessee, where the Hiatts took over the promotion and publication of *Back to Eden*... [Jethro] peacefully went to sleep in June of 1946, his eighty-fourth year [but he was age 83], and today rests in a little cemetery in Tennessee."

The recollections by his son, Eden, note: "I was born in St. Peter, Minnesota, on February 10, 1910, to Jethro and Amy Kloss... After the move to Tennessee, my parents developed a plant for the manufacture of a line of vegetarian meat substitutes, cereals, crackers, and other items, at Amqui, near Nashville. (Our business was called the Nashville Sanitarium Food Factory.) Many of my early memories center on that large two-story factory, where raw materials were transformed into good-tasting, healthful food products...

"My father was an untiring worker. He would be up hours before the rest of the family–building fires, starting cracker dough, and making everything ready so that the work could go full speed ahead when the workers arrived in the morning... One day when Eden was burned while canning tomatoes, Jethro rushed him to the Madison Sanitarium for treatment. Kloss also made gluten there.

"When I was nine or ten years old, the factory was sold to the private school at Madison and transferred to that campus, and our family traveled in our pickup truck,

© Copyright Soyinfo Center 2014

camping en route, from Tennessee to Virginia. Here, at a town named Brooke, we found an ideal location–a plot of ground with a building in which we could make and sell health foods and teach people about healthful living...

"It was here at Brooke, Virginia, that Papa started to put in uncounted hours working on the beginnings of his book, *Back to Eden.*

"After some years, my oldest sister and her husband took over the food factory, and my parents moved to Takoma Park (on the outskirts of Washington, D.C.)...

"Papa's travels to give lectures and food demonstrations took him to places like Miami, Florida, and Houston, Texas."

There are also recollections by his granddaughter, Doris Joyce Kloss Gardiner. In about 1939-40 she used to be with her grandparents when they visited relatives in Falmouth, Virginia, just north of Fredericksburg. There she helped make soymilk: "Nor was I happy to stand at the stove stirring and stirring large kettles of soybean milk (so the milk wouldn't stick and be scorched)–a laborious and time-consuming process. But Grandpa's soybean milk was delicious, and so were the twenty or so other soy products that he originated and produced–including meat substitutes and soybean bread, butter, cheese, and ice cream...

"Often Grandpa would prepare soybean ice cream to serve at the close of his lectures or cooking demonstrations. One of my favorite treats was to lick the paddle from the ice-cream freezer before we left home to go to the lecture...

"Grandpa and Grandma Kloss died when I was in my mid-teens." The frontispiece (facing the title page) is a portrait photo of Jethro Kloss. An original of this photo was sent to Soyfoods Center in 1985 by Doris Kloss Gardiner of Loma Linda, California. On the 4th page of photos in the center section is an ad by "Jethro Kloss Health Food Company, Brooke, Virginia." Photos show two hand grinders, a large-scale gas-fired pressure cooker, a large stove-top pressure cooker, and a hand scaler. The text begins: "We manufacture a large line of health foods." In 1921 Kloss opened this health food factory in Brooke, VA, and it as on this site that he began writing *Back to Eden.* Address: P.O. Box 1439, Loma Linda, California 92354.

2276. Kloss, Jethro. 1981. The Back to Eden cookbook. Loma Linda, California: Back to Eden Books. 159 p. Illust. by Daniel Guild. Index. 22 cm.
• ***Summary:*** The yellow cover of this 1981 edition ($2.95) features a color illustration (by Harry Anderson) showing a man and woman seated by an idyllic river, surrounded by birds and animals, in the Garden of Eden. The cover text states: "From the renowned author of Back to Eden. This is a golden treasury of recipes and priceless information on natural foods for health and healing. Based on the work of the late Jethro Kloss. Published under the supervision of Promise Kloss Moffett and Doris Kloss Gardiner. The copyright page of the 1981 printing states that the book is published and distributed by Back to Eden Books, P.O. Box 1439, Loma Linda, California 92354. The book is copyrighted by Doris Kloss Gardiner, Promise Kloss Moffett, and Eden P. Kloss. The book was previously published by Woodbridge Press under ISBN 0-912800-05-4.

Contents: Jethro Kloss... Pioneer nutritionist. Return to Eden... Return to happiness. Soy milk, cheese, butter, and cream. Nut milk, cheese, butter, and cream. Main dishes. Using sprouted seeds (including soybean sprouts). Bread... A health food. Life-giving breads. Natural breakfast foods. Soups... Total nutrition. Salads and dressings. Vegetables. Sauces, seasonings, and spreads. Desserts for health. Coffees, teas, and broths (including a recipe for making soybean coffee at home, p. 151).

The chapter titled "Nut milk, cheese, butter and cream" has recipes for: Nut milk (made from raw peanut butter). Nut cheese (from raw peanut butter and soy butter). Dieters nut cheese (from raw peanut butter). Malted nut cream (from raw peanut butter and malt powder). Superb peanut butter. Blanched peanut butter (add water to make into milk or cream). Simple peanut butter. To blanch peanuts. Nut meal. Nut butter cream (add warm water to nut butter).

Photos (p. 6 and 9) show: daughter Promise Kloss Moffett, son Eden Kloss, and granddaughter Doris Kloss Gardiner. Address: P.O. Box 1439, Loma Linda, California 92354.

U.S. soybean production. 45 Aquaculture... the world's untapped resource (From 1974 to 1979 the harvest from aquaculture more than doubled to nearly 7 million metric tons). 46. Almost a century of progress. About the author (autobiographical): Leo Gilbert Windish was born in 1909. A retired seedsman, he attended the University of Illinois in 1927 and 1928. He was close friends with Hackleman, and wrote this book in fulfillment of a promise he made to Hackleman, whom he described as "the soybean's greatest missionary." Windish also knew Burlison (the first to promote soybeans heavily) and Woodworth (the first soybean geneticist).

2282. **Product Name:** [GranoVita Sojagen Instant].
Foreign Name: GranoVita Sojagen Instant.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Phone: 04 13 11 89 41.
Date of Introduction: 1981?
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 450 gm. Wholesales for DM 11.60.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1981. May 1. DE-VAU-GE Sortiments-Preisliste. 4 p.

Soyfoods Center Computerized Mailing List. 1982. July 23.

Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products. Rein pflanzliche Soja-Nahrung. Retail price is DM 10.24 for 450 gm.

Manufacturer's brochure. 1989? "GranoVita Soja-Drinks und -Desserts... ein erfrischender Genuss [a refreshing enjoyment]. 6 pages, with many color photos. Contains a brief description of Sojagen and Sojagen Plus, with a color photo of both packages/boxes. The Sojagen box is red, dark green, light green and white. A color illustration shows a glass of milk in front of soybean leaves and pods. "A soya food made purely from plants. Milk free. Lactose free. Gluten free. Weight: 350 gm. Neuform certification symbol.

2283. **Product Name:** [GranoVita Sandwich Spread].
Foreign Name: GranoVita Soja-pikant.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1981?
Ingredients: Water, vegetable oils and fats, egg protein, soya protein, spices, wheat gluten, glucose, salt, yeast, rolled oats, soya sauce, bread crumbs, onions.
Wt/Vol., Packaging, Price: 80 gm wholesales for DM 2,35 or 200 gm for DM4,55.
New Product–Documentation: Manufacturer's catalog. 1981. May 1. DE-VAU-GE Sortiments-Preisliste. 4 p. Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products.

2290. **Product Name:** [Nutana Soya-Protein 92, and Soya Lecithin Capsules].
Manufacturer's Name: Nutana Helsekost (Marketer).
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product.

2291. **Product Name:** [Nutana Soya-Beans in Vegetable Bouillon].
Foreign Name: Sojaboenner i Vegetabilsk Bouillon.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Soya-beans, spices, sea salt.
Wt/Vol., Packaging, Price: 400 gm, of which 210 gm are soya-beans.
How Stored: Shelf stable.
Nutrition: Per 400 gm: Calories 140, protein 14 gm, fat 5 gm, carbohydrate 9 gm.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. "Heat in a saucepan together with sliced and fried onions. Serve with boiled or mashed potatoes, or grated raw vegetables. Also well suited for vegetarian loaf." Labels in Danish, Dutch, and Finnish.

2292. **Product Name:** [Nutana Fricassee].
Foreign Name: Nutana Frikasse.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Peas, SoyaPro with Calf-Like Flavour, water, carrots, vegetable margarine, wheat flour, spices, maize starch, parsley, vegetable aroma, caramel color (not ammonized).
Wt/Vol., Packaging, Price: 425 gm can.
How Stored: Shelf-stable.
Nutrition: Per 100 gm: Calories 130, protein 6 gm, fat 8 gm, carbohydrate 7 gm.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. "Use for dinner or to fill tartlet cases." It is "ready to serve. Just heat in a saucepan. Serve with boiled or mashed potatoes, and you will have an easy and delightful dish." Labels in Danish, Dutch, and Finnish.

2293. **Product Name:** [Nutana Vegetarian Paste].
Foreign Name: Nutana Vegetabilsk Postej.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Soya beans, water, onions, egg, soya oil, yeast extract, spices, sea salt.
Wt/Vol., Packaging, Price: 120 gm and 215 gm can.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. "Used on sandwiches, e.g. garnished with mushrooms, tomatoes, beetroots or cucumber salad, etc." Label. Labels in Danish, Dutch, and Finnish.

2294. **Product Name:** [Nutana Frikalett/Rissole].
Foreign Name: Nutana Rissole.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Soya protein, egg white powder, spices, water. Gravy: Wheat flour, soya sauce, vegetable bouillon, onions.
Wt/Vol., Packaging, Price: 450 gm can.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. "Ready to serve. Just heat in saucepan. To be served with boiled or mashed potatoes and vegetables." Labels in Danish, Dutch, and Finnish.

2295. **Product Name:** [Nutana Soya Goulash].

Foreign Name: Nutana Soja-gullasch.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Water, Soya Pro with Beef-Like Flavour, carrots, celery, onions, wheat flour, sunflower oil, tomato puree, yeast extract, sea salt, spices, vegetable aroma, colour (caramel, not ammonized).
Wt/Vol., Packaging, Price: 425 gm can.
How Stored: Shelf-stable.
Nutrition: Per 100 gm: Calories 110, protein 6 gm, fat 6 gm, carbohydrate 7 gm.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. "For dinner or lunch. Ready to serve. Heat in a saucepan and serve with mashed potatoes, fresh grated vegetables, and beet roots." Labels in Danish, Dutch, and Finnish.

2296. **Product Name:** [Nutana Soya Sausages].
Foreign Name: Nutana Soja-poelser.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Water, sunflower oil, textured soya protein, gluten, grape sugar, sea salt, egg white powder, oat flakes, soya sauce, vegetable consistency, spices, vegetable flavouring, smoke flavour, colour (caramel, not ammonized). Water: water, vegetable bouillon.
Wt/Vol., Packaging, Price: 385 gm can, of which 230 gm is sausages.
How Stored: Shelf-stable.
Nutrition: Per 100 gm: Calories 200, protein 13 gm, fat 15 gm, carbohydrate 4 gm.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. "For dinner or lunch. Ready to serve. Heat or fry. Serve with bread, potato salad, or mashed potatoes." Labels in Danish, Dutch, and Finnish.

2297. **Product Name:** [Nutana Dinner Balls].
Foreign Name: Nutana Maddagsboller.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Water, gluten, textured soya protein, soya oil, bread crumbs, egg white powder, yeast extract, defatted soya flour, onions, grape sugar, spices, sea salt, vegetable flavouring. Gravy: Water, soya oil, wheat flour, spices, sea salt.
Wt/Vol., Packaging, Price: 400 gm can, of which about 180 gm are Dinner Balls.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. "May be served in curry-sauce prepared by adding a level teaspoon of curry to the gravy in the tin. To be served with cooked rice and grated raw vegetables." Labels in Danish, Dutch, and Finnish.

2298. **Product Name:** [Nutana Bean Paste].
Foreign Name: Nutana Grov Boennepostej.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Soya beans, onions, egg, textured soya protein, sunflower oil, spices, and water.
Wt/Vol., Packaging, Price: 210 gm can.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1981. Nutana Helsekost. 19 p. Contains a photo of and detailed information about every product. "Used on sandwiches, e.g. garnished with mushrooms, tomatoes, pickled beetroots or cucumber salad." Labels in Danish, Dutch, and Finnish.

2299. **Product Name:** [Nutana Soya-Beans in Tomato].
Foreign Name: Nutana Sojaboenner i Tomat.
Manufacturer's Name: Nutana Helsekost.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1981?
Ingredients: Water, soya-beans, tomato puree, wheat flour, spices, sea salt, vegetable aroma.
Wt/Vol., Packaging, Price: 425 gm can.
How Stored: Shelf stable.
Nutrition: Per 100 gm: Calories 100, protein 8 gm, fat 3 gm, carbohydrate 8 gm.

Manufacturer's Name: Produtos Alimenticios Superbom.
Manufacturer's Address: Caixa Postal 8633, 01051 Sao Paulo, Brazil.
Date of Introduction: 1981?
New Product–Documentation: Shurtleff. 1981. Overseas Adventist Food Companies. p. 8.

2308. Boismenue, Clyde. 1982. Textured soy protein products in America today (Interview). *SoyaScan Notes.* Jan. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The biggest present outlet for TVP (more precisely textured soy flour or TSF) is in the pet food industry, and some is used in the U.S. school lunch program. Occasionally a foreign country, such as Poland or the USSR, will buy some to extend meats.

The Briggs Amendment is a California state amendment of about 1975; it regulates the labeling of meat products containing soy. If you add soy to hamburger you must label it "imitation hamburger," and even restaurants and institutions must state the names on the menu or, if there is no menu, in a sign on the wall, if the extender is bread crumbs. But the health inspectors overlook a lot of violations, as in small restaurants. Companies are not even allowed to use fanciful names such as "Superburger." Because of all this, customers in California have stopped using soy in droves and brought sales to a crashing halt. Clyde thinks there may be a similar law in New York; he does not know how many other states have such restrictive laws.

Nationwide, imitation cheese must have the word "imitation" as the largest word on the box; it looks absurd.

A company that wants to make TSF must buy a number of large extruders. Each one makes 3,000 to 5,000 lb/hour, and most companies own 3 to 5. Every one of the major manufacturers for TSF or textured soy protein products is losing money. Prices are terribly low and the industry is operated at an estimated 10% of capacity in 1981.

ADM's TVP is the most dense, but it gets too soft on cooking. Textured concentrates are too hard, and are like gristle or rubber in the finished product; they have less flavor but cause less flatulence. Textured isolates are too expensive, costing more than the meat they are intended to replace. All companies are desperate for a breakthrough.

ADM has never spent much money on developing imitation beef, ham, or chicken. Yet it the company has developed meatless entrees to increase profit margins. Uncle Archie's line of meatless entrees included Pepper Steak (the first one developed), Chicken Almadine, Sweet and Sour Pork, and Hearty Stew. ADM wanted to move from TVP extender to meatless entrees about 2 years ago. Like everybody, they rushed to GNC (General Nutrition Corp.), which reformulated the pepper steak by removing the mushrooms. It didn't sell well before or after the

© Copyright Soyinfo Center 2014

reformulation, so ADM tried to market it themselves under the Uncle Archie's brand. From the start, they appealed to the Safeway mentality, using lots of artificial ingredients. The product now tastes good but it looks like they will flop anyway.

Worthington and Loma Linda are also having big, indeed disastrous, problems. All the TSP (textured soy protein) products are dying on the vine. Central Soya can't sell textured concentrates. Loma Linda plans to try to duplicate the success of Sanitarium Food Co. [Australia] with breakfast cereals. Some health food stores have carried Loma Linda products, but natural food stores object to all the additives. And now even some Seventh-day Adventists are starting to be critical for the same reason. None of the natural- or health food stores will carry Clyde's TVP because it contains so much artificial stuff.

Nabisco is no longer in the business, and Central Soya has discontinued the line of material they bought from General Mills. Cargill and Lauhoff are now in quite a precarious position. Cargill makes a good line of soy flours, but they also have a line of textured protein products that they have never been able to position correctly; they are operating at about 10% of capacity. Cargill got in early then in 1976 spent several million dollars more upgrading their plant so it is one of the nicest in the industry. A man with the inside scoop on Cargill is ADM's manager in the western region, Bill Potter, phone 213-833-1389. He was Cargill's sales manager and now lives in Los Angeles.

The three people and companies that hold all the process patents and pooled them were Nabisco, Swift & Co. and ADM; that jump-started this industry. All three had a slightly different process, so they cross licensed to get the TVP process going. Lynn Adolphson of ADM is the best man in the USA to ask about his; he really knows the industry.

General Mills was one company that really went into TSP in a big way. They had a line of flavored products that has never been duplicated since–all the TVP items that were used as meat extenders, including the Bontrae line which were very fancy products. They introduced spun isolates in a really big way in both the bacon bits type products and their whole line of frozen meat analogs. One day they shut down the whole operation without any warning. They sold the frozen line to Dawson Mills, and sold the Bontrae process to Central Soya, both of whom have shut down these products in the last 18 months or so. Dawson Mills got completely out of the ISP business, but may still have a weak line of textured products. People keep hoping the market will materialize, but it never happens, so eventually they have to get out to cut their losses.

Three companies went out in the first washout: General Mills, Swift & Co., and finally the Marschall Division of Miles Laboratories. A division of National Can called National Protein Products or something like that made a compressed soy grit very similar to that made by Nabisco.

We're now heading for a second washout. Lauhoff is weak but has a little niche in the pet food industry. With the market collapsing and export sales bleak, everyone is going hook and tong after the pet food industry. Lauhoff was just bought by Bunge. Worthington is probably in a pretty precarious position. They have huge capacity with a market of 2-10% of capacity.

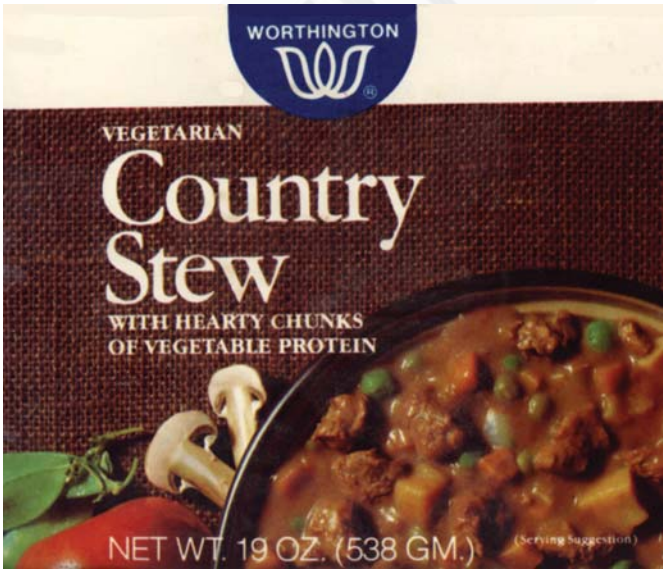
Lauhoff and Cargill will probably be the next ones out. Dawson Mills is sort of dragging along at the rear, a little weak. Clyde is not sure if they still sell textured products. They banked an awful lot on textured soy concentrate. They still have a few fairly large customers–such as SAGA Food Services. All three companies need big volume to run their machines economically.

ADM is definitely in the strongest, premier position among the makers of new soy protein products. ADM has strength across the board–not just in pet foods. They are the only company with a truly complete line of products and a decent line of flavored products. ADM is way out in front with the edible soy products because of better texture and flavor. Cargill, Dawson Mills, and Central Soya have sort of a nondescript product–not outstanding and not positioned well. They are losing money.

Central Soya is having problems with its textured soy protein concentrate. Staley is a dogged competitor. They have concentrated on a few items which they sell inexpensively; they do a good job with those, but they have no flavored products. Farmland (Far-Mar-Co) is also a dogged competitor. They have a line of flavored TSF that has never gone any where.

Each strong manufacturer has at least one pet food account from which they draw their financial life. All the companies are losing money on their pet food TSF but they have to have it to keep their overhead spread thin enough to make money on anything else. So the competition in the edible soy products industry is brutal.

What killed them all was Wenger Manufacturing Co. In the early days the pet food makers were happy to get TSF at 60 cents/pound, which was much cheaper than beef. But soybean meal was 6 cents/pound. So pet food makers started to buy a lot–dozens of carloads. Then Wenger shows up and says, "Why not buy an extruder, buy soybean meal for 6 cents/pound, and make your own TSF?" This forced TSF processors to drastically lower rates to cost of meal plus a fixed processing charge. That still allowed the processors to work off a lot of scrap. Some bought Wenger extruders. That was the end of profits in the pet food industry.



Dwayne Andreas took an early liking to TVP. Dwayne is a very homey person, a Quaker [sic, Mennonite] in the true sense. He developed and made a flaked breakfast cereal out of TVP; it contained 100% of the RDA for everything and you just poured milk on it–not a hot cereal. Or it could be used as a tuna extender. But in about 1972 the cereal makers rejected it; they thought it was too concentrated. That

© Copyright Soyinfo Center 2014

was one of the first times ADM got burned–a sort of TVP tragicomedy. Bob Sullenberger is another key man and good source of information. Address: Basic Foods Co., 1211 E. Olympic Blvd. #204, Los Angeles, California 90021. Phone: 213-623-6686.

2313. Holmes, Charlotte Van Gundy. 1982. The life of T.A. Van Gundy (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 26. 2 p. transcript.
• ***Summary:*** She will send three pamphlets. She has a fine photo at her daughter's home of the family in which she was a child; it was taken at the Christian Brothers Winery at St. Helena

"Ransom Brown worked for Loma Linda, she thinks, 3-6 months, then was fired. It served him right. When he left her Dad and family he had to work like crazy, which she thinks may have contributed to his early death [sic, he is still alive]. He was out of work for a long time (about a year) after working for Loma Linda Foods. They got out of him what they wanted then dismissed him.

Dad offered his formulas to Loma Linda Foods, but they would rather steal them.

To lose their main man, Ransom Brown, was a huge loss to the company.

When Dot [Dorothea], went back to Illinois, in 1933 or 1934 [or maybe even 1932] she attended something

© Copyright Soyinfo Center 2014

sponsored by A.E. Staley Manufacturing Co. She had a booth of her father's soy products and gave out samples. She was the only one with soyfoods. Others had plastics, etc. She did not speak. But her 1936 American Soybean Association (ASA) speech was definitely that year. It was a soybean convention. She demonstrated and exhibited all of Dad's products.

Maybe her opportunity to go to Japan in 1964 was related to the soybean books she wrote and to that speech. The family soy bean factory no longer existed in 1936. Address: Jackson, California.

2314. **Product Name:** Loma Linda Savory Dinner Loaf (Dry Mix).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1982 February.
Ingredients: Soy protein concentrate, egg whites, wheat gluten, onion, natural (vegetable) flavors, rice flour, corn starch, artificial flavor, guar gum, garlic powder, caramel color, spices, whole wheat flour, monosodium glutamate, cottonseed oil, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 4.5 oz can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per ¼ cup (16 gm): Calories 50, protein 9 gm, carbohydrate 4 gm, fat less than 1 gm, cholesterol 0 mg, sodium 380 mg, potassium 140 mg.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1982.

2315. **Product Name:** Loma Linda Corn Dogs (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1982 February.
Ingredients: Meatless wiener: Wheat gluten, corn oil, water, dried yeast, soy protein concentrate, artificial and natural (vegetable) flavors, wheat germ, soy flour, onion, vegetable mono- and di-glycerides, garlic powder, salt, soy lecithin, caramel color, L-lysine, paprika, artificial color, spice, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin). Batter: Enriched flour, corn flour, enriched corn meal, sugar, salt, soy flour, soy oil, whey, egg yolks, dried honey, sodium acid pyrophosphate, sodium bicarbonate, monocalcium phosphate, artificial and natural (vegetable) flavors.
Wt/Vol., Packaging, Price: 10 oz paperboard box.
How Stored: Frozen.
Nutrition: Per 1 corn dog (2.5 oz–71 gm): Calories 250, protein 12 gm, carbohydrate 7 gm, fat 19 gm, cholesterol 0 mg, sodium 300 mg, potassium 120 mg.
New Product–Documentation: Food Report (Lehmann). 1982. Aug. The frozen corn dogs are meatless wieners dipped in corn batter.

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1982.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

2316. **Product Name:** [Haimaru / Haimiru Soyalac {Soymilk} (Plain, or Cocoa)].
Foreign Name: Haimaru Kokoa, Haimaru Soiyarakku.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1982 February.
Wt/Vol., Packaging, Price: 180 gm foil retort pouch (standing pouch).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: See next page. K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Haimaru Kokoa, and Haimaru Soiyarakku were introduced in Feb. 1982 by Saniku Fuuzu in a 180 gm standing pouch and distributed nationwide.

• ***Summary:*** In the second half of this century, new reasons for becoming a vegetarian have appeared which often are associated with a desire for good health, philosophical orientations, new spiritual beliefs, or ecological issues. People who initiate vegetarianism for those reasons have been called the "new" vegetarians and represent the majority of those currently involved in this lifestyle in the United States. New vegetarians are of interest to nutritionists because their food habits differ considerably from those of traditional vegetarians, such as the Seventh Day Adventists and Trappist Monks. Address: Dep. of Home Economics and Psychology, Univ. of Texas, Austin, TX 78712.

2320. *SoyaScan Notes.* 1982. Chronology of Great Eastern Sun Trading Company in North Carolina. 26 Jan. 1994. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1982 March–The company is founded by Barry Evans. Martin Roth is the first manager. The original purpose is to be a distributor for the miso made by American Miso Company. But the company soon decides to import Japanese

© Copyright Soyinfo Center 2014

macrobiotic products from Mitoku (the first order was placed in Jan. 1982) and later to become a manufacturer.

1984 July–Great Eastern Sun starts to import Ah Soy (soymilk, in chocolate, vanilla, and original flavors). Made in Japan by San-iku Foods, and sold in a stand-up foil retort pouch, it soon becomes very popular. Don DeBona is the first product manager. Address: 92 Macintosh Rd., Asheville, North Carolina 28806.

2321. Holmes, Charlotte Van Gundy. 1982. Re: More about the life and work T.A. Van Gundy. Letter to William Shurtleff at Soyfoods Center, April 21–in reply to inquiries. 1 p. Handwritten answers between the typewritten questions from Shurtleff.
• ***Summary:*** Q2. In 1936 in *La Sierra Recipes* Dot [Dorothea] described Soy Cream made by mixing equal parts soymilk and oil with a little vanilla, sugar, and salt, then running the mixture through a homogenizer to make a substitute for whipped cream. Did your father ever mark this commercially? Ans: No.

Q3. Did he ever make it for the family? Using the homogenizer? Ans: Always. I had also a mamenoka [roasted soy flour] flour folder. The address of La Sierra Industries in Ontario was Campus and Maitland, Box 203. No Zip code of course.

"Bill: In going thru old material I also found a memo book for Mildred Lager. She used soy beans at Dr. McCoy's clinic in 1933 and she mentions the soy products in her literature. I believe they are all Dad's products but [she] does not give brand name–1934.

Bill: See if you can get Dad's school record in L.A. [Los Angeles]. He taught East Side L.A.–I think Junior High. Lived in San Gabriel 1927-1929 Fall. Moved to La Sierra 1929 Fall. Dad started soy products commercially. I drove from La Sierra to Loma Linda medical school, Aug. 1931-1933. In June 1933–moved to Ontario after [my] school closed. Factory was on Campus and Maitland. Will try to find booklet [which she found and sent]. Daddy in full swing–New label–Beautiful. Never saw a prettier one. Soy bean plant on can. Soft greens & a speck of red. Dot [Dorothea] went to soy convention in either Fall 1933 or 1934. Wish we could find convention date. This is where she had a booth.

Mom & Ted sold soy ice cream in carrot, vanilla, carob & avocado flavors at L.A. Household show in 1933 or 1934.

Father passed away June 3rd 1935–all folded up.

Mildred Lager says soy beans 1933 mentioned soy bean products, listed 1934. Address: Jackson, California 95642.

2322. Shurtleff, William; Aoyagi, Akiko. 1982. History of okara (soy pulp) and soy bran. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 11 p. April 22. Unpublished typescript. Available online at www.soyinfocenter.com.

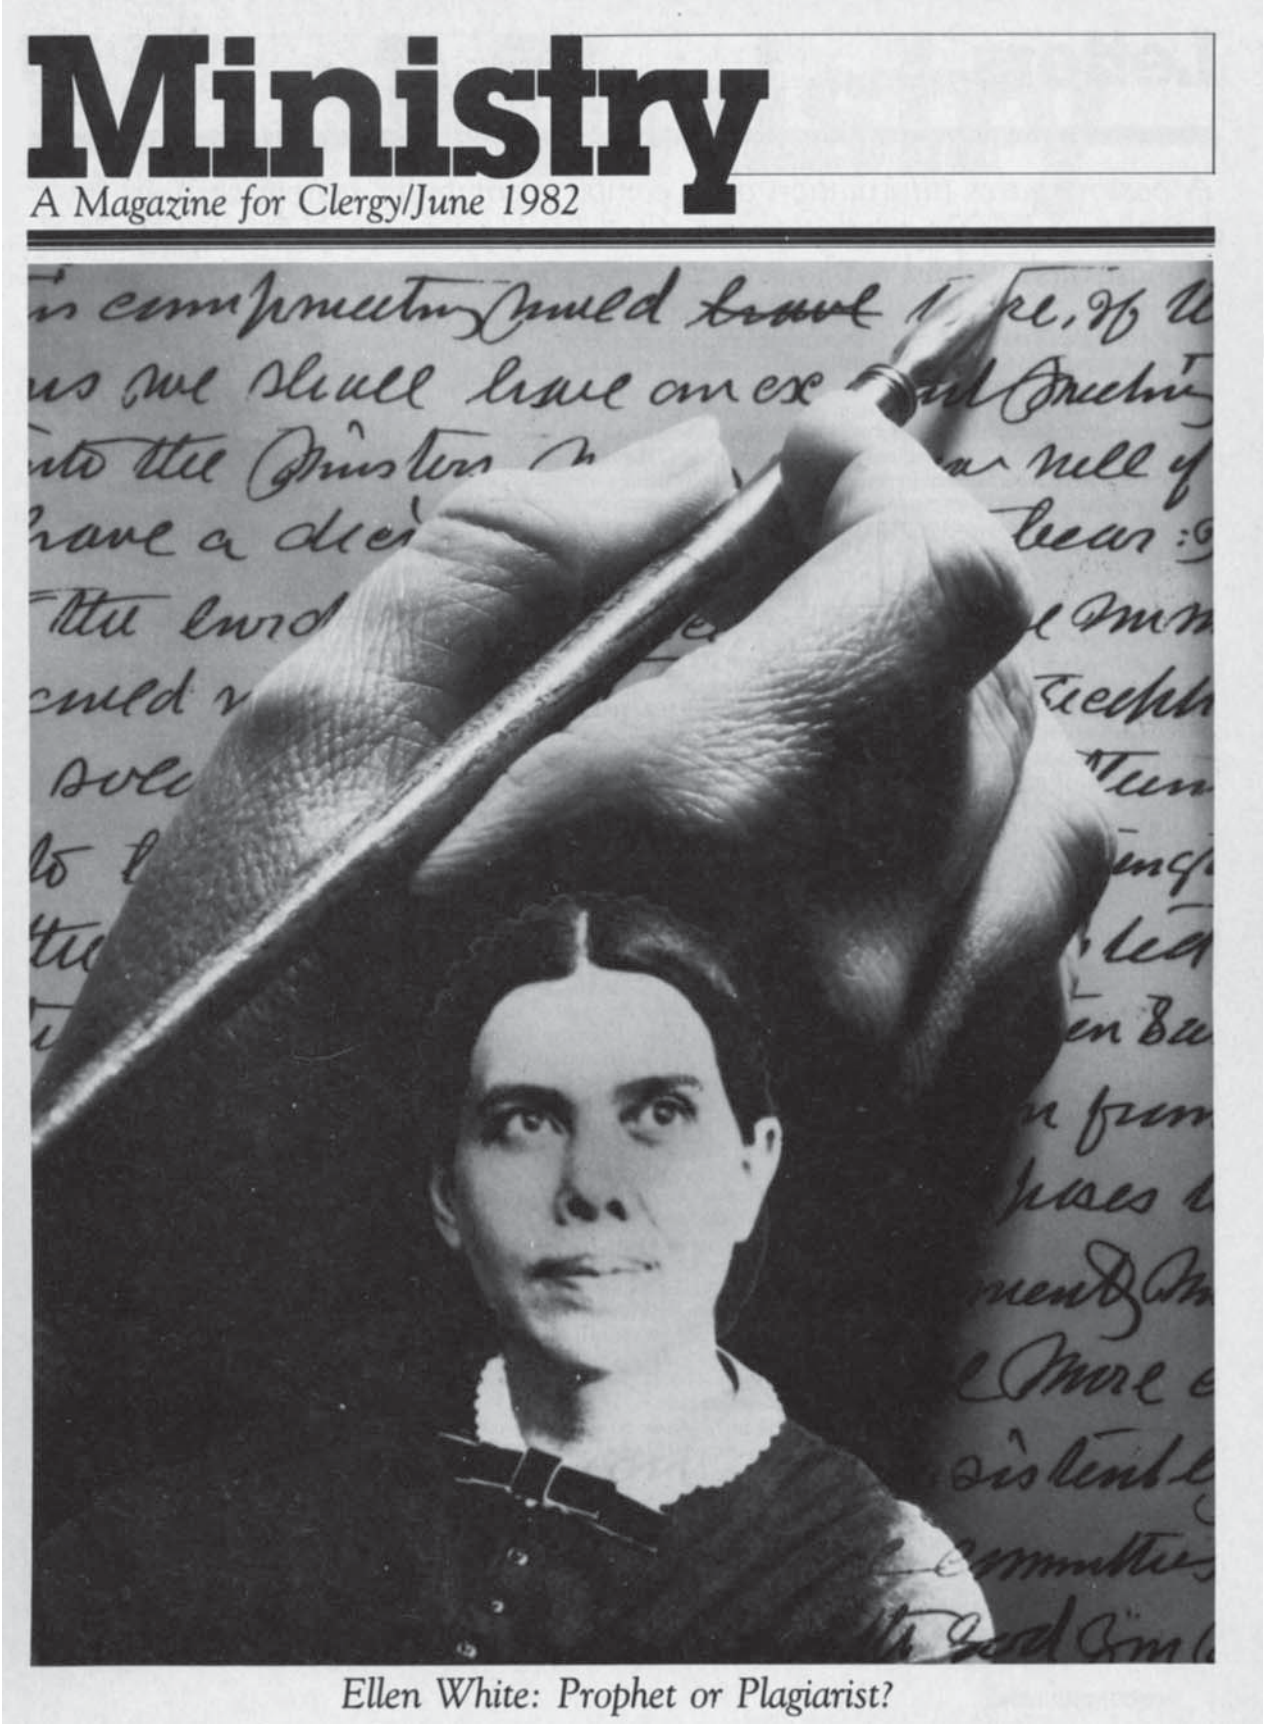
2324. Johns, Warren H. 1982. Ellen G. White: Prophet or plagiarist? *Ministry* 55(6):5-19. June. [32 ref]
• ***Summary:*** See next page. The Seventh-day Adventist church's position on E.G. White's alleged plagiarism. Contents: "Although dressed in different garb, the issues facing the church in the 19805 are strikingly similar to those faced in the 1800s. This special report is a fresh analysis of Ellen White's use of literary sources, culminating more than five years of research by one of Ministry's associate editors.



"1. Closed Windows or Open Doors (p. 5): For the past one hundred years the church has been aware of Ellen White's literary borrowing. What is new today is not the fact of her borrowing, but the extent of the borrowing. Some have charged the church with cover-up, but how can she cover up that which she did not know?

"2. Literary Thief or God's Messenger? (p. 13): Plagiarism involves much more than the nonuse of quotation marks. The author discusses the five ingredients of literary theft.

"3. Human Thoughts or Divine Truths? (p. 16): Granted that Ellen White did use material without quotation marks more extensively than previously thought, does this make her any less inspired, any less a messenger to God's church today, and her counsels any less trustworthy than one hundred years ago?"

Note: The recent charge of plagiarism was raised in 1982 in the book *The White Lie,* by Walter T. Rea. Address:

• ***Summary:*** Contents: Summary and highlights: Sales programs, food for development, use of foreign currencies, foreign donations, world food program. Title I sales program: Agreements signed in fiscal year 1980, accounting for Title I costs, self-help provisions, food for development, use and administration of Title I foreign currencies. Title II foreign donations: Program highlights, world food program, the food aid convention of the international wheat agreement. Appendix–statistical tables.

Table 18 is titled "Title II, Public Law 480, total commodities shipped by program sponsor, fiscal year 1980." The main program sponsors and distributing agencies, listed alphabetically, are AJJDC (American-Jewish Joint Distribution Committee), CARE, CRS (Catholic Relief Service), CWS (Church World Service), LWR (Lutheran World Relief), SAWS (Seventh-day Adventist World Service), UNICEF, UNRWA (United Nations Relief and Works Agency), and WRC (World Relief Commission). All of these are Private Voluntary Organizations (PVO/PVOs), registered with USAID. The following foods containing soy protein were distributed: CSM (corn soya mix), WSB (wheat soya blend), and small amounts of soya flour. The vegetable oil which was shipped to many countries was soybean oil; it is not recorded here.

Foods containing soy protein were distributed to the following countries or areas: Near East: Egypt, Gaza, Jordan, Morocco, Tunisia. Latin America: Bolivia, Chile, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Nicaragua, Panama, Paraguay, Peru, St. Lucia.

Africa: Angola, Benin, Botswana, Cape Verde Islands, Comoro Islands, Ethiopia, Gambia, Ghana, Guinea-Bissau, Ivory Coast, Kenya, Lesotho, Liberia, Malawi, Mauritania, Mauritius, Mozambique, Senegal, Sierra Leone, Somalia Republic, Swaziland, Tanzania, Togo, Upper Volta, Zambia.

Asia: Bhutan, India, Indonesia, Kampuchea, Nepal, Philippines, Sri Lanka. Address: Washington, DC. Phone: 703-875-4901 (1991).

2327. *Toyo Shinpo* (*Soyfoods News*). 1982. Tônyû no peeji: 2-3 baizô no urigae o tassei. Sudeni 150 oku shijô keisei no koemo [The soymilk industry and market in Japan: Sales have increased 2-3 fold to an estimated 15,000 million yen per year]. July 21. p. 26. [Jap; eng+]
• ***Summary:*** Industry sources say that the Japanese soymilk market has already reached about 15,000 million yen. The order in which companies started making or marketing soymilk is: 1959 San-iku Foods. 1969 House Shokuhin. 1972 Ishihara Food Center. 1974 Tokyo Soymeal, Kenbi-Sha, Okazaki Marusan. 1976 Asahi Shokuhin, Soken-sha, Kyushu Nyugyo. 1977 Kibun, Natural Foods. 1979 Mitsubishi Kasei Shokuhin. 1980 Chiba Seisen Shokuhin Kogyo, Meiji Nyugyo. 1981 Yakuruto, Nagano Tomato, Morinaga Nyugyo. 1982. Seven-Up Inryo. Among these, House Shokuhin and Tokyo Soymeal have discontinued.

Major Japanese brands of soymilk, aseptically packaged in Tetra Brik cartons are (percentages indicate market share): Kibun Foods (Plain, Yogurt flavored, Fruit, Barley Malt & Coffee), 41.7%; Okazaki Marusan (Plain, Orange, Barley malt), 23.3%; Mitsubishi Kasei (Maburon plain, Orange, Coffee, Honey), 10.0%; San-iku Foods (Soya Neo Cocoa), 8.0%; Kyushu Nyugyo, 6.0%; Meiji Nyugyo (Sun-Glow), 5.8%; Kenbisha, 2.5%; Asahi Shokuhin (Plain, Orange, Coffee), 2.5%; Soken-sha, 1.3%; and Natural Foods, 1.3%. Most sizes are 200 ml, which retail for 75 yen with a 60 day shelf life.

Companies with the largest number of different soymilk products are: (1) Okazaki Marusan has 15 products including soymilk in a Pure-Pak carton (500 ml for 150 yen) and in a can (195 gm); (2) Kyushu Nyugyo has 13 products incl. Midori Tonyu; (3) San-Iku Foods has 10 products, including canned soymilk; (4) Kibun has 8 products. Mitsubishi Kasei is taking a different approach; they have only 5 items (honey, coffee, fruits, sour, and plain) but are aiming at large production.

Kibun's sales have been very good, especially after they switched to the Brik Pak-type carton. Last year they had sales of 2,500 million yen and they are aiming to double that this year. Industry analysts believe that Kibun will be the industry leader for a while.

Mitsubishi Kasei established Mitsubishi Kasei Shokuhin in January of this year, and transferred all soymilk sales to

© Copyright Soyinfo Center 2014

that new department. They are hoping this year's sales will be three times as large as last years, hopefully 1,800 to 2,000 million yen. They are now constructing a new soymilk plant in Okayama, and when it is done they hope sales will reach 8,000 million yen.

Okazaki Marusan has grown 20-fold in the past 5 years. They predict this year's soymilk sales to be 2,000 million yen.

A photo shows 24 soymilk products. Most are in Brik Pak Aseptic cartons. Three Soyalac products are in cans. One product is in a retort pouch.

2328. **Product Name:** [PHAG Carob Drink].
Foreign Name: PHAG Caroba-Drink.
Manufacturer's Name: PHAG Sàrl (Produits Hygièniques Alimentaires Gland) (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: La Ligniere, CH-1196 Gland, Switzerland. Phone: 022/64 11 18.
Date of Introduction: 1982 July.
Wt/Vol., Packaging, Price: 0.5 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Remy Mayer of PHAG. 1990. Oct. 2. This product was introduced in July 1982. His company distributed the product, which was made by a manufacturer in Belgium [probably Alpro].

2329. Ostling, R.N. 1982. The church of liberal borrowings: Plagiarism and fraud charges rock the Seventh-day Adventists. *Time*. Aug. 2. p. 49.
• ***Summary:*** The Seventh-day Adventist (SDA) church has been rocked by two scandals: The second, which may be the more damaging of the two, concerns the charge that many of the writings of Ellen G. White about health reform may have been plagiarized from other earlier or contemporary writers. This charge was raised by Walter T. Rea in his book *The White Lie*, published in April 1981.

Rea, a veteran SDA pastor from Patterson, California, began to come across duplicate passages in the course of his PhD research. He found (and documented very carefully) that large numbers of long passages by previous writers on health appeared with identical wording in books by Ellen G. White, who never cited her sources, but rather attributed to passages to divine inspiration. The SDA church has been forced to admit (in *Ministry*, its magazine for clergy) that "White's use of 'outside sources' was much more extensive than Adventists realized."

2330. Gardiner, Doris Kloss. 1982. Re: Jethro Kloss' work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Aug. 3. 1 p. Answers handwritten after typewritten questions on Soyfoods Center stationery.
• ***Summary:*** Doris is Jethro Kloss' only grandchild. She was born on 28 Feb. 1929 in Miami, Florida. Concerning her grandfather's work with soy ice cream she recalls: "My mother and I, my uncle Eden, and my grandfather spent the winter of 1935-36 in Miami, Florida. I know he was preparing soy ice cream to serve at the close of his lectures and food demonstrations at that time. I used to get to lick the freezer paddles before he left for the lectures.

"I have no idea where and when and why Jethro Kloss became interested in soybeans. The soy foods that I remember that he made and that I ate as a child were the soy ice cream (of course!), delicious soy bean bread, soy bean butter, soy milk, soy cheese, pie crust, soy coffee, broth, soy mayonnaise, and soy bean roast.

"I just talked with my aunt (Promise Kloss Moffett), who lives in Hagerstown, Maryland, and who turned 79 today, and she does not recall if Jethro used any soy in the commercial health foods he made at the Nashville Sanitarium Food Company (which was sold in 1919-1920). She said that she does recall his experimenting with soy beans when they lived in Brooke, Virginia (in about 1924)." Address: Back to Eden Books, P.O. Box 1439, Loma Linda, California 92354. Phone: (714) 796-9615.

2331. **Product Name:** Ceres Natural Soy Milk.
Manufacturer's Name: Ceres Natural Foods Pty. Ltd. (Importer & Distributor). Made in Japan.
Manufacturer's Address: East Bentleigh, Victoria, Australia.
Date of Introduction: 1982 August.
Wt/Vol., Packaging, Price: 180 ml pouch.
How Stored: Shelf stable.
New Product–Documentation: Talk with Don Lazzaro of Ceres Natural Foods. 1995. June 6. Their first imported product was named Ceres Natural Soy Milk. The label was an "oversticker" on a narrow plastic (not foil) stand up pouch in those days. It was made by either Marusan or Saniku.

Letter (fax) from Don Lazzaro of Ceres Natural Foods. 1995. June 15. In Aug. 1982 they introduced a soymilk product in a 180 ml pouch with a Ceres label, made by and imported from Saniku Foods in Japan. In Oct. 1983 this pouch was redesigned and became available in four flavours [probably natural, vanilla, barley malt, and one other]. During the mid-1980s, Ceres also imported and sold the Westbrae Westsoy and Ah Soy brands from the USA.

2332. Henderson, Brian E.; Ross, R.K.; Pike, M.C.; Casagrande, J.T. 1982. Endogenous hormones as a major factor in human cancer. *Cancer Research* 42(8):3232-39. Aug. [129 ref]
• ***Summary:*** Higginson and Muir (1979) calculated that about one-third of male cancers and two-thirds of female cancers are probably caused by environmental factors related to "life-style." This latter, vague term includes such factors as diet, sexual activity, and reproductive behavior [such as

© Copyright Soyinfo Center 2014

pregnancy, child bearing, etc.].

Hormonal cancers include endometrial cancer, breast cancer, prostate cancer, and epithelial ovarian cancer; less important than the above are testes cancer, thyroid cancer, and osteosarcoma.

The binding property of isoflavones to estrogen receptors may reduce breast cancer, which is estrogen dependent. Address: Depts. of Family and Preventive Medicine, Univ. of Southern California School of Medicine, Los Angeles, California 90033.

2333. Berney, DeDee; Smith, Scott. 1982. Vegetarian celebrities: Who's a vegetarian and who's not. *Vegetarian Times.* Oct. p. 70-71.
• ***Summary:*** Lists the vegetarians by occupations, with photos of 9 prominent ones: Show business and models (45 people), authors and writers (32), sports (39), music (53), historical (35), other famous people (32).

The following 25 people are on the "Historical" list: "Louisa May Alcott, General William Booth, Buddha, Clement of Alexandria, Charles Darwin, Leonardo da Vinci, Albert Einstein, Ralph Waldo Emerson, St. Francis, Benjamin Franklin, Mahatma Gandhi, Horace Greeley, J.H. [John Harvey] Kellogg, Dalai Lama, John Milton, Isaac Newton, Ovid, Plato, Plutarch, Alexander Pope, Pythagoras, Jean Jacques Rousseau, Albert Schweitzer, Seneca, George Bernard Shaw, Percy Bysshe Shelley, Upton Sinclair, Socrates, Rabindranath Tagore, Henry David Thoreau, Leo Tolstoy, Voltaire, H.G. Wells, John Wesley."

2334. Yoshimura, Sam. 1982. Dr. D.W. Harrison and Africa Basic Foods (Interview). *SoyaScan Notes.* Nov. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. D.W. Harrison is a black Seventh-day Adventist (SDA) missionary doctor. He supports his own work largely through his medical practice, with financial assistance from CARE. He receives no money from the SDA church and probably none from the Government of Uganda. He began this work at age 37-40 and is especially interested in children. He now also has a medical practice in Washington, DC; the SDA General Conference would have his address.

Sam went to work with Dr. Harrison and his company, Africa Basic Foods, when he was connected with Worthington Foods. Worthington paid his full salary and travel expenses; Dr. Harrison paid his living expenses. He had close ties with a hospital in Kampala, Uganda, to study kwashiorkor, etc. Sam thinks the soybean project came to an end (at least for a while) about 2 years after Sam left, because of the unsettled, dangerous political situation in Uganda [under General Idi Amin, who was a brutal dictator from 1971 to April 1979]. Dr. Harrison was not kicked out by the Government of Uganda. He worked closely with UNICEF and with Uganda's Ministry of Health. Address: 8200 Colonial Meadows, Westerville, Ohio 43081. Phone: 614-882-0625.

2335. Harrison, D.W. 1982. Work with soyfoods in Ghana, Uganda (Africa Basic Foods) and Kenya (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 12. 4 p. transcript.
• ***Summary:*** Reminiscences of his pioneering work in Africa, starting in Ghana in the early 1960s. Address: 7503 Kipling Parkway, District Heights, Maryland 20028.

2336. Folkenberg, Robert. 1982. The Seventh-Day Adventist Inter-American Food Company, and Dr. Steven Youngberg's soymilk plant in Honduras (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 10. 1 p. transcript.
• ***Summary:*** Dr. Steven Youngberg arrived in Honduras in about 1959-61. He is a self-supporting SDA medical missionary. He operates an orphanage and a small clinic, and has done quite a bit of work with foods, including soyfoods. Folkenberg lived there from 1970-74 and knew him well. Youngberg began making soymilk at an early date. He had a large plant as well as a portable plant. He set up the portable one at a fairground in San Pedro Sula. He had a fine product and it was well accepted, but it was not well marketed or distributed. Address: Inter-American Food Co., P.O. Box 340760 (760 Ponce de Leon Blvd.), Coral Gables, Florida 33134. Phone: 305-443-7471.

2337. Miller, A.B. 1982. Risk factors from geographic epidemiology for gastrointestinal cancer. *Cancer* 50(11):2533-40. Supplement. Dec. [74 ref]
• ***Summary:*** "Seventh Day Adventists and Mormons show a low risk of colon cancer. Internationally intake of fat is correlated with colon, rectal, and pancreatic cancer, and starch with stomach cancer." Address: MB, FRCP(C), Director, NCIC Epidemiology Unit, McMurrich Building, 3rd Floor, Univ. of Toronto, Toronto, Ontario M5S 1A8.

2338. Tsuchiya, Kanji. 1982. Tônyû. Shinban [Soymilk. 2nd ed.]. Tokyo: Shoku no Joho-sha. 223 p. First edition was published in 1980. Illust. 17 cm. [Jap]
• ***Summary:*** This is the best book seen to date on soymilk in Japanese. A detailed chronology of tofu and soymilk is given on pages 173-76. Over 20 years ago, when Mr. Tsuchiya was plant manager of the *Kyôdo Nyûgyo* dairy milk plant at Matsumoto, he became interested in using soy protein to replace dairy protein. Although soybean crushers had investigated the use of defatted soybean meal, the techniques for removing the beany flavor and smell were not yet good enough to allow substitution of soy protein for milk solids. At that time there was a shortage of imported nonfat milk for use in ice cream bars. It was said that a small numbers of manufacturers of the inexpensive ice cream products were

© Copyright Soyinfo Center 2014

already using some soy protein to increase their over-run. "Discovering this, Nisshin Seiyu, after some research, found a method of removing the beany smell by fermentation with a yeast; they asked if Kyodo Nyugyo could make a test run of 10 kg of spray-dried soymilk in our plant. So they dissolved soy powder (*daizu-ko;* which had been defatted at a low temperature) in water, added yeast, waited until the reaction was finished, diluted it with some water, and put it in a spray dryer. Yet the spray drying caused some protein denaturation and an increase in the viscosity of the soy powder, which made it difficult to pump the solution to the top of the spray dryer. Glucose was used to replace half the soy powder. The spray-dried powder would not dissolve in water and the resulting mixture had a muddy brown color, a flavor that was too sweet, and a beany flavor. It was useless. They had discovered that defatted soybean meal and nonfat dried milk behave differently. Defatted soybean meal contains about 20% sugars, but less than 1/3 of these are water soluble and many have a very complicated structure and high viscosity."

Therefore they started to study the basic nature of defatted soybean powder (*dasshi daizu-ko*) and after much trial and error, in 1961 they applied for a Japanese patent on "The method of refining defatted soybean powder" (*Dasshi daizu-ko no seisei hôhô*). They were issued the patent (#16,658) in 1962. The key to the success of this patent was the use of meta potassium bisulfite (*meta jûaryusan karium*), which lowers the viscosity, bleaches it and increases the amount of soluble nitrogen. Not enough of the beany flavor had been removed, yet at that time it was an excellent product, which could be used in place up to 30% of nonfat dried milk to make an ice cream product without a beany flavor. Mr. Masaharu Sato (who is presently head of the soybean department of Kyodo Nyugyo's central research lab) was the person who contributed most to the discovery. He is now conducting research on tofu and soymilk. "I still see him often since we are both members of Soyfoods Development Study Group (*Daizu Shokuhin Kaihatsu Kenkyû-kai*). He recently told me, 'After that incident, I became captivated by soy protein.'"

"After about 2 years of research, during the summer we received an order from Nisshin Seiyu for 200 tons of soy protein. Our plant had been losing money for a long time, and this discovery helped to make some profit during my time of work there. I will never forget it. I feel real gratitude to Nisshin Seiyu for helping us to become captivated by soybeans."

At about that time dairy farmers throughout Japan began to compete with one another in a price war which lowered milk prices. The battle between them and the owners of dairy milk companies got worse and worse. Among the leaders of this struggle were progressive dairy farmers in Matsumoto. "Although we made soy powder very secretly, one of the plant workers, who was the son of a dairy farmer, leaked the secret. This caused an uproar (we were using soy powder instead of dairy milk) and the local farmers asked us to stop immediately. However we decided to continue making soy powder for various reasons: (1) We had to fulfill the order that we had accepted; (2) Since we simply processed soy and sold it to another company, this had no effect on our plant's use of unprocessed dairy milk; (3) The soy business allowed out plant to operate profitably and this allowed us to return some money on the dairy farmers' investment." For a variety of complex reasons related to this conflict, Mr. Tsuchiya was fired as plant manager for Kyodo Nyugyo's Matsumoto dairy milk plant. Though his retirement was very near, he left the dairy industry without regret to continue his research on soy powder (p. 14-19).

"Meeting with Dr. Miller: During the period 1965-1969 I was involved in the founding of Taiwan Ryokusô Kogyô Kôshi, and I took a leadership role in constructing modern plants to make powdered soymilk and chlorella. One of the leaders in the chlorella industry, the late Dr. Yoshio Takechi, was in charge of the chlorella cultivation department and I was in charge of chlorella product development and of powdered soymilk production. In 1966 Dr. W.A. [sic, Harry W.] Miller (who was a founder of Loma Linda Foods) and his son visited our company, under the guidance of Dr. Taisei of Taikei University. At that time Dr. Miller stood on the platform atop our spray dryer, which was 20 meters tall and had 500 liters/hour capacity. Admiring it, he said: 'I've never seen a soymilk plant which has this much facilities!' He also tasted the soymilk (from which the beany flavor had been removed) and said 'I wonder if you have to refine soymilk to this degree for Chinese people.' His words left a strong impression in my memory. Sure enough, when the factory was completed and we launched our canned soymilk powder, we heard Chinese saying, 'This is not real soymilk. It's an imitation.' But we did a good marketing campaign and soon the soymilk started selling. When my 2-year contract ended, I returned to Japan. After that, the products produced in this plant were used as food for the Taiwanese army and were not sold to the public. Moreover, because of the chlorella boom in Japan, the spray dryer was used for chlorella and soymilk production stopped. Since I had great expectations for this plant, I was greatly disappointed.

"Right after I returned to Japan in 1970, I was asked to provide technical assistance to Keijô Shison Shokuhin Kenkyusho, a research lab in Korea headed by pediatrician Son Zaien. I visited there several times and even drafted a floor plan, then suddenly the Japanese government told me that the money which had been available for helping Koreans was no longer available, so I could do no more" (p. 18-21; see p. 53 for more on soymilk in Korea). Continued. Address: Technical consultant, Okazaki Marusan, Japan.

2339. Tsuchiya, Kanji. 1982. [Soymilk in Japan, and its history (Document part)]. In: Kanji Tsuchiya. 1982. Tônyû.

Shinban [Soymilk. 2nd ed.]. Tokyo: Shoku no Joho-sha. 223 p. First edition was published in 1980. [Jap]

• ***Summary:*** Building a plant specialized in making soymilk (p. 21-24): After my two overseas attempts ended in failure, I returned to studying the basics. With the help of a friend, I had a soymilk test plant (55 liters/hour) built on the outskirts of Sendai, in the Tohoku region. There I worked on making soymilk with less beany flavor and better digestibility. Over a period of about 2½ years I completed development of a new heating system (Japanese Patent No. 19,928 issued in 1973), and also completed a report on digestibility of soymilk with my co-worker Kazuhiro Ootomo. In order to test the results of my research, I went to Tokyo in 1974. I found an investor, taught my techniques to Tokyo Soymeal K.K., spent 9,000,000 yen, and started to build a soymilk plant in the Tokyo area. At about this time other early soymilk manufacturers like House Luppy, Soyalac, etc. were building the market slowly but steadily, making about 10,000 to 20,000 packs/day. Our company, Tokyo Soymeal, cut into this market share, and spent 3 very tough years. But finally we were producing 6,000 packs/day and we first started to break even financially. Our soymilk product, named Soymeal, marketed as a soft drink, had a good flavor and was accepted as a new type of soymilk by consumers.

"However I realized at that time that soymilk was being sold only in the health food market. Because of that, no regular mainstream consumers bought our soymilk since distributors placed it only in Diet- and Health food stores, and in the drug section of other stores. Thus our share of the milk or beverage markets was extremely small, and expansion was difficult. Our next step was to change consumers preconceptions about soymilk.

"I want to make a tasty soymilk: Rather than placing emphasis on health or medical care, beauty care, changing one's constitution, etc. I wanted to make a soymilk product that was simply delicious and nutritious. But unfortunately our Soymeal company had to close its plant in December 1978 because the landlord sold the land on which the plant was located. This land was located next to the Tachikawa U.S. military base, and when the U.S. army gave the land back to the Japanese government, the price of land in the whole area rose. Thus our landlord wanted to sell his land too.

"In order to use my past effort and experience to make a new start, I was planning to build a plant in the Chûbu area. I did not have the means to do this by myself, but by good fortune, in 1979 Okazaki Marusan K.K. decided to help this enterprise and I was accepted as a member of their company. And furthermore it is planned to build a plant that can produce 4 times as much soymilk as plants that existed in May 1980. I would like to produce the best soymilk in Japan. The Japanese Department of Food, Agriculture, and Forestry is now studying soymilk with the intent of establishing a JAS standard in 1980."

Pages 50-52 show a chart of different brands of soymilk and soy-based infant formulas sold in the USA, with the name of the manufacturer, ingredients, and/or composition. These include: Loma Linda Food Co. of Arlington, California (Soyagen [liquid or powder], Soyalac); Mead Johnson & Co. of Evansville, Indiana (Metrecal, Sobee); Dietetic Food Co. Inc. of Brooklyn, New York (Diamel no Sorina); Ovaltine Food Products of Villa Park, Illinois (Ovaltine, 2 types which contain soy protein); Gerber Food Products of Fremont, Michigan; Plus Products of Los Angeles, California; Borden Co. of New York (Mullsoy, 2 types); Pavo Co. Ice of Minneapolis, Minnesota.

Early history of soymilk: In the *Teikun Orai*, written during the Muromachi (Ashikaga) period in Japan, the word *tofu-kan* appears in the section titled *Shojin Ryori* (Buddhist Vegetarian Cookery). That word used to mean "tofu soup" but it actually refers to what Japanese today call soymilk (*tônyû*). In the book *Sôgo Daisô-shi*, written in about 1417-1473 by Ise no Jôshin, there is a section on cooking okara (*unohana*). Mr. Tsuchiya thinks this soup was similar to today's soymilk except that the okara had not been removed. The author was the ancestor of Ise no Teijô, who lived during the Tokugawa (Edo) period and wrote that the word *Tofu-kan* should actually be pronounced *Tofu-ko*, and means "soup" (*shiru*). When the last character is pronounced "kan" it means "yokan." Note: Could Mr. Tsuchiya be confusing Manpukuji's tofukan (hard tofu) with the word tofukan that means soymilk?

A table (p. 72-75) lists all Japanese soymilk products made to date, including the name of the manufacturer, the exact date of introduction, range of distribution, package size and type, and retail price. Products sold by the following companies are listed: Kibun, Okazaki Marusan, Mitsubishi Kasei Shokuhin, Meiji Nyugyo, Kyushu Nyugyo, Nisshi Seiyu, Asahi Shokuhin, Kyodo Nyugyo, Yakuruto Honsha, Furuta Shokuhin Kogyo, Morinaga Nyugyo, Sugiyo, Koshin Nyugyo, Kenbi-Sha, Saniku Foods / Fuuzu, Nagoya Seiraku, Nagano Tomato, Zenkoku Nokyo Chokuhan (Nokyo), Yamato Shokuhin, Sokensha, Ishihara Fuudo Senta, Chiba Seisen Shokuhin Kogyo, Asahi Fuuzum Sebun-Irebun (7-11), Fukushima-ken Rakuren, Nacuraru Fuuzu (Natural Foods), Sebun Appu Inryo (7-Up). This entire table has been translated by Soyfoods Center; printed copies are filed with the book. The word processing filename is d:\w\hss\MilkJap1.doc. In addition, most of these soymilk products have a commercial soy products (CSP) record in the SoyaScan database. Address: Technical consultant, Okazaki Marusan, Japan.

2340. **Product Name:** [Trisoy Cereal {Puffed Wheat-Soy Blend}].
Manufacturer's Name: Alimentos Colpac.
Manufacturer's Address: Km 13 Carratera Huatabampo, Apartado No. 502, Navojoa, Sonora, CP8500, Mexico.

© Copyright Soyinfo Center 2014

Date of Introduction: 1982.
New Product–Documentation: Soya Bluebook. 1985. p. 102. Talk with Gil Harrison of American Soybean Assoc. 1989. April 21. This puffed wheat and soy product was probably introduced in about 1981-82. "Its very good. Its one of my favorites. I buy it and eat it as a snack."

2341. **Product Name:** [GranoVita Soy Steaklet: Textured Soya Pieces].
Foreign Name: GranoVita Soja-Steakli: Texturierte Soja-Stuecke.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1982.
Ingredients: Defatted soy flour.
Wt/Vol., Packaging, Price: 250 gm wholesales for DM 5,95.
How Stored: Shelf stable.
Nutrition: Per 100 gm. dry: Protein 55 gm, fat 2 gm, usable carbohydrates 27 gm, calories 343. 1 BE = 44 gm.
New Product–Documentation: Manufacturer's catalog. 1981. May 1. DE-VAU-GE Sortiments-Preisliste. 4 p. Form filled out and Labels sent by DE-VAU-GE. 1990. June 11. The product was introduced in 1982. Label.

2342. **Product Name:** [Soja-Delikat {Vegetarian Slices for Sandwiches}].
Foreign Name: GranoVita Delikat.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: (04131)-303-145.
Date of Introduction: 1982.
Ingredients: Soya protein, corn germ oil, mushrooms, water, egg protein, onions, salt, dextrose, spices, yeast.
Wt/Vol., Packaging, Price: 250 gm can retails for DM 3,69.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products. "Tasty vegetarian slices to be used in various dishes, on bread or dressed and fried, in salads or stews."

2343. **Product Name:** Loma Linda Chicken Supreme (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1982.
Ingredients: Soy protein concentrate, egg whites, wheat gluten, natural (vegetable) flavors, artificial flavor, corn starch, onion, guar gum, monosodium glutamate, whole wheat flour, spice, cottonseed oil, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 4.5 oz can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per ¼ cup (16 gm) dry mix: Calories 50, protein 9 gm, carbohydrate 4 gm, fat less than 1 gm, cholesterol 0 mg, sodium 450 mg, potassium 190 mg.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1984. Feb. p. 113. "A lot more than meats the eye. Loma Linda Foods taste great."

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1982.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. Says the product is a "dry pack."

2344. **Product Name:** Loma Linda Ocean Platter (Meatless Fish Dish).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1982.
Ingredients: Soy protein concentrate, egg whites, wheat gluten, onion, artificial flavors, natural (vegetable) flavors, potato flakes, guar gum, whole wheat flour, garlic powder, lemon juice powder (malto-dextrin and lemon juice solids), spice, monosodium glutamate, cottonseed oil, salt, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, cyanocobalamin).
Wt/Vol., Packaging, Price: 4.5 oz can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per ¼ cup (16 gm) dry mix: Calories 50, protein 8 gm, carbohydrate 5 gm, fat less than 1 gm, cholesterol 0 mg, sodium 260 mg, potassium 170 mg.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1984. Feb. p. 113. "A lot more than meats the eye. Loma Linda Foods taste great."

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1982.

2345. **Product Name:** Loma Linda Patty Mix (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1982.
Ingredients: Soy protein concentrate, egg whites, wheat gluten, rolled oats, onion, natural (vegetable) flavors, artificial flavor, potato flour, guar gum, garlic powder, caramel color, whole wheat flour, monosodium glutamate, cottonseed oil, spice, vitamins (niacinamide, D-calcium

2351. Henderson, Bruce R. 1982. Oakland organic: A vegan primer. Albany, New York: Caboose Press. 200 p. Illust. 23 cm. [24 ref]
• ***Summary:*** This is a book about veganism which contains a few vegan recipes near the back. It focuses on the San Francisco Bay Area and urban areas, and contains extensive information about soybeans and soyfoods, much of it inspired by *Yay Soybeans*, from The Farm in Summertown, Tennessee. As follows: Miso, and Soya-Mineral Bouillon (Dr. Bronner's) (p. 19). Soy as an alternative protein source (p. 37-43). Soymilk (p. 53-56; Jethro Kloss). More soy (p. 57-61; soy pulp [okara] pudding, soysage, Garden of Eatin' Soy Jerky (illustration of package), Brightsong Missing Egg Tofu Salad (illustration), soy yogurt (fermented), soy tofu–hard, baked, or fried). Sprouting (p. 67-70; incl. soybeans). Fermented foods (p. 71-74; incl. tempeh, raw tofu). Snacks & quick foods (p. 88-96; incl. Ice Bean–soy ice cream, Ice-C-Bean). Miso and soy sauce (p. 120-21). Soy-related recipes: Baked apples with miso (p. 185-86). Tofu cheesecake (p. 188-89). Soysage (p. 193). Soy ice bean (p. 195). Note: Bruce Henderson was born in 1946. Address: Oakland, California.

2352. Loma Linda Foods. 1982. Pour a glass of fresh nutrition. It's a Loma Linda lunchtime (Poster). Riverside, California. 1 p.

• ***Summary:*** "Kids and grownups put their bodies through some pretty tough workouts most days."

"Taste is important. Nutrition is essential." A small photo shows 3 cans of Soyagen. A large photo (the lower half of the poster) shows a full glass of soymilk surrounded by (left to right) a sliced loaf of brown bread on a breadboard, a clear glass pitcher of half full of soymilk, a dark-brown woven basket of fruit, sliced cantaloupe and sliced tomatoes on lettuce on a slice of brown bread, and a clear glass bowl of white flowers with yellow centers. Address: Riverside, California.

2353. Rea, Walter T. 1982. The White lie. M & R Publications, Box 2056, Turlock, CA 95381. 409 p. Illust. No index. 23 cm. [100+ ref]

• ***Summary:*** First published in April 1981, this book is a scathing indictment of Ellen G. White, arguing convincingly and with page after page of examples, that she was a plagiarist. Most of this book is about her plagiarism from religious sources. But she also plagiarized in the fields of health, diet, and vegetarianism (see p. 66-76). Those health reformers from whom she drew most extensively were James Caleb Jackson, Russell T. Trall, Larkin B. Coles, Joel Shew, Sylvester Graham, and William A. Alcott. She was asked about this "borrowing" and in October 1867 she replied as follows: "It was at the house of Brother A. Hilliard, at Otsego, Michigan, June 6, 1863, that the great Subject of Health Reform was opened before me in a vision. I did not visit Dansville till August, 1864, fourteen months after I had the view. I did not read any works upon health until I had written 'Spiritual Gifts,' vol. iii and iv, 'Appeal to Mothers,' and had sketched out most of my six articles in the six numbers of 'How to Live,' and I did not know that such a paper existed as the Laws of Life, published at Dansville, New York. I had not heard of the several works upon health written by Dr. J.C. Jackson, and other publications at Dansville, at the time I had the view named above.

"As I introduced the subject of health to friends where I labored in Michigan, New England, and in the State of New York, and spoke against drugs and flesh meats, and in favor of water, pure air, and a proper diet, the reply was often made, 'You speak very nearly the opinions taught in the Laws of Life, and other publications, by Doctors Trall, Jackson, and others. Have you read that paper and those works? My reply was that I had not, neither should I read them till I had fully written out my view, lest it should be said that I had received my light upon the subject of health from physicians and not from the Lord."

Note 1. Before writing this book, Rea (pronounced "Ray") was a longtime devotee of Ellen G. White and her teachings. He was also the prolific author of many very popular and glowing books about Ellen White and her teachings. These books were sold at most Adventist bookstores. And he was a Seventh-day Adventist minister. In the mid-1970s he began to disclose evidence from his research that raised sobering questions as to the official church position on Ellen White. After writing this book, he was de-frocked [dismissed from the church]. He is also said to be a multi-millionaire, having made his money in various businesses.

Note 2. An index would make this book much more useful. Address: [Turlock, California].

2354. Seventh-day Adventist Dietetic Assoc. 1982. Diet manual, including a vegetarian meal plan. 6th ed. Seventh-day Adventist Dietetic Assoc., P.O. Box 75, Loma Linda, California 92354. 537 p. In a 3-ring binder with tabbed dividers. Index. 30 x 29 cm.

• ***Summary:*** This comprehensive guide to planning, selection, and coordination of vegetarian diets was edited by Georgia Hodgkin, M.S., R.D.; Susan Maloney, M.S., R.D., was the managing editor. Previous editions were published in 1960, 1965, 1970, 1975, 1978, and 1982. Each chapter has an author and a reviewer. References are found at the end of each chapter.

Contents: Introduction. Normal nutrient needs. Nutrition for pregnancy and lactation. Pediatric diets. Gastrointestinal diets. Renal diets. Cardiac diets. Diabetic and related diets. Mineral modified diets. Diet for acute care. Nutrition and immunity. Nutritional support and enteric feedings. Geriatric and rehabilitation diets. Test diets. Nutrition and drugs. Nutrition for exercise and weight control. Appendixes (11) including: Ingredients of selected vegetable protein foods (108 products, mostly made by Seventh-day Adventist companies). Nutrient composition of selected vegetable protein foods (the same 108 products whose ingredients are given above). Addresses of selected Seventh-day Adventist hospitals (16 hospitals). Selected vegetarian cookbooks (15 citations). Selected books concerning a vegetarian diet (7 citations). Tables (79 tables). List of figures (10 figures). Address: Loma Linda, California.

2358. Whorton, James C. 1982. Crusaders for fitness: The history of American health reformers. Princeton, New Jersey: Princeton University Press. xi + 359 p. Illust. Index. 22 cm. [477* ref]

• ***Summary:*** Critical of health reform movements and presented in an unsympathetic, sometimes mocking or sarcastic tone, this provocative book on the American "health fanatic" and "health faddism" is nevertheless extremely well researched and well written. It shows the importance of basing health reform movements on solid nutritional science. In attempting to prove his point, the author is often unbalanced in his presentation.

Contents: List of 11 illustrations (both photos and illustrations). Acknowledgments. Introduction: The kingdom of health. 1. A fig for the doctors. 2. Christian physiology (Reverend Sylvester Graham [1794-1851], Francois Broussais, William Andrus Alcott, Bronson Alcott). 3. Tempest in a flesh-pot (Vegetarianism, Graham, Alcott, George Cheyne, William Lambe, John Frank Newton, Russell Trall, William Cowherd, William Metcalfe). 4. Physical education. 5. Hygiene in evolution (Martin Luther Holbrook, Herbert Spencer). 6. Physiologic optimism (Horace Fletcher). 7. Muscular vegetarianism (John Harvey Kellogg, Ellen G. White). 8. Uric acid and other fetishes (Alexander Haig). 9. Philosophy in the gymnasium (Bernarr Macfadden). 10. The hygiene of the wheel (Rise of the bicycle and cycling). 11. A modern conspectus (J.I. Rodale, Adelle Davis, macrobiotics (p. 342), Frances Moore Lappé, Jay Dinshah, the religion of running and marathons, etc.).

The health reformer "is one of the classic characters bred by American culture." The first health reform movement started in the 1830s, with Sylvester Graham. Devotion, asceticism, and zeal have led to hygienic ideologies and religions of physical purification. A deep trust in the wisdom and beneficence of nature have characterized all American health reform ideologies. Perfection of the body is seen as a first step towards perfection of the whole organism, mind, moral character, and soul–and eventually of society and the world. Any indulgence which is immoral must also be bad for the body. Note: Seventh-day Adventists started the first health reform movement that used soyfoods.

Good health is seen as more than the absence of physical symptoms. Today we have "high level wellness" or well being.

These reform movements have flourished in periods of general reformist ferment and social optimism. Thus, the Jacksonian Era (Andrew Jackson was president of the U.S. from 1829-1837; Jacksonian democracy celebrated the virtues of the common people and of grass-roots democracy) and the Progressive Era of the 1900s and 1910s were years of great reform activity. The 1960s gave birth to the "wholistic health movement" of which the natural foods movement was but a part.

There have been few serious studies of the history of America's unique health reform movements. Recent exceptions include: *Prophetess of Health: A Study of Ellen G. White*, by Ronald L. Numbers (1976) and *Sex, Diet, and Debility in Jacksonian America: Sylvester Graham and Health Reform*, by Stephen Nissenbaum (1980).

America's first major health reform movement was founded by Sylvester Graham during the Jacksonian Era. Against the heroic medical therapeutics of the day (mercury compounds, opium, strong emetics and cathartics, and bloodletting) arose a deep trust in nature and a confidence that hygiene (the key word, which had a different meaning then) could replace medicine.

Sanitary reform began in the mid-1850s following the first invasion of Asiatic Cholera into America in 1832. Health reform grew largely out of Christianity. Hygienic living was considered by many to be a Christian duty, which was necessary for salvation and part of redemption. Its opposite was indulgence. So the emphasis was on what to avoid rather than on what to do. Graham was a Victorian New Englander, based in Boston, Massachusetts. He advocated avoiding consumption of alcohol, meat, spices, and white bread. He was a very strong advocate of whole wheat bread. Flesh food was doubly bad: the cruelty of the slaughterhouse and the fact that it was a "stimulating" food.

William A. Alcott, cousin of the famous Transcendentalist and "vegetarian by instinct" Bronson Alcott, was as busy a lecturer as Graham, but he had a more complete and balanced philosophy.

In the late 1830s, Graham and the American Physiological Society helped to organize the nation's first health food store in Boston, to supply Graham Bread and fresh fruit and vegetables grown in virgin, unfertilized soil.

The Journal of Health (Philadelphia, Pennsylvania), America's first health reform periodical, was inaugurated in 1829, the same year that Andrew Jackson was; it lasted until about 1832.

Donna Maurer of Southern Illinois University, who is writing a PhD thesis in the field of vegetarianism, notes (Jan. 1995): "Regarding Whorton's interpretation of early vegetarians–although I agree with you that his scholarship is unbalanced in terms of giving 'proper' credit to Graham, Alcott, and Kellogg, etc., he has presented the movement

© Copyright Soyinfo Center 2014

in *much* more favorable terms than any other interpretation I've read (that deals with vegetable diet as a component of 'irregular' medicine). Also, Whorton has engaged in more archival, primary research on the early vegetarians than any other historian to date." Address: Assoc. Prof. of Biomedical History, Univ. of Washington, Seattle, WA.

2359. **Product Name:** [Textured Vegetable Protein].
Manufacturer's Name: Industrias Covac.
Manufacturer's Address: Alajuela, Costa Rica.
Date of Introduction: 1982?
New Product–Documentation: Letter from Robert Folkenberg. 1983. Feb. 15. "This company, organized in 1967, is presently producing about 3 tons of TVP each week."

2360. **Product Name:** [Soymilk].
Manufacturer's Name: Industrias Covac.
Manufacturer's Address: Alajuela, Costa Rica.
Date of Introduction: 1982?
New Product–Documentation: Letter from Robert Folkenberg. 1983. Feb. 15. "This company, organized in 1967, is presently producing about 1,000 liters/week of soy milk."

2361. Airola, Paavo. 1983. Health forum: Are vegetarians healthier than meat eaters? *Vegetarian Times.* Jan. p. 58.
• ***Summary:*** In short: Yes. "Perhaps the most important and scientifically acceptable evidence of the superiority of the vegetarian diet is the study made on the health status of the Seventh Day Adventists, who are lacto-ovo vegetarians. This official government-sponsored study, which was widely reported in both the medical and lay press a few years ago, showed that the vegetarian Seventh Day Adventists have 40-70% less cancer, heart disease, diabetes and many other diet-related diseases than the general population. And, if you read this magazine regularly, you can see reports in almost every issue on the superiority of the vegetarian diet in terms of health, as well as in regard to a more satisfying and fulfilling lifestyle."

A portrait photo shows Dr. Airola. Address: N.D., Ph.D (in nutrition and biochemistry).

2362. *Food Processing* (*Chicago*). 1983. Miles sells unit [Worthington Foods]. 44(1):185. Jan.
• ***Summary:*** "Miles Laboratories Inc. of Elkhart, Indiana, has sold its Worthington Foods operations and the Morningstar Farms line of products to three former officers of Worthington. Miles acquired Worthington in 1970, later introducing the Morningstar Farms line of cholesterol-free meat analogs and egg substitutes to grocery stores."

2363. McEndree, L.S.; Kies, C.V.; Fox, H.M. 1983. Iron intake and iron nutritional status of lacto-ovo-vegetarian and omnivore students eating in a lacto-ovo-vegetarian food service. *Nutrition Reports International* 27(1):199-206. Jan. [13 ref]
• ***Summary:*** Vegetarians had higher iron intakes than omnivores, suggesting that the vegetarians made better food choices. However hemoglobin, hematocrit, and serum iron levels were not different between the two groups. "Both groups were not considered anemic, but neither did they have enough iron stores to cope with heavy menstrual losses or pregnancy without possible jeopardy to their iron nutritional status." Address: Dep. of Human Nutrition and Food Service Management, Univ. of Nebraska, Lincoln, NE 68583.

2365. Folkenberg, Robert. 1983. Re: History of work with soyfoods by the Seventh-day Adventist (SDA) Inter-American Division in Latin America. Letter to William Shurtleff at Soyfoods Center, Feb. 15. 3 p. Typed, without signature on letterhead.
• ***Summary:*** The first SDA food factory in South America was Granix in Buenos Aires, Argentina, in 1938. Today Superbom of Brazil is the largest producer, making an estimated 30 tons/month of textured soy flour (TVP). In the Caribbean region, Industrias Covac in Alajuela, Costa Rica, was the first organized in 1967, followed by Alimentos Colpac of Mexico in 1969 and Westico foods in Jamaica in 1970. Today Alimentos Colpac makes about 10 tons/week of TVP and 3,000 liters/week of soymilk. Westico Foods makes 2 tons/week of TVP, which is expected to increase dramatically in the near future. Industrias Covac makes about 3 tons/week of TVP and 1,000 liters/week of soymilk. Alimentos Integronaturales in Montemorelos, Mexico makes about 3,000 liters/week of soymilk. They and Productos Icolpan in Colombia will soon start producing TVP. Address: Field Secretary, Inter-American Div., P.O. Box 340760 (760 Ponce de Leon Blvd.), Coral Gables, Florida 33134. Phone: 305-443-7471.

of Worthington Foods and Morningstar Farms formerly operated by Miles Laboratories, Inc. Worthington Foods, Inc. is an independent corporation and employs 240 people. The company markets a complete line of over 50 vegetable protein foods that are rich in nutrition and free of preservatives."

2368. Bisalski, Ed. 1983. More on Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, March 1. 1 p. transcript.
• ***Summary:*** Miller [was it Dr. Miller or his son, Willis?] invited Bisalski to he manager of his soymilk factory. Miller is a fine man but he always wants to be in control. Ed went there in about 1948. Before that he was at Madison. After studying at Madison he went to Peabody for graduate work in nutrition. He worked with Dr. Miller for 6 weeks, then he realized he couldn't work with him any longer. Dr. Miller was always changing schedules. Miller couldn't develop an organisation, didn't stick with budgets, bought equipment he couldn't pay for.

Note: My observation: few good saints are good businessmen.

Neither Kellogg nor Sutherland were good businessmen. Kellogg was a tyrant, always in control. Sutherland was more amenable. No one could work with Kellogg; it was either obey or be fired. That was with the food businesses. In medicine he commanded the respect of everyone. One of the greatest surgeons in the world. Bisalski is now age 80, a vegetarian. Vegetarian diet really shows up as one ages. He does 40 push ups every morning, plus lots of exercises. Ed was born on 1 Feb. 1903. "The Lord bless you as you prepare this book"–he says. He is now writing a book on nutrition and lifestyle. Doctors were the last to find out about nutrition, diet, and health. Address: 3123 E. Miller Rd., Bancroft, Michigan 48414. Phone: 517-634-5203.

2369. Oka, Tadashi. 1983. [History of the soymilk industry in Japan]. *Toyo Shinpo* (*Soyfoods News*). March 1. [Jap]
• ***Summary:*** In 1957 (Showa 32) one tofu maker in Hachiôji, Tokyo, was making several hundred 180 cc bottles of soymilk and selling it. This tofu maker was a Seventh-day Adventist and it is said that he received Dr. Harry W. Miller's guidance when learning how to make soymilk.

It is said that after visiting this tofu shop, in 1959 Saniku Gakuin [a Seventh-day Adventist school] decided to serve soymilk in their school lunch program.

So Seventh-day Adventists pioneered modern soymilk in Japan.

Around 1962 Nihon Tanpaku Kôgyô [Kogyo, K.K.] ordered Japan's self-defense forces (*jieitai*) to do taste tests of their soymilk. This company was making soymilk powder and selling it, so they were looking for a market for their product. But there were some problems with its heavy smell, so that flavored soymilks (such as orange) were popular, but their plain soymilk was not well accepted.

Mr. Kanji Tsuchiya, who had been working for Kyôdô Nyûgyô (Kyodyo Nyugyo, a dairy milk company) for more than 10 years, got very interested in developing soymilk. In 1965-69 he helped to set up a soymilk plant in Taiwan (capacity 500 liters/hour). But the soymilk made in his plant didn't have its natural beany flavor, so Taiwanese consumers thought it was fake. Dr. Harry W. Miller, who visited his plant at that time, told him that he didn't have to refine soymilk that much for Chinese customers.

Mr. Teisuke Yabuki, of Japan's Ministry of Agriculture (Monbu-sho, Gakumu, kyoku-cho) started soymilk research because of Ryukichi Sekiya, who was interested in soymilk and used lactic acid bacteria to remove the beany flavor when making soymilk. He conducted taste tests and a kindergarten and an elementary school, but the taste was unacceptable and nobody was interested. He asked other people to do this research but didn't get good results. Mr. Yabuki asked if he could do his research and development on soymilk and asked Onihara (Shinnojo?) at Tokyo Agricultural University (*Tokyo Nôgyô Daigaku*) to do the research. At that time Mr. Yabuki was the president of Yakult (Jôtô Yakuruto Hanbai K.K.). He continued Mr. R. Sekiya, spent 9 years and a lot of money, and at last in 1968 he was able to start a small scale soymilk pilot plant. He bottled his soymilk and gave it away to his friends, to test the product and the process; his energy went into his product No. 1.

In Oct. 1969 Mr. Yabuki named his soymilk Luppy and started selling it. This was exactly 10 years after Nihon Saniku Gakuin started to provide soymilk in their own way.

But Mr. Yabuki was the president of Yakult at that time; he was selling about 13,000 bottles per day of Yakult [a small probiotic beverage] and had about 500 workers. He had to build a soymilk plant in Sept. 1968, found Luppy Tanpaku Kagaku Kenkyûsho and chose the package (Tetra Pak Aseptic) for his soymilk. Finally he was asked to choose between Yakult and Luppy. He suffered a lot but finally chose Luppy, resigning as president of Yakult. Mr. Yabuki had been using the Yakult sales and distribution network to sell his soymilk. On 31 Dec. 1972 he severed his relationship with Yakult.

It happened this way. When Mr. Yabuki was talking to Yakult's main office (*honsha*) House Shokuhin Kôgyô K.K. got interested in soymilk and started trying to persuade Mr. Yabuki into working for them. House Shokuhin Kôgyô K.K. made powdered tofu and had been selling it and were interested in soyfoods.

In April 1973 House Luppy (K.K.) was founded. Mr. Yabuki became its president and took responsibility for making the company's soymilk; House Shokuhin took charge of marketing and selling the soymilk.

A large food manufacturing company like House entering the soymilk was expected to have a big effect on expanding that market.

© Copyright Soyinfo Center 2014

In 1973, soymilk brands in Japan were: (1) Soyalac (canned) made by Saniku Foods. (2) Shinko White made by Shinkô Shôbai. (3) Bonlact made by Wakôdo (Wakodo). (4) Luppy made by House Luppy. Because of expensive packaging and the use of fructose and honey, Luppy was quite a bit more expensive than the others (45 yen per 180 cc at that time).

In Nov. 1974 Tokyo Soymeal started. The technician Kanji Tsuchiya, who was from Kyôdo Nyûgyo, helped to make this soymilk plant. Mr. Tsuchiya's main idea was to make good-tasting soymilk in a clean, modern plant, resembling a dairy milk plant.

A chronology looks like this:

1959–Nihon Saniku Gakuin.

1969 Oct.–Luppy Tanpaku Kagaku Kenkyusho (Yakult / Yakuruto).

1971–Saniku Foods.

1972 April–House Luppy (New company from Luppy Tanpaku Kagaku Kenkyusho). They closed in 1979.

1973 Nov.–Tokyo Soymeal. They closed in Dec. 1978.

1975 July–Asahi Shokuhin.

1976–Kyodo Nyugyo.

1976–Marusan.

1977–Kibun / Kibon.

1981–Mitsubishi. But Mitsubishi had started testing soymilk in about 1972.

2370. Abu-Assal, M.; Craig, W.J. 1983. Plasma zinc levels in pregnant vegetarian and non-vegetarian women. *Federation Proceedings* (*FASEB*) 42(3):552 (Abst. #1527). March.
• ***Summary:*** The plasma zinc levels of 28 pregnant women volunteers, 12 vegetarians and 16 non-vegetarians, aged 23-36 years, were measured. None consumed alcohol. A vegetarian diet apparently does not compromise the zinc status of pregnant women. In late gestation, the vegetarians had higher plasma zinc levels than the non-vegetarians (47.9 vs. 42.9 mcg/dl). Buy 1-3 months after birth, the non-vegetarians had higher levels (66.6 vs. 59.2). Further study is needed to determine why plasma zinc levels remain low after delivery in the vegetarians. Address: Loma Linda Univ., Loma Linda, California 92350.

2371. Ling, C.A. 1983. Re: Plamil Foods Ltd. Letter to William Shurtleff at Soyfoods Center, March 3. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "You will gather from the attached completed questionnaire that we were the pioneers of a liquid soya milk in this country in 1965 and the enclosed labels and literature will give you further background information.

In answer to your questions... may we say that we obtain our soya protein isolate from Arkady ADM, Skerton Road, Old Trafford, Manchester M16 ONJ. We shall be obtaining from them shortly some TVP for a Goulash we propose marketing and also some de-fatted soya for a non-dairy chocolate bar we shall be producing i.e., with soya in place of milk. Regretfully we cannot say in answer to 55 and 56 whether the British Soya Products Ltd. or Soy Foods Ltd. are still in business as we have no connection with either company;

"We have already stated that we were pioneers in this country of liquid soya milk in 1965 and at that time the labeling authorities in the country would not permit us to use the definition of 'soya milk' or 'soy milk' and insisted that we used the terminology 'plantmilk'. We have taken this matter up from time to time with the Trading Standards Office (responsible for carrying out the labelling laws) and understand that the matter is at long last being centrally reviewed, so that we hope we may be able before long to use the terminology "soya milk". When you re-write your summary in numerical order relating to the UK, perhaps you would be good enough to make mention that we were the pioneers of a liquid soya milk here in 1965. After it being the sole one on the market for a number of years in the country, Itona decided to bring out one approximately five years ago and Granose also entered the market with one a couple of years ago. So we appear to have stimulated their interest!

"Yours faithfully, Plamil Foods Ltd." Address: Managing Director, Plamil Foods, Plamil House, Bowles Well Gardens, Dover Road, Folkestone, Kent CT19 6PQ, England. Phone: Folkestone (0303) 58588.

2372. *Madison Survey* (*Madison, Tennessee*). 1983. News regarding Worthington Foods. 65(1):7. March.
• ***Summary:*** "Soon after Madison College closed in 1964, Madison Foods was sold to Worthington Foods. Equipment and supplies were moved to Worthington, Ohio, in 1965. In 1970 Worthington sold to Miles Laboratories, and on Oct. 15, 1982, became the owner again. Application is being made for membership in the ASI again, of which the company was a charter member. Worthington Foods is dedicated to the philosophy and policies under which it operated for 30 years, from 1940 to 1970."

Note: ASI, which stands for Adventist-Laymen's Services and Industries, is a group of businessmen who have joined to advance Adventist work such as schools, hospitals, etc. in all parts of the world. They are headquartered at 12501 Old Columbia Pike, Silver Spring, Maryland 20904, USA. Phone: (301) 680-6450.

2373. Marsh, Alice G.; Sanchez, T.V.; Chaffee, F.L.; Mayor, G.H.; Mickelsen, O. 1983. Bone mineral mass in adult lacto-ovo-vegetarian and omnivorous males. *American J. of Clinical Nutrition* 37(3):453-56. March. [13 ref]
Address: Dep. of Home Economics, Andrews Univ., Berrien Springs, Michigan 49104 and the Dep. of Medicine, Michigan State Univ., East Lansing, MI 48824.

© Copyright Soyinfo Center 2014

production. Full-fat soy flour. Dawson Mills and Loma Linda. Central Soya (Interview). *SoyaScan Notes.* May 23. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.
• ***Summary:*** Estimates of soy protein production: Textured soy proteins (flours or concentrates) 150-200 million lb/year. Isolates 120-150 million lb/yr, including: Ralston Purina (doing very well), ADM (having lots of problems), and Grain Processing Corp. ("sold out"). Much of the isolate made in the USA is being exported for use in meat products in Europe and Africa. About 10-20 million lb/year of the non-exported isolate is used to make infant formulas in the USA by Mead Johnson, Ross Laboratories, and Syntex (Borden operation). A large amount of textured soy flour is still going into pet foods. Prices (dollars/lb): Soy flours $0.13. Soy protein concentrates $0.40-0.60 (lower priced are for calf starters). Soy protein isolates $1.10 to $1.35.

Full-fat soy flour: There is no significant production in the USA; in the past, production was several hundred tons/month. Some is imported from Germany (Lucas Meyer).

Dawson Mills: As of June 1, they will discontinue production of soy flour and grits, and textured soy flour. Loma Linda (California) purchased one of their two isolate spinning lines and was trying to have AMPI [American Milk Products, Inc.] run it for them [in Minnesota] using isolate purchased from elsewhere. Dale is not sure of the status of this project. Dan Hooten, formerly with Dawson Mills, is now apparently involved in sales of dairy products at Land O'Lakes (now located in Eau Claire, Wisconsin).

Central Soya is no longer using their steam texturization process. Address: Food Ingredients (Minnesota), Inc., 2121 Toledo Ave. North, Golden Valley, Minnesota 55422.

2375. O'Brien, Jane M. 1983. Re: Recent history of soybeans and soyfoods in Ireland. Letter to William Shurtleff at Soyfoods Center, May 28–in reply to inquiry. 1 p. Typed, with signature.
• ***Summary:*** "I was in touch with Tony Walshe at the Golden Dawn Restaurant in Dublin who said that they have been selling tofu more or less regularly since 1979. They use it in the restaurant for various recipes, but at the moment, I believe they could use more than they are able to get.

"There is an oriental [tofu] shop in Dublin which must have been open for about a year now which supplies tofu regularly, I gather. I never seem to be in town when it is open because it opens at 11:00 a.m., and when I shop I am usually in town before 9:00 and ready to leave as early as possible...

"Philip Guiney has been wholesaling Morinaga tofu for about a year now, and it seems to be moving for him...

"Ken Kinsella of Kelkin Naturproducts Ltd. has been wholesaling Granose Soya Milk for about 18 months now, and it is selling quite well for him because of the numbers of people who suffer from lactose intolerance and because of the general interest in getting away from dairy [products]. Ken's daughter, Hillary Kinsella, with a friend of hers, did a project called "Soya–The Modern Food" for the Young Scientists Exhibition in January 1983, for which she won two awards, and she is planning to do it again with further information in 1984, also for the Young Scientists Exhibition.

"For my part, I have taught tofu making in some of my cooking classes a couple of years ago, but I haven't given any cooking classes for the last couple of years for various reasons. Roughly from September 1983 through May of 1983, I provided about 12 pounds of tofu per week which Kelkin Naturproducts delivered to the Golden Dawn restaurant as a kind of pilot project to try to determine the demand for tofu in this area. At the end of that period, we discontinued it for a number of reasons and we felt that the time was not yet right to consider tofu production an economic possibility in this country. In fact, in many ways, we feel that soy milk might be a better starting off point here, but we are still not ready to do anything about it at this time." Address: 7 Woodside Drive, Rathfarnham, Dublin 14, Ireland. Phone: 909-769.

2376. Dwyer, Johanna T.; Andrews, E.M.; Berkey, C.; Valadian, I.; Reed, R.B. 1983. Growth in "new" vegetarian preschool children using the Jenss-Bayley curve fitting technique. *American J. of Clinical Nutrition* 37(5):815-27. May. [42 ref]
• ***Summary:*** A study of 142 vegetarian children, ages 6 weeks to 6 years, showed them to be 500 to 1,000 gm lighter and 1-2 cm shorter as a group when compared to the norms. Females and those children on a macrobiotic diet had the lowest weight and height in the group. Energy intake was low but protein intake was adequate.

The "new" vegetarian families differ from the Seventh-day Adventists and vegetarian immigrants in that very few of the adults in such families were raised as vegetarians, and in various other respects having to do with diet and lifestyle. Address: Frances Stern Nutrition Center, New England Medical Center Hospital, Boston.

2380. Jensen, Ole Møller. 1983. Cancer risk among Danish male Seventh-Day Adventists and other temperance society members. *J. of the National Cancer Institute* 70(6):1011-14. June. [14 ref]
• ***Summary:*** Cancer risk was studied in 781 male Seventh-Day Adventists [SDA] and 808 male members of other temperance societies. The Adventists had only 65% as much cancer as the others, and had significantly decreased risks of cancer of the colon (only 13% as much as expected), cancer of the respiratory system (only 17% as much), of the lung (15%), and of the bladder including papilloma [an epithelial tumor caused by a virus] (only 13% as much as expected).
Address: Danish Cancer Registry, Strandboulevarden 49, DK-2100 Copenhagen, Denmark.

2381. Liebman, Bonnie. 1983. Are vegetarians healthier than the rest of us? *Nutrition Action.* June. p. 8-11. [32 ref]
• ***Summary:*** "To many Americans, the word 'vegetarian' conjures up an image of a 1960s era flower child eating brown rice, vegetables, and soybeans grown organically in the back yard. In fact, vegetarianism is far older and more common than most people think."

Research on America's major diseases "shows that vegetarians are lowering their risks of developing a host of the most serious diseases confronting our society. That they eat less fat, particularly less saturated fat, and more grains, legumes, and vegetables, appears to make them healthier than the average American." The writer then discusses one disease at a time:

"Heart Disease. 'The vegans have cholesterol levels so low, they'd never get a heart attack,' says Dr. William Castelli, referring to a group of macrobiotic vegetarians in Boston. 'Their average blood cholesterol level is about 125, and we've never seen anyone at Framingham with a cholesterol level below 150 have a heart attack.'

"For more than a decade. researchers have known that lacto-ovo vegetarians have lower blood cholesterol levels than non-vegetarians. and vegans have even lower levels. These findings come as no surprise. After all, vegans eat less saturated fat, less cholesterol, and more fiber than lacto-ovos, who in turn eat less than meat-eaters. More recent studies indicate that vegetarians enjoy a further protection against heart disease: the percentage of their blood cholesterol carried in high-density lipoproteins (HDL) is higher than in meat-eaters."

"But skeptics want evidence that vegetarians have lower heart attack rates, not just lower cholesterol levels. That means following a sizable number of people for several decades. Now the data are finally at hand. In Loma Linda, California. Drs. Roland Phillips and David Snowdon have monitored the health of 25,000 Seventh Day Adventists (SDAs) for over 20 years. About half of the SDAs are lacto-ovo vegetarians. The rest eat meat, though somewhat less often than most Americans. Cigarette smoking is rare in both groups.

"According to Phillips:

"Older male SDAs (aged 55 and above) who eat meat six or more times a week are twice as likely to die of heart disease as vegetarian SDAs;

"Younger male SDAs (aged 40 to 54) who eat meat six or more times a week run four times the risk of a fatal heart attack than their vegetarian brethren;

"Meat-eating SDA women over 55 run 1.5 times the risk of a fatal heart attack encountered by female vegetarian SDAs."

Cancer: SDA vegetarians are only about *one half* as likely as other Americans to develop colon or rectal cancer. Moreover, SDAs have less breast, prostate, pancreatic, and ovarian cancer compared with the average American. The reasons for these differences are unclear.

In short, vegetarians are healthier than average Americans. Address: Nutritionist, Center for Science in the Public Interest (CSPI).

2382. **Product Name:** Tofu.
Manufacturer's Name: Miller's Soy Inc.
Manufacturer's Address: Route 2, Box 2088, Greenbriar, TN 37073. Phone: 615-643-7506.
Date of Introduction: 1983 June.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1983. June 20. Owners: Harry Miller Jr. (Willis), and Mike Bishop. On the same printout, the company is listed at 206 Amherst Dr., Nashville, Tennessee 37214. Phone: 615-643-7506. Owner: Wayne Miller. Note: It is not clear whether or not either of these companies every produced tofu commercially. Willis later made a successful with R. Fischer called Miller Farms Food Co. in Cedar Falls, Iowa.

2384. *Soyfoods.* 1983. The soyfoods industry on display [at Natural Foods Merchandiser Expo in Anaheim, California and Whole Life Times Expo in San Francisco]. Summer. p. 7.

• ***Summary:*** Sixteen soyfoods companies exhibited at Anaheim to 7,600 paying visitors. "Six soyfoods companies shared an official Soyfoods Association booth, where they retailed their own products and provided liberal tasting samples as well. Participants included Legume Inc. (tofu pizza, tofu lasagna), Farm Foods (Ice Bean, in cones), Quong Hop (tofu burgers, tofu canolli, soymilk), Sonoma Specialty Foods (tofu salads, tofu cheesecakes), Laughing Moon (vegetable tofu turnovers), and San-Jirushi International (samples of San-J Real Tamari). The Association booth, one of 10 food catering booths at the Expo, was 'packed solid through the whole show,' reports Farm Foods' Robert Tepper."

"William Shurtleff gave a one hour speech and slide presentation on soyfoods to an enthusiastic audience."

Other interesting companies include: Pacific Tempeh, Light Foods, Essential Foods, Garden of Eatin', Living Lightly, Kibun, Westbrae Natural Foods, Edward & Sons, Cedarlane Foods, Morinaga, Worthington Foods.

Interesting products: Light Links tofu "hotdogs," Ravioli, Tofumale Tamale, Tempehroni Pizza, Chili Con Tempeh, Tempeh Enchilada.

Photos (without captions) show: (1) Danielle Lin of Laughing Moon. (2) Steve Snyder of Hinode. (3) The Morinaga booth, with Mr. Seishiro Ikegami.

2385. **Product Name:** Natural Touch Tofu Garden Patties.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1983 June.
Ingredients: Water, tofu, isolated soy protein, carrots, peas, soy oil, flavorings (HVP, onion powder), spices, garlic powder, yeast, natural flavor, essential oil of paprika, turmeric, carrageenan.
Wt/Vol., Packaging, Price: 10 oz box contains 4 white patties. Retails for $1.95 to $2.37.
How Stored: Frozen.
Nutrition: Per 70-gm. patty: 11 gm. protein.
New Product–Documentation: See next page. Talk with Craig Klatt of Seventh-day Adventist Bookstore in Pleasant Hill, California. 1983. Aug. 8. This product is now on the market, with 4 white / unfried patties per package, retailing for $1.95. Craig does not know who is the man behind this new concept or who makes the tofu.

Interview with Frank Poston. 1983. Dec. 16. This is the start of a new line developed for the health foods market. The Tofu Garden Patties were introduced in June 1983. Worthington bought all of the tofu equipment from Rising Sun Soy Farms in Columbus, Ohio, and are now making the tofu for the product at the Worthington plant in Ohio. The product was developed for the health food market, and will be part of the larger new Natural Touch line of products. More new products will be out in April 1984. This is a big and important new trend for the company and they plan to put a lot of energy and money into promoting it. Some (but not all) of the new products will contain tofu.

Worthington news release. 1984. May 25. Gives launch date as March 1984. Spot in Soyfoods. Summer. 1984. p. 45. "Prepared Patty Pair." Label, 4 color box. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

Ad (full page, color photo) in Natural Foods Merchandiser. 1985. May. "Natural Wonders. Discover Natural Touch for something new in natural foods taste!" Shows color labels/packages for each of four entrées, including Okara Patties and Tofu Garden Patties.

Talk with Worthington Foods. 1992. Feb. 10. This product has been discontinued.

2386. **Product Name:** Tofu.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1983 June.
New Product–Documentation: Interview with Frank Poston. 1983. Dec. 16. They bought all of the equipment from Rising Sun Soy Farms in Columbus and are making tofu for their second generation products at the Worthington plant in Ohio.

2387. Bialick, Barbara. 1983. A century of natural foods: From Battle Creek to Berkeley. *Whole Life Times* No. 28. July.

• ***Summary:*** This 5-page article gives a good overview of the natural foods movement, which began in the mid-1800s, at about the same time as the industrial revolution and the growth of cities (urbanization). In 1826 some 83% of U.S. citizens made their living from farming; by the 1850s, fewer than 50% did so. Farming and food production were becoming mechanized. Social reformers began to advocate the abolition of slavery and vivisection, expansion of the rights of women, food and dress reform, etc. Rev. Sylvester Graham, a Presbyterian minister, was "one of a group of idealists who in 1850 founded the American Vegetarian Society in New York, rallying around Dr. William A.

Alcott's historic words 'A vegetable diet lies at the basis of all reform.'" In 1866 Ellen G. White founded the Western Health Reform Institute in Battle Creek, Michigan. Also discusses the work of John Harvey Kellogg, W.K. Kellogg, Henry D. Perky (an Ohio farm boy who invented Shredded Wheat in 1893), C.W. Post (Grape Nuts, Postum grain coffee), etc. "In 1925 the Postum Company combined with the Jell-O Company in the first of a series of mergers that eventually created today's huge General Foods Corporation, the first company originating from the health movement to shift to a strictly commercial purpose."

2388. Shultz, Terry D.; Leklem, James E. 1983. Dietary status of Seventh-day Adventists and nonvegetarians. *J. of the American Dietetic Association* 83(1):27-33. July. [66 ref]
• ***Summary:*** Dietary intakes of both groups were generally adequate. However 26% of the women consumed less than 60% of the RDA for iron, and 19% consumed less than 60% of the RDA for vitamin B-6 (pyridoxine). The non-vegetarians consumed more energy, protein, fat, total saturated fat, oleic acid, cholesterol, calcium, riboflavin, and niacin than the Seventh-day Adventist vegetarians. Address: Dep. of Foods and Nutrition, Oregon State Univ., Corvallis. Shultz's present address: Dep. of Nutrition, Loma Linda Univ., LOma Linda, California.

2389. Worthington Foods, Inc. 1983. Worthington product catalog: Putting good taste into nutrition. Worthington, Ohio. 2 panels each side. Each panel: 28 x 21.7 cm. Undated.
• ***Summary:*** See next two pages. Contents: Canned and dry products (lists 27 products, each with a color photo). At the bottom of the page is printed: "Sound Nutrition / Delicious Taste / Free of Meat and Preservatives." Frozen products (lists 22 products, each with a color photo). Kaffree beverages (lists 6 products, each with a color photo). Kaffree is a caffeine-free coffee substitute made from roasted malt barley, roasted barley, and roasted chicory. Kaffree Tea is also available. Address: Worthington, Ohio 43085.

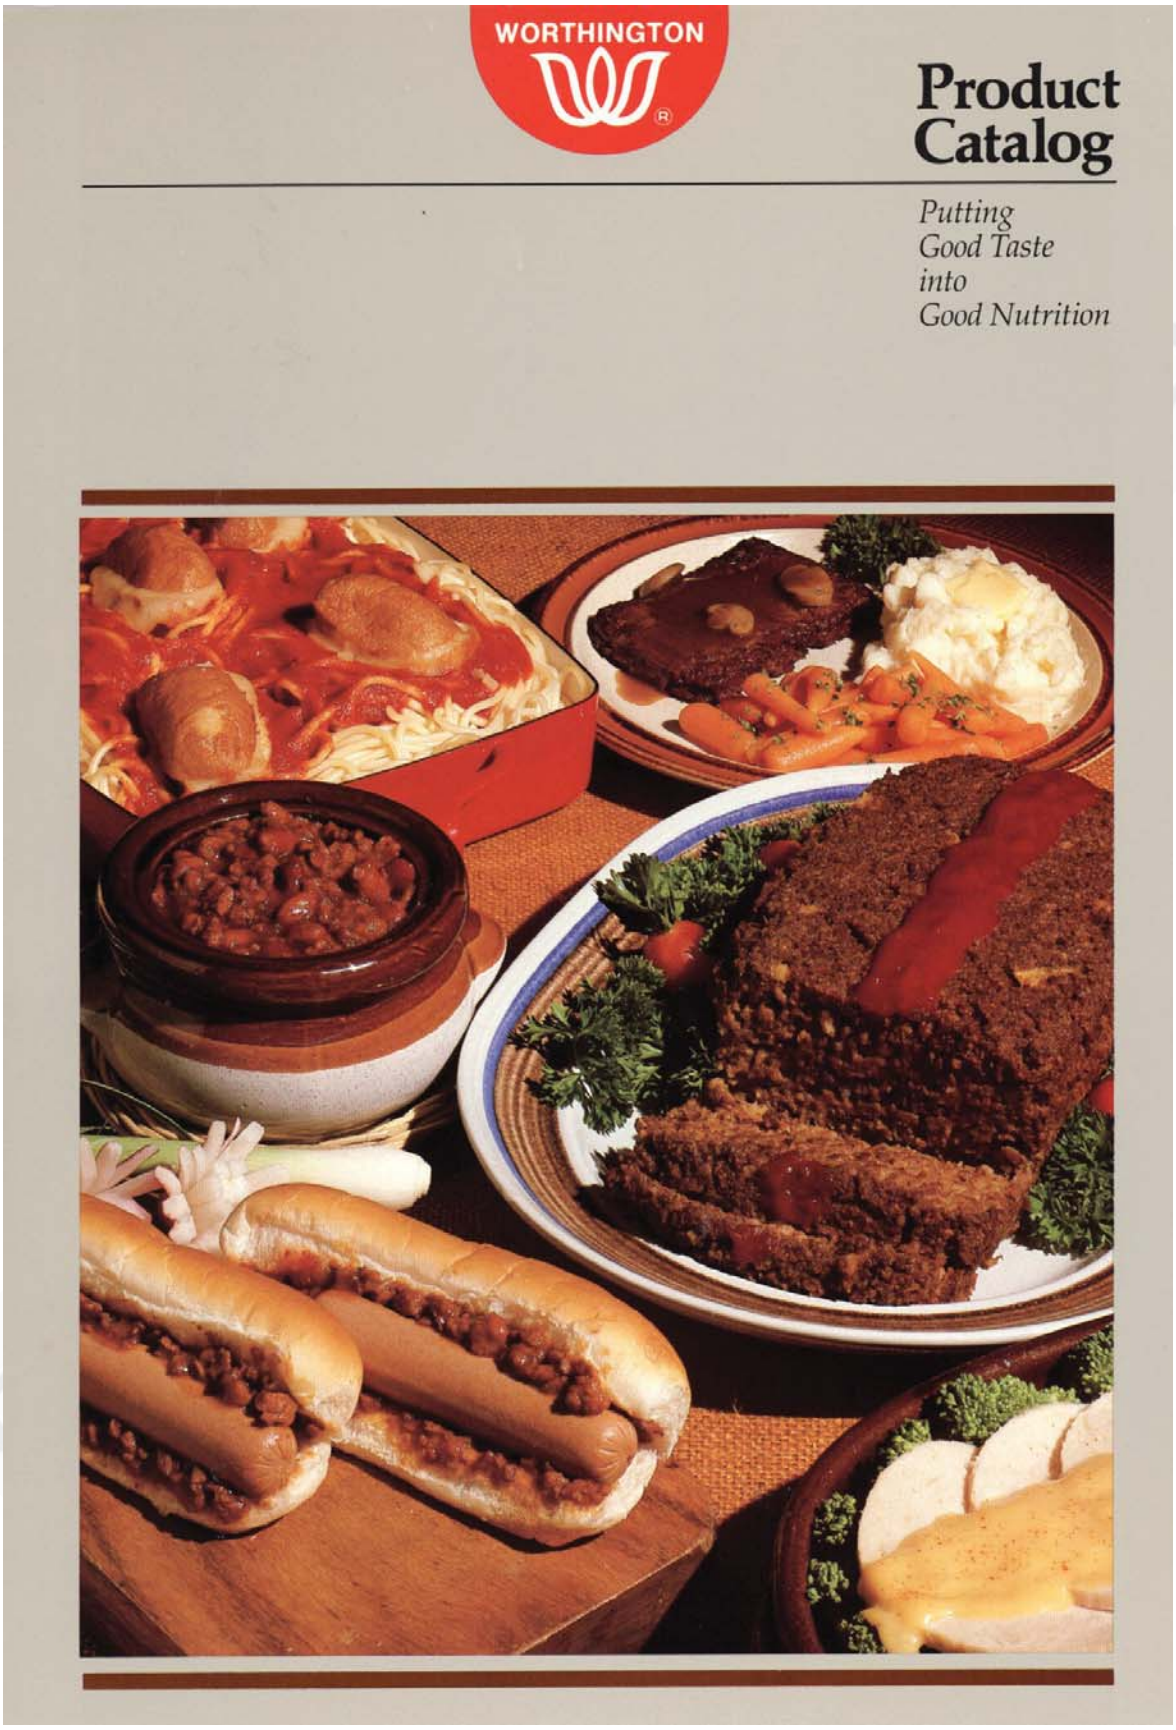
2390. Klatt, Craig. 1983. Update on Worthington Foods and other Seventh-day Adventist companies making soyfoods (Interview). *SoyaScan Notes*. Aug. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Worthington Foods is going stronger than ever. They are expanding into new, more natural products, such as Tofu Garden Patties, as part of their Natural Touch line. They plan to develop more new products in this line. Worthington bought back their company from Miles Laboratories for less than they sold it for, and got a new factory and the Morningstar Farms line as part of the deal.

Payless and Longs drug stores in California sell Loma Linda infant formula.

Country Life, formerly Cedar Lake, now imports bottled soymilk (free of sugar) from Japan, and has a chain of vegetarian restaurants, including one on Wall Street. Address: Manager, Adventist Book Center, 2300 Nourse Rd., Pleasant Hill, California 94523. Phone: 415-685-4300.

2391. Klatt, Craig. 1983. Update on Worthington Foods (Interview). *SoyaScan Notes*. Aug. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Worthington is now stronger than ever. They are expanding into more natural products in their "Natural Touch" line. Tofu Garden Patties is their newest product. There are four unfried patties per box, sold frozen, for $1.95.

Worthington still has the Morningstar Farms line. Worthington bought back the whole company from Bayer A.G. for less than they sold it for and got a new factory and the Morningstar Farms tossed in too. Address: Adventist Bookstore, Pleasant Hill, California.



2392. **Product Name:** Loma Linda Vege-Scallops (Meatless).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1983 August.
Ingredients: Vege-Scallops: Wheat gluten, water, wheat flour. Broth: Water, monosodium glutamate, salt.
Wt/Vol., Packaging, Price: 19.5 oz can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 6 pieces (2.75 oz–78 gm): Calories 70, protein 14 gm, carbohydrate 2 gm, fat 1 gm, cholesterol 0 mg, sodium 180, potassium 30 mg.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1984. Feb. p. 113. "A lot more than meats the eye. Loma Linda Foods taste great."

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1983.

2393. Shurtleff, William; Aoyagi, Akiko. 1983. The book of tofu. 2nd ed. Berkeley, California: Ten Speed Press. 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. Aug. 28 cm. [321 ref]
• ***Summary:*** Three parts of this new edition have been extensively revised and updated: (1) "Tofu Makers in the West" (p. 313-16) has been updated and now includes 310 tofu producers in the Western world (with the name, address, phone number, and contact person for each company), arranged by state or foreign country. This is the only tofu book containing such a directory.

(2) The "Bibliography" (p. 319-324) has been greatly expanded and updated. It now contains 321 publications on tofu, including all known scientific and nutritional journal articles, the 33 books about tofu written in North America since publication of the first edition of *The Book of Tofu* in 1975, and other key articles and books about tofu from East Asia and Europe, the earliest from Europe dating back to

WORTHINGTON

FROZEN PRODUCTS

1 Meatless "Chicken" Style
Like white meat of chicken. Delicious in sandwiches, casseroles, gravies, cream sauce, soups, salads and more.
Packed: Slices, 8 oz. packages/12 packages per case; Roll, 4 lb. rolls/4 rolls per case; Diced, 5 lb. bags/4 bags per case.
Stock No.: 8 oz. packages #26403; Roll #26419; Diced #26412.

2 Chic-Ketts®
A unique texture, delicious flavor. Serve breaded and deep fat or pan fried. Also ideal in casseroles, soups, chow mein and more.
Packed: 1 lb. rolls/12 rolls per case; 56 oz. rolls/4 rolls per case.
Stock No.: 1 lb. roll #26504; 56 oz. roll #26506.

3 "Chicken" Style Pie
Combines chicken-like cubes with fresh vegetables and creamy sauce inside a flaky crust.
Packed: 8 oz. pie/24 pies per case.
Stock No. #26503.

4 "Beef" Style Pie
Combines beef-like cubes with fresh vegetables and creamy sauce inside a flaky crust.
Packed: 8 oz. pie/24 pies per case.
Stock No. #26303.

5 Chik Stiks™
Golden brown outside, tender chewy inside . . . unique "drumstick" shape, delicious chicken-like flavor.
Packed: 10 oz. cartons/12 cartons per case; 15 lb. carton.
Stock No.: 10 oz. cartons #26441; 15 lb. #26448.

6 Wham™
A scrumptious ham-like flavor with fewer calories and much less fat. Delicious as cold cuts and fried or baked. Casseroles, too.
Packed: Slices, 8 oz. packages/12 packages per case; Roll, 72 oz. rolls/4 rolls per case.
Stock No.: 8 oz. packages #26603; Roll, #26619.

7 Stakelets®
Gourmet flavor, tender texture. Excellent main entrée or sandwich . . . great for cookouts. Just heat and serve.
Packed: 10 oz. cartons/12 cartons per case; 20 lb. carton.
Stock No.: 10 oz. carton #27704; 20 lb. #27705.

8 FriPats®
Flavor and texture make this a super meatless sandwich. Just heat and serve.
Packed: 9 oz. cartons/12 cartons per case; 17 lb. carton.
Stock No.: 9 oz. carton #27804; 17 lb. #27807.

9 Fillets™
Savory fish-like flavor and texture. Just heat and serve for a meal or a sandwich.
Packed: 9 oz. cartons/12 cartons per case.
Stock No.: #27604.

10 Tuno®
Tasty tuna-like flavor and tender texture. Great for a "Tuno-salad" sandwich or baked in your favorite casserole.
Packed: 12 oz. rolls/12 rolls per case.
Stock No.: #27903.

11 Meatless Salami
A great sandwich alone or a really good beginning for a "Super Sandwich."
Packed: Slices, 8 oz. cartons/12 cartons per case; Roll 4½ lb. rolls/4 rolls per case.
Stock No.: Slices #26924; Roll #26936.

12 Corned "Beef" Style
Serve in sandwiches (a delicious Reuben), salads, soups, casseroles, and hors d'oeuvres.
Packed: Slices, 8 oz. packages/12 packages per case; Roll, 72 oz. roll/4 rolls per case.
Stock No.: Slices, 8 oz. #26103; Rolls, #26116.

13 Smoked "Beef" Style
Adds savory flavor to sandwiches, soups, casseroles, salads, hors d'oeuvres.
Packed: Slices, 8 oz. packages/12 packages per case; Roll, 72 oz. rolls/4 rolls per case.
Stock No.: Slices #26203; Roll #26216.

14 Smoked "Turkey" Style
A turkey-like flavor that's sure to please. Serve plain and in casseroles, salads, soups, sandwiches.
Packed: Slices, 8 oz. packages/12 packages per case; Roll, 4 lb. rolls/4 rolls per case.
Stock No.: Slices #27103; Roll #27116.

Prosage®
Scrumptious sausage-like flavor available in links, patties or roll.

15 Prosage® Patties
Packed: 8 oz. cartons/12 cartons per case.
Stock No.: #26802
12½ lb. bulk #26803.

16 Prosage® Links
Packed: 8 oz. cartons/12 cartons per case
Stock No.: #26804
19½ lb. bulk #26815

17 Prosage® Rolls
Packed: 1 lb. rolls/12 rolls per case;
Stock No.: #26806.

18 Stripples®
Crisp up in minutes. These bacon-like strips are great for breakfast, in sandwiches and as a flavor enhancer in casseroles and salads.
Packed: 5 oz. packages/12 packages per case.
Stock No. #27001.

19 Dinner Roast
An elegant entrée sure to add a holiday touch to any family meal.
Packed: 2 lb. cartons/6 cartons per case.
Stock No.: #27414.

20 Bolono™
Makes a simply delicious "bologna" sandwich, sliced or in a spread.
Packed: Slices, 8 oz. cartons/12 cartons per case; Roll, 4½ lb. rolls/4 rolls per case.
Stock No.: Slices #26904; Roll #26916.

Meatless "Beef" Style
(Not Shown)
Frozen 72 oz. roll/4 rolls per case.
Stock No.: #26016.

Leanies® (not shown)
15 lb. Bulk-Pack Links
Stock No.: #26725.

(3) An updated listing of "People and Institutions Connected with Tofu" in the U.S. and around the world, including researchers, major tofu manufacturers in Japan, trade associations, publications, equipment dealers, and tofu apprenticeship programs.

The "Glossary" (p. 325-27) has been condensed to make space for the expanded bibliography and back matter. There is a new page about the Soyfoods Center (p. 333). The page "About the Authors" (autobiographical) has been expanded, and the photograph has been updated. "Sending Tofu to the Four Directions" (p. 335) and the inside rear cover have both been updated. Still contains 500 vegetarian recipes–both western and eastern style.

Note: A news release of 17 Aug. 1983 states: "The Book of Tofu, which introduced the Western world to tofu and inspired the founding of more than 200 tofu shops and soy dairies in North America, has sold 340,000 copies to date, making it the world's best-seller on this popular new 'protein source of the future.'" Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2394. **Product Name:** Stroganoff (Meatless).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1983 August.
Ingredients: Incl. vegetable protein, onion, mushroom, and other savory seasonings in a sour cream sauce.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Food Report (Lehmann). 1983. March.

2395. Holmes, Charlotte Van Gundy. 1983. Re: More about T.A. Van Gundy. Letter to William Shurtleff at Soyfoods Center, Nov. 21. 1 p. Typed, with signature.
• ***Summary:*** "Am enclosing a photo of Dot [Dorothea Van Gundy] and a copy of a Japanese newspaper clipping, and a couple of other items of correspondence which will help document her work.

"I came very close to getting one of my father's labels from the factory at La Sierra. A can had been seen there, but when I went to get it, it could be found nowhere. Hope this is helpful to you in your research. Very truly yours,..." Address: M.D., 10745 Ranchette Rd., Jackson, California 95642.

2397. McDougall, John A.; McDougall, Mary A. 1983. The McDougall plan. New Century Publishers Inc., 220 Old New Brunswick Rd., Piscataway, NJ 08854. 340 p. Foreword by Nathan Pritikin (8/83). General index and recipe index. 24 cm. [804* ref]
• ***Summary:*** This carefully researched and documented book and cookbook argues convincingly in favor of a vegan diet that uses no animal products, that is low in fats, calories, and sodium, and rich in complex carbohydrates. Pages 89-90 give the percentage of calories from fats in various foods under 3 categories: low-fat vegetable foods (incl. oatmeal 16% of calories from fat, apple 9%, broccoli 9%), high-fat vegetable foods (incl. avocadoes 88% of calories from fat, almonds 82%, peanut butter 77%, sunflower seeds 76%, tofu 53%, soybeans 40%, wheat germ 27%, tempeh 25%), and animal foods (bacon 94%, t-bone steak 82%, frankfurters 80%, cheddar cheese 73%, egg 65%, tuna in oil 64%, milk [whole 3.5% fat] 49%, ice cream 49%, milk low-fat 31%, chicken [light-skinned] 18%, tuna in water 6%, buttermilk 3%, skim milk 2%).

Note: The author, however, argues repeatedly against the use of tofu and tempeh based on the "percentage of calories from fat" concept. His figures are correct but we and many nutritionists feel the basic concept, originally popularized by Nathan Pritikin, overlooks two key points: (1) the percentage of water in the food, and (2) the average serving size.

Page 198, in a section on rich [high fat] plant foods, states that tofu, tempeh, soybeans, textured vegetable protein (TVP), and miso contain excessive fat and most are high in calories. "The rich plant foods may account for a small portion of your daily food (less than 10 percent of your calories per day) but only after you have attained the level of health you are striving for. In general, these foods are more harmful than health-supporting. Never eat these foods if you have problems with your health that remain unsolved. If you begin using this group of foods and find that you are also gaining weight or getting back some of your old ailments, then stop eating these foods immediately."

Appendix I, p. 322-28 contains a table listing the percentage of calories from protein, fat, and carbohydrates in many foods. It also gives the calorie concentration (in calories per gram) for each food; foods with a low concentration aid in weight-loss programs. Tofu has only 0.72 calories per gram, and soy sprouts only 0.46; both are low. No soyfoods are used in the many recipes in this book.

Note: According to a colleague, John McDougall suffered a stroke at age 19, which led to much of his current interest in diet and health. He is not a Seventh-day Adventist. Address: 1. M.D. Both: Near Kailua Bay, Oahu, Hawaii.

2399. Leviton, Richard. 1983. Short summary of trip to Europe sponsored by the American Soybean Association (Interview). *SoyaScan Notes.* Nov. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The trip was very good, and Richard feels ASA was favorably impressed with his work. Richard did 6 programs, including 5 for ASA in Paris (France), Milan (Italy), Budapest (Hungary, with Tom Brennan from Vienna), and the Netherlands (small seminar for 10 people). He delivered a speech before 150 people at the Euvepro General Assembly in Parma, Italy. In Switzerland he visited Soyana and Verena Krieger.

ASA says they want to sponsor a conference and a newsletter. Richard will be chair of the conference, which will be held in late Sept. 1984 in Amsterdam. They will get more sponsors, put up all up-front costs, and ensure plenty of media coverage. Richard can keep all the profits. The newsletter on soyfoods, funded by ASA, will be sent to 200 people 3-4 times a year.

The most interesting general concept was that virtually all tofu in Europe is vacuum packed; he saw no water-packed tofu. Lima Foods packs their tofu in glass jars. Witte Wonder, Soyana, Manna, and Cauldron Foods (Bristol) sell pasteurized, unrefrigerated tofu dips and spreads in jars. They have a good shelf life without preservatives, and no spongy consistency. Some are quite amazing (like sweet curry)–far better than any products we have in the USA. Nutana has 3 tofu entrees (noodles, chili, in cans like Loma Linda); the word "Tofu" appears on the label. Address: Colrain, Massachusetts.

2400. Shurtleff, William; Aoyagi, Akiko. 1983. Dr. D.W. Harrison and Africa Basic Foods: History of work with soyfoods. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 10 p. Nov. 22. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. D.W. Harrison is an African-American physician and a Seventh-day Adventist. Contents: Introduction. Early years: Birth and education, army, first trip to Africa, attraction of Ghana's Nkrumah, Meals for Millions. Work in Ghana (1960-63): contract as surgeon, start of farm machinery company, start of bakery and small school, return to U.S. in 1963. Work in Uganda (1964-71): Attractions of Uganda, hired by Uganda government, establishment of Africa Basic Foods (ABF, 1965), 3 objectives, expansion of soybean production, early food production, home-roasted soy flour, grants, equipment, church ties, 3 early products, marketing and demonstrations, end of government contract, start of private medical practice, Worthington Foods purchase of ABF stock and loan of Sam Yoshimura, new tofu and soymilk products, soynuts and soynut butter, Wenger's extruder, speech to United Nations Industrial Development Organization (1969), balance of business and service, Idi Amin and 1970's instability to present. Work in Kenya (1974-82): Move to Kisii, work with soybean production, start of New Soya Enterprises. Summary.

• ***Summary:*** Some information in Chapter 1, Appendix A, and many advertisements have been changed. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2402. Kahan, Ben. 1983. Recollections of the early health foods industry in Los Angeles: Bill Baker, Mildred Lager, El Molino Mills, Harold Hain, Henry Borsook, Gayelord Hauser, Clark Irvine (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 4. 3 p. transcript.
• ***Summary:*** Ben, age 69, was one of the founders of Kahan & Lessin. He has been in the health foods industry since 1932. He became involved with soyfoods through Bill Baker (of Ojai), who pioneered the use of soy flour in Los Angeles bakery products. Bill had the flour ground by El Molino Mills, by elder Vandercook. Starting in about 1936 he developed and started to sell soybean bread. At about the same time he started to make soybean cookies, cereal, pancake flour, and related products. Ben Kahan was the first distributor of Bill Baker's soybean products. Before this, he developed lima bean flour, bread, and pancake and waffle flour, then he switched to soybean flour. Bill Baker got El Molino interested in soybeans. El Molino started in about 1927 with whole-wheat flours. Mr. Vandercook came from Holland, worked for Sperry Mills, was disenchanted, left Sperry and came to Alhambra, where he set up a stone burr just as he had known as a child in Holland. Kahan was also the first distributor for El Molino.

Mildred Lager had one of the first free-standing health food stores (i.e., not in a department store) but she also did promotional work for the health food industry direct to consumers via radio. She was retained by a number of pioneer health food organizations which sponsored here, including Bill Baker. Ben knew here and distributed products to her. Mildred was a slight woman, medium height, former school teacher from Wisconsin, arthritic since youth [about age 16]. Doctors told her to go to California since the weather might help her. She decided to help herself through nutritional means. She was enthused in discovering the relationship between nutrition and health, and she wanted to spread this knowledge to the public. So she started a store,

© Copyright Soyinfo Center 2014

radio broadcast, and classes. She would hire a hall in the Royal Palms Hotel (at 6th and El Dorado), invite people to lectures and cooking classes, and publicize it through her radio program. Bill Baker would bake fresh soybean breads and cookies for the demos.

Bill Baker entered America as a poor immigrant from Prussia. He worked as a baker at some of the most prestigious hotels and restaurants in America. His last jobs were as chefs in the White House [sic] for many years. The last administration was the Harding administration. After that each Christmas he would send the official holiday fruit cake, continuing until Franklin Roosevelt's 3rd administration. After retirement in the early 1930s he was in Ventura, then he moved to Ojai; he baked conventional breads and pies for the Thatcher School and other schools in the Ojai Valley.

Then a group of doctors at the Cottage Hospital in Santa Barbara asked him to try to develop an alkaline bread for nutritional treatment of patients with hyperacidity. Baker researched the problem and came up with lima bean bread, using flour from dried immature baby limas. Also lima bean pancake and waffle flour. He then tried to get this out to the doctors' patients. It was the middle of the Great Depression so it was hard to introduce new products. Kahan, a new distributor in need of products, tried to get the new bread into stores, but only health food stores were interested. Others laughed him out of the store. Mildred Lager was one of his first customers. Bill Baker did his promotions through her.

Bill Baker died in about 1945. The heyday of his baked goods was during World War II. Kahan distributed 1,200 loaves a day. Baker probably also sold through many other distributors in other regions. He shipped his bread to San Francisco, Seattle, and as far east as Colorado. The formula was a secret but probably 16-20% soy flour and the rest a high-gluten unbleached white flour.

The Los Angeles health food movement originated in the late 1920s and early 1930s. Clark Irvine was one of the founders. He published *Health Food Digest* [sic, *California Health News*], which later became Let's Live. Kahan, Irvine, and a few others founded the Health Food Dealers Association, which later became the National Dietetic Foods Association.

The key health food people in Los Angeles were Clark Irvine, Bill Baker, Mildred Lager, Van Gundy, Vandercook, La Sierra Industries (founded by T.A. Van Gundy in Arlington, California), and Loma Linda Foods. Kahan knew of T.A. Van Gundy, and he knew Dorothea Van Gundy well. Harold Hain canned the first commercial soybeans in about 1924. His Hain Health Foods company later became today's Hain Food Group. Dr. Fearn was a pioneer but not a mixer in the industry; not at the National Health Food Dealers Association.

Vitamins: Dr. Henry Borsook, a biochemist at the California Institute of Technology (commonly referred to as Caltech) pioneered vitamins in the early 1940s. He attended health food meetings. This is one reason for the rise of the health food industry in Los Angeles. Borsook was the first on the West Coast to do this. The first U.S. vitamins in a health food store were sold by Joe Bishop, manager of the Vegetarian Cafeteria in San Diego, in about 1941. He sold those made by W.T. Thompson Co.–powdered vitamin B-1 sold in little envelopes. The Seventh-day Adventists also played a big role in Los Angeles. In the early days, many stores were marginal operations in private homes, run by women. The manufacturers were primitive. They catered to poor, marginal people, during the Depression, who couldn't afford to go to doctors, so they tried health foods. They also catered to diabetics, people with allergies, and the teachers who preached against salt. Some of the earliest out-of-the-home health food stores were concessions in markets. So, in this sense, now its not new for health food stores to be in supermarkets. Some of the leaders were those disenchanted with the medical profession. Gayelord Hauser played a leading role in making health foods acceptable; before him they were associated with the nuts, kooks, and freaks. Hauser, who associated with Hollywood and Greta Garbo, gave health foods a big image boost. He created the first big chain, the forerunner of the modern health food industry, in the late 1940s. He and his books and charisma gave the industry a new image. Suddenly health foods were seen as being used by people in the know–not just by nuts.

He recalls four stages of health food stores: (1) In private homes run by women. (2) Concessions in larger food markets or stores. (3) Small stores in secondary retail stores, out of the way, because they couldn't afford stores in main shopping districts. (4) A handful of free-standing health food stores. Mildred Lager's store was not a prime place by any means, but it was pretty good. She had a friend named Gilbert Thayer who backed her. He was an early chiropractor interested in nutrition. She worked for him originally, then branched out on her own. Before that she was a primary school teacher in Wisconsin. Address: 5530 Goodland Ave., N. Hollywood, California 91607. Phone: 818-701-6632.

2403. Poston, Frank. 1983. Worthington is now making tofu and Tofu Garden Patties as part of their new Natural Touch line (Interview). *SoyaScan Notes.* Dec. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Tofu Garden Patties is the start of a new line developed for the health foods market. The Patties were introduced in June 1983. Worthington bought all of the tofu equipment from Rising Sun Soy Farms in Columbus, Ohio, and are now making the tofu for the product at the Worthington plant in Ohio. The product was developed for the health food market, and will be part of the larger new Natural Touch line of products. More new products will be out in April 1984. This is a big and important new trend for the company and they plan to put a lot of energy and money into promoting it. Some (but not all) of the new products

© Copyright Soyinfo Center 2014

will contain tofu. Address: Director, Product Marketing, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

2404. *SoyaScan Notes.* 1983. Chronology of soybeans, soyfoods and natural foods in the United States 1983 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. 16. Larry Needleman decides to sell Bean Machines. Looking for a buyer. Jan. 24. "Legume, Company Finds Niche Selling Frozen Foods Made with Tofu, published by The Wall Street Journal.

Feb. *Soyfoods* magazine No. 8 published by Richard Leviton. Blue cover, 5,000 copies

Feb. 6-8. Sixteen soyfoods companies exhibit at the Natural Foods Expo. in Anaheim, California. A new trade association named Soyfoods Association of America (SAA) is formed; it is basically a restructured version of the original Soyfoods Association of North America, which was founded in July 1978 and which now ceases to be active. SAA elects a new board of directors; Michael Austin is chosen new Executive Director and Gary Barat of Legume becomes new President. Fourteen companies pledge $12,000. Headquarters established in New York City.

Feb. 7. The First Great Tofu Burger, a dry mix, made in Oakland, introduced at Anaheim Natural Foods Expo.

Feb. 18. Wm. Shurtleff has idea for forming a Soy Sauce Council to help encourage soy sauce companies to join Soyfoods Association, develop soy sauce terminology and standards, and eliminate mislabeling.

Feb. Jack's Beanstalk, innovative tofu company in Salt Lake City, goes out of business.

March 10. *Soyfoods Industry and Market: Directory and Databook 1983* published by Soyfoods Center, accompanied by glossy flyer and catalog of professional publications and services.

March 10. *Tempeh Primer,* by Juel Andersen and Robin Clute, published.

March 14. Connecticut Agricultural Experiment Station, in Bulletin 810 "Quality of Tofu and Other Soy Products," reports high bacterial and coliform counts. A virtual expose, revealing the tofu industry's erratic quality control, it gets wide media coverage and hurts sales of New England and New York tofu companies.

March. Hinode Tofu Co. starts major tofu ad and coupon campaign, with full-page ads in four national magazines. Most extensive national publicity ever done for tofu. Triggers lawsuit from a rice company over the Hinode brand, with which Hinode Tofu Co. is subsequently forced to part.

April 27-30. Six soyfoods companies exhibit at Whole Life Expo in San Francisco, as part of Soyfoods Association's booth. Shurtleff presents a speech and color slide show.

April. Hartz Seed Co. is purchased by Monsanto.

May. *The Au Naturel Tofu Manual,* by Chloe & Abraham Fox self-published in Canada. Vol. 1 is *Tofu Recipes for Families.* Vol. 2 is *Modern Jewish Tofu Cooking.*

May 3. Michael Austin mails out Soyfoods Association Charter Member letter. By year's end $18,000 in membership fees had been raised.

May 4. Richard Leviton decides to move to California.

May 8-11. Hinode Tofu Co. exhibits five flavors of Tofu Parfait at the prestigious and influential Food Marketing Institute convention in Chicago, a major national supermarket convention, attended by 20,000.

May 9. Dr. Hwa L. Wang of USDA NRRC speaks on "Tofu and Tempeh as Potential Protein Sources in the Western Diet" at the American Oil Chemists' Society symposium on "Potential New Protein Sources" in Chicago.

May 16. Quong Hop & Co. introduces the first Soy Deli cooler display case to Raley's supermarkets in Reno and Sacramento. In July they introduce the idea to Safeway supermarkets in California. By August there are Soy Delis in ten Safeway supermarkets in the San Francisco Bay Area.

May 18. The New York Times article on "Bacteria in Soy Products" as a follow-up on the Connecticut tofu contamination report.

May 24. Wm. Shurtleff goes to China for three weeks to study soyfoods, sponsored by Danish Turnkey Dairies; the first trip for this purpose since Dr. A.K. Smith of the USDA went there in 1949. Shurtleff writes 75-page report on *Soybeans and Soyfoods in China: 1949-83.* After China, Wm. and Akiko Shurtleff spend 3 weeks studying the soymilk industry and market in Japan.

May 31. Leviton and Wang speak on the soyfoods industry at Iowa State University conference on grains and legumes.

June. Worthington Foods introduces Tofu Garden Patties, developed for the health food market as part of a larger new line of natural food products, all sold under the Natural Touch brand. This is a new trend for the company and they commit money to promoting it. In 1984 they launch Okara Patties (which contain okara as the 4th ingredient).

June. *Quantity Tofu Recipes for Institutions & Restaurants,* by Gary Landgrebe published by Soyfoods magazine and Fresh Press.

June. *The Magic of Tofu,* by Jane O'Brien of Ireland published by Thorsons in the UK.

June. *Tofu: Not Just for the Health of It,* by Jana H. Crutchfield self-published.

June. *Handbook of Indigenous Fermented Foods,* edited by Keith H. Steinkraus, published by Marcel Dekker. Extensive original material on traditional soyfoods. It soon becomes a classic.

June. *Soyfoods* magazine No. 9 published, 7,000 copies. *Soyfoods Newsletter* published in new typeset, 4-page format with new design.

June. Torigoe Seifun, Japan's fifth-largest flour miller,

© Copyright Soyinfo Center 2014

starts production of tempeh. This is the earliest known commercial tempeh ever made in Japan.

July 1. Quong Hop & Co. purchases Pacific Tempeh Co.

July. INTSOY publishes *Proceedings of the First China/USA Soybean Symposium,* held July 1982 at the University of Illinois.

July 3-Aug. 22. Richard Leviton in England, lectures on soyfoods in London and Leicester, and does some soyfoods research.

July 25. Soyfoods Association meeting in Denver. Tom Timmins, president of Tomsun Foods Inc. (one of the companies seriously affected by negative publicity on tofu quality) is asked to be head of the Soyfoods Association's Standards Committee, and to appoint people to work with him on the development of standards, especially tofu standards. In October he sends a 4-page survey letter concerning soyfoods standards to the 18-person Soyfoods Association Standards Committee that he has appointed.

July 28-Aug. 2. Second US/China Soybean Research Symposium, held in Jilin, China

July. NNFA show in Denver. Eden Foods surprises the natural foods industry by launching designed-for-America Edensoy in plain and carob flavors. Made in Japan by Marusan-Ai and exported by Muso, it is packed in a 6-ounce retort pouch. San-J's To-Neu brand soymilk is also debuted in Tetra Brik cartons.

Eden Foods is the first Caucasian-American company to import soymilk, and their gamble soon pays off; sales skyrocket, sparked by an extensive magazine advertising campaign. Between Sept. and Dec. 1983 over 1 million packs are sold. A host of competitors rush to follow Eden's lead... and many of them go to Muso. Eden objects.

July 31. Fifth Anniversary of the founding of the Soyfoods Association of North America.

Late July. Hot, dry summer weather heats up the price of soybeans from $6/bu to over $9.50/bu in August and September, falling back to $8 in December.

Aug. 15. *Time* magazine article on stylish ice creams has a paragraph on Tofutti soy ice cream.

Aug. 15. Delegation of four soyfoods experts from People's Republic of China spends 5 hours at The Soyfoods Center. First stop of the first Chinese soyfoods team to visit the USA.

Aug. 15. Soyfoods Center makes the first photocopy of the entire Log of the Dorsett-Morse Expedition to East Asia, 1929-31. 6,170 pages. The only original is owned by the American Soybean Assoc. in St. Louis.

Aug. Farm Foods serves Ice Bean soymilk ice cream at the American Soybean Association convention in Nashville, Tennessee.

Sept. Legume in New Jersey, in their second public stock offering in 15 months, raises an additional $400,000 ($300,000 net).

Sept. Continental Soyfoods, run by Pat Aylward in Minneapolis, goes out of business.

Sept. 9. Leviton leaves Massachusetts, moves Soyfoods magazine to Encinitas, California. But he decides to leave there a week later.

Sept. 21. New Ten Speed Press edition of *The Book of Miso,* by Shurtleff and Aoyagi published. Extensively revised. Shows miso consumption in U.S. has increased 300% since 1975.

Sept. 25. Open House at new headquarters of Soyfoods Center for 30 people, including Nancy Dailey, who is writing a major story on soybeans for *National Geographic* magazine, and for Richard Leviton, newly arrived in California. Shurtleff shows color slides of soyfoods in China.

Sept. 26–Oct. 1. Symposium on "Soybean in Tropical and Subtropical Cropping Systems" held at Tsukuba, Japan. About 200 people attended. Proceedings were published in 1985.

Sept. 28. Soyfoods Center buys its first computer and begins computerization, which soon leads to development of the world's three largest computerized databases focusing on soyfoods and the soybean industry–from which this chronology is compiled.

2405. Berkel, J.; Waard, F. de. 1983. Mortality pattern and life expectancy of Seventh-Day Adventists in the Netherlands. *International J. of Epidemiology* 12(4):455-59. Dec. [21 ref]

• ***Summary:*** A ten-year study (1968-77) on 482 Seventh-Day Adventists who died in the Netherlands showed that–compared with the total Dutch population–they were only 41% as likely to die from cardiovascular diseases, 50% as likely to die of cancer, and 45% as likely to die of all causes. The Adventists also lived significantly longer. Address: Dep. of Epidemiology, Inst. for Social Medicine, State Univ., Utrecht, The Netherlands.

2406. Leviton, Richard. 1983. Report on soyfoods research trip across America, Dec. 1983. Colrain, Massachusetts. 2 p. Unpublished typescript.

• ***Summary:*** Visited or discusses: Northern Soy (Rochester, New York), Legume (New York City), Tofu Time (David Mintz, New York City), New England Soy Dairy (Greenfield, Massachusetts), SanJ (San-Jirushi, Virginia), Quong Hop & Co. (South San Francisco, California), Worthington Foods (Worthington, Ohio), Southwest Soyfoods (Richard Jennings, Santa Fe, New Mexico). Address: 100 Heath Rd., Colrain, Massachusetts 01340. 2407. **Product Name:** [Soya Pac, and Tortaleta {Textured Soy Protein Meat Analogs}].
Manufacturer's Name: Alimentos Colpac.
Manufacturer's Address: Km 13 Carratera Huatabampo, Apartado No. 502, Navojoa, Sonora, CP8500, Mexico.
Date of Introduction: 1983.

© Copyright Soyinfo Center 2014

New Product–Documentation: Soya Bluebook. 1983. p. 62.

2408. **Product Name:** [Granix Nutrisoja Textured Soy Flour for Breaded & Fried Cutlets].
Foreign Name: Granix Nutrisoja para Milanesas.
Manufacturer's Name: Alimentos Granix.
Manufacturer's Address: Av. San Martin 4625 (C.P. 1602), Florida, Provincia de Buenos Aires, Argentina.
Date of Introduction: 1983.
Ingredients: Incl. Defatted soybeans.
Wt/Vol., Packaging, Price: 250 gm plastic bag.
New Product–Documentation: Manufacturer's brochure. 1989? "Granix por excelencia." A color photo shows the package label. On the front is a color photo of the foods on a plate. Letter and Label sent by Jorge Manrique of Alimentos Granix. 1990. July 13. This product was introduced in 1983. A small one-sided red and black leaflet is titled CEAPE: Nutrisoja para Milanesa. Above this is the logo of Colegio Adventista del Plata. It describes: How to prepare these breaded and fried cutlets. Other applications. Composition. "The Nutrisoja Milanesa is a texturized product with defatted soy flour and without additives (*agregados*). It contains more than 40% protein and a low percentage of fat (1.5%). It is made by the Adventist College of the Plata, Commercialization Dept., Marshall 99, 3103 Villa Libertador San Martin, Entre Rios."

Note: La Plata is the capital of Buenos Aires province in Argentina. Rio de la Plata, called the River Plate in English, is the estuary formed by the combination of the Uruguay River and the Paraná River. It is a funnel-shaped indentation on the southeastern coastline of South America, between Argentina and Uruguay. extending 290 kilometers (180 mi) from the rivers' confluence to the Atlantic Ocean.

2409. **Product Name:** [Granix Nutrisoja for Rellenos].
Foreign Name: Granix Nutrisoja para Rellenos.
Manufacturer's Name: Alimentos Granix.
Manufacturer's Address: Av. San Martin 4625 (C.P. 1602), 1602–Florida, Prov. de Buenos Aires, Argentina. Phone: 760-7292/0307.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: 500 gm plastic bag.
How Stored: Refrigerated.
New Product–Documentation: Letter sent by Jorge Manrique of Alimentos Granix. 1990. July 13. This product was introduced in 1983. No label was sent and the product is not listed in the company's catalog.

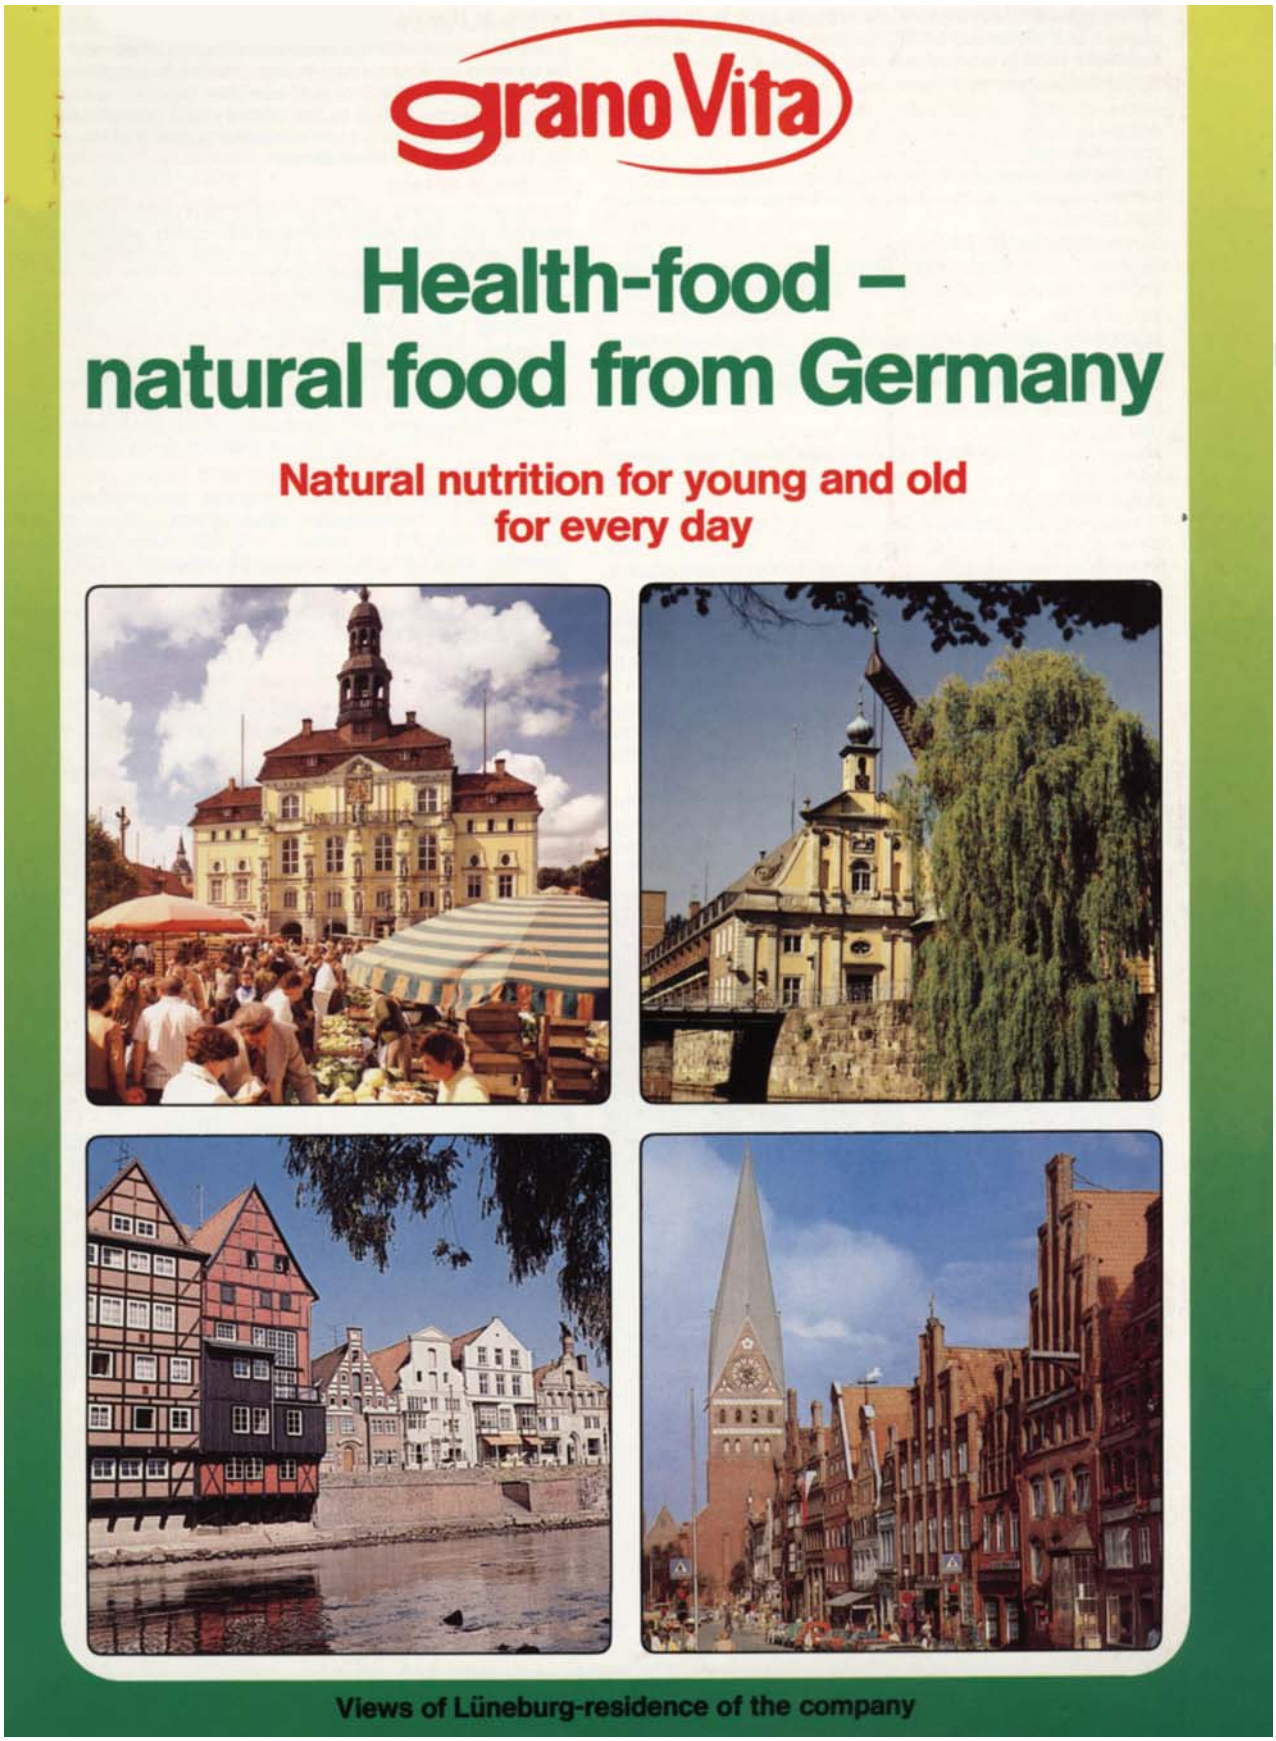
2415. Rouse, Ian L.; Armstrong, B.K.; Beilin, L.J. 1983. The relationship of blood pressure to diet and lifestyle in two religious populations. *J. of Hypertension* 1:65-71. *
• ***Summary:*** The authors compared blood pressures in Seventh-day Adventist (SDA) lactoovovegetarians with Mormon meat eaters in an attempt to control for several of the potentially confounding aspects of lifestyle that characterize religious adherents. In particular, both the SDA and Mormon religions discourage the use of alcohol, nicotine, caffeine, and other stimulants. The SDAs who ate fish, meat, or poultry less than once a month had significantly lower blood pressures and a lower prevalence of mild hypertension (2%; > 140 systolic and/or > 90 diastolic) compared with age- and sex-matched Mormons (10%). Address: Dep. of Medicine, Royal Perth Hospital, Univ. of Western Australia, Perth, Western Australia, Australia.

2416. **Product Name:** Sanitarium Health Foods Swiss Rounds (Vegetarian).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1983.
Ingredients: Textured vegetable protein, vegetable oil, rolled oats, onion, whey protein concentrate, thickeners, flavours, yeast extract, salt, sugars, herbs and spices, water added.
Wt/Vol., Packaging, Price: 430 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1983.



2417. DE-VAU-GE Gesundkostwerk GmbH. 1983. GranoVita. Health-food & natural food from Germany. Natural nutrition for young and old for every day. P.O. Box 1660, D-2120 Lueneburg, West Germany. 6 p. Manufacturer's catalog. [Eng]

• ***Summary:*** See next two pages. This full-color manufacturer's catalog contains a color photo of each of the company's products and a listing of ingredients. All are natural, vegetarian foods. The lines are Soya-Products, Sandwich-spreads, Baby food, Fruit- and Grain bars, Nut-Creams, Wholemeal Breakfast, Herbal drugs, Drinks (soymilks and coffee substitutes), and Boesen grain-mill. Contains a concise history of the company, which was founded in 1899 by a group of health reformers at Friedensau near Magdeburg. Today the Lueneburg plant employs about 120 workers. The company supplies 2,500 health food stores in West Germany and has business dealings worldwide. "By our motto 'Once a week a meatless day with granoVita soya-food' more and more customers are induced to try the wholesome and tasty soya-products."

In 1977 DE-VAU-GE acquired the Boesen Bakery Ltd. which employs 130 workers. In 1982 total sales for granoVita and Boesen were 50 million DM (German marks).

Soya-Products

Eating meatless soya-products is up to date. It gives you a change and all the fun of discovering new tastes. Moreover meatless food is wholesome and healthful.

Soya-Sausages in 3 varieties

Article-No. 1402 Soya-sausages, standard
Article-No. 1465 Soya-sausages, highly seasoned
Article-No. 1475 Soya-Wieners
Ingredients: Vegetable oils and fats, water, soya-protein, egg-protein onions, natural spices, wheat gluten, salt, glucose, yeast, rolled-oats, bread-crumbs. 275 g per tin.

Soya-zart (tender cutlets)

Seasoned soya-cutlets. Ingredients: Soya-protein, water, corn-germ-oil, egg-protein, salt, dextrose, spices.

Soya-balls

Article-No. 1406 / 350 g per tin.
Ingredients: Soya-protein, water, corn-germ-oil, egg-protein, bread-crumbs, spices, sea-salt, wheat-protein, wheat-flakes, yeast, onions, potato-starch. Article-No. 1415 / 170 g per tin.

Pasta chuta Bolognese

Use as spaghetti-sauce. Ingredients: Tomato-pulp, water, textured soya-protein, onions, grated cheese, soya-oil, salt, natural spices, corn-starch. Article-No. 1411 / 400 g per tin.

Soya-goulash

To be served with potatoes, rice or noodles. Ingredients: Non hydrogenated vegetable-fats, soya-protein, carrots, celery, tomatoes, wheat-flour, natural spices. Article-No. 1417 / 425 g per tin.

Soya-Mignon

Can be used like meat-balls. Ingredients: Soya-protein, water, onions, rolled-oats, non hydrogenated vegetable-fats, egg-protein, spices. Article-No. 1473 / 375 g per tin.

Soya Ragout fin

To be served as tasty filling for pies. Ingredients: Water, Soya-zart, mushrooms, wheat-flour, cream, vegetable-margarine, onions, spices. Article-No. 1472 / 400 g per tin.

Soya-Vita

Perfectly seasoned patty-mixture with sea-salt. Ingredients: Soya-protein, bread-crumbs, wheat-gluten, wheat-flakes, glucose, egg-protein, yeast, potato-starch, onions, spices, sea-salt, celery, parsley. Article-No. 1409 / 200 g.

Sandwich-spreads in various tastes, in tins or to be stored in the refrigerator.

granoVita Sandwich-spreads can be used in several ways: As spreads on bread, crisp-bread or toast, in vegetarian patties, on pizza, in salads or puff-pastries, together with rice as filling for peppers. Due to the added yeast granoVita Sandwich-spreads contain a considerable quantity of the essential B-vitamins. No cholesterol.

Sandwich-spread

Produced according to a Swiss recipe. Ingredients: Water, vegetable-oils and fats, yeast, onions, potato-starch, sea-salt, natural spices. Article-No. 1312 / 80 g or as small unit for cold storage 4x62,5 g / 250 g. (Article-No. 4730).

Sandwich-spread with mushrooms

Ingredients: Like Sandwich-spread, with mushrooms added.
Article-No. 1316 / 80 g
or as small unit for cold storage Article-No. 4727 / 200 g.

Sandwich-spread with olives

Ingredients: Like Sandwich-spread with pepper-filled olives added. Article-No. 1315 / 80 g or for cold storage Article-No. 4728 / 200 g.

Sandwich-spread – like homemade

Ingredients: Water, vegetable-oils and fats, yeast, onions, wheat-wholemeal, buckwheat-groats potato-starch, spices, sea-salt, soya-flour. Reduced in calories – only 225 calories per 100 g. Article-No. 1320 / 80 g or for cold storage Article-No. 4729 / 200 g.

Soya-pikant

Ingredients: Water, vegetable-oils and fats, egg-protein, soya-protein, spices, wheat-gluten, glucose, salt, yeast, rolled-oats, soya-sauce, bread-crumbs, onions. Article-No. 1448 / 80 g.

Soya-Delikat

Tasty vegetarian slices to be used in various dishes, on bread or dressed and fried, in salads or stews. Ingredients: Soya-protein, corn-germ-oil, mushrooms, water, egg-protein, onions, salt, dextrose, spices, yeast. Article-No. 4726 / 250 g.

2418. Knorr, Dietrich. ed. 1983. Sustainable food systems. Westport, Connecticut: AVI Publishing Company, Inc. xiv + 416 p. Illust. Index. 24 cm. [50+* ref]
• ***Summary:*** Contents: List of contributors. Preface. Part 1: System analysis. 1. The future of American agriculture, by D. Pimentel and M. Pimentel. 2. The potential of an alternative agriculture. 3. The new consumers: Food habits and the basis of choice. Part 2: Agricultural production. 4. Energy in U.S. agricultural production. 5. Energy and agricultural production in Europe and the Third World. 6. Role of stress tolerance in integrated pest management. 7. Design of small-scale food production systems and pest control. 8. The economic feasibility of widespread adoption of organic farming. Part 3: Food processing and distribution. 9. Appropriate food technology. 10. Solar dehydration. 11. Recycling of nutrients from food wastes. 12. Challenging the modern U.S. food system: Notes from the grassroots. Part 4: Quality and quality control. 13. Organically grown foods. 14. Quantity and quality determination of ecologically grown foods. 15. A qualitative method for assessing humus condition. 16. Nutritional considerations in planning for food production.

Chapter 2, "The potential for a sustainable agriculture," by Gil Friend, has this contents: Introduction. Contemporary agriculture. Biological agriculture. Agro-ecosystem design. Conclusions. 78 references.

Chapter 16 (p. 394-410), "Nutritional considerations in planning for food production," by Olaf Mickelsen, has this contents: Factors influencing consumers' purchases. Crops for human nutrition. Ruhner and World War I. Animal foods in human nutrition. Growth rate and milk composition. Rat milk versus human milk. Bread protein: Studies with rats. Bread protein: Studies with young men. Wheat and blood urea levels. Osteoporosis and vegetarianism. Urinary calcium loss and titratable acidity. Seventh-day Adventists and osteoporosis. Dietary fiber. Water needs of different foods. Energy to process and store foods. Plant foods for man's survival. Address: Dipl.-Ing, Dep. of Food Science and Human Nutrition, Univ. of Delaware.

2419. Loma Linda Foods. 1983. Loma Linda: 69 secrets for making delicious meatless meals in minutes. Riverside, California: Loma Linda Foods. 35 p. Index. 22 x 10 cm.
• ***Summary:*** Loma Linda makes: Canned and dry products (22 are used here in recipes). Cereals (1). Frozen (5). A color center-fold photo shows all vegetarian meatlike and dairylike products currently made by Loma Linda. The many recipes in this booklet each call for the use of a specific Loma Linda product. The index shows which products are used in which recipes. Address: 11503 Pierce St., Riverside, California 92515.

Nutrition Press. 298 p. See p. 53-72. Chap. 5. Proceedings of an international conference sponsored by the American Health Foundation, March 31–April 1, 1982, New York, New York. [79 ref]
• ***Summary:*** Previous reports have shown that the risk of fatal cancer among approximately 23,000 Seventh-day Adventists in California is 61% of the risk in the general population. Of these Adventists, 42% are lacto-ovo-vegetarians, 2% are vegans, and the majority use meat, poultry, and fish somewhat less frequently than most USA whites.

This report presents data on cancer risk among Adventists with differing levels of meat use. Based on 20 years of mortality follow-up of the above-mentioned sample, the mortality ratios of non-Adventists to Adventist lacto-ovo vegetarians are as follows for various cancer sites: colo-rectal cancer 1.97 (i.e. non-Adventists are almost twice as likely to die of colo-rectal cancer as Adventist lacto-ovo vegetarians), all causes of cancer 1.59, ovarian cancer 1.51, pancreas cancer 1.47, stomach cancer 1.37, prostate cancer 1.27, breast cancer 1.27, and all cancers unrelated to smoking 1.23. Thus the risk of fatal cancer among Adventist vegetarians is significantly below that of comparable non-Adventists for each of the above-mentioned sites.

Now, comparing the mortality ratios of Adventists who eat meat (i.e. meat, poultry, or fish) 4 or more days/week to Adventist lacto-ovo vegetarians, we find the following: Ovarian cancer 1.66 (i.e. 66% more Adventist meat-eaters die of ovarian cancer than Adventist lacto-ovo vegetarians), prostate cancer 1.51, all causes of cancer 1.33, breast cancer 1.28, pancreas cancer 1.16, stomach cancer 1.08, all cancers unrelated to smoking 1.07, and colo-rectal cancer 1.02.

Table 5.2 gives an overview of 22 other studies (3 cohort, 20 case control) that also contain individual data on the relationship of meat use to various cancer sites. A substantial positive association (relative risk > 1.5) was observed in 7 of the 13 studies of colo-rectal cancer, in 2 of the 4 studies of breast cancer, and in 2 of the 6 studies of stomach cancer.

"In summary, there is substantial but not entirely convincing, evidence that a vegetarian diet may protect against several of the cancers which are common in westernized populations. The evidence is quite compelling that high vegetable use may play a key role in any protective effect the vegetarian diet may offer. This protection is likely mediated by vitamins A and C and possibly by indoles, protease inhibitors, or fiber. There is suggestive evidence that a vegetarian diet which is carefully devised to also be low in total fat, saturated fat, or cholesterol may also protect against these cancers. However, the available data does not provide convincing evidence that simply deleting meat from the typical American diet would substantially reduce cancer risk."

This research was partially supported by grants from the National Cancer Institute and the National Institute of Aging. Address: 1. Prof. of Epidemiology; 2. Asst. Prof. of Epidemiology; 3. Senior Research Asst. All: Loma Linda Univ., Schools of Health and Medicine, Loma Linda, California 92350.

2421. Register, U.D.; Crooks, Hulda. 1983. Nutritionally adequate vegetarian diets. In: Miloslav Rechcigl, ed. 1983. CRC Handbook of Nutritional Supplements. Vol. I. Human Use. Boca Raton, FL: CRC Press. See p. 331-42. [41 ref]
• ***Summary:*** Contents: Introduction. What is a vegetarian diet? Protein requirement. Lacto-ovovegetarian diet. Lactovegetarian diet. Total vegetarian diet. Adequacy of plant proteins. Planning the vegetarian diet. Meat analogs.

There are three basic types of "nonflesh diets": 1. Lacto-ovovegetarians include dairy products and eggs in their diets. 2. Lactovegetarians use only dairy products in addition to plant foods. 3. Total or pure vegetarians avoid all animal products. Many total vegetarians (vegans) "substitute soymilk and soy products for dairy products"; some refuse "even to wear shoes made of leather." E. Hodgkin, M.S., R.D., Asst. Professor, Dep. of Nutrition and Dietetics, School of Allied Health Professions, Loma Linda Univ. Soy-related recipes include: Soy milk shake (p. 11). Spring rolls (with FriChik Soyameat, p. 15). Soy chicken salad (with canned soy chicken, p. 33, 34). Soya chick fruit salad (p. 35). Soyannaise (p. 43). Tofu cornbread (p. 49). "Tuna" burgers (with canned chicken-style Soyameat, p. 60). Savory soybean burgers (with whole soybeans, p. 61). Chicken-style spread (with canned chicken-style Soyameat, p. 62). Mild sloppy Joes (with Vegeburger, p. 64). Soy chicken spread (with Worthington's fried-style Soy chicken, p. 65). Tofu, peanut butter, and banana spread (p. 67). Whole wheat-soy waffles (with soy flour, p. 70). Crunchy granola (with soy flour, p. 74).

Many of the entrees (p. 77-143) call for canned, frozen, or dry soy-based meatlike products. McKay's seasoning (chicken-style) and G. Washington broth, Vegex, Sovex, and Savita are also widely used. The following is but a sampler: Tofu roast (p. 81). Soy bean loaf (p. 82). Soy cheese loaf (with tofu, p. 82). Chicken loaf (with chicken-style soyameat, p. 85). Soyameat broccoli casserole (chicken-style, p. 86). Onion tofu (p. 93). Easy tofu casserole (p. 94). Tofu casserole (p. 94). Lasagne (with textured vegetable protein, p. 95). Soy bean patties (p. 110). Tofu balls (p. 113). Soy beans, southern style (p. 115). Delicious baked soybeans (p. 116). Stir fry vegetables with tofu (p. 127). Tofu quiche (p. 133). Soybean soufflé (p. 138).

Tofu fruit whip (p. 171). There is a chapter titled "Foods for Fifty" (p. 185-201) including: Curried rice with soyameat (p. 195). Address: Loma Linda Univ., School of Medicine, 11136-A Anderson St., Loma Linda, California 92354.

2426. Woodroof, Jasper Guy. ed. 1983. Peanuts: Production, processing, products. 3rd ed. Westport, Connecticut: AVI Publishing Co., Inc. xiv + 414 p. Illust. Index. 24 cm. [100+* ref]

• ***Summary:*** All chapters are by J.G. Woodroof unless otherwise noted. Contents: 1. Historical background. 2. Production and marketing of peanuts in the United States, by D.H. Carley. 3. World production and trade of peanuts, by D.H. Carley. 4. The culture of peanuts. 5. Harvesting, curing, and shelling. 6. Storing peanuts. 7. The aflatoxin crisis, by T.H. Sanders. 8. Composition and nutritive value of peanuts. 9. Peanut butter. 10. Salted peanuts. 11. Peanut confections. 12. Peanut oil. Diversified food uses for peanuts, by Kay H. McWatters: Introduction, white and whole wheat peanut bread, variety breads, cookies, cakes and brownies, doughnuts and sweet yeast products, pies, peanut milk, peanut yogurt, and peanut cheese-type systems, frozen desserts, nonmilk beverages, soups and gruels, peanuts with meats, peanut snack products, breakfast cereals, summary. 14. Peanut protein properties, processes, and products, by John P. Cherry. 15. Nonfood uses for peanuts. Summary and future outlook. Appendices: 1. U.S. standards for peanuts: Farmers' stock white Spanish peanuts, Virginia-type peanuts, and runner peanuts (unshelled or shelled). 2. U.S. standards for grades of peanut butter. 3. Technical inspection procedures for peanut butter. 4. Peanut butter: definition and standard of identity. 5. Common conversions. Address: Prof. Emeritus, Dep. of Food Science, Univ. of Georgia Agric. Exp. Station, Experiment, Georgia. Phone: 404-227-3376.

2427. Woodroof, Jasper Guy. 1983. Peanut butter. In: J.G. Woodroof, ed. 1983. Peanuts: Production, Processing, Products. 3rd ed. Westport, Connecticut: AVI Publishing Co., Inc. xiv + 414 p. See p. 181-227. Chap. 9. [59* ref]

• ***Summary:*** Contents: History. Peanut butter in America and abroad. Peanut butter in the United Kingdom. Increased use of peanut butter. Importance. Manufacture of peanut butter. Shelf life of peanut butter. Peanut butter–Bulk pack. Peanut butter syrup. Peanut butter powder. Peanut butter granules. Nonoiling peanut butter. Improvement in peanut butter. Artificial peanut butter. Use of peanut butter. Bibliography.

"In Haiti and Nigeria shelled peanuts are pounded into a pulp (paste or butter) with a mortar and pestle... Making peanut butter in Haiti dates back to the Spanish occupation in 1697." And the practice "dates to before slaves were abolished in Haiti in 1793." In South Africa "this product dates to early 1790."

"In 1865 and earlier in the southern United States, shelled, roasted peanuts were chopped, ground, or beaten into a paste in a cloth bag and eaten with salt. The product was seldom sufficiently fine as to become sticky." "Possibly the first attempt to make and use peanut butter or paste, other than as a subsistence food item, in the United States was when a physician in St. Louis, Missouri, was reportedly the first to manufacture peanut butter commercially about 1900 (Beattie, 1936). [Note: Beattie 1936 makes no mention of any physician in St. Louis, Missouri in connection with peanut butter!] He recommended it for invalids because of its high nutritional value. It was said to be used in sanitariums elsewhere, especially at Battle Creek, Michigan, due to its high protein content, palatability, and low carbohydrate content. Due to the limited sale at first and lack of adequate equipment for manufacture, the price was too high for general use."

Photos show: (1) "Mortar and pestle used for making peanut butter in Nigeria in 1981, very similar to the way it was probably made two centuries before." (2) Conventional Chop-rite meat chopper suitable for grinding peanuts into peanut butter. (3) Motorized machine for grinding peanuts into peanut butter in store; customers can grind to desired fineness. Address: Prof. Emeritus, Dep. of Food Science, Univ. of Georgia Agric. Exp. Station, Experiment, Georgia. Phone: 404-227-3376.

2430. Daems, Chr. 1984. Re: Alpro's commercial soymilk products. Letter to William Shurtleff at Soyfoods Center, Feb. 7. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** Alpro started commercial production of soymilk in 1979 at a plant in Izegem with a capacity of 6,000 liters/hour. Soymilk production in their new plant in Ghent is expected to start in May 1984. They have 3 brands of their own: Soyamel, Alpro, and Provamel. They also sell their soymilk to several companies who use their own brand. The best known are DE-VAU-GE in Germany and Granose Foods in England. They have recently started selling to Health Valley in California under the latter's brand.

They sold a turnkey soymilk plant to a company in Madagascar, which started making soymilk in Jan. 1984. They were attempting to sell compact soymilk plants with capacities of 2,000 to 4,000 liters/hour to other countries. Address: Alpro, Zuidkaai 33, B-8700 Izegem, Belgium.

2431. Blix, Glen. 1984. Re: Update on soymilk and soy-based infant formula in America. Letter to William Shurtleff at Soyfoods Center, Feb. 8. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "It is our feeling that the soy market has not grown appreciatively over the last couple of years due to a reduction in incidence of use among pediatricians. The American Academy of Pediatrics has recommended that soy use be somewhat more restricted than it has been in the past, due to their fears regarding mineral uptake, etc. I would therefore still place the total gallons of infant formula consumed in the United States at approximately 32 million gallons.

"I believe that Ross and Mead Johnson have achieved somewhat more equitable market share, with Ross possibly commanding 46 percent of the total soy formula market, or approximately l5 million gallons, with Mead Johnson some where in the range of 44 percent or 14 million gallons. We believe that Loma Linda, with the Soyalac and i-Soyalac products sells in the range of 7 percent of the market, with Wyeth being in fourth place at the 3 percent level. This would mean that Loma Linda's market share is approximately 2 million gallons, with Wyeth coming in at approximately 1 million gallons of infant formula.

"I believe the same will be true regarding the adult Soyagen formulation, with Loma Linda Foods still retaining at least 60 percent of the total market, with approximately 1 million gallons of product, Worthington's Soyamel would make up the balance of 40 percent of the adult beverage sold with approximately 0.7 million gallons.

Regarding your question concerning the percentage of sales to Seventh-Day Adventists, again, the data we have is somewhat sketchy, but I believe that less than 5 percent of the total baby formula goes into Seventh-Day Adventist households. However, the Soyagen will probably be the reverse of that, with close to 80 to 90 percent of the Soyagen sold being consumed by Seventh-Day Adventists.

"Seventh-Day Adventists would tend to use the soy based beverage primarily due to their interpretation of certain health counsels given by Ellen White, believing that the discontinuance of all dairy products would be advantageous to health. Of course, the standard allergy problems which many adults experience, as well as lactose intolerance which is particularly prevalent among the black and oriental races, are also significant factors." Address: Vice-President of Marketing, Loma Linda Foods, 11503 Pierce St., Riverside, California 92515. Phone: (714) 687-7800.

2432. Calvert, Francis E. 1984. Work with Ford and Drackett on soybeans (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 19. 3 p. transcript.
• ***Summary:*** Francis (Frank) Calvert was first introduced to soybeans after he went to Detroit. In about 1931, Ford arrived at the Chemical Plant in Greenfield Village (also a lab and a pilot plant), with a 20 pound sack of soybeans. He threw them on the workbench and said, "More people eat these than anything else. There must be something awfully

© Copyright Soyinfo Center 2014

good about them. Why don't you fellows find out what it is." They were already doing research on agricultural wastes and chemurgy, on almost every crop you could think of.

Their first problem was getting soybeans. There were none available. Within the next year or two they planted thousands of acres themselves. Ford plowed up a big field and planted quarter acre plots with different varieties. It was an enormous quantity. Even though they didn't know what to do with them, it was Ford's style. He did nothing small. They raised hundreds of quarter acre plots, testing different varieties.

Dr. Edsel Ruddiman, after whom Edsel Ford was named, was a nutritionist and pharmacologist. He ran the food laboratory and made lots of the foods served in the Ford cafeteria to Ford employees. They were first sold as samples, but didn't sell well because of the flavor. From about 1932-33, the products included soy milk, soy cheeses, and soy ice cream and sherbets. Soynuts were also made in a counter-current fryer in rectangular buckets on a chain. The employees ate most of the products and tourists consumed some. Food was also served from the kitchen at the Wayside Inn in the village. Products were provided as a snack, but most were given as samples, and a few were sold.

Both Atkinson and Calvert, research chemists, reported to Boyer. Calvert left Ford in 1938 and went to Drackett. Boyer and Atkinson left later to do work on soy-based plastics.

ADM bought The Drackett soybean crushing plant in about 1957. Calvert went with ADM for about 5 years, until 1960-61. From 1962-74, he worked for Ralston Purina. In December 1958 Ralston purchased Procter & Gamble's plant in Louisville, Kentucky, and were already somewhat involved with isolates; they began working with foods after 1962.

Ralston went into dietary products and infant formulas in about 1963-64, supplying soy protein isolates to most of the infant formula manufacturers such as Miles and Wyeth Labs. Ralston, Loma Linda and Worthington were the biggest suppliers of infant formula from 1962-74.

Don Walker, Vice President of Ralston Purina, took a strong interest in soy protein. Ralston took the lead primarily because of the strong interest and leadership of Hal Dean, then Chairman of the Board and CEO. Dean was the key motivating force from the early 1960s. He firmly believed in and supported soy protein development.

Ford was the father of the soybean industry in the U.S. He had an impact just through his interest in soybeans. He planted soybeans and promoted and merchandised them in the same way he promoted the industrial barn at the World's Fair in Chicago. Ford set up an extraction plant and actually extracted oil and molded gearshift balls at the Industrial Barn at the Fair. People couldn't believe their eyes! Ford was the single largest soybean grower in the U.S. at that time.

2433. **Product Name:** Provamel Soya Drink [Without Sugar].
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1984 February.
Wt/Vol., Packaging, Price: 250 ml, 500 ml, 1000 ml.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Food Report (Lehmann). 1984. Aug. Described in leaflets issued to health food stores in the Netherlands. Labels. 1988. No sugar or salt, with sugar and salt. Talk with Ted Nordquist of Aros Sojaprodukter, Sweden. 1988. March 27. "In late 1984 the only soy drink sold in Scandinavia was GranoVita, made for DE-VAU-GE by Alpro in Belgium. When DE-VAU-GE started their own soymilk plant (constructed by STS), Alpro introduced their own soymilk line brand-named Provamel [launched in Dec. 1982]. They marketed it in Scandinavia, competing with GranoVita."

Simon Bailey. 1988. Natural Choice. Aug. 15. A photo shows the Label. "No added sugar. 100% natural. Free of animal fats." CSP form filled out by Simon Bailey. 1988. Sept. 28. Gives date as Feb. 1984. All made with organic soybeans. Adds honey & malt flavor. The importer in England is Vandemoortele (UK) Ltd., Ashley House, 86-94 High St., Hounslow, Middlesex TW3 1NH. Phone: 01-577 2727.

Label sent by Anthony Marrese. 1990. March 22. Green and yellow on white. 1 liter Tetra Brik carton, without addition of sugar. In French, Dutch, Italian, and German. "Organic." Retails for DM 3.85. Imported and distributed by Lucas Meyer s.r.l. Consumer Div., Vigonza (Padova).

2434. **Product Name:** Granose Soya Dessert (Vanilla, or Chocolate).
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in Belgium by Alpro.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1984 February.
New Product–Documentation: Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by DE-VAU-GE, was introduced in 1981 in Vanilla, Chocolate, Strawberry, and Banana flavors. The desserts were made by Alpro in Feb. 1984.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. The desserts were first made for Granose by Alpro in Feb. 1984 in Vanilla and Chocolate flavors.

• ***Summary:*** Seventh Day Adventist omnivore and vegetarian students, who ate primarily in a lacto-ovo-vegetarian food service, kept dietary diaries for 3 days and selected their own foods. "Vegetarian students consumed significantly higher amounts of calcium and phosphorus than did omnivore students suggesting that under the conditions described the vegetarian students were making superior food pattern selections. No significant differences in blood serum calcium and phosphorus levels between these two groups were found." Address: Dep. of Human Nutrition and Food Service Management, Univ. of Nebraska, Lincoln, NE 68583.

2437. Shurtleff, William; Aoyagi, Akiko. 1984. Soymilk industry and market: Worldwide and country-by-country analysis. 2 vols. Lafayette, California: Soyfoods Center. Vol. 1, 199 p. Vol. 2, 100 p. Feb. 28 cm. [165 ref]

• ***Summary:*** A comprehensive overview, worldwide, with extensive historical information. The first study of its type, with many statistics, graphs, and tables. Volume 1 is the market study, and Volume 2 is black-and-white copies of soymilk labels and other graphics.

Contents: 1. Introduction. 2. Directory of soymilk manufacturers and related companies worldwide. 3. Definitions and varieties of soymilk. 4. Overview of world soymilk industry and market, and future outlook. 5. United States soymilk industry and market. 6. Japan. 7. Korea. 8. China. 9. Taiwan. 10. Hong Kong. 11. Singapore and Malaysia. 12. Southeast and South Asia: (13. Vietnam. 14. Thailand. 15. Philippines. 16. Indonesia. 17. India. 18. Sri Lanka). 19. Europe (Incl. Plamil Foods in England, Tetra Pak Group in Sweden, Alfa-Laval and John Wilson in Sweden, Danish Turnkey Dairies–DTD and Soya Technology Systems (STS), Alpro / Vandemoortele in Belgium, Nestle, F. de Selliers in Belgium, Dansk Soyakagefabrik in Denmark, Lima Andiran in France, Galactina in Belp, Switzerland, and Semper A.B. in Sweden).

20. Latin America. 21. Africa. 22. History of Vitasoy in Hong Kong. 23. Two modern soymilk manufacturing processes: Marusan and Alfa-Laval. 24. Etymology of the word "soymilk" worldwide. 25. Analysis of ingredients in 49 popular Japanese soymilk products. 26. Bibliography. 27. About the Soyfoods Center. A table on p. 12 gives an overview of world soymilk production in 1983 ranked in descending order of annual per capita consumption. These statistics do not include China (PRC) or soy-based infant formulas, usually made from soy protein isolate. 1. Taiwan, 210 million liters, 11.1 liters / capita, growing at 30% per year. 2. Hong Kong, 39.1 million liters, 7.5 liters / capita, growing at 10% per year. 3. Singapore, 11.2 million liters, 4.7 liters / capita, growing at 15% per year. 4. South Korea, 67.0 million liters, 1.60 liters / capita, growing at 60% per year. 5. Malaysia, 21.4 million liters, 1.53 liters / capita. 6. Japan, 131.8 million liters, 1,10 liters / capita, growing at 101% per year. 7. Thailand, 50.0 million liters, 1.00 liters / capita. 8. USA, 9.6 million liters, 0.04 liters / capita. Total world production: 548.3 million liters.

Page 36 gives an overview of the U.S. market for soy-based infant formulas and adult soymilk. Production of soy-based infant formulas (on a ready to serve basis) in 1983 was as follows: Ross Laboratories made 14,720,000 gallons of Isomil (i). Mead Johnson made 14,080,000 gallons of Prosobee. Loma Linda made 2,240,000 gallons of Soyalac. And Wyeth Labs made 960,000 gallons of Nursoy. Thus 32,000,000 gallons of soy-based infant formula were made in the USA in 1983.

Also in 1983, consumption of soymilk by adults in the USA was as follows: 1,743,000 gallons were made by specialized soymilk manufacturers in the USA (Loma Linda Soyagen 1,000,000 gallons; Worthington Soyamel 670,000 gallons, Miller's Soy (private label) 73,000 gallons). 690,000 gallons were imported (328,000 gallons of Vitasoy by Vitasoy USA, 254,000 gallons of Yeo's by YHS, 50,000 gallons of Edensoy by Eden Foods, 25,000 gallons of President by President, 25,000 gallons of Kibun by Kibun, 8,000 gallons of To-Neu by San-J International). 250,000 gallons were made fresh by tofu companies (45,000 gallons by Mighty Soy, 41,000 gallons by Victor Foods [Scarborough, Ontario, Canada], 39,000 gallons by Quong Hop & Co., 35,000 gallons by Wy Ky, and 90,000 gallons by others).

Yield. 1 ton of raw soybeans yields approximately 4,320 gallons of soymilk. Conversion: 3.785 liters = 1 gallon.

On page 56 is a table of "Large natural food distributors in the US" with the dollar figure being estimated annual sales in millions of dollars."

1. Rainbow Distributing (Denver, Colorado) $13.
2. Arrowhead Mills (Hereford, Texas) $12.
3. Eden Foods (Clinton, Michigan) $10.
4. Rock Island Foods (Ignacio, California) $10.
5. Westbrae Natural Foods (Emeryville, California) $9.
6. Pacific Rim (Seattle, Washington) $7.
7. Cornucopia Natural Foods (Coventry, Rhode Island) $7.

Total estimated sales for the top 7 distributors: $68 million a year.

A lot more than meats the eye.

Chicken Supreme

Vege-Scallops

Tastee Cuts

Ocean Platter

If you think you're looking at four delicious meat dishes, look again.

There's not an ounce of beef or chicken or fish anywhere.

Because you're looking at four delicious, new meatless family meals from Loma Linda: Chicken Supreme, Vege-Scallops, Tastee Cuts and Ocean Platter.

Like all our fine Loma Linda Foods, each is prepared from protein-rich soybeans and other vegetable sources. There are no animal fats, no cholesterol, and no added preservatives.

Just great taste, bite after bite.

Stock up now with these profitable meal makers while our special deal is on. Check with your distributor or Loma Linda Foods.

2438. Shurtleff, William; Aoyagi, Akiko. 1984. Brief history of Alpro in Belgium (Document part). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 122-23.
• ***Summary:*** "In 1975 Alpro, the Protein Division of the Vandemoortele group started making soymilk; they decided to introduce alternative, vegetable proteins to developing countries. This Group, established in 1879, by the 1980s ranked as one of Europe's largest food processing companies in the fields of edible oils and fats, and protein foods. In 1978 the Group employed over 1,700 people and had annual sales of over $600 million. In 1979 Alpro started commercial production of soymilk at a plant in Izegem with a capacity of 6,000 liters/hour. They also sold a turnkey soymilk plant to Madagascar (it started production in January 1984) and were attempting to sell compact soymilk plants with capacities from 4,000 to 8,000 liters/hour to other countries. In May 1984 Alpro opened a new soymilk plant at Ghent, reputed to be the largest in the world. The 100% natural soymilk is made from whole soybeans, not soy protein isolates, and is sold under three brands: Soyamel, Alpro, and Provamel. Alpro will look to the U.S. and Asia for additional markets for this product, since the European market is small. They plan to focus on areas with protein shortages or lactose intolerance. In October 1983 an Alpro representative visited the USA and lined up Health Valley in Los Angeles as a master distributor. In early 1984 Alpro got distribution on the East Coast of the USA. Alpro sells quite a bit of its soymilk to other European food companies, which sell it under their individual brands. DE-VAU-GE in West Germany and Granose in England, for example, sell plain and carob soymilks (made by Alpro) in 500 ml packs. The main figures behind Alpro are Philip Vandemoortele (Managing Director) and Christian Daems (Marketing Manager)." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

• ***Summary:*** Starting in the late 1950s a renaissance of interest in soymilk began in East Asia, eventually spreading from its center in Hong Kong to all countries in the area, and from there to other parts of the world. The company that inspired this development was K.S. Lo's Hong Kong Soya Bean Products Co., Ltd. (HKSBP), makers of the world-famous soymilk, Vitasoy. As of 1984, no person alive had done more to further the world's interest in soymilk (or in soyfoods) than K.S. Lo.

Early Years (1910-1944). Lo Kwee Seong was born on 2 February 1910 in Kwangtung, China. At age 10 he went to Malaya with his mother and at age 20 he went to Hong Kong. In 1935 he graduated from the University of Hong Kong with a BA degree in commerce and business. After graduation he joined the company where his father worked and was soon appointed Hong Kong manager of the firm's real estate branch.

The story of Vitasoy begins in the winter of 1937, when K.S. Lo, then 27 years old, happened to be in Shanghai on other business. There he attended a talk entitled "Soya Bean: The Cow of China," presented by the American Julean Arnold, then the commercial attaché to the American Embassy in Nanking, and actively involved in relief work using soymilk. Lo later wrote (1964), "Arnold called the soybean the 'Cow of China' and practically attributed to it the preservation of the Chinese race. He said the fact that the Chinese as a race were able to maintain their physical fitness for over 5,000 years in a land where meat was so rare was entirely due to the people's inclusion of soybeans in their diet. I was impressed by his talk and came away with soybeans stuck in my mind." Even after Lo returned to Hong Kong, Arnold's message kept returning to him.

Several years later, in 1939, following the Japanese invasion of China, the first wave of Chinese refugees arrived in Hong Kong. A refugee camp was set up in Argyle Street, Kowloon. A small group of volunteers, including Lo, went to see what could be done to help. Most of the refugees were sick or suffering from malnutrition, including beri-beri and pellagra. Seeing this, Lo again recalled Julean Arnold's message of the promise of the soybean. With the group of friends he raised some money and purchased some soybeans and brown sugar, a stone mill, a kettle, and some cheese cloth. The group set up a small soymilk shop right in the camp and taught the refugees how to make soymilk for themselves. Each refugee received one bowlful every morning. Lo later wrote: "The results were quite startling, as many of them showed significant improvement in their health after the first month. This little experiment gave me full confidence in the nutritional value of soy bean milk and I decided to make it available to the masses of people in Hong Kong who could not afford to buy cow's milk" (Lo, personal communication, March 1981).

In 1939 Lo and four of his friends got together and formed The Hong Kong Soya Bean Products Company (HKSBP), with paid-up capital of HK$15,000. (The company name was expanded to The Hong Kong Soya Bean Products Company, Ltd. in March 1940). The original plant and processing equipment, designed by the founders and located at Causeway Bay (on the site where the Plaza Hotel now stands), officially began operations on 7 March 1940. In his inaugural speech, Lo stated that the company's aim was

© Copyright Soyinfo Center 2014

to provide nutritious soymilk for the masses at the lowest possible price–an aim that has not changed over the years. In those days, when nutritional deficiency diseases such as beri-beri and pellagra were still widely prevalent in Hong Kong, this aim was doubly urgent and important. Yet the day after the plant opened, exactly nine bottles of the product, called VITAMILK, were sold. A dozen delivery boys delivered Vitamilk door-to-door each morning. The strongest supporter of the fledgling operation was a Brit, Dr. Selwyn-Clarke, then director of Medical and Health Services. The only government official aware of the nutritional value of soymilk, he gave orders that all government hospitals should use the new product instead of cow's milk for all third-class patients.

The first few years were filled with problems. Lo wrote in 1964: "We soon found that, even among us Chinese to whom the soybean was by no means new, there was a strong prejudice against soy milk. They not only did not believe its nutritional values, but they also thought it could cause diarrhea, indigestion, and stomach ache. At that stage the taste of our product, too, left much to be desired. Many customers found it hard to take, because of the strong beany flavor and the slightly bitter taste. Another problem we had to face was the keeping quality of the soy milk. We followed the dairy industry by packing it in standard half-pint milk bottles and sealing them with a paper cap and hood. They spoiled even quicker than milk unless they were kept under refrigeration all the time. As they were packed like dairy milk, we had no choice but to market them as a milk substitute. It was not until years later that we found it was a mistake to adopt such a marketing approach. For among the Chinese community, giving milk to children was considered to be a Western luxury, which only the very rich could afford. And of course to the rich, cost was no problem."

Sales continued to be slow, only 300-400 bottles a day. During the summer, sometimes as many bottles spoiled as were sold. Something had to be done. Lo began working with Dr. Y.T. Chiu, who had a written his PhD thesis at Cornell University in 1927 on methods for improving soymilk and its production, and in 1929 had published an article on the subject in China. Their goal was to get locals schools to start using Vitamilk. Speeches on soymilk and nutrition by Chiu were followed by tasting sessions conducted by Lo at the schools. The idea worked. In fact it was a major breakthrough, and today schools remain the company's single most important customer. After the first year, distribution was extended from Hong Kong Island onto the Kowloon peninsula on the mainland. There a combination soymilk cafe and distribution depot was set up. The spot proved popular with students and young people.

In the spring of 1941, Howard Hoover, who had started and run a small Seventh-day Adventist soy dairy in Canton (Guangzhou), had left that city after it fell to the Japanese. While waiting to return to the US he worked with Lo for 6 months. He taught Lo how to homogenize coconut oil into the soymilk to give it a richer flavor then helped to install the company's first Cherry Burrell homogenizer.

By mid-1941 sales of Vitamilk had risen to 1,000 bottles a day. But that was far below the break-even point, and by December 1941, when World War II broke out, the company went broke. Lo, abandoned by his partners, had sunk HK$30,000 of his own money into the venture.

Sixteen days later Hong Kong surrendered to the Japanese. Four months after the occupation Lo left for Free China (the part of China not occupied by Japanese), taking with him his family of four children. They finally settled down as refugees in a small town called Linshan on the border between Kwantung and Kwansi, west of Canton. Here again the soybean provided Lo with a livelihood and probably saved the family's life. Lo put up a makeshift building and called it The Cafe. After buying a stone mill, he started to make soymilk and home-made cakes, and thus made a living until World War II was over. Their fifth child, Irene, was born during this hard time. Lo's wife had no breast milk to feed her since she had not nursed the other children. Irene was thus raised on soymilk which, the family felt, saved her life. Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

• ***Summary:*** Continued. Starting Over (1944-1959). The British Navy returned to Hong Kong on 31 August 1944, after the Japanese surrender. Lo returned 2 weeks later and quickly got back his plant from the Custodian of Enemy Properties. He was glad to find that the Japanese had left most of his equipment intact. He borrowed HK$50,000 from a friend and by November 1945 Vitamilk was back on the market. At this time, everything was scarce in Hong Kong and only one company had resumed production of soft drinks. Lo seized the opportunity to sell his soymilk, still in milk-type bottles with paper cap and hood, through soft drink outlets instead of delivering it to households. Now he presented it to the typical man on the street as a noncarbonated beverage rather than as a morning milk substitute. In the "small people in the street," Lo wrote in 1964, "I found my best friends and customers, who have remained the backbone of my business even to this day. Our sales increased so rapidly thereafter that our only problems were how to step up production and enlarge the areas of distribution."

In about 1948 Lo first started adding vitamins to his soymilk. He was probably the first person in the world to do this. Although it was sold somewhat like a soft drink, Vitamilk aimed at replacing the empty calories of

© Copyright Soyinfo Center 2014

conventional soft drinks with protein and essential nutrients.

In 1949, having paid off his loan in less than a year, Lo bought a piece of land in Aberdeen, Hong Kong, and started to build a new plant. However before it was finished Lo had been chosen to be the Hong Kong franchise for Greenspot, a large California-based manufacturer of orange concentrate. When the Aberdeen factory opened in 1950 it was Greenspot orangeade that was made there. Vitamilk stayed in the old factory at Causeway Bay, because Lo could not afford to move it.

For years Lo had dreamed of being able to sell his soymilk in soft-drink type bottles, sterilized to give a shelf life of 6 months without refrigeration–just like the Greenspot they were now bottling. But there were extra problems involved in bottling soymilk this way. Experts with whom Lo consulted said that it probably could not be done without the use of a preservative, but that if anyone figured out how to do it without preservatives, they would become rich. Lo decided to accept the challenge. He hired a man with a US degree in dairy science and asked him to try to sterilize soymilk in Greenspot capped glass bottles. After repeated failures, explosions, and injuries, the project was a success. The two men were overjoyed, for they realized that now, at last, soymilk could be marketed exactly like soft drinks without the handicaps of the milk bottle and short shelf life.

In about 1953 Vitamilk first came on the market in soft-drink bottles, sealed with a metal crown cap and sterilized to allow it to keep for months. Now the soymilk operation was moved into the new plant at Aberdeen and the soymilk was distributed on the same truck as Greenspot. Retailers who previously could order only a dozen bottles at a time for lack of refrigeration space, could now take up to a dozen cases. A major marketing barrier had been broken. Vitasoy had been remade, and was the first beverage of its kind in the world. With this new approach, Lo discovered a new market that has continued to remain the backbone of his business. The change of product concept and distribution channel brought immediate success, and sales began to increase dramatically. For many years thereafter Lo's biggest problem was how to produce enough soymilk to keep up with the growing demand, as sales would sometimes double or triple in one year. By 1958 a million cases (24 million bottles) a year were being sold.

This fast expansion attracted the attention of many, both in and outside of Hong Kong. In Hong Kong the success of Vitamilk aroused the envy and jealousy of companies making competing beverages. They formed a lobby to get the Urban Council to forbid Lo from using the word "milk" in his product name. In 1953, after some wrangling, a compromise was reached whereby Lo was allowed to retain the Chinese characters in his registered trademark if he changed the English name of his product from VITAMILK to VITASOY. The characters were *Wai-ta Nai; Wai-ta* means "vitality" in Chinese, and also forms a part of the Chinese word for "vitamin," *wai-ta ming. Nai* means "milk," such as cow's milk. Lo was not the first person in the world to use the term Vitasoy. It had been used as early as 1936 in the USA as the name for a "soybean milk powder" by Soya Health Products in New York, and as early as 1948 as the name for "vitamin and enriched infant and vegetarian food" made with soy flour by Soya Foods Ltd. in England.

Soon after Vitasoy caught on in Hong Kong, other companies began to jump on the bandwagon, following Lo's basic marketing concepts. In about 1948 in Manila, Soya Lac, launched as a milk substitute in 1941, was reintroduced as a healthful soft drink. In 1954 Yeo Hiap Seng, a big Chinese food manufacturer in Singapore, launched its first soymilk. Called BEANVIT (later renamed Yeo's Soybean Drink) it was sold as a soft drink in sterilized bottles, the first product of its type in Singapore and Malaysia. (In 1967 Yeo Hiap Seng's soymilk became the first in the world to be sold in Tetra Pak, the new tetrahedronal aseptic and disposable cartons, requiring no refrigeration.) In 1958 Green Spot in Thailand started making soymilk, followed in 1959 by Saniku Foods in Tokyo. The pioneers of what would eventually become East Asia's soymilk boom were starting to grow, drawing their inspiration from Vitasoy in Hong Kong.

Outside of Hong Kong, Vitasoy had begun to catch the attention of people in the United Nations, especially those in UNICEF and FAO. Representatives of these organizations, when passing through Hong Kong, often wanted to visit Lo's plant. Thus, in the late 1950s, when UNICEF decided to assist Indonesia in setting up a soymilk plant, four Indonesian technicians were sent for 3 months work and training at Lo's factory.

In 1957 HKSBP was granted the Pepsi-Cola bottling franchise for Hong Kong, which they kept until 1976. Although they did not make any profit on the franchise during all those years, they did manage to learn from the Pepsi people a good deal about marketing, which they employed to advantage in marketing their own products.

In about 1959 Lo set out to find a way to make Vitasoy popular year-round. In Hong Kong 80% of all soft drinks were sold during the 6 warm months, and only 20% from November to April. That year Lo developed a heater that would heat up to four cases (96 bottles) of Vitasoy at a time, and keep them hot (145ºF) during the chilly weather. The idea caught on and retail store owners loved it, for it helped their beverage sales during the typically slack cold months. Customers loved it too, for Vitasoy was the only soft drink available that one could enjoy piping hot to take away the winter's chill. With the help of the winter heaters and the introduction of chocolate-flavored Vitasoy (also in 1959), sales again shot upwards. And throughout the 6 cold months they now stayed at 50% of peak summer sales. Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2441. Shurtleff, William; Aoyagi, Akiko. 1984. K.S. Lo and the history of Vitasoy in Hong Kong and North America. (Continued–Document part III). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 130-153.
• ***Summary:*** Continued. The 1960s, Continuing Growth. During the period from 1955 to 1960 sales of Vitasoy grew 5-fold, from 8.4 million bottles in 1955 to 42 million in 1960. This represented a remarkable compound rate of 38% a year, the highest rate in the company's history up to the present. The time had come to launch a new phase of the business: mass promotion.

In the early 1960s, with sales skyrocketing, Lo set out to take full marketing advantage of the breakthroughs he had made in packaging, distribution, and market domination. He launched a major, modern advertising campaign. The slogan (used until 1975), emphasizing health and nutrition, introduced a much wider public to Vitasoy and its new name. It proclaimed: "Vitasoy makes you taller, stronger, and more attractive."

During the 1960s, sales increased 2.4-fold, climbing to 60 million bottles a year in 1962, then to 67 million in 1965 and 100.8 million in 1970, for a very healthy compound growth rate of 9.2% a year during the decade. By 1962 Vitasoy had become Hong Kong's best-selling soft drink, ahead of such internationally known brands as Coca-Cola, Pepsi-Cola, and Seven-Up (Lo 1964). In 1964 Vitasoy retailed for less than one-third the price of cow's milk in Hong Kong. In the mid-1960s Malt Vitasoy was introduced and soon became very popular. By 1968 Vitasoy had captured an impressive 24% of the highly competitive Hong Kong soft drink market. Here, indeed, was a soybean Cinderella success story.

In 1961 Vitasoy, which had met no competition from brand-named soymilks since its origin, suddenly had its first real rival. Fung Lik Nai, meaning "milk filled with energy and power," was launched that year, only to disappear after one season. Again Vitasoy shared the market only with tiny street-side makers of traditional soymilk.

In 1962-63 HKSBP built a new plant in Kowloon, doubling the production capacity of the old plant in Hong Kong. By the first year it was operating at 90% of capacity. The plant had the most modern, mechanized equipment, including a continuous automatic sterilizer for the sealed bottles.

In 1964 Lo was invited to present a paper on his experience in promoting Vitasoy at the International Symposium on Oilseed Protein Foods organized by UNICEF in Tokyo. The paper was hailed for its description of the commercial marketing of a protein-rich soft drink. It was published in the May 1964 issue of *Soybean Digest.* Because of Vitasoy's proven success, the United States was now willing to grant outright financial aid to any American company willing to introduce protein-enriched soft drinks in any Latin American country. UNICEF was also willing to give financial and technical aid to companies interested in starting similar projects in developing countries in Asia or Africa. Right after the Tokyo conference Lo was approached by more than half a dozen multinational companies, who wanted to franchise Lo's Vitasoy process on a worldwide basis. Lo finally chose to go with Monsanto, a chemical company based in St. Louis, Missouri. Monsanto wanted to diversify into food processing, using Vitasoy as the key catalyst for its new department. Most of the other companies were already heavily into food processing and Vitasoy would be just another item for them. Monsanto and Lo set up a Hong Kong subsidiary, Lomond Ltd., of which Lo owned one-fifth of the stock and got royalties on sales.

The choice of Monsanto, however, proved to be a serious mistake, for they had no experience in developing and marketing a new food. Instead of going out and finding interested bottlers, they spent 3 years on fruitless research, hoping to develop a concentrate (based on soy protein isolates and containing more than 100 flavor ingredients, including vanilla, orange, and cinnamon) with an improved flavor that they could sell to prospective bottlers like Coca-Cola's secret formula. In August 1968 Monsanto announced that it planned to bottle and market a soymilk soft drink in Guyana, South America, with plans for eventual expansion to other Latin American and Asian markets (*Soybean Digest,* Aug. 1968; *TIME* 1968). The new isolate-based drink, called Puma, containing about 2.5% protein, was launched in 1969. It had a strong banana flavor. In the early years about 29 million bottles were sold annually, all through retail outlets. Yet from Lo's point of view, the Puma project had only limited success. In 1969, when the heavy chemical industry turned sour, Monsanto, itself in larger trouble, stopped putting new money and energy into the project, and they soon sold the entire operation to the local bottler (who was still making Puma in 1976; Aguilera and Lusas 1981). This whole debacle was Lo's biggest setback to date. He had had a world market at his fingertips and lost it. After this apparent failure he was never able to renegotiate with other multinationals. Once again, he would be forced to start all over using an entirely new approach–but that would have to wait until the late 1970s (Lo 1982).

One of Lo's greatest admirers was Dr. Harry Miller, who had pioneered soymilk production in Shanghai in 1936. He and Lo had first met in Hong Kong after World War II. Miller visited the Vitasoy plant. Lo remembers him as "quite business minded and interesting in getting people to use his soymilk manufacturing process, on which he would collect a small royalty." Miller wrote two articles about Vitasoy in the *Soybean Digest* in June 1948 and May 1965. Miller, who was one of the first to see the great potential of soymilk for China, was apparently delighted that Lo had been able to so successfully manifest this potential. In the 1965 article

© Copyright Soyinfo Center 2014

he spoke of Lo's "genius and leadership" and how some 40 large delivery trucks distributed Vitasoy to hospitals and schools. It retailed from street vendors for slightly more than 3 cents (US) per 7-ounce bottle.

"By the late 1960s the international media began to take notice of Vitasoy's meteoric rise to popularity. In 1968 *Time* magazine ran an article stating that "Vitasoy has become the new soft-drink craze of the British Crown Colony. A 6.5 oz. bottle costs 3.5 cents, compared with 4.8 cents for the same sized bottle of Coca-Cola. Vitasoy has captured 25% of the Hong Kong soft-drink market. This year an estimated 78 million bottles, second only to Coca-Cola's 100 million, will be sold from sidewalk stands, sampans and grocery stores for a total of $2,600,000." In about 1974 a major East Asian business magazine did a long story on Lo, his company, and Vitasoy.

As soon as Lo had proved the potential of soymilk, the giant Coca-Cola Company got interested. In 1966 they started a Protein Beverage Project within the company and in 1968 introduced their first soymilk, Saci, in Brazil. Coke was smart enough to join the trend rather than fight it. Eventually other huge multinational corporations, including Mitsubishi in Japan and Nestle in Europe (in the late 1970s) followed Vitasoy's lead, further sparking the soymilk renaissance. Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2442. Shurtleff, William; Aoyagi, Akiko. 1984. Japan: Soymilk industry and market (Document part). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 63-81.

• ***Summary:*** Historical. Soymilk was not a part of the traditional diet in Japan, as it was in China. Cow's milk, which entered Japan in about 1000 A.D., likewise, never became a part of the basic diet. Reference to soymilk (then called *toju* or "bean liquid") may have appeared as early as the 1100s, but the first clear reference was not published until 1895, when Inouye did one of the world's first nutritional analyses of soymilk, and compared it to cow's milk. In 1906 Katayama wrote two articles on soymilk; in one he described preparation of a fermented soymilk cheese, similar to Swiss cheese. Yet both Inouye and Katayama wrote in English. In 1924 Sato Yoshitane wrote a book called *Daizu Kakko,* which is said to contain the earliest known reference to the word soymilk (*tônyu*), written with the present characters.

From this time on (and perhaps from an earlier date) some Japanese (an estimated 1% of the population) would order fresh soymilk from their local tofu shop, usually for health-related reasons, as in diabetic diets or for mothers who had difficulties with breast feeding, or because it was thought or found to be a health-giving beverage.

The earliest known commercial production of soymilk in Japan dates back to the influence of Dr. Harry Miller. In 1957 two Japanese Seventh-day Adventists, following his inspiration, started making soymilk in Hachioji, Tokyo, and selling it locally in 180 ml cartons. In 1958 Dr. Miller set up a small soymilk plant in the kitchen of the Adventist Tokyo Sanitarium. It was used to make soymilk, soy whipping cream, soymilk ice cream, and soy spread, which were served to the staff and patients. In 1959 a small soymilk plant was established in the Seventh-day Adventist Saniku School. From this year, Japan's oldest existing soymilk company, Saniku Foods, traces its origin.

A chronology of the starting date of Japanese soymilk companies is as follows. Only three, each followed by an asterisk, are no longer in business:

During the period from 1973 to 1976 soymilk started to become quite popular in Japan, largely because of developments in processing technology that made it possible to produce soymilk with a bland (non-beany) flavor, and because of promotion by the new soymilk companies. In 1974 Japan's first major book on soymilk was published. By 1976 the Japanese were making the best soymilk in the world–by Western standards.

A new era began in 1976 when Kyushu Milk Co., a long-established, middle sized dairy milk company, started making soymilk. Tremendous momentum was added to this new direction in April l979, when Meiji Milk Co., Japan's second largest milk company also started to sell soymilk (made by Marusan but with the Meiji brand). Meiji first began to make their own soymilk in their own plant in March 1981. That same month Morinaga Milk Co. was licensed by Mitsubishi to distribute their soymilk. Quickly thereafter each of the other major Japanese milk companies (Meito, Yuki-jirushi) followed suit, joining the wave of the future rather than fighting it. Their analysis was that fundamentally soymilk and cow's milk were complementary rather than competing products, and that making soymilk would allow a company to expand its market size by reaching people who did not ordinarily drink cow's milk. In retrospect, this analysis has proven to be correct.

What has since often been called "The Soymilk Boom" really started in Japan in about 1981-82. The main reasons for this were:

1. A growing interest among Japanese in good health and nutrition, through improved diet. A corollary of this was the concept that the elite should be especially healthy, both to improve their own performance and well being, and to set an example for others. The American health, natural foods, soyfoods, and vegetarian movements all had a significant influence on Japanese attitudes toward good health.

2. Improved soymilk quality/flavor, and a growing number of varieties and flavors.

3. Popularization of packaging (such as Tetra Brik aseptic cartons) that would give the soymilk a long shelf life, allowing nationwide distribution from one large soymilk plant.

© Copyright Soyinfo Center 2014

4. Strong interest and support by the media/mass communications followed, after 1981, by extensive advertising and promotion on TV (especially by Kibun and Marusan), in the print media, and with in-store demos by soymilk companies.

5. The aggressive marketing of soymilk by all of Japan's major milk companies.

6. The establishment of Japanese Agricultural Standards (JAS) for soymilk in May 1981.

7. Large numbers of tofu shops starting selling fresh soymilk (containing its natural "beany" flavor), starting in about mid-1982.

8. Large manufacturers and distributors of beverages and related food products started to buy soymilk in bulk from manufacturers, then to market and distribute it under their own labels. Examples: Kirin Beer, Kagome (a large ketchup maker), Suntory, etc.

From 1978 to 1983 the soymilk market in Japan, on average, more than doubled each year, making it the fast growing food market in Japan! Many new brands started appearing in 1982 and there was a big jump in production. Soymilk was the star and darling of the media and it played a major role in enhancing the image and sales of all soyfoods in Japan.

Market Size and Growth Rate: The following statistics show the increase in size of the Japanese soymilk market: Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2443. Shurtleff, William; Aoyagi, Akiko. 1984. History of soy protein concentrates, isolates, and textured soy protein products. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 25 p. March 4. Unpublished typescript. Available online at www.soyinfocenter.com.

• ***Summary:*** A comprehensive history of the subject. Contents: Definition of types of products. Part I: History of modern soy protein products from origin to 1964. Soy protein isolate: Tofu, Nagel in New York 1903, Beltzer in 1911, Ajinomoto in 1919, Cone and Brown patent in 1928, Glidden (first plant in U.S. for production of industrial grade soy protein isolate) in 1935, first study of use of soy isolates in food (Woodruff at University of Illinois, 1938), Glidden first company in the West to produce a soy protein isolate for use in food (1939, enzyme-modified), Glidden first with large-scale production of non-enzyme modified isolates (1957), Worthington Foods introduced Soyamel in 1952 (first soymilk based on isolate). Soy protein concentrates: First developed and introduced in Germany in 1925, first commercial food-grade concentrates and first patent from Griffith Laboratories in 1959. Textured soy protein products: Developed in China 1,000 years ago, made from tofu or yuba, earliest Western meat analogs developed by John Harvey Kellogg about 1896 (without soy), first synthetic industrial protein fiber (Lanital, made from casein) introduced in Italy 1936, first industrial (non-food) soy protein fibers in 1938 from Robert Boyer of Ford Motor Co. (used for upholstery), Boyer got patent for use in food (1951), rights purchased by Worthington, Dr. Harry Miller's soya loaf in 1939, Worthington first to produce a meat analog based on spun soy protein fibers in 1960, textured soy flour (TSP or TVP) introduced as food ingredient in U.S. in 1964.

Part II: History of modern soy protein products in the U.S. from 1965 to 1981. 1964 Belden report from Harvard Business School *Protein Paradox.* Commercial Protein Foods Studies Program of the U.S. Agency for International Development (AID) encouraged U.S. firms to develop protein foods for the Third World in 1967. General Mills Bac-O's test marketed 1966. Producers. February 1971 breakthrough when USDA authorized use of TVP in school lunch programs. 1972 *Soybeans. Chemistry and Technology,* edited by Smith and Circle, contained all the research on nutrition and processing up to that time. 1973 high beef prices led to beef-soy retail blends. Appearance of TSP cookbooks, starting in 1971. First World Soy Protein Conference held in Munich, Germany, in 1973. In 1974 Miles Laboratories/Worthington Foods introduced Morningstar Farms meat analogs, the first soy protein meat analog entrees marketed to mainstream America. Textured soy concentrates and other concentrate developments. New developments with isolates. New flavorings. New textured soy flour development. 1978 Keystone Conference on soy protein and human nutrition sponsored by Ralston Purina. Problems with government regulation.

Part III: History of modern soy protein products outside the U.S. and Europe (1960-1981): Japan. China. Other Asia: Philippines, India, Sri Lanka. Latin America: Colombia, Mexico. Address: Lafayette, California. Phone: 415-283-2991.

Total serum cholesterol levels were low (138 mg per dl), and apolipoprotein B level was low as well (46 mg per dl)." Mean blood pressures were also low (104/65). Address: 1,2&4. Dep. of Community Health and Preventive Medicine, Northwestern Univ. Medical School, Chicago. Illinois.

2447. **Product Name:** Natural Touch Okara Patties.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1984 March.
Ingredients: Textured soy protein concentrate, wheat gluten, egg whites, okara (cooked soy pulp), soy oil, potatoes, yeast extract, skim milk, onion, sea salt, carrageenan, vegetable gum, spices, paprika, oil of celery, turmeric.
Wt/Vol., Packaging, Price: 9 oz box contains 4 patties. Retails for $1.89-$2.09.
How Stored: Frozen.

New Product–Documentation: Note that even though this product has "Okara" in the product name, okara is a relatively minor ingredient, the fourth most predominant after soy protein concentrate, egg whites, and wheat gluten.

Spot in Soyfoods. 1984. Summer. p. 45. "Prepared Patty Pair." Product with Label purchased from Berkeley Natural Grocery Co., California. 1984. 8 by 4 by 1.25 inches. 4 color box. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Golden Goodness. Nothing Artificial, Protein Rich/Natural Fiber."

Ad (full page, color photo) in Natural Foods Merchandiser. 1985. May. "Natural Wonders. Discover Natural Touch for something new in natural foods taste!" Shows color labels/packages for each of four entrées, including Okara Patties and Tofu Garden Patties.

2448. Worthington Foods, Inc. 1984. Worthington: Yesterday and today. Worthington, Ohio. 12 p. April 3.
• ***Summary:*** Includes a concise history of the company. In March 1970 Worthington was acquired by Miles Laboratories. On 15 Oct. 1982 Worthington was repurchased from Miles Laboratories by a group of three Seventh-day

Adventist investors. During the 12 years under Miles, sales increased five-fold. Sales volume in 1983 was an all-time high. The company employs 250 people.

The section titled "Yesterday and today" (p. 4-9) contains an excellent history of Worthington Foods, accompanied by 18 photos (both black-and-white and color). "Worthington Foods got its start in vegetarian foods in 1939 with two peanut-based products, Proast and Numete. These were among the first items produced by the company then known as Special Foods, Inc. Operations began in Worthington, Ohio, inside a small two-story home." [see photo]

"Dr. George T. Harding, Sr. borrowed $5,000, secured with a mortgage on his home, to launch Special Foods, Inc. and was soon joined by four other Seventh-day Adventist investors. Bill Robinson was appointed manager and the only salaried employee."

"The company survived and grew. By the end of two years, annual sales had reached $20,000."

Note 1. This is the earliest document seen (Aug. 2002) containing statistics on the meat alternatives industry or market–by individual companies.

Note 2. A later (undated) revised edition of this booklet was published in about 1987. The cover title was "Worthington: Building for a healthier tomorrow." Address: Ohio.

• ***Summary:*** Announces launch of Tofu Garden Patties and Okara Patties at Natural Foods Expo in Anaheim, California, in March. Address: Worthington, Ohio.

2456. Poston, Frank. 1984. Worthington Foods and their new Natural Touch line (Interview). *SoyaScan Notes.* June 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The upsurge in Morningstar Farms sales, the line they direct to the cholesterol-concerned market, started to increase in late 1983 due primarily to increased promotion. The upsurge was helped substantially by the cover story in *Time* magazine (March 26, 1984) titled "Cholesterol: And now the bad news." The inside story, in the Medicine section, was "Hold the eggs and butter."

Miles Laboratories hadn't done much with promotion and advertising for 2-3 years in a row. In 1984 the first quarter's sales were up 18% above last year.

Worthington has 3 product lines: (1) Morningstar Farms is promoted to the mass consumer with an emphasis on no-cholesterol. (2) The Worthington branded lines is promoted to Seventh-day Adventists. (3) The Natural Touch line is promoted to the natural / health market, plus some to Seventh-day Adventists.

Worthington is now working to take advantage of the *Time* magazine article by sending out news releases, PR releases, etc. He'll put Soyfoods Center on their list.

Only the Morningstar line has benefitted from the upswing in interest / concern with cholesterol. The other lines are not promoted for cholesterol.

He does not know how much tofu they now make.

The Natural Touch line will include a whole line of products, including snacks as well as products manufactured elsewhere. They now have only entrees. New additions will appear this year. The buyback from Miles Laboratories went smoothly and with much good will. Miles was bought out by Bayer (pronounced BAI-ur), a huge pharmaceutical company and they really weren't interested in food anyway. Miles cut way back in promotion during the last few years. They we never satisfied with the volumes they got.

Worthington now has mostly non-Adventist employees, but the majority of the investors are Adventists. Warren Hartman retired but is on the board. Address: Director, Product Marketing, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

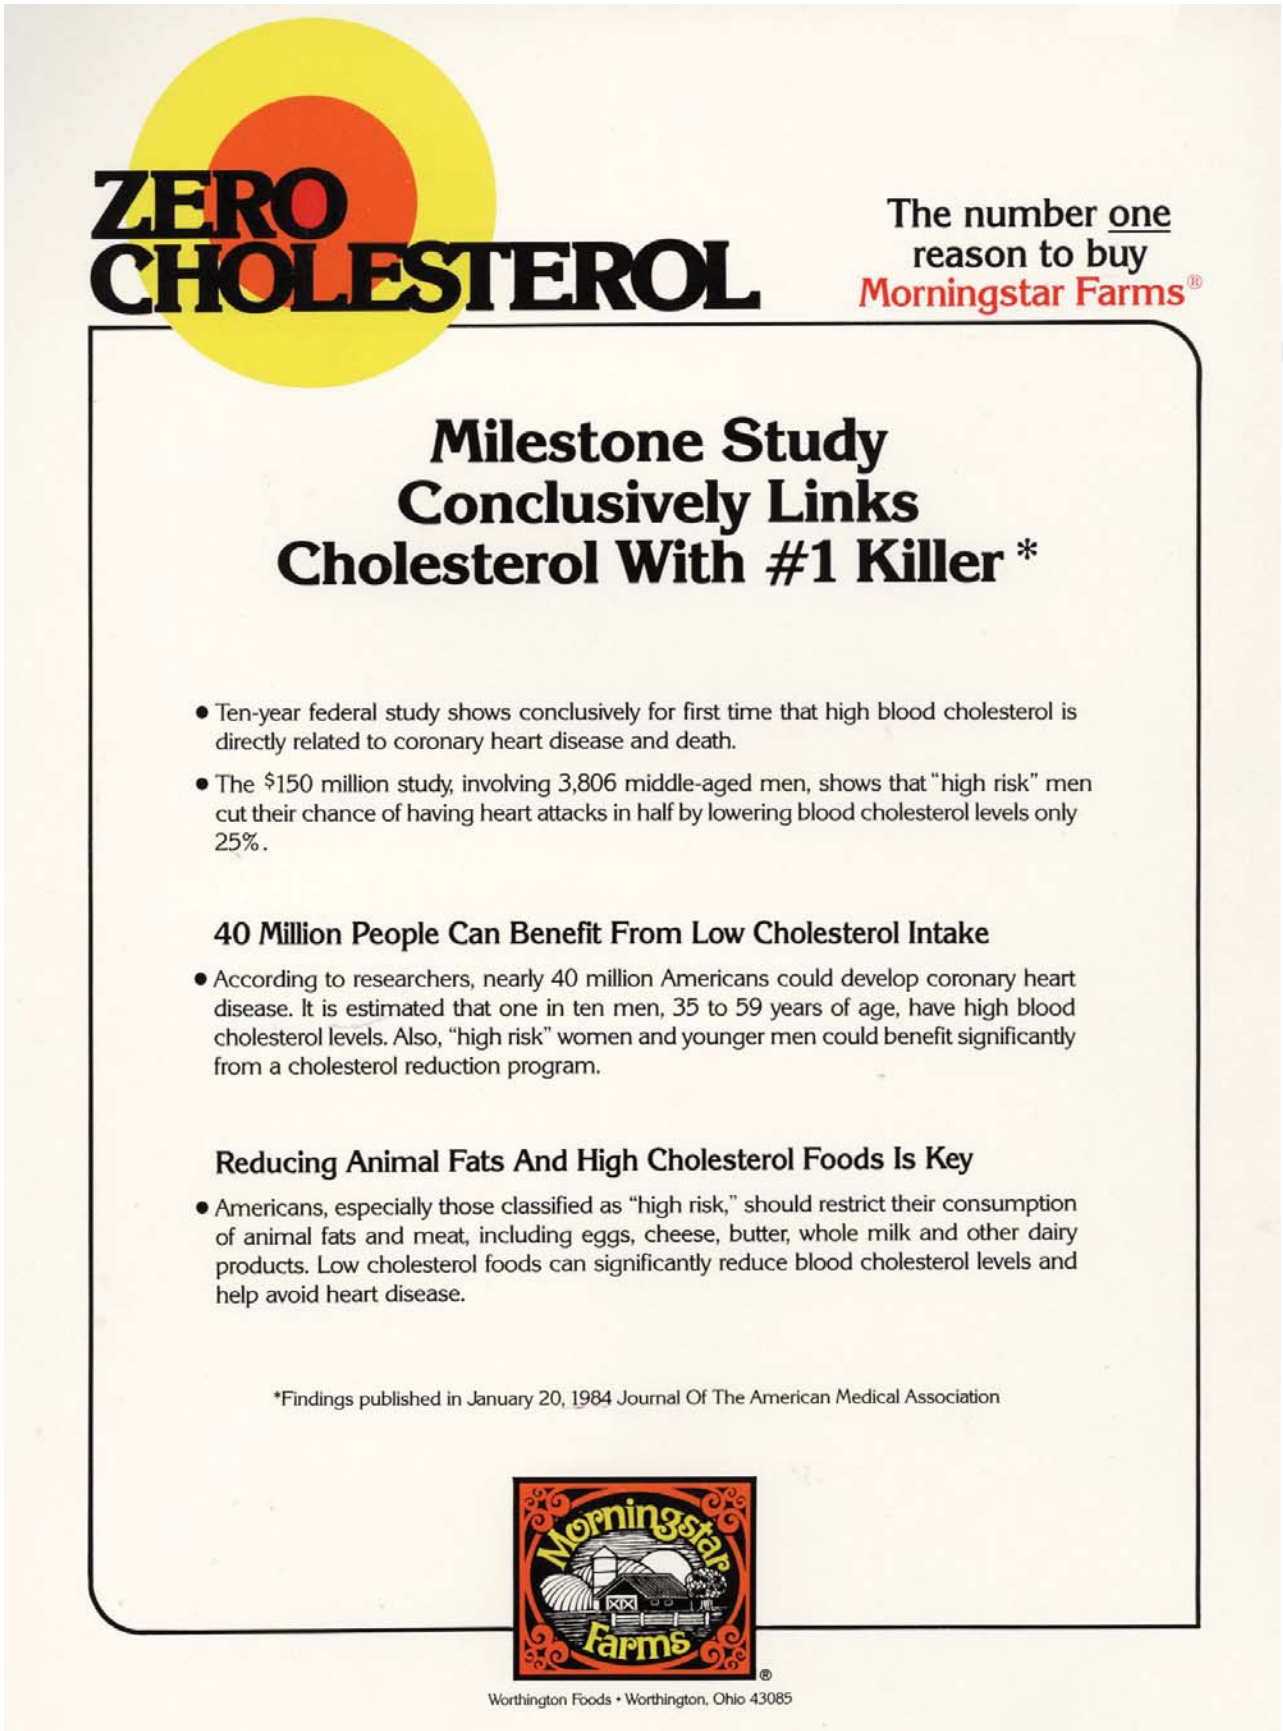
ZERO CHOLESTEROL

The number one reason to buy Morningstar Farms®

MORNINGSTAR FARMS® THE LEADER IN DELICIOUS, CHOLESTEROL-FREE FOODS.

Morningstar Farms® offers a complete family of zero cholesterol foods, each rich in protein, polyunsaturated vegetable fats and good taste. It's the kind of variety you would expect from the leader in cholesterol-free products.



Forty million Americans could benefit from Morningstar Farms® products. With delicious foods for breakfast, lunch and dinner, Morningstar Farms® satisfies both appetite and diet.

One great taste leads to another. Customers who try one Morningstar Farms® product will want to try another ... and that's how you profit from this complete family of fine foods ... the only complete line of cholesterol-free foods.

Morningstar Farms®

Association (NNFA) and their decades of legal battles with the U.S. Food and Drug Administration (FDA). This is one of the only supportive (non-critical) histories of the health foods movement in America.

Contents: Introduction. 1. How the health food industry began. 2. The vitamin and mineral hearings (prompted by onerous FDA regulations of 18 June 1966). 3. The battle rages on. 4. The struggle over vitamins A and D. 5. NNFA marches on Washington (May 1975). 6. The vitamin bill is finally passed (22 April 1976; Proxmire Bill, signed into law by President Gerald Ford. NNFA victory over FDA). 7. Hanky-Panky in Washington. 8. How the FDA attempted to curtail the sale of health books. 9. NNFA vs. Frederick Stare and Elizabeth Whelan (and the American Council on Science and Health, ACSH, whose current funders and institutional members are listed on pages 187-92). 10. The golden years of PELLL Committee (Public Relations, Education, Legal, Legislative and Lobbying; formed by NNFA in 1955). 11. NNFA supports the Delaney Clause. 12. NNFA's radio and TV programs. 13. NNFA has many friends. 14. NNFA's first woman president. 15. What lies ahead. Epilogue.

Frank Murray got involved with the health foods movement in 1963, working for Jack Schwartz at Syndicate Publications. The book was written for the NNFA and not released commercially. Several thousand copies were printed in paperback, selling for $4.95. A copy was sent to each member of Congress.

The health food industry was born out of the discovery of vitamins and the devitalization of the American food supply (especially white flour since the late 1890s, and white sugar) by large corporations. A few early companies started in the 1920s but most began in the 1930s. It grew on the issues of chemicals and pesticides in foods.

"The National Nutritional Foods Association (NNFA), which has had several names since its inception, has been the spokesman for the health food industry since 1938" (p. 6).

Companies: Akin's Special Foods (Tulsa, Oklahoma, p. 30-31), Eichenauer's (Phoenix, Arizona, p. 34-36. Opened in 1938. Early lines included Paul Bragg products, Dr. Walker's Vegetable Juice Hydraulic Press and books, Gayelord Hauser products and books, Martin Pretorius products and Waring Blender), Vita Food Co. (Washington, DC, p. 34-36. Opened in 1928. A list of products sold in an early catalog includes Lust's Peanut Butter, Carque's Almond Butter, Black Mission Figs, Kadota Figs, Manukka raisins, Carque California Health Bars {5¢ each}, Live Food Juicer {$5.95}), Vic Boff's (Brooklyn, New York, p. 36. For 48 years he has been associated with the pioneers of Physical Culture), House of Better Living (now owned by John Quinn and called Quinn's, p. 38), General Nutrition (Pittsburg, Pennsylvania; David Shakarian), Kahan & Lessin Co. (Compton, California), The Landstrom Co. (South San Francisco, CA), Balanced Foods, Inc. (North Bergen, New Jersey), Wm. T. Thompson Co. (Carson, CA), El Molino Mills (City of Industry, CA), Ener-G-Foods, Inc. (Seattle, Washington), Naturade Products (Paramount, CA), Seelect, Inc. (Chatsworth, CA; Max Lessin), Fearn Soya Foods (Melrose Park, Illinois), Hoffman Products / York Barbell Co. (York, Pennsylvania), Worthington Foods (Worthington, Ohio), RichLife, Inc. (Anaheim, CA), Hain Pure Foods (Los Angeles, CA).

Periodicals: *Health Foods Retailing* (New York City; started in April 1936 by Lelord Kordel), *Better Nutrition* (1940 by Jack T. Schwartz). *Health Foods Business* (formerly *Dietetic Foods Industry,* 1950), *Whole Foods* (Jan. 1978), *Natural Foods Merchandiser* (1979 in Hope, Pennsylvania), *Prevention* (1949 by J.I. Rodale), *Let's Live* (1933), *Bestways* (1973).

NNFA Presidents (1938-1981, p. 56-58).

People: Dr. Linus Pauling, Dr. Roger Williams, Dr. Albert Szent-Gyorgyi, Paul C. Bragg, Gayelord Hauser, Adelle Davis, Anthony Berhalter (founded the American Health Food Assoc. and the National Health Foods Assoc., predecessors of the NNFA in 1937), Ben Kanan, Otto Carque, Lelord Kordel, George Spitzer, Milton A. Bass (lead attorney), Max Huberman, Dave Ajay, Stanley N. Phillipps, Martin Pretorius, William T. Thompson, Jack Schwartz; Wayne Walker, Eugene Schiff, and Herb Bristol started the NNFA and kept it going during hard times; Milt Okin. Address: New York.

2458. Murray, Frank; Tarr, Jon. 1984. Balanced Foods, Inc., North Bergen, New Jersey (Document part). In: F. Murray and J. Tarr. 1984. More Than One Slingshot: How the Health Food Industry Is Changing America. Richmond, Virginia: Marlborough House Publishing Co. 240 p. + 16 p. of photos. See p. 43.

• ***Summary:*** "This wholesaler opened for business in 1939 in New York City, at 15th Street and Fifth Ave. In its New Jersey location [2501 71st Street, North Bergen, NJ 07047], it has a 100,000 square foot operation" [mostly warehouse]. Note: North Bergen is very close to New York City. Directly west of Central Park, it is just across the Hudson River from Manhattan, and about 3 miles north of the Lincoln Tunnel under the Hudson River.

"During its formative years, the company was run by Samuel H. Reiser, the current president, and Will Reiser, his brother, and Dr. Maurice Shefferman, both deceased. John H. Reiser and Rhona C. Reiser are vice presidents of the firm. Its subsidiaries include Akin's in Oklahoma and Jacksonville, Florida; Midwest Natural Foods Distributors, Ann Arbor, Michigan; and Northwest Dietetic Supply, Kent, Washington.

"'In the early days the health food industry was primitive,' Sam Reiser said. 'The operators of health food stores were visionaries–idealistic and few of them were merchants. Leading products at that time were the Battle Creek meat substitutes, yeast tables, vegetable salt, vegetable tablets, carrot tablets and health cereals.

© Copyright Soyinfo Center 2014

"'The health food industry at that time comprised less than 50 stores from Boston [Massachusetts] to Washington [DC], with only about 150 stores in the entire country, he continued. 'There were probably no more than six jobbers [wholesalers] to serve the entire industry. Growth of the health food field was very slow, for it was primarily a business catering to diabetics.'"

Note: An Internet search (March 2006) shows that Sam Reiser died in 1989. His wife was named Helen. One of his sons, Paul Reiser (born 30 March 1957 in New York City) became quite famous as an actor. In 1973 he graduated from Stuyvesant High School in New York City, and in 1977 he earned his BFA (Bachelor of Fine Arts) at SUNY (State University of New York) Binghamton, with a major in piano and composition. In 1996 Paul Reiser established the Samuel Reiser Scholarship Endowment, in honor of his father, for students majoring in piano or composition. When he finished college, his family expected him to take over his father's health food business. But he turned to stand-up comedy and acting instead. He married Paula Ravets on 21 Aug. 1988 and they had a son, Ezra Samuel Reiser, born Sept. 1995. Address: New York.

2459. Murray, Frank; Tarr, Jon. 1984. Origin of the American Health Food Association, the National Health Foods Association, and the National Nutritional Foods Association (NNFA) (Document part). In: F. Murray and J. Tarr. 1984. More Than One Slingshot: How the Health Food Industry Is Changing America. Richmond, Virginia: Marlborough House Publishing Co. 240 p. + 16 p. of photos. See p. 20-25.
• ***Summary:*** "In 1937, Anthony Berhalter organized a consumer group known as the American Health Food Association." A man of foresight, he operated a bakery in Chicago, and bought high-protein whole-wheat flour from Elam Mills, also of Chicago. Berhalter also had a health food store (one of the first in Chicago), and a mail order business, with 24- to 36-page catalogs. He bought "quantities of fine, sundried, unsulphured fruits from California" [probably from Otto Carque].

"In the spring of 1937, Berhalter set up a convention of some 10 to 15 booths" in the old Auditorium Hotel in Chicago. "Exhibitors included Live Food Products, Alberty Products, American Dietaids (then known as Tam Products, Inc.), Battle Creek Scientific Foods, Chippewa Spring Water Co., Dietetic Food of New York (Diamel), Elam Mills, Health Food Jobbers (now Health Foods, Inc.), H.W. Walker Co., Loeb Dietetic Foods, Modern Diet Products, Inc., Natural Health Products of New York, Nutty Brown Mills of Texas, Parkelp of California, and Vegetable Juices Inc. of Chicago." About "150 health food people" attended the convention, coming from across the United States.

Berhalter hoped to bring together all factions of the health food industry in this one organization. "Dr. Walter Hodson was one of the able speakers at those first meetings of the American Health Food Association... And those attending the first convention, among them Ed Neumann, George Spitzer, Henry Rosenberger, Sr. (of Cambridge, Massachusetts), Herb Bristol, H. Wayne Walker and others, felt that Tony Berhalter should be offered a fee to form an organization made up of retailers, manufacturers and jobbers, but excluding consumers."

"Mr. Englehardt of Physical Culture Publishing Company, who was sent to the meeting by Bernarr Macfadden to help in starting a solid organization, secured a large room at the Big Hotel down the street on Michigan Avenue, where dissenters could thrash out a plan for the new organization."

Eight men were elected to the organization committee. "After working all night with attorney Henry Junge, the committee presented a Constitution and By-Laws the next day to those who wanted the new association. It was approved [in 1937] and the new organization, National Health Foods Association [NHFA], which is now NNFA, was born. Herb Bristol and Wayne Walker immediately made plans for a second convention to be held in the summer of 1938 at the Sherman House in Chicago."

The first president was Dr. John Maxwell. George Fleming was the paid secretary, who served until 1945. The next [2nd] convention at Sherman House [sic, La Salle Hotel, in late August 1939] was a resounding success with speakers such as Paul Bragg, Edward McCollum [not to be confused with Elmer V. McCollum, the famous biochemist from Johns Hopkins University], and others. Approximately 150 people attended the banquet, "however Bragg and McCollum had 800 to 900 people at their lectures.

"Chicago became the headquarters for the new association, with Herb Bristol, Wayne Walker and George Fleming doing most of the work. Fleming received about $50.00 a week as secretary. The next two conventions were held in Chicago. "In 1941, the fledgling association held its fourth convention at the McAlpin Hotel in New York." Since this convention was not a financial success, the next 5 conventions were held in Chicago. In 1947 the convention at French Lick Springs, Indiana, marked a low point in the association's history. So the next convention was held in California (Ben Kahan helped to organize it), followed by another in Chicago.

After the 1966 convention at the International Hotel in Los Angeles, Stanley N. Phillips (of Cincinnati, Ohio) who, for years, had done much of the work organizing conventions, "resigned and helped to start a new retailer organization, American Dietary Retailers Association" (ADRA). But after two years, in 1968, Phillipps of the ADRA and Walter Camp of the NHFA began to communicate about merging the two organizations is order to better "fight a common enemy–the bureaucrats in Washington [DC, at the FDA] rather than squabbling among ourselves.

© Copyright Soyinfo Center 2014

"In 1969 the two associations held a joint convention and it was agreed that, if the remaining differences were resolved at the 1970 convention in New Orleans [Louisiana], the merged group would be united under the name of National Nutritional Foods Association" [NNFA].

The transition was made and Phillipps continued as convention manager through 1974, when he resigned and turned over the convention work to Arnold Pike, who managed the Las Vegas convention that Phillipps had set up for the MGM Grand Hotel. Address: New York.

2460. *Vegetarian Times.* 1984. Long-term study has good news for vegetarians. June. p. 6.
• ***Summary:*** One of the longest and largest studies of vegetarians has recently been finished and the results show the "tremendous benefits of a long-term meatless diet." Researchers at Loma Linda University have been tracking 25,000 Seventh-Day Adventists (SDA) for 20 years to determine the effects on health of a lifestyle devoid of meat, smoking, and alcohol.

The results are remarkable. The risk of fatal coronary heart disease among SDA males who ate meat was three times higher than vegetarian SDAs of comparable age. A striking relationship was also found (for the first time) between fatal diabetes and meat eating. Moreover, men who ate large amounts of meat, eggs, milk and cheese had a three-fold increase in fatal prostate cancer. Roland L. Phillips, professor of epidemiology at Loma Linda, comments on the study. In about two years, the Loma Linda team will start reporting on another long-term, large study of 35,000 SDAs. More detailed dietary information has been collected in this study, and more than just fatal diseases are being tracked.

2461. Wilson, John C. 1984. The manufacture of soymilk which is not contaminated with undesirable "beany flavor," resulting from enzyme induced oxidation of fats. Paper presented at the Singapore Inst. of Food Science & Technology Symposium. 19 p. Held June 14-15 at the Hyatt Hotel, Singapore. [8 ref]
• ***Summary:*** Introduction: "This paper anticipates a series of questions and tries to inform the reason for things pertaining to our topic according to the perspective from which we see things in 1984." Who are the real giants? Shall we not give tribute?" 1. What is the interest in the world regions for a soymilk without the traditional 'beany flavour'? What need creates an interest, creates a demand of such proportions? China, South East Asia, North East Asia, North America, hippies, vegetarians, tofu, *The Book of Tofu,* by Shurtleff and Aoyagi.

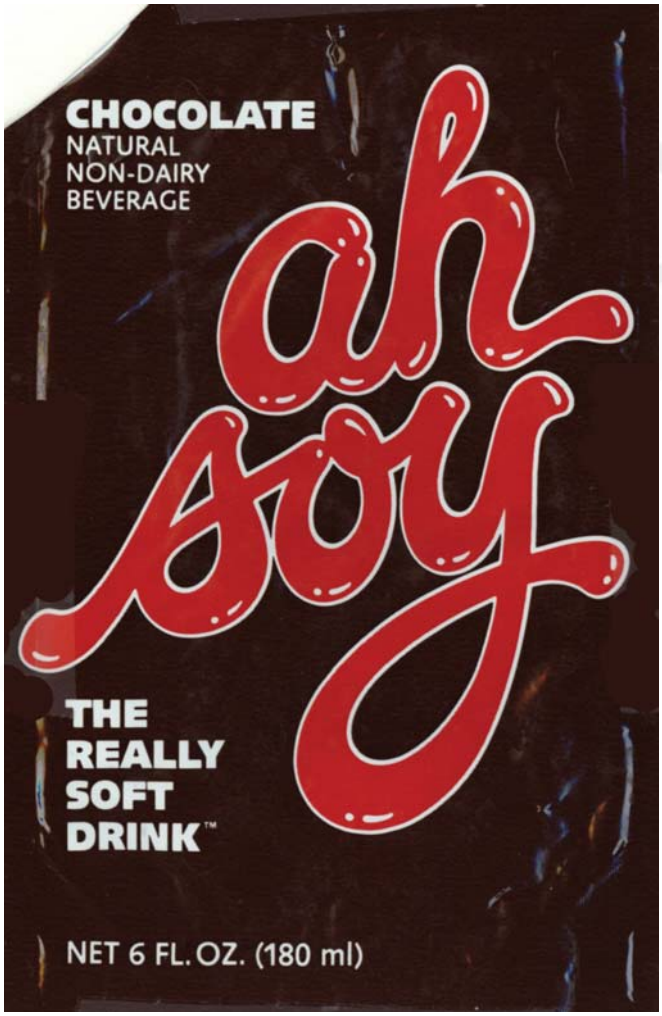
2. What is the history behind the long delayed but sudden phenomenal development of this product? Dr. Harry W. Miller in Shanghai (1936), K.S. Lo (of Vitasoy) in Hong Kong [1941], in-bottle sterilizing by K.S. Lo, development of UHT processing and aseptic packaging by Yeo Hiap Seng in Kuala Lumpur, Malaysia (1967), the advent of the brick shaped aseptic carton. The traditional soymilk process: "Filtering off the fibrous material,... one is left with the basic soymilk extract or soybase to which some sugar is added" (p. 8). Improvements in soymilk flavor: Cornell hot-grind process. University of Illinois hot water blanch method "is the basis of most modern soymilk processing." Developments in Japan since the mid-1970s, which have grown "out of the Illinois process but overcoming the 'chalkiness' by a filtration step using a decanter or some form of continuous filtration." The quality is excellent but the yield of protein is unfortunately only about half compared to the almost 100% achieved by the original Illinois method."

3. What are the developments in the market areas? Soyfoods industry and market statistics published annually by Shurtleff. Trends in: Japan, South East Asia, Indian Subcontinent, Mid East [Middle East], Europe (Flavor is not as good as in Japan. "There is also a political impediment. It would be suicidal to set up a soymilk industry as a 'substitute cow's milk...' considering today's ailing European dairy industry and the militant stand of the European dairy farmer. But as surely as margarine has come and been accepted, a prime quality soymilk will come to Europe. It is a matter of time"). Africa (financing troubles, the good work of IITA in Ibadan, Nigeria). South America ("A market spoilt! Take Brazil–the world's 2nd largest producer and exporter [of soybeans]. People have had inferior quality product almost forced down their mouth"). North America.

4. What is the state of the art in the manufacturing technique for a "bean free" tasting soymilk? (Contains a flow chart with 13 steps, of which No. 10 states: "Blend ingredients: Blend into the soybase the ingredients necessary to a particular formulation, e.g., sugar, vegetable fat, emulsifier–stabilizer, flavouring–aromas," p. 16)

This paper deals with the phenomenal growth of the soymilk industry in northeast Asia, and the likeliness that its influence will spread worldwide in the near future.

Note: This is the earliest English-language document seen (Aug. 2013) that uses the word "soybase" to refer to a concentrated form of soymilk. However, no definition of the degree of concentration or total solids content is given. Address: Soya Process Product Manager, Alfa-Laval, Box 1008, S-221 03, Lund, Sweden.



2462. Worthington Foods, Inc. 1984. Introducing all new, all natural, Natural Touch: The taste nobody can touch (Ad). *Natural Foods Merchandiser.* June. p. 18-19.
• ***Summary:*** This large-format, two-page color ad shows packages and prepared dishes for Natural Touch Tofu Garden Patties, Okara Patties, Harvest Bake Lentil Rice Loaf, and Kaffree Tea. Okara is described as "the protein-rich, high-fiber pulp from cooked soybeans."

This 2-page ad also ran in the July issue (p. 23-24). Address: Worthington, Ohio 43085.

2463. **Product Name:** Ah Soy: Natural Non-Dairy Beverage (Soymilk) [Chocolate, Vanilla, or Original].
Manufacturer's Name: Great Eastern Sun (Importer). Made in Japan by San-iku Foods.
Manufacturer's Address: Asheville, NC 28806. Phone: 704-252-3090.
Date of Introduction: 1984 July.
Ingredients: Original: Water, organically grown soybeans*, barley malt, pearl barley malt, cold pressed safflower oil, sea salt. * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.

Vanilla: Vanilla extract. Chocolate: Natural cocoa, natural vanilla extract.
Wt/Vol., Packaging, Price: 6 fluid oz (180 ml) in stand-up foil retort pouch.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Original: Per 6 oz.: Calories 100, protein 4.5 gm, carbohydrate 9.4 gm, fat 5 gm. Vanilla: Calories 142, protein 4.3 gm, carbohydrate 21.2 gm, fat 4.4 gm. Chocolate: Calories 149, protein 3.9 gm, carbohydrate 25.5 gm, fat 3.5 gm.

New Product–Documentation: Labels. 1984. 4 by 6.25 inches. Plastic packs. Original: Red and white on blue. Vanilla: Red and white on tan. Chocolate: Red and white on dark brown. The words "ah soy" are written in script and look rounded, as if they were made from brightly colored round tubing. Text on front panel: "Made with organically grown soybeans." "The really soft drink." On back panel: "It drinks like a shake and you can use it to bake. Ah Soy is the most versatile, delicious and nutritious natural non-dairy soft drink you can buy. Can something so smooth, so rich, so refreshing, really be good for you? Ah Soy is. Ah Soy is full of protein, free of cholesterol, low in calories and has no cane, fruit or milk sugars. And of course, there are no chemical additives and no preservatives. Use Ah Soy on breakfast cereal, as the secret to spectacular sauces, to make extra fluffy pancakes, and as a healthy, all natural thirst quencher."

Note: This is the earliest commercial soymilk product seen with an English-language label (June 1999) that has a flavor named "Original." In March 1982 a Japanese company named Nagoya Seiraku introduced a soymilk in Japan named *Sujaata no Gen Tônyû*, which means "Sujaata Original Soymilk."

Shurtleff & Aoyagi. 1984. Soymilk Industry and Market, Update (Based on interview with Bob Ballard, 21 March 1985). This product has been a "fantastic success." During the period from 1 Nov. 1984 to 25 Jan. 1985 (just under 1 fiscal quarter), 525,000 unit packs of 4 flavors were sold.

Shurtleff & Aoyagi. 1985. Soymilk Industry and Market, Update. By March 1985 sales of Ah Soy are growing rapidly, now accounting for 15-20% of Great Eastern Sun's total sales. The favorite flavor is vanilla, followed by original [plain], carob, and chocolate, in that order. By 1987 Ah Soy was being made in the USA in quarts. Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update. By March 1987 Ah Soy is selling about 270,000 units (10,906 gallons) per month. Sales by flavor are vanilla (35% of the total), original/plain (30%), carob (17.5%), chocolate (17.5%). Sales have been flat for the past year.

Letter from Bruce Sturgeon, Vice President, Great Eastern Sun, Enka, North Carolina, to East West Journal. 1989. Jan. p. 6. Convincingly refutes EWJ's award to Ah Soy for the "Most Questionable Beverage Label Claim."

• ***Summary:*** Overweight man were found to have a relative risk (RR) of 2.5 for development of prostate cancer, compared with men of normal weight. In addition, this study found that men who consumed large amounts of milk, cheese, eggs, and meat had an RR of 3.6 for the development of prostate cancer. Address: Dep. of Biostatistics and Epidemiology, School of Health, and Dep. of Physiology and Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California 92350.

2468. *Soyfoods.* 1984. Press releases. Summer. p. 14.
• ***Summary:*** Summarizes new releases from Farm Foods (Ice Bean), Legume, Laughing Moon Foods, Market Sales, Worthington Foods, Frieda's Finest / Produce Specialties, The Soyplant, NutraBlends, Soy Systems (Ridgefield, Washington; Hananya Kronenberg).

2469. **Product Name:** WestSoy Natural (Soymilk).
Manufacturer's Name: Westbrae Natural Foods (Importer). Made in Japan by San-iku Foods.
Manufacturer's Address: 4240 Hollis St., Emeryville, CA 94608. Phone: (415) 658-7521.
Date of Introduction: 1984 August.
Ingredients: Water, organic soybeans, malted barley, expeller pressed corn oil (less than 1%), sea salt.
Wt/Vol., Packaging, Price: 6 fluid oz (180 ml). Stand-up foil retort pouch.
How Stored: Shelf stable.
Nutrition: Per packet: Calories 140, protein 5 gm, carbohydrates 25 gm, fat 2 gm, sodium 124 mg.
New Product–Documentation: Label. 1984, dated. 4 by 6.25 inches, color. Retort pouch. Blue, brown, white and black on orange background. Milk bottle illustration. "Non dairy drink. Organic. Shake well. Serve chilled. Low sodium. Half the fat, all the protein of milk. No cholesterol. No refined sugar. No preservatives." Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Shurtleff & Aoyagi. 1984. Soymilk Industry and Market, Update. This plain soymilk, similar to Ah Soy (launched 1 month earlier and also made by San-iku Foods in Japan), is Westbrae's first

soymilk product.

Talk with Marty Roth of Westbrae Natural. 1985. Jan. 3. Their Westsoy natural was a sort of me-too effort, so that Westbrae could have its plain counterpart to Edensoy, Ah-Soy, and Vitasoy. Westbrae didn't put a lot of effort into the product. Westsoy, introduced a little before the Malteds, was not eventually as successful as the Malteds but it quickly became one of the company's better products. Its features: 1. Organic. 2. The lowest price plain soymilk. It was made in the same plant (Saniku Foods in Japan) as Ah-Soy and had a similar flavor.

Note 2. E.M. Chajuss is the name of Daniel Chajuss' father. He and his son founded Hayes Ashdod Ltd. "E.M. Chajuss Ltd." is a limited or incorporated company that was jointly owned by Daniel and his father. Daniel Chajuss attended this Soyfoods Workshop as a "delegate" of E.M. Chajuss Ltd. company.

Note 3. This is the earliest document seen (July 2006) that mentions Wessanen of the Netherlands. Address: Brussels, Belgium.

2471. Snowdon, David A.; Phillips, R.L.; Fraser, G.E. 1984. Meat consumption and fatal ischemic heart disease. *Preventive Medicine* 13(5):490-500. Sept. [25 ref]
• ***Summary:*** "In 1960 the meat-consumption habits of 25,153 California Seventh-Day Adventists were assessed by questionnaire. Between 1960 and 1980 ischemic heart disease deaths were identified. Meat consumption was positively associated with fatal ischemic heart disease in both men and women. This association was apparently not due to confounding by eggs, dairy products, obesity, marital status, or cigarette smoking... For 45- to 64-year old men, there was approximately a threefold difference in risk between men who ate meat daily and those who did not eat meat. This is the first study to show a dose-response relationship between meat consumption and ischemic heart disease risk." Address: School of Health and School of Medicine, Loma Linda Univ., Loma Linda, California 92350.

2473. Yoshimura, Sam. 1984. Re: Update on work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Oct. 21–in reply to inquiry. 1 p.
• ***Summary:*** Shurtleff writes: "I just read a little blurb about you, written by your wife, that was in the *Madison Survey.* It indicated that you were now in Canada and again making soyfoods. Could I ask a few questions for use in the Adventist chapter of our history book?

1. What is your present address and postal code. Ans: See above.

2. When did you leave Worthington Foods? Ans: Sept. 30, 1981 (Retired).

3. Could you please tell me a little about your new business? When did you start selling products? Are you working alone or with another company? What products do you make? Can you send me some descriptive or promotional literature on your products?

Ans: "Name of company: MGM Brans. I am a technical consultant of the above company. We started selling products in January 1982.

"Our main product is meat analogs–franks, sausages, sandwich slices, chicken nuggets & burgers. Currently we are developing tofu-based meat alternates [alternatives] & other products."

Note: Sam does not send any labels or descriptive literature. Address: Home: 19 Masedale Cres., Willowdale,

2479. Kurup, P.A.; Jayakumari, N.; Indira, M.; et al. 1984. Diet, nutrition intake, and metabolism in populations at high and low risk for colon cancer: Composition, intake, and excretion of fiber constituents. *American J. of Clinical Nutrition* 40(4):942-46. Oct. [20 ref]
• ***Summary:*** Diets and stools were analyzed for neutral detergent fiber (NDF), hemicellulose, lignin, cellulose, cutin & silica, and pectin. The dietary profile revealed a trend (not statistically significant) toward generally higher daily intake values among the vegetarian subgroups. In sharp contrast, in the stools, 24-hour excretion values for NDF decreased steadily in the order, SDA-pure vegetarians, SDA-lacto-ovo vegetarians, SDA-nonvegetarians, and general population nonvegetarians (NDF values in stools in g/day: SDA-pure vegetarians, 13.8; SDA-lacto-ovo vegetarians, 10.5; SDA-nonvegetarians, 8.19 and general population nonvegetarians, 5.05). This decrease paralleled a similar drop in dry stool weight (bulk) of stools. The observations generally indicate that introduction of meat into the daily diet significantly enhances the ability of intestinal microorganisms to degrade fiber components. Address: Dep. of Biochemistry, Univ. of Kerala, Trivandrum 695 034, India; The Wistar Inst., Philadelphia, Pennsylvania 19104; The Johns Hopkins Univ., Baltimore, Maryland 21205.

2480. Kurup, P. Achuta; Jayakumari, N.; Indira, M.; et al. 1984. Diet, nutrition intake, and metabolism in populations at high and low risk for colon cancer: Composition, intake, and excretion of fiber constituents. *American J. of Clinical Nutrition* 40(4):942-46. Supplement. Oct. [20 ref]
• ***Summary:*** This study was designed to ask the question whether populations leading different dietary lifestyles and who are at varying risks for colon cancer show marked differences in their dietary and fecal profiles of various fiber components. Four study groups were selected from the greater Los Angeles Basin area of California: Seventh-day Adventist (SDA) pure vegetarians [vegans], SDA lacto-ovo-vegetarians, SDA nonvegetarians, and a group of nonvegetarians from the general population (non-SDA). Three-day composite diets and stools were analyzed for neutral detergent fiber (NDF) and other fiber components. A trend (not statistically significant) was found toward generally higher daily intake values of NDF among the vegetarian subgroups (in gm/day): SDA pure vegetarians 63.0±7.9; SDA lacto-ovo-vegetarians 55.8±3.5; SDA nonvegetarians 57.2±3.5; general population vegetarians 52.5±4.9. Lignin, cellulose, and pectin were the major contributors to this difference.

In sharp contrast, in the stools, 24-hour excretion values of NDF decreased steadily in the same order (in gm/day): SDA pure vegetarians 13.8±1.7; SDA lacto-ovo-vegetarians 10.5±0.8; SDA nonvegetarians 8.19±0.7; general population vegetarians 5.05±0.6. Thus, those who consumed the most fiber excreted the most. There was a parallel drop in the dry weight (bulk) of stools.

"The observations generally indicate that introduction of meat into the daily diet significantly enhances the ability of intestinal microorganisms to degrade fiber components, as reflected by the lower excretion of NDF and its constituents." Address: Dep. of Biochemistry, Univ. of Kerala, Trivandrum 695034 India. Also: Wistar Inst. of Anatomy and Biology,

• ***Summary:*** High levels of fecal bile acids have been associated with populations at high risk for developing colon cancer. In this study, 168 subjects were drawn from populations that show low and high mortality from colon cancer [pure vegetarians, lacto-ovo vegetarians, and non-vegetarian Seventh-Day Adventists (SDA) and demographically comparable group from the general population]. Total bile acids (mg/g lyophilized stools) were statistically different among dietary groups: SDA pure vegetarians 2.16 ± 0.32, SDA lacto-ovo vegetarians 3.66 ± 0.41, SDA nonvegetarians 4.39 ± 0.44, general population nonvegetarians 6.04 ± 0.75; but were similar when stool weights, body weights, and fat intake were taken into account. The most striking difference was evident in the ratio of secondary to primary bile acids: when compared to SDA pure vegetarians, both SDA lacto-ovo vegetarians and SDA nonvegetarians had twice the ratio while values for general population nonvegetarians were five to six times. There is increasing evidence that environmental factors associated with diet, nutrition, and lifestyle determine the predisposition to chronic diseases such as cancer of the colon. Address: 1. Dep. of Biochemistry, The Johns Hopkins Univ., Baltimore, Maryland 21205; Dep. of Epidemiology and Biostatistics,

2489. **Product Name:** Westbrae Natural Malted's [Carob Malted, Vanilla Malted, Cocoa-Mint Malted, Almond Malted, or Caffeine-free Java Malted].
Manufacturer's Name: Westbrae Natural Foods (Importer). Made in Japan by San-iku Foods.
Manufacturer's Address: 4240 Hollis St., Emeryville, CA 94608. Phone: (415) 658-7521.
Date of Introduction: 1984 October.
Ingredients: Cocoa-Mint: Soybeans, malted barley, expeller-pressed corn oil (less than 5%), cocoa, sea salt, peppermint.
Wt/Vol., Packaging, Price: 6 fluid oz.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Cocoa-Mint: Per 6 oz.: Calories 250, protein 6 gm, carbohydrate 50 gm, fat 3 gm. Carob: Calories 230, carbohydrate 44 gm. Vanilla: Calories 250, carbohydrate 46, fat 5 gm.
New Product–Documentation: This is soymilk with a thick and rich milk shake-like consistency. Ad in East West Journal. 1984. Sept. Inside front cover. "Westbrae Natural Malted's. [Note spelling, with apostrophe]. Vanilla, Carob, Cocoa-Mint. Thick and rich non-dairy soy delights. 'Did you make this out of ice-cream?' Ryan Garvy, age 7. All the fun, half the fat of milk shakes. No refined sugar, no preservatives, no cholesterol."

Labels. 1984. 4 by 6.25 inches. Plastic retort pouches. Brown, yellow, white. Cocoa-Mint on mint green background. Carob on cherry background. Vanilla on orange background. All have soda fountain picture with glass of malted with straw. "Shake well. Serve chilled. No refined sugar or cholesterol. No preservatives." Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Shurtleff & Aoyagi. 1984. Soymilk Industry and Market, Update. Thick soymilk from whole soybeans (no soy protein isolates) plus malt and 2.65% oil are used to give this

product its thickness. Sales of Westsoy and Malteds for 1984 were roughly $700,000 or 1.67 million units at $0.42 each FOB.

Ad (8½ by 11 inches) in Natural Foods Merchandiser. 1985. May. p. 26. "Afternoon Delight." "15% off. On special now." "For a great afternoon treat for the kids (or even the young at heart) try New Morning Honey Grahams and Westbrae Natural Malteds!"

Natural Foods Merchandiser. 1985. May. p. 48-49. Gold medal in 6th annual merchandising contest. Poster. 1986. June. "The Cadillac of Soydrinks." Talk with Martin Roth. 1989. Aug. 17. "Gordon Bennett gave me the assignment to develop a soymilk product for Westbrae. He recognized that Westbrae had already missed the boat on soy drinks, with Edensoy, Vitasoy, Ah Soy, and Health Valley already on the market. I said 'Great. How can you make a soy drink that isn't a soy drink.' Then the Malteds idea flashed into my mind, and I said 'Maybe we can do a thicker, richer, creamy one and make it a dessert.' I designed the graphic idea and developed the name and formula."

As of about Feb. 1995 this product was made by Cathay Industrial, owned by John Yamauchi, in Los Angeles. Prior to that, it was made by House Foods & Yamauchi in Los Angeles.

2490. **Product Name:** Natural Touch Dinner Entree (Resembles a Chopped Steak).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1984 October.
Ingredients: Vegetable protein (wheat gluten, soy protein concentrate), soybean and/or corn oil, egg white solids, calcium caseinate (milk protein), soy isolate, natural flavor, yeast extract, carob, onion, sea salt, garlic, spice.
Wt/Vol., Packaging, Price: 9 oz.
How Stored: Frozen.

2492. Mayer, Caroline E. 1984. FDA studies advertising for Kellogg's All-Bran: Linked to cancer prevention. *Washington Post.* Nov. 6. p. E1.
• ***Summary:*** The Kellogg Company's new advertising campaign links its All-Bran breakfast cereal to cancer prevention. Kellogg officials say that they are trying to work with the National Cancer Institute to publicize the cancer awareness prevention project. This effort is based on an NCI report which says that "a high fiber diet may reduce your risk of some kinds of cancer." This is the first time that Kellogg has mentioned cancer in its advertising.

However FDA's Bruce Brown says that there are many different types of cancer, and that Kellogg's advertising implies that a high-fiber diet is a good way to prevent all of them. Address: Staff writer.

2494. Bisalski, Ed. 1984. Soy ice cream and soymilk at Madison College (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 30. 1 p. transcript.
• ***Summary:*** He never made ice cream himself. Harold M. "Pop" Mathews (he was a staff worker, not a teacher, in charge of the cannery where they canned fruits and vegetables) made the first ice cream. He is quite sure of that. In the cannery they first made soymilk, introduced by Dr. P.A. Webber. But a Japanese boy (a student) named Sam Yoshimura and Dr. Perry A. Webber, then Philip S. Chen, a teacher and native of China, brought soymilk to Madison–he thinks, but is not sure. Pop Mathews' daughter still lives at Madison; Dorothy Mathews.

They never marketed the ice cream–never sold it off campus. Ed ate it often. They made 5-10 gallons at a time, from soymilk. Flavors: No chocolate was used since its a stimulant; most was vanilla. It was served scooped in the dining hall and one could also get it from the soy dairy; just bring own dish and eat it on the spot. It was very popular on campus. He first went to Madison in June 1931; they were not making it then. He took over management of the food factory in Sept. 1933. But a Madison article said Jan 1932 ice cream was made.

Milk was first made in cannery, then about 1934-35, brought over to the food factory; they homogenized it and sold it commercially. Address: 3123 E. Miller Rd., Bancroft, Michigan 48414. Phone: 517-634-5203.

2495. Yoshimura, Sam. 1984. Soy ice cream and soymilk at Madison College (Interview). *SoyaScan Notes.* Dec. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sam arrived at Madison College, Tennessee,

in 1937. In about 1940 Mr. Shiro Kunihara, a student from Japan like Sam, made soymilk at Madison and Sam thinks he also made a soy ice cream, working with Harold M. "Pop" Mathews. Both the soymilk and the ice cream were served in the school dining hall when Sam was there. The ice cream was also served in the cafeteria. Mr. Kunihara is retired from Loma Linda University. Address: 8200 Colonial Meadows, Westerville, Ohio 43081. Phone: 614-882-0625.

2496. *SoyaScan Notes.* 1984. Chronology of soybeans, soyfoods and natural foods in the United States 1984 (Continued–Part II) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. July 26. At the NNFA (National Nutritional Foods Association) show in Atlanta, Great Eastern Sun rolls out Ah Soy, its new line of soymilk imported from Saniku Foods in Japan, in vanilla, chocolate, and plain flavors, in foil retort pouches. After the show, the Soyfoods Association board meets. Steve Snyder replaces Michael Austin as director of SAA. The next day, SAA directors Snyder, Burke, and Barat travel to St. Louis to meet with the staff of the American Soybean Association to discuss possible areas of mutual interest. ASA appears friendly and open minded, and offers to discuss specific future joint projects. A potential line of communication is opened.

July 30. *People* magazine (circulation 2.8 million) article on Tofutti titled (ineptly) "A Happy Zealot Turns Curd (Yuck!) into a Creamy Treat."

July. "The Soyfoods Industry: Growing Like a Beanstalk" by B. Bialick published in *Whole Life Times.*

Aug. 9. *Soyfoods* magazine No. 10 (color cover) published by Doug Fiske. 7,000 copies printed at a cost of $11,200. Magazine's focus has been changed from production to marketing of soyfoods. This is the last issue of this pioneering magazine.

Aug. 12-17. World Soybean Research Conference III held at Iowa State University. Heavy emphasis on soybean production and agronomy; relatively little new material on soyfoods. Soyfoods movement is not represented.

Aug. 20. Ralston Purina introduces Checkerboard Farms TenderLean, America's first branded ground beef product consisting of 75% ground lean beef and 25% textured soy protein isolate. Some meat journals are harshly critical and many meat departments refuse to carry it. Ralston withdraws the product.

Aug. 24. Westbrae Natural launches WestSoy Natural, a plain soymilk similar to Ah Soy but lower in price and made with organic ingredients. Imported in a foil pouch from Saniku Foods in Japan, it is the company's first soymilk.

Aug. 31. San-J International Inc. announces that it will construct a soy sauce plant (44,000 square foot, $5 million) in Virginia on a 27-acre site just north of Colonial Heights.

Sept. Chico-san, Inc. introduces unpasteurized miso in a revolutionary "Pressure Release Package," a plastic bag with a one-way valve that allows the escape of the carbon dioxide produced naturally during fermentation.

Sept. 9-14. Gloria Vanderbilt announces that she, in conjunction with Dolly Madison and Frusen Gladje, will launch a tofu ice cream.

Sept. 27-28. First European Soyfoods Workshop held in Amsterdam, The Netherlands, at the Grand Hotel Krasnapolski, organized by the American Soybean Association's Belgium office. ASA reports attendance as 105 people from 14 countries, but participants report a maximum of 50 participants. Talks on tofu, soymilk, tempeh, distribution, and microbiological standards, all later published in the Proceedings. There is a large Expo with soymilk equipment from Alfa-Laval and Soya Technology Systems prominently featured. A very successful event, and another ASA first!

Oct. *The Tofu Gourmet* by Linda Barber and Junko Lampert published by Kodansha in Menlo Park, CA. 129 p. Many color photos.

Oct. 15. "Here Tofutti, There Tofutti," a full-page, very positive article with 2 color photos published in *Newsweek* magazine (circulation 3 million).

Oct. 23. The joint managing directors of the International Food Information Service, owners of Food Science and Technology Abstracts (FSTA, the world's largest, oldest, and most widely used food-related computerized database) visit William Shurtleff at The Soyfoods Center to discuss putting the 6,500 bibliographic records in The Soyfoods Center Library into FSTA, thus making this information available worldwide. Both parties are very interested in the project but technical problems remain to be solved.

Oct. Westbrae Natural Foods launches Malted's, billed as "thick and rich non-dairy soy delights." Marketed like a milkshake and imported from Japan in a foil pouch, they come in three flavors: vanilla, carob, and cocoa-mint.

Oct. Three member team from PLENTY Canada spends one month in Sri Lanka, funded by the Canadian International Development Agency, studying the country's soyfoods program. They learn, teach, and introduce tofu ice cream.

Nov. 13. A.E. Staley Manufacturing Company, America's oldest existing soybean crusher, announces that its soybean crushing operations are for sale.

Nov. 20. Tofu Time's first Tofutti Shop opens in uptown Manhattan, New York. A fast-food retail outlet with a slick, red-and-white plastic, almost gaudy, decor.

Nov. 16. Chico-san Inc. is purchased by H.J. Heinz Co., largely for its rice cake business.

Nov. 21. After years of searching, William Shurtleff, with help from Nancy Florida in Java, discovers an 1815 reference to tempeh in the *Serat Centini*, from the Court in Solo, Java. This pushes the earliest reference to tempeh back

© Copyright Soyinfo Center 2014

60 years and has it originating in Indonesian rather than in Dutch culture.

Nov. 30. America's first Tofu Standards are issued by the Soyfoods Association's Tofu Standards Committee, in part to help stem the rising tide of products bearing the name "tofu" that contain little or no tofu.

Nov. Galactina, a Swiss manufacturer of soymilks since 1969 (they make Vita Drink / Enteroform, a soymilk sold to in vanilla, chocolate, and strawberry flavors to the dietetic and pharmaceutical markets for tube feeding), starts test marketing tofu in Swiss supermarkets. Attractive recipe booklet attached to each packet, which is pasteurized for a 6-week shelf life.

Dec. Excellent, 19-page cover story on "Soymilk and Soyfoods," published in the prestigious *Journal of the American Oil Chemists' Society.* 1984 is the Society's 75th anniversary.

Dec. Ralston Purina, in its 1984 annual report, notes: "The Company has entered into preliminary agreement with Cargill, Inc., to sell six of the Company's seven soybean [crushing] plants." It also reported strong, steady growth in sales of soy protein products, from about $98 million in 1980 to $152 million in 1984, for an 11.5% compound annual growth rate (but only 4.5% after adjusting for inflation).

Dec. Gloria Vanderbilt's Glace, a soy-based nondairy ice cream, starts being test marketed in Los Angeles, in nine flavors.

Dec. A poll of readers by *Vegetarian Times* magazine finds that 53.1% of readers used tofu one or more times during the past 7 days; 29.4% used it 3 or more times.

Dec. 31. Brightsong Light Foods in Petaluma, California, receives the first funds of a $500,000 equity investment from a Hong Kong investor, who had seen an article praising Brightsong in Venture magazine. Brightsong greatly expands its product development and promotion.

* American Soybean Assoc. phases out its Human Nutrition Dept., headed for years by Judy Trujillo.

* Chicago Board of Trade starts trading options contracts on soybean futures. Continued.

2500. **Product Name:** [Pure Harvest Soy Drink].
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: Sodegaura-machi, Chiba-ken 299-02, Japan.
Date of Introduction: 1984.
Ingredients: Whole soybeans, barley malt, pearl barley malt, wheat germ, safflower oil, sea salt.
Wt/Vol., Packaging, Price: Retort pouch.
How Stored: Shelf stable.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 47. "San-iku Foods has been exporting Pure Harvest Soy Drink to Australia for several years."

Letter from San-iku Foods. 1990. June. This product was introduced in 1984.

2501. **Product Name:** Sanitarium Health Foods B-B-Q Links (Vegetarian Hot Dogs).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.
Date of Introduction: 1984.
Ingredients: Textured vegetable protein, vegetable oil, coconut oil, whey protein concentrate, egg albumin, torula yeast, modified starch, sauce, salt, dried autolysed yeast, onion powder, garlic powder, water added.
Wt/Vol., Packaging, Price: 430 gm.
New Product–Documentation: See next page. Letter with Label from Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1984. Label is 10 by 4 inches. Red, yellow, black, and green on white. A color photo shows 3 links on a bed of scrambled eggs on a white plate with a half tomato and some small squash.

2502. **Product Name:** Chicken (Meatless; Resembles White Meat) [Slices, or Diced].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.

© Copyright Soyinfo Center 2014

Date of Introduction: 1984.
How Stored: Frozen.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

2503. **Product Name:** Vegetarian Pie [Chicken Style, or Beef Style].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1984.
New Product–Documentation: Manufacturer's catalog. 1984, undated. Frozen Products.

2504. **Product Name:** Salami (Meatless).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1984.
New Product–Documentation: Manufacturer's catalog. 1984, undated. Frozen Products. Label reads: "Vegetable protein slices. Artificial salami flavor. Completely meatless. Rich in protein. No preservatives."

2505. **Product Name:** Bolono (Meatless Bologna Slices).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1984.
Ingredients: Textured vegetable protein (soy protein concentrate and isolate, wheat gluten), egg whites, water, soybean and/or corn oil, potassium caseinate, etc.
How Stored: Frozen.
New Product–Documentation: Manufacturer's catalog. 1984, undated. Frozen Products. Label reads: "Vegetable Protein Slices. Artificial Bologna Flavor."

2506. **Product Name:** Chili (Meatless).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: (614) 885-9511.
Date of Introduction: 1984.
Ingredients: Water, wheat gluten, red beans, tomato paste, soybean and/or corn oil, flavorings (hydrolyzed vegetable protein, garlic powder, extractives of spices), modified corn starch, salt, sugar, monosodium glutamate, caramel color, yeast extract, dextrose, niacinamide, etc.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.

2507. Cooper, Robert G. comp. 1984. A comprehensive bibliography of Dr. John Harvey Kellogg 1852-1943. Keene, Texas: Southwestern Adventist College. iii + 264 p. 28 cm. [10641 ref]
• ***Summary:*** An excellent, carefully compiled (over 18 years), lengthy typewritten bibliography of books, periodical articles, reprints and charts by Dr. Kellogg. Contents: Preface. Explanatory notes & symbols (including location symbols for books and pamphlets). Books and pamphlets (538 references). Periodical articles & reprints (10,090 references). Miscellaneous (13 references, incl. charts). Appendix (incl. sources searched, dissertations, indexes, and periodicals).

The entries are arranged alphabetically by the title of each publication, and chronologically under each title. In the Preface the author states: "Since key words appear near the beginning of most articles, a subject index did not seem necessary."

Yet we believe this bibliography would have been much more useful if it had a subject index. For example, there are only 7 entries under "Soy" (i.e. where the title of the article starts with "Soy"), starting in 1918. Yet the SoyaScan database contains 74 records by Dr. Kellogg about soy, starting in 1896. In Cooper's bibliography there is not a single entry under fiber or dietary fiber–a field in which Dr. Kellogg was an acknowledged major pioneer. There are also no entries under wheat gluten or gluten–where Dr. Kellogg also did pioneering work. Address: Director, Findley Memorial Library, Southwestern Adventist College, Keene, Texas.

2508. Francis, Dorothy E.M. 1984. Alternatives to cow's milk: Comparisons. In: David L.J. Freed, ed. 1984. Health Hazards of Milk. London, Philadelphia, Toronto, etc.:

Baillière Tindall. xvii + 281 p. See p. 145-150. [8 ref]
• ***Summary:*** In the section on "Milk Substitutes," table 8.1 is titled "Milk substitutes suitable for different age groups." The following soya products are listed with their manufacturers and osmolality in mmol/kg (millimole/kilogram): Infants from birth: Formula S Food (Cow & Gate), Prosobee liquid and powder (Mead Johnson), Wysoy (Wyeth, contains beef fat). Infants from three months, in addition: Granolac Infant (Granose). School age children and adults requiring enteral feeds: Fortison Soya (Cow & Gate). Social replacements of milk: Granogen (Granose), Plamil (Plant Milk Ltd.), Soy Bean Milk (Itona), Soya Milk Liquid (Granose).

A discussion of "Soya formulas" is given on p. 148-49. Social replacements of milk "do not contribute significantly to the nutritional intake, particularly for calcium and riboflavin." Address: SRD, Group Chief Dietitian, The Hospital for Sick Children, Great Ormond St., London, WC1N 3JH, England.

2509. General Conference of Seventh-day Adventists. 1984. Seventh-day Adventist Yearbook. Washington, DC. 980 p. Address: Washington, DC.

2510. **Product Name:** [Textured Vegetable Protein].
Manufacturer's Name: Productos Icolpan.
Manufacturer's Address: Medellin, Colombia.
Date of Introduction: 1984?
New Product–Documentation: Letter from Robert Folkenberg. 1983. Feb. 15. "This company, organized in 1972, has ordered the necessary equipment to produce TVP but they are not yet in production."

2511. Nordquist, Ted. 1985. The ASA soyfoods conference in Amsterdam. New developments with soyfoods in Europe (Interview). *SoyaScan Notes.* Jan. 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** During the 3-day conference 30-50 people were actively involved, not 120. Alfa-Laval and STS had exhibits in the expo hall. Why did the American Soybean Assoc. (ASA) organize this conference? To sell more soybeans. They were very forthright about this. Big drop in sales of soybean meal in Europe due to strong dollar and more use of European oilseeds? The conference was very professional. Amsterdam is definitely the European center of soyfoods. Nutana buys 4 million liters a year of aseptic soymilk from Alpro and sells it through their 7th day Adventist distribution network generally under the brand GranoVita. Nutana claims that when they started soymilk they were responsible for half of Alpro's production. They started distributing it 3 years ago. Alpro was making 3-4,000 liters/hour of milk. A new factory just opened with a capacity of 40,000 liters/hour. Milk from the new plant tastes better. Reliable sources have told Ted that last year 10 million liters of soymilk were sold in Europe, and that 80% of that was made by Alpro.
