DEDICATION AND ACKNOWLEDGMENTS

This book is dedicated to Ellen G, White, John Harvey Kellogg, E.A. Southerland, Harry W. Miller, and T.A. Van Gundy.

Part of the enjoyment of writing a book lies in meeting people from around the world who share a common interest, and in learning from them what is often the knowledge or skills acquired during a lifetime of devoted research or practice. We wish to give deepest thanks...

Of the many libraries and librarians who have been of great help to our research over the years, several stand out:

University of California at Berkeley: John Creaser, Lois Farrell, Norma Kobzina, Ingrid Radkey.

Northern Regional Library Facility (NRLF), Richmond, California: Martha Lucero, Jutta Wiemhoff, Scott Miller, Virginia Moon, Kay Loughman.

Stanford University: Molly Molloy, who has been of special help on Slavic-language documents.

National Agricultural Library: Susan Chapman, Kay Derr, Carol Ditzler, John Forbes, Winnifred Gelenter, Henry Gilbert, Kim Hicks, Ellen Knollman, Patricia Krug, Sarah Lee, Veronica Lefebvre, Julie Mangin, Ellen Mann, Josephine McDowell, Wayne Olson, Mike Thompson, Tanner Wray.

Library of Congress: Ronald Jackson, Ronald Roache.

Lane Medical Library at Stanford University.

Contra Costa County Central Library and Lafayette Library: Carole Barksdale, Kristen Wick, Barbara Furgason, Sherry Cartmill, Linda Barbero.

Harvard University's Five Botanical Libraries (especially Arnold Arboretum Library): Jill Gelmers Thomas.

French translation: Martine Liguori of Lafayette, California, for ongoing, generous, and outstanding help since the early 1980s.

Japanese translation and maps: Akiko Aoyagi Shurtleff.

Loma Linda University, Del E. Webb Memorial Library (Seventh-day Adventist): Janice Little, Trish Chapman.

We would also like to thank our co-workers and friends at Soyinfo Center who, since 1984, have played a major role in collecting the documents, building the library, and producing the SoyaScan database from which this book is printed:

Irene Yen, Tony Jenkins, Sarah Chang, Laurie Wilmore, Alice Whealey, Simon Beaven, Elinor McCoy, Patricia McKelvey, Claire Wickens, Ron Perry, Walter Lin, Dana Scott, Jeremy Longinotti, John Edelen, Alex Lerman, Lydia Lam, Gretchen Muller, Joyce Mao, Luna Oxenberg, Joelle Bouchard, Justine Lam, Joey Shurtleff, Justin Hildebrandt, Michelle Chun, Olga Kochan, Loren Clive, Marina Li, Rowyn McDonald, Casey Brodsky, Hannah Woodman, Elizabeth Hawkins, Molly Howland, Jacqueline Tao, Lynn Hsu, Brooke Vittimberga, Tanya Kochan.

Special thanks to Tom and Linda Wolfe of Berwyn Park, Maryland. And to Lorenz K. Schaller of Ojai, California.

■ For outstanding help on this Seventh-day Adventist book we thank: Paul Allred, Glen Blix, Allan Buller, George Chapman, Philip S. Chen, Jr., Eric C. Fehlberg, Robert Folkenberg, Doris Kloss Gardiner, John Goodbrad, Gloria Hodgkin, Warren E. Hartman, Charlotte Van Gundy Holmes, Charles D. Howes, Juliette Johnson, Eden P. Kloss, Richard S. Leiss, K.S. Lo, M. Beth McCalla, Charles R. MacIvor, Jorge Manrique, Remy Mayer, John Menzies, Harry W. Miller, Oliver H. Miller, Sinclair Pinnick, Mary Jo Pugh, Richard W. Schwarz, Michael Shemer, Vep P. Sias, Allan K. Smith, Mavis Sutherland, Mable Towery, Dale E. Twomley, Masao Uruma, Hidekazu Watanabe, Sam Yoshimura.

■ Finally our deepest thanks to Tony Cooper of San Ramon, California, who has kept our computers up and running since Sept. 1983. Without Tony, this series of books on the Web would not have been possible.

This book, no doubt and alas, has its share of errors. These, of course, are solely the responsibility of William Shurtleff.

■ This bibliography and sourcebook was written with the hope that someone will write a detailed and well-documented history of this subject. And that it will be of practical use to entrepreneurs.

INTRODUCTION

Brief chronology of Seventh-day Adventist work with soyfoods, vegetarianism, meat alternatives, wheat gluten, dietary fiber and peanut butter.

No other organization or group of people has played a more important role than Seventh-day Adventists in introducing soyfoods, vegetarianism, meat alternatives, wheat gluten, dietary fiber or peanut butter to the Western world.

There are two basic types of Seventh-day Adventist (SDA) organizations: (1) Those owned by the SDA church / denomination (officially General Conference of Seventh-day Adventists) – such as Sanitarium Foods (Australia), Loma Linda Foods (from 1905 to about 1989), Nutana (Denmark). (2) Those owned by practicing Seventh-day Adventists – such as Worthington Foods, La Sierra Industries (owned by T.A. Van Gundy), etc. For details, see the copyright page.

Soyfoods: Worldwide, Seventh-day Adventists (SDAs) first became familiar with soybeans in about…

1883 April – An article in that issue of *Good Health* (Battle Creek, Michigan) titled "Food of the Japanese," states: "More than forty varieties of peas and beans are cultivated. The richly nutritive soy bean properly supplements the rice, which plays so large a part in the national diet."

1892 – *Science in the Kitchen*, by Ella E.E. Kellogg (wife of the famous Dr. John Harvey Kellogg), in a long chapter on "Legumes," states (p. 217-18): "The nitrogenous matter of legumes is termed *legumin*, or vegetable casein, and its resemblance to the animal casein of milk is very marked. The Chinese make use of this fact, and manufacture cheese [clearly tofu] from peas and beans."

1896 May – In an editorial titled "Bean Cheese," in his periodical *Modern Medicine and Bacteriological Review* (Battle Creek, Michigan), Dr. John Harvey Kellogg gives a detailed description (p. 112) of how tofu and frozen tofu are made.

1899 – The *Deutsche Verein für Gesundheitspflege* (German Society for Good Health) is founded in an old mill at Friedensau, near Magdeburg, Germany to make whole, healthy foods. It is later renamed DE-VAU GE Gesundkostwerk Deutschland GmbH. A new plant was built at Hamburg in 1912 – shortly before World War I. During World War II ownership of the factory was transferred to four trustees, who continued to operate it as a private company. In 1966 a new building was constructed in North Hamburg at Brodermannsweg 17. Many soy products were developed and growth was rapid. In about 1976 the factory started operations at an enlarged site in Lüneberg (Neufeld 19765, p. 389-90). The company owned and used the brand GranoVita from at least 1958 until 1991. After that the story becomes complicated as the company was broken up and restructured (Drosihn 2010).

1900 April - The International Health Association (SDA) now has a sanitarium and a food factory in Redhill, Surrey, England. "The foods from now on are to be sold in this country under the name of 'Life and Health Foods.'" Previously the foods were imported from Battle Creek, Michigan, and sold by the London Food Co. (*Vegetarian Messenger*, p. 117-18). Granose Flakes was on the market by 1898, Toasted Wheat Flakes by Oct. 1901. In 1900 a fire burned the Redhill factory to the ground. By 1902 an IHA factory was making Adventist health foods on Legge Street, in Birmingham. "In 1907 all SDA institutions in England, including the food factory, were centralized at Stanborough Park, Watford." In 1926 the food company was renamed Granose Foods Ltd. (Neufeld 1966, p. 527-28). In 1940 their first soy product, Granose Protose, containing soy flour, was launched.

1905 – The forerunner of Loma Linda Foods was the Loma Linda Sanitarium bakery, situated on Anderson Street in Loma Linda, California; it began operation in 1905. On 6 Feb. 1933 the name "Loma Linda Food Co." was adopted, and on 1 July 1935 the first articles of incorporation were adopted for a nonprofit organization. A new and enlarged factory began operation on 16 July 1938 on a nine-acre site at Arlington (Riverside), California (Neufeld 1976, p. 797-98).

1915 Nov. – Kellogg Toasted Corn Flake Co. (owned by Will Keith Kellogg) applies for a patent for soynut butter (regular and powdered); it is issued in June 1916.

1919 Feb. 26 – *The Madison Survey*, printed by the Madison College Printing Dept., begins weekly publication. It contains many articles about Madison's work with vegetarianism and soyfoods.

1921 – La Sierra Industries (Arlington, California), founded by Theodore A. Van Gundy, launches La Sierra Smoein – A bacon-flavored smoked soy powder seasoning. This is America's first commercial soy-based meat alternative.

1922 March – Soy Bean Meat, America's 2nd soy-based meat alternative, is introduced by Madison Foods in Madison, Tennessee. This is also the earliest known commercial soy

Copyright © 2014 by Soyinfo Center

product made in Tennessee. Also in 1922 Madison Foods launched Soy Beans (Plain, Canned) and Savory Meat (Meatless).

1929 – Theodore A. Van Gundy, founder of La Sierra Industries in southern California, becomes the first Caucasian in the Western world to manufacture commercial tofu, filtered soymilk, soynuts (named B-Nuts), soynut butter (named B-Nut Butter), or a commercial okara-based food product (named Soy Spread).

1936 – Dr. Harry W. Miller, an Adventist medical missionary in China, introduces Vetose Soya Milk (natural or chocolate), Soy Ice Cream, and Vetose Acidophilus (cultured soymilk) made by his Vetose Nutritional Laboratories in Shanghai.

1938 spring – *Madison Health Messenger*, which focuses on the work of Madison Foods (at Madison College, Tenessee) begins irregular publication, with Edwin M. Bisalski as editor. Most issues contained 4-6 pages, each 8½ by 11 inches, and were filled with information about and photos of canned vegetarian foods, including many soyfoods. It continues until 1949.

1939 fall – Dr. Harry Miller starts making and canning Miller's Soya Lac (soymilk fortified with vitamins and minerals, renamed Soyalac by Sept. 1941) and Soy-A-Malt (malted soymilk) at his International Nutrition Laboratory in Mt. Vernon Ohio. Soyalac was America's first widely successful soymilk. For decades it remained on the market as an infant formula.

1939 – Worthington Foods begins operations in Worthington, Ohio, under the name Special Foods. In Dec. 1945 the company is incorporated under the name Worthington Foods, Inc.

1950 June – Dr. Harry Miller of International Nutrition Laboratories (Mt. Vernon, Ohio), sells the meat alternatives part of his business (gluten meats, nut loaves, frankfurters) to Worthington Foods (Worthington, Ohio). They bought the patents, recipes and formulas, equipment, technology, and good will that went with Miller's meat alternatives business. Most of these products contained no soy. Worthington kept the brand name "Miller's" for several years thereafter as they sold Miller's Cutlets, Miller's Burger, Miller's Stew, Vege-Links, and the like.

1951 Jan. 1 – Dr. Harry Miller sold the rest of his business at a very low price (book value) to Loma Linda Food Co. of Riverside, California. This sale included the Mt. Vernon land, buildings, equipment, technology, and recipes and formulas for soymilk, canned fresh green soybeans, Vege-Cheese (a canned tofu cottage cheese) and related products. Dr. Miller had always believed that the *process* for making soymilk was not his to sell; it had been a gift to him from a higher power. So he gave the process to the SDA church.

1960 – Worthington Foods of Ohio introduces Fry-Chik, a meatless drumstick that is the world's first meatlike product (meat alternative) based on spun soy protein fibers – developed and patented by Robert Boyer, initially of the Ford Motor Co.

1960 – Africa Basic Foods, black Africa's first soyfoods company, is started in Uganda by Dr. D.W. Harrison, a black American Seventh-day Adventist medical missionary.

1960 – Worthington Foods acquires the rights to manufacture and market Battle Creek Food Company products.

1964 – Worthington Foods acquires the rights to manufacture and market Madison Foods' products.

1970 – Worthington Foods merges with Miles Laboratories.

1974 – Miles Laboratories/Worthington Foods introduces the Morningstar Farms line of meatlike products based on spun soy protein fibers. The first of a new generation of meatlike entrees, they are soon sold nationally in U.S. supermarkets – and are still thriving today. Since the mid-1970s, Worthington has been the world's largest manufacturer of meatlike vegetarian products – most based on soy proteins and gluten.

1987 late – Loma Linda Foods shuts down its plant in Mount Vernon, Ohio, and moves its production to Riverside, California.

1988 – Granose Foods Ltd. moves from Stanborough Park into new facilities at Newport Park, England.

1989 – Loma Linda Foods (Riverside, California) is sold to Nutricia, a Dutch maker of infant formulas. But two disastrous infant formula recalls hurt the parent company.

1990 Jan. – La Loma Foods' (formerly Loma Linda Foods) meat alternatives and Soyagen business (11503 Pierce St., Riverside, California) is sold to Worthington Foods (Ohio) (Fehlberg 1991).

1991 Jan. 1 – Granose Foods Ltd. (Newport Pagnell, England) is sold to the Haldane Foods Group and British Arkady Ltd. (*Adventist Review*, 1991; Fehlberg 1991).

1991 Oct. 1 – Kellogg Co. (famous maker of Breakfast cereals, Battle Creek, Michigan) buys Worthington Foods

Copyright © 2014 by Soyinfo Center

(Worthington, Ohio) for $342 million. With this sale, no more SDA companies making soyfoods or meat alternatives are left in the United States.

1991 – A major breakup and restructuring takes place at DE-VAU-GE in Germany. They no longer sell under their GranoVita brand (Drosihn 2010).

2014 Jan. – The DE-VAU-GE website states that since June 1976 the company headquarters has been in Lüneburg. There they focus on the production of "crispy breakfast cereals, different kinds of muesli, and fruit bars. In 1998 another plant opened in Tangermünde near Stendal housing the very latest production facilities for breakfast cereals and muesli-bars." Today DE-VAU-GE has more than 500 employees at the two locations. The products are made for the "private label sector." Neither soyfoods nor meat alternatives are mentioned.

Vegetarianism: The organized vegetarian movement in America traces its origins to two Christian groups in the mid-1800s. The Bible-Christian Church in Philadelphia, under the leadership of Rev. William Metcalfe, started the American Vegetarian Society – America's first such society – in May 1850. The following November, *The American Vegetarian and Health Journal* began publication, with Metcalfe as editor. Famous early vegetarians such as Sylvester Graham and Dr. William A. Alcott were deeply influenced by Metcalfe and this Society. But this society's influence was short-lived, especially after Metcalfe's death.

The second group, the Seventh-day Adventist church, became actively involved in vegetarianism in 1863, following a vision received by Ellen G. White in Otsego, Michigan. Over the years the Adventist influence on vegetarianism in grew steadily, initially through the influence of Dr. John Harvey Kellogg and the Battle Creek Sanitarium in Michigan, the writings and teachings of Ellen G. White and other Adventists on the benefits of a meatless diet, vegetarian cookbooks and other publications, and commercial vegetarian products – especially meatlike products based on nuts, soya, and/or gluten.

But the greatest impact began in the 1960s when Adventist health professionals began the first real scientific research on the health benefits of a vegetarian diet. The centerpiece of this research was the first two Adventist health studies, initiated at Loma Linda University. These were the first large-scale, long-term epidemiological studies on vegetarians, and they showed convincingly and dramatically that Adventists (roughly half of whom were vegetarians) have much lower rates of heart disease, cancer, diabetes, stroke, and several other major degenerative diseases. Based on these studies, researchers have published some 200 articles in scientific journals. We believe that this vast body of original research constitutes the single most important development in the field of vegetarianism since World War II.

Moreover, in 1987 the Loma Linda University Medical Center and affiliated groups organized the First International Congress on Vegetarian Nutrition. Subsequent meetings took place every five years, with the sixth taking place in 2013.

This pioneering scientific health research and these congresses have played a leading role in changing the attitudes of health care professionals (physicians, nutritionists, dietitians etc.) toward a vegetarian diet.

In the 1960s, vegetarian diets were generally considered risky. But by the 1990s they were (if balanced) widely considered healthier than the standard American diet.

Meat Alternatives: Formerly called "meat substitutes." By definition, these are meatless, meatlike products. The category of commercial meat alternatives was invented by Dr. John Harvey Kellogg, the world-famous head of the Battle Creek Sanitarium. His first two meat alternatives were Nuttose (1896) and Protose (1899) – both based on ground peanuts.

In the USA, this category was both pioneered (starting in the early 1940s) and developed by Worthington Foods and Loma Linda Foods.

Most of the meat alternatives made by Seventh-day Adventist companies have been vegan – they contain no animal products (such as eggs or dairy products).

Wheat Gluten: Seventh-day Adventists – and especially Dr. John Harvey Kellogg – were among the pioneers in introducing wheat gluten and foods based on wheat gluten to America. As early as 1882 the Food Department of the Battle Creek Sanitarium, supervised by Dr. Kellogg, was selling Gluten Wafers, Gluten Food, and Diabetic Food. All were probably used in diabetic diets. In 1907 Dr. Kellogg was issued U.S. Patent 869,371 for a meat substitute whose two main ingredients were gluten and casein (milk protein). And by 1912 the Kellogg Food Co. in Battle Creek, Michigan, was selling at least 7 food products based on wheat gluten, including 3 types of biscuits and a breakfast toast. Protose, launched in 1899, was Dr. Kellogg's second earliest commercial meatlike product – after Nuttose. Originally made from nuts, at some early unknown date Protose came to include gluten.

Following Dr. Kellogg's lead, other Adventist companies soon began to launch commercial meatlike products based on gluten. In 1929 La Sierra Soy Gluten was introduced by La Sierra Industries in Arlington, California. In 1932 Vigorost was launched by Madison Foods in Madison, Tennessee.

But the company that has been most successful in introducing gluten-based meatlike products to America is

Copyright © 2014 by Soyinfo Center

Worthington Foods in Worthington, Ohio. Their first such product was Proast, launched in 1939, followed by Choplets (Oct. 1941). In 1968-70 with Prosage (a meatless sausage) Worthington invented a unique and proprietary process for combining gluten and textured soy proteins to give improved texture, flavor, and nutritional value – leading to a host of new meatlike products by the early 1980s.

By 1992 Seventh-day Adventist food companies had introduced at least 166 commercial food products containing gluten as a major ingredient; of these at least 55 were made by Worthington Foods. Moreover, of Worthington's 180 products, approximately 90% contained at least some wheat gluten.

Dietary Fiber: Here, too, Dr. John Harvey Kellogg was the pioneer. He was so credited in at least four publications by Denis P. Burkitt and Hugh Trowell – who established the "fiber hypothesis" of disease causation. For example, in 1978 in "The Development of the Concept of Dietary Fiber in Human Nutrition" published in the *American Journal of Clinical Nutrition* (October, Supplement, p. S3-S11) Trowell wrote: "When Dr. John Harvey Kellogg, an American cereal manufacturer, advocated the use of bran in 1923 in *The New Dietetics*, he stimulated much research.

Note: As early as 1909, Dr. Kellogg's company, Battle Creek Foods in Battle Creek, Michigan, was selling and advertising "Sterilized bran (a gentle laxative)."

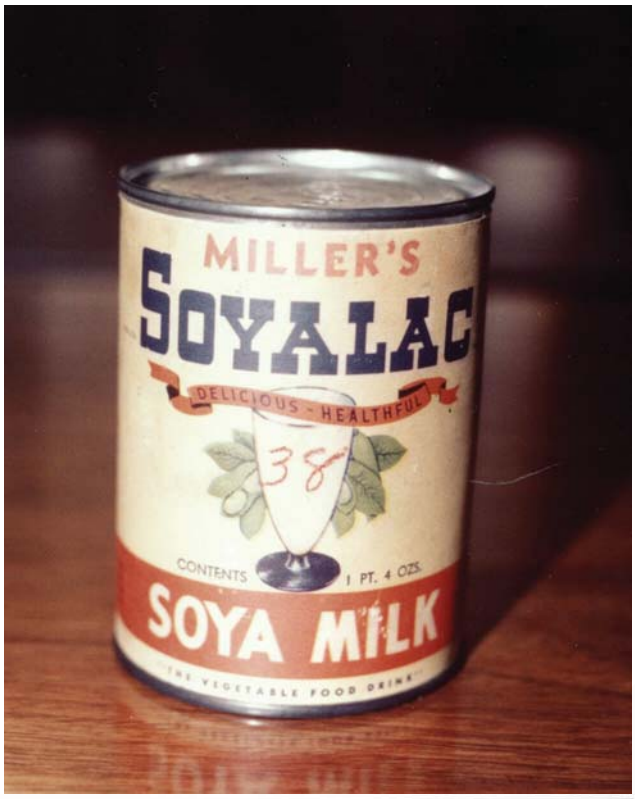
Peanut Butter: The forerunner of peanut butter (called "Peanut paste") was invented and patented in the USA in Oct. 1884 by Marcellus Gilmore Edson of Montreal, Quebec, Canada. The patent (U.S. Patent No. 306,727) was titled "Manufacture of peanut-candy." The term "peanut butter" does not appear in the patent. We call this peanut paste a "forerunner" because it was not sold as peanut butter (or as a nut butter or as peanut paste), but rather as an ingredient – in peanut-candy. We have been unable to find any evidence that the peanut-candy described in this patent was ever manufactured or sold commercially, or that Edson was a Seventh-day Adventist.

1895 Oct. 10 – Dr. John Harvey Kellogg, in a letter to Ellen G. White in Australia, writes: "We make very little use of cream or milk in our family, and use no butter whatever for seasoning, but use nuts instead. I have recently succeeded in making some very excellent preparations from nuts which take the place of butter entirely and are sweeter, more palatable, and more digestible. I find this plan is working very successfully both with the patients and with the helpers at the Dormitory." He is probably referring to peanut butter as we shall soon see.

1895 Nov. 4 – Thee months later, Dr. Kellogg applies for a U.S. patent (No. 567,901) for a "nut-butter" made from peanuts or almonds.

1896 Nov. – Dr. Kellogg's peanut butter is now sold commercially – but is not yet named "peanut butter." Sanitas Nut Food Co., in an ad titled "New Nut Products" in the *Chicago Vegetarian* (p. 8) advertises the following: 3. Nut Butter. "A substitute for ordinary butter, presenting fat in the form of a perfect emulsion; combined with water, forms a delicious cream. Used for shortening of all kinds. A pure product of nuts; can be eaten by those who cannot eat ordinary butter." Note: This may well be peanut butter.

4. Nut Cream. "A delicate, delicious nut preparation, which, properly diluted, furnishes a delicately-flavored cream or milk. It resembles milk in appearance." Note: It is probably made from peanuts and/or almonds.



1897 July 2 – The term "peanut butter" first appears in an English-language document. In an article titled "For a trust in peanuts," the *Chicago Daily Tribune* writes (p. 10): "Economic uses for peanuts: The active brains of American inventors have found new economic uses for the peanut. A peanut butter, first designed for invalids, but now sold with other food products, is made simply by crushing the nuts into a paste and adding water."

1897 – Large-scale production of peanut butter begins in the United States in Kokomo, Indiana – but unrelated to Seventh-day Adventists. It is made by Lane Bros. Health Food Co. at 11 McCann St. See: *Kokomo Daily Tribune*. 1897. "The Latest in Butter: Kokomo has a New Industry Making Butter from Peanuts." Nov. 16. p. 4, col. 3.

1898 – In Australia, Edward Halsey, a baker at Sanitarium Health Food Co. (Seventh-day Adventist) introduces Sanitarium Peanut Butter – Australia's first.

ABOUT THIS BOOK

This is the most comprehensive book ever published about the history of Seventh-day Adventist work with soyfoods, vegetarianism, wheat gluten or dietary fiber. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of these interesting subjects. It is also the single most current and useful source of information on this subject.

This is one of more than 100 books compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyinfo Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features detailed information on:

- 80 different document types, both published and unpublished.
- 2530 published documents - extensively annotated bibliography. Every known publication on the subject in every language.
- 498 unpublished archival documents.
- 427 original Soyinfo Center interviews and overviews never before published, except perhaps in our books.
- 755 commercial soy products.

Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present.

Each bibliographic record in this book contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given). For most books, we state if it is illustrated, whether or not it has an index, and the height in centimeters.

All of the graphics (labels, ads, leaflets, etc) displayed in this book are on file, organized by subject, chronologically, in the Soyinfo Center's Graphics Collection.

For commercial soy products (CSP), each record includes (if possible) the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.
A complete subject/geographical index is also included.

HOW TO MAKE THE BEST USE OF THIS DIGITAL BOOK - SEARCH IT

Most Important Thing: The **KEY** to using this digital book, which is in PDF format, is to **SEARCH IT** using Adobe Acrobat Reader: For those few who do not have it, Google: **Acrobat Reader** - then select the **free** download for your type of computer.

Click on the link to this book and wait for the book to load completely and hourglass by cursor to disappear (4-6 minutes).

Type [Ctrl+F] to "Find." A white search box will appear near the top right of your screen.
Type in your search term, such as Madison or Jethro Kloss.
You will be told how many times this term appears, then the first one will be highlighted.
To go to the next occurrence, click the down arrow, etc.

For those using a Mac without Acrobat Reader: Safari is often the default browser. Click "Edit" in the toolbar at top. In the dropdown click "Find," then click "Find..." again. A search bar will open across top of screen with a search box at right. In this box type a word or phrase you would like to search, such as Madison or Jethro Kloss. Click "Done" then scroll through the various matches in the book.

Chronological Order: The publications and products in this book are listed with the earliest first and the most recent last. Within each year, references are sorted alphabetically by author. If you are interested in only current information, start reading at the back, just before the indexes.

A Reference Book: Like an encyclopedia or any other reference book, this work is meant to be searched first - to find exactly the information you are looking for - and then to be read.

How to Use the Index: A subject and country index is located at the back of this book. It will help you to go directly to the specific information that interests you. Browse through it briefly to familiarize yourself with its contents and format.

Each record in the book has been assigned a sequential number, starting with 1 for the first/earliest reference. It is this number, not the page number, to which the indexes refer. A publication will typically be listed in each index in more than one place, and major documents may have 30-40 subject index entries. Thus a publication about the nutritional value of tofu and soymilk in India would be indexed under at least four headings in the subject and country index: Nutrition, Tofu, Soymilk, and Asia, South: India.

Note the extensive use of cross references to help you: e.g. "Bean curd. See Tofu."

Countries and States/Provinces: Every record contains a country keyword. Most USA and Canadian records also contain a state or province keyword, indexed at "U.S. States" or "Canadian Provinces and Territories" respectively. All countries are indexed under their region or continent. Thus for Egypt, look under Africa: Egypt, and not under Egypt. For Brazil, see the entry at Latin America, South America: Brazil. For India, see Asia, South: India. For Australia see Oceania: Australia.

Most Important Documents: Look in the Index under "Important Documents -."

Organizations: Many of the larger, more innovative, or pioneering soy-related companies appear in the subject index – companies like ADM / Archer Daniels Midland Co., AGP, Cargill, DuPont, Kikkoman, Monsanto, Tofutti, etc. Worldwide, we index many major soybean crushers, tofu makers, soymilk and soymilk equipment manufacturers, soyfoods companies with various products, Seventh-day Adventist food companies, soy protein makers (including pioneers), soy sauce manufacturers, soy ice cream, tempeh, soynut, soy flour companies, etc.

Other key organizations include Society for Acclimatization (from 1855 in France), American Soybean Association, National Oilseed/Soybean Processors Association, Research & Development Centers (Peoria, Cornell), Meals for Millions Foundation, and International Soybean Programs (INTSOY, AVRDC, IITA, International Inst. of Agriculture, and United Nations). Pioneer soy protein companies include Borden, Drackett, Glidden, Griffith Labs., Gunther, Laucks, Protein Technologies International, and Rich Products.

Soyfoods: Look under the most common name: Tofu, Miso, Soymilk, Soy Ice Cream, Soy Cheese, Soy Yogurt, Soy Flour, Green Vegetable Soybeans, or Whole Dry Soybeans. But note: Soy Proteins: Isolates, Soy Proteins: Textured Products, etc.

Industrial (Non-Food) Uses of Soybeans: Look under "Industrial Uses ..." for more than 17 subject headings.

Copyright © 2014 by Soyinfo Center

Pioneers - Individuals: Laszlo Berczeller, Henry Ford, Friedrich Haberlandt, Artemy A. Horvath, Englebert Kaempfer, Mildred Lager, William J. Morse, etc. Soy-Related Movements: Soyfoods Movement, Vegetarianism, Health and Dietary Reform Movements (esp. 1830-1930s), Health Foods Movement (1920s-1960s), Animal Welfare/ Rights. These are indexed under the person's last name or movement name.

Nutrition: All subjects related to soybean nutrition (protein quality, minerals, antinutritional factors, etc.) are indexed under Nutrition, in one of more than 70 subcategories.

Soybean Production: All subjects related to growing, marketing, and trading soybeans are indexed under Soybean Production, e.g., Soybean Production: Nitrogen Fixation, or Soybean Production: Plant Protection, or Soybean Production: Variety Development.

Other Special Index Headings: Browsing through the subject index will show you many more interesting subject headings, such as Industry and Market Statistics, Information (incl. computers, databases, libraries), Standards, Bibliographies (works containing more than 50 references), and History (soy-related).

Commercial Soy Products (CSP): See "About This Book."

SoyaScan Notes: This is a term we have created exclusively for use with this database. A SoyaScan Notes Interview contains all the important material in short interviews conducted and transcribed by William Shurtleff. This material has not been published in any other source. Longer interviews are designated as such, and listed as unpublished manuscripts. A transcript of each can be ordered from Soyinfo Center Library. A SoyaScan Notes Summary is a summary by William Shurtleff of existing information on one subject.

"**Note**:" When this term is used in a record's summary, it indicates that the information which follows it has been added by the producer of this database.

Asterisks at End of Individual References:

1. An asterisk (*) at the end of a record means that Soyinfo Center does not own that document. Lack of an asterisk means that Soyinfo Center owns all or part of the document.

2. An asterisk after eng (eng*) means that Soyinfo Center has done a partial or complete translation into English of that document.

3. An asterisk in a listing of the number of references [23* ref] means that most of these references are **not** about soybeans or soyfoods.

Documents Owned by Soyinfo Center: Lack of an * (asterisk) at the end of a reference indicates that the Soyinfo Center Library owns all or part of that document. We own roughly three fourths of the documents listed. Photocopies of hard-to-find documents or those without copyright protection can be ordered for a fee. Please contact us for details.

Document Types: The SoyaScan database contains 135+ different types of documents, both published (books, journal articles, patents, annual reports, theses, catalogs, news releases, videos, etc.) and unpublished (interviews, unpublished manuscripts, letters, summaries, etc.).

Customized Database Searches: This book was printed from SoyaScan, a large computerized database produced by the Soyinfo Center. Customized/personalized reports are "The Perfect Book," containing exactly the information you need on any subject you can define, and they are now just a phone call away. For example: Current statistics on tofu and soymilk production and sales in England, France, and Germany. Or soybean varietal development and genetic research in Third World countries before 1970. Or details on all tofu cheesecakes and dressings ever made. You name it, we've got it. For fast results, call us now!

BIBLIO: The software program used to produce this book and the SoyaScan database, and to computerize the Soyinfo Center Library is named BIBLIO. Based on Advanced Revelation, it was developed by Soyinfo Center, Tony Cooper and John Ladd.

History of Soybeans and Soyfoods: Many of our digital books have a corresponding chapter in our forthcoming scholarly work titled History of Soybeans and Soyfoods (4 volumes). Manuscript chapters from that book are now available, free of charge, on our website, www.soyinfocenter.com and many finished chapters are available free of charge in PDF format on our website and on Google Books.

About the Soyinfo Center: An overview of our publications, computerized databases, services, and history is given on our website.

HISTORY OF SEVENTH-DAY ADVENTIST WORK WITH SOYFOODS, VEGETARIANISM, MEAT ALTERNATIVES, WHEAT GLUTEN, DIETARY FIBER, AND PEANUT BUTTER

1. Graham, Sylvester. 1837. A treatise on bread, and bread-making. Boston, Massachusetts: Light and Stearns. viii + 131 p. 16 cm.

• ***Summary:*** The author urges Americans to return to using whole wheat flour, instead of refined white flour, when making bread. The ancients realized that wheat flour suffered in nutritive value when the coarse bran was removed, and their wrestlers "ate only the coarse wheaten bread to preserve them in their strength of limbs." Hippocrates, the father of medicine, who flourished over two thousand years ago, recommended the unbolted wheat meal bread "for its salutary effects on the bowel."

In the preface, the author notes: "While the various preparations of animal food constitute so important a portion of human aliment, the quality of bread will be greatly disregarded and neglected, and people will continue almost universally to be cursed with poor bread."

Chapter 1, titled "History of Bread," begins: "In the English version of the sacred scriptures [the Bible], the term Bread is frequently used to signify vegetable food in general. Thus in Genesis iii, 19, the Lord says to Adam–'In the sweat of thy face shalt thou eat bread (or food) till thou return to the ground.'" Graham promoted specific foods which he believed were necessary for good health. These foods were largely coarse, whole meal breads, which at that time were not considered to be of dietary importance. He attributed the health-giving properties of these breads to their content of "innutritious substance," a term he used of the modern term "dietary fiber." In attempting to prove the need for this dietary component, he notes: "We know that dogs fed on sugar and water, gum and water, fine flour bread and water or any other kind of concentrated aliment will soon languish and droop and emaciate and die, but if a due proportion of proper innutritious substance be mixed with these concentrated forms of aliment, the dogs will subsist on them and remain healthy. So if horses, cows, deer, sheep and other grass eating animals be fed on grain alone, they will soon lose their appetite and will shortly perish, but if a due proportion of straw and shavings of wood be given to them with their grain, they will continue to do well. Man is affected in the same manner. He cannot long subsist on purely nutritious substances and the reason is not because these substances have no azote or nitrogen in them nor because many necessarily require a variety of alimentary substances, but simply and exclusively because the anatomical construction and vital powers of the alimentary organs are constitutionally adapted to the alimentary substances which consist of both nutritious and innutritious matter."

Note 1. One of Sylvester Graham's most lasting legacies was Graham Bread, which he considered to be an ideal food. By the late 1980s, as the importance of dietary fiber came to be recognized by doctors and nutritionists, Sylvester Graham came to be seen as the pioneer in America advocating more fiber in the diet (Burkitt & Spiller 1986). Graham Bread was made from unbolted wheat flour (later widely known as "Graham Flour") and allowed to sit for 24 hours before being consumed. Many of America's early health reformers, during the 1850s and 1860s, advocated Graham Bread as part of a vegetarian diet, and refused to serve white-flour bread. These included James Caleb Jackson (proprietor of Our Home on the Hillside, a famous water cure spa at Dansville, New York) and Ellen G. White (the Seventh-day Adventist leader, though she initially had trouble digesting the relatively coarse bread). The SDA magazines *Review and Herald* and *Health Reformer* provided readers with hints on "How to Use Graham Flour." In Britain, Graham bread became a household name after Queen Victoria took to eating brown bread in 1847, at a time when it was still a poor man's food.

Note 2. Daphne Roe (1986) argues convincingly that Sylvester Graham was closely indebted for his ideas on dietary fiber to the physiologist William Beaumont; four years before the appearance of Graham's book on bread, Beaumont's book titled *Experiments and Observations on the Gastric Juice and the Physiology of Digestion* had been published. Section 1 contains ideas quite similar to those of Graham, who was familiar with Beaumont's ideas and actually wrote a review of them.

Note 3. McCance & Widdowson (1956, p. 49) write: "It is somewhat disillusioning to realise that Graham appears to have obtained most of his information about milling, baking and early diets from Rees' Cyclopaedia which was published in 1819, but it is difficult to over-estimate the influence of a man whose bread became a household word for over 100 years. Graham bread, or its imitations, must have been extensively eaten by people who were health minded." Address: Northampton, Massachusetts.

2. Ellen G. White's first health reform vision on the dangers of tobacco, tea and coffee (Early event). 1848. Autumn.

• ***Summary:*** James White mentioned this vision and stated that the health vision was a progressive one. Source: *Review and Herald,* Nov. 8, 1870.

Some church members were not easily convinced

© Copyright Soyinfo Center 2014

regarding tobacco. In an 1851 letter Ellen White responded to the question as to whether she had seen "in vision" that it was wrong to use tobacco: "I have seen in vision that tobacco was a filthy weed, and that it must be laid aside or given up." She wrote encouraging letters to those who struggled to break the tobacco habit.

Tobacco was tolerated for some time among Sabbath-keeping Adventists. The church paper published various articles with both scientific and scriptural arguments against tobacco in the 1850s. The first disfellowshipping of tobacco users occurred in Morristown, Vermont, in 1855. Source: Robinson, D.E. 1965. *The Story of Our Health Message,* pp. 65-70.

"In the autumn of 1848 her angel instructed here that tea, coffee, and tobacco were injurious, even life threatening." Source: Coon, Roger W. 1992. *The Great Visions of Ellen G. White,* Vol. 1. p. 92 + footnote 9.

3. *Present Truth* (*The*). 1849. Serial/periodical. Middletown, Connecticut. Publishing Committee, incl. James White. *
• ***Summary:*** Talk with Colleen Duran, Head Librarian, Heritage Room, Del E. Webb Memorial Library, Loma Linda University, Loma Linda California. 2000. July 18. This was the first periodical published by James White and his close associates. *The Present Truth* began in July 1849, in Middletown, Connecticut, and continued with that title until No. 11 (Nov. 1850, Paris Maine). The title then changed to the *Second Advent Review and Sabbath Herald.*

Note: This is the earliest document seen (Oct. 2004) concerning Seventh-Day Adventists.

4. Coles, Larkin B. 1849. The philosophy of health: or, Health without medicine. A treatise on the laws of the human system. 8th ed. Boston, Massachusetts: William D. Ticknor & Co. vi + 120 p. 16 cm. *
• ***Summary:*** One of Coles' main themes was the proposition that "it is as truly a sin against Heaven, to violate a law of life, as to break one of the ten commandments." He argued, like many other health reformers of the time, for fresh air, exercise, a vegetarian diet, the nonuse of stimulants, reform in dress, sexual purity, and drugless medicine.

This book was remarkably successful, selling 35,000 copies during its first 5 years and another 9,000 before Coles' death. "When the twenty-sixth edition appeared in 1851, one medical journal joked that it seemed 'as though the friends of reform not only read, but eat the books'" (R. Numbers 1982, p. 60).

Three early America health reformers whose writings later had a noticeable influence on the thinking of Ellen G. White (leader of the Seventh-day Adventist church) were Horace Mann, Dio (Dioclesian) Lewis, and Larkin B. Coles. Although never as prominent a reformer as Mann or Lewis, Coles is of special interest because of his background as a Millerite preacher and physician. Born in New Hampshire, he graduated from Castleton Medical College in 1825 during that institution's heyday as New England's most popular medical school. He is also said to have been trained as a minister. As early as 1836 he seems to have been associated with William Miller, and at the height of the Millerite movement he was actively distributing Miller's books and writing theological articles for the *Signs of the Times.* Shortly after the Great Disappointment of 1844 (when Jesus Christ failed to appear) he settled in Boston and joined both the Boston Medical Association and the Massachusetts Medical Society as an orthodox physician in good and regular standing. He loved to travel and preach. He died in January, 1856, while visiting Louisville, Kentucky (Ronald Numbers 1982, p. 59-60). Address: M.D. and minister of the Gospel, Fellow of the Massachusetts Medical Society, Member of the Boston Medical Association.

5. *Second Advent Review and Sabbath Herald.* 1850. Serial/periodical. Paris, Maine. Publishing Committee, incl. James White. *
• ***Summary:*** R.L. Numbers (1976, p. viii) lists this as one of the most important Seventh-day Adventist periodicals. He notes that by 1851 the Whites had launched a succession of periodicals culminating in the *Advent Review and Sabbath Herald.*

Talk with Colleen Duran, Head Librarian, Heritage Room, Del E. Webb Memorial Library, Loma Linda University, Loma Linda California. 2000. July 18. In Nov. 1850 the title of *The Present Truth* changed to the *Second Advent Review and Sabbath Herald,* in Paris, Maine. The last issue was 9 June 1851. On 9 June 1851 the title was changed to *Advent Review and Sabbath Herald* (Saratoga, New York). On 30 Oct. 1855 it began publication in Rochester, New York, then on 4 Dec. 1855 it was moved to Battle Creek, Michigan. This title continued until 20 Dec. 1870. The next issue was titled *Advent Review and Herald of the Sabbath*– still in Battle Creek.

Note: This is the second earliest document seen (Oct. 2004) concerning Seventh-Day Adventists.

6. Coles, Larkin B. 1851. Philosophy of health: Natural principles of health and cure: or, Health and cure without drugs: also, The moral bearings of erroneous appetites. Boston, Massachusetts: Ticknor, Reed, & Fields. 260 p. 19 cm.
• ***Summary:*** One of Coles' main themes was the proposition that "it is as truly a sin against Heaven, to violate a law of life, as to break one of the ten commandments." He argued, like many other health reformers of the time, for fresh air, exercise, a vegetarian diet, the nonuse of stimulants, reform in dress, sexual purity, and drugless medicine.

Larkin generally used the word "flesh" to refer to meat; the word "flesh" appears on 31 pages of this book. For example, in the chapter on "Quality of food" a section

© Copyright Soyinfo Center 2014

titled "Flesh-eating and vegetable eating" (p. 57) states: To consider man anatomically, he is decidedly a vegetable-eating animal. He is constructed like no flesh-eating animal, but like all vegetable-eating animals. He has not claws, like the lion, the tiger, or the cat; but his teeth are short and smooth, like those of the horse, the cow, and the fruit-eating animals; and his hand is evidently intended to pluck the fruit, not seize his fellow-animals. What animals does man most resemble in every respect? The ape tribes: frugivorous animals.

Because they were viewed as stimulants, Coles also opposed the use of coffee, tea, alcohol, opium and tobacco. The word "coffee" appeared on 29 pages in this book. For example, pages 78-79: "It needs only to be added, that, in the estimation of the writer of this little work,–after having used it for several years, and since having abstained from it for some fifteen years,–coffee, in all cases, and under all circumstances, is bad; that its stimulating qualities are decidedly injurious to the system, and ought never to be used, except when required as an antidote to poison, or for some other medicinal purpose. And, what makes it to be dreaded more than many other injurious things is, its evil working is so unseen and delusive. While it does not show itself like alcohol, yet its evil work is more certainly undermining the nervous system; and while it tempts us to believe that it strengthens and supports, because it excites, yet it slowly enervates. It affects the whole system, and especially the nervous system, by its effects on the stomach. But, besides this, it creates a morbid action of the liver, especially where there is a tendency to bilious affections. It affects the circulation of the blood, and the quality of the blood itself, so that a great coffee-drinker can generally be known by his complexion; it gives to the skin a dead, dull, sallow appearance."

This book was remarkably successful, selling 35,000 copies during its first 5 years and another 9,000 before Coles' death. "When the twenty-sixth edition appeared in 1851, one medical journal joked that it seemed 'as though the friends of reform not only read, but eat the books'" (R. Numbers 1982, p. 60).

Three early America health reformers whose writings later had a noticeable influence on the thinking of Ellen G. White (leader of the Seventh-day Adventist church) were Horace Mann, Dio (Dioclesian) Lewis, and Larkin B. Coles. Although never as prominent a reformer as Mann or Lewis, Coles is of special interest because of his background as a Millerite preacher and physician. Born in New Hampshire, he graduated from Castleton Medical College in 1825 during that institution's heyday as New England's most popular medical school. He is also said to have been trained as a minister. As early as 1836 he seems to have been associated with William Miller, and at the height of the Millerite movement he was actively distributing Miller's books and writing theological articles for the *Signs of the Times.* Shortly after the Great Disappointment of 1844 (when Jesus Christ failed to appear) he settled in Boston and joined both the Boston Medical Association and the Massachusetts Medical Society as an orthodox physician in good and regular standing. He loved to travel and preach. He died in January, 1856, while visiting Louisville, Kentucky (Ronald Numbers 1982, p. 59-60). Address: Fellow, Massachusetts Medical Society; member, Boston Medical Assoc.

7. Ellen G. White's second health reform vision in regarding cleanliness and rich / refined foods (Early event). 1854. Feb. 5.

• ***Summary:*** This vision took place in Brookfield, New York. In 1854, at a time when modern conveniences were not even thought of, she called for cleanliness among those professing Christianity: "I saw that the houses of the saints should be kept tidy and neat, free from dirt and filth and all uncleanness." Turning to maintaining health, especially in dietary matters, she wrote that we must "take special care of the health that God has given us... Deny the unhealthy appetite, eat less fine food, eat coarse food free from grease. Then as you sit at the table to eat you can from the heart ask God's blessing upon the food and can derive strength from coarse, wholesome food."

Source: Manuscript 3, 1854, cited in *Selected Messages*, book. 3, p. 274. Careful examination of Ellen White's writings indicates that by "grease" she meant animal fat, such as lard and suet, very common cooking ingredients in her day.

"And on February 12, 1854, she was told that (1) adultery was a serious problem in her church, (2) there was a physically dangerous lack of bodily cleanliness among Sabbathkeepers, and (3) control of appetite was sorely needed among them. Source: Coon, Roger W. 1992. *The Great Visions of Ellen G. White*, Vol. 1. p. 92 + footnote 10.

Note: Fine food means "refined food." Coarse food refers to unrefined, whole food.

8. *Laws of Life* (*The*) (*Journal of the Dansville Sanitorium*). 1858? Serial/periodical. Dansville, New York. Published and edited by James Caleb Jackson.

• ***Summary:*** Continues: *Letter Box.* In 1866 this "Original monthly health journal of 16 quarto pages" was edited by Miss Harriet N. Austin, M.D., James C. Jackson, M.D., and F.W. Hurd, M.S. Published in Dansville by F. Wilson Hurd & Co. Its "primary object is to teach people how to live so as to avoid sickness" [i.e., preventive medicine].

James Caleb Jackson, born on 28 March 1811, was head of "Our Home on the Hillside," one of the most popular and prosperous water cure (hydropathy) establishments in the USA. He began his career in 1834, lecturing on temperance and slavery. By 1847 his weak constitution failed him, but he recovered his health through hydropathy in New York. Soon he opened a water cure at Glen Haven, where only

© Copyright Soyinfo Center 2014

vegetarian meals were served and only reform dresses were worn. In 1858 Glen Haven was destroyed by a fire, so Jackson and his co-worker Dr. Harriet N. Austin, purchased a defunct water cure 50 miles south of Rochester outside the town of Dansville, and on 1 Oct. 1858 they opened "Our Home on the Hillside" for patients. Two vegetarian meals a day (at 8 AM and 2:30 PM) were served. The "food, plentiful but plain, consisted principally of a variety of 'Graham' dishes, vegetables, and piles of fresh fruit. Meat, butter, white-flour bread, tea and coffee were positively not allowed on the premises" (R.L. Numbers 1976, p. 74-75). Nor were drugs or medicine ever administered. Jackson's medical faith rested on ten natural remedies: Air, food, water, sunlight, dress, exercise, sleep, rest, social influence, and mental and moral forces. His most popular book was titled *How to Treat the Sick without Medicine.* In early 1863 Dr. J.C. Jackson of Dansville wrote a letter to the editor of the *Yates County Chronicle* (Penn Yan, New York) giving directions for the treatment of diphtheria. Published on 15 Jan. 1863, the letter was read by Ellen G. White, who took her two sons to Dr. Jackson, whom she believed cured them of diphtheria using simple water treatments. "The grateful mother at once began sharing her discovery with others and thus embarked upon a lifelong career as a prophetess of health reform" (Numbers 1976, p. 76).

Note: Volume 28 (1885), published by The Sanatorium Publishing Co. (Dansville, NY) and volume 30 (1887) are available in full view on the Web on HathiTrust. In Volume 28 (p. 12-13) we read that when Dr. Jackson began his mission 37 years ago, the words "hygiene" or "hygienic" were "not known, outside of a little circle of literary men, and by them was not known to have any practical meaning. Physicians themselves knew little or nothing about healthy methods of living. Their thoughts ran entirely along lines of consideration for persons who were sick or ailing. All diseases with Christians were thought or supposed to have their origin in and through the will of God;..."

"When then, almost single handed and alone, I set going the thought that life had its laws and these operated in the direction of the preservation and maintenance of human life, there was no general faith that these laws did exist and that to obey them would insure persons from sickness and prevent death. I was laughed at by all classes of men just as far as my ideas found circulation." Address: Dansville, New York.

9. Ellen G. White's great health reform vision at Otsego, Michigan (Early event). 1863. June 5 or 6.

• ***Summary:*** Prof. Ronald Numbers (1976, p. x, 81-83) notes that on the evening of 5 June 1863, Ellen White and a dozen Seventh-day Adventist friends were kneeling in prayer at the home of the Aaron Hilliards, just outside the village of Otsego, Michigan. Ellen received a vision concerning the preservation and restoration of health. She was told that it was a religious duty for God's people to care for their health and not violate the laws of life. The Lord wanted them "to come out against intemperance of every kind,–intemperance in working, in eating, in drinking, and in drugging." For several weeks following her vision, Ellen White seemed reluctant to say much about its contents. She first revealed some of the contents to Horatio S. Lay, a self-styled Adventist physician. When he noted that certain "wise and eminent physicians" were currently teaching exactly what she had been shown, she went on to condemn the use of all stimulants and narcotics, to caution against meat eating, and to emphasize "the remedial value of water treatments, pure air, and sunshine." Ellen White's first published account of her June 5 vision, a short 32-page sketch tucked into her fourth volume of *Spiritual Gifts,* did not appear until 15 months after the event.

"In her essay 'Health,' which reads in places like L.B. Coles, she recited the established principles of health reform, attributing them to her recent vision. Willful violations of the laws of health–particularly 'Intemperance in eating and drinking, and the indulgence of passions'–caused the greatest human degeneracy. Tobacco, tea, and coffee depraved the appetite, prostrated the system, and blunted the spiritual sensibilities. Meat-eating led to untold diseases; swine's flesh alone produced 'scrofula, leprosy and cancerous humors.' Living in low-lying areas exposed one to fever-producing 'poisonous miasma.'

"Her strongest language, however, was reserved for the medical profession... The Lord specifically and graphically forbade the use of opium, mercury, calomel, quinine, and strychnine... Of all the medical sects, only drugless hydropathy received divine sanction. Since medicines were so dangerous and had 'no power to cure,' the only safe course was to rely on the natural remedies recommended by the health reformers: pure soft water, sunshine, fresh air, and simple food–preferably eaten only twice a day."

Dr. Richard W. Schwarz (1970, p. 17-18) states: "Some early Adventist leaders such as [Joseph] Bates had conscientiously practiced certain principles of healthful living for years. Since 1848 Ellen White, wife of denominational leader James White, had progressively spoken out against certain unhealthful practices. The Adventists looked to Mrs. White as divinely inspired. They believed that God communicated to them through her. One such communication, taking place at Otsego, Michigan, in June 1863, directed the infant Church's attention to the Christian's moral duty to study and observe basic health laws. A variety of reasons prevented Mrs. White from publishing any extensive material on healthful living until Volume 4 of her series of books *Spiritual Gifts* came out in August 1864. Volume 4 contained a 32-page article entitled 'Health,' in which she discussed the relationship of diet and disease, pointed out the dangers of tea, coffee, drugs, and meat eating, and called attention to the importance of cleanliness, sunlight, fresh air, the rational use of water, and

© Copyright Soyinfo Center 2014

the value of willpower in combating poor health.

"As soon as Mrs. White began to speak and write extensively on healthful living, many persons commented on the similarity of her teachings to those of earlier health reformers... When Ellen White began to get questions concerning the relationship of her health teachings to those of men like Drs. J.C. Jackson and R.T. Trall, she was naturally curious, but she resolved not to read any health reform writings until she had first written out in detail the principles she had begun presenting at Otsego. When she had finished, she read the writings of the earlier reformers and was astonished to note the extent to which the ideas they taught agreed with what God had communicated to her."

For a good discussion of this vision, including the events leading up to it, its context, and what Ellen G. White did in response to it, see: Coon, Roger W. 1992. *The Great Visions of Ellen G. White,* Vol. 1. Chap. 7 (p. 90-107). He notes (p. 92-93) that the vision took place on the evening of Friday, June 5, 1863, yet Mrs. White "dated her vision June 6, since it came after the beginning of the Sabbath at sunset. She apparently preferred to emphasize sacred rather than civil time." Martha Amadon gave an eyewitness account of what happened (footnote 15): "'Friday evening we found ourselves all assembled at Brother Hilliard's for family worship, about a dozen being present. A chapter was read and Sister White led in prayer, Brother White kneeling across the corner from her. Her burden in prayer was for him, and as she prayed, while still on her knees, she moved over to his side, laid her hands on his shoulders, and prayed until she was taken in vision. This lasted for about three quarters of an hour.

"'At this time she was given the light on the health reform, Brother White was also greatly blessed and encouraged, and he was relieved of the burden of discouragement ["burnout, from constant and excessive labor"] that he had been carrying.'

"An initial, partial account of the specific content of this significant vision was written down by Ellen shortly after it was received. About two thirds of the document was counsel given specifically to alleviate James White's deteriorated state of health; the remaining third consisted of general counsels for the church.

"In the summer of 1864, however, Ellen White wrote a more complete account of the instruction given her (this time generally omitting personal family counsels). In print it fills some 30 pages in chapter 39 ('Health'), of *Spiritual Gifts*, book 4. Some 10 categories of counsel are covered in this comprehensive account of this vision."

"1. Care of health is a religious duty. 'The body, which God calls His temple, should be preserved in as healthy a condition as possible.'"

"2. The cause of disease is a violation of health laws.

"3. She attacked intemperance on many fronts" (stimulating drinks / alcohol, tobacco, highly spiced foods and rich foods, overwork, indulgence of base passions).

"4. Vegetarianism was, for the first time, revealed to Ellen as the ideal diet, being the original diet of Adam and Eve in Eden..."

5. Control of appetite–eating too often or too much.

"6. Control of the mind."

"7. Natural remedies in healing. 'Nature alone is the effectual restorer.' 'Nature alone possesses curative powers.'

8. Personal cleanliness.

9. Environmental concerns.

"Health education by the church."

Note: This is the earliest event seen (Jan. 2012) concerning Seventh-day Adventist work with vegetarianism.

10. White, Ellen G. 1864. Health. In: Ellen G. White. 1864. Spiritual Gifts: Important Facts of Faith, Laws of Health, and Testimonies. Vol. 4. Battle Creek, Michigan: Seventh-day Adventist Publishing Association. 160 p. See p. 120-51. Chap. 39. No index. 18 cm.

• ***Summary:*** This is Ellen G. White's first published account of her first major health vision of 6 June 1863 (14 months earlier), outside the village of Otsego, Michigan. It was destined to change the health habits of the entire Seventh-day Adventist (SDA) church and of Ellen G. White herself.

At sunset, on Friday, a the home of Aaron Hilliard, the Whites, Hilliards, and a few friends knelt in prayer. Ellen's prayer burden was James' health. She prayed and moved closer to him, placing her hand gently on his shoulder. She was taken off in vision for 45 minutes.

She was shown (among other things): (1) Care of personal health is a Christian duty. (2) Much disease results from violation of the laws of health. (3) It is the duty of each person to try to avoid all forms of intemperance. (4) God's natural remedies include pure water and air. (5) Physical health depends upon successful control of the mind. (6) Vegetarianism, advocated to SDAs for the first time, is ideal for health and pork is especially detrimental. Meat-eating leads to untold diseases. "Subsisting mostly on highly seasoned animal food produces a feverish state of the system, especially if pork is used freely. The blood becomes impure, the circulation is not equalized" (p. 126).

(7) Human effort is to be combined with divine power. (8) "The endless variety of medicines in the market... kill hundreds where they benefit one" (p. 140).

Note 1. This is the earliest document seen (Nov. 2004) concerning Ellen G. White and her interest in vegetarianism or health reform.

Note 2. This is the earliest document seen (Nov. 2004) concerning the work of Seventh-day Adventists with vegetarianism. Address: Battle Creek, Michigan.

Ellen G. White, her husband, and their two sons. Sometime in 1845 Ellen met her future husband, James Springer White, also a Millerite. A year later, on 30 August 1846, they were married by a justice of the peace in Portland, Maine. The elder son is James Edson White. The younger son is William Clarence ("Willie") White.

At the age of nine, Ellen was struck with a rock thrown by a fellow student. The injury severely disfigured her nose, and left her in a coma for three weeks.

When Ellen Harmon had her first "conversion experience," at age 12, she would later write:

"This misfortune, which for a time seemed so bitter and was so hard to bear, has proved to be a blessing in disguise. The cruel blow which blighted the joys of earth, was the means of turning my eyes to heaven. I might never had known Jesus, had not the sorrow that clouded my early years led me to seek comfort in him" (*Review and Herald,* 25 Nov. 1884).

In 1840, at age 12, her family became involved with the Millerite movement. As she attended William Miller's lectures, Ellen felt guilty for her sins, and she was filled with terror about being eternally lost. She describes herself as spending nights in tears and prayer, and being in this condition for several months. She was baptized by John Hobart in Casco Bay in Portland, Maine, and eagerly awaited Jesus to come again. In her later years, she referred to this as the happiest time of her life.

12. *Health Reformer* (*The*) (*Battle Creek, Michigan*). 1866-1878. Serial/periodical. Battle Creek, Michigan. Vol. 1 No. 1. Aug. 1866. *

• ***Summary:*** Continued by *Good Health* with vol. 14 in Jan. 1879. According to Richard W. Schwarz's book *John Harvey Kellogg, M.D.* (1970), in June 1863, in Otsego, Michigan, Ellen G. White had had a vision in which God had directed the infant Seventh-day Adventist church's attention to the Christian's moral duty to study and observe basic health laws. "After Ellen White had written out all of the basic health principles shown her in the Otsego vision, she, her husband, and several other Adventist leaders spent three weeks observing the methods used at Dr. [James Caleb] Jackson's establishment ["Our Home on the Hillside", a water-cure institution] in Dansville, New York... They also decided to bring out a series of six pamphlets devoted entirely to the subject of healthful living. Entitled *Health, or How to Live*, these pamphlets appeared in 1865. Although each contained an article written by Ellen White, the majority of the material consisted of reprints from the writings of Sylvester Graham, Dr. Larkin B. Coles of Boston, Massachusetts, Dr. Russell T. Trall, Dr. James Caleb Jackson,

© Copyright Soyinfo Center 2014

Dio Lewis, and others. Trall, a regular columnist from about 1868-1873, wrote tirades against the medical profession and the use of sugar. The next year [1866] the Review [and Herald Press, founded in the 1850s] office also began publication of the *Health Reformer,* a monthly journal edited by Dr. H.S. Lay and dedicated to popularizing dietetic and sanitary reforms, not only among Adventists, but among the general public."

As an apprentice typesetter, John Harvey Kellogg set type for the early issues of the *Health Reformer.* In about 1873 James White, who was then the magazine's editor, pressed the 21-year-old John Harvey Kellogg into service as his chief editorial assistant. Since church responsibilities overburdened White, in July 1874 Kellogg officially became editor of the *Health Reformer,* a position he held until his death 61 years later. Kellogg began writing columns for this periodical in which he set forth the basic principles of healthful living that he would promote all his life. His system, which he eventually called "biologic living," was based on preventive medicine and a simple vegetarian diet; it demanded total abstinence from alcohol, tobacco, tea, coffee, and chocolate. In January 1879 the *Health Reformer* was renamed *Good Health.* A year after the name change, the Battle Creek Sanitarium officially acquired *Good Health* from the Seventh-day Adventist Publishing Association. The journal was now under Dr. Kellogg's control. Circulation soon increased to 20,000 copies a month, and by 1916 more than 5 million copies of the magazine had been printed. By 1921 *Good Health* had published its first article on soybeans or soyfoods. The basic ideas promoted in *Good Health* remained the same throughout the years until it ceased publication in 1955.

Talk with National Library of Medicine. 1991. Nov. 25. From Aug. 1866 (Vol. 1, No. 1) to 1875 *Health Reformer* was issued by the Health Reform Institute. The title was changed in Jan. 1879. The last issue was Vol. 88, No. 8, Aug. 1953.

The Loma Linda Univ. Library Heritage Room (Loma Linda, California) probably has the best and most complete set of this periodical; they own 1(1867)-13(1878), in both bound and microfiche formats.

Note 1. This is the earliest periodical seen (Dec. 2013) published in Battle Creek, Michigan, that has health and diet as its primary interests.

Note 2. This is the earliest document seen (Dec. 2013) connected with the work of Dr. John Harvey Kellogg. Address: Battle Creek, Michigan.

13. Bordeau, D.T. 1866. Health. No. 2: Eating and drinking. *Health Reformer* (*The*) (*Battle Creek, Michigan*) 1(2):25-27. Sept.

• ***Summary:*** This article begins: "'Whether therefore ye eat or drink, or whatever ye do, do all to the glory of God.' *I Corinthians* x, 31.'"

"1. "God's original design could not have been that man should subsist on flesh meats; that he should have to destroy the lives of other creatures equally tenacious of life, and averse to suffering, as himself, to prolong his own life. There is something deeply affecting to anyone whose heart vibrates in tenderness for all of God's creatures, to see any of them suffering and dying to save our lives. The tendency of this must be to remind us that man has fallen,..."

"A farinaceous and vegetable diet contains all the nutritive properties that can be derived from food, and we can partake of it without feeling that we are eating that which has had to suffer and die.

"2. It is a cheaper diet than that which consists of flesh meats."

"3. You can get a greater and better variety in a vegetable diet than in a meat diet.

"4. A farinaceous diet is more nutritious than a flesh diet."

"5. A vegetable diet is freer from disease, and consequently can be used with more safety, than a flesh diet."

"6. Inasmuch as those beasts which subsist on animal food are characterized by ferocity and rapacity, a flesh diet, eaten largely by man, naturally and necessarily develops fierceness and rapaciousness in him also; whereas a vegetable diet is constitutionally adapted to foster docility.

"7. In order that health may be promoted, it is necessary that our various faculties be equally exercised and developed; but a flesh diet excites and unduly develops the feelings and animal propensities to the prejudice and deterioration of the moral and intellectual faculties. This is equally true of intoxicating drinks, tea, coffee, and tobacco, and highly stimulating food of any kind. By these stimulants the animal organs are unduly excited and developed, and the blood and vitality are withdrawn from the moral and intellectual organs, and they are blunted and weakened."

"8. A plain vegetable diet is more conducive to longevity than flesh meats."

14. Bordeau, D.T. 1866. Health. No. 3: Eating and drinking (Continued). *Health Reformer* (*The*) (*Battle Creek, Michigan*) 1(3):33-35. Oct.

• ***Summary:*** "But the following objections are sometimes argued against the position that a vegetable diet is superior to flesh meats:

"Obj. 1. One feels better and stronger after eating meat, than after simply a vegetable diet; therefore there is more strength in animal food than in vegetable."

"No, feeling is not the criterion by which to decide which articles are the most nutritious, and impart the greatest amount of strength... In the case of spirituous liquors, tea, coffee, and other stimulating articles, the strength that is realized under their influence is not derived from them, but is drawn from the general fund of vitality in the system. These articles stimulate to undue action; and every time you use

© Copyright Soyinfo Center 2014

them, you make a direct draft upon your capital of vitality, and lessen the sum total of your life-power;..."

15. John Harvey Kellogg decides to become vegetarian (Early event). 1866.
• ***Summary:*** Richard W; Schwarz, in his excellent biography *John Harvey Kellogg, M.D.*, states (p. 25): "As an apprentice typesetter, John Harvey Kellogg set type for both *Health, or How to Live* [published in 1865] and the early issues of the *Health Reformer* [which began publication in Aug. 1866]. He became intensely interested in these publications and in the health journals the *Review* received on an exchange basis. In his spare moments he studied the complete works of [Sylvester] Graham and Coles, which the *Review* kept for sale in its office.

"Soon John put into practice some of the things which he had read. Although the Kellogg family had always served meat at almost every meal, and in spite of the fact that an oxtail, richly browned in the oven, was one of his favorite foods, John decided to become a vegetarian."

Note: John Harvey Kellogg, born 26 Feb. 1852, probably decided to become a vegetarian in 1865 or 1866, at the age of about 13 or 14. Quite remarkable for him to make such a big decision at such a young age!

16. Trall, Russell Thacher. 1867. The experimental evidence. *Health Reformer* (*The*) (*Battle Creek, Michigan*) 2(5):69-70. Nov.
• ***Summary:*** Adam and Eve were consistent vegetarians.

"Pythagoras raised up a society of vegetarians 550 years before Christ. Josephus testifies that the Essenes, a sect of the ancient Jews, numbering several thousands, were long-lived because of their regular course of life and simplicity of diet, which Pliny tells us consisted of the fruit of the palm-tree [dates]. It is certain, however, that they were vegetarians after the Pythagorean philosophy. The Brahmin priests, who are a very numerous sect, are all strict vegetarians."

"James Simpson, Esq., president of the English Vegetarian Society, stated at a public meeting held at Glasgow, June 17, 1851, that of the individuals belonging to the society, numbering between six and seven hundred adult members, two hundred and three have abstained from all kinds of flesh for upward of ten years; one hundred and fifty-three for more than twenty years; ninety-one for thirty years; twenty-nine for forty years; and eighty-five have abstained for the whole of their lives. These vegetarians belong indiscriminately to all trades and professions, and have, as a body, always a much higher and more uniform standard of health than flesh-eaters under similar general circumstances, and many of them have experienced a wonderful improvement in bodily vigor and mental vivacity.

"But we have equally interesting facts in the United States. The American Vegetarian Society, though of more recent date and fewer numbers, has in its ranks full-grown men and women who have never tasted 'flesh, fish, nor fowl.' Rev. Mr. Metcalfe, who is the corresponding secretary of the society, and also pastor of the Society of Bible Christians, who have adopted vegetarianism from religious motives, has practiced the vegetarian system for more than forty-one years, as has also his wife. In a late number of the Vegetarian Advocate he says: 'We have raised a family of five children, none of whom have ever eaten flesh. They are all married to vegetarians; they all have children, none of whom have ever used animal food; they are healthy, vigorous, and intellectual.' In this society there are now fifty-one persons who have never eaten flesh, nor tasted intoxicating drinks." Address: [New York].

17. Western Health Reform Institute (Photograph). 1868.
• ***Summary:*** See next page. Image courtesy of the Ellen G. White Estate. The Institute was established in 1866 and this photo taken in 1868.

18. Ellen G. White (standing) and James White (her husband) seated. (Photograph). 1868? Undated
• ***Summary:*** See page after this page. Image courtesy of the Ellen G. White Estate. The image is dated as "c. 1868." Ellen G. White (1827-1915) was an American religious leader and co-founder of the Seventh-day Adventist Church. 1827– Born Ellen Harmon in Gorham, Maine. 1842+. Follower of William Miller. 1846–Married James S. White, Adventist minister. 1855–Author of *Testimonies for the Church.* 1860+. Experienced numerous visions that guided formation and doctrine of Seventh-day Adventist Church.

19. The Health Reformer's progressive cook book, and kitchen guide: Comprising recipes for the preparation of hygienic food, directions for canning fruit, &c., together with advice relative to change of diet. 1870. Battle Creek, Michigan: Health-Reform Institute, Review & Herald Steam Press. 76 + [4] p. Index. 17 cm.
• ***Summary:*** Contents: Preface. Introductory: Health reform and healthful cooking, what is food?, foods which are not the best and are sometimes "positively injurious to life and health": Flesh meats, fine flour (white, bolted; Graham flour is preferred), milk, eggs, sugar, salt, butter, spices. Change of diet. Hygienic cookery: Bread (incl. biscuits, rolls, crisps, crackers, gems). Puddings, mushes, &c. Pastry (incl. pies). Fruits. Preserving fruit (drying, canning). Vegetables (incl. dried beans).

"Progressive" department ("The recipes contained in this department are intended for the benefit of those who are changing their mode of living, and progressing toward a radical system of diet." To help them make "the transition from the gross manner of living so prevalent at the present time, to a radically wholesome plan,...") Bread, cakes, &c. Puddings. Gruels and soups. Miscellaneous (incl. custard without eggs, roasted peanuts, pumpkin pie without eggs).

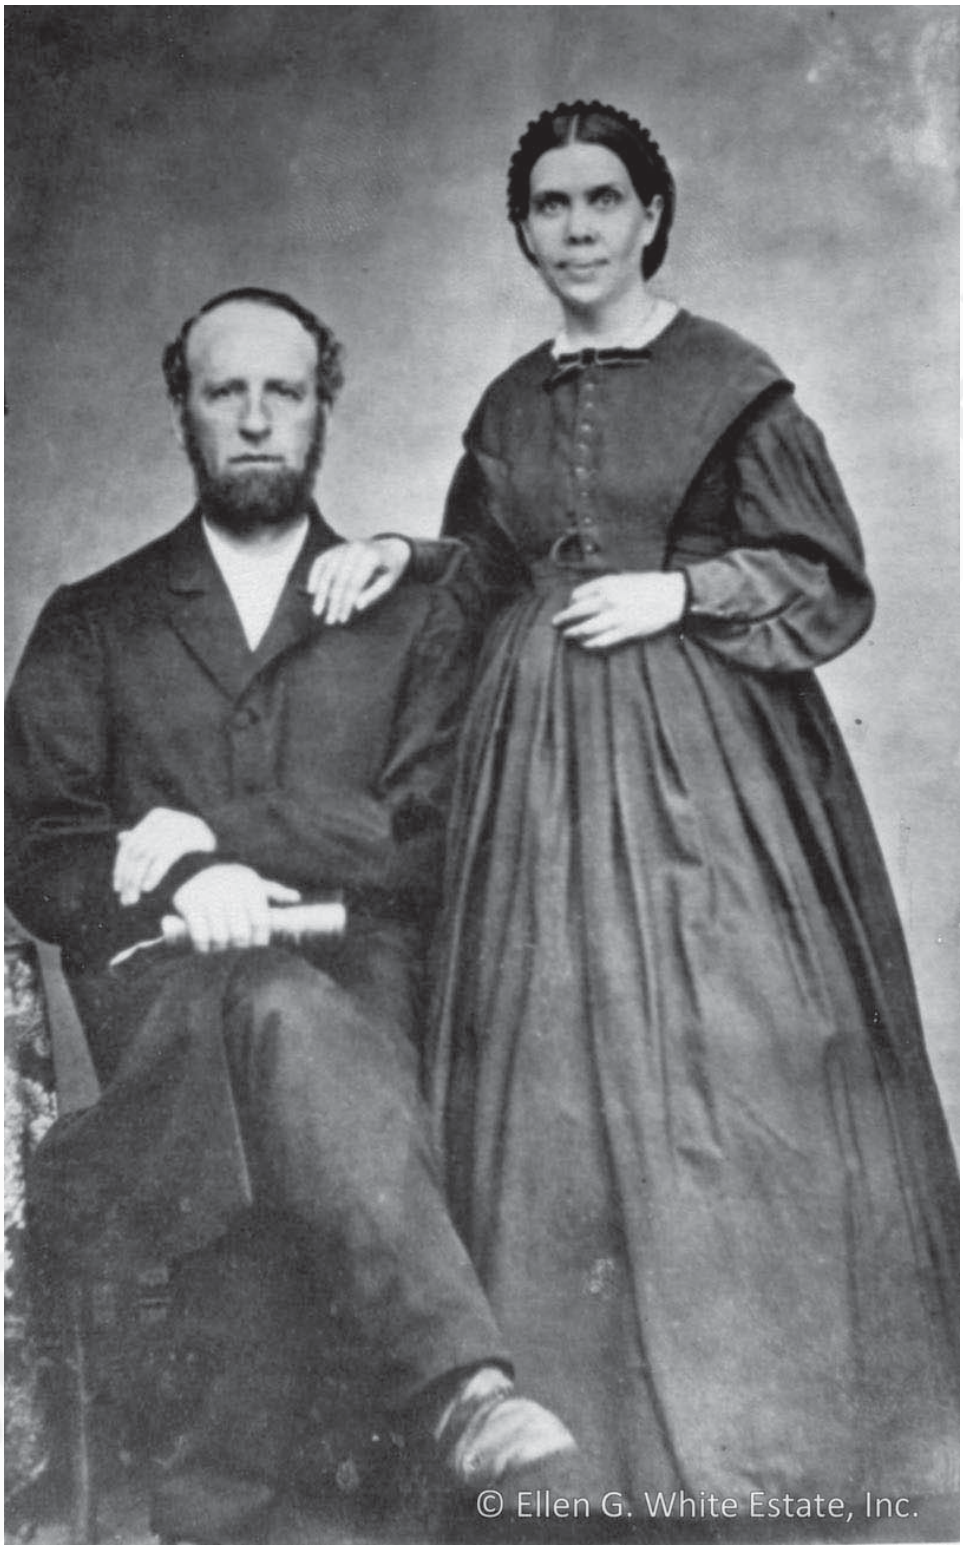
Pure soft water. Drinks for invalids (lemonade, crust coffee [made from toasted crusts of bread rather than from coffee beans], tamarind water). Bleaching, &c. (for removing stains).

After page 76 are 4 unnumbered pages of ads: (1) List of books for sale at the office of the *Health Reformer* (Battle Creek, Michigan). (2) The celebrated Fountain Syringe (with 5 attachments incl. nasal douche, for the rectum [enema], the vaginal). (3) Works on hydropathy, or water cure: Four books and a special list, published by E.R. Wells, 389 Broadway, New York City. (4) Kedzie reliable improved water filter.

On the inside front cover: "*The Health Reformer.* This is the title of a health journal, 24 pp., magazine form, issued monthly at the Health Reform Institute, Battle Creek, Michigan. It is devoted to an exposition of the laws of our being, and the right application of those laws in the treatment of disease." Its also discusses the "temperance question." "R.T. Trall, M.D., founder and principal of the New York Hygeio-Therapeutic College, and writer and lecturer on health subjects, has a special department in each number, which is itself worth the subscription price. Everybody should have it. Price only one dollar per year, in advance. Specimen copies free."



On the inside rear cover: "Books and periodicals issued by the Seventh-day Adventist Publishing Association, Battle Creek, Michigan. Includes the *Advent Review and Sabbath Herald* (weekly), *The Youth's Instructor* (semi-monthly), and about 30 books, pamphlets, and tracts, with the price and postage for each. On the rear cover is detailed information about the Health-Reform Institute (opened 5 Sept. 1866) in Battle Creek, Michigan. Nature is the only healer; hence, no drugs are administered.

Note: This is the earliest known Seventh-day Adventist cook book. Soy is not mentioned. Address: Battle Creek, Michigan.

20. Bates, Joseph. 1871. Experience in health reform. *Health Reformer* (*The*) (*Battle Creek, Michigan*) 6(1):20-21. July.
• ***Summary:*** "In early life, before finishing my second European voyage, I was impressed into the British naval service. and stationed on board a British war ship, associated with about seven hundred men, on a daily stated allowance of hard bread, salt provisions, and one pint of inferior wine. Thus I was held for about two years and a half, until son after the declaration of war by the United States against England, the American citizens on board our ship petitioned, and became prisoners of war, and were placed on two-thirds of what had been allowed us before, and no wine. In this state I continued some two years and a half... Five years experience in these two schools of vice and debasement of moral character, seriously convinced me of the necessity of reform.

"What seemed most important of all at that time was the disuse of spirituous liquors. A few weeks after my return home from my imprisonment, in the summer of 1815, I was offered, and accepted, the office of second mate on board a new ship fitting for a European voyage. This was some twelve years before temperance societies were organized." He soon yielded to the temptation of "a social glass" but

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

finally confined himself "to one glass only in twenty-four hours. Wine, beer, and cider, were not considered spirituous liquors. These I used but seldom.

In the fall of 1821, he took a vow saying "I will never to drink another glass of spirituous liquors while I live. And I am not aware that I ever have." "In 1822 I fully resolved never to drink wine. By watchfulness and perseverance I broke up my habit of using profane language, and before I left the Pacific Ocean, I had forever discarded the use of that filthy weed, tobacco. These victories strengthened and encouraged me in the work of reform.

"In the summer of 1824, on leaving the capes of Virginia for another voyage, I resolved from thenceforth never to drink ale, porter, beer, cider, nor any liquor that would intoxicate. I now felt strengthened, and fully relieved from this burden to reform, which had been balancing in my mind for upwards of ten years."

"Turning my attention more to reading the Bible than I had done, I was led to see what a feeble worm of the dust I was–an unpardoned sinner under condemnation. I began to plead with God for pardoning mercy, for many days. I did then believe, and still believe, that he freely forgave me, for his Son's sake. My prospect then for this, and the life which is to come, was most cheering. I then convented with the Lord that I would serve him evermore.

"Some thirty years ago, on becoming satisfied of the poisonous nature of both tea and coffee, I resolved never more to use them.

Reform in food: In February, 1843, I resolved to eat no more meat. In a few months after I ceased using butter, grease, cheese, pies, and rich cakes. Since the introduction several years ago by my brethren of the Seventh-day Adventists, I have been endeavoring to conform in my eating more strictly to the hygienic practice, adopted by the Health Institute in Battle Creek, and confine myself to two meals only in twenty-four hours. Robinson (1965, p. 59) states that Joseph Bates was the first Adventist to become a vegetarian. But note that he seems to have done it more as personal penance than for reasons of health or concern for the lives of animals. "Regarding the minor points of reform, he exerted a silent influence, but did not urge his practices upon others. Sometimes his friends would ask him why he did not partake of flesh meat, or grease, or highly spiced foods; and he would quietly reply, 'I have eaten my share of them.' He did not make prominent in public or in private his views of proper diet unless asked about them." Address: Monterey, Michigan.

21. Heald, Mary H. 1872. Diet.–No. 9. *Health Reformer* (*The*) (*Battle Creek, Michigan*) 7(10):291. Oct.
• ***Summary:*** "An almost universal error in this country is the use of hot drinks with food; they are objectionable because they lessen the tone of the mucous surface of the mouth, throat, and stomach. Their introduction while hot raises the temperature of the parts beyond the normal degree; and by the time the natural temperature is restored, the parts are relaxed and weakened. The heat has also a directly injurious effect upon the teeth, particularly if followed by the introduction of cold liquid or solid matter. Besides these objections, the substances used for heated beverages–tea, coffee, and chocolate–are injurious.

"Tea is a well-known stimulant. Many who are weary or half sick use it, and feel refreshed in a few minutes' time, and so come to labor under the delusion that its use is beneficial, whereas, the relief gained is at the expense of the system. Under its influence, the nerves are debilitated and diseased, and the body grows into an unnatural, morbid dependence upon it."

"Coffee is a decided narcotic, and is recognized by scores of our most eminent physiologists as productive of many nervous disorders. If one wishes to measure the injury it does him, let him discontinue its use for some time."

"Chocolate should not be used on account of its oily character, and because of the sugar, cinnamon, etc., used in its preparation. Moreover, it is not often found pure. Lard or some other pernicious, oily matter, is often added in preparing it for the market. All can therefore see strong objections to its use. The roasted kernel of the nut of the cacao, or chocolate tree, which is the basis of the compound, would not probably be objectionable to a healthy person with fine digestive power; but warm drinks are always hurtful; they lessen the tone and vigor of the stomach, besides containing the unhealthy principles before-named."

22. John Harvey Kellogg officially replaces James White as editor of *Health Reformer* magazine. In January 1879 the *Health Reformer* is renamed *Good Health.* (Early event). 1874. July.
• ***Summary:*** Richard W; Schwarz, in his excellent biography *John Harvey Kellogg, M.D.*, states (p. 37, 91-92) In about 1873 James White, who was then the magazine's editor, pressed the 21-year-old John Harvey Kellogg into service as his chief editorial assistant. Since church responsibilities overburdened White, in July 1874 Kellogg officially became editor of the *Health Reformer,* a position he held until his death 61 years later. Kellogg began writing columns for this periodical in which he set forth the basic principles of healthful living that he would promote all his life. His system, which he eventually called "biologic living," was based on preventive medicine and a simple vegetarian diet; it demanded total abstinence from alcohol, tobacco, tea, coffee, and chocolate. In January 1879 the *Health Reformer* was renamed *Good Health.* Dr. Kellogg entrusted much of the editing work for *Good Health* to his wife, Ella Eaton Kellogg

• ***Summary:*** The typewritten inventory and finding aid, which describes John Harvey Kellogg's personal papers in the Bentley Historical Library at the University of Michigan at Ann Arbor, is divided as follows: Biography of J.H. Kellogg (p. i-iv). Summary contents list (p. v). Box 1–Autobiographical and biographical notes. Awards, citations, etc. (and oversize box 21) Correspondence 1875-June 1935. Box 2–Correspondence, July 1935-1940. Box 3. Correspondence 1941-1948, and undated. Lectures, speeches, and related, 1875-1901 (22 folders) (see attached index). Box 4–Lectures, speeches, and related, 1901-07 (23 folders). Box 5–Lectures, speeches, and related, 1908-11 (17 folders). Box 6–Lectures, speeches, and related, 1912-17 (24 folders). Box 7–Lectures, speeches, and related, 1918-43 (15 folders). Boxes 7-10–Lectures, speeches, notes, and articles [undated by Topic], ca. 1890-ca. 1943. Boxes 10-11–Notes and memoranda, 1876-1943. Boxes 11-12–Subject files (primarily medical missionary materials). Box 13–Clippings, dated and by topic. Boxes 13-14 (and oversize box 21)–Scrapbooks, dated and arranged by subject, 1878-1944. Box 14–Guestbooks and registers. Box 15–Miscellaneous bound materials. Ledgers/daybooks, 1899-1923. Index Rerum, ca. 1888-1896. Boxes 16-17–Notebooks (as student and physician), 1869-1927. Box 17–Printed works by JHK and various Sanitarium physicians, ca. 1890-1940. Bound manuscripts of JHK, ca. 1890-ca, 1925. Box 18–Works by others (manuscript). Works by others (published), ca. ca. 1832-ca. 1940. Box 19 and oversize box 20–Photographs.

The Kellogg collection came to the Michigan Historical Collections in two primary accessions, one in 1962 and another in 1972. The collection was a gift of Gertrude W. Goodwin, secretary of the Race Betterment Foundation of Battle Creek, Michigan. A microfilm copy of the collection is available (see attached listing by reel number, p. 5-8).

"John Harvey Kellogg was also a skilled surgeon, an editor, and scientist who saw himself as primarily an educator determined to focus public attention on preventive medicine as the means to maintain good health. The main thrust of Kellogg's good health message was that vegetarian diet, regular exercise, fresh air, and sunshine are the keys to a long and vigorous life. Kellogg was a testament to the efficacy of his principles, living to age ninety-one and working diligently until succumbing to pneumonia on December 14, 1943."

"Kellogg, an 1875 graduate of Bellevue Hospital Medical College, brought a solid training in orthodox medicine to his health reform efforts. In this, he differed from most earlier health reformers, whose systems often lacked grounding in science. Kellogg made repeated trips to Europe to keep abreast of developments in medicine, surgery, and physiology in order to buttress the scientific foundations which supported his health message." Address: Michigan Historical Collections, Bentley Historical Library, Univ. of Michigan, Ann Arbor, Michigan 48109-2113. Phone: 313-764-3482.

25. The hygienic cook book: Comprising, in addition to many valuable recipes for the preparation of healthful food, brief remarks upon the nature of food, how to make the change of diet, time for meals, canning fruit, &c. 1874. Battle Creek, Michigan: Office of the Health Reformer. 96 p. Index. 18 cm.
• ***Summary:*** A vegetarian cook book. Contents: Preface. Introductory: Food and diet (What is food?, man's natural diet), Perverted appetites (animal food, eggs, milk, cheese, butter, fine flour {bolted}, spices, salt, soda and other minerals, sugar {incl. molasses, maple sugar, honey, etc.}, vinegar, pickles, and preserves, tea and coffee, wine, time for meals {two a day is best}, change of diet). Cookery: The art of cooking. Bread, loaf bread (Graham bread, etc.), toast, fruit-bread and cake, puddings, pastry (incl. pies, dumplings, tarts), cooked fruit and sauces, vegetables (incl. dried beans), soups, stews, and gruels, preserving fruits and vegetables (canning, drying). Beverages: Filtered water, summer drinks.

On the inside rear cover is a full page advertisement for the Health Reform Institute, Battle Creek, Michigan. "This Institution has a competent corps of Physicians, both male and female, and is under the general supervision of a Board of Directors... At this Institute diseases are treated on Hygienic Principles. Instruction, both Theoretical and Practical, is given to Patients and Boarders on the great subject of How to Live so as to Preserve Health, and also

© Copyright Soyinfo Center 2014

respecting the safe and sure means of Recovery from Disease. In the treatment of the sick, No Drugs will be given. Those means only will be employed which Nature can use in her healing work; such as Proper Food, Water, Air, Light, Exercise, Cheerfulness, Rest, and Sleep. Grains, vegetables and fruits constitute the staple articles of diet."

On the rear cover is a "Catalogue of books" (and pamphlets) published at the office of the *Health Reformer,* Battle Creek, Michigan. Thirteen titles and prices are listed. One pamphlet is titled "Proper diet for man." Three are written by R.T. Trall, M.D. and one (*Science of Human Life*) by Sylvester Graham.

Note: This is the second earliest known Seventh-day Adventist cookbook. Soy is not mentioned. Address: Battle Creek, Michigan.

26. John Harvey Kellogg receives his M.D. degree from Bellevue Medical School in New York at age 23. He has been a vegetarian for 9-10 years (Early event). 1875. Feb. 25.
• ***Summary:*** Richard W; Schwarz, in his excellent biography *John Harvey Kellogg, M.D.,* states (p. 30-33). "As evidence of their faith in him, the Whites [James White and his wife, Ellen G. White] lent John a thousand dollars to meet expenses. Kellogg soon made a decision. He would go to Bellevue Hospital Medical School in New York, which that year had graduated the largest medical class of any medical college in America." Kellogg had to spend only one year at Bellevue to qualify for his M.D. degree. He "needed two full courses of medical lectures, but the year spent at [the University of Michigan Medical School] Ann Arbor counted for one of them." He received his degree on the date given above at Bellevue's 14th annual commencement, held in the New York Academy of Music.

During his year at Bellevue, John apparently ate a vegetarian diet. While it is not clear exactly when Kellogg decided to become a vegetarian, he was probably a vegetarian by the date of his graduation, and perhaps as early as 1873.

As Schwartz says further (p. 37): "While still a medical student at Bellevue, John Harvey Kellogg outlined in the *Health Reformer* the basic principles of healthful living that he would promote all his life... It had as its goal to help people stay well, rather than to recover from illness. Kellogg started with the premise that obedience to the natural laws of health was a moral duty and was essential to the maintenance of mental and moral as well as physical health. Biologic living demanded total abstinence from alcohol, tea, coffee, chocolate, and tobacco, since each contained some factor detrimental to the body. It stressed a simple vegetarian diet as most 'natural' for man."

"No food came under more sustained attack by Dr. Kellogg than meat of any kind."

Page 41: "Milk and eggs were two other foods which Kellogg long regarded with suspicion. For many years he excluded milk from his personal diet. Gradually he altered his views, however, and in 1917 he told the National Milk Congress that milk was 'the choicest product of nature's laboratory'; no other food product could compare with it. For years he regarded clean raw milk from healthy cows as superior to pasteurized because he believed the process destroyed essential natural qualities. No dairy product stirred Kellogg's enthusiasm more than yogurt. Convinced that it largely explained the longer life expectancy of the Bulgarian people, the doctor was one of the first persons in the United States to promote its use.

"During his entire lifetime, Kellogg remained unenthusiastic about eggs as food."

Note: Dr. Kellogg may have eaten a "vegan" diet (although that word was not coined until 1944) from about 1874 until around 1915.

27. *Health Reformer* (*The*) (*Battle Creek, Michigan*). 1875. Tea and coffee: Number one. 10(3):92-95. March.
• ***Summary:*** "If tea and coffee are medicines, and hence poisons, should we not be led to mistrust that they are anything but suitable articles for daily consumption? But to still further confirm the position just suggested, we will give the following, which is a summary of the results of a series of experiments conducted by Dr. Bennet in the Physiological Laboratory of the University of Edinburg, and reported in the *Edinburg Medical Journal,* for October, 1873, more than one hundred experiments being performed on various animals:-

"1. The effects of tea, coffee, cocoa, and chocolate, are due to the presence in them of *theine* or *caffeine* in tea and coffee, and of *theobromine* in cocoa and chocolate.

"2. They are all powerful *poisons.*

"3. They are identical in physiological action.

"4. In small doses they produce, first, Cerebral excitement; secondly, Loss of sensibility.

"5. In large doses, they produce, a. Cerebral excitement; b. Complete paralysis of sensibility; c. Tetanic spasms and convulsions; d. Death.

"6. They first increase, then impede, and finally stop, respiration.

"7. They first increase, and then diminish, the heart's action."

28. Ellen G. White (Engraving). 1875? Undated
• ***Summary:*** See next page. Image courtesy of the Ellen G. White Estate. The image is undated. Letter (e-mail) from Tim Poirer, Vice-Director, Ellen G. White Estate, Inc., Silver Spring, Maryland 20905. 2012. Nov. 7. In reply for a request for more details, Tim replies: Yes, I can give you some additional details. It is an engraving that was made c. 1875. The engraving was printed in the *American Biographical History of Eminent and Self-Made Men,* Michigan Volume, published in Cincinnati in 1878 by the Western Biographical Publ. Co. The engraver may have been M.A. Samuels,

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

but we cannot be sure. He made the engraving from a photograph of Ellen G. White, owned by the White Estate, dated 1875 on the back, and taken by Dunham & Lathrop's, Broadway, between 13 & 14th, Oakland, Cal. A photo of the engraving has printed on the back: "M.A. Samuels, Palace of Art, Corner 10th and Clay Streets, Oakland, Calif."

29. *Health Reformer* (*The*) (*Battle Creek, Michigan*). 1876. Vegetarian sentimentalism. 11(5):148. May.
• ***Summary:*** "Some time since a guest in one of our city hotels chanced to encounter a copy of the *Health Reformer,* which lay with other periodicals upon the parlor table. In glancing it through, his eye met a paragraph in which it was argued against the use of flesh as food in that it involved the infliction of unnecessary pain upon animals. It was suggested that the idea of butchering and then devouring the patient ox was a repulsive one, and that the act would have a tendency to harden the feelings, and make an individual obtuse to the sufferings of his fellows. Our carnivorous friend could see nothing in this argument but a ludicrous play of sentimentalism, and entertained his fellow guests at the breakfast table with an account of his discovery of a sentimental fellow who 'thought it wrong to slay the meek-eyed ox.'"

Horace Walpole might have been in sympathy with him.

30. John Harvey Kellogg, M.D., officially takes over the leadership of the Western Health Reform Institute in Battle Creek, Michigan (Early event). 1876. Oct. 1
• ***Summary:*** Richard W; Schwarz, in his excellent biography *John Harvey Kellogg, M.D.*, states (p. 59-63). The Institute began in 1866 "in response to the urgings of Ellen White. As the true pattern of healthful living opened to Mrs. White, she saw that Adventists should establish an institution which could care for the sick in harmony with the newly accepted principles." Much of the initial funding came from John Preston Kellogg, John Harvey's father. By 1868 the Institute had essentially become a nonprofit organization. But it fell on hard times, and "the directors seriously considered closing the Institute and selling its property to pay its debts. At this critical point, in the fall of 1976, leading church members persuaded John Kellogg, then only twenty-four years of age, to take over as physician-in-chief."

"When Dr. Kellogg officially took over the leadership of the institute on October 1, 1876, it contained only twenty patients. Six left with the former chief physician, Dr. William Russell, who preceded to open a rival establishment in Ann Arbor." But under Dr. Kellogg the fledgling Institute thrived. "Within a year after he had assumed charge... John Kellogg decided that a change of name would improve the institution's public image. Consequently, apparently acting entirely on his own initiative, he renamed it the Battle Creek Sanitarium. The doctor explained that the new name which he had coined, a variant of 'sanitorium,' would come to mean a 'a place where people learn to stay well. He consistently maintained that the sanitarium's teaching function distinguished it from the average medical institution." Within 25 years it would become one of the finest and best known hospitals in the United States.

31. *Health Reformer* (*The*) (*Battle Creek, Michigan*). 1876. Vegetarian diet a cure for apoplexy. 11(11):342. Nov. [1 ref]

32. *Health Reformer* (*The*) (*Battle Creek, Michigan*). 1876. The diet cure for intemperance. 11(11):339. Nov. [1 ref]
• ***Summary:*** "A few months ago, reference was made to the successful efforts of Mr. Napier, of England, in curing intemperance by the aid of a vegetarian diet. The following is a portion of an address recently delivered by the same gentleman at a public meeting in London; we quote from the *Dietetic Reformer*: -" This is a long extract from the following article: Groom Napier, C.E. 1876. "The diet cure for intemperance." *Dietetic Reformer and Vegetarian Messenger* (England). Aug. p. 128-29.

33. *Good Health* (*Battle Creek, Michigan*). 1879-1953. Serial/periodical. Battle Creek, Michigan. John Harvey Kellogg, editor and publisher.
• ***Summary:*** Continues: Health Reformer: 1(1867)-13(1878). Dr. Kellogg, a Seventh-day Adventist and head of the Battle Creek Sanitarium, was one of America's most prominent and respected doctors. This was his most important serial publication. On the title page of the Jan. 1879 edition is written: "Pure air, water, food. Health is wealth. A sound mind in a sound body. Proper clothing, ample exercise, adequate rest. A journal of hygiene devoted to physical, mental and moral culture. Cleanliness next to godliness. Temperance in all things." The magazine at this time is strongly opposes to the use of alcoholic beverages and tobacco. It supports vegetarianism, temperance, bread made from unbolted flour, and a healthful lifestyle. In 1879 there are many more articles about the dangers of alcohol and tobacco than about the benefits of a vegetarian diet, but by 1904 vegetarian articles predominated. In 1904 pneumonia was the most deadly disease in America. By the 1900s the cover of many issues stated that *Good Health* was established in 1866.

Richard Schwarz in his excellent book *John Harvey Kellogg, M.D.* writes of *Good Health:* By 1916 Dr. Kellogg estimated that more than 5 million copies of the magazine had been printed (p. 87). "Several years after he assumed the editorship of the *Health Reformer,* Dr. Kellogg decided that it needed a new name if the magazine and its teachings were to gain wider acceptance. He reasoned that public reaction to the word *reform* had changed. No longer did it call up visions of progress, advancement, and the substitution of truth for error. Rather, Kellogg felt, the average person associated reform with revolution, controversy, discord, and radicalism.

© Copyright Soyinfo Center 2014

A more positive name was essential. He decided to rechristen the periodical *Good Health* and make it into a journal which would tell its readers how to find and maintain their health. A year after the name change [it changed in Jan. 1879], the Battle Creek Sanitarium officially acquired *Good Health* from the Seventh-day Adventist Publishing Association. Thus what had begun as a Seventh-day Adventist publication remained under Dr. Kellogg's control even after his separation from the church. Within a few months after he began his program of rejuvenating *Good Health*, he had succeeded in increasing its circulation to 20,000 copies a month... apparently the subscription list never grew much beyond 25,000, and it probably stayed considerably below that number most of the time" (p. 90-92). *Good Health* was always plagued by chronic deficits. Eventually the American Medical Missionary Board contributed more than $100,000 to keep the Kellogg journal alive (p. 220). After Dr. Kellogg's death, the Race Betterment Foundation published *Good Health.*

Excellent sets of this periodical are owned by both the National Library of Medicine and the Loma Linda Univ. Library Heritage Room (Loma Linda, California). The magazine ceased publication in Aug. 1953.

Note: This is the earliest periodical seen (May 2006) that is part of the health foods movement or industry in the United States (after about 1890).

34. *Good Health* (*Battle Creek, Michigan*). 1879. Vegetarianism. 14(4):119. April.

35. *Good Health* (*Battle Creek, Michigan*). 1879. A vegetable diet. 14(11):342. Nov.
• ***Summary:*** "At a recent meeting of the London Medical Society, Sir Joseph Fayrer said that he had seen in the northwest provinces of India, whose inhabitants are pure vegetarians,–eating not even butter, eggs, or milk,–some of the finest specimens of the human race, as regards strength, endurance, and physical development.

"'Their food consists chiefly of peas, beans, and the like–articles of diet specially rich in nitrogen, which is one of the chief elements of nutrition.'"

Note: This is the earliest English-language document seen (June 2005) that uses the term "pure vegetarians" (or "pure vegetarian") to refer to people who eat a vegan diet, free of milk, dairy products, and eggs.

36. *Good Health* (*Battle Creek, Michigan*). 1881. Bean-flour bread. 16(3):92. March.
• ***Summary:*** Soy is not mentioned.

37. *Good Health* (*Battle Creek, Michigan*). 1881. A vegetable diet for children. 16(6):184. June.

38. *Good Health* (*Battle Creek, Michigan*). 1881. Publisher's page: The Sanitarium foods are meeting with much favor everywhere... 16(7):224. July.
• ***Summary:*** "... Those who have employed the various kinds of invalid food, are highly pleased with them. The praise which they have received from those who have given them a fair trial, is unstinted. We have no hesitation in recommending them to be exactly what they claim to be, which cannot be said of the various foods prepared by some firms, which make a business of supplying so-called 'health foods.' An examination of the article sold as gluten by a firm in New York, was recently made by an eminent Boston gentleman, with the result of showing that it was composed almost wholly of starch, and actually contains less gluten than some brands of wheat flour. The Sanitarium foods were first prepared for use at the sanitarium, in the treatment of the sick. The present great demand for them, has been occasioned by the success which has attended their use as invalid foods at the Sanitarium. The manufacturers guarantee their goods to be exactly as represented, and to give satisfaction." Address: Battle Creek, Michigan.

39. *Good Health* (*Battle Creek, Michigan*). 1881. Publisher's page: Invalids who have tried the "Sanitarium Foods" find they are indispensible... everywhere... 16(8):256. Aug.
• ***Summary:*** "... We have been sending out a large number of packages, and notice that when a sample package goes away we receive in a short time an order for a large supply. Our food products are unexcelled in quality, being prepared with the greatest nicety from a formula obtained by many pains-taking experiments. The Wheatena, Maizena, Avena, and Granula, are foods which will be universally used when their qualities have become sufficiently well known to give them a fair introduction. We would also call special attention to our 'Infant Food' as an article which is especially opportune at this season of the year."

Note: This is the earliest document seen (Sept. 2012) in the Seventh-day Adventist archives (www.adventistarchives.org) that contains the word "Granula." Address: Battle Creek, Michigan.

40. *Good Health* (*Battle Creek, Michigan*). 1881. Publisher's page: The "Sanitarium Foods" are meeting with great sales... 16(8):256. Aug.
• ***Summary:*** "... The food department is a busy place now-a-days. To a visitor the many novel processes by which all kinds of grain products are converted into palatable, wholesome foods, and when necessary into dietetic remedies for disease, are an interesting study. The 'Infant Food,' prepared from the formula devised by Dr. Kellogg, is one of the most serviceable of all the numerous excellent preparations. Most of the various 'foods' for infants sold at the stores are really of little or no value, consisting as they do almost wholly of sugar or dextrine, a substance almost identical with sugar. These patent foods will not sustain life

© Copyright Soyinfo Center 2014

if eaten alone."

"Persons residing in Canada can obtain the Sanitarium Foods of Geo. Detweiler, Berlin, Ontario." Address: Battle Creek, Michigan.

40a. Portrait of Dr. John Harvey Kellogg (Illustration). 1881.
• ***Summary:*** This portrait, drawn when Dr. Kellogg was about age 29, is from the book *Plain Facts for Old and Young.* He was born in 1852. We copied it from the Wikipedia page for John Harvey Kellogg.

41. Sanitarium, Food Department. 1882. Sanitarium Foods (Ad). *Good Health* (*Battle Creek, Michigan*) 17(12):Unpaginated at end of volume.
• ***Summary:*** Describes products made by this company, directed by John Harvey Kellogg, including: Graham Crackers (No. 1 [with the best with granulated sugar plus butter], and No. 2 [unsweetened]). Plain Graham or dyspeptic crackers. Fruit crackers. Gluten wafers. Wheatena. Maizena [made from corn/maize]. Avena [made from oats]. Granola [combines all the qualities of Avena. "It is greatly superior to 'steam-cooked' preparations which are offered at a much higher price..."]. Beef and bread combination biscuit (Based on a "recent remarkable discovery by an eminent German professor..." Contains easily digested lean beef). Beef and bread granola. Diabetic food (probably made of wheat gluten). Gluten food (A "perfect substitute for animal food in cases in which the latter is thought to be indicated"). Infant's food.

Concerning Gluten wafers: "A person who suffers from acid or flatulent dyspepsia, or who is in a condition of nervous exhaustion, needing a restoration of nerve power as speedily as possible, will accept this article of food as a real godsend. Those who are obliged to live on a meat diet on account of their inability to digest vegetable food will find in these wafers a grateful substitute. We say this after using them in hundreds of cases successfully."

Products sell for 12 to 25 cents/pound. Note 1. Dr. Kellogg sold non-vegetarian products at this time. Note 2. This is the earliest original publication seen (Dec. 2013) for wheat gluten in the United States and the earliest document seen that mentions Seventh-day Adventist work with wheat gluten.

Note 3. This is the earliest document seen (Dec. 2013) that contains the word "Sanitarium" (spelled in that way), or mentions the Sanitarium (Battle Creek) as a maker and seller of foods. A related word, "Sanatorium," first used in 1839, refers to a "an establishment that provides therapy combined with a regimen (as of diet and exercise) for treatment or rehabilitation." This word was often used in connection with treatment of tuberculosis.

Note 4. This is the earliest document seen (June 2002) concerning vegetarian foods and diabetes.

Note 5. This is the earliest document seen (Aug. 2010) that mentions "Granola." Address: Battle Creek, Michigan.

42. *Good Health* (*Battle Creek, Michigan*). 1883. A race of vegetarians. 18(3):89. March.
• ***Summary:*** The Podhalians live high in the Carpathian Mountains. They use strong drink, consume no animal food, and are fond of music and dancing. They are in excellent physical condition, with fine intellectual development. "From the above it would not seem that there is much ground for the belief that vegetarianism produces a tendency to degeneration."

43. *Good Health* (*Battle Creek, Michigan*). 1883. Food of the Japanese. 18(4):103. April.
• ***Summary:*** "In noticing a recent report sent to his Government by Thomas V. Van Buren, U.S. Consul-General to Japan, the *Scientific American* remarks as follows:

"'Among the many reports returned to the State Department at Washington [DC] by our consular agents abroad, this report on the food of the Japanese people is of exceptional interest."

© Copyright Soyinfo Center 2014

"More than forty varieties of peas and beans are cultivated. The richly nutritive soy bean properly supplements the rice, which plays so large a part in the national diet."

Note: This is the earliest document seen (Dec. 2013) in which Dr. John Harvey Kellogg [or any other Seventh-day Adventist] mentions the soy bean.

44. *Good Health* (*Battle Creek, Michigan*). 1883. Vegetarianism and gout. 18(7):222. July.
• ***Summary:*** "An old English doctor reports that he has never been successful in the treatment of gout, except in cases in which he required total abstinence from animal food as well as from wine."

45. *Good Health* (*Battle Creek, Michigan*). 1884. The cooking school: Granola crust. 19(8):253. Aug.
• ***Summary:*** "For pies requiring an under crust only, the prepared granola manufactured by the Sanitarium Food Co. makes a superior crust. To prepare, moisten with thin sweet cream or rich milk,–one-half cup of cream for every two-thirds cup of granola is about the right proportion, and will make sufficient crust for one pie. Flour the board quickly, and lift the moistened granola on to it, spreading it as much as possible with the hands. Dredge flour over the top, and roll out gently, without turning, to the required size."

Note: This is the earliest document seen (Sept. 2012) in the Seventh-day Adventist archives (www.adventistarchives.org) that contains the word "granola." Address: Battle Creek, Michigan.

46. Kellogg, E.E. 1884. The cooking school: Granola crust. *Good Health* (*Battle Creek, Michigan*) 19(8):253. Aug.
• ***Summary:*** "For pies requiring an under crust only, the prepared Granola manufactured by the Sanitarium Food Co. makes a superior crust. To prepare, moisten with thin sweet cream or rich milk,–one-half cup of cream for every two thirds cup of granola is about the right proportion, and will make sufficient crust for one pie. Flour the board thickly, and lift the moistened granola on to it, spreading it as much as possible with the hands."

47. *Good Health* (*Battle Creek, Michigan*). 1885. Caramel coffee (Letter to the editor). 20(2):59. Feb.
• ***Summary:*** "L.B.P. inquires how to make caramel coffee.

"Ans.–This preparation, sometimes known as cereal coffee, is made by roasting in the oven a mixture of molasses and [wheat] bran, or coarse middlings [of wheat]. Cereal coffee properly consists of coarse wheat or barley, or a mixture of the two. The brown color is due to the conversion of starch or sugar into caramel. It is comparatively harmless, but we do not approve of the large use of fluids of any kind at meals."

Note: This is the earliest document seen (Nov. 2012) that mentions "caramel coffee" (regardless of hyphenation or capitalization) an early caffeine-free alternative to coffee.

48. *Good Health* (*Battle Creek, Michigan*). 1885. A vegetarian cat. 20(3):85. March.
• ***Summary:*** The writer's cat has been a vegetarian for 16 years (which is equal to 150 human years).

49. White, Ellen G. 1885. Diary entry of 28 August 1885 [Concerning her stay in London, England].
• ***Summary:*** "We met Elder Jones in the Mission and became acquainted with him. He is a Seventh-day Baptist preacher... We were obliged to go to our restaurant dinner. In this place a vegetarian diet alone can be obtained. We enjoyed our dinner, then took the train for Southampton..."

Note: This is the earliest use of the word "vegetarian" seen in the collected papers of Ellen G. White, co-founder of the Seventh-day Adventist church. The full text of all her letters and diary entries has been computerized and this fact is the result of a search conducted by the Ellen G. White Estate. This letter is cited as follows: Ms 16a, 1885

NP

July 1885

Diary (July 7–September 24). The original is in the Ellen G. White Papers, Ellen G. White Estate, Inc., General Conference of Seventh-day Adventists, 12501 Old Columbia Pike, Silver Spring, Maryland 20904-6600.

The second earliest use of the word "vegetarian" by E.G. White appeared a few days later in her diary entry dated 1 Sept. 1885. "It is cloudy, but we have a fire, which is a blessing. Our time is occupied in writing. A gentleman called–an Englishman, a vegetarian. He talks well and seems to be honest. He is an intelligent man. We had a profitable conversation. He is keeping the Sabbath."

The third earliest use of the word "vegetarian" by E.G. White appeared about a year later in an undated dairy entry from September 1888. She is again in London. "We met William C. White in London about 12 M. Walked out to a restaurant, vegetarian, and obtained wholesome refreshment."

Talk with Tim Poirier of the Ellen G. White Estate. 1997. May 5. The terms "vegetarian" and "vegetarians" appear 44 times in Ellen White's writings, mostly during the 1890s. She never used the term "vegetarianism." Address: London.

50. *Life and Health: The National Health Magazine.* 1885-1985. Serial/periodical. Washington, DC: Review and Herald Publishing Association. Published by the Seventh-day Adventist Church. *
• ***Summary:*** Succeeded by *Vibrant Life.* Vol. 30, no. 5 was May 1915. Address: USA.

51. Kellogg, Ella Eaton. 1885. The cooking school. Battle

© Copyright Soyinfo Center 2014

Creek, Michigan: Health Pub. Company. 60 + [4] p. 18 cm.
• ***Summary:*** This is the 3rd earliest known Seventh-day Adventist cookbook. Cover title: "Part of a large work on food and cookery... now nearly completed." In it, the author's name is written "Mrs. E.E. Kellogg."

Contents: Introduction. Soups. Bread. Yeast and fermentation. Unfermented bread [made without soda, saleratus or baking-powder]. Grains and mushes. Leguminous seeds (incl. dried peas, white beans, Lima beans, lentils). Vegetables. Simple puddings. Pies and cake (incl. Granola Crust, using granola made by the Sanitarium Food Co. {p. 46}). Fruit for desserts and sauces. Breakfast dishes ("The habit of using fried potatoes, fried mushes, salt fish, salted meats, and other similar foods of almost impossible digestibility for breakfast dishes, is a most pernicious one." "The breakfast should be as simple as possible,..." "Fruit... should always have a place at the breakfast table." "The grains form one of the most healthful, appropriate, and convenient breakfast dishes").

This vegetarian cookbook often calls for the use of milk or cream in recipes. It describes how to prepare home-made yeast and make yeasted bread.

Ella Eaton Kellogg lived 1853-1920. Address: Battle Creek, Michigan.

52. *Good Health* (*Battle Creek, Michigan*). 1887. A vegetarian nation. 22(11):339. Nov.
• ***Summary:*** The Chinese are vegetarians. "Their country is so densely populated with human beings, that the land must be closely cultivated to the best advantage. As every one knows, flesh-eating is a most wasteful practice, as the same amount of land will support thirty or forty times as many persons taking the products of the earth at first hand, as when taking corn and other vegetable products at second hand, in the form of flesh."

53. Parloa, Maria. 1887. Miss Parloa's kitchen companion: A guide for all who would be good housekeepers. Boston, Massachusetts: Published by Estes and Lauriat, for The Clover Publishing Co. 966 + [10] p. Illust. 22 cm. 19th ed.
• ***Summary:*** The section on "Relishes" states (p. 91): "Soy is a sauce made in China and Japan, it is a thick reddish-brown liquid, and is used in many fish sauces."

In the section on "Cereals." the subsection titled "Graham" (p. 93-94) says: "Graham is one of the most uncertain of the bread materials with which we have to deal. A large part of it is made by mixing a poor quality of flour with coarse bran. In buying graham, select that containing a rather fine bran, which does not separate readily from the flour when shaken in the hand. The Health Food Company [of Battle Creek, Michigan] makes an excellent graham; and when there is any doubt as to the quality of the ordinary graham, it would be wise to purchase that sold by this company."

Note: This company was founded and run by Dr. John Harvey Kellogg. This is the earliest document seen (Dec. 2013) concerning the pioneering work of Dr. J.H. Kellogg with health foods.

Under "Olive Oil" (p. 96): "Unless you have a good cool cellar, it will be best to buy oil in small quantities... oil loses its fine flavor if the bottle be opened often. Rae's Lucca oil is very reliable;..."

The chapter on "Soups" states (p. 109): Maigre soups are those made without meat, and are especially appropriate for fast days. Some of them are good enough for any season, and make a pleasant change from meat soups.

Under the recipe for "Pearled wheat mush" (p. 581): "The Health Food Company sells a nice quality of pearled wheat."

Under the recipe for "Granulated-wheat muffins" (p. 809): "Mix together in a sieve, and rub through it, three cupfuls of fine-granulated wheat meal, such as is made by the Health Food Company, four table-spoonfuls of sugar,..."

The recipe for "Green tomato soy," which is a type of homemade ketchup, does not call for "soy" [sauce] as an ingredient. It is followed by two recipes for "Tomato ketchup"–which also use no soy. Address: Founder of the original cooking-school in Boston; Principal of the School of Cookery in New York; and author.

54. *Brisbane Courier* (*Queensland, Australia*). 1888. Classified ad: Miscellaneous. April 27. p. 8.
• ***Summary:*** "Drink Caramel-Cereal! Elegant, fragrant, harmless, and perfect substitute for coffee. Sanitarium Health Food and Supply Agency, Matthewson's Photographic Lobby, Queen-street."

"Eat Nut Butter, delicious, germ-free, non-bilious preparation, a necessity where meat is prohibited. Sanitarium Health Food and Supply Agency, Matthewson's Photographic Lobby, Queen-street."

Note 1. These foods and beverages are probably made in Battle Creek, Michigan, USA, by a company associated with the Battle Creek Sanitarium, then imported to Australia by the Sanitarium Health Food and Supply Agency.

Note 2. This is the earliest document seen (Feb. 2010) that mentions a "Sanitarium Health Food" company in Australia. They do not yet manufacture health foods.

Note 3. This is the earliest document seen (Nov. 2012) that mentions "Caramel-Cereal" (regardless of hyphenation or capitalization) an early caffeine-free alternative to coffee.

55. *Advent Review and Sabbath Herald.* 1888. Camp-meeting hygiene. 65(36):569. Sept. 4.
• ***Summary:*** "2. The diet while attending a camp meeting, should be the most wholesome possible, and simple in character. Good graham bread, well cooked grains, particularly such preparations as boiled rice, oatmeal, cornmeal, or graham porridge, rice puddings, milk toast,

© Copyright Soyinfo Center 2014

granola, potatoes, baked or boiled, with an abundance of good milk and ripe fruit,..."

Note: This is the earliest article seen (Aug. 2010) in this Seventh-day Adventist periodical that mentions "granola."

56. Kellogg, John Harvey. 1888. [Vegetable diet capable of maintaining strength]. *Good Health* (*Battle Creek, Michigan*) 23(11):351. Sept.
• ***Summary:*** Dr. Rutgers of England has been conducting a series of dietetic experiments comparing the effects of a mixed diet and a vegetable diet. "He reported as the result, that he found a vegetable diet wholly capable of maintaining the strength of the body, and that vegetable albumen was equivalent, weight for weight, to animal albumen."

"Such experiments are interesting, but at this age of the world, are not really necessary, as the question of the capability of vegetable food to sustain life, even in its highest vigor, was settled so long ago as the time of Pythagoras, who, with his followers, was a radical vegetarian. Indeed, we may say that this question was experimentally settled by Adam and his immediate descendants, who proved that long and vigorous life may be maintained upon a diet from which animal food is excluded."

Note: This is the earliest document seen (June 2002) concerning protein [vegetable albumen] and vegetarian diets.

57. Kellogg, Ella Eaton. 1889. Cooking school for instruction in Mrs. Dr. Kellogg's system of scientific cookery. Battle Creek, Michigan. 3 p. 21 cm.
• ***Summary:*** Describes "Mrs. Kellogg's System of Scientific Cookery." "As the result of many years' experience in the management of a School of Cookery and an 'Experimental Kitchen,' Mrs. Dr. J.H. Kellogg has developed a system of cookery, the leading features of which are so entirely novel and so much in advance of the methods heretofore in use, that it may be justly styled A New System of Cookery. It is a singular and lamentable fact, the evil consequences of which are wide-spread, that the preparation of food, although involving both chemical and physical processes, has been less advanced by the results of modern researches and discoveries in chemistry and physics than any other department of human industry. Iron-making, glass-making, even the homely art of brick-making, and many of the operations of the farm and the dairy, have been advantageously modified by the results of the fruitful labors of modern scientific investigators; but the art of cookery is at least a century behind in the march of scientific progress. The mistress of the kitchen is still groping her way amid the uncertainty of mediæval [medieval] methods, and daily bemoaning the sad results of the 'rule of thumb.'"

The course of instruction will consist of eight lessons, to be given at 21 East Jefferson St. on June 14-23 at 3 p.m. The instructor is Mrs. D.H. Kress. The eight sessions will comprise the following subjects: 1. Soups. 2. Grains. 3. Breakfast dishes. 4. The possibilities of yeast. 5. Unfermented breads. 6. Vegetables. 7. Invalid foods. 8. Desserts.

Note: This is the earliest Seventh-day Adventist cookbook seen (Sept. 1999). However soy is not mentioned in a SDA cookbook until 1919 or 1924. Address: Battle Creek, Michigan.

58. *Good Health* (*Battle Creek, Michigan*). 1890. Vegetable milk. 25(5):153. May.
• ***Summary:*** An English periodical notes: There are several trees which produce milk, the best known being the *Palo de Vaco* or "cow-tree," of the Cordilleras of the coast of Caracas [Venezuela] in South America. "Humboldt says of this tree, 'Among the many curious phenomena that I beheld during my journey, there was hardly any that struck my imagination so forcibly as did the "cow-tree..." pierce the trunk and a sweet and nourishing milk flows. At sunrise this vegetable source is most abundant; then the blacks and native people hurry from all parts, provided with jugs to catch the milk, which turns thick and yellow on the surface.' M. Boussingault has analysed this vegetable milk, and declared before the Academy of France that it most certainly approaches in its composition to the milk of a cow..."

Note: This is the earliest English-language document seen (April 2010) that contains the term "Vegetable milk." However it does not refer to (or even mention) soymilk.

59. *Good Health* (*Battle Creek, Michigan*). 1890. The vegetarian cannibal. 25(5):152. May.
• ***Summary:*** The great actor Booth was a vegetarian. But when he met a Quaker on a steamboat on one of the Western rivers, the Quaker offered him various types of meat. Booth refused each, then finally said in a booming voice: "I never eat any flesh but human flesh, and I prefer that raw."

60. *Good Health* (*Battle Creek, Michigan*). 1890. Vegetarianism in England. 25(6):183. June.
• ***Summary:*** Vegetarian principles appear to be gaining ground in beef-eating England, as evidence by a long article reproduced from the *London Christian* magazine.

61. *Good Health* (*Battle Creek, Michigan*). 1890. Vegetarian diet. 25(9):279. Sept.
• ***Summary:*** A vegetarian diet consists of "the productions of the vegetable kingdom, the best of which are the various grains and fruits. Milk is usually added, as it is quite free from the unwholesome qualities that render flesh food objectionable. Dr. Dujardin-Beaumetz, the renowned Parisian physician, maintains that the body may be thoroughly well supported on a diet from which meat is wholly excluded." He adds that "this diet is of therapeutic importance in certain diseases."

62. *Good Health* (*Battle Creek, Michigan*). 1890. Vegetarianism and old age. 25(12):372-74. Dec. [1 ref]
• ***Summary:*** The first half is a long excerpt of an article by Dr. Alanus first published in the *Rhenish Courier* (in German) entitled "Why I no longer live as a vegetarian." It argues that a vegetarian diet ruins the blood vessels and makes them prematurely old. The second half is an analysis of the article.

63. *Good Health* (*Battle Creek, Michigan*). 1890. A noted vegetarian. 25(12):376. Dec.
• ***Summary:*** Mr. Isaac Pittman, of Bath, England, the inventor of phonography [a system of shorthand writing based on sound], is a vegetarian in his 78th year, is still in the enjoyment of excellent health, and able to supervise correspondence of about 40,000 letters per year, to edit a phonographic journal, and to compile and publish annually a number of works. He is a teetotaler and a total abstainer from tobacco and other narcotics. His life is being written by Mr. Reed.

64. Clubb, Henry S. 1891. A vegetarian talk. *Food, Home and Garden* (*Philadelphia*) 3:19-20. Feb. Whole No. 26.
• ***Summary:*** From the *Hillsdale Standard.* This talk was given on Tuesday, Dec. 9, 1890, at Beethoven Hall, Hillsdale College (Hillsdale, Michigan). The speaker, formerly state senator from the Ottawa and Muskegon district, was one of the organizers of the Michigan "Pomological Society" (now "Horticultural Society"); he "is now a resident of Philadelphia, president of the Vegetarian Society of America, and editor of *Food, Home and Garden,* one of the publications of that Society."

Discusses: The story of Daniel in the Bible (Daniel 1:8-16). The poisons in meat and diseases in meat animals. The Kellogg Orphan School at Battle Creek, Michigan.

65. *Good Health* (*Battle Creek, Michigan*). 1891. Vegetarianism in Japan. 26(3):87. March.
• ***Summary:*** The writings of Buddha strictly enjoin abstinence from the use of flesh foods. A long discussion of what the Sutras say and why. Yet Christians in Japan kill animals and fish, even though Japanese Buddhists ask them to stop. These Christians consider the Japanese to be ignorant and unable to keep the body healthy.

66. *Good Health* (*Battle Creek, Michigan*). 1891. A noted vegetarian. 26(3):89. March.
• ***Summary:*** "Prof. F.W. Newman, brother of the late Cardinal Newman, has been a strict vegetarian for more than thirty years, and during a considerable portion of that time has been president of the Vegetarian Society of England. He is one of the most eminent literary men of England, and professor in the London University, and is still active, although more than eighty years of age."

67. Bentley Historical Library, University of Michigan. 1891. Index to John Harvey Kellogg speeches and lectures (1891-1943) (Archival collection). Ann Arbor, Michigan. 10 p. Undated. 28 cm. [409 ref]
• ***Summary:*** This typewritten list gives the titles of the 409 speeches and lectures Dr. Kellogg (lived 1852-1943) presented from 1891 to 1943. They are listed alphabetically under each year. On average, he presented 8.2 per year, but in 1898 he presented 33, in 1901 he presented 22. His most oratorically productive decade was from 1900 to 1909, when he presented 148. Amazingly in 1940, at age 88, he presented 12 (including one titled "Soy Acidophilus"), in 1942 (at age 90) he presented 8, and in 1943 he presented 3.

Some interesting lecture titles: 1891–Nature's method of defending the body against disease. A twentieth century doctor.

1893–Relations of the muscles to religion. What is the medical profession?

1896–Religion of the body.

1897–Common errors in diet. Twenty years experience in the non-alcoholic treatment of diseases.

1898–How to get well quick. God's design in establishing Sanitariums. St. Helena Sanitarium [California].

1900–Dress reform talk. How nature fights diseases. What is the natural food of man? 1901–Exercise. Health food fakirs.

1903–Flesh food. 1905–How Christians should eat.

1906–How incurable are cured. The natural diet of man. 1907–The anti-toxic diet. How to live well one hundred years. Oatmeal. The scientific basis of vegetarianism.

1908–Constipation. 1909–Evils of civilization. The magical curative power of water. Sugar.

1910–The Battle Creek Idea. Is the human race degenerating? The physiological necessity of hard work. The possibilities of preventative medicine. Why flesh eating is wrong.

1911–Tendencies toward race degeneration. The beginning of the Battle Creek idea. Tobacco. Yogurt ferments in the treatment of intestinal disorders. 1913–Meat germs. 1914–Why laughing is an aid to digestion. 1916–The case against sugar.

1930–Soybeans as human food. 1932–The Eskimos not exclusive meat eaters. 1933–Orange juice versus flu. 1935–The aristocracy of health. Improved apparatus for irrigating and flushing the colon. 1937–Soy acidophilus milk. Special health value of the soybean. 1938–The case against meat eating. 1940–Soy acidophilus. 1942–Nature a false god. The new sugar. My search for health. 1943–Drink more water. Address: Michigan Historical Collections, Bentley Historical Library, Univ. of Michigan, Ann Arbor, Michigan 48109-2113. Phone: 313-764-3482.

68. Battle Creek Bakery Co. 1892. Health foods (Ad). *Food,*

© Copyright Soyinfo Center 2014

Home and Garden (*Philadelphia*) 4(37):Inside front cover. Jan.
• ***Summary:*** A half page ad. "Pure crackers and biscuits manufactured." This bakery company was "Established in 1881. "We manufacture a choice line of these goods, entirely free from lard and all adulterations at the following prices:..." Products include: Fruit biscuits (white flour or whole wheat flour). Graham biscuits (sweetened). Graham crackers (sweetened or unsweetened). Whole wheat crackers, Gluten crackers, Carbon crackers (leavened or unleavened). Cereola, a prepared grain food in bulk. Pure gluten, or Wheat gluten (in packages). Cereal coffee, prepared from grains only, a very choice and healthful drink. Many of these products are also sold in 13 lb or 30 lb boxes.

At the end of the ad, we read: "References. To whom it may concern. We the undersigned residents of Battle Creek, Michigan, take pleasure in stating that Mr. Joseph Smith, manager of the Health Food Department of the Battle Creek Bakery Co., has resided in Battle Creek for nearly 20 years, and is a competent and responsible man, and of long experience in this line of business, and one whose goods we can heartily recommend to the public." There follow 11 names, each with a title. The latter include two ex-mayors, three physicians (M.D.s), the postmaster, the vice-president of the city bank, and the editor of the *Review and Herald* magazine.

Note 1. This is the earliest English-language document seen (Sept. 2006) with the term "health foods" (or "health-foods" or "health food") in the title.

Note 2. This is the earliest document seen (Sept. 2006) that mentions "Cereal Coffee," the earliest known commercial alternative to coffee, made in Battle Creek. Address: Battle Creek, Michigan.

69. *Good Health* (*Battle Creek, Michigan*). 1892. A royal vegetarian. 27(1):312-13. Oct.
• ***Summary:*** "It was recently announced that Lady Paget, wife of the British ambassador to the Austrian court, had become a vegetarian, having renounced the use of flesh meat on humane grounds." She also observed that "vegetarians have usually a very clear and beautiful complexion." Contains a long extract from an article by her which appears in the April 1892 edition of the *Nineteenth Century.*

70. Kellogg, Ella Ervilla Eaton. 1892. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery, and a large number of original, palatable, and wholesome recipes. Battle Creek, Michigan: Health Publishing Co. 573 p. Illust. Index. 23 cm.
• ***Summary:*** The wife of the famous Dr. John Harvey Kellogg discusses the principles and methods of the dietary system employed at the Battle Creek Sanitarium. The Preface, written by the publishers, begins: "The interest in scientific cookery, particularly in cookery as related to health, has manifestly increased in this country within the last decade..." Many successful schools for instruction in cookery have been established. Unfortunately the focus has been on "the preparation of toothsome and tempting viands, but little attention has been paid to the science of dietetics, or what might be termed the hygiene of cookery.

"A little less than ten years ago the Sanitarium at Battle Creek, Michigan, established an experimental kitchen and a school of cookery under the supervision of Mrs. Dr. Kellogg... the demand for instruction has become so great that classes are in session during almost the entire year. During this time Mrs. Kellogg has had oversight of the cuisine of both the Sanitarium and the Sanitarium Hospital, preparing bills of fare for the general and diet tables,... [for] 500 to 700 inmates.

"These large opportunities for observation, research, and experience, have gradually developed a system of cookery... [that] may justly be styled, *A New System of Cookery.* Although based on modern chemistry, the methods are simple, and the results are tasty, wholesome and attractive. Many people say its has never occurred to them "to do it this way before." Great success has also "attended the cooking school in connection with the Bay View Assembly (the Michigan Chautauqua),..."

In the Introduction, the author emphasizes that diet and cooking should be studied as a science whose aim is to promote good health. This book focuses on those scientific principles. The most important foods, the legumes and grains, and their products, are given extra space and special attention.

Chapter 1, titled "Foods," discusses the properties of food, the food elements (starch, sugar, fats, albumen, mineral substances {phosphates, carbonates}, and indigestible substances), uses of the food elements, proper combination of foods (6 of carbonaceous to one of nitrogenous), condiments (which have no real food value, are all strong irritants, and only disguise the natural flavor of food. The use of condiments invites habitual use of intoxicating drinks), etc. Each chapter is followed by a page titled "Table topics" containing quotations, often from well-known or respected people. For example: "A man's food... suggests his moral nature. Many a Christian is trying to do by prayer that which cannot be done except through corrected diet.–Talmage." The first two food chapters are about cereal grains (p. 78-107, and about breads and bread-making). In the next chapter, titled "Fruits," is a long section on "nuts, or shell fruits" with recipes. Note 1. Neither peanut butter nor "nut butters" are mentioned in this book.

The long chapter on "Legumes" (p. 217-27) focuses on dry peas, beans, and lentils. Although neither soybeans nor soyfoods are mentioned, we read (p. 217-18): "The nitrogenous matter of legumes is termed *legumin*, or vegetable casein, and its resemblance to the animal casein of

© Copyright Soyinfo Center 2014

milk is very marked. The Chinese make use of this fact, and manufacture cheese [clearly tofu] from peas and beans."

Note 2. This is the earliest known Seventh-day Adventist cookbook that mentions soyfoods.

Note 3. This is the 2nd earliest document seen (Dec. 2013) concerning soyfoods in connection with Dr. John Harvey Kellogg–actually his wife, Ella.

The chapters on animal products are toward the back of the book, after the chapter on desserts. The first of these, titled "Milk, cream, and butter" (p. 364-79) says that milk is best used in its fresh, natural state, and includes discussions of "adulteration of milk, quality of milk influenced by the food of the animal, diseased milk, kinds of milk to be avoided, and distribution of germs by milk." The section on "artificial butter" discusses various "fraudulent preparations" such as oleomargarine. The use of cheese is strongly discouraged, since it "is very difficult of digestion" and "is very liable to contain a poison called tyrotoxin, capable of producing most violent and indeed fatal results..." Recipes for non-fermented cheese are given. The next chapter is titled "Eggs" (p. 380-88).

Surprisingly, this is not a vegetarian cookbook, although the author and her husband were long-time ardent vegetarians. Next comes a long chapter on meats, with recipes (p. 389-417). Possible reasons for including such a chapter are: (1) As a place to criticize the use of the "flesh and various organs" of animals, poultry and game as food. (2) As a place to praise the vegetable [vegetarian] diet. (3) To help prevent other leaders of the domestic science / scientific cookery movement (most of whom were not vegetarians) from categorically dismissing the book. On the first 3 pages of this chapter we read: "At the present time there is not much question in the minds of many intelligent, thinking people as to the propriety of using foods of this class, and especially of their frequent use. Besides being in no way superior to vegetable substances, they contain elements of an excrementitious character, which cannot be utilized, and which serve only to clog and impede the vital processes, rendering the blood gross, filling the body with second-hand waste material which was working its way out of the vital domain of the animal when slaughtered. To this waste matter... are added those productions of the putrefactive process which so quickly begin in flesh foods exposed to air and warmth.

"That flesh foods are stimulating has been shown by many observations and experiments.

"Flesh foods are also specially liable to be diseased and to communicate to the consumer the same disease... It has been abundantly proved that such diseases as the parasitic, tuberculous, erysipelatous, and foot and mouth diseases are most certainly communicable to man by infected flesh. All stall and sty fed animals are more or less diseased. Shut up in the dark, cut off from exercise, the whole fattening process is one of progressive disease... Add to this the exhaustion and abuse of animals before slaughtering; the suffering incident to long journeys in close cars, often without sufficient food and water; and long drives over dusty roads under a burning sun to the slaughter house, and it will be apparent to all thoughtful persons that such influences are extremely liable to produce conditions of the system that render the flesh unfit for food." Note 4. The main concern here is human health, not animal suffering.

"Meat is by no means necessary for the proper maintenance of life or vigorous health, as is proved by the fact that at least 'four tenths of the human race,' according to Virey, 'subsist exclusively upon a vegetable diet, and as many as seven tenths are practically vegetarians.' Some of the finest specimens of physical development and mental vigor are to be found among those who use very little or no animal food." "The use of large quantities of animal food, however free from disease germs, has a tendency to develop the animal propensities to a greater or less degree, especially in the young, whose characters are unformed. Among animals, we find the carnivorous the most vicious and destructive, while those which subsist upon vegetable foods are by nature gentle and tractable." Nevertheless, many meat-centered recipes are given. The page of "Table topics" at the end of the chapter contains only quotations critical of eating meat.

The chapter on "Food for the sick" contains recipes (p. 426-28) for: Beef tea. Chicken broth. Mutton broth. Chicken panada, etc. The section titled "Grains for the sick" (p. 429) states: "The various cooked preparations of grains–granola, wheatena, avenola, wheat gluten, and gluten meal–Manufactured by the Sanitarium Food Co., Battle Creek, Michigan, form excellent articles of diet for many invalids, when served with hot milk or cream..." Then comes a section on "Meats for the sick" with 7 recipes (p. 430-31).

A closing chapter titled "A year's breakfasts and dinners" (p. 481-538) gives 365 days of sample healthy menus, with this introduction: "We have given meats no place upon these bills of fare, as we wished particularly to illustrate how good, substantial menus of appetizing variety could be provided without their use;..."

Caramel coffee, one of "various grain coffees" is mentioned on at least 7 pages in this book. For example, the chapter on "Beverages" (p. 357+) discusses caffein [caffeine], the adulteration of tea and coffee, and the idea that these beverages contain "poisons." A section in this chapter on "Substitutes for tea and coffee" gives recipes for making five different types of "Caramel Coffee." The first one states (p. 360): "Take three quarts best bran, one quart corn meal, three tablespoonfuls of molasses; mix and brown in the oven like ordinary coffee. For every cup of coffee required, use one heaping tablespoonful of the caramel. Pour boiling water over it, and steep, not boil, for fifteen or twenty minutes."

This book also discusses: Artificial human milk (3 recipes, one based on pearl barley). Graham bread, Graham

© Copyright Soyinfo Center 2014

flours, and other whole-wheat flours. Wheat gluten (with many recipes).

A 3rd ed. was published in 1898, a 4th edition in 1904, and a final edition in 1910.

Concerning the Bay View Assembly School of Cookery, this was connected with the Michigan Chautauqua, which was a Methodist camp meeting resort begun in 1875. A chautauqua was an institution of the time that provided popular education combined with entertainment in the form of lectures, concerts, plays, etc., often presented outdoors or in a tent. Ella Kellogg was very involved with the Women's Christian Temperance Union (WCTU), which built a hall on the grounds of the Bay View Assembly in 1890. Address: A.M., Superintendent of the Sanitarium School of Cookery and the Bay View Assembly School of Cookery, and Chairman of the World's Fair Committee on Food Supplies for Michigan [Battle Creek, Michigan].

71. *St. Louis Post-Dispatch* (*Missouri*). 1893. A vegetarian missionary: Miss May Yates coming from England for the world's good. May 12. p. 7.

• ***Summary:*** "New York, May 12.–Among the passengers of the steamer Arizona, which is expected here within the next few days, is Miss May Yates, Organizing Secretary of the London Vegetarian Society. Miss Yates, who is the founder and honorary secretary of the Bread and Food Reform League, comes to this country to make arrangements for the vegetarian congress to be held at the Chicago Exposition in the first week of June.

"The New York Vegetarian Society, of which Walter John Scott, the well-known philatelist [stamp collector] is President, has under consideration the propriety of tendering Miss Yates a reception on her arrival. From statements made by Mr. Scott the cause of vegetarianism is in a most flourishing condition. The number of its adherents is steadily on the increase, especially in England and Germany. In the latter country there have been nineteen new societies organized during the last three months. Great things are expected at the Chicago congress. There will be addresses, resolutions and declarations at which the menu will consist of humble potatoes and lettuce, the homely cabbage, the blushing carrot, the aristocratic pea, rare fruit and the thousand and one food preparations which abound in the cereal West [Battle Creek, Michigan].

"The enthusiasts will gorge themselves in honor of Miss Yates and the large delegation from the other side, which is expected will accompany her, and the rest of the world will read about it and stick to chops, steaks and game."

72. Battle Creek Sanitarium. 1893. Sanitarium health foods. Battle Creek, Michigan. 32 p. Illust. 21 cm.

• ***Summary:*** The foods in this catalog are manufactured by the Sanitarium Health Food Co., Battle Creek, Michigan. An illustration on the front cover shows two views of a large building, probably the one housing that company. Contents: Introduction: Wheat flour, the modern miller, the ancient miller. The question of food. Granola. Wheat Granola. Avenola. Gluten. Water biscuit. Whole wheat wafers. Rye wafers. Zwieback. Gofio. Wheat-germ grits. Whole-wheat flour. No. 1 Graham crackers. No. 2. Graham crackers. Plain Graham crackers or dyspeptic crackers. Oatmeal biscuit. Medium oatmeal crackers. Plain oatmeal crackers. White crackers. Fruit crackers. Carbon wafers. Infant food: What an infant needs, twenty per cent of gluten, for nursing mothers. Wheat charcoal. Recipes: Granola, Wheat Granola, pure Gluten Meal, nos. 2 and 3 Gluten Meal. Testimonials.

"The growing demands of the great army of dyspeptics in this and other civilized countries, and the remarkable advances recently made in the science of dietetics, have given rise to the term 'Health Foods.' There is a general recognition of the fact that some foods are less wholesome than others."

The testimonials (p. 28-31), written from Jan. 1890 to March 1893, to the Sanitarium Foods Co. (Battle Creek, Michigan), by both merchants and individuals, praise foods made by the company. The first and earliest, dated 18 Jan. 1890 and written from Williamsport, Pennsylvania, is of interest because it mentions the term "Health Foods." It reads: "Gentlemen:–Eighteen months ago I was a complete wreck from nervous dyspepsia. My case was considered beyond the reach of the remedies usually prescribed by physicians for this malady. I was induced to throw medicine to the dogs, and try diet and exercise. I inquired into the merits of the various 'Health Foods.' Among others I tried your Granola, and it affords me much pleasure to say that I regard it as a valuable, nutritious, and palatable food. I use it twice every day, and would not be without it. I have lived principally on the foods prepared by your company for many months, and have made great gain in health and strength, but more especially in weight; as one year ago I weighed 130 pounds, now I tip the beam at 172 pounds.

"Wishing you continued success in your grand work, I am, Very respectfully, W.H. Miller, Principal Washington Building School." Address: Battle Creek, Michigan.

73. *Chicago Daily Tribune.* 1893. Live on vegetables. Men and women who eat no meat open a world's congress: Vegetarians assemble at the Art Institute and expound their views. June 9. p. 3.

• ***Summary:*** Today's program: Vegetarian Congress, Hall 2, Morning session–Addresses: Dr. L.H. [sic, J.H.] Kellogg, Battle Creek, Michigan; Dr. H. Louisa Exton, Clinton, New Jersey; the Rev. Louis Paroli, New Orleans, Louisiana; W.D. Campbell, Sydney, New South Wales [Australia]; Dr. E.M. Bingham, Springfield, Massachusetts; the Rev. Madison Allen, California; the Rev. W.P. Alcott, Indianapolis, Indiana; Philander Dasi, California.

Afternoon session–Addresses: W. Forward; J.S. Perron,

© Copyright Soyinfo Center 2014

Belfast, Ireland; Mrs. C.H. Wallace, London; the Rev. H.J. Bruce, Liverpool; T.B. Bruce, England; Dr. James H. Jackson, Danville, New York; Miss A. Stanford, Pasadena, California; Dr. J.G. Stair, St. Joseph, Missouri; Edmund J. Baillie, Chester, England.

"Evening session–Addresses: Juliet H. Severance; the Rev. S.J. David, Minneapolis [Minnesota]; Miss Adelaide Johnson, Washington, DC; James Arbuckle Sr., Glasgow, Scotland; Mrs. Le Favre, Chicago; Emory F. Boyd, New (Britain?), Connecticut; Drs. Martha and J.H. Neff, Fort Wayne, Indiana."

"Fresh countenances and sturdy frames characterized most of the vegetarians who met in a World's Congress yesterday in Hall 2 of the Art Institute. Some of the disciples of fruits and plants had passed the three score and ten mark, but their hale and beauty bearing testified to the merits of their doctrine. C.C. Bonney made an address of welcome, which was responded to by W.E.A. Axon, Secretary of the International Vegetarian Society.

"Acting Chairman Clubb, President of the Vegetarian Society of America, made an address. He said that vegetarianism lay at the formation of all reforms. If practiced it would do away with war by taking the fierceness out of human nature and making man friendly to his fellows.

"Miss May Yates, a prominent vegetarian from England, read a paper on vital food written by Arnold F. Hills, President of the Vegetarian Federal Union of England. He called meat the conventional carnality of carrion and wanted it replaced by the 'kindly fruits of the earth.'

"John E.B. Mayor, professor of Latin in the University of Cambridge, England, contributed a comprehensive paper on Universal Vegetarianism, which was read by Ernest Locke of Manchester, England.

"Vegetarianism and Agriculture was the subject of an address by Dr. M.L. Halbrook of New York.

"Thomas Bruce of England had written a paper for the congress on the 'Esthetics of Vegetarianism.' He claimed for vegetarianism that it carried in its train no distressing sights, no offensive smells, and was favorable to beauty, health, and refinement.

"The Rev. A.T. De Learsey of Como, Mass., said that more than two-thirds of the world's inhabitants were vegetarians.

"Dr. Rachel Swain in speaking of the evolution of vegetarianism said that by slow processes the human race had reached a point where it eschewed the eating of human flesh. The time would come when all flesh would be abominated.

"Josiah Oldfield of London contributed a paper on the use of starch in the human system. He recommended graham bread strongly.

"Mrs. M.L. Mason of Chicago gave an address on right thought and right life. She said that to eat dead animals was to wrap about us the shroud of mental death."

Note: Today, a Temperance Congress will also meet in two other halls; it is separate from the Vegetarian Congress.

74. Axon, William Edward Armitage. 1893. Milton as a vegetarian poet. *Vegetarian Messenger* (*Manchester, England*). July. p. 248-55. [4 ref]
• ***Summary:*** "(An address delivered at the Sanitarium, Battle Creek, Michigan, June 12th, 1893.)"

75. *Good Health* (*Battle Creek, Michigan*). 1893. The Vegetarian Congress. 28(7):215-16. July.
• ***Summary:*** "The Vegetarian Congress was a success. The Congress was conducted under the auspices of the Vegetarian Alliance, an English association which was represented by Miss Yates, the very able and enthusiastic English bread reformer. Miss Yates has done more than perhaps any one else to introduce the use of wholesome bread in England, and will remain a little time in this country, lecturing upon her favorite themes. Mr. Clubb, the President of the American Vegetarian Association, and Mr. William E. Axon, Honorable Secretary of the English Vegetarian Society, we believe the oldest vegetarian society in existence, together with many other prominent vegetarians, were present, and took a leading part in the meeting."

Note: This is the earliest English-language document seen (June 2004) that contains the term "Vegetarian Alliance." It is also the *only* document seen that mentions this term.

76. Axon, William E.A.; Clark, Ernest C.; Clark, James. 1893. International Vegetarian Congress, Chicago, June, 1893. *Vegetarian Messenger* (*Manchester, England*). Aug. p. 282-86. [30 ref]
• ***Summary:*** "Your deputation left Liverpool, May 20th, after a farewell breakfast at Chapman's Restaurant [probably vegetarian], and arrived, May 29th, at New York, where they were met by Mr. Scott, President of the New York Vegetarian Society, Mr. Haviland, and Mr. Power, son-in-law of Mr. Harrison. It had not been found practicable to arrange a public meeting, but the above named and other friends joined the deputation at the Metropolitan Hotel, in an informal conference. The Rev. H.S. Clubb, from Philadelphia [Pennsylvania], came to New York, on May 30th, and returned with the deputation.

"Philadelphia was reached May 31st, and the deputation were met by the Messrs. Metcalfe and Mr. Horrocks, who escorted them to the Bible Christian Church, in the parlour of which a large company was assembled to greet them. Lunch was ready, and after it had been partaken of, Mr. Clubb gave a hearty and affectionate welcome to the visitors, which was responded to by the Rev. James E. Clark, Mr. Ernest Clark, Mr. Axon, Mr. T.A. Hanson (London), Mr. C. Dixon (Cambridge), and Mr. E.B. Reeves (Norwich). The afternoon was devoted to a delightful excursion to Fairmount Park,

© Copyright Soyinfo Center 2014

the Museum, and by steamer to Wissahickon Creek. In the evening, after dinner, a small tree was planted in the church grounds as a memorial of the visit, each member of the deputation assisting, and Mrs. Axon also sharing the pleasant duty. An evening service was held in the church, when the Rev. James Clark preached on the needs and duties of the members of that church. Many offers of hospitality had to be declined for want of time. On the same evening Mr. Axon gave an address at the Presbyterian Temple, on 'Peace and Vegetarianism.'

"Washington [DC] was reached June 1, where Miss A.F. English and Mr. Silliman had arranged a reception and meeting at the Wimodaughsis Club. The Rev. H.S. Clubb presided, and made a very spirited speech, which was followed by addresses from each of the deputation and their friends, and by a number of local Vegetarians. As a result, it was decided to form a Washington Vegetarian Society, for which there were evidently abundant and excellent materials.

"The next day began our thousand miles journey by rail to Chicago, which was reached June 3. A business meeting was held on the 6th, when Miss May Yates and Mrs. C. Le Favre were appointed secretaries of the Congress, and a committee was named to prepare resolutions. This committee consisted of Rev. H.S. Clubb, Miss Dusenbury, Mr. Axon, Mrs. Stockham, M.D., and Mr. Eisenstadt. The delegates were then invited to a Reception, to be given by the Chicago friends on the following evening, which proved a great success. About seventy persons were present, to most of whom the delegates were introduced, and a pleasant evening was spent, music and recitations being interspersed at intervals. On the 8th, the Congress assembled for its first session."

The article lists the various papers read and discussed over the two-day conference. "On June 8 Mr. and Mrs. Axon were invited to an informal reception, by the 'coloured' people of Chicago, and were accompanied by Mr. E.C. Clark, to an interesting gathering of clergymen, lawyers, doctors, authors, &c., all of the negro race. After addresses from Hon. Fred Douglass and others, Mr. Axon was called upon to respond, and incidentally showed how Vegetarianism might help in mitigating social prejudice. On June 9 Mr. Axon was invited to address a large meeting of the Chicago Stenographic Society, and took occasion to point out the interesting connection between Vegetarianism and shorthand, and to pay a warm tribute of respect to Mr. Isaac Pitman, a Vegetarian of more than half a century, and the 'Grand Old Man' of the stenographic world.

"On Saturday a reception was given at the Chicago Exhibition to inaugurate the exhibit of the Vegetarian Federal Union.

"Mr. and Mrs. Axon visited the Sanitarium, Battle Creek, Michigan, and Mr. Axon lectured there, June 12, on 'Milton and Shelley as Vegetarian Poets,'..." The delegation continued to travel.

"The World's Vegetarian Congress, which was the main aim of the journey of the deputation, was successful beyond any previous gathering of the kind, the attendance was good, the interest deep and continuous, and the papers were, on the whole, of the highest value and importance. The Chicago Congress will, we hope and believe, form the starting point for an earnest and active forward movement, and lead to a wide diffusion of Vegetarianism alike in the Old and in the New world."

77. Kellogg, John Harvey. 1893. Vegetarian diet in disease of the thyroid gland: Editorial. *Modern Medicine and Bacteriological World* (*Battle Creek, Michigan*) 2(9):239. Sept. [1 ref]
• ***Summary:*** Two experiments show that one of the duties of the thyroid gland is to destroy the toxic ptomaines and extractives contained in animal tissues. Therefore, in serious thyroid diseases a vegetarian diet is indicated. Address: Battle Creek, Michigan.

78. *Good Health* (*Battle Creek, Michigan*). 1893. Vegetarian cats. 28(12):374-75. Dec.
• ***Summary:*** A long excerpt from the London *Graphic* gives an interesting account of a vegetarian account living at Hampton Court. His coat is sleek, his teeth are sound, and he won't even eat fish.

79. *Good Health* (*Battle Creek, Michigan*). 1893. Vegetarian inns in Berlin. 28(12):377. Dec.
• ***Summary:*** "All the vegetarian innkeepers of Berlin, with one exception, have formed a union and advertise their respective vegetarian restaurants and taverns from time to time by posting up large handbills. The emblem used is a large green wreath, which incloses [encloses] the advertisement."

80. Kellogg, Ella Ervilla Eaton. 1893. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery, and a large number of original, palatable, and wholesome recipes. Chicago, Illinois: Modern Medicine Publishing Co. 581 p. Illust. Index. 23 cm.
• ***Summary:*** This 1893 edition is very similar to the 1892 edition. All the pages up to about p. 440 are identical, but somewhere after that 8 pages have been added. Pages 551-58 are blank except for "New recipes" and the page number printed at the top of each page. There are also 14 blank pages after the last numbered page.

Note: An ad in the Sanitarium health foods booklet (1893, inside rear cover) states: "The new hygienic cook book. Thoroughly scientific; entirely practical. Over 800 carefully tested recipes. Bright and entertaining in style, concise, the result of Ten Years of patient research and experimentation in the Experimental Kitchen connected

with the Sanitarium at Battle Creek, Michigan. Ought to be in every family." Address: A.M., Superintendent of the Sanitarium School of Cookery and the Bay View Assembly School of Cookery, Battle Creek, Michigan, and of the Bay View Assembly School of Cookery, and Chairman of the World's Fair Committee on Food Supplies, for Michigan.

81. Axon, William E.A. 1894. Battle Creek, Michigan. *Vegetarian Messenger* (*Manchester, England*). Jan. p. 14.
• ***Summary:*** An engraving of both the Battle Creek hospital and sanitarium appears above the verse of William E.A. Axon, dated June 1892.

82. Kellogg, J.H. 1894. Sanitarium methods. *Vegetarian Messenger* (*Manchester, England*). Jan. p. 15-22.
• ***Summary:*** "It may not be inappropriate to present in this report a brief *résumé* of the general principles which underlie the medical work of a sanitarium conducted on rational principles, or at least which should underlie the work of such an institution, and the methods employed."

"Health is as much a matter of growth and development as is the growth of a tree or of a crop of wheat, and is as much dependent upon material conditions. By proper control and modifications of his nutritive processes, the chronic invalid may be gradually grown or trained out of disease into health. By raising his whole vital status and improving his general physical tone, morbid conditions are left behind, the normal rhythm of vital activity is re-established: and health comes, not as a result of ingenious antidoting or morbid conditions, but as the result of the working within the body of that occult force recognized by the ancients, but so often forgotten in modern times–the *vis medicatrix naturæ* [the healing power of nature]."

"The main idea of the Sanitarium, then, is health culture. The sick man is led to reform his unhygienic ways, and is taught to do works of supererogation [more than is required] healthward."

The author goes into great detail from the examination of the patient, to the importance of massage, and also describes the various mechanical means of therapy, including massage machines, some specially designed for Battle Creek, electrical current machines, bath rooms for hydro-therapy, and electric light baths. The article, then, is a virtual tour of the Battle Creek facilities and its holistic philosophy of health. "This institution has been conducted practically upon this basis for nearly twenty years, and its phenomenal growth may fairly be accepted as evidence that the idea which dominates the enterprise, and which has been briefly outlined in the foregoing, has a sound basis." Address: M.D., Superintendent of the Medical and Surgical Sanitarium, Battle Creek, Michigan.

83. Kellogg, John Harvey. 1894. Relation of modern physiological chemistry to vegetarianism. *Modern Medicine and Bacteriological Review* (*Battle Creek, Michigan*) 3(3):58-59. March.
• ***Summary:*** "For nearly half a century there has been considerable popular agitation upon the question of a fruit-and-grain diet as opposed to a flesh dietary for human beings. Pythagoras, Socrates, Plato, Solon, and other ancient philosophers, as well as Byron, Pope, Gay, and some other modern poets, together with Cuvier, Bell, and Humboldt, among the most distinguished of modern naturalists, have been advocates of a non-flesh diet, while Buddha the great religious reformer of the East, whose teachings are to-day revered by a larger number of persons than those of any other, ancient or modern, made abstinence from flesh diet a part of his religious creed. The same is true of many of the 'Fathers' of the early Christian church. These facts have led many of the laity to adopt a non-flesh diet as the most natural and wholesome dietary for man, and have furnished the basis for a quite active propaganda of vegetarian doctrines, especially within the last few years. Dujardin-Beaumetz, a leading French physician, and Bouchard, eminent as one of the most distinguished of modern physiologists and pathologists, have within recent years given their strong adherence to the doctrines of vegetarianism, especially as a therapeutic measure; while Bonnejoy, a French physician of some prominence, has written enthusiastically in favor of a non-flesh diet, as best fitted for the maintenance of health and the attainment of the greatest longevity for all classes. Modern interest in the subject has led the writer to undertake some studies with special reference to the scientific ground upon which the claims of vegetarianism may be based, and especially their relation to the doctrines of physiology, chemistry, and bacteriology."

Note: This is the earliest English-language document seen (Dec. 2003) that uses the term "non-flesh diet" to refer to a meatless diet. Address: M.D., Battle Creek, Michigan.

84. Kellogg, John Harvey. 1894. Relation of modern physiological chemistry to dietetics. *Modern Medicine and Bacteriological Review* (*Battle Creek, Michigan*) 3(4):82-85. April.
Address: M.D., Battle Creek, Michigan.

85. *Vegetarian Messenger* (*Manchester, England*). 1894. Battle Creek Sanitarium Foods. April. p. 142-43.
• ***Summary:*** "Some of our friends may like to take the opportunity that is now offered of making trial of the special foods prepared and supplied at Dr. Kellogg's Sanitarium. A small supply is at hand, and may be ordered from the depôt, 9, Peter Street, Manchester.

"One of their preparations is known in America as 'Granola,' but as this is the registered name in this country of a preparation of a different kind made by Messrs. Marshall of Glasgow (we can now supply this also by the way) we are offering it from 'number nine' under the name of 'Sanitarium

© Copyright Soyinfo Center 2014

Food.'"

A list of Sanitarium Foods" follows, including the price per pound of each (which ranges from 5 to 9 pence–not including the gluten products, which range from 10 to 24 shillings). The foods are: Granola. Gofio (parched grain food). Oatmeal biscuit. Medium oatmeal crackers. Plain oatmeal crackers. Graham crackers (No. 1, No. 2, and plain). White crackers. Whole wheat wafers. Water biscuits. Carbon crackers (containing wheat charcoal). Gluten wafers. Gluten biscuit (Nos. 1, 2, 3). Note 1. The "Gluten" preparations are "intended for persons suffering from diabetes, dyspepsia, obesity, &c..."

Note 2. This is the earliest English-language document seen (Feb. 2005) that contains the term "Gluten biscuit."

Note 3. These are all baked goods, with a low moisture content and long shelf life.

Note 4. This is the earliest document seen (May 2004) that mentions Battle Creek Sanitarium Foods.

86. Sanitarium Health Food Co. 1894. Health foods (Ad). *Good Health* (*Battle Creek, Michigan*) 29(11):Inside rear cover. Nov.

• ***Summary:*** The words "Health Foods" are written in huge bold letters across the top of the half-page ad. "In the efforts to meet the needs of a large Sanitarium, with a large variety of patients, we have produced a number of food preparations adapted to the different diseased conditions, the merits of which are such as to secure for them a very large and increasing sale, not only to persons belonging to the invalid class, but to those who wish by 'good living' to avoid disease. The following are the leading preparations:

"Oatmeal biscuit, Medium Oatmeal Crackers, Plain Oatmeal Crackers, No. 1 Graham Crackers, No. 2 Graham Crackers, Plain Graham Crackers, Dyspeptic, Water Cracker, White Crackers, Whole-Wheat Wafers, Gluten Wafers, Rye Wafers, Fruit Crackers, Carbon Crackers, Wheat Granola (bulk 10), Avenola (bulk 10), Gluten Food No. 1, Gluten Food No. 2, Gluten Food No. 3, Infant's Food." Address: Battle Creek, Michigan.

87. Newberry's. 1895. Just in: Ralston / Health Foods (Ad). *Los Angeles Times.* May 18. p. 7.

• ***Summary:*** Caramel Coffee, Gluten Biscuits, Whole Wheat Wafers, Gofio Wheat Maize, Ralston Graham Flour, Zwieback, Carbon Crackers, Wheat Granola, Ralston Bran."

Note: This ad is confusing, but one of 25 July 1895 will help to clarify it a little. Are all these foods made by Ralston? Several of them (Gluten Biscuits, Zwieback) have names similar to products made by Dr. John Harvey Kellogg's Sanitarium Food Company in Battle Creek, Michigan. Moreover, according to *The Ralston Chronicle: 1894-1994*, a centennial history of the Ralston Purina Co., William H. Danforth (of the Robinson-Danforth Commission Company, St. Louis, Missouri) "enters the human foods market in 1898 with *Purina Wheat* and a line of whole-wheat breakfast cereals. Danforth's fascination with fitness and health inspires the endorsement of 'Dr. Ralston,' a health guru with 800,000 followers. An undated poster (probably from about 1902) titled "Ralston Purina Foods: Absolutely pure" (with a red and black checkerboard square background) shows that the company now makes: Ralston Breakfast Food, Ralston Cereal Coffee, Purina Whole Wheat Flour for Bran Bread, Purina Pancake Flour, Ralston Hominy Grits, Ralston Kornkins (corn meal), Ralston Oats, and Ralston Barley Food. Address: 216-218 S. Spring Street [Los Angeles, California].

88. Kellogg, John Harvey. 1895. Milk as a food unsuited for the diet of adults: Editorial. *Modern Medicine and Bacteriological Review* (*Battle Creek, Michigan*) 4(5):121-22. May.

• ***Summary:*** "The popular idea that milk is one of the most wholesome and nutritious articles of food for use at all periods of life, is by many facts shown to be an error. Cow's milk is admirably adapted for digestion in the stomach of a calf."

"Kumyzoon is a scientific preparation of milk in which the lactose is replaced by lactic acid... Kumyzoon is manufactured by the Sanitarium Health Food Co., Battle Creek, Michigan, and 28 College Place, Chicago, Illinois. This company is manufacturing kumyzoon according to the formula furnished by the writer, and has it made under the writer's care at the Battle Creek Sanitarium."

Note: This is the earliest document seen (July 2013) that discusses problems with cow's milk as a food for adult humans. Address: M.D., Battle Creek, Michigan.

89. *Good Health* (*Battle Creek, Michigan*). 1895. Publisher's department: Chicago, Illinois, April 23, 1895 (Letter to the editor). 30(6):Unnumbered page near end of issue. June.

• ***Summary:*** This letter is addressed to "Sanitarium Health Food Co., Battle Creek, Michigan."

"Accept our thanks for the package of your new food preparation known as 'Granose.'"

Note: This is the earliest document seen (Dec. 2013) that mentions a food named "Granose"; it is made by the Sanitarium Health Food Co., Battle Creek, Michigan.

"The Caramel Coffee manufactured by the Sanitarium Health Food Company has constantly grown in popularity as a substitute for those baneful drugs, tea and coffee, which, under the deceptive guise of 'cups which cheer but do not inebriate,' have made nervous wrecks of thousands upon thousands of our American women. Recent improvements which have been made in Caramel Coffee, by which its palatableness and convenience for use are increased, will still further add to its popularity as a tea and coffee substitute. It is agreeable to the taste, aromatic, and at the same time entirely wholesome."

© Copyright Soyinfo Center 2014

"Digestive Coffee is another beverage which the Sanitarium Health Food Co. are preparing to place upon the market. It is in some respects allied to Caramel Coffee. It has the added virtue that it not only does not interfere with digestion but actually aids the digestive process by assisting in the conversion of starch to sugar, which should take place in the stomach under the influence of saliva acting upon the starch."

"... Sanitarium Health Food Co. is not a money-making concern, but simply one branch of the great missionary project represented by the Battle Creek Sanitarium, which has for more than a quarter of a century, stood as a champion for the most advanced principles in relation to dietetic and temperance reform, as well as other reforms relating to human welfare. No person receives individual benefit from the labors of this institution, all the dividends being devoted to the advancement of the institution itself, one important feature of which is the care of the sick poor."

90. Newberry (J.R.) & Co. 1895. Newberry's. Ralstonites (Ad). *Los Angeles Times.* July 25. p. 7.
• ***Summary:*** "Just in, another large shipment of Ralston Foods from Battle Creek Sanitarium [Michigan], consisting of the following: Granose Flakes, Granola, Gluten Meal, Wheat Gofio, Graham Flour, Bran, Graham Crackers, Fruit Crackers, Zwieback, Gluten Wafers, Gluten Biscuits, Carbon Wafers, Whole Wheat Wafers, and Caramel Coffee."

Note 1. Why are Ralston Foods being shipped by and from Dr. Kellogg's Battle Creek Sanitarium? Where are these foods made and by which company? Did Dr. Kellogg have agreement with "Dr. Ralston" of "Ralston Health Club" fame to use the Ralston name in marketing Dr. Kellogg's foods?

Note 2. This is the 2nd earliest document seen (Dec. 2013) worldwide that mentions "Granose" and the earliest that mentions "Granose Flakes." The flakes appear to be made in Battle Creek, Michigan, and sold in Los Angeles.

91. Newberry's. 1895. Health is wealth (Ad). *Los Angeles Times.* Sept. 14. p. 7.
• ***Summary:*** "Another large shipment of Ralston Foods from The Battle Creek Sanitarium [Michigan]. These goods are prepared strictly on scientific principles, and all dyspeptically inclined, in fact, all general sufferers, are cordially invited to call and examine these goods. Granose Flakes is one of their latest and finest preparations. Zwieback and Caramel Coffee are having and immense run. Call for samples." Address: 216–218 S. Spring St.

92. Kellogg, John Harvey. 1895. Re: Work with digestion, nuts, and peanut butter. Letter to Ellen G. White, "Norfolk Villa," Granville, N.S.W., Australia, Oct. 10. 6 p. Typed, with signature.
• ***Summary:*** The letter, addressed to "Dear Sister White," states: "I have just finished the MS. for a new edition of Digestion and Dyspepsia. It is really a new book, well illustrated, and I hope will prove helpful to the work. Mrs. Kellogg has also finished the MS. for a small book on Cookery, in which careful attention has been given to the many suggestions which you and others have made with reference to a work for Australia.

"I entirely agree with you in the suggestion that cream and milk should not be too freely used. I think they are even worse than the limited use of butter as a seasoning, as there are so many people who have dilated stomachs and cannot digest them. We make very little use of cream or milk in our family, and use no butter whatever for seasoning, but use nuts instead. I have recently succeeded in making some very excellent preparations from nuts which take the place of butter entirely and are sweeter, more palatable, and more digestible. I find this plan is working very successfully both with the patients and with the helpers at the Dormitory."

Note 1. The preceding paragraph states that Dr. Kellogg was developing various nut butters, but he does not say from what kinds of nuts. However, about 3 months later, on 4 Nov. 1895, he applied for a U.S. patent (No. 567,901) for a "nut-butter" made from peanuts or almonds. This is the earliest document seen (Dec. 2013) concerning the work of John Harvey Kellogg or Seventh-day Adventists with nut butters, and probably with peanut butter.

Note 2. The letter also discusses the Medical Missionary College and its Seventh-day Adventist students: "I cannot describe to you what an encouragement it is to me to see these 40 young men and women devoting their lives to the grand work which the Lord has placed in our hands. I have done my best to inspire them with confidence and courage and to lay before them the importance of thorough consecration to the work." Dr. Kellogg is anxiously awaiting Ellen White's revised manuscript for Christian Temperance.

Note 3. The original letter is in the Ellen G. White Papers, Incoming papers, Ellen G. White Estate, Inc., General Conference of Seventh-day Adventists, 12501 Old Columbia Pike, Silver Spring, Maryland 20904-6600. Address: M.D., Superintendent, Battle Creek Sanitarium, Battle Creek, Michigan.

93. *Atlanta Constitution* (*Georgia*). 1895. Agricultural Department. Nov. 22. p. 9.
• ***Summary:*** The section titled "Diploma of honor or silver medals" contains entries for: "Sanitarium Health Food Company, Battle Creek, Michigan–Food preparations of various kinds.

The N.K. Fairbank Company, Chicago, Illinois–"Cottolene." Also two makers of olive oil from California (from Pomona, and National City).

94. Nash Bros. 1895. Health foods (Ad). *Los Angeles Times.* Dec. 6. p. 10.
• ***Summary:*** "Wheat gluten, Wheat Granola, Zwieback.

98. Kellogg, John H. 1896. Nut butter and nut meal. *Good Health* (*Battle Creek, Michigan*) 31(2):56-57. Feb. [1 ref]
• ***Summary:*** This article by Dr. Kellogg was reprinted from *Modern Medicine.* The most valuable products developed from nuts are nut butter, nut meal, and bromose. Gives ten "special advantages of nut butter over ordinary butter, tallow, lard, cottonseed oil, cocoanut butter, olive oil, suet, cream, and other materials used for shortening foods..." "1. Nut butter is a purely vegetable product, and hence free from the elements of disease which are often found to an extent dangerous to life in animal fats." "Bromose is a combination of nuts with digested starch. It is the vegetable analogue of malted milk and constitutes a perfect food."

"Nut butter, nut meal, and bromose are manufactured and sold at reasonable rates by the Sanitas Food Company, Battle Creek, Michigan." Almonds are mentioned; peanuts are not.

Note 1. This is the earliest document seen (May 2004) that mentions Sanitas Food Company.

Note 2. This is the earliest English-language document seen (Jan. 2005) that contains the term "Nut butter" used without referring to a specific type of nut.

Note 3. This is the earliest English-language document seen (Aug. 2013), that mentions Bromose, a dry non-dairy product resembling malted milk, made from nuts.

Note 4. This is the earliest document seen (Feb. 2005), that mentions a dairy alternative made by Seventh-day Adventists. Address: M.D., editor.

99. **Product Name:** Bromose (Dry Milklike Product Made from Malted Nuts–No Soy).
Manufacturer's Name: Sanitas Nut Food Co. from 1899. Renamed Kellogg Food Company in mid-1906, then Battle Creek Food Co. in the spring of 1921.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1896 February.
Ingredients: Mainly peanuts.
New Product–Documentation: Kellogg, John H. 1896. "Nut butter and nut meal." *Good Health* (Battle Creek, Michigan) 31(2):56-57. Feb. "Bromose is a combination of nuts with digested starch. It is the vegetable analogue of malted milk and constitutes a perfect food."

Sanitas Food Co. 1896. "New nut products" (Ad). *Chicago Vegetarian* 1(3):8. Nov. Four products are advertised: 2. Bromose. "Makes fat and blood. This is a product made by malting nuts, and is especially adapted to persons who cannot digest starch."

Ellen Goodell Smith. 1896. *The Fat of the Land and How to Live on it.* Page 195 contains a full-page ad for products made and sold by the Sanitas Food Company (Battle Creek, Michigan) titled "Pure Products of Nuts." These include Bromose.

Schwarz, Richard W. 1970. *John Harvey Kellogg, M.D.* Nashville, Tennessee: Southern Publishing Assoc. "During the decade following the appearance of peanut butter, Dr. Kellogg developed several other food products with a nut base. In 1896 he patented a product labeled 'Bromose,' which he claimed to be a vegetable equivalent of malted milk" (p. 120-21).

100. Woodward & Lothrop. 1896. We place on sale this day... (Ad). *Washington Post.* April 14. p. 7.
• ***Summary:*** The section titled "Health food exhibit" states: "We are now demonstrating the famous products of the Battle Creek Sanitarium Health Food Co., of Battle Creek, Michigan, and call special attention to the following perfect health foods: Granose, wheat flakes, per pkg.–15¢. Granola, cereal food, per pkg.–12¢. Caramel Cereal, wheat coffee, per pkg.–20¢. Whole wheat wafers, per pkg.–12¢. Graham crackers, sweetened or plain, per pkg.–12¢. Best fruit crackers, per pkg.–18¢. Whole wheat zwieback, per pkg.–12¢.

"Free samples served daily. Fifth floor, 11th st. building."

Note: This is the earliest document seen (Sept. 2006) that mentions "Caramel Cereal," an alternative to coffee made from roasted wheat. Address: 10th, 11th, and F Sts.

101. Battle Creek Sanitarium Health Food Co. 1896. Health foods (Ad). *Modern Medicine and Bacteriological Review* (*Battle Creek, Michigan*) 5(5):Unnumbered at front. May.
• ***Summary:*** Three products are advertised: 1. Granola. 2. Granose. 3. Caramel-Cereal. "Established 1876. Food cure for constipation."

Note 1. This is the 2nd earliest know U.S. company with the term "Health Food" (or "Health-Food") in the company name.

Note 2. This is the earliest document seen (Sept. 2006) that mentions the Battle Creek Sanitarium Health Food Co.

Note 3. This is the earliest document seen (June 2013) that mentions a food cure for constipation in connection with Battle Creek Sanitarium or Battle Creek Sanitarium Health Food Co. Address: Battle Creek, Michigan.

102. Kellogg, John Harvey. 1896. Bean cheese: Editorial. *Modern Medicine and Bacteriological Review* (*Battle Creek, Michigan*) 5(5):112. May.
• ***Summary:*** "A variety of cheese known as *tofu* is much used by the Japanese. It is made from the soja bean, which, after soaking for twelve hours in water, is ground to a uniform pulpy mass, then boiled for an hour in three times its quantity of water, and afterward filtered through a cloth. The milky liquid thus obtained is allowed to stand two or three days, when lactic acid develops, by which the vegetable casein is separated as in sour milk. Ten per cent. of concentrated brine is added by constant stirring, which causes a flocculent precipitate. This is separated by a cloth filter, and is formed into tablets by a slow pressure.

"*Tofu* is eaten in the form of soup and in many other ways. The solid nutriment which it contains amounts to only about ten per cent. Sometimes the greater part of the water is separated by freezing, and the block of frozen *tofu* afterward allowed to thaw in the sun. When prepared in this way, the proportion of solid nutriment, chiefly fat and vegetable casein, is nearly eighty per cent."

Note 1. This is the earliest document seen (Dec. 2013) in which Dr. John Harvey Kellogg clearly mentions a soyfood product–tofu.

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "frozen tofu" to refer to dried-frozen tofu. Address: M.D., Battle Creek Sanitarium, Michigan.

103. Newberry's. 1896. Just received: A large assortment of Health Foods from the Battle Creek Sanitarium (Ad). *Los Angeles Times.* July 21. p. 7.
• ***Summary:*** "Granose Flakes–25¢ package. Whole wheat biscuits–15¢ package. Granola–15¢ package. Aranola–15¢ package. Caromel coffee–15¢ package. And many others including Bromose." Address: 216 and 218 South Spring Street [Los Angeles, California].

104. **Product Name:** Nuttose (Meatlike or Cheeselike Product Made from Nuts–Mostly Peanuts, No Soy).
Manufacturer's Name: Battle Creek Sanitarium Bakery. Then Sanitas Nut Food Co. from 1899. Renamed Kellogg Food Company in mid-1906, then Battle Creek Food Co. in the spring of 1921.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1896 July.
Ingredients: Mainly peanuts.
New Product–Documentation: Dr. John Harvey Kellogg. 1896. *Good Health* (Battle Creek, Michigan) 31(7):195-96. July. "Nuttose: A new food for brain and muscle building." "It is so perfect a substitute for flesh food that in eating it one could readily imagine himself to be partaking of roast beef, dried beef, broiled chicken, or other meats, according to the mode of preparation..."

Note: Nuttose appears to be Dr. Kellogg's first commercial meatlike or cheeselike product, and the first commercial meatlike or cheeselike product introduced by any Caucasian in the Western world. It is also the earliest commercial meat alternative seen which is described as an alternative to chicken or poultry. Made solely from nuts, Nuttose contains no soy.

Ellen Goodell Smith. 1896. *The Fat of the Land and How to Live on it.* Page 195 contains a full-page ad for products made and sold by the Sanitas Food Company (Battle Creek, Michigan) titled "Pure Products of Nuts." These include Bromose and Nuttose.

Kellogg, John H. 1898. *Good Health.* Jan. p. 46. Nuttose is "a thoroughly cooked and sterilized product of nuts, chiefly peanuts. Nuttose is made in the form of a cheesy mass which readily dissolves in the digestive fluids, the nuts having been first completely disintegrated and then thoroughly cooked. It contains about the same amount of proteids as beefsteak, and, in addition, between twenty-five and thirty per cent of easily digestible nut fat in a state of natural emulsion."

Concerning the establishment and name of this company: Richard Schwarz in his excellent book *John Harvey Kellogg, M.D.* states: "Shortly after the production of Granola for patients at the sanitarium began in 1877, Dr. Kellogg organized the Sanitarium Food Company as a subsidiary of the Battle Creek Sanitarium. Operated as an adjunct to the sanitarium bakery, for more than a decade it marketed a variety of oatmeal, graham, and fruit crackers and whole-grain cooked cereals–all originally devised to provide variety in the menu of sanitarium patients." All products were made from whole grains without artificial additives, and all underwent prolonged high-temperature baking designed to dextrinize their starch. "By 1889 the Sanitarium Foods had become popular enough to warrant the establishment of a separate factory; Granola alone sold at the rate of two tons a

© Copyright Soyinfo Center 2014

week." But when Dr. Kellogg wanted to expand the business, other sanitarium doctors refused to vote the funds. So Dr. Kellogg launched the private Sanitas Food Company, relying heavily on his younger brother, Will Keith, who had served as his personal accountant and business manager since 1880. John Harvey's new flaked cereals and vegetable meats became the property of the Sanitas Company. In mid-1906 Dr. Kellogg decided to change Sanitas' corporate name to the Kellogg Food Company.

The Loma Linda University Library Heritage Room (Loma Linda, California) has a copy of a stock certificate for this company (White document file #497-h). On the certificate two company names appear: Sanitas Nut Food Co. and Sanitas Food Co.

Talk with Duff Stoltz of Battle Creek, Michigan. 2001. April 26. Duff believes that Nuttose probably contained peanuts as the main ingredient. Dr. Kellogg was making peanut butter by this time and his first U.S. patent (No. 567,901), issued on 15 Sept. 1896, describes the production of both peanut butter and peanut meal. He could well have used the latter to make Nuttose.

105. Kellogg, John Harvey. 1896. Nuttose: A new food for brain and muscle building. *Good Health* (*Battle Creek, Michigan*) 31(7):195-96. July.
• ***Summary:*** A disease known as "amylaceous dyspepsia" requires a diet which is entirely free of starch. "Quite a large proportion of persons suffering from this form of dyspepsia find so much relief from their distressing symptoms by the use of a flesh diet that they are naturally led to the conclusion that a vegetable diet does not agree with them..." To meet the needs of such patients, Dr. J.H. Kellogg has developed Nuttose, a most delicious and wholesome food, made solely from nuts. "It is so perfect a substitute for flesh food that in eating it one could readily imagine himself to be partaking of roast beef, dried beef, broiled chicken, or other meats, according to the mode of preparation."

Note 1. This is the earliest English-language document seen (Nov. 2003) that contains the term "substitute for flesh food" to refer to a meat alternative.

"Nuttose not only satisfies the craving for meat, but supplies the same kind of nutriment, and in a form which is digestible, and wholly free from the unwholesome properties of flesh food. Nuttose contains exactly the same proportion of proteids, or nitrogenous matter, as beefsteak, and in addition, thirty per cent. of fat, and a rich supply of the nerve- and bone-building salts. The invention of nuttose has thus removed one of the greatest obstacles which had stood in the way of the advancement of dietetic reform."

"Nuttose has the advantage over meats and most other foods in that it is very quickly digested, agrees with almost any stomach, can be made an exclusive article of diet if necessary, and contains all the elements required for complete nutrition... Nuttose is put up in one and one-half pound tins, hermetically sealed, and in this condition will keep for an indefinite length of time."

Note 2. Nuttose appears to be Dr. Kellogg's first meatlike or cheeselike product, and the first commercial meatlike or cheeselike product introduced by any Caucasian in the Western world. Though Nuttose was usually marketed as a substitute for meat, it was described as having "a consistency similar to brick cheese," and therefore could also be used as a cheese substitute.

Note 3. This is the earliest document seen (Oct. 2013) concerning a Western-style cheese alternative. It was a non-soy, non-dairy cheese alternative–although it did not melt. Address: M.D.

106. Kellogg, John Harvey. 1896. A doctor's chats with his patients: A new food for diabetics. *Good Health* (*Battle Creek, Michigan*) 31(8):248. Aug.
• ***Summary:*** The new food is Nuttose. "Until recently the almost universal prescription for persons suffering from diabetes has been a meat diet, it being well known that the leading symptom of this disease is the presence of sugar in the urine, which is aggravated by the use of starchy foods. Within the last few years, however, eminent French physicians have pointed out the fact that in the exclusive or free use of meat there is great danger of so filling the system with a class of poisons which abound in meat, and are known as leucomains and ptomains, as to produce death by a diabetic coma...

"Gluten derived from wheat, the nitrogenous principle of Soja bean, and the casein of milk, have been substituted for meats with advantage. But the patient tires of these substances, which, by their means of production, are necessarily deprived of their natural flavors, and consequently do not appeal to the palate in an appetizing way.

"As a result of a long series of expensive experiments and investigations, it has been found possible to prepare from nuts a food which answers perfectly the requirements of a person suffering from diabetes. This food, known as nuttose, closely resembles meat, both in its appearance and flavor. Its [percentage] composition is as follows:–Proteids, 15. Vegetable fat, 23.3, with a very small proportion of soluble starch and dextrin. It also contains an abundance of the salts, phosphates, etc., which accompany both vegetable and animal proteids, and hence is a perfect food. Nuttose is furnished in hermetically sealed cans, in which it will keep indefinitely."

Note: This is the earliest document seen (Oct. 2004), by or about Dr. John Harvey Kellogg, that mentions the soy bean [actually "Soja bean"]. It is also the earliest soy-related article seen in Dr. Kellogg's periodical *Good Health.* Dr. Kellogg was born in 1852. Address: M.D., Superintendent of the Battle Creek (Michigan) Sanitarium.

107. Kellogg, John H. 1896. Food compound. *U.S. Patent* 0,567,901. Sept. 15. 1 p. Application filed 4 Nov. 1895.
• ***Summary:*** This is a patent for nut-butter, preferably peanut butter or almond butter; it is made by boiling rather than roasting the nuts. "In carrying out the invention the kernels of some form of edible nuts, preferably peanuts or almonds, are blanched and then thoroughly cooked, preferably by boiling in water for a period of four to six hours, after which they require to be dried. This cooked product is disintegrated by some suitable means, and preferably by passing it between rolls or rollers, and thus subjecting it to heavy pressure, whereby the mass is caused to separate into two products, one being a fine and comparatively dry and nearly white nutmeal, while the other is moist, pasty, adhesive, and brown, which for distinction is termed 'butter' or 'paste'... One or both of such nut products, the nut-meal or nut-butter, but preferably the former, is mixed with diastatically digested starch of wheat, barley, oats, corn, or some analogous cereal."

"What I claim is–An improved article of manufacture, the alimentary product composed of completely-digested starch, completely-emulsified vegetable oil such as described, and thoroughly-cooked and finely-divided vegetable proteids derived from nuts, as specified."

Note 1. This is the 2nd earliest document seen (June 2008) that clearly concerns peanut butter in the United States, or that clearly links Seventh-day Adventists with the invention of peanut butter. It is also the earliest patent issued to Dr. John Harvey Kellogg that mentions peanuts.

Note 2. This is also the earliest document seen (June 2003) that contains the term "nut-butter" (or "nut butter"). Address: M.D., Battle Creek, Calhoun Co., Michigan.

108. *Chicago Daily Tribune.* 1896. Live on a frugal diet. Development of a real vegetarian community in Chicago. As a rule Chicago people eat little meat–Who some of the vegetarians are–What they claim for their practice–What a strict food reform disciple considers a square meal–And. too, a vegetarian place of worship. Sept. 20. p. 47.
• ***Summary:*** Notwithstanding the nearness and business value of the Stock-Yards, people in Chicago (in general) do not eat much meat. "Vegetarians we have in large numbers, fruitarians, grainarians, nutarians–every kind of food- 'arians,' in fact. And some of the city's brightest and best known people belong to one or more of these peculiar divisions of the community." Brief biographical sketches (with portrait illustrations of the first two) are given of:

(1) J. Howard Moore, a recent student at the University of Chicago, who has just been offered the chair of sociology at the Wisconsin State University. Last year Moore won first honors at the Prohibition oratorical contest. He first became a vegetarian 10 years ago for ethical reasons, and "claims that he works better, thinks better, and is better in all ways..." (2) Albert J. Snyder, founder of the Chicago Vegetarian Society, came into his new mode of thought at an early age because he always disliked ordinary food and knew no better than a vegetarian diet. He never drinks coffee, tea, or other stimulants. (3) Miss Caroline Kofel, a native of Weiningen, Zurich, Switzerland, and now a teacher in the Chicago public schools. She exhibited her enamel china painting at the World's Fair. (4) "Frances L. Dusenberry, the Chicago publisher, and editor of the Woman's News, is also a food reformer and energetic in her praise of the good effects of her theories and practice. Miss Dusenberry eats neither pepper, salt, or any other condiments..."

Loise Foskette, the woman lawyer, is a member of the Food Reform Society; so are Addison Blakely, Clarence S, Darrow, the well-known Socialist;... Luther E. Ellison, the lawyer;..."

The Rev. Henry Clubb, an old army man and the pastor of a vegetarian church in Philadelphia [Pennsylvania], "is a good example of the force and truth of his own doctrines; at 70 years of age he is still hale and vigorous." A Chicago vegetarian newspaper will be launched within a few weeks and a vegetarian home [for the poor] has been established lately. Of the many types of vegetarians, some choose the Battle Creek [Michigan] preparations and some belong to the Ralstonite faction.

"The only thing upon which all of these dietists agree is upon the abstinence from meat."

109. *Chicago Vegetarian.* 1896. Chicago Sanitarium, 28 College Place (Ad). 1(1):3. Sept.
• ***Summary:*** "This institution is a branch of the Battle Creek Sanitarium [of Michigan]. It is favorably located near Lake Michigan... Facilities are appointed for Hydro-Therapy, Massage, Electricity, Swedish Movements, and other rational methods of treatment. Trained nurses supplied on request. J.D. Wilson, manager. Drs. E.H. Matthewson and Mary A. Wild, resident physicians."

110. E.E.K. [Ella Eaton Kellogg]. 1896. Nuttose, and some recipes for its use. *Good Health* (*Battle Creek, Michigan*) 31(9):275. Sept.
• ***Summary:*** The author is Dr. John Harvey Kellogg's wife. Nuttose "is a pure product of nuts. It is intended as a substitute for meat, which it completely replaces dietetically..." Six brief recipes are given. Soy is not mentioned.

Note: This is the earliest English-language document seen (Nov. 2003) that contains the term "substitute for meat" (or "substitute for meats,"with any combination of quotation marks).

111. Kellogg, John Harvey. 1896. Cow's milk a cause of disease: Editorial. *Modern Medicine and Bacteriological Review* (*Battle Creek, Michigan*) 5(9):220-23. Sept.
• ***Summary:*** Contents: Introduction. Milk a natural food for

© Copyright Soyinfo Center 2014

infants, but not for adults. Milk the cause of biliousness. Milk the cause of nervous headache, or migraine. Vegetable substitutes for milk.

"Cow's milk differs very materially from mother's milk, containing less sugar, more fat, and four times as much casein [protein] as mother's milk. The casein in cow's milk also differs from that in mother's milk in that it forms large, firm, tough curds, whereas those formed in mother's milk are small, soft, and friable, crumbling easily into small particles under the action of the stomach.

"It will thus be seen that that popular notion that since milk is the natural food of infants, cow's milk must be the most wholesome and easily digested of all foods for adults, is without proper foundation. When pure cow's milk is fed to infants, the child not infrequently vomits fragments of decomposing curds, which, having remained many hours in the stomach, are still hard, tough, and leathery. Every nurse is also familiar with the fact that the bowel discharges of children fed upon cow's milk often contain large quantities of tough, undigested curds."

"The writer has become thoroughly convinced that there are few persons who do not suffer sooner or later from the long-continued use of cow's milk."

"Vegetable substitutes for milk.–Some years ago Sir B.W. Richardson, the eminent London physician, prophesied that the time would come when milk, as well as all other forms of animal food, would be derived directly from the vegetable kingdom... The milk of the cocoanut furnishes a satisfactory substitute for cow's milk to the teeming millions of many tropical countries..." Most nuts, when crushed and mixed with water, give a solution "closely resembling milk... By the addition of a proper amount of sugar, preferably levulose or maltose, a very perfect substitute for milk may be produced. Such a preparation may be made from almonds..."

"In the experiments which we have made with nut milk we find it has a delicate, delightful flavor, with a suggestion of its nutty origin, but resembles cow's milk very closely indeed... Added to cow's milk in proper proportion, lac vegetal, or nut cream, prevents the formation of hard curds in the stomach, as when the cow's milk is used alone. This renders it an exceedingly valuable food for infants–vastly superior to any infant's food which has been devised."

"Nuts are unquestionably the vegetable analogue of meat and other animal foods, not only containing all the food elements to be found in animal products, but in finer and more digestible form, more delicately flavored, and wholly free from deleterious elements which abound in meat..."

Note 1. This is the earliest English-language document seen (Feb. 2012) that uses the word "vegetal" to refer to a plant-based or pure vegetarian diet. *Merriam-Webster's Collegiate Dictionary* (1998) defines vegetal (derived from the Middle Latin *vegetare*, meaning to grow), a word first used in English in the 15th century, to mean: "1: vegetable. 2. Vegetative..."

Note 2. This is earliest English-language document seen (Aug. 2013) that contains the term "nut milk" (or "nut milks" or "nut-milk") or the term "nut cream" (or "nut creams" or "nut-cream") or the term "lac vegetal" (or "lac-vegetal"). Address: M.D., Battle Creek, Michigan.

112. *Chicago Daily Tribune.* 1896. Homeless fed on a vegetable diet: Chicago's hygienic lodging-house and vegetarian restaurant where poor may live for 10 cents a day. Oct. 11. p. 46.

• ***Summary:*** About the work of Dr. John Harvey Kellogg and workers from the Battle Creek Sanitarium, Michigan. "For many years the dietists of Chicago have mourned that no such thing as a vegetarian restaurant has ever existed in Chicago, save for the briefest possible spaces of time. For years they have predicted the immense and colossal success of a venture in this direction." But now a "food apostle has appeared in Chicago..." A bowl of hygienic soup costs 2 cents and a night at the lodging house 10 cents. He "can always have a choice of cereals, and he may always decide between zwieback and toasted crackers. And for the beverages, the hygienist may have either caramel coffee or the latest sanitarium substitute for the real article." Practically all may be purchased for 1-3 cents "A five-cent order would expose a man to the charge of extravagance... Food values are carefully studied at the hygienic lunch-counter."

"The place at which all this missionary work is located at No. 42 Custom-House place,... in a building which was once a church and belonged to a colored congregation... Over 300 take their meals at the lunch-counter and nearly 175 sleep in the dormitories every night. A bed, together with use of the laundry, reading-room, baths, and medical attendance, if necessary, costs a dime."

"Work is furnished by the rug-making department upstairs" so that a man who is absolutely penniless may keep himself going. The lunch counter with its missionary diet is the strong point of the new organization. "No profits are desired, the food used being that of sanitarium manufacture almost exclusively... Every one of the 800 regular customers–who belong to nearly all grades of society–can get a plentiful and wholesome meal for 10 cents... All of which goes to show that the food mission is at least appreciated, and that the dream of the Chicago vegetarian, a restaurant devoted to non-meat eaters, is possibly not far from realization."

113. Newton, Robertson & Co. 1896. Battle Creek Sanitarium Health Foods (Ad). *Hartford Daily Courant* (*Connecticut*). Oct. 13. p. 12.

• ***Summary:*** "The great American disorder is Indigestion and its allied troubles. If you are troubled with dyspepsia in any form, ask about these Health Foods. Eat Granola, Granose. Drink Caramel Cereal. These goods are being used daily by

© Copyright Soyinfo Center 2014

thousands upon thousands of invalids with great success. The most delicate stomach can take these Cereals with relish and without distress. Ask about Health Food Goods..."

114. Lacey, D. 1896. Letter: Vegetarian missionaries. *Vegetarian Messenger* (*Manchester, England*). Oct. p. 344.
• ***Summary:*** Urges with Mrs. Pike (see *Vegetarian Messenger,* June 1896, p. 190) that members of the Vegetarian Society should not contribute to the support of missionaries to Indian, Ceylon, or Japan who are "flesh-eaters." "I would say cease to contribute to flesh-eating missionaries sent to pure living people such as Hindoos, Cingallis or Japanese." There "is at least one sect which, regarding their bodies as the temple of the Holy Spirit, refuse to defile themselves with flesh food; who also abstain from all fermented liquors, strong drinks and stimulants–even going so far as to forego the use of tea and coffee. This singularly pure sect... rejoices in the name of Seventh-Day Adventists." They "believe in and are looking forward to the Second Advent,... and they keep holy the seventh day as set forth in the Fourth Commandment of the Decalogue. To this sect then any and all vegetarians might, with a good and clear conscience, contribute of their abundance..." Address: A vegetarian and Seventh Day Advestist, Beulah, Cooranbong, New South Wales.

115. Newberry's. 1896. Caramel Cereal (Ad). *Los Angeles Times.* Nov. 11. p. 7.
• ***Summary:*** "Is a perfect substitute for Coffee. If you are nervous, stop drinking Tea and Coffee, and use Caramel Cereal: It is the greatest health drink of the age. Don't be misled to take something else. There is only one Caramel Cereal, and that is made by the Battle Creek Sanitarium Health Food Co., of Battle Creek, Michigan. Sold at 15¢. package." Address: 216 and 218 S. Spring Street.

116. Battle Creek Sanitarium Health Food Co. 1896. Foods for health (Ad). *Chicago Vegetarian* 1(3):8. Nov.
• ***Summary:*** Three products are advertised: 1. Granola. 2. Granose (a flaked cereal food). 3. Caramel-Cereal. Address: 65 Washington St., Battle Creek, Michigan.

117. Sanitas Food Co. 1896. New nut products (Ad). *Chicago Vegetarian* 1(3):8. Nov.
• ***Summary:*** Four products are advertised: 1. Nuttose. Has "the consistency of cheese, having somewhat the appearance and flavor of cold roast mutton." Prepare like meats. 2. "Bromose. Makes fat and blood. This is a product made by malting nuts, and is especially adapted to persons who cannot digest starch." 3. "Nut Butter. A substitute for ordinary butter, presenting fat in the form of a perfect emulsion; combined with water, forms a delicious cream. Used for shortening of all kinds. A pure product of nuts; can be eaten by those who cannot eat ordinary butter." [Note 1. This may well be peanut butter.] 4. "Nut Cream. A delicate, delicious nut preparation, which, properly diluted, furnishes a delicately-flavored cream or milk. It resembles milk in appearance." Note 2. This is probably made from peanuts and/or almonds.

"Send 25 cents in stamps for samples. Circulars free on application."

Note 3. This is the earliest English-language document seen (Aug. 2013) that contains the term "Nut Cream." Address: 65 Washington St., Battle Creek, Michigan.

118. Newberry's. 1896. Just arrived: Another shipment of Health Foods in today from Battle Creek (Ad). *Los Angeles Times.* Dec. 3. p. 7.
• ***Summary:*** "Bromose, Nuttose, Almond Meal, Granose, Caramel Cereal, Granose Flakes and Avanola." Address: 216 and 218 South Spring Street [Los Angeles, California].

119. Allen, James Madison. 1896. Figs or pigs? Fruit or brute? Shall we eat flesh? A comprehensive statement of the principal reasons for entertaining the vegetarian or fruitarian principle, with numerous citations from eminent authorities. Springfield, Missouri: J.M. and M.T. Allen. 39 p. 20 cm. [55 ref]
• ***Summary:*** This book (as of May 2011 digitized on the Web) strongly promotes a diet based on plant foods only [i.e., vegan diet] in a non-religious way.

Contents: Preliminary observations. 1. Anatomical. 2. Physiological and hygienical. 3. Pathological. 4. Psychological. 5. Phrenological and moral. 6. Chemical. 7. Agricultural. 8. Economical and laborial. 9. Gustatorial and sentimental. 10. Intuitional. 11. Historical. 12. Eventual.

Each of the 12 sections begins with an overview followed by 4-6 relevant quotations. The author of most quotations is given but, unfortunately, the source document is not. Many of the authors–such as Bronson Alcott, Baron Cuvier, Benjamin Franklin, Dr. John Harvey Kellogg, Linnaeus (naturalist), Plutarch, Shelley (poet), Henry David Thoreau, Dr. R.T. Trall–are still well known. The text also includes several long poems: "Civilized Cannibals," by J.O. Barrett (p. 12). "Song of the Vegetarian," by Arcadian (p. 27). Untitled, by Shelley (p. 36). "Vegetarian Life," by Emily M. Guthrie (p. 38-39).

Concerning alcohol and temperance:

"Following the disuse of animal food, it will be found that alcoholic drinks, tobacco, morphine and the like (including all drug medicines) will also cease to be used.

"'In the same line of argument lies the question of intemperance. Temperance advocates can talk until 'doomsday,' but the drinking habit will never be obliterated so long as we partake of flesh diet. A heavy drinker is invariably a heavy meat eater. The unfortunate drunkard never dreams that the feverish, poisonous germs gnawing at his vitals, first found their lodgement out of the flesh that had been killed.'

© Copyright Soyinfo Center 2014

Dr. Ditson" (p. 16).

"Thoreau observes: 'I have found repeatedly of late years, that I cannot fish without falling a little in self respect. I have tried it again and again. I have skill at it; but always when I have done, I feel that it would have been better if I had not fished'" (p. 17)

Concerning milk: "No food should be used which necessitates slaughter. Even animal milk and its products, and eggs, would better be discarded; and preparations of oat milk, etc., the sap of the South American 'cow tree,' nuts, vegetable oils, etc., substituted" (Preliminary observations, p. 2).

"The writer has abstained from flesh about forty-five years, having become convinced when a lad of fourteen or fifteen, by reading, observation, reflection and instinct, that the use of animal food tends to degrade and brutalize the human race, and keep it in subjection to the animal appetites and passions. That it is unnecessary to either health, strength or longevity, witness the ox, horse, camel, elephant, reindeer, etc., who derive their immense strength and endurance from herbage alone; witness the ancient Pythagoreans and Essenes; the great mass of the ancient Egyptians and Persians, whose physical, mental and moral superiority are well known facts of history; the Brahmins, who eschew milk and its products and eggs, as well as flesh, yet are among the most healthy, vigorous and long-lived of their race; the great bulk of the four hundred and fifty millions of Chinese, who subsist mainly upon rice and use neither butter, cheese nor milk; the negroes of Brazil, who subsist almost wholly upon farinha or mandioca [a type of cassava] flour, and yet endure the hardest labor; the Mexican Indians, according to Humboldt; the Society of Bible Christians, whose creed embraced vegetarianism, and one of whose American members was reputed to be the strongest man in Philadelphia; the bulk of the hardiest and hardest laboring class in Scotland and Ireland, whose chief reliance is upon oatmeal and potatoes; the peasantry of France, who live mostly upon bread, and the common people of Spain, who live principally upon bread and onions;... (p. 31-32).

"John Whitcomb, whose health was so good at one hundred and four years that he rose and bathed himself in cold water, even in mid-winter–whose wounds would heal like those of a child–who drank only water for eighty years, and subsisted for thirty years on bread and milk chiefly; Captain Ross, the celebrated navigator, who with his company spent the winter of 1830-31 above 70º North latitude, without beds or bed-clothing, *or animal food*, with no evidence of any suffering from the *mere disuse of flesh and fish;...* (p. 35).

A poem titled "Vegetarian Life," by Emily M. Guthrie (p. 38-39) begins:

"No skinning of eels, no chopping of hash,
"No beating of steak with rude clatter and crash;
"No frying of pork with its frizzling sound,
"In which tones more pleasant are haplessly drowned;
"No grease on the cloth and no saving of swill,
"With loathsome diseases doomed porkers to fill;
"No spoiling of meats, and no fear of the flies;
"They harmlessly buzz o'er the food of the wise;
"No stewing of oysters (the dull, sluggish things;)
"Nor turtles nor fishes–naught that bites nor that stings;
"No whiskey, no beer, no brandy or wine,
"O'er which men grow noisy, or prone as the swine;
"The sweet singing-bird is not stayed in her flight
"To glut the gross maw of some death-dealing wight [creature] -
"Nor lamb, nor the ox, nor sensual swine
"Unfeelingly slain for the human canine.
"(There's no milking of cows to rob the poor calves,
"No grumbling, no hypo, no living by halves;
"No churning, no butter, no making of cheese,
"But oh, we live quiet and nice as you please.)" (p. 38-39). Address: 233 Commercial St., Springfield, Missouri.

120. Kellogg, Ella Ervilla Eaton. 1896. Every-day dishes and every-day work. Battle Creek, Michigan: Modern Medicine Publishing Co. 184 p. Index. 24 cm.

• ***Summary:*** The wife of the famous Dr. John Harvey Kellogg discusses her system of meatless cookery–though the term "vegetarian" is not used. She lived 1852-1920. Contents: Eight pages of ads (for books, foods, and medical instruments/devices). Title page. Cereals (incl. Graham grits, Graham apple mush). Preface. Introduction. Cereals (incl. Graham grits, Graham meal). Macaroni. Fermented or yeast bread (incl. whole-wheat bread, Graham or wheat-meal bread). Unfermented or aerated bread (incl. Graham puffs, Granola gems). Fruit (cooking, canning). The leguminous seeds (incl. peas, beans, lima beans, lentils, cooked peanuts). Vegetables. Soups (incl. without milk, with milk and cream; Bran stock). Eggs (incl. cream). Desserts. Pastry. Cake. Toasts. The Battle Creek Sanitarium Health Food Company's products (discusses and contains recipes using Granola, Granose, Crystal Wheat, gluten {13 recipes}, nut butter and nut meal, Nuttose, zwieback, and caramel cereal, p. 139-52). Hints about every-day work. Every-day bills of fare.

The eight ads on unnumbered pages in the front of the book are for: (1) "Caramel-Cereal. A most delicious substitute for the Coffee Bean, and contains none of its harmful properties... Caramel-Cereal has been used for over twenty years at the Battle Creek Sanitarium, and the demand has increased daily... Try it, and you will always use it... Manufactured by Battle Creek Sanitarium Health Food Co." (2) Battle Creek (Mich.) Sanitarium Health Foods. "Eat Granola, Granose. Drink Caramel-Cereal." (3) Charcoal Tablets: Antiseptic... Absorbent. Sanitas Food Company, Battle Creek. (4) Almond Meal, from Sanitas Food Co. (5) Lac Vegetal or Nut Cream: Prepared from the choicest nuts. A perfect substitute for cow's milk. Sanitas Food Co. (6)

© Copyright Soyinfo Center 2014

Bromose: Makes fat and blood. "Consists of cereals and nuts in which the starch is completely digested... Unequalled as a tissue builder... Gain in flesh." Sanitas Food Co. (7) The natural abdominal supporter. Modern Medicine Co., Battle Creek. (8) *The Stomach: Its Disorders and How to Cure Them,* by J.H. Kellogg, M.D. Modern Medicine Publishing Co.

A table (p. 7) shows the "nutritive value of some common food substances," including sweet almonds, peanuts, five legumes, milk, and six types of meat and poultry, and eggs. Values/columns are given for: Water, albuminous elements, starch, grape sugar, free fat, salts, cellulose, proportion of carbonaceous to nitrogenous material, total nutritive value.

The chapters on cereals and breads include Graham Grits, Wheat-Meal or Graham Mush, whole-wheat breads, Graham breads, Graham Puffs, etc.–but most breads are made with white flour and milk–and fermented. The chapter on leguminous seeds contains two recipes for blanched and boiled peanuts (p. 76); soy beans are not mentioned. Milk, cream, eggs, and sugar are used in moderation throughout the book. There is an entire chapter titled "Eggs." Desserts are generally sweetened with sugar. Up to 1 cup of sugar is used in some recipes (p. 117), but fruits are often used instead; milk or cream are also widely used in desserts. The chapter on "Pastries" (mostly pies) begins by discussing the dietetic evils of pastries; recipes calls for less fat than typical recipes.

The section on "Nut Butter and Nut Meal" (p. 147-49) notes that these two foods "have been prepared as substitutes for butter and cream," which cause many persons to "suffer from biliousness, nervous and sick-headache, and various forms of indigestion." Ten recipes are given. For example (p. 149): "Nut Butter Sandwiches.–Spread slices of thinly cut graham bread with nut butter, and then with chopped dates or figs..." Note 1. Although "peanut butter" is not mentioned, this is almost certainly a peanut butter sandwich. Yet this book contains no recipe for making peanut butter at home.

The section titled "Nuttose" (p. 149-50) states: "This is a pure product of nuts. It is intended as a substitute for meat, which it completely replaces dietetically, having nearly twice the nutritive value, while it furnishes the same elements and in a form much more digestible, and wholly free from the objectionable features of meat. Nuttose may be prepared and served in the same manner as the various forms of flesh food. It so perfectly resembles meat in appearance and flavor, as well as nutritive properties, that many persons find it difficult to distinguish the difference. 7 recipes are given.

The 1¼ page discussion of Zwieback (p. 151) states: "Any one who has ever made a visit to Carlsbad [Karlsbad or Karlovy Vary in today's Czech Republic] will remember the delicious zwieback which occupies so conspicuous a place in the bill of fare... At Carlsbad, zwieback is made by exposing the sour 'schwartz brodt' to moderate heat for several hours until the starch becomes to dextrin and dextrose. For years the Sanitarium Health Food Company has manufactured for the use of the numerous patrons of the Medical and Surgical Sanitarium, Battle Creek, Mich., a superior quality of zwieback, which is not only more palatable but much more wholesome than the original article of Carlsbad manufacture... With milk or cream it is a real delicacy, as toothsome as it is nourishing and easy of digestion. Zwieback is supplied in three grades as follows:–No. 1. Made of graham flour (Sanitarium brand), containing fifteen per cent. of gluten... For recipes, see pages 145 to 138."

Note 2. This is the earliest document seen (July 2004) that contains the word "zwieback" (pronounced SWEE-bak in English). The word is also spelled like this in German, but with a capital "Z" and pronounced TSVEE-bak. The earliest occurrence of the word seen by *Merriam-Webster's Collegiate Dictionary* is 14 March 1894, *New York Weekly Tribune* (p. 5, col. 4). "These Zweiback will keep for a long time if put in a dry place." Note spelling and capitalization!

The eight ads on unnumbered pages in the back of the book are for: (1) Health Foods–Granola, a health food, an invalid food. From Battle Creek Sanitarium Health Food Co. Established 1876. "One pound more than equals three pounds of best beef." (2) Health Foods–Granose, Granola, Caramel-Cereal, Battle Creek Sanitarium Breakfast Food, Germless Oats, Germless Wheat Grits, Germless Corn Grits, Crystal Wheat, gluten preparations, diabetic foods. Send for a catalogue and price list to Battle Creek Sanitarium Health Food Co. (3) "Almond Butter–A substitute for ordinary butter. Presenting fat in the form of a perfect emulsion. Combined with water it forms a delicious cream. Used for shortening of all kinds. A pure product of nuts; can be eaten by those who cannot eat ordinary butter. Send five cents for sample. From: Sanitas Food Co., Battle Creek. (4) "Nuttose–Pure product of nuts. Perfect substitute for all flesh foods. Makes fat and blood. In their natural state nuts are difficult to digest, and cannot be eaten by many persons... Nuttose has the consistency of cheese, and much the consistency of cold roast mutton, and may be eaten cold, stewed, cooked with vegetables or other foods, made into gravies and other preparations in the same manner as meat..." "Send ten cents for a sample can... Ready to eat at once. Keeps indefinitely." From: Sanitas Food Co., Battle Creek.

(5) *Science in the Kitchen,* by Mrs. E.E. Kellogg. Published by Modern Medicine Publishing Co., 65 Washington St., Battle Creek, Michigan. (6) Universal Mercurial Dynamometer, developed by Dr. Kellogg for testing the strength of individual groups of muscles in the human body. From: Sanitary and Electrical Supply Co., Battle Creek. (7) *Home Hand-Book,* by Dr. J.H. Kellogg. Published by Modern Medicine Publishing Co. Over 1,700 pages and 500+ engravings. Describes the best means of preserving and regaining health. "Science in the Kitchen," etc., Battle Creek, Michigan.

121. Smith, Ellen Goodell. 1896. The fat of the land and how to live on it. Special chapters on nuts and vegetable oils, and how to use them in cooking; milk; bakeries; feeding infants and various other subjects relating to the problem. Amherst, Massachusetts: Press of Carpenter & Morehouse. 251 + [12] p. Portrait. Illust. Index. 20 cm. At top of title page: "A practical cook and text book for general use."

• ***Summary:*** A remarkable and wholistic vegetarian (actually vegan) cookbook by a medical doctor (M.D.). A photo (frontispiece), facing the title page, shows a portrait of Dr. Ellen Smith. Dedication: "To the millions of thinkers who think in new directions, and to other millions who do not stop to think whether they should 'live to eat' or eat to live' this book is dedicated." Facing the table of contents are three quotations from Buddhist and Christian scriptures on the importance of not killing.

The Preface begins: "This book *is* because of the agitation and discussion upon the various phases of the food question. The title indicates its character to be vegetarian; this word however is a misnomer, but as none better has yet been coined, we will simply state that we are vegetarians because we think nature designed us to subsist on the 'fat of the land,' and not on the flesh and blood of beasts, or of any living, sentient creature."

"To be a health and dietetic reformer in the early days of this movement meant much sacrifice and often personal abuse" (p. 10).

"With no desire to set aside the work of the scientists, we accord 'honor to whom honor is due,' and may success attend their gigantic efforts, that seem to be heroically directed toward healing, protecting, and preparing the animal world and their products for human consumption" (p. 11).

This chapter, after listing many of America's major problems, concludes: "From a vegetarian standpoint, these unhealthful conditions of mind and body are largely propagated, nourished and developed and developed from the never ending supply of slaughtered flesh and its stimulating–not nourishing–accompaniments. The moral and physical health of millions is thus undermined, and from such material is created generation after generation of imperfect human beings;..." (p. 11).

Chapter 5, titled "Milk, cream, butter, etc." begins: "Milk, cream, butter, salt and sugar are admissible in hygienic and vegetarian dietary, but in most of the recipes here given are not included... [but] in all cases salt can be added if desired, or milk substituted for water."

Chapter 6, titled "Vegetable oils," notes: "Those at present extensively used for culinary purposes are obtained from the olive, cocoanut and cotton seed." It is almost impossible to obtain olive oil unadulterated. "The *American Analyst* tells us that 'Two-thirds of the olive oil sold in the markets of the world is born in the cotton fields of the southern states" (p. 57). "At Manheim, Germany, cocoanuts have for many years been made into butter for general culinary use... [It] keeps indefinitely and even when exposed to the air *will not become rancid* like animal fat. This butter is also manufactured in England... It is now manufactured in America by the Pure Food Co., Chicago, Illinois" (p. 58). Chapter 6 concludes prophetically: "One need not be a vegetarian or even a hygienist to use these vegetable oils, for these are thousands of families using them, who also use animal food, finding economy in health and purse by so doing." Note 1. This is the earliest document seen (March 2005) that contains the term "Pure Food," probably in connection with the growing "pure food movement" in the USA

Chapter 10, titled "Nuts, their culture and use in cooking," (p. 141-56) discusses almonds (now largely grown in California), walnuts, pecans, Brazil nuts, and peanuts. Peanut oil is largely exported to foreign countries and doubtless returns, with olive oil, under the name of "Pure Olive Oil." "It is said that America uses 4,000,000 bushels of peanuts yearly at a cost to the consumers of $10,000,000. Very rarely do we find these nuts on the table as an article of food, but they are consumed between meals by everybody, from the shoeless and hatless street waif to the gray-haired millionaire." "Unbelievers tell us that a vegetable diet lacks proteids or tissue building elements, and hence

© Copyright Soyinfo Center 2014

that vegetarians are not properly nourished. Science has demonstrated that proteids are abundant in the grains," nuts, and other foods (p. 148-49). The section titled "Nuts as food" (p. 149-53) begins: "Nuts are not only superior to flesh as an article of diet, but may be used in many forms of cookery, either whole, chopped, grated, crushed or ground into a paste or meal." "The pine nut, sold under the name of pegnolia [pignolia], is an excellent nut for cooking." Two sub-sections are titled "Nut substitute for milk" (using cocoanuts, pecans, peanuts, Brazil nuts, etc.) and "Nut butter" (one of the latest novelties). There are recipes for sandwiches with "almond nut butter," and "Peanut sandwiches" spread with a "form of nut butter which flavors so strongly of peanuts that it will make an excellent substitute for dairy butter to spread the bread and hold the crushed nuts in place." Note 2. This book contains no recipe for making peanut butter at home.

Chapter 11, "Salads," contains a long section titled "Japan Soja" (p. 164) which clearly refers to Japanese soy sauce: "A jar of the extract of Japan soja was received too late for careful testing or experiment. But coming from a German vegetarian laboratory [Dr. Lahmann's] and said to be free from injurious substances, it may prove to be a useful addition to the table. Following is a description of the Soy-bean from which it is made.

'Japan Soja, a substitute for flesh meat extracts such as Bovinine, etc. etc. The soy-bean or pea is a small erect herb, ("Glycine soja," or "soja hispida") of the bean family, "Papilionacees" of India and China, cultivated for its seeds; composed of 38% proteids, 17 to 20% fat, 5% cellulose [fiber] and 4% ashes. The hygienist loses nothing by declining flesh meat extracts of any sort, but substantially gains by adopting Japan Soja, a safe and far more palatable flavoring for various dishes. It may not only be so employed in the preparation of dishes, prior to serving, but subsequently and similarly to Worcestershire sauce, etc.'

The odor and flavor of this preparation is very delicate and may readily supply a need in the dietary of those who are making a change from an animal to a vegetable diet."

The next (and last) paragraph of Chapter 11 (p. 165) notes that commercial samples of "Bromose and nut butter... manufactured in vegetarian laboratories and guaranteed free from animal fat" were "received at 'the eleventh hour,' too late for critical experiment... Crushed nuts, nut butter and nut meal of home make were used in all preceding recipes containing nuts."

Chapter 12, titled "Condiments and seasonings" (p. 167-71) argues against the use of salt, spices (including pepper, mustard, ginger, etc.), and commercial condiments. "Salt destroys natural flavor and gives its own flavor to all food... Salt also induces unnatural thirst,..." Instead, why not grow and use "sweet herbs" and "aromatic seeds." "Why may not sweet marjoram, sweet basil, rosemary and lavender, lemon verbena, rose and geranium leaves lend their exquisite flavors to our food? Thyme, parsley, sage and mints of various kinds..." Note 3. This general attitude may explain why Japanese soy sauce, a commercial condiment, was not considered a condiment and included in this chapter.

A "Directory" (p. 246) lists 13 sources of "pure food products" including: "Health foods: Dr. J.H. Kellogg, Battle Creek, Michigan. Nut preparations: Sanitas Food Co., Battle Creek, Michigan... Vegetable milk, etc.: Hygienic Supply Co., 203-05 Park avenue, Baltimore, Maryland... Readshaw's Forest Mills Graham Flour (Original) and cereals, Dansville, New York."

A full-page ad (p. 255) describes products made and sold by the Sanitas Food Company (Battle Creek, Michigan) titled "Pure Products of Nuts." These include Bromose, Nuttose, Nut-Butter [probably peanut butter], and Nut-Meal.

A full-page ad (p. 258) is titled "Pure. Vegetable. Nutritive," by The Hygienic Supply Co. (F. Witte), 203-205 Park Ave., Baltimore, Maryland. They are "Importers of German health goods and books" including Dr. Lahmann's Japan Soja, which "Is a pure vegetable extract, which is far superior to Meat Extract. It can be used for making soups, or may be added to other foods in order to make them more appetizing. Price per jar, $1.00." (Note 4. According to *Vegetarisches Kochbuch mit Gesundheit Regeln*, by Carlotto Schultz {1886}, Dr. H. Lahmann of Stuttgart is an authority on the feeding of infants and problems related to indigestion.) Other products imported from Germany by this company include Dr. Lahmann's Vegetable Milk (for infants), Dr. Lahmann's Vegetable Extract, and Dr. Lahmann's Nutritive Cocoa.

Note 5. This is the second earliest English-language document seen (Aug. 2013) that contains the term "Vegetable Milk." This non-soy product is an emulsion made from almonds and nuts.

Page 259 contains an ad for *Health-Culture: A Journal of Practical Hygiene* by The Health-Culture Co., 341 Fifth Ave., New York.

Page 260 contains an ad for *Food, Home and Garden,* a periodical edited by Rev. Henry S. Clubb of the Vegetarian Society of America, 310 Chestnut St., Philadelphia, Pennsylvania.

Note 6. Notice that this book contains no chapter on main dishes or entrees; unleavened Graham bread (made with "entire wheat flour") was considered the best main dish. Very few the many recipes call for the use of dairy products, eggs, animal fats, or honey, and in each case they are optional.

Chapter 13, "Pudding, pastries and cakes," convincingly questions the need for this entire category of foods, but those who *must* have such sweets are encouraged (p. 176-77) to use water instead of milk, vegetable fats instead of animal fats and dairy products, reduce the number of eggs and the amount of sugar used by one-half or more, and gradually eliminate spices and salt.

Chapter 14, "Milk and the cow" makes a strong case for

© Copyright Soyinfo Center 2014

not using these animal products.

A woman cited several times (p. 68, 177) as an authority on foods is Mrs. Emma P. Ewing. Address: M.D., Pansy Park, Dwight, Massachusetts.

122. Kellogg, John Harvey. 1896? Cow's milk a cause of disease (Brochure). Battle Creek, Michigan. 18 p. Undated. 15 cm.

• ***Summary:*** Contents: Introduction. General suspicion of cow's milk. Milk a natural food for infants, but not for adults. Why milk disagrees with adults. Milk the cause of biliousness. Milk the cause of nervous headache, or migraine. A vegetable substitute for milk (Lac Vegetal, or Nut Cream, sterilized in half pound tin cans). Nuts and fruits remain man's natural diet. The advantages of Nut Cream (10 advantages). Directions for use.

Infants who cannot digest cow's milk should "add one part of Nut Cream to six parts of thin gruel made of the Sanitarium Infant Food, or Sanitarium Gluten Meal. Every one who has seen Nut Cream and tasted it, is astonished that so close an imitation of milk could be produced from nuts. It constitutes one of the most useful and interesting products of the many experiments which have been conducted by the Sanitas Food Co. Taken together with Nuttose, nut cheese, and nut butter, Nut Cream completes the list of substitutes for most common animal food substances; namely, meat and milk and their products."

Note: This brochure was probably published shortly after an article by the same title appeared in *Modern Medicine and Bacteriological Review* (Battle Creek, Michigan) (Sept. 1896, p. 220-23)–because it is longer and more detailed. Address: M.D., Battle Creek, Michigan.

123. Newberry's. 1897. Health, 'Lead in quality and quantity.' We are headquarters for Battle Creek Sanitarium Health Foods. The following is a partial list (Ad). *Los Angeles Times.* March 7. p. 27.

• ***Summary:*** "Granose Flakes–20¢ a package. Arenola–15¢ a package. Granola–15¢ a package. Bromose–50¢ a package. Nuttose–25¢ a can. Zwieback–15¢ a package. Glutin [Gluten] Biscuits–40¢ a package. Glutin Wafers–25¢ a package. Caramel Cereal, a substitute for coffee–15¢ a pound. Whole Wheat Wafers–15¢ a package.

"Just in a large shipment of shredded whole wheat biscuits, from Worcester, Massachusetts, 15¢ a package." Address: 216 and 218 South Spring Street [Los Angeles, California].

124. Kellogg, John Harvey. 1897. The nutritive value of peanuts. *Good Health* (*Battle Creek, Michigan*) 32(3):176. March.

• ***Summary:*** "It is not generally known that the peanut is one of the most nourishing of all foods." A table, prepared by Dr. König of Germany, shows the number of nutritive units per kilogram of 12 foods. Peanut meal has the most (3,134), followed by bacon (2,767), then butter (2,610).

"Dr. Fuhrbringer [sic, Führbringer], director of the Public Hospital at Berlin, Germany, has made extensive use of peanuts as a food for patients in the hospital, and speaks of them in the following commendatory terms: 'They are especially valued as a part of the diet of those suffering with diabetes or corpulency.'" Address: M.D.

125. Kellogg, John H. 1897. Process of preparing nutmeal. *U.S. Patent* 0,580,787. April 13. 3 p. Application filed 4 Nov. 1895.

• ***Summary:*** This is a patent for two products: Peanut meal and a sort of peanut butter. "It is the object of my invention to produce an improved alimentary product or products from peanuts or other nuts... I obtain a bifold or double product, namely a dry and practically white nutmeal and a pasty adhesive substance that is for convenience of distinction termed 'nut butter.'"

"The moist and brown product is soft and pasty like butter and is somewhat less digestible than the meal, owing to the greater amount of free oil it contains. It is used as a substitute for butter, either for table use or for shortening in cooking. It is, in fact, a good substitute for animal fats. It has a slightly nutty flavor and is palatably agreeable, beside being far more nutritious than butter."

Final summary: "The improved process for producing the alimentary nut product specified, which consists in blanching the nut-kernels; then boiling the same for several hours, till they are thoroughly cooked and rendered soft and pulpy; next drying such cooked products; and lastly, subjecting the dried product to heavy pressure between rollers and separating the fine meal from the roller to which it adheres, as specified.

"The process of producing the improved alimentary nut product, consisting in removing the cuticle of the nut-kernels; then boiling them in water until thoroughly cooked and rendered soft; next shredding and drying the cooked product; and lastly, passing the dried substance between rotating rollers by which it is subjected to heavy pressure, and the fine meal is separated from the roller to which it adheres, and the more oily portion from the adjacent roller, as specified."

A full-page illustration showings the rotating rollers or rollers by means of which heavy pressure is applied to the boiled, shredded, and dried peanuts "with the result that the pasty mass is separated into two quite distinct forms." One is dry and granulated, the other is dark, oily, and sticky. Address: M.D., Battle Creek, Calhoun County, Michigan.

126. Newberry's. 1897. "Lead in quality and quantity" (Ad). *Los Angeles Times.* April 29. p. 7.

• ***Summary:*** "Lincoln said: 'You can fool some of the people all the time; all the people some of the time, but cannot fool

© Copyright Soyinfo Center 2014

all the people all the time.'"

"Caramel Cereal: The great Substitute for Coffee is made only by the Battle Creek Sanitarium Health Food Co. [Michigan], and is the original goods. Sold in full 1-lb. packages at 15¢. Be sure you get the genuine Caramel Cereal." Address: 216-218 South Spring St. Phone: Main 26.

127. *Good Health* (*Battle Creek, Michigan*). 1897. Vegetarianism not at fault. 32(4):241-42. April.
• ***Summary:*** "The recent death of Mr. Charles Sorley, former president of the Chicago Vegetarian Society, from cancer of the liver and stomach, has been made the occasion of some absurd newspaper comments, and used as an argument against abstinence from flesh foods." Contains a statement made by his son.

128. Kellogg, John H. 1897. Vegetable substitute for milk. *Good Health* (*Battle Creek, Michigan*) 32(4):245. April.
• ***Summary:*** The cocoanut furnishes a satisfactory substitute for cow's milk to millions of people in tropical countries. For the past 20 years, Dr. Kellogg has been searching for a suitable substitute for milk to meet the dietetic requirements of invalids. About 18 months ago he "succeeded in producing a very palatable substitute for milk, which was termed 'Lac Vegetal.'... It can not be offered with confidence as a thoroughly satisfactory substitute for animal milk. Lac vegetal, or nut cream, is made from the choicest nuts, and is thoroughly sterilized. Its composition is such that it constitutes a perfect and symmetrical food." It is made from almonds.

"Lac vegetal, when diluted, has precisely the appearance of cow's milk; and if allowed to stand, a cream will rise upon it.

"In experiments made with nut milk it has been found to have a delicate, delightful flavor, with a suggestion of its nutty origin, but resembles cow's milk very closely indeed. It agrees with the most delicate stomach, and can be taken with perfect impunity by persons who cannot take cow's milk or cream even in the smallest quantities without suffering more or less severely in consequence. Added to cow's milk in proper proportion, lac vegetal, or nut cream, prevents the formation of hard curds in the stomach, as when the cow's milk is used alone. This renders it an exceedingly valuable food for infants,–vastly superior to any infant's food which has been devised." Address: M.D., Battle Creek, Michigan.

129. Newberry's. 1897. "Lead in quality and quantity." Health foods (Ad). *Los Angeles Times.* May 3. p. 7.
• ***Summary:*** "We are the headquarters for Battle Creek Sanitarium Health Foods [Michigan]. Granose and Granola. Are complete foods, containing all the elements required for nutrition. One pound contains three times as much nutriment as a pound of beefsteak. Granose–20¢ pkg. Granola–20¢ pkg." Address: 216-218 South Spring St. Phone: Main 26.

130. Newberry's. 1897. Avenola (Ad). *Los Angeles Times.* May 10. p. 7.
• ***Summary:*** "This is a preparation of the finest quality wheat and oats. Like Granola, it is a perfect food, meeting all the demands of the human system, having been subjected to several hours cooking at a heat above that of boiling point. Ready for use in half a minute. 1 pound packages 15¢.

"Headquarters for Battle Creek Sanitarium Health Foods [Michigan]." Address: 216-218 South Spring St. Phone: 26 and 49.

131. Kellogg, John Harvey. 1897. Nuts and fruits man's natural diet (Editorial). *Good Health* (*Battle Creek, Michigan*) 32(5):317. May.
• ***Summary:*** "Nuts are unquestionably the vegetable analogue of meat and other animal food, not only containing all the food elements to be found in animal products, but in finer and more digestible form, more delicately flavored, and wholly free from the deleterious elements which abound in meat, and which are closely associated with all forms of animal food. Nuts and fruits are stated by the most eminent comparative anatomists to be the natural diet of man, as they are of his primitive relatives, the gorilla, the orang-outang, and the chimpanzee..."

"The general prejudice against nuts on the ground of their indigestibility is the natural outgrowth of the attempt to use them in a perfectly natural state, with no preparation except such as can be given by the teeth. With an entirely healthy stomach and sound teeth, this preparation is generally sufficient, but experience has shown that the digestibility of most nuts is as much improved by artificial preparation and cookery as is that of vegetables and other food-stuffs." Address: M.D. [Battle Creek, Michigan].

132. Battle Creek Sanitarium Health Food Co. 1897. The autocrat of the breakfast table... (Ad). *Chicago Daily Tribune.* July 20. p. 12.
• ***Summary:*** "... From a liquid point of view, was long considered to be a steaming cup of coffee. This berry from the tropics shared with the leaf of the tea-plant the honor of refreshing all civilization. Both were found by experience, however, to be workers of mischief to the nerves, stomachs and brains of their admirers. In one direction or another they were simply poisons. When science was aroused to this fact, some thirty years ago, it was at the famous Battle Creek Sanitarium, the headquarters of the Pure Food movement in America, that steps were taken to make a beverage worthy of replacing coffee and tea. There, by study and experiment, was evolved the original 'Health Coffee,' Caramel Cereal, which at once became a comfort to thinkers and toilers alike. It has been used on the Sanitarium tables for over 30 years... In flavor and fragrance it is fully equal to Mocha or Java... Progressive people all use it!... In short, Caramel Cereal is

© Copyright Soyinfo Center 2014

the Autocrat of the Breakfast Table." An illustration shows the main building of the Battle Creek Sanitarium. Address: Battle Creek, Michigan.

"Nuts of Every Kind?
"Then send your orders to us. We make it our business. We keep posted. We have a stock on hand. Circulars and price lists free." Address: Oxford, New York.

138. Battle Creek Sanitarium Health Food Co. 1897. Housewives, beware!!! (Ad). *Chicago Daily Tribune.* Nov. 3. p. 7.
• ***Summary:*** "Caramel Cereal is a 'Health coffee, not a medicine. At all grocers. A print of the Sanitarium is on every package of Caramel Cereal. Any Cereal Coffee offered you without it is an imitation." Address: Battle Creek, Michigan.

139. Kellogg, John Harvey. 1897. Chronic poisoning from the free use of flesh foods (Editorial). *Good Health* (*Battle Creek, Michigan*) 32(11):709-11. Nov.
• ***Summary:*** The "flesh of animals as food is not a pure nutriment, but is mixed with poisonous substances, excrementitious in character, which are the natural result of animal life. The vegetable stores up energy... It is from the vegetable world that all animals, directly or indirectly, derive the energy which is manifested by animal life through muscular and mental work. The vegetable builds up; the animal tears down. The vegetable stores up energy; the animal expends energy."

"Dujardin-Beaumetz, Trastour, and other eminent French physicians called attention several years ago to the fact that in gastoptosis a flesh diet is particularly pernicious, on account of the too long retention of food in the stomach, and the consequent putrefaction of proteids, giving rise to ptomains and other toxic substances, some of which exercise an exceedingly potent and mischievous influence upon the body." Address: M.D., Battle Creek, Michigan.

140. Kellogg, John Harvey. 1897. Nuts for diabetics: Editorial. *Modern Medicine and Bacteriological Review* (*Battle Creek, Michigan*) 6(11):274-77. Nov.
• ***Summary:*** "In view of the high nutrient value of nuts, it is astonishing that they have heretofore been so little employed as a source of food by civilized nations." The ancient Arcadians in Italy used chestnuts. The Indians of California used pine-nuts. The cocoanut furnishes food for vast multitudes of people in the Pacific islands and tropical countries. The hickory-nut, the walnut, and the butternut are also valuable foods. In "their natural condition [raw] they are somewhat difficult of digestion, and so have been altogether excluded from diet lists... Even peanuts, which are perhaps the most refractory to digestion of all nuts, may be so prepared as to be acceptable to the most delicate and sensitive stomach.

The especial characteristics of nuts, from a dietetic standpoint, are the almost entire absence of starch and allied substances, and an abundance of proteids and fats... This fact is well shown by the accompanying table." It gives values for the walnut, hazelnut, sweet almonds, peanuts, and cocoanut." Most contain a much larger proportion of proteids

© Copyright Soyinfo Center 2014

than beefsteak.

"Some extensive experiments have recently been made in Germany for the purpose of determining the food value of the peanut. The material used is what is known as the 'oil-cake,' a residue of the oil industry. Some thousands of tons are annually imported to Germany for the purpose of making salad oil, a large portion of which is sold in this country as olive-oil." More than 25 factories in Germany are engaged in this process.

"Within the last few years the writer has made many experiments with nut products of various sorts in diabetes and other disorders, and has found the following preparations extremely valuable:-

"1. Nuttose.–This is a thoroughly cooked and sterilized product of nuts, chiefly peanuts. Nuttose is made into the form of a cheesey mass which readily dissolves in the digestive fluids, the nuts having been first completely disintegrated and then thoroughly cooked" [steamed or blanched].

"2. Nut meals of various sorts.–These are chiefly almond meal and nut meal, the latter consisting of an admixture of nuts." They can be added to cakes, soups, etc. or used for shortening pie crusts.

"3. A sterilized nut butter.–This preparation consists of a combination of nuts which have been first thoroughly blanched, then completely disintegrated by conversion into a paste, and finally cooked at a temperature which secures complete sterilization. This product is an excellent substitute for butter and shortening of all kinds. When mixed with water it makes a very delicious nut cream or milk, and is very readily assimilable.

"Fürbringer's examination of the fecal matters of persons fed upon nuts shows that roasted peanuts in their ordinary form are practically indigestible, coarse particles being found in about the same condition as when swallowed. When reduced to a paste, roasted peanuts are much more digestible, but, for perfect digestibility, the nut needs to be subjected to long cooking at a lower temperature than that employed for roasting.

"Luedtke has shown that the proteids of the peanut are much more easily digestible than those of beans, peas, lentils, etc..." Address: M.D., Battle Creek, Michigan.

141. Battle Creek Sanitarium Health Food Co. 1897. Granola (Ad). *Gospel of Health* (*Battle Creek, Michigan; Seventh-day Adventist*) 1(11):2. Dec.
• ***Summary:*** A ¼-page ad. "Granola is a thoroughly cooked and partially predigested cereal food prepared from the choicest grains.

"Granola has a delicate, appetizing flavor.

"Granola is an excellent food for teething babies and for older children. It is a fine food for every member of the household.

"Granola is far better than beefsteak.

"A sample package free to those mentioning *Good Health.*

An illustration shows a large package of the product. On the front panel we read: "Granola: A Health Food. Carefully blended mixture of wheat and other choice grains." Address: Battle Creek. Michigan.

142. Sanitas Nut Food Co., Ltd. 1897. Ambrosia (Ad). *Gospel of Health* (*Battle Creek, Michigan; Seventh-day Adventist*) 1(11):1. Dec.
• ***Summary:*** A 1/8-page ad. "It is a fat- and blood-making food, and may be digested and assimilated by those who can eat nothing else." Address: Battle Creek. Michigan.

143. Sanitas Nut Food Co., Ltd. 1897. Eat Bromose, Maltol, Malted Nuts (Ad). *Gospel of Health* (*Battle Creek, Michigan; Seventh-day Adventist*) 1(11):2. Dec.
• ***Summary:*** A ½-page ad. "Are you thin? Would you like to get fat? 'Laugh and grow fat' is an old adage which may have in it a grain of truth, but thousands of scrawny individuals will testify that something more than laughter is necessary to produce plump, rosy cheeks and a rotund figure. Fat- and blood-making foods are necessary. We have three new foods, all produced from nuts, which make fat faster than any other food remedies known. Send for brochure 'How to Get Fat,' for circulars; and if you wish a sample of foods, enclose ten cents." Address: Battle Creek. Michigan.

144. International Medical Missionary and Benevolent Association. 1897. Year book. Battle Creek, Michigan. 176 p.
• ***Summary:*** The chapter titled "The Battle Creek Sanitarium Health Food Company" begins (p. 137): "Early in 1877, the managers of the Battle Creek Sanitarium began the manufacture of health foods. The first product introduced was that now commonly known as 'granola.' This new food soon established itself in the confidence of the public, and has steadily grown in favor, until at the present time it is manufactured and sold by the car-load.

"From time to time various other products have been added, until forty-two different kinds of foods, including numerous varieties of crackers, biscuits, and packaged foods, are now made and offered for sale in the leading cities of the United States. The facilities, which at first consisted of nothing more than a common brick oven, have been gradually increased, until at the present time three factories are required to supply the growing demand. One of these is devoted exclusively to the manufacture of a cereal substitute for coffee; another is wholly devoted to the manufacture of breads; while the third, a large, new structure, equipped with the most modern machinery of every description useful in this line, is devoted to the manufacture of granola, crackers, biscuits, gluten, and other special preparations.

"The latest addition to this department is a complete

© Copyright Soyinfo Center 2014

milling establishment with a new and improved system, by which is manufactured flour greatly superior in quality to anything which has heretofore been made. The various cereal products of this department are, at present, made almost wholly from this flour.

"The Battle Creek Sanitarium Health Food Company is not conducted as an ordinary commercial business, but is carried on as a practical means of diffusing health principles in relation to diet, thus acting as an auxilliary to the Sanitarium in a double sense, not only furnishing the best foods for its family of more than one thousand persons, but annually sending out into all parts of the United States and to foreign countries, millions of packages of health foods, each of which acts as a practical missionary of health principles.

"During the past year this department has employed twenty agents, or food demonstrators, who have visited various points in the United States, not simply to make sales for a salable product, but to present the value of pure foods and the superiority of a well-chosen, well-prepared vegetarian dietary over one consisting of flesh foods, condiments, tea and coffee, and other unwholesome articles. These demonstrators, having received training in the Sanitarium School of Cookery and in the research laboratories of the institution, are well prepared to give the reasons for their recommendation of wholesome foods in the place of unwholesome ones, and prove themselves most efficient agents in the diffusion of health principles. During the year 1896, exhibitions were given in many of the principal cities of Michigan, Indiana, Ohio, Illinois, Wisconsin, Minnesota, Iowa, New York, Connecticut, and Massachusetts, and before many medical associations, and at numerous Pure Food Exhibits. Demonstrators are permanently located in New York City; Boston, Massachusetts; Philadelphia, Pennsylvania; Minneapolis, Minnesota; and Chicago, Illinois. Foods are shipped to many foreign countries, including Great Britain, Germany, Scandinavia, Africa, India, China, Australia, and the South Sea Islands.

"The demand for health foods is rapidly increasing. At the present time, two of the three factories of the company are obliged to run night and day to keep up with orders. The orders received and filled during the first ten days of 1897 amounted to more than forty tons. The sales of this department during 1896 aggregated more than $150,000.

"The earnings of this department, while not large, owing to the low price at which the foods are sold, compared with the cost of their manufacture, are still considerable, usually amounting to several thousand dollars annually. The total earnings of this as well as of other departments of the Sanitarium, are devoted to the charitable and philanthropic work of the institution, and to making necessary improvements."

A full page photo on the page just before this chapter shows a ground-level view of the "Manufactory of the Battle Creek Sanitarium Health Food Co." In front are four carts pulled by horses. A tall smokestack rises above the top. On the roof is a large sign that reads "Health Food Department."

The chapter titled "Missionary Nurses" states (p. 153-54): "Sister Anne Tabor has spent the last three years in the field, giving talks on healthful dress, diet, etc., holding classes in physical culture, and caring for the sick at times as occasion has required. For some time past her regular occupation has been that of demonstrating health foods in the large cities of the South and East, under the direction of Brother Barton Huff manager of the Battle Creek Sanitarium Health Food Company, who conducts his work on missionary principles, and as a genuine missionary effort."

Note: This annual began publication in 1895. Address: Battle Creek, Michigan.

145. Kellogg, Ella Ervilla (Eaton) (Mrs.). 1897. Every-day dishes and every-day work. Battle Creek, Michigan: Modern Medicine Publishing Co. 184 p. Index. 22 cm. [2 ref]

• ***Summary:*** The text of this book is identical to that of the 1896 edition, and on the same pages. However the order and location of the ads are different.

The eight ads on unnumbered pages in the front of the book are for: (1) *Science in the Kitchen,* by Mrs. E.E. Kellogg. Published by Modern Medicine Publishing Co., 65 Washington St., Battle Creek, Michigan. (2) Universal Mercurial Dynamometer, developed by Dr. Kellogg for testing the strength of individual groups of muscles in the human body. From: Sanitary and Electrical Supply Co., Battle Creek. (3) *Home Hand-Book,* by Dr. J.H. Kellogg. Published by Modern Medicine Publishing Co. Over 1,700 pages and 500+ engravings. Describes the best means of preserving and regaining health. (4) Perfection vaporizer, from Modern Medicine Co. (5) Health Foods–Granola–a health food, an invalid food. From Battle Creek Sanitarium Health Food Co. (6) Health Foods–Granose, Granola, Caramel-Cereal, Battle Creek Sanitarium Breakfast Food, Germless Oats, Germless Wheat Grits, Germless Corn Grits, Crystal Wheat, gluten preparations, diabetic foods. Send for a catalogue and price list to Battle Creek Sanitarium Health Food Co. (7) "Almond Butter–A substitute for ordinary butter. Presenting fat in the form of a perfect emulsion. Combined with water it forms a delicious cream. Used for shortening of all kinds. A pure product of nuts; can be eaten by those who cannot eat ordinary butter. Send five cents for sample. From: Sanitas Food Co., Battle Creek. (8) "Nuttose–Pure product of nuts. Perfect substitute for all flesh foods. Makes fat and blood. In their natural state nuts are difficult to digest, and cannot be eaten by many persons... Nuttose has the consistency of cheese, and much the consistency of cold roast mutton, and may be eaten cold, stewed, cooked with vegetables or other foods, made into gravies and other preparations in the same manner as meat..." "Send ten cents for a sample can... Ready to eat at once. Keeps indefinitely."

147. *Food, Home and Garden* (*Philadelphia*). 1898. Home department. Jan. p. 10.

• ***Summary:*** The section in this vegetarian magazine titled "Holiday menu" begins: "Breakfast–Grapefruit. Oranges. Cracked wheat mush. Granose Flakes and Granola with cream. Toast. Graham gems."

148. Kellogg, John Harvey. 1898. Nuts for diabetics. *Good Health* (*Battle Creek, Michigan*) 33(1):45-47. Jan.

• ***Summary:*** "Even peanuts, which are perhaps the most refractory to digestion of all nuts, may be so prepared as to be acceptable to the most delicate and sensitive stomach."

A table shows the nutritive value of walnuts, hazelnuts, sweet almonds, peanuts, and cocoanuts. Peanuts contain the most proteids (28.3%), followed by sweet almonds (23.5%). "The amount of proteids in a pound of peanuts is, in fact, fifty per cent. more than that in a pound of beefsteak..."

Recent experiments in Germany have shown that peanut oil-cake is a rich source of proteids; it could be used to make an inexpensive military ration.

Nuttose is "a thoroughly cooked and sterilized product of nuts, chiefly peanuts. Nuttose is made in the form of a cheesy mass which readily dissolves in the digestive fluids, the nuts having been first completely disintegrated and then thoroughly cooked. It contains about the same amount of proteids as beefsteak, and, in addition, between twenty-five and thirty per cent of easily digestible nut fat in a state of natural emulsion." Address: M.D., editor.

149. Newberry's. 1898. 'Lead in quality and quantity.' Battle Creek Health Foods are the best pure foods in the world (Ad). *Los Angeles Times.* Feb. 2. p. 7.

• ***Summary:*** "Granose Flakes–1-lb package 20¢. Granose Biscuits–1-lb package 20¢. Avanola–2 packages 15¢. Wheat Gluten–15¢ a package. Wheat Granola–2 packages 25¢. Zwieback–2 packages 25¢. • ***Summary:*** "The Ontario camp-meeting was held June 9-19 at St. Thomas, a city of about twelve thousand inhabitants."

"The Ontario Tract Society and the London Health Food Company had a tent for the display of books and health foods. The sales were good. The vegetarian dining tent was well patronized."

157. *Good Health* (*Battle Creek, Michigan*). 1898. The medical opinion of the Battle Creek Sanitarium Health Food Company's products. 33(6):391. June.
• ***Summary:*** The London *Lancet* is one of the leading medical publications of the world. It is recognized as an eminent authority in all parts of the civilized globe. A recent issue contains the following reference to the foods manufactured by the Battle Creek Sanitarium Health Food Company and the Sanitas Nut Food Company: -

"'There are some novel and interesting dietetic preparations in the list of this company. They consist chiefly of food prepared from cereals and from nuts.

"'Granose Flakes,' for example consists of light brown flakes resembling potato chips, which on analysis present the composition of wheaten flour of superior quality–that is, flour in which all the essential food constituents are retained. The nitrogen amounted to 2.14 per cent., which is equivalent to a total of 13.37 per cent. albuminoids. The moisture amounted to 12.02 per cent., and the mineral matter to 2.09 per cent. The microscope showed the presence of starch granules highly distorted by cooking, probably by steam. The preparation is undoubtedly nutritious, not merely on account of its composition, but also because the constituents are prepared for the digestive process.

"'Nuttose' is an oily compound prepared from nuts. The fat is in a finely divided state, amounting to an emulsified condition, while the carbohydrates and nitrogenous matter are previously treated so as to render them easy of digestion.'"

Bromose and Caramel Cereal (an alternative to coffee) are also discussed.

158. *Good Health* (*Battle Creek, Michigan*). 1898. A new bread for diabetics. 33(6):391. June.
• ***Summary:*** "There is probably no single dietetic need which has received more attention, with fewer satisfactory results, than the preparation for diabetics. Bran bread is unpalatable and irritating, and has about the same nutritive value as sawdust. Pure gluten is tasteless, unpalatable, tough, and almost inedible. The so-called gluten breads are almost without exception unmitigated frauds... Some attempts have been made in France to manufacture a bread from the vegetable casein or legumin of peas or beans, but the results have been by no means satisfactory.

"The Sanitarium Health Food Co. has at last solved this difficult problem by producing a bread made by combining pure gluten and nuts. One of the most characteristic properties of nuts is the absence of starch. Nuts, in fact, consist almost exclusively of proteids and fats. They are, in this respect, a vegetable analogue of fat meat."

"Nut Gluten Biscuit are especially adapted, not only to persons suffering from diabetes, but to those who need a rapid gain in fat and blood."

"The Battle Creek Sanitarium Health Food Co. will be glad to send free samples to any physician or trained nurse who may desire to test this new food. Others may receive a small sample by sending to the address of the company a two-cent postage stamp."

159. Kellogg, John Harvey. 1898. Re: Medical missionary work, use of the tongue in diagnosis, and work with nuts. Letter to Ellen G. White, "Sunnyside," Cooranbong, N.S.W., Australia, July 29. 5 p. Typed, with signature.
• ***Summary:*** The letter, written on ornate Battle Creek Sanitarium letterhead (illustrations show two views of the "San") and addressed to "Dear Sister White," begins with a discussion of Dr. Kellogg's views of the importance of medical missionary work by the General Conference and its president Eld. [Elder] Irwin who is "a thorough-going health reformer. At the college View Conference last year

© Copyright Soyinfo Center 2014

he showed me his tongue. It was thickly coated, about the worst looking tongue I ever saw. He complained of constant pressure and headache, and was laboring under great difficulties. I called his attention to the fact that he was using milk and cream. I advised that he discontinue them and take a diet of fruits, grains, and nuts as a source of fat and albumen, and take once in a while a meal of fruit only. He adopted this plan with most excellent results.

"We have continued our experiments with nuts until now we are able to dispense with butter, milk, and cream altogether. In our Health Food department, we no longer use any animal fat of any kind but shorten our crackers, rolls, etc. with nuts and with such excellent success every one pronounces them more palatable and excellent in every way. I feel more thankful than I can say that we are at last delivered from the Beast entirely in diet at any rate."

Note 1. The preceding paragraph suggests that Dr. Kellogg was developing peanut butter, peanut milk, and peanut cream. If so, this is the earliest 2nd document seen (Aug. 2013) that refers to peanut milk.

Note 2. The letterhead states that the medical staff at the Sanitarium and hospital includes: J.H. Kellogg, M.D.; Kate Lindsay, M.D.; Lou C. Cleveland, M.D.; David Paulson, M.D.; Ruth O. Bryant, M.D.; D.H. Kress, M.D.; G.H. Heald, M.D.; Lauretta Kress, M.D. Abbie M. Winegar, M.D.; Howard F. Rand, M.D.; C.E. Stewart, M.D.

Note 3. The original letter is in the Ellen G. White Papers, Incoming papers, Ellen G. White Estate, Inc., General Conference of Seventh-day Adventists, 12501 Old Columbia Pike, Silver Spring, Maryland 20904-6600. Address: M.D., Superintendent, Battle Creek Sanitarium, Battle Creek, Michigan. Phone: Nos. 135, 45, 188.

160. Kellogg, John Harvey. 1898. Nuts as a food. *Good Health* (*Battle Creek, Michigan*) 33(8):473-75. Aug.
• ***Summary:*** "Peanuts must be cooked longer than any other nut, because the peanut is really not a nut at all, but a legume. It belongs to a class of foods that are closely allied to peas and beans. In China there is a bean which contains eighteen per cent of fat–the 'soja' bean, which is largely used as an article of food by the Chinese. But this bean does not compare with the peanut in nutrient qualities. Peanuts are largely used for food in the German army. Thousands of tons are annually shipped from this country to Germany and France." Address: M.D.

161. Sanitas Nut Food Co., Ltd. 1898. Twentieth Century Foods (Ad). *Chicago Vegetarian* 2(12):Rear cover. Aug. Address: Battle Creek, Michigan.

162. Kellogg, John Harvey. 1898. Vegetarians got there first (Editorial). *Good Health* (*Battle Creek, Michigan*) 33(9):574-75. Sept.
• ***Summary:*** Several interesting events have recently occurred in the world of athletics. "Fourteen flesh-eaters and eight vegetarians entered up a walking contest, the course being seventy miles. Six of the eight vegetarians arrived at the goal before the first flesh-eater arrived." The other two vegetarians got lost.

"In a bicycle contest between three well-known English clubs, the Shepherd's Bush, the London Central, and the Vegetarian, the disciples of Pythagoras won in both the three-mile heats and the half-lap contests, and were easy victors, leaving the flesh-eaters in disgrace.

"These performances ought not to surprise us, however, for five years ago, in the celebrated walking contest between Berlin and Vienna, a distance of more than three hundred and sixty miles, there were entered for the race, three vegetarians, two of whom arrived at the end more than twenty hours in advance of the first of the thirteen flesh-eaters."

"The vegetarian antelope and the vegetarian horse are the fleetest of beasts; the vegetarian reindeer is the most enduring; the vegetarian elephant, the strongest. The vegetarian gorilla is the real monarch of the forest, for he has been known to kill a lion with a club." Address: M.D.

163. *Advent Review and Sabbath Herald.* 1898. Ontario [Canada]. 75(43):687. Oct. 25.
• ***Summary:*** Under London, Ontario: "The London health food factory is prospering beyond the company's expectation. The sales have been steadily increasing until for the month of September alone they reached $600. The company are fully satisfied that this enterprise was established in the providence of God, and will be an important factor in the missionary work in Canada."

164. *Kokomo Dispatch* (*Indiana*). 1898. Bucking the cow: Butter from peanuts and how it is manufactured. A Kokomo product growing in demand–locks horns with the farm cow in many markets. Nov. 12. p. 2, col. 3.
• ***Summary:*** "Out on Courtland avenue, near the Palmer school-house, stands a curious little factory. It is a modest frame edifice of one story, architecturally speaking, but it has another story but little known even in the immediate neighborhood of its location. This factory is engaged in the manufacture of butter from peanuts, a rather queer procedure one might say, but nevertheless a real, genuine occupation, started up in opposition to the saffron Jersey "sookey" [sookie, used as a call to cows] of the farm barn. The little peanut butter factory stands just across the street from a large dairy barn, which location gives evidence that the 'goober' is bearding the lion in its den [boldly confronting, opposing, and defying a powerful opponent].

"The butter made from peanuts is hairless. Like Samson shorn of his locks, the peanut butter does not attain the prodigious strength that the product of the cow is capable of, especially of the kind that frequents cheap boarding houses and depot restaurants of neighboring towns.

© Copyright Soyinfo Center 2014

"The proprietor of this new industry is George B. Lane (formerly Lane Brothers), and he is doing a thriving business. The process of manufacture is simple, but interesting. Nearly a year ago Mr. Lane began in a small way to convert peanuts into butter, using Georgia and Virginia nuts, but he soon discovered that the American grown 'goobers' did not fit the bill. He now uses the Spanish nuts grown at the Philippines, Cuba, and Porto Rico.

"At the present cost of the tropical bean the butter is made and sold at fifteen cents per pound, and if these islands become American possessions the butter will be less expensive.

"Mr. Lane makes no secret of his process, and anybody who has the machinery and understands the business can make the butter. The hulled peanuts are carefully hand-picked to remove all the imperfect grains, after which the nuts are put into a baker's rotary oven and roasted to a rich brown color. After roasting the nuts are again gone over by hand to rid them of scorched and faulty ones. They are then put into a hopper and ground to the finest of flower. The product comes from the mill looking very much like putty, the natural oil of the nut giving it that consistency. This completes that manufacture, nothing being added, not even salt. It goes into the mill a peanut and comes out butter. It never goes rancid, keeps in any climate and does not stale with age.

"The butter is put up [packed] in one, two, five, ten, twenty-five and 100-pound cans and sealed. It is used for every purpose cow butter is used and is said to be an excellent substitute for the output of the cow. Rich 'Jersey' cream is also made by reducing the butter with pure water. Sky-blue milk, if wanted, will appear through the liberal application of water in the reducing process.

"The peanut butter is in great demand at health resorts and sanitariums throughout the country. It also finds favor with camping parties. Mr. Lane recently filled large orders for the annual camp meeting of the Indiana Baptists at Logansport and Rushville, and had the Spanish war lasted a little longer the butter probably would have been in use in feeding the United States soldiers–a ration the boys would have appreciated, as no butter of any kind was issued to them. The new butter is very pleasant to the taste, and physicians say it is more healthful than that produced by the cow.

"Mr. Lane also manufactures Lane Bros.' cereal, graham crackers and other health foods, having quite a large trade in Indiana and adjoining states."

Note: Mr. Lane roasts his peanuts, whereas his mentor, Dr. Kellogg, at Battle Creek, Michigan, did not.

• ***Summary:*** "We have opened at 320 Yonge Street a branch store for the sale of the famous Battle Creek Sanitarium Health Foods.

"We invite our friends and the public generally to call, examine and sample these delicious cereal and nut products. Nothing like them on the market."

The bottom half of the ad is taken up with the following very large white text on a black background: "Eat Granola and Granose. Drink Caramel Cereal" [a caffeine-free alternative to coffee]. Address: 320 Yonge St., Toronto. Phone: 8255.

166. Forward, Charles Walter. 1898. Fifty years of food reform: A history of the vegetarian movement in England. From its inception in 1847, down to the close of 1897, with incidental references to vegetarian work in America and Germany. With upwards of two hundred illustrations. London: The Ideal Publishing Union, Ltd. 3 + 192 p. Illust. Index. Index to illustrations. 26 x 20 cm. [75+ ref]

• ***Summary:*** The best, most comprehensive general history of vegetarianism up to this time; focuses on England, but gives some attention to the United States and Germany. Discusses the vegetarian Society of Manchester, England. It is one of the best sources of early photographs.

Contents: Dedication (to Arnold Frank Hills). Preface, by the author. 1. Introductory. 2. A group of pioneers: John Oswald, George Nicholson, Joseph Ritson, William Cowherd, Dr. William Lambe, Sir Richard Phillips, John Frank Newton, Percy Bysshe Shelley (A table shows the name of each man, the years of his birth and death, and his main publications). 3. The pilgrim fathers of vegetarianism. 4. The first vegetarian society: Details of the first meeting at Northwood Villa, Ramsgate, Kent, on 30 Sept. 1847. Discusses: Joseph Brotherton (M.P., elected chairman), George Coates, William Horsell (secretary), William Oldham (treasurer), Mr. Milner, Mr. Palmer, Rev. Scholefield, James Simpson, Jr. (elected president), Mr. Warman, Mr. Wright. The Liebig School of Chemistry, Dr. Beaumont and Alexis St. Martin's stomach.

5. From the Ramsgate meeting to the death of Joseph Brotherton: The first annual meeting was held 28 July 1848 in Manchester, England. 6. The second decade of the Vegetarian Society. 7. Some veterans and statistics. 8. Vegetarianism in relation to other reform movements.

9. "Vegetarianism" or "Dietetic reform." Table showing number of members, associates, and annual income from 1847 to 1896. Debate over the scope of the vegetarian platform: Should it advocate abstinence from flesh foods (meat, poultry, and fish) only, or should it also advocate abstinence from alcoholic beverages, tobacco, coffee, tea, sugar, etc. New societies are formed in response to this debate. 10. Vegetarian literature: Past and present. 11. The Health Exhibition and vegetarian restaurants. List of vegetarian dining rooms or restaurants (by city). 12. The vegetarian revival in London: National Food Reform Society,

The London Auxiliary, Mr. A.F. Hills, the London Vegetarian Society, The Vegetarian Cycling and Rambling Club.

13. The Vegetarian Federal Union and the local societies, the Vegetarian Congress in Chicago [Illinois] (1893). 14. Muscular vegetarianism: The Vegetarian Cycling Club. 15. The Vegetarian Society–1886 to 1897. 16. A vegetarian's visit to the Queen, and the thrilling story of the loss of the S.S. *Elbe* (1896). 17. Annus Mirabilis: 1897. Fiftieth anniversary of the Vegetarian Society. Appendix: The Battle Creek (Michigan) Sanitarium: Dr. John Harvey Kellogg: It "is conducted almost entirely on Vegetarian lines."

A footnote (p. 63) states: "In the *Graphic* of July 4th, 1874. there appeared the portraits of four leading Vegetarians: Professor Newman, Isaac Pitman, John Davie, and W. Gibson Ward; the first occasion, apparently, that a batch of portraits had appeared merely from the fact that the individuals they represented were Vegetarians. It was remarked at the time that, on the same page there appeared the portraits of four eminent teetotalers, four noted anti-tobacco men, and four eminent opponents of compulsory vaccination, for, as in the case of many other Vegetarians, Professor Newman, Sir Isaac Pitman, John Davie, and Gibson Ward were 'anti-everythingarians,' and opposed alcohol, tobacco, vaccination, vivisection, etc., as well as flesh-eating. In recent years complaints have been made that the *Vegetarian* was not confined to Vegetarianism, but it is noticeable that, in a lesser degree, the tendency to go beyond these bounds has existed in other journals." Address: 6, Blackfriars Road, London, England.

• ***Summary:*** In the section titled "Breakfast foods," page 1343 states:

"15325. Ralston Health Club Breakfast Food, indorsed [sic] by Ralston Health Club, Martyn College, Washington D.C. Manufactured by Robinson-Danforth Company, proprietors, Purina Mills, St. Louis, Missouri. 'A perfect food made from selected wheat, rich in gluten.'

"15326. Granose Flakes. Manufactured solely by the Sanitarium Health Food Company, Battle Creek, Michigan. 'Represents the entire wheat berry undeteriorated by any milling process and thrice cooked, whereby the starch is largely converted to dextrin.'

"15329. Granulated Rye. Manufactured by the Health Food Company, 61 Fifth avenue, New York. 'Made from the best rye, hulled by the wet process and reduced to a granular meal without the injurious heating of millstone grinding.'" Address: Chief Chemist, USDA.

169. Kellogg, John Harvey. 1899. Vegetarian question (Editorial). *Good Health* (*Battle Creek, Michigan*) 34(2):109-12. Feb.

• ***Summary:*** A correspondent sends a clipping from the New York *Medical Record* in which this question is discussed. It, in turn, quotes from a long article in the *Times* (London) in which Sir Henry Thompson gives his opinions about climate and food. Dr. Kellogg notes that Dr. Thompson "does not answer a single one of the numerous grave objections which have for many years been raised against the use of flesh-food, and which have, up to the present date, never been satisfactorily answered." He then lists and discusses ten of these objections at length. They are: 1. Human physiology and anatomy is similar to that of primates which are vegetarians. 2. The Bible (in Genesis 1:29) urges a vegetarian diet. 3. Most humans are presently non flesh-eaters. 4. Trappists and Carmelite Sisters have long been vegetarians; they are healthy and live to a ripe old age. 5. The characteristic food elements of flesh-food are not those (carbohydrates) required for maintaining the energy of the body. 6. Animals are increasingly contaminated by disease. 7. Flesh eating, if not practised in great moderation, gives rise to well-recognized disorders and diseases. 8. The slaughter of animals and the eating of corpses are abhorrent to human instincts. 9. All food originally comes from plants. "When a man eats an ox, he is simply eating corn at second hand, not improved corn but adulterated corn..." 10. "Animals are sentient creatures, deriving their life from God, and they have the same right to enjoy that life that human beings have to enjoy their lives, so long as they commit no violence or depredation upon the rights of human beings or other sentient creatures."

"The writer [Dr. Kellogg] started out in life a puny, sickly boy. At the age of fourteen he was expected to die of consumption, as two sisters had done; but, adopting a non-flesh dietary at that time, he finds himself to-day, after thirty years of hard work, enjoying better health than ever before, able to work more continuously, for a longer number of consecutive hours, with less sleep and with less food than the average meat eater, and on a spare diet of fruits, grains, and nuts. If Sir Henry Thompson will visit Battle Creek, the writer will take pleasure in showing him a family of nearly one thousand rosy-cheeked, bright-eyed, vigorous men and women who are living well, and who hope to live long and usefully, on a strictly non-flesh diet." Address: M.D.

170. *Chicago Daily Tribune.* 1899. Menard K. Bowen dead. Chicago City Railway President expires suddenly. End comes at a hospital after an operation for appendicitis– Sufferer had been ill two years, but disease became critical only last Friday–His connection with the South Side Line marked by the making of many improvements. April 10. p. 5, col. 1.

• ***Summary:*** "Menard Kenner [sic, Kennerly] Bowen, President of the Chicago City railway company, died at the Chicago Hospital at 8:30 o'clock last evening from an operation for appendicitis performed at 6 o'clock on Saturday morning... Mr. Bowen had been connected with the Chicago City railway company but seven years, and in that time had risen from the position of Assistant Superintendent to President... He was but little more than 40 years of age and was believed to have a brilliant future before him."

He had been ill for more than two years. "He was an extremely nervous, hard-working man, and his ailment

© Copyright Soyinfo Center 2014

was considered to be nervous dyspepsia, or neuralgia of the stomach, with recurrent inflammation of the appendix. He went to the Battle Creek sanitarium [in Michigan] for treatment last summer and had been treated from time to time by various physicians." He resided at 419 Forty-eighth street in Chicago, two blocks from the Chicago Hospital.

"Sketch of Menard K. Bowen: Mr. Bowen was born at the army post of Jefferson Barracks, Missouri, in 1858. His father was General John S. Bowen, C.S.A. [Confederate States of America], who was a graduate of West Point, and his grandfather Pierre Menard, the first Lieutenant Governor of Illinois. He was educated for a civil engineer, first at the St. Louis University [Missouri] and afterward at the Washington University at St. Louis. When he was 19 years old he entered the government service as an assistant engineer to a triangulation survey of the Mississippi River, and later was made assistant engineer of the jetty work below New Orleans. In 1880 he took charge of the survey work from Fort Smith, Arkansas, to California for the St. Louis and San Francisco railroad, and after several years at this work entered the street railway business.

"His first work in this field was in Kansas City, where he was chief engineer and superintendent of construction, and afterwards superintendent of the completed system. The Short Electric railway company of Cleveland [Ohio] next engaged him, and he went to New York as its commercial representative.

"Mr. Bowen came to Chicago as assistant to Engineer Holmes in the extension of the South Side system and in the reorganization of the work was made superintendent, which position he held until the office of general manager was created for him in 1897. On Jan. 15, 1898, upon the retirement of Mr. [George Henry] Wheeler, he was elected President of the company, and continued in that office until his death."

He made many improvements in the railway system. The whole electric system was built under his charge, and the dynograph car, for determining the condition of the tracks, was his work. "He was a thoroughly practical engineer and a man of great executive ability. He was known as a strict disciplinarian but at the same time as a man of utmost fairness, and his death is generally regretted by employees of the company.

"He was married in 1884 to Miss Allan De Berry of Jackson, Tennessee, who survives him. There are two children–a boy, Allan, aged 12, and a girl, Marion, aged 4 years. These together with his mother, whose home is in St. Louis, and a sister, Miss Annie D. Bowen, residing in Philadelphia [Pennsylvania], were at his bedside when he died. His brother, John S. Bowen, is on his way to this city from his home in Georgia.

"Tribute of fellow workers:... G.O. Nagle, superintendent of the company, said: 'He was one of the best and fairest men I ever knew. He would do anything for his employees and personally he was always our friend. I do not know how we are to reconcile ourselves to his loss."

A large illustration shows Menard K. Bowen.

171. White, Ellen G. 1899. Re: Work with health foods, including peanuts. Attitude toward nuts (1868-1876). Letter to John Harvey Kellogg, M.D., Superintendent, Battle Creek Sanitarium, Battle Creek, Michigan, April 17. 1 p. Typed, without signature.

• ***Summary:*** "As yet we have received only two hundred fifty pounds from the Echo office. Special direction was given in regard to the manufacturing of health foods, but lately we have not had money to invest in peanuts for our own family. We eat no meat or butter, and use very little milk in cooking. There is no fresh fruit in this season. We have a good yield of tomatoes, but our family think much of the nuts prepared in a variety of ways. For many months my food has been uncooked tomatoes and bread."

Note 1. This is the earliest use of the word "peanuts" see in the collected papers of Ellen G. White, co-founder of the Seventh-day Adventist church. The full text of all her letters and diary entries has been computerized and this fact is the result of a search conducted by the Ellen G. White Estate. This letter is cited as follows: Lt 73, 1899. The original letter is in the Ellen G. White Papers, Ellen G. White Estate, Inc., General Conference of Seventh-day Adventists, 12501 Old Columbia Pike, Silver Spring, Maryland 20904-6600.

Note 2. Ellen White's attitude toward nuts seems to have changed over the years. She first uses the word "nuts" in a letter to James Edson White [her eldest child/son; Willie was her youngest son] dated 27 Feb. 1868. "I have frequently asked myself what you could have done with so much money. Edson, I am answered in a dream, you are not a health reformer in principle. You do not live up to the light God has given and while you neglect one ray of light that the Lord has graciously permitted to shine upon your pathway, you will be in darkness. When you boarded yourself, did you not spend money for nuts, candies, and hurtful things and eat these between meals and at any time? I concluded that your frequent headaches were caused by the indulgence of your appetite. You gratified the taste to the injury of the stomach..." (Letter 5)

Again in July 1874, in an undated letter to Brother and Sister Abbey, she states: "You have fostered a perverted appetite by indulgence. You have allowed her to eat between meals, to fill her pockets with nuts and crackers, and to have the third meal, eating sometimes late at night. How can you expect her to have a healthy relish for coarse and healthful food? I understand her father has bought Lillie white baker's bread to tempt her delicate appetite, and at night she has eaten this baker's bread and butter in the cellar with Nellie Matthews. Is this in accordance with the principles of a health institute?" (Letter 65).

Again on 12 June 1876, in a manuscript, Ellen White

© Copyright Soyinfo Center 2014

states: "We were pained to hear the mothers' fretful chiding, as they sought to hold in check the outbursts of temper exhibited by the children. But these mothers did not control themselves; how then could they expect their children, with their perverted habits, to have tranquil tempers. Both parents and children ate at irregular intervals all through the day, after eating heartily three times a day. The boy on the cars who sold cakes, candies, nuts, and fruit was freely patronized by the indulgent parents." Address: "Sunnyside," Cooranbong, New South Wales, Australia.

172. P.W. 1899. Breakfast biscuits without soda. *Indicator* (*New York Tract Society, Rome, New York; Seventh-day Adventist*) 9(16):3. April 19.
• ***Summary:*** "'Hot biscuits raised with soda or baking-powder should never appear on our tables. 'Such compounds are unfit to enter the stomach.' Saleratus in any form should not be introduced into the stomach; for the effects are fearful. It eats the lining of the stomach, causes inflammation, and it quietly poisons the entire system."

"Try griddle cakes of this batter. If you have not cream use water and enough peanut butter to make a cream. Try corn bread. Mix half flour, using two well beaten eggs. Also try Buckwheat, ½ white flour." Address: Province.

173. Battle Creek Sanitarium Health Food Co. 1899. Announcement! The Battle Creek Sanitarium Health Food Co... (Ad). *Chicago Daily Tribune.* May 7. p. 31.
• ***Summary:*** "... Will open a Health Food Store at 178 Wabash-av., where they will carry a full line of the celebrated foods, manufactured at Battle Creek, Mich. [Michigan]. Competent demonstrators will answer all inquiries respecting the subject of Health Foods, and will have for the benefit of their patrons samples of the "Foods" so that you can judge of their merits.

"They earnestly solicit the attention of the people of Chicago to questions of healthful living, and believe they have a line of foods unequaled for purity and healthfulness and that they will be appreciated."

Note: This is the earliest English-language document seen (March 2007) that contains the term "Health Food Store" (or "Health Food Stores," regardless of capitalization). Address: [Battle Creek, Michigan].

174. Battle Creek Sanitarium Health Food Co. 1899. Health, wealth, prosperity: The Battle Creek Sanitarium Health Food Co... (Ad). *Chicago Daily Tribune.* May 14. p. 12.
• ***Summary:*** "... announce that they will open on Monday, May 15, a Health Food Store at 178 Wabash Ave., where they will give a free exhibit of all their products of all Health Foods, including the cereals and crackers, and the new Foods made from Nuts. These Foods are without question unequaled for purity and healthfulness, and as the hot weather is once more with us, probably a few suggestions respecting a suitable dietary may be acceptable to those who have not given special thought to this subject, or who have not solved the problem for themselves by practical experience. There will be at all times efficient salesmen and demonstrators direct from the Sanitarium at Battle Creek, Michigan, expert in the knowledge of Food Products, who will gladly answer all inquiries on this subject.

"We have over sixty different foods to select from, and are prepared to suit the most fastidious tastes. We cordially invite the public to call and participate in the good things that will be prepared Monday at our grand opening.

"Special. We will give away free to visitors Monday a beautiful booklet descriptive of all the Health Food, and also free samples." Address: 178 Wabash-Av. [Battle Creek, Michigan].

175. Battle Creek Sanitarium Health Food Co. 1899. What shall I eat? (Ad). *Chicago Daily Tribune.* May 21. p. 14.
• ***Summary:*** "'Eat ye that which is good.' You are invited to call at our Health Food Store, just opened at 178 Wabash-Av., and partake of the good things prepared for you. Free exhibit. Free exhibit of all the foods every day this week." Address: 178 Wabash-Av. [Battle Creek, Michigan].

176. *Chicago Daily Tribune.* 1899. Who's who and what's what: Progress of vegetarianism. May 25. p. 6.
• ***Summary:*** "That the number of people who do not eat meat is increasing is shown by the establishment of a new and handsomely appointed vegetarian café in the heart of the down-town district. This place makes a specialty of all kinds of health foods and caters chiefly to people with fads in the eating line. An omelet is the nearest approach to meat on the bill of fare."

Note: This "vegetarian café" is almost certainly the "health food store" just opened by the Battle Creek Sanitarium Health Food Co. at 178 Wabash av., Chicago, and advertised in the May 7, 14, 21, and 28 issues of this newspaper.

177. Battle Creek Sanitarium Health Food Co. 1899. Sanitarium health foods (Ad). *Chicago Daily Tribune.* May 28. p. 39.
• ***Summary:*** "New store at 178 Wabash-av. Free exhibit of all the health foods manufactured by the Battle Creek Sanitarium Health Food Co." Address: [Battle Creek, Michigan].

178. Food Reform Bureau. 1899. You can make your own nut butter at home (Ad). *Modern Medicine* (*Battle Creek, Michigan*) 8(6):Ad at rear of issue. June.
• ***Summary:*** A half-page ad on page 7 of the "Advertisements" section at rear of issue. "If you have one of our new Mills, and thus have fresh butter every day. Our mill is superior to any other mill in that -

© Copyright Soyinfo Center 2014

"It Has Twice the Capacity of any Other Mill. It Requires One-third Less Effort to Operate It. It Can not be Overfed. Is Unequaled in Point of Durability.

To introduce this mill we make the following offer, which will be good but for a limited time: -

"The price of the Mill is $5.00, but we will furnish a Mill and a copy of 'Every-Day Dishes,' by Mrs. E. E. Kellogg, for $3.50.

"Orders will be filled in the order they are received.

"We can in every way recommend this mill as represented.-Publishers." Address: Battle Creek, Michigan.

179. Sanitarium Health Food Company. 1899. Protose and Beans (Ad). *Modern Medicine* (*Battle Creek, Michigan*) 8(6):Ad at rear of issue. June.

• ***Summary:*** A full-page ad on page 5 of "Advertisements" at rear of issue. "A delicious, appetizing, and nutritious combination.

"Protose is a vegetable meat containing 25% more food value and 10% more fat-making properties than beef, with a rich, delicious, meaty flavor.

"Sanitarium Baked Beans. Are cooked three times and are easily digested. Prepared in a scientific manner, rendering them the most digestible preparation of beans on the market.

"The addition of Protose makes these porkless beans the most toothsome product imaginable. A new combination of food properties, representing the new and progressive ideas of the best food experts in the country.

"Sample free.

"Send us the name of a grocer who does not sell Sanitarium Baked Beans, with eight cents to pay postage, and we will mail you a sample can.

"Art Booklet on Health Foods for the asking."

Note: This is the earliest document seen (March 2010) that mentions "Protose," a vegetable meat made in Battle Creek, Michigan.

This same ad appeared in the next issue of this magazine, in the same place. Address: Battle Creek, Michigan.

180. **Product Name:** Protose (Meatlike Product Made of Peanuts and Cereal–No Soy).
Manufacturer's Name: Sanitas Nut Food Co., Ltd. Renamed Kellogg Food Company in mid-1906, then Battle Creek Food Co. in the spring of 1921.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1899 June.
New Product–Documentation: Ads in *Modern Medicine* (Battle Creek, Michigan). 1899. June. Full-page ads on pages 5 and 8 of "Advertisements" section at rear of issue.

Mrs. Anna L. Colcord. 1899. *A friend in the kitchen: Or, what to cook and how to cook it. Containing about 400 choice recipes carefully tested.* Oakland, California, San Francisco, New York, Kansas City: Pacific Press Publishing Company. Protose is discussed in detail on pages 108-09. "Protose. This is also a nut product and is intended as a substitute for meat. It may be prepared and served in much the same way as flesh foods, which it resembles somewhat in both appearance and flavor. While it possesses nearly twice their nutritive value, it is free from their objectionable features. Protose makes a good flavoring for soups, and is excellent cooked with vegetables." Recipes are given for: Stewed Protose. Roast Protose. Protose sandwiches.

Ad for Protose by Sanitas Nut Food Co., Ltd. 1900. July. *Good Health* (Battle Creek, Michigan). Protose is described as an easy to digest, perfect substitute for meat.

Good Health. 1904. Jan. (Insert after p. 48) "Chart of food elements." Protose (0.5 pint or 4.2 oz) contains 21.3 [units not given] protein, 10.2 fat, 2.8 carbohydrates, and 60 food units per oz.

Lenna Frances Cooper. 1923. *The New Cookery.* 8th ed., revised. The section titled "Unusual foods referred to in this book" (p. 462-64) states: They are made by the Battle Creek Food Company, Battle Creek, Michigan: "Protose (a meat substitute made from cereal and nuts)."

John Harvey Kellogg. 1930. Good Health (Battle Creek, Michigan). Dec. 5, p. 5-7. "Soybeans as human food. I." "I was wholly unacquainted with it [the soybean], and so naturally sought to find in nuts, especially the peanut, a solution to the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have been since made and consumed." Note: It is not known when gluten was first used in this product, but "wheat protein" was the main ingredient in Protose made by Granose Foods in England in 1940.

Ad in *California Health News.* 1937. Feb. 19. p. 13. "For meatless days and for a delicious change. Protose: A satisfying vegetable meat." Illustrations show (each on a plate): Protose croquettes. Protose steak with onions. Protose salad. A can of "Protose: Vegetable meat." "Protose is made of grains and nuts."

Ad for Protose: Vegetable Meat by Battle Creek Food Co., Ltd. 1939. *Good Health* (Battle Creek, Michigan). July, p. 380. "Protose, a vegetable meat, may be prepared in any of the ways in which meat is served." A small photo shows the Battle Creek Sanitarium.

Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 18. "Battle Creek Health Products: Vegetable Meats–Protose Vegetable Meat. 1 lb. $0.50. ½ lb $0.30.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Protose contains 22.30% protein, ?% fat, and 22.70% carbohydrate.

Richard W. Schwarz. 1970. John Harvey Kellogg, M.D. p. 122, 209-14, 216, 218. "In 1896 [Dr. John Harvey] Kellogg announced that he had perfected the ideal substitute for meat in Nuttose, a nut product which he could prepare to taste much like beef or chicken." This was his first meatlike

© Copyright Soyinfo Center 2014

product. Later he developed Protose. "Shortly after the production of Granola for patients at the sanitarium began in 1877, Dr. Kellogg organized the Sanitarium Food Company as a subsidiary of the Battle Creek Sanitarium." But when Dr. Kellogg wanted to expand the business, other sanitarium doctors refused to vote the funds. So Dr. Kellogg launched the private Sanitas Food Company, relying heavily on his younger brother, Will Keith, who had served as his personal accountant and business manager since 1880. "John Harvey's new flaked cereals and vegetable meats became the property of the Sanitas Company." In mid-1906 Dr. Kellogg decided to change Sanitas' corporate name to the Kellogg Food Company. Then: "In the spring of 1921, to avoid further difficulties with Will Kellogg's manufacturing business [Battle Creek Toasted Corn Flake Company], Dr. Kellogg changed his concern's name to the Battle Creek Food Company."

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Protose (Battle Creek)." Note that in 1960 Worthington Foods had acquired Battle Creek Food Co.

181. Sanitas Nut Food Co., Ltd. 1899. The Dujardin-Beaumetz antiseptic dietary (Ad). *Modern Medicine* (*Battle Creek, Michigan*) 8(6):Ad at rear of issue. June.

• ***Summary:*** A full-page ad on page 8 of the "Advertisements" section at rear of issue. "It is universally recognized by European physicians as essential to the successful treatment of Disorders of the Stomach and Liver. This dietary excludes flesh, fish, and shell-fish of all kinds. The chief difficulty in enforcing the non-flesh regimen is the lack of a suitable variety of foods rich in proteids in the ordinary bill of fare.

"The Sanitas Nut Food Co. has discovered how to make all sorts of delicious meat dishes from nuts, by newly discovered processes, which have proved so successful that thousands of invalids are already daily regaling themselves with the most delicate and tasty meat 'stews,' 'roasts,' 'potted meats,' meat 'soups,' 'broths,' and other savory and blood-enriching viands, without the slightest fear of 'hepatic congestion,' 'uric acid diathesis,' or any thing of the sort.

"'Vegetable Meat–in the form of 'Protose,' 'Nuttose,' 'Bromose,' 'Nutta,' And their congeners, is as much more toothsome than 'bloody beefsteaks,' as Bartlett pears are superior to crabapples. Address for circulars and further information,-

"Sanitas Nut Food Co., Ltd., Battle Creek, Michigan." Address: Battle Creek, Michigan.

182. *Mercury* (*The*) (*Hobart, Tasmania, Australia*). 1899. Vegetarianism. July 25. p. 3.

• ***Summary:*** "[From a correspondent.] The delegates and visitors to the biennial Union Conference of Seventh Day Adventists, recently in session at Avondale College, Cooranbong, N.S.W., were much interested in the vegetarian dietary as practised at the college, and in which the delegates, visitors, and students equally participate. In order to give a good idea of the dietary in question, a week's menus at the college are appended: -

"Sunday.–Breakfast–Rolled oats, granola, milk, bread, rolls, honey, stewed quinces, caramel coffee. Dinner–Tomato soup, crutons, mashed beans, squash, corn, nut sauce, bread, zwieback, bread and fruit pudding, lemon dressing.

"Monday.–Breakfast–Oatmeal, granola, fruit toast, bread, rolls, buns, stewed apples, honey, milk, caramel coffee. Dinner–Pea soup, crutons, mashed beans, scalloped tomatoes, boiled rice, nut sauce, bread, zwieback, quince pie.

"Tuesday.–Breakfast–Oatmeal, granola, maccaroni [macaroni], nut butter, bread, rolls, gems, stewed quince, honey, caramel coffee, milk. Dinner–Bean soup, crutons, green peas, potatoes, squash, milk sauce, bread, zwieback, bread pudding.

"Wednesday.–Breakfast–Breakfast meal porridge, granola, milk, milk toast, nut butter, bread, rolls, gems, stewed peaches, jam, caramel coffee. Dinner–Tomato soup, crutons, split peas, fresh corn, squash, nut sauce, bread, zwieback, lemon pudding.

"Thursday.–Breakfast–Breakfast meal porridge, grape toast, granola, nut butter, stewed peaches, honey, bread, rolls, milk. Dinner–Potato soup, crutons, baked beans, pumpkin, fresh corn, nut sauce, bread, zwieback, apple pie.

"Friday.–Breakfast–Rolled oats, granola, maccaroni baked with granola, bread, rolls, gems, stewed apricots, honey. Dinner–Bean soup, crutons, peas puree, mashed potatoes, turnips, sauce, bread, zwieback, sago pudding.

"Saturday.–Breakfast–Oatmeal, granola, fruit toast, bread, biscuits, buns, peaches, honey, milk, caramel coffee. Dinner–Pea soup, crutons, savoury beans, sliced tomatoes, nuttose, bread, zwieback, peach pie.

"The dietary is not only thoroughly wholesome, but also exceedingly appetising."

Note: Parr and Litser (1995, p. 18-19) state that the first Seventh-day Adventist health food factory in Australia, at Melbourne, began to make its first foods in Jan. 1898. Edward Halsey, the master baker, produced the first batch of Granola on 27 Jan. 1898. It was made at St. George's Bakery, 46 Clarke St., Northcote, Melbourne, Victoria. The next day he roasted his first tray of peanuts and produced the first batch of Caramel Cereal. But it was soon realized that Melbourne was not the best location. On 5 Oct. 1898 (in a meeting at Summer Hill, a suburb of Sydney), G.W. Morse was elected "president of the Sanitarium Health Food Company," and it was decided "that he should supervise the transfer of the manufacturing of health foods from Melbourne to Cooranbong (the newly established SDA College in New South Wales was at Avondale in Cooranbong).

On 29 May 1899 the new SDA food factory at

© Copyright Soyinfo Center 2014

Cooranbong, began to make its first product (Peanut Butter, made Edward Halsey, manufacturing wizard). "By June 16 he had turned out two batches of Granola; bread and wholemeal biscuits had come from the oven by July 5/6. And when, later in July of that year, the Union Conference session was held at Avondale, Mr. Halsey's toothsome delights of sound and sensible food were more than enough to awaken the enthusiasm of the delegates. More than this, the delegates bought over £80 worth of Halsey's special goodies during the conference."

Therefore it seems likely that most or all of the special Adventist foods mentioned above (such as granola, caramel coffee, nut butter, nuttose, etc.) were made in Cooranbong, New South Wales, Australia, and no longer imported from Battle Creek, Michigan.

188. *Vegetarian Messenger* (*Manchester, England*). 1899. Vegetarian Society of Victoria. Sept. p. 302.
• ***Summary:*** "The annual report of this society speaks of a considerable amount of work having been accomplished. Forty-five meetings have been held, mostly in the halls of the temperance associations in Melbourne and its suburbs. The secretary of the society has been in correspondence with several of the great shipping companies urging them to introduce wheat-meal bread among their passengers and crews, and has met with sympathetic responses. Perhaps the most important event in the history of Australian vegetarianism during the year, was the establishment by the Battle Creek [Michigan] Seventh Day Adventists of a manufactory [factory] at Sydney, for the production of health foods. The Adventists have launched a monthly vegetarian journal called the 'Herald of Health,' and have also established a cheap restaurant and lodging house for the poorest classes, which is run on pure vegetarian lines. The Vegetarian Society of Victoria congratulates itself on this addition to the forces of vegetarianism in Australia, and has elected as its president Dr. Caro, the superintendent of the Adventist propaganda. The report also notes with satisfaction the establishment of a sister Vegetarian Society in South Australia."

This is the earliest document seen (March 2009) in *Vegetarian Messenger* that contains the term "health foods" (or "health food" or "health-foods").

189. *Los Angeles Times.* 1899. Care of the body: Valuable suggestions for acquiring and preserving health. Oct. 29. p. 29.
• ***Summary:*** The section titled "Vegetarian restaurants" states: "Referring to a suggestion recently made in this department that there is a good opening for a vegetarian restaurant, a correspondent writes a somewhat lengthy communication, in which he takes the ground that, from a financial point of view, no comparison can be made between

© Copyright Soyinfo Center 2014

the prospects of such an establishment here and in London or Liverpool, for the reason that our regular restaurants furnish so much in the vegetarian line that is not found at English eating places. The latter, he says, are mainly supported by non-vegetarians, who take a vegetarian meal in the middle of the day by way of a change.

"At the same time, there are plenty of vegetarian restaurants which do well in this country, and since the previous article was published The Times notes that such an establishment is shortly to be opened in Los Angeles, by a company which owns a number of sanitariums in various parts of the world, and has a vegetarian restaurant in San Francisco."

190. Woods, Chas. D.; Merrill, L.H. 1899. Cereal breakfast foods. *Maine Agricultural Experiment Station, Bulletin* No. 55. p. 93-106. Nov.

• ***Summary:*** "The general use, at the present time, of cereals on the breakfast table is largely due to the improved condition in which these foods are now offered. Twenty years ago uncooked decorticated oats, (sold under the name of oat meal), graham flour, corn meal, and hominy, all of which required long cooking, made up nearly the entire list of breakfast cereals available to the average housekeeper. Today it is possible to purchase at a moderate price cereal foods which have been previously thoroughly cooked, and subsequently dried so they will keep indefinitely."

This report gives a chemical analysis and the "fuel value per pound" of 41 of America's leading precooked cereal breakfast foods, found in the Bangor (Maine) market, including 3 gluten preparations. The chemical composition of the three gluten foods most commonly used in New England is analyzed. These are widely prescribed for diabetic patients by local physicians. The foods were Cooked Gluten, and Whole Wheat Gluten (both made by the Health Food Company of New York), and Dr. Johnson's Glutine (made by Johnson Educator Food Store, Boston, Massachusetts). A table shows that they contain only a little more protein (16.88%, 17.89%, and 15.31% respectively), and a little less carbohydrates (76.80%, 73.85%, and 82.53%) than ordinary bread flour (which contains 15.02% protein and 82.91% carbohydrates).

"Gluten preparations, containing as high as 70 per cent of protein, were on the market five years ago, and there are now preparations carrying from 30 to 50 per cent of gluten which can be used with reasonable safety by persons suffering from diabetes... Samples of flour made from the hard spring wheat of the Northwest not infrequently carry more protein than the sample of Dr. Johnson's Glutine and nearly as much as the two other samples here reported upon. Too much can hardly be said in condemnation of the foisting, by false statements in advertising such materials upon diabetic patients, imposing upon physicians as well as the public."

Another interesting wheat-based product is Ralston Health Club Breakfast Food, made by the Robinson-Danforth Company. It contains 12.16% protein, 85.36% carbohydrates, and 1.56% fat. The report says of this product: "Ralston Breakfast Food, 'a perfect food made from selected wheat rich in gluten,' is also apparently made from soft winter wheat. The sample examined carries 10.70 per cent of protein, and hence could not have been made from a 'wheat rich in gluten.' It is a well made preparation, but its cost of 8 cents a pound is too high."

Other interesting observations: "There is probably no other cereal food on the market so widely and extensively advertised as Shredded Wheat Biscuit. For the most part its advertising matter is free from exaggerated statements." Grape Nuts are manufactured by the Postum Cereal Company. "The claims of the makers are preposterous." Note the very early use of the term "Health Food" in a company name; Cooked Gluten and Wheatena were both made by the Health Food Company. This was probably the Battle Creek Sanitarium Health Food Co. (located in Battle Creek, Michigan; incorporated 1898, yet its forerunner, the Sanitarium Food Department, was making Wheatena and gluten products by 1882), which merged with the Sanitas Nut Food Co. (founded 1899) to become the Kellogg Food Co. in 1908. Note also that no company with "Kellogg" in its name is listed.

Mazama is made by the Mazama Health Food Co. (p. 94). Address: Orono, Maine.

191. *Union Conference Record* (*Australia*). 1899. The health food factory. 2(10):8. Dec. 1.

• ***Summary:*** "After a long but most determined and persevering effort the Sanitarium Health Food Factory is well fitted up, and able to turn out many of our health foods rapidly. This has required much longer time than was expected by anyone, but the work has been well done..." "They are now manufacturing granose biscuits, granose flakes, bromose, nuttose, antiseptic tablets [charcoal tablets], granola, caramel cereal, nut butter, wheatmeal biscuits, gluten biscuits, gluten meal, and still other foods are in the experimental stage. White and brown bread, for the school and the immediate neighbourhood, are also made at the factory. We are thankful to see this enterprise at last on its feet, and we believe it will be appreciated in proportion to the effort it has cost."

Note 1. This is the earliest document seen (Feb. 2010) concerning the Sanitarium Health Food Factory (or Company) in Australia, or stating explicitly that foods with names such as "granose biscuits, granose flakes," etc. are being made in Australia. Formerly foods with these names were made only in Battle Creek, Michigan, then some were imported to Australia.

Note 2. Ellen G. White, co-founder of the Seventh-day Adventist Church, apparently never used the word "gluten"

© Copyright Soyinfo Center 2014

in her own writings. However the above passage appears in her biography, *Biography of Ellen G. White,* 6 vols., by White, Arthur L. 1981-86. He cites it to show what products are being made by the Sanitarium Health Food Factory in Australia. Ellen White was almost certainly aware of all these products (including gluten) since she was in Australia during the 1890s; she arrived in Dec. 1891 and stayed until about 1900.

Note 3. As of May 1997, this Seventh-day Adventist church paper is still published under the title *Record.*

192. Smith's Cash Store. 1899. Prices are for this week (Ad). *San Francisco Chronicle.* Dec. 11. p. 4.
• ***Summary:*** In this ad, one food section with a large bold heading is "Health Foods–Come next–Demonstration permanently of St. Helena and Battle Creek goods–Only fully equipped Health Food Department in city."

Note: Both St. Helena (in St. Helena, California) and Battle Creek (in Battle Creek, Michigan) are makers of vegetarian health foods, owned by the Seventh-day Adventist Church.

This ad also appeared in the Dec. 3 (p. 6) issue of this newspaper. Address: 25-27 Market St., near Ferry, San Francisco, California.

193. **Product Name:** Malted Nuts (Non-dairy Product Made from Malted Cereals and Nuts and Resembling Malted Milk).
Manufacturer's Name: Sanitas Nut Food Co. from 1899. Renamed Kellogg Food Company in mid-1906, then Battle Creek Food Co. in the spring of 1921.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1899.
Nutrition: Water 2.6%, protein 23.7%, fat 27.6%, carbohydrate (malt sugar and dextrin) 43.9%, and ash 2.2%. Calories per ounce: 140.
New Product–Documentation: Mrs. Anna L. Colcord. 1899. "A friend in the kitchen: Or, what to cook and how to cook it. Containing about 400 choice recipes carefully tested." The next to last page of the book (unnumbered) lists foods available from the St. Helena Sanitarium Health Food Company [California], including "Malted Nuts."

Sanitas Nut Food Co., Ltd. 1900. *Good Health* (Battle Creek, Michigan). 35(7):July. Ad section in back of issue. Unpaginated. "20th century foods" (Ad). Products include "Malted Nuts."

John Harvey Kellogg. 1921. The New Dietetics–What to Eat and How... Battle Creek, Michigan: Battle Creek Modern Medicine Publishing Co. p. 359. "Nearly thirty years (1892-93) the writer, in seeking to supply the needs of invalids unable to eat cow's milk, conceived the idea of combining malt-digested cereals with nuts to prepare a substitute. The result reached after many experimental efforts was the product known as 'Malted Nuts,' which much resembles malted milk in appearance, while having a delicate and very agreeable nutty flavor. This product has been produced in considerable quantities and has come to be somewhat widely used." 'Malted Nuts' is an excellent source of food iron and it increases the milk secretion in nursing mothers.

In: Richard W. Schwarz. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. See p. 121. "In 1896 he [Dr. Kellogg] patented a product labeled 'Bromose,' which he claimed to be a vegetable equivalent of malted milk... At about the same time, John Harvey originated a similar product which he named Malted Nuts. Derived principally from peanuts and almonds, one could mix Malted Nuts with water to form a vegetable milk which Kellogg maintained looked 'exactly like milk, and tastes so nearly like it that it is a very satisfactory substitute.' He designed the latter product primarily for infants who could not tolerate cow's milk..."

194. Colcord, Anna L. (Mrs.). 1899. A friend in the kitchen: Or, what to cook and how to cook it. Containing about 400 choice recipes carefully tested. Oakland, California, San Francisco, New York, Kansas City: Pacific Press Publishing Company. 126 + v p. Illust. 19 cm.
• ***Summary:*** A Seventh-day Adventist vegetarian cookbook. The subtitle continues: Plain directions for healthful cookery; How to can fruit; A week's menu; Proper food combinations; Rules for dyspeptics; Food for infants; Simple dishes for the sick; Wholesome drinks; Useful tables on nutritive values of foods, time required to digest foods, weights and measures for the kitchen, etc.

Pages 105-09 discuss "Specially Prepared Health Foods" which may be obtained from the St. Helena Sanitarium Health Food Company (St. Helena, California), of the Battle Creek Sanitarium Health Food Company (Battle Creek, Michigan). They include Granola (thoroughly cooked and partially digested; may be eaten with milk, cream, or fruit juice), Granose (light, crisp flakes; serve like Granola), Nut Butter (a substitute for butter and cream), Protose ("This is also a nut product and is intended as a substitute for meat..."), and Caramel Cereal (a "harmless and nutritious substitute for tea and coffee, both of which are now generally recognized by the best physicians as harmful beverages, and the cause of many nervous disorders. It is made wholly from grain products...").

Page 120 gives a week's menu and page 121 discusses the Sabbath and Sabbath dinners ("The Sabbath is the day of rest In order that it may be devoted by all to religious exercises, holy meditation, and spiritual delight, it should be as free as possible from the ordinary duties and cares of life... With proper planning, very little, if any, cooking need ever be done on the Sabbath...").

A full-page ad on the next to last page of the book (unnumbered) lists foods available from the St. Helena Sanitarium Health Food Company (which has a San

Francisco branch at 1422 Market St.): Granose ("The Queen of cereal foods"), Granola, Granose biscuit, Caramel cereal, Whole wheat sticks, Graham sticks, Pure gluten biscuit, Whole wheat zwieback, Whole wheat wafers, Nut butter, Nucose, Nutlet, Bromose, Malted nuts, Protose, Maltol, Ambrosia, Almond butter, Manno, Fruit coco. "Unfermented breads aid digestion: Most of our crackers and sticks are unfermented."

Note: This is the earliest document seen that mentions Protose (which was Dr. John H. Kellogg's first meat alternative product), or that mentions "Malted Nuts" (a nondairy product made principally from peanuts and almonds; when mixed with water it resembled malted milk).

195. Kellogg, John Harvey. 1899. Shall we slay to eat? Battle Creek, Michigan: Good Health Publishing Co. 173 + iii p. Illust. 19 cm.

• ***Summary:*** This is a comprehensive study of vegetarianism. Contents: Historical: The Golden Age, the Pythagorean philosophy, the healthy city of Socrates, Seneca a believer in the natural dietary, Plutarch's "Essay against Flesh Eating," early Christian defenders of the natural dietary, Buddha a diet reformer, vegetarianism not a modern innovation, celebrated modern vegetarians, vegetarianism in America, vegetarian periodicals, associations, etc. Man's natural diet considered from a scientific point of view. The testimony of physiology respecting the natural dietary of man. diseases resulting from the use of flesh foods. The testimony of human experience. The testimony of eminent man against flesh eating. The ethnics of diet. Address: M.D., Battle Creek, Michigan.

196. Lambert (Joseph) & Co. 1899. We manufacture nut grinders and blanchers, also peanut roasters (Ad). In: Almeda Lambert. 1899. Guide for Nut Cookery: Together with a Brief History of Nuts and Their Food Values. Battle Creek, Michigan: J. Lambert & Co. 452 p. See last page (unnumbered).

• ***Summary:*** This full-page black-and-white ad (on the unnumbered last page of the book) contains a large illustration showing a hand-powered grinder that "Makes fine nut butter."

"Our favorite family nut grinding mill. Ball bearing–easily operated. To operate by hand and power. A full equipment for preparing nut foods. We have for sale a large stock of all kinds of nuts, shelled and unshelled. We also make a fine variety of pure and wholesome Nut Foods. For further information, descriptive illustrated catalogue, and price list, address–Joseph Lambert & Co., Battle Creek, Michigan." Address: Battle Creek, Michigan.

197. Lambert, Almeda. 1899. Guide for nut cookery: Together with a brief history of nuts and their food values. Battle Creek, Michigan: J. Lambert & Co. 452 p. Illust. Index. 22 cm.

• ***Summary:*** Published in 1899, this book was copyrighted in 1898 by Mrs. Almeda Lambert (of Battle Creek, Michigan), who was almost certainly a Seventh-day Adventist. She quotes from Genesis 1:29 and on pages 60-65 she quotes extensively from the writings of Ellen G. White, the founder of the Seventh-day Adventist religion; she likewise advocates a vegetarian diet–indeed a pure vegetarian diet, free from milk and dairy products.

In the Introduction (p. 6) she states: "In the last few years there has been a great awakening in regard to healthful living and great strides have been made in the methods of emulsifying nuts into a paste or butter,–a convenient form for cooking purposes and much easier to digest. But the majority of those who have adopted nut butter, use it instead of the dairy product only to spread on bread. It is the object of the author to place before the public a book treating upon the use of nuts as shortening, seasoning, etc., to be used in every way in which milk, cream, butter, or lard can be used, and fully to take their place."

Chapter 1, "Nuts and Their History" (p. 7-58) includes many species of nuts arranged alphabetically including almonds, beechnut, chufa (earth almond), cocoanut, groundnut (*Apios tuberosa*, common in low, wet grounds), hickory-nut, litchi (leechee nut), peanut, pecans, sapucia-nut, souari-nut, pine-nut, walnut, and water chestnut.

The section on the peanut (*Arachis hypogœa*, p. 37-42) states that it is also "known in different localities as the earthnut, ground-pea, goober, pindar, jar-nut, and Manila nut. Strictly speaking it is not a nut at all, and should be more properly called the ground-pea." About 3½ pages of extracts are given from *Farmers' Bulletin* No. 25 titled "Peanuts: Culture and Uses," by Robert B. Handy (1895). Mrs. Lambert then comments: "Thus we see that over thirty years ago, peanuts were not only used as titbits [sic, tidbits] between meals, but also for culinary purposes. But since the invention of machinery for family use, for grinding the nuts into a butter, their use has spread over a greater territory. This is partly due to the fact that the expense is thus lessened, and not only this, but because the nut as it comes from the mill is in a much healthier condition to eat, being easier of digestion than the oil or the raw residue that remains after the oil is taken out. The nut butter can be easily mixed with water, forming an emulsion, and by thinning it sufficiently, it makes an excellent substitute for cream and milk. It can also be made into various nut foods."

A table compiled by Prof. König (p. 41) shows that peanut meal has the largest number of nutritive units per pound of twelve principal foods listed, and the cost of 1,000 nutritive units in the form of peanut meal is the lowest. For this reason the German army now uses peanuts, peanut flour and peanut meal extensively in its diet (p. 6).

In the chapter titled "Nuts: Their properties and food values" she states (p. 68-69): "The purest and most easily digested of all meats is the meat of nuts. In nutritive value

© Copyright Soyinfo Center 2014

they far exceed all flesh meats." "Nuts are more digestible if they are first emulsified, as very few can masticate them fine enough to be acted upon by the digestive juices. The question of emulsifying nuts has been practically settled in the last few years by the invention of machinery for that purpose, both for family and factory use. It is sincerely hoped and believed that the time is not far distant when nuts will fully take the place of animal flesh, fats, and products."

The chapter titled "Nut butter" (p. 70-75) describes how to make the following at home: "Peanut butter, raw peanut butter, almond butter, Brazil-nut butter, peanut cream, peanut milk, raw peanut milk and cream, almond milk, hickory milk, pine-nut milk, chufas milk, and cocoanut milk."

Note 1. This is the earliest document seen (Aug. 2013) that mentions coconut milk, which it calls "cocoanut milk."

Concerning homemade "Peanut butter" (p. 70-71): The introduction states: "The Spanish peanut makes the best peanut butter. The first essential thing is to have a nut-grinding mill" [such as the one made by Joseph Lambert & Co.]. The recipe itself states: "The first step is to roast the peanuts to a nice brown, being careful not to over-brown or scorch them, as too much cooking spoils the flavor. They can be roasted in an ordinary oven, but can be better done in a peanut roaster made especially for this purpose. As soon as they are roasted and cool, the skins or bran should be removed by rubbing them in the hands, or what is better, a coarse bag; or take a square piece of cloth and fold the edges together, forming a bag of it. The chaff can then be removed by the use of an ordinary fan, or by pouring from one dish to another where the wind is blowing. The process of removing the skins is called blanching. Next look them over carefully, remove all defective nuts and foreign substances, and they are ready for grinding. If a fine, oily butter is desired, adjust the mill quite closely, and place in the oven to warm. Feed the mill slowly, turn rapidly, and always use freshly roasted nuts; after they have stood a day or two they will not grind well nor make oily butter. If the butter is kept in a cool place in a covered dish, and no moisture allowed to come in contact with it, it will keep several weeks; and if put in sealed jars or cans, will keep indefinitely."

Note 3. This is the earliest document seen (Dec. 2007) that contains a recipe for homemade peanut butter.

When making peanut cream and milk, roast the peanuts less than when making peanut butter. "They should have a light straw color."

Note 4. This is the earliest document seen (Oct. 2004) that mentions Joseph Lambert in connection with peanut butter. Unfortunately it provides little information on the history of peanut butter or the history of his work with it.

Note 4. This is the earliest document seen (Sept. 2000) that mentions almond butter (resembling the modern product) or gives a recipe: "Almond butter is more difficult to make than peanut butter because the skins can not be so easily moved. Roasting does not loosen the skins of the almond as it does of the peanut. They have to be soaked in boiling water from two to five minutes; then the skins become loose and can be pinched off by pressing on the nut with the thumb and finger; the skin will crack and the kernel pop out. But by this process the nuts have soaked up some water and become tough. They must then be dried in the oven until quite crisp, but the oven must not be hot, or they will brown. Then run them through a loosely adjusted mill or a sausage grinder, and place on a cloth stretched over the stove until perfectly dry; then grind them in the nut-butter mill, quite tightly adjusted. This makes excellent butter if the almonds are first-class, and sweet."

Note 5. This is the earliest U.S. document seen (Sept. 2000) that mentions "Almond milk" which is prepared as follows: "Dissolve 1 tablespoonful of almond butter in 1 pint of warm water, adding a little at a time.

Note 6. This is the earliest English-language document seen (Aug. 2013) that contains the term "peanut milk." Continued. Address: Battle Creek, Michigan.

198. Lambert, Almeda. 1899. Guide for nut cookery: Together with a brief history of nuts and their food values (Continued–Document part II). Battle Creek, Michigan: J. Lambert & Co. 452 p. Illust. 22 cm.

• ***Summary:*** Continued from p. 76. Other chapters include– Nut meal (p. 76-78): To make peanut meal, heat the nuts sufficiently to remove the skins, but do not brown them. Blanch (remove skins), then boil in water until very tender. Drain until perfectly dry, then grind in a mill that is loosely adjusted. If desired, rub through a flour sieve. A very rich meal can also be made by grinding raw peanuts. Meals can also be made from almonds, pine-nuts, etc.

Sausages (p. 79-81): For peanut sausages mix 1 tablespoon peanut butter, 2 tablespoons water, 3 tablespoons gluten or dry bread-crumbs, a little salt, sage, and parsley. Form into small cakes and bake on an oiled tin. Serve topped with Peanut Gravy No. 1.

Nut oil (p. 82-83): Boil ground cocoanuts or peanuts with water in a kettle for 1 hour. Set in a cool place and the oil will rise to the top. Nutmeatose, Nutora, etc. (p. 84-90): These foods are best cooked under high-pressure steam to make them quite solid. For Nutora of peanuts: Mix 2 cups raw nut butter or nut meal with 1 cup water and salt to taste. Beat with an egg beater for 5 minutes or more, then put into cans and cook (in a steam cooker) for 3 or 4 hours. For "Nut cheese," see p. 90.

Note 7. This is the earliest document seen (Aug. 2002) in the Western world concerning a meatless sausage.

Nutmeato (p. 91-127): This chapter contains many nut-based recipes for meat alternatives. The main ingredient is usually nut butter, but "nutmeatose" gluten, zwieola or toasted bread crumbs, and legumes are also used, along with corn starch and a little salt. The mixture is usually sealed in a can and steamed for 3-5 hours. Recipes include: Mock

© Copyright Soyinfo Center 2014

Nutmeato roast, Nutmeato steak, Nutgrano No. 1-10 (No. 1 and No. 8 use 1 cup raw peanut butter), Nutmeatose No. 1-7 (p. 97-98; No. 1 uses 2 cups peanut butter), Frutose, Frutosia, Butter for table (butter whipped with an equal quantity of water ["Better Butter"]), Roast goose (with full-page photo, based on zwieola {see p. 399} and eggs), Turkey legs, Chicken legs, Roast turkey (with photo, based on zwieola, gluten, pecan meal, almond meal, peanut butter), Nut lobster, Baked trout (with photo), Mock fish stuffed and baked, Sauce for baked fish (with photo), Mock turkey, Mock fish-balls, Vegetable nut roast, Mock salmon, Mock chicken croquettes, Mock fried oysters, Mock oyster patties, Mock chip beef. Includes many photos of the finished dishes.

Unleavened breads (p. 156-67): These are "made light without the use of yeast, baking-powder, or soda. Since they are the most healthful of all breads, it would be of benefit to mankind if they were in more general use." For best results "run the dough through the nut-butter mill twice or more, instead of kneading by hand as directed in the recipes." Recipes include: Graham gems, Raw peanut-butter gems, No. 1 gluten (made from best grade white flour which is rich in wheat gluten–such as Pillsbury's Best). Yeast breads (p. 168-82) incl. Graham bread.

Legumes (p. 246-52) incl. Nut meatose beans, Vegetable turkey, boiled peanuts. Gravies for vegetables and toasts (p. 311-17) incl. Mock milk gravy (from peanut butter), raw peanut milk gravy. Pies (p. 320-32) incl. Peanut meal pie crust, Chufa cream pie crust.

Puddings (p. 333-43): "Puddings made with dairy milk and sugar combined are apt to ferment in weak stomachs. They are much better prepared without dairy milk." Incl. Custard No. 1 (from raw peanut milk). Sauces for puddings (p. 344-49) incl. Almond cream sauce. Cakes (p. 354-75): "Cakes and pies are filled with animal fats, irritating spices, and are raised with baking-powder or soda, are certainly very unwholesome; to use them in our bill of fare could work nothing but injury to all who partake.

"Animals are becoming so diseased that it is no longer safe to use their flesh as food, and even if they were not diseased, free fats are hard of digestion." (p. 354).

"Spices and condiments, which usually enter into cake making, are equally injurious. The effect that they have upon the stomach can be illustrated by putting them upon a raw surface or in the eye; inflammation immediately takes place. They irritate the nerves, cause irritability and peevishness, and create a craving for something more highly spiced, which often leads to grosser forms of intemperance."

Drinks (p. 381-83) incl. Peanut and cereal coffee (with wheat bran, corn-meal, and malt), Peanut coffee No. 1-2 (roast peanuts until dark brown), Chufa coffee. Food for the sick (p. 400-01) incl. Almond milk, Graham gruel, Plain gluten gruel, Nut gruel (with almonds and peanuts), Egg nog (made from cocoanut cream, eggs, and sugar).

Note: This is the earliest document seen (Dec. 2012) that mentions or contains a recipe for a nondairy egg nog.

Creams, ices, etc. (p. 411-14) incl. Ice-cream No. 1-3 (made from almond or peanut cream, sugar, and eggs), Ice-cream made of peanut milk, Almond ice cream, Sherbets (from frozen fruit juices). To blanch nuts (p. 415-16); blanch peanuts dry and almonds by pouring boiling water over them. To salt nuts (p. 417-18). Confectionery (p. 419-24) incl. Peanut candy (with 1 lb each sugar and peanuts). Menus (p. 425-33) incl. Thanksgiving dinner: This "has been a great puzzler to the vegetarian housewife... I propose that we do have a turkey for Thanksgiving, not the corpse of a bird whose life was sacrificed to satisfy our perverted appetites, but something which... is only one made of nuts and grains... "With painstaking we shall have a better dinner than our sisters who have their platters ladened with the remains of a barn-yard fowl, and with cakes and pies filled with animal fats and spices. Besides this, we shall have a clearer mind, as well as a clear conscience; while those who eat meat are taking poisons into the system which benumb the brain, cloud the conscience, and render man unfit to meet the vesper hour and hold communion with his God."

Thanksgiving dinner menu (8-course meal), Christmas dinner. Composition of foods (p. 434-39) incl. Dietetic tables by Atwater and Woods of USDA. See p. 439 for composition of nuts.

On the last page is a full-page ad for nut grinders, blanchers, and peanut roasters made by Joseph Lambert & Co., Battle Creek, Michigan.

Note 8. This is the earliest U.S. document seen (March 1999) that mentions almond milk.

Note 9. This is the earliest document seen (Sept. 2013) that mentions a non-dairy non-soy ice cream; it is based on almonds or peanuts.

Note 10. This is the earliest document seen (June 2007) that gives a recipe for a meatless turkey and the 2nd earliest that mentions meatless turkey. However soy is not mentioned.

Note 11. This is the earliest document seen (Dec. 2003) that mentions or gives a recipe for a meat alternative resembling beef: Mock Nutmeato roast, and Nutmeato steak. These were made with nuts rather than soy. Address: Battle Creek, Michigan.

199. Leadsworth, J.R. (Mrs.). 1899. The natural food of man, and how to prepare it. 3 parts. Oakland, California, New York City, Kansas City, Missouri: Pacific Press Publishing Assoc. 96 p. *

• ***Summary:*** An 1899 ad for the book (published by "Pacific Press Publishing Co." in Oakland, California) states: "A thoroughly hygienic cook-book. It discards not only meat, but all animal productions, such as milk, butter, eggs, etc., as well." Address: USA.

find it when its lost, how to keep it when its found. Oakland, California, New York, N.Y., Kansas City, Missouri: Pacific Press Publishing Company. 3 + 9 + 222 p. 19 cm.
• ***Summary:*** About vegetarianism and hygiene. Pages 65-66 contain a section on uric acid.

201. *Vegetarianeren.* 1899-?? Serial/periodical. Copenhagen, Denmark. [Dan]*
• ***Summary:*** "This is the name of the Danish Vegetarian journal, which is published at Kopenhagen [Copenhagen], and has just entered upon its second year. Its editor is a young physician, who conducts a sanatorium at Skodsborg, near Kopenhagen, and is a pupil of Dr. Kellogg" (*Vegetarian Messenger* (UK), June 1900, p. 180). Address: Copenhagen, Denmark.

202. Dr. John Harvey Kellogg answering questions about health and biological living at Battle Creek, Michigan (Photograph). 1899? Undated.
• ***Summary:*** See above, Image courtesy of the Ellen G. White Estate. In a book he wrote in 1920 titled *The health question box, or a thousand and one health questions answered.* 2nd ed., Dr. J.H. Kellogg wrote: "Foreword: For more than forty years, the writer of this volume has each week stood before an audience of invalids at the Battle Creek Sanitarium to open a popular question box."

203. *Los Angeles Times.* 1900. Care of the body: Valuable suggestions for acquiring and preserving health. Jan. 7. p. IM27.
• ***Summary:*** The section titled "A vegetarian restaurant" states: "Los Angeles has now a first-class vegetarian restaurant and it appears to be well patronized. The restaurant, which also keeps health foods for sale, is connected with a well-known hygienic institution [Battle Creek Sanitarium] in Michigan, which manufactures these foods on a large scale, and has branch sanitariums all over the world. For those who are not acquainted with the wide range of dishes at the command of the modern vegetarian in the United States, the following dinner bill of fare of the restaurant above referred to, on a recent Sunday, will be of interest:

"Bayo beans and tapioca soup, celery, cabbage salad, onions, nut and vegetable roast, egg macaroni, boiled potatoes with gluten sauce, lima beans and nut stew, carrots, vegetable stew, ambrosia, bromose tablets, shaved nuttose, sliced nucose, protose.

"Boiled eggs, plain omelet, scrambled, poached, poached on toast, and poached on granose.

"Rice with raisins, granose, granola, gluten mush with milk, nut cream or dairy cream.

"Steamed figs, pear sauce, baked apples with cream, sliced bananas with cream, stewed prunes, apple sauce, apples, oranges, and bananas. Apple charlotte, cream rice pudding.

"Cereal coffee, hot malted nuts, cold milk, hot milk,

unfermented wine, glass one-half cream and one-half milk, lemonade, hot or cold orangeade, distilled water.

"Whole-wheat bread, graham bread, zweiback [zwieback], graham sticks, whole-wheat sticks, mixed wafers, oatmeal wafers, graham wafers, granose biscuit, gluten wafers, and whole-wheat wafers."

Note: This is the earliest document seen (March 2007) worldwide that mentions a health foods restaurant.

204. Bucknum, Evora. 1900. An experience with nuts as food. *Good Health* (*Battle Creek, Michigan*) 35(1):28-30. Jan.

• ***Summary:*** "While the peanut, or goober pea, or monkey nut, as it is variously called in different localities, is not a true nut but a legume, and is so classed by leading authorities on foods, its composition is almost identical with that of the sweet almond, being a little richer in proteids, although not containing so much oil."

"Some years ago the German army began to use them. Professor Dabney has experimented extensively with them, as have many other scientists. I have known several cases of insomnia of long standing to be cured by the use of peanut butter."

205. *Food, Home and Garden* (*Philadelphia*). 1900. A college for vegetarians. Jan. p. 1.

• ***Summary:*** "The importance of securing educational advantages away from the artificial stimulation of flesh, alcohol and unwholesome beverages cannot be overestimated." "The Walla Walla College was built in 1892 to furnish college privileges especially to the Seventh Day Adventists (though many others attend) in the Northwest. The first president was Professor E.A. Sutherland, who is now president of the college at Battle Creek, Michigan."

"This college was the first, I believe, in the denomination, to start out on the Vegetarian diet: none of the animal products being used, except eggs, milk and butter, and the latter only in cooking." An illustration shows Walla Walla College, College Place, Washington.

206. Hammond (Harry N.) Seed Co. 1900. Annual catalogue (Mail-order catalog). Fifield, Michigan. 49 p. See p. 35. January 1, 1900. 22 cm.

• ***Summary:*** Page 35 is titled "Hammond's selected northern-grown farm seeds." Here we read: "Soza Beans or Soy Beans. The dry beans, roasted and ground, *closely resemble and taste* very much like coffee. Its great value, however, is as a forage crop and for fertilizing the soil, and for pasturing, or feeding of the green fodder, of which it yields eight to ten tons per acre. Sow broadcast one-half bushel to the acre, or it may be planted in drills three feet apart and one foot between plants. My seed grown in latitude of Augusta, Me. [Maine], will ripen in any State. Pkt. 10 cts., lb 25 cts., 3 lbs. 60 cts., post-paid; peck 65 cts., bu. $2.25 by freight or express."

Across the top of the page is printed: "Following Seeds are grown, cleaned, and tested under my supervision. I guarantee them the best seeds that can be grown. Bags free with all farm seeds." Other seeds described on this page include: Hammond's success beardless barley, new Japanese buckwheat, chufas or earth almonds, kaffir corn, teosinte, mammoth Russian sunflower, dwarf Essex rape, Spanish peanuts, and Japanese millet.

The cover of this catalog states: "Fresh, pure seeds–sure to grow. Harry H. Hammond seedsman. Fifield, Saginaw County, Michigan. Seed potatoes. Vegetable and flower seeds. The largest seed farm controlled by any one seedsman in America." An illustration showing many fields, farmhouses, and buildings is titled "Partial view of Hammond's Saginaw Valley seed farm. 1200 acres devoted to growing and producing the best seeds that grow. Buy seeds direct from the grower." Many vegetables and grains are also illustrated on the cover and below them is written: "Hammond's $1.00 vegetable seed collection of 50 packets of the choicest northern-grown vegetable seeds comprises all the above and many others not illustrated on this page." This catalog was printed by the Review & Herald Publishing Co. [Seventh-day Adventist], Battle Creek, Michigan. At the top of page 1 the date "January 1, 1900" is printed.

Note 1. This is the earliest Hammond seed catalog seen in which the soybean is listed. It is owned by the Bentley Historical Library at the University of Michigan (Ann Arbor).

Note 2. Fifield (pronounced FAI-feeld) is in Saginaw County, Michigan, just east of the Saginaw River and northwest of the center of Saginaw city today; it is a station on the Pierre-Marquette Railroad in Bueno Vista township "serving a sawmill settlement of which Harry M. Hammond became the first postmaster on August 19th, 1898. The office operating until February 15th, 1900." The place is named for Eugene Fifield (Source: *Michigan Place Names*, by Walter Romig–1986. Wayne State Univ. Press, p. 196).

Note 3. Hammond also lived (and published catalogs in) in Decatur, Michigan (far away in the southwest corner of the state), and Bay City (which is now about 20 miles north of Saginaw, near Saginaw Bay). Address: Fifield, Saginaw Co., Michigan.

207. *Advent Review and Sabbath Herald.* 1900. News and notes. 77(9):141-42. Feb. 27. See p. 142, col. 1.5.

• ***Summary:*** "The Detroit *Christian Herald* reports that 'Battle Creek [Michigan] is becoming noted as the headquarters in the United States for the manufacture of peanut butter. Thirty car-loads of peanuts were contracted for in Virginia, which will be made into butter.'"

Address: M.D.

210. Lee, Clayton Donald. 1900. Joseph Lambert. *Battle Creek Daily Moon.* April 4. Art Souvenir Edition.
• ***Summary:*** "We present herewith exterior views of the two establishments of Joseph Lambert, one of the progressive manufacturers of Battle Creek [Michigan]. Mr. Lambert is a native of South Nattick, Massachusetts, and he came to this city in 1885, and until 1890 was engaged in the manufacture of buggies. In the later year he started a small machine shop for the manufacture of printers' supplies. In 1895 he made a beginning in his present line of business, and two years later he opened a small retail store on West Main Street for the sale of nut foods. The demand for these goods increased to such an extent that Mr. Lambert erected the large block at 235 West Main street, which was occupied by his retail business.

The manufacturing and wholesale business is located in the building shown in the accompanying illustration at the corner of Washington and Kalamazoo streets, where Mr. Lambert first began the manufacture of nut grinding machinery, and the wholesaling of peanuts. The business has gradually extended and this building is now used for the manufacture of several kinds of machines for special purposes. Among them are: Nut butter mills, for making butter from nuts; blanching machines, for removing the hulls from peanuts; peanut roasters, etc. The trade in these special machines has developed to a remarkable extent, so that now the concern ships its products to Japan, China, Australia, Egypt, Palestine, to other foreign countries, and throughout the United States.

In addition to the articles mentioned, Mr. Lambert manufactures several varieties of nut foods, among them Nut Butter, Malted Caramels, Fruit Nuts, Crystal Nuts, etc. He is making a specialty of salted peanuts prepared by a new process, and ships large quantities of this article to the wholesale trade." Photos show: (1) "One of the factory buildings"–a large, two-story wooden building. (2) Lambert's retail store.

Note 1. Jean Davis, a Seventh-day Adventist historian from Battle Creek, Michigan, writes of the first photo: "This building was originally the first *Review & Herald* building, in which the Seventh-day Adventist periodical was published.

Note 2. This Art Souvenir Edition is subtitled "Historical, industrial, and social record of Michigan's queen city." "Issued as a special edition of the Battle Creek Daily Moon, Wednesday, April 4, 1900." Address: Battle Creek, Michigan.

211. Broadbent, Alfred. 1900. Battle Creek work in England. *Vegetarian Messenger* (*Manchester, England*). April. p. 117-18.
• ***Summary:*** "I had recently the pleasure of visiting the sanitarium at Dunedin, Cronks Hill Road, Meadvale, Redhill, in Surrey. It is about two miles walk from Redhill, is pleasantly situated, and has excellent views. There is only room for ten patients, and so far the sanitarium has been full.

"Dr. Kress, who is in charge of the work in this country, is now anxious for the sanitarium to become better known, and says it is intended to build an institution at Redhill to accommodate forty or fifty patients. When that is filled, another will be started at some other point where an equal number can be dealt with."

"The sanitarium at Redhill, is under the supervision of Dr. Kress and his wife–Dr. Lauretta Kress, and under their superintendence the work must prosper, they are so impressed by its righteousness and truth.

"Dr. Kress is a specialist for diseases of the stomach, and has had many years experience in the treatment of indigestion.

"Dr. Lauretta Kress is skilled in the treatment of diseases of women, &c. She is an excellent speaker and lecturer, and a great believer in dress reform for ladies, being most anxious to promote it in this country. She has designed some garments which sit very tidily, and are not at all sloppy. She says that any garments can be adapted to the patterns she uses.

"There are only two meals during the day in the sanitarium, one at 8 o'clock morning, the other at 3 o'clock afternoon. No liquids are allowed at meals.

"No physic or drugs are used, the treatment consists of massage, electricity, electric baths, diet and hydropathy being made special features of the treatment, which is highly successful."

"For a few years the foods sold by the London Food Co., have been imported from Battle Creek, Michigan, U.S.A., but now a factory is established at Horley, Surrey, where several kinds are already manufactured.

"The foods from now are to be sold in this country under the name of 'Life and Health Foods.'

"I have visited the factory and though the machinery was not working, I was struck with the elaborate machines required for producing the foods. Some of them go through more than twelve processes, Granose especially requiring a very long time to make.

"I was informed that the price of all the foods is being gone into, and a reduction on them all–it is hoped–will be eventually made. I hope this will come about, for I have long considered it a great pity that these valuable foods should–because of their high price–be placed beyond the reach of

© Copyright Soyinfo Center 2014

many whose accession to them would leave the path of food reform made easier.

"The Vegetarian Society, which has always sought to popularise food-products of a genuine nature, was the first to introduce these foods into this country, and has done much to make them so well known as they are today."

Note: This is the earliest document seen (Dec. 2013) that discusses the origins of Granose Foods (a Seventh-day Adventist company) in England.

212. Stewart, Charles E. 1900. Chronic constipation, a symptom resulting from a disordered state of the sympathetic nervous system. Its causes and cure. *J. of the American Medical Association* 34:1306-10. May 26.
• ***Summary:*** "Nuts, in order to be of service, should go through a special process of preparation. At the present time such specially prepared nut foods as protose, nuttolene, malted nuts, granuts, bromose, and a number of others can be found on the market. A careful analysis of these nut foods has been made in our laboratory, and they have been found to be sterile and wholesome, and to contain nitrogenous and fatty material to meet the demands of the human economy. A diet consisting of granose, browned rice, protose, steamed figs, prune marmalade, and ripe fresh fruits..., almond butter, and cream [almond cream], is so palatable, nourishing, and easy of digestion that the most fastidious epicure could find no fault with it" (p. 1309). Address: M.D., Battle Creek, Michigan.

213. U.S. Department of the Interior, Census Office. 1900. Joseph Lambert in the 1900 U.S. Census in Battle Creek, Michigan. Battle Creek, Calhoun County, Michigan. p. A-79. Home No. 229.
• ***Summary:*** This census record, enumerated on 1-2 June 1900, shows that Joseph Lambert is living alone in Battle Creek, Michigan. He was born in April 1860, is age 40, married, and has been married for 8 years–but his wife, Almeda, is not with him. He was born in Massachusetts. His father was born in Canada (French) and his mother in Ireland. Occupation: Merchant. He is renting the place where he lives. There are four separate apartments in this house.

Note 1. Jean Davis, a Seventh-day Adventist historian from Battle Creek, Michigan, writes: "Almeda's obituary says they were married in 1890. They must have separated and later divorced as Joseph is in Cincinnati, Ohio, in 1920, with wife Daisey [Daisy]; Almeda did not die until 1921. I did not find Almeda in Michigan in 1900." Note 2. Almeda Lambert died in Escondido, California, in March 1921.

theine [a stimulant found in tea] nor caffeine, the harmful elements of the beverages of the breakfast table. Granose is a preparation of wheat, in which all the elements of the grain are preserved. Granola is another health food, made from a combination of grain, and it is claimed for it that it is an ideal breakfast food. There are other preparations from nuts, specialties in glutens and antiseptic charcoal tablets, wheatmeal and oatmeal biscuits, etc."

219. Catalogue of exhibitors in the United States sections of the International Universal Exposition, Paris, 1900. 1900. Paris: Société Anonyme des Impremieries Lemercier. 560 + 31 + [23] p. See p. 288. 20 cm.
• ***Summary:*** "Class 56, Farinaceous products and their derivatives," includes two health food companies (p. 288): (1) "Battle Creek Sanitarium Health Food Company, Battle Creek, Michigan.–Cereal products and health foods."

(2) "Health Food Company, 61 5th Avenue, New York. Wheatena, infants' and invalids' food."

220. Kellogg, Ella Ervilla (Eaton) (Mrs.). 1900. Every-day dishes and every-day work. Battle Creek, Michigan: Modern Medicine Publishing Co. 206 p. Index. 21 cm. [1 ref]
• ***Summary:*** The wife of the famous Dr. John Harvey Kellogg discusses her system of meatless cookery. She lived 1852-1920. This book was copyrighted 1896.

Contents: Preface. Cereals. Macaroni. Fermented or yeast bread. Unfermented or aerated bread. Fruit. The leguminous seeds (soy is not mentioned). Vegetables. Soups (without milk, with milk), Eggs. Desserts. Pastry ("Dietetic evils of pastry–General suggestions for making pies"). Cake. Toasts (incl. Zwieback). The Battle Creek Sanitarium Food Company's Products (recipes using them; including Granola, Granose, Crystal Wheat, Gluten, Zwieback, Caramel-Cereal).

Sanitas Nut Food Company's Products (recipes using them; including Nut Butter, Nuttolene, Nut Meal {"Many persons suffer from biliousness, nervousness, sick-headache, and various forms of indigestion, from the use of butter, milk, and cream, without being aware that these substances are harmful to them. Persons suffering from dilatation of the stomach, a condition which is exceedingly common, must avoid milk and butter in all forms. Nut butter, nut meal, and nuttolene have been prepared as substitutes for butter and cream. In nut butter, the fat is in a state of perfect emulsion, so that it mixes well with water. Thus it does not interfere with digestion}," Protose, Granose, Almond Meal). Hints about every-day work (Economizing time, system in work, daily program of kitchen work, economizing money, economy of material, uses of stale bread, left-overs, waste of fuel, general suggestions for economical housework, order of clearing the table, washing the dishes, dish-cloth and towels, cleaning silver, care of table linen, disposal of garbage).

Peanut butter is called for as an ingredient in recipes on pages 166 and 170 ("An icing for the peanut cake may be made in the same way by using the peanut butter").

Note: This is the earliest English-language document seen (Nov. 2013) that mentions a non-dairy icing.

Almond butter is called for as an ingredient in recipes on pages 140 (one well-rounded tablespoonful in an icing for Almond pound cake), 155 (twice), 156 (twice), 166 (twice), 170, and 172 (twice).

The term "nut butter" appears on 32 pages; see p. 201 in Index.

The word "Vegetarian" appears in this book only once, in the titled of a recipe, "Vegetarian Boiled Dinner" (p. 164).

Bran (including wheat bran) is mentioned on pages 98 and 99 (3 times each in the section on soups), 100, 144, 169, and 197.

Near the end of this book are full-page ads for: Bromose (p. 207), Malted Nuts ("presented in the form of a fine granular powder," p. 208), Protose–vegetable meat ("This truly wonderful food product is, without question, the most remarkable discovery in dietetics which has been made within the last half century... Protose is a Perfect Substitute for flesh food... Send 10 cents for a sample can," p. 209), Battle Creek Sanitarium Health Foods (Granose, Granola, Caramel-Cereal, Battle Creek Sanitarium Breakfast Food, Germless Oats, Germless Corn Grits, Crystal Wheat {sterilized, ready cooked}, Gluten Preparations, Diabetic Foods, A large variety of crackers and biscuit and other wholesome preparations. Superior canned goods. Warranted pure. Send for catalog and price list, p. 210).

Antiseptic charcoal tablets–antiseptic, absorbent. "Charcoal Tablets are not a panacea, but they have proved to be the moat valuable remedy we possess for morbid conditions arising from fermentation or decomposition of food in the stomach and intestines. They consist of a special form of vegetable charcoal, much superior to willow, freshly prepared, to which is added sulphur, one of our most valuable intestinal antiseptics, and diastase, a starch-digesting ferment. This will at once be recognized as a happy combination for combating the action of microbes in the alimentary canal," (p. 211). *The Stomach: Its Disorders and How to Cure Them,* by J.H. Kellogg, M.D. (p. 212). *The Home Hand-Book,* by J.H. Kellogg (p. 213). *Science in the Kitchen,* by Mrs. E.E. Kellogg, A.M. (p. 214). Address: A.M., Battle Creek, Michigan; Author of *Science in the Kitchen,* etc.

221. *Battle Creek Daily Moon* (*Michigan*). 1901. Another improvement: The Sanitas Nut Food Company's building nearing completion. Jan. 2. p. 6.
• ***Summary:*** "The Sanitas Nut Food company's new building, on the corner of Aldrich and Lincoln streets, is rapidly nearing completion and will be ready for occupancy about the last of next week. The structure is one of the most substantial factory buildings in America and when completed

© Copyright Soyinfo Center 2014

will be practically fireproof...

"The building is 50 by 100 feet in size and three stories in height. The walls are massive, twenty-two inches in thickness below and eighteen above the second story floor... this building will cost in the neighborhood of $20,000...

"When the new building is completed it will be used by the Sanitas Nut Food company (Ltd.) as a factory where nut foods will be manufactured. One of the features of the new factory is an immense revolving oven two stories in height."

222. *Vegetarian Messenger* (*Manchester, England*). 1901. Of health foods and vegetarian specialties: Write for the latest and most complete price list in the Kingdom (Ad). Jan. p. [4].

• ***Summary:*** This ¼ page ad (on an unnumbered page near the front) continues: "... and Xmas and New Year Novelties. 'Pitman' Health Food Stores, Birmingham.

Note 1. This is the earliest English-language document seen (Sept. 2009) in England or the UK that contains the term "Health Food" or "Health Food Stores" (or Store, regardless of capitalization).

Note 2. This is the earliest document seen (Sept. 2009) that mentions "Pitman" or "Pitman Stores" in Birmingham, England, in connection with healthy foods. Pitman seems to be much less involved with making such foods than the International Health Food Association [International Health Association], also of Birmingham. IHA seems to have been the first importer of and then the first manufacturer of health foods in England and Pitman seems to have started the first health food stores. Yet it is not clear whether or not Pitman carried health foods made by IHA in its stores; it seems likely that they would have (in part since IHA apparently owned no retail stores), yet we have been unable to find any evidence to confirm this.

223. White, Ellen G. 1901. Manufacture of health foods. In: Testimony for the Church. Vol. 7. See p. 127-31.

• ***Summary:*** This talk, said to be under Divine Guidance, was presented on 16 Feb. 1901 at St. Helena, California. "I have a most earnest desire that in every place the work shall be carried forward in accordance with His commands. I see trouble ahead as high as mountains for our people in the way in which some things are now being done, and especially in regard to the health food business...

"With great skill, and with painstaking effort, Dr. Kellogg and his associates have prepared a special line of health foods. Their chief motive has been to benefit humanity, and God's blessing has rested upon their efforts... The Lord will teach His servants how to make food preparations that are more simple and less expensive. There are many whom He will teach in this line if they will walk in His counsel, and in harmony with their brethren."

"In all our plans we should remember that the health food work is the property of God and that it is not to be made a financial speculation for personal gain. It is God's gift to His people, and the profits are to be used for the good of suffering humanity everywhere.

"Especially in the Southern States of North America many things will be devised and many facilities provided, that the poor and needy can sustain themselves by the health food industries..."

"... No one has a right to engage in the manufacture of these foods in any selfish way..." Address: St. Helena, California.

224. Kellogg, John Harvey. 1901. Vegetable-food compound [made from wheat gluten and peanuts]. *U.S. Patent* 0,670,283. March 19. 2 p. Application filed 3 June 1899.

• ***Summary:*** "My invention relates to an improvement in vegetable-food compounds; it consists in combining gluten of wheat or other cereals and water with a meal prepared from peanuts or other oleaginous nuts... The object of my invention is to furnish a vegetable substitute for meat which shall possess equal or greater nutritive value in equal or more available form for digestion and assimilation..."

Wash wheat gluten until it is practically free from starch, then mix it with dry peanut meal in the proportion of 1 part of the nut meal to one or more parts of the raw moist gluten. To mix, pass the gluten and meal one or more times through a vegetable shredding or other suitable mixing machine. Then carefully mix in the proper quantity of water. Cook for 1-3 hours or more at a temperature of 212-230ºF. Cooking not only preserves the product (in the way ordinary canned foods are preserved) but modifies "its consistence [consistency] and flavor, both of which are changed in a very remarkable way... By proper regulation of the temperature and proportions of the ingredients various meat-like flavors are developed, which give to the finished product very characteristic properties."

Note: This is the earliest English-language document seen (Nov. 2003) that contains the term "meat-like" (or "meat like").

"My product is purely vegetable in character. It contains no animal substance or extract. In color and appearance it resembles potted veal or chicken. It has a distinctly meaty odor and flavor. When a bit is torn off and chewed, it shows a distinct fiber. It is of such consistency that it may be masticated like tender meat and when cooked retains its form as does meat. As is the case with animal flesh, its color varies somewhat according to the temperature to which it is subjected in cooking, the higher the temperature the darker the color... It may be cut into slices and served cold. It may be broiled like meats of all sorts and lends itself to the various culinary manipulations in a manner altogether resembling meat. Laboratory digestion experiments demonstrate that is it digestible in less time than meat-pulp. This is due to the well-known fact that the digestibility of vegetable proteids is increased by cooking, while animal

© Copyright Soyinfo Center 2014

proteids are rendered less digestible by cooking."

Advantages: "It is more digestible than flesh meats. It is free from danger of contamination with the disease germs or putrefaction products, and hence may be freely employed in many disorders in which physicians find it wise to prohibit the use of flesh foods, such as rheumatism, gout, Bright's disease, various disorders of the liver, myxoedema, and exophthalmic goiter. It is an economical substitute for flesh food, as it can be commercially produced at a price less than that usually charged for flesh meats. Its use obviates the necessity of slaughtering animals, against which in certain countries, as India, there are many millions of people who entertain a deeply-rooted prejudice. It may be freely used without incurring many of the risks which are involved in the free use of flesh meats."

Note 1. This is the earliest patent seen issued to Dr. John Harvey Kellogg that mentions wheat gluten. Note 2. The process described in this patent was probably used to make Protose.

Note 3. This is the earliest English-language document seen (Nov. 2003) that contains the term "meat-like" (with any combination of quotation marks), or the term "vegetable substitute for meat." Address: M.D., Battle Creek, Calhoun Co., Michigan.

225. Parlin, E.E. 1901. Vegetarian restaurants in San Francisco. *California Missionary* 6(12):3. March 25.
• ***Summary:*** Seventh-day Adventists established some of the first vegetarian restaurants in San Francisco. "The first restaurant began in a very modest way in the rear of the food store at No. 1438 Market Street, and was confined to the family of sanitarium nurses and helpers. In December 1898, upon the removal of the health food store to No. 1436 Market Street, arrangements were made by which the restaurant was opened to the public, and a trained cook was secured from the St. Helena Sanitarium. About thirty-five persons, I am told, patronized the restaurant the first day it was opened. The idea of existing without the use of meat was a novel proposition to almost every one; but by means of lectures, demonstrations, and judicious advertising, an interest was awakened, which has steadily grown from that time to the present. 'Vegetarian cranks,' as they were frequently called, became more numerous...

Many of the customers were from down-town San Francisco. They "urged over and over again that a similar establishment be opened nearer the business portion of the city." But rents were very high there. "Finally, however, the present place, at 755 Market Street, was secured at a monthly rental of $150. Although it has dining accommodations for 60 persons at a time, "almost daily many persons go away because of inability to find a place at the tables.

"From the very beginning the class who have patronized the 'Vegetarian Cafe,' as it is now called, have been the professional and business men of San Francisco."

226. *Good Health* (*Battle Creek, Michigan*). 1901. Dainty summer dishes prepared from the celebrated foods that have made Battle Creek famous (Ad). 36(7): July.
• ***Summary:*** This page consists of three large, horizontal photos and their detailed captains. They show: (1) Roast of Protose. "Serve with brown gravy, the recipe for which may be found in the Recipe book which may be had from the Sanitas Nut Food Co., Ltd." Note: Protose is a meatlike product made of peanuts and cereal (no soy) introduced in 1899 by the Sanitas Nut Food Co.

(2) Croquettes of Protose. "Form into croquettes, roll in granola, then in beaten egg, and again in granola. Bake until brown and serve hot, garnished with parsley." (3) "Malt honey balls.–Over freshly toasted granose flakes pour sufficient malt honey to hold the flakes together. Form into balls, and serve with fresh fruit of any kind.

At the bottom of the page is written: "Samples of the foods that are used in these dishes may be obtained by addressing the Battle Creek Sanitarium Food Co., or Sanitas Nut Food Co., Battle Creek, Michigan."

Note: This is the earliest document seen (May 2004) that mentions the Battle Creek Sanitarium Food Co.

227. Sanitas Nut Food Co., Ltd. 1901. Cow's milk kills babies: Malted nuts cures babies (Ad). *Good Health* (*Battle Creek, Michigan*) 36(7):Unpaginated. July.
• ***Summary:*** "By the thousand every year. The manure germ is always present in milk, and is now known to be the cause of *Cholera Infantum*, and other gastro-intestinal disturbances which are the bane of infant life, especially during the warm months. Cow's milk forms tough and indigestible curds. Cow's milk develops ptomaines which cause rickets. Cow's milk causes coated tongue and biliousness [peevish and ill-natured in disposition]. Cow's milk constipates.

"Cow's milk may be improved by mixing with malted cereals (malted milk or cream), and in various other ways, but it is cow's milk still, and often causes rank poison to the babe, and is not much less unwholesome for adults, often gastric catarrh, biliousness, periodical headache, and obstinate constipation.

"Malted nuts cures babies and adults of the mischiefs which milk creates, and is the one perfect substitute for mother's milk, a delicious and wholesome substitute for cow's milk." An oval photo on this full-page ad shows a baby. Address: Battle Creek, Michigan.

228. *Vegetarian Messenger* (*Manchester, England*). 1901. Spanish America. Sept. p. 198.
• ***Summary:*** "A temperance and vegetarian propaganda is now being carried on in Latin America. Señor Ed. F. Forga has translated into Spanish a score of tracts and articles on food reform, including versions of Dr. Nichols's 'How to live on sixpence a day,' Dr. Kellogg's 'Relation of

© Copyright Soyinfo Center 2014

physiological chemistry to vegetarianism' and others. The latest addition is a translation of Dr. Paul Foerster's German essay on 'Vegetarianism as the basis of a new life.' Amongst other publications which Señor Forga has in preparation is 'Algunos datos sobre el vegetarismo in Hispano-America.' This will be looked for with interest as so little is known here of what has been done in the South American republics to spread rational ideas on the right method of living. Kneipp's books have been turned into Spanish among a score of languages. The writings of Jorge Klickmann and Simón B. Rodriguez may also be mentioned. We congratulate Señor Forga (whose address is Arequipa, Peru) on the courage and enterprise shown in his attack on the evils resulting from flesh-eating and intemperance."

229. Battle Creek Sanitarium Food Co. 1901. Toasted Wheat Flakes (Ad). *American Kitchen Magazine* 16(1):p. xxv. Ads section at end. Oct.

• ***Summary:*** A ½-page ad. "Made by the world-famed Battle Creek Sanitarium Food Company of Battle Creek, Michigan. At last the work of achievement is accomplished, and Ceres offers the world the one of all whole wheat foods that is most acceptable to the palate and most healthful. By natural process, exclusive with us, starch, the chief element of all wheat foods, is transformed into dextrine by cooking, drying, recooking, and then hot air toasting, this preparing the way for ready digestion and perfect assimilation. No other food is completely cooked or can begin to compare with Toasted Wheat Flakes..."

An illustration shows a statue of Ceres, the Greek goddess of grain, holding a box of Toasted Wheat Flakes in her left hand. A youth, sitting on the floor, looks on.

Note 1: This is the earliest ad or document seen for "Toasted Wheat Flakes."

Note 2. A different half-page ad, titled "Toasted Wheat Flakes" and featuring another lovely woman, appears in this same volume, at the end of the Nov. 1901 issue, on page xxxi. Address: Battle Creek, Michigan.

230. Battle Creek Sanitarium 1901. Battle Creek Sanitarium

© Copyright Soyinfo Center 2014

(Ad). *Bulletin of the American Medical Temperance Association* 8(4):Last page (unnumbered). Oct.
• ***Summary:*** In the top third on this full-page ad is an illustration of the huge Battle Creek Sanitarium. It is described as "The oldest and most completely equipped establishment of its sort in the world. Beautifully and healthfully located.

The 2nd third is "Branch institutions," those "which are conducted under the same general management as the Sanitarium at Battle Creek, Michigan. Each possesses special advantages due to locality or other characteristic features." They are: Colorado Sanitarium, Boulder, Colorado. St. Helena Sanitarium, or Rural Health Retreat, St. Helena, California. Nebraska Sanitarium, College View (Lincoln), Nebraska. Portland Sanitarium, Portland, Oregon. New England Sanitarium, South Lancaster, Massachusetts. Chicago Branch Sanitarium, Chicago, Illinois (David Paulson, M.D., Superintendent). Cleveland Branch of the Battle Creek Sanitarium, Cleveland, Ohio. Branch of St. Helena Sanitarium, San Francisco, California. Honolulu Sanitarium, Hawaiian Islands. Medical and Surgical Sanitarium, Guadalajara, State of Jalisco, Mexico. Institut Sanitaire, Basel, Switzerland. Claremont Sanitarium, Cape Town, South Africa. Skodsborg Sanitarium, Skodsborg, Copenhagen, Denmark. Sanitarium, Apia, Samoa. New South Wales Medical and Surgical Sanitarium, N.S.W., Australia.

Directory of health food factories: Battle Creek Sanitarium Food Co., Battle Creek, Michigan. Nebraska Sanitarium Food Co., College View, Nebraska. Colorado Sanitarium Food Co., Boulder, Colorado. Portland Sanitarium Food Co., Portland, Oregon. St. Helena Sanitarium Food Co., St. Helena, California. Basle Sanitarium Food Co., Basle, Switzerland. London Food Co., 70-74 Legge St., Birmingham, England.

Note: The correct name (as of Dec. 1901) of the "London Food Co." in Birmingham was probably either the "London Health Food Company" or the "International Health Association." Address: Battle Creek, Michigan.

231. *Meriden Daily Journal* (*Meriden, Connecticut*). 1901. The miseries of mush: It makes bad tempers and worse stomachs. Dec. 14. p. 18. [1 ref]
• ***Summary:*** "All mushes should be discarded from the bill of fare and a well-dextrinized cereal, such a qwieback [sic, zwieback] or twice-baked bread, toasted or brown rice, granose, granola, granut, and especially to be commended is a new and exceedingly popular food, Toasted Wheat Flakes, sweetened with Malt Honey, nature's health-sweet. This new food originated at the Battle Creek Sanitarium, where, as well as at the sixty branches of their world-famous institution, it is in great demand as a food remedy for indigestion and constipation. Every package bears the picture of the Battle Creek Sanitarium."

Note: This is the earliest English-language document seen (April 2011) that contains the term "brown rice."

232. *Good Health* (*British*) (*England; Seventh-day Adventist*). 1901. A Christmas dinner. 1(2):25-26. Dec.
• ***Summary:*** Gives a menu with recipes. The main dish is: "Protose roast.–Use one-half pound of protose as it comes from the tin. Press into the sides of this one large onion which has been sliced thin, and sprinkled with salt. Place in a baking dish, and surround with a nut cream made by dissolving one-fourth cup of peanut butter in one and one-half pints of water, and salt to taste. As it bakes in a hot oven, baste often with the dressing until the protose and onion become a rich brown. The time usually required for baking is from one and one-half to two hours."

233. Rich, Burdett A.; Farnham, Henry P. 1901. The lawyers' reports annotated. Book LI. Rochester, New York: The Lawyers' Co-operative Publishing Company. 1013 p. Index.
• ***Summary:*** Page 332: "United States Circuit Court of Appeals, Second Circuit." Frank Fuller v. Barton Huff et al. Better known as "Fuller v. Huff." Basic findings: "1. The term 'health food' cannot be a technical trademark, either with or without the word 'company,' as the term is descriptive of quality.

2. "A mark, name, or phrase that has been so used by a person in connection with his business, or articles of merchandise as to become identified therewith and indicate to the public that such articles emanate from him cannot be used by others so as to lead purchasers to believe that the articles for sale are his, or so as to obtain the benefit of the market he has built up thereunder.

"3. The use of the name 'health food' to describe foods which the manufacturer had previously called "sanitarium foods" may be prevented by injunction at the suit of another manufacturer which had used the name for eighteen years before, even if the defendant may have been innocent in adopting the same name, where, after it had learned of the complainant's prior use, it continued to use the term in spite of remonstrance, with a guaranty to its purchasers against suits, though the packages plainly state the name of the manufacturer, and do not imitate or resemble in external appearance the packages of the complainant.

Ruling of July 5, 1900.

"The use of the prefix 'sanitarium' or the name 'Battle Creek,' in connection with the complainant's tradename, 'Health Food Co.,' does not enable the defendants, under the law, to escape infringement."

Page 333: "The addition of the word 'company' or its abbreviation 'Co.' to 'Health Food' does not make the phrase a legitimate trade-name capable of exclusive appropriation."

"Shipman, Circuit Judge, delivered the opinion of the court: The complainant, Frank Fuller, a citizen of New Jersey, commenced in the year 1875, under the name of

© Copyright Soyinfo Center 2014

'Health Food Company,' to sell in the city of New York cereal products prepared for food, and has continued to the present time in that business and in the use of the same name, under which he has extensively advertised his goods by circulars, and in newspapers and magazines, at a cost of from $75,000 to $100,000. He has established agencies in Brooklyn, Chicago, Boston, Washington [DC], Philadelphia [Pennsylvania], St. Louis [Missouri], and Oakland [California]. The name 'Health Food Company' is displayed prominently upon the packages in which the various articles are presented to the consumers. About fifty different articles have been thus placed upon the market. The business has become large, and the name is unquestionably valuable to the complainant. In October, 1876, John H. Kellogg took charge, and has continued to be in charge, of the institution popularly known as the 'Battle Creek Sanitarium,' but incorporated in pursuance of the laws of the state of Michigan, in 1867, under the name of the 'Health Reform Institute.' This corporation is the owner of a large sanitarium, having branch institutions at various places, and has established in this country and elsewhere sub-organizations for the promotion of charitable and missionary work. The Battle Creek Sanitarium recommended to its patients particular kinds of cereal foods, and entered upon the business of manufacturing and selling these articles under the name of 'Sanitarium Foods.' In 1881 nineteen different articles were made. In 1888 the business of food manufacture was made a separate department, under the name of 'Sanitarium Food Company,' which advertised itself in April, 1893, as 'Sanitarium Health Food Company.' The reason for this, and a subsequent change of name, which preserved the words 'Health Food Company,' is stated by Kellogg in his deposition as follows:

"In April, 1893, our advertisement appears in *Good Health* [magazine] over the business name of 'Sanitarium Health Food Company.' This name we were led to adopt by the action of one of our old employees [Charles W. Post, developer of Postum {1895} and Grape Nuts {1897}. In 1929 the Postum Cereals company changed its name to General Foods Corporation], who, leaving the institution, set up in business in the same town, advertising himself under the name of the 'Battle Creek Health Food Company.' As quite a large proportion of our mail had for years been addressed to us as the 'Battle Creek Health Food Company,' we found this action a serious annoyance, and objected to it, with the result that an arbitration was agreed upon, the result of which was that the party referred to was required to change his name, which he did, adopting the title the 'Battle Creek Bakery Company.' We then added the word 'Health' to our business announcement, making it 'Sanitarium Health Food Company.' Our salesmen, however, in introducing our foods, so constantly made use of the term 'Battle Creek Sanitarium' in describing our foods, to distinguish between our institution and numerous other sanitariums, we finally, some two or more years ago, still further extended the business title of our food department to its present form,– the 'Battle Creek Sanitarium Health Food Company.' Our purpose in adopting the words 'health food' in our name was to protect ourselves against parties who sought to pirate the extensive business which we had built up, by assuming a name similar to ours, and making similar goods in the same town."

"In October, 1896, a retail grocers' food exhibition was held at the Grand Central Palace in New York city. The complainant exhibited his products at a booth, under the prominently displayed name, 'Health Food Company.' About 15 or 20 feet distant the defendant, Barton Huff, a citizen of the state of New York, as agent of the Health Reform Institute, exhibited its wares, and upon its booth was a placard containing the words 'Health Food Company,' in large letters, under the words 'Battle Creek Sanitarium.' The complainant remonstrated with Huff against the use of 'Health Food Company' as an infringement of the complainant's right, and threatened a suit. Huff said that he would bring the representation to the attention of the officers of the Health Food Department, but the use of the name did not cease. The food business of the defendant under its last name is extensively advertised, and, when the testimony was being taken, was said to amount to from $260,000 to $300,000 annually. The circuit court dismissed the bill upon the ground that the defendant's name was clearly distinguishable from the complainant's business name, and was not an unlawful appropriation. 99 Fed. Rep. 439."

"The decree of the Circuit Court is reversed, with costs, and the cause is remanded to that court with instructions to enter a decree for injunction against the defendant Barton Huff in accordance with the prayer of the bill, with costs."

Note: In short, J.H. Kellogg and the Battle Creek Sanitarium were ordered to stop using the words "Health Food Company" or "Health Food Co." in its company name. Use of these words constituted "unfair competition." Address: 1. Editor; 2. Asst.

234. Sanitas Nut Food Co. 1901. The Court of Awards of the Paris Exposition (Ad). In: Charles B. Reynolds. 1901. Washington: A Handbook for Visitors. The Standard Guide. New York, NY: Foster & Reynolds.

• ***Summary:*** A half-page ad near the rear of this book. "... recognizing the merits of the unique foods manufactured by the Sanitas Nut Food Co., granted them a medal.

"The thousands of persons, both in this country and in the Old World, who are daily using these products of forest and field, furnish a stronger proof, if possible, of their intrinsic value.

"Chief among these foods is Protose, the Vegetable Meat, which is more than a substitute for flesh, fish, and fowl.

"Protose Steaks with tomato sauce are delicious. That flesh meats are productive of disease is fast becoming

© Copyright Soyinfo Center 2014

recognized by intelligent people everywhere. Eminent scientists in both hemispheres are charging to the account of meat eating such diseases as cancer, Bright's disease, epilepsy, gout, rheumatism, and a host of other afflictions of mind and body.

"'As a man soweth so shall he also reap,' is a principle as true in our habits of eating as in any other phase of human experience. The poisons contained in flesh foods when taken into the human stomach are sure to produce disastrous results. Why do we slay to eat, and make graveyards of our stomachs when there is a better way?

"Protose which resembles meat in appearance and taste, and whose nutritive value is twenty-five per cent greater, may be baked, boiled, stewed, or broiled, or served in the hundred and one other ways known to the skillful cook for the preparation of flesh foods.

"If you can not procure Protose of your grocer, send us three two-cent stamps, and we will mail you a sample, together with the address of our nearest agent.

"Booklet 'Nut Foods' free on application."

Illustrations show the front and back of a circular medal / medallion from the 1900 Exposition Universelle Internationale. Address: Battle Creek, Michigan.

235. *Naturopath and Herald of Health* (*The*) (*New York City*). 1902. Our exchanges. 3(1):44-45. Jan.
• ***Summary:*** When two periodicals have an exchange, they send each other, free of charge, every issue published. In this article is given the name of each magazine, its place of publication, and a few lines about its subject / content. *Physical Culture* (New York City, Bernarr Macfadden). *Health* (NY). *Health Culture* (NY). *Nature Cure* (NY). *The Mental Advocate* (NY). *The Phrenological Journal* (NY). *The Scientific American* (NY). *Arena and Mind* (NY). *Public health Journal* (NY). *The Clinic* (Syracuse, NY). *Chicago Vegetarian* (Illinois). *Good Health* (Battle Creek, Michigan). *Health* (Altruria, California). *Thought* (Alameda, Cal.). *Pacific Health Journal* (San Francisco, Cal.). *Journal of Hygeio-Therapy* (Kokomo, Indiana). *The Searchlight* (Appleton, Wisconsin). *Vaccination* (Terra Haute, Indiana; the official organ of the Anti-Vaccination Society of America). *American Inventor* (Washington, DC). *Freedom* (Seabreeze, Florida). *Philosophical Journal* (San Francisco, Cal.). *Suggestion* (Chicago, Ill.). *Journal of Magnetism* (Chicago; magnetic healing). *Practical Physiology* (Boston, Massachusetts). *Capitol of Health* (Atchison, Kansas). *The Nautilus* (Holyoke, Mass.; Elizabeth Towne). *American Osteopath* (Memphis, Tennessee). *Osteopathic Success* (Wilkes-Barre, Pennsylvania). *The Psychic Healer* (Oswego, Kansas). *Out Home Rights* (Boston, Mass.). *Weltmer's Magazine* (Nevada, Missouri). *The Breath of Life* (Battle Creek, Mich.). *Psychic Review* (Toledo, Ohio). *Journal of Osteopathy* (Kirksville, Missouri). *Journal of the Science of Osteopathy* (Chicago, Ill.).

236. *Vegetarian Messenger* (*Manchester, England*). 1902. Price list. Jan. p. 12.
• ***Summary:*** Lists prices for foods; beans, peas, lentils; prepared foods; biscuits; Plasmon; tea and coffee substitutes; nuts; jams; bottled fruit; oils; butter and lard substitutes [margarines and shortenings]; soaps; and cookery appliances, etc.

All are available for purchase from the Vegetarian Society's Food Stores at 19 Oxford St., Manchester, England.

The foods in the category "Prepared foods" are of special interest, since most are meat alternatives and would soon be called "health foods." Those known to be made (or imported) by the International Health Association Ltd. (renamed Granose Foods Ltd. in 1926). are followed by an asterisk: Dr. Nichol's Food of Health, Dr. Allinson's Food (packed it tins), Fromm's Extract (jar), Maggi's Soups (packet), Granose Flakes* (packet), Granose Biscuits* (packet), Avenola (packet), Bromose* (tin), Falona (tin), Meatose*, Nutmeatse* (tin), Vejola (tin), Nutvejo (tin), Malted Nut Caramels (tin), Nut Butter* (tin), Carnos, Golden Grain Meal (packet).

Cookery appliances include several Nut Mills, and "The Pitman Spoon."

Note: There are apparently no foods made by Pitman sold at this vegetarian store.

237. Carr, Homer W. 1902. West Salamanca. *Atlantic Union Gleaner* (*South Lancaster, Massachusetts; Seventh-day Adventist*) 1(10):106. March 12.
• ***Summary:*** "The school opened here November 23 [1901], with an enrolment of seventeen pupils. This has steadily increased. Now we have twenty-nine."

"In manual labor the boys have cut wood, and all have helped in making peanut butter which sells readily."

238. Kellogg, John Harvey. 1902. Vegetarianism and evolution. *Good Health* (*Battle Creek, Michigan*) 37(3):150-52. March. [1 ref]
• ***Summary:*** Discusses an article in *The Literary Digest* by Prof. Ferdinand Hueppe. Address: M.D.

239. Battle Creek Sanitarium Food Co. 1902. Toasted Wheat Flakes: A rational food (Ad). *Modern Medicine: A Journal of Physiological Therapeutics* (*Battle Creek, Michigan*) 11(5):[36]. May.
• ***Summary:*** "By virtue of its wheat origin and careful preparation, Toasted Wheat Flakes is a rational food. It supplies the elements of sustenance, repair, and growth to the body in a delicious, easily digested form."

"Served hot or cold: Toasted Wheat Flakes is always crisp and dainty,..." Address: Battle Creek, Michigan.

240. Kellogg, John Harvey. 1902. Vegetable proteids. *Good*

© Copyright Soyinfo Center 2014

Health (*Battle Creek, Michigan*) 37(5):248-49. May.
• ***Summary:*** "Proteids are perhaps the most important of the three indispensable food elements, carbohydrates (starch and sugar), proteids, and fats." Albumen, casein, fibrin, and gelatin are found in both animal and vegetable substances. Nuts are very rich in vegetable albumen. Vegetable casein is found in legumes. Wheat contains gluten or vegetable gelatin. Yet the cost of vegetable proteids is much less than that of animal proteids. Address: M.D.

241. R.S.T. 1902. The solving of the meat problem: What has been accomplished at the Battle Creek Sanitarium during the past thirty-seven years. *Chicago Daily Tribune.* June 5. p. 7.
• ***Summary:*** "Just now, when the price of meat is so high as to make it an expensive luxury even to the well-to-do classes, it strikes me that it is a good time generally for people to learn the fact that meats are not the best foods obtainable to contribute to either health or strength."

"I was surprised to learn that the patients treated at this great institution were not only not given drugs for the cure of their ailments but were fed on a 'meatless' or vegetarian diet. At first I said these people are 'cranks,'... Gradually I sampled the 'vegetarian' dishes, and found them so temptingly prepared and served, that I soon learned to prefer them to the flesh foods. I was surprised at the great and pleasing variety of substitutes for meats in the line of cereal and nut preparations."

Dr. Kellogg, whom the writer has known intimately for about 6 years, "has been a vegetarian for 35 years or more [i.e., since at least 1867]. He is the hardest and most persistent worker that I know of." He works at least 14 hours a day. "He is a human dynamo of wonderful energy. Recently, when he was engaged almost night and day planning and working for the rebuilding of the Sanitarium [destroyed by fire on 18 Feb. 1902], I asked him how he could endure so much work. He answered in his uniformly courteous and cheerful way: 'O, that is simple; I live right.'"

He has developed scientifically prepared foods from cereals and nuts for his thousands of patients. In "this line he is certainly the most prolific as well as the most successful inventor in the world."

These food products were primarily "for use in the Battle Creek Sanitarium, but as the thousands of patients who have been cured or benefited, learned the better way of living, they demanded that these foods be supplied to them at their homes, and as a result the Battle Creek Sanitarium Food Company and the Sanitas Nut Food Company came into existence, the former about 3 years ago [i.e., about 1899], and the latter about 7 years ago [i.e., about 1895].

"Dr. Kellogg is not the only living example of the superiority of a vegetarian over a meat diet. There are, I should judge, no less than 2,000 people in Battle Creek who do not eat meat, and who claim as a consequence that they enjoy better health on account of their method of living, and they certainly look healthier than the average persons who are meat eaters."

The Sanitarium "corps, numbering about 800, are all vegetarians, and the amount of work that they do, always with cheerfulness, amply demonstrates the fact that the 'Battle Creek Idea' is correct."

It is important to know that neither "the Battle Creek Sanitarium nor the Battle Creek Sanitarium Health Food Company is conducted for the purpose of making money." They are "wholly philanthropic in nature."

There follows a long column giving menus on specific days, starting with breakfast, 4 June 1902. Items preceded by an asterisk (*) are made by one of the two food companies. These include: Almond Cream, Bromose, Caramel Cereal, Cocoanut Crisps, Crystal Wheat, Gluten Biscuit No. 1, Gluten Wafers, Graham Crackers, Granola, Granut, Granose Biscuits, Granose Flakes, Malted Honey, Malted Nuts, Nuttolene. Protose, and Zwieback. Categories: Dextrinized grains. Unfermented breads. Eggs and milk are served, but no meat, fish, or poultry–except at the "sinners" table. Two photos show the Sanitarium, old and new.

242. *Good Health* (*London*). 1902--. Serial/periodical. London. Published for the Proprietors (Good Health, 451 Holloway Rd.) by Simpkin, Marshall, Hamilton, Kent & Co., Ltd., 23 Paternoster Row, London, E.C.
• ***Summary:*** Continues: Health Reformer: 1(1867)-13(1878). Dr. Kellogg, a Seventh-day Adventist and head of the Battle Creek Sanitarium, was one of America's most prominent and respected doctors. This was his most important serial publication. On the title page of the Jan. 1879 edition is written: "Pure air, water, food. Health is wealth. A sound mind in a sound body. Proper clothing, ample exercise, adequate rest. A journal of hygiene devoted to physical, mental and moral culture. Cleanliness next to godliness. Temperance in all things." The magazine at this time is strongly opposed to the use of alcoholic beverages and tobacco. It supports vegetarianism, temperance, bread made from unbolted flour, and a healthful lifestyle. In 1879 there are many more articles about the dangers of alcohol and tobacco than about the benefits of a vegetarian diet, but by 1904 vegetarian articles predominated. In 1904 pneumonia was the most deadly disease in America. By the 1900s the cover of many issues stated that *Good Health* was established in 1866.

Richard Schwarz in his excellent book *John Harvey Kellogg, M.D.* writes of *Good Health:* By 1916 Dr. Kellogg estimated that more than 5 million copies of the magazine had been printed (p. 87). "Several years after he assumed the editorship of the *Health Reformer,* Dr. Kellogg decided that it needed a new name if the magazine and its teachings were to gain wider acceptance. He reasoned that public reaction to the word *reform* had changed. No longer did it call up visions of progress, advancement, and the substitution of truth for

© Copyright Soyinfo Center 2014

error. Rather, kellogg felt, the average person associated reform with revolution, controversy, discord, and radicalism. A more positive name was essential. He decided to rechristen the periodical *Good Health* and make it into a journal which would tell its readers how to find and maintain their health. A year after the name change [it changed in Jan. 1879], the Battle Creek Sanitarium officially acquired *Good Health* from the Seventh-day Adventist Publishing Association. Thus what had begun as a Seventh-day Adventist publication remained under Dr. Kellogg's control even after his separation from the church. Within a few months after he began his program of rejuvenating *Good Health*, he had succeeded in increasing its circulation to 20,000 copies a month... apparently the subscription list never grew much beyond 25,000, and it probably stayed considerably below that number most of the time" (p. 90-92). *Good Health* was always plagued by chronic deficits. Eventually the American Medical Missionary Board contributed more than $100,000 to keep the Kellogg journal alive (p. 220). After Dr. Kellogg's death, the Race Betterment Foundation published *Good Health.*

Excellent sets of this periodical are owned by both the National Library of Medicine and the Loma Linda Univ. Library Heritage Room (Loma Linda, California). The magazine ceased publication in Aug. 1953. Address: 451 Holloway Rd., London, N.

243. *Vegetarian and Our Fellow Creatures* (*Chicago*). 1902. Vegetarian directory. Sept. 15. p. 273.

• ***Summary:*** "Vegetarian restaurants and homes where vegetarians are catered for. United States (22):

California, Los Angeles: 317 W. Third St.

California, San Diego: Vegetarian Cafe, Corner 4th and C St.

California, San Francisco: 755 Market St.

Colorado, Colorado Springs: Pure Food Cafe, 322½ Tejon St.

Colorado, Denver: Vegetarian Cafe, 1635 Champa St.

DC, Washington: Restaurant, 1929 14th St., N.W.

Illinois, Chicago: Hygienic Dining Rooms, 58th St. and Drexel Ave.

Illinois, Chicago: Mortimer Pure Food Cafe, 53 Washington St.

Iowa, Des Moines: 607 Locust St.

Louisiana, New Orleans: New Orleans Health Restaurant, 305 St. Charles St.

Massachusetts, Boston: Vegetarian Dining Rooms, 17 Broomfield St. (Elevator at No. 21), second floor.

Michigan, Battle Creek: Hygienic Dining Hall, 271 Main St.

Nebraska, College View: Restaurant, Nicola block

Nebraska, Lincoln: 310 So. 12th St.

New York, Brooklyn: Restaurant, 170 Fulton St.

New York, New York City, Vegetarian Restaurant, 34 West 18th St.

Ohio, Cleveland: The Hygienic Cafe, 230 Euclid Ave.

Oregon, Portland: Vegetarian Restaurant.

Tennessee, Nashville: Vegetarian Restaurant.

Washington, Seattle: Good Health Restaurant, 616 Third Ave.

Wisconsin, Madison: Hygienic Cafe, 426 State St.

England (39): Name and address are given for each in Ampleforth, Bath (2), Birmingham (2), Blackpool (3), Bournemouth, Bradford, Bridge of Allen, Brighton, Broadway, Bromley, Cornwall, Coventry, Douglas (Isle of Man), Derby, Derbyshire, Felixstowe, Gloucester, Harrogate, Hythe, Ilkley, Ilfracombe, Killarney, London (4), Malvern, Manchester, Margate, Okehampton, Paris (Mrs. Tumner {English}, 10 Rue Gustave Courbert, Paris {near Trocadero}, France). Southport, Torquay (2), Weymouth.

Italy, Pisa: Via Carraia, 2 Pensione Diprete.

New Zealand, Auckland: Health Food Cafe, Strand Arcade.

244. Bilson (T.J.) & Co. 1902. T.J. Bilson & Co. (Ad). *Good Health* (*London*) 1(4):125. Sept.

• ***Summary:*** A ¼-page ad. "Supplies of the best dried fruits and nuts of all kinds.

"Also a full stock of the foods of the International Health Association [IHA], such as Bromose, Protose, Granose, Toasted Wheat Flakes, etc.

"Special offer made with respect to Welch's Grape Juice, a most delicious food-drink, and real tonic.

"Send stamp for full price list, in which you are sure to be interested."

Note 1. This small ad (3 inches high by 2.5 inches wide) is the earliest document seen (July 2009) (one of two ads on the same page) that mentions the "International Health Association," a Seventh-day Adventist organization, which was renamed Granose Foods in 1926. The IHA was an early (perhaps the earliest) manufacturer of health foods in England and the UK.

Note 2. This is the earliest document seen (July 2009) giving the name of a retail store that carries products manufactured by the International Health Association. Note that this retail store is located in London.

This same ad appeared in the Dec. 1902 (p, 228) and Jan. 1903 (p. 260) issues of this magazine. Address: 86 Gray's Inn Road, London, W.C. [England].

245. Miles (W.T.). 1902. Agent for the food products of the International Health Association... (Ad). *Good Health* (*London*) 1(4):125. Sept.

• ***Summary:*** "... and the Good Health Supply Department. All orders given prompt attention. Call and view samples.

Note 1. This small ad (1.75 inches high by 2.5 inches wide) is the earliest document seen (Dec. 2013) (one of two ads on the same page) that mentions the "International

© Copyright Soyinfo Center 2014

Health Association" or that gives the name of an agent that promotes and sells those products.

Note 2. As of July 2009, Croyden is near the outskirts of Greater London, about 7 miles directly south of the city center. Address: 24 Lower Coombe St., Croyden.

246. *Good Health* (*London*). 1902. The International Health Association of Legge Street, Birmingham,... 1(5):156. Oct.
• ***Summary:*** "... have added two new foods to their list of products during the last few months; namely Toasted Wheat Flakes, and, very recently, Malted Nuts. These foods are not eminently wholesome and nourishing but also very palatable. Toasted Wheat Flakes bids fair to out-rival the famous Granose Flakes, from which it differs in affording more resistance to the teeth, and in its rich, sweet taste. The Association richly deserves the increased patronage which it is enjoying."

Note: Toasted Wheat Flakes was on the market by Oct. 1901, and widely publicized by 1902. Granose Flakes was on the market by 1898. Both products were first launched in the USA by Seventh-day Adventists in Battle Creek, Michigan.

247. *Good Health* (*London*). 1902. It is surprising how many different health foods are on the market nowadays. 1(7):220. Dec.
• ***Summary:*** "Evidently the public interest in the diet question is growing. We have been pleased to learn that the factory of the International Health Association at Birmingham, is running night and day, and even then finds it difficult to supply the demand. Its leading products, Granose Flakes and Biscuit, and Toasted Wheat Flakes, have, in common with the well-known Shredded Wheat Biscuit, a definite status at the breakfast table in thousands of homes. Thoroughly cooked cereals of this general class are decidedly superior to soft, sloppy foods."

Note: This is the earliest English-language document seen (June 2009) that contains the term "health foods" in connection with Europe or England.

248. Miles, Eustace Hamilton. 1902. Avenues to health. London: Swan Sonnenschein & Co, Ltd.; New York, NY: E.P. Dutton and Co. 438 p. Illust. Index.
• ***Summary:*** In Chapter 15, "Diet and feeding," Miles gives a full-page list of protein foods that he believes are nourishing and free from harmful elements. "I certainly find them pleasant to the taste." These include:

"Foods of the International Health Food Association (70-74 Legge Street, Birmingham; Battle Creek, Michigan, U.S.A.). Besides Protose, Nuttose, and Malted Nuts or Bromose (over 20 per cent. of vegetable Proteid), Granose is a excellent Grain product."

"Pitman's Vigar Oil (for Salads, etc.)."

"These and other food products can be ordered through the Pitman Stores, Corporation Street, Birmingham."

Note 1. The "International Health Food Association" was probably correctly named the "International Health Association"; in 1926 it became Granose Foods. It may have been the earliest known company in England that used the term "Health Food" or "Health Food Co." in its company name.

Note 2. On the last (unnumbered) page of the book is a long list of "Works [mostly books] by Eustice Miles, M.A." A summary of the prizes he won in racquets, tennis, and squash, etc. appears at the top of the list. He was a fine, well known athlete. Eustace Miles lived 1868-1948, and was at his peak of athletic performance in about 1897-1902. Address: Author, England.

249. *Good Health* (*London*). 1903. Our advertisers are perhaps entitled to a few words of praise. 1(8):252. Jan.
• ***Summary:*** "We need only say what the readers have already observed, that we put up the bars pretty high and only really meritorious enterprises are able to get in at all. In fact, we consult our readers' interests in the matter. Thus we advertise the food products of the International Health Association, not only because it is a first-class British firm worthy of hearty support in its efforts to put good foods on the market, but also because these particular foods possess special value for those who are adopting a reformed dietary. The same general statement would apply to the Hovis Co., Briggs Indian Food Co., the Natural Food Co., and other firms we might mention.

"Confirmed flesh-eaters sometimes say, 'If we give up meat and fish, what is there left to eat?' A good answer to such a question would be to hand the person one of the price lists of the three well known firms who cater especially for food reformers. We refer now to the Pitman Stores, Corporation Street, Birmingham; Mr. T.J. Bilson, 86 Grays Inn Road, London, W.C.; and Mr. Frederick Bax and Son, 35 Bishopsgate Street Without, London, E.C."

250. Kellogg, John H. 1903. Constipation: Editorial. *Good Health* (*Battle Creek, Michigan*) 38(1):41-42. Jan.
• ***Summary:*** This early editorial on constipation begins: "This condition is usually the result of indigestion, errors in diet, sedentary habits, or neglect to attend properly to the call of nature for evacuation of the bowels. A too concentrated diet, especially the use of condiments, mushes, and sweets, are frequent causes of constipation. It is necessary that the food should have a certain bulk in order that intestinal activity may be normally stimulated. Fruits, wholemeal bread, spinach, green peas, nuts, and nut preparations, granose cakes and flakes, malted nuts, and similar preparations, are highly conducive to intestinal activity."

Note: This is the earliest document seen (June 2013) concerning Seventh-day Adventists and dietary fiber ("bulk"). Address: M.D., editor.

© Copyright Soyinfo Center 2014

251. *Vegetarian Messenger* (*Manchester, England*). 1903. Notes: Battle Creek restaurants. Jan. p. 2.
• ***Summary:*** "The extent of the vegetarian propaganda carried on in America by the Seventh Day Adventists of Battle Creek may be gauged by the fact that they conduct restaurants and eating-houses in Boston, Massachusetts; Cleveland, Ohio; Detroit, Michigan; San Francisco, and Los Angeles, California; Des Moines, Iowa; Chicago, Illinois; Madison, Wisconsin; Lincoln, Nebraska; Portland, Oregon; Denver, Colorado; and Seattle, Washington. At all these eating-houses the food is prepared in accordance with the principles of rational dietetics and scientific cookery. This vegetarian work is in addition to their extensive propaganda in other directions."

252. *Good Health* (*London*). 1903. Malted Nuts, the new food which the International Health Association is putting on the market,... 1(9):285. Feb.
• ***Summary:*** "... affords the best hot, nourishing drink that we know of. A cup of hot malted nuts may be prepared in a moment, and is in such form that it is ready for immediate assimilation into the system. It is not only far superior to tea, coffee, or cocoa, but contains a great deal more nourishment than bovril or any other meat extract, as well as being free from the harmful extractives contained in these animal foods."

253. International Health Association. 1903. Health foods (Ad). *Good Health* (*London*) 1(10):319. March.
• ***Summary:*** A full-page 2-column ad with a large bold title. The introduction, spanning both columns, states: "The foods included in the following list are called 'Health Foods' because they are entirely free from all that is injurious, and contain just the elements required to build up the human system, both in health and disease. They are made from the purest materials, combined in the proper chemical proportions, and so perfectly cooked as to be easily digested by all."

Under the fairly large words "Price list" (also spanning both columns), the name of each of 14 foods appears underlined in large bold letters, followed by a detailed description and the price in regular size type. The foods are:

Granose Flakes (crisp flakes in packets containing about 13 ounces, 7½*d.*) Granose Biscuits ("The same as Granose Flakes but pressed into biscuit form." Sold in boxes). Toasted Wheat Flakes ("Sweetened with Malt Honey (Nature's Health Sweet)," Makes a "delicious breakfast dish." Serve warm or cold)."

Avenola (A combination of grains. "Makes porridge in one minute." Also tasty puddings. Packed in an air-tight canister). Nut Rolls (Made from "whole meal and finely ground nut meats, shortened with sweet nut oil. Very suitable for those who have to put their dinners in their pockets"). Gluten Meal (Made from wheat gluten for "diabetics and people who cannot digest starch").

Nut Butter ("Made from cooked nuts only. Can be used for shortening, flavouring soups, or for table purposes. When diluted with hot water it forms a delicate cream. In 1 lb tin"). Caramel Cereal ("A healthful and fragrant substitute for tea and coffee, prepared from cereals... One pound makes nearly 100 cups. Packed in air-tight canister. 8*d.*). Protose ("Vegetable Meat... It provides the same elements of nutrition that are found in the best meat, without any impurities. Liked by almost everyone from the first... In ½ lb. tin" 8*d.*). Bromose ("A combination of malted cereals and pre-digested nuts"). Fruit Bromose ("The same food as Bromose, combined with figs"). Wheatmeal biscuits. Oatmeal biscuits. Fruit wafers ("Made from the best flour and dried fruits, shortened with nut fats").

Across the bottom: "A package of assorted samples of the above foods will be sent, post paid, one receipt of One Shilling. Can also be obtained from your *Good Health* agent. Recipes furnished."

Note: This is the earliest ad seen (June 2009) for the various foods made or sold by the International Health Association of Birmingham. A few of these foods may be made in Battle Creek, Michigan, and imported into the UK. Address: Birmingham [England].

254. Paulson, David. 1903. Nonflesh eating and physical endurance. *Good Health* (*Battle Creek, Michigan*) 38(3):108-09. March.
• ***Summary:*** Eustace Miles, the world's champion tennis player at Cambridge, England, tells the story of how he gave up flesh foods to get rid of many health disorders and his desire for alcohol. Mr. Allen, a vegetarian from London, a few months ago walked 100 miles in a little over 20 hours to set a world record.

"The winners in one of the most famous long-distance walking matches in Germany were all vegetarians. The champion long-distance bicycle rider of several years ago, lived upon a strictly natural dietary.

"If athletes, and others who have to undergo surprising tests of bodily endurance, find it advantageous to abstain from flesh foods, is the plan not worthy of a trial by those who wish to use either their intellectual or physical strength and endurance in the service of God and humanity?"

255. Axon, William E.A. 1903. Some Chinese arguments for vegetarianism. *Good Health* (*Battle Creek, Michigan*) 38(4):162-66. April.
• ***Summary:*** "It is said that in no part of the world is the consumption of flesh meat so small as in China. For this there are varied reasons. Buddhist influence will count for something, and the greater cost of animal food will also contribute to the result. But there are also the precepts of the ancient emperors who forbade the *daily* use of flesh meat. This, while in form only a precaution against excess, shows

© Copyright Soyinfo Center 2014

that the dangers arising from animal food were recognized, and considered of sufficient importance to demand royal notice."

The author quotes various Chinese writers from as long ago as the Song dynasty (+960-1279). Dr. Robert Morrison translated a tract against beef eating in which the speaker is an ox; it is quoted in full.

Vegetarians comprise an estimated 5 to 10% of the population of China. "That would mean that between twenty and forty millions of the people of China abstain entirely from flesh meat, while a proportion of the remainder of the population of that country use it only sparingly. From the strength and power of endurance of the Chinaman a powerful argument may be drawn in favor of vegetarians." Address: L.L.D.

256. International Health Association. 1903. Radical temperance. Health foods (Ad). *Good Health* (*London*) 1(11):348. April.
• ***Summary:*** A 1-column half-page ad. The health foods advertised are: Caramel cereal (A "health beverage" for use in place of nerve stimulants like tea and coffee). Malted nuts (Use in place of stimulating Beef Tea and Meat Extracts). Protose (Use in place of animalising flesh foods). Address: Birmingham [England].

257. *Good Health* (*London*). 1903. Directory of sanitariums (Ad). 1(12):377. May.
• ***Summary:*** A ¼-page ad. "The following institutions are conducted under the same general management as the Sanitarium at Battle Creek, Michigan, which has long been known as the most thoroughly equipped sanitary establishment in the United States. The same rational and physiological principles relative to the treatment of disease are recognized at these institutions as at the Battle Creek Sanitarium, and they are conducted on the same general plan. Both medical and surgical cases are received at all of them. Each one possesses special advantages due to the locality or other characteristic features. (This is only a partial list)."

"Battle Creek Sanitarium, Battle Creek, Michigan. J.H. Kellogg, M.D., Superintendent.

"Surrey Hills Hydropathic Institution, Caterham, Surrey [England]. Alfred B. Olsen, M.D., Superintendent.

"Belfast Sanitarium, 30 Antrim Rd., Belfast [Ireland]. J.J. Bell, M.D., Superintendent.

"Skodsborg Sanitarium, Skodsborg, Denmark. Carl Ottosen, M.D., Superintendent.

"Friedensau Sanitarium, Post Grabow, Bez. [Bezirk] Magdeburg, Germany. A.J. Hoenes, M.D., Superintendent.

"Institut Sanitaire, Basle, Switzerland. P. De Forest, M.D., Superintendent.

"Calcutta Sanitarium, 51 Park St., Calcutta, India. R.J. Ingesoel (?), M.D., Superintendent.

"New South Wales Medical and Surgical Sanitarium, 'Meaford,' Gower St., Summer Hill, N.S.W., Australia. D.H. Kress, M.D., Superintendent.

"Guadalajara Sanitarium, Apartado 138, Guadalajara, State of Jalisco, Mexico. J.W. Erkenbeck, M.D., Superintendent."

258. International Health Association, Ltd. (The). 1903. Spring is here. Make the most of it while it lasts (Ad). *Good Health* (*London*) 1(12):377. May.
• ***Summary:*** A half-page ad. "Avoid heavy, indigestible foods that clog the system, and keep you from enjoying the sunshine.

"Use our Health Foods, pure, light, perfectly cooked, quickly digested, and share the abundance of life and health around you. If you feel well, our Foods will make you feel better.

"If you are ill, try our Foods. They are cheaper than medicine, and will help you as they have helped others.

"One shilling sample package sent, post free, to any address, on receipt of Postal Order.

"In answering advertisement kindly mention 'Good Health.'" Address: Birmingham [England].

259. Curtis, Atherton. 1903. The moral basis of vegetarianism. *Good Health* (*Battle Creek, Michigan*) 38(6):290-92. June.

260. *Good Health* (*Battle Creek, Michigan*). 1903. A remarkable Canadian [vegetarian]. 38(8):414. Aug.
• ***Summary:*** A Canadian newspaper states: "Hon. R.W. Scott, of Ottawa, could have had the nice fat job of lieutenant-governor of the province of Ontario the other day, but declined it for the most remarkable reason ever known in political life. He is a vegetarian, and refused the job because he would be compelled to give banquets as lieutenant-governor at which viands carved out of the animal kingdom would necessarily be served."

261. *Good Health* (*Battle Creek, Michigan*). 1903. A substitute for leather. 38(8):414. Aug.
• ***Summary:*** "An English inventor has devised a perfect substitute for leather which can be used for boots, shoes, and for every other purpose for which leather is employed. The new tissue is called wolft. It is being extensively used in England, having been adopted by the London Shoe Company especially for walking shoes on account of its coolness and its lightness. Wolft is more durable than leather and is much more waterproof while at the same time more porous, which makes it a non-conductor, and to a large degree obviates the necessity for wearing rubbers which are needed by one whose feet are clad with leather only when the slush and mud is so deep that the feet are half buried at every step."

262. Paulson, David. 1903. "Its all dead." *Good Health*

© Copyright Soyinfo Center 2014

(*Battle Creek, Michigan*) 38(7):324-25. Aug.
• ***Summary:*** A child of age four, on being seated at a table upon which was an uncarved chicken, cried out in evident distress, "It's all dead, mamma! It must have hurted it," and he could not be persuaded to remain at the table until the dead bird was carved past recognition.

"Children are naturally tender and sympathetic, not only toward each other but also solicitous for the welfare of the lower animals. The parents of this child will probably congratulate themselves when his tender nature becomes so calloused that the sight of a dead animal being devoured will seem to him entirely consistent, and will no longer excite his pity." Address: M.D.

263. *Los Angeles Times.* 1903. Some good recipes. Oct. 29. p. A4.
• ***Summary:*** These are home-made recipes for commercial products. "Home-made Protose: As most of our readers know, 'prostose' is a favorite upon vegetarian bills of fare. Soak two cupfuls of fine bread crumbs in one cupful of hot water, in which dissolve a teaspoonful of butter, a saltspoonful of salt, and a dash of paprika. Mix in a cupful of chopped nut kernels. Beat one egg and add to bind the whole together. Make into a loaf and bake for an hour.

"You can bake it in a buttered mould and turn it out, if you prefer. Or mould [mold] croquettes, roll in cracker crumbs and raw egg, and set on ice for two hours before frying in deep fat."

267. Kellogg, John Harvey. 1903. The living temple. Battle Creek, Michigan: Good Health Publishing Co. 568 p. *
• ***Summary:*** Gives a clear presentation of the principles relating to simple, wholesome living and the rational treatment of the sick. Advocates a vegetarian diet. Dr. Kellogg presents the ethics of flesh-eating in the following light: "The basis for the ethical argument against flesh-eating is to be found in the fact that the lower animals are, in common with man, sentient creatures. We have somehow become accustomed to think of our inferior brethren, the members of the lower orders of the animal kingdom, as things;... We are wrong in this; they are not things, but *beings*... A horse or a cow can learn, remember, love, hate, mourn, rejoice, and suffer, as human beings do. Its sphere of life is certainly not so great as man's, but life is not the less real and not the less precious to it; and the fact that the quadruped has little is not a good and sufficient reason why the biped, who has much, should deprive his brother of the little that he hath. For the most part it must be said that the lower animals have adhered far more closely to the divine order established for them than has man.

"The divine order, as clearly shown by nature as well as by revelation, and by the traditions of the ancient world, and illustrated by the present practice of a great part of the human race makes the vegetable world the means of gathering and storing energy and making it into forms usable by the sentient beings that compose the animal world, the one gathering and storing that the other may expend. When animal eats vegetable, there is no pain, no sorrow, no sadness, no robbery, no deprivation of happiness. No eyes forever shut to the sunlight they were made to see, no ears closed to the sweet melodies they were made to hear, no simple delights denied to the beings that God made to enjoy life–the same life that He gave to his human children. (p. 184-185.)"

The word "vegetarian" appears on pages 162, 540, 551, and 567. Address: Medical Director, Battle Creek Sanitarium, Battle Creek, Michigan,.

268. *Good Health* (*Battle Creek, Michigan*). 1904. Directory: Sanitariums. Vegetarian cafes and restaurants. 39(1):Unpaginated. Jan.
• ***Summary:*** Gives the name and address of 33 Sanitariums, including 23 in the United States, and 10 overseas (Guadalajara, Mexico; Basle, Switzerland; Skodsborg, Denmark; St. Johns, Newfoundland, Canada; Wahroonga, NSW, Australia; Magdeburg, Germany; Caterham, Surrey, England; Calcutta, India; Papanui, Christchurch, New Zealand; and Kobe, Japan). These "institutions are conducted under the same general management as the Sanitarium at Battle Creek, Michigan, which has long been known as the most thoroughly equipped sanitary establishment in the United States.

There are 29 vegetarian cafes and restaurants in the United States (with names like Hygienic Cafe, Pure Food Cafe Sanitarium Rooms, etc.) including the following:

The Laurel, 11 W. 18th St., New York City.

J.B. Stow, 105 E. 3rd St., Jamestown, New York.

W.L. Winner, 1017 Walnut St., Philadelphia, Pennsylvania.

Sanitarium Rooms, 1809 Wallace St., Philadelphia, Pennsylvania.

Hygienic Company, 1209 G St., N.W., Washington, D.C.

Sanitarium Rooms, 224 E. Broadway, Louisville, Kentucky.

Sanitarium Dining Room, corner Church and Vine Sts. Nashville, Tennessee.

Restaurant, 305 St. Charles St., New Orleans, Louisiana.

Ellen V. Vance, 307 Madison St., Fairmount, West Virginia.

Hygeia Dining Room, 54 Farrar St., Detroit, Michigan.

North Mich. Tract Society Rooms, Petoskey, Michigan.

Hygeia Dining Rooms, 5759 Drexel Ave., Chicago, Illinois.

Hygienic Cafe, 426 State St., Madison, Wisconsin.

Hygienic Cafe, 164 Wisconsin St., Milwaukee, Wisconsin.

Pure Food Cafe, 607 Locust St, Des Moines, Iowa.

Pure Food Cafe, 410 E. 12th St., Kansas City, Missouri.

Pure Food Store, 2129 Farnum St., Omaha, Nebraska.

Sanitarium Dining Room, corner Church and Vine Streets, Nashville, Tennessee.

Vegetarian Cafe, 322½ N. Tejon St., Colorado Springs, Colorado.

Vegetarian Cafe, 1543 Glenarm St., Denver, Colorado.

Vegetarian Cafe, 4th and C Streets, San Diego, California.

The Vegetarian, 1482 Market Street, San Francisco, California.

Vegetarian Dining Rooms, 317 W. 3rd St., Los Angeles, California.

Portland Sanitarium Rooms, Mt. Tabor. Oregon

Good Health Restaurant, 616 3rd St., Seattle, Washington.

White Rose Restaurant, W.H. Nelson, Proprietor, 36 W. 18th St., New York City.

Health Restaurant, Alexander Martin, 555 Boylston St., Boston, Massachusetts.

269. *Good Health* (*Battle Creek, Michigan*). 1904. Chart of food elements. 39(1):Insert after p. 48. Jan.
• ***Summary:*** This table lists 64 foods, both processed and unprocessed, with a standard serving size for each (both volume and weight), and the amount of proteid, fat, and carbohydrate per serving, plus the number of "food units"

© Copyright Soyinfo Center 2014

[apparently similar to calories] per ounce. Processed foods include: Granola, Granose, Graham crackers, Whole wheat wafers, Graham bread, Whole wheat bread, Gluten mush, Wheatose, Malted nuts, Bromose, Nuttolene, Protose, Stewed Nuttolene (½ water), and Kumyss. For example, Protose: 0.5 pint (4.2 oz) contains 21.3 [units not given] protein, 10.2 fat, 2.8 carbohydrates, and 60 food units per oz. Butter has the highest number of food units per oz (217.6), followed by shelled almonds (189.6). Lettuce is lowest (5.2).

270. *Good Health* (*Britain*) (*Seventh-day Adventist*). 1904. Formal health dinners: Suggestions for a somewhat elaborate meal on reform lines. 2(8):243. Jan.
• ***Summary:*** Contains a menu plus recipes. "Mock chicken Cutlets.–Run through the nut-mill two cupfuls of bread crumbs, and one cupful of shelled walnuts. Mix together in a basin, with a tablespoonful of grated union juice, and a little salt. Heat in a saucepan a cupful of rich milk to which has been added a dessertspoonful of peanut butter or almond butter rubbed smooth in a few drops of water. When this boils, add the other ingredients, salt to taste, a well-beaten egg, and when removed from the fire, a little lemon juice. Stir well; allow to cool, then roll into balls dipped in bread crumbs and eggs, and bake."

"Nut Gravy.–Heat to boiling a pint of water in which a tablespoonful of peanut butter has been dissolved. Thicken with one tablespoonful of browned flour and a half tablespoonful of Paisley digestive lentil flour. Cook thoroughly for five or ten minutes."

271. International Health Association, Ltd. 1904. Our health foods reach to the ends of the earth: Have they reached you? (Ad). *Good Health* (*Britain*) (*Seventh-day Adventist*) 2(8):255. Jan.
• ***Summary:*** A full-page ad. This company sells (and perhaps makes) the following foods. A description and price of each is given. Granose flakes. Toasted wheat flakes. Avenola. Nut rolls. Whole wheatmeal biscuits. Oatmeal biscuits. Fruit wafers. Peanut butter. Pure almond butter. Caramel Cereal [a coffee substitute]. Protose. Nuttolene. Bromose. Malted nuts–in fine powder form.

"Send us One Shilling for a package of samples and cookery book, or ask your Good Health agent for these foods."

Note: Most or all of these products were first developed by Dr. John Harvey Kellogg at Battle Creek, Michigan, and sold by Sanitas Nut Food Co. Address: Birmingham [England].

272. *Vegetarian Messenger and Health Review* (*Manchester, England*). 1904. "Fletcherizing" food. Jan. p. 4.
• ***Summary:*** "The name is new but the thing is old. Mr. Horace Fletcher, of Venice, has been making experiments respecting the increased value of food when thoroughly masticated. In a recent number of *Good Health* (Battle Creek), Dr. J.H. Kellogg gives a résumé of Mr. Fletcher's researches. Mr. Fletcher finds that everyone eats too much, and that the proper daily ration has been fixed by the scientific authorities at least 50% too high. According to his observations, a pound of water-free food daily is ample for anybody, and if care is taken to masticate the food thoroughly, the amount actually required is considerably less. Mr. Fletcher's experiments show that if care is taken to chew the food four or five times as long as usual, it is utilized to so much better advantage that its sustaining power is wonderfully increased, and hence the amount required is considerably diminished, and a large proportion of the energy now wasted in digesting unnecessary food is released for other purposes. The United States Government has thought Mr. Fletcher's results of so much importance that it has detailed 20 men to give their entire time for several months to an exhaustive series of researches, the aim of which will be to subject Mr. Fletcher's views to the crucial test of exhaustive experimentation. Dr. Kellogg, whose experience as a dietist is second to none, has no doubt that the result of this test will be the revision of views which have heretofore been held by most physiologists respecting the quantity of food required for the maintenance of weight and working power, and also respecting the amount of proteids required for daily consumption."

273. *Good Health* (*Battle Creek, Michigan*). 1904. A substitute for leather. 39(2):104. Feb.
• ***Summary:*** A reader from Nebraska writes: "In your August magazine you wrote of shoes made of a material called wollft." She requests more information. Answer: "Wolft shoes are made in England. They are not now manufactured, the company having gone out of business, but we understand it is being re-organized. They are not on sale in this country."

274. *Australasian Good Health* (*Wahroonga, NSW, Australia; Seventh-day Adventist*). 1904. Fruit and nuts as food. 7(3):11. March 1.
• ***Summary:*** "The results of the investigation recently carried out by the United States Department of Agriculture as to the value of different foods, emphasise the fact that both fruit and nuts should be considered as true foods rather than food accessories."

"The fare given in the experiments was in every case one that would appeal to any normal appetite. It embraced honey, tomatoes, apples, bananas, cantaloupe, grapes, verdal, cornichon, tokay, muscat, scarlet haws, pears, pomegranates, persimmons, oranges, strawberries, watermelons, figs, almonds, and peanut butter. The only animal foods allowed were cottage cheese and eggs, and these in limited quantities."

275. *Good Health* (*Battle Creek, Michigan*). 1904. The

Sanitarium era. 39(3):134-38. March.
• ***Summary:*** The word "Sanitorium," coined in England, referred originally to a health resort for invalid soldiers. The term "Sanitarium" was coined about 25 years ago to represent an idea, "first embodied in the Battle Creek Sanitarium, an institution which had for its fundamental idea a return to nature in diet, dress and all habits of life, and the adoption of natural methods and natural agencies in the treatment of the sick." Photos show: The Tri-City Sanitarium of Moline, Illinois. Dr. and Mrs. Stewart, who helped finance its construction. The dining room. A cozy corner.

276. Mendel, Lafayette B. 1904. Some historical aspects of vegetarianism. *Popular Science Monthly* 64:457-65. March. [5 ref]
• ***Summary:*** Dr. Mendel, at Yale University, was one of the world's leading authorities on all aspects of proteins in the early 1900s. Here he discusses ethical and philosophical arguments for vegetarianism as expressed in literary works, including quotations from or comments on Pythagoras, Rousseau (*Return to Nature*), Tolstoy (*The First Step*), Shelley (*Queen Mab, VIII*), Lord Byron (*Don Juan*, Canto II), John Frank Newton (*The return to nature, or, a defence of the vegetable regimen*), Benjamin Franklin (Autobiography), Dr. Luther V. Bell (*A dissertation on the Boylston prize question for 1835*), Dr. W.A. Alcott (*Vegetable Diet*), J.A. Gleizes (*Thalysie, 3 vols*), and J.H. Kellogg (*The Living Temple*).

"The early literature of the vegetarian movement in this country indicates a greater tendency toward the substitution of arguments based on scientific observation in place of purely sentimental considerations than do the trans-Atlantic [European] publications of similar date."

The "individual who probably did more than any other in this country to reduce the subject of vegetable dietetics to a system was Sylvester Graham. This eccentric reformer, remembered to-day in connection with the bread which familiarly bears his name, was an enthusiastic temperance advocate, who insisted that the craving for drink can only be combated by the use of a judicious diet in connection with correct habits of living. His belief that 'an exclusively farinaceous and fruit diet is best adapted to the development and improvement of all powers of body, mind and soul' was set forth for many years both in public lectures and in writings, among which the 'Graham Lectures on the Science of Human Life' (2 vols., 1839) were perhaps most widely quoted in vegetarian literature. About 1837 there was formed an American Physiological Society of two hundred members, nearly all of whom, as well as their families, abstained from animal food."

Dr. Mendel concludes by stating that his article "has aimed merely to point out some little known historical aspects of a movement which is unique, if not progressive. A position so long and stubbornly held can not be entirely devoid of some resources, and may well offer an occasional helpful suggestion for the improvement of our plans of nutrition. By the physician and hygienist especially is real progress in dietetics to be welcomed. *Qui bene nutruit, optime medebitur."* Address: Prof. of Physiological Chemistry, Sheffield Scientific School, Yale Univ., Connecticut.

277. Brunson, John A. 1904. A glimpse of Japanese life. *Good Health* (*Battle Creek, Michigan*) 39(5):237-42. May.
• ***Summary:*** A good photo (p. 239) shows a Japanese vegetable vendor carrying his goods in baskets on a shoulder pole. Page 240 notes: *"Tofu*, or 'bean curd,' as the foreigners call it, is a favorite dish. The beans are first ground fine in hand mills. These mills consist of two stone discs about eighteen inches in diameter, and perhaps six or eight in thickness, one being placed above the other. To the upper stone is attached a handle by which it is turned, and the motor power is supplied by two women. It is a familiar sight in Japan to see 'two women grinding at the mill.' The husks and coarser parts of the bean flour are then carefully removed, and the fine white residuum is mixed with water and pressed into squares which somewhat resemble cottage cheese in appearance. The *tofu* is then boiled, and is both palatable and nutritious, but rather concentrated."

In Japan, fish are served raw, while yet fresh, "with *shoyu*, a kind of Japanese Worcester sauce."

Note 1. This is the earliest article seen (Aug. 1996) with detailed information on soyfoods in Dr. John Harvey Kellogg's periodical *Good Health.*

Note 2. This is also the earliest document seen (Aug. 1996) that compares tofu with cottage cheese.

278. Broadbent, Albert. 1904. A short history of the English vegetarian movement. *Good Health* (*Battle Creek, Michigan*) 39(6):301-03. June.
• ***Summary:*** The city of Manchester, England, gave birth to the vegetarian movement. "In 1809 the Bible Christian Church, Salford, adopted a rule of abstinence from intoxicants and flesh foods for its members." In 1847, some 38 years later, a number of the members decided to form a vegetarian society, to do work of a secular nature. A meeting was accordingly held at Ramsgate in 1847, at which Brotherton, M.P. [Member of Parliament] was chairman. "The Vegetarian Society" was formed; during the first year 331 people joined it. "The Vegetarian Society has never been a local society, but was and is national and international in its character and claims... Fifty years ago there was no vegetarian periodical; to-day in Great Britain there are four monthly papers. Thirty years ago there was not one restaurant; to-day they are to be found in Ireland and in Scotland and in many large towns in England, and nowhere are they so successful as in Manchester, which is supplied with eight.

© Copyright Soyinfo Center 2014

"In 1847 the Vegetarian Society was the only one of its kind in the world; now there are independent societies in the United States, Australia, India, France, Germany, Russia, Finland, etc., etc. It is significant that the work in America was inaugurated by a band of emigrants from the Bible Christian Church, who established a church at Philadelphia [Pennsylvania]. The pastor of this church, the Rev. H.S. Clubb, is the president of the American Vegetarian Society [sic, Vegetarian Society of America], and one of the oldest members of the Vegetarian Society."

Photos show the following leading figures in the vegetarian movement in England: J.E.B. Mayor, Albert Broadbent, Rev. James Clark, William E.A. Axon, and Alfred Tongue. Address: F.S.S.

279. Kellogg, John Harvey. 1904. Vegetarianism and endurance. *Good Health* (*Battle Creek, Michigan*) 39(6):285-86. June.

• ***Summary:*** Begins by discussing Karl Mann, a German vegetarian, and eight other vegetarians, who competed two years ago in a walking match from Dresden to Berlin. Karl Mann won the match and "five of the eight other vegetarians reached the goal before a single one of the meat eaters had arrived."

Then talks about Mr. John Allen of England, a vegetarian who, at the age of 13 was a "poor, spindling, feeble, epileptic." He started to exercise systematically and became a vegetarian. Two years ago, he won the great walking match in England. Last year "he beat the world's record in long-distance walking, even coming out ahead of Karl Mann by a very little. This was the greatest walking feat ever performed. When Mr. Allen reached London after his hundred-mile walk, he walked twelve miles to see his mother. He then slept for a few hours, and awoke ready to walk another hundred miles. This marvelous endurance has been acquired by training and by living on pure food."

This and several other similar stories are from a symposium on "Natural Food." Address: M.D.

280. *Los Angeles Times.* 1904. Tented town of a church: Seventh Day Adventists in camp meeting. Thousand looked for under spreading canvas. Old Fernando College bell calls breakfast. Sept. 2. p. A1.

• ***Summary:*** It was probably the largest tent city of any church denomination ever assembled in Southern California, if not in the entire State. The annual conference at Vernon took place under the gnarled limbs of old pepper trees, which remain a relic of the old county park just of Central avenue and adjoining East 49th street. Some 1,000 Adventists are expected to attend for 10 days.

"On the grounds there is an Adventist restaurant and store, where the various food products extolled by this denomination are served or sold. The Adventists are vegetarians. Their church rules do not definitely prescribe this; but the teachings of the denomination inevitably lead to this conclusion, and it is adopted by the members. They use no liquors, tobacco, tea, coffee nor meats." Includes a history of the rapidly expanding denomination in Southern California.

281. Carqué, Otto. 1904. The foundation of all reform: A guide to health, wealth and freedom. A popular treatise on the diet question. Chicago, Illinois: Kosmos Publishing Co.; London: L.N. Fowler & Co. 66 + vi p. 20 cm.

• ***Summary:*** About vegetarianism. Contents: 1. Man's position in nature. 2. Chemistry and physiology of nutrition. 3. The raw food question. 4. The superiority of the fruitarian diet. 5. Diet-reform, the ultimate solution to the economical and social problems (the problem of increasing consumption of intoxicating liquors is one of the principal causes of the mental and physical degeneration of man). 6. The ethics of diet-reform.

The author (lived 1867-1935) argues for the superiority of the fruitarian diet. "Man's strong resemblance to the anthropoid apes which subsist almost exclusively on fruits and nuts places him in the frugivorous class. In fact, all the great anatomists, Sir Charles Bell, Dr. Richard Owen, Dr. William P. Carpenter, Baron Cuvier, have shown that not only is man adapted by anatomical structure to a diet of fruits and nuts, but that the meat-eaters' violation of this law has been the undoubted source of endless suffering and disease. This fact, which had already been recognized by the ancient sages, as Plato, Socrates, Pythagoras, Plutarch, and others, has also been fully confirmed by the great universal law of evolution which Lamarck, Darwin and Haeckel have scientifically established and which has thrown much light on the origin of life and its development on our planet" (p. 8).

Why did humans start to eat meat? At a comparatively recent date in man's existence, there was apparently a scarcity of proper plant food and very adverse conditions. So "man was forced by fierce hunger to subsist on flesh-food. But the fact remains that in the process of evolution so great a change in man's diet had not the slightest bearing on his anatomical structure... Man's normal type dates from the period when the digestive organs of our frugivorous ancestors adapted themselves to such food;... not evolution but cataclysm caused his change of food from fruit to flesh with 'made dishes' to hide the taint of death.

"It is very probable that the so-called glacial period or age of ice, which according to geologists occurred some twenty or thirty thousand years ago and subjected organic life to altogether new conditions, had also caused man's deviation from his original and natural diet, after he had subsisted on the products of fruit trees during many thousands of generations" (p. 10-11). "In reviewing the long march of evolution of the human race... we come to the conclusion that for a vast period of time man subsisted

© Copyright Soyinfo Center 2014

on fruits and nuts, his natural diet, which was abundantly furnished by a virgin soil and a congenial climate" (p. 15).

The chapter titled "The raw food question" states: "Raw food must therefore be declared as the ideal diet of man, and the unperverted appetite demands nothing else." "But here the question arises, is the milk of even perfectly healthy cows a desirable article of food for man in general and for infants in particular? The answer must be an emphatic 'no.' Nature has destined the milk of the cow, like that of other mammals, for the nourishment of their respective young" (p. 34). The milk of all mammals, "the first nourishment of the new-born is relished in its natural and raw state." Mr. Horace Fletcher has shown that raw foods require thorough mastication, and with thorough mastication a smaller quantity of food is required (p. 36).

"An argument of the greatest importance in favor of the fruitarian diet–at least from the economical and social point of view–is, that it means the emancipation of woman. She will then no longer be a slave to the kitchen, for it will hardly be needed. The time which she formerly devoted to so much cooking and toiling, she will then be able to devote to a proper education of her children and her own culture" (p. 37).

The last sentence in this chapter reads: The "ideal food for man should consist of fruits, nuts, and grains properly masticated" (p. 38). Note 1. Such a diet (including seeds) is widely referred to as a fruitarian diet.

The next chapter, titled "The superiority of the fruitarian diet" develops this idea in more detail "The athletes of ancient Greece were trained entirely on a fruitarian diet... The Mystic Adepts who are strong physically, mentally, and who are never sick and live to great ages, all the time doing a tremendous amount of work, never eat flesh-food. They live on plant-foods exclusively" (p. 41).

A table titled "A few daily dietaries for fruitarians" (p. 67) gives 7 meal plans and the cost of each. A typical meal consists of one serving each of fruit, nuts, and unfermented whole wheat bread. Two meals a day are recommended. The total cost of the diet for 1 week is $1.60.

At the back of the book are 27 unnumbered pages of ads, including the following: (1) "Become a vegetarian–and become stronger, healthier, happier, clearer-headed–and save money. Learn about Vegetarianism through *The Vegetarian Magazine,*" published by The Vegetarian Co., 712, 167 Dearborn St., Chicago, Illinois. (2) Pacific Health Journal, published in Oakland, California. "A magazine for the home intended to give practical instruction on health and hygiene." Note 2. This was a Seventh-day Adventist publication that advocated a vegetarian diet. (3) The Sanitarium Pure Food Store and bakery of Benold's unfermented whole wheat bread, 413 E. North Ave., Near Wells St., Chicago, Illinois. Note 3. This is the earliest document seen (May 2004) by or about Otto Carque (one of two documents). This book is advertised in *Naturopath and Herald of Health* (New York City) (June 1905, unnumbered page).

282. Fulton, Edwin Giles. 1904. Vegetarian cook book: Substitutes for flesh foods. Oakland, California: Pacific Press Publishing Company. 266 p. Index. 19 cm.

• ***Summary:*** The introduction, titled "Why I was impressed to write a cook book," states: "The number of physicians and dentists increases each year at an alarming rate, but the aches and ills of the suffering people do not lessen. Thousands of people find themselves in a deplorable condition, with stomachs almost worn out, having depended largely upon predigested foods and a long list of so-called 'dyspepsia cures.'

"The amount of patent medicines, 'sure cures,' consumed by the people in the United States is enormous, and is increasing every year...

"Disease among cattle, poultry, and fish has increased so alarmingly in the last few years that we should no longer depend on the animal kingdom for food." "In our efforts to teach how to live without the use of flesh foods, we find we have only begun to discover the inexhaustible resources of the great vegetable kingdom in the boundless wealth of varied hygienic foods."

The chapter on "Entrees" (p. 67-114) contains only vegetarian recipes with names like Mock white fish, Fillets of vegetarian salmon, Mock turkey with dressing, Roast duck (vegetarian style), Vegetarian roast, Vegetarian hamburger steak (p. 113-14), or vegetarian sausage. Several commercial products are called for in many recipes: Protose, Nuttolene, and Nut Food–all made by the Sanitas Nut Food Co. of Battle Creek, Michigan.

The chapter on "Cereals" contains a recipe for Gluten-Granola mush (p. 184). The chapter titled "Toasts" states (p. 187): "Zwieback should be used as the foundation of all

© Copyright Soyinfo Center 2014

toasts, although ordinary toasted bread can be used." Adjust the fire so as not to burn or singe the bread.

The chapter titled "Nut butter" (p. 239-45) states that "Nut butter can be easily made in the home... Peanuts and almonds are the nuts most suitable for making nut butter... The best variety peanuts for making nut butter is the Spanish shelled." Three home-scale processes are given. The first is:

"Process no. 1: Put a layer of peanuts about one-half inch deep in a dripping-pan and place on perforated shelf in a moderate oven. Allow them to bake slowly for about one hour. Cook them until they are a light brown or straw color. Shake the pan or stir the peanuts every few minutes. When the kernels begin to crack and pop they brown very quickly, and should be watched closely.

"A splendid way to cook them is to fill a tight-covered dish about two-thirds full, place in the oven, and shake occasionally. When cooked this way, they are not liable to burn, and they retain their flavor better. When they have cooked sufficiently, spread out at once. When they have become quite cool, blanch as follows: This can be done by rubbing them in the hands, or what is better, a coarse bag, or take a piece of cloth and fold the ends together, forming a bag. Another good device is a screen made of coarse wire. Rub them until the skins are loose. The chaff can be removed by using a fan or by pouring them from one dish to another where the wind is blowing. Look them over carefully, removing defective nuts and foreign substances.

"The next step is to grind them. The most practical family mill we know of for grinding nuts, etc., is the Quaker City Mill (see cut [illustration] and description of same in this book).

"Always grind freshly cooked nuts, as they do not make good butter when left a day or two after being cooked." Note: No salt is used in this recipe. And, it is clearly based on the recipe in Lambert (1899, p. 70-71, which see). Moreover, the term "peanut butter" does not appear in this book.

These recipes are followed by recipes for: Salted nut butter ("Prepare nuts as described in process No. 1. Sprinkle salt on the kernels when grinding. It is much more preferable to grind the salt in with the nuts than to mix it in the butter"). Almond butter ("more difficult to make than peanut butter, on account of the difficulty in removing the skins"). Brazil nut butter. Peanut meal. Nut butter for the table. Peanut cream ("Emulsify with water until it is the consistency of milk").

Concerning "Nut butter for the table" (p. 245): "Put one-half the amount of butter required for the meal [p. 244] into a bowl and dilute with an equal quantity of water, adding a little of the water at a time, beating it thoroughly with a fork until it [sic, the mixture] is smooth and light. Enough water should be used to make it the proper consistency to spread nicely. An egg beater or a wire potato masher is an excellent utensil for mixing. A little salt can be added if desired. Nut butter when mixed with water does not keep but a few hours."

Page 249 lists 25 U.S. and 2 overseas "Vegetarian Restaurants and Cafes" worldwide, each with a street address. USA: Vegetarian Restaurant, Los Angeles, California. Vegetarian Restaurant, Oakland, California. Vegetarian Cafe, San Francisco, California. Vegetarian Cafe, Colorado Springs, Colorado. Vegetarian Cafe, Denver, Colorado. Hygienic Dining Rooms, Washington, DC. Hygeia Dining Rooms, Chicago, Illinois. Vegetarian Restaurant, Des Moines, Iowa. The Hygeia, Battle Creek, Michigan. Vegetarian Restaurant, Detroit, Michigan. North Michigan Tract Society, Petoskey, Michigan. Pure Food Cafe, Kansas City, Missouri. Vegetarian Restaurant, Lincoln, Nebraska. Vegetarian Restaurant, Jamestown, New York. Health Restaurant, New York City, New York. The Laurel, New York City, New York. Hygienic Cafe, Philadelphia, Pennsylvania. Vegetarian Restaurant (Corner Church & Vine St.), Nashville, Tennessee. The Pure Food Cafe, Salt Lake City, Utah. Good Health Restaurant, Seattle, Washington. Vegetarian Restaurant, Spokane, Washington. Restaurant, Fairmont, West Virginia. Hygienic Cafe, Madison, Wisconsin. Hygienic Cafe, Milwaukee, Wisconsin. Hygienic Restaurant, Sheridan, Wyoming.

Foreign: Vegetarian Restaurant, Sydney, NSW, Australia. Vegetarian Restaurant, Copenhagen, Denmark.

Pages 250-52 contain a "Directory of Sanitariums," 56 in all, worldwide. They are located in the USA (35), Australia (2; Wahroonga and Cooranbong, NSW), Canada (4; Vancouver and Victoria, British Columbia; Knowlton, Quebec; and St. Johns, Newfoundland), Denmark (2; Skodsborg and Frederikshavn), England (2; Caterham, Surrey, and Leicester), Germany (Friedensau, Bez. Magdeburg), India (Calcutta), Ireland (Belfast), Japan (Kobe), Mexico (Guadalajara), New Zealand (Christchurch), Norway (Christiania), Samoa (Apia, [Western Samoa]), South Africa (Cape Colony), Sweden (Orebro), and Switzerland (Basle).

Page 252 gives a "Directory of Sanitarium Food factories: Battle Creek Sanitarium Food Company, Battle Creek, Michigan Sanitarium Food Company, Sanitarium, California. Portland Sanitarium Food Company, West Ave., Mt. Tabor, Oregon. Colorado Sanitarium Food Company, Boulder, Colorado. Union College Bakery, College View, Nebraska. Sanitarium Food Company, 228 Clarence St., Sydney, NSW, Australia.

Commercial food products made by these food companies and used in the recipes include: Gluten, Granose Flakes, Nuttolene, and Protose.

In the back are ads (on unnumbered pages) for: (1) Quaker City Peanut Butter Mill, made by A.W. Straub Co. at 3 locations: 3737-41 Filbert St., Philadelphia, Pennsylvania; Canal and Randolph Streets, Chicago, Illinois; Vegetarian Cafe, 775 Market St., San Francisco, California. (2) Sanitarium Food Company, Sanitarium [St. Helena?],

California. Branch stores: San Francisco, Oakland, San Jose, and Fresno, California; and Salt Lake City, and Provo, Utah. They make bottled grape juice and apple cider. (3) Sanitas Nut Food Co., Ltd., Battle Creek, Michigan (makers of Protose and Nuttolene. "Nut foods were developed by the Sanitas Nut Food Co., Ltd., Battle Creek, Mich. Their manufacture is protected by patents... Sanitas Protose and Nuttolene are the only successful and scientific meat substitutes on the market. Sanitas Foods are sold by reliable dealers in all parts of the country... The Sanitarium Food Co., St. Helena and San Francisco, Cal., carry a full line of our products.")

Note: This is the earliest English-language document seen (Nov. 2003) that contains the term "meat substitutes" (or "meat substitute").

A slightly revised edition was published later in 1904, containing 268 pages. A second edition was published in 1910.

283. Kellogg, Ella Ervilla Eaton. comp. 1904. Healthful cookery: A collection of choice recipes for preparing foods, with special reference to health. Battle Creek, Michigan: Modern Medicine Publishing Co. 299 p. Index. 19 cm.
• ***Summary:*** Contents: Methods in hygienic cookery: Healthful cookery. Measuring and combining ingredients. Breads. Unfermented, or aerated bread. Sandwiches. Toasts. Vegetable substitutes for flesh foods. Eggs. Porridges and breakfast dishes. Vegetables. Gravies and relishes. Salads. Soup. Soups with nut soup stock. Gruels and liquid foods. Desserts. The invalid's meals. Seasonable bills of fare. Note 1. Soy is not mentioned.

"Peanut butter" is called for in various recipes: Nut cheese (p. 163), Nut cream (p. 164), Nut salad dressing (p. 171), and Vegetable soup (p. 181-82).

"Almond butter" is called for in: Fruit pin wheels (p. 49), Almond cream (p. 164), Nut cream (p. 164), Peach salad (p. 169), Sweet salad dressing (p. 172), Sour salad dressing (p. 172-73), Cream of almond soup (p. 179), Almond puree (p. 197), Hot nut milk (p. 197), Granola pie crust (p. 210), Almond pound cake (p. 231, incl. almond butter in the icing), Almond filling (for desserts, p. 233), Chocolate mold no. 1 (p. 239), Cocoanut almond cream sauce (p. 245), Almond whipped cream ([non-dairy], p. 246. "Reduce Almond Butter to the consistency of cream, and pour slowly over the well-beaten white of an egg. Sweeten and flavor to suit the taste. For persons who can not use cow's cream, this makes an excellent substitute for whipped cream").

Note 1. This is the earliest document seen (Oct. 2013) that discusses a non-soy, non-dairy whipped cream.

"Nut butter" is called for in: Granuto cakes (p. 44), Nut butter puffs (p. 45), Nut gluten rolls (p. 47), and other recipes on pages 55, 57, 58, 71, 78, 82, 86, 87, 88, 104-06, 126, 136, 157, 159-62, 169, 173, 177-79, 233, 245, 301. For "Nut butters" see Sandwiches (p. 53; "The butter, whether dairy or some one of the various nut butters, should be creamed and spread smoothly on the bread...").

"Nut cream is called for in: Granuto cakes (p. 44; "Serve at once with dairy or Nut Cream, dairy or Nut Butter,..."), Nut gluten rolls (p. 47), Pease gravy toast (p. 65), Nut Lisbon steak, no. 2 (p. 75), and other recipes on pages 86, 99, 104-05, 121-23, 129, 132, 136-37, 141, 146, 151, 153, 155, 159-60, 164, 176, 192, 205, 217, 245, 253, and 283.

Gluten is mentioned throughout the book, as are gluten bread, gluten flour, 40% gluten flour, ½ cup gluten (p. 84), 20% gluten (p. 99, in Protose and gluten patties), gluten meal, and gluten gruel.

This is a vegetarian cookbook. In the chapter on flesh-food substitutes (p. 67+), "vegetarian" is mentioned in several recipe names: Vegetarian roast (p. 106). Vegetarian roast No. 2 (p. 107). Also: Vegetarian boiled dinner (p. 134). Major branded ingredients in this chapter are: Protose ("vegetable meat"), Nuttolene, Granola, and Nut Butter. On page 84 is a recipe for "Vegetable turkey."

On the last 2 pages of the book is an ad: "This volume contains some six hundred recipes." "For the preparation of Sanitarium foods. These foods are manufactured by the Battle Creek Sanitarium Co., Ltd., and the Sanitas Nut Food Co., Ltd., the two original health food manufacturers of Battle Creek. Our products are of world-wide reputation, some of them having been in use more than a quarter of a century [i.e., since about 1879]. The company makes more than 49 food products. "Many good grocers carry only a few of them; some, a large line; more, none at all... Thousands upon thousands of grocers have never heard of our products."

"To all express offices in the following States we prepay the express on orders of $5.00 or more." On orders of $15.00 or more they also offer a 10% discount. The names of 23 states near Michigan are listed. Then the name, weight, packaging type, and price of every product is given.

The author is the wife of the famous Dr. John Harvey Kellogg. She lived 1852-1920. A slightly enlarged edition (313 p.) was published in 1908. Address: A.M., Battle Creek, Michigan.

284. Kellogg, Ella Ervilla Eaton. 1904. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery; a thousand choice, palatable, and wholesome recipes. Revised and enlarged edition. Battle Creek, Michigan: Modern Medicine Publishing Co. 508 p. [39] leaves of plates. Illust. Index. 24 cm.
• ***Summary:*** In this new edition, the wife of the famous Dr. John Harvey Kellogg discusses the principles and methods of the dietary system employed at the Battle Creek Sanitarium. Although this is a vegetarian cookbook (which includes the use of eggs and milk), that fact is not discussed anywhere in

© Copyright Soyinfo Center 2014

the book.

The "Preface to the fourth edition" (p. 4) begins "Cookery is a progressive science. Within the past few years several new and very valuable food products have been developed in the food laboratories of the Battle Creek Sanitarium and put upon the market, making necessary the evolution of many new recipes for their preparation for the table."

The long chapter on "Meats" (p. 389-417) in the 1892 ed. has been replaced by an even longer chapter on "Nuts and nut foods" (p. 389-425). After that we find all new chapters: "Food for the sick" (p. 426-52), "The daily menu (p. 453-63), and "Appendix" (p. 464+) with many pages of nutritional analyses, copied from the "Battle Creek Sanitarium Diet List," showing the "Food value of the large variety of foodstuffs when prepared for the table."

In the new "Introduction," the section on dairy products has been rewritten to deemphasize their use.

The long chapter on "Legumes" again notes that the Chinese "manufacture cheese [clearly tofu] from peas and beans" (p. 217-18).

The chapter on "Milk, cream, and butter" states (p. 369): "Various nuts, as almonds, filberts, and cocoanuts furnish products which make excellent substitutes for milk, and which can be utilized in cooking in early all recipes where milk is needed. These milk substitutes approach very closely the same composition as cow's milk, thus affording equal nourishment, while they have the advantage of being perfectly clean and free from germs. Recipes for their preparation are given elsewhere."

The chapter on "Nuts and nut foods" begins with a description of the major nuts. The long section on "The peanut or groundnut" notes: "In this country they are more commonly roasted, but in this form are almost indigestible, for the peanut is really not a nut at all, but a legume, and requires thorough cooking... to render it digestible. Peanuts are, however, a very wholesome and nutritious food when properly cooked" (p. 393). Recipes include: To blanch almonds. To blanch peanuts. Cocoanut cream. Nut pulp (from well blanched and baked peanuts). Peanut butter (Blanch, then cook in a double boiler for 8-10 hours before grinding). The section titled "Nut preparations" states: "Within the last few years, various processes have been discovered whereby nuts of different kinds are converted into most valuable and palatable foods. Chief among these nut products may be named protose, or vegetable meat, almond and peanut butters, nuttolene, nuttose, nut meals, and nut soup stock" (p. 398). Then come subsections on: "Protose and nuttolene recipes" (p. 399-411, incl. 2 recipes for Vegetarian roast, Vegetarian chili sauce, Protose steak, Nut steak in gravy, Mock hamburger steak, Nuttolene cutlets, Nut fillets, Protose patties, and Rice and lentil croquettes). "Nut products with vegetables" (p. 411-16). Nut cream and butter (p. 416+, incl. Nut butter, Nut milk). Sandwiches (p. 214+, incl. with almond nutter or nut butter).

The Appendix showing nutritional value of foods (p. 464-84) includes all the new nut products. At the very end is a half-page table titled: "The following table shows clearly the inferior value of flesh foods." The nutritional composition of 23 such foods (red meat, poultry, fish, and shellfish) is given. The book contains 31 excellent illustrations and 39 unnumbered pages of glossy black and white photos, each page printed on only one side.

Note 1. This is the earliest document seen (Jan. 2007) that mentions a kind of meatless burger or patty, which it calls "Mock hamburger steak" and "Protose patties."

Also discusses: "The superiority of bread made from the entire wheat or unbolted meal" also called "whole-wheat bread" (p. 112, 143). Many gluten recipes throughout. Diabetic biscuit (p. 452, made of Graham or entire-wheat flour). The following words do *not* appear in the Index: Animal, beef, bulk, fiber, fish, flesh, roughage.

Note 2. The 1904 date appears only on page 4 in the section titled "Preface to the fourth edition." No mention of a 4th ed. appears on the title page. The copyright page gives only the 1892 date. Address: Battle Creek, Michigan.

285. Kellogg, John Harvey. 1904. The miracle of life. Battle Creek, Michigan: Good Health Publishing Co. 574 p. 19 cm. Plates (partly colored). *

• ***Summary:*** Includes a chapter on vegetarianism titled "Shall we slay to eat?" (p. 161-96). Address: M.D., Battle Creek, Michigan.

286. *Good Health* (*Battle Creek, Michigan*). 1905. Sanitariums. Health food restaurants. 40(1):ix (Advertisements section). Jan.

• ***Summary:*** Gives the name and address of 39 Sanitariums, including 26 in the United States, and 13 overseas (new ones since 1904 at Leicester, England. Cape Town, South Africa. Kimberly, South Africa). These "institutions are conducted in harmony with the same methods and principles as the Battle Creek Sanitarium.

Also gives the name and address of 27 health food restaurants in the United States (note that the term "vegetarian restaurants" is no longer used) including the following new ones: Vegetarian Restaurant, 555 Boylston St., Boston, Massachusetts. Vegetarian Cafe, 214 Union St., Seattle, Washington. Vegetarian Cafe, S. 170 Howard St., Spokane, Washington.

Note: This is the earliest English-language document seen (March 2007) that contains the term "Health food restaurants" (or "Health food restaurant" or "Health-food restaurant").

287. *New York Times.* 1905. An imitation dinner. May 22. p. 6, col. 4.

• ***Summary:*** Discusses (with lame humor and much

© Copyright Soyinfo Center 2014

sarcasm) the meatless dinner given by a social leader to some distinguished delegates to the National Tuberculosis Convention held in Washington. The menu (whose nomenclature was "stimulating to the imagination if not to the palate") included Broiled Slices of Pinenut Protose, Nut Sauce, C.C. Protose Timbale, Kellogg Gelatina, and Imitation Coffee.

288. *Life and Health* (*Washington, DC; Seventh-day Adventist*). 1905. Fresh pure peanut butter. 20(6):180. June.
• ***Summary:*** "Appetizing, nourishing, strengthening. Made from No. 1 Spanish peanuts in an absolutely sanitary factory. Our improved machinery enables us to furnish the highest grade peanut butter at the exceptionally low price of 14¢ a lb. in 5 and 10 lb. pails; 12¢ lb. in 20, 25, 50 lb cans. Add 1¢ a lb. extra on 50 lbs. or over and we prepay the freight east of the Mississippi and north of Tennessee.

"Order to-day, if only 5 lbs. to try. You'll use it always once you start. Send for trial can, post-paid for 10¢.

"St. Laurent Bros., 1220-22 Saginaw St., Bay City, Michigan."

289. International Health Association, Ltd. (The). 1905. Granose: The pre-eminent whole wheat preparation is the ideal food for breakfast, dinner and supper (Ad). *Vegetarian Messenger and Health Review* (*Manchester, England*). Sept. p. 253.
• ***Summary:*** "No table is complete without it. Granose is crisp, delicious, not only easily digested but an aid to good digestion, and nourishing, alike for infants, invalids, the strong and robust, the mechanic and athlete, the brain worker, and the aged. The only food of which it can be truthfully said: 'Tis the best for all.

"Sample of Granose Flakes, Granose Biscuits, and Toasted Wheat Flakes, with complete price list of other Cereal and Nut Health Foods sent post free for 3*d.;* or package of assorted samples of Health Foods for 1/ [1 shilling]."

292. Loughborough, John Norton. 1905. The great second advent movement, its rise and progress. Nashville, Tennessee, and Fort Worth, Texas: Southern Publishing Assoc. xvii + 21-480 p. Illust. 21 cm.
• ***Summary:*** A participant's view of the early history of the Seventh-day Adventist church. Chapter 23, titled "Health Institutions," discusses the Battle Creek Sanitarium (Battle Creek, Michigan), Ellen G. White, J.N. Andrews, the health journal *Health Reformer,* dress reform, Dr. Trall's endorsement (1868), Dr. J.H. Kellogg's testimony, the *Pacific Health Journal,* Mrs. Haskell's $30,000 gift, medical missionaries and missionary work, the sanitarium hospital, list of sanitariums (USA 35, Great Britain 3, Australia 2, and 1 each in Germany, Switzerland, Denmark, Norway, Sweden, South Africa, New Zealand, Island of Samoa [probably Western Samoa; see Fulton 1904], Mexico, India, Japan). A portrait photo (frontispiece) shows J.N. Loughborough.

Note: There is no "Island of Samoa." Samoa or the Samoa Islands are divided into American Samoa (on the east; Pago Pago is the capital), and Western Samoa (Apia is the capital. Formerly controlled by Germany, then New Zealand, it became an independent nation in 1962). Address: Mountain View, California.

293. Roper, William N. ed. 1905. The peanut and its culture. Petersburg, Virginia: American Nut Journal. 75 p. Illust. Index. 23 cm.
• ***Summary:*** The many chapters in this book are written by various authors who are experts on peanuts; those with no special author given are written by the editor. The Preface states that this is a book of practical information "for all persons engaged in the growing or the handling of this important crop, with special attention to the methods that have obtained the best results among the most successful growers of all varieties of peanuts."

Contents: Introduction. Magnitude of the peanut crop. Origin and botany of the peanut, by Prof. H. Harold Hume, Raleigh, North Carolina. Peculiarities of the peanut plant. The peanut a fruit, not a vegetable. Varieties of the peanut and their special uses. Domestic uses of the peanut. Breeding seed peanuts, by Prof. W.F. Massey, Raleigh, North Carolina. Dealers' comment on seed selection, by Holmes & Dawson, Norfolk, Virginia. The peanut, by Prof. Charles W. Burkett, Raleigh, North Carolina. Cultivation of the peanut, by B.W. Jones, Spottsville, Virginia. How peanuts are harvested, by B.W. Jones, Spottsville, Virginia. How to cultivate and harvest Spanish peanuts, by E.T. Shackleford, Petersburg, Virginia. The peanut "popper" (used for shelling seed peanuts). Peanut culture in Arkansas, extracts from Bulletin 84, Arkansas Experiment Station, by C.L. Newman. Adaptability of the peanut to the arid west. How peanuts are prepared by factories for the trade. Spanish peanut industry at Petersburg, Virginia. Virginia peanut industry at Norfolk, Virginia. Peanut industry at Suffolk, Virginia. Foreign peanuts, by Burton H. Allbee, New York, for five years Market Editor New York Commercial: Introduction, France, Spain, Africa, Malayan Archipelago, China, Japan. Arachides in Marseille, by Hon. Robert P. Skinner, U.S. Consul General, Marseille, France. How peanut oil is made,

© Copyright Soyinfo Center 2014

by Robert P. Skinner. The peanut as a food (incl. peanut butter). Comparative weights and prices (by month from Jan. 1900 to May 1905, for Virginia and Spanish peanuts).

At the back of this book (p. 63-75) are 13 pages of ads related to peanuts, including seeds, Lummis & Co. cleaners of peanuts, peanut machinery from the Cardwell Machine Co., Ellis champion peanut and pea thresher from the Ellis Keystone Agricultural Works (Pottstown, Pennsylvania), Royster's peanut fertilizer, Lion brand fertilizer, National Nitro-Culture Co. (West Chester, Pennsylvania).

Concerning the origin of the peanut, by Prof. H. Harold Hume, Raleigh, North Carolina (p. 11): "For many years the original home of the peanut (*Arachis hypogaæa*) was in dispute, but this dispute has been set at rest by the investigations of Alphonse De Candolle.

"It has been said that it had its origin in Africa, or in Asia; but the weight of evidence points to Brazil as the home of this unique plant, though its existence in a wild state is unknown.

"The evidence upon which this conclusion is based is sufficiently convincing to allow little reason to doubt the accuracy of De Candolle's conclusion. The genus *Arachis* contains a half dozen or more other species, all of which are known to be natives of Brazil. It would be an unusual exception to find one single isolated plant the native of one hemisphere, while all of its near relatives were found in another. Marcgraf and Piso described the peanut from Brazil as early as 1648. There were ancient American names–*mandubi, anchic and mani*–for the plant. On the other hand, the peanut was unknown to the early Greek, Latin and Arab writers. The agriculture of Egypt is very ancient; yet, according to the early botanists, it was not in cultivation in that country. In India it has no name in the ancient Sanskrit. In the older books on the plants of the Orient, the peanut is always referred to as a cultivated plant, and in the more ancient ones it is not mentioned.

"But, on the other hand, we know that it was cultivated extensively in Guinea and other parts of Africa at an early date. Sloane, in his work on Jamaica, says that it was used by slave-dealers to feed the negroes on the passage from Africa. This may be explained, however, by the supposition that the first slave-ships carried the peanut from Brazil to Africa, toward the close of the fifteenth century, where it soon became generally cultivated, and it was then used in the way stated by Sloane, and eventually was brought to the British Colonies in America by the slave-ships, and was subsequently planted and cultivated in the Southern Colonies of Virginia and Carolina, from which its culture has spread generally throughout all the Southern States. Its presence in the Orient may be explained on the basis of a Portuguese introduction toward the close of the sixteenth century."

Photos (black-and-white) show: (1) Black people working in a 300-acre Spanish peanut field near Petersburg, Virginia. (2) Flat or running Virginia peanuts in the shell (3 views, exact size). (3) Improved running jumbo peanuts in the shell (2 views, exact size). (4) Black people sitting on the ground, picking nuts from the vines (Courtesy Bain Peanut Co.). (5) Black people with one horse taking the vines and nuts from the ground (Courtesy Bain Peanut Co.). (6) Black people stacking the vines and nuts to dry (Courtesy Bain Peanut Co.). (7) Cluster for four Spanish peanut vines. (8) Improved Spanish peanuts in the shell (8 views, exact size). (9) Vines shocked in the field; a black girl is standing in front of one, smiling (Courtesy Suffolk Peanut Co.). (10) A peanut popper. (11) Black people sorting peanuts on tables in a factory with lights overhead. (12) Solid carload (a train with many cars) or peanuts leaving Suffolk, Virginia. (Courtesy Suffolk Peanut Co.).

The section titled "The peanut as food" (p. 58-59) states: "Professor Jaffa, of the University of California, reporting interesting experiments made upon men engaged in hard, manual work, states that nuts are the cheapest source of energy, peanuts ranging far ahead. A prominent southern physician says the peanut is the best food a man can eat. There are sanitariums and hospitals where the little peanut constitutes the chief article of diet. It is ground and added to bread, made into croquettes, meringue, salads, soups, jumbles, griddle cakes, muffins, pies, and utilized in numerous other ways.

"Peanut butter is rapidly becoming a staple article of commerce, and it is claimed for this butter that it has these marked advantages: it does not absorb offensive odors, will stand a high temperature without melting, and does not become rancid when made pure. For the manufacture of candies and confections, the peanut is becoming more popular than ever. From refreshments on special occasions it is rapidly becoming esteemed as a food.

"The peanut will doubtless become one of the great staples of commerce, to take rank with wheat and rice as one of the most important articles of food supply for the millions of consumers in all parts of the world." Address: Editor, American Nut Journal, Petersburg, Virginia.

294. Battle Creek Health Food Co., Limited. 1906. Life Chips for the workingman (Ad). *Toronto Daily Star* (*Canada*). April 21. p. 12.

• ***Summary:*** "Flesh food does not give the staying quality–the energy it produces is quickly expended.

"The workingman is much better fitted for his day's labor by a cereal and egg diet.

"His strength is more uniformly distributed, and he is never troubled with that heavy, fagged, tired-out feeling.

"His health is improved by leaving meat alone–more than half the disease of today is caused by eating flesh foods."

Life Chips are made from the whole wheat, scientifically mixed with the best quality of malt."

For breakfast Life Chips are delicious with hot or cold

milk or cream. For dinner or supper, in combination with fruit, vegetables or eggs, Life Chips are nourishing and appetizing."

A large vertical illustration, in the middle of the ad running its full height, shows a man walking, smoking a pipe, wearing a hat, and carrying a cylindrical lunch bucket as he walks to work. Address: Canadian Factory, London, Ontario.

295. Battle Creek Health Food Co., Limited. 1906. Life Chips for the young child (Ad). *Toronto Daily Star* (*Canada*). May 19. p. 5.
• ***Summary:*** "The foundation for perfect health is laid in childhood.

"Much depends on the child's diet. It most be nourishing and satisfying, without clogging the system.

"Life Chips should be the basis of every child's meal.

"They will give the vigor of perfect manhood and beautiful womanhood."

A large vertical illustration, in the middle of the ad running its full height, shows a young child, seated in a high chair at a dining table, wearing a bib, and eating from a bowl of Life Flakes. Address: Canadian Factory, London, Ontario.

296. White, Ellen G. 1906. Notes of travel–No. 1: Journey to Southern California. *Advent Review and Sabbath Herald.* June 14. p. 7.
• ***Summary:*** On April 12 Mrs. White left her home near St. Helena for a short visit to southern California. "The Los Angeles vegetarian restaurant: Our train into Los Angeles was a few minutes late, and we could not make close connections with the train for Loma Linda, so we spent a pleasant hour at the vegetarian restaurant, on the corner of Third and Hill Streets. This restaurant is now conducted by the medical missionary department of the Southern California Conference, and is in charge of Brother and Sister Allen..."

"During the past few years, the Lord has given much instruction regarding the establishment of hygienic restaurants in large cities. Over and over again he has indicated that in many cities we should have small restaurants, as centers of influence, by which the attention of thinking men would be called to the principles that make us 'a peculiar people.'"

"In 1902 I wrote out many reasons why it will be best to establish several smaller restaurants in different parts of our large cities. Among these reasons were the following: The smaller restaurants will recommend the principles of health reform as well as the larger establishments, and will be much more easily managed."

297. Battle Creek Health Food Co., Limited. 1906. The public invited (Ad). *Toronto Daily Star* (*Canada*). June 19. p. 11.
• ***Summary:*** "The Battle Creek Health Food Company of London [Ontario] are having a special demonstration of Granose Biscuit, Granose Flakes, and Caramel Cereal [a coffee substitute] in the Grocery Department of the T. Eaton Co., and all visitors to the big store are invited to purchase sample packages of these most excellent foods.

"With these foods it is not a question of price, because the cost is no more, but it is a matter of quality, and to know that what you are eating is the best that time, money, and skill can produce." Address: London, Ontario.

298. Kellogg, John Harvey. 1906. Vegetarians of India (Editorial). *Good Health* (*Battle Creek, Michigan*) 41(11):664-65. Nov.
• ***Summary:*** "The eminent Prof. C.B. Ramarao, M.D., delegate to the British Medical Association which recently held its meeting at Toronto [Ontario, Canada], stated in a lecture recently delivered before the physicians and guests of the Battle Creek Sanitarium upon the habits and customs of the people of India, that the Brahmans of southern India, who are known to be the most intellectual and highly cultivated people of that country, absolutely eschew all animal food of every description with the exception of milk. Even eggs are excluded from their dietary. The Brahmans of northern India make use of eggs, and sometimes of fish, but never eat the flesh of animals.

"Dr. Ramarao is himself a fine specimen of physical development and manly vigor, a man of great intellect and professional attainments."

"If foodstuffs rich in proteids are at any time needful as an addition to the dietary, they may be readily found in peas, beans, lentils, milk, and eggs..." Address: M.D.

300. Winton, A.L. 1906. Diabetic foods. *Connecticut Agricultural Experiment Station, Annual Report* 30:153-65. For the year 1906.

• ***Summary:*** This article begins: The necessity of excluding so far as possible from the diet of diabetic patients sugars and substances, such as starch and dextrin, yielding sugar with the digestive juices, had led to the introduction of saccharine and other coal-tar derivatives and preparations containing, or purporting to contain, no starch or starch derivatives,..."

"Not only all of the cereal grains but also most of the seeds of the legumes... contain large amounts of starch and must be avoided by diabetics; the soja or soy bean, however, is a striking exception as it contains, when ripe, no true starch, or only traces. This leguminous seed is an important food in Japan and is being used in this country for the manufacture of meal for the use of diabetics. Two analyses of soja bean meal [whole soy flour] are given in Table XVI, pp. 156-157."

This table lists and analyzes about 45 diabetic foods made by about 12 companies. Only three products clearly contain soy; the first two (p. 156-57) are both named Soja Bean Meal made by the Theo. Metcalf Co. in Boston, Massachusetts; one contains 5.5% starch and the other 7.63% starch. The first product contains 19.06% fat and is thus a whole (full-fat) soy flour; this table contains the earliest analysis seen of whole soy flour. The third product (p. 164) is a homemade "Soja Bean Meal Biscuit (Muffins or Popovers)" made from Metcalf's Soja Bean Meal. Made with 1 cup cream, 2 eggs, baking powder, and salt, plus Soja Bean Meal, it contains (on an as-is basis) 27.6% water, 5.33% ash, 16.71% protein, 1.55% fiber, 12.84% nitrogen-free extract [non-fiber carbohydrates], and 35.91% fat. Note: This is the earliest English-language document seen (Nov. 2013) that uses the term "soja bean meal" to refer to whole soy flour.

"The peanut, another leguminous seed, although very rich in oil, contains about 11 per cent. of starch, sugar, and dextrin, of which about half is starch." Most of the nuts, including almonds, "since they contain no starch and only small amounts of sugar and dextrin but are rich in protein and oil, are valuable additions to the diet of diabetics. Almond meal is used in the preparation of various biscuits and bread substitutes."

The table (p. 156-59) also contains many gluten products, together with their manufacturers and nutritional composition. Diabetic products made by Battle Creek Sanitarium Food Co. (Battle Creek, Michigan) are: 40% Gluten Flour, 40% Gluten, 40% Gluten Biscuit, Potato Gluten Biscuit, and Pure Gluten Biscuit. Diabetic products made by the Sanitas Nut Food Co., Ltd. (New York) are: Sanitas Nut Butter, Nuttolene, Almond Butter, and Protose. Nutritional analyses of each of these products are given.

This table shows that The Health Food Co., New York, makes (p. 156): Flour and meal–Glutosac Flour, 35% proteids. Protosac Flour, 40% proteids. Pure Washed Gluten Flour, 85% proteids, 6% carbohydrates, 9% water. Almond meal. Bread, biscuit, rusk, etc.–No. 1 Proto Puffs, 78.86% protein, 6.71% starch. Salvia Sticks. Protosac Bread, 40% protein, Glutosac Bread, 35% proteids. Plain Glutosac Wafers, 33% proteids. Glutona, 35% proteids. Glutosac Zweiback, 35% proteids. Glutosac Butter Wafers, 35% proteids. Protosac Rusks, 40% proteids, Glutosac Rusk, 35% proteids. Diabetic Biscuit, 40% proteids.

Note: Kate G. Barber, PhD, is also a chemist in the station's Analytical Laboratory. She and Andrew Winton were later married. Address: PhD, Chemist in charge, Analytical Lab., New Haven, Connecticut.

• ***Summary:*** Under Pacific Union Conference is Southern California Conference (p. 59-60). Organized 1901. Under "Vegetarian Cafe" (no address is given) are the names of the "Board of Management: J.A. Burden, S.S. Merrill, O.F. Conway, W.M. Healey, E.S. Ballenger."

Note: The address was probably 257 South Hill St., Los Angeles. J.A. Burden, and two other ministers who lived in Los Angeles, lived at 317 West Third St.

302. *Good Health* (*Battle Creek, Michigan*). 1907. Directory of Sanitariums. Health food restaurants. Health food stores. 42(2): Feb. Near front (unpaginated).
• ***Summary:*** Gives the name and address of 37 Sanitariums and treatment rooms, including 25 in the United States, and 12 overseas (including Chaterham, Surrey, England; Leicester, England; Calcutta, India; Cape Town, South Africa; Christchurch, New Zealand; Kobe, Japan; Guadalajara, Jalisco, Mexico; Gland, Vaud, Switzerland; Skodsborg, Denmark; Wahroonga, NSW, Australia; Bez. Magdeburg, Germany; Kimberley, South Africa).

Also the names and addresses of 16 "Health food restaurants" in the United States (with names like Hygienic Cafe, Pure Food Cafe, Sanitarium Rooms, etc.) including: Vegetarian Cafe, 259 South Hill St., Los Angeles, California.

And the names and addresses of 8 "Health food stores" in the United States (in Omaha, Nebraska; Springfield, Massachusetts; Detroit, Michigan; Boston, Massachusetts; Melrose, Massachusetts; Rochester, New York; College View, Nebraska; Chicago, Illinois).

303. International Health Association, Limited (The). 1907. Do you want to be rich? The [key] to the secret (Ad). *Good Health* (*London*) 5(16):507. Sept.
• ***Summary:*** "Health is wealth! How many people unconsciously exchange health for money. How many violate the laws of nature in their efforts to gain a position in the world!

"Are you healthy? If so, allow us to offer you a few suggestions on the maintenance of strength and vigour. Are you sick? We believe we can help you get well."

Perhaps "you are anxious to discard the use of flesh meats, but are at a loss to find a suitable substitute. We can remove this difficulty by offering you a Perfect Meat made from choice Wheat and Nuts, being therefore absolutely pure and wholesome. Our Protose is the best substitute for flesh meats ever produced... Protose is beneficial to the brain-worker, and will also impart strength and vigour to those engaged in manual labour.

"Supplied in three varieties: No. 1. The Original Protose. No. 2. Pine-Nut Protose. No. 3. Hazel-Nut Protose." Price: 1½ lb., 1 shilling 4 pence. 1 lb., 1 shilling. ½ lb., 8 pence.

"Send six stamps for a sample tin. Health Food Booklet sent free on application." Address: Legge Street, Birmingham [England].

304. Yogurt Company (The). 1907. Yogurt: An invaluable remedy (Ad). *Good Health* (*Battle Creek, Michigan*) 42(9):Unnumbered page in ads at end of issue. Sept.
• ***Summary:*** "Masson, of Geneva, discovered in certain Oriental milk preparations a new lactic acid-forming ferment. Metchnikoff investigated this new bacillus and found it to possess extraordinary powers and great resistance, far superior to the ferments of kumyss [koumiss, kumis, kumiss], kefir, and other ferments previously known. The ferment is commonly used with milk in a form resembling kumyss or sour milk.

"The milk preparation containing this ferment has been used in Egypt under the name of Leben; in Bulgaria it is known as yoghourt or yaghourt. It is also used in Turkey and other Oriental countries. Metchnikoff, of the Pasteur Institute, Combe, Bourget, and many other European authorities make large use of this ferment in the treatment of intestinal autointoxication which investigation by these and other authorities has shown to be responsible for a large number of chronic diseases, particularly many cases of arteriosclerosis, Bright's disease, skin maladies, chronic rheumatism. rheumatoid arthritis and chronic biliousness..."

"Yogurt cures by driving out the disease-producing germs in the intestinal tract and substituting a harmless species instead. It is easily the most valuable remedy ever discovered for Intestinal Autointoxication.

"Hitherto this remedy has not been available in this country. It may now be secured, freshly prepared and of superior quality.

"We have succeeded in preparing this ferment in concentrated form so that it may be administered in capsules.

"Packages containing four dozen capsules, each post-paid, $1.00.

"Manufactured and sold by The Yogurt Company,..."

Note: This is the earliest English-language document seen (Sept. 2012) with the word "Yogurt" (regardless of spelling) in the title. This yogurt is made from dairy / animal milk. Address: Battle Creek, Michigan.

305. Kellogg, John H. 1907. Food product. *U.S. Patent* 0,869,371. Oct. 29. 1 p. Application filed 24 Feb. 1906.
• ***Summary:*** This is patent for a meat substitute product, and process of making it. The ingredients and their proportions by weight are gluten (wet, 37%, made from wheat flour), casein (wet, 37%, precipitated from cow's milk with an acid), and vegetable oil (25%). The ingredients are shredded, mixed, put into cans, and cooked. The product may also be dried. Soy is not mentioned. Note: This patent was later widely cited by Anson and Pader in their meat analog patents of the 1950s. Address: M.D., Battle Creek, Calhoun Co., Michigan.

306. International Health Association, Limited (The).

1907. A move into the country. The International Health Association's new headquarters (Ad). *Good Health* (*London*) 5(17):533. Oct.

• ***Summary:*** "It is with pleasure that we announce our removal from Birmingham, where we have for some time been working under the disadvantages of limited facilities, a smoke-laden atmosphere, and the general unhealthful conditions which appertain to large cities, into a beautiful country location, where we shall be able to manufacture Health Foods under genuinely healthful conditions.

"The property consists of 55 acres of well-timbered park-land, situated one mile beyond the limits of the town, at an elevation of 300 feet above sea level.

"We have built the factory to suit all our requirements, and have fitted it throughout with electricity for power and lighting purposes.

"Our increased facilities and improved conditions warrant us to invite your continued and increased patronage, and make us feel confident of giving entire satisfaction to all. Price list free on application." Address: Stanborough Park, Watford, Herts. [Hertfordshire, England].

307. Andross, E.E. 1907. Dedication at Stanborough Park [of IHA food factory at Watford, Hertfordshire, England]. *Missionary Worker* (*London*) 11(21-22):177-78. Nov. 20.

• ***Summary:*** "Monday, Oct. 28th, at 2:30 p.m., in the packing room of the Food Factory (the largest room available for such a gathering) at Stanborough Park, about two hundred people assembled for the purpose of formally dedicating the estate, with all its buildings, to the service of God. While we could but say with David; 'All things come of Thee, and of Thine own have we given Thee,'..."

"The packing room was crowded to its utmost capacity, and the doors into the shipping room were thrown open, and all its available space was occupied, besides the standing room near the main entrance and on the landing being filled with attentive listeners.

"Statement of the business manager: Brother Sisley gave a brief history of our experiences in searching for a location for the headquarters of our work, and of the Lord's leading in securing this estate. He also gave a financial statement of the 'Seventh-Day Adventist Union, Limited' (the organization owning the property),..."

"Health work: Brother Barnard related some of the experiences in the development of the health food work in this field. And in behalf of its staff of workers expressed the high appreciation of, and deep gratitude to God for, the present beautiful situation and splendid facilities for the prosecution of their work."

A photo shows five, huge two-story buildings, including the food factory and printing office.

Note: This is the earliest document seen (Dec. 2013) concerning Seventh-day Adventist food manufacturing activities outside the United States.

308. Barnard, S.S. 1907. The health food work. *Missionary Worker* (*London*) 11(21-22):177-78. Nov. 20.

• ***Summary:*** "The manufacture of health foods occupies an important place in the health reform work;..."

"Many of the foods offered to the public to-day are unsafe to eat, owing to the harmful ingredients contained in them; various kinds of chemicals, adulterants, and other questionable elements being unscrupulously used by the majority of worldly firms engaged in the manufacture of foods, of whatever kind, whose chief object for being in business is to make money... With regard to flesh meat, it is an acknowledged scientific fact that its use is contrary to the best development of the physical, mental, and moral powers. The best meat naturally contains many impurities, besides which, animals are becoming more and more diseased, so that it is positively unsafe to eat their flesh.

"The health foods work began about twenty-five years ago [i.e., in about 1882] in America, when the Lord gave skill and understanding to His people to prepare [meatless] foods that are healthful and life-sustaining. These foods were adopted for regular use in our sanitariums, and proved so highly beneficial to the patients that many of them continued to use them after returning to their homes; consequently, in a little while the health food factory was sending out its products to all parts of the United States. In course of time inquiries for the foods were received from England, and in 1897 an agency for their sale was started at our Tract Society Office, 451 Holloway Road, the foods being imported from America. A year or two later the brethren in England decided to manufacture the foods in this country, and purchased a mill for the purpose at Horley, a village in Surrey. The enterprise was getting fairly well established when a fire burnt the mill to the ground. In September, 1900, a factory was rented in Birmingham, and for the last seven years the work has been carried on there. Unfortunately, the building and its location were unsuitable for our work, and we have long been looking for a more favourable place. The Lord has now provided us with an ideal place in the midst of the scenes of nature, for which we are truly thankful. The building that has been erected is light, airy, and hygienic in every way, and is eminently suited for the manufacture of health foods. It was publicly dedicated to the Lord's work on October 28th, at the time of the dedication of the other enterprises centered at Stanborough Park, Watford. Not only has the building been dedicated, but all the brethren engaged in the work of making the foods have dedicated themselves to the Lord, their chief motive being to work unselfishly for the benefit of their fellow men; and all will strive to reach the very highest standard of excellence."

"A few statistics bearing upon the progress of the work may be of interest. The first year at Birmingham showed a loss of £1,500, and the business would have had to be abandoned had not some of the brethren kindly assisted us

© Copyright Soyinfo Center 2014

with temporary loans; but since that time God's blessing has rested on the efforts put forth, each year showing a margin of profit, until on the 31st of December last, there was a balance of £400 on the right side. Our sales this year have kept ahead of last year's notwithstanding the increased competition, so that we anticipate a fair showing at the end of the present year, after deducting the heavy expenses that have been incurred in removing from Birmingham. We have sold over 100,000 packets of granose flakes and granose biscuits (our leading lines) during the last twelve months, and now we are aiming for the 200,000 mark."

"But a word now with reference to the profits that may accrue. These are to be wholly devoted to the extension of the work to which we, as a people, are committed."

"On our part we will do our utmost to merit support by supplying foods of the very best quality, carefully prepared on scientific lines, that will be health foods, not only in name, but in fact.

"Some firms are now manufacturing and selling goods that profess to be health foods, but that contain unwholesome ingredients. Again, the foods are often of so inferior a quality that much harm is done to the cause by their sale, those who buy them supposing that all health foods are similar. Foods are also being manufactured by a firm which obtained most of its recipes from one who went out from us, while many are imitating our foods and advertisements."

Photos show: (1) A corner of the bakery. (2) The room where Granose is made. Four workers are shown in each photo. Address: Manager, The International Health Ass'n, Ltd. [Stanborough Park, Watford, Hertfordshire, England].

309. International Health Association, Ltd. (The). 1907. Monotony in diet tends to mal-nutrition (Ad). *Good Health* (*London*) 5(19):607. Dec.

• ***Summary:*** "A variety of sustaining breakfast foods eaten on alternate mornings is, for most people, better than the same kind morning after morning." Each of IHA's breakfast foods is perfectly cooked and ready to serve in two minutes.

They are: Granose Flakes and Granose Biscuits. Toasted Wheat Flakes. Avenola. Gluten Meal (I.H.A. brand).

"Can be obtained from all Health Food Stores, or direct from the makers. In districts throughout the United Kingdom where we have no agents we will send, carriage paid, a packet of each of the above five foods, also a tin of our delicious Malted Nuts, and a ½ lb. tin of Protose (Nut Meat), together with "One Hundred Hygienic Recipes," for 5/-.

Note: The first page of the December issue states: "Our seventh Christmas... Our edition this month is 80,000 copies. Six years ago it was 15,000." Address: Stanborough Park, Watford, Herts. [Hertfordshire, England].

314. *Advertiser* (*The*) (*Adelaide, South Australia*). 1908. Sanitarium Health Food. Feb. 27. p. 6.

• ***Summary:*** "A 'Sanitarium Health Food Cafe' was opened on Monday in cool, airy, and convenient premises at 28, Waymouth-street under the management of Mr. J. G. Fisher. Great success has attended the hygienic cafes established by the same institution in Melbourne, Sydney, Hobart, and Wellington [New Zealand], where the viands purveyed have grown in public estimation every day. It is claimed that sanitarium health foods are pre-eminently calculated to supply all that is required for the development of the human body. They are prepared from the choicest grains, nuts, and fruits, and so can be eaten without fear of contracting diseases sometimes conveyed by flesh meats. Everything about the cafe is attractive, and the food is served in the most appetising way. The menu includes Macaroni cutlets, mock chicken soup, nut meat and tomato stew, and other vegetarian delicacies while the waitresses are expert and attentive. The cooking is, of course, in the hands of specialists. Meals are served at the ordinary hours, and it is asserted that in the food there are no free fats, coloring matter, or other injurious decoctions. If so desired palatable unfermented wine, the pure juice of the grape, can be taken with the meals."

315. White, Ellen G. 1908. An appeal for the Madison School. n.p. 4 p. May 25.

• ***Summary:*** "I am acquainted with the necessities of the work being done by Brethren Magan and Sutherland and their co-laborers at Madison, Tennessee, for the Lord has presented this matter clearly before me.

"Light had been given that a great work was to be done in and around Nashville. When these brethren were looking for a location for their school, they found the farm where the school is now established; The price was moderate, and the advantages were many. I was shown that the property should be secured for the school, and advised them to look no farther.

"The character of the work: The school at Madison not only educates in a knowledge of the Scriptures, but it gives a practical training that fits the student to go forth as a self-supporting missionary to the field to which he is called. In their work at Madison, Brethren Sutherland and Magan and their associates have borne trial nobly. The students have been taught to raise their own crops, to build their own houses, and to care wisely for cattle and poultry. They have been learning to become self-supporting, and a training more important than this they could not receive. Thus they have

© Copyright Soyinfo Center 2014

obtained a valuable education for usefulness in missionary fields.

"To this is added the knowledge of how to treat the sick and to care for the injured. This training for medical missionary work is one of the grandest objects for which any school can be established.

"The need for a sanitarium: There are many suffering from disease and injury, who, when relieved of pain, will be prepared to listen to the truth. Our Saviour was a mighty Healer. In His name there may be many miracles wrought in the South and in other fields, through the instrumentality of the trained medical missionary. It is essential that there shall be a sanitarium connected with the Madison school. The educational work at the school and the sanitarium can go forward hand in hand. The instruction given at the school will benefit the patients, and the instruction given to the sanitarium patients will be a blessing to the school.

"The value of an all-round education: The class of education given at the Madison school is such as will be accounted a treasure of great value by those who take up missionary work in foreign fields. If many more in other schools were receiving a similar training, we as a people would be a spectacle to the world, to angels, and to men. The message would be quickly carried to every country, and souls now in darkness would be brought to the light.

"It would have been pleasing to God if, while the Madison school has been doing its work, other such schools had been established in different parts of the Southern field. There is plenty of land lying waste in the South that might have been improved as the land about the Madison school has been improved. The time is soon coming when God's people, because of persecution, will be scattered in many countries. Those who have received an all-round education will have a great advantage wherever they are. The Lord reveals divine wisdom in thus leading His people to train all their faculties and capabilities for the work of disseminating truth.

"A call to self-denial: Every possible means should be devised to establish schools of the Madison order in various parts of the South; and those who lend their means and their influence to help this work, are aiding the cause of God. I am instructed to say to those who have means to spare: Help the work at Madison. You have no time to lose. Satan will soon rise up to create hindrances; let the work go forward while it may.

"Let us strengthen this company of educators to continue the good work in which they are engaged, and labor to encourage others to do a similar work. Then the light of truth will be carried in a simple and effective way, and a great work will be accomplished for the Master in a short time. When the Lord favors any of His servants with worldly advantages, it is that they may use those advantages for the benefit of others. We are to learn to be content with simple food and clothing, that we may save much means to invest in the work of the gospel.

"Our lack of self-denial, our refusal to see the necessities of the cause for this time, and to respond to them, call for repentance and humiliation before God. It is a sin for one who knows the truth of God to fold his hands and leave his work for another to do. The gospel of Christ calls for entire consecration. Let our church-members now arise to their responsibilities and privileges. Let them spend less on self-indulgence and needless adorning. The money thus expended is the Lord's, and is needed to do a sacred work in His cause. Educate the children to do missionary work, and to bring their offerings to God. Let us awake to the spiritual character of the work in which we are engaged. This is no time for weakness to be woven into our experience.

"The work at Madison not to be hindered: The workers at Madison have devised and planned and sacrificed in order to carry the school there on right lines, but the work has been greatly delayed. The Lord guided in the selection of the farm at Madison, and He desires it to be managed on right lines, that others, learning from the workers there, may take up a similar work, and conduct it in a like manner.

"In the work being done at the training-school for home and foreign missionary teachers in Madison, Tennessee, and in the small schools established by the teachers who have gone forth from Madison, we have an illustration of one way in which the message should be carried in many, many places.

"Brethren Sutherland and Magan should be encouraged to solicit means for the support of their work. It is the privilege of these brethren to receive gifts from any of the people whom the Lord impresses to help. They should have means–God's means with which to work. The Madison enterprise has been crippled in the past, but now it must go forward. If this work had been regarded in the right light, and had been given the help it needed, we should long ere this have had a prosperous work at Madison. Our people are to be encouraged to give of their means to this work which is preparing students in a sensible and creditable way to go forth into neglected fields to proclaim the soon coming of Christ.

"Now a modest sanitarium is being erected, and a more commodious school-building. These are necessary to carry on aright the work of education. In the past, Brethren Sutherland and Magan have used their tact and ability in raising means for the good of the cause as a whole. Now the time has come when these faithful workers should receive from their brethren, the Lords' stewards, the means that they need to carry on successfully the work of the Madison school and the little Madison sanitarium.

"I appeal to our brethren to whom the Lord has entrusted the talent of means: Will you not help the workers at Madison, who have been instrumental in raising means for many enterprises? As the Lord's messenger, I ask you to help the Madison school now. This is its time of need. The money

© Copyright Soyinfo Center 2014

which you possess is the Lord's entrusted capital. It should be held in readiness to answer the calls in places where the Lord has need of it.

"The necessities of the Madison school call for immediate help. Brethren, work while the day lasts; for the night cometh, when no man can work.

"May 25, 1908."

Note 1. Reprinted in 1986 in the *Madison Survey.*

Note 2. Letter (e-mail) from Tim Poirier, Vice Director, Ellen G. White Estate, Inc. (Silver Spring, Maryland). 2013. Jan. 2. "Contrary to the note that appears at the top of the page [in the 1986 *Madison Survey*], this 4-page appeal was not a part of *Special Testimonies,* Series B, No. 11. At least all of our original copies end with page 32 and do not include this appeal. The note refers to a 38-page edition, but this was a later reprinting of the pamphlet (either 1946 or 1958), in which the appeal was added by the Madison printers as an Appendix." Tim then gives the correct citation. It can also be found in "Pamphlet no. 119 in the Ellen White Writings CD-ROM and our online electronic database."

Note 3. Under the title "An Appeal for the Madison School," parts of this appeal were published during 1909 in several SDA periodicals; see www.adventistarchives.org. At that time the school's official name was "Nashville Agricultural and Normal Institute."

Note 4. This is the earliest document seen (Dec. 2013) that mentions Madison College. Address: St. Helena, California.

316. *Medical Evangelist* (*Loma Linda, California*). 1908. Testimonies and experiences connected with the Loma Linda sanitarium. 1(2):1-27. July. See p. 2-5.
• ***Summary:*** A long letter by Ellen G. White (p. 2) begins: "St. Helena, Cal., October 13, 1902. During my stay in Southern California, I was enabled to visit places that in the past have been presented to me by the Lord as suitable for the establishment of sanitariums and schools." After the letter is a commentary (not in quotation marks) by the editor of this periodical. It notes that while a sanitarium was developing at Paradise Valley, near San Diego, "an effort was being made to place the Los Angeles Vegetarian Cafe and treatment rooms in improved quarters, also to establish a sanitarium near Los Angeles." In a "few months the Glendale Sanitarium, its branch treatment rooms, and the Vegetarian Cafe in Los Angeles were all in good running order, thus proving that when the Lord bids us move forward in any line, it is not impossible to do so."

Note: Talk with Janice Little of Del E. Webb Memorial Library, Loma Linda Univ., California. 2004. June 9. This commentary clearly refers to Ellen White's letter of Oct. 1902. Thus, in late 1902 the search was on for a better location for the Vegetarian Cafe in Los Angeles.

317. *Naturopath and Herald of Health* (*The*) (*New York City*). 1908. A remarkable discovery. 9(9):269-71. Sept.
• ***Summary:*** "J.H. Kellogg, M.D., writes in the last issue of "Good Health" about: Masson of Geneva who, "in studying certain Bulgarian fermented milk preparations, discovered a new lactic acid forming ferment with superior properties. Prof. Metchnikoff of the Pasteur Institute who recognized the importance of this discovery. "Chronic autointoxication is unquestionably a factor in nearly all chronic disorders,..." "This new ferment in concentrated form is furnished in this country under the name of 'Yogurt'"

318. *Vegetarian Messenger* (*Manchester, England*). 1908. Home news–"Pitman" stores annual outing: A new departure. Sept. p. 252.
• ***Summary:*** From *Smethwick Telephone:* "The annual outing of the go-ahead firm took place on August 8th, the whole of the establishment being closed for the day. Employees and friends to the number of about fifty, journeyed in brakes [horse-drawn carriages] and by cycles [bicycles] from the Stores at about nine o'clock in the morning, Dodderhill Common, with its beautiful surroundings, being reached about noon. A cold vegetarian luncheon was served shortly after arrival. Mr. Tom Banks (president of the Birmingham Vegetarian Society) in a moving vote of thanks to their host and hostess (Mr. and Mrs. James Henry Cook), remarked on the pleasure it gave him for the fourth time to be present at the annual outing of the 'Pitman' Co. He believed that the firm had done much towards forwarding the Food Reform Movement, and he believed further... that with the new departure about to be inaugurated, much greater things would be done and still greater success achieved in the future. Mr. Cook... looked upon that day as a red letter day in the history of the firm. That morning the first sod was turned for their new premises, which when completed would be by far the most compact and up-to-date [but not the largest] health food factory in the kingdom. The building throughout would be lit up with electric light, and the whole of the ground floor premises, about 160 feet in length, would be laid from end to end with tram lines. The premises would have about three times their present accommodation., and will be built so that extensions can be made from time to time on the freehold land already acquired. While outside the City [of Birmingham], the land [at Aston] was just within the borough boundary, and could be reached by tram from the centre in a very few minutes."

Note: The largest health food factory in the UK was almost certainly that of the International Health Association (IHA), a Seventh-day Adventist organization, located at Stanborough Park, Watford, Herts. The IHA moved its factory from Birmingham to Stanborough Park in 1907.

• ***Summary:*** "Benedict Lust, who has a spacious tract of land at Butler, New Jersey, which he calls 'Jungborn,' where the air and light and sun cures are practiced, by patients who go nude during a part of the day, in inclosures set apart for the purpose, writes to the editor of the Care of the Body that Wu Ting Fang, the Chinese Minister, who takes much interest in hygienic questions, and is a confirmed vegetarian, spent several days at Jungborn, and has ordered a special cottage, with a private park, to be fitted up for the next season.

"Since then Mr. Wu has spent a week at the big Battle Creek sanatorium [sic, sanitarium], as a guest of Dr. J.H. Kellogg. It was said to be an interesting sight to see him in his rich oriental robes, going through the dumb-bell drill and march. One evening he gave an address to the guests in the main parlor. He told them he hopes to reach 200 years. He said of all the things he had given up–meats, rich foods, coffee, wine and tea–the last-named was the most difficult to renounce, as is natural in the case of a Chinaman." Address: Staff writer.

320. Kellogg, J.H. 1908. Constipation: A lecture at the Sanitarium parlor, Battle Creek, Michigan, Thursday, December 3, 1908. 8:00 p.m. Battle Creek, Michigan. 22 p. 28 cm.
• ***Summary:*** This is the transcript of a one-hour lecture presented by Dr. Kellogg. In addition to constipation, he discusses the alimentary canal, human anatomy (stomach, liver, kidneys, appendix, gall bladder, colon, pancreas, lymph glands, mucous membrane) physiology, harmful and beneficial germs in the intestinal tract, surgical operations on the colon.

This archival document is found in the Bentley Historical Library, Univ. of Michigan: John Harvey Kellogg box 5–papers Notes & Articles 1908–Oct., Nov., Dec. Address: M.D., Battle Creek, Michigan.

321. Battle Creek Food Co. 1908. Healthful living: Fundamental facts about food and feeding. Battle Creek, Michigan. 64 p. *
• ***Summary:*** On the cover of this booklet is an illustration of a mother serving her family of three (husband, son, and daughter) seated around a dining table.

Several other undated editions were also published. Address: Battle Creek, Michigan.

322. Colcord, Anna L. (Mrs.). 1908. A friend in the kitchen: or What to cook and how to cook it. Containing 400 choice recipes carefully tested. 16th ed. Takoma Park Station, Washington, DC: Review and Herald Publishing Association. 112 p. Illust. Portrait. 20 cm.
• ***Summary:*** One chapter in this vegetarian cookbook, titled "Substitutes for meats," contains many Biblical quotations opposing meat eating. The recipes are based mostly on nuts, lentils and peas.

Another chapter, titled "Specially prepared health foods: Nuts, oils, etc.," gives recipes including: Peanut butter. Peanut cream. Peanut milk. Almond butter. Almond milk and cream. Cocoanut milk and cream. Home-made granola. Nutmeat. Protose steak. Protose cutlets. Nut gravy. Other chapters (p. 98-110) include "Simple dishes for the sick" (with recipes for Gluten gruel, Graham gruel, and Rice gruel), "Food for infants," "Remember the Sabbath Day to keep it holy," "Food combinations," "Time required to digest various foods" (Rice, apples, and granola take the least time, 1 hour; Roasted pork takes the longest, 5 hours and 15 minutes; animal foods generally take longer than foods of plant origin), "How to become a vegetarian," and "Vegetarianism in London."

A photo of the author, a Seventh-day Adventist, and her signature faces, the title page. Note: This is the second earliest U.S. document seen (March 1999) that mentions almond milk. Soy is not mentioned in this book. Address: USA.

323. Kellogg Food Co. 1908. Healthful living: An account of the Battle Creek Diet System. Battle Creek, Michigan. 72 p.
• ***Summary:*** The inside front cover, titled "A bit of history about the health food business in Battle Creek," states: "Thirty-five years ago Dr. J.H. Kellogg, the Superintendent of the Battle Creek Sanitarium, began the preparation of special food products, intended at that time for the use of the patients of the Sanitarium.

"The knowledge of their value grew. New foods were added from time to time as the idea developed. One of the first was a cereal coffee (1876). Later came the invention of Toasted Wheat Flakes (1895), and Toasted Corn Flakes (1901), then Toasted Rice Flakes and a long list of nut foods and other products.

"Dozens of food companies were organized in Battle Creek to manufacture toasted flakes, cereal coffees, and other foods. Millions were made and lost in exploiting the food ideas developed by Dr. Kellogg and the reputation acquired by Battle Creek as a headquarters for health foods and ideas.

"In order to protect the public against further imposition, a company has been organized and incorporated to manufacture and sell Dr. Kellogg's food products made after original and perfected formulæ, which will be known as The Kellogg Food Company, Battle Creek, Michigan."

The price list, near the back of this booklet, gives the prices for 126 foods–including various sizes. Among these are: Almond butter (1 lb can, $1.00), almond meal, Bran biscuit, Bromose, Diabetic gluten biscuits, Diabetic gluten meal, 40% gluten flour, Gluten meal, Granola, Meltose, Nut butter (1 lb can, $0.30), Nuttolene, Nuttose, olive oil, Peanut butter (large jar, $0.25; small jar, $0.10), Protose vegetable meat, Salted peanut butter (1 lb can, $0.25), Savora nut butter, Sterilized wheat bran, Taro gluten biscuit, Toasted corn flakes, Toasted rice flakes, Toasted rye flakes, Toasted

© Copyright Soyinfo Center 2014

wheat flakes, Vegetable gelatin, Wafer–whole wheat, Yogurt cheese, Zwieback.

On page 72 is a description of the company's "Peanut butter.–We were the originators of peanut butter, the use of which has become so widespread, and which is now manufactured by many concerns in different parts of the country. But we long ago abandoned the process of roasting the nuts, as we found this to produce harmful effects by setting free the oil and producing certain chemical changes in it. For years our peanut butter has been prepared by a wholly different process, by which the injurious effects referred to may be avoided. In this respect our Peanut Butter differs from all similar products. Prepared from choicest nuts. Put up in pound tins. Most excellent fat producer. Capital for use in sandwiches, for the preparation of salads and desserts. An excellent substitute for butter. Large glass jars, 25 cents; small glass jars, 10 cents.

"Salted Peanut Butter–Same as the preceding, but containing a certain proportion of salt. Pound tins, 25 cents.

"Nut butter–A combination of various nuts. An exceedingly palatable, toothsome vegetable fat which is readily accepted as a substitute for animal fats of all sorts. Pound, 30 cents."

Note 1. This is the earliest English-language document seen (Nov. 2003) that contains the term "vegetable meat" (or "vegetable meats"–with any combination of quotation marks).

Note 2. This is the earliest document seen (June 2002) showing interest by Seventh-day Adventists or Dr. John Harvey Kellogg in dietary fiber, or a high-fiber food product (Bran Biscuit, Sterilized Wheat Bran) sold by an Adventist food company. Dr. Kellogg was the founder and director of Battle Creek Foods. This is the earliest document seen (June 2002) that mentions bran in connection with Dr. John Harvey Kellogg. It is also the first commercial product seen with "Bran" in the product name. Address: Battle Creek, Michigan.

324. Kellogg, John Harvey. 1908. The Battle Creek Sanitarium system: History, organization, methods. Battle Creek, Michigan. 215 p. Illust. See p. 137, 207.

• ***Summary:*** Note: This book was written after the U.S. Circuit Court of Appeals ruled in July 1900 that Dr. Kellogg's company must stop using the words "Health Food Company" in its company name, since that term had been used continuously since 1875 by Frank Fuller of New Jersey. A careful reading of these text reveals a great deal.

The section titled "The original Sanitarium health foods" begins (p. 137): "All the so-called Sanitarium health foods are regularly found on the Sanitarium bill of fare, having been originally devised solely for this use. The character of these foods cannot be judged by the numerous imitations and piracies which are lauded by newspapers and signboard advertisements in terms not unlike those employed by the patent medicine vendor. The Battle Creek Sanitarium has no connection whatever with these questionable exploitations."

The section on "Sanitarium health foods" states (p. 207): "Various special foods were for some time manufactured and sold by a department organized for the purpose, but after the fire of 1902 the management disposed of all its interest in the manufacture and sale of foods to friendly parties, who it was believed would conduct the business in an honorable and ethical manner, precautions being taken to secure this. Through clerical oversights and trusting too much to advertising agents, some mistakes were made, the correction of which involved large losses and reorganization. At the present time all the foods which have originated in connection with the Battle Creek Sanitarium, and some of which have at various times been sold by the Battle Creek Sanitarium Food Department, the Battle Creek Sanitarium Health Food Company, the Battle Creek Sanitarium Food Company, the Battle Creek Sanitarium Company, Limited, and the Sanitas Nut Food Company, Limited, are now manufactured and sold exclusively by the Sanitas Food Company, who announce their products under the name of the 'Battle Creek Diet System,' the only food company doing business in Battle Creek whose products are used or recommended by the Sanitarium management.

"The Battle Creek Sanitarium has never at any time had any connection whatever with the manufacture of 'Postum,' 'Grape-Nuts,' 'Obesity Pills,' or any other of the numerous nostrums made or sold by parties advertising from Battle Creek."

The section titled "A public charity–No private interest–No sectarian affiliation" begins (p. 203): "The Battle Creek Sanitarium corporation is a private enterprise conceived and conducted solely for the public welfare. It has never been owned by any church or sect. For many years the institution was closely affiliated with the Seventh-day Adventist denomination because of the fact that the original founders and the contributing members were chiefly members of the denomination named; but the nonsectarian and undenominational character of the work was always fully acknowledged, and was clearly indicated by its charter. An attempt made in recent years by the central committee of the denomination named to bring the institution under denominational control resulted in so marked a failure that at the present time the institution is absolutely free from sectarian affiliation as well as control. The personnel is made up of Christian men and women of various denominations, but there is no church or sectarian control or affiliation."

At the front of this book, on the verso of the title page, are two quotations: (1) "Nature alone can cure; this is the highest law of practical medicine, and the one to which we must adhere... Nature creates and maintains; she must therefore be able to cure.–Dietl (1845)." Note: Joseph Dietl (1804-1878) was a medical reformer who belonged to the so-called New Vienna School of Medicine.

© Copyright Soyinfo Center 2014

(2) "Diseases are not entities that have entered into the body; they are not parasites that take root in the body; they merely show us the course of the vital processes under altered conditions.–Virchow (1847)." Note 2. Rudolf Ludwig K. Virchow (1821-1902) was a German doctor, who is referred to as the "Father of Pathology." He is perhaps best know for his saying that "every cell originates from another existing cell like it" which he published in 1858. It is a rejection of the concept of spontaneous generation, which held that organisms could arise from non-living matter. Address: M.D., Superintendent.

325. Battle Creek Foods. 1909. The only original health foods: A complete list of our products (Ad). *Good Health* (*Battle Creek, Michigan*) 44(3):Unpaginated. March.
• ***Summary:*** The company sells seven categories of products: 1. Cereals (15 products), incl. Toasted rice flakes, Granose flakes, Granola, Granuto, and Gluten meal (20 per cent, for gruels, mushes, and purees), Sterilized bran (a gentle laxative). 2. Bakery products (12 products), incl. Graham crackers (plain or sweetened), Sanitas wafers, Zwieback, Sanitas cookies. 3. Meat substitutes (10 products), incl. Protose (made of nuts and grains, ½- or 1-lb can), Savory Protose, Potted Protose, Protose roast, L-Protose (no nuts), K-Protose (resembles veal, no nuts), X-Protose (resembles chicken), Nuttose (made from nuts, 1 lb can), Nuttolene ("Made exclusively of choice edible nuts. A vegetable butter for table use").

4. Other nut products (5 products), incl. Peanut butter (1 lb can, unroasted), Salted peanut butter, Almond butter, Almond meal. 5. Condensed soups (4 products). 6. Savory sauces (3 products). 7. Beverages (3 products), incl. Malted nuts (large bottle), Noko (cereal coffee), Caramel cereal ("The original coffee substitute, containing no burnt molasses or artificial flavoring").

Note: This is the earliest English-language document seen (March 2005) that uses the term "vegetable butter" but not to refer to margarine. Address: Battle Creek, Michigan.

326. Howland, John A. 1909. The week's progress: New argument for vegetarians. *Chicago Daily Tribune*. Sept. 5. p. E4.
• ***Summary:*** "Dr. J.H. Kellogg of Battle Creek, Michigan, declares that the researches of Metchnikoff, Tissier, and others have shown that most chronic diseases may be directly traced to putrefaction processes in the intestines and the absorption into the blood of poisons thus formed, or intestinal autointoxication. He argues that vegetable proteins or tissue building foods less readily undergo putrefactive changes in the intestine, hence are less likely to become a source of poisoning to the body.

"Vegetable protein foods are free from toxins with which flesh foods abound..."

"Vegetable proteins are found in natural foodstuffs, are presented in a properly arranged bill of fare in the right proportions to supply the body needs, whereas proteins in the form of meats are in a highly concentrated form, and hence likely to be taken in great excess, giving rise to the enormous mischief which follows high protein foods as pointed out by Chittenden and Mendel of Yale [New Haven, Connecticut], and others, in recent years." Address: New York.

327. Kellogg, John Harvey. 1909. The Battle Creek Sanitarium diet list. Battle Creek, Michigan: Modern Medicine Publishing Co. Ltd. 71 p. 16 cm.
• ***Summary:*** A table on page 53 shows the "Number of food units or calories per ounce of various uncooked foodstuffs." Soja beans are said to contain the following: 38.4, fats 48.3, carbohydrates 33.5, total 120.2. Note: The units are not clear. The food with the highest total is almond meal (200.2). There are two types of Sanitas self-rising gluten flour. One with protein 20.0 and total 107.4, and another with protein 46.4, total 100.3.

One section titled "Disease-producing foods" (p. 58-59) discusses cane-sugar, fats (in excess), flesh foods, oysters and other shellfish, eggs, milk, condiments, tea, coffee, chocolate, cocoa, wine, beer, and all alcoholics [i.e. alcoholic beverages].

Note: This is the second earliest document seen (Nov. 2002) connected with Dr. John Harvey Kellogg that mentions soy beans [actually "Beans, Soja"]. Dr. Kellogg was born in 1852. Address: M.D., Superintendent, Battle Creek Sanitarium, Battle Creek, Michigan.

should read 'Pitman' Health, from Food Library, No. 1 to 8. One penny each, post free... Full catalogue of health foods, with 'Diet Guide,' post free one stamp. A wise selection of health foods will give you Perfect Health and Digestion, and so enable you to perform the maximum amount of work–both mental and physical–with the minimum amount of fatigue."

"'Pitman' Health Food Stores, 155 Aston Brook St., Birmingham [England]. (The largest health food dealers in the world)."

Page 66: "In addition to above, there are the products of the International Health Association [1899–Founded under the name The International Health Association Limited. 1926–Name changed to Granose Foods Limited], 'the pioneer manufacturers of health foods,' who have within the past year removed their works into the country (Stanborough Park, Watford, Herts). Then Messrs Winter, Birmingham, 'Pitman,' Birmingham, and Messrs Chapman, Liverpool, have a number of excellent nut meats, fuller reference and recipes for which will be found in the chapter on 'Health Food Specialties' at end of book."

Pages 215-16. "Nut meat preparations, whereby one can with very little contrive Nut meats for one's self. There are four different kinds–walnut, white, and brown almond (free from pea nuts), and another containing pea nuts... 'Pitman' Savoury Nut Meat bears a name which guarantees its excellence. It is free from pea nuts, and is put up in ½-lb., 1-lb., and 1½-lb. tins.

"Quite the biggest development of the last year or two are the nut meats manufactured by R. Winter, Birmingham, of 'Pure Fruit Fame.'" The products include: Nutton, and Legumon.

330. Sinclair, Upton; Williams, Michael. 1909. Good health and how we won it: With an account of the new hygiene. New York, NY: Frederick A. Stokes Co. [5] + 302 p. Illust. (with 16 full-page illustrations from photographs). Index. 20 cm.

• ***Summary:*** Contents: Introduction. 1. The battle of the blood. 2. How to eat: The gospel of dietetics according to Horace Fletcher. 3. The Yale experiments [New Haven, Connecticut]. 4. How digestion is accomplished. 5. How foods poison the body (advocates a vegetarian diet). 6. Some important food facts. 7. How often should we eat. 8. Health and the mind. 9. The case as to meat. 10. The case against stimulants. 11. Diet reform in the family. 12. Breathing and exercise. 13. Bathing and cleanliness. 14. A university of health. 15. Health reform and the Committee of One Hundred. Appendix.

Photos show: (1) The battle of the blood (White blood cells attacking two types of germs; Frontispiece). (2) Mr. Upton Sinclair and Mr. Michael Williams, resting from their favorite exercise, tennis. (3) "Mr. Horace Fletcher, whose books on dietetics and good health were the forerunners of the present movement." (4) Horace Fletcher making a world's record of weight lifting endurance in the Yale gym; he doubled the previous best record. (5) Prof. Russell H. Chittenden, Ph.D., LL.D., Sc.D., Director Sheffield Scientific School, Yale University. "He has conducted many dietary experiments from the physiologist's point of view." (6) Prof. Irving Fischer, Ph.D. Prof. of Economics at Yale Univ. "His investigations have had to do largely with the cost of necessary food." (7) Mr. John E. Granger breaking the world's record for deep knee bending. Observing are Mr. Alonzo A. Stagg (coach of the Chicago University football team) and Mr. Michael Williams.

(8) M. Elie Metchnikoff of the Pasteur Institute, Paris. He has studied auto-intoxication and "believes the normal life should be over 125 years long."

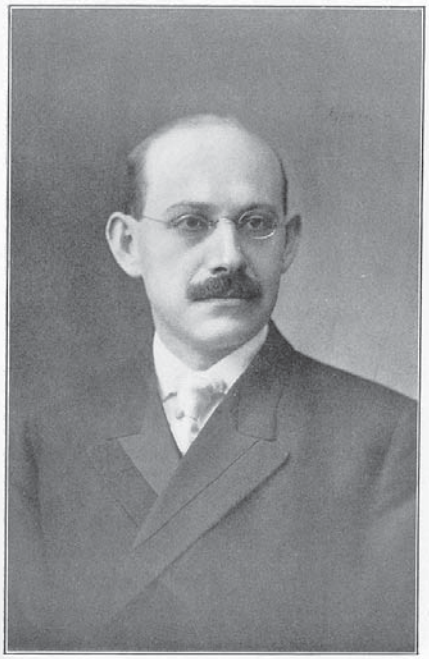
(9) Prof. Lafayette B. Mendel, Ph.D., Yale University. He has carried on researches with Prof. Chittenden. (10) Mr. Upton Sinclair's three children at the beach. "Well nourished on two meals a day." (11) Mr. Sinclair's children (2 more photos). (12) The daily swim. (13) Fresh air in Bermuda. (14) Outdoor exercise.

(15) Dr. J.H. Kellogg of the Battle Creek Sanitarium. (16) A group by the fireside at the Battle Creek Sanitarium with Dr. Kellogg.

The Introduction, by Sinclair, begins with this story: About 10 years ago, when he was a college student, he became sick for the first time in 14 years. He visited a doctor and said: "'Doctor, it has occurred to me that I would like to have someone who knows about the body examine me thoroughly and tell me how to live.'

"I can recall his look of perplexity. 'Was there anything the matter with you before this attack?' he asked. 'Nothing that I know if,' I answered; 'but I have often reflected that the way I am living cannot be perfect; and I want to get as much out of my body and mind as I can. I should like to know, for instance, just what are the proper things for me to eat -"

"'Nonsense,' he interrupted. 'You go right on and live as you have been living, and don't get to thinking about your health.'



"And so I went away and dismissed the idea... All doctors that I had ever heard of were people who cured you when you were sick; to ask one to take you when you were well and to help you to stay well, was to take an unfair advantage of the profession.'" Over the years he visited the doctor several times, and each time the doctor gave him a another kind of medicine to cover up his symptoms. It was first in Battle Creek, Michigan, that he found a large, modern and entirely new type of hospital with "more than a thousand nurses, physicians, and helpers, all devoting their time to the teaching of the new art of keeping well." Slowly but surely he "found the road to permanent health."

A review in Nature: "A new sort of health book, giving in condensed form the theories of Fletcher, Metchnikoff, Kellogg and others. 16 full page illustrations. Price, $1.35."

It might be introduced into Tasmania with advantage, and in a calcareous soil would prove a source of great profit to the grower. The Wahroonga variety of Soy bean takes less time to cook and is also more tender when cooked than that imported direct from Japan. It is far more digestible than any other kind of bean."

Note 1. In 1910 Wahroonga was a suburb of Sydney; it would have included some small, semi-rural market-gardening areas that provided vegetables for the city dwellers. The word "extensively" above probably means that small plots of soybeans were being grown in market gardens around towns and settlements in NSW. As of 2005 Sanitarium Food Reform Co. has been renamed Sanitarium Health Food Co. and is a thriving maker of health foods, breakfast cereals, meat alternatives, soymilk, etc.

"While the writer feels some satisfaction in the thought that more than 20 years ago [i.e., before April 1890], in the columns of a Melbourne journal, he was the first to call attention to the great merits of this most remarkable bean, and to advocate its introduction into Australia, he feels somewhat depressed at the fact that it has taken so many years to (?) its cultivation on and its adoption and recognition as an article of food. As a rule it may be assumed that it will take a generation to effect any great (?) reform. But we shall meat, together with an intense craving for stimulants [e.g., alcohol], is wholly unknown to vegetarians, and this is why, in London, the numerous vegetarian restaurants are thronged by bankers and brainy business men at the time of the midday meal.

"It is worthy of notice that the ox gives back in his meat only some of the food derived by him from the grass, retaining the balance to form his teeth, horns, hoofs and hide. So that, at best, man loses some of the best nutriment when he uses meat as food. In addition to this, in the venous blood of the animal are to be found poisonous and effete material, waste tissue, cadaveric alkaloids, and even parasites and disease-germs, wholly absent from vegetables and fruit. It is a rare thing for vegetarians to suffer from anaemia, though it must be supposed that even a diet so rich in all the elements the blood requires will of itself secure immunity from this and other diseases if other hygienic conditions are absent. A vegetarian diet is not a panacea, although those who adopt it suffer far less from all complaints than their meat-eating brothers and sisters. If a vegetarian lady, 'cumbered with much serving,' and beset with a multitude of household duties, keeps all day indoors and does not go out enough to exercise in direct sunlight and fresh air–and most women have too little of these–she will very likely become anaemic,

© Copyright Soyinfo Center 2014

like her meat-eating sister, but this is not because of her vegetarian diet, but in spite of it. Still, she will not suffer so badly, or become so 'run down,' as that meat-eating sister, and she will, moreover, make a much more rapid recovery from all her ailments.

"It is also quite possible for a vegetarian to eat too much nitrogenous food, and to suffer from consequent indigestion. Still, the diet is not responsible for a man's gluttony if he will eat to much, and will live to eat rather than live to eat. Temperance in eating is almost as essential as temperance in drinking. Here it may be added that a moderate and well-chose vegetarian diet is a certain cure for drunkenness, since the craving for intoxicants is mainly induced by the inflammatory state of the stomach caused by flesh-eating. Vegetable food is so nourishing and sustaining that a vegetarian can better afford to go without a meal than can a meat-eater. Indeed, the experience of the writer has been that for prolonged muscular and mental work there is nothing to compare with a judiciously-selected fruit and vegetable diet. The ancient Spartan and Roman athletes disdained meat. They lived on barley-cakes, olive oil, and black lentil soup. The canny and energetic Scotchman is virtually a vegetarian. The miners of Chili [Chile] are wont to ascend a perpendicular ladder with 2 cwt [1 cwt = hundredweight = 112 pounds] on their backs, and they do this all day long on a meal of beans and vegetables and fruit.

"The writer is of [the] opinion that after the age of three years milk should not be taken by human beings. It clogs his stomach, makes his brain sluggish and stupid, and in the stomach gives rise to lactic acid complications. Hence it should never be forced upon children over three years of age who have come of gouty or rheumatic parents. As a rule, such children have a natural detestation of it and a great aversion to it. Cow's milk is an abomination that ought never to be taken. It is an unnatural thing for a human being that has cut its teeth, and ought to eat solid food, to drink the milk of a brute! The human stomach resents it!"

The writer then discusses: Suitable foods for vegetarians. The benefits of eating two meals a day. The importance of understanding the "elements of nutrition" contained in each food to maintain one's proper weight and good health, the ability of a given area of land to support 6 times as many vegetarians as meat-eaters, the need to divide large Tasmanian land holdings into small plots of orchards and kitchen gardens, the sustaining and invigorating power of a non-flesh diet, the overall physical, mental, and moral effects of a vegetarian diet, and the need to abolish abattoirs or slaughter houses.

"It is not sufficiently understood that a vegetarian has far higher motives that the gratification of his palate and the satisfaction of his appetite. He regards all life as sacred, and the taking of innocent animal life as a monstrous crime, both against the animal and its right to live, and against the moral development of society at large. He regards his Creator as the Creator and Father of every living thing. When his last hour comes the vegetarian will be able calmly to meet his Heavenly Father–the Father also of every poor dumb animal–with the happy though humble consciousness that he has neither knowingly caused the infliction of pain or death, nor connived in their infliction by others upon an innocent animal. There is sound sense in the lines: -

"'He prayeth best who loveth best
All things both great and small;
For the dear God who loveth us,
He made and loveth all.'"

Source of poem: "Rime of the Ancient Mariner," by Samuel Taylor Coleridge (1798; Part VII, stanza 23). Coleridge lived 1772-1834

Note 2. This is the earliest document seen (May 2005) concerning soy beans in connection with (but not yet in) Tasmania.

Note 3. The author may have been a Seventh-day Adventist, since he states that soybeans have been grown in the Sanitarium gardens at Wahroonga, New South Wales. If he was an Adventist, this would be the earliest article seen on soybeans written by a Seventh-day Adventist. Address: Tasmania.

335. Fulton, Edwin Giles. 1910. Vegetarian cook-book: Substitutes for flesh foods. Mountain View, California, Kansas City, Missouri, and Portland, Oregon: Pacific Press Publishing Association. 419 p. Illust. Semi-index. 20 cm.
• ***Summary:*** This Seventh-day Adventist cookbook was first published in 1904 under the title *Substitutes for Flesh Foods.* In the long chapter on "Entrees" (p. 35-94), many recipes call for meat alternatives, such as Nuttolene, Protose, and "nut cero"–but with no recipe given for making the latter.

In the chapter on "Sandwiches," are two recipes (p. 301-02) which could be considered precursors of the veggie burger. The first, "Nut cero sandwiches," is a lettuce and sliced tomato sandwich, with nut cero serving in place of the burger.

On p. 260 are two recipes with "Granola" in the title. In Granola Porridge, the first ingredient is "Granola or fruit nuts, 1 cup." The meaning of "fruit nuts" is unclear. The second is Gluten-Granola Mush.

The sub-chapter titled "Nut butter" (p. 309-13) states: "Nut butter is easily made in the home... Peanuts and almonds are the nuts most suitable for making nut butter. The other varieties are difficult to blanch... The best variety of peanuts for making nut butter is the Spanish shelled... There are three ways of cooking them; namely baking or roasting, boiling, and steaming. The baking process is the easiest way, but care should be used not to scorch them..." Two processes / recipes for homemade peanut butter are given, followed by Almond butter, Peanut meal, Nut cream (alternative to dairy cream made by mixing 2 tablespoons peanut butter with 1 pint hot water and 1 teaspoon salt), Crystallized peanuts,

© Copyright Soyinfo Center 2014

Salted peanuts, and Blanched almonds.

The author was born in 1867; his portrait photo faces the title page, with the inscription "Yours for health," and his signature, A slightly revised edition with the same number of pages was published later in 1910.

336. Kellogg, Ella Ervilla Eaton. 1910. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery; a thousand choice, palatable, and wholesome recipes. Revised and enlarged edition. Battle Creek, Michigan: The Good Health Publishing Co. 508 p. Illust. 23 cm. *

• ***Summary:*** In the last edition of this book, the wife of the famous Dr. John Harvey Kellogg discusses the principles and methods of the vegetarian system employed at the Battle Creek Sanitarium. Address: Battle Creek, Michigan.

337. *Los Angeles Times.* 1911. Reaper takes noted elder: Miles Grant, Adventist, answers summons. Veteran preacher had passed his ninety first year–For a half century he never tasted meat and never ate a meal prepared by any hands but his own. March 25. p. II7.

• ***Summary:*** "A swing of the reaper's scythe yesterday gathered in Elder Miles Grant, veteran Adventist clergyman and many years a vegetarian, formerly of Boston" [Massachusetts]. He was born on 13 Dec. 1819 in Farrington, Connecticut. "For the last fifty years he had never tasted meat in any form..." He did use raw eggs and milk, plus "grain foods, cheese, raisins, nuts and fresh fruit. These he ate but twice a day and after adopting this diet he became possessed of almost perfect health, and almost to the last retained his mental and physical vigor." He died of uremic poisoning.

"The funeral will be held in the Advent Christian Church on North Avenue Twenty-two."

338. Bugby, William. 1911. Soy beans as human food. *Vegetarian Messenger and Health Review* (*Manchester, England*). March. p. 83-84 (Series 8, 63d year). Reprinted from the Daily Post (Australia). [2 ref]

• ***Summary:*** "For some time past there has been a growing demand for a substitute for animal food that should be at once palatable, nutritious, and digestible, as well as easily cooked and moderate in price. Such an article of diet is furnished in the Soya, Soja, or Soy bean of China and Japan...

"In an article on 'A Vegetarian's Experiences,' in this paper, some months ago, by the present writer, a very brief account of this remarkable bean was given" accompanied by a table showing the nutritional composition of two soy bean samples compared with peas, lean beef, and fat mutton. The soy beans are much higher in protein, containing 34.0 to 38.8%.

The soy bean "has greatly improved in quality and flavor since its introduction to Australia; the beans produced at the [Seventh-day Adventist] Sanitarium gardens at Wahroonga, New South Wales, have also thinner skins, and are consequently much more easily cooked.

"The present writer does not pretend to be a gardener, but since his former article appeared, he himself has succeeded in growing the Soy bean in Tasmania. Although sown as late as October 24th, the beans survived a very sudden and severe frost, just after they had appeared above the ground. The plants are doing remarkably well, and are now developing rapidly. They evidently find the Tasmanian climate highly favorable to them. The beans thus sown came originally from the Wahroonga Sanitarium in New South Wales.

"The true economy, therefore–quite apart from the moral advantage of a non-flesh diet–is to use the Soy bean itself direct, as a perfect and superior substitute for flesh meat.

"As the writer is frequently asked how the Soy bean should be cooked, the recipe is here given:–Take a large breakfast cupful of Soy beans, place them in a basin, over them pour enough boiling water to cover them, and leave them to soak for one hour. Then boil gently for 2 hours. Like other beans they require flavouring with salt, mint, celery seed, mushroom ketchup, tomato sauce, or a slice of onion."

Note 1. This is the earliest document seen (May 2005) concerning soybeans in Tasmania or the cultivation of soybeans in Tasmania.

Note 2. This is the earliest English-language document seen (April 2008) with the term "human food" in the title, referring to soy beans. Address: Tasmania.

339. Kellogg, John Harvey. 1911. Food product. *U.S. Patent* 1,001,150. Aug. 22. 2 p. Application filed 19 Oct. 1908.

• ***Summary:*** This meat substitute is made from 3 parts each wet casein and wet wheat gluten, 3 parts vegetable oil (such as corn or nut oil, optional), plus yeast products from waste brewery yeast (either concentrated yeast extract or crude yeast product). After the ingredients are mixed and cooked in cans, the product has a meaty consistency and flavor, making it a "very satisfactory substitute for flesh foods. It is very nourishing and may be used in a great variety of ways." Address: M.D., Battle Creek, Calhoun County, Michigan.

340. Kellogg, John Harvey. 1911. Vegetable vs. animal protein. *Good Health* (*Battle Creek, Michigan*) 46(8):680. Aug. [1 ref]

• ***Summary:*** The editor of *Scientific American*, in an article about producing wheat that contains a larger proportion of protein, notes that vegetable gluten costs less than one-twelfth as much as animal "gluten" (i.e., beef protein). Address: M.D.

341. Kellogg, John Harvey. 1911. Vegetarian societies in

© Copyright Soyinfo Center 2014

China. *Good Health* (*Battle Creek, Michigan*) 46(8):679. Aug.
• ***Summary:*** "Dr. Tucker, of North China, states that there are in existence all through China vegetarian societies known as *tsiali*. These people eat no meat on any occasion. They are quite numerous, perhaps five per cent of the entire population... The people of North China eat very little meat. As a rule, meat is eaten only on three occasions: weddings, funerals, and Chinese New Year, which occurs in January or February. A pound of meat costs in China as much as a day's wage. The average wage is five cents a day."

"The above statements are true with reference to nine-tenths of the entire population. The other one-tenth, the official class, eat more meat. The principal food of the Chinaman is millet with a little salt, turnip or cabbage. They put no salt in their food but eat the salt in the form of dried salt vegetable. The wealthy class eat peanuts as a relish." Address: M.D.

342. Nashville Sanitarium–Food Factory. 1911. High grade health foods (Ad). *Naturopath and Herald of Health* (*The*) (*New York City*) 16(12):Unnumbered page. Dec.
• ***Summary:*** "Made by expert bakers, from best selected materials, in a well-ventilated hygienic factory away out in the country, surrounded by farms and pure fresh air. Made by men who do things from principle.

"Contain no animal fat. Full line of nut foods, cereal foods... More than twenty-five kinds. Nutfoda is the great vegetable meat, pure, wholesome, delicious, a perfect meat substitute at 10, 15 and 25¢. for ½ lb., 1 lb and 2¼ lb. cans.

"Nutkysa–similar to cheese, 1 lb. can–$0.15.

"Nashville Malted Nuts, 1 lb. jar–$0.35...

"Baked Beans, Tomato or Plain, 1½ lb. can–$0.10. Note: It is possible, but unlikely, that these baked beans are soybeans.

"Cereal Coffee, Superb, 1 lb. pkg.–$0.10...

"Dixie Kernel (a Malted Breakfast Food) 1¼ lb. pkg.–$0.15.

"20 per cent Gluten Meal, Well Cooked, 1 lb. pkg.–$0.12."

"On sale at Naturopathic Supplies Store, 465 Lexington Ave., New York, N.Y." Address: Nashville, Tennessee.

343. Anderson, Hans Steele. 1911. Food and cookery, their relation to health. Revised ed. Loma Linda, California: The College Press. 82 p. Illust. 18 cm. *
• ***Summary:*** The author was born in 1877.

344. Encyclopaedia Britannica (11th ed): Vegetarianism. 1911. Cambridge, England, and New York: Encyclopaedia Britannica. See vol. 27, p. 967-68. [7 ref]
• ***Summary:*** The word "vegetarianism" came into use in about 1847, and refers to "the practice of living upon foods from which fish, flesh and fowl are excluded." "... while vegetarian societies claim as 'vegetarians' all who abstain from flesh foods, there is a large and growing number of people who repudiate the name of 'vegetarian' because of its associations, but who none the less... abstain from eating anything that has been killed. The order of the Golden Age, for example, with its headquarters at Barcombe Hall, Paignton, South Devon, adopted the words 'Fruitarian' and 'Fruitarianism' to denote the dietary of its members. The rule laid down by the Order is abstinence so far as possible from all foods which are obtained by the cruel infliction of pain, and the minimum that is set is complete 'abstinence from flesh and fowl,' while net-caught fish may be used by associate members."

Note: This is the earliest English-language document seen (April 2005) that contains the word "fruitarianism."

The reasons advanced for the practice of vegetarianism are: health, economy, racial improvement (more workers are required to grow crops than to feed animals), and character improvement (encourages gentle humaneness).

"Organizations have been established to advocate this method of living under the name of 'Vegetarian Societies' in many countries–chiefly the United Kingdom, America, Germany, France, Austria, Holland and Australia. Propagandism is carried on by lectures, literature, cookery demonstrations and restaurants. In England, the oldest and one of the most important societies is 'The Vegetarian Society,' of which the headquarters are at Oxford Street, Manchester. There are also several small London societies, and an active London Association. A few provincial towns, too, have small societies. An attempt has been made to organize the various vegetarian societies of the world under the title of 'The Vegetarian Federal Union.' The headquarters of the London societies and of the 'Union' are at Memorial Hall, Farringdon Street, E.C...

"The athletic side of the movement has been represented in national and international races by vegetarians winning the Berlin and Dresden walking match (125 m.), the Carwardine Cup (100 m.) and Dibble Shield (6 hours) cycling races (1901 and 1902), the amateur championship of England in racquets and in tennis (held by Mr Eustace Miles for a series of years), the cycling championship of India (3 years), half-mile running championship of Scotland (1896), world's amateur cycle records for all times from 4 hours to 13 hours (1902), 100 miles championship Yorkshire Road Club (1899, 1901).

"In the religious world the Seventh-Day Adventists (who are connected with many sanatoria and the manufacture of food specialties) and some Bible Christians, the worshippers of Vishnu and the Swami Narang and Vishnoi sects, amongst others, preach abstinence from flesh food. The Salvation Army, the Tolstoyans and the Doukhobors encourage it. A number of orders in the Roman Catholic church (e.g. the Trappists) and in the Hindu faith (e.g. the Dadupanthi Sadus) are pledged abstainers...

© Copyright Soyinfo Center 2014

"The literature on the subject is considerable, but the two classics are perhaps *The Ethics of Diet*, by Howard Williams, and *The Perfect Way in Diet*, by Dr. Anna Kingsford. In former years the 'Vegetarian Society' was the most active in producing literature, but since about 1901 the Order of the Golden Age has come to the front with new and up-to-date books, booklets and leaflets, and the Ideal Publishing Union has reprinted much of the earlier literature. The chief periodicals are the *Vegetarian* (weekly), the *Herald of the Golden Age* (monthly), the *Vegetarian Messenger* (monthly), the *Vegetarian* (American monthly), the *Children's Garden* (monthly)."

345. Marcuse, Julian; Woerner, Bernardine. 1911. Die fleischlose Kueche: Eine theoretische Einleitung und ein praktisches Kochbuch [Vegetarian cookery: A theoretical introduction and a practical cookbook]. Munich, Germany: Ernst Reinhardt. 2 + 552 p. Index. 21 cm. [Ger]
• ***Summary:*** Dr. Marcuse was born in 1862. The 3-part introduction by Dr. Marcuse discusses: The significance of a flesh-less [*fleischlosen*] diet for human nutrition. The practice of flesh-less cookery. Comparative summary of the main animal and vegetable food products. This is followed by recipes. In the back are some advertisements: (1) Nuxo foods made from nuts by Nuxo-Werke, Rothfritz & Co., Hamburg; (2) Protose, Vegetabilischer Aufschnitt (vegetable cutlet), Nuttolin, Granola, Granoseflocken and Bromose, from the Deutscher Verein für Gesundheitspflege, Friedensau Nr. 60 (Post Grabow, Bez. Magdeburg). This looks like a Seventh-day Adventist company with a health food factory in Germany.

There is a directory of Vegetarian eating houses, restaurants, and boarding houses (Pensionen) in Germany, and other nearby German-speaking countries (mostly Switzerland and Austria). Address: 1. Doctor of medicine.

346. *Evening Post* (*Wellington, New Zealand*). 1912. Sanitarium health food cafe. May 10. p. 8.
• ***Summary:*** "About six or seven years ago a cafe was opened in Willis-street by the Sanitarium Health Food Company. Later it was shifted to Manners-street, and owing to a fire the cafe is again located in Willis-street, in Shortt's Building. The change made is certainly a very advantageous one–a new building with a bright, cheery outlook, instead of one of the oldest places in Wellington. There are twelve tables in the room with ample seating accommodation for fifty people.

"The cafe is owned by the Sanitarium Health Food Company, whose headquarters are in Sydney [Australia], with a manufactory at Cooranbong, 80 miles from the city, and another manufactory in Christchurch [New Zealand]. The latter is likely to be shifted to Wellington, and placed under the manager of the cafe here. As considerable misunderstanding exists as to what constitutes a cereal-vegetable [vegetarian] diet, it may be stated that there are half-a-dozen classes of biscuits, a dozen kinds of green goods, six varieties of beans and two of lentils, and, generally, all vegetables and fruits in season.

"Olive-oil is imported from Italy, best selected raisins from California, unfermented wine from California and New South Wales, and clover honey is obtained from local apiaries. Amongst the many special foods for invalids are gluten flour and biscuits, and Soya beans for diabetic patients: it is stated that this bean is rich in gluten. Whilst the principal aim of the Sanitarium Health Food Cafe is to cater for those in health, it is claimed that indigestion and many forms of stomach trouble can be eradicated by the adoption of the food served up at the cafe, or by buying the ingredients and cooking them at home. The object is to endeavour to educate the public to live on what is regarded as a higher quality of food for mental or physical work."

347. *Good Health* (*Battle Creek, Michigan*). 1912. Vegetable protein not inferior to animal protein as a nutrient. 47(7):347-49. July.
Address: M.D.

348. *Good Health* (*Battle Creek, Michigan*). 1912. Rejuvenating effects of a vegetarian diet. 47(8):428-29. Aug.
• ***Summary:*** Contains six stories of such rejuvenating effects: The first: "Sir Walter Scott tells of a certain Doctor Ferguson, of Edinburgh [Scotland], who became a flesh abstainer at sixty, after he had suffered a number of strokes of paralysis. By abstemious living he recovered entirely from all paralytic symptoms, and after having attained his eightieth year still possessed a considerable degree of strength and vigor. He lived to the advanced age or 93."

Note 1. This is the earliest document seen (June 2002) concerning a vegetarian diet and relief from cardiovascular disease (stroke, in this case).

Note 2. This is the earliest English-language document seen (Jan. 2004) that uses the term "flesh abstainer" to refer to a vegetarian–one who eats no red meat, poultry, or fish.

349. *Good Health* (*Battle Creek, Michigan*). 1912. Constipation: Simple remedies for its removal. 47(12):609-29. Dec. [1 ref]
• ***Summary:*** This is the third in a series of three articles on the nature, causes, and treatment of constipation. The two previous articles showed that constipation is largely the result of wrong habits of living. The most frequent cause is a concentrated diet–that is, a diet lacking in bulk–together with food that readily decomposes, such as meat products.

Discusses: Regulation of diet, exercises to treat constipation, proper sleeping posture, simple water treatment and enemas, use of electricity, kneading the abdomen, conclusion.

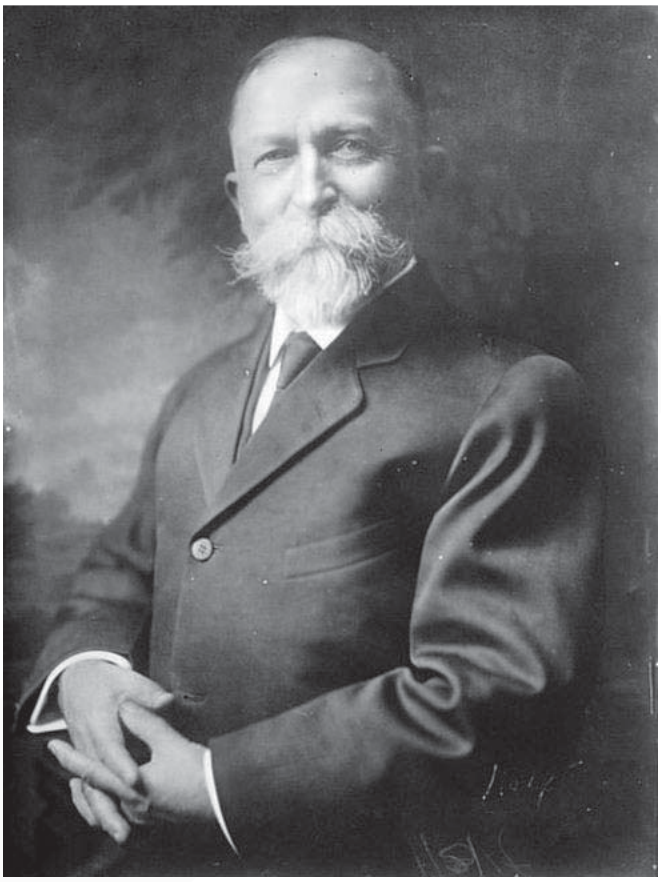
350. **Product Name:** 20% Gluten Meal, 40% Gluten, 80% Gluten, Avena-Gluten Biscuit Mixture (made from oatmeal and wheat gluten), 40% Gluten Biscuit, 80% Gluten Biscuit, Breakfast Toast.
Manufacturer's Name: Kellogg Food Co. (The).
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1912.
New Product–Documentation: J.P. Street. 1913. Connecticut Agric. Exp. Station, Annual Report 36:107-11. For the year 1912. "Gluten and Special Foods." The protein and starch content of these diabetic foods is as follows: (1) Gluten Meal (27.50% protein, 49.64% starch); (2) 40% Gluten (47.00% protein, 31.86% starch); (3) 80% Gluten (81.25% protein, 6.21% starch); (4) Avena-Gluten Biscuit Mixture (21.38% protein, 41.13% starch; made from oatmeal and wheat gluten); (5) 40% Gluten Biscuit (47.50% protein, 35.01% starch); (6) 80% Gluten Biscuit (82.38% protein, 4.68% starch); (7) Breakfast Toast (13.63% protein, 57.42% starch).

Note: These are the earliest products seen, made by a Seventh-day Adventist food company or by Dr. John Harvey Kellogg, that contain gluten.



351. Portrait of Dr. John Harvey Kellogg (Photograph). 1912.
• ***Summary:*** This portrait photo from the Library of Congress is dated 1912-1915. He was born in 1852. We copied it from the Wikipedia page for John Harvey Kellogg.

352. Kellogg Food Co. 1913. Constipation: Fight it (Ad). *Good Health* (*Battle Creek, Michigan*) 48(6):8-9. June.
• ***Summary:*** Ninety percent of Americans are victims of constipation. "The use of salts, pills, cathartics and mineral waters is a constant menace to the health. Drugs do not cure: They afford only temporary relief and aggravate the trouble in the end. Medical laxatives of all sorts afford relief only by irritating the intestine and sooner or later produce disastrous results..."

"A new drugless remedy: The food experts of the Battle Creek Sanitarium have after years of research perfected a wonderful remedy for constipation known as Para-lax." A major ingredient is "a refined product of Russian mineral oil." Address: Battle Creek, Michigan.

353. Kellogg, J.H. 1913. Constipation–How to fight it. Battle Creek, Michigan: Good Health Publishing Co. 80 p. 16 cm.
• ***Summary:*** Dr. Kellogg discusses: Cellulose (p. 32), and bran (p. 61). Note: This fragile small book (perfect bound and stapled) is owned by the Bentley Historical Library, University of Michigan, Ann Arbor. Address: M.D., Battle Creek, Michigan.

354. Cooper, Lenna Frances. 1913. The new cookery: A book of recipes, most of which are in use at the Battle Creek

Sanitarium. Battle Creek, Michigan: The Good Health Publishing Co. [v] + 298 p. Illust. (10 photos). Index. 20 cm.
• ***Summary:*** This Seventh-day Adventist vegetarian cookbook, the first by Lenna F. Cooper, advocates a "low-protein" diet based on the research of Prof. R.H. Chittenden, dean of physiology, Yale University [New Haven, Connecticut]. It uses dairy products and eggs, but no meat, poultry, fish, shellfish or stimulants (such as coffee or tea).

The Foreword states: "Many 'food reformers' and faddists have attempted to prepare wholesome foods but have neglected the almost equally important requirement–palatability. This combination of wholesomely prepared and palatable foods constitutes in a sense a New Cookery... which has for its object, efficiency of body and mind." She thanks "Dr. and Mrs. J.H. Kellogg, who first inspired her with a love for the study of foods and their scientific preparation and who have since been constant sources of help and encouragement." She also thanks Miss Clara B. Lambert and Mrs. Estella F. Ritter.

Recipes call for the use of Minute Brew (p. 10), cereal coffee (p. 10), Kaffir tea (p. 11), Sanitas / Health Koko (p. 11), yogurt buttermilk (p. 11-13), bran (p. 18), Graham flour (p. 20), Good Health Breakfast Food (Brose, p. 20), gluten (p. 20), granola (p. 22), fermented breads (p. 23+), Graham bread (p. 26-28), unfermented breads (p. 33+), bran and Graham biscuit (p. 41), bran gems (p. 43-44), peanut butter

© Copyright Soyinfo Center 2014

sandwiches (p. 49), Protose (p. 49, 71, 77, 79), cream soups made with almonds, lentils, white beans, lima beans, or split peas (p. 63-66), Savora (p. 73-74, 78-79).

Chapter 10, titled "Meat substitutes and entrees," begins (p. 81): "In many homes, meat forms the chief part of the meals,..." but this book calls for a "meatless dietary," which requires a "knowledge of the chemistry of foods." Recipes (p. 81-103): Roast Protose [canned] with dressing. Boiled Protose. Protose fillet. Nut fillet (with Protose and Nuttolene). Fillet of nut meat. Panned Protose. Nut or Protose cutlets. Braised Protose. Nut and apple pie. Normandy or mock veal loaf. Chipped Protose in cream. Nut and rice croquettes. Protose hash with rice and peas. Nut sausage (p. 87; with ¼ lb Protose, seasoned with "2 tablespoons Japanese soy [sauce] or 4 teaspoons Savora"). Nut and vegetable stew (with Protose). Protose steak with onions. Broiled Nuttolene. Nuttolene with mint sauce. Nuttolene cutlets. Nuttolene a la cream. Baked Nuttolene. Nuttolene fricassee. Nuttolene croquettes. Nut meat pie (with Protose). Pressed vegetable meat (with Protose). Rice a la Carolina (with Protose). Nut meat loaf (with Protose and Nuttolene). Vegetarian ham (with Nuttolene and Savora). Nut patties. Nut chops (with peanut butter). Pine nut roast. Peanut roast (with peanut butter). Walnut roast. Cereal roast (with granola). Chestnut roast. Creamed chestnuts. Chestnuts with tomato sauce. Baked beans (with white beans). Baked lima beans. Lima bean loaf. Bean croquettes. Bean souffle. Savory roast or mock turkey (with lentils and granola). Peas patties. Baked lentils. Lentil and potato loaf. Hominy croquettes. Corn roast. Apple fritters. Prune fritters. Banana fritters. Rice patties.

Chapter titles: 12 Eggs. 15. Salads and relishes (incl. Neufchatel or yogurt cheese, p. 168, 176. Salad dressings, p. 172+). 17. Fruits and fruit desserts (incl. Baked apples with Meltose dressing, p. 186. Vegetable gelatine desserts, p. 195+). 19. Frozen desserts (incl. Yogurt buttermilk ice cream, p. 215). 20. Pastry and pies (most desserts call for lots of white or granulated sugar). 21. Cakes. 22. Cake fillings and icings [icing, frosting]. 23. Hot puddings. 24. Sauces for puddings. 25. Canning and preserving. 26. Invalid dishes. 27. Balanced menus (breakfast, dinner, supper). Lenna F. Cooper was born in 1875.

After the Index (p. 288-98) are advertisements: Perfection Biscuit Co. The Welch Grape Juice Co. Horlick's Malted Milk Co. Winorr Canning Co. (Winorr Kerneled Corn). Acme Preserve Co. (White A Condensed Tomatoes). Garis-Cochrane Household Dish-Washing Machine (motorized). Sprague, Warner & Co. (Richlieu Food Products). A.-B. Stove Co. (gas range). Wagner Manufacturing Co. (cast aluminum ware). The Kellogg Food Co. ("Protose: A vegetable meat." Minute Brew. Colax {relief from constipation}). McGraw Mfg. Co. (Servette [Lazy Susan]). Battle Creek Sanitarium School of Home Economics. National Onion Salt Co. American Thermos Bottle Co. Seely Fasco Fireless Cooker. Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium.

355. Street, John Phillips. 1913. Gluten and special foods. *Connecticut Agricultural Experiment Station, Annual Report* 36:107-11. For the year ending Oct. 31, 1912.
• ***Summary:*** "Eleven samples of gluten foods and similar preparations were examined. While some of these were not specially recommended for use by diabetics, the chief use of a gluten preparation lies to provide a food rich in nitrogenous compounds and as poor as possible in starch. Some of these samples are excellent from this standpoint, while others contain so much starch that their claims to be diabetic foods are unfounded if not fraudulent, and their use by diabetic patients attended with considerable danger." The foods were: (1) Akoll Biscuit (53.2% protein, 1.53% starch); (2) Brusson Diabetic Bread (37.3% protein, 40.14% starch); (3) Barker's Gluten Food (Herman Barker, Somerville, Massachusetts; 86.88% protein, 0.00% starch); (4) Soy Bean Gruel Flour (Cereo Co., Tappan, New York; 45.69% protein, 0.63% starch); (5) 20% Gluten Meal (The Kellogg Food Co. [or Battle Creek Food Co.], Battle Creek, Michigan; 27.50% protein, 49.64% starch); (6) 40% Gluten (Kellogg; 47.00% protein, 31.86% starch); (7) 80% Gluten (Kellogg; 81.25% protein, 6.21% starch); (8) Avena-Gluten Biscuit Mixture (Kellogg; 21.38% protein, 41.13% starch; made from oatmeal and wheat gluten); (9) 40% Gluten Biscuit (Kellogg; 47.50% protein, 35.01% starch); (10) 80% Gluten Biscuit (Kellogg; 82.38% protein, 4.68% starch); (11) Breakfast Toast (Kellogg; 13.63% protein, 57.42% starch). Address: M.S., Chemist in charge, Analytical Lab., New Haven, Connecticut.

recently hosted the successful "National Conference for Race Betterment, upon which the attention of the eugenic scientists of all the world was centered."

One section, titled "Health Foods," includes Berhalter's Health Foods, 308 North Ave., Chicago, Illinois.

358. Nashville Sanitarium Food Factory. 1914. Offers a full line of health foods... (Ad). *Naturopath and Herald of Health* (*The*) (*New York City*) 19(4):Unnumbered page. April.
• ***Summary:*** "... such as meat substitutes, whole wheat preparations, nut butters,... baked beans, wholesale or retail.

"Same are for sale also at the Pure Food Store, 112 East 41st St., New York City." Address: Nashville, Tennessee.

359. *Good Health* (*Battle Creek, Michigan*). 1914. Vegetable diet in colitis. 49(10):512-13. Oct.
• ***Summary:*** "A person suffering from colitis should use an anti-toxic diet. Let it consist largely of fruits and vegetables. Lettuce is especially good. Even bran and such coarse articles as turnips, cabbage and beets will act as a broom to sweep away the foul matter that is irritating the bowels. It is the rotting, putrefying fecal matter adhering to the wall of the intestine which occasions the irritation, and by means of a rather coarse vegetable diet, these materials may be scrapped off, swept on and carried away, and the habitual rhythm restored, and the intestines given a chance to heal. This is no new idea."

Prof. von Noorden of Vienna holds similar views on dietary treatment of colitis; they are described in detail.

360. *Los Angeles Times.* 1914. Seventh-day Adventists. Dec. 6. p. I-11.
• ***Summary:*** M. Meyers, head baker at the Loma Linda plant in Loma Linda, California, is suffering from a serious injury to his left hand, which was mashed when it was caught in a dough mixer brake.

Note: This is the earliest document seen (Dec. 2013) concerning Loma Linda Food Co.

361. Arnbrecht, Jacob. comp. 1914. Hygienic cook book: A collection of choice recipes carefully tested. College View, Nebraska: International Publishing Assoc. 318 p. 20 cm.
• ***Summary:*** The title page states that this vegetarian cookbook offers "Plain directions on healthful cookery; Nutritive value and digestibility of foods; Proper food combinations; Food for the sick; Weights and measures for the kitchen, etc."

In the section on Proteids, page 8 discusses gluten and how to make it at home. In the chapter on Entrees (p. 60-) is a long section titled "Substitutes for flesh meats." Many of these recipes are based on Protose or Nuttolene, with granola and nut butter also used, indicating that Mr. Arnbrecht may well have been a Seventh-day Adventist.

362. Cooper, Lenna Frances. 1914. The new cookery: A book of recipes, most of which are in use at the Battle Creek Sanitarium. 2nd ed., revised. Battle Creek, Michigan: The Good Health Publishing Co. [10] + 301 p. Illust. (10 photos). 20 cm.
• ***Summary:*** Soy is mentioned only once in this book, in the recipe titled "Nut sausage" (p. 89); this exact same recipe was on page 87 of the 1913 1st ed.

Note: This book contains a few more pages than the 1913 edition; 5 more pages of unnumbered front matter and 3 more pages of text. The title page is identical except that the words "Second edition–Revised" have been added. The index starts on p. 291, is more than 1 page longer, and ends near the bottom of p. 301. The ads at the rear are generally on different pages; some have been added and others deleted. Lenna F. Cooper was born in 1875. Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium.

363. Fischer, A. 1914. Kuhmilch und vegetabile Milch und ihre Unterschiede in der Magenverdauung besonders mit Ruecksicht auf das Problem der Kuhmilch-Intoleranz: Eine vergleichend-experimentell-diaetetisch Studie [Cow's milk and vegetable milk and the different ways they are digested in the human stomach, especially with regard to the problem of cow's milk intolerance: A comparative experimental dietetic study]. *Archiv fuer Verdauungs-Krankheiten* 20(1):13-48. [Ger]
• ***Summary:*** Page 18 gives the compositions of a number of nuts and seeds from which plant/vegetable milks can be made–including peanuts, coconuts, hazelnuts, walnuts, sweet almonds (*Amygdalus communis*), Brazil nuts (*Paranuss; Bertholletia excelsa*), cashews or cashew nuts (*Indische Mandel, Accajouness; Anacardium occidentale*), and soybeans. Of these, the soybean contains the highest percentage of protein and the lowest percentage of fat. In this long article, the soybean is mentioned only on page 18. Fischer focused his attention on almond milk and Brazil-nut milk, showing that they were more easily digested than cow's milk. He found that vegetable milks formed smaller, finer, more flocculant, and more easily digestible curds in the stomach, that these stayed in the stomach for less time, and that the peristaltic motion of the stomach was less after their consumption.

Note: On the basis of Fischer's observations, subsequent writers (such as von Nordon and Salomon in 1920 in Germany, and Dr. John Harvey Kellogg and Frances Dittes in the 1920s and 1930s in America), recommended the therapeutic use of soymilk for many digestive problems, including gastric and duodenal ulcer, peritoneal irritation, and disturbances of the motility of the stomach. Address: Dirig. Arzt des Sanatoriums Untere Waid-St. Gallen, Schweiz, Germany.

364. Fulton, Edwin Giles. 1914. Vegetarian cook-book: Substitutes for flesh foods. Revised ed. Mountain View, California, Kansas City, Missouri, etc.: Pacific Press Publishing Assoc. 271 p. Illust. 20 cm. *
• ***Summary:*** This book was first published in 1904 under the title *Vegetarian cook book: Substitutes for Flesh Foods*. The author was born in 1867.

365. Gillmore, Maria McIlvaine. comp. 1914. Meatless cookery: With special reference to diet for heart disease, blood pressure and autointoxication. New York, NY: E.P. Dutton & Company. viii + 352 p. Introduction by Louis Faugeres Bishop. Illust. Index. 21 cm.
• ***Summary:*** The author's Preface begins: "Since auto-intoxication is now held to be the cause of many of the most serious diseases of humanity, too much stress cannot be laid upon the immediate necessity of looking into the question of diet and removing those foods which are responsible for the cause of ill health.

"In the case of heart trouble and high blood pressure, with the accompanying deterioration of other organs, Dr. Bishop has found from prolonged observation that the offending substance most often appears in meat, eggs, fish and meat stock soups, but is not the same in all cases."

"In a double sense, the way to a man's heart is by the food he is given, and the more elaborate the food, the more quickly does his heart succumb to the strain put upon it. So it falls upon the women to meet this condition, and without delay."

The author thanks: (1) The patients of Dr. Bishop (see below), who have been kind enough to share the result of their successful experience. (2) Dr. C.W. Langworthy, expert in charge of Nutrition Investigation at the United States Department of Agriculture. (3) Miss Lenna Frances Cooper, Head Dietitian of the Battle Creek Sanitarium [Michigan], for recipes published in *The New Cookery.*

In the Introduction, Dr. Louis F. Bishop, M.D. (Prof. of Heart and Circulatory Diseases, Fordham Univ. School of Medicine, New York) begins by describing how difficult it is to bridge the gap between those of technical education and those who have not been so trained. After years of research he has found that, "under certain circumstances, the cells of the body become sensitive to the protein element of certain kinds of foods, and from that time on, as long as this sensitiveness lasts, that kind of food acts as a poison to the cells of the body. The only way to limit the damage is to exclude the offending article of food from the diet." Even small amounts of this kind of food can be as harmful as large amounts. Moreover, food damage can be entirely independent of any discomfort. "Food poisoning has generally existed for five or ten years before the heart is sufficiently damaged to cause distress on exertion... My own experience is that heart disease and hardening of the arteries have usually existed about five years at the time the sufferer comes under observation."

"The things that do damage are usually found in the group including eggs, fish, meat and stock soups, but there is no definite way of determining which of these things is at fault. This has to be accomplished by the study of each individual person, by means of the absolute withdrawal of all those things until there is an improvement in the action of the heart and blood vessels. Now one article of food, and then another is added to the diet, and it is discovered by experiment which one the person can use without a return of the disorder.

"In the beginning, it may be only eggs, or fish, or meat, that is a source of irritation to the cells of the body. In persons very seriously ill with hardening of the arteries, all of these things are a source of irritation."

There is a long chapter titled "Meat substitutes" (p. 81-127). The following recipes are of interest: Cereal coffee (p. 1). Almond milk (p. 2). Rice milk (p. 3). Peanut butter sandwiches (p. 209). Two charts near the back of the book give the nutritional composition of peanut butter, and peanuts.

Note 1. is the earliest document seen (June 2002) which states that diet (and specifically a meatless or vegetarian diet) can reduce the risk of coronary heart disease in humans.

Note 2. This is the earliest English-language document seen (Aug. 2013) that contains the term "rice milk," which it uses to refer to a recipe.

Note 2. This is the earliest English-language document seen (June 2003) that contains the word "autointoxication" (or "auto-intoxication").

Note 3. This is not a Seventh-day Adventist cookbook and no commercial products made by SDA companies are called for in the recipes. Soy is not mentioned. Maria Gillmore was born in 1871. Address: Clinical Prof. of Heart and Circulatory Diseases, Fordham Univ., Bronx, New York.

366. Street, John Phillips. 1914. Diabetic foods. *Connecticut Agricultural Experiment Station, Annual Report* 37:1-95. For the year ending Oct. 31, 1913. See p. 20-21, 30-33, 38, 45, 47-48, 56, 75-77. Part I. Eighteenth Report on Food Products and Sixth Report on Drug Products, 1913.
• ***Summary:*** Page 11: "What is a 'diabetic' food? Formerly an almost complete absence, or at least a very marked reduction, of carbohydrates was considered an essential characteristic of a true 'diabetic' food. A table of 12 different classes of diabetic foods shows that, of the 542 commercial products, "Beads, biscuits, cakes, etc." 150, and "Flours and meals" 109 were the top two classes.

In Table I, titled "Analyses of diabetic foods" (p. 18-39), the many commercial products are grouped into classes, starting with "Flours and meals." For each product is given: Year of analysis, name of manufacturer and brand, no. of pieces, net weight of package, cost per package, cost per pound, nutritional composition (water, ash, protein

© Copyright Soyinfo Center 2014

{Nx6.25}, fiber, nitrogen-free extract, fat {ether extract}, starch, weight supplying same amount of carbohydrates as 10 gms. of wheat bread, calculated calories per 100 gms.).

The summary (p. 75-77) groups the main commercial products into six groups based on their carbohydrate content. The first group contains less than 5% carbohydrates and the 6th group contains 25 to 35% carbohydrates. "The soy bean flours contained from 23 to 26 per cent. carbohydrates" and "cost from 30 to 65 cents per pound." Brands include: "Health Food Co., New York, Protosoy Soy Flour, Jireh Diabetic Food Co. (NY), Soja Bean Flour, Health Food Protosoy Diabetic Wafers (21.2% carbohydrates) and Protosoy Soy Flour (24.5%), Cereo Soy Bean Gruel Flour (23.7%), Metcalf's Soja Bean Meal (25.0%), Jireh Soja Bean Meal (25.8%; sometimes also named Jireh Diatetic [sic, Dietetic] Soja Bean Flour). Platschek (Karlsbad) Sojabohnenmehl (49%)."

Note. This is the earliest English-language document seen (Nov. 2013) that contains the term Soja Bean Flour (regardless of capitalization).

The Health Food Co., New York, made the following products: Flours and meals: Almond meal (analyzed 1906, 1913), C B X Cold Blast Flour, 25% protein (1911), Glutosac Gluten Flour (1906, 1909, 1911, 1913), Pronireu (Gluten Griddle Cake Flour; 1913), Protosac Gluten Flour (1906, 1913), Protosoy Soy Flour (1913), Pure Washed Gluten Flour (1906, 1913). Soft breads–Protosac Bread (1906). Hard breads and bakery products: Alpha Best Diabetic Wafer (1913), Diabetic Biscuit (1906 & 1913), Gluten Nuggets (1913), Glutona (1906), Glutosac Butter Wafers (1906), Glutosac Rusks (1906), Glutosac Wafers, Plain (1906), Glutosac Zwieback (1906), No. 1 Proto Puffs (1906 & 1913), No. 2 Proto Puffs (1911 & 1913), Protosac Rusks (1906), Protosoy Diabetic Wafers (1913), Salvia Sticks (1906). Breakfast Foods–Manana (1913). Miscellaneous products–Kaffeebrod (1913).

Peanut butter was made or sold by the following (p. 36-37): Atlantic Peanut Refinery, Philadelphia (1899), J.W. Beardsley's Sons, New York, Acme Red Brand (1913), Beach Nut Packaging Co., Canajoharie, NY (1913), A.C. Blenner & Co. New Haven, Connecticut (Distributor; 1913), D.W. Brooke (Newark, NJ; 1913), Dillon & Douglass, New Haven, CT, Perfection (Distributor), H.J. Heinz Co., Pittsburgh, Pennsylvania (1913), The Kellogg Food Co., Battle Creek, Michigan (1913), Francis H. Leggett & Co., New York, Premier (1913), MacLaren Imperial Cheese Co., Detroit, Michigan, Eagle (1913), Nut Products Co., New Haven, CT, Penolia (1913), Penolia Food Co., New Haven, CT, Penolia (1899), S.S. Pierce Co., Boston, MA, Acharis Brand (1914).

Almond paste [Almond butter] was made by: Chapman, Chicago (1902-03), Henry Heide, New York (1902-03), Spencer, New York (1902-03).

Many gluten-based foods are also discussed and analyzed in a table including Kellogg's Protose (3.6% carbohydrates), Barker's Gluten Food "A" (4.1%), Kellogg's 80% Gluten Biscuits (4.4%), Bischof's Gluten Flour (5.0%), Barker's Gluten Food "B" (5.9%), Barker's Gluten Food "C" (7.7%), Kellogg's 80% Gluten (1912) (7.8%), Plasmon Cocoa 9.3% (Made by Plasmon Co., London, analyzed 1903), Metcalf's Vegetable Gluten (1913) (9.8%), Kellogg's Pure Gluten Biscuit (1906) (10.2%), Kellogg's Potato Gluten Biscuit (1906, 1909) (11.9%, including fiber), Ferguson Gluten Bread (33.6%), Gum Gluten Breakfast Food (34.2%).

Many peanut-based foods are also discussed and analyzed including Rademann's Erdnuss-Brot [Peanut Bread 19.7%, p. 26, 77]. Frank & Co. (Bockenheim) Erdnuss-Kakes [Peanut Cakes, p. 28, 56]. Rademann's Erdnuss-Biskuits [Peanut Biscuits, p. 34]. Peanut butter: Manufacturers (with date of analysis in parentheses) are: Atlantic Peanut Refinery, Philadelphia, Pennsylvania (1899). J.W. Beardsley's Sons, New York (Acme Red Brand, 1913). Beech-Nut Packing Co., Canajoharie, New York (1913). A.C. Blenner & Co., New Haven, [Connecticut] (Distributed by D.W. Brooke, Newark, New Jersey, 1913). Dillon & Douglass, New Haven (Perfection brand; Distributed by H.J. Heinz Co., Pittsburgh, Pennsylvania, 1913). The Kellogg Food Co., Battle Creek, Michigan (2 samples, 1913). Francis H. Leggett & Co., New York (Premier brand, 1913). MacLaren Imperial Cheese Co., Detroit, Michigan (Eagle brand, 1913). Nut Products Co., New Haven (Penolia, 1913). Penolia Food Co., New Haven (Penolia, 1899). S.S. Pierce Co., Boston, Massachusetts (Acharis brand, 1913). Note the two brands that were on the market by 1899.

A host of products contain "almond" in the name, including Kellogg's Almond Butter (8.2% carbohydrates), Callard's almond shortbreads (21%), and Fritz's Mandelbrot (23%), Almond-form wafers with chocolate (from Fromm & Co., Dresden), Charasse Gluten Exquis Biscuits aux Amandes.

Other nut preparations (p. 38): The Kellogg Food Co., Battle Creek–Nut Bromose (Meltose [a malt preparation] and nuts, 1913), Nut Butter (Sanitas, 1906), Nut Meal (1906), Nuttolene (6.3%, 1906). Nashville Sanitarium-Food Co., Nashville, Tennessee–Nut Butter, Nutcysa, and Nutfoda (13.0% 6.3%, and 6.8%; Analyzed in 1913).

A section titled "Nut, Nuts Pastes, etc." (p. 62-64) notes: "Samples of peanut butter showed considerable uniformity; the carbohydrates ranged from 12 to 20, with 3.2 to 6.5 per cent. starch. Most of the peanut butters we have examined would seem to be useful additions to the diabetic's diet." The manufacturer of Kellogg's Malted Nuts claims that it "supplies the place of cow's milk as a liquid food. Its composition is similar to that of milk." The author thinks this statement is misleading, but he notes that "Kellogg's Nut Butter closely resembles peanut butter in composition, and has its same advantages as a diabetic food... Kellogg's Nut Meal is a peanut meal containing only 12 per cent.

© Copyright Soyinfo Center 2014

carbohydrates. Kellogg's Nuttolene and Protose likewise contained only 6 and 4 per cent. carbohydrates, respectively."

Webster's Dictionary defines "aleurone" (a word first used in about 1869) as "protein matter in the form of minute granules or grains occurring in seeds in endosperm or in a special peripheral layer." Many German products have the same root: Gerike's Aleuronat (3.1% carbohydrates, p. 76). F. Guenther, from Frankfurt, makes Aleuronat-Kakes (p. 56). R. Hundhausen, from Hamm, makes Aleuronatzweiback (high or low gluten) and Aleuronat Biskuits and Kakes (biscuits and cakes, p. 57, 30), or pure (4.0% carbohydrates, p. 76). Kirche, from Duesseldorf, makes Aleuronat-Kakes (p. 32).

Other well-known products. Protein preparations: Plasmon Co., London, makes Plasmon. Troponwerke, Mülheim, makes Tropon (p. 24). Address: Chemist of the Station, New Haven, Connecticut.

367. *Good Health* (*Battle Creek, Michigan*). 1915. Vegetable protein not inferior to animal protein. 50(2):92, 93 + 10a. Feb.

• ***Summary:*** "For many years a stock argument against the non-flesh dietary has been the claim that animal protein is much more readily and completely assimilated than vegetable protein. At best this argument would be only a matter of economy and would amount to nothing, since the cost of vegetable protein is not more than one-fifth to one-tenth the cost of animal protein, so that one could easily afford to lose five to ten per cent of the raw material while making a saving of three hundred to four hundred per cent in cost.

"But a review of the supposed experiments of comparative indigestibility of protein has shown that there is no real foundation for the claim that vegetable proteins are less digestible than animal proteins. In the earlier experiments it was observed that when a large amount of protein of the diet was derived from peas or beans, only three-fourths to four-fifths of the protein was assimilated, whereas in the case of animal proteins in the form of eggs or meat eighty-eight to ninety per cent was assimilated.

"Experiments made by an eminent Japanese physiologist with the pure protein of the soy bean have shown it to be digestible to the extent of ninety-six per cent, a degree of digestibility fully equal to that of any animal protein. It appears that the only reason why animal proteins have seemed to be more digestible than vegetable protein has been the fact that vegetable proteins are combined with various substances, especially cellulose, which is indigestible, so that digestion is hindered.

"These experiments have been repeated in this country by Doctor Mendel of the Yale University laboratory [Connecticut] and with practically identical results. Doctor Mendel does not hesitate to state that vegetable proteins are equally as digestible as animal proteins."

368. Benedict, Francis G.; Roth, Paul. 1915. The metabolism of vegetarians as compared with the metabolism of non-vegetarians of like weight and height. *J. of Biological Chemistry* 20(3):231-41. March. [2 ref]

• ***Summary:*** "Perhaps no special dietetic regime is more successful in attracting adherents and holding them than is that of vegetarianism. While the modern conception of the word 'vegetarianism' is by no means as strictly applied to the exclusive use of vegetables as was formerly the case, and we have at the present time the lacto-vegetarians and the ovo-vegetarians, nevertheless there are a considerable number of individuals who regularly confine themselves to a strictly vegetarian diet."

"This adherence to a vegetarian diet may be due to any one of several causes. First, to environment, heredity, training, or the habit of the household and parents; second, to a religious belief, in which the use of flesh for food is proscribed; third, as the result of some dietetic alteration incidental to the treatment of disease and a subsequent adherence to the vegetarian diet; or finally, for physiologic or biologic reasons, in the belief that a non-flesh dietary is the natural or physiologic diet for human beings as well as other primates.

"In the discussion of the supposed benefits of vegetarianism, considerable stress has been laid upon the remarkable endurance (see Fisher 1907; Iotekyo and Kipiani 1906) apparently shown by vegetarians over flesh eaters, the statements being made that the vegetarians live upon a distinctly lower metabolic plane, are not so highly stimulated as the flesh eaters, have a lower blood pressure, and, in general, that the metabolic activities are on a lower level."

It is not difficult "to measure the metabolic plane by studying the respiratory exchange. Thanks to the kindness and interest of Dr. J.H. Kellogg of the Battle Creek Sanitarium, Michigan, we are enabled to make a series of observations on both men and women vegetarian subjects, all of whom may be definitely classified as normal individuals. The greater number of these subjects were members of the staff of the Sanitarium. These individuals [11 men and 11 women] had been meat abstainers for varying lengths of time, the periods stated in the list given below."

This experiment showed that there appears to be little, if any, difference between the basal-metabolic rates of vegetarians and non-vegetarians.

Note 1. This is the earliest English-language document seen (June 2005) that uses the term "lacto-vegetarians" (or "lacto-vegetarian") to refer to vegetarians whose diet includes milk and dairy products, but does not include eggs.

Note 2. This is the earliest English-language document seen (June 2005) that uses the term "ovo-vegetarians" (or "ovo-vegetarian") to refer to vegetarians whose diet includes eggs, but does not include milk or dairy products. Address: From the Nutrition Lab. of the Carnegie Institution of Washington [DC], Boston, and the Battle Creek Sanitarium,

Battle Creek, Michigan.

369. Cooper, Lenna F. 1915. The cost of foods in non-meat dietaries. *J. of Home Economics* 7(3):137-41. March.
• ***Summary:*** "The fact that meat is one of the most expensive articles of diet is illustrated by a comparison of the costs of a mixed diet and of a non-meat diet. The cost of foods given here are from the non-meat dietary in use at the Battle Creek Sanitarium." The cost of foods in the guests' dining room for the year 1912 amounted to 67.8 cents per capita per day. A copy of one day's menu is shown in order to give an idea of the variety of food in the guests' dining hall. Breakfast foods include: Scotch bran borse. Gluten gruel. Boiled protose. Scrambled eggs. Whole wheat bread. Entire graham bread. Toasted rice biscuit. Toasted granose (wheat) biscuit. Bran biscuit. Nut butter. Palm butter. Malt honey. Malt sugar. Yogurt buttermilk. Sanitas cocoa. Hot malted nuts [peanut milk]. Minute brew [coffee substitute] with sugar and cream. Kaffir tea. Dinner (afternoon meal) entrées include: Nut fillets. Nuttolene with piquant sauce. Supper (evening meal) includes many of the same foods served for breakfast.

In 1914 the total number of guest days at the Sanitarium was 115,590. The cost of vegetarian food for this same period was $67,866. Address: Head Dietitian, Battle Creek Sanitarium, Michigan.

370. Morse, W.J. 1915. Re: Report on trip to Experiment Stations in Connecticut, Rhode Island, New Hampshire, Vermont, and Massachusetts. Letter to Prof. C.V. Piper, Washington, DC, Aug. 28. 3 p. Handwritten, with signature on USDA letterhead.
• ***Summary:*** Morse is writing from Lowville, New York, where he was born and raised. "Dear Prof. Piper: During the past week I have been at the Experiment Stations in Connecticut, Rhode Island, New Hampshire, Vermont, and Massachusetts. The Manchurian varieties, which were sent from the office this spring to these stations, in my opinion were doing very nicely. A number of them should mature at the stations and appear very promising as early grain strains. Others appear to be of promise as forage strains being finer and more suitable for hay. I found the men at the stations much interested in securing the early grain variety. The Manchu, Black Eyebrow, and 36653 appear to be the earliest and I think all three will mature with possibly a few other numbers. No other variety except the Ignotum (a variety from E.E. Evans, West Branch, Michigan) approached ours in earliness. The Guelph and Ito San are at least two weeks later. The station men appeared very much interested in the test.

As yet I have not looked into the soybean factory at Clayville, but after leaving here Monday expect to look into that matter. From Clayville, I expect to go to East Lansing, Michigan, and then to Battle Creek, Michigan. I do not think I shall stop at Elysia for I have given [Mr. E.E.] Evans our note books to take fall notes. I think I can put my time in better other places.

"I have been here since Thurs. and expect to leave here Mon.

"Have had a very pleasant time here the past few days. Had a rather heavy frost here last night. Very truly yours,..."

Note: This is the earliest document seen (March 2012) that mentions the soybean variety Ignotum–which was later thought to be the same as Ogemaw.

Location: National Archives, College Park, Maryland. Record group 54–Bureau of Plant Industry, Soils and Agricultural Engineering. Subgroup–Div. of Forage Crops and Diseases. Series–General Correspondence, 1905-29. Box 92–Morgan-Morse.

Sent to Soyinfo Center by Matthew Roth of Rutgers Univ., March 2012. Address: Forage-Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

371. Morse, W.J. 1915. Re: Report on visits to makers of soy products. Letter to Prof. C.V. Piper, Forage Crop Investigations, Bureau of Plant Industry, Washington, DC, Sept. 5. 2 p. Handwritten, with signature.
• ***Summary:*** "Dear Professor Piper:... At Clayville, New York, I looked up the soy bean factory recently started for the manufacture of flour and milk. I had a visit with the man in charge, a Mr. Spring/Sjurning (?) of Cussville (?), New York. The establishment is under the name of Spring (?) Corporation Co. and in addition to the soy products are to put out different kinds of breakfast food. The soy beans were to be purchased from (?) and Indiana growers, but Mr. Spring is going to get in touch with growers in eastern North Carolina... They have a patent process for making the milk called an emulsifier. The beans are crushed, put in the emulsifier with water, the mass churned about and the liquid drawn up. The bean mass is then dried and ground into flour. The milk is all to be sold to chocolate manufacturers while some biscuit concerns agree to take a certain amount of the flour.

"At Battle Creek, Michigan, the Kellogg concern are interested in trying out the soy bean both as a flour and as a substitute for coffee. Mr. Kellogg would like to have us send him about a bushel of the Mammoth Yellow for experiments. He will give us the results and furnish us some of the products made from the beans." He is at the Toasted Corn Flake Co. in Battle Creek.

Note: This is the earliest document seen (Dec. 2013) that mentions Mr. [W.K.] Kellogg or his Toasted Corn Flake Co. in connection with soybeans.

Location: National Archives, College Park, Maryland. Record group 54–Bureau of Plant Industry, Soils and Agricultural Engineering. Subgroup–Div. of Forage Crops and Diseases. Series–General Correspondence, 1905-29. Box 92–Morgan-Morse. Folder–Morse, W.J.–#1 F.C.I.

372. *Advance* (*The*) (*Elizabeth City, North Carolina*). 1915. A better day for soy beans. Nov. 30. p. 2.
• ***Summary:*** "Farmers in this section will be glad to know that the Division of Agronomy at Raleigh, of which C.B. Williams is the head, is very much interested in the future of the soy bean crop, which is being more extensively grown now every year in this country.

"It is not strange that the State Department of Agriculture should be interested in soy beans, for the soy bean crop in North Carolina is larger than in any other state in the union. This year the soy bean acreage in nearly every county in this section was increased and it is said that Hyde County alone this year has harvested no less than 200,000 bushels.

"With a million bushels of soy beans now on their hands, Eastern Carolina farmers are wondering what they are going to do with them.

"In central New York, according to Mr. Williams, a factory has been established for the manufacture of soy bean milk and soy bean flour. The Kellogg Toasted Corn Flake Company of [Battle Creek] Michigan have conducted experiments with soy beans, and have expressed a desire to get in touch with growers of the product. Mr. Williams has recently visited this section and has obtained the promise of the Elizabeth City Oil and Fertilizer Company and of the Eastern Cotton Oil Company of Hertford [15 miles southwest of Elizabeth City] to conduct experiments with view to utilizing the soy bean to keep their mills running after the close of the cotton season. Also inquires have been received from the owners of factories which handle the soy bean and are able to use its by-products for information about factory sites in this section."

Note: This is the earliest document seen (June 2003) that mentions the Elizabeth City Oil and Fertilizer Company (or Elizabeth City, North Carolina) in connection with soybeans.

(p. 122; Stanborough Park, Watford, Herts.; Granose [crisp, delicate flakes], Protose, Avenola, Health Coffee [made from cereals], I.H.A. Health Biscuits; "Manufactured in the interests of health and NOT merely for profit"), Manhu Food Co. Ltd. (p. 123; Manhu Flaked Wheat; Manhu Diabetic Foods). Address: England.

375. Kellogg, John Leonard. Assignor to Kellogg Toasted Corn Flake Company (Battle Creek, Michigan). 1916. Manufacture of a food product. *U.S. Patent* 1,189,128. June 27. 1 p. Application filed 19 Nov. 1915.
• ***Summary:*** "My invention relates to the manufacture of a new food product made from the soy or soja bean." It "is particularly adapted to be used as a diabetic food by mixing it with water or milk."

To make the powdered product, soybeans are soaked, dried, dehulled in an ordinary scouring device using the brush method, roasted in an ordinary roaster to a dark brown color, then ground to a fine powder, which "tastes and smells very much like peanut meal, but is quite dry.

"In making my improved butter for spreading over crackers, bread, etc., as peanut butter is used, I mix the finely powdered product of the above process by preference with a good grade and sufficient quantity of peanut oil... to give the product the texture and appearance of peanut butter.

"The final product is used as peanut butter is used, and may be mixed with peanut butter in any desired proportions, as the two blend admirably and improve the flavor each of the other. The soy beans contain much more protein than peanuts and my final product is, therefore, very desirably as a dietetic food.

"The powdered product, before mixing with the oil, can also be used as a diabetic food, by mixing it with water or milk, and on account of its high protein value and low starch composition, it makes an admirable food for persons suffering from diabetes or for babies who require an excessive amount of protein."

Note: This is the earliest document or patent seen (Dec. 2012) that mentions soynut butter (powdered or regular–although the word "soynut" is not used) and the earliest document seen that mentions work by a Seventh-day Adventist with soybeans or soyfoods.

Note 2. This is the earliest English-language document seen (Dec. 2012) that mentions soynut butter, which it calls "my improved butter for spreading over crackers, bread, etc., as peanut butter is used..."

Note 3. According to the book titled *The Kelloggs in the Old World and the New*, by Timothy Hopkins (1903, San Francisco), John Leonard Kellogg was the second child of Will Keith Kellogg (who was the brother of Dr. John Harvey Kellogg and who founded the Kellogg Toasted Corn Flake Co. in 1909; Will Keith made Corn Flakes into a famous product). John Leonard Kellogg was born on 23 Aug. 1883 in Battle Creek, Michigan. In 1903 Will Keith Kellogg had

© Copyright Soyinfo Center 2014

been vice-president and manager of the Modern Medicine Publishing Co. for ten years, and of the Sanitas Nut Food Co. for seven years. Address: Battle Creek, Calhoun County, Michigan.

376. Kellogg, John Harvey. 1916. Diet as a means of combating acidosis. *American Medicine* 22(6):457-61. June. (Vol. 11 in New Series).

• ***Summary:*** "The pathological condition known as acidosis has long been known and been the subject of exhaustive researches by physiologists and clinicians, but the great importance of this disorder of metabolism as a factor in a great variety of medical and surgical cases is only just beginning to receive recognition. Many laboratory and clinical studies have demonstrated that the normal functioning of the body cells requires the maintenance of the reaction balance. The arterial blood must be kept neutral or slightly alkaline."

"We now know that acidosis plays a dominant role in many conditions in which its presence was formerly not even suspected. The discovery of accurate tests for acidosis... has greatly contributed to the collections of clinical data and the extension of our knowledge."

Acidosis "results from perverted metabolism. The direct cause of acidosis is the abnormal production in the liver of diacetic and beta-oxybutyric acids as a result of imperfect metabolism of fats and protein." Discusses the findings of Zellner, M.H. Fischer, Palmer and Henderson, and Lewis and Barkman indicating the a high protein diet is a cause of acidosis. "It is evident, then, that in the treatment of these conditions the protein ration should be reduced to a minimum and carbohydrates provided in abundance. "Malt sugar" is better tolerated than cane sugar.

Concerning fasting: "When deprived of food, an obese person of course finds his chief source of energy in the oxidation of fat. In such a case the situation is practically the same as when a normal person is fed exclusively on fat. The few ounces of glycogen [carbohydrate] stored up in the liver and muscles is soon consumed, so after the first day or so of fasting the obese patient is living almost exclusively on fat and the natural result is a high degree of acidosis. The clinical evidence of acidosis is to be seen in the languor, weakness, lassitude, often headache and sometimes nausea of which these patients often complain when fasting." If a small amount of carbohydrate, about 50 grams/day, "is given to a patient who is taking a fasting cure for obesity acidosis will disappear." "The patient will loose flesh less rapidly but will avoid the disagreeable symptoms which tend to discourage him and lead him to abandon the effort. A still more satisfactory plan is to allow the obese patient to eat freely of" green vegetables "and of such fruits as apples, strawberries, oranges, cantaloupe, and watermelons. Such a diet will not only satisfy the craving for food but will also furnish a liberal supply of basic elements to neutralize the acids resulting from the oxidation of fats."

"In the practical management of the diet of several hundred cases of diabetes the writer and his colleagues have found great advantage in very largely replacing animal proteins by vegetable proteins. It is very surprising how quickly both acidosis and glycosuria disappear on a properly regulated diet in which the protein is reduced to a minimum and animal proteins mostly excluded."

"Bunge many years ago called attention to the fact that the ordinary diet among civilized nations tends to produce a preponderance of acids in the body. He especially called attention to the fact that flesh foods contain an excess of acids that are not oxidizable in the body... and that a considerable excess of these acids is also found in cereals.

"Sherman of Columbia University, who has made extended studies of this subject in recent years, has confirmed the observations of Bunge."

"The injury resulting from this excessive intake of protein is greatly increased by the sedentary habits of a large proportion of the population and especially from a diet deficient in bulk because of the use of fine flour bread and other concentrated foods from which cellulose, an essential intestinal stimulant, is almost wholly lacking.

"Humans are primates and as such are low protein feeders... The alimentary canal is long–ten times that of the length of the body, measuring from the end of the nose to the end of the backbone. The liver is small, one one-fourth as large in proportion to the body weight as in the dog and other carnivorous animals."

"Modern scientific research is showing more and more clearly that in these departures from primitive conditions of life is to be found the foundation of most of the chronic ills which afflict us."

Note: This is the earliest English-language document seen (July 2005) that contains the term "acidosis." Address: AM., M.D., Battle Creek, Michigan.

377. *Good Health* (*Battle Creek, Michigan*). 1916. Vegetarian restaurants in Russia. 51(12):670. Dec.

• ***Summary:*** According to a journal from Stockholm, Sweden, the rise in food prices in Petrograd, Russia [one year before the 1917 revolution] has given great encouragement to vegetarian restaurants. Hundreds of vegetable kitchens have been opened, supplying thousands of meals daily. "Although the prices of the dishes are not remarkably low, long lines of waiting guests throng the larger halls."

378. Colon hygiene: comprising new and important facts concerning the physiology of the colon and an account of practical and successful methods of combatting intestinal inactivity and toxaemia. 1916. Battle Creek, Michigan. 402 p. *

• ***Summary:*** This book is divided into three large chapters:

© Copyright Soyinfo Center 2014

1. The twelve gates. 2. The symptoms of constipation. 3. Simple measures for its relief. Dr. Kellogg discusses cellulose (p. 228-30) and bran (p. 237-40).

Note: This book is owned by the Bentley Historical Library, University of Michigan, Ann Arbor.

379. Cooper, Lenna Frances. 1916. The new cookery. 3rd ed. Revised and enlarged. Battle Creek, Michigan: The Good Health Publishing Co. 412 p. 22 cm.

• ***Summary:*** This is a Seventh-day Adventist vegetarian cookbook. Contents: 1. Food values. 2. The art of preparing foods. 3. Beverages. 4. Cereals. 5. Fermented breads. 6. Unfermented breads. 7. Sandwiches. 8. Dairy products. 9. Cream soups. 10. Plain soups. 11. Meat substitutes and entrees. 12. Macaroni and Italian pastes. 13. Eggs. 14. Gravies and sauces. 15. Vegetables. 16. Salads and relishes. 17. Toasts. 18. Fruit desserts. 19. Custards and cold desserts. 20. Frozen desserts. 21. Pastry and pies. 22. Cakes. 23. Cake fillings and frostings. 24. Hot puddings. 25. Sauces for puddings. 26. Canning and preserving. 27. Special dishes for invalids. 28. Balanced menus."

In the Foreword, the author states: "We are indebted to Professor Ivan Pawlow [Pavlov], of Russia, for demonstrating the relation between appetite and digestion." "Many food reformers and faddists have attempted to prepare wholesome foods but have neglected the almost equally important requirement–palatability." "The author wishes to express her indebtedness to Dr. and Mrs. John Harvey Kellogg, of the Battle Creek Sanitarium, who first inspired her with a love for the study of foods and their scientific preparation and who have since been constant sources of help and encouragement. She would also acknowledge her indebtedness to Miss Clara B. Lambert, who for several years was associated with the author and has contributed to this volume both by helpful suggestions and by numerous recipes."

Soy is not mentioned in this Seventh-day Adventist vegetarian cookbook. The following commercial products are mentioned: Minute Brew (cereal coffee [coffee substitute], p. 32). Cereal coffee (p. 33). Kaffir Tea (p. 33). Sanitas Health Koko (p. 33). Yogurt buttermilk (p. 33-34). Sterilized bran (p. 44). Gluten mush (p. 47). Graham bread (p. 54). Bran bread (p. 62). Bran gems (p. 76). Protose (p. 129-35). Gluten flour (p. 136). Nuttolene (p. 138-41). Peanut butter (p. 144-145). Nut chops (p. 144, with peanut butter). Savora (p. 145). Granola (p. 147). Mock turkey (p. 152). Salted almonds (p. 300). Strawberry gelee (p. 306, with Vegetable Gelatin and egg whites). Yogurt ice cream (p. 307). Meltose dressing (p. 361). Hot Malted Nuts (p. 386. Pour 3/4 cup boiling water into ¼ cup dry Malted Nuts, stirring while so doing. Add salt if desired. It is ready to serve at once. Calories in the recipe: 34 from protein, 88 from fat, 61 from carbohydrate. Total 183. Note: Malted Nuts was a dry powder or meal. The resulting beverage was almost certainly a mixture of peanut milk and almond milk). Almond ice (p. 389, with "almond butter"). Gluten bread (p. 390). Gluten puffs (p. 391).

Note: This cookbook calls for abundant use of dairy products (milk, cream, butter), eggs, and sugar (up to 2 cups in some recipes). Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium [Battle Creek, Michigan].

380. Joslin, Elliott Proctor. 1916. Treatment of diabetes mellitus, with observations upon the disease based upon one thousand cases [5th ed.]. Philadelphia and New York: Lea & Febiger. xvi + 17-440 p. 25 cm.

• ***Summary:*** Joslin (lived 1869-1962) recommended the use of Hepco Flour, a soybean product, in his diabetic diets. Page 397 states: "Soya bean is also extensively used, and probably deserves a still wider introduction into the diabetic diet. It is used in the manufacture of Hepco Flour." Page 400 states that "soy bean meal" [probably soy bean flour] contains 34.0% carbohydrates. "Ralston Health Food" is a type of "Cereal breakfast food." Page 402 notes, under "fresh vegetables," that soy beans [i.e. green vegetable soybeans] contain on average 28.0% carbohydrates (range 19.3-39.0%).

In the section titled "Composition of so-called diabetic foods" (p. 406-17) the author notes that such foods have been more thoroughly studied at the Agricultural Experiment Station in New Haven, Connecticut, than elsewhere. The lengthy list that comprises most of this section is based on original analyses found in Connecticut Agricultural Experiment Station Reports, for 1913, Part 1; for 1914, Part 5, and for 1915, Part 5. The table contains the following columns: Date of analysis. Manufacturer and brand. Protein per cent. Carbohydrate per cent. Fat per cent. Starch per cent. and Calculated calories per 100 grams. The following contain soy: Cereo Co., Tappan, New York: Soy Bean Gruel Flour (1913 [date of analysis]). Health Food Co., New York: Protosoy Soy Flour (1913, 1914), Protosoy Diabetic Wafers (1913, 1914). Jireh Diabetic Food Co., New York: Soja Bean Flour (1913). Theo. Metcalf Co., Boston, Massachusetts: Soja Bean Meal, 18% starch (1913). Waukesha Hepco Flour (1913).

A large number of companies in the USA and Europe make products containing gluten; among these are The Kellogg Food Co. in Battle Creek, Michigan. The Nashville Sanitarium Food Co. in Nashville, Tennessee makes Malted Nut Food, Nut Butter, Nuteysa, and Nutfoda.

A list of 13 peanut butter manufacturers is given (p. 415), including The Kellogg Co. (Battle Creek, Michigan), Beech-Nut Packing Co. (Canajoharie, New York), and H.J. Heinz Co. (Pittsburgh, Pennsylvania). The fat content of the various brands ranges from 42.8% to 51.3%; Kellogg's is 49.7%. Two companies whose peanut butter was analyzed in 1899 were: Atlantic Peanut Refinery, Philadelphia, Pennsylvania, and Peanolia Food Co., New Haven,

© Copyright Soyinfo Center 2014

Connecticut.

Special protein preparations include Soson and Tropon (made in Germany), and Plasmon (made in London, England). Address: Asst. Prof. of Medicine, Harvard Medical School, Massachusetts.

381. Kellogg, John Harvey. 1916. Battle Creek Sanitarium diet list. Battle Creek, Michigan: Modern Medicine Publishing Co. Ltd. 71 p. *
• ***Summary:*** The author was born in 1852. Address: M.D., Battle Creek, Michigan.

382. Kellogg, John Harvey. 1916. Colon hygiene: Comprising new and important facts concerning the physiology of the colon and an account of practical and successful methods of combating intestinal inactivity and toxemia. Battle Creek, Michigan: Good Health Publishing Co. 370 p. 19 cm.
• ***Summary:*** Contents: The colon. The physiology of the colon. The ileocecal valve and its function. Normal bowel action. The feces. Influences which excite movements of the colon. Influences which lessen intestinal movements. The causes of constipation. Habits which give rise to constipation. Disorders of the digestive tube. Alimentary toxemia, or intestinal autointoxication. Important discussion of alimentary toxemia before the Royal Society. Forms of constipation. The treatment of constipation. Diet in constipation. Baths and other home treatments for constipation. Exercises which combat constipation. Efficient electrical methods. Special treatment of different types of constipation. Treatment of disorders which result from constipation. Bowel habits of uncivilized man.

The section titled "Cellulose-containing foods" (p. 228) states: "All vegetable foods contain more or less cellulose, but the amount differs very greatly. This element, as has already been mentioned, is highly necessary as a means of securing normal bowel action. Indeed, bulk, not simply in the food itself, but in the residues left behind after the absorption of the nutritive portions of the food, is of first importance."

In the chapter titled "Diet in constipation" (p. 218-40): A bar chart (facing p. 229) shows the number of grams per ounce of cellulose in some common cereal foods. The leaders: Bran 200, oatmeal 44, barley 20, rye 15, wheat 10, Graham flour granola 10, Graham bread 6. A table (p. 229-30) gives similar information. A section on "Recipes for the use of bran" (p. 237-40) contains 6 recipes: Bran brose (like mush), Sterilized bran, Bran and granola mush, Graham bread (made with "whole wheat flour"), Bran Graham biscuit, Bran gems (like muffins). Address: M.D., LL.D., Superintendent of the Battle Creek Sanitarium.

383. Kellogg, J.H. 1917. Should the colon be sacrificed or may it be reformed? *J. of the American Medical Association* 68(26):1957-59. June 30.
• ***Summary:*** Metchnikoff of the Pasteur Institute believes that the colon is a useless appendage and the source of many health problems. Sir William Arbuthnot Lane advocates surgical removal of the colon, or colectomy as a way of restoring health. But Dr. Kellogg sees the question as this: Is the design of the colon at fault or are we misusing it through improper diet. Dr. Kellogg has treated more than 40,000 patients with colon problems at the Battle Creek Sanitarium during the last 10 years. He then lists 10 nonsurgical methods that he has found "most effective in relieving intestinal stasis." "1. A low protein, bulky diet consisting largely of fruits, fresh vegetables and whole grain preparations. 2. The free use of bran or agar-agar, or a combination of both at every meal. From one half ounce to an ounce of cellulose daily seems to be necessary to stimulate the bowels to normal activity... 5. In very obstinate cases the patient takes, three or four times a day, a couple of tablespoonfuls of bran and as much fruit as he can eat."

"7. In cases of colitis with a spastic condition of the descending and pelvic colon, the colon is treated by means of hot saline enemas, and afterward there is introduced into the colon, with the patient in the knee-chest position, several ounces of a liquid culture of *Bacillus bulgaricus* and *Bacillus bifidus,* to which is added a small amount of malt sugar and boiled starch, the purpose being to change the character of the bacteria growing in the colon and thus encourage the healing of the infected mucous membrane."

"Too much cannot be said in favor of bran and liquid petrolatum [½ to 1½ ounces at every meal] used in combination." Address: M.D., Battle Creek, Michigan.

384. Kellogg, John Harvey. 1917. Bran the best laxative. *Good Health* (*Battle Creek, Michigan*) 52(10):471-73. Oct.
• ***Summary:*** Bran is a laxative because it "contains a suitable proportion of cellulose, a substance that the human stomach and intestines cannot digest." The "bowel requires a considerable amount of residue to stimulate it to activity. There must be sufficient bulk to stretch the intestine." The idea that bran irritates was started by millers and manufacturers of fine bolted flour.

On the title page of this issue, just below the title, is written: "A Journal Devoted to Race Betterment. Official Organ of the Eugenics Registry. The oldest health magazine in the world–Established 1866." Address: M.D.

385. Anderson, Hans Steele. 1917. Food and cookery. Revised fourth ed. Mountain View, California, and Kansas City, Missouri: Pacific Press Publishing Assoc. 163 p. Index. 18 cm.
• ***Summary:*** This is a book about vegetarianism. Soy is mentioned on pages 45 (see Lesson 11, Soy bean-rice loaf; Soy bean-rice patties), 84, 85.

Soy-related recipes: Stewed soy beans (with whole soybeans, p. 84). Rice and soy bean loaf (with "1½ cups

© Copyright Soyinfo Center 2014

soy bean purée" and "3 tablespoons soy bean broth" plus "1 cup steamed natural rice," p. 85). Rice and soy bean patties (using the "soy-bean-rice mixture described in the preceding recipe," p. 85).

The author was born in 1877. Address: Food expert, Loma Linda Sanitarium, California.

386. Joslin, Elliott Proctor. 1917. Treatment of diabetes mellitus, with observations upon the disease based upon thirteen hundred cases. 2nd ed. enlarged and thoroughly revised. Philadelphia and New York: Lea & Febiger. xvi + 17-559 p. See p. 506-07, 512, 531. Index. 25 cm. [50* footnotes]

• ***Summary:*** For details, see the 1916 edition. Joslin recommended the use of Hepco Flour, a soybean product, in his diabetic diets. "Diabetes is a disease in which the normal utilization of carbohydrate is impaired, in consequence of which glucose is excreted in the urine." Glycosuria is a related but different condition (p. 17). "If diabetes should continue to increase in the next 30 years at the same rate statistics show it has increased in the last thirty years it would rival tuberculosis as a cause of death" (p. 19).

Section VII, titled "Foods and their composition," begins with a subsection on "Diabetic foods" which states: "The improvement in the treatment of diabetes owes much to the recent dissemination of knowledge regarding the composition of foods. To the United States Government we are indebted for an excellent monograph by Atwater and Bryant entitled 'The Chemical Composition of American Food Materials, Bulletin No. 28, Revised Edition,' which was first issued in 1906." "The State of Connecticut, from its Agricultural Experiment Station in New Haven, has also published excellent special reports on diabetic foods, and from year to year adds analyses of new preparations" (p. 503). The subsection titled "What is a diabetic food?" (p. 504-05) gives a long definition. Such foods should contain much less carbohydrate than ordinary foods of the same class, the "label should bear a correct statement of the percentages of protein, fat, and carbohydrate present," and "The amounts of the different carbohydrates present should be declared on the label, *i.e.*, starch, sucrose, levulose, lactose, etc." The diabetic patients under Joslin's care "who have done best either never use special diabetic foods or only a few varieties, such as Akoll Biscuits, Barker's Gluten Flour, Casoid Flour, Hepco Flour..."

In the subsection titled "Substitutes for bread" are discussions of bran bread, gluten bread, and "various other substances." The latter states (p. 506-07): "Soya bean is also extensively used, and probably deserves a still wider introduction into the diabetic diet. The carbohydrate in it is unassimilable. It is used in the manufacture of Hepco Flour."

A table titled "Foods and their carbohydrate content" shows: Soy-bean meal [flour] contains 42.5% protein, 19.9% fat, and 34.0% carbohydrates (p. 512). Soy beans, when used as a fresh vegetable, contain 28.0% carbohydrates (range 19.3 to 39.0%) (p. 514). A long table titled "Table of so-called diabetic foods" (p. 519-30) is similar to that in the 1916 edition. Seven daily menus for a severe diabetic appear on p. 536-37. Address: M.D., Asst. Prof. of Medicine, Harvard Medical School.

387. Kellogg, John Harvey. 1917. The new method in diabetes: The practical treatment of diabetes as conducted at the Battle Creek Sanitarium, adapted to home use, based upon the treatment of more than eleven hundred cases. Battle Creek, Michigan: Good Health Publishing Co. 177 p. See p. 64-65.

• ***Summary:*** In the chapter titled "The feeding of diabetics," the section on "Legumes" (p. 64-65) states: "The soy bean is a remarkable legume which is two-fifths fat and one-third protein, giving a food content closely resembling fat meat with the addition of a small amount of carbohydrate–about one-fourth the total food value. The soy bean is a highly valuable food for diabetics."

A table titled the "Food value of legumes" compares the nutritional composition of "peas, beans, lentils, and soy bean." The latter contains 38% "protein calories" (32% of total calories come from protein), 48.0 fats calories (40%), 34.0 carbohydrate calories (28%), and 120.0 calories per oz. A table titled "Foods containing a moderate amount of carbohydrates" (p. 81-82) includes soy bean, peanuts, nuts of all sorts, Protose, and Nuttolene. A table titled "Caloric value of diabetic foods" (p. 164) includes "Beans, Soja," and "Gluten mush."

Note: This is the earliest document seen connected in which Dr. John Harvey Kellogg writes in some detail about soybeans; he praises them. He also thanks Miss Lenna F. Cooper (Director of the Battle Creek Sanitarium School of Home Economics) and Miss Corinne King (Head Dietitian of the Sanitarium) for their excellent recipes and standard bills-of-faire. Under each recipe is given per-serving nutritional information: Weight of one serving, and calories from protein, fats, carbohydrate, and total.

The book contains many recipes which use wheat gluten: Gluten egg toast (p. 129-30), Gluten bran bread (p. 143), Gluten griddle cakes (p. 143-44), 40% gluten puffs, Gluten bread, 80% gluten puffs (p. 144-45), 40% gluten mush, Cream gluten mush (p. 158).

Also discusses: Agar-agar (p. 107), Cream of almond soup (with almond butter, p. 119), almonds (p. 63, 145), chronic intestinal toxemia as a cause of diabetes (p. 17, 27, 106-07), constipation (p. 106-07), essential features of the new method (p. 19-27, 165-67), peanuts (p. 63), bran (p. 56, 106-07, 144), fasting (p. 24-26), lentils (p. 65), nut butter (p. 121-22), vegetable proteins (p. 61-63), vegetarian diet (p. 61, 166). Address: M.D., LL.D., Chief Medical Director, Battle Creek Sanitarium, Battle Creek, Michigan.

388. Kellogg, J.H. 1917. Colon hygiene: comprising new and important facts concerning the physiology of the colon and an account of practical and successful methods of combatting intestinal inactivity and toxaemia. Battle Creek, Michigan: Good Health Publishing Co. 417 p. Index. 19 cm. "28th thousand."

• ***Summary:*** The Preface begins: "That most despised and neglected portion of the body, the colon, has in recent years been made the subject of much scientific study and research, with the result that a lively controversy has been stirred up over the question as to whether this organ should be permitted to remain a part of the "human form divine," or whether it should be cast out as worse than useless and unworthy of a place in the anatomy of the modern *genus homo.*

The Preface continues (p. 11-12): "Forty years' experience and observation in dealing with chronic invalids, and careful study of the results of the modern X-ray investigations of the colon, together with observations made at the operating table in many hundreds of cases, has convinced the writer -

"(1) That constipation with its consequences is the result of the unnatural habits in relation to diet and colon hygiene which prevail among civilized people."

Note: Dr. Kellogg observed this clearly about 30-40 years before Dr. Denis Burkitt, founder of the "fiber hypothesis."

"(3) That practically every case of constipation is curable, and in all but exceptional cases without the aid of surgery. It must be added, however, that by cure is not meant the working of such a miracle that the colon will perform its function normally without attention to diet or other means which encourage colon activity, but rather that by observing certain rules and the faithful and continuous use of safe and simple means, the colon may be made to perform its functions in a regular and efficient manner, without the use of irritating laxative drugs."

One or two rounded tablespoonsuls of sterilized bran should be taken at each meal, the amount depending upon the character of other foods taken.

The section titled "Meat eating" (p. 91-92) states: "Carnivorous animals have a short alimentary canal and a smooth colon. The movement of food stuffs along this short, smooth passage is rapid. This is necessary for the preservation of the life of the animal, as undigested remnants of meat long retained in the body necessarily undergo putrefactive changes with the production of ptomaines and poisons of a dangerous character. The digestion of meat leaves little residue, hence an animal that lives chiefly on meat has but little bulk to stimulate the bowels to activity, a condition which favors the putrefaction of undigested remnants, and this by creating an alkaline condition of the intestines soon develops constipation.

"A diet of fine-flour [white] bread and meat, with the usual concomitants of the ordinary bill of fare, would be an excellent prescription for the production of constipation. Within the last century there has been an enormous increase in the use of flesh foods in all civilized countries; and the use of modern milling processes has become almost universal. Fine flour bread and meat form a combination that is productive of prodigious harm, not only in causing constipation, but also in depriving the bones of the lime salts [calcium] which are essential for their development and maintenance. From the lack of lime salts comes decay of the teeth, and loss of the teeth leads to imperfect mastication of food. The increased consumption of flesh, and the substitution of fine-flour bread for the wheatmeal of our ancestors, are two calamities, the evil results of which upon the health of the men and women of the present generation are incalculably great."

The chapter on the "Bowel habits of uncivilized man" states (p. 377):

"In this country the percentage of patients in whom constipation is present is just the reverse of that in Uganda. Whereas in Uganda there are less than two per cent who are constipated, in civilized countries among sick people there is scarcely one in a hundred who is not constipated.

"'The rather coarse diet, largely grains and vegetables, has a favorable influence on the bowel movements. The stools are usually very large and fairly soft.'–A.H. Norton, M.D., Haiju, Korea."

Note: The word "laxative" appears on 58 pages in this book (Dr. Kellogg strongly disapproves of the use of "laxative drugs"), the word "bran" on 35 pages, the word "bulk" on 33 pages, the word "cellulose" on 25 pages, the word "constipation" on 14 pages, the term "sterilized bran" on 10 pages, and the word "laxatives" on 10 pages.

The following words do not appear in this book: "fiber" or "roughage." Address: M.D., LL.D, Superintendent of the Battle Creek Sanitarium.

389. Hall, George W. 1917? Food in war time–Vegetarian recipes for 100 inexpensive dishes. London: G. Bell and Sons, Ltd. 48 p. Reprinted in 2006 by Read Books. *

peanut crop. 53(2):75-76. Feb.
• ***Summary:*** "The peanut crop of the United States in 1908 was worth $12,000,000.00. In 1916, it was worth $40,000,000.00 and its value is growing every minute.

"Peanut butter first made at the Battle Creek Sanitarium and first introduced to the public in the pages of this journal, has become a household staple, and has helped to raise the peanut to the dignity of a food staple."

391. Kellogg, John Harvey. 1918. The soy bean. *Good Health* (*Battle Creek, Michigan*) 53(2):111. Feb.
• ***Summary:*** "A new food product has made its appearance in the United States, although up to the present time it has been little appreciated. This new food is a legume, the famous Japanese soy bean, which has for unknown centuries been a staple food in Japan and China."

"Another point in favor of the soy bean is the fact that the protein which it contains is a complete protein. That is, it is capable of fully supplying the place of lean meat, milk or eggs. It is for this reason that the Chinese and Japanese are able to prepare from the soy a very good substitute for milk. A very fine cheese is also made from the soy which is in many respects superior to ordinary cheese.

"The fat or oil of the soy is of excellent flavor and is more easily digestible than animal fats."

"The soy bean has been grown quite freely of late years in the South as a forage plant and for feeding cattle, but has been little used for human food. The chief obstacle in the way of its introduction as a food product has been the difficulty of preparing palatable dishes from it. Ordinary cooking even when prolonged left the beans so tough as to be hard to chew and unpalatable. A few months ago the interesting discovery was made that by cooking the bean under pressure it became remarkably tender and toothsome. A temperature of about 225 degrees F. is required and the cooking must be continued for four to six hours."

A recipe is then given for "pressure cooking" whole dry soybeans without a pressure cooker. "Soak the beans over night in sufficient water to cover them. Provide an empty stone jar with a tight fitting top, also prepare a strong brine by adding to a gallon of water five pounds of common salt. Put the soaked beans in the stone jar with a little salt, adding tomato sauce if desired. Screw in the top, taking care to make it tight. Immerse the jar in the brine and boil for five or six hours. The brine has a boiling temperature of about 225 degrees F. Higher temperatures may be obtained by adding chloride of calcium to the brine.

"Prepared in this way, the soy bean makes an exceedingly rich and savory dish with a meaty taste and very great staying and satisfying qualities."

Note 1. The USA entered World War I in April 1917. Starting in about 1916 there was great interest in finding alternatives to meat and dairy products, so that the latter foods could be shipped to American and allied soldiers.

Note 2. This is the earliest document seen (Oct. 2006) that uses the term "complete protein" (or "complete proteins") and also the earliest that uses this term in connection with soy.

Note 3. This is the earliest document seen (June 2013) that mentions the cooking of soybeans under pressure or in a pressure cooker. Note that the soybeans are apparently in a separate container inside the pressure cooker so that their skins do not clog the pressure-release valve. Address: M.D.

392. *Good Health* (*Battle Creek, Michigan*). 1918. The peanut. 53(5):284-85. May.
• ***Summary:*** "Although, since the writer–some twenty-five years ago [i.e., about 1893]–introduced the crushed nuts, or peanut butter, into the bill of fare of the Battle Creek Sanitarium, the use of the peanut in this form has rapidly extended and it has found its way to many thousands of tables.

"But the discovery, which has really placed the peanut upon a high pedestal among food stuffs of the finest quality, has yet to be mentioned. It is the fact that the protein of the peanut belongs to a special class very rare among the products of the vegetable kingdom, known to the chemist as 'complete protein.'"

"It has been known for some time that complete proteins were found in the almond and a few other choice nuts, but it is now known that the peanut, together with its cousin the soy bean, contains proteins of the very finest quality."

"It is certainly most comforting and reassuring to know that in the peanut, and we may add the soy bean, we have crop foods by means of which in a single season, through an organized effort in the farming communities of the southern and southwestern states, a sufficient amount of fat and protein could be produced to more than equal our annual production of meat and animal fats."

393. *Good Health* (*Battle Creek, Michigan*). 1918. Milk from beans. 53(5):285. May.
• ***Summary:*** "A recent patent application in England is based upon a process for the manufacture of artificial milk for human consumption It is claimed that a wholesome and inexpensive substitute can be made from peanuts, soy beans, sugar, water, and the mineral salts found in milk." Contains a summary of the process.

394. Kellogg, John Harvey. 1918. Method for changing and reforming the intestinal flora. *American Medicine* 24(6):432-40. June. (Vol. 13 in New Series). [2 ref]
• ***Summary:*** Contents: Introduction (buttermilk, Metchnikoff). 1. The low-protein diet. Results of recent experiments. 2. Increased intestinal activity (intestinal stasis vs. frequent bowel movements; need to supply the proper amount of bulk and lubrication). Lubrication necessary. 3. The displacement of harmful, putrefactive bacteria by

© Copyright Soyinfo Center 2014

harmless acid-forming bacteria (*B. bifidus* discovered by Tissier). Other anti-toxic ferments.

Dr. Kellogg advocates consumption of a meatless diet that is low in protein, high in carbohydrates, and high in bulk (cellulose, later called "fiber"), supplemented with *Bacillus bulgaricus* (found in buttermilk).

The article begins: "When Poehl, of St. Petersburg [Russia], more than thirty years ago, announced that the putrid stools of infants suffering form diarrhea could be made quickly to disappear by a buttermilk diet, the profession was incredulous; but within a few years the feeding of buttermilk to sick babies became almost a fad in Paris [France]. This led to a bacteriologic study of buttermilk." Grigoroff in Geneva [Switzerland] "discovered a vigorous growing acid-forming bacillus to which was later given the name *B. bulgaricus.* Tissier, then first assistant to Metchnikoff, in studying this new organism found that it possessed to a remarkable degree the property of suppressing the growth of putrefactive organisms, a property which he showed to be common to all acid-forming organisms.

"Metchnikoff soon announced this important discovery to the world, and the new bacillus was hailed as a panacea for nearly all human ills. Buttermilk germs in tablets or vials were soon being dispensed by druggists and later by milk venders [vendors] thruout the civilized world, but the results were disappointing... To change the intestinal flora is not an easy matter."

Several measures must be employed in conjunction successfully to change the intestinal flora. These are: 1. A diet that will produce in the intestine a media unfavorable for the growth of putrefactive and pathogenic organisms. 2. Increased activity of the colon. 3. The introduction into the intestine and especially the colon of large quantities of acid-forming or protective bacteria."

1. The low protein diet.–It is a matter of common observation that carbohydrates (starches and sugars) ferment, while proteins putrefy." In this respect there is a marked difference in the character of the stools of a vegetable-eating animal, like the sheep, and a carnivorous animal, like the dog. "How to get the required amount of carbohydrates into the colon is the problem." "Since the epoch-making experiments of Chittenden [at Yale in Connecticut], supplemented by those of Folin at Harvard [in Massachusetts], Hindhede of Copenhagen [Denmark] and other investigators, the sufficiency of a low-protein diet to support life and health can no longer be questioned." Folin shows that fruits, grains, and vegetables contain enough protein; flesh foods and even eggs may be excluded. At the Battle Creek Sanitarium, "for more than forty years, a low protein dietary has been employed as a prominent feature in the general therapeutic program employed in the treatment of more than one hundred thousand patients..."

2. Increased intestinal activity. To prevent the development of putrefactive bacteria, "acceleration of the food materials along the intestinal tract" is important. There is a clear relationship between intestinal stasis and resulting toxemia. Increased frequency of bowel movements is desirable, and a sign of good health and vitality. Primitive people typically have three bowel movements a day, one after every meal. "The chimpanzees and other big apes in zoological gardens move their bowels four to six times a day."

"It is usually quite easy by the methodical use of simple means to acquire the habit of three bowel movements daily and the results of this practice have always been found to be beneficial and in no way harmful. The method is quite simple. It is only necessary to supply the proper amount of bulk and lubrication required in each individual case. For giving the diet a proper amount of bulk, Nature has provided only a single food substance. This is cellulose... Cellulose is found in larger or smaller quantities in practically all vegetable foods... In fruits and fresh vegetables cellulose is found in a newly formed state in which it is very easily broken up, and it is on this account less valuable as bulk-producing material. It is easily acted upon by bacteria and broken up into gases resembling illuminating gas. The bran of cereals represents an older form of cellulose in which it has been transformed into wood and which is resistant to bacteria. Agar-agar represents a peculiar form of cellulose known as 'hemi-cellulose,' which is soluble in boiling water. This is also indigestible. All forms of cellulose are useful in giving bulk to the intestinal contents; but bran and agar-agar, known also as 'Japanese isinglass,' are most valuable.

"For efficient stimulation of the intestine it is necessary to take with the food daily from two-thirds of an ounce to one or two ounces of cellulose. This indigestible material or roughage should not be taken at a single dose but should be taken at each meal in such a way that it will be thoroly mixed with the various other food substances so that it will be equally distributed along the intestine. Care must be taken that requisite amount of cellulose is taken at every meal without exception. The omission to supply the necessary bulk for one single meal may give rise to stasis, the ill effects of which may last for several days."

Note 1. This is the earliest article seen (Sept. 2009) by Dr. John Harvey Kellogg advocating the importance of dietary fiber–which he refers to as bulk, cellulose, bran, and hemi-cellulose. He was one of the first American physicians to recognize the importance of dietary fiber and he emphasized its importance throughout his many years of teaching.

Note 2. This is the earliest document seen (Sept. 2009) by Dr. Kellogg that contains the phrase "changing the intestinal flora," or that advocates doing this.

Note 3. This is the earliest document seen (Sept. 2009) by Dr. Kellogg that mentions the *bifidus* bacterium or *B. bifidus. Bifidobacterium* is a genus of Gram-positive, anaerobic bacteria inhabiting the Gastrointestinal tract.

© Copyright Soyinfo Center 2014

Bifidobacteria are one of the major genera of bacteria that make up the gut flora, the bacteria that reside in the colon. Bifidobacteria aid in digestion, are associated with lower incidence of some allergies, and prevent some forms of tumor growth. Some bifidobacteria are used as "probiotics." Before about the 1960s, *Bifidobacterium* species were collectively referred to as "Lactobacillus bifidus". Address: M.D., Battle Creek, Michigan.

395. *Good Health* (*Battle Creek, Michigan*). 1918. Biologic living. 53(7):370. July.
• ***Summary:*** "We must return to the simpler life." Like the Greek and Roman poets, we need a life more in touch with the natural world. Address: M.D.

396. *Good Health* (*Battle Creek, Michigan*). 1918. Peanuts as a basis of food. 53(9):564. Sept.
• ***Summary:*** Discusses the remarkable growth of the peanut industry in the USA; it doubled during the past year to over $105 million. "There were 50 peanut-crushing establishments in 1916 and the oil produced was slightly over 26,000,000 gallons... Edible peanut oil is being substituted for olive and corn oils."

397. Morse, W.J. 1918. Re: Letter from Tennessee Board of Control. Letter to Mr. R.A. Oakley, USDA, Washington, DC, Nov. 18. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Dear Mr. Oakley: Relative to the attached letter from Tennessee Board of control requesting information on the growing of crops in Tennessee for both farm and vegetable products, will say that the soy bean has given most excellent results, both for forage and for food. It might be well to call the Board's attention to the work being done by the Nashville Agricultural and Normal Institute located at Madison, Tennessee. This Institute has a very large farm and produces practically all of its food for the members of the Institute as well as the Sanitarium.

"The Horticulturist in charge of the Institute is Prof. Floyd Brailliar, who has done a considerable amount of work with different food products from the soy bean. At the present time they have a factory for canning several different soy products from the soy beans which are grown on their farm.

"Of course, the Cowpea is another crop which may be used both for forage and for food. The Blackeye have given very good results in Tennessee and no doubt would furnish them with a great amount of food. I am attaching here with our available publications on the Soy Bean and Cowpea.

"Very truly yours,..."

Note: This is the earliest document seen (Dec. 2013) that mentions soy in connection with the Nashville Agricultural Normal Institute (NANI, in Madison, Tennessee; named Madison College after 1937).

Location: National Archives, College Park, Maryland. Record group 54–Bureau of Plant Industry, Soils and Agricultural Engineering. Subgroup–Div. of Forage Crops and Diseases. Series–General Correspondence, 1905-29. Box 92–Morgan-Morse.

Sent to Soyinfo Center by Matthew Roth of Rutgers Univ., March 2012. Address: Forage-Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

398. *Madison Survey* (*Madison, Tennessee*). 1919. The triple alliance. 1(1):2. Feb. 26.
• ***Summary:*** "The triple alliance is complete when a health food factory is conducted in connection with a school and a sanitarium, and the three are located on the land...

"Never in the history of our country has there been such a demand for vegetable meats. Scientists are experimenting with new vegetable products and new processes of food combination. The school at Madison has had its experience in raising soy bean and other leguminous crops, and has recently begun the manufacture of health foods."

Note: *The Madison Survey* began publication on 26 Feb. 1919 and was still being published quarterly (circulation 800+) in March 1993.

399. *Madison Survey* (*The*) (*Madison, Tennessee*). 1919. Serial/periodical. Madison, Tennessee: The Nashville Agricultural Normal Institute (later renamed Madison College). Vol. 1, No. 1. 26 Feb. 1919. Frequency: Weekly.
• ***Summary:*** See next page. This periodical, printed by the Madison College Printing Department, documents the college's pioneering work with soyfoods, soybeans, vegetarianism, and wheat gluten–as well as with a totally new kind of education. The school, founded in 1904 by seven Seventh-day Adventist friends, was located about 10 miles north of Nashville on the Cumberland River. It was known initially as the Nashville Agricultural Normal Institute (NANI). It did not take the name "Madison College" until 1937.

A 1936 article in *The Madison Survey* (July 15, p. 116) states: "Long before the Printing Department assumed its present proportions, it began printing and circulating the little sheet which for nineteen years has been making its weekly visits to the homes of thousands. The circulation has varied from seven thousand to ten thousand copies each issue. It literally goes to the ends of the earth... The message of the Survey has been constant through the years. It is a message to lay church members to train for more efficient service to the Master. It has been the advocate of rural life, rural education, rural health centers. It speaks for the school and all its activities at Madison.

By April 1939 *The Madison Survey*, which was published twice a month, had a mailing list of 14,500. It was mailed to every U.S. state and to 44 foreign countries.

Concerning the title and subtitle of the newsletter on page 1, before 19 April 1939 the subtitle read: "Published by

VOL. I MARCH 5, 1919 No. 2

The New School

THE War emphasized the importance of a change in educational methods. Intensive training, as demonstrated in the preparation of soldiers, has laid bare the faults of pre-war methods in many institutions.

Practical subjects are coming to the front, and all unnecessary matter is being weeded out. "A genuine change of thoughts and methods of teaching" was called for a number of years ago, and as our younger schools were started these were told "that in our educational work we are not to follow the methods that have been adopted in our older established schools. There is among us, too much clinging to old customs, and because of this we are far behind where we should be."

We have "laid yokes on the shoulders of our students." These yokes are prolonged courses of instruction, packed and crowded to the limit with a large amount of subject matter that the student cannot, and never should use in after life. "If we had a thousand years before us, such a depth of knowledge would be uncalled for."

❖

STUDENTS are baited on by degrees and diplomas to spend year after year in study when they should have a "speedy preparation" and hasten out into the world to do their God-appointed tasks.

"I hope that no one will receive the impression from any words I have written that the standard of the school is to be in any way lowered. There should be most diligent and thorough education in our schools." We are not to cheapen education, but we are to sift out the chaff and lay greater emphasis upon essentials.

❖

ATTENTION has been called especially to the need of strengthening the courses of instruction and improving the methods. *The New York Independent* of January 28, 1919, contains an article concerning the opening of an educational institution in New York City, called "a novel departure from traditional methods." The qualifications for entrance are not "so many units of language, mathematics, and science, dutifully acquired." Nobody is debarred "for lack of a college or high school diploma."

Describing the methods of this "novel departure," *The Independent* says, "It will try to get rid of the perfunctory reading, the mere listening to lectures, and the mechanical examinations of the ordinary university. The teaching will be personal and informal, and 'field work' is to be a special feature."

❖

THAT it is Madison's effort to keep abreast of the times in the development of practical education and intensive training is shown by recent agitation. The school has been studying better methods of work in its manual departments, and endeavoring to determine how to place all manual work on a stronger educational basis.

Manual work should be an expression of

© Copyright Soyinfo Center 2014

Nashville Agricultural Normal Institute, Madison College, Tennessee." By 19 April 1939 it read: "Published by Madison College [Nashville Agricultural Normal Institute]." The words "Madison College, Tennessee" now appeared on the same line as the volume and issue number, and the date.

400. *Madison Survey* (*Madison, Tennessee*). 1919. Beans. 1(2):5. March 5.
• ***Summary:*** "During the past two years the school [Nashville Agricultural Normal Institute, renamed Madison College in 1937] has tested many varieties of soy bean, arriving at the following conclusions: *Ito San* and *Manchu* are perhaps the earliest edible seeded varieties, but the plants are too small to be profitable for a general hay crop.

"*Haberlandt* is a heavy yielder of the edible seeded varieties.

"*Mammoth Yellow* proves the best general bean for this locality.

"*Peking*, the black seeded variety, produces the most good hay.

"*Virginia* grows full six feet tall, is a semi-climber, and so goes well with ensilage corn. It is a very heavy seeder, but by most people is considered too strong in flavor for human food.

"The soy bean lima, or *Hito* [sic, probably *Hahto,* see Pelton 1920], is an exceptionally good garden vegetable, making a very heavy yield of seed. The green beans are as large as a small lima, and many people think they have a better flavor."

Note 1. The school got these soybean varieties from W.J. Morse of the USDA. (See *Madison Survey,* 14 May 1919, p. 4, and 22 Oct. 1919, p. 4).

Note 2. This is the earliest issue of the *Madison Survey* and the earliest document (Aug. 2011) seen that mentions the "soy bean lima" (see also 14 May 1919 issue).

401. *Madison Survey* (*Madison, Tennessee*). 1919. Seven reasons for not eating meat. 1(2):4. March 5.
• ***Summary:*** "People discarding the use of flesh foods, and physicians prescribing a non-flesh dietary are often asked to give their reasons.

"1. Muscular strength does not depend on the use of flesh food. This fact is attested by millions who know only a non-flesh diet. Had meat been essential, it would have been a part of man's prescribed diet in the beginning.

"Showing that, biologically, man is not a carnivorous animal, Cuvier, the great naturalist, says that the natural food of man, judging from his structure, appears to consist of fruits, roots, and the succulent parts of vegetables. And this is corroborated by the Scripture (Genesis 1: 28) that originally man's diet was fruit, grains, and nuts.

"2. The meat eater runs a heavy risk of overloading his system with protein. Chittenden and others have proved that the proteid requirements of the human body are so small that it is difficult to add animal flesh to other ordinary foods without going beyond the prescribed limit. Graham Lusk tells us that the stimulating effect of flesh foods, due to the poisons and toxins they contain, tempt one to over-eat as he is not tempted by vegetable proteins.

"3. Meat-eating shortens the life by introducing toxins and poisons. Over-loading the system with protein in any form is a frequent cause of disease, but that the protein of meat brings added burdens to the eliminative organs is the testimony of Doctor Bishop, recognized authority on arteriosclerosis,–premature old age,–who says, 'Vegetable protein foods are free from toxins with which flesh foods abound.' Doctor Bishop insists that a diet free from animal proteins is the most essential part of his treatment for hardening of the blood vessels.

"4. Meat eating is an active cause of tuberculosis and cancer. 'People are continually eating flesh that is filled with tuberculous and cancerous germs. Tuberculosis, cancer, and other fatal diseases are thus communicated.'

"The American Medical Journal is authority for the statement that, in view of the diseased condition of animals, practically all meat on the market contains more or less disease.

"Bulkley, an authority on cancer, boldly announces that flesh foods are the most important cause of cancer, and his treatment consists 'in an absolutely vegetarian diet.'

"5. Meat eaters are more susceptible to fatigue than non-meat eaters. So says Buttner. The reason is apparent, for the meat eater has added to the usual work of his eliminative organs that accumulation of animal poisons that was on its way to excretion when the animal was slaughtered.

"6. A diet of grains, fruits, nuts, and vegetables contains all the nutritive properties necessary to make good blood. A flesh diet is stimulating, and creates an appetite for condiments, tobacco, and strong drink.

"7. A meat diet is anything but economical. That it requires over thirty pounds of corn to produce one pound of beefsteak, has been determined by Professor Henry of the University of Wisconsin."

402. *Good Health* (*Battle Creek, Michigan*). 1919. The protein of the soy bean. 54(3):185. March.
• ***Summary:*** "The extensive use made of the soy bean in Japan and China as a food has led in recent years to a careful study of its composition, both by chemical methods and by the new method of biological analysis through feeding experiments developed by Mendel and Osborne, Funk, McCollum and others. These experiments have shown that the protein of the soy bean is highly superior in character."

403. *Madison Survey* (*Madison, Tennessee*). 1919. Sweet clover. 1(9):2. April 23.
• ***Summary:*** "Early ensilage corn and soy beans were planted the first week in April."

404. Nashville Agricultural Normal Institute, Food Department. 1919. Re: Soy bean and peanut products. Letter to Mr. George Washington Carver, Tuskegee Normal and Agricultural Institute, Tuskegee, Alabama, April 29. 1 p. Typed, without signature on letterhead. [1 ref]

• ***Summary:*** "Yours of April 10 received. We have sent you two cans of our Soy bean product. We also can soy beans in three ways, plain, with tomato, and with nut meat.

"We do not know as anything we have would do to exhibit except our soy bean flour, and that you say you make yourself. We have never seen a sample of the milk though we have tried to make it many times. We would be much pleased to receive a little sample of you. Do you think you can make a success of producing milk from the soy bean? I hope the soy bean food reaches you O.K." Initials Dp or Sp.

Handwritten note on bottom of letter: "Is the wood stain you made from the soy bean of much use? Would be pleased to hear how you are succeeding with these experiments.

Note 1. Names printed at the top of this letterhead are E.A. Sutherland, M.D., N.H. Druillard, W.F. Rocke [farm manager of the Madison school], and M. Bessie De Graw.

Note 2. Letter from Sam Yoshimura. 1981. March 19. When Sam attended Madison College from 1937-1943 Nut Meat was made from peanuts, water, and seasonings.

Location: Library of Congress, Washington, DC. Microfilm of The George Washington Carver Papers in the Tuskegee Institute Archives, Roll 6 #0152. Address: Madison, Tennessee (near Nashville). Phone: Walnut 1789-W.

405. Kellogg, John H. 1919. The peanut a great food producer. *Good Health* (*Battle Creek, Michigan*) 54(4):197. April.

• ***Summary:*** "The peanut is making great progress these days as a food resource, and deservedly so." "But the superior character of the peanut as a food producer becomes still more apparent when compared with meat production. To produce a fat steer requires two acres of pasture land and two years, or the equivalent of four acres, to produce 75 lb of protein and two hundred and forty lb of fat, or 18.75 lb of protein and 60 lb of fat for one acre.

"In other words, the peanut produces ten times as much protein and five times as much fat to the acre as can be obtained from one acre of pasture in the form of beef, and this not taking into account the corn and other concentrates fed to complete the fattening for market."

"Sometimes the farmer turns his pigs into the peanut field instead of harvesting the nuts. He imagines that he is in so doing achieving a wonderful economy, whereas he is wasting at least nine-tenths of the food which he has toiled to produce. It will take from ten to twenty lb to make a pound of pork; and the value of the pork as a foodstuff when produced, will be less than that of an equal weight of peanuts."

406. **Product Name:** Nut Meat (Made from Peanuts).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1919 April.
Ingredients: Peanuts, water, seasonings.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Nashville Agricultural Normal Institute, Food Department. 1919. April 29. Letter to Mr. George Washington Carver, Tuskegee Normal and Agricultural Institute, Tuskegee, Alabama. "Yours of April 10 received. We have sent you two cans of our Soy bean product. We also can soy beans in three ways, plain, with tomato, and with nut meat."

Madison Survey. 1919. July 16. p. 4 "The Food Factory." "A visitor finds the big oven full of crackers, and hundreds of pounds on the cooling racks... The steam cooker is filled with cans of nut meat; mills at the south end of the room are grinding peanut butter, hundreds of pounds; and the blancher, tended by one of the young women, is handling peanuts, not by the pound but by the ton."

Madison Survey. 1922. March 8. p. 3. "Madison Food Factory products." "The food factory puts out Nut Meat, Savory Meat, and Soy Bean Meat."

Note: Madison Foods started in 1918. The first manager and treasurer was Mrs. Nellie Druillard (affectionately called "Mother D"). Mr. and Mrs. Andrew Wheeler were the first in charge of food production.

407. **Product Name:** Peanut Butter.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1919 April.
Ingredients: Incl. peanuts.
New Product–Documentation: Madison Survey. 1919. July 16. p. 4 "The Food Factory." "A visitor finds the big oven full of crackers, and hundreds of pounds on the cooling racks... The steam cooker is filled with cans of nut meat; mills at the south end of the room are grinding peanut butter, hundreds of pounds; and the blancher, tended by one of the young women, is handling peanuts, not by the pound but by the ton."

Madison Survey. 1922. June 14. p. 3. "The Food Factory." "A man and his wife, members of the faculty, have charge of the food department, where are manufactured various nut and soy bean meats, malted nuts..., peanut butter, and other health foods."

Note: Madison Foods started in 1918. The first manager and treasurer was Mrs. Nellie Druillard (affectionately called "Mother D"). Mr. and Mrs. Andrew Wheeler were the first in charge of food production.

408. *Madison Survey* (*Madison, Tennessee*). 1919. From the farm. 1(11):3. May 7.
• ***Summary:*** "The first soy beans for grain and seed were planted the 23rd of April. This is rather earlier than previous plantings of the main crop. The object is to have the beans mature before the fall rains."

409. *Madison Survey* (*Madison, Tennessee*). 1919. Beans. 1(12):4. May 14.
• ***Summary:*** "From the United States Department of Agriculture, the school has received one and one-half bushels of the soy bean lima [for use as a green vegetable], description of which was given earlier in *The Survey* [probably March 5, p. 5]. It has received, also, 15 pounds of a new, edible, yellow-seeded soy bean [probably Hahto or perhaps Easy Cook], similar to Mammoth Yellow, but better for table use as it cooks more readily than any other soy bean known. Of this yellow-seeded soy bean Professor [sic, Mr.] Morse writes that the Department was testing the cooking qualities of about 800 varieties of soy beans when it discovered that this particular bean cooked in about twenty minutes, while other soy beans needed to be cooked from three to six hours."

410. *Madison Survey* (*Madison, Tennessee*). 1919. The city problem. 1(14):1-3. May 28.
• ***Summary:*** "Come out of the cities has been Madison's slogan. By precept and example this call has been given for the past fifteen years." Ellen G. White, leader of the Seventh-day Adventist movement, has said: "In many cities it is advisable for a restaurant to be connected with treatment rooms. The two can co-operate in upholding right principles."

Madison has established a vegetarian cafeteria in nearby Nashville, Tennessee. "Miss Mabel Robinson gave a number of interesting features of the cafeteria work. She told also of the training course for cafeteria workers, and of the need of help in the form of good bakers, efficient cooks, and people capable of presenting the diet question to enquirers."

411. *Madison Survey* (*Madison, Tennessee*). 1919. Instead of meat. 1(15):3. June 4.
• ***Summary:*** "That it is not necessary to take nourishment in the form of flesh meats is demonstrated all about us. The government is spending thousands of dollars to place before people the food value of different vegetables and other products of the soil. Nothing illustrates this better than the agitation of the soy bean question. Here is an edible seed, that until a few years ago, was practically unknown to our country. The Orient was feeding its multitudes before we were awake to the value of a large class of legumes."

"Miss McKay has returned to Madison after several months at Carthage, Missouri, and she tells of the desire she met from people of all classes to learn how to prepare health foods. In response to urgent requests, she held classes and gave demonstrations. When people wanted to know where to buy foods that will take the place of meat, she told them of the Madison food factory, and of its vegetarian meat and various soy bean products."

412. *Good Health* (*Battle Creek, Michigan*). 1919. Vegetarian Orientals. 54(6):307. June.
• ***Summary:*** "Confucius, the great Chinese philosopher, said: 'I have never known the taste of meat.' And through all the centuries the Chinaman has known from this fact that meat is not essential for the development of mind or body, and so has eaten little meat. Millions of Chinese are consistent Buddhists and refuse to eat flesh of any sort."

A Chinese poem, titled "The Cow's Lament," reads: "When I'm a man and you a cow.

"Then I'll treat you as you treat me now."

"The Chinese and the Japanese, as well as our own learned chemists and physiologists, have demonstrated the competency of the soy bean to take the place of meat."

413. *Good Health* (*Battle Creek, Michigan*). 1919. What we lose in rejecting bran. 54(6):307-08. June.
• ***Summary:*** This article begins: "The bran of wheat contains the chief store of some of the most precious elements of the grain." It is the chief source of lime [calcium] as well as of roughage. Dr. Kellogg recommends that we consume "entire wheat" [whole wheat] in the form of bread.

414. *Madison Survey* (*Madison, Tennessee*). 1919. The food factory. 1(21):4. July 16.
• ***Summary:*** "A visitor finds the big oven full of crackers, and hundreds of pounds on the cooling racks... The steam cooker is filled with cans of nut meat; mills at the south end of the room are grinding peanut butter, hundreds of pounds; and the blancher, tended by one of the young women, is handling peanuts, not by the pound but by the ton."

Note 1. Though soy beans are not mentioned, they were being canned at the food factory by April 1919.

Note 2. Some of this food is probably going to the Nashville Cafeteria.

415. *Madison Survey* (*Madison, Tennessee*). 1919. The Atlanta cafeteria. 1(21):3. July 16.
• ***Summary:*** Brother and Sister Book, Seventh-day Adventists, have recently opened a small vegetarian cafeteria in Atlanta, Georgia. It "gives opportunity to reach people who are anxious for a scientific vegetarian diet."

416. *Madison Survey* (*Madison, Tennessee*). 1919. Madison activities. 1(23):3. July 30.
• ***Summary:*** "From the bimonthly report of department activities, read at Union Meeting on the thirteenth of July, the

© Copyright Soyinfo Center 2014

following data is gleaned:... Ensilage corn has been planted on the barley stubble, and soy beans on the oat stubble, after discing with a tractor.

"Products of the food factory are becoming known. The largest order during the week called for over $400.00 worth of foods, to be used at one of the state meetings.

"Six to ten quarts of goats milk is being used daily by members of the school family."

Note: This is the earliest document seen (Feb. 2003) that mentions the use of a tractor for soybean production.

417. Palen, L.S. 1919. The romance of the soya bean. *Asia and the Americas* 19(1):68-74. July. Illust.

• ***Summary:*** The author, who begins by acknowledging his indebtedness to Dr. Yamei Kin, Dr. John Harvey Kellogg, and Mr. W.J. Morse for much of the material in this article, gives an overview of the soya bean worldwide. The article contains excellent photos (many by Adachi): (1) Stacks of soya bean cake in open storage on Dairen wharves, South Manchuria. (2) Horses plowing soybean fields in North Manchuria. (3) Modern machinery [a huge steam-powered tractor] used in bean cultivation in remote parts of Manchuria where foreign interests are involved. A Western man and woman ride horses nearby. Caption: "To the Manchurian farmer, with his laborious methods of hand cutting and hand winnowing, the introduction of modern Western farming methods would spell many-fold prosperity." Note: This is the earliest document seen (Feb. 2003) that shows a photo of a tractor in connection with soybeans. (4) Stacks of soybeans piled high in sacks in Manchuria as far as the eye can see. (5) Soybeans stored in huge cylindrical, 20-foot-high osier bins, each covered with a conical top.

Soy oil is purified and flavored with an admixture of olive oil for use as a salad oil. It also forms the basis of some of our butter and lard substitutes. "What Mr. Li Yu-ying accomplished in Paris in the establishment of a Laboratory of Research and of a factory for the production of all the products derived from the soya has been the forerunner of activity on the part of certain independent Chinese companies in America and of government and private investigations."

"In general the use of whole soya beans has not been attended with much success because of the ever present flavor of the oil content and because, with the ordinary method of cooking, they remain hard and unpalatable; but it has been found that cooking at a temperature somewhat above the boiling point, say from 220 to 230 degrees, breaks up the cellulose structure and develops a richness of flavor that is not obtainable with the lower temperature."

"By far the most extensive use of the soya is in the products manufactured from it. And it is here that Dr. Yamei Kin, the talented Chinese physician, is making her chief studies under the direction of the Pure Foods Division of the Department of Agriculture, with the purpose of spreading a knowledge of the soya among Americans. For convenience of consideration the products studied may be divided into sauces, curds, cheeses and milk.

"Of the sauces the liquid form is already familiar, although unrecognized, perhaps, by a large percentage of Occidentals through the work of early English traders in bringing back the base of the now famous Lea and Perrins Worcestershire Sauce. This original Chinese *shi-yu* was highly spiced and became a well recognized adjunct to many an English meal. Following the example of Lea and Perrins, others have put out sauces with the same base without, however, attaining the same success, because the makers did not understand that there are many kinds of soya sauce. While they are all made by the same ferments and in the same general way, they differ very greatly in quality according to the locality and to the manufacturer, just as wine, though made from the identical kind of grape and by the same process of fermentation, may be a very different article from different hands. It takes several months to make this liquid form of sauce, while the best kind requires a year or more to attain the finest flavor and mellowness. The hot condiment added by Lea and Perrins is not favored by the Chinese, since according to their taste it detracts from a wide use of the soya sauce."

Tofu (spelled to-fu) is discussed in detail. "There are records to show that it has been used since at least nine hundred years B.C. *To-fu* making is a staple industry in every little community. Usually it is done at night so that the fresh curd will be ready for the morning demand in the market, or for peddling around the streets. It provides, for the fraction of a cent, the indispensable equivalent of meat and affords very often the explanation of how the Chinese laborer does so much work on what is purely vegetable diet, popularly supposed not to contain much protein. *To-fu* is made in many different forms and the bean stalls occupy quite as large and prominent places in the city market as the fish and meat stalls...

"Cheeses are also made from the growth of cheese-making moulds on *tofu.* The Chinese resident in America regularly import a certain highly flavored red bean cheese for their own use...

"Perhaps the greatest contribution of the soya to the life of the Occident will be in its form of milk. Back in the golden era of peace there had been established in London a soya bean milk factory which was prepared to place its product regularly on the market, and there were said to be plans consummated for the erection of two others at Manchester and Liverpool; but of what the development has been we have no definite information. In Shanghai, Peking and Dalny Chinese companies are supplying hospitals and individuals with an 8 or 10 ounce bottle of concentrated milk per day at a cost of $1.00 Mex per month.

"In its competition with the cow the legume has in its favor the following facts: Soya milk can be produced with

© Copyright Soyinfo Center 2014

less contamination; it is tuberculosis-free; its caseins break down much more readily than the caseins of cows' milk and do not form curds in the stomach in the same degree...

"By those who advocate and urge a vegetarian diet, a very strong bill can be drawn in favor of this oriental substitute. In these days when war has thrown new light on many of our life problems, it will be easier to secure acceptance for their contention that the world must for both economic and physiological reasons adopt the biological diet. It has been calculated that, roughly speaking, it takes 100 pounds of foodstuffs to produce 3 pounds of beef and that a given acreage of land can support five times the population if the necessary protein can be derived directly from vegetable sources rather than going through the roundabout way of an animal form, imposing upon the body the burdens incident to taking in the toxines [toxins] resultant from the catabolism of the cells of the animal, and from possible putrefaction. In China the Buddhist priests and people who enter the various temperance societies all depend on varieties of *to-fu."*

418. *Madison Survey* (*Madison, Tennessee*). 1919. City and rural work co-ordinated. 1(27):4. Aug. 27.
• ***Summary:*** Nashville is within easy reach of the school and the vegetarian cafeteria there is operated by its Seventh-day Adventist students. "It is nearly two years since the effort began. The misses Robinson and Stout were the pioneers, assisted in the beginning by Brother Guy Jenkins. Later Miss McKay united with the young women, and Mrs. Gotzian, for years a friend of Southern self-supporting enterprises, and others assisted financially in equipping new quarters for the cafeteria." Some 120 to 150 people are fed daily.

"The cafeteria is an educational institution quietly yet surely training the appetites of its patrons. For instance, it stresses the use of whole wheat or graham bread, and at present only two or three patrons even ask for white bread. Serving no meat, no tea, no coffee, selecting the combination of foods for those who are not well, it is a real factor in the proclamation of the truth of healthful living, called 'the right arm of the message.'"

The treatment rooms in Nashville also serve a meatless diet.

419. *Madison Survey* (*Madison, Tennessee*). 1919. Asheville Cafeteria. 1(33):3. Oct. 8.
• ***Summary:*** "When one walks into the Asheville Vegetarian Cafeteria [in North Carolina], he finds himself glancing about the walls and reading the striking notices and signs posted in conspicuous places. The cafeteria is conducted by I.E. Seibert and wife, formerly of California, and once Madison students. The room is centrally located, and is easily pointed out because it is opposite the post office."

One of the posters reads: "I have eaten the cow that ate the bran, And I felt like a cannibal man. I chewed up corpses, fresh and stale, And washed the down with a bottle of ale..."

420. *Madison Survey* (*Madison, Tennessee*). 1919. Soy bean lima. 1(35):4. Oct. 22.
• ***Summary:*** "Professor [sic, Mr.] W.J. Morse, forage crop expert of the United States Department of Agriculture, spent the day with the School family not long ago, and soy bean limas, one of the new variety of beans which he introduced into the country, were served for dinner that day. Professor Morse sent us the seed last spring, about one-half bushel of it. This was the largest amount of seed furnished to any one outside Government experiment stations, consequently the School will have the largest stock of seed this fall to be found anywhere in this country aside from that grown directly by the Government.

"The soy bean lima as it grows is hard to shell, but Government tests demonstrate that if the green beans are immersed in boiling water for three to five minutes they shell easily. We have tried it, and it is true. This bean is about the size of the Sieva lima, or the Southern butter bean, and it is the mildest and best flavored of all soy beans." Note: This is the earliest English-language document seen (Jan. 2009) that uses the word "Sieva" in connection with lima beans, or that uses the term "Sieva lima" to refer to a type of butter beans.

421. *Madison Survey* (*Madison, Tennessee*). 1919. Adzuki beans. 1(35):4. Oct. 22.
• ***Summary:*** "The School [Nashville Agricultural Normal Institute, renamed Madison College in 1937] has been experimenting with a half dozen varieties of the Chinese bean, the Adzuki, which is harvested the latter part of September. One variety proves of special merit because it carries the pods well above the ground so that it can be mown with a machine without cutting the pods, and it does not scatter seed easily. It cooks readily, has a flavor somewhat similar to lentil, and is very agreeable to those who have tasted it."

422. *Madison Survey* (*Madison, Tennessee*). 1919. Food factory. 1(38):6. Nov. 12.
• ***Summary:*** It "has been necessary to raise the price of foods. It is our purpose to make healthful foods, and since this is not a money-making enterprise, prices will be kept as low as possible."

423. *Madison Survey* (*Madison, Tennessee*). 1919. City work. 1(38):6. Nov. 12.
• ***Summary:*** "The Nashville Cafeteria reports having the largest patronage in the history of its work, serving something over two-hundred [vegetarian] dinners on Tuesday. Thursday evening Misses Stout and Robinson of the cafeteria force assisted in a food demonstration at the tent on North Nashville, and there has come to us a neat folder containing sample menus, recipes, and suggestive food

© Copyright Soyinfo Center 2014

combinations given to the public at this demonstration."

424. Hansen, I.A.; Miller, H.W. 1919. Medical missionary department: What shall we eat?–No. 2. *Advent Review and Sabbath Herald* 96(49):29-30. Dec. 4.
• ***Summary:*** "White bread, white rice, and similar demineralized foods have certainly weighed in the balances and found wanting. Analysis of whole grain shows it to contain elements corresponding quite closely to those found in the structures of the body..."

"Secure natural brown rice from the grocers and cook the cereal until well done, letting the water boil away so as to leave it fairly dry and not 'soupy.' Cook whole wheat in a fireless cooker overnight." Address: 1. Secretary; 2. M.D., Asst. Secretary: General Conference Medical, Takoma Park, Maryland.

425. *Madison Survey* (*Madison, Tennessee*). 1919. Medical missionary volunteer activities. 1(43):1-3. Dec. 17.
• ***Summary:*** "A group of workers, including Miss McKay, formerly a member of the Madison faculty, has opened a cafeteria in Birmingham, Alabama. Their card reads: Vegetarian Cafeteria–Number 3. Health Foods. Home Cooking. 117 1-2 N 21st St., Birmingham, Ala. This group has purchased a farm as a rural base for city work."

426. *Good Health* (*Battle Creek, Michigan*). 1919. Biologic living. 54(12):681. Dec.
• ***Summary:*** An outline of the main tenets of Biologic living on the front page of this issue. It begins: "Biologic living is simple, sane, scientific, successful and satisfactory."

427. Kellogg, John Harvey. 1919. The new method in diabetes: The practical treatment of diabetes as conducted at the Battle Creek Sanitarium, adapted to home use, based upon the treatment of more than eleven hundred cases. Battle Creek, Michigan: The Modern Medicine Publishing Co. 195 p. See p. 64-65, 124-26, 166. Illust. Index. 19 cm.
• ***Summary:*** Although not indicated on title page, this is a revision of the 1917 edition. The information on the soya bean in the chapter titled "The feeding of diabetics" is identical to that found in the 1917 edition of this book. But the chapter titled "Recipes for foods suitable for diabetics" (p. 119-84) contains the earliest soyfoods recipes seen published by any Seventh-day Adventist. In this chapter are recipes for "Cream of soy bean soup" and "Soy bean and tomato soup" (p. 124-25; each with "soy bean purée" [cooked ground soybeans]), and "Soy bean salad" (with "½ cup cooked soy beans," p. 166).

Note 1. This is the earliest book seen (Oct. 2004) written by a Seventh-day Adventist that contains one or more recipes using soybeans or soy ingredients.

Note 2. This is the earliest English-language document seen (June 2013) that uses the term "cooked soy beans" (or "cooked soy-beans") to refer to whole soybeans that have been cooked and ground.

The book contains many recipes which use wheat gluten: Gluten egg toast (p. 152), Gluten bread, Gluten bran bread (p. 156), Gluten bran puffs, Gluten griddle cakes, 40% gluten puffs (p. 157-58), 80% gluten puffs, Gluten wafers (p. 158), Cream of gluten gruel, and Gluten mush (p. 170).

Also discusses: Almonds, peanuts (p. 63), bran (p. 56, 170), lentils (p. 174), vegetarian diet (p. 61). Address: Chief Medical Director of the Battle Creek Sanitarium, Battle Creek, Michigan.

428. Smith, Joseph Russell. 1919. The world's food resources. New York, NY: Henry Holt and Company. 634 p. See pages 326-27, 360-65. [1 ref]
• ***Summary:*** Contains a brief overview of the soybean, soybean production, and soybeans as a food product, with several long excerpts from Dr. J.H. Kellogg, and the *USDA Year Book of Agriculture* (about food uses, including shoyu or soy sauce).

A photo shows "Soy bean curds and cheeses in a Japanese factory," in large earthenware containers (p. 362). Note: This photo of "curds and cheeses," taken by Frank N. Meyer, shows the production of fermented tofu, probably in a Chinese factory (See: {1} Morse 1918. "The Soy-bean Industry in the United States." Plate IV, fig. 2; {2} Piper & Morse. 1923. *The Soybean.* p. 242).

Concerning use of food resources, in the USA and Canada, the chief goal of agriculture is not to feed humans but to feed animals. This was true even in the food crisis of 1918 [at the end of World War I]. About 5,191 million bushels of grain are now grown in the USA; in descending order of importance (in million bushels) they are corn (2,863), oats (1,422), wheat (643), barley (195), rye (54), and buckwheat (14). Of this total of 5,191 million, the American people eat less than 550 million (14.1%). Adding the 340 million bu exported, the total amount used for human food was 900 million bu (17.3%). "The rest, 4,300 million, went to our four-footed brethren, who outnumber us and whose food requirements, because of their greater size, are several times our own.

"In addition to the grain, they get all of the 85,360,000 tons of hay grown on 54,618,500 acres. (More than ten per cent of the half billion acres under cultivation in the United States). They also roam over millions of acres eating all the grass. It is therefore plain that more than four-fifths [80%] of the produce of American agriculture, even in 1918 [a war year], went to feed beasts." Address: Prof. of Geography, Columbia Univ., New York.

429. *Good Health* (*Battle Creek, Michigan*). 1920. Vegetarian meat extract. 55(1):58. Jan.
• ***Summary:*** Yeast is used in the manufacture of beer and other fermented liquors; it converts the starch of grain into

© Copyright Soyinfo Center 2014

alcohol. So much yeast is used by the industry that it has become a major waste product. However, yeast is rich in proteins and in flavors practically identical with those found in meat.

A recent article in *Scientific American* (1919 Aug. 23, p. 191) discusses the process of utilizing yeast. "The enzyme, endo-tryptase, breaks down the complex protein molecule into simpler compounds–albumoses, peptones, amido [amino] acids, and ammonia in consecutive order. If the process is stopped by sterilizing at 70ºC, thus destroying the enzymes at a point at which peptones and amido acids predominate, the product becomes a splendid food... When well made, it has the same taste as beef extract and is easily digested. The sale as 'vegetable extract' has been large in England."

430. U.S. Bureau of the Census. 1920. Joseph Lambert in the 1920 U.S. Census in Cincinnati, Ohio. Cincinnati, Hamilton County, Ohio. Enumeration District No. 72. House No. 802. Dwelling No. 39.

• ***Summary:*** This census record, enumerated on 5 Jan. 1920, shows that Joseph Lambert is living with his wife, Daisy in Cincinnati, Ohio. He is age 54, married, and born in Massachusetts. His father was born in Canada and his mother in Ireland. Both of his parents spoke English as their mother tongue. Occupation: Machinist.

His wife is age 44, born in Missouri. Her parents appear to have both been born in Pennsylvania. Her occupation: None.

431. *Good Health* (*Battle Creek, Michigan*). 1920. The soy bean. 55(2):71-73. Feb.

• ***Summary:*** Contents: Introduction. Soy-bean milk. Soy-bean cheese. Soy sauce. Soy-bean sprouts." Photos show: (1) A typical soy bean plant with leaves and pods. (2) A large basket full of "sprouted soy beans, which are sold and used as a green vegetable" [in China].* (3) "Large blocks of freshly made bean curd, 'Tofu' [on a round wooden table], ready to be cut up into squares and sold to the housewife."*

Note 1. This article consists mainly of long quotations from the following article: Morse, W.J. 1918. "The soy-bean industry in the United States." *Yearbook of the U.S. Department of Agriculture* p. 101-11. For the year 1917. * = Photographed by Frank N. Meyer, USDA Plant Explorer.

Note 2. The cover of this issue reads: "Edited by John Harvey Kellogg, MD, LLD. Devoted to race betterment and biologic living."

432. Kellogg, John Harvey. 1920. Vegetarianism: The kindly fruits of the earth. *Arbitrator* (*The*) 2(9):3-6. Feb.

• ***Summary:*** Presents various arguments in favor of a biologic or non-flesh [later called "vegetarian"] diet. "Within the last fifty years there has been a veritable revolution in matters pertaining to diet. Seventy-five years ago, when Sylvester Graham was making his famous campaign for dietetic righteousness, he was not only made the butt of ridicule by the laity, but was vigorously combated by scientific men of all classes.

"It was true that Cuvier, Bell, Gassendi, and scores of other naturalists had testified to the fact that a man was near relative of the higher apes, with whom he constitutes the family of primates, and that his diet must, consequently, be essentially the same as that of his forest cousins. But this great biologic fact seemed to make no impression upon the writers of books on dietetics other than the few heretics who were regarded as quite outside the pale of authority.

"When the writer first became interested in the biologic diet by reading the works of Graham, now more than 50 years ago, not a single medical authority could be found who recommended a non-flesh dietary. On the contrary, it was unanimously maintained that flesh food was essential for the maintenance of sound health and vigor, notwithstanding the fact that men and women were to be found in India and other countries who had never tasted flesh food and who ancestors for many centuries had abjured the flesh of animals from religious scruples.

"But a new day has dawned. Within the last twenty years, a number of physiologists have admitted the adequacy of a fleshless diet, and at the present time not a single authority of standing on the subject of diet maintains the necessity of using flesh. Nearly all, in fact, readily admit that flesh food may be wholly dispensed with and that, without injury."

Discusses the writings of Dr. Graham Lusk, Hindhede, Professor Elliott, Ovid, the Hebrew scriptures, Professor Price (Univ. of Chicago), Lord Byron, the diet of Indian Brahmins (who are "vegetarians"), and the benefits of eating "vegetable proteins."

"The protein of eggs, milk and of nuts and soy beans, according to the world's most eminent authorities, may replace the proteins of meat; and this fact is so clearly established that the Inter-Allied Scientific Food Commission considered it unnecessary to fix any minimum meat ration, since meat may be wholly eliminated from the dietary without injury.

"It may be positively stated, in fact, that any one may at once drop all meats of every description from his dietary without suffering any loss whatever, provided he will take care to include in his daily bill of fare two or three glasses of milk."

Note: This is the earliest document seen by Dr. John H. Kellogg (Dec. 2013) that mentions "vegetarians" or "vegetarianism." Yet he referred to the diet he advocated as "the biologic diet" and his broader system as "biologic living." Address: M.D., LL.D., Fellow American Medical Assoc., Fellow of the Royal Society of Medicine.

433. *Good Health* (*Battle Creek, Michigan*). 1920. Peanut

© Copyright Soyinfo Center 2014

butter. 55(4):190. April.
• ***Summary:*** "Peanut butter was introduced to the world through *Good Health*. The first article ever written upon the subject was written by the editor of *Good Health*, under whose supervision the first peanut butter was made. The nuts, after careful preparation, were roasted in the ordinary peanut roaster, then ground into a paste, and named 'peanut butter.' This was nearly thirty years ago.

"The purpose of preparing peanut butter was to present the nuts to the digestive organs in a form easy of digestion. European physiologists had shown by experiment that when eaten in the ordinary way a large part of the peanut passes through the alimentary canal without digestion, and hence without being utilized.

"The use of peanut butter was for sometime confined to the Battle Creek Sanitarium, but it gradually became known to the public, and a little later its manufacture rapidly developed to the proportions of a great industry. In the meantime, the discovery was made at the Sanitarium that the process of roasting rendered the nuts somewhat indigestible on account of the high temperature to which they were exposed. When highly heated, fats are decomposed, and these burnt fats are highly irritating and greatly disturb the digestive organs. Accordingly, peanut butter, though at first very popular, fell under the taboo of the Sanitarium physicians, and practically disappeared from the dining-tables.

"After extended experiments, a method was found for making a palatable nut butter without roasting the nuts, thus avoiding the disadvantages which are adherent in roasting nuts because of the irritating effects of burnt fats."

434. *Peanut Promoter* (*The*) (*Suffolk, Virginia*). 1920. The first peanut butter. 3(5):84. April.
• ***Summary:*** "Some one likely would have started to manufacture peanut butter sooner or later, but it is reported to us that the honor for being the first to market this product is claimed by the Bayle Food Products Co., of St. Louis [Missouri].

"In 1894 this company was manufacturing a brand of cheese put up in small glass jars. A customer persuaded them to begin the manufacture of 'Cheese-Nut,' cheese flavored with peanut butter or ground nuts. 'Cheese-Nut' did not find favor with the housewives and soon was dropped from the lists of products put up by this company, but the nut butter itself was found to be in demand.

From one small grinder in the St. Louis office of the Bayle Company the peanut butter industry has grown until it is found on the shelves of every corner grocery, and the industry itself employs thousands of people the year round in the manufacture of this delectable eatable.

"Prior to 1894, peanuts were ground and the product, peanut butter, eaten, but its use had been largely restricted to sanitariums, notably that at Battle Creek, which was made by Mr. Lambert, who was later the founder of Lambert Machine Company, Marshall, Michigan. It is claimed by the Bayle Company that they were the first to see the possibilities as a food, free from any health doctrines or policies.

"Almost from the first peanut butter found favor with the housewives, and soon the Bayle Company found their field full of competitors, as the demand grew too large for them to supply.

"Mr. George A. Bayle, Sr., head of the firm in 1894, is still in charge and ready to discuss the peanut market, peanuts and peanut butter with any trade visitor to their plant and offices in St. Louis.

"Bosman & Lohman started to manufacture peanut butter in 1900, which was made in an iron mortar and pestle, and the second lot in a small meat chopper.

"Then, in 1904, the company that was to *put peanut butter 'on the map'* appeared–the Beech-Nut Packing Company–and to them the peanut butter fraternity will have to take off their hat for the wide publicity this peanut product has had."

Note 1. This is the earliest document seen (Dec. 2012) that mentions George A. Bayle or his Bayle Food Products Co. (St. Louis, Missouri) in connection with peanut butter. The lack of earlier documents makes this claim by Bayle look suspicious. There is no mention of a St. Louis doctor or physician being involved with this peanut butter.

Note 2. This is the earliest document seen (Dec. 2012) stating that Mr. Lambert made the first peanut butter at the Battle Creek Sanitarium [run by Dr. John Harvey Kellogg] in Michigan. Mr. Lambert later founded the Lambert Machine Company in Marshall, Michigan. His machines were used to make peanut butter.

Note 3. In 1897 Lane Bros. of Kokomo, Indiana, was making and selling peanut butter commercially. The earliest article about this appeared in the *Kokomo Daily Tribune* on 16 Nov. 1897 (page 4).

435. Grohens, Albert P. 1920. History and development of the peanut butter industry. *Spice Mill* (*The*) 43(6):976, 978-80. June.
• ***Summary:*** "It was in the year 1896 that the peanut butter industry had its origin, when Joseph Lambert, who, a few years before while in the employ of that institution, made the first peanut butter at the Battle Creek Sanitarium, started in business for himself, manufacturing this and other nut food products. At the same time, he devised crude machines, mostly to be operated by hand, cuts of which are here shown, to be used for manufacturing peanut butter.

"The group of three small machines, intended for family use, constituted the original peanut butter outfit. They consisted of a toy roaster, equipped with a hand crank, to be placed on the top of an ordinary cook stove; a tiny blancher, also operated by hand, and a hand nut grinding mill."

Original illustrations show the Lambert Baby Peanut

© Copyright Soyinfo Center 2014

Roaster, Lambert Baby Peanut Butter Blancher, and Lambert Baby Peanut Butter Mill (each dated 1896). Lambert sold his 3 machines with one or more sacks of raw shelled peanuts from his warehouse at Battle Creek, Michigan. Illustrations of improved and larger scale models of the machines are also shown (dated 1898 to 1900). "The writer's connection with Joseph Lambert dates back to 1900. In 1901 the Lambert Food Company was organized and its headquarters transferred to Marshall, Michigan... The company continued to make peanut butter until 1908, but after that focused on selling machinery for the manufacture of peanut butter.

"There are now scattered all over the United States large peanut butter manufacturing plants, some producing as high as 50,000 pounds daily; and the most flourishing are those which adhere strictly to high-grade quality."

436. *Madison Survey* (*Madison, Tennessee*). 1920. Outside activities. 2(28):2. July 14.
• ***Summary:*** "Cafeteria [vegetarian] and treatment rooms in Nashville [Tennessee] are prospering. Similar centers are conducted in Birmingham [Alabama], Louisville [Kentucky], and Asheville [North Carolina]."

437. Grohens, Albert P. 1920. Peanut butter: History and development of the peanut butter industry–Just one of the products made from peanuts. *Peanut Promoter* (*The*) (*Suffolk, Virginia*) 3(8):65, 67, 69, 71, 78. July.
• ***Summary:*** "It was in the year 1896 that the peanut butter industry had its origin when Joseph Lambert, who a few years before, while in the employ of that institution, made the first peanut butter at the Battle Creek Sanitarium, started in business for himself, manufacturing this and other nut food products.

"At the same time he devised crude machines, mostly to be operated by hand, cuts of which are here shown, to be used for manufacturing peanut butter.

"The group of three small machines, intended for family use, constituted the original peanut butter outfit. They consisted of a toy roaster, equipped with a hand crank, to be placed on the top of an ordinary cook stove; a tiny blancher also operated by hand and a hand nut-grinding mill.

"To introduce his outfit Mr. Lambert took pains to attend gatherings and conventions in various parts of the country, at which topics relating to foods and diet were discussed, where he distributed literature describing the virtues of peanut butter and how to make it. He also embraced this opportunity to secure a list of names of persons interested in vegetarian diet and which list formed the basis of a small mail order business.

"He mailed club offers, comprising the three small machines mentioned and one or more sacks of raw shelled peanuts, either of the Spanish or Virginia varieties, a stock of which he carried in his warehouse at Battle Creek, Michigan. It is well to state here that the No. 1 Spanish peanuts were at that time obtainable at about 3 cents per pound.

"Through this means peanut butter was introduced into private families scattered throughout a large portion of the United States. They in turn introduced it to their friends and neighbors. Some of these persons who had purchased Lambert outfits worked up small trades in their respective neighborhoods. Gradually, as the product became known, the demand for it increased until it became necessary to construct larger machines in order to produce an adequate supply. This led to the next advance step in the development of the peanut butter industry. The three larger machines shown in the second group constituted the first peanut butter equipment to be operated with power. These machines, which could also be operated by hand, were placed on the market about the year 1898. All have long been supplanted by more up-to-date and larger machines.

"Mr. Lambert continued his campaign of education by preparing leaflets and booklets showing the high food value of nuts and peanut butter. In the year 1899 he published his large book entitled 'Guide for Nut Cookery,' which sold very rapidly until the two editions in print were exhausted. Inquiries are still received for this book, but no later editions were printed from the fact that the plant of the publishing company which had the plates and the manuscript for the book was destroyed by fire in the year 1902. Thus the work accomplished by Joseph Lambert formed the real foundation of what has now become one of the leading industries of the country in the line of food manufacturing.

"The writer's connection with Joseph Lambert dates back to 190 [sic, 1900?]. In 1901 the Lambert Food Company was organized and its headquarters transferred to Marshall, Mich. Shortly after this Mr. Lambert withdrew from the business. The company continued to make peanut butter until 1908, but having since 1900 perfected more efficient machinery for the manufacture of peanut better as well as for the roasting of coffee, it was only natural that the machinery end was given preference. The name at this time was changed to Lambert Machine Company. For a number of years the writer's entire time and attention were devoted to the study of peanut butter machinery and to the improvements which he perceived would be necessary to render the manufacture of peanut butter at once practical and economical."

"The phenomenal growth of the peanut butter industry during the period of the late war was due to the appreciation by the government of the high food value of the product."

Illustrations (line drawings) show: (1) Lambert's original hand-turned roaster, blancher, and mill. (2) A large "Eureka Roaster." (3) First peanut butter machine operated by power. (4) Motor driven blanching machine. A portrait photo (p. 78) shows A.P. Grohens. Address: President and General Manager, Lambert Machine Co., Marshall, Michigan.

438. Kellogg, John Harvey. 1920. In memoriam: Ella Eaton

© Copyright Soyinfo Center 2014

Kellogg. Battle Creek, Michigan. 52 p.

• ***Summary:*** Begins with a portrait photo of Ella (the wife of Dr. John Harvey Kellogg) in her later years. Born: April 7, 1854. Died: June 14, 1920.

On the next page is this poem:

"Death reaches not a spirit such as thine,
"It can but steal the robe that hid thy wings;
"Though thy warm breathing presence we resign,
"Still in our hearts its loving semblance clings.
"–Oliver Wendell Holmes."

Below a full-page photo showing the Kellogg home is written: "Where she is missed."

With here death "was ended a service of forty-three years to the readers of *Good Health.* Thus also was ended a life whose energies were unstintingly poured out that humanity might be bettered through knowledge."

"Through her writings in *Good Health* [where she was assistant editor from 1877 to 1920; her husband was publisher] and in other magazines and in her books she reached larger audiences. Here in itself were justification for calling hers a very fruitful life. But in her oral teaching and in her part in the upbuilding of the great Battle Creek Sanitarium she had another career which was broadly helpful. In her public activities, such as the Women's Christian Temperance Union, the Young Women's Christian Association, the American Home Economics Association, she likewise accomplished a work with far-reaching effects. But those who knew her personally will always place ahead of everything else the sympathy, the kindliness, the Christian helpfulness of her own private life, the forgetfulness of self in her efforts to replace the wrinkles of care with the smiles of contentment."

"As an out-growth of her teaching of dietetics to nurses in the Sanitarium, she founded the School of Home Economics, which has grown into an institution of wide renown. She was also graduated from the American School of Household Economics. Her philanthropy took practical form in her part in the founding of the Haskell Home for Orphan Children [1894-1922] in Battle Creek. Of this she was managing chairman for many years."

"Mrs. Kellogg was born at Alfred, in western New York, on April 7, 1853, the daughter of Joseph Clarke and Hannah Sophia (Coon) Eaton. She attended the local school and academy until she was sixteen, and soon after entered Alfred University."

"When she was just three months beyond nineteen, she received the degree of A.B. for completion of the classical course. The president spoke of her as 'the youngest Daughter of the University,' since no one before had gained her diploma at so early an age."

Most of this short book is a very beautiful and moving tribute to Ella E. Kellogg, It is followed (starting on p. 23) by a special tribute to her by her husband, titled "My Helpmeet," which tells how and when they met and many anecdotes. This section begins: "I first met my wife, then Miss Ella Eaton, in the late fall of 1876, forty-four years ago. The circumstances of my meeting her I always regarded as Providential. We were having an epidemic of typhoid fever in the West End, chiefly among the students of the Battle Creek College, which at that time had a large attendance." Ella plunged selflessly into the work, helping to save lives."

On Oct. 1, 1876, Dr. Kellogg assumed leadership of the Western Health Reform Institute (later renamed Battle Creek Sanitarium) in Battle Creek.

On Feb. 22, 1879 Dr. Kellogg and Ella Ervilla Eaton were married.

Note: Part of this 52-page booklet also appeared as an article by H.M.S. [Henry M. Stegman] in the July issue of *Good Health* (Battle Creek, Michigan). Address: M.D.

439. Kellogg, John Harvey. 1920. The almond. *Good Health* (*Battle Creek, Michigan*) 55(8):466-70. Aug.

• ***Summary:*** Contents: Introduction. Composition. Rich in food lime [calcium]. Rich in iron. An extraordinary food. Science prizes the high value of the almond [digestibility experiments]. Why nuts sometimes disagree [they are concentrated and should be used as a staple food which is well masticated, not as a dessert]. The origin of nut butters. Nut proteins equal to meat proteins [proteins are broken up into about 18 amino acids]. Meat eating involves enormous economic waste. The great food commission declared meat not necessary. Almonds are pure and safe which meat is not. A ready-to-eat food.

"The origin of nut butters: To overcome the objection that some people are unable to masticate nuts properly on account of defective teeth and to insure the proper assimilation even if not properly chewed, the writer about thirty years ago [i.e., in about 1890] conceived the idea of converting the nuts by crushing and grinding, into a paste–in other words, chewing the nuts by machinery. The peanut was first utilized in this way and rapidly won its way to public favor. Now, many scores of carloads of that nut are eaten under the name of peanut butter.

"Almonds were next used, and were found to make a delicious nut paste, or butter, which by the addition of water and a little salt, became a most delicious cream. In the form of almond cream or milk, nothing could be conceived in the way of nourishment which the body can more easily appropriate and more fully utilize" (p. 469-70).

"The Almond Grower's Association of California, with the co-operation of the U.S. Agriculture Department, in encouraging the growth of the almond is doing a work which will entitle it to an honored place in the economic history of this country; for the time is certainly coming, and it cannot be far in the future, when the animal industry will languish for lack of space for pasturage, and flesh foods for this as well as other reasons will fill a less conspicuous place in the dietary of the average man than at present" (p. 470).

© Copyright Soyinfo Center 2014

"The great food commission... The Inter-Allied Scientific Food Commission which met during the war was without doubt the most authoritative body on the subject of food and nutrition that was ever brought together." The names of the members of the commission, each a distinguished specialist on human nutrition, are given. There were generally two members from each of the following countries: France, Italy, Great Britain, United States (Profs. Lusk and Chittenden), and Belgium. "The question of a minimum meat ration was discussed by the commission, but it was decided to be unnecessary to fix a minimum meat ration 'in view of the fact that no absolute physiological need exists for meat, since the proteins of meat can be replaced by other proteins, such as those contained in milk, cheese and eggs, as well as those of vegetable origin' (beans, nuts, and especially almonds).

"Quite in line with this official action was a recent editorial in the *Journal of the American Medical Association,* perhaps the highest medical authority in the world, which states that 'man's health and strength are not dependent on the assumed superior virtues of animal flesh as a dietary constituent.'

"Within the year 1918 there were slaughtered in the United States a hundred million beeves, sheep, pigs and goats, one whole beast for every man, woman and child in the United States. Of this vast multitude of animals, the Federal inspectors examined nearly two-thirds (60,000,000) and found one and a half per cent so badly diseased that the whole or part of the carcass was condemned. In other words, nearly a million (900,000) carcasses were found seriously diseased" (p. 471).

"Almond butter with the addition of a little water is converted into a delicious cream, which, with the addition of more water, becomes a delicately flavored milk closely resembling the milk of the cow in appearance, and with the addition of sugar the resemblance to milk, especially mother's milk, becomes still more complete. Such a preparation is in fact almost a perfect substitute for milk.

"The almond is thus not only capable of taking the place of meat in the dietary but may also serve as a substitute for milk." Address: M.D.

440. *Good Health* (*Battle Creek, Michigan*). 1920. A vegetarian orphan's home. 55(9):559. Sept.
• ***Summary:*** "It is reported that the home of Tolstoy, 'Jasnaja Polijana' [Yasnaya Polyana, located 14 km southwest of Tula, Russian SSR], under the direction of his youngest daughter, is now utilized as an Orphans' Home. Eight hundred orphans are already there, and the number is constantly increasing.

"The Home is to be conducted on the plan of the Junior Republic. Children will be taught agriculture and various trades under the direction of experts. They will be reared in accordance with the principles of the simple life as expounded by Tolstoy in his works. Meats of all sorts are to be excluded from the dietary."

441. *Madison Survey* (*Madison, Tennessee*). 1920. The Thirteenth Annual Conference of Rural School Workers. 2(41):1, 5. Oct. 13.
• ***Summary:*** This two-day conference was held at Madison, Tennessee. I.E. Siebert and Mrs. Sutherland discussed "Rural Centers Solving the Food Problem." "Elder McElhany told of experiences in the San Diego [California, vegetarian] cafeteria, and of the calls for class instruction in dietetics and cooking..."

442. *Madison Survey* (*Madison, Tennessee*). 1920. The value of whole grain breads. 2(44):2-3. Nov. 3.
• ***Summary:*** "It has been abundantly proved that for use in bread making, the superfine white flour is not the best. Its use is neither healthful nor economical... Modern grain milling methods are of comparatively recent origin, having been introduced since the year 1846. And wholesale commercial production of superfine or white flour dates from about 1870... The original idea in milling white flour was to get a product which would keep indefinitely in large quantities, and which, when baked into the staff of life, would present, what was supposed to be, a more refined appearance than whole-ground meal."

"Whole wheat bread, or freshly ground whole wheat flour with recipes for making the bread from this and other grains, may be obtained from: The Nashville Vegetarian Cafeteria, 610-6th Ave. N., Nashville, Tennessee. Ask also for information concerning grinding mills."

443. *Madison Survey* (*Madison, Tennessee*). 1920. Home made bread from home ground flour. 2(46):3. Nov. 17.
• ***Summary:*** "The Medical Missionary Volunteers have begun the publication of a series of leaflets on health subjects, to meet the demand for instruction on the part of patrons of the vegetarians cafeterias."

The five vegetarian cafeterias [run by Seventh-day Adventists from Madison College] are located at: (1) 610 6th. Ave., N. Nashville, Tennessee; (2) 85 Patton Ave., Asheville, North Carolina; (3) 117 1-2 North 21st St., Birmingham, Alabama; (4) 509 South 3rd St., Louisville, Kentucky; (5) 516 Gay St., Knoxville, Tennessee.

444. *Madison Survey* (*Madison, Tennessee*). 1920. The Louisville treatment rooms and cafeteria. 2(48):2-3. Dec. 1.
• ***Summary:*** Describes the opening of treatment rooms and a vegetarian cafeteria in Louisville, Kentucky. The cafeteria opened on the ninth [probably Nov. 9], serving its first meal to fifty people. Brother F.E. Worrell temporarily supplied the money for the venture.

445. *Michigan State Supreme Court Record.* 1920. John

© Copyright Soyinfo Center 2014

Harvey Kellogg, The Kellogg Food Co., and Sanitarium Equipment Co. vs. Kellogg Toasted Corn Flake Co., et al. 3 vols. See vol. 2, p. 369.

• ***Summary:*** This court case between the Kellogg brothers, Dr. John Harvey (age 68) and Will Keith, concerned the use of the name Kellogg by the cereal company. The 3 volumes contain about 1,000 pages. In volume II, p. 368-69 Dr. John Harvey discusses his inventions, many of which have gone to market and 50-60 of which have had quite a large sale; "the most prominent are various cereal flakes and bran preparations, coffee substitutes and preparations from nuts, protoses, peanut butter, the last very popular, first made in our laboratory, one of my inventions.

"I wish to say that I was the original inventor of it in this country, but when I was over in Egypt about five or six years after I made peanut butter, I found that a similar product was made there was 'sesame,' a butter which is quite similar, was made by a process, and also somewhat similar, though not the same process, but it was independent as far as I was concerned, at the time I did it originally." Address: Michigan.

446. Kellogg, John Harvey. 1920. The health question box, or a thousand and one health questions answered. 2nd ed. Battle Creek, Michigan: Modern Medicine Publishing Co. 907 p. Illust. Index. 21 cm. 1st ed. was 1917.

• ***Summary:*** "Foreword: For more than forty years, the writer of this volume has each week stood before an audience of invalids at the Battle Creek Sanitarium to open a popular question box. During a longer period the writer has supplied each month to the monthly journal *Good Health* several columns of answers to correspondents." More than a thousand of these have been selected, with their answers, for this volume.

The following questions concern the soy bean (p. 350-53, 886; also 125, 200, 347, 349): In what respect is the soy bean superior to the navy bean and other varieties? What is soy bean curd or cheese (to-fu), and how is it made? What is the food value of the soy bean? What is the composition of the soy bean, especially in relation to the amount of carbohydrate it contains?

Concerning peanuts (p. 348-49): Is the protein of the peanut equal to that of meat or eggs? Which is the more digestible, roasted or raw peanuts? Why is it necessary to cook peanuts to prepare them for digestion?

"In North China and various other countries where the peanut flourishes, it has long held a prominent place in the national dietary; but in this country its great value has been so little appreciated that it has been scarcely recognized as a food, having been eaten as a dainty or luxury.

"Although, since the writer–some twenty-five years ago [i.e., ca. 1895]–introduced the crushed nuts, or peanut butter, into the bill of fare of the Battle-Creek Sanitarium, the use of peanuts in this form has rapidly extended and it has found its way to many thousands of tables."

One discovery has "placed the peanut upon a high pedestal among foodstuffs... It is the fact that the protein of the peanut belongs to a special class very rare among the products of the vegetable kingdom, known to the chemist as 'complete protein.' The complete protein is one which contains all the elements needed for making any of the many different kinds of tissue found in the human body. Very naturally these proteins are found in eggs, milk and meat, but they are not found in cereals or vegetables." The almond and soy bean also contain complete proteins.

Concerning the natural diet of man (p. 96-109, 124-25): What was the diet of prehistoric man? Ans: Fruits and nuts. What is the natural diet of man? Ans: Fruits, soft grains, nuts, tender shoots and juicy roots. Man is not carnivorous. What was the Brook Farm experiment? What is the simple life? What is biologic living? Ans: Living in accord with the "great biologic laws... which rule our physical being." What is Fletcherism? Ans: Thorough mastication. When eggs and meat are discarded what vegetable foods should take their place? Ans: No substitutes are needed. "Protose, Nuttolene and other vegetable meats are rich in protein. The newly introduced soy bean is more than a substitute for meat. It is rich in lime and vitamins which meat lacks. Its protein is 'complete.'" Have human beings a natural appetite for flesh? Do scientific authorities admit that animal flesh is a necessary part of the human dietary? Ans: "All modern physiologists admit that flesh food is not an essential part..." Is a meatless diet capable of maintaining the body in a state of vigorous health? Is there any authority for the elimination of flesh foods from the dietary? Does a flesh diet injure the kidneys? Is it not true that laborers universally require a large amount of meat.

Concerning roughage, bran, and constipation (p. 197-99). Diabetic foods (p. 199-201, incl. soy bean and soy bean curd). Dietary oils and butter (p. 338-41, incl. nut oils, peanut oil, olive oil, malted nuts). Concerning tree nuts (p. 341-47, 354-59): What is the food value of nuts? Ans: The "most highly concentrated of all natural foods." Tropical fats–Where do the natives of the tropics get their fat? Nuts for nursing mothers–Is there any food which will increase the flow of her milk? Ans: Nut milks, Malted Nuts. How did the Jordan almond get its name? Ans: This choicest of all almonds came originally from Malaga in southern Spain. Almond milk–Is it possible to prepare a substitute for milk from vegetables? Ans: Yes. "The writer has made large use of almond milk for thirty years [i.e., since about 1890]. It is more easily prepared from almond butter." "Almost equally good milk preparations may be made from the soy bean and the peanut." Are nuts good food? Yes, incl. peanut butter. Nuts make good "meat substitutes."

On the last page is a list of 18 health books by Dr. Kellogg, all published by the Modern Medicine Publishing Co. Address: M.D., Battle Creek, Michigan.

447. St. Helena Sanitarium (California) (Color postcard). 1920? Sanitarium, California. 1 p. Front and back. Undated. 9 x 14 cm.

• ***Summary:*** Of the 4 color photos on the front, three show the main sanitarium building. In the upper left corner: "The largest and best equipped institution west of the Rocky Mountains. Following the Battle Creek Sanitarium system."

On the back left. "A true health resort. Located 65 miles from San Francisco, on an elevation overlooking the beautiful Napa Valley..." Postage was 1¢ in the USA, possessions, Canada, or Mexico. Foreign: 2¢. Address: Sanitarium, California.

448. *Madison Survey* (*Madison, Tennessee*). 1921. Vegetarian cafeterias. 3(3):2. Jan. 19.

• ***Summary:*** "Birmingham [Alabama] cafeteria was started about one year ago by Miss McKay, Mrs. Holst, and others... Chalkville farm, an 87-acre tract about fourteen miles from the cafeteria has been purchased as a country base... Mr. Zilke is the maker of whole wheat bread which the trade is appreciating..."

"The Knoxville [Tennessee] cafeteria is less than a month old." The whole wheat bread sells like hot cakes. "Practically no one asks for white bread."

449. Muhse, Effie Funk. 1921. The soy bean in Chinese cookery. *Good Health* (*Battle Creek, Michigan*) 56(3):108-114. March.

• ***Summary:*** Contents: Introduction. Sprouted seeds. Bean oil. Soy sauce. Bean curd.

"Sprouted seeds: Beans, along with other sprouted cereals, such as peas, wheat and barley, are on sale in the shops and market stalls, practically regardless of the season. Beans with sprouts an inch long or more are seen heaped high on bamboo trays. They are sold by the catty (one and one-third pounds) for from 3 to 6 coppers (Mex.)."

"The method of producing bean sprouts is thus described by a native. 'Soak some beans in water in a flat dish. Spread the beans out: do not let one cover another. Cover with a piece of wet cloth and water every morning. The sprouts will appear in [?] nights. They are ready to eat when they are two inches long.'"

Bean curd: Describes how bean curd is made in a commercial shop. In a large room, soy beans were soaked in water in large vats over night. "Close at hand was a stone mill consisting of two circular stones, each about 6 inches thick, and about 18 inches in diameter. The stones were securely placed over a drain, and high enough to allow a vat to be pushed in, or drawn from under. The upper stone was moved to and fro, in partial revolutions, by means of a bamboo shaft, one end inserted in the stone's center and the other in the ceiling timbers. Two men kept the mill in constant motion, each with his arm through a sling fastened to the shaft. The upper stone had a hole about 4 inches across, into which at every second revolution one man poured a half pint of beans and water, which he dipped with clock-like regularity from the vat of soaking beans.

"And into the vat beneath oozed from the edges of the mill a milky, crushed mass. A strong cloth, pocketing down into the vat, was securely tied about the vat's rim; and when the grinding ceased, the vat was drawn from under the mill, the cloth twisted into a bag, through which all the contents possible were pressed by means of a crescent-shaped, concave wooden paddle. The mass in the cloth was washed out and pressed a second time, and the water from even a third pressing served as that in which to start the next beans soaking. The waste, which was principally hulls, was placed in a bin in the court, where it was carried away, presumably to be used as fertilizer in the truck gardens round about the city. On the side of the room opposite the mill was a typical, native brick stove, with three fire-holes, on which rested metal basins about two feet in diameter and 14 inches deep. Into these the creamy mass obtained from the first and second pressings was poured, and carefully stirred during the boiling. The boiling finished, it was poured into a vat and white powder added to coagulate the mass, after which the whey was dipped off, Whether this latter found a further use was not ascertained, but it is a truth that nothing in China goes to waste. The curd was then ready for the molds and pressure.

"I have spoken of the white powder that was added to coagulate the boiled mass. In nearly every factory one would see a basket sitting about, holding four or five pounds of it, sometimes in lumps, sometimes in powdered form... I had the characters put on paper at two different factories, and always 'plaster of paris' was the translation by anyone asked about the matter, even an English chemist who was asked to verify it." Note: It was calcium sulfate.

The final process of changing the coagulated mass into products for the sales counter was very interesting, particularly since the workmen were so patient and so adept in every movement. The bulk of it was molded into masses about 3 inches thick and 16 inches square. A square wooden frame of these dimensions was laid on a slat base, and diagonally across the frame a large square of cloth was spread. The requisite amount of coagulate was poured into the cloth, the corners of which were folded over. Another frame with a bamboo slat base was then superimposed upon the one just filled, another and another, till possibly a dozen or more stood [?] in a pile; and on the top were placed large weights."

"Merchants doubtless study their localities and adapt their products to the buying power and preferences of their customers; one merchant seemed to have a brisk daily, trade in tiny raw, as well as fried, cubes which sold to children for a "cash" (about 1-17th of a cent) apiece.

In the photographs note the pile of little squares–thin bean-curd wafers about 10 inches across. They were made

© Copyright Soyinfo Center 2014

by a pressure method very similar to that by which the large masses were made. Over a mold 10 inches square was laid crosswise a cloth about the size of a man's handkerchief. On this a spoonful of coagulate [curds] was spread out and the cloth folded over. Another cloth was laid on, filled, and folded, and so on without limit, or until the mold was filled. They were then put under pressure, and in due time the reverse process was again patiently gone through with, and the wafers laid out in a pile. Eight such wafers weigh a catty, and sell two for a copper.

"In each bean-curd establishment visited there was work for seven persons, usually all men, besides the man who carried away the waste–the salesman, who also attended to the cutting of the curd; three men who coagulated and placed in the molds; one at the stove and bellows, who also attended to the boiling; and two at the water mill. The workmen in the Shanghai factories, I was told, usually came from the country villages and did not bring along their families. For their services they received a monthly wage of from four to five dollars (Mex.), a place to sleep, and their food. The bean-curd establishments are typical of industrial development in China. The master and workmen, right there in a little shop, carry to completion the process of manufacture from the raw material to the finished product, and from the shop sell the product direct to customers. Fresh bean cubes, the fresh curd cakes in boiling oil, and the wafers, were on sale in all parts off China visited.

"The Chinese cook uses the bean-curd as an ingredient for many choice dishes. It is very extensively used in the cookery of the Chinese of all classes, despite the statement that it is 'a food for the common people.' The writer has eaten bean-curd deliciously combined with beef in the home of one of the most prominent Chinese families of Shanghai, who had educated four children in American and European colleges. Another American-educated Chinese, being asked for a typical home-dinner menu of well-to-do Cantonese families, included 'bean-curd with shrimp eggs' as one of five courses."

Photos show: (1) Many large containers storing soy sauce, oil and wine in Shanghai; each is "made up of an outside covering of wicker, a thick body of clay, and a lining of oiled paper." (2) About 300 sixty-gallon earthenware vats with cone-shaped wicker tops containing yellow soybeans, salt, and water in the process of becoming soy sauce in the immense court of a soy sauce factory in Shanghai. (3) A man in the street end of a bean curd factory. (4) Scene from a bean curd factory, including many people. Caption: "All the products of the factory are to be seen,–fresh curd masses, a pile of wafers, and a tray of cooked bean curd. Beneath the table is a basket of the powder used to coagulate the boiled, crushed beans."

450. Healey, W.M. 1921. Mrs. Almeda Lambert. *Review and Herald.* May 26.

• ***Summary:*** Mrs. Almeda Lambert was born in Marquette County, Wisconsin, in 1864. She married Joseph Lambert in 1890. Died in Escondido, California, March 1921. Her daughter, a brother, and three sisters survive.

451. Mendel, Lafayette B. 1921. Re: Suitability of a vegetarian diet in a hospital (Letter to the editor). *Modern Hospital* (*The*) 17(5):431. Nov.

• ***Summary:*** Louis J. Frank, in his article titled "The Meatless Diet," reprints letters from some of America's most prominent biochemists, metabolists, and physiologists (all professors), including one "From Lafayette B. Mendell, Sheffield Laboratory of Physiological Chemistry, Yale University: 'I have given some thought to the advisability of introducing a meatless dietary into your hospital régime, and reached the conclusion that there will be no objection to this upon physiological grounds. Inasmuch as I myself lived upon a diet devoid of meat, fowl, and fish for nearly a year, for purely experimental purposes, and remained in excellent health and vigor during that period, I have no fears regarding the wholesomeness of such a procedure.

"If we consider the various aspects of the meat-free régime, the foremost criticisms will probably be as follows: (a) The ration tends to be low in calories. It is true that on a vegetarian diet the food intake is likely to be reduced for a variety of reasons, because the ration tends to be less palatable than in cookery with meat products. However, with fish, milk, and eggs permitted, as I assume they will be in the meatless dietary, the palatability can be greatly enhanced. As a substitute for meat stock or extract of beef in preparing soups, gravies, etc.,–all of which are so highly prized in a well flavored diet such as your patients are allowed,–I see no reason why the now commercially available extracts of yeast should not be used. In England 'Marmite' is sold for this purpose, and the same product is available in this country under the name of 'Vegex.' These commercial names happen to be familiar to me, but there are doubtless others, and it is not difficult to prepare a well flavored extract of yeast. Incidentally, it is rich in water soluble vitamine.

"(b) It may be said that the quality of the protein in the vegetable diet is poor. This can scarcely apply where fish, eggs, milk, and its numerous products (cheese, etc.) are surely available, as they can be without violation of the Mosaic dietary regulations. As you well know, even small quantities of 'animal proteins' serve to supplement well the proteins of the cereals, etc.

"(c) There will be no lack of suitable vitamin A, B, C, where milk and cream, green vegetables, fruits, and eggs are used in abundance. Surely meat has no virtues as a source of vitamines except in so far as the beef drippings ('oleo oils') may furnish a small amount of fat-soluble vitamine, such as the egg yolk yields in far greater abundance. Incidentally, inorganic salts will be assured quite as well on the meatless dietary, and there will be no lack of suitable 'roughage.'

"If you have ever visited the Battle Creek Sanitarium [in Battle Creek, Michigan] you will have noted that life is possible and good health is maintained without the use of meat. I regard the diet there as too bland for your clientele, but I am sure the menus could be greatly improved by additions of further foods such as you are not interdicted from employing. Under separate cover I am sending a few reprints which are intended to support some of the comments which I have made."

Note: This is the earliest document seen (Aug. 2002) concerning vitamins and vegetarianism. Address: Prof., Sheffield Lab. of Physiological Chemistry, Yale Univ. [Connecticut].

452. **Product Name:** La Sierra Smoein (Bacon Flavored Smoked Soy Powder Seasoning).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1921.
Ingredients: Smoked soybeans.
How Stored: Shelf stable.
New Product–Documentation: This was America's first commercial soy-based meat alternative. Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46. Interview with Charlotte Van Gundy Holmes. "He soaked soybeans, put them in perforated flats, and smoked them over a hickory fire. When dry, he ground the beans to a powder, which he packed and sold in salt shakers."

Note 1. This is the earliest known commercial soy product made by La Sierra Industries or T.A. Van Gundy.

Note 2. This is the world's earliest known meatless alternative to a pork product (bacon).

Note 3. This is the earliest known commercial roasted soy flour in the Western world.

453. Anderson, Hans Steele. 1921. Science of food and cookery. 5th ed. Mountain View, California: Pacific Press Publishing Assoc. 282 p. Illust. Index. 23 cm. [5 ref]
• ***Summary:*** This book, by a Seventh-day Adventist, advocates a vegetarian diet as "the natural diet of the human race." The first one-third (p. 1-97) is a scientific discussion of the nutritional basis for such a diet; the last two-thirds (p. 98-268) is vegetarian recipes.

Chapter 4, titled "The natural food of man" (p. 37-52) has sections on: True food satisfies hunger. Vegetarian diet and longevity. Vegetable and flesh foods contrasted. Vegetarian diet and endurance. Flesh eating a cause of disease. Ethics of flesh eating. Cruelty of flesh eating. The section titled "Vegetarian diet and longevity" (p. 39-42) notes that in the Bible, before the fall, Adam was told to eat grains and nuts. After the fall herbs of the field were added to his diet. After the flood, when all vegetation had been destroyed by water, God permitted man to eat flesh. In the 9 generations before the flood, the average man lived to the age of 912 years, but in the 10 generations after the flood this was reduced to 317 years.

The section on "Vegetarian diet and endurance" (p. 45-48) contends that "the vegetarian diet is capable of developing the highest level of strength and endurance." Soy-related recipes include: Stewed soy beans (p. 156). Rice and soy bean loaf (with soy bean purée, p. 156). Rice and soy bean patties (p. 156). Favorite soy bean coffee (p. 265).

A 6th edition was published in 1932, and a 7th edition in 1938.

Note 1. This is the earliest Seventh-day Adventist cookbook seen (Oct. 2004) that contains a recipe using soybeans or soy ingredients.

Note 2. This is the earliest document seen (Oct. 2004) concerning the Loma Linda Sanitarium (or Hospital) and its work with vegetarianism or soyfoods. Address: Dietitian, Medical Missionary College and Sanitarium, Loma Linda, California.

454. Kellogg, John Harvey. 1921. The new dietetics: What to eat and how. A guide to scientific feeding in health and disease. Battle Creek, Michigan: The Modern Medicine Publishing Co. 933 p. Illust. Index. 24 cm.
• ***Summary:*** This is the first edition of this important book; subsequent editions were published in 1923 and 1927. Contents: Foods: Food Principles. The digestive process: The liver, mastication, hunger. Metabolism: The energy of food–the calory [calorie]. The physiology of eating: The protein ration, fats, carbohydrates–starches and sugars, food salts, vitamins, cellulose, the acids of foods. Wholesome foods: Cereals (incl. wheat bran), vegetables, green vegetables, root vegetables, vegetable or garden fruits (incl. tomato, cucumber, eggplant, watermelon, muskmelon, squash, vegetable marrow, pumpkin, chayote), legumes (incl. the adsuki [azuki] bean, the Hahto bean, the soy bean, composition of the soy bean, soy bean milk, to fu [tofu], soy sauce, soy bean sprouts), fruits, nuts (incl. the ground nut, the peanut, peanut butter, flour from the peanut, peanut milk, malted nuts). Animal foods. Condiments. Tea and coffee (They are poisonous drugs, in 1921 the U.S. per capita consumption increased to 12 lb/year, chronic caffein [caffeine] poisoning, coffee raises blood pressure, tea, coffee and uric acid, coffee cripples the liver, other coffee poisons, some poisonous effects of tea and coffee, soda fountain drinks containing caffein, coffee substitutes {most consist of cereals plus molasses, roasted until part of the starch and sugar are caramelized; the roasting process makes them unwholesome}), tobacco. Ptomains–Poisoned foods. Water drinking. Medical dietetics: Introduction, scientific tests of the nutritive functions, regimens and dietaries, diet in disorders of the digestive organs, diet in disorders of nutrition, diet in joint diseases (rheumatism, arthritis,

© Copyright Soyinfo Center 2014

gout), diet in disease of the heart and blood vessels–Cardio-vascular-renal diseases, diet in disorders of the nervous system, diet in disorders of the urinary organs, diet in diseases of women, diet in management of fevers, diet in chronic infectious diseases, diet in diseases of the skin, diet in surgical cases, diet in diseases of the eye, ear, nose, and throat, infant feeding, the rice regimen. The world's foods: Making the bill of fare.

A table (p. 138) titled "Vegetable fats" lists "The principal sources of edible vegetable fats..." including: Cocoanut meats 36%, corn 5%, hemp seed 32%, palm nut 72%, peanut 52%, sesame seed 51%, soy bean 20%

A table (p. 166-67) lists the 7 main food salts [minerals] found in various foods, including soy beans, gluten (pure, 40%, or 20%), and peanuts.

Table XII (p. 170-71) lists foods rich in iron. Columns (a) shows the grains of iron in one ounce, and column (b) shows the number of ounces required to supply one day's ration of iron. Includes (in descending order of iron content): Savora (yeast extract), Gluten–pure, gluten–40%, egg yolk, dried lentils, wheat bran, soy beans, Protose, Brose (oatmeal, corn meal, bran), Nuttolene, Graham Flour, tenderloin meat, Graham bread, Zante currants.

Table XIV (p. 182) lists foods rich in lime [calcium] in descending order of lime content, with the same two columns as table XII. Includes: Cheese, yogurt cheese, mustard greens, linseed meal, turnip tops, soy beans.

Page 183 discusses "The acids and bases of foods–The reaction balance. As pointed out by Bunge many years ago, and as further shown by an extensive research conducted by Sherman of Columbia University, foodstuffs differ in relation to their acid and basic contents... The waste products of the body are predominantly acid, consequently it is desirable that the foodstuffs should be predominantly basic... The predominance of acids gives rise to a condition known as acidosis (p. 719), and care must be taken to protect the body from injuries which result from this condition... Meats of all sorts, especially the lean meats, tend to acidify the tissue fluids to a marked degree. Eggs tend in the same direction, though less strongly than do meats."

In the chapter titled "Diet in disorders of the digestive organs," pages 654-55 discuss soy flour, yeast extract (Savita, Marmite–which is a very useful source of iron and vitamins), Malted Nuts, 20% gluten meal, and the "Gluten-feeding method."

In the section on diabetes, page 703 gives a recipe for gluten bread. Gluten is also mentioned on p. 718. The section titled "Diet for acidosis" (p. 719) begins: "The blood and tissue fluids are slightly alkaline in reaction. This slight degree of alkalinity is essential to the maintenance of health. When, through disordered metabolism, the body becomes charged with an excess of acids, so that the alkalinity of the blood and tissues is diminished, the result is a condition known as acidosis. Among the symptoms due to acidosis may be mentioned nervousness, mental depression, mental confusion, drowsiness, convulsions, and coma. Air hunger with shortness of breath is one of the early symptoms of acidosis. This condition is most pronounced in advanced cases of diabetes and is encouraged by a meat diet, particularly by the use of an excess of fats. Fasting persons always show a condition of acidosis after fasting for a day or two. Professor Fischer believes that this preponderance of acids, or chronic acidosis, is the exciting cause of Bright's disease."

The section on diet and heart disease notes (p. 738-39): The "great frequency with which arteriosclerosis is encountered in modern times is the result of the increase in flesh eating which in recent years has been very marked in all civilized countries." It "has become the universal custom among practical physicians to exclude meats, meat extracts, and broths of all sorts from the diet of patients suffering from arteriosclerosis, as the most efficient means of checking the degeneration of the arteries..." Foods containing uric acid, plus coffee and tea, should be discarded. Bran, agar, paraffin oil, and an enema should be used freely. Address: M.D., LL.D., F.A.C.S., Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

455. Kellogg, John Harvey. 1921. The adsuki bean (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 298. 24 cm.
• ***Summary:*** In the chapter titled "Legumes," this section states: "Another variety introduced into this country from Japan is the Adsuki, a red bean which closely resembles the Mung in composition. It is the favorite bean of Japan, where it commands the highest price. It has a delicious flavor, being wholly free from the beanny [beany] taste characteristic of the American varieties of this legume. Tests made by the Plant Introduction Bureau of the Agricultural Department show that this bean can be readily grown in this country and it will doubtless in time achieve high rank as a staple foodstuff."

Note 1: This is the earliest document seen in which Dr. Kellogg mentions the adsuki bean.

Note 2. This exact same information appeared on the same page (314) in the 1923 edition of this book. Address: Battle Creek, Michigan.

456. Kellogg, John Harvey. 1921. Peanut butter (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 358-59. 24 cm.
• ***Summary:*** In the chapter titled "Nuts" this section states: "Many years ago (1893) it occurred to me that one of the objections to the extensive dietetic use of nuts might be overcome by mechanical preparation of the nut before serving so as to reduce it to a smooth paste and thus insure

© Copyright Soyinfo Center 2014

the preparation for digestion which the average eater is prone to neglect. The result was a product which I called peanut butter. I was much surprised with the readiness with which the product sprang into public favor. Several years ago I was informed by a wholesale grocer of Chicago [Illinois] that the firm's sales of peanut butter amounted on an average to a carload a week. I think it is safe to estimate that no less than one thousand carloads of this product are annually consumed in this country."

"The ordinary method of preparing peanut butter renders the product more or less indigestible by setting free and decomposing some of the oil which constitutes nearly 50 per cent of the peanut. The ordinary commercial peanut butters are objectionable on this account.

"Peanut butter may be prepared at home by the following method: Obtain the desired quantity of shelled nuts. Dry in an oven not hot enough to roast, loosen the skins. Place in a gunny sack and remove the skins by rubbing on the outside of the sack. Pick over carefully and exclude all skins and defective nuts. Place in thin layers, on flat pans in an oven containing also a basin of hot water. The nuts should remain in the oven until slightly browned. Great care should be taken to avoid scorching, which produces poisons, 'phenolic substances' which are highly objectionable. After the nuts are cooked they may be ground to a smooth paste in one of the numerous patterns of nut mills now easily obtainable."

Note: This document contains the earliest date seen for Dr. John Harvey Kellogg's interest and involvement in peanut butter (1893). Address: Battle Creek, Michigan.

457. Kellogg, John Harvey. 1921. Flour from the peanut. Peanut milk (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 359. 24 cm.

• ***Summary:*** These two sections appear in the chapter titled "Nuts." "Flour from the peanut: It has been found that by special treatment of the press-cake obtained after the extraction of the oil from the peanut an excellent flour, containing only five per cent oil, may be made. The flour contains a high percentage of an excellent protein."

"Peanut milk: The protein of the peanut is quite soluble in hot water, and the fat being in a finely divided state, it is easy to prepare from peanut butter a very palatable cream or milk by the simple addition of hot water." Address: Battle Creek, Michigan.

458. Kellogg, John Harvey. 1921. Malted Nuts (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 359-60. 24 cm.

• ***Summary:*** This section appears in the chapter titled "Nuts" (p. 359). "Nearly thirty years (1892-93) the writer, in seeking to supply the needs of invalids unable to eat cow's milk, conceived the idea of combining malt-digested cereals with nuts to prepare a substitute. The result reached after many experimental efforts was the product known as 'Malted Nuts,' which much resembles malted milk in appearance, while having a delicate and very agreeable nutty flavor. This product has been produced in considerable quantities and has come to be somewhat widely used. The following is the analysis as made by Atwater, as published by the U.S. Department of Agriculture:" Water 2.6%, protein 23.7%, fat 27.6%, carbohydrate (malt sugar and dextrin) 43.9%, and ash 2.2%. Calories per ounce: 140.

"It was soon discovered that 'Malted Nuts' had certain characteristic properties which rendered it of special value as a nutrient. One of these is its richness in food iron of which it contains double the amount found in ordinary beefsteak. Another... is its influence upon the milk secretion in nursing mothers. This discovery was first made by a mother who by its use was able to double her milk production and to nurse the child of a neighbor in addition to her own. Later, Dr. Hoobler, of Detroit, superintendent of a lying-in hospital, independently undertook an extended series of experiments, the interesting results of which, largely attained by the use of malted nuts, were reported in the *Journal of the American Medical Association* for August 17, 1917. The purpose of the research was to determine the influence of diet upon the milk production of nursing mothers... Studies were made of the effects of meat, eggs, cow's milk, a strictly vegetable dietary (fruits, grains and vegetables) and nuts.

"The influence of the diet was judged by the following points: 1. The amount of milk produced [by the nursing mother]. 2. The food value of the milk. 3. The effect upon the mother in loss or gain of weight.

"It was found that a diet consisting largely of nuts (fifty per cent), was far superior to any other dietary and in every particular. The amount of milk was larger than the average (14.8%), the food value was greater (30%), and the mother did better. It was noted that the mothers 'took the diet directly and in fact enjoyed it.'"

"'Malted Nuts' has been demonstrated practically the best substitute for milk which has thus far been found. It is relished by bottle-fed infants and 'agrees' when cow's milk is not tolerated."

Note: We are not told what kind of nuts were used to make Malted Nuts. But other sources (Schwarz 1970, p. 121) explain that this nondairy product was made principally from peanuts and almonds, and resembled malted milk. Address: Battle Creek, Michigan.

459. Kellogg, John Harvey. 1921. The soy bean. Composition of the soy bean (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 299-302. 24 cm.

• ***Summary:*** In the chapter on "Legumes," the section titled "The Soy Bean" (p. 315-21) has the following contents: Introduction and history (incl. a long extract from a publication by W.J. Morse (1918), and discussion of soy beans and diabetic diets). Composition of the soy bean (according to Bailey and Street 1915). Soy bean milk. To fu (tofu). Soy sauce. Soy bean sprouts. Composition of soy bean sprouts compared with mung bean sprouts.

The section begins: "The soy bean has been used in China since 2838 B.C. It was introduced into France in 1740, England 1790, and this country not until a century later. This bean requires a long season and does best in the Southern states on this account. It is quite hardy, however, and some varieties have been found which mature as far north as Canada.

"The soy is the best of all beans. It differs decidedly from other beans in its composition. It contains 40% protein, practically no starch, and nearly 20 per cent fat, giving it characteristics approaching those of the peanut more closely than those of ordinary beans.

"More than one thousand varieties have now been tested by the U.S. Department of Agriculture. Twenty varieties are at the present time being handled by growers and seedsmen in this country. The green and yellow varieties are best adapted for food. The black and brown are chiefly for forage.

"In China, the soy bean is very little used in the manner in which beans are used in this country. Instead, according to W.J. Morse [1918], of the U.S. Department of Agriculture, 'the beans are soaked in water and roasted, the product being eaten after the manner of roasted peanuts.'" Dr. Kellogg then quotes two passages from Morse; one about roasted soybeans, and the other about soy beans which, when three-fourths or more grown, can be used as "a most palatable and nutritious green vegetable."

"This bean not only contains a large amount of protein, more than is found in the same weight of beef, but its protein is of a particularly fine quality. Heretofore, the casein of milk has enjoyed a unique reputation as a protein of finest quality, but now 'the protein of the soy bean appears to be as valuable as the casein of milk.' In view of the shortage of milk, which is likely to increase, it is gratifying to know that a protein has been discovered equally valuable as casein, and one which may be produced in unlimited quantities.

"For promotion of growth, it is not only necessary for the food to contain 'complete' protein in proper amount, but it must also contain a sufficiency of the two vitamins, designated as fat-soluble A and water-soluble B. Osborne and Mendel demonstrated that the soy bean contains an adequate supply of both fat-soluble and of 'water-soluble vitamins,' in which respect it is superior to all seeds heretofore examined, with the possible exception of flaxseed and millet.

"The soy bean is destined to become one of the great food staples, not only of this country but of the world. It is capable not only of supplying the essentials for growth and maintenance, but may also act as a complement to other imperfect foods, such as corn for example, in combination with which it has shown most excellent experimental results.

Composition of the soybean: A table shows the composition of the soy bean, compiled from various sources. "The above analysis clearly shows the soy bean to be a most remarkable food product. Its composition is in some respects more like that of a nut than that of other legumes. In this respect it very much resembles the peanut. Its protein content, nearly 40 per cent, is higher than that of any other foodstuff. Even lean meat affords but half as much. Its high percentage of fat gives it a very high food value and makes it a rich source of oil for various industrial purposes as well as for food.

"The soy fills the place of meat as well as milk in the dietary of many millions of sturdy Orientals. Since the composition of the soy has been understood, it has been much used as a food for diabetics. It is evident from the above [table] that it contains little which can be objectionable in diabetes. The small amount of dextrin and sugar may be easily removed, when necessary, by parboiling.

"Experiments by Holmes [1920], of the office of Home Economics, U.S. Department of Agriculture, have shown that the well cooked soy bean (cooked for two hours under steam pressure) is very easily digestible, and is an exceptionally wholesome article of food, superior to most other legumes.

"The soy bean may not become really popular until the pressure cooker comes into general use, which may be some time. In the meantime, while the patent pressure cooker is coming, any resourceful housewife may improvise a perfectly good and satisfactory pressure cooker from inexpensive materials close at hand. Get a stone jug or jar that can be hermetically sealed. The little stone jars in which apple butter is sometimes sold are well adapted to the purpose. After soaking the beans over night put [them] in the jug with a little salt and enough water to cover, seal up tight and secure the cover well, remembering that the pressure will be from within. Set the jug in a saturated solution of common salt, place over a smart fire and boil for one to two hours. The salt solution boils at a temperature of 220ºF. and so the beans are exposed to a higher temperature than in ordinary boiling... Cooking at the higher temperature not only softens the cellulose and so renders the foodstuffs tender, but greatly improves the flavor.

Note: This is the earliest document seen (Sept. 1996) that uses the term "pressure cooker" in connection with soy beans. Address: Battle Creek, Michigan.

460. Kellogg, John Harvey. 1921. Soy bean milk (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 302-03. 24 cm.

• ***Summary:*** "In Japan infants are sometimes nourished artificially on milk prepared from the soy bean by methods

© Copyright Soyinfo Center 2014

for a long time kept secret. Soy milk is now well known and quite extensively in use in France and England, and likely soon to be introduced into this country. The writer has prepared, experimentally, a quite palatable milk from the soy bean, and has for twenty-five years made use of milk prepared from the almond and other nuts.

"The beans may be prepared either by grinding to a fine flour or by soaking over night and crushing to a pulp between rollers. The dry meal is most convenient. Add to the dry meal sufficient water to a little more than saturate. Allow to soak for two hours. Add five times the quantity of boiling water. Boil for ten minutes, stirring. Filter through a fine cloth. The milky liquid thus obtained has properties very closely resembling cow's milk. It is rich in protein and fats. The fat is well emulsified and easily digestible, and the protein very closely resembles that of milk, being what is known to chemists as a complete protein which may replace the casein of milk as food. The soy milk is rather deficient in salts, both lime and iron. It contains vitamins but less than milk, and it contains no carbohydrates. To be used as milk it should be sweetened by the addition of 2 per cent of cane sugar or 4 per cent of milk sugar. To suit most palates a little salt should be added also. The flavor is different from that of cow's milk, but it is wholesome and not unpalatable and may to a considerable extent take the place of cow's milk by persons who are sensitized to milk or when milk is not available. A similar preparation may be made from peanuts.

"Soy bean milk, according to Adolf and Kiang, has the following percentage composition: Protein 4.22, fat 1.87, salts 0.40, water 93.51.

"The composition of the milk will vary, of course, with the amount of water used in its preparation. It will be noted that soy milk contains no sugar and is very poor in salts, containing only half the amount of salts found in cow's milk. All these may be easily added, however, and so soy milk is a possible resource for lacteal food in case of scarcity of the bovine product; but it seems to the writer doubtful that soy milk will ever be able to compete with cow's milk as a nutrient for human beings, and especially the feeding of infants." Address: Battle Creek, Michigan.

461. Kellogg, John Harvey. 1921. To fu (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 303-04. 24 cm.
• ***Summary:*** "This is a cheese like preparation made from the soy bean, much used in China. The method is as follows:

"Prepare soy bean milk. While it is boiling add one-fifth its volume of a one-half per cent solution of citric acid, stirring. Strain through a cloth to separate the curds.

"To fu omelet is more palatable and more wholesome than ordinary egg omelet. It is made as follows: Four ounces of to fu, one rounded teaspoonful of graham flour, milk sufficient to give the mixture the consistency of pancake batter. Add one well beaten egg. Cook in the usual way. This to fu or soy bean omelet is more wholesome than the ordinary egg omelet and is more easily digestible. Made without the addition of flour the to fu omelet is a valuable dish for diabetics.

"The following is the [percentage] composition of to fu as given by Adolf [sic, Adolph] and Kiang [1920]:

"Protein 10.22, fat 3.66, salts 1.09, [nitrogen-free] extract 4.13, water 80.90." Address: Battle Creek, Michigan.

462. Kellogg, John Harvey. 1921. Soy sauce (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 304. 24 cm.
• ***Summary:*** "'Soy or shoyu sauce is a dark brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat (Barley is sometimes used), salt, and water. This mass is inoculated with a culture known as rice ferment (*Aspergillus oryzae*) and left in cakes to ferment from six months to a year, or sometimes longer.

"In odor and taste this sauce suggests a good quality of meat extract, though perhaps more salty and a trifle more pungent." Address: Battle Creek, Michigan.

463. Kellogg, John Harvey. 1921. Soy bean sprouts (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 304-05. 24 cm.
• ***Summary:*** "'Several species of beans are sprouted and used as a garden vegetable by the Chinese. Soy beans are used to a very considerable extent for this purpose, as these sprouts are larger and firmer than those of most other legumes. Bean sprouts may be used as a home winter vegetable, for the dried beans are sprouted easily in a short time under proper conditions of heat and moisture.

"Mr. Shih Chi Yien [1918] of the Foochow [sic, Soochow] University gives the following directions for preparing bean sprouts, for which purpose either yellow or green soy beans or the Mung beans may be used." There follow two paragraphs of instructions.

"Another method of sprouting is to spread the beans one layer thick on a wet cloth and cover with a heavy wet, dark colored cloth which must be kept damp by frequent sprinkling.

"Bean sprouts are used as a green vegetable at all seasons of the year. In this country they would be especially useful in the winter season because of their richness in vitamins. They have been much used in combating beri-beri and other deficiency disorders. Their use in this country should be encouraged.

"The sprouts may be served raw as a salad or cooked as a green vegetable. They are a constituent of the famous Chinese dish, 'chop suey.'"

Note: This is the earliest document seen (Jan. 2013)

that uses the word "vitamins" in describing one of the nutritional benefits of soy bean sprouts, or that notes that soy bean sprouts are used in chop suey. Address: Battle Creek, Michigan.

464. Kellogg, John Harvey. 1921. Cellulose. The laxative diet. Diet in constipation. Rules for care of the colon to combat constipation (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 198-208, 580-82, 628-29, 632-34. 24 cm.
• ***Summary:*** Four sections of this book contain Dr. Kellogg's most complete statement to date about the health benefits of what would later come to be known as dietary fiber or complex carbohydrates. By the 1980s he was considered one of the pioneers in the Western World on this subject.

(1) In the chapter titled "Cellulose" (p. 198-208) are three sections after the introduction: Bran does not irritate, Agar-agar, and Manyalla (Partially digested reindeer moss eaten by the Koraks and all other Siberian tribes as a substitute for bread). "Bran does not irritate (p. 203): That bran is an excellent laxative is not a new discovery... The general failure to resort to bran for the relief of constipation has probably been due to the wide-spread but erroneous notion that bran is irritating. We are glad to find this view which we have so long defended endorsed by the most eminent of medical authorities, *The Journal of the American Medical Association* (Dec. 6, 1919, p. 1768)." A long quotation follows about the laxative value of bran. The section on Agar-Agar (p. 205-08) gives details on the production and use of this product in Japan based on an account from Mr. George U. West, American Consul of Kobe, Japan.

(2) In the chapter titled "Regimens and Dietaries" is a section on "The Laxative Diet" (p. 580-82) which states: "This dietary is chiefly addressed to the colon, although its beneficial effects are participated in by the whole body, and not only indirectly through improved elimination, but directly through the rich supplies of vitamins, lime [calcium], iron and other essential food minerals which this dietary affords.

"The most laxative foods are those which contain the largest amount of cellulose. The amount of cellulose found in each one of the ordinary foodstuffs is shown in tables given elsewhere in this work. (See pages 200, 201). The foods in the following list are especially rich in cellulose..." Thirty foods are listed, including wheat bran, oatmeal, beans, peas, lentils, barley, and many vegetables and fruits.

Next comes a subsection titled "Bran" (p. 580): "When it is necessary to combat obstinate constipation, it is usually essential that wheat bran be used in liberal quantities. The laxative virtues of bran have long been known and utilized by stock raisers, but it is only within the last twenty years that the value of this article as a food laxative has begun to receive the recognition it deserves. When the writer first began the advocacy of bran as a laxative some forty-five years ago [i.e., in about 1878], it was very hard to convince the average man that in taking bran he was not running great risk of doing violence to his stomach and intestines, perhaps creating ulceration, inflammation, hemorrhoids, or some other distressing disorder. On purely theoretical grounds and perhaps with a commercial purpose, some one [someone] years ago launched the notion that bran irritates the gastric and intestinal mucous membrane. The patent flour manufacturers have industriously cultivated this false notion until it has come to be widely held and deeply rooted in the popular mind. The millers can well afford to spend a considerable amount of money in persuading people to eat fine flour bread, for this will make them constipated so that they will later be obliged to resort to the use of the same miller's bran, for which they will be asked to pay 15 to 25 cents a pound after having paid one or two cents extra per pound for the superfine flour which has made them ill. Thus the miller by his shrewd scheme not only makes an extra profit on his superfine flour, but gets triple price for the precious bran which should never have been separated from the other components of the wheat berry.

"It should be remembered that *bran does not irritate; it titillates.* It passes through the mouth without inflicting injury and likewise passes along over the mucous membrane of the whole alimentary tract, stimulating the intestine to action but doing it no damage.

"The amount of bran required to produce decided laxative effects is considerable. A quarter ounce at each meal is often needed, and it must be taken without exception. The quantity should be increased until the desired effect, three bowel movements daily, is produced.

"There are many convenient methods of using bran. Here are a few. Bran 'brose' may be prepared by mixing together equal measures of bran, cornmeal, and steel-cut oats. Stir into boiling water and cook 3 to 10 minutes, never longer. This is an excellent breakfast dish. Dry bran may be served upon the table and eaten with corn flakes or rice flakes, oatmeal, cream of wheat or other breakfast foods. One or two heaping tablespoonfuls is not too large a dose for the average individual. Some require more. At dinner bran may be added to the soup or mixed with mashed potatoes or purées of some sort.

"Bran bread, bran gems and other similar combinations will be found efficient and satisfactory The important thing is to use a liberal quantity of bran and take it at every meal without exception. Agar, another form of cellulose, is equally efficient in many cases and occasionally produces more satisfactory results than does bran.

"It is to be remembered, also, that bran is rich in lime [calcium], iron and vitamins and so has a real food value aside from its laxative properties."

The next subsection is titled "When the Laxative Diet is

© Copyright Soyinfo Center 2014

Indicated" (p. 582).

(3) In the chapter titled "Diet in Disorders of the Digestive Organs" (p. 624-85) the section on "Diet in Constipation" (p. 628-29) states: "Cellulose is found only in vegetable foodstuffs; hence animal foods of all sorts, meat, eggs and dairy products are constipating. Being wholly digestible and absorbable, they leave behind little residue. But the small residues of these animal substances which reach the colon readily undergo putrefaction, and the products of putrefaction being alkaline paralyze the colon, which is rendered inactive by alkalies and stimulated to activity by acids. In addition to increasing the bulk of food, lubrication is usually required. This may be secured by the use of paraffin of some form." "For best results, either bran or agar and the lubricating paraffin should be mixed in the entire meal instead of being taken before or after the meal... It is the meal itself which needs the roughage and lubrication. These physiological aids to bowel movement do not act by irritation but by promoting physiologic action."

(4) Several pages later (p. 632-34), the section titled "Rules for Care of the Colon to Combat Constipation" gives 20 basic rules. Rule number 9 states: "Eat no white flour bread and avoid condiments, meat and other constipating foods." Number 10: "Eat whole grain breads and cereals. Add an equal measure of bran to oatmeal and other cereals. Eat liberally of greens, fresh vegetables, dates, figs, prunes and all laxative foods." Address: Battle Creek, Michigan.

465. Kellogg, John Harvey. 1921. The peanut (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 357-58. 24 cm.
• ***Summary:*** In the chapter titled "Nuts" this section states: "Though usually classed with nuts, the peanut is really a legume and botanically should be classed with beans and peas. In chemical composition, however, it much more closely resembles a nut than a bean. The peanut is a native of Central America. It is now grown, however, in all parts of the world. It is used extensively as a food in various parts of Africa, where it is known as the monkey nut.

"Peanut oil has been extensively used as a substitute for butter and in the adulteration of olive oil. It must be remembered, however, that these vegetable oils do not contain the fat-soluble vitamins which abound in butter and which are essential for good nutrition.

"Evidence is constantly accumulating to show the great food value of the humble peanut. Dietary studies made by the office of home economics of the U.S. Department of Agriculture have shown that the peanut is not only easily digested but that the fat and protein, which are its chief constituents, are of a very superior character. The oil of the peanut is easily digested and the protein has been shown to have about twice the value of the proteins of wheat. It is well known that experimental animals can not be brought to normal development on a diet of bread alone, but bread consisting of three parts of wheat flour and one of peanut flour will secure normal growth.

"A bushel of peanuts contains 21 pounds of meats and 9 pounds of shells. As an average of 34 bushels can be produced to the acre, an acre will yield 714 pounds of shelled peanuts to the acre. One bushel of peanuts yields a gallon of fine edible oil which may take the place of olive oil for table use. A field of peanuts 200 miles square (25,000,000 acres) would furnish a year's supply of food fat for the United States."

Note: On page 356, Dr. Kellogg discusses "The Ground Nut: A native of this country which was eaten to considerable extent by the North American Indians in aboriginal times. It is nutritious and wholesome but not at present produced in quantities sufficient to give it more than a very minor place in the world's bill of fare." Address: Battle Creek, Michigan.

466. Kellogg, John Harvey. 1921. Animal foods (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 363-435. 24 cm.
• ***Summary:*** Dr. Kellogg confines to this one chapter all of his discussion of meat, poultry, fish, eggs, and milk. Contents: Introduction: Special characteristics of animal foods. Meats: The iron of meats, the lime [calcium] content of animal foods, beef, mutton, goat, venison, pork, fowls, fish, "sea foods," oysters, meat extractives, the poisons of meat, viscera highly objectionable. "high" meats, putrefaction products in meat, the bacteria of meat, acidosis from a flesh diet, effect of flesh eating on animals, parasites of meat, flesh meat not essential, meat unnecessary, raw beef not antiscorbutic, special contraindications of flesh foods. Eggs: Introduction, egg yolk, egg white, the cooking of eggs, influence of hen's food on eggs, eggs and biliousness, the food iron of eggs, the lime content of eggs, egg substitutes, preserved eggs, bad eggs, candling of eggs, egg poisoning, when eggs should not be eaten. Milk: Introduction, table showing composition of cow's milk and milk products, why milk sours while meat putrefies, the special value of milk proteins, milk rich in vitamins, influence of food of cow upon milk, milk rich in salts, dried milk, cream, butter (rich in vitamins), butter color, cheese, skimmed milk, canned milk, buttermilk, whey, modified milk, the iron content of milk, the lime [calcium] content of milk and cheese, "yogurt cheese" (fermented using pure cultures of the *bacillus acidophilus*), whey, milk must be clean, sour milk, bitter milk, slimy and colored milk, bacteria on milk bottles, infections due to unclean milk, infected milk a cause of tuberculosis, injurious effects of sterilizing or pasteurizing milk, buddized milk (sterilized with peroxide of hydrogen), certified milk (and specifications established by the American Association of Medical Milk Commissions), a person may be sensitized to milk, medical uses of milk, how

© Copyright Soyinfo Center 2014

to eat milk (it must be chewed to mix it with saliva, not just swallowed; never eat it with meat), milk a cheap food, table showing composition of milk of various animals (human milk is the lowest in total protein {2.01%} and reindeer milk is the highest {10.90%}), table showing the composition of certain infant foods.

Photos show: (1) The appearance of eggs when candled (4 types). (2) The Battle Creek Sanitarium dairy barn (very clean, with cows standing in two long rows), (3) Beefsteak preserved in buttermilk for 15 years.

Note: Dr. Kellogg advocated a vegetarian diet. He opposed the consumption of meat, fowls (poultry), fish, or sea foods. Eggs are good food if they are fresh and properly cooked to make them digestible–at a low temperature (150-160ºF) until they are "soft boiled." Milk is an excellent food (good source of protein, calcium, and vitamins; and inexpensive) if it is fresh and clean (ideally certified), and comes from cows which have been fed upon fresh grass or other green food (which supplies vitamins). Unsanitary milk may contain disease-producing organisms such as those of typhoid fever, tuberculosis, and diphtheria. Butter is the most important of all animal fats because it is rich in vitamins. Fresh, unripened cheese (especially cottage cheese) and yogurt cheese are good foods. Fresh, clean milk is better than clean eggs. Address: Battle Creek, Michigan.

467. Kellogg, John Harvey. 1921. Vitamins (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 185-197. 24 cm.
• ***Summary:*** Contents: The anti-scorbutic vitamin. The antineuritic or anti beri-beri vitamin. Yeast extract very rich in vitamins. The fat-soluble vitamin. How vitamins are destroyed. The unique value of the tomato.

This chapter begins: "These subtle elements, which have been in recent years proven to be absolutely essential to life and health, are present in food in such small quantities that notwithstanding the prodigious amount of work which has been bestowed upon them, their chemical composition is not yet known. The proof of the existence of this class of food principles and their importance to human life rests upon numerous observations which have shown that in their absence various disorders known as deficiency diseases make their appearance.

"Vitamin appears to be an essential constituent of nerve tissue. Funk found vitamin in ox brain and other investigators have found vitamin in the spinal cord.

"When vitamins are not present in the food in sufficient amount, the vitamin constituent of the nerves is gradually lost and degeneration of the nerve tissue with paralysis follows as the result."

"Vitamins are necessary to promote growth. In their absence young animals do not develop, reproduction does not take place, mothers are not able to nurse their young, appetite and nutrition and various diseases develop, among the best known of which are scurvy, beri-beri, rickets, perhaps pellagra, and certain diseases of the eye."

The section on "The antiscorbutic vitamin" (p. 187) notes: "The Chinese have long made use of sprouted seeds in the form of salad and combined with vegetables in various ways. Sprouted soy beans is one of the constituents of the famous chop suey. Recently Chick and Delf, of London," have found that peas and lentils, when soaked of 24 hours in water and then sprouted for 48 hours at room temperature "were five to six times as active as dry seeds in preventing scurvy, and is this respect compared well with many fresh vegetables. So small a quantity as one and one-fourth grams (one-third dram) of the sprouted seeds fed daily was found sufficient to prevent scurvy in guinea pigs." "The antiscorbutic power of germinated seeds is considerably lessened by boiling. Holst tells us that Cartier, on his last voyage to Newfoundland [Canada] in 1535, cured his crew of 103 men, who with the exception of three were sick with scurvy, by administering to them a freshly prepared decoction of pine needles."

"A very good salad may be prepared from sprouted soy bean seeds which have been allowed to grow to the length of about an inch. Sprouted soy bean seeds also add an excellent quality to vegetable soups. The property which these seeds have of producing highly valuable vitamins makes very desirable the encouragement, in this country, of the use of sprouted seeds." The author then describes how to grow sprouts at home. Address: Battle Creek, Michigan.

468. *Madison Survey* (*Madison, Tennessee*). 1922. Health foods and how to make them known. 4(2):2-3. Jan. 11.
• ***Summary:*** "Teachers in the pulpit and teachers in the class room should be prepared to instruct in the care of the body. They should understand the science of physiology and hygiene, and should teach those under their direction the sacredness of the human body and the laws of its life."

"Simple preparations are to be made, the price of which will fall within the reach of the poor, and many are to be taught to make their own foods rather than to depend upon factory-made foods.

"Every cafeteria, every sanitarium, every school, and likewise, every home table, should be a practical demonstration center of foods properly prepared to give health of body and mind."

469. *Madison Survey* (*Madison, Tennessee*). 1922. Madison Food Factory products. 4(10):3. March 8.
• ***Summary:*** The factory's loaf of whole-wheat bread is riding a wave of popularity. "With many who are studying diet problems the first question is, 'What shall I prepare in place of meat?'

"There are vegetable preparations just as rich in food elements as the flesh of animals, and not only more easily

© Copyright Soyinfo Center 2014

prepared than meats, but lacking in those undesirable points that are driving a good many people to give up the use of flesh foods. The food factory puts out Nut Meat, Savory Meat, and Soy Bean Meat.

"Recipes for dishes made from these vegetable meats are sent with every order.

"Much is being said and written against the free use of cane sugar, and cane sugar products."

Note: This is the earliest document seen (Aug. 2013) that mentions "Savory Meat" in connection with Madison College. This product may have been made with wheat gluten. The last mention seen of Savory Meat in the *Madison Survey* is on 2 July 1922, page 3.

470. **Product Name:** Soy Bean Meat.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1922 March.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Madison Survey. 1922. March 8. p. 3. May 10. p. 3. Canned. Probably made from whole mature soybeans. It is not clear what ingredients (in addition to soy beans) were used or how it was made. This was America's second commercial soy-based meat alternative (meat analog).

Note: This is the earliest known commercial soy product made in Tennessee.

471. *Madison Survey* (*Madison, Tennessee*). 1922. Bits of news. 4(14):4. April 5.
• ***Summary:*** "The Louisville [Kentucky, vegetarian] cafeteria workers have been giving food demonstrations at the health institute conducted at the Louisville church, and Mrs. Sutherland spent the weekend with them, giving instruction on dietetics.

"Two members of the family, Mrs. Scott and Dr. Caroline Hilborn, spent the week visiting the cafeterias in Chattanooga, Knoxville [both Tennessee], and Asheville [North Carolina]..."

472. *Madison Survey* (*Madison, Tennessee*). 1922. Instead of meat. 4(19):3. May 10.
• ***Summary:*** "The Food Department of the Madison School puts out a number of foods to take the place of flesh meats, such as Nut Meat, Soy Bean Meat and Savory Meat." Two recipes for serving Nut Meat or Savory Meat are given.

473. *Madison Survey* (*Madison, Tennessee*). 1922. Added facilities for a growing institution. 4(19):1-2. May 10.
• ***Summary:*** "A number of years ago when the flakefood business was being pushed, a large food factory was erected near Madison. The promoters had a big institution on their hands before the people of the country had been educated to eat the products of the concern. The plant passed from one group of men to another [including Jethro Kloss, who took over this Nashville Sanitarium Food Factory in about 1915], each finding that it was too large and expensive to operate with profit. Finally, it was decided to scrap it.

"It seemed a pity to do this, for the enterprise stood for the manufacture and sale of health foods which the public needed. With the help of friends, the food factory was purchased and rebuilt on a more simple plan on the school grounds. It has since been operated, as are other departments of the institution, with student labor, and has contributed its share to the support of students who meet expenses by work while in training.

"The demand for health foods is on the increase. The latest advance has been in the manufacture of malta [probably made from malted grains], a grain sweet which is more wholesome than cane sugars and cane syrups. A small house was built for the manufacture of malta."

Note 1. According to W.C. Sandborn (1953, p. 123), the food factory was opened at Madison in 1918. This date was verified by Elmer Bush who helped move the factory.

Note 2. This is the earliest document seen (May 2009) related to Jethro Kloss, although his name is not mentioned.

474. *Madison Survey* (*Madison, Tennessee*). 1922. Is flesh food essential to health. 4(22):1-3. May 31.
• ***Summary:*** "Many times the patrons of our vegetarian cafeterias and sanitariums ask why flesh food is discarded."

"The flesh eater is getting his food second-hand. It is a little strange that people who would shrink from using second-hand clothing will eat second-hand food without giving the matter a passing thought. There is no advantage in passing vegetable food through the body of an animal before it is consumed by a human being."

"McCullum, an authority on diet has stated, 'We could entirely dispense with meats without suffering any ill effects whatever.'"

Discusses the benefits of a vegetarian diet and cites numerous authorities who advocate such a diet.

475. *Madison Survey* (*Madison, Tennessee*). 1922. The food factory. 4(24):3. June 14.
• ***Summary:*** "A man and his wife, members of the faculty, have charge of the food department, where are manufactured various nut and soy bean meats, malted nuts, malta, whole wheat and bran crakers [sic, crackers], whole wheat bread, peanut butter, and other health foods." Various pieces of food processing equipment, including a peanut blancher, prepare "health foods for the market, for the city cafeteria, and the home table."

476. *Madison Survey* (*Madison, Tennessee*). 1922. Health foods manufactured at Madison. 4(26):3. July 2.
• ***Summary:*** "For the benefit of those who are inquiring

© Copyright Soyinfo Center 2014

about foods put on the market by the food department of the Madison School, we give the following list: Unleavened Breads–whole wheat fruit crackers, sweetened whole wheat crackers, unsweetened whole wheat crackers, bran crackers, whole wheat beaten biscuit, whole wheat beaten sticks, breakfast crisps.

"The vegetable meats, in cans of various sizes, are–Nut meat, Soy bean meat, Savory meat.

"There are soy beans, plain canned... Steamed whole wheat is put up in 16-ounce cans, and sterilized bran and forty per cent gluten flour are for sale."

477. *Madison Survey* (*Madison, Tennessee*). 1922. The manufacture of health foods an important part of our work. 4(30):1-2. July 26.

• ***Summary:*** "For a number of years before the establishment of the school, a food factory was operated in this section of the South. It was in the days when flake foods had been popularized, and this factory was started as a money-making enterprise. Although it was in no way connected with the work of the denomination, yet our people were looked upon as responsible for the project, and when it failed they received the censure.

"In order to keep alive the health food industry, the factory was purchased and operated for a number of years by the conference. The location was unfavorable and the labor problem a perplexing one, and so in spite of the fact that good foods were manufactured, the enterprise was a losing one, and it was decided to close.

"Finding it difficult to dispose of the property to any company whose object was the making of money, it was decided to scrap the plant, but Brother Jethro Kloss, who had a keen interest in the food work, and who had some experience in a small way in the manufacture of foods in Minnesota, decided to buy. He operated the factory for several years. He was enthusiastic over the production of foods, not so much from the financial as from the philanthropic side of the question. But the labor problem was still a difficult one. He could not pay the prices demanded, and the factory was again to be shut down.

"When the Madison School faced the closing of the food factory,–the only one then operating in the South for the manufacture of health foods,–and considered the statement made in the early history of the institution, that Madison should interest itself in the food work in the South, the management of the School decided it to be their duty to keep the health food business alive.

"This was in the time of the Great War [World War I], a time of unusual stress everywhere. But with the assistance of Sister Josephine Gotzian, who has befriended more than one struggling health food enterprise, the Madison School faculty purchased the plant. The buildings were wrecked and brought to the School farm. Here, a new factory was built. It is not large but it is well planned and thoroughly sanitary. It has cost nearly fifteen thousand dollars, and aside from Sister Gotzian's assistance the School has borne the expense. The money came out of what otherwise would have gone to faculty members as a salary. They willingly made the sacrifice because of their love for health principles and their desire to help forward this type of work in the South.

"The factory has had a moulding effect on the work in this field. It has made possible the whole grain bread campaign that is being carried forward in many other places... It is encouraging men and women to discard the use of flesh foods by providing proper foods to take the place of meat."

Note 1. Though soy beans are not mentioned, by April 1919 this food factory was canning soy beans grown on the school farm. In later years it would make many commercial soy products and sell some of them throughout the USA and the world.

Note 2. This is the earliest document seen (May 2009) related to Jethro Kloss which mentions his name.

478. Kellogg, John Harvey. 1922. Bacteriology condemns meat. *Good Health* (*Battle Creek, Michigan*) 57(7):318-20. July.

• ***Summary:*** "Recently the writer had the pleasure of visiting in his laboratory an eminent bacteriologist, professor this newest branch of this important science in one of the world's greatest universities. In the course of the conversation, the writer remarked, for the purpose of eliciting an opinion of the professor:

"'A bacteriologist ought to prohibit the use of meat, because every morsel is swarming with putrefactive organisms, Welch's bacillus, and other pernicious germs which infect the alimentary canal, particularly the colon, and so become the cause of colitis, appendicitis, and other diseases, beside producing virulent poisons which damage the liver, kidneys and other bodily structures in a great variety of ways.'"

"'Yes,' said the professor, 'as meat comes from the butcher shop, as it is ordinarily eaten by people, it is filled with putrefactive bacteria. I entirely agree with you. *Meat is unnecessary as an article of food and is harmful.'*

"Dr. Tissier, one of the most eminent and celebrated bacteriologists of the Pasteur Institute of Paris, for many years assistant of the late Professor Metchnikoff, and later his associate, was among the first to make a careful study of the bacteria of the colon. He then made a study of meat, obtaining specimens first from the butcher shops. He found every specimen swarming with the bacteria of putrefaction... Dr. Tissier then went to the slaughterhouse and obtained specimens of meat from the slaughtered animals as quickly as possible after the animal was killed." The same putrefactive germs were found. "As a result of these experiments, Dr. Tissier abandoned the use of flesh foods, and for more than twenty years has prohibited the

© Copyright Soyinfo Center 2014

use of flesh foods by his patients. He treats his patients by changing the intestinal flora. This he accomplishes by implanting cultures of the protective germs which discourage the growth of putrefactive germs in the colon. These germs are implanted in the infant's intestine within a few hours after birth. Nature starts out in life every young warm-blooded animal, every calf, every kitten, even puppies and chickens, with a stock of protective germs (*B. bifidus* and *B. acidophilus*). So long as these germs flourish, the animal remains in health. Through errors in diet, particularly by the use of meat, these germs are lost. The autointoxication begins, with all the evil consequences which follow." Address: Battle Creek, Michigan.

479. **Product Name:** Soy Beans (Plain Canned).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1922 July.
Ingredients: Incl. whole soybeans.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Madison Survey. 1922. July 2. p. 3. Gray. 1936. All About The Soya Bean. p. 123.

480. *Good Health* (*Battle Creek, Michigan*). 1922. The constipation problem simplified. 57(8):323-27. Aug.
• ***Summary:*** The three keys are: (1) Avoid laxatives and drugs that act by chemical effects. (2) Add protective, beneficial bacteria, *B. acidophilus* and *B. bifidus* to change the intestinal flora. (3) Consume a diet rich in roughage.

481. Brook, Harry Ellington. 1922. Care of the body. *Los Angeles Times.* Sept. 10. p. XI22. Sunday magazine.
• ***Summary:*** The section titled "Vegetarian restaurants" states: "The vegetarian restaurant site on Hill street is now occupied by one of our leading grocery stores. For many years, it was conducted by the Seventh-Day Adventists, and, according to the tenets of that sect, was closed on Saturday. Since then, it has changed hands several times, gradually falling into 'innocuous desuetude.'

"It seems as if there should be a good field for several vegetarian restaurants in this city, where there are thousands of people who do not eat meat. The explanation may be that of late the restaurants and cafeterias have come to cater more and more to this class of customers.

"There are several raw food restaurants in Los Angeles." Address: N.D. [Naturopathic Doctor].

482. Hollister, M.A. 1922. The relation of the church to city treatment rooms, vegetarian cafeterias, and rural community work. *Madison Survey* (*Madison, Tennessee*) 4(41):4-5. Oct. 18.
• ***Summary:*** "The work of the church is the saving of souls, and since the real object of such enterprises as our cafeterias and treatment rooms is to save men, the attitude of the church and conference should not be mere toleration of these enterprises, but they should encourage and foster by active participation and cooperation."

"The vegetarian cafeteria [in Nashville] is a most excellent line of work, as it serves healthful foods to the people and gives instruction in healthful cookery. We are told that the cafeteria should be a school–not merely a place to feed people but to educate them... Many of the same things may be said of treatment rooms... The workers in these city centers should be examples of neatness, Christian courtesy and with a character above reproach."

483. **Product Name:** Savory Meat.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1922.
New Product–Documentation: *Madison Survey* (Madison, Tennessee). 1922. March 8. p. 3 "Madison Food Factory products." "There are vegetable preparations just as rich in food elements as the flesh of animals, and not only more easily prepared than meats, but lacking in those undesirable points that are driving a good many people to give up the use of flesh foods. The food factory puts out Nut Meat, Savory Meat, and Soy Bean Meat."

Madison Survey (Madison, Tennessee). 1922. May 10. "Instead of meat." "The Food Department of the Madison School puts out a number of foods to take the place of flesh meats, such as Nut Meat, Soy Bean Meat and Savory Meat." Two recipes for serving Nut Meat or Savory Meat are given. Note: Nowhere can we find any proof that Savory Meat contained wheat gluten. Yet it was a meat alternative that probably did not contain soy. The last mention seen of Savory Meat in the *Madison Survey* is on 2 July 1922, page 3.

Letter from Mavis Sutherland. 1994. July 3. "I may have solved the gluten question [What was the first commercial product made by Madison Foods that contained gluten?] but I can't prove it. I will send copies of the *Madison Survey* which cause me to feel that gluten came on the scene in 1921 or 1922. It was called Savory Meat."

Note: Madison Foods started in 1918. The first manager and treasurer was Mrs. Nellie Druillard (affectionately called "Mother D"). Mr. and Mrs. Andrew Wheeler were the first in charge of food production.

484. **Product Name:** Loma Linda Smokene (Seasoning).
Manufacturer's Name: Sanitarium Food Co. (Changed name to Loma Linda Food Co. on 6 Feb. 1933).
Manufacturer's Address: Anderson Street, Loma Linda, California.
Date of Introduction: 1922.
Ingredients: In 1973: Toasted soy powder, dried yeast, soy

© Copyright Soyinfo Center 2014

sauce, condensed wood smoke.
Wt/Vol., Packaging, Price: By 1969: 2.5 oz shaker bottles.
New Product–Documentation: Ad in *Health* (Mountain View, CA). 1934. April. p. 33. The product is now named Smoteen.

Today's Food. 1961. Summer. p. 6. "Smokene."

Loma Linda Food Co. 1969. "Wholesale Price List." Smokene is now sold in 2.5 oz shaker bottles, which retail for $0.30 each.

Interview with Charlotte Van Gundy Holmes. 1981. She says that this was produced as an imitation of the soy-based Smoein developed several years earlier by her father, T.A. Van Gundy, at La Sierra Industries in nearby La Sierra, California.

Karen Misko. 1973. *SeVa Longevity Cookery Cookbook.* p. 101. "Smokene: smoked seasoning spice made from toasted soy powder, dried yeast, soy sauce and condensed wood smoke. It is used for flavoring soups and sauces (Loma Linda Foods)."

Talk with Ty Myers of Washington state. 2004. Jan. 30. His aunt, who also lives in Washington, has a bottle of Smokene with some of the product still in it. She had it when he was a boy, and he is now age 40. He tried some not long ago. A powder, it adds a delicious smoky flavor when sprinkled on almost anything. Ingredients include soybeans and yeast. It comes in a glass bottle, 3 inches tall, with a shaker top and a metal cap. The design looks like it was made in the 1940s. He will send color photos to Soyfoods Center.

Note 1. This is the earliest known commercial soy product made by Loma Linda Foods or its predecessors.

Note 2. This is the 2nd earliest known commercial roasted soy flour in the Western world (after Smoein).

485. Arnbrecht, Jacob. comp. 1922. Hygienic cook book: A collection of choice recipes carefully tested. Revised and enlarged. Battle Creek, Michigan: Shaw Printing Company. 416 p. Index. 21 cm. [10 ref]
• ***Summary:*** This is a Seventh-day Adventist vegetarian cookbook (which includes dairy products and eggs), containing much basic information about nutrition and hygiene. A full-page table titled "Typical foodstuffs representative of each food nutrient" (p. 14) lists soy beans as a food that contains protein, but less than is found in eggs, meat, milk, or cheese. It also notes that soy beans are "Starchless." A half-page table titled "Classification of proteins" (p. 18) states that the proteins legumin and glycenin [sic, glycinin] are found in soy beans. The chapter titled "Entrees" contains a recipe for "Soy bean loaf" which includes 1½ cups soy bean puree and ½ cup peanut butter. This is the only soy recipe in the book. This same chapter contains many recipes using "substitutes for flesh meats" (such as Protose, Nuttolene), and other innovative ingredients (gluten meal, ground nut meats, vegetable butter, nut butter) made by Seventh-day Adventist companies. Recipe names include: Vegetable meat. Vegetarian beefsteak. Mock veal pie.

Cellulose (p. 26): It "has no nutritive value, but because it is not digested in the human body it forms the larger part of the ballast or bulk of our food which is so necessary to a normal intestinal movement. It stimulates peristalsis by acting as a gentle mechanical irritant." Those who have a tendency to "sluggish intestinal movement" may want to add bran to their food or consume a diet consisting of "a greater proportion of foods which contain a large amount of 'roughage' or ballast, such as green vegetables, fruits, and whole grain products."

Note: This is the second earliest Seventh-day Adventist cookbook seen (Oct. 2004) that contains a recipe using soybeans or soy ingredients.

Also discusses: Lecithin (p. 28; soy is not mentioned). Food combinations (good, fair, and bad; p. 44). Acid and alkali forming foods (p. 48). Natural diet of man. Shall we eat meat? Dangers of disease in meat. Was flesh first used before or after the flood? (p. 50-55). Diet for constipation: Lists of laxative foods to be recommended and avoided (p. 147-49). Sago is used in puddings (p. 237). Many desserts contain a great deal of sugar, plus eggs and milk; others use "vegetable gelatine" (p. 262). Pies use butter, peanut butter, granola, etc. Whole wheat bread/flour is different from Graham bread/flour (p. 293). Recipes for gluten bread, and Gluten biscuit or sticks (p. 301), and Gluten mush (p. 319). Chapter 32, titled "Nut preparations" (p. 375-77) contains a recipe for peanut butter using two processes, one of which calls for a Quaker City Mill. Recipes for Almond milk (p. 382). Peanut candy (p. 394).

486. Cooper, Lenna Frances. 1922. The new cookery. 8th ed., revised. Battle Creek, Michigan: The Modern Medicine Publishing Co. 449 p. Index. 23 cm.
• ***Summary:*** Contents: 1. Food values. 2. The art of preparing foods. 3. Beverages. 4. Cereals. 5. Fermented breads. 6. Unfermented breads. 7. Sandwiches. 8. Dairy products. 9. Cream soups. 10. Plain soups. 11. Meat substitutes and entrees. 12. Macaroni and Italian pastes. 13. Eggs. 14. Gravies and sauces. 15. Vegetables. 16. Salads and relishes. 17. Toasts. 18. Fruit Desserts. 19. Custards and cold desserts. 20. Frozen desserts. 21. Pastry and pies. 22. Cakes. 23. Cake fillings and frostings. 24. Hot puddings. 25. Sauces for puddings. 26. Canning and preserving. 27. Special dishes for invalids. 28. Balanced menus."

Soy is not mentioned in this Seventh-day Adventist vegetarian cookbook; soy flour was mentioned in 9th edition (1924).

This book is dedicated to the author's mother. Page 13 states: "The author wishes to express her indebtedness to Dr. and Mrs. John Harvey Kellogg, of the Battle Creek Sanitarium, who have inspired her with a love for the study

© Copyright Soyinfo Center 2014

of foods and their scientific preparation and who have since been constant sources of help and encouragement."

With each recipe is given the calories in the recipe and per serving from protein, fat, carbohydrate, and total. Interesting items: Cereal coffee, Kaffir tea, and Health Koko (p. 33). Yogurt buttermilk and Orange yogurt (p. 34-36). Sterilized bran (p. 44). Graham mush with dates, Gluten mush, and Creamed gluten mush (with 1 cup 20% Gluten Meal, p. 47). Granola fruit mush (p. 49-50). Graham bread (p. 54-55). Peanut butter sandwiches (p. 84-85). Protose sandwiches (p. 85). Cream of almond soup (p. 104-05). Noodle soup with Savora (p. 126-27). Chapter 11, titled "Meat substitutes and entrees" contains many interesting recipes, including some commercial products made by SDA companies: Roast Protose with dressing (p. 129). Protose fillet (p. 130). Nut fillet (with Protose and Nuttolene, p. 131). Fillet of nut meat (with Protose and Cereal Coffee, p. 131). Nut meat loaf (with Protose and Nuttolene, p. 143). Vegetarian ham (with Nuttolene, Protose, and Savora, p. 143). Nut patties. Nut chops (with peanut butter, p. 144-45). Peanut roast (p. 145-46). Jellied peach (with 1 cup sugar, p. 284). Spanish cream (with 3 cups hot milk, 3 eggs, and ½ cup sugar, p. 285). Hot Malted nuts (with ¼ cup dry Malted Nuts, p. 386). Hot Malted Milk (with 4 tablespoons Malted Milk, p. 386). Almond cream (p. 388). Meltose ice cream (with 1 cup Meltose, p. 389). Almond ice (with 6 tablespoons almond butter, p. 389). Frozen malted nuts (with 1½ cups Malted Nuts, p. 390). Gluten bread (with 3.75 cups 40% Gluten Flour, p. 390-91). Gluten puffs (with 1 cup 40% Gluten Flour, plus soda and hydrochloric acid p. 391). Note: In 1923 Lenna F. Cooper was secretary of the American Home Economics Association (see *Journal of Home Economics*, Oct. 1923, p. 588). Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium [Battle Creek, Michigan].

487. Hamburger's Grocery Store. 1923. Go to Hamburger's Grocery Store for Health Foods (Ad). *Los Angeles Times.* Feb. 7. p. II20.
• ***Summary:*** "We carry the most complete line to our knowledge on the West Coast. Established 1881. 'Some ha' meat who canna' eat'–then it is they seek the most appetizing, most nutritious health foods. Hamburger's has searched this country and abroad to bring the best to you. One entire department is given over to health foods alone..." Two lines of health foods are advertised: Eugene Christian Vitamin Foods (Vegex brand), and Battle Creek Sanitarium Health Foods. For the latter: "- new goods arriving daily. Laxa–a combination of sterilized wheat, bran and Ceylon agar. Calax, Paramels, Paralax, Lactose, Dextrine, Acidophilus Lactose, Dialtetic [sic, Diabetic] Bran, Cooked Bran, Soy Biscuit, Black Fig, White Fig and Prune Marmalade, Gluten Meals, Malted Nuts, Yogurt Tablets. Among the many meat substitutes are Protose, Nuttose and Nuttolene."

"Free delivery, convenient charge account and special phone service." Groceries delivered free twice a day.

Note: A similar but larger ad appeared in 11 April 1923 issue, p. II22. Here we read "Diabetic Bran, Soy Biscuits." Address: Fourth Floor [Broadway at Eighth, Los Angeles]. Phone: Broadway 3940.

488. **Product Name:** Soy Biscuit or Soy Biscuits.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1923 February.
New Product–Documentation: Ad in *Los Angeles Times.* 1923. Feb. 7. p. II20. "Go to Hamburger's Grocery Store for Health Foods." This store carries a complete line of Battle Creek Sanitarium Health Foods, including "Soy Biscuit" (also called "Soy Biscuits").

Note: This is the earliest known commercial soy product made in Michigan.

489. *Madison Survey* (*Madison, Tennessee*). 1923. Nashville Cafeteria. 5(20):3. May 9.
• ***Summary:*** A story in the *Nashville Banner* explains that the "Vegetarian Cafeteria, closed for some months, reopened today in attractive new quarters, 151 Sixth avenue, North, in a building which has been remodeled for the purpose. The cafeteria, with the treatment rooms in the same building, which will be reopened early in May, is a branch of the Nashville Agricultural Normal Institute and Madison Rural Sanitarium at Madison, and has a large clientele in Nashville."

490. *Madison Survey* (*Madison, Tennessee*). 1923. News about the place. 5(21):4. May 16.
• ***Summary:*** "When a new department is opened, the school cannot well hire experienced help to operate it; it must train its own help. This was the case when the food factory was opened. It was the policy to begin in a small way, educate workers step by step, and make gradual growth. Mr. and Mrs. Andrew Wheeler were placed in charge of the work of this department in counsel with Mrs. Druillard, who has had years of experience in other institutions. Mr. and Mrs. Wheeler have grown up with the work."

491. *Good Health* (*Battle Creek, Michigan*). 1923. Food value of the soy bean. 58(8):15-16. Aug. Advertising section.
• ***Summary:*** D.W. of Louisiana asks in a letter, "What is the food value of the soy bean?" Answer: "The soy bean is rich in fat, containing twenty times as much as the navy bean. It is also rich in protein, of which it contains fifty per cent more than the same weight of meat. The protein of the soy bean closely resembles that of milk, being a 'complete' protein and capable of replacing the protein of eggs, meat or milk.

© Copyright Soyinfo Center 2014

This has been demonstrated by animal feeding experiments.

"A milk closely resembling cow's milk may be prepared from the soy bean, and also cheese... In China and Japan the soy is used only in the form of *to-fu,* or curd... The half-grown beans of certain varieties are delicious."

492. Kellogg, John Harvey. 1923. Intestinal stasis: Its significance and means of combatting it. *State Hospital Quarterly* (*Michigan*). Aug. *
Address: M.D., Battle Creek, Michigan.

493. Kloss (Jethro) Health Food Co. 1923. Health foods (Ad). *Naturopath* (*New York City*) 28(9):488. Sept.
• ***Summary:*** "We manufacture an unusual line of Health Foods. Have thirty-four years of experience along the Naturopathic line. Our years of experience in Institutional feeding of the sick, as well as out of Institutions, watching the results obtained from feeding Natural Products, has enabled us to present something to the public that is of infinite value."

"We manufacture a line of foods that most perfectly takes the place of meat, milk, eggs and butter. There are no animal products used in the manufacture of our foods. We have used no animal products in our home for over eight years [i.e., since 1915], no meat for over 30 years [since 1893 or before].

"We are just completing a book, which will be off the press in September, on Natural Products of the earth,..."

"Send for the price list of our health foods and complete description of our new book." Address: Brooke, Virginia.

494. *Madison Survey* (*Madison, Tennessee*). 1923. Reason for reform in diet. 5(41):2-3. Oct. 10.
• ***Summary:*** "Men do not love pain, but most of them are loath to attribute suffering to errors in diet and other wrong habits of life... However no less an authority than Dr. E. V. McCullum of the School of Hygiene and Public Health of Johns Hopkins University, tells us 'that a dietary reform is essential as a part of any general program of public health work.'

"The legumes such as soy beans, lentils, peas, and beans of all kinds are rich in lime [calcium], much richer than the cereal grains."

Note: This is the earliest document seen (Oct. 2001) concerning dietary/health reform and soy.

495. *Madison Survey* (*Madison, Tennessee*). 1923. A city church cooperates with the cafeteria. 5(43):3. Oct. 24.
• ***Summary:*** "The city treatment rooms and the vegetarian cafeteria [in Nashville] are well known among the business men."

496. Kellogg, John Harvey. 1923. The new dietetics: A guide to scientific feeding in health and disease. Revised ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 1021 p. Index. 24 cm.
• ***Summary:*** About the principles of physiology, metabolism, dietetics and vegetarian nutrition (for both healthy and sick patients) as practiced at the Battle Creek Sanitarium. Dr. Kellogg was a pioneer in emphasizing the importance of dietary fiber, as illustrated in the following four sections. The content of these sections is nearly identical to that of the 1921 edition (which see for details).

(1) In the chapter titled "Cellulose" (p. 211-22) are four sections: Bran, Bran does not irritate, Agar-agar, and Manyalla.

(2) In the chapter titled "Regimens and Dietaries" (p. 572-670), following a section on "The Laxative Diet," are long sections titled "Bran" (p. 626-27) and "When the Laxative Diet is Indicated" (p. 627).

(3) In the chapter titled "Diet in Disorders of the Digestive Organs" (p. 671-755) is a section on "Diet in Constipation" (p. 682).

(4) Several pages later, the section titled "Rules for Care of the Colon to Combat Constipation" (p. 686-87) gives 20 basic rules.

Note 1: This book is widely cited by Trowell (1979) and others as the one in which Dr. J.H. Kellogg stimulated the study of fiber in the United States, and was thus a pioneer in this field worldwide. However most of the information about fiber in this 1923 edition first appeared in the original 1921 edition.

Note 2. The section titled "The soy bean" (p. 315-321) is quite similar to that in the 1921 first edition of this book, but on different pages. Changes appear on the following pages: 316, 318, 320-21. Address: M.D., LL.D., F.A.C.S., Superintendent of the Battle Creek Sanitarium, President of Battle Creek College, Battle Creek, Michigan.

497. Kellogg, John Harvey. 1923. The natural diet of man. Battle Creek, Michigan: The Modern Medicine Publishing Co. 386 p. Illust. Index. 20 cm. [50+* ref]
• ***Summary:*** This classic of vegetarian literature contends that a vegetarian diet is the natural diet of man. Contents: 1. Man not naturally a flesh-eater: Modern civilized life unnatural and unbiologic, animal dietaries, lessons from the monkey, porcine wisdom in diet, animals classified by diet, the ancient family of primates, all mammals originally vegetable feeders, when germ diseases were unknown, kinship of higher apes and men, flesh-eating never a universal human custom.

2. Twenty popular delusions about flesh foods: D-1. That meat is superior as a blood-making food, and, hence, is needed in anemia. D-2. That meat is essential as a flesh-building food. D-3. That a flesh diet is essential to support severe or prolonged activity; that is, promotes endurance. D-4. That flesh-eating is necessary to produce physical courage. D-5. That vegetarian races are inferior physically

© Copyright Soyinfo Center 2014

and mentally to races using a mixed diet. D-6. That flesh foods are more refined and more easily digested and, hence, more nutritious than are foods of vegetable origin. D-7. That man is naturally omnivorous. D-8. That flesh foods are stimulating and thus supply an element needed especially by brain workers. D-9. That beef tea is a useful nutrient. D-10. That a meat diet is required to prevent or cure gastric acidity. D-11. That a meat diet is desirable in tuberculosis. D-12. That a meat diet is necessary in diabetes. D-13. That a flesh diet is essential in the treatment of obesity. D-14. That meat is required in beri-beri. D-15. That meat is essential as a "building-up" or restorative food. D-16. That meat is needed by growing children. D-17. That meats are needed as a stimulus to appetite. D-18. That the beef industry is a necessary part of our national economic system. D-19. That a meat diet is necessary to insure reproductive activity. The law of diminishing returns versus flesh-eating. D-20. That meat is a harmless luxury.

3. Scientific objections to the use of meat: Human liver not adapted to meat diet; important differences between meat and milk; meat deficient in vitamins and food lime; Eskimos eagerly seek vegetable food; ill effects of meat diet on Arctic explorers; meat saturated with tissue poisons; meat readily putrefies, natural foods do not; the poisons of meat; meat extracts; why viscera are especially objectionable; bacteriology condemns meat as food; vast numbers of bacteria in meat; putrefactive products of meat; why physicians forbid meat in cases of kidney disease and high blood pressure; how flesh-eating causes constipation ("partly because the flesh diet is lacking in the roughage or indigestible material required to stimulate the intestine to action").

4. Diseases due to flesh eating: Tuberculosis in animals, cancer from meat eating, cancer rare and appendicitis unknown among flesh abstainers, meat-eating causes disorders of nutrition, acidosis from a flesh diet, a meat diet and scurvy, meat eating and arteriosclerosis, pernicious effects of a meat diet experimentally proven, recognized meat contraindications, the peregrinations of a deadly parasite, typhoid germs in meat products, flesh poisoning, no protection for meat-eaters, oyster poisoning, converting sewage into food.

5. Experimental evidence against flesh eating: McCollum's experiments, Dr. S. Weir Mitchell endorses the meatless regimen, an eminent scientist on meat diet, Fauvel's observations, greater endurance of flesh-abstainers, the death rate reduced by meatless diet, flesh-eating does not develop intelligence, meat-eating and race degeneracy, meat-eating a city habit, non-meat diet best even for carnivorous animals, the Scotchman's dog, the effects of a meat diet on rats, the effects of a flesh diet on rabbits, flesh-eating animals short lived. 6. The ethical argument.

7. Historical facts and authoritative opinions: Biblical teaching about flesh eating, apostles who were flesh abstainers, the Essenes were flesh-abstainers, the diet of the ancient Greeks, King Cyrus a flesh-abstainer, Julius Caesar's army ration, diet of Peruvian soldiers, diet of athletes of ancient Greece, ancient philosophers were flesh-abstainers, Plutarch's essay on flesh-eating, fleshless diet of a Roman emperor, meatless diet endorsed by Gautier, views of Seneca, diet of the ancient Sumerians [today's Iraq], eminent modern flesh abstainers, vegetarian monks, Thoreau on the fleshless diet, a Chinese statesman's experience, the views of two great naturalists, the poet Shelley a food reformer, a child's natural repugnance to meat, Liebig on the advantages of a non-flesh diet, Sylvester Graham's diet reform movement.

8. Interesting facts concerning the dietary habits of various peoples. 9. The marvelous adaptation of the natural diet to human needs. 10. How to discard meats comfortably and safely.

11. Is the disuse of meat advisable from a practical standpoint? The U.S. Department of Agriculture shows the use of less meat to be safe and economic, the importance of planting nut trees, avoidance of meat is necessary to change the intestinal flora, vegetable substitutes for meat, the recent low protein movement in the United States, the half century experience of the Battle Creek Sanitarium with a fleshless diet.

12. Newspaper and magazine misinformation: An "eat-more-meat" campaign, Professor Fisher of Yale University [Connecticut] refuses to support the "eat-more-meat" campaign of the [Chicago, meat] packers, pernicious piffle.

Soy is mentioned in many places. The section titled "Flesh-eating never a universal custom" states (p. 33-34): "According to Mori, the Japanese peasant of the interior is almost an exclusive vegetarian. He eats fish once or twice a month and meat once or twice a year... The soy bean is held in high esteem and used largely in the form of *miso*, a purée prepared from the bean and fermented; also *to-fu*, a sort of cheese; and *cho-yu* [shoyu, soy sauce], which is prepared by mixing the pulverized beans with wheat flour, salt, and water and fermenting from one and a half to five years. The Chinese peasant lives on essentially the same diet, as do also the Siamese, the Koreans, and most other Oriental peoples. Three-fourths of the world's population eat so little meat that it cannot be regarded as anything more than an incidental factor in their bill of fare."

Page 45: Complete "proteins are found in milk and eggs as well as in most nuts, peanuts, and the soy bean..."

Page 73: "The protein of milk, of the soy bean, and of nuts is known to be superior to meat as a source of body nitrogen." Address: Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

1021 p. See p. 315-21. 24 cm.
• ***Summary:*** This section is quite similar to that in the 1921 first edition of this book, but on different pages. Changes appear on the following pages: 316 (addition of a paragraph stating that the soy bean is a highly valuable food for persons suffering from diabetes), 318 (deletion of the statement that the writer "has for twenty-five years made use of milk prepared from the almond and other nuts."), 320-21 (addition of a table, supplied by William Morse of the USDA, giving the composition of soy beans sprouts and mung bean sprouts). Address: Battle Creek, Michigan.

499. Kellogg, John Harvey. 1923. The ethical argument (Document part). In: J.H. Kellogg. 1923. The Natural Diet of Man. Battle Creek, Michigan: The Modern Medicine Publishing Co. 385 p. See p. 216-27.
• ***Summary:*** Page 221 states: "When man slays to eat, what a picture arises! *'Deaf to the calf that lies beneath the knife, / Looks up, and from her butcher begs her life; / Deaf to the harmless kid, that, ere he dies, / All methods to procure thy mercy tries, / And imitates in vain thy children's cries! / Where will he stop who feeds with household bread, / Then eats the poultry which before he fed?'*

Kellogg continues: "Man rears his cattle, his sheep, and his poultry much like household pets. His children make his lambs their playmates. Side by side his oxen toil with him in the field. In return for kindness, they give affection. What confidence they repose in him! how faithfully they serve! With winter's frost an evil day arrives,–a day of massacre, of perfidy, of assassination and bloodshed. With knife and ax he turns upon his trusted friends,–the sheep that kissed his hand, the ox that plowed his field. The air is filled with shrieks and moans, cries of terror and despair; the soil is wet with warm blood, and strewn with corpses.

"Is there a brute on earth that would be capable of such a crime? In such an act have we not the veritable spirit of murder in an aggravated form? Let us listen to the appeal of a pagan who lived five centuries before Christ (Pythagoras):

'Whoever was the wretch (*and cursed be he*) */ That envied first our food's simplicity, / The essay of bloody feasts on brutes began, / And after forged the sword to murder man,–/ Had he the sharpened steel alone employed / On beasts of prey that other beasts destroyed / Or man invaded with their fangs and paws, / This had been justified by Nature's laws / And self-defense: but who did feasts begin / Of flesh, he stretched necessity to sin. / To kill man-killers, man has lawful power, / But not the extended license to devour. / Take not away the life you can not give; / For all things have an equal right to live: / Kill noxious creatures, where 'tis sin to save; / 'Tis only just prerogative we have: / But nourish life with vegetable food; / And shun the sacrilegious taste of blood.'*

"Well did Plutarch say, 'Alas, for our savage inhumanity! It is a terrible thing to see the tables of rich men decked out by those layers-out of corpses, the butchers and the cooks.'" Address: Director, School of Hygiene and Public Health, Johns Hopkins Univ., Baltimore, Maryland.

500. Kellogg, John Harvey. 1923. Vegetable substitutes for meat (Document part). In: J.H. Kellogg. 1923. The Natural Diet of Man. Battle Creek, Michigan: The Modern Medicine Publishing Co. 385 p. See p. 334-36.
• ***Summary:*** "By the combination of nuts and cereals, a product very closely resembling meat may be prepared. The process for doing this was discovered by the writer many years ago in a series of experiments undertaken for the purpose by the request of Professor Dabney, then assistant professor in the Department of Agriculture. Recognizing that the increase of population would ultimately lead to an increase in the price of foodstuffs and particularly of meats, and possibly a scarcity of meats, Professor Dabney requested the writer to solve the problem by a production of a vegetable substitute for meat. The result of the experiment undertaken was Protose, a nut-cereal preparation, which to a considerable degree resembles meat in appearance, taste and odor, having a slight fibre like potted meat.

"Earlier experiments made by the writer led to the production of peanut butter, which has since developed into a great industry and has increased enormously the size and value of the peanut crop of the South. From a food standpoint, a pound of peanut butter is more than equal to the same amount of pork or meat of any sort.

"In Malted Nuts, another product of our experiments, is provided a product [probably peanut milk] resembling Malted Milk, which has been extensively used as a substitute for milk by those unable to tolerate cow's milk.

"No doubt the future will develop a large number of vegetable products which will so fully supply the place of various meat products and dishes that all of these unwholesome products may be dropped from the bill of fare without being missed. As a matter of fact, it is now recognized by the most eminent authorities in dietetics that the flavor of meats is about the only reason or apology which can be offered for their use." Address: Director, School of Hygiene and Public Health, Johns Hopkins Univ., Baltimore, Maryland.

501. Kellogg, John Harvey. 1923. The natural diet of man (Continued). Battle Creek, Michigan: The Modern Medicine Publishing Co. 386 p. Illust. Index. 20 cm. [50+* ref]
• ***Summary:*** Continued: Page 74: "Vegetable extracts (yeast extracts and soy sauce) are now prepared which are finer in flavor than the best meat extracts..."

Page 191: "Complete proteins are found in the almond and also in the soy bean and the peanut, a fact which accounts for the large use of the soy bean and the peanut in China and other Oriental countries as a supplement to a diet of rice and green vegetables."

© Copyright Soyinfo Center 2014

Page 198: "The soy bean contains more protein than does beef, and 20 per cent of oil."

Page 282: G. Yukawa reports that the diet of Japanese monks "consists exclusively of vegetable products, rice being the staple, supplemented with soy beans and vegetables. The diet contained an average of 70 grams of protein, 15 grams of fat, 514 grams of carbohydrates, an average energy intake of 2,500 calories. The experimenter concluded that the absolute vegetarian diet of the Buddhist monks of Japan is entirely adequate to maintain perfect health."

Page 285: "Some years ago (1899) the Emperor of Japan appointed a commission to determine by investigation whether it was necessary to add meat to the national dietary to improve the physique of the race, especially to increase their stature. As regards the use of meat, the commission reported 'that the Japanese had always managed to do without it, and that their powers of endurance and their athletic prowess exceeded that of any of the Caucasian races. Japan's diet stands on a foundation of rice.' The rice diet of the Japanese is supplemented by the free use of peanuts, soy beans, and greens, which supply all that rice lacks to constitute a wholly sufficient bill of fare."

Page 306: "The experiments of McCollum and numerous others have in recent years demonstrated the entire feasibility of living exclusively upon a diet of purely vegetable origin. It is only necessary to make such a selection of foodstuffs as will supply the body with all the elements necessary for complete nutrition; and this may be easily done, as has already been indicated. It has also been shown that two widely used legumes, the soy bean and the peanut, as well as nuts, supply complete proteins and may be used in supplementing the incomplete proteins of cereals and vegetables. This fact explains the great rôle played by the soy bean in the bills of fare of the Orientals."

Pages 313-14: "Certain proteins known as complete proteins, when taken into the body in proper quantities may be wholly utilized in tissue building, because they contain exactly the elements needed, no more and no less, for the building of muscles, nerves, glands, and other nitrogenous tissues." "The protein of the soy bean, the peanut, the almond, and various other nuts has, however, been shown to be of high quality, practically equal to the protein of flesh... When meat is discarded, it is evidently necessary that care be taken to supply in its place an adequate amount of protein derived from the soy bean, the peanut, the almond, or other nuts, or from milk or eggs. Four or five ounces of soy beans, peanuts, or almonds afford an abundance of protein for a day's ration. See also p. 320.

Page 322: "But even in the absence of milk and eggs, an abundant supply of protein could be readily secured by the planting of peanuts and the soy bean, two remarkable legumes which, pound for pound, supply more nourishment than beef or pork and of finer quality." "Nuts, together with the peanut and the soy bean, afford a protein which is equivalent to that of meat at a cost far below the cost of meat proteins. For example, an acre of very ordinary ground will produce twenty bushels, or twelve hundred pounds of soy beans, which contain 40 per cent, or four hundred and eighty pounds of excellent protein. It takes an acre of ground and two years to produce seventy-five pounds of dried protein in the form of beef. The same land will produce in the same length of time nearly one thousand pounds of soy bean protein. In other words, an acre of ground devoted to soy beans will produce more than thirteen times as much protein as the same ground used as a pasture for fattening steers..."

Page 338: The section titled "The recent low protein movement in the United States," notes that the daily protein requirement for a person weighing 120 pounds could be "provided by 2½ pints of milk or by 6 ounces of almonds, 5 ounces of peanuts, 6 ounces porterhouse steak, 6 ounces navy beans, 4 ounces soy beans, 5 ounces lentils, 5 ounces black walnuts."

Page 359: "Animals furnish us a good object lesson on this subject. Compare the agility, alertness, curiosity and intelligence of the fruit-eating chimpanzee with the dull stupidity of the lion and the tiger; or the vivacity and progressiveness of the rice- and soy-eating Japanese, with the dull-witted, decaying Eskimo."

Nuts are discussed favorably on pages 56, 297, 327-31 but neither peanuts nor peanut butter are mentioned specifically.

Dr. Kellogg was a pioneer in promoting the importance of dietary fiber. The following terms appear: Bran or wheat bran (p. 40, 155, 157, 201, 301). Bulk, bulky, or bulky diet (referring to "roughage") (p. 70, 135). Cellulose (p. 57, 70, 297, 303). Constipation (p. 10, 66, 135-138, 148, 157, 161, 332, 382). Roughage (p. 57, 135, 297, 301). But none of the following terms appears in the index: Laxative, laxatives.

The author lived 1852-1943.

Note: This is the earliest English-language document seen (June 2004) that contains the term "natural foods" and that also discusses soy. Address: Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

502. White, Ellen G. 1923. Counsels on health, and instruction to medical missionary workers. Mountain View, California, Kansas City, Missouri [etc.]: Pacific Press Publishing Assoc. 696 p. 19 cm. *

• ***Summary:*** In the section titled "Dietetics" is a long quotation from John Harvey Kellogg, M.D. that begins: "Regulation of the diet is perhaps the most important of any single measure, in the treatment of chronic disease."

The section titled "Organic and inorganic salts" states: "In *Rational Diet,* Otto Carque writes: 'We must draw a

© Copyright Soyinfo Center 2014

sharp line of demarcation between organic and inorganic salts, as well as between vitality and chemical energy.'" Organic salts come from living things, such as plants or animals. "'It is only through the life-process of the plant that the constituents or air and soil become vitalized.'" Address: N.D. [Naturopathic Doctor].

504. Hamburger's. 1924. Established 1881 (Ad). *Los Angeles Times.* March 2. p. A15.
• ***Summary:*** This full-page ad shows that Hamburger's is a full-service department store selling silks, fine clocks, draperies, framed mirrors, floor lamps and shades, Chinese rugs, talking Panama parrots, etc.

A box at the top of the ad shows that it also sells: "Health Foods: Headquarters for the famous Battle Creek Health foods. We carry the most complete line of these foods on the Coast. (Hamburger's–Fourth floor)." Address: Fourth Floor [Broadway at Eighth, Los Angeles]. Phone: Broadway 3940.

505. May Co. (The). 1924. Battle Creek health foods! Have you tried them? (Ad). *Los Angeles Times.* Aug. 3. p. I25. Sunday magazine.
• ***Summary:*** "Others have had astounding results... If necessary you can make three delicious meals a day from these famous foods." The May Co. is "headquarters for Battle Creek health foods;... we have a dietician to advise you."

"Paralax–lubricates the intestinal walls. Acidone–supplies gastric acid when deficient. Acidophilus–combats autointoxication. Protose, Nuttolene and Nuttose–meat substitutes. Almond butter–for soups, sandwiches, etc. Soy biscuit–for diabetics."

On the 4th floor. "The May Co. Formerly Hamburger's." Address: Broadway at Eighth, Los Angeles, California. Phone: BRoadway 3940.

506. May Co. (The). Formerly Hamburger's. 1924. Health first! (Ad). *Los Angeles Times.* Sept. 7. p. I25.
• ***Summary:*** "The May Co. headquarters for Battle Creek [Michigan] and other famous health foods! Yogurt Tablets, a Battle Creek product that makes very superior buttermilk. Vegex–a vitamin food in four different forms and sizes. Cubes, almonds, paste and fruit wafers. 10¢ to $11.50.

"Fruit and Nut Bromose–health chocolates and meltose sweets. Zo–Vitamin breakfast food (Battle Creek Food Co.) rich in food iron and other food salts.

"For a full list of Battle Creek and other health foods, also catalog of fine groceries, write for Bklet [Booklet] 67T." Address: Fourth Floor [Broadway at Eighth, Los Angeles].

507. Battle Creek Food Co. 1924-1933. Special tests. Battle Creek, Michigan. 115 p. Unpublished manuscript.
• ***Summary:*** This is a bound, lined laboratory notebook used for recording the results of experiments, which were then reported back to Dr. John Harvey Kellogg. Most of the experiments involved the vitamin content of plant foods. Pages 4-5 (dated 12 Dec. 1924) shows graphs of the weight of rats fed soy bean flour as the sole source of protein and vitamin B. H.S. Mitchell was the experimenter.

Page 7 (dated 9 Nov. 1928) is a test of soy bean flour which "had been subjected to a process for removing the bad flavor. Dr. Kellogg was "anxious to see whether the vitamins A and B have been removed." A test on rats showed that they grew equally well on regular soy bean flour and the processed soy bean flour.

Page 22 (dated 1929-30) describes an experiment which shows that soy milk and soy bean meal are equally good sources of vitamin B. Many tests were conducted on the vitamin content of Savita, Savita Bouillon Cubes, and Savita yeast, compared to Fleischmann's yeast. Address: Battle Creek, Michigan.

508. Cooper, Lenna Frances. 1924. The new cookery. 9th ed., revised. Battle Creek, Michigan: The Modern Medicine Publishing Co. 475 p. See p. 76-77. Index. 23 cm.
• ***Summary:*** The Preface (p. 12) states: "The author wishes to express her indebtedness to Dr. John Harvey Kellogg, of the Battle Creek Sanitarium, and to his wife, the late Mrs. Kellogg, both of whom have inspired her with a love for the study of foods and their scientific preparation and have been constant sources of help and encouragement.

In the chapter on "Unfermented breads," the recipe for "Soy cakes and waffles" (p. 76) calls for "2 cups Soy flour."

The section titled "Unusual foods referred to in this book" (p. 462-64) states that the following are made by the Battle Creek Food Company, Battle Creek, Michigan: Protose (a meat substitute made from cereal and nuts), Nuttolene (a pure nut product with the consistency of brick cheese), Savita (a pure vegetable meat flavoring), Meltose (malt honey), Meltose Sugar, Sanitarium Cooked Bran (an appetizing food that supplies the necessary roughage, stimulates intestinal activity, and is rich in vitamins), Vita-Wheat (rich in gluten, lime, iron, and Vitamin B–the anti-neuritic vitamin), Branola (breakfast food that is 2/3 bran and 1/3 wheat), Zo (a body-building, ready cooked cereal breakfast food), gluten flour (contains 44% of wheat gluten), Malted Nuts ("A delicious nut cream–Contains the same nourishing food values as human milk and is even richer in its tissue building elements. It has an appetizing flavor and can be used with excellent results by those with whom cow's milk is found to disagree. It is excellent for those who wish to gain weight"), Minute Brew (a cereal coffee), Kaffir Tea, B. Acidophilus Culture (Bacillus Acidophilus is the strongest known lactic acid producing organism), Vegetable Gelatine or Agar (Made "from Ceylon moss, a seaweed that grows off the coast of Japan." It is "a form of cellulose resembling bran in chemical composition but somewhat like animal gelatine

© Copyright Soyinfo Center 2014

in physical appearance").

Note 1. This is the third earliest Seventh-day Adventist cookbook seen (Oct. 2004) that contains a recipe using soybeans or soy ingredients.

Note 2. The first edition of this book was copyrighted in 1914, the 11th edition in 1929. There is no mention of soya in Mrs. E.E. Kellogg's *Science in the Kitchen* (revised ed., 1892. Battle Creek, Michigan: Health Publishing Co.), nor in H.S. Andrews' *Science of Food and Cookery* (1921. Pacific Press Publishing Co.), nor in George Cornforth's *Good Food* (1920. Review and Herald Publishing Assoc.). Address: Dean of Home Economics, Battle Creek College; formerly, Head Dietitian of the Battle Creek Sanitarium; and later, Supervising Dietitian, United States Army (1918-1919).

509. Kellogg, John Harvey. 1924. The new method in diabetes. Third revised ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 300 p. Plus 6 unnumbered pages of [color] plates. See p. 205-06, 229-30. Index.
• ***Summary:*** The soy bean is discussed in the chapter titled "The Best Foods for Diabetics," under the heading "Legumes." "The soy bean is a remarkable legume which is two-fifths fat and one-third protein, giving a food content closely resembling fat meat with the addition of a very small amount of carbohydrate."

In a table titled "Food values of legumes" it is stated that soy beans contain 32% of their calories in the form of protein, 40% in the form of fat, and 28% in the form of carbohydrates. They have 120.0 calories per ounce, more than lentils (103.9), beans (111.0), or peas (112.0).

Soy-related recipes include: Cream of soy bean soup (with soy bean puree, p. 229-30). Hahto bean and tomato soup (p. 231).

Gluten-related recipes (all calling for gluten flour) include: Gluten bread (p. 267). Gluten bran bread (p. 267). Gluten bran puffs (p. 267). Gluten griddle cakes (p. 268). Sandwiches (all on gluten bread, p. 268-71). Gluten bran bread sandwich (on gluten bran bread, p. 270). Cream of gluten cereal (p. 272). Gluten wafers (p. 286). Address: Battle Creek, Michigan.

510. Fair (The). 1925. The popular price store (Ad). *Chicago Daily Tribune.* Jan. 18. p. C6.
• ***Summary:*** Within this full page ad is a section titled "Bargain basement: Pure food store," states: "Battle Creek Sanitarium Health Foods. Mrs. Toppe, a direct representative from Battle Creek, Michigan, and an expert on Battle Creek Health Foods, is in charge of our demonstration. Complete line of these health foods are on display and Mrs. Toppe will give you very valuable information in regard to their use and preparation." Battle Creek Lextro-Dextrine [Lacto Dextrine?] sells for 98¢ per package. Address: State, Adams and Dearborn Streets.

511. May Co. (The). 1925. Grocery store (Ad). *Los Angeles Times.* Jan. 23. p. 8.
• ***Summary:*** "Listed below are many of the rare, out-of-the-ordinary delicacies to be found in this complete Grocery Store–helpful suggestions for the discriminating hostess."

"China and Japan: Jasmine tea. Hong Kong ginger in crocks. Shoyu sauce. Boiled bamboo shoots."

"Imported health foods–from Dr. Huedebert, Paris; Dr. Charasse, Marseilles; Brusson Jeune, Ville Mur–for diabetes, dyspepsia, constipation, indigestion and reducing weight." Includes Aleurone bread muffins, Gluten bread, Levulose powder, Mignonettes of gluten–small bread balls for soup.

"Battle Creek Sanitarium Health Foods [Michigan]. These famous preparations will also be found in our Health Food Section, and include Colax, an agar biscuit; Lacto auxiliary food; Lacto Dextrine, antitoxic food; Casein-Gluten Flour, a superior food; Canned fruits, vegetables for restricted diet; Charcoal tablets; Vegex–the wonderful vitamine food." Address: Broadway at Eighth. Grocery store–Fourth Floor [Los Angeles].

512. Lust's Health Food Bakery, Inc. 1925. Moving to larger headquarters (Ad). *Naturopath* (*New York City*) 30(1):90. Jan.
• ***Summary:*** A full page ad. Louis Lust's bakery will move to their new, large headquarters in the double buildings at 309-311 East 56th St., New York City. Phone: Plaza 7687. This location will also have a modern "Retail Department, where a full line of all their own Health Food products as well as a department of the Battle Creek Food Co.'s products [Michigan] and many other noted health food quality products will be kept on sale."

"The old stand at the corner of 105th Street and Park Avenue, established since 1903, will be continued as their Harlem Retail Branch, which will be supplied twice daily" with the company's freshly baked goods. Phone: Lehigh 2111.

513. *Naturopath* (*New York City*). 1925. Notes on the proceedings of the Twenty-Eighth Annual Convention of the American Naturopathic Association. Los Angeles, California, Nov. 20-22, 1924. 30(3):[205]-09. March.
• ***Summary:*** Summarizes presentations by Dr. Starr White–"The true physician." Dr. J. Haskel Kritzer–"Iridiagnosis." Otto Carqué–"The value of fruits." Dr. Harvey Hazel–"The doctor's reward." as a cause of nephritis. *California and Western Medicine* 23(4):437-42. April.
• ***Summary:*** Rats fed a series of high-protein diets invariably showed kidney damage. The authors urge limited use of meat and increased use of fruits and vegetables in the prevention and treatment of nephritis. Whole soy beans, wheat gluten, peanuts, and meat were among the foods fed to the rats. Address: M.D., Depts. of Biochemistry and Pathology of the College of Medical Evangelists, Loma Linda, California.

515. Health Food Products Co. 1925. The Health Center News (Ad). *Los Angeles Times.* Nov. 29. p. K25. Sunday.
• ***Summary:*** This large square ad looks like the reduced front page of a newspaper titled *The Health Center News.* Above the title on a banner: "In business for your health." In the middle of the title in white on a bold black background: "1000 W. 7th St." Below the title in large bold letters: "Published by the Health Food Products Co." In smaller all-capital letters running across the page: "Mail and phone orders given special attention. Phone VAndyke 4063."

There are then 5 boxes, each promoting something different: (1) "Inner-Clean removes cause of every sickness." This is an "aromatic herb-vegetable compound perfected by Prof. Arnold Ehret, originator of the Mucusless Diet Healing System" [MDHS]. "Prof. Arnold Ehret's 'M.D.H.S.' lesson course sent anywhere in the U.S.A., $1.50 postpaid."

(2) "Free health lectures, Health Center Hall, 1000 W. 7th St. Tues, Dec. 1, 8 P.M.,–Prof. Paul Bragg. Subject: 'Breathe your way to health.' Fri., Dec. 4, 8 P.M.–Dr. John Dequer (Decker), America's foremost health lecturer. Subject: 'Conquering ill health through seasonal foods.'"

(3) "Disease questions and health answers. Questions of health will be answered in this column or by personal letter. Address communications to Chief Clinician [Bragg], Health Center, 1000 W. 7th St., Los Angeles. Enclose stamped envelope." There are 2 questions. Each answer recommends the purchase of one or more products sold by the Health Center. For example: Q2. "A doctor tells me I must quit coffee. I have tried one or two coffee substitutes, but don't like flavors. What do you recommend? E.A.H." Ans: "Minute Brew, made by the Battle Creek Food Co. [Michigan], contains many of the elements of flavor and aroma that appeal to coffee drinkers and is absolutely free from caffein [caffeine]. Kafex is a coffee substitute made of cereals with an especially delicious flavor. Our Health Food Store carries all these fine beverages."

(4) "Wanderlusters' hike next Sunday, Dec. 6th."

(5) "By special appointment we are headquarters for Battle Creek Sanitarium Foods. Ask for valuable booklets and samples. Health Food Products Co. Phone VA. 4063. Free city delivery. 1000 W. 7th St."

Note: The basic concept and format of this ad is very similar to that titled "Healthy News" and run by the Health Foods Products Co. on 14 Dec. 1924. Moreover, Paul Bragg contributed an article to that ad in Healthy News. Address: 1000 West Seventh Street, [Los Angeles, California]. Phone: VAndike 4063.

516. Kellogg, John Harvey. 1925. Nuts the real meat–Flesh the substitute. *Good Health* (*Battle Creek, Michigan*) 60(12):34. Dec. [1 ref]
• ***Summary:*** "So thinks Prof. Henry C. Sherman, of Columbia University. In his admirable textbook, *Food Products*, Professor Sherman says:... 'Looking at the matter in evolutionary perspective, it might be more logical to speak of meats as "nut substitute" instead."' Prof. Sherman believes that nuts were a staple in the diet of primitive man.

"The teeming millions of India and China which constitute nearly half of the whole human race, live on rice and the soy bean. The thronging millions of Central Africa thrive on corn, peanuts, manioc, sweet potatoes and melons." Address: M.D.

517. Loma Linda Food Co. Bread and Health Foods. Wholesale Only (Photograph). 1925. Loma Linda, California.
• ***Summary:*** See next page. The original building and staff in 1925. Address: Loma Linda, California.

518. Olsen, Mahlon Ellsworth. 1925. A history of the origin and progress of Seventh-day Adventists. Washington, DC, South Bend, Indiana, and Peekskill, New York: Review and Herald Publishing Assoc. 768 p. Illust. Portraits. Index. 22 cm. Reprinted in 1972 by AMS Press. [31 ref]
• ***Summary:*** Prof. R. Numbers, in *Prophetess of Health: A Study of Ellen G. White* (1976, p. 209), calls this the best history of Seventh-day Adventists written to date. It is widely considered a valuable account of the denomination's history and activities worldwide into the early 20th century.

The Preface and Introduction state: "The history of a denomination is best understood when viewed in its relation to church history as a whole, and especially to that history in its early stages" (p. 11).

Chapters 8 and 22 are about publishing work and publications. Chapters 11, 31, and 34 are about health and temperance work. Contains a good bibliography and a chronology of key events in the history of the Advent movement from 1831 to 1924. On 1 Oct. 1860 the name "Seventh-day Adventist" was adopted by the denomination. In 1865 the first health publication, titled "How to Live," was published. It was written and compiled by Mrs. Ellen G. White. On 1 Aug. 1866 the first denominational health journal, titled *Health Reformer,* was published. Later that year, on 5 Sept. 1866, the Health Reform Institute (later Battle Creek Sanitarium, Battle Creek, Michigan) was opened for patients.

W.W. Prescott had general charge of Adventist work in Great Britain from 1897 to 1901. During this time

© Copyright Soyinfo Center 2014

beginnings were made toward a health magazine and a health food factory. Note: The factory was operated by The International Health Association Ltd., founded in 1899; the Association was renamed Granose Foods Ltd. in 1926.

"The health food factory, situated in Surrey [it began operating in 1899], burned to the ground [in 1907]; but through the efforts of H.G. Butler the business was put on its feet again, the factory moved to Birmingham, and a good patronage built up" (p. 368-69).

Note: In 1907 all SDA institutions in England, including the food factory, were centralized at Stanborough Park, Watford, Hertfordshire (see next page).

"The Stanborough Park Sanitarium, located on grounds adjacent to the college of that name, was dedicated on July 3, 1912." A health food factory was also built at Stanborough Park [in about 1907-09]. A photo (p. 377) shows this health food factory.

"An important feature of our medical education is in the operation of our College of Medical Evangelists at Loma Linda and Los Angeles, California. This unique institution, the only one of its kind in the world, was established for the purpose of training medical missionary physicians and other medical evangelists" (p. 648-49).

"Our health food factories are flourishing. With ten food factories, many food stores, cafés, and cafeterias, this feature of our health work occupies a wide field of usefulness. The health food business of the Australasian Union deserves notice. With several factories, a large wholesale depot, many

THE HEALTH FOOD FACTORY

retail stores, and a system of affiliated cafés, it represents en enterprise of widespread usefulness and influence. The food sales of a single year amount to $750,000. The profits are largely used for the support of church schools.

"Our health work stands distinctly as one of reform... This means to point out the better way of living, make plain the laws of health, and urge obedience to them. It enables us to present these laws as the laws of God, and to point men and women to Him as the healer alike of body and soul" (p. 649).

Mahlon Ellsworth Olsen lived 1873-1952.

519. Portrait of Dr. Harry W. Miller (Photograph). 1925.
• ***Summary:*** See next page. This 7-by-10 inch black-and-white photo shows Dr. Miller, wearing glasses, dressed in a coat and tie, and seated at a table with his hands folded on the table. It was taken in about 1925 in Washington, DC, by Harris and Ewing.

It was sent to Soyfoods Center by his son, Dr. Clarence Miller, St. Helena Hospital, Deer Park, California, in Nov. 1996.

520. Health Food Products Co. 1926. The Health Center News (Ad). *Los Angeles Times.* March 21. p. K25. Sunday.
• ***Summary:*** This large square ad is similar in format and appearance to that published in this newspaper on 29 Nov. 1925. However the content is different.

There are now 7 boxes, each promoting something different: (1) "Children gain health by diet and treatment." Contains the text of a letter from Cloud V. Bond of Los Angeles praising the benefits of the "personal treatments and diet schedule for myself and children." All health problems were solved. "Other letters recently received illustrate the benefits received from the Marathon Bio Bloodwash Baths." "Send today for Prof. Ehret's 'Mucusless Diet Healing System,' a 25-lesson course in healing therapy, sent postpaid anywhere in the U.S.A. for $1.50."

(2) "Health lectures free. Tuesday, March 23, 8 p.m., Prof. Paul Bragg: 'A diet for everyone.' Wednesday, March 24, 6:45 p.m., Ehret Club Dinner. By special appointment. Friday, March 26, 8 p.m. Dr. Philip M. Lovell 'Things that make for success.'"

(3) Inner-Clean is used by drugless practitioners. "Many Osteopaths, Chiropractors, Naturopaths, and other drugless practitioners" recommend it. (4) Business men like cafeteria health luncheons. At the "Corrective Eating Cafeteria" at the Health Center. (5) You are eligible to join Wanderlusters. "Inexperienced hikers should not hesitate to join this happy group of nature lovers." (6) "Health food specials this week: Unsulphured sterilized golden dates–20¢. Calimyrna figs–25¢ per lb. S & W. Sauerkraut–large can 20¢; small can 15¢.

(7) "By special appointment we are headquarters for Battle Creek Sanatorium Health Foods. Health Food Products Co. 1000 W. 7th Street." Address: 1000 West Seventh Street, [Los Angeles, California]. Phone: VAndike 4063.

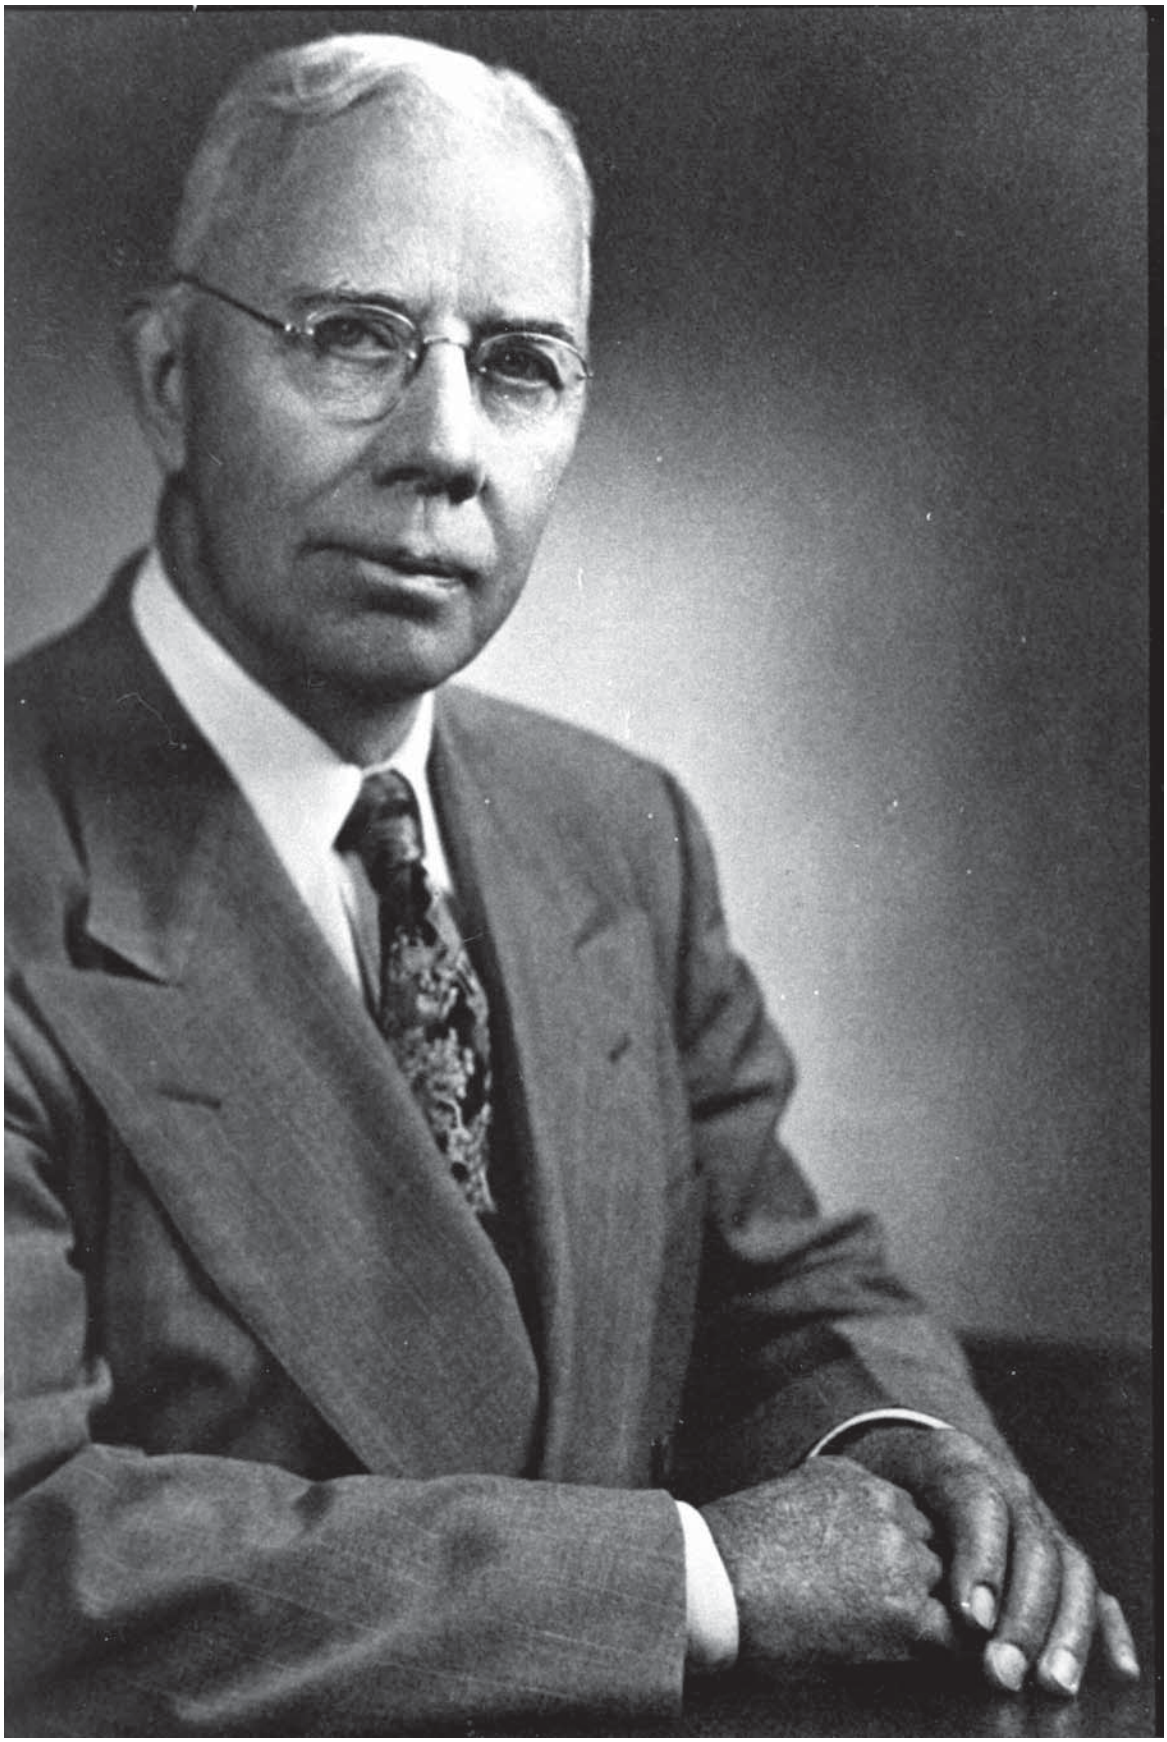
• ***Summary:*** Blood pressures of vegetarian college students increased significantly within 2 weeks of adding meat to their diet. Address: M.D., College of Medical Evangelists, Loma Linda Sanitarium and White Memorial Hospital, Los Angeles, California.

522. Kellogg, John Harvey. 1926. Biologic living becoming popular. *Good Health* (*Battle Creek, Michigan*) 61(4):34. April.
• ***Summary:*** "Every reform movement goes through three stages. The new truth is first derided, perhaps persecuted, then tolerated, and finally applauded and adopted. The idea of... regulating one's conduct in harmony with the requirements of biologic laws, has gone through the first two stages of experience, and is well advanced in the third. In England there is today beginning a strong movement toward a reform in living habits as a necessary means of promoting race betterment. Such well-known leaders as Lord Oxford and Asquith, Ramsey Macdonald and Dr. Arbuthnot Lane, the noted surgeon, are announced as supporters of the movement, which seems to be particularly active among the nobility. The Duchess of Manchester has for some years been an ardent supporter of biologic living (since a visit to the Battle Creek Sanitarium). The following article by the Duchess of Hamilton and Brandon, contributed to the *London Daily News*, recently appeared in several American newspapers:"



A long excerpt follows; as a vegetarian, she regards the "eating of meat as objectionable both from a moral and a hygienic point of view." Address: M.D.

that are inspiring... with all the bunk left out. I try to talk in understandable everyday language..."

"Someone asked me what diet I used to give me my 'splendid strength.' It is no secret. I eat the same balanced menus that are served to the public at the Health Center Corrective Eating Cafeteria, 1000 W. 7th St."

"There is a vast difference between so-called 'Health Foods' and genuine tested health foods. You will find all the recognized products, such as the Battle Creek Sanitarium foods and other nationally famous makes at the Health Food Store, 1000 W. 7th St. Write for mail order price list if unable to buy in person." Address: Prof., Chief Clinician, Health Center of Los Angeles, 1000 W. Seventh St.

525. Bragg, Paul C. ed. 1926. Health Center newslets (Ad). *Los Angeles Times.* Sept. 5. p. K27.
• ***Summary:*** A dull or lost appetite is "Nature's warning that your system is being poisoned by a clogged intestinal tract. I have found that the most effective internal cleansing medium is Innerclean Intestinal Laxative. This is a compound of aromatic herbs and vegetables developed by Prof. Arnold Ehret, originator of the famous 'Mucusless Diet Healing System.' Innerclean thoroughly removes the long accumulated filth, mucus and poisonous toxemias clinging to the intestinal walls and rejuvenates the whole digestive system. You fell like a million and have an appetite like a wolf! Innerclean is 50 cents a package at the Health Center and all druggists. The Innerclean Mfg. Co., 846 E. Sixth St, will mail a generous free sample by writing them a postal or letter."

"A proper diet will go a long way toward preventing that 'bound up' condition in the first place. Come to the Health Center... Our health food store here carries the most complete line of genuine recognized health foods to be found in the city–including the famous Battle Creek Sanitarium foods, Nutradiet, canned fruits and vegetables, a wide variety of delicious vegetable meat substitutes, whole wheat products from our own ovens, and many other items. Mail orders are given prompt attention." Address: Prof., Chief Clinician, Health Center of Los Angeles, 1000 W. Seventh St.

526. Kellogg, John Harvey. 1926. Nuts as a substitute for cow's milk. *Good Health* (*Battle Creek, Michigan*) 61(11):5-7. Nov.
• ***Summary:*** This paper, read at a meeting of the American Nut Growers' Association on 16 Sept. 1926 in Lancaster, Pennsylvania, begins by discussing nine serious drawbacks with cow's milk as a staple for adults. Dr. Kellogg first discovered that "milk disagrees very seriously with certain persons more than forty years ago." So he set out to develop a substitute for milk from nuts. He found that "the protein of nuts so closely resembles that of milk that it was by some authors described as plant casein. Oily nuts, as Sherman has pointed out, are the vegetable analogues of meat. They consist almost wholly of fat and protein." Our relatives, the primates, are extremely fond of nuts, and they know how to chew them thoroughly. More than 30 years ago it was found that nut milk is better than cow's milk in promoting the secretion of milk in nursing mothers. Two or three years later, Dr. Kellogg began making Malted Nuts for this purpose, and it is now "regularly prescribed by many physicians for nursing mothers who need assistance of this sort."

"My first experiments in an effort to make nuts more digestible led me to produce peanut butter. This was for several years produced in small quantities by consumers with the aid of small hand mills especially devised for this purpose. It has now come to be a staple food manufactured by numerous companies and may be found in every grocery in the land."

But the peanut is a legume rather than a nut. "Continuing our experiments with other nuts, especially almonds, cashew nuts, pecans, and pine nuts, we finally succeeded in producing a series of nut creams which we found highly satisfactory as substitutes for cow's milk and cream."

527. Kellogg, John Harvey. 1926. Biologic living not a modern idea. *Good Health* (*Battle Creek, Michigan*) 61(11):40. Nov.
• ***Summary:*** This article is taken from one of Dr. Kellogg's "Question Box" lectures. He begins with a long quotation from Plato's great book, *The Republic*, in which Socrates and Glaucon, his pupil, discuss how people ought to live. They conclude that eating meat requires lots of land, which increases the likelihood of war. He then talks about Pythagoras, the teacher of Socrates, who taught Plato, who taught Aristotle. Pythagoras was a vegetarian who advocated living biologically. Address: M.D.

• ***Summary:*** Summarizes an editorial in the *British Medical Journal* (17 April 1926).

529. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(1):24-32. Jan. [17 footnotes. Eng]
• ***Summary:*** Contents: The whole soybean as food: Immature or green soybeans, mature or dry soybeans, the digestibility of the boiled soybean seeds, boiled soybeans as a food of predominant importance in China, soybean coffee, soybean chocolate, soybean sprouts.

Concerning mature or dry soybeans: "In China the green seeded variety is soaked in fresh water or salted water and roasted, the product being eaten after the manner of roasted peanuts. In Japan the black soybeans are used chiefly for

© Copyright Soyinfo Center 2014

cooking, with sugar and soy sauce; the green variety is also used in this way, either in the fresh state or after being dried (Oshima). Generally speaking, the use of whole soybeans has not been attended with much success either in the Orient or Western countries, because, with the ordinary method of cooking, they remained hard and unpalatable. It has been found that cooking at a temperature somewhat above boiling breaks up the cellulose structure and develops a richness of flavor that is not obtainable at the lower temperature. Although this result can readily be secured in high pressure steam cookers [pressure cookers], the problem is to know how to accomplish this with ordinary household equipment."

Dr. J.H. Kellogg cooks the beans in a saturated solution of salt at about 107ºC. "The method of Durand does not require a special jar. The soybean seeds are soaked overnight in salt water and boiled in fresh water to which some sodium bicarbonate is added. If the foam is not allowed to flow over, the seeds will be ready for consumption in two hours. Lachaume claims that the removal of the skin of the beans after five minutes of immersion in hot water increases markedly the speed of boiling.

"Experiments by the Office of Home Economics, U.S. Department of Agriculture, and by the home economics departments of many colleges, have shown that mature or dry soybeans can be used satisfactorily after the manner of navy or other beans. Soybeans are very palatable. The lighter colored varieties, yellow and green, are best for food, as the dark ones usually have a stronger, less pleasant taste [sic]; some of the light brown varieties have a very agreeable flavor. Because of their high fat content and compactness, most varieties of soybeans do not cook soft as readily as the navy or field beans. The method of cooking, however, may cause the beans to remain hard and tough. If cooked properly, soybeans do not require much longer soaking and cooking than ordinary beans. One variety, the Easycook, has been found by the U.S. Department of Agriculture to cook fully as soft as the navy bean in less time after the preliminary soaking of 12 hours."

"Professor Haberlandt, the soybean pioneer of Central Europe, fifty years ago prepared a nourishing food, mixing boiled soybeans with potatoes or rice. This food was called *sojenta*, in analogy to the name of the Italian national food, *polenta*. At present in Central Europe boiled soybeans are mixed with boiled potatoes in the proportion of one to two, to which are added table salt and onions. Boiled soybeans may be also added to cereal gruels. In this way a food is obtained which is rich in protein and fat, and which can be completely substituted for products of animal origin.

"The digestibility of the boiled soybean seeds is, according to Lipsky, 80.5 per cent for protein and 80.8 per cent for fat. Goessman's figures of digestibility for protein and fat are on the average 90 per cent (Li Yu-ying). Oshima conducted two digestion experiments, which continued for three days. The diet consisted of cooked dried beans (outer skin not removed), eaten with a considerable amount of sugar and some shoyu (soy sauce). The per cent digested was: protein, 61.8-69.1 per cent; fat, 34.7-37.8 per cent; and carbohydrates (including fiber), 81.4-89.9 per cent."

"Liebig said that the method of preparing the food is of no less importance than its chemical composition. According to von Noorden and Salomon, the proteins of the beans give with calcium an insoluble compound; that is why hard water (rich in calcium) cannot be used for the boiling of leguminous seeds. It makes them hard and kernelly. If soft water is not available, it is necessary to add a little sodium bicarbonate, which precipitates the calcium salts. Richter demonstrated that from peas (the proteins of which behave toward calcium like those of the soybean) boiled in soft water, 10.2 per cent of the nitrogen and 19 per cent of the ash were eliminated in the stools. If boiled in hard water (the method of cooking remaining the same) the corresponding values for protein and ash in the stools were 16.6 and 42 per cent.

"The digestibility of the soybeans depends largely on the thoroughness of cooking and also on the state of division. The protein of boiled beans eaten as such is digested to 60 per cent, but if given in a state of fine division (puree) it rises to 90 per cent."

"According to von Noorden and Salomon: 'It will be correct to connect a satisfactory digestion of food with the presence and co-operation of a corresponding bacterial flora and it makes it clear why, especially in leguminous seeds, habit plays such a large and evident role.'"

"The water in China is known to be hard as a rule and this may be the chief reason why the Chinese are not using boiled soybeans in a noticeable amount. If soda [a natural product of China, being collected in Mongolia from soda lakes] were used in China for boiling the soybean seed soft, thus doubling the digestibility, it may revolutionize the nutrition of the Chinese population" (p. 31-35).

Concerning soybean coffee (p. 30-31): "During the period of the Civil War in America, the soybean was extensively used in the southern states as a coffee substitute. For a considerable time seedmen sold the Ito San variety under the name of Coffee Berry and Coffee Bean (Piper & Morse [1923]). Soybean coffee has been used in Western Europe, in Switzerland, and in the Alpine Provinces of former Austria since the introduction of the soybean to Europe. Horvath [probably the writer's father], 50 years ago [i.e., about 1877], was the first to prepare soybean coffee for the market in South Russia. In 1913 Marschner (Bohemia) put on the market a soybean 'coffee without caffein' [caffeine] under the trade mark 'Santosa.' In Germany, Fischer and Follmann (Dresden) also manufactured soybean coffee for the market... In China an 'artificial bean coffee' is prepared by the Kai Cheng Bean Products Company, Peking. (Note: Li Yu-ying is connected with the company). It is claimed to be 'a good substitute for real coffee, cures

© Copyright Soyinfo Center 2014

constipation, and improves the appetite."

Concerning soybean chocolate (p. 31): "In recent years the demand for cocoa has risen sharply and the supply has run short... Li Yu-ying's soybean products factory in the vicinity of Paris* succeeded in preparing a chocolate from soybeans, sugar, and cocoa butter. The chemical composition, the aspect and the taste are close to that of real chocolate (Footnote: *"Formerly *L'usine de la Caseo-Sojaine* [*Caséo-Sojaïne*], now *Société Française pour l'exploitation du soja et de ses dérivés*, 48 Rue Denis-Papin, Les Vallées-Colombes.)" Note: This is the earliest document seen (July 1996) that mentions Li's *Société Française...*

Concerning soybean sprouts: "Soybeans soaked in water and allowed to sprout are much relished as a vegetable by the Chinese." One kg of soybeans yields about 4 kg of sprouts. The yellow- or green-seeded varieties are generally used for growing sprouts.

Reprinted in 1927 as part of an 86-page monograph titled "The Soybean as Human Food" (Peking, China). Address: M.D., Peking Union Medical College, China.

533. *Good Health* (*Battle Creek, Michigan*). 1927. The dietary value of the soy bean. 62(4):36. April.
• ***Summary:*** "A recent issue of the *Lancet* calls attention to the special nutritional value of the soy bean...

"Now, however, a new phase in the use of the soy bean has been entered upon, owing to the discovery of Doctor Berczeller of Vienna [Austria] that the obnoxious constituents can be eliminated by a special milling process and fractional distillation, without interfering with the high nutritional value of the meal. This nutritional value is so great that Professor Haberlandt, years ago, prophesied that the carbohydrate stores of the potato would come to be supplemented, at least in the diet of the poorer classes, by the proteins and fats provided in such abundance in the soy bean.

"The proteins of the soy bean are, according to McCollum, distinctly more valuable from the point of view of nutrition than are those of the other legumes."

534. *Los Angeles Times.* 1927. Lima bean acreage cut: Oxnard district ranchers raising more sugar beets and other vegetables this year. May 14. p. 6.
• ***Summary:*** The California Lima Bean Growers' Association, located in Oxnard and with more than 1,100 members, has just issued a lengthy report that discusses this decrease in acreage. In 1926 the total acreage planted to regular lima beans in Southern California was about 100,000 acres. It is expected to decrease by 3,000 to 4,000 acres this year, partly because of lower prices. About 43,000 acres of baby limas were planted last year.

The report states that there is considerable interest in "lima bean flour and bread... The experiments and successful tests of Dr. D.W. Sansum, director of the Potter Metabolic clinic in Santa Barbara, in this connection, have given the lima bean association a new idea that promises to further the lima bean industry tremendously."

As a result of experiments conducted by Dr. Sansum, a good-tasting and wholesome bread, made chiefly with lima bean flour, is now on sale at several places. Dr. Sansum is prescribing lima bean muffins for his patients suffering from various forms of acidosis.

"Lima beans are the most alkaline food known... Some of the flour has been sent to Battle Creek [Michigan, to Dr. Kellogg] and also to two or three large bakeries in the East for the purpose of developing a formula by which good lima bean bread can be made."

Note 1. This is the earliest English-language document seen (July 2005) that contains the term "lima bean flour" or the term "lima bean bread."

Note 2. Bill Baker of Ojai, California, is not mentioned.

48. June.
• ***Summary:*** Discusses the soy bean as human food. "It is hardly too much to say that there is nothing that would help so much in solving the national and international problems, which are perplexing the world, as popularizing the use of soy beans as an article of human diet and as teaching the subject of nutrition from the standpoint of food production and efficient use." Address: Pekin Medical College, China.

536. Kellogg, John Harvey. 1927. Bran for constipation of childhood. *Good Health* (*Battle Creek, Michigan*) 62(10):40. Oct.
• ***Summary:*** "Do you advise bran for constipation in children?"

"For a child who is occasionally constipated, I would recommend bran for one thing. Another thing: Dismiss white bread from the table. I should like to see a law, such as they now have in Italy and in Belgium, prohibiting the use of white bread. It is just as unreasonable to steal the cream from the wheat as to steal the cream from the milk. When wheat is skimmed, the lime and iron and vitamins and the wholesome roughage are lost, and there is nothing to replace them unless it is supplied in some artificial way. Millers have carefully propagated the idea that bran is irritating, that the wheat must be fine and that the bread must be white. College professors have written articles explaining why fine flour is so much better than whole wheat flour. The argument they offer is that a larger proportion of the wheat will be digested if it is made into fine flour than if it is left in the form of graham flour or whole wheat flour. That is not the right kind of economy. There will not be quite as much food absorbed from the wheat, but nobody is suffering because we do not get more calories from the wheat. A little of the coarse carbohydrate, as found in bran, is needed in the colon to keep the colon clean, and to promote the growth of the acid-forming germs that protect the colon from putrefaction."

This article is on a page titled "Gleanings from Dr. Kellogg's 'Question Box' lectures."

537. **Product Name:** Soy Meal. Renamed Soy Flour by 1934, Soy Bean Flour by 1936, and Soybean Flour by Dec. 1943.
Manufacturer's Name: Battle Creek Food Co. (Marketer-Distributor). Made in the USA by A.E. Staley Manufacturing Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1927.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Horvath. 1927. The Soybean as Human Food. p. 41, 44. "This soy meal contains: moisture 5.5%, protein 53.8%, fat 9.2%. This roasted meal is manufactured from fresh press cake. The roasting greatly improves the taste, digestibility, and keeping capacity of bean meal. This procedure is largely applied to soybean meal (flour) in China and Japan."

Board of Health, Editor of "Good Health," Superintendent of the Battle Creek Sanitarium, President of Battle Creek College.

Table XIV (p. 188) lists soy beans as a food rich in lime (calcium), containing 0.46%. Pages 189-93 discuss "Acids and bases of food–The acid alkaline balance." It begins: "As pointed out by Bunge many years ago, and as further shown by an extensive research conducted by Sherman, of Columbia University, foodstuffs differ in relation to their acid and basic contents. In certain foods, bases or alkalies predominate, while in others the mineral acids predominate.

"The waste products of the body are predominantly acid; consequently it is desirable that the foodstuffs should be predominantly basic. If acids predominate in the ration, and this condition continues for a considerable period of time, the effect will be to disturb the nice balance between acids and bases which is normally maintained in the body fluids and which is essential for life. A deficiency of alkalies constitutes acidosis.

"It is necessary that the alkalinity of the blood should be constantly maintained as the only means by which the acid wastes of the body which are constantly accumulating as the result of all sorts of vital work may be promptly removed." All flesh foods leave highly acid residues. Eggs are also acidic, though less strongly than meat. Cereals and bread are acidic, though much less so than meats. Milk is slightly alkaline. Most fruits, and all green and root vegetables are strongly basic and tend to alkalinize the tissue fluids... Generally it is better to select foods which afford a large basic margin so as to add to the alkali reserve of the body, which always tends toward diminution, especially in old age. A strongly basic diet is especially indicated in cases of arteriosclerosis and disease of the kidneys, in fevers, in pregnant women, in all forms of acidosis, and in old age...

"At the present time all physiologists are agreed that the highest degree of physical vigor and efficiency may be maintained on a diet which excludes flesh foods and physiologists the world over are unanimous in advising a curtailment rather than an increase in meat consumption."

Table XVI (p. 192-93) is titled "Excess of acid or alkali in one ounce and in 100 calorie portions of common foodstuffs." The Soy bean has an excess of base (alkali), 12.0 units per 100 calories or per 1 ounce.

In the chapter on Legumes, pages 322-28 give a detailed and accurate discussion of the soy bean and various soyfoods, including the history and nutritional composition of the soy bean, soy bean milk, to fu [tofu], soy sauce, and soy bean sprouts. On the first page, Dr. Kellogg states: "The soy is the best of all beans."

In the chapter titled "Infant Feeding," under "Vegetable Milk" (p. 956), Dr. Kellogg states: "The Chinese have for ages made from the soy bean a preparation which so closely resembles the dairy product that it may not inappropriately be called vegetable milk. A much better preparation is made from walnuts, almonds, and even peanuts... Milk prepared from walnuts and almonds is used in China, the Philippines and throughout the Orient, as a food for nurslings for whom a wet nurse can not be provided. This custom prevails extensively in those Asiatic countries in which cow's milk is but little used.

"A nut milk commonly known as 'Malted Nuts' has been made in this country for more than thirty years and has come into extensive use... These plant protein milks render great service especially in the treatment of infants and invalids who are sensitized to cow's milk. They are also valuable resources in the treatment of colitis in infants and in cases in which change of the flora is found difficult, so that the suppression of all animal proteins becomes necessary."

Also discusses quinoa, kaoliang, and the adsuki bean.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word "alkalinize" to refer to making a food more alkaline. Address: Battle Creek, Michigan.

540. Kellogg, John Harvey. 1928. Treatment of colitis by changing the intestinal flora. *Bulletin of the Battle Creek Sanitarium and Hospital Clinic* (*Battle Creek, Michigan*) 23:1. Jan. *

• ***Summary:*** This article begins: "There is only one way to cure colitis and that is to change the intestinal flora; for colitis is an infection, and as in any other infection, the infecting agent must be eliminated." Roughage in the diet is also necessary and of great value; try using plenty of coarse bran, such as fig bran. "Agar may be used in place of bran, but is less efficient unless used in very liberal quantities.

"Another excellent food accessory is psyllium seed, commercially known as psylla. It is a highly mucilaginous seed of European origin." It supplies both "roughage and lubrication, which are equally necessary."

Liberal use of carbohydrates that promote growth of an aciduric flora are also required; lactose and dextrin have been found to be best for this purpose. A sufficient quantity must be taken to ensure that some of it reaches the colon to encourage lactic acid formation.

Note 1. This is the earliest document seen (June 2004) that mentions psyllium seed or psylla as a source of dietary fiber. Note 2. *Webster's Dictionary* defines psyllium seed (derived from the New Latin *psyllium* which was derived from the Greek *psyllion* meaning "fleawort"), a word first used in 1930, as "the seed of a fleawort (esp. *Plantago psyllium*) that has the property of swelling and becoming gelatinous when moist and is used as a mild laxative–called also *psyllium."* Address: M.D., F.A.C.S., Battle Creek Sanitarium, Battle Creek, Michigan.

541. Stop & Shop. 1928. Buy your Sunday dinner at this store (Ad). *Chicago Daily Tribune.* Feb. 24. p. 12.

• ***Summary:*** One section is titled "Stop & Shop now offers

© Copyright Soyinfo Center 2014

Battle Creek Sanitarium Health Foods to you–Every day in the year a complete line of standard Battle Creek foods... Battle Creek expert always in charge of this department." Featured: "Savita–a valuable substitute for meat extracts; rich in vitamin–excellent for diabetics. Has the fine flavor of mushrooms and rivals the finest meats. 50¢ jar. Protose–looks like meat, smells like meat, tastes like meat; has the composition of meat yet is purely vegetable. 35¢ jar." An illustration shows 11 products, including Psylla [from psyllium], Gluten Flour, Malted Nuts, Lacto Dextrine, Zo, Savita, Protose, and Laxa. Address: 16 N. Michigan and 12 W. Washington.

542. Kellogg, John Harvey. 1928. Constipation. *Good Health* (*Battle Creek, Michigan*) 63(4):42. April.
• ***Summary:*** Why does constipation come and go? The mind has a great deal to do with it. If a person becomes angry, or despondent, or worried, the colon becomes spastic.

543. Kellogg, John Harvey. 1928. Bran for children. *Good Health* (*Battle Creek, Michigan*) 63(5):42. May.
• ***Summary:*** A child two years of age may take bran as a good source of roughage.

544. Kellogg, John Harvey. 1928. The rise of bran. *Good Health* (*Battle Creek, Michigan*) 63(5):36-37. May.
• ***Summary:*** The article begins: "The rise of bran in public esteem and general use as an article of diet has in recent years been so rapid as to be almost spectacular."

"Of course bran is not a new discovery... All primitive grain eaters... made use of the bran along with the rest of the grain."

"In this country the interest in bran began with the diet reform movement started by Sylvester Graham in the forties of the last century." He lectured widely, "advocating the use of whole meal flour. The graham flour and graham bread, with which everybody is familiar, and the great interest in bran, are the results of his efforts."

Dr Morris Fishbein, editor of the *Journal of the American Medical Association,* and one of the most prolific of modern medical writers, wrote about the importance of bran in the April 1928 issue of *Scientific American.* Hippocrates was also a believer in bran.

545. Cooper, Lenna Frances; Barber, Edith M.; Mitchell, Helen S. 1928. Nutrition in health and disease [1st ed]. Philadelphia, Pennsylvania: J.B. Lippincott. viii + 546 p. June. Illust. Index. 21 cm. [37 ref]
• ***Summary:*** This is the first edition of this classic text. Contents: Part I: Principle of nutrition. 1. Nutrition and the health program. 2. Summary of digestion and absorption. 3. Water and cellulose. 4. Minerals. 5. Vitamins. 6. Carbohydrates. 7. Fats. 8. Proteins. 9. Energy metabolism. 10. Food value determinations. 11. Feeding of normal children. 12. Diet in old age. 13. Foods of the foreign born. 14. Cost of food. 15. Public health and the food supply.

Part II: Food selection. 16. The development of cookery and the service of food. 17. Menu planning and hospital dietaries. 18. Beverages. 19. Fruits. 20. Vegetables. 21. Cereals. 22. Salads. 23. Milk. 24. Eggs, cheese and other dairy products. 25. Meats and poultry. 26. Soups and gelatin. 27. Fish and shellfish. 28. Nuts and legumes. 29. Leavening agents, batters and doughs. 30. Desserts.

Part III: Diet in disease. 31. Diet in gastric disorders. 32. Diet in gastric disorders (continued). 33. Diet in diseases of the intestines. 34. Diet in diseases of the liver and biliary tract. 35. Diet in cardio- vascular-renal diseases. 36. Diet in diseases of the blood. 37. Diet in fevers and infections. 38. Diet in overweight and underweight. 39. Diet in gout and arthritis. 40. Diet in diabetes mellitus. 41. Diet during pregnancy and lactation. 42. Artificial feeding of infants. 43. Malnutrition. 44. Diets before and after surgical operations.

Part IV: Cooking for the sick and convalescent. Introduction. 45. Beverages. 46. Cereals and gruels. 47. Toasts. 48. Breads. 49. Soups and broths. 50. Meats and poultry. 51. Fish and shellfish. 52. Meat substitutes. 53. Eggs and cheese dishes. 54. Gravies and sauces. 55. Vegetables. 56. Salads and salad dressings. 57. Frozen desserts. 58. Gelatin desserts. 59. Miscellaneous desserts.

Appendix. 1a. Table of approximate relative food values. 1b. Table of values of food materials in common measurements. 1c. Nutritive value in grams per 100 grams of food. 1d. 100 calorie portions of foods. 2. Reference books and magazines (bibliography).

This important early work on scientific nutrition is not vegetarian, even though all three authors are Seventh-day Adventists; the word "vegetarian" does not even appear in the index. It is addressed more to homemakers than to trained nurses; the homemaker "is an all the year round nurse, in the new sense of the word–as an enlisted volunteer in the war against disease" (p. iii).

Also discusses Acid-base balance (with a large table) (p. 34-38). Fats in the diet ("There are numerous vegetable oils obtained from seeds namely, cottonseed oil, cocoanut oil, corn oil, olive oil, and peanut oil. These oils are sometimes hydrogenated,..." p. 72). Proteins (incl. incomplete proteins, p. 73-79). Chinese dietary habits ("The soy bean is grown abundantly and some thirty or more products are manufactured from it." p. 124). Cost of food: Meat and dairy foods (Meat "is one of the most expensive of our foodstuffs" p. 133-35). Public health and the food supply: The federal "Pure Food Law, or the Food and Drugs Act, passed in 1906" designed "to protect its citizens against frauds, adulteration and deterioration." The second federal food law of 1906, made operative under the Bureau of Animal Industry, USDA, provides for the examination of all animals intended for slaughter and an examination by a federal inspector of the carcasses of animals slaughtered (p. 143-49). Milk (Begins:

© Copyright Soyinfo Center 2014

"'A quart of milk a day for every child and a pint for every adult' should be the rule..." p. 214-15). Eggs, cheese and other dairy products are viewed as valuable foods (p. 223-25). Meat ("The per capita consumption of meat is very large in this country, a condition which can be traced to the generous supply [of game] which was available during the pioneering days" [and early patterns of meat consumption in England]. "Lamb is the meat of the immature sheep. Mutton is the meat of the mature animal." Pork is relatively cheap but "contains more fat than any other meat." p. 230-37). Diet in gout and arthritis (incl. uric acid and purines. A table shows the 16 foods with the highest content of purines, p. 352-53). Diet in diabetes mellitus ("Joslin is confident that overeating resulting in obesity is the chief predisposing cause of this disease." "13. There are several standard soya bean flours on the market which may be purchased through local dealers. Soya bean flour may be prepared at home by buying soya beans and grinding them in a feed mill, or a small hand mill" p. 356-67). Meatless luncheon dishes (recipes, p. 456-59). Reference books and magazines (p. 528). Address: 1. Food Director, Univ. of Michigan; formerly Dean of School of Home Economics, Battle Creek College; Supervising Dietitian, U.S. Army 1918-1919; 2. Writer and consultant, food and nutrition; editor, food column, *New York Sun;* 3. PhD, Prof. of Nutrition, Battle Creek College; Director of Nutrition Research, Battle Creek Sanitarium.

546. Cooper, Lenna Frances; Barber, Edith M.; Mitchell, Helen S. 1928. Nutrition in health and disease for nurses. [1st ed]. Philadelphia, Pennsylvania: J.B. Lippincott. viii + 574 p. June. Illust. Index. 21 cm. [37 ref]
• ***Summary:*** In June 1928, J.B. Lippincott published two books that were very similar. The first, titled *Nutrition in Health and Disease*, was 28 pages shorter and its target audience was typical homemakers. The contents of the two books appear to be identical, except in this book: (1) Facing the title page is a list of 20 books and their authors in the series "Lippincott's Nursing Manuals." (2) The words "Lippincott's Nursing Manuals" appear across the top of the title page. (3) The Preface is different and half a page longer.

(4) The order of the parts in the Appendix is slightly different: 1a. Table of approximate relative food values. Reference books and magazines (bibliography). 1b. Table of values of food materials in common measurements. 1c. Table: Nutritive value in grams per 100 grams of food. 1d. Table of 100 calorie portions of foods.

(5) Right after the last appendix is a long section (p. 528-54) titled "Suggestions to teachers: To the instructor of dietetics." It begins: "For a number of years the American Dietetic Association has coöperated with the Committee on Education of the National League of Nursing Education on the problems of the course of study in dietetics for nurses' training schools." (6) On page 555 is another, somewhat different page of "Reference books and magazines" (bibliography). The index of each book appears identical.

This is the only edition of this book, although it did go through several printings. *Nutrition in Health and Disease* went through many editions. Address: 1. Food Director, Univ. of Michigan; formerly Dean of School of Home Economics, Battle Creek College; Supervising Dietitian, U.S. Army 1918-1919; 2. Writer and consultant, food and nutrition; editor, food column, *New York Sun;* 3. PhD, Prof. of Nutrition, Battle Creek College; Director of Nutrition Research, Battle Creek Sanitarium.

547. Mitchell, Helen S. 1928. Nutritive value of the garbanza pea. *Western Hospital and Nurses' Review* 11(6):26-27, 52-53. Aug. [9 ref]
• ***Summary:*** The garbanza is also known as the gram or chic pea, and sometimes as the Idaho pea. Artemus, in *The Encyclopedia of Foods and Beverages*, states that it is widely used in Mediterranean countries and was probable the "pulse" of the ancient Hebrews. Today is it a leading article of diet in Spain.

Pages 26-27 show the growth rates of rats fed garbanza pea, soy bean, and casein diets. Address: PhD, Nutrition Lab., Battle Creek Sanitarium [Michigan].

548. Good Housekeeping. 1928. Confidence creates sales: Everywoman's magazine. Every manufacturer's market (Ad). *New York Times.* Sept. 24. p. 10-11.
• ***Summary:*** "Ask any of the more than 1,600,000 progressive *Good Housekeeping* families what monthly page in the magazine serves them as a Buying Directory. They will reply out of their satisfactory experiences: *'Good Housekeeping's Index of Guaranteed Advertisements!"*

"Herewith we present a list of advertisers in October *Good Housekeeping..."*

The category "Food products" includes Grape Nuts, Kellogg's All Bran, La Choy Chinese Food Products, Lea & Perrins' Sauce, etc. Address: New York, Chicago, Boston, Detroit, San Francisco.

549. *Good Health* (*Battle Creek, Michigan*). 1928. Soy bean milk. 63(9):41. Sept.
• ***Summary:*** "An article in an Italian medical journal extols the soy bean from the agricultural standpoint... In some Asiatic countries soy bean milk has from remote times been extensively used in the feeding of children. When properly prepared it keeps better than animal milk."

550. Abbott, George Knapp. 1928. High blood pressure: And degenerative diseases of the heart, blood vessels, and kidneys. Takoma Park, Washington, DC, Peekskill, New York, and South Bend, Indiana: Review and Herald Publishing Assoc. 176 p. Illust. No index. 20 cm. [50+ ref]
• ***Summary:*** This book, by a Seventh-day Adventist physician, is "the outgrowth of 25 years of medical practice,

© Copyright Soyinfo Center 2014

chiefly institutional, where high blood pressure and degenerative diseases have been an ever-present problem... The problem of so-called essential hypertension had been a baffling and discouraging one until the researches of Sansum and Nuzum gave the added detail of the acid factor [acid-alkali balance], and we have made very definite and precise the rationing in both protein and alkalinizing dietary factors" and standardized these into "a simplified system understandable and practical for the use of the patient..." (p. 5).

A poem titled "The fence or the ambulance" humorously capsulizes the debate between prevention and treatment of illness (p. 7). A table (p. 26) shows the increase in heart disease death rate in the USA from 1900 to 1925, It was 132 death per 100,000 population in 1900 and 186 in 1925, for a 41% increase. Heart disease is the leading cause of death in the USA.

The chapter titled "Strength and endurance" (p. 38-53) discusses: The research of Russell H. Chittenden of the Sheffield Scientific School at Yale University [Connecticut]. He found that a relative low protein diet helped develop endurance. He was not interested in vegetarianism. "Chittenden's conclusions have never been disproved. No flaw could be found in his experiments." Yet prejudice persists that humans do best on a high-protein diet. Fatigue poisons include uric acid or purine substances. Caffeine and uric acid are nearly alike. Graphs show the effects of caffeine on producing premature muscle fatigue.

The chapter on "High blood pressure and degeneration" (p. 54-66) shows that a low protein vegetarian diet leads to low blood pressure. Three groups of rabbits, placed on high-protein diets, each group on a different type of protein, developed increased blood pressure. These experiments, lasting for nearly 3 years were conducted at the Potter Memorial Clinic of Santa Barbara, California. In the "Soy bean protein group" (p. 57-58) a group of 12 normal rabbits was fed a diet containing 38% protein, chiefly from soy beans. A graph shows that within 4 months (relatively late) elevation of blood pressure occurred, the range for the first year being 78 to 94–the highest 4 diets graphed. But after 18 months (graph, p. 59) the soy beans diet produced the next to lowest blood pressure. Ultimately the liver diet produced the highest blood pressure. "Not one of the twelve rabbits on the soy bean diet presented arteriosclerosis... but three showed spontaneous sclerosis." 89% of rabbits on the liver diet showed a kidney disease similar to Bright's disease found in humans–marked especially by albumin in the urine. 80% of the rabbits on the soy bean diet showed this kidney disease (p. 59-60). The summary (p. 60) states that increased blood pressure appeared latest in those "on a vegetable (soy bean) diet, which kept the urine alkaline." "The meat and grain protein diets contributed to acidosis, that is, increased acids in the blood. This was not true of the vegetable [soy] protein diet. The acidifying diets, meat and cereal, resulted in hardening of the arteries, while the alkalinizing did not."

The chapter titled "The food problem" (p. 67-76) discusses Denmark's food experiment under Dr. Hindhede, who was made "food dictator" during World War I, and the good health that resulted when the entire nation ate a vegetarian diet largely free of dairy products and eggs. They ate all natural "pig food and hen food."

The chapter on "Hardening of the arteries" (p. 83-94) defines the development of arteriosclerosis and atherosclerosis; It was not present in any of the 12 rabbits "on a soy bean diet, a strongly alkalinizing diet." "A high protein diet from liver makes a decidedly acid urine with reduction in alkali reserve (carbon dioxide combining power) of the blood" (p. 86-88).

The chapter titled "The unbalanced ration" (p. 122-29) uses the writings of Dr. McCarrison and Dr. Hindhede to argue that simple, primitive diets are healthier than civilized diets.

The chapter titled "The normal diet" (p. 134-60) suggests three basic principles for a healthy diet: (1) Avoid excess protein foods above the normal body requirements of 40-45 gm/day of protein. (2) Avoid excess of acid-ash foods over alkalinizing foods. (3) Avoid excess of total calories (overeating). Soy beans are listed (p. 138) as a high-protein food with an alkalinizing ash. The section on "Complete and incomplete proteins" (p. 140-41) lists soy beans as a source of complete proteins. Meat, although a complete protein, is considered "an inferior food." The section on "Alkalinizing balance" (p. 143-49) states that acid ash comes from sulphur and phosphorous acids. Alkaline bases are sodium and potassium. The blood and tissue fluids "are normally slightly alkaline. If the blood became even very slightly acid, death would result." A full-page table (p. 144) ranks many foods on a scale ranging from acid forming to base forming, with "Foods nearly neutral" in the middle. "Of the legumes, peas and beans are alkaline, the latter very strongly so, while lentils and peanuts are acid in ash. Almonds are alkaline..." Address: A.B., M.D., Medical Director of the Washington Sanitarium and Hospital, Washington, DC.

551. Kellogg, John Harvey. 1928. Experience proves the advantages of a meatless diet. Battle Creek, Michigan: Good Health Extension Bureau. 8 p. 16 cm.
• ***Summary:*** Contents: Introduction. The Battle Creek Sanitarium has excluded meat for more than fifty years. Science demands disuse of meats. A meatless diet helps surgery. A New York hospital adopts a meatless dietary. Address: M.D., Battle Creek, Michigan.

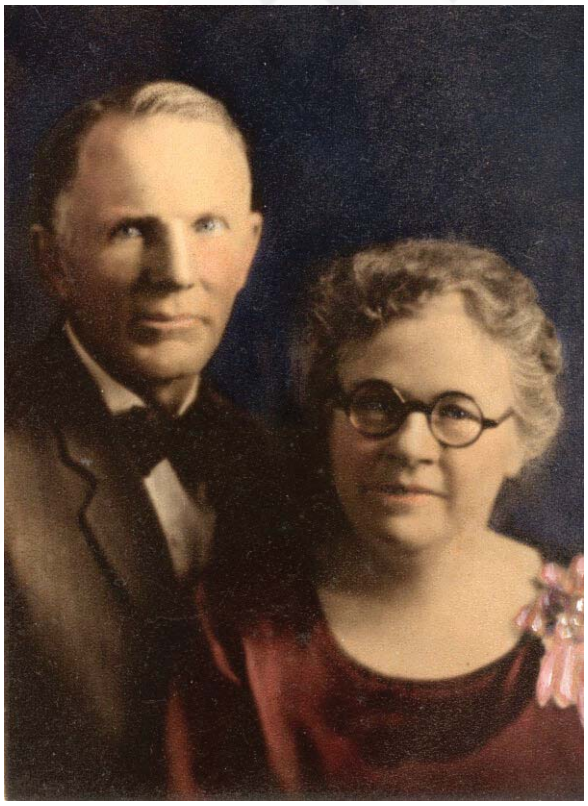
guinea pigs. Vegetable proteins (nuts, beans) and milk do not encourage putrefaction. Address: M.D., Battle Creek, Michigan.

553. Kellogg, John Harvey. 1928. Pythagoras on the ethics of diet. Battle Creek, Michigan: Good Health Extension Bureau. 8 p. 16 cm. [1 ref]
• ***Summary:*** "Pythagoras, the founder of Greek philosophy, was born in the early part of the sixth century, B.C. (586), on the Island of Samos, from which he was driven by the tyrant Polycrates. He and his followers formed a colony at Crotona, in southern Italy, which seems to have been a model health city, where the rules of biologic living were established conventions.

"The philosophy of Pythagoras recognized the blood brotherhood of living creatures and prohibited the taking of life, and hence of eating flesh. Pythagoras and his followers, among whom was Milo, the Greek athlete, dressed in white clothing, and maintained the highest standards in manners and morals. Their virtues were, naturally, a living condemnation of the conduct of most of their contemporaries, who ultimately, by persecutions drove Pythagoras into exile, and one night gathered in a mob and fell upon and massacred the remnant of his devoted disciples, who were gathered in the house of Milo.

"The following poetical description of the ethical teaching of this great thinker on the subject of diet, was written by the famous Latin poet Ovid, who lived shortly before the Christian Era, and was translated from his 'Metamorphoses,' by the English poet, Dryden."

There follows five pages of quotation from Ovid's Metamorphoses. Address: Battle Creek, Michigan.



554. Kellogg, John Harvey. 1928. Should an athlete eat meat? Battle Creek, Michigan: Good Health Extension Bureau. 7 p. 16 cm.
Address: M.D., Battle Creek, Michigan.

555. Kellogg, John Harvey. 1928. What scientific men say about meat and meat eating. Battle Creek, Michigan: Good Health Extension Bureau. 8 p. 16 cm. [3 ref]
Address: M.D., Battle Creek, Michigan.

556. Kellogg, John Harvey. 1928. The world's greatest authorities pronounce meat unnecessary. Battle Creek, Michigan: Good Health Extension Bureau. 4 p. 16 cm.
• ***Summary:*** Contents: Introduction (The Inter-Allied Scientific Food Commission). The United States Department of Agriculture declares meat to be non-essential. Man not naturally a flesh eater. Milk and nuts better than meat.
Address: Battle Creek, Michigan.

557. The family of Theodore A. Van Gundy, with his wife and three children, in 1928 (Photograph). 1928.
• ***Summary:*** See next page. This superb 7½ by 9½ inch black-and-white photo was taken in 1928 in San Gabriel, California, by Hartsook. It was given to Soyfoods Center in Feb. 1982 by Charlotte Van Gundy Holmes, one of T.A. Van Gundy's daughters. On the back, in pen, is written: "Picture taken 1928, San Gabriel, California. Theodore A. Van Gundy, age 54, father, center. Lulu G. Van Gundy, age 56, mother, to right of father. Mary Charlotte Van Gundy (later Holmes, 1945), age 23, daughter, lower left. Theodore Romayne Van Gundy, age 27, son, top left. Martha Dorothea Van Gundy (later Jones 1960), age 25, daughter, upper right.

"I have another photograph of the family taken in an old Christian Winery Garden in 1911–but I can't find it. I guess it is packed in some of my things. Thought I gave it to my daughter Sue, but she can't remember seeing it."

Note 1. A small tinted color photo (a portion of the larger photo), showing only Mr. and Mrs. Van Gundy, has the date 1927 written on the back.

Note 2. In the 1928 Los Angeles City Directory, Theo A. Van Gundy is shown as tchr [teacher] City School, residing in San Gabriel.

558. Battle Creek Food Co. 1928? Entrées for the vegetarian dinner. Battle Creek, Michigan. 16 p. Undated. Illust. 17 x 9 cm.
• ***Summary:*** On the cover of this small booklet is a chef, with white chef's hat and moustache, tasting a spoonful of something. On page 1 is a "Personal letter to chefs,"

© Copyright Soyinfo Center 2014

encouraging them to serve Battle Creek Food Co. dinner entrees since "The time is no longer when people demand meat three times a day. Once a day is a good average. Research surveys tell us that the consumption of meat in hotels and restaurants has decreased 45% since 1927... You will find that Protose, Nuttose and Savita help make your vegetable dinners as delicious as the old-fashioned meat and vegetable dinners."

The booklet contains many recipes using Protose and Nuttose like meat, and Savita as a savory vegetarian seasoning in soups, sauces, broths, bouillon, and gravies. All 3 products are canned. One 2-page spread titled "Protose and Savita served from coast to coast" shows menus of many hotels and restaurants where these products appear on the menu. The Busy Bee in St. Louis, Missouri, for example, has a full page of the menu devoted to "Battle Creek Specials." Sales helps and table cards are also available from Battle Creek.

"Savita is an extract of a special yeast plant [i.e. yeast extract] that imparts a delicious mushroom flavor to soups, gravies, sauces, vegetables and bouillons, that makes every chef proud of his cooking."

"Protose is purely vegetable, being made of nuts and grains, yet it looks and even tastes like choice meat. Serve with your vegetable dinners, as well as a special on Fridays and during Lent. Protose dishes generally cost around 7c [cents] per serving. The usual charge for a Protose vegetable dinner ranges from 45c to 75c."

"Nuttose is made from choice nuts, and is most enjoyable in croquettes, salads and nut fillet. It has a rich, meaty flavor, yet is made purely from nuts. A serving costs about 7c." Address: Battle Creek, Michigan.

559. *Madison Survey* (*Madison, Tennessee*). 1929. Soy-bean products replace dairy products. 11(20):78-79. May 15.
• ***Summary:*** "For many years we have been warned that the increase of disease among cattle would put an element of danger into dairy products. This set us to studying foods that contain the essential elements of dairy foods with [sic, without] this objectionable feature." Describes the post-graduate work with soybeans done by two of the school's teachers, Miss Frances Dittes (Peabody College, Nashville) and Prof. P.A. Webber (Michigan State Agricultural College, Lansing).

"It is intensely interesting to those who are looking for something to replace dairy products, to see the products of the soy-bean cheese is delicious and capable of many variations in the dietary. One of the latest articles sampled is a loaf of yeast bread in which soy-bean milk was used instead of water. The bread is fine of grain, sweet, light, and with a toothsome crust that will appeal to the taste of the most fastidious."

"The soy-bean with nuts will supply every thing we have been obtaining from milk and flesh foods. And the danger that lurks in the products of diseased animals is entirely eliminated by the use of soy-bean products.

"There is a future for soy-bean products. We expect to see hundreds of our people demonstrating the value of these foods. This is a real missionary work for which Madison is preparing."

560. *Madison Survey* (*Madison, Tennessee*). 1929. Soy-bean recipes. 11(20):79. May 15.
• ***Summary:*** The following recipes were developed by Miss Frances Dittes: Soy-bean milk ("This gives creamy, forty-two and one-half pounds of rather heavy consistency, and resembling cow's milk in appearance").

Soy-bean cheese: "To four quarts of soy-bean milk at 100 deg. F., add ten drops of rennet, dissolved in one-half cup cold water and two ounces of starter. The starter may be whey from a previous making of cheese or some sour soy-bean milk. The rennet needs an acid media in which to do its work. Stir thoroughly and keep the mixture for sixteen to eighteen hours at a temperature of 100 degrees. One gallon of milk will make twenty-four ounces of fine curd, which separates from the whey. This curd should be drawn off, mashed and molded."

Soy-bean omelet (from whole sieved soybeans and eggs).

Soy-bean in tomato sauce: "To one can of soy-beans add 2 cups of tomato juice, 1 small grated onion, a pinch of salt, celery salt, and a piece of butter about the size of a walnut. Bake for one hour."

Cream of soy-bean soup: "Through a sieve rub one can of soy-beans. To this add 3 cups of rich, creamy milk, and a pinch of salt. Serve hot with a few bits of chopped leaves of celery or parsley."

Soy-bean salad.

561. *Madison Survey* (*Madison, Tennessee*). 1929. Soy-bean recipes. 11(25):98-99. June 19.
• ***Summary:*** Describes how to make "soy-bean cheese" (also called "soy cheese," i.e. tofu) at home using lactic acid as a coagulant, plus the following recipes: Savory loaf (with soy-bean cheese). Soy-bean loaf (with soy cheese). Lentil-soy loaf (with soy-bean puree). Vegetable roast (with soy-bean puree). Jellied soy salad (with soy cheese). Tomato soy salad (with "soy curd").

562. *Madison Survey* (*Madison, Tennessee*). 1929. Food work. 11(33):126-27. Aug. 14.
• ***Summary:*** "The raising of foods is an interesting and profitable work for students. The manufacture of health foods and the serving of those foods to the public is a close second in educational value. The Madison Food Factory is putting up crackers of various sorts, nut meats, malt honey, soybeans and steamed wheat in cans, and other attractive products. A variety of bakery goods, specializing in whole wheat breads

© Copyright Soyinfo Center 2014

and buns, gives employment to a group of students."

"A group of men and women drive to the city each morning and return each evening. They are the working force of the vegetarian cafeteria, located on Sixth Avenue, just off Church Street, and a short distance from the busiest section of the city. The cafeteria is one of the most attractive projects of the institution. It affords a business training that ought to be the delight of any active student. A group is training there throughput the year under the direction of Kenneth Sheriff.

"The training of cooks and dietitians is given special attention at Madison... The Dietitian's Course is headed by Miss Francis Dittes."

563. Kellogg, John Harvey. 1929. Stefansson's tallow-eating stunt. *Good Health* (*Battle Creek, Michigan*) 64(8):5-6. Aug. [1 ref]
• ***Summary:*** In a recent issue of the *Journal of the American Medical Association* (6 July 1929), Dr. C.W. Lieb describes an experiment in which arctic explorer Stefansson and Andersen ate a daily diet that provided 2,100 calories of fat and 550 calories of protein. Dr. Kellogg says that they were paid to endure this diet by the Meat Board, and that the diet was not a meat diet but a "tallow diet." He says Steffanson's "diet was four-fifths fat and only one-fifth muscle meat."

Note: On the cover of this issue the subtitle is now: "The Battle Creek Journal of Health and Hygiene."

564. *Madison Survey* (*Madison, Tennessee*). 1929. Practical uses for the soybean. 11(36):141-42. Sept. 4.
• ***Summary:*** "From the pamphlet just coming from the press giving soybean recipes, we select this week the following instruction on salads. That readers are interested in soybean products is evident from the letter of inquiry received. Soybean cheese as used by the Madison Sanitarium is a popular dish and the many uses of the soybean curd make it a valuable addition to the dietary."

There follows a section titled "How to make a perfect salad" with 8 recipes for soy cheese [tofu]: Tomato, pineapple, cheese salad (with ½ cup grated soy cheese). Jellied soy salad (with 2 cups grated soy cheese). Waldorf cheese salad (with ½ cup grated soy cheese). Raisin and soy cheese salad (with equal parts grated soy cheese, seeded raisins, and chopped apple). Almond and salad (with "2/3 grated soy curd" and 1/3 ground blanched almonds). Sliced fruit and cheese salad (with orange, pineapple, raisins, and soy cheese). Tomato and soy salad ("Make a soy dressing by softening the soy curd with mayonnaise"). Pineapple and cheese salad (with pineapple, celery, grated soy cheese, and pecans).

565. Wheeler, A.J. 1929. From the agricultural department. *Madison Survey* (*Madison, Tennessee*) 11(36):141. Sept. 4.
• ***Summary:*** Last year members of this department broadcasted two acres of the fertile river bottom land with Mammoth Yellow soybeans, and turned them under soon after frost. "There was a splendid crop of beans and we debated the advisability of using them for hay, but decided to give them to the soil" to improve its fertility. "Next year we plan to sow most of this [bottom land] to Japan clover or soybeans, which are annuals and can be sowed after the flood season."

566. *Madison Survey* (*Madison, Tennessee*). 1929. Soybean products. 11(42):168-69. Oct. 23. [1 ref]
• ***Summary:*** Discusses a report on the calcium content of soybeans and tofu presented by Miss Frances Dittes at the annual meeting of the American Home Economics Association, and quoted in the October issue of the *Journal of Home Economics.* Last year Miss Dittes wrote her thesis on this subject while studying at George Peabody College for Teachers. She made three types of soybean curd using calcium sulfate, lactic acid, and rennet as coagulants, then measured their calcium content. All were low in calcium, although that made with rennet had the highest calcium content. "It is concluded that soybean curd in the dietary should be supplemented by foods rich in calcium."

Dr. Bailey at New Haven, Connecticut, found that soybean curd had no starch and no significant amounts of sugars. "This means that the soybean curd is a food eminently fitted for use by patients suffering from diabetes."

567. Dittes, Frances L. 1929. The calcium content of soybean cheese (Abstract). *J. of Home Economics* 21(10):779. Oct.
• ***Summary:*** "Three types of soybean curd made by using calcium sulfate, lactic acid, and rennet, respectively, as coagulants, were analyzed for calcium by the Shohl modification of the McCrudden method. The three methods of making the curd produced cheeses of good texture, color, and flavor. All were low in calcium, varying from 0.003 to 0.005 per cent calculated as CaO [calcium oxide = lime]. The rennet curd had the highest calcium content. It is concluded that soybean curd in the dietary should be supplemented by foods rich in calcium." Address: George Peabody College for Teachers [Nashville, Tennessee].

568. **Product Name:** La Sierra Soy Cheese (With Pimiento).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Los Angeles City Directories. 1928-29. For both these years Theo. A. Van Gundy is a teacher in City School. Resides in San Gabriel. Riverside City Directories. 1926-1951. No listing for Van Gundy or La Sierra Foods. Yet only in 1951 is La Sierra College listed. Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline

© Copyright Soyinfo Center 2014

Ash, Low Starch." The first product on the list is "Soy Cheese." Note: This is the earliest known commercial tofu product to be named "Soy Cheese."

Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46.

Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981. In the fall of 1928 (probably not in 1927 as reported by Jones in 1963), T.A. Van Gundy moved to La Sierra (now a suburb of Riverside) and started La Sierra Industries. He soon developed a line of eleven soyfoods. The first eight of these were probably on the market by late 1929. One of the products was Soy Cheese (canned tofu, with pimiento added to prevent graying after canning). This was the company's second best selling product in the early 1930s.

569. **Product Name:** La Sierra Soy Milk.
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." Thirteen products are listed, including "Soy Milk."

Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46. L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal.* June 25. p. 14. "Soy bean–The magic plant. Article XI." "La Sierra Industries, Ontario, California: Soy bean milk.

Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981. The product was canned with beany flavor removed by processing with live steam.

570. **Product Name:** La Sierra Soy Beans (Canned) [Unseasoned Green-Seeded Type, or with Tomato Sauce].
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46. L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal.* June 25. p. 14. "Soy bean–The magic plant. Article XI." "La Sierra Industries, Ontario, California: Canned soy beans.

Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981.

Note: These are the earliest known canned, green-seeded commercial whole soybeans seen.

571. **Product Name:** La Sierra Soy Flour (Raw).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
New Product–Documentation: Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46. "Raw and Processed." Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981.

572. **Product Name:** La Sierra Mamenoka (Roasted Soy Flour).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
New Product–Documentation: Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981. She says this product was introduced in late 1929. The word "Mamenoka" bears a close resemblance to "Mamenoko," the early Japanese word for "roasted soy flour."

573. **Product Name:** La Sierra Soy-Co (Soy Coffee) [Coarse, or Fine Grind].
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
New Product–Documentation: Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." Dorothea Van Gundy. 1936. La Sierra Recipes. p. 41, 46. The company address is now Box 203, Ontario, California. Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981.

574. **Product Name:** La Sierra Sandwich Spread (Called Soy Spread by 1936).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
Ingredients: Incl. okara, salt, mace, and other seasonings.
Wt/Vol., Packaging, Price: 8 oz can.
New Product–Documentation: Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." Ad in Health magazine. 1935. 2(9):31. Sept. "Soy Bean Products, La Sierra Brand: Complete protein, low starch, high alkaline ash." House of Better Living Catalog. 1936. March. p. 9. 8 oz. can for $0.15. Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46. "Soy Spread."

Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981. This was canned okara or soy pulp, with salt, mace and other seasonings; it had a soft

© Copyright Soyinfo Center 2014

consistency and was said to taste and smell like "potted chicken."

Note: This is the earliest record seen (June 2013) showing the use of okara as an ingredient in a commercial soy product.

575. **Product Name:** La Sierra Soy B-Nuts or Beanuts (Parched Soy Beans. Dry Roasted Soynuts).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
New Product–Documentation: Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46.

Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981.

Note 1. This is the earliest commercial soynut product seen in the Western world. Note 2. This is the earliest English-language document seen (Dec. 2012) that uses the term "Soy B-Nuts" or the term "Beanuts" to refer to soynuts.

576. **Product Name:** La Sierra Soy Gluten (Meat Analog).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
New Product–Documentation: Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981. This meat analog was made of Soy Spread mixed with ground gluten, resembling Dr. Kellogg's Protose, but with soy.

Note: This the earliest meatlike product seen, made by a Seventh-day Adventist food company, that contains gluten.

577. **Product Name:** La Sierra Soy Cereal.
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929 November.
New Product–Documentation: Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981. In 1929 or 1930 he built the mill that produced this ready-to-eat, toasted and shredded, all-soy product. It was the company's best-seller in the early 1930s.

578. Kellogg, John Harvey. 1929. Chinese babies thrive on milk from beans. *Good Health* (*Battle Creek, Michigan*) 64(12):36-37. Dec.
• ***Summary:*** Orphans in China are often "saved from starvation by feeding them milk prepared from almonds, walnuts and other nuts. In North China, the peanut is much used for this purpose," according to a Chinese trained nurse, as is the soy bean. "This bean in its composition resembles a nut more than an ordinary bean. It is richer in protein than any other plant food."

"Dr Tso, a Chinese physician, at the recent International Physiological Conference, held in this country, gave a report of a careful study of the effects of a soy-milk diet in the feeding of infants."

579. *Vegetarian Messenger and Health Review* (*Manchester, England*). 1929. The soya bean. Dec. p. 284. [1 ref]
• ***Summary:*** "Our esteemed contributor, Mr. John Naylor, in a communication appearing on a later page, has done us excellent service in drawing our attention to the potentialities of the soya bean. The vegetarian who bases his practice on the principle of humaneness is aware of his inconsistency when taking milk and milk products. To replace cow's milk by a satisfactory milk made from the soya bean would be to replace a food that is provided at the cost of suffering with one free from that taint. The vegetarian strengthens his claim to be a humanitarian whenever he uses a vegetable substitute for an animal product and many have made the first forward step by using only artificial leather. The soya bean makes it possible to advance still further by giving us not only milk, butter, cheese and meal, but many by-products which will satisfactorily replace by-products of meat. Statisticians have stated that before the close of the present century land will not be available to grow cattle for the meat and milk required, and Dr. Kellogg, of Battle Creek [Michigan], is of opinion that the soya bean will then become one of the great food staples of the world.

"The Vegetarian Society allows members the use of milk, butter and cheese, and for the majority of vegetarians, during the present transitional period, the use of these animal products is both necessary and convenient. Milk and milk products have been aptly called 'protective' foods and it has been demonstrated that they have often made up what was lacking in the dietary of a vegetarian doing hard physical or mental work. The soya bean, however, promises the greatest of possibilities, for by its use the time is brought appreciably nearer when vegetarians will obtain all their food from the vegetable kingdom." Address: The Vegetarian Society, 39 Wilmslow Rd., Rusholme, Manchester, England.

580. **Product Name:** La Sierra Soy Bean Butter (later renamed B-Nut Butter (Soynut Butter)).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929.
New Product–Documentation: La Sierra Industries. 1931? "La Sierra soy bean products." Arlington, California. 6 panels. This small, undated leaflet (which cites a Jan. 1930 USDA Farmers' Bulletin No. 1617 titled "Soybean utilization," by W.J. Morse) lists "Soy Bean Butter" as one of the company's products and states: "Soy Bean Butter is similar to peanut butter, however it does not contain any nuts. It may be served plain or mixed with water to dilute. A delicious spread is made by mixing equal parts of honey and soy bean butter."

Note: This product is almost surely soynut butter. If so, it is the world's earliest known commercial soynut butter.

Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." House of Better Living. 1936. Sept. p. 2. "Fresh Nut Butters. No Salt Added." Retailed for $0.25/lb. Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46. Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981. March-May. Early work with peanut butter: In 1897, at about age 23, T.A. Van Gundy began his first commercial food production, making peanut butter (which, at the time, was a relatively new food) with Dr. Hare in Fresno, California. In the fall of 1928 (probably not in 1927 as reported by Dorothea Van Gundy Jones in 1963), T.A. Van Gundy moved to La Sierra, California (now a suburb of Riverside) and started La Sierra Industries, the business that would make his famous as a soyfoods pioneer. The first eight La Sierra-brand soyfood products were probably on the market by late 1929. These included B-Nuts or Beanuts (oil-roasted soynuts), and B-Nut Butter (soynut butter made from B-Nuts).

581. Cooper, Lenna Frances; Hall, Margaret Allen. 1929. The new cookery. 11th ed., revised. Battle Creek, Michigan: The Modern Medicine Publishing Co. 493 p. Illust. 22 cm.
• ***Summary:*** This Seventh-day Adventist vegetarian cookbook contains a recipe for Soy bean muffins on p. 72-73. It calls for "1 cup soy bean flour." Address: 1. Food Director, Univ. of Michigan; formerly Dean of Home Economics, Battle Creek College; formerly, Head Dietitian, Battle Creek Sanitarium; and later, Supervising Dietitian, United States Army 1918-1919; 2. Consulting dietitian and lecturer on dietetics, Battle Creek Sanitarium and Chautauqua Lecturer.

582. Cooper, Lenna Frances; Barber, Edith M.; Mitchell, Helen S. 1929. Nutrition in health and disease. Philadelphia, Pennsylvania, and London: J.B. Lippincott company. viii + 546 p. Illust.
• ***Summary:*** First published in 1928. Address: 1. Food Director, Univ. of Michigan; formerly Dean of Home Economics, Battle Creek College; formerly, Head Dietitian, Battle Creek Sanitarium; and later, Supervising Dietitian, United States Army 1918-1919.

583. Dittes, Frances L. 1930. Vegetable milk. *Madison Survey* (*Madison, Tennessee*) 12(2):5-6. Jan. 8.
• ***Summary:*** "Milk, for many years known as 'the perfect food,' has now become a point of question, not because in composition it is deficient, but because milk, being easily contaminated, becomes one of the great carriers of disease... Disease is increasing among the animals as well as among humans. Milk obtained from diseased creatures is not always healthful. Since milk is such a good carrier of disease, the public may well be concerned as to the condition of milk offered for its consumption... a number of [soy milk] products are now on the market, such as infant foods, canned milk, condensed milk, powdered milk, flour, and breakfast foods."

"The general method for making vegetable milk followed by the Orientals is to wash and soak the bean. Freshly ground soybean meal may also be used. The length of time of leaving the beans in water is not fixed but depends upon the temperature. When the beans are well softened, they are crushed in a stone mill and the meal washed thoroughly. After crushing, two or three times the volume in water is added to the dense, milky liquid, and the whole is allowed to stand for a while. Finally the mixture is placed in a covered kettle over a slow fire until the mass has simmered well. A filter bag separates the refuse from the white, thick liquid which resembles cow's milk, and which is called 'vegetable milk.'"

"The composition of soybean milk varies somewhat, depending on the process of manufacture. In general, however, it is similar in composition to animal milk.

"The protein of the soybean milk seems to contain all the essential amino acids to make it a complete protein. It is poor in fat soluble and anti-scorbutic vitamins (the juice of soybean sprouts may be used to supplement this deficiency), in sodium chloride and perhaps calcium. Because of its low carbohydrate content, the milk does not possess the sweetness of cow's milk.

"In competition with the bovine milk, soybean milk has in its favor the following facts and dietetic advantages: It may be produced with less contamination, it is free from tuberculosis, it may be produced more cheaply, and its casein breaks down much more readily than the casein of cow's milk.

"Soybean milk is recommended by Y. Noorden in cases of gastric and duodenal ulcer, states of peritoneal irritation, hyper-secretory conditions of the stomach, disturbances of the motility of the stomach, in conditions with edema where food poor in sodium chloride is required, cholecystitis, cirrhosis of the liver, diabetes, and in cases where a very nutritious diet is desired." Address: Madison, Tennessee.

584. Steen, Herman. 1930. Soy bean processing: A discussion of the newest field in specialty milling. *American Miller* 58(2):164-65. Feb. 1.
• ***Summary:*** "Six mills affiliated with the Millers National Federation have added equipment for handling soy beans, extracting oil, and making soy bean meal, within the past year or two,... This development is one of the most important things in the industrial-agricultural world, and is making it possible for a tremendous increase to take place in the acreage of this valuable crop.

The American Milling Co. (Peoria, Illinois) used more than 1,000,000 bushels of soy beans during the past 12 months to make oil and meal. The ground meal was used a major source of protein in dairy feeds.

© Copyright Soyinfo Center 2014

A cereal manufacturer at Battle Creek, Michigan, is milling soy beans to make flour, which it uses to make biscuits and bread for those suffering from diabetes. Soy beans contain very little sugar and are very nourishing.

In Chicago and elsewhere, paint companies are using soybean oil in the manufacture of their product. This started when the price of linseed oil rose because of its scarcity, "but now the paint makers find that for certain purposes the replacement of part of the linseed oil by soy bean oil improves the quality of their product."

"In Cincinnati, Ohio, soap makers are using soy bean oil for making certain fine soaps and shampoos. It is more expensive than cocoanut oil and cottonseed oil, but for certain kinds of soap it must be used to attain the desired quality.

In Seattle, Washington, large quantities of soy beans are used [by the I.F. Laucks Co.] to make glue [for plywood]. It is almost a new industry, yet this one company is now using about 600,000 bushels of soy beans a year.

A portrait photo shows Herman Steen. Address: Secretary, Millers National Federation.

585. Woodward & Lothrop. 1930. Display ad: National Health Food Week. *Washington Post.* June 4. p. 7.
• ***Summary:*** "This week visit our Battle Creek Health Food Section–This is National Health Food Week. Join the nation-wide campaign for better health by making a visit this week to our Battle Creek Health Food Section on the Fifth Floor.

We carry a complete line of Battle Creek Health Foods, and our Battle Creek Representative will be glad to tell you about the health foods which will be especially beneficial to your health.

"Savita, a Battle Creek vegetable extract, is served in the Fountain Room–the Down Stairs Store."

Note: This is Woodward & Lothrop's golden anniversary (1830-1930).

586. *Kokomo Tribune* (*Indiana*). 1930. Geo. B. Lane passes away in his sleep: Had come here from Florida to spend summer–Formerly prominent here. July 21. p. 1, 8.
• ***Summary:*** This front page obituary notes that George B. Lane, age 60, died in his sleep early Monday morning [July 21], in Kokomo. His home is in Orlando, Florida, but he had been residing temporarily at 615 North Wabash avenue. Death was due to heart trouble.

"Surviving are the widow, Lillie Charles Lane; one son, Ovid C. Lane, 901 West Monroe street, a member of the news staff of the Tribune; two daughters, Mrs. K.F. Brown, Battle Creek, Michigan, and Mrs. D.A. Bays, Orlando, Florida; four granddaughters, Myra Janice Lane, Jeanette Bays, and Anita and Bonnie Joan Brown; one brother, Ira B. Lane, 814 West Jackson street, and two sisters, Mrs. William C. Adrian, 1101 South Bell street, and Mrs. Amos Brubaker, residing near Burlington" [Indiana].

"Mr. Lane was born near Point Isabel, Grant county [Indiana], May 16, 1870, the second son of James and Rebecca Lane, both dead several years. The parents moved to the city of Tipton and later to the village of Kempton, while he was still a child. When he was eleven years old the family moved to Kokomo, where he continued to reside until 1919, when he moved to Orlando, Fla., going there on account of failing health. He returned for a period practically every year. He came back several weeks ago and was intending to spend the summer here.

"As a young man, Mr. Lane followed the baker's trade. He was employed at that time in the Zwisler restaurant in Buckeye street [in Kokomo]. Thirty-five years ago [i.e., 1895], he went to Battle Creek, Michigan, where he was employed for several months by the Kellogg Company, and where he made the first peanut butter that concern ever marketed. He also created other new foods for them.

"Returning to Kokomo, he started a health food factory in South Webster street, just north of the Palmer School building. This enterprise was highly successful. It was, however, wiped out by fire and, unfortunately, at a time when the insurance had lapsed. After this disaster, he entered the truck gardening business, here and at Denver, Indiana."

"In 1915, Mr. Lane entered the real estate business, a line which he followed the remainder of his life."

"Mr. Lane was a man of intelligence, character and thrift. He was largely self taught, but was well informed on a number of subjects. He was straightforward and square in his dealings, did not hesitate to express his convictions and had the respect of all circles in which he was known. The record he leaves is one by which he will be long and pleasantly remembered.

"Mr. Lane was a member of the Seventh Day Adventist church, and was head deacon in the church of that denomination in the city of Orlando."

Talk with Bonnie Van Kley, Curator of Archives, Howard County Historical Society, Kokomo, Indiana. 2004. Jan. 13. Bonnie found this important article. She adds: George's brother, Ira Lane, helped to build the Seiberling Mansion, which is now the Howard County Historical Museum, located in Kokomo.

587. *Madison Survey* (*Madison, Tennessee*). 1930. Demonstrating health foods. 12(30):119. Aug. 6.
• ***Summary:*** "As an advertising scheme for the health foods of the Madison Food Department and for other lines which are being handled by Mr. Ralph Meade, this gentleman gave a banquet for the men heading the chain stores of the Atlantic and Pacific Grocery Company, of Birmingham, Alabama. The company of some seventy or eighty business men was entertained in the Vegetarian Cafeteria of that city.

"A group of young people from Madison, and another from Southern Junior College, took part in the program of music and song, and assisted in the serving of lunch."

© Copyright Soyinfo Center 2014

588. Kellogg, John Harvey. 1930. Soybeans as human food. Paper presented to the American Soybeans Grower's Association, Sept. 11. 20 p.

• ***Summary:*** Dr. Kellogg shows that he has an excellent knowledge of the world literature on soybeans and soyfoods, much of which he summarizes in this speech. "Many years ago (1899), the United States Department of Agriculture, called upon me to undertake the preparation of a vegetable meat. The Assistant Secretary, Dr. Charles Dabney, wrote me, suggesting that the navy bean might be used for the purpose. I found, however, as I expected, that this legume was not suited to the purpose. At that time the soybean was not grown to any extent in this country, I was wholly unacquainted with it, and so naturally sought to find in nuts, especially the peanut, a solution of the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have since been made and consumed. But the introduction of the soybean renders quite unnecessary any other substitute for flesh meats." The author discusses his belief that primitive man subsisted wholly upon plant products (i.e. ate a vegan diet "according to Prof. Elliot of Oxford University, Prof. Ami of Montreal, and other distinguished paleontologists"), and the nutritional value of soybeans and their basic-ash quality. "All meats yield a highly acid ash. The excess of acid in these foods produces a lowering of the alkalinity of the blood and tissue fluids when they are freely used, a condition which is known as acidosis." He also discusses soya sauce (which is now being manufactured in the USA), miso (which like soy sauce has a flavor resembling that of the osmazomes found in meat and meat sauces), roasted soy nuts (resembling roasted peanuts), pressure cooking whole soybeans, adding soy meal (flour) to breads, soy milk (which, in certain parts of China and Japan, "is made in quantities and distributed in bottles like milk in this country"), soy cheese [tofu], and the many health benefits of soy milk described in the medical literature, the many health problems caused by consuming flesh foods.

"Von Noorden, the world famous German physician, has demonstrated that the soy bean is of very great service in changing the intestinal flora." Note 1. This is the earliest document seen (June 2003) concerning soy and changing the intestinal flora. It is also the earliest document seen (June 2003) that uses the phrase "changing the intestinal flora" in connection with soy.

"In spite of the frantic efforts of vested interests to promote the uneconomic live-stock industry, it will no doubt gradually disappear as a true science of agriculture is developed and the country becomes more densely populated. The conversion of vegetable into animal protein by feeding to steers and pigs, is one of the most wasteful of all human activities. Armsby has shown that 100 pounds of digestible vegetable protein are required to produce 3 pounds of meat protein..."

Discusses Stefansson's absurd so-called meat-eating experiment, which was really a publicity stunt. Stefansson took no more than 20% of his calories in the form of lean or muscle meat. The rest of his diet was fat. "Excessive meat consumption is one of the begetting sins of the people of this country. Our per capita meat consumption is 5 ounces per day, just 5 times that of Italy (1.0 oz.) and ten times that of North China (0.5 oz.), while the average native of South China eats no meat at all, and is one of the hardiest and most industrious of workers."

"Thanks to the efforts of our efficient Plant Introduction Bureau, the soybean is beginning to get a start toward recognition and appreciation in this country; but it is evident that a plant possessed of such superlative values and such astonishing versatility and adaptability should receive far more serious attention than has heretofore been given it by the agriculturalists of this country... There can be no doubt that it is destined to play a large part in the feeding of America's millions..."

Note 2. This is the earliest English-language document seen (Dec. 2012) that uses the term "soy nuts" or the term "roasted soy nuts" to refer to soynuts. Address: Battle Creek, Michigan.

589. *Proceedings of the American Soybean Association.* 1930. Program of joint meetings: American Soybean Association and Annual Illinois Soybean Day. Agronomy South Farm, University of Illinois, Urbana-Champaign. Sept. 10, 11, 12, 1930. 3:3-6. Eleventh annual field meeting. Held 10-12 Sept. 1930 in Illinois.

• ***Summary:*** The Wednesday morning program began at 9:00 with music by a male quartet, followed at 9:20 by a welcome from Dean H.W. Mumford. Then came 13 speeches about soybean production and feeding; their titles and authors are listed. At 12:00 there was a "special soybean lunch" served at the University South Farm and prepared by ladies of the First M.E. Church, Urbana. It consisted of "Soybean fed pork, soybean fed beef, soybean bread, soybean muffins, baked soybeans, a soybean health drink, soybean ice cream, and soybean ice."

On Wednesday afternoon, starting at 5:00 p.m. there was an inspection of soybean production machinery at the Farm Mechanics Building, and the special tour of the Urbana Laboratories.

On Thursday evening at 8:00 p.m. Dr. John Harvey Kellogg, of the Battle Creek Sanitarium [Michigan], presented a paper titled "Soybeans as human food," which was printed in the Battle Creek Hospital Journal, *Good Health.*

On pages 5-6 is the text of the "Address of Welcome," by Dean H.W. Mumford, Univ. of Illinois.

Note: This is the earliest English-language document seen (Sept. 2013) that contains the term "soybean ice cream." Address: Illinois.

590. Dittes, Frances L. 1930. Soybean food preparation for infants. *Madison Survey* (*Madison, Tennessee*) 12(38):151-52. Oct. 1.
• ***Summary:*** A table compares the nutritional composition of soybean milk, cows' milk, and mother's milk. Soybean milk contains the most protein (4.94%) and mother's milk the least (1.5%). Soybean milk is lowest in carbohydrate (0.92%) while mother's milk is highest (7.00%). "In composition the soybean resembles a nut more than an ordinary bean." Soybean milk contains "the six essential amino acids necessary for complete nutrition and normal growth."

Soybean milk works well for treating eczema in infants. "Soy milk is produced at a cost of one-fifth that of cow's milk, besides being free of disease bacteria, such as tuberculosis, typhoid fever, etc. This food product may be found so practical, economical, and adequate, that it will save the lives of many infants..."

Note: This is the earliest English-language document seen (Sept. 2011) with the term "soybean food" (or "soybean foods") in the title. Address: Madison, Tennessee.

591. Kellogg, John Harvey. 1930. Soybeans as human food. I. *Good Health* (*Battle Creek, Michigan*) 65(12):5-7. Dec. Continued Jan. 1931. Paper first read at the meeting of the American Soybean Assoc., held 11 Sept. 1930 at Urbana, Illinois. [1 ref]
• ***Summary:*** Contents: Introduction. An age-long esculent. The soybean is richer in protein than beefsteak. An extraordinarily versatile food. The soybean replaces milk and eggs as well as meat in China.

"Many years ago (1899), the USDA called upon me to undertake the preparation of a vegetable meat. The Assistant Secretary, Dr. Charles Dabney, wrote me, suggesting that the navy bean might be used for the purpose. I found, however, as I expected, that this legume was not suited for this. At that time the soybean was not grown to any extent in this country. I was wholly unacquainted with it, and so naturally sought to find in nuts, especially the peanut, a solution to the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have been since made and consumed.

"But the introduction of the soybean renders quite unnecessary any other substitute for flesh meats. As a matter of fact, the protein rich foods of vegetable origin, such as nuts, which the soybean resembles, as Professor Sherman of Columbia University suggests, are not meat substitutes, but are the original meats for which the flesh of animals became a substitute when the glacial cold of the Ice Age drove our prehistoric forbears into the caves and grottoes of Southern Europe.

"The proteins of the soybean are, according to McCollum, distinctly more valuable from the point of view of nutrition than are those of the other legumes. The work of my own laboratory as well as that of others has shown that this bean is almost unique among seeds in its vitamin content." Address: Battle Creek, Michigan.

592. **Product Name:** Soy Ice Cream (Honey Sweetened) [Strawberry, Chocolate, Vanilla], and Soy Coffee with Soy Cream.
Manufacturer's Name: Scientific Food & Benevolent Association.
Manufacturer's Address: Takoma Park Station, Washington, DC.
Date of Introduction: 1930.
New Product–Documentation: Miami Daily News. 1934. April. "He [Jethro Kloss] exhibited 21 articles made from soy beans" including "ice cream." He invited the public in Miami, Florida, to taste them.

Jethro Kloss. 1935. *Back to Eden.* Page 105 contains a recipe for non-dairy soy ice cream.

Letter from Jethro Kloss, president of this association, to his daughter, Promise. 1936. May 11. The letterhead states that this is "Manufacturers, Jobbers, and Distributors" with "A marvelous line of foods made from the soy bean..." Note: It is not clear when this company was founded, or if it existed in 1930, when Kloss first started making and selling soy ice cream commercially.

Letter from Eden Kloss, son of Jethro Kloss. 1985. Nov. 15. He recalls that in about 1930 he helped his father make soy ice cream (honey sweetened in strawberry, chocolate, and vanilla flavors) and soy coffee with soy cream. They sold it to the public as part of a quick lunch out of a small trailer on Pennsylvania Avenue near the White House.

Note: This is the world's earliest known non-dairy soy ice cream. This is the earliest known commercial soy product made in Washington, DC–in the early years of the Great Depression. It is also the earliest known commercial soy product introduced by a Seventh-day Adventist that contained chocolate.

593. Bragg, Paul Chappius. 1930. Professor Bragg's live food cook book and menus. Hollywood, California: National Diet and Health Association of America; and, Live Food Products. 170 p. No index. 24 cm.
• ***Summary:*** About raw food and vegetarianism. Contents: 1. Why I write this book. 2. Our daily food, is it nourishment or poison? 3. There are no meat recipes in this book. 4. Poisonous white sugar. 5. Dairy products not human food. 6. Coffee and tea are drugs. 7. Don't use condiments. 8. Salt–The enemy of life and health. 9. Pure food. 10. Don't use aluminum cooking ware. 11. Gas, indigestion and stomach trouble. 12. Acknowledgment of recipes and suggestions fork other health food writers. 13. Salads. 14. Fruit salads. 15. Salad dressings. 16. Directions for making nut butter and nut milk. 17. Relishes. 18. Soups (incl. Carque's nut milk soups, made with his nut milk). 19. Cooked vegetables. 20. Meat

© Copyright Soyinfo Center 2014

substitutes and main dishes. 21. Desserts. 22. Breads and bread foods. 23. Sauces and gravies. 24. Drinks. 25. Health confections. 26. Health sandwiches... 30. Baby's diet from birth to 18 months. 31. Diet schedule for the growing child.

Chapter 1 (p. 11) states: "The drug doctor has been a failure. After hundreds of years of his reign there is still universal sickness and suffering which, instead of abating, is unmistakably on the increase."

Chapter 12 (p. 26) acknowledges: "A few of the recipes in this book were taken from the works of some of the most prominent men in the field of Natural Living. I have considered, in giving a cook book to my people, that they should have, not only my own favorite recipes, but also the best of other men who have experimented along this line. I have therefore included recipes from the books of: Dr. John T. and Mrs. Vera Richter, the leaders of the Raw Food movement in the West. Dr. Philip M. Lovell, distinguished editor of the most widely read Health column in the world, the Care of The Body section of the *Los Angeles Times.* Dr. Henry Lindlahr, the great pioneer Nature Doctor. And Otto Carque, chemist, research worker and crusader in the fight for natural foods."

Chapter 16, "Directions for making nut butter and nut milk," begins with a long passage from *Natural Foods: The Safe Way to Health,* by Otto Carqué (1925). It contains recipes for: Cocoanut milk. Nut milk (made by mixing 1 level tablespoon nut butter with 1 cup warm water, plus a little honey or sweet fruit juice if desired). Almond milk for infants. Nut cream (made from unroasted nut butter, warm water, and honey). Combination nut butter (peanuts, pignolias, cocoanuts). Apple and almond butter. Nut meal.

Chapter 20, titled "Meat substitutes and main dishes" (p. 111-18), contains largely cooked dishes, and makes widespread use of the "Battle Creek Sanitarium product, Protose, being available at most fancy grocers." Vegex and Savita are also widely used in recipes. Soy sauce is used to season Vegetable chop suey (p. 114). It "may be purchased at a Chinese store or any fancy grocers."

The National Diet and Health Association of America is located at 1109 North Hudson, Hollywood, California.

Note: This is the earliest document seen (March 2007) by or about Paul C. Bragg that mentions soy. No juicer is mentioned in this book. A portrait photo (just after the title page, p. 5) shows handsome "Prof. Paul C. Bragg." Address: Professor, California [Los Angeles].

594. Vacation days at the Battle Creek Sanitarium (Leaflet). 1930? Battle Creek, Michigan. 2 panels each side. Each panel: 23 x 18 cm. Undated

• ***Summary:*** The front panel (green on white) shows "The cool and spacious colonnade." The two inside panels contain 10 photos in and around the San. The headline: "Delightful vacation days at Battle Creek, Michigan. Just a glimpse." The rear panel is titled "Recreation for health." Contents: An ideal vacation spot. Entertainment and sports. Men's outdoor gymnasium. Women's outdoor gymnasium. The grand march. Rest. Food. A delightful program.

Note: Dr. Kellogg wanted people to feel that going to the San would be both enjoyable and very good for their heath–like a visit to Disneyland, rather than to a hospital (ugh). Address: Battle Creek, Michigan.

595. [Battle Creek Sanitarium] (Leaflet). 1930? Battle Creek, Michigan. 4 panels each side. Each panel: 19 x 19 cm. Undated.

• ***Summary:*** The color front panel (untitled) shows an aerial view of the huge and majestic Sanitarium and the surrounding town and landscape. The two inside panels contain 7 black-and-white photos in and around the San. (1) After dinner, Grand Promenade on the roof. (2) Men's setting-up drill in gymnasium. (3) The dietitians (24 women, seated and standing). (4) The main dining room. (5) Indoor sun-baths. (6) Reducing exercises. (7) Some of the nurses (6½ rows of about 22 women in each row, or about 140 women and men).

The headline: "Health by training–A health university." The text begins: "Within the last 50 years more than 300,000 people have found their way to The Battle Creek Sanitarium." The rear panel shows Battle Creek on a map of the Midwest and major connecting highways, airways, and railways. Address: Battle Creek, Michigan.

596. Kellogg, John Harvey. 1931. Soybeans as human food. II. *Good Health* (*Battle Creek, Michigan*) 66(2):20-22. Jan.

• ***Summary:*** Contents: Introduction. How to cook the soybean (in a stone jug in salt water under pressure). The extraordinary supporting qualities of the soybean (nutritional value, gives stamina). The soybean combats acidosis (basic-ash quality). A wonderful vegetable milk from the soybean (relieves food allergy caused by dairy milk). The great value of soy milk as a remedy. The easy digestibility of soy milk ("The author finds that plant milk is digested more easily than cow's milk"). The soybean, the vegetable analogue of meat ("The soybean differs from other legumes and cereals in the fact that it contains practically no starch. Its food values are protein and fat, as is the case with meat").

Note: This is the earliest English-language document seen (Aug. 2013) that contains the word "plant milk" (or "plant milks").

A large photo (p. 21) shows soybean sauce being made commercially in Japan. Address: M.D., Battle Creek, Michigan.

597. Kellogg, John Harvey. 1931. Soybeans as human food. III. *Good Health* (*Battle Creek, Michigan*) 66(2):24-25, 52-53. Feb.

• ***Summary:*** Contents: Introduction. The soybean combats intestinal putrefaction. The economic value of the soy as

© Copyright Soyinfo Center 2014

human food. Explorer Stefansson demonstrates the deadly character of an exclusive flesh diet. Effect of the soybean (in preventing rate deterioration).

"Metchnikoff and Tissier of the Pasteur Institute showed how Nature protects us by providing friendly germs to keep guard in the intestines, the lactic-acid-forming bacteria, *bifidus* and *acidophilus.* This discovery enables us to drive out the bad germs from our interiors by drinking acidophilus milk or better by the use of lacto -dextrin, which makes the friendly germs grow luxuriantly and kills off the undesirables, thus 'changing the flora,' and so combating constipation, colitis and all the evils of autointoxication. It thus appears that change of flora is, in fact, a battle between B. acidophilus and 'meat germs' (Herter). Von Noorden, the world-famous German physician, has demonstrated that the soybean is of very great service in changing the intestinal flora, helping materially in driving out the offensive germs which pollute our bodies... Meats, on the other hand, are the chief source of these mischief makers."

Page 25 shows an interesting photo titled "Boiling soybean milk in copper pans for making yuba, which is hanging above the pans in thin sheets folded over sticks."

"Excessive meat consumption is one of the besetting sins of the people of this country. Our per capita meat consumption is five ounces per day, just five times that of Italy (1.0 oz.) and ten times that of North China (0.5 oz.), while the average native of South China eats no meat at all, and is one of the hardiest and most industrious of the world's workers" (p. 25).

"Although we are thousands of years behind Oriental nations in our appreciation of the food merits of this highly endowed legume, there can be no doubt that it is destined to play a large part in the feeding of America's millions in the long and brilliant future which is opening up before this greatest and most highly privileged of all nations that ever lived." Address: M.D., Battle Creek, Michigan.

598. Thompson, William. 1931. The soybean industry of northern Manchuria. *Good Health* (*Battle Creek, Michigan*) 66(2):30-31. Feb.
• ***Summary:*** Contains interesting photos. Page 30 shows a field of soybeans, with a Mongolian boy on a water buffalo in the foreground. Page 31 shows (1) Soybeans in temporary storehouses, shaped liked houses with steep roofs and covered with canvas, awaiting shipment; (2) Soybeans loaded for transport to the Chinese Eastern Railway on two-wheeled wooden carts of the ancient Assyrian pattern. Address: F.R.G.S. [Fellow Royal Geographical Society].

599. Mandel Brothers. 1931. It pays to shop at Mandels: A store of youth. A store of fashion. A store of moderate price (Ad). *Chicago Daily Tribune.* May 23. p. 9.
• ***Summary:*** Most of this full page ad is about fashionable clothing, toiletries, and pearls. A section at the bottom center is titled "Regulate your weight without discomfort! Have you visited our Battle Creek Sanitarium Health Foods department? Let Miss Marion Behrens, Home Economist, give you free advice on all diet problems. Learn how to reduce easily or gain weight quickly. Mandel's Tea Room–Ninth Floor."

Note: This is the most recent document seen (Sept. 2006) that contains the term "Sanitarium Health Foods" (or "Food"). Address: [Chicago].

600. Shryock, Richard Harrison. 1931. Sylvester Graham and the popular health movement, 1830-1870. *Mississippi Valley Historical Review* 18(2):172-83. Sept. [30 footnotes]
• ***Summary:*** Also discusses: Bathing, Mary Grova, Paulina Wright, Dr. William Alcott, Amos Bronson Alcott, Dr. T.H. Trall, hydropathy or "water cure," Battle Creek, Michigan.

The "faddist fringe of the reformers' theories" are "displayed in their views on vegetarianism" (p. 181). "In the long run, however, the popular health movement accomplished good rather than ill" (p. 182).

Note: This is the earliest English-language document seen (Oct. 2004) that contains the term "health movement." Address: Formerly Dep. of History, Duke Univ. [North Carolina].

601. *Madison Survey* (*Madison, Tennessee*). 1931. Soybean bread. 13(41):164. Oct. 21.
• ***Summary:*** "Recently the Madison family have been very much delighted with a new bread containing a good percentage of soybean flour. This bread has advantages over the ordinary bread in many ways. Its high protein content and its alkalizing quality is most valuable. If interested in knowing more about this bread, write P.A. Webber, Nashville Agricultural Normal Institute, Madison, Tennessee."

Note: There is no mention of this being a commercial product.

602. *Madison Survey* (*Madison, Tennessee*). 1931. A valuable but neglected food. 13(41):163. Oct. 21.
• ***Summary:*** "About half of the people of the world obtain their protein from the soybean. The soybean protein is complete and superior in some respects to the protein in milk and flesh foods. The protein of a pound of soybeans is equal in nutritional value to two pounds of beef and costs much less. It contains none of the objectional [sic, objectionable] features found in the protein of meat. The broken-down, worn-out dead matter–the result of metabolism–of flesh foods is injurious to the liver, kidneys, and blood vessels."

"The Madison School family is enjoying the milk made from soybeans. Already the medical profession is realizing the value of this milk for infant feeding. The milk and cheese of the soybean is a wholesome, delicious food."

"It has been discovered that the average per cent of tuberculous milk in the great cities of England is 7.36. There

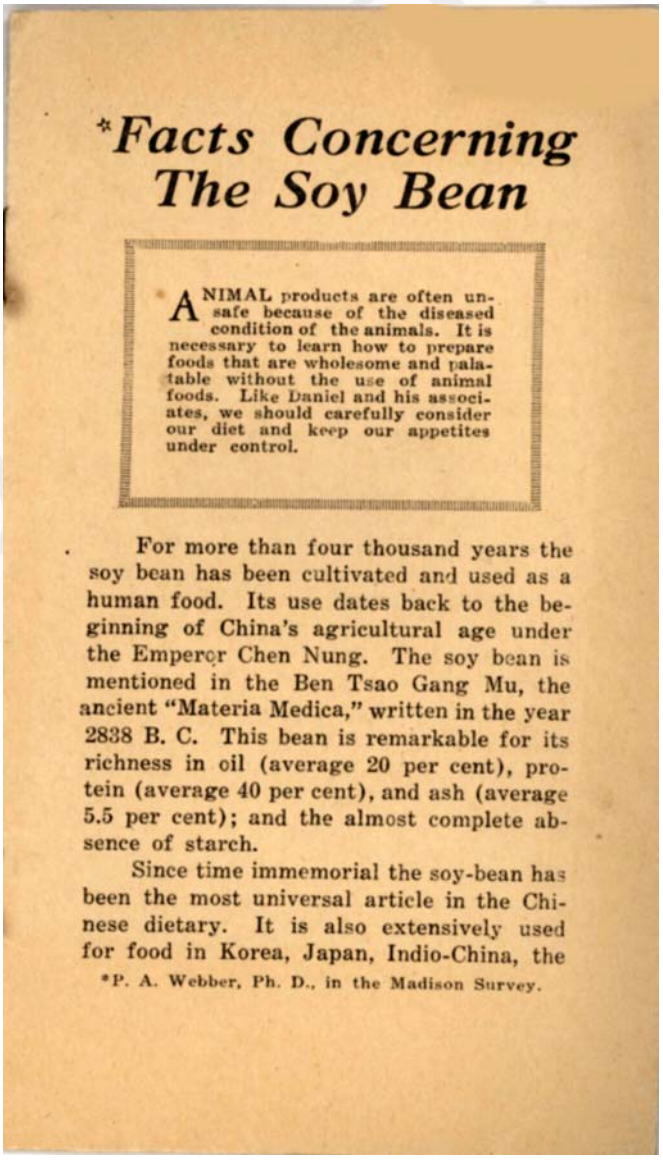
© Copyright Soyinfo Center 2014

are over a million tuberculous milk cows in England and Wales. And there are only four hundred dairies in all England and Wales that produce an A-grade milk."

603. Kellogg, John Harvey. 1931. The soybean vs. beef. *Good Health* (*Battle Creek, Michigan*) 66(10):35-36. Oct. • ***Summary:*** This editorial is a summary, with long quotations, of the following article: Horvath, A.A. 1931. "Soya flour as a national food." *Scientific Monthly* 33:251-60. Sept.

The editorial concludes: "There is abundant reason for believing that the soybean will gradually win its way to popular favor in this country and that as its use increases, the consumption of meat will gradually decrease. For nearly five thousand years it has supplied the protein needs of the people of China so completely that the average Chinaman eats less meat in a year than the average American eats in a week. The soybean is the roast beef, beefsteak, veal, pork and sausage of China and in due time may likewise supplant these unwholesome disease-breeding comestibles in this country." Address: M.D., editor.

604. **Product Name:** Madison Soy Milk (Homogenized Fluid. Renamed Kreme O'Soy Milk by April 1937 and Kreme-O-Soy by 1947) [Plain, or Chocolate].
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1931 October.
Ingredients: Fall, 1948: Soybeans, soy oil, dextrose, calcium phosphate, sodium chloride.
Wt/Vol., Packaging, Price: 15 oz, 19 oz, or 20 oz can.
How Stored: Shelf stable.
Nutrition: Protein 3.5%, fat 3.9%, carbohydrates 4.9%, ash 0.7%, calcium 0.34%, iron 4.4 mg/k.
New Product–Documentation: *Madison Survey* (Madison, Tennessee). 1931. "A valuable but neglected food." Oct. 21. p. 163. "The Madison School family is enjoying the milk made from soybeans."



Hansen, J.E. 1932. "A variety of foods from the soybean." *Madison Survey* (Madison, Tennessee). Jan. 27. p. 15. "Were our readers visiting the Madison Food Factory, they would be surprised to learn of the many ways in which the soybean is used. Bread, crackers, milk, and cheese are made from this important bean."

Madison Health Foods. 1934? *Vegetable milk and cheese. How they are served. Manual No. 2.* Madison, Tennessee. 21 p. Undated. Several recipes call for "soy milk" or "soybean milk." On the last page are listed "Products for sale by Madison Health Foods Inc. (Madison, Tennessee)": These include "Soy milk, 14 or 30 oz... Write for information and prices."

Madison Survey (Madison, Tennessee). 1937. "Experimental work with foods." 19(9):35-36. March 3. "Soy milk, fresh every day, is used in quantities by the institution. Soy milk in cans is one the market, its sale increasing continually as people become acquainted with the value of this product."

Note: We cannot be certain that Madison Foods had canned soy milk on the commercial market before March 1937. The earlier products may have been fresh soy milk, made by Madison Foods in quantity, and served in the school's dining room and hospital.

605. Webber, P.A. 1931. Facts concerning the soybean. *Madison Survey* (*Madison, Tennessee*) 13(45):177-78. Nov. 18; 13(46):181-82. Nov. 25.

*Facts Concerning The Soy Bean

ANIMAL products are often unsafe because of the diseased condition of the animals. It is necessary to learn how to prepare foods that are wholesome and palatable without the use of animal foods. Like Daniel and his associates, we should carefully consider our diet and keep our appetites under control.

For more than four thousand years the soy bean has been cultivated and used as a human food. Its use dates back to the beginning of China's agricultural age under the Emperor Chen Nung. The soy bean is mentioned in the Ben Tsao Gang Mu, the ancient "Materia Medica," written in the year 2838 B. C. This bean is remarkable for its richness in oil (average 20 per cent), protein (average 40 per cent), and ash (average 5.5 per cent); and the almost complete absence of starch.

Since time immemorial the soy-bean has been the most universal article in the Chinese dietary. It is also extensively used for food in Korea, Japan, Indio-China, the

*P. A. Webber, Ph. D., in the Madison Survey.

• ***Summary:*** "The soy bean is the only seed, as far as we know, which contains both the water soluble and the fat soluble vitamins."

"In 1917 during the World War, a special committee

© Copyright Soyinfo Center 2014

appointed by the Department of Agriculture, while searching for a cheaper source of protein for human consumption, discovered the soy bean. Shortly afterwards, soy bean in the form of flour was manufactured and this has been on the market now for some time. The entire soy bean ground into flour contains double the amount of protein and calories present in beefsteak."

"The soy bean is also very rich in lecithin. It has been clearly shown the soybean oil contains fat soluble vitamins A, D, and E."

A soybean milk can be prepared "in the same way as almond milk... Many tests have been made in the pediatrics departments of various universities in the United States showing that soybean milk can be used as the only source of protein in the nutrition of young infants." Also gives details on tofu. "In the Orient, 'tofu' forms a very popular and almost indispensable dietary article. This 'tofu' can be used in many different dishes, taking the place of meat or eggs. It is delightful as a constituent of roasts, omelets, etc."

"In Russia the soybean is taking prominence in the dietary of the people there. 'Plant soybeans and you plant meat, milk, egg omelets,' is the newspaper cry. A Soy Institute was recently organized in Moscow as well as a special exhibition of soy foods at which one hundred thirty varieties of soy dishes, including cutlets, pastry, salads, candy, and beef were shown. There is every reason to believe that the United States will become the leaders in introducing the soybean in the daily diet of the white race."

"The following are a few of the ways in which it is being prepared and used in the United States at the present time: Soybean flour is being used by large bakeries as a constituent of bread, rolls, pastry for pies, cakes, etc. Baby foods are coming on the market containing certain percentages of soybean milk. Chocolate malted milk containing a good per cent of soybean products is now manufactured and sold by several companies. For some time, manufacturers of diabetic foods have been placing on the market productions made largely from the soybean. The soy sauce, otherwise known as Oriental 'Shoyu' has been popularized by the Chinese chop suey restaurants, and is now being used in many dishes made in the home. The bean curd is being canned and manufactured in various other ways and sold on the market. Powdered soybean milk has become a commercial product."

"For several years the Health Food Department of the Nashville Agricultural Normal Institute has been experimenting with this most interesting legume, and is now offering two basic products which may be used in many nutritious and appetizing dishes: the soy cheese and soybean flour. These two products have been used in scores of recipes tested out at the Madison Rural Sanitarium, the Nashville Vegetarian Cafeteria, and other health food places. Just recently several different recipes for the use of soybean flour bread, rolls, and cakes have been perfected. These with other recipes, will be sent free to those who inquire for them."

"A move to substitute vegetable proteins for animal proteins is a move in the right direction, and there is no plant so promising as the soybean. A soybean research foundation has been suggested. Large space at the coming World's Fair in Chicago [Illinois] will do much to bring this important but neglected food to the attention of the American people."

Note: This article was reprinted as a little 8-page booklet (15 x 9 cm, undated) by T.A. Van Gundy of La Sierra Industries. This shows that Van Gundy was aware of the pioneering work of Madison Foods at an early date. On the last page of Van Gundy's booklet is the following paragraph which does not appear in P.A. Webber's original article: "For some time the founders of La Sierra Industries, Arlington, California, have been experimenting with this most interesting legume and are now prepared to offer a number of products which may be used in many nutritious and appetizing dishes: canned soys, soy soup, soy flour, soy cheese, soyco (a coffee substitute), smoein (vegetable smoked meat), soy breakfast food and soy-loaf." What a shame that this little booklet is not dated! At least we know it was printed after November 1931. Address: PhD, Madison, Tennessee.

606. Kellogg, John Harvey. 1931. The bran bugaboo. *Good Health* (*Battle Creek, Michigan*) 66(11):5-6. Nov.
• ***Summary:*** More than 80 years ago [about 1837], "Sylvester Graham, a highly cultured college professor and lawyer, became convinced that the fine flour bread that was then in general use was unwholesome because it represented only part of the grain, the mineral part, the bran and the germ being lost in the bolting process. He set out on a campaign to convince the public of the superiority of bread made from the whole grain meal. He was so able a lecturer that he soon had a great number of followers, and bread made from wheat meal in a few years became popular in many places, and was known as graham bread. In recent years, this wholesome bread has become so widely used its name is spelled with a small *g* instead of a capital, and probably few people know its origin.

When patent flour made by the rolling process came into fashion, the millers soon discovered that the growing popularity of whole meal bread was not at all in the interest of their business, and so began a campaign of opposition. Very soon articles began to appear in the papers about the injurious effects of bran and of whole meal bread." It was said that bran irritates the stomach and intestines. "Those who listened to this teaching soon found themselves suffering from distinct forms of constipation, which created a demand for mineral waters and laxative pills of many sorts."

"Very nearly thirty years ago [in the early 1900s] I suggested that sterilized bran be put up in packages ready for use. The idea was laughed at as being very absurd. I was often advised that intelligent people would never be induced to use bran, but as I had for years been prescribing it, I had

© Copyright Soyinfo Center 2014

frequently found difficulty in obtaining clean bran in fit condition for food." Note: By 1908 Dr. Kellogg's company was selling sterilized wheat bran.

Today, probably "more than ten million people in this country alone are making daily use of bran... Thousands of drug stores have become cafeterias and are selling more foods than drugs.

"While the popularity of bran has thus been increasing from year to year, the opponents of its use have continued their efforts but with little success..." The doctor advises taking psyllium seed with bran to help move it through the intestines. Address: M.D.

607. Dittes, Frances L. 1931. The soybean as human food. *Madison Survey* (*Madison, Tennessee*) 13(48):189-90. Dec. 9; 13(49):193-94. Dec. 16. [3 ref]
• ***Summary:*** This paper was presented by Miss Dittes at the 20th annual meeting of the Tennessee Academy of Science, held 27-28 Nov. 1931 at George Peabody College for Teachers, Nashville, Tennessee. It summarizes scientific research on the subject. "In 1917 during the World War, a special committee appointed by the Department of Agriculture, while searching for a cheaper source of protein for human consumption, discovered the soybean."

"At present there is a great interest in soybean preparations throughout the world. In this country the leading forces are the Bureau of Home Economics, and W.J. Morse, of the United States Department of Agriculture. The famous Austrian, Professor Haberlandt, wrote about fifty years ago that the time would come when soybeans would play an important role in human dietary."

"An important step being studied at the present time is the establishment of a soya foundation in order to promote the creation of a National Soya Food Research Institute." Address: Madison Sanitarium Dietitian and Prof. of Home Economics, Madison College, -.

608. **Product Name:** Zoybeans (Cooked Soybeans), Zoy Soup, Bacon and Zoybeans, Zoy Bouillon.
Manufacturer's Name: Madison Foods?
Manufacturer's Address: Madison, Tennessee?
Date of Introduction: 1931 December.
New Product–Documentation: W.L. Burlison and O.L. Whalin. 1932. *Journal of the American Society of Agronomy* Aug. p. 594-609. "The production and utilization of soybeans and soybean products in the United States." See p. 608. "Zoybeans," "Zoy soup," "Bacon and zoy beans," and "Zoy bouillon" are listed as soybean food products made and sold in the USA.

W.L. Burlison. 1936. *Industrial and Engineering Chemistry* 28(7):772-77. July. "The Soybean: A Plant Immigrant Makes Good." See Table II, p. 775. "Zoybeans (cooked beans). Bacon and Zoybeans. Zoy bouillon." States that these products were on the market during the latter part of 1931. They were probably made by Madison Foods in Madison, Tennessee.

609. Cooper, Lenna Frances; Barber, Edith M.; Mitchell, Helen S. 1931. Nutrition in health and disease. 4th ed. Philadelphia, Pennsylvania: J.B. Lippincott. xii + 548 p. Illust. (102). 21 cm. *
• ***Summary:*** "First published in 1928 under the title: *Nutrition in Health and Disease for Nurses"*. Address: 1. Food Director, Univ. of Michigan; formerly Dean of Home Economics, Battle Creek College; formerly, Head Dietitian, Battle Creek Sanitarium; and later, Supervising Dietitian, United States Army 1918-1919.

610. Kellogg, John Harvey. 1931. The crippled colon: causes, consequences, remedies. Battle Creek, Michigan: The Modern Medicine Publishing Co. x + 385 p. + 32 unnumbered leaves of plates. Illust. (some color). Index. 20 cm. *
• ***Summary:*** This is an extensive revision of *Colon Hygiene* (first published in 1912). Address: M.D., Battle Creek, Michigan.

611. La Sierra Industries. 1931? La Sierra soy bean products (Leaflet). Ontario, California. LSI. 3 panels each side. Each panel: 22 x 9 cm. Undated. [2 ref]
• ***Summary:*** See next page. Gives a 6-7 line description of each of the following products prepared by the company in Arlington: Soy Beans (canned, plain or with tomato sauce), Soy-Co, Soy Flour, Mamenoka [roasted soy flour], Soy Milk, Soy Cheese, Soy Loaf, Soy Bologna, Soy Sandwich Spread, Smoein, Soy Bean Butter [soynut butter], Soy Bean Breakfast Food. One of the panels (front and back) is "Mamenoka Recipes (Processed soy bean flour)."

"Smoein is a smoked vegetable protein made from legumes which have been toasted and smoked in the old fashioned way, giving the flavor of smoked meats. It is an excellent seasoning for soups, gravies, entrees, eggs and any food in which a smoked flavor is desirable.

"Soy Bean Butter is similar to peanut butter, however it does not contain any nuts. It may be served plain or mixed with water to dilute. A delicious spread is made by mixing equal parts of honey and soy bean butter." Note 1. This product is almost surely soynut butter. If so, this is the earliest English-language document seen (Dec. 2012) that uses the term "soy bean butter" to refer to soynut butter.

Note 2. This is the earliest published document seen (Sept. 2000) related to T.A. Van Gundy or his company, La Sierra Foods. Note 3. This is the earliest English-language publication seen (April 2013) that uses the term "Soy Cheese" to refer to tofu. T.A. Van Gundy coined and later frequently used the term "soy cheese" to refer to tofu.

Note 4. This is the earliest English-language document seen (Nov. 2012) that uses the word "Mamenoka" to refer

© Copyright Soyinfo Center 2014

fant feeding. The milk and cheese of the soy bean is a wholesome, delicious food. It is not difficult for people to acquire a taste for soy bean products. The soy bean is becoming very popular because of its nutritional value, and also its versatility. Among the many sauces, entrees, and ragouts made from it is the world-famous Soya Sauce.

A number of soy bean products are now on the market and may be purchased at most food stores.

SOY BEANS may be had canned, plain or with tomato sauce, and are delicious served either hot or cold.

SOY-CO is an alkaline breakfast drink which is very beneficial in reducing acidosis as well as keeping up the alkaline reserve in the body. It may be served as a hot drink or as an iced beverage.

SOY FLOUR may be used in bread, muffins, milk and cheese.

MAMENOKA is a processed Soy flour which has the raw bean flavor removed. May be used any way the raw flour is used.

SOY MILK and CHEESE may be purchased all ready prepared in cans. The Milk has a composition similiar to cows milk and is of equal nutritive value. It may be used in any way that cows milk is used. The CHEESE is an excellent calcium food.

Mamenoka Recipes

(Processed Soy Bean Flour)

SOY WAFFLES

4 eggs
2 cups SOY MILK or cows' milk
2 tbsp. butter
1 cup of MAMENOKA
½ cup white flour
¾ cup whole wheat flour (fine)
1 tsp. salt
1 tsp. sugar

Separate eggs. Beat yolks, add milk gradually, then salt and butter. Beat egg white very stiff. Sprinkle sugar in the beaten egg white. Add flour to batter, stir well. Fold whites of egg in carefully.

PIE CRUST

¾ cup MAMENOKA
5 tbsp. cold water
6 tbsp. solid vegetable fat, salt
¾ cup white flour

Sift the flour well together. Cut the fat into it, add water, a little at a time and mix quickly.

SOY GEMS

½ cup entire wheat flour
½ cup MAMENOKA
½ cup white flour
1 cup milk
2 tablespoons fat
1 tablespoon honey
½ teaspoon salt
2 eggs

Mix dry ingredients, mix milk, egg yolks, sugar and fat. Add flour and fold in stiffly beaten egg whites. Bake at once in iron gem pans in a hot oven.

© Copyright Soyinfo Center 2014

to roasted soybean flour. It is a variation on or misspelling of the Japanese term *mame no ko* meaning "flour of [soy] bean."

Note 5. This is the earliest English-language document seen (Nov. 2012) that uses the word "toasted" in connection with roasted soy flour. Address: Campus and Maitland, Box 203, Ontario, California.

612. Hansen, J.E. 1932. A variety of foods from the soybean. *Madison Survey* (*Madison, Tennessee*) 14(4):15. Jan. 27. [1 ref]
• ***Summary:*** "Were our readers visiting the Madison Food Factory, they would be surprised to learn of the many ways in which the soybean is used. Bread, crackers, milk, and cheese are made from this important bean. The flour is ground on the hammer mill in the factory... Roasts, bean loaf, and croquettes are made from it. Ice cream made from the soybean is delicious."

Note: This is the earliest document seen (Nov. 2013) that describes the equipment used to make soy flour. It is also the earliest document seen stating that a hammer mill is or can be used to grind soy flour. Address: Madison College, Tennessee.

613. Cowgill, George R.; Anderson, William E. 1932. Laxative effects of wheat bran and "washed bran" in healthy men: A comparative study. *J. of the American Medical Association* 98(22):1866-75. May 28. [7 ref]
• ***Summary:*** The article begins: "The importance of ingestion of a reasonable amount of food 'roughage' for the maintenance of satisfactory intestinal motility is widely appreciated. It is quite generally recognized that wheat bran contains a relatively large amount of indigestible material, notably cellulose."

Dr. J.H. Kellogg of Battle Creek, Michigan (1921) "is one of those who attribute numerous ills to constipation and therefore advocate the ingestion of large amounts of various sources of 'indigestible residue,' including bran, as a corrective and preventive measure."

The laxative value of whole wheat bran was studied in three series of experiments on eleven healthy men subsisting on carefully controlled diets. One type of bran had the phytin removed. "It was concluded that the laxative value of bran is due predominantly to the fiber present, regardless of phytin or other bran constituents... in healthy men a definite relationship exists between the rate of laxation and the amount of fiber ingested per unit of body weight. This points to the existence of a physiologic roughage minimum, which, in terms of fiber, is obtained from an intake of 90 to 100 mg. of fiber per kilogram of body weight daily... A somewhat greater fiber intake may be required to secure the physiologic fiber optimum." Address: Lab. of Physiological Chemistry, Yale Univ., New Haven, Connecticut.

614. *Good Health* (*Battle Creek, Michigan*). 1932. Bran does not cause, but heals gastric ulcer in rats. 67(5):26. May. [1 ref]
• ***Summary:*** Recent scientific research by Hoelzel and Da Costa of the University of Chicago (Illinois), published in *Proceedings of the Society for Experimental Biology and Medicine* shows that "bran, even when taken in liberal quantities as an exclusive diet, in fact, not only does not cause ulcer of the stomach, but when ulcers are present, does not interfere with their healing." The bran is believed to absorb gastric acid.

615. Stegman, Henry M. 1932. Babies thriving on vegetable milk. *Good Health* (*Battle Creek, Michigan*) 67(5):38-39. May. [1 ref]
• ***Summary:*** "Nutritionists place milk first among foods. They urge that every child should have a quart a day and every adult a pint–some say a quart." There follows a detailed summary of: Lane, Dorothy Engelhard. 1931. "The nutrition of twins on a vegetable diet during pregnancy, the nursing period and infancy." *American Journal of Diseases of Children* (Dec. 1931, p. 1384-1400). "At the age of two years and eleven months, they have made sturdy physical and mental progress. Their great endurance and strength call for special comment."

616. *Good Health* (*Battle Creek, Michigan*). 1932. Plant milks. 67(7):20. July.
• ***Summary:*** "A simple plant milk which has borne the test of use in China for several thousand years may be prepared from the soybean by the following simple process." The process is described in two paragraphs.

Another "excellent plant milk may be prepared by grinding blanched almonds in a mortar."

617. Wakeham, Glen; Hansen, Louis O. 1932. The basal metabolic rates of vegetarians. *J. of Biological Chemistry* 97(1):155-62. July. [6 ref]
• ***Summary:*** The average basal metabolic rate of 20 lifetime vegetarians was found to be 11% below Du Bois normals. Average basal metabolic rates dropped after 6 to 8 years in subjects consuming vegetarian diets. "The significance of these results is not at all clear... Perhaps it may be tentatively suggested that the cells of the organism, confronted over a long period of time with a low supply of amino acids, gradually adjust their metabolic processes in such a way as to increase the mechanical efficiency of the body as a heat engine and thus enable the organism to carry on its normal functions with less loss of the total potential energy of the food in the form of heat. It should be stated that the sublingual temperatures of forty-two of the subjects–all of the cases in which this factor was observed–were always between normal limits, 36.7-37.2°." This research was done in cooperation with the Boulder-Colorado Sanitarium-

© Copyright Soyinfo Center 2014

Hospital. Note: It was largely conducted at the Stanborough School, run by Seventh-day Adventists in England. It was the first experiment in Great Britain on the basal metabolism of vegetarians. International in scope, it involved vegetarians from 7 different countries. Address: Dep. of Chemistry, Univ. of Colorado, Boulder.

618. *Vegetarian Messenger and Health Review* (*Manchester, England*). 1932. The "Pitman" Health Food Company: Vitaland, Four Oaks, Warwickshire. Aug. p. 223-25.
• ***Summary:*** The company's model factory, Vitaland, is located only a few minutes' walk northeast of Sutton Park, about 10 miles northeast of Birmingham. "Vitaland had its beginning in 1898 in the centre of Birmingham, but in 1908 it was found necessary to take larger premises, to meet the demands of a growing manufacturing business, and a move was made to Aston, a densely populated suburb, 2-3 miles northeast of central Birmingham. In 1930 the final move was made to Four Oaks. Mr. James H. Cook, the principal of the "Pitman" Company, looked upon the building at Aston as a step toward his long-cherished idea of a 'factory in the country' and Vitaland is a 'dream come true.'

There follows a description of the large, spacious, well-lit factory. Photos show: (1) The Order Department with a floor space of 3,200 square feet. (2) Machinery Bay. "The total area of glass covering the six northern lights is 5,850 superficial feet [square feet].

"On the day following his visit to the factory our representative joined the '34th Annual Staff Outing' [apparently starting in 1899] when a party of 70 journeyed by motor coach to Ludlow and Church Stretton and spent a thoroughly enjoyable time."

"Food reformers who are interested not only in the composition of the food they eat, but also in the conditions in which they are manufactured are invited to visit Vitaland."

Note: The statement that "Vitaland had its beginning in 1898" seems slightly misleading. According to "The First Century of Health Foods," by Kathleen Keleny (the daughter of James H. Cook) (1996): "In the summer of 1898 the first Vegetarian hotel in England, called the Pitman Vegetarian Hotel, was opened and I was made manager of that too" (p. 7). The vegetarian meals were an immediate success, hundreds of people were soon enjoying lunch at the hotel daily, and many of the hotel's visitors became vegetarians. "The customers started asking for foods which they could take home with them... I produced simple and appetising foods from nuts, cereals, fruits and vegetables to take the place of meat, lard, butter, cheese and jelly made from animals..." So Mr. Cook, probably with his staff, made these vegetarian foods in the hotel's kitchen. There is no indication that they were labeled or packaged; so they were more like "take out" dishes than commercial products.

In 1902 he started a health food store "and the manufacturing side was increased. "I realised that it was not economical to run a factory in the centre of Birmingham, so I bought a site in Aston where I could build the first factory" [in 1908] (p. 8).

But what products did he sell at his health food store starting in 1902? Many were probably made by the International Health Association at a real health food factory in Redhill, Surrey, starting in 1899. In his very carefully researched and documented book, The Seventh-day Adventists in the British Isles, 1878-1933, Gideon David Hagestotz, PhD, explains: In 1899, near Redhill, Surrey, the International Health Association purchased Harley Mill, which it enlarged and called Salford Mill before starting production of health products. The management imported some of the machinery and purchased the remainder in England. The products resembled the noted Kellogg and Post health foods; in fact the association had procured the 'rights' to make Battle Creek foods in England.

"Early in 1900, just after the factory gave promise of developing into a profitable industry, fire destroyed the plant... With the undamaged machinery as a nucleus for a new start, the Association leased property in Birmingham [far to the northwest, between London and Manchester] the following November [1901] where it functioned as a stock holding company under British law. Unfavorable conditions in the form of high rent and improper location" led to "a financial loss of £1,500 at the end of the first year of operation." Thereafter "each year the plant showed a profit in spite of some competition created by substitutes for the commodities it produced."

In short, the Seventh-day Adventists started the first health food factory in England in 1899. In 1926 the rapidly expanding International Health Association (I.H.A.) was renamed Granose Foods Ltd.

619. *Madison Survey* (*Madison, Tennessee*). 1932. Madison notes [The Food Factory]. 14(35):140. Sept. 14.
• ***Summary:*** "From the Food Factory comes the report that five salesmen have recently entered Chattanooga and surrounding territory with Madison health foods. The factory has been kept unusually busy of late getting out orders for Breakfast Crisps, Three-Minute Wheat, and Vigorost. The last-named item is proving to be very popular. From Michigan a firm writes, 'We have to compete with other companies, but a taste of Vigorost has settled the matter in favor of your foods.' A California patron writes, 'Vigorost is the best food we have eaten along the health food line.' May we hear from others in regard to this new product?"

620. *Madison Survey* (*Madison, Tennessee*). 1932. News notes [Madison soybean foods at American Soybean Association meeting in Washington, DC]. 14(36):144. Sept. 21.
• ***Summary:*** "Word comes from several persons who attended the meeting of the American Soybean Association

© Copyright Soyinfo Center 2014

in Washington, D.C., September 2-3, expressing their interest in the Madison display of soybean foods. These foods were sent to Washington for this special occasion at the request of Dr. W.J. Morris, President of the American Soybean Association."

621. **Product Name:** Vigorost (Fibrous-Textured Canned Meatless Steak). Renamed Vigoroast by 1965.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1932 September.
Ingredients: Wheat gluten, firm tofu and/or okara, whole peanut meal, seasonings.
Wt/Vol., Packaging, Price: 14 and 20 oz cans.
How Stored: Shelf stable.
Nutrition: Protein 19.4%, fat 8.6%, carbohydrates 12.3%, ash 2.1%.
New Product–Documentation: Madison Survey. 1932. Sept. 14. p. 140. Dec. 7. p. 179. For entrees, sandwiches, salads. Madison Health Messenger. V. 49-2. p. 5. Gray. 1936. All About the Soya Bean. p. 123.

Madison Survey. 1937. "The soy bean marches on." April 21. p. 59-60.

Ad (2¼ by 3 inches) in *Nature's Path* (USA). 1941. July. p. 273. "A treat without meat." Vigorost is one of five basic food products made and sold by Madison Foods. Taylor. 1944. The Soy Cook Book. p. 201.

Note from Sam Yoshimura. 1981. March 19. When Sam attended Madison College from 1937-1943 Vigorost was made from wheat gluten, soy cheese [tofu], and seasonings.

Note 1. This is the earliest known commercial soy product that is a meat alternative resembling beef; it uses tofu and/or okara.

Note 2. This the second earliest meatlike product seen, made by a Seventh-day Adventist food company, that contains gluten.

622. **Product Name:** Breakfast Crisps (Ready-to-Eat Soy-Based Breakfast Cereal).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1932 September.
Ingredients: Incl. whole soy flour.
How Stored: Shelf stable.
New Product–Documentation: Madison Survey. 1932. Sept. 14. p. 140.

Madison Survey. 1937. "The soy bean marches on." April 21. p. 59-60.

Madison Health Messenger. 1938. Spring, p. 4. A photo shows a young boy at the breakfast table (dressed in a white shirt and bow tie) eating "Breakfast Crisps." The package is clearly shown.

Note: This is the earliest known commercial soy product that uses whole soy flour as an ingredient.

623. *Los Angeles Times.* 1932. Health aid and diets on program: Food specialist to assist director of 'Times' Home Service at meeting. Oct. 19. p. A6.
• ***Summary:*** Marian Manners, director of the [Los Angeles] Times' Home Service Bureau, announces a program for today at 3 o'clock in the auditorium of the Southwest Building, 130 South Broadway, held especially for those who are interested in "foods from the standpoint of diet and health."

"Hazel Denis, dietitian for La Sierra Industries, manufacturers of the complete line of soy bean products, will prepare soy cream pie and Boston roast, showing two novel and delicious ways of introducing this health food into the diet."

Note 1. This is the earliest published and dated document seen (Oct. 2013) concerning La Sierra Industries, founded by T.A. Van Gundy.

Note 2. This is the earliest document seen (Oct. 2013) that mentions a "soy cream pie." We soon learn that this "soy cream pie" closely resembled a non-dairy cheesecake.

624. Dittes, Frances L. 1932. Soy milk in infant feeding. *Madison Survey* (*Madison, Tennessee*) 14(37):146-47. Sept. 28; 14(38):150-51. Oct. 5. [2 ref]
• ***Summary:*** "It is a fact definitely proved on many occasions, that for the normal baby, good breast milk from a healthy mother supplies the type of food, both as to quantity and quality, best suited to develop the ideal infant."

Two facts about breast milk stand out prominently: "First, breast milk protein, by its lack of buffer and formation of flocculent soft curd, favors both rapid and efficient gastric and intestinal digestion; and secondly, the protein, or element of growth, of breast milk contains the kind and amount of amino-acids best suited to the infant's growth."

"As a substitute for breast milk, when artificial feeding is necessary, cow's milk has long been recognized as the best. There are, however, conditions under which cow's milk may be undesirable, particularly since animals are becoming more and more diseased. Science is showing that a milk made from the soy bean is a splendid substitute for mother's milk. (To be continued)."

Part 2 (Oct. 5, p. 150-51): Two tables compare the composition of cow's milk, soy milk, and mother's milk. Mother's milk has 1.5% protein, soy milk 3.3%, cow's milk 4.94%. "The salts in cow's milk are chiefly phosphates, which absorb or buffer hydrochloric acid." Mother's milk is the lowest in salts (minerals), with soy milk in the middle. "Since soy milk contains less salts than cow's milk, it requires less secretion of gastric hydrochloric. According to Fisher [sic, Fischer 1914], soy milk gives a much finer flocculent curd in the stomach than cow's milk and by its

© Copyright Soyinfo Center 2014

lack of buffer action forms both rapid and efficient gastric and intestinal digestion. Its period of stay in the stomach is shorter. Its ingestion results in a shorter period of gastric secretion. The peristaltic motion of the stomach is less after the ingestion of soy milk than in the case of cow's milk. These qualities make the soy milk more desirable as a food for delicate infants than is cow's milk."

"The protein of the soy milk has been shown by authorities to contain five of the essential amino-acids necessary for complete nutrition for infants, cystine being the absent amino acid."

"Soy milk is produced at a cost of one-fifth that of cow's milk, besides being free from disease bacteria such as tuberculosis, typhoid fever, etc. This food product may be found so practical, economical, and adequate that it will save the lives of many infants, particularly in cases where the use of cow's milk is not advisable, and in sections where cow's milk is unsafe for use." Address: Madison College, Tennessee.

625. La Sierra Industries. 1932. Soy bean (Ad). *Los Angeles Times.* Nov. 6. p. J20.
• ***Summary:*** This small, square ad reads: "One of the most perfect foods on the market today. Perfect in protein and practically free from starch, with an Alkaline Reaction.

"Soy bean products are offered in twelve different varieties: Soy-Co Breakfast Beverage [soy coffee], Soy Milk, Cheese [tofu], Butter, Bologna, Loaf, Spread, and Others.

"On sale at health food stores. Manufactured by the La Sierra Industries. 'Packers of superior foods.'" Address: Arlington, California.

626. *Los Angeles Times.* 1932. Annual Food and Household Show will open today. Nov. 14. p. A7.
• ***Summary:*** A photo (one of eleven) shows a booth titled "Soy Bean Products." Inside is a man holding a little girl, and a woman serving a customer. The caption: "Soy beans come into their own in La Sierra Industries booth."

627. *Madison Survey* (*Madison, Tennessee*). 1932. The food factory. 14(45):179-80. Dec. 7.
• ***Summary:*** "For many years, as one of the campus industries at Madison, a health food factory has been operated. It has furnished foods for the college cafeteria, for the sanitarium diet kitchen, and for the Nashville Vegetarian Cafeteria, and has sold much to the outside trade. Recently more than usual interest is being shown in health foods. Quotations from a few letters written by those representing and those using our food in other places will be of interest to many of the Survey readers."

Popular products include Vigorost, Soy Cheese [tofu], Soybean Dixie Fruit Crackers, and Soy Bread.

Dr. E.A. Ruddiman, in charge of Soy Bean Research at the Henry Ford Laboratory in Dearborn, Michigan, wrote that he took home the samples of Vigorost and Soy Cheese and enjoyed them very much; his wife made some croquettes from the Soy Cheese.

Dr. A.A. Horvath of the Bureau of Mines in Pittsburgh, Pennsylvania, ordered 12 small cans of soy cheese. "Dr. Horvath is an expert on the soy bean and our correspondence with him is most interesting.

"Dr. Harvey Holmes of the Severance Chemical Laboratory, Oberlin College [Ohio], writes: 'I am very anxious to try the "tofu" (soy cheese) and learn the various ways of serving it. I would like to obtain a sample of the Soybean Dixie Fruit Crackers.'"

628. *Good Health* (*Battle Creek, Michigan*). 1932. The soybean an excellent source of food lime [calcium]. 67(12):20-21. Dec. [1 ref]
• ***Summary:*** A summary of an article titled "The utilization of calcium in soy bean diets" by Adolph and Chen, published in the *Journal of Nutrition* (July 1932, p. 379-85).

Good Health adds: "Soybeans are now turned into about fifty products in America; while in the Orient two hundred and fifty products are made of them."

629. **Product Name:** Soy Cheese (Tofu).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1932 December.
New Product–Documentation: Madison Survey. 1932. Dec. 7. p. 179-80. 1937. Nov. 10. p. 167. Gray. 1936. All About The Soya Bean. p. 123. "Cheese." Madison Health Messenger. 1939. 10 cents and 25 cents. Taylor. 1944. The Soy Cook Book. p. 201. "Soybean curd with Soy Oil."

630. **Product Name:** Soy Beans with Tomato Sauce (Canned).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1932.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Madison Survey. 1936. July 15. p. 115. Gray. 1936. All About the Soya Bean. p. 123.

Madison Survey. 1937. "The soy bean marches on." April 21. p. 59-60.

Soybean Blue Book. 1963. p. 97. "Soybeans in tomato sauce." Soybean Blue Book. 1965. p. 111. Company is now listed as Nutrition International Corp., Box 415, Madison, Tennessee 37115.

631. **Product Name:** Soy Bread (By 1937 renamed Whole Wheat & Soy Bread).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal

© Copyright Soyinfo Center 2014

Institute, Madison, Tennessee.
Date of Introduction: 1932.
Ingredients: Whole wheat, soy flour, salt, water.
How Stored: Shelf stable.
New Product–Documentation: Madison Survey. 1931. Oct. 21. p. 164. Apparently served at the school but not yet commercialized. 1932. Dec. 7. p. 180. Delivered fresh to grocery stores in Nashville by service trucks.

632. **Product Name:** Soy Fruit Crackers (Dixie Fruit Crackers).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1932.
New Product–Documentation: Gray. 1936. All About the Soya Bean. p. 123. "Dixie Fruit Crackers."

633. Anderson, Hans Steele. 1932. Science of food and cookery. 6th ed. Mountain View, California: Pacific Press Publishing Assoc. 298 p. Illust. Index. 23 cm. [7 ref]
• ***Summary:*** This book, by a Seventh-day Adventist, advocates a vegetarian, natural foods diet. "Natural foods, just as they come from the garden, field, and orchard, furnish the elements best suited to the harmonious development and functioning of all the tissues and organs of the body..." (p. 11). It discourages consumption of cane sugar (which is not digested by saliva, p. 14) and encourages consumption of cellulose and bran (p. 15).

Chapter 4, titled "The natural food of man" (p. 37-52) has sections on: True food satisfies hunger. Vegetarian diet and longevity. Vegetable and flesh foods contrasted. Vegetarian diet and endurance. Flesh eating a cause of disease. Ethics of flesh eating. Cruelty of flesh eating.

Recipes include: Gluten bread (p. 112). Diabetic bread (strong in gluten, p. 112). Gluten biscuit (p. 112). Homemade Nuttose (incl. nut butter, flour, tomato pulp, p. 134). Stewed soy beans (p. 156). Rice and soy bean loaf (with soy bean purée, p. 156). Rice and soy bean patties (p. 156). Favorite soy bean coffee (p. 281).

In the chapter on "Diet and disease" is extensive information and tables about acid-forming and base-forming foods (p. 237-39).

A 5th edition (same publisher, number of pages, and size) was published in 1929, and a 7th edition in 1938. Address: Dietitian.

634. Bartlett, Jenny. 1932. Healthful cookery. Warburton, Victoria, Australia: Signs Publishing Co. 95 p. Illust. Index. 21 cm. *
• ***Summary:*** This is a Seventh-day Adventist cookbook. Address: Australia.

635. Boulder-Colorado Sanitarium. 1932. Vegetarian cook book. Boulder, Colorado: The Boulder-Colorado Sanitarium. 52 p. *

636. Kellogg, John Harvey. 1932. How to have good health through biologic living. Battle Creek, Michigan: Modern Medicine Publishing Co. vii + 498 p. See p. 88-89, 209-10. 21 cm.
• ***Summary:*** For Dr. Kellogg, biologic living includes a vegetarian diet (which includes dairy products and eggs). A section titled "The soy bean and the peanut, high quality proteins" (p. 88-89) states: "The soy bean and the peanut are notable exceptions to other legumes. Their proteins are of the same high quality as those of eggs and milk."

The next section, titled "Proteins of animal origin" (p. 89) starts by noting that animal proteins are "of the complete or balanced sort." It concludes: "Lean meat is protein more or les saturated with blood and with a small admixture of fat. Such fat may constitute as much as one-half or more of fat meats. Meat contains uric acid urea, and other waste products. Newburgh has shown that toxic products constitute about one-fourth of lean meat solids."

A section titled "Soy milk" (p. 209-10) notes: "Soy milk is in some respects superior to cow's milk and its use in this country should be encouraged. Three quarts of excellent milk may be made from a pound of soy beans and the food value of the residue [okara] will be greater than that of a pound of beefsteak. A pound of wheat and a pound of soy beans will supply energy sufficient for a laboring man, and at a cost of less then three cents a day. Soy milk protein is of the superior quality necessary to supplement that of cereals and is of the basic or alkaline-ash type, and so corrects the acid-ash effects of cereal proteins.

"Soy milk is of special value in helping to change the intestinal flora. A very superior quality of acidophilus milk may be prepared from it*." (Footnote: *"For information, address Battle Creek Diet Service, Battle Creek, Michigan.").

"To fu [tofu], a curd prepared from soy milk, in China and Japan serves as the basis for a great number of meat-like and most delicious dishes."

Note 1. This is the earliest document seen (Sept. 2012) that mentions an "acidophilus milk" made from soy milk or that discusses Dr. Kellogg's work with it (one of two documents).

Note 2. This is the earliest English-language document seen (June 2002) that uses the term "animal origin" in connection with vegetarianism. Address: Battle Creek, Michigan.

637. *Good Health* (*Battle Creek, Michigan*). 1933. The soybean cures rickets. 68(2):16. Feb.
• ***Summary:*** This editorial states: "Various observers report the successful use of soybean milk in the treatment of rickets. Bischoff, an eminent German authority, calls attention to the fact that the soybean is rich in phosphorus, the lack of which

© Copyright Soyinfo Center 2014

is a frequent cause of rickets.

"Many physicians are recommending the giving of cod-liver oil to all infants as a precaution against the development of rickets. Soybean milk may be found in many, perhaps in most, cases, equally as protective as cod-liver oil and because of its agreeable flavor and high nutritive value, may be found preferable to fish-liver oil."

Note: As of 1999 nutritionists believe that rickets, a deficiency disease characterized by soft and deformed bones, is usually caused by failure to assimilate and use calcium and phosphorus normally due to inadequate sunlight or vitamin D.

638. Hansen, Louis A. 1933. The soy bean as human food. *Life and Health* 48(2):21-23, 27. Feb. Also in J. of the Jamaica Agric. Soc., March 1933, p. 147-50.
• ***Summary:*** This is a good introduction to the soybean, based largely on information provided by Dr. A.A. Horvath (until recently of the health section, U.S. Bureau of Mines) and William J. Morse (senior agronomist at the USDA Bureau of Plant Industry). Discusses: History of the soy bean in Asia (especially China), nutritional benefits, soy bean flour, soy bean milk, and soy sauce.

Photos show: (1) Two men standing in a field of tall soybeans. (2) A person grinding soybeans with a stone mill to make soy bean milk in China. (3) A "Chinese courtyard with pots of fermented soybeans and brine from which the well-known soy sauce is made." (4) Steamed soy beans about to be made into miso in Japan.

Note: In 1968 Hansen wrote a book titled *From So Small a Dream*, about Madison College (Madison, Tennessee), which pioneered soyfoods in the United States.

639. Kellogg, John Harvey. 1933. The soybean rich in vitamin B. *Good Health* (*Battle Creek, Michigan*) 68(2):26. Feb.
• ***Summary:*** This editorial is a summary of the following article: Wan, Shing. 1932. "Comparison of soybeans and milk in contents of vitamins B-1 and B-2." *Chinese J. of Physiology* 6(1):35-40. Feb. 15. Kellogg states: "One of the most important vitamins is vitamin B, which controls growth, feeds the nerves and acts as a stimulant to all vital processes... The soybean contains three times as much [vitamin B] as an equal weight of dry milk powder..."

640. *Madison Survey* (*Madison, Tennessee*). 1933. Soy bean recipes. 15(9):34. March 8.
• ***Summary:*** Gives two recipes: Soy corn pones, and Soy muffins. Each calls for the use of "soy meal" (soy flour).

641. *Madison Survey* (*Madison, Tennessee*). 1933. Soybean on exhibition at World's Fair. 15(10):39-40. March 22.
• ***Summary:*** "According to Sherman R. Duffy, the soybean will be the only vegetable crop having an exhibit all to itself at the Century of Progress Exposition, and will occupy 6,000 square feet of space in the Agricultural Building."

The soybean is known to urban dwellers only as the "material from which chop suey sauce is made... In the soybean exhibit will be soybean flour, diabetic foods, infant foods, macaroni, breakfast foods, and a vegetable milk which is being used in a variety ways in the manufacture of foods and confections."

642. Kellogg, John Harvey. 1933. Nutrient value of the soybean. *Good Health* (*Battle Creek, Michigan*) 68(3):25. March. [1 ref]
• ***Summary:*** *Nutrition Abstracts* reported that two Russian investigators who studied soy milk "found that its protein is equally as digestible as the protein of cow's milk and that it contains more tryptophan and so is able to balance up a larger amount of incomplete cereal proteins. Soy milk was found to digest more easily than egg or muscle protein (lean meat). Its lack of vitamin D is easily made good by the use of spinach and other greenstuffs which are the natural sources of this vitamin."

643. Battle Creek Sanitarium. 1933. Menu. Breakfast, Tuesday, April 18 1933. Battle Creek, Michigan. 1 p.
• ***Summary:*** At the bottom of each typed menu is a space for the dietitian's name. "Good morning!" is printed near the top of the menu, which is in the form of a table with 8 columns. Col. 1 are the menu items divided into main types: Fruits, cereals, entrees, breads, beverages. Cols. 2-8 give, for each menu item, the weight, the calories from protein, fat, and carbohydrates, and the total calories. Cols. 7-8 give the reaction of the food (acid or basic).

Only vegetarian foods are offered. These include soy milk, soy acidophilus [cultured soy milk], cereal coffee, whole wheat toast melba, cooked whole wheat cereal, bran flakes cereal.

644. Kellogg, J.H. 1933. The mischievous colon bacillus: From the editor's pen. *Good Health* (*Battle Creek, Michigan*) 68(4):16. April.
• ***Summary:*** "The bacillus coli, or colon bacillus, is always found in the colon and is frequently found in the upper parts of the intestinal tract..." "When the diet contains a large amount of protein, that is, when meat and eggs are eaten freely, the colon bacilli, along with various other harmful organisms, increase in numbers and virulence.

"There is but one remedy for this grave condition, that is, change of the protective flora by implanting the protective germ B. acidophilus which by nature is endowed with the power to suppress the harmful bacteria which invade the intestine. This is now easily accomplished by means of the newly discovered preparation, soy acidophilus milk. This is a culture of the bacillus acidophilus in soybean milk. It is found that the acidophilus grows with much greater

© Copyright Soyinfo Center 2014

vigor in soybean milk than in cow's milk; consequently soy acidophilus milk contains the protective germ in much greater numbers than does ordinary acidophilus milk [made from cow's milk]. Not only this, but the individual organisms are larger and much more vigorous. Laboratory researches have shown that soy milk is a better medium for growing the acidophilus than is cow's milk. When first placed in cow's milk, the B. acidophilus grows very slowly." But when this bacillus, "newly isolated from the intestine, is placed in soy milk, it springs immediately into vigorous growth. The long series of transfers required when cow's milk is employed is not necessary. It has been further observed that when old and attenuated cow's milk cultures of the B. acidophilus are added to soy milk, they are at once revived and rejuvenated. In other words, the soy milk seems to be a much better medium for the growth of B. acidophilus than is cow's milk."

"Another advantage of soy milk as a medium for cultivating B. acidophilus is the fact that it is free from the unwholesome contaminations to which milk is suspiciously subject, especially the very considerable admixture of barnyard filth which is always found in cow's milk."

Note: This is the earliest document seen (Sept. 2012) which contains the term "soy acidophilus milk."

645. *Washington Post.* 1933. Milk from soy beans is new economy food. Inventor [Jethro Kloss] claims product is more nutritious than dairy article. May 21. p. 24. Sunday.
• ***Summary:*** Jethro Kloss makes soy bean milk at home for his family. His own daughter, Mrs. Harry C. Engelhard, was raised on nut milk before he perfected the soy bean milk. Her daughter, Joyce Joan Engelhard, was raised exclusively on the soy bean milk. In Mr. Kloss' method, the strong flavor is removed. The beans are soaked overnight, then ground, to give a product costing about 2 cents for 3 quarts. Mr. Kloss, who lives at 109 Varnum St. Northwest, says that buttermilk and cheese may also be made from soy bean milk.

Two small portrait photos show: (1) Mrs. Harry C. Engelhard (left), wearing a white hat and dress. Jethro Kloss' youngest daughter, she was born Naomi Kloss, but later changed her first name to Joan. (2) Jethro Kloss (right), wearing a dress suit with a white bow tie. An original of this photo (shown here) was sent to Soyfoods Center in 1985 by Doris Kloss Gardiner of Loma Linda, California.

Note 1. This is the earliest document seen (Oct. 2004) concerning Jethro Kloss and his work with soyfoods.

Note 2. This is the earliest article on soy seen (Aug. 2002) in the *Washington Post.*

646. Kellogg, John Harvey. 1933. The precious peanut. *Good Health* (*Battle Creek, Michigan*) 68(5):20-21. May.
• ***Summary:*** "The humble goober, or monkey nut, as it is known in Africa, from the fact that the monkey seems to have been the first to discover its value, has never been taken seriously by civilized people, or, at least, not until recent

times. We are just beginning to appreciate the value of this wonderful legume."

The peanut contains 24% protein of high quality. "Forty years ago the peanut had no standing whatever as a food source; in fact, received very little consideration, and was one of the least valued foodstuffs.

"In looking for practical food substances which might take the place of meats in the bill of fare, something more than forty years ago, the writer began a series of experiments which resulted in the production of a paste which, on account of its richness in fat, was called 'peanut butter.' The purpose of treating the nut, first by exposure to heat sufficiently to cook its raw starch, and then by passing through rolls, was to increase its digestibility." Address: M.D.

647. Kellogg, J.H. 1933. Lime and longevity: From the editor's pen. *Good Health* (*Battle Creek, Michigan*) 68(6):16-17. June. [1 ref]
• ***Summary:*** Dr. H.C. Sherman of Columbia University, in rat feeding experiments, has shown that the addition of milk and lime or calcium to their diet increased longevity by 10%. "For those who cannot take cow's milk, and there are many such, soybean milk is a very satisfactory substitute. It is, indeed, more than a substitute, for in some respects it is superior to cow's milk.

© Copyright Soyinfo Center 2014

"Best of all is the soy acidophilus milk, a culture of the *bacillus acidophilus*, the protective germ which Nature plants in the intestine of every young mammal to protect it against the invasion of harmful bacteria. Unfortunately, many adults have lost this bodyguard which Mother Nature kindly provides. In such cases, a new implantation of the protective flora is necessary. This can best be done by the use of the soy acidophilus milk. One or two pints of this milk, used in connection with lactose, will quickly change the flora even in cases where the protective organism has wholly disappeared. The protective flora keeps the intestinal tract in an acid state, the normal condition which encourages the absorption of lime" [calcium].

• ***Summary:*** An ad for La Sierra soy products.

649. Dittes, Frances L. 1933. The soy bean as human food. *J. of the Tennessee Academy of Sciences* 8(3):323-28. July. [12 ref]
• ***Summary:*** "Read before the Tennessee Academy of Science at the Nashville meeting, November 27, 1931." Food products from soybeans and their value as food. Concludes: "Thus, there are significant reasons for expecting that the soy bean will become one of our most stable and prominent sources of fat and protein. There are reasons to expect also that the United States will become the leader in introducing the soy bean in the daily diet of the white race."

Tables: (1) Composition of soy bean seed compared with that of other legumes. (2) Comparisons of soy milk with other milks. (3) Composition of soy bean milk compared with cow's milk compiled from various sources. Address: Nashville Agricultural and Normal Inst., Madison.

650. Wartenweiler, Marion J. 1933. The bean in ancient and modern times. *Good Health* (*Battle Creek, Michigan*) 68(7):20-21, 26. July.
• ***Summary:*** Beans were not widely consumed in Egypt. Herodotus wrote that the priests regarded beans as unclean. Pythagoras, "although a vegetarian, forbade his disciples to eat beans. Borrowing the superstition from the Egyptians, he believed that they stupefied [dulled] the mind."

Today there is a noticeable increase in the use of soybean flour in the United States and in Europe. "It has a strong and characteristic, although quite delicious flavor. Moreover, only recently Henry Ford has announced that the paint on his next model Ford will be compounded with oil developed from the soybeans raised on the Ford farms."

651. Webber, P.A. 1933. Soy bean finally recognized. *Banner* (*Nashville, Tennessee*). Aug. 4. Summarized in Madison Survey. Aug. 16. p. 119. *
Address: Nashville, Tennessee.

652. Anderson, Hans S. 1933. Anæmia–No longer a death sentence: A dietitian of long experience tells how the anæmic can dodge the undertaker. *Signs of the Times* (*Pacific Press, Mountain View, CA; Seventh-day Adventist*) 60(48):12-13. Dec. 5.
• ***Summary:*** "It used to be that when the doctor told a patient that he was the victim of pernicious anæmia, such a diagnosis was a death sentence, for until recent years the medical profession was baffled in the treatment of this malady."

"In the feeding of cases of pernicious anæmia, a change of the intestinal flora is of prime importance. Dr. J.H. Kellogg, who has advocated the therapeutic value of lactose and lactodextrin in the treatment of intestinal putrefaction now holds that soybean milk is coming to be recognized as a very helpful adjunct in clearing up the intestinal tract so far as harmful bacteria are concerned. He says:

"'We find soy acidophilus milk a wonderful help in changing the flora. By the aid of this wonderful culture of the protective germs, I do not hesitate to challenge any case that needs changing the flora. I am thoroughly convinced that in many of these bad cases the acidophilus [in the digestive tract] has been lost entirely, and in these cases feeding with lactodextrin, although highly beneficial, will not restore the normal condition because it will not bring back the protective flora. But this the soy acidophilus milk will do and do quickly.'

"If men and women would learn to preserve their health as earnestly as they seek for gold and other treasure this world holds dear, how changed would be the 'vital statistics' and the 'obituary' columns in the daily press!" Address: Author.

653. Hilkrest. 1933. Low price health products (Ad). *Signs of the Times* (*Pacific Press, Mountain View, CA; Seventh-day Adventist*) 60(48):15. Dec. 5.
• ***Summary:*** "Prepaid prices east of the Mississippi River. For west of the Mississippi add 6 cents per pound.

"Psyllium, best, white, absolutely clean–5 lbs. $1.30.

"Colon food (lactose and dextrin)–5 lbs. $2.90."

"Soy bean foods–oil, flour, sauce, meat substitutes, etc. Send for free list."

Note 1. In a search of the Seventh-day Adventist electronic archives (www.adventistarchives.org), this is the earliest document seen (Dec. 2013) showing that Hilkrest–or any other Adventist-run small business in the United States–is selling "Soy bean foods." Note 2. By 1936 this small Adventist company (at the same address) would be named "Hilkrest Health Products." Address: 120 Carrol. Ave., Takoma Park, DC.

654. *Madison Survey* (*Madison, Tennessee*). 1933. Soy bean recipes. 15(46):184. Dec. 20.

© Copyright Soyinfo Center 2014

• ***Summary:*** Gives two recipes: Soy beans southern style (with "2 cups cooked soy beans"). Soy bean salad (with "1½ cups cooked soy beans").

"Soy beans furnish a protein equal in quality to that found in meat, milk, and eggs, and are also an important source of vitamin B. The large amount of fat, although lacking in much fat-soluble vitamin, is an economical source of energy. Soy beans are also rich in calcium and iron and give an alkaline reaction in the body."

655. *Medical Evangelist.* 1933. The origin of the light on health reform among Seventh-day Adventists. 20:2. Dec. 28. *

• ***Summary:*** A history of early Adventist health reform work, starting with Ellen White's vision on 5 June 1863 at Otsego, Michigan.

656. *Unknown newspaper* (*Miami, Florida*). 1933. Scientist extracts milk from soy bean. Unknown.

• ***Summary:*** A facsimile copy of this article appears on page 341 of the revised 1981 edition of Back to Eden. A large photo shows "Dr. [sic, he was not an M.D.] Jethro Kloss" with glasses in what appears to be a tuxedo and white bow tie. The subtitle states: "Dr. Jethro Kloss of Washington, D.C., says product tests 3.15 per cent butter fat and can e obtained much more cheaply than from cow; soy bean products to be exhibited." The article continues: "Milk from contented soy beans. This may sound like a joke or prophetic, but it's a fact, according to Dr. Jethro Kloss of Washington, D.C., who has devoted 18 years to the study of the soy bean, and from it has derived so many products that an enumeration of them sounds like a dairy menu.

"'Milk so pure that it can hardly be detected by the taste alone can be taken from the soy bean,' Dr. Kloss said. 'From this milk more than 20 products already have been made, and have stood the test of careful analysis.

"'Soy bean milk tests 3.15 per cent butter fat against 4.50 butter fat for the best of cow's milk. It will sour just as the cow's milk, and after this it may be made into cheese, buttermilk or anything else for which cow's milk is used. And it may be produced for about 2 cents per quart.'

"Dr. Kloss said that he first became interested in the soy bean when he noted its fattening effect on cattle. He began an intensive study of the bean, and after many years of research, perfected processes by which the milk could be extracted. From this the by-products developed.

"' The milk can hardly be detected by taste alone. Most people expect it to be slightly bitter, but it isn't,' Dr. Kloss said. 'My own 4-year-old granddaughter has never tasted cow's milk, and she has been pronounced an almost perfect specimen of childhood.'

"Dr. Kloss will exhibit the products of the soy bean in Bayfront park tomorrow evening after the band concert."

Note: Kloss' 4-year-old granddaughter referred to here is Doris Kloss Gardiner, who was born on 28 Feb. 1933 in Miami, Florida. Thus the article must have been published after that date, probably sometime during 1933. Bayfront park (which still exists in 1990 and has a large amphitheater) is in northern Miami, Florida, on the waterfront on Biscayne Blvd.

657. Horvath, A.A. 1933. Some recent views about soya flour. Newark, Delaware. 10 p. Undated pamphlet. 23 cm. [31 ref]

• ***Summary:*** The author quotes recent authorities in a discussion including the objectives of "processing" soybeans for the manufacture of edible flour, the quantity of lecithin, vitamin A and D and protein in the flour, its basic ash quality, alkaline influence and importance of these in the human diet.

"The technical difficulties have now been successfully overcome and processed soya flour milled from whole soybeans [full-fat soy flour] is gaining in popularity, while all attempts of marketing soya meal (with most of the oil removed or only a minor part of it) for human consumption have already failed or are doomed to fail since meal flour turns rancid on keeping and does not possess the pleasant taste of refined soya flour." The reasons for this are lack of proper cleaning, and crushing which "brings the various cell juices in contact with the oil, spreads the latter over the entire surface of the particles and exposes it to oxidation. A properly 'processed' whole soya flour on the other hand is free of these defects and possesses a pleasant nutty taste."

Note: This is the earliest English-language document seen (Nov. 2013) that contains the term "whole soya flour." Horvath used this term in most of his early writings.

"The first objective of 'processing' is to kill the enzymes of the soybean, such as lipase, the oxidases and peroxidases, which are capable of liberating free fatty acids from soybean oil, of converting them into toxic oxyacids, and of destroying vitamins A and E."

"The second objective of 'processing' the soybeans for the manufacture of edible flour is to remove the objectionable beany taste. One of these substances has been isolated by Schmalfuss and Treu (1927) and its formula showed to be Methyl-*n*-nonyl-ketone, which seems to be located in the outer layer of the bean cotyledons. The process of 'refining' should therefore be performed on the whole soybean." This ketone can be removed by distillation.

Dr. Horvath cites the research findings of Dr. Ragnar Berg of the Dresden City Hospital, Germany, which showed that a large excess of inorganic bases in the organism consuming a food, as well as in the food itself, is a necessary precondition for optimal utilization of protein. "The conclusion to be drawn from these findings is that the alkalinity of the soybean ash (it has the astoundingly high value of 26) is a highly important factor for causing a saving in protein, and this is probably the main part of the explanation why Rose and MacLeod (1925) recorded

© Copyright Soyinfo Center 2014

that a human organism is able to store three times as much nitrogen from a soybean food as from meat, while the high quality of the soya protein also contributed its share to this phenomenon."

"In a recent personal letter to the writer Dr. John Harvey Kellogg of the Battle Creek Sanitarium [in Battle Creek, Michigan] brings out the following interesting experience: 'We are making increasing use of the soy acidophilus with splendid results. I am sure it is very much superior to ordinary acidophilus milk as a means of changing the flora. It seems to stimulate greatly the growth of the acidophilus, whereas cow's milk is such an unfavorable medium that prolonged training is necessary to bring the organism up to a degree of activity sufficient to produce a good quality of buttermilk. The soy milk requires no such training. A slow growing dying milk culture when placed in soy milk springs into rejuvenescence at once, producing a good quality of buttermilk in less than 24 hours. It seems evident that a medium which exercises such a stimulating effect upon the growth of acidophilus in vitro ought to be equally superior in the intestines. *We find it of special value in old cases of toxemia in which the conditions are so unfavorable that the acidophilus has entirely disappeared. In such cases the soy acidophilus will reimplant the normal acidophilus flora within a week or two after other measures employed for months or even years have utterly failed.*"

Note 1. This is the earliest document seen (Oct. 1999) that uses the term "soy acidophilus" or that discusses Dr. Kellogg's work with it (one of two documents).

Note 2. This is the earliest English-language document seen (July 2003) that contains the word "peroxidases."

Note 3. Although this booklet is undated, we can estimate the date as 1933 since: (a) The two most recent articles in the bibliography were published in 1933, both in January. (b) One article cited in the bibliography, said to be published in 1932, is list as "(in press)." Address: P.O. Box 385, Newark, Delaware.

658. Kellogg, John Harvey. 1933. The new method in diabetes. Fourth revised ed. Battle Creek, Michigan: Modern Medicine Publishing Co. 300 p. See p. 90-91, 177-80, 295. Illust. 21 cm.

• ***Summary:*** A section titled "Insulin–Its discovery and use" (p. 90-91) states: "Every diabetic suffers from intestinal toxemia and needs to have his intestinal flora changed... Gluten preparations and soy bean products should take the place of meat and eggs, and milk prepared from the soy bean may be advantageously used in place of ordinary milk. Soy milk is almost wholly free from carbohydrates... The soy bean encourages remarkably the growth of the protective acidophilus flora. Soy acidophilus milk is especially useful in cases in which the protective flora has been entirely lost. By its continued use, the flora may be restored and maintained.*" (Footnote: *"Information concerning soy acidophilus milk may be obtained by addressing the Battle Creek Food Company, Battle Creek, Michigan.")

In a chapter titled "Directions for Making Soy Acidophilus Milk at Home" (p. 177-80), Dr. Kellogg begins by noting that he discovered the "remarkably stimulating effect of soy bean milk on the growth of B. acidophilus, the germ which forms the protective flora in the human intestine..."

Page 295 gives a recipe for making soy bean milk at home. The first step is to grind the beans to a fine flour and sift.

Gluten-related recipes (all calling for gluten flour) include: Gluten bread (p. 273). Gluten bran bread (p. 273). Gluten bran puffs (p. 273). Gluten griddle cakes (p. 274). Gluten wafers (p. 274). "Southern" gluten biscuits (p. 274). Soy bean biscuits (with soy bean meal, gluten flour, and starch-free bran, p. 275). Oatmeal and gluten gems (p. 275). Sandwiches (all on gluten bread, p. 268-71). Gluten bran bread sandwich (on gluten bran bread, p. 270). Cream of gluten cereal (p. 272). Address: Battle Creek, Michigan.

659. Madison Food Co. 1933? Madison soy cheese. Madison, Tennessee. 6 p. Undated.

• ***Summary:*** Contains a brief introduction to tofu with 8 American-style tofu recipes. "The principal protein of the Soybean is much like the protein casein of milk, and when the bean is properly treated a milk quite comparable in appearance, taste, and food value can be manufactured from it. From this milk, when allowed to become acid, or when a slight amount of a precipitating agent is added, a cheese can be prepared in consistency much like cottage cheese. This vegetable cheese (tofu) has been one of the principal articles of diet in the Orient for many centuries.

"In order that the people of America may have this most important food as an article of diet, a method of manufacturing and preserving has been perfected at the Madison Food Factory.

"For several years it has been used as a daily article of diet in the Madison Rural Sanitarium, Nashville Vegetarian Cafeteria, and many other Good Health places. It has proven its value as a diabetic food, and as a splendid meat substitute."

Tofu recipes include: Soy cheese salad. Stuffed egg with soy cheese. Tomato soy sandwich. Soy sandwich filling. Soy croquettes. Soy cheese loaf. Soybean omelet. Soybean cutlets.

On the back panel is a list of "Health foods manufactured and distributed by Madison (Sanitarium) Food Company, Madison, Tennessee: Nut Meat, Vigorost, Peanut Butter, Fruit Sticks, Sterilized Bran, Psyllium Seed, Cereal Drink, Soy Flour, Soybeans (Dry), Malta (Malt Syrup), Soy Fruit Crackers, Soybeans (Canned with Tomato Sauce), Madison 3 Minute Breakfast Wheat, Sanitarium Baked Beans, Steamed Whole Wheat, Malted Breakfast Crisps,

© Copyright Soyinfo Center 2014

Whole Wheat Fruit Crackers, Sweetened Whole Wheat Crackers, Soybeans (Canned Plain), Soy Cheese (Bean Curd), Madison Fruit Candy, Regulose (composed of Lactose and Dextrine). Write for descriptive literature."

Note 1. The company is now named "Madison Food Company."

Note 2. Many of Madison's publications about its foods are undated; this makes it very difficult to determine when a specific food was first made and sold commercially. Address: Tennessee.

660. St. Helena Sanitarium Food Co. 1933? St. Helena Sanitarium Foods: What they are and how to use them. Sanitarium, Napa Co., California. 14 p. Undated. 16 cm.

• ***Summary:*** Contents: Foreword. Brief description of each food product: Fruit nuts. Granola. Caramel cereal coffee. Peanut butter. Nut-Cereo. Nut loaf. Malted nut meal. Granose Flakes. Granose biscuit. Crackers (incl. Graham Crackers, Graham Sticks). Zwieback. Gluten. Olive oil. Grape juice. Sanitarium flour. Cooking oil (cottonseed). Choice food recipes (34 vegetarian recipes). Mail orders. Price list.

The descriptions of several of these products are especially interesting: "Fruit nuts: A scientific combination of grains, fruit, and nuts thoroughly baked by a slow process to dextrinize all the starch, then ground to a coarse meal. It is slightly sweetened by the malting of the grain but contains no artificial sugar. The most perfect breakfast food.

"Granola: Similar in appearance to Fruit Nuts but without the sweet." Therefore, Fruit Nuts was like today's sweetened Granola, whereas this Granola was unsweetened.

"Peanut butter: We [Seventh-day Adventists] were the originators of Peanut Butter."

On the last page is a directory of "Restaurants and Sanitariums on the Pacific Coast where these foods are used. Vegetarian restaurants: 435 Geary Street, San Francisco. Fifth and A Streets, San Diego. 259 South Hill Street, Los Angeles. 319-321 West Eighth, Los Angeles.

"Sanitariums: St. Helena Sanitarium, Sanitarium, Napa Co., California. Glendale Sanitarium, Glendale, California. Loma Linda Sanitarium, Loma Linda, California. Portland Sanitarium, Mt. Tabor Sta., Portland, Oregon. Paradise Valley Sanitarium, National City, California. Walla Walla Sanitarium, College Place, Washington."

On the rear cover is an ad for the St. Helena Sanitarium, with a photo of the 5-story building.

On the inside front cover: "Something to drink? Caramel cereal coffee. Something to eat? Fruit nuts. Nothing better. Nothing just as good." Address: Sanitarium [St. Helena], Napa County, California.

661. *News and Observer* (*Raleigh, North Carolina*). 1934. Food products from soy beans: Chemist from Washington makes interesting demonstration in Belhaven [North Carolina]. Jan. 21. Sunday morning.

• ***Summary:*** Belhaven, January 20, 1934. Dr. Jethro Kloss, expert food chemist from Washington, DC, gave a demonstration of food products that can be made from soy beans to a packed and enthusiastic crowd in Belhaven's City Hall Tuesday. He came to Belhaven at the invitation of F.P. Latham, Beufort County's master farmer.

"In 1932, Mr. Latham went to Washington, D.C. to a National Soy Bean Convention and witnessed Dr. Kloss making milk, cheese, buns, cakes, pies, vegetable roasts, butter, salad dressings and even a very healthyful medicinal liniment from soy beans. Mr. Latham's community is a great soy bean country and he immediately had a vision of Dr. Kloss visiting his community and showing it his experiments with soy beans. After 2 years, that vision at last has materialized and the people in Hyde County and Belhaven communities not only saw and tasted delicious foods made from the soy bean, but Dr. Kloss showed them how the

© Copyright Soyinfo Center 2014

products can be made in any home kitchen at a nominal cost."

"Dr. Kloss's little granddaughter came to Belhaven with him. She is 4 years old and 100% perfect. She never has drunk any other milk than soy bean milk.

"Dr. Kloss says there is no limit to the delicious foods that can be made from the soy bean. He is now working on a book of recipes made from soy bean products. He uses the Mammoth Yellow soy bean for most of his products. He became interested in the soy bean food products in searching for a food for diabetics."

662. Sutherland, Joe E. 1934. A cooperative college. *Madison Survey* (*Madison, Tennessee*) 16(8):29-31. March 14.

• ***Summary:*** This article, reprinted from *The Pacific Cooperator* (Los Angeles, California) is an introduction to all aspects of Madison College, located 10 miles from the city of Nashville. On the school property are 900 acres of productive land on the banks of the Cumberland River. "All students work a part of each day in some one of the enterprises of the school. In the Agricultural Department they learn to raise crops in the most scientific manner. In the Dairy Department there is a beautiful herd of registered Jersey cows in the natural surroundings of blue grass pastures for which middle Tennessee is noted. There the boys learn dairying and are being paid for it. This dairy furnishes milk, butter, cream and cheese for school and sanitarium.

"The Garden Department employs many students... and produces vegetables for the school and sanitarium." The Horticultural Department grows and harvests fruits. The Canning Department sees that nothing of value goes to waste. "A Food Factory gives work to a large group of students and furnishes a substantial cash income to the institution through the products placed on the market."

Madison is self-supporting. "The students have built the buildings and roads, and cleared the land; and at the present time several new modern college buildings are being erected.

Photos show: Students at work in the food factory, with two long tables covered with cans, and a large pressure cooker / autoclave [probably used to sterilize the contents of canned foods]. The Food Factory's commercial products–8 in cans and 11 in boxes.

663. **Product Name:** Soy Beans Baked. Renamed Wonder Soy Beans by 1936.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1934 March.
Wt/Vol., Packaging, Price: 11 oz tin can.
New Product–Documentation: Battle Creek Food Co. 1934. Price list. March 1. "Soy Beans Baked, 11-oz. tin, $0.18."

666. Battle Creek Food Co. 1934. How to eat: To build and maintain good health. Battle Creek, Michigan. 64 p. Undated. Illust. Index. 21 cm.

• ***Summary:*** The cover of this undated, saddle-stitched (stapled) book has red and black letters on an orange background. We can estimate the publication date from the latest date of the many references (March 1934, p. 8). The Introduction begins: "This book has been prepared by the Dietetic Department of the Battle Creek Food

© Copyright Soyinfo Center 2014

Company to meet the demand for more specific information concerning the adaptation of our Food to Special Diets." "We acknowledge... the friendly cooperation of food specialists and laboratory technicians of the Battle Creek College whose scientific research has been a constant guide in all our dietetic undertakings."

The book is divided into two equal parts: (1) Dietetic information (such as Diet in Constipation, Diet in Diabetes, Diet in Hyperacidity of stomach, Diet in high blood pressure, etc.). (2) Product descriptions (with a separate photo of each). Chapter 2, "Diet in Constipation" (for example) has the following contents: What is constipation? (two types: common/atonic, and spastic). What harm does constipation do? Have you constipation? What to do for common constipation: Don't take laxatives, increase the fiber content of the diet with fruits, vegetables, whole grains, bran products, psyllium, etc. Drink plenty of water, etc. What bran will do to restore satisfactory elimination. Relative amounts of bulk suppliers. The value of lubrication. To overcome putrefaction (Soy Acidophilus Milk). Does your diet contain sufficient vitamin B? Battle Creek foods for common constipation (incl. Psylla, Agar, Krusty Bran, Fig Bran, Bran Biscuit, Paralax with Agar, Paramels). Bibliography. Books to help you (two by Dr. John Harvey Kellogg).

A long list of Battle Creek basic (alkalinizing foods) (p. 25) includes: Soy Beans Baked, Soy Bean Biscuit, Soy Bean Flour, Soy Gluten Bread. A description of "The vegetable meats" notes that "Protose is a dark colored vegetable meat and Nuttose a light colored vegetable meat, both supply just as much protein as meat..."

Part 2, product descriptions, includes: Soy Bean Flour (14 oz or 5 lb tin with screw top), Soy Gluten Biscuit (in carton), Soy Gluten Bread (12 oz tin), Battle Creek Soy Beans (Baked, with tomato sauce, 11 oz can).

Many photos show each of the products and the huge Battle Creek Sanitarium. Address: Battle Creek, Michigan.

667. *Good Health* (*Battle Creek, Michigan*). 1934. Have you lost your protective germs? 69(3):20-21. March.
• ***Summary:*** "Many adults are suffering seriously because they have lost their protective germs and so are defenseless against the germs of putrefaction and infection which are being constantly introduced in the air and in certain foods, such as fresh meat, fish, oysters, etc., which are fairly alive with harmful germs. In such cases, as in the case of the infant, a *new implantation of the protective germs is necessary.* The remedy employed for the infant is of course not available for the adults. A thoroughly efficient means of recovering lost acidophilus is available through the fortunate discovery of soy acidophilus milk, a highly active culture of the acidophilus, by the use of which it is possible to restore the friendly germs in any case in which it is possible to restore the friendly germs in any case in which they have been lost or have become so nearly extinct that they no longer serve as efficient means against invading bacteria."

"The new culture is prepared from milk made from the soybean, a product little known in this country, but which has been in use in China for many thousands of years, and in South China completely takes the place of cow's milk, which the average Chinaman has never tasted.

"When placed in soybean milk, the acidophilus germ grows with great vigor and develops rapidly, and in a few hours produces a highly palatable, slightly acid product closely resembling buttermilk both in appearance and taste. Its food value is greater than that of buttermilk and it has the advantage that the acid-forming germs, which contain many millions in every teaspoon, are able to live and thrive in the intestine, while the germs of ordinary buttermilk die almost immediately after being swallowed into the stomach."

668. The wonder of the 20th century. Come and hear Dr. Kloss astonishing and interesting free lectures (Poster). 1934. Dr. Jethro Kloss, 500-44th St., N.W., Miami, Florida. 1 p.
• ***Summary:*** "Dr. Jethro Kloss of Washington, D.C. food chemist and scientist..." Dr. Kloss will show how to make soy bean milk and soy bean bread at the Miami School of

© Copyright Soyinfo Center 2014

Applied Arts, 406 N.E. 2 Avenue. These 2 exceptional food demonstrations have never yet been given to the public. "Dr. Kloss is one of the best informed chemists on the soybeans, which is fast coming to the front in food lines.

"Dr. Kloss makes more than 20 palatable edible table foods from the soybeans, they are very inexpensive and can be made in any home by a simple, practical method of which Dr. Kloss is the originator...

"Dr. Kloss' demonstration is truly amazing when one knows and considers that the soybean is a perfect food, and contains a high quality protein. Soybeans and their products perfectly take the place of meat, milk, and eggs. Soybean roast is better than the best beefsteak... Soybeans furnish the most economical supply of protein to be found, also contains all the other necessary elements of nutrition.

"Dr. Kloss' classes in the preparation of these foods will begin, Thursday afternoon, March 28 at 2:30 p.m." Address: Miami, Florida. Phone: Edgewater 1128-J.

669. *Miami Daily News*. 1934. Food products of soy bean urged for daily table use: Milk, cheese, roasts, bread and other preparations made from herb claimed to have high nutritive values. April 8. Sport section. p. 5. Sunday. Facsimile printed in Back to Eden by Jethro Kloss, 1982 ed.
• ***Summary:*** Two photos by Rinc above the article show: (1) A small insert portrait of Dr. Jethro Kloss. (2) His daughter, Mrs. Harry C. Engelhardt, standing next to her daughter, Joyce, age 5. The caption states that "Dr. Jethro Kloss is devoting his life to the dissemination of knowledge pertaining to soy bean milk." Both his daughter and granddaughter were raised on this milk."

"Dr. Kloss prides himself on having once been a 'farmer.' He is credited with having spent a fortune in philanthropic work, the greater part having gone toward introducing a bean which he feels is destined to eventually revolutionize the economic structure of this country and become of incalculable value in time of war.

"Approximately 6,000 persons recently heard Dr. Kloss in Bayfront park explain how he apparently performs miracles when he transmutes beans into 24 or more different foods which in addition to being delectable also retain various life-giving elements usually attributed to cow's milk...

"He exhibited 21 articles made from soy beans and invited the public to taste them. These were soy bean milk, bread, pie, cakes, buns, cookies, roast, buttermilk, coffee, cottage cheese, cream cheese, yellow cheese, soy bean sauce, pancakes, broth, butter, 'mashed potatoes,' mayonnaise, soy bean roast not like that from meat, ice cream, sprouted beans. None of these contained white flour nor cane sugar, making such foods especially valuable for diabetics. Soy bean foods are also recommended for arthritis.

"He advocates the teaching of edible food preparation from soy beans as part of school curriculum and drew a parallel tending to show how the government spends millions to spread hog and other stock-feeding knowledge while almost ignoring the phases which would create well-fed humans.

"Dr. Kloss pointed out that he was merely in this country revealing something which for centuries had been common knowledge throughout the Orient... He quoted Dr. S. [sic, A.] Horvath of the Rockefeller institute as one of the world's leading authorities who said: 'The Chinese nation exists today because of the use of the soy bean as a food.'"

A sidebar at the lower left of the article shows another portrait photo of Dr. Kloss and announces: "By the request of thousands who heard Dr. Kloss speak in Bayfront Park, he has consented to give further instructions in the preparation of the wonderful Soy Bean Products.

"He will give two food demonstrations in the Miami School of Applied Arts, 406 N.E. 2nd Ave., Monday afternoon at 2:30 and Monday evening at 8, April 9.

"Dr. Kloss makes more delicious table foods from soy bean than any one else known. The soy bean is a complete food, and is highly alkaline. Following is a partial list of the foods he makes:

"Soy bean milk, soy bean buttermilk, cottage cheese, ice cream, bread, buns, pies, cake, cookies, roast, coffee, pancakes, butter [probably soynut butter], mayonnaise, broth. These foods do not contain any cane sugar or other harmful ingredients. They are most economical, simple to prepare, and very healthful and inexpensive. The use of the articles would mean a great saving of money, and preserving of health. They must be seen and tasted to be appreciated."

Note 1. This is the earliest document seen (March 2000) that mentions soy mayonnaise.

Note 2. This is the earliest document seen (Oct. 2013) that mentions a "cream cheese" or "yellow cheese" made from soy beans (one of two documents).

Note 3. This is the earliest document seen (March 2007) that mentions Jethro Kloss' work with soy bean ice cream.

Note 4. As of Nov. 1990 the *Miami Daily News* no longer exists. Its name was changed to the *Miami News*, it was owned by Cox, and it went out of business in about 1988. Back issues would probably be available at the Univ. of Miami.

Note 5. This is the second earliest document seen (March 2007) that uses the word "miracles" (or "miracle" or "miraculous") in connection with soy beans.

Note 6. This is the earliest document seen (Oct. 2013) that mentions a non-dairy cottage cheese–made from soy beans. Address: Florida.

670. Come and see: The wonders of the 20th century (Poster). 1934. Dr. Jethro Kloss, 500-44th St., N.W., Miami, Florida. 1 p.
• ***Summary:*** By special request Dr. [Jethro] Kloss is giving two more free lectures and food demonstrations at the Miami

School of Applied Arts, 406 N.E. 2d Avenue, Monday, April 9, in the afternoon and evening. Following is a list of food Dr. Kloss prepares from the soybean. They do not contain any cane sugar, white flour, or other harmful ingredients: Soy bean milk, bread, buns, pies, cakes, roast, buttermilk, ice cream, jelly, sauce, cream cheese, cottage cheese, yellow cheese, coffee, pancakes, broth, mashed potatoes, mayonnaise, butter.

"Learn to make this alkaline milk from soybeans, it taste's [sic] better than other milks, and has a better analysis than cow's milk, or goat's milk. Dr. Kloss will show a table of comparative analysis prepared for him by Dr. LeClerc, Senior Chemist of the Government. This milk can be made in any home, and costs less than 2 cents per quart... Dr. Kloss' ice cream made from the soybean milk is as delicious as any on the market, and very inexpensive and healthy. Learn to make these products in your own kitchens."

Note: This is the earliest document seen (Oct. 2013) that mentions a "cream cheese" made from soybeans (one of two documents). This cream cheese was developed by Jethro Kloss. Address: 500 44th St., N.W., Miami, Florida. Phone: Edgewater 1128-J.

671. Loma Linda Food Co. 1934. The way to health. Loma Linda Foods. Carefully consider your diet (Ad). *Health* (*Mountain View, California*) 1(1):33. April.
• ***Summary:*** Ad for Breakfast Cup [non-soy coffee substitute], Fruit Cereal, Flaxseed Wafers, Soy Wafers, Lima Bean Wafers, Fruit Crackers, Proteena, Nuteena, Smotone, and Smoteen (These four do not contain meat, but can be used like meat), Soy Beans with Proteena and Tomato Sauce. These foods can be used to "build a nonstimulating diet."

Note: This is the earliest document seen (Oct. 2004) concerning the work of Loma Linda Food Co. with soyfood products. Address: Loma Linda, California.

672. **Product Name:** Loma Linda Breakfast Cup (Coffee Substitute).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1934 April.
New Product–Documentation: Ad in Health (Mountain View, CA). 1934. April. 1(1):33. "The Way to Health. Loma Linda Foods. Carefully Consider Your Diet." A photo shows a can of "Breakfast Cup." The front panel of the label states: "Contains no coffee." Also in June 1934. p. 33. "Health Diet for Hot Weather."

Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 52. "Loma Linda Foods: Breakfast Cup. $0.25." Note: This product is not listed under "Soy Products."

The Loma Linda line: 35 selected recipes (booklet). 1944? Page 14. "Breakfast Cup: A delightful drink for all the family–children included. The base is soy beans which are skillfully blended with grain, and figs. Has a distinctive flavor. Is made and served like coffee. It is a 'different,' unique alkaline beverage."

Soybean Blue Book. 1949. p. 98. Address is Loma Linda Food Co., Arlington, California. Also listed in 1970 Blue Book.

673. **Product Name:** Loma Linda Smoteen, and Smotone.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1934 April.
New Product–Documentation: Ad in Health (Mountain View, California). 1934. April. 1(1):33. "The Way to Health. Loma Linda Foods. Carefully Consider Your Diet." The text reads: "Build a nonstimulating diet... Proteena and Nuteena, Smotone and Smoteen–to be used like meat."

674. **Product Name:** Loma Linda Soy Wafers (Also called Soy Bean Wafers). Renamed Soy Weet Wafers by 1940.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1934 April.
Ingredients: Incl. soy flour, wheat flour, all-vegetable shortening.
New Product–Documentation: Ad in Health (Mountain View, California). 1934. April. p. 33. "The Way to Health. Loma Linda Foods. Carefully Consider Your Diet." Loma Linda crackers contain no soda, no baking powder, and no lard.

House of Better Living Catalog. 1936. March. p. 8. Retail for $0.35/lb bulk. House of Better Living Catalog. 1938. March. p. 13. 10 oz pkg. for $0.20.

Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 52. "Loma Linda Foods–Soy Products: Soy Weet Wafers. $0.20."

no lard), Proteena, Nuteena, Smotone, Smoteen (these 4 canned products to be used like meat), Syl-Dex (a ten-minute breakfast food).

Note: It is not clear, which, if any, of these foods contain soya. Address: Loma Linda Food Co., Loma Linda, California.

683. Van Gundy, Dorothea. 1934. Soy beans: The new thing in foods. *Health* (*Mountain View, California*) 1(3):13, 30. June. [3 ref]

• ***Summary:*** Just below the subtitle is written: "Soy beans are going to revolutionize humanity"–Dr. A.A. Horvath. This article discusses: Nutritional value of soybeans, soybeans as a source of "complete protein" (which, when taken alone, will furnish all the essential elements for proper nutrition in sufficient quantities so there will be no impairment in growth or maintenance), soybeans for those who are seeking wholesome vegetable proteins to substitute for animal proteins, soy-bean flour (all cereals yield an acid ash, but soy flour is high in alkaline ash), whole soy beans (baked or pressure cooked), soy milk, and soy cheese or soy curd ("The Oriental people call it *tofu,* and make great use of it in their diets").

Soy beans "may be brought into the diet in almost any of the courses from soup to nuts, even entering the dessert course, for pumpkin pie made from soy milk with a crust made from soy flour is most delicious. Soy cookies are very nutritious as well as tasty.

"This unique food of the Orient is fast becoming Westernized, for all who study foods and nutrition are recognizing the value of the soy bean. Its high percentage of complete protein, its low starch content, its high alkaline ash, its valuable mineral and vitamin content, and its great versatility predestine this food to become an important and valuable addition to the American bill of fare." Address: Dietitian, California.

684. *Arkansas Gazette* (*Little Rock*). 1934. Soybean experts in national meet: Delegates from every producing area in U.S. at opening session. Value as food shown. Convention will adjourn to Stuttgart today and will conclude Saturday at Marianna. Aug. 23. p. 1, cols. 3-5.

• ***Summary:*** "Representatives from every section of the soybean producing area of the United States attended the opening session of the 1934 meeting of the American Soybean Association at the Hotel Marion last night."

"Special interest in the soybean as human food is being shown at this time because of the shortage of grain crops, Dr. P.A. Webber of the Nashville Agricultural Normal Institute at Madison, Tennessee, secretary-treasurer of the association, said before last night's meeting.

"He had several samples of products from the soybean, such as meat substitutes, crackers and flour. Dr. Webber said the production of soybeans is his hobby. He spent several years in Japan doing educational work and at this time studied the production of soybeans."

"Walter Godchaux of New Orleans, La. [Louisiana], vice president of Godchaux Sugars Inc., said he has been using soybeans on his sugar plantations for the past 10 years for a cover crop and for fertilization purposes. Mr. Godchaux has approximately 15,000 acres planted in sugar. Last year, he said he purchased approximately 3,000 bushels of soybeans."

"Chikayoshi Nagakura of Tokio, Japan, representative of the South Manchuria Railway Co. in New York city, attended last night's meeting to obtain information on the production of the American soybean. He said that practically the entire tonnage of his railway in Manchuria consisted of soybeans."

"Lunch will be served at Stuttgart. Speakers there will include: Jacob Hartz of Stuttgart and Dr. J.E. LeClerc Sr., chemist of the Bureau of Soils and Chemistry of the Department of Agriculture, Washington, D.C."

Photos show: Walter Godchaux and Chikayoshi Nakagura.

685. *Arkansas Democrat* (*Little Rock*). 1934. Soybean uses practically unlimited: Bright future for growers predicted by Association heads. Aug. 24. p. 22, col. 2.

• ***Summary:*** "Stuttgart, Aug. 24.–(Special.)–Closing what one member said 'has been one of our most interesting and instructive meetings,' the American Soybean Association completed its research work in the grand Prairie area this morning with the inspection of two more farms and headed toward Marianna, where it will adjourn tonight after a program at the cotton branch experiment station.

"Members of the association, gathered from many states, were enthusiastic over prospects for further growth of 'the young giant, the soybean,' whose recognition by Americans as one of the most valuable food products in the world, they say, is on its way.

"They listened eagerly yesterday to the prediction by Dr. J.E. LeClerc, chemist of the United States Department of Agriculture, that soya flour some day may be used universally in bread as a valuable adjunct to wheat."

"Other possible soybean uses, said Dr. P.A. Webber of Nashville, Tennessee, secretary-treasurer of the association, are practically unlimited in number."

Jacob Hartz of Stuttgart said in an address that Grand Prairie now grows 35,000 of the 90,000 acres of soybeans grown in Arkansas.

686. Kellogg, John Harvey. 1934. Method of making acidophilus milk [from soybean milk]. *U.S. Patent* 1,982,994. Dec. 4. 2 p. Application filed 14 June 1933. [1 ref]

• ***Summary:*** An "acidophilus milk" or "buttermilk" type product was prepared by inoculating sterilized soybean milk with *Bacillus acidophilus* and culturing the milk at

© Copyright Soyinfo Center 2014

about 100ºF. About 2% lactose may be added to the milk. The "culture count in soy acidophilus milk far exceeds the count in cow acidophilus milk. Old cultures are rejuvenated immediately. The organism is thicker and grouped in longer strings. Persons who are sensitized against cow's milk may employ soy acidophilus milk without experiencing allergic symptoms. In cases of acute colitis, especially in children, when cow's milk must be avoided, soy acidophilus milk is of special service. Likewise in cases of extreme toxemia, when all animal proteins are harmful to the patient, soy acidophilus milk may be used as a source of protein." Address: Battle Creek, Michigan.

687. *Good Health* (*Battle Creek, Michigan*). 1934. The quintuplets. 69(12):19. Dec.
• ***Summary:*** Dr. A.R. Dafoe is generously caring for these five infant girls in one of Canada's frontier provinces. When the babies were recently attacked by bowel troubles, they were quickly fed "a potent culture of B. Acidophilus, the protective germ that Nature supplies to every nursing infant mammal..."

688. **Product Name:** Soya Bean Flour.
Manufacturer's Name: Great Valley Mills.
Manufacturer's Address: Paoli, Pennsylvania.
Date of Introduction: 1934 December.

695. Battle Creek Food Co. 1934. Healthful living. Battle Creek, Michigan. 64 p.
• ***Summary:*** The top one-third of the front cover contains a photo of the Battle Creek Sanitarium, with the tall twin towers. The bottom third is a table of contents.

The section titled "Nut butters" (p. 13) contains a description of the company's products with a photo of a jar of peanut butter; in the middle of the label is written "The Original." "Peanut butter–We were the originators of peanut butter, which we first made for the Battle Creek Sanitarium in 1892. We at first roasted the nuts, but found that roasting destroyed some of the fine qualities and rendered the product hard to digest. After much experimenting, we discovered a new process whereby a far more delicious and entirely wholesome product could be made without roasting. The roasted nut butter is difficult for some people to digest.

"Our peanut butter is prepared from choicest nuts. A most excellent fattening food. Capital for use in sandwiches and salads.

"Almond butter–Prepared by our own process from the finest quality of sweet almonds. Thoroughly cooked and emulsified, it dissolves readily in water, and until opened will keep indefinitely in any climate.

"Almond butter may be prepared for table use by mixing with an equal amount of water and adding salt. This makes delightful sandwiches. Mixed with equal parts of lemon juice and salt to taste, you have a sour salad dressing. Makes delicious nut cream and nut milk."

The price list (p. 64) gives the prices for 132 foods–including various sizes. Among these are Agar (flaked), Almond butter (8 oz jar, $1.35), Bran biscuit, Bran–cooked, Bromose–Nut, Dietetic bran (starchless), Gluten bread in tin, Gluten biscuit–40%, Gluten flour (5 lb sack), Granola, Meltose, Kaffir tea, Malted nuts, Meltose sugar (malt sugar), Nuttolene, Nuttose, olive oil, Peanut butter (8 oz jar, $0.40), Protose vegetable meat, Savita, Soy beans baked (11 oz tin, $0.18), Soy bean biscuit (package, $0.60), Soy flour (14 oz tin, $0.35; 5 lb tin, $1.25), Soy gluten bread ($0.35), Vegetable gelatin, Whole wheat flour (100%, 5 lbs, $0.55), Whole wheat wafers, Yogurt tablets, Zwieback. Address: Battle Creek, Michigan.

696. Battle Creek Food Co. 1934? Battle Creek special purpose foods. Battle Creek. Michigan. 2 panels each side. One panel 9 x 10.5 cm. The other: 9 x 16.5 cm. Undated.
• ***Summary:*** See next page. Front panels: (1) "You are invited to attend a special demonstration of Battle Creek Special Purpose Foods, conducted by Miss Minnie Duffy, Oct. 12 to Oct. 17 at Park Grocery Co., 18-20 North Diamond, Mansfield, Ohio." (2) Small photos show: (a) Battle Creek Sanitarium. (b) Miami Battle Creek Sanitarium [Florida].

Inside panel: "The story of Battle Creek special purpose foods: Half a century ago, a doctor [John H. Kellogg] became interested in the treatment of disease by foods. He first experimented upon himself and then animals and only after that were the foods given to his patients. His discoveries were so astounding that his books on diet soon became best sellers, often running into hundreds of thousands.

"He organized the Battle Creek Sanitarium where he put into practice his knowledge of diet to cure disease. He has been eminently successful as director of The Battle Creek Sanitarium ever since its founding. He lately opened another sanitarium which is proving very successful (The Miami-Battle Creek).

"The foods he invented were so successful that they became the foundation of the Battle Creek Food industries. Scores of imitators have appeared but The Battle Creek Food Company still holds its place as the pioneer in the discovery and invention of foods for health.

"Every product of The Battle Creek Food Company has been made first for use in the Battle Creek Sanitarium. Each one is validated by clinical test before being offered to the public.

"Battle Creek Special Purpose Foods because of their superiority and scientific background have become known all over the civilized world.

"Whether you wish to gain or lose weight, combat faulty elimination, follow a low starch diet, or just to round out your regular diet you will find among these foods just what

You Are Invited to Attend a Special Demonstration of

BATTLE CREEK SPECIAL PURPOSE FOODS

Conducted by

Miss Minnie Duffy Oct. 12 to Oct. 17

at

PARK GROCERY CO.

18-20 North Diamond Mansfield, Ohio

THE BATTLE CREEK SANITARIUM

MIAMI BATTLE CREEK SANITARIUM

The Story of Battle Creek Special Purpose Foods

HALF a century ago, a doctor became interested in the treatment of disease by foods. He first experimented upon himself and then animals and only after that were the foods given to his patients. His discoveries were so astounding that his books on diet soon became best sellers, often running into hundreds of thousands.

He organized the Battle Creek Sanitarium where he put into practice his knowledge of diet to cure disease. He has been eminently successful as director of The Battle Creek Sanitarium ever since its founding. He lately opened another sanitarium which is proving very successful (The Miami-Battle Creek).

The foods he invented were so successful that they became the foundation of the Battle Creek Food industries. Scores of imitators have appeared but The Battle Creek Food Company still holds its place as the pioneer in the discovery and invention of foods for health.

Every product of The Battle Creek Food Company has been made first for use in the Battle Creek Sanitarium. Each one is validated by clinical test before being offered to the public.

Battle Creek Special Purpose Foods because of their superiority and scientific background have become known all over the civilized world.

Whether you wish to gain or lose weight, combat faulty elimination, follow a low starch diet, or just to round out your regular diet you will find among these foods just what you need.

Ask for a copy of "How to Eat to Build and Maintain Health," the 64-page Battle Creek Diet System book.

you need.

"Ask for a copy of 'How to Eat to Build and Maintain Health,' the 64-page Battle Creek Diet System book."

Rear panels: (1) "There are Battle Creek special purpose foods for every dietetic need." A small photo shows the Battle Creek Food Co. (2) For the reducing diet: Gluten bread in tin. Soy products. Canned fruits (unsweetened). Gluten flour. Savita. Bran biscuit. For the laxative diet: Lacto-Dextrin. LD-Lax or Kaba, Paramels, Paralax with Agar, Bran Biscuit, Fig-Bran. For the weight gaining diet: Malted nuts. Lacto dextrin. Food ferrin. "Zo." Meltose. Ripe olives. For the low starch diet: Gluten flour. Savita. Soy bean biscuit. Gluten bread in tin. Canned fruits (unsweetened). Food ferrin (unsweetened). Address: Battle Creek. Michigan.

697. Madison Health Foods. 1934? Vegetable milk and cheese. How they are served. Manual No. 2. Madison, Tennessee. 21 p. Undated. 22 cm.

• ***Summary:*** Contents: Introduction. Composition of the soybean. Soybean–A food for infants. Salads: How to make a perfect salad (20 recipes, including 11 with soy cheese [tofu] and 7 with grated soy cheese): Tomato, pineapple, cheese salad (with grated soy cheese). Jellied soy salad (with grated soy cheese). Waldorf cheese salad (with grated soy cheese). Raisin and soy cheese salad (with grated soy cheese). Almond and soy salad (with grated soy cheese). Sliced fruit and cheese salad (with soy cheese). Soy peach salad (with grated soy cheese). Tomato and soy salad (with soy cheese). Baked apple with soy sauce (with grated soy cheese). Pineapple and cheese salad (with grated soy cheese). Apple, carrot and soy salad (with grated soy cheese). Soybean salad (with whole soybeans). Soybean sprout salad (with soybeans sprouted until the sprouts are about 2 inches long). Cold sliced curd (with thin-sliced soy cheese). Potato soy salad (with grated soy cheese). Stuffed egg with soy cheese. Vegetable soy salad (with grated soy cheese). Cheese, cantaloupe, and tomato salad (with grated soy cheese). Mock chicken salad (with grated soy cheese). Pea soy salad (with grated soy cheese).

Sandwiches (9 recipes, incl. 5 with soy cheese and 4 with grated soy cheese; one recipe uses Vegex). Cooked vegetable dishes with soy cheese (40 recipes, all use soy cheese except 2 which use soybean puree). Other soy dishes (3 recipes). Desserts (1 recipe for Soy cream custard, with soy milk). Diabetic foods (4 recipes, each using soy meal [flour]). Soups (5 recipes, using soybeans, grated soy cheese, and soy milk or soybean milk). Breakfast dishes (4 recipes, using canned soybeans, soy meal, or grated soy cheese).

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "grated soy cheese" to refer to grated tofu.

On the last page (inside rear cover) are listed "Products for sale by Madison Health Foods Inc. (Madison, Tennessee): Soy cheese, 14 or 30 oz. Soy beans, 14 or 30 oz. Soy milk, 14 or 30 oz. Soy meal, 5 or 10 lb. Also many other health products. Write for information and prices."

Two photos on the cover show: (1) Students at work inside the Madison food factory, with two long tables and a retort cooker. (2) Various food products made by the company.

Note 2. Although this booklet is undated, the two photos on the cover appear in the *Madison Survey* issue of 14 March 1934 (p. 31). Address: Madison, Tennessee.

697a. **Product Name:** Soy Milk Ice Cream [Vanilla, Avocado-Orange, Almond, Carrot Juice]..
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Ontario, California.
Date of Introduction: 1934..
Ingredients: Based on soymilk.
New Product–Documentation: In about 1931-32 Adventist T.A. Van Gundy, who ran a soy dairy in Ontario, California,

© Copyright Soyinfo Center 2014

just east of Los Angeles, began to use the soymilk produced in his commercial plant to make soymilk ice cream for his family; it was served in their home. In about 1933-34 Mrs. Van Gundy and her son displayed and sold this non-dairy frozen dessert at a big household fair and food show in Los Angeles. They served four flavors: vanilla, avocado, carrot juice, and carob (Charlotte Van Gundy 1983, personal communication). Mr. Van Gundy hoped to commercialize his soymilk ice creams, but his untimely death in 1935 (from overwork) prevented this. In 1936 Dorothea Van Gundy, T.A.'s daughter, was the first to use the term "Soy Ice Cream." She published the first recipes for homemade soymilk ice cream in La Sierra Recipes; flavors included vanilla, avocado-orange, and almond, plus strawberry and raspberry sherbets. The first two recipes called for equal parts "soy milk" and "soy cream." Soy cream was made by homogenizing 1 part soymilk with 1 part soy oil, then flavoring the mixture with vanilla, sugar, and a pinch of salt.

698. *Argus* (*The*) (*Melbourne, Victoria, Australia*). 1935. Adventists in camp: Rise early, dine cheaply. Jan. 18. p. 11.
• ***Summary:*** "Seventh Day Adventists in camp at West Preston are early astir. The rising bell is run at 6 a.m."

"Meals are cheap. Foods are obtainable at 1*d.* and 2*d.* a portion and a good dinner may be purchased for 9*d.* There is no meat and no tea in the diet. A typical menu is as follows– Savoury soup, macaroni, and nut meat, potato pie roast and mashed potatoes, cabbage, parsnips, and parsley sauce, beetroot, soja beans, steamed bread pudding, and creamed rice."

699. Horvath, A.A. 1935. Acceptance of soya flour depends on correct processing. *Food Industries* 7(1):15-16. Jan.
• ***Summary:*** The first objective of processing soybeans is to inactivate the enzymes, such as lipases, oxidases, and peroxidases, which may destroy vitamins A and D, and also liberate free fatty acids from the oil and oxidize them to nonaldehyde and dihydroxyacetone. Rapid inactivation at an appropriate temperature is recommended.

The second objective of processing soybeans in making edible soy flour is removal of the objectionable beany taste. One substance thought to cause this taste was isolated in 1927 and its formula established as a methyl-*n*-nonyl ketone, which seems to be located in the outer layers of the soybean's cotyledons.

A photo on the first page shows six commercial products containing soy flour (left to right): (1) Soy Biscuit [The Battle Creek Food Co.] "A low carbohydrate bread. Practically free from starch." (2) Mrs. Hauser's "Soy" Macaroni (each of her products in a cellophane bag). (3) Great Valley Mills Soya Bean Flour (in a box), Paoli, Pennsylvania. (4) Mrs. Hauser's "Soy" Egg Noodles. (5) Mrs. Hauser's "Soy" Foratina. (6) U.D. Vita-full. In a sealed can. "A delicious food beverage for everyone, everyday." Address: Agric. Exp. Station, Newark, Delaware.

700. Stegman, Henry M. 1935. Benefits from acidophilus milk. *Good Health* (*Battle Creek, Michigan*) 70(1):22. Jan. [1 ref]
• ***Summary:*** A recent 18-month study on 126 subjects, conducted at Cornell University [New York], showed clear benefits from the consumption of acidophilus culture. The number of acidophilus bacteria in the feces rose dramatically. "The number of streptococci and of sporulating bacteria and other putrefactive and disease-producing germs in the intestines was greatly decreased." Of the 66 constipated persons in the study, about two-thirds (44) were benefited by the acidophilus therapy and a majority of the others reported themselves much improved in physical condition.

A recent discovery has shown that soybean milk is an improved culture medium for the acidophilus. "This soy acidophilus milk has been prepared and used at the Battle Creek Sanitarium and the Miami-Battle Creek institution, and elsewhere for nearly two years [i.e. since early 1933], and has shown itself to be greatly superior to other cultures.

"This culture also has the advantage that it is more easily digestible than cow's milk and can be taken freely by persons who are unable to use cow's milk on account of sensitivity, or allergy."

701. *Good Health* (*Battle Creek, Michigan*). 1935. The quintuplets are thriving on a biologic diet. 70(3):83. March.
• ***Summary:*** "Dr. Dafoe, the highly intelligent physician who has charge of the famous Canadian quintuplets, is, fortunately for the babies and for science, a wide-awake medical man and is giving them the benefit of every resource of modern medical science which will promote their survival. The fact that they are alive today is probably due to Dr. Dafoe's sagacious recognition of the fact that because the babies were bottle-fed instead of being breast-fed, as babies normally are, they were not being properly inoculated with the protective bacteria with which babies are naturally inoculated in the act of nursing.

"This was doubtless the cause of the attack of bowel trouble which occurred last summer in one of the babies, and which if it had not been checked, would probably have involved them all, and very likely sent them to the cemetery; but Dr. Dafoe recognized the situation and at once secured [from Dr. Kellogg] for the little ones a supply of protective acidophilus germs produced by artificial culture.

"Very soon after the babies began taking the cultures (soy acidophilus milk), the bowel trouble disappeared and they have since continued to thrive.

"The mortality of bottle-fed babies is ten times that of breast-fed, and the chief cause of death is bowel troubles, the result of the growth in the intestine of disease-producing germs which are normally driven out by the protective germs provided by the mother. Many thousands of babies die every

© Copyright Soyinfo Center 2014

year because their nurses or physicians lack the knowledge or the sagacity of Dr. Dafoe, whose name will be known to all future generations of mankind as the physician of the first quintuplets who survived for more than a few hours."

Note: This is the earliest document seen (Sept. 2012) concerning the Dionne quintuplets and soy. They were born on 28 May 1934. Dr. Roy A. Dafoe was the attending physician.

702. Dittes, Frances Linda. 1935. Food for life: The art and science of preparing food. Madison, Tennessee: Associated Lecturers, Inc. xii + 332 p. Spring. Recipe index. 23 cm.
• ***Summary:*** This early Seventh-day Adventist vegetarian cookbook contains more soyfoods recipes that any published up to this time. The author, a soyfoods pioneer born in 1891, first attended Madison College in 1910 and joined the faculty in 1912. She did her graduate work in nutrition, specializing in soyfoods nutrition, at George Peabody College for Teachers (in Nashville, Tennessee), from which she received her MA degree in 1929. This book was printed by the "Rural School Press" (Madison College's school press) and published in the spring of 1935.

Contents: Part I: Food and nutrition. Milk. The acid-base balance. Fruit acids. Balancing the food. Measuring food values. Menu planning. The art and science of food preparation (preceded by this quotation: "Food will be the medicine of the future"–Harvey W. Wiley). Food combinations. Condiments. Suggestions for flavoring. Garnishings. Measurements. Part II: Recipes (listed by recipe type such as breads {some recipes call for Crisco shortening}, soups, salads, desserts, etc.). One chapter titled "Dishes to take the place of flesh foods" (p. 149-65) contains many interesting recipes such as: Preparation of gluten. Gluten pot pie. Gluten loaf. Glutose (with 5 cups ground cooked gluten, plus potatoes, eggs, and cream). Cold sliced Nut Meat or Vigorost (Nut Meat is sold in 2-lb cans, Vigorost in 14 oz cans). Peanut roast. Chow mein (with soy cheese or Nut Meat). Boiled peanuts. Soy-related recipes are given below. Another chapter is "Nutritive value of the soy bean. Soy bean dishes" (p. 166-86).

Appendixes: A. Classification of carbohydrates. B. Canning. C. Sample menus. D. 100 calorie portions of foods. E. Approximate servings and values of a few common foodstuffs. F. Protein, calcium, phosphorus, and iron in 100 calories of food material. G. Ash constituents of foods in percentage of edible portion.

The author uses the term "soy cheese" to refer to tofu. Soy-related recipes include: Soy bread (20% soy flour and 80% white wheat flour; p. 96). Soy gems (18-20 muffins using soy flour; p. 108). Tomato-soy sandwich (with grated soy cheese; p. 114). Soy noodle soup (with grated soy cheese browned in butter; p. 122). Jellied soy salad (with grated soy cheese; p. 138). Potato soy salad (with grated soy cheese; p. 138). Tomato and soy salad (with soy cheese). Waldorf soy cheese salad (with grated soy cheese; p. 139). Lentil-soy loaf (with soy bean puree; p. 157). Savory soy loaf (with soy cheese). Soy souffle (with grated soy cheese browned in butter; p. 159). To fu chi (deep-fried soy cheese stuffed with rice and seasoned with soy sauce). Soy gravy (with 3 parts soy flour and 2 parts white wheat flour).

The chapter titled "Nutritive Value of the Soy Bean" (p. 167-86) discusses the general nutritional composition, then gives details on protein, fats (including lecithin), minerals (including tofu made with magnesium chloride or calcium sulphate). Recipes are given for: Cooked soy beans. Soy milk (after soaking 1 lb of Mammoth variety soy beans overnight in water, "Wash several times in hot water to remove undesirable taste."). Soy milk no. 2. Soy acidophilus milk. Soy bean cheese [tofu, curded with calcium sulphate]. Soy bean cake [okara] loaf. Browned soy cheese. Green soy beans. Escalloped green soy beans. Dried soy beans. Baked soy beans. Soy beans southern style. Roasted soy beans. Soy beans in tomato sauce. Chop suey (with soy cheese). Sauce (with soy sauce). Soy bean omelet. Lentil soy bean loaf (with soy bean puree). Soy bean loaf. Soy bean pie (with soy bean pulp). Soy bean meat.

Note 1. This is the 2nd earliest English-language document seen (June 2013) that calls for okara as an ingredient in a recipe.

Note 2. This is the earliest English-language document seen (June 2013) that uses the term "Soy bean cake" to refer to okara.

* = made with soy bean flour. Soy bean muffins*. Soy muffins*. Soy biscuits*. Soy bread*. Soy nut bread*.

Escalloped onions with soy cheese. Baked rice with soy cheese. Escalloped potatoes with soy cheese. Spaghetti and soy cheese. Stuffed pepper with soy cheese. + = with soy cheese. Left-over croquettes+. Soy croquettes+. Soy cheese with rice. Stuffed baked potato with soy cheese. Soy fritters+. Soy cutlets+. Savory soy loaf+. Spanish chop suey+. Soy souffle (with grated soy cheese browned in butter). Cream of soy soup. Soy noodle soup+. Soy soup+. # = made with soy milk. Soy cream of tomato soup#. Soy cream of pea soup#. Soy cream custard#. Jellied soy salad+. Waldorf cheese salad+. Potato soy salad+. Stuffed egg with soy cheese. Soy bean salad. Soy bean sprout salad. Soy Vegex sandwich+. Tomato-soy sandwich+. Egg and soy sandwich+. Soy and cucumber sandwich+. Celery and soy sandwich+. Banana soy sandwich+. Scrambled egg and soy cheese sandwich. Diabetic crackers (with soy meal). Diabetic pie crust (with soy meal). Diabetic soy bean mush*.

Vegetables: Soy cheese sauce (with grated soy cheese and soy sauce, p. 195). Steamed cucumbers with soy cheese (grated, p. 201). Escalloped onion with soy cheese (p. 204). Spinach with soy cheese sauce (and Vegex, p. 207).

Desserts (p. 215-36), Cakes (p. 237-53), Pies (p. 255-60), Cookies (p. 261-68), and Ice creams and sherbets (p. 269-74). Some of these sweet recipes use agar-agar, gelatin,

© Copyright Soyinfo Center 2014

Malta (malt syrup), Health Koko, and Crisco. Some desserts call for 1-2 cups sugar per 4 servings and 1 pound of sugar is used in an icing for pound cake (p. 242). No soy is used in any sweet recipes. Note: It is surprising that Ms. Dittes and Madison had not discovered the use of tofu or soy milk in ice creams, other desserts, or dressings. Nor is peanut butter mentioned.

The chapter titled "Milk" (p. 17-21) states: "Since milk is an important food constituent, especially for children, those responsible for planning dietaries should see that each child has one quart of clean milk or its equivalent each day; adults, about one pint... *Grade A* is a raw milk from cows free from disease, having a bacteria count of not more than 100,000 per cubic centimeter at the time of delivery. *Grade B* must be pasteurized and the bacteria count must not exceed 1,000,000 per cubic centimeter. It must also come from cows free from disease." All other milk is Grade C.

The chapter titled "The acid base balance" (p. 23-24) states: "Most foods when burned in the body leave an ash in addition to the carbonic acid which is thrown off by the lungs. This ash may be either alkaline, neutral, or acid in reaction. The principal base-forming (alkaline) elements are calcium, potassium, magnesium, and sodium, while the chief acid-forming elements in foods are sulfur, phosphorus, and chlorine... A neutral or slightly alkaline condition will produce a feeling of buoyancy, health, vigor, and clear mental activity... In general, all fruits and vegetables (with a few exceptions) are potent in producing alkaline ash. Meat, eggs, breads, and cereals are acid-formers."

The chapter titled "Condiments" (p. 51-52) states: "Spices, such as mustard, ginger, pepper, horseradish, curry, and cloves, are among the most irritating of the seasonings used. It would be better if these exciting substances were not added to the food... Vinegar contains acetic acid which is burned in the body with difficulty. Citric acid as found in the lemon juice is more easily oxidized in the tissues. Lemon juice, therefore, makes a good substitute for vinegar, both as to ease of oxidation and flavor." Address: Director, Food and Nutrition, Nashville Agricultural Normal Inst., Madison Rural Sanitarium and Hospital, Madison, Tennessee.

703. Curran, Howard A. 1935. Obituaries: Van Gundy, Theodore A. *Pacific Union Recorder* (*Angwin, California*). June 26. p. 6. [1 ref]

• ***Summary:*** "Van Gundy was born in Osa Flaco, San Luis Obispo Co., California, July 8, 1874. He attended Healdsburg College and later took the nurses' course. In 1898 he married Lulu Pond. To them three children were born, Theodore Romaine, Dorothea, and Charlotte. Brother Van Gundy passed away June 1, 1935. The devoted wife, three children, and other relatives and a wide circle of friends did not sorrow as those who have no hope, knowing that this dear brother was fully ready to go. The funeral services were conducted by Elder C.M. Sorenson, assisted by Elder Seat, Brother Gober and the writer."

Note: Letter (fax) from Betty Minton of La Sierra University Church. 2000. Nov. 15. Elder C.M. Sorensen was the president of La Sierra College and pastor of the church in 1935. Elder E. Toral Seat was an evangelist and was not assigned to a specific church. Her records show that Theodore Van Gundy [probably Theodore Romaine, the son of T.A. Van Gundy] transferred his membership to La Sierra University Church in 1949 from the Arlington church in Southern California; he died in 1950.

704. Lager, Mildred. 1935. Food facts. Los Angeles, California: House of Better Living. 228 + 10 p. No index. 23 cm. [34 ref]

• ***Summary:*** Contents: 1. Purpose of food. 2. Classes of food. 3. Natural foods are best. 4. Acid-alkaline balance. 5. Minerals. 6. Vitamins. 7. Proteins. 8. Carbohydrates. 9. Fats. 10. Fruits. 11. Vegetables. 12. Beverages. 13. Better cooking. 14. Food combinations. 15. The mental side of health. 16. What is the "House of Better Living."

Pages 67-68 contain a very positive section on soy beans and foods made from them, including whole soybeans, "curd cheese, resembling cottage cheese [tofu], and soy bean milk... Other soy food products are soy butter [no description is given; this is probably soynut butter from T.A. Van Gundy's La Sierra Foods, but it could be margarine made from soy oil], soy loaf (combined with gluten), soy sandwich spread, soy bologna, soy oil, soy sauce, soy ready-to-serve breakfast foods, coffee substitute, as well as soy flour. Soy flour is yellow and fluffy, and can be used in all baking... Soy macaroni, noodles, spaghetti, bread, and pancake flour are also on the market. Soy beans are also sugar coated for candy and toasted as peanuts. They are a wonderful food for animals and have been used in that way in this country for years. Today the governments of Europe and America are devoting a great deal of attention to the soy bean as human food and the next few years will see an increased consumption, as well as many new soy products."

Page 75 contains a nutritional analysis of soy beans.

In the chapter on Acid-alkaline balance (p. 22-25), foods with the most acid ash are egg yolk and oysters, followed by eggs, most fish and meats. Foods with the most alkaline ash are lima beans, string beans, dried beans, spinach, raisins, figs, dates, and dried milk, followed by soy beans, soy bean tea, and most vegetables. The author believes that one should keep an alkaline balance in the body. Sleep is a great alkalinizer.

The subsection titled "Lima beans: states: "Dr. Sansum of Santa Barbara was instrumental in having lima bean flour made, and Bill Baker of Ojai, California pioneered this field, developing the original lima bean bread and lima bean pancake flour."

This is not a vegetarian book. Meat and dairy products are discussed at length, and their consumption is not

© Copyright Soyinfo Center 2014

discouraged. However this is the earliest book seen that uses the term "natural foods" prominently–in this case as a chapter title.

Also discusses (see index for page numbers): Acidophilus milk, alfalfa (alfalfa tea has alkaline ash, p. 35), almonds, almond oil, aluminum, avocado, bran, carob beans, chufas, cottonseed, cottonseed oil, garbanzas, kephir, lentils, lima beans, linseed, margarine / oleomargarine, olive oil, olives, palm oil, palm kernel oil, peanuts, peanut oil, rape seed oil, sago, sesame oil.

Note 1. This is the earliest document seen (Sept. 2009) concerning Mildred Lager and soy.

Note 2. This is the 2nd earliest document seen (July 2005) that mentions a food or drink product ("alfalfa tea") made from alfalfa. This is also the earliest English-language document seen (July 2005) that contains the term "alfalfa tea." It was used for its alkaline ash. Address: House of Better Living, 1207 West 6th St., Los Angeles, California. Phone: Mutual 2085.

707. Kellogg, John Harvey. 1935. Re: Growing soy beans. Making condensed soy bean milk and soy acidophilus milk. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, Sept. 16. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "Thank you for your letter of September 5. I am expecting to have 75 or 80 bushels of soy bean seed of the 78-day variety. I shall be glad to know if there will be any demand for this seed and at what price.

"You may be interested to know that our company is making a condensed soy bean milk which may be used either as it comes from the can or with the addition of one or two equal volumes of water according to the degree of richness desired. If you care to have me do so, I will be glad to have sent you a sample for your criticism and also a sample of our soy acidophilus which we are using extensively and with great profit."

712. Webber, Perry A. 1935. Soybeans: The wonder food. *Health* (*Mountain View, California*) 2(9):16-17, 31. Sept. [3 ref]
• ***Summary:*** This article begins: "The soybean is a plant of early cultivation in China, and for more than four thousand years has been used largely by the Chinese and other Oriental nations as human food. It is first mentioned in the "Ben Tsao Gang Mu" [Bencao Gangmu], an ancient Chinese materia medica, written in the year 2838 B.C.

"The Occident has been under the false impression that the Oriental lives almost wholly on rice. Rice is used extensively, but if we are to correct our traditional view of the rice diet, we can amend our statement by saying that it is the soybean which is probably the most universal article in the Oriental dietary. Especially is this true of the more than six hundred million dwelling in eastern Asia. During the centuries the use of the soybean has spread from its original home in Shantung and Manchuria throughout China, Korea, Japan, the Philippines, the Dutch East Indies [Indonesia], and to a limited extent to India itself.

"The Chinese make practically no use of dairy products, and the majority of the people consume a very meager amount of meat; yet, in spite of this, they have lived for centuries on what appears to be a remarkably well-balanced diet by the use of the soybean." Address: PhD, Chief of Chemistry Dept., Nashville Agricultural Inst. [Madison College, Madison], Tennessee.

713. Stegman, Henry M. 1935. Wide usefulness of the soy bean. *Good Health* (*Battle Creek, Michigan*) 70(10):315. Oct. [1 ref]
• ***Summary:*** "The advantages of the soy bean are so manifold and manifest that its cultivation is sure to spread. In the United States the demand for it grows steadily... After twenty years of experimentation it has been acclimatized in England. Henry Ford now grows it there on his two thousand acre farm in Essex, as well as in Michigan." Many food and industrial uses of the soy bean are given.

714. Kellogg, John Harvey. 1935. Re: Growing and canning shell soy beans. Making condensed soy milk and soy acidophilus milk. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, Dec. 9. 3 p. Typed, without signature (carbon copy).
• ***Summary:*** "We have been doing some experimenting this year with growing and canning shell soy beans. I am having a couple of cans sent you so you can see what our product is like. We think it is very fine. The few thousand cans we put up went off like hot cakes.

"We are thinking of doing rather extensive planting this year. We shall not have any seed to sell but may need to buy some more seed.

"Here are some points on which I should like information: 1. Do you know of anyone in this country who is putting up shell soy beans? 2. Are shell soy beans canned in Japan and China, and if so can they be purchased there and brought to this country?..."

"I should also be glad to know if you have other

© Copyright Soyinfo Center 2014

varieties of shell beans of good quality with a growing period of about the same length.

"I am also having sent to you samples of our condensed soy milk. Diluted with two or three times its volume of water, it is, I think you will agree, a very palatable product. We supply this to people who are interested in soy acidophilus milk and willing to take the trouble to make it at home. We supply them with the culture. They simply put the condensed milk into a clean fruit jar, add hot water, let it cool to body temperature and then add the culture and wrap it up in a blanket and set it on the kitchen table and the next day the buttermilk is ready.

"Soy milk produces a much more vigorous growth of the bacillus acidophilus than does cow's milk. The organism is more than twice as large and it grows twice as fast and does not require the long training, 25 to 30 transfers, required when cow's milk is used for the culture medium. In other words, the bacillus acidophilus seems to like vegetable products for a culture medium better than animal.

"I shall be glad to know how you like the milk. If you would like to try making it at home, I will have some more cans and cultures sent to you. The process is so simple any housewife can do it. Slight contamination occurs, of course, but by using a large inoculum this does not matter for the first culture; but a fresh pure culture has to be used every time. If an attempt is made to make a culture from a home made culture it will be likely to fail because of the contamination likely to occur.

"Thanking you in advance for any information you may be able to give me, I remain, dear Sir, Very sincerely yours,

"P.S. Soy acidophilus milk has become so popular at my institution here that dairy milk rarely appears on the table. Everybody likes the soy milk better, and of course when people have been properly informed they want the soy acidophilus milk to change their flora and to get rid of intestinal putrefaction and to encourage bowel action. The effect of the soy acidophilus milk in this particular is very remarkable. In cases of very chronic constipation I have observed complete recovery with two or three normal bowel actions daily.

"The Canadian quintuplets are taking soy acidophilus milk at every feeding and have been doing so since last September when they had an attack of bowel trouble which disappeared as soon as they began taking the soy acidophilus milk which I sent them and have supplied to them ever since.

"I am accumulating evidence to the effect that the soy bean encourages the growth of the protective organisms in the human intestine to a very pronounced degree and by producing acids not only prevents putrefaction but encourages bowel action.

"I think every effort possible ought to be made to spread information among the people respecting the value of the soy bean, which I am sure is some time destined to become one of the most important staple foods in this country as well as in China and Japan.

"Here is another question: One of the difficulties in the way of the soy shell bean business is the expense of picking from the vines and shelling the pods. Do you know of any machinery that is used for either of these purposes?"

Note 1. This is the earliest English-language document seen (June 2009) that uses the term "shell soy beans" to refer to shelled green vegetable soybeans.

Note 2. This is the earliest document seen (June 2009) that mentions machinery or equipment for picking / harvesting or shelling green soybeans in the pods. However it only asks a question about this machinery.

Source: Bentley Historical Library, University of Michigan, Ann Arbor. J.H. Kellogg Collection, Box 2, Correspondence.

715. **Product Name:** Granose Rissol-nut: Savoury Nut Mix.
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1935.
Ingredients: Cashew nuts, wholewheat flake, wheatmeal flour, rusk, onion, soya nuts, salt, herbs, spices.
How Stored: Shelf stable.
New Product–Documentation: *The British Vegetarian.* 1960. Sept/Oct. p. 249. Granose produces Rissol-Nut in packets, and this can be quickly made up into savouries, roasts, and pasties.

Manufacturer's catalog. 1980. April. "A ground mixture which with the addition of water is ready for making into all types of rissoles, grills, roasts, and pasties."

Note: Pasty (plural = pasties) is a British term (pronounced like the word *nasty*) that refers to a small meat pie or turnover. The term, first used in the 14th century, is derived from the word *paste* meaning dough.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1935. But a note says "Not Applicable." This product does not contain any soy products and is still on the market. The ingredients are now peanuts, rusk, Wholewheat (wheat, sugar, salt, malt), wheat flour, salt, onions, herbs, spices. Label sent by Granose. 1990. July 11. Red, yellow, black, and white box. Soynuts are no longer an ingredient.

Note: This is the earliest known commercial soy product made by Granose Foods Ltd., which is presently (Dec. 2013) owned by the Haldane Foods Group Ltd.

716. Bragg, Paul C. 1935. Paul C. Bragg's personal health food cook book and menus. Burbank, California: Published by the author. Printed by Aetna Printing Co., Los Angeles. 201 p. No index. 24 cm.
• ***Summary:*** The Introduction to Chapter 22, titled "Meat substitutes or main dishes" states (p. 112): "Variety is the spice of life... Many people can live a vigorous, active,

© Copyright Soyinfo Center 2014

healthful life on a strictly vegetable diet, particularly those who are not engaged in a hard mental occupation. Even then, vegetable proteins, such as soy beans and nuts, can be substituted for meat. To take the place of meat there are the vegetables rich in protein–peas, soy beans, lima beans, kidney beans, Mexican beans, and lentils, and there are on the market many meat substitutes made of nuts and grains. The Battle Creek Sanitarium [Michigan] product, 'Protose,' is available at most fancy grocers and health-food stores. 'Savita' is a seasoning which gives a delicious meat-like flavor to all vegetable cooking. 'Vegex' is a product similar to 'Savita,'...

"The vegetable diet is a very alkaline diet, and should be used three or four times a week by everyone. Vegetable foods are porous, furnish bulkage to the intestines, and enrich the body with valuable organic minerals that are very necessary to maintaining perfect health.

"Soy beans are a marvelous source of vegetable protein, and should be fed to the family several times a week, and they furnish a rich source of energy-building food. They can be soaked over night, and then baked in tomato sauce, with a small amount of onion and chopped mushrooms. The soy bean is a food that the American public has not yet cultivated." Surprisingly, neither this chapter nor this books contains any soy bean recipes! However Vegetable shop suey (p. 116) is served with Savita Gravy or Soy sauce.

Bragg urges his readers to eat "real, natural, live food" (including whole wheat bread–the staff of life) to eat simply with a small number of foods at each meal, only when hungry. Do not worry about combining foods. Avoid white sugar, coffee and tea, salt, seasonings and spices, aluminum cooking ware, alcohol, preservatives, dyes, and white flour. He believes that eating meat (rare and unfried), fish, and eggs are important for building perfect health. Note 1. The 1930 edition of this book contained no recipes using meat or dairy products.

Chapter 11 acknowledges the use of recipes and suggestions from several health food writers and men in the field of Natural Living: (1) Dr. John T. and Mrs. Vera Richter, the leaders of the Raw Food movement in the West. (2) Dr. Philip M. Lovell, distinguished editor of the most widely read health column in the world, the Care of the Body section of the Los Angeles Times [Sunday Magazine. Note 2. The section contained many fascinating ads]. (3) Dr. Henry Lindlahr, the great pioneer Nature Doctor. (4) Otto Carque, chemist, research worker and crusader in the fight for natural foods. (5) Fannie Merritt Farmer's *The Boston Cooking School Cook Book.*

The last three pages each contain a full-page ad for mail-order products available from Bragg at Box 428, Burbank, California: (1) Bragg Dextronized [sic, Dextrinized] (Toasted) Meal with Wheat Germ will keep your energy high and your weight right. 60 cents for a 2 lb. box. (2) "Drink health." An illustration shows a hand-turned Live Food Juicer. Also mentions a large new book titled *Health Cocktails,* by Paul C. Bragg, "nationally famous Health Lecturer." The book "is full of live juice treats." Send $5.95 for both, postpaid to Live Food Products Co., Box 428, Burbank, California. (3) O.K. Lax is a marvelous laxative for relief of constipation and cleansing agent for internal sanitation. 50 cents for one package. Address: P.O. Box 428, Burbank, California.

717. Cooper, Lenna Frances; Hall, Margaret Allen. 1935. The new cookery. 12th ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 493 p. Illust. Index. 22 cm.
• ***Summary:*** A vegetarian cookbook. Soy-related recipes include: Soy bean muffins (p. 72, with 1 cup soy bean flour).

Gluten- and bran-related recipes include: Scotch bran brose (p. 50, with 1 cup Sterilized bran. Note: *Webster's Dictionary* defines brose {a term first used in 1515} as "a chiefly Scottish dish made with a boiling liquid and meal"). Gluten mush (p. 51, with 20% gluten meal). Granola fruit mush (p. 52). Bran and Zo mush (p. 52, with 1 cup each Sterilized Bran and Zo–a body-building, ready cooked cereal breakfast food). Branola (p. 52, with 1 cup Branola). Gluten bread (p. 65). Bran griddle cakes (p. 74). Gluten griddle cakes (p. 75). Gluten puffs (p. 87, with 40% gluten flour). Gluten bran puffs (p. 87-88; If used by diabetic patients, Diabetic Bran should be used).

Note: *Webster's Dictionary* defines Chautauqua (pronounced shuh-TAW-kwuh; a word first used in this way in 1873, after a lake in western New York) as: "an institution that flourished in the late 19th and early 20th centuries providing popular education combined with entertainment in the form of lectures, concerts, and plays often presented outdoors or in a tent." Address: 1. Food Director, Univ. of Michigan; formerly Dean of Home Economics, Battle Creek College; formerly, Head Dietitian, Battle Creek Sanitarium. Supervising Dietitian, United States Army (1918-1919); 2. Consulting Dietitian and Lecturer on Dietetics, Battle Creek Sanitarium and Chautauqua Lecturer.

718. Dittes, Frances L. 1935. The biological availability of cystine found in soybean cheese. *George Peabody College for Teachers, Abstract of Contribution to Education* No. 165. 36 p. Summary of PhD thesis, Dep. of Home Economics. [38 ref]
• ***Summary:*** Contents: 1. Introduction: Brief historical sketch of previous research on the soybean, the problem. 2. Experimental: General method, basal diet, materials used. 3. Discussion. 4. Summary and conclusions.

Contains many tables, most related to the growth of rats. Figures show (1) Average weight gain curves of rats receiving diets containing 18, 12 and 9 per cent soybean curd as the sole source of protein plus different amounts of cystine. (2) Average weight gain curves of rats receiving diets containing 18 per cent casein; 9, 12, 18, 24, and 30 per

© Copyright Soyinfo Center 2014

cent soybean curd as the sole source of protein. Address: Ph.D., Madison, Tennessee.

719. Kloss, Jethro. 1935. Back to Eden. Takoma Park, DC: Published by the author. 189 p. Mimeographed. 28 cm. Staple-bound (not saddle stitched).

• ***Summary:*** This treasury of herbal lore and vegan cookbook (it uses no dairy products or eggs, replacing them with soy products) is one of the most creative and original sources of early soyfoods recipes, and one of the two earliest Seventh-day Adventist cookbook to contain many soyfood recipes (see also Frances L. Dittes' *Food for Life* published in the spring of 1935). The predecessor to the popular published edition of Back to Eden, it has a dark imitation leather cover and contains many Biblical passages. This book has no title page, copyright page, publication date, or table of contents. The first page (verso) states: "Send orders for 'Back to Eden' to the author, Jethro Kloss, Takoma Park, Washington, D.C., U.S.A., when you cannot secure it from dealers in your locality. Special Notice: This book is now being revised. Some things may be eliminated, and many new things added. I have a regular experimenting outfit, and I am experimenting all of the time. No doubt there will be many new recipes made from soy beans in the Revised book... This Revised edition will be printed in Regular Book Form. Just as this book is being closed up, another most excellent article has been perfected, a Soybean, Whole Wheat Noodle. Send all orders for this product to The Royal Cookie Co., Takoma Park, Washington, D.C... This book is now being copyrighted. All rights reserved."

Underneath the copyright notice, Doris Gardiner has written "Copyright Jethro Kloss 1935." She does not recall where she got that information. No publisher is listed. Note: Takoma Park is now in Maryland, 6 miles north of Washington, DC.

This book is largely about herbs and natural healing. It contains many Biblical quotes.

Soy-related recipes include: Unleavened bread (with soy bean meal, p. 94). Gems (with soy bean flour). Soy bean bread (5:1 whole wheat flour to boiled soy bean meal, p. 97). Soy bean buns or cinnamon rolls (with soybean meal and soybean milk, p. 98). Soy bean cheese (fermented, with raw peanut butter, soy bean milk, and tomato puree, p. 104). Nut cheese No. 1 and 2 (made with raw peanut butter, water, and salt, p. 105. Can be made from different nuts; tastes like cream cheese made from whole milk). Ice cream (made with soy bean milk, dextro sugar, corn starch, and crushed fruits to taste, p. 105). Malted nut cream. Nut milk (with raw peanut butter and Soothe-a-lac {made with cocoa fat}). Soy bean milk (p. 106). Buttermilk (made from soy bean milk, p. 106). Malted nuts (with raw peanut meal), non-dairy butters (with ground peanuts and cocoa fat, p. 107). Nut sauce (made from Vegetarian meat). Peanut butter No. 4. Nayonnaise (with peanut butter and vegetable oil, p. 108). Canned soy beans (using soybeans sprouted about half an inch, p. 111). Soy beans and rice (using sprouted soy beans, p. 112).

How to sprout soy beans, lentils, and grains (p. 112). "Cover 1 pint of soy beans with water and let stand over night. Pour off water. Keep them moist. Rewash daily and keep moist for approximately three days until well sprouted. Allow to stand until sprouts are about ½ inch long. Lentils do not take as long as soy beans.

"Sprouting of any bean or pea turns the protein into peptogen to a very great extent and the starch into dextrose or maltose and the sprouts are very high in vitamines,..."

Original meat #1 and #2 (using gluten and peanuts, p. 112). Granola #3 (with only whole wheat flour and soy bean flour, p. 116). Soybean coffee (p. 118). Note that Kloss has no recipes using whole dry soybeans in an unprocessed or unsprouted form.

"Loma Linda Food Company, Loma Linda, California, Manufacturer of Health Foods," has an ad on p. 189. They list their products, but no soy products are mentioned. Nature's Original Food Co. in Muirkirk, Maryland, is listed on pages 196 and 198. They make or sell strictly vegetarian pure health foods, incl. "Fine grade soy bean flour."

One interesting section is titled "Aluminum utensils for cooking purposes" (p. 80-84); Kloss strongly advises against their use, presenting much convincing but anecdotal evidence describing health problems that both he and other people have had after using aluminum cooking utensils. For example, Kloss bought a tea kettle which was constantly standing on the stove with some water in it. He would drink 2-3 cups of this water each morning, then some more about an hour before dinner. He developed terrible bowel trouble. He tried all kinds of remedies but nothing worked. The conditions grew steadily worse until finally he said to his wife, "Unless something helps me, I will surely die." One day he described his condition to a man, and the man said that the symptoms were similar to those that aluminum poison would cause. He began to research the subject by reading various books and found that "every one who had any practical experience in it condemned aluminum cooking utensils." Yet Kloss does not say that when he stopped using aluminum utensils his health problems disappeared. Kloss then includes a 3-page statement by Dr. Chas. T. Betts of Toledo, Ohio, on the dangers of using aluminum cooking utensils. Dr. Betts became very ill soon after his family began using aluminum cooking utensils. He too investigated the subject in depth and regained his health within 8 weeks after he stopped using aluminum cooking utensils. He has enjoyed good health for the past 17 years. While studying the subject in Washington, DC. he found that the U.S. government had made a thorough investigation of the matter from 1920 to 1925. The Federal Trade Commission Docket 540 contained more than 4,000 pages of closely typewritten testimony from 158 witnesses during the 5 years, after which an official report was made by Edward M. Averill. "Many

© Copyright Soyinfo Center 2014

of the witnesses above mentioned were professors, deans, biologists, and toxicologists from many colleges, some of which are the highest schools of learning in America." Averill's report noted. "The evidence in this record does not prove that they are harmless... It does prove that there are substantial grounds upon which to predicate an honest opinion that they are harmful."

Doris Gardiner notes (Oct. 1990) that "in the revised 1939 edition of Back to Eden, Jethro Kloss eliminated many Biblical texts. He didn't want to turn off anyone that was not religious. He wanted to help everyone." Kloss moved to Brooke, Virginia, in 1920. From there, in the early 1930s (by Sept. 1932), he and his family moved to Takoma Park. Address: Takoma Park, DC.

720. Battle Creek Food Co. 1935? Appetizing health food recipes and menus. Battle Creek, Michigan. 25 p. Undated. Illust. 15 x 17 cm.

• ***Summary:*** On the cover of this booklet is a 3-panel illustration of a family seated at the table enjoying a meal; the daughter is in the left panel, the wife and husband (with suit and necktie) in the center, and the young son (also in suit and tie) in the right panel. The booklet promotes and shows how to use the vegetarian food products made by Battle Creek Food Co.

Contents: The story of Battle Creek Health Foods (and its free diet service). Where these recipes are triple tested (the company's modern test kitchen). Dinner menus and recipes (p. 4-7). Luncheon and tea menus and recipes (p. 8-11). Breakfast menus and recipes (p. 12-15). Reducing menus and recipes (p. 16-17). Wholesome diabetic foods (p. 18). Brawn-building menus and recipes (p. 19). A brief description of Battle Creek Health Foods (p. 20-21). Health candies (p. 22).

On almost every page of recipes is an illustration of one of the company's products in its container/package, and in a prepared dish, followed by a description of each product on p. 20-21. The only two soy-related products are "Soy Biscuits–Best bread for diabetics. Contains less than 2% starch but is rich in protein and strength-building elements. (Also furnished in the form of a meal)."

Other products are: Agar (made from Japanese seaweed). Almond butter. Bran biscuits. Cooked bran (from wheat). Bran gluten flakes (crispy toasted breakfast cereal). Branola (hot cereal). Fig and nut bromose (with malt honey). Brose (hot cereal with dates, figs or raisins, and cream). Sanitarium canned fruits and vegetables. Chocolate nut bar. Cooked whole wheat. Fig bran. Fig bran flakes. Food ferrin (supplies dietary iron from green vegetables). Fruit crackers. Gluten bread (Low in starch, shipped in air-tight cans, ready to eat. A healthful reducing food). Gluten biscuit (40%, containing less than half the starch of ordinary bread; fine for diabetic patients). Gluten flour. Graham crackers. Health chocolates. Health koko. Kaffir tea (caffeine free). Lacto dextrin. Laxa (a biscuit with bran and agar). Malted nuts (increases the flow of milk in nursing mothers). Marmalades. Meltose (a malt sugar made from grains). Minute brew (A caffeine-free cereal beverage). No-fat (for use in place of butter). Nuttolene ("A nut meat product having the consistency of cream cheese. Makes healthful croquettes, cutlets, and stews"). Oatmeal wafers. Paralax with agar. Paramels. Peanut butter (made from steamed rather than roasted peanuts to make it easier to digest). Preserved figs. Protose ("The vegetable meat–makes savory sandwiches, salads, meat pies, and roasts. Rich in iron, lime and protein for body-building"). Psylla. Ripe olives. Savita ("A vegetable [yeast] extract with a rich, meaty flavor, excellent for soups and gravies, Rich in vitamins, and wonderful for blood-building"). Sal-Savita (A vegetable seasoning with a meat-like flavor). Savita-yeast (new yeast with a rich meaty flavor). Starchless bran. Toasted rice flakes. Tomato soup. Vegetable gelatin. Vegetable soup. Vitamet (A savory vegetable meat that is rich in Vitamin B and food iron). Vita wheat (creamy hot cereal). Whole wheat cream sticks. Whole wheat flour. Whole wheat wafers. ZO ("The vitamin breakfast food, ready to eat with cream and sugar. Made from whole wheat and barley and enriched with Savita... Supplies the daily vitamins and minerals"). Zwieback.

On page 23 is an ad for a 64-page booklet titled *Healthful Living: Fundamental Facts About Foods and Feeding.* Address: Battle Creek, Michigan.

721. Battle Creek Food Co. 1935? How to make savory roasts, steaks, croquettes without meat: Protose–A vegetable meat (Leaflet). Battle Creek, Michigan. 4 panels each side. Each panel: 16 x 8½ cm. Undated.

• ***Summary:*** See next page. Printed with brown and light orange on white. Contents: A brief history of Battle Creek Sanitarium Health Foods. Protose: A substantial food around which you can build your menu (2 panels; "Here is one of the most interesting of all the Battle Creek Health Foods..."). Six recipes using Protose. About Savita with 1 recipe. Send for "Healthful Living" (60 p. book).

HOW TO MAKE SAVORY ROASTS, STEAKS, CROQUETTES WITHOUT MEAT

PROTOSE
A VEGETABLE MEAT

PROTOSE

A SUBSTANTIAL FOOD around which YOU can build Your . . . . MENU

HERE is one of the most interesting of all the Battle Creek Health Foods, and it deserves a place on every table because of its goodness. It is different from so many others in that it is a protein food serving the same purpose in the diet as meat, milk and eggs. Protein is that part of the daily food supply which contains the needed building material. It is essential for growth and replaces the tissue wear which results from one's daily work. The growing boy or girl, the laborer, and all who indulge in vigorous exercise need an extra measure of protein. With a few cans of Protose in your pantry, the protein part of the daily bill of fare is assured. It is a most delicious food with flavors which appeal to everyone, and at the same time lends itself to the preparation of a great variety of dishes.

Protose is made from the grains of choice nuts. It may be served cold just as it comes from the can but more often appears in the form of roasts, steaks, salads or a filling for sandwiches.

Protose is a substantial food containing materials needed for the heavier part of the diet. While it is easily digested and can be managed by the indoor worker of sedentary occupation, it supplies at the same time the sturdy staying qualities required by those leading a strenuous, active life.

Protose is an excellent food for those who cannot use meat.

You will enjoy the rich, meatlike flavor of Protose, and will find it a welcome addition to your regular food supply. Its convenience, wholesomeness and economy will appeal to you. It is not only a dependable source of protein but stands high in food minerals containing double the amount of iron found in meat dishes, five or six times as much lime, with appreciable amounts of vitamin B.

A BRIEF HISTORY OF BATTLE CREEK SANITARIUM HEALTH FOODS

The Battle Creek Sanitarium

BATTLE CREEK SANITARIUM Health Foods were first made in 1889 for patients at the Battle Creek Sanitarium. Such satisfactory results were obtained that soon the outside demand made it advisable to stock them in leading grocery, drug, department and health food stores.

At present there are over 100 Battle Creek Health Foods, including several groups covering almost every phase of diet—tasty vegetable meats, whole grain cereals, health confections, foods for the reducing diet and laxative diet, others for blood building, with a large assortment for diabetic and other conditions.

The Battle Creek Food Company

Here are foods of highest quality supported by recognized authority and having a background of forty years' use that has met every test.

PROTOSE LOAF

1 pound Protose
1 onion
2 eggs
Cheese — yellow
½ cup crumbs
1 tablespoon Savita dissolved in ⅓ cup hot water

Mash the Protose, stir all ingredients together, roll into loaf and place in pan. Place thin strips of yellow cheese across the top. Bake in moderate oven until brown. Serve with Savita Brown Gravy.

ROAST PROTOSE WITH BROWN POTATOES

1 pound Protose
1 quart brown gravy
12 boiled potatoes
Butter

Remove Protose from can by first removing both ends of can. Cut the Protose in half lengthwise and make eight slices of each half. Arrange in buttered pan and cover with Savita Brown Gravy. Dip boiled potatoes in melted butter and arrange around the Protose. Bake in hot oven until potatoes are nicely browned.

PROTOSE VEGETABLE SALAD

½ cup chopped carrots
1 cup chopped celery
¼ chopped green pepper
½ cup chopped Protose
Salt
Mayonnaise

Mix the chopped vegetables and add the Protose. Fold in the mayonnaise.

© Copyright Soyinfo Center 2014

confections, foods for the reducing diet and laxative diet, others for blood building, with a large assortment for diabetic and other conditions.

"Protose: A substantial food around which you can build your menu. Here is the most interesting of all the Battle Creek Health Foods.

This leaflet was apparently printed for an exposition in San Diego, California. At the bottom of the back panel is printed in large bold letters: "Vegetarian cafeteria. Battle Creek Section. California Pacific International Exposition. San Diego, USA. Palace of Foods and Beverages."

Note: This Exposition was held in 1935-36 at San Diego's Balboa Park. It opened on 29 May 1935 and closed on 9 Sept. 1936. Address: Battle Creek, Michigan.

722. **Product Name:** Vita-Elm (With Slippery Elm). Blend of Cereal and Soy Flours plus Slippery Elm had started by 1948.
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia. Phone: (03) 729-1738.
Date of Introduction: 1935?
Ingredients: 1995: Wholegrain wheat flour, barley flour, maize flour, oat flour, wheatgerm flour, wholegrain rye flour, whole soya flour (with oil and lecithin intact), and slippery elm.
Wt/Vol., Packaging, Price: Tin-plated steel can.
How Stored: Keep sealed. Store in a cool, dry, lightfree place.
New Product–Documentation: Ad in *Nature's Path to Health* (Melbourne, Australia). 1932. Oct. p. 21. "Good health by taking Vita Elm. Makes invalids strong. Children thrive on it. Invaluable to the athlete. Vita-Elm contains the germ of life of wheat, oats, barley, rye, and maize. [Note: Soy is not mentioned]. Abounding in all the valuable vitamines that give strength, energy and vitality. Delicious flavour. Nourishing. Nature's food. Obtainable at 342 St. Kilda Road, Melbourne, SC1."

Ad in Nature's Path to Health. 1935. May 1. Vita-Elm is now promoted as a "vitalizer" that can give "glorious health." Ad in Nature's Path to Health (Australia). 1937. Christmas. p. 36. "Natural health baby. Esmae Noelene Grimes. Aged four and a half months. Thrives on Vita Elm Dinner." A photo shows baby Esmae (the Roberts' granddaughter, aged 4½ months) sitting up and enjoying Vita Elm. Paul Smith notes (28 March 1995): "Esmae was reared on Vita Elm and Soy Compound and was using both at the time of the photo as her mother was experiencing difficulty in breastfeeding Esmae. As Esmae also later experienced difficulty in breastfeeding her own children, and resorted to the same two remedies... Esmae and family still purchase Vita Elm and Soy Crunch directly from us."

Ad in Nature's Path to Health. 1940. July. p. 36. "Vita-Elm builds bonny boys and girls. To avoid malnutrition and the many ills that beset children, a fully fortified food must be provided... Protect them from winter colds and deficiency disease by daily use."

Information brochure: "'Vita Elm' was originally developed as a therapeutic product to assist invalids of all ages to recuperate. Bland, nutritious, sustaining and easily digestible it is an ideal way to encourage people recovering from surgery or suffering from hiatus hernia, ulcers or diarrhoea [diarrhea] back onto solid foods. It also forms a valuable addition to the diets of infants, toddlers and children of all ages. Slippery Elm has long been recognised for its soothing, gelling properties and its ability to gently coat the sensitive linings of the human digestive system." Serve as a porridge, and a hot or cold drink or thickshake.

Letter from Paul Smith. 1995. March 14. "Interestingly none of the advertisements for Vita Elm from the mid-1930s into the 1950s acknowledge the use of soy in this product. However the practise of adding soy flour to Vita Elm was well established when my father, Ron, went to work for F.G. Roberts early in 1948, and he believes soy was used by the mid-1930s. Admittedly, it is a minor ingredient." "Esmae believes the soy was added to Vita Elm in 1937, when Roberts first became interested in it."

Letter from Paul Smith. 1995. April 1. Vita Elm was the most heavily, longest and continuously promoted of all the Roberts products from its inception in Oct. 1932 until 1947, in almost every issue of the magazine. A 2-page table shows, for each issue, on what page the ad appears.

723. *Advent Review and Sabbath Herald.* 1936. Obituaries: W.A. Colcord. 113(1):21. Jan. 2.
• ***Summary:*** William Allan Colcord was the husband of Mrs. Anna L. Colcord, who survives him. He was born on 8 Dec. 1860 at Coleta, Illinois. At about age 24 [ca. 1884] he became a Seventh-day Adventist and became a member of the church at Grand Junction, Iowa. Education: He attended the academy at Rockford, Illinois, and still later was a student in the Battle Creek College at Battle Creek, Michigan.

He began his work as a preacher of the gospel in 1886, laboring first in Des Moines, Iowa. From about 1893 to 1902 he preached in Australia. Returning to the USA, he worked at the denominational headquarters in Washington, DC, where he served for a number of years as one of the secretaries of the Religious Liberty Department, and later he became book editor for the Review and Herald Publishing House.

Not long after this he lost his faith in SDA doctrines and withdrew from the denomination. But in due time he became convinced of his mistake, returned with sincere repentance, was rebaptized, and again became a member of the church. He died on 4 Nov. 1935 at Washington, DC. He was the son of Ivory G. and Charlotte Colcord. The detailed biography

© Copyright Soyinfo Center 2014

does not mention when or where he married. In addition to his wife, he leaves two sons, Clarence G. and Glenn A. Colcord, and one daughter, Mrs. Walton C. John.

Note 1. His wife was the author of an excellent Seventh-day Adventist vegetarian cookbook, *A Friend in the Kitchen*, first published in 1899. Note 2. Janice Little of Del E. Webb Memorial Library, Loma Linda, California, was unable to find the birth or death dates of Anna L. Colcord (Dec. 2004).

724. Kellogg, John Harvey. 1936. Improvements in or relating to preparation of natural or artificial milk containing *Bacillus acidophilus. British Patent* 441,574. Jan. 22. Application filed 16 Nov. 1934. *

725. *Good Health* (*Battle Creek, Michigan*). 1936. The alkalizing power of the soy bean. 71(1):15-16. Jan.
• ***Summary:*** "The dried lima bean has heretofore been considered as one of the most strongly alkaline of all natural foodstuffs, its ratio of alkalinity being placed at 12 in standard tables. Christian Becker of Frankfort, Germany, in a recent paper places the alkalinity of the soy bean at 13.6. This places it at the head of all vegetable substances which may be used as food for increasing blood alkalinity and so combating acidosis, a condition which encourages degenerative changes in the tissues, such as arteriosclerosis and other senile changes in the heart and blood vessels.

"This fact gives new importance to the promotion of the use of the soy bean as a nutritional means of both preventing and curing a large class of grave and highly prevalent disorders, particularly those of a chronic character. The condition of acidosis which results from the use of foods which leave acid residues in the body, such as meats, eggs, and an excessive diet of cereals, lowers vital resistance and in so doing predisposes to acute infections of various sorts."

726. *Good Health* (*Battle Creek, Michigan*). 1936. Babies thrive on soy bean milk. 71(1):19. Jan.
• ***Summary:*** This summary of an article of: Rittinger, Fred; Dembo, L.; Torrey, G.G. 1935. "Soy bean (vegetable) milk in infant feeding." *J. of Pediatrics* 6(4):517-32. April. Includes a discussion of *Lactobacillus acidophilus* in the soy bean milk.

727. **Product Name:** Soy Ice Cream.
Manufacturer's Name: Vetose Nutritional Laboratories (Distributor). Made in Shanghai by Henningsen Produce Co.
Manufacturer's Address: Pting Liang Road, Shanghai, China.
Date of Introduction: 1936 January.
New Product–Documentation: Raymond S. Moore. 1961. *China Doctor.* p. 182. "Soon Miller was producing the ultimate–a primitive 'soy ice cream.'"

Interviews with Harry W. Miller Jr. 1981-85. This was one of the world's first semi-commercial soy ice creams. "This ice cream was made only for the staff and patients at our institutions, the Shanghai Sanitarium and Hospital, and the Shanghai Sanitarium Clinic, down town. It wasn't for sale and it wasn't advertised. It had no formal name; we just called it "Soy Ice Cream." We sometimes had it for parties at the hospital. It was made for us by Henningsen Produce Co., which had a big ice cream plant in Shanghai. They are now Henningsen Foods in White Plains, New York."

728. **Product Name:** Vetose Soya Milk [Natural, or Chocolate].
Manufacturer's Name: Vetose Nutritional Laboratories.
Manufacturer's Address: Pting Liang Road, Shanghai, China.
Date of Introduction: 1936 January.
Wt/Vol., Packaging, Price: Half pint or quart glass bottles.
New Product–Documentation: Miller, Harry W.; Wen, C. Jean. 1936. "Experimental nutrition studies of soymilk in human nutrition." *Chinese Medical Journal* 50(4):450-59. April. "Such milk can be and is being manufactured as a dried milk powder under the name of Vetose Soya Milk Powder with claims of nutritive value the equivalent of other prepared powdered milk food for infants."

Miller, Harry W. 1944. "The Story of Milk from the Soya Bean." Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. "Milk routes were established in all parts of Shanghai, and the production doubled each succeeding month. Three types of liquid milk were produced: natural soya milk, chocolate soya milk and acidophilus milk, packaged in pint and quart bottles. The price to the consumer was less than that of cow's milk in Shanghai, which thus made available a milk rich in food value for all members of families whose circumstances did not permit them to buy the more expensive animal milk. It was here demonstrated that soya milk in every way filled the average family requirement for a milk, and that in countries where the economic conditions make impracticable dairies, where stock feed is scarce and costly, the people may still have an equally suitable milk." On 13 Aug. 1937 a Japanese bomb destroyed Dr. Miller's commercial soy milk plant.

Raymond S. Moore. 1961. *China Doctor.* p. 182. Dr. Miller established a soybean milk plant on Pting Liang Road in Shanghai, not far from his Shanghai clinic. "There the doctor worked with his production manager, Harry, Jr., who later was to become a consultant for the United Nations Food and Agricultural Organization. From the outset, however, the customers in areas without refrigeration were plagued by spoilage. After studying the American techniques for keeping milk drinks, Harry Miller and his helpers installed in-bottle sterilization equipment, and began deliveries anew. The milk kept indefinitely until uncapped. Malt and chocolate flavors were provided for the sophisticated taste... The price of the milk competed easily with that of cow and goat milk. In the late thirties, Japan was invading China. Within months after

© Copyright Soyinfo Center 2014

the soy-milk business began booming, a Japanese bomb blew up the Shanghai plant."

Interviews with Harry W. Miller Jr. 1981-87. Sold and delivered door to door in half pint and quart bottles, this was the earliest known commercial branded soymilk in East Asia. It was sold in wide-mouth glass milk bottles with Crown caps. The only labeling information was printed on the caps. The plant, which was connected with the Seventh-day Adventist Shanghai Sanitarium, was destroyed on 13 August 1937 during the Japanese invasion.

Note 1. This is the earliest known commercial soy product made by a Seventh-day Adventist food company outside the United States.

Note 2. This is the earliest document seen (Dec. 2013) concerning the work of Dr. Harry W. Miller with soyfoods.

729. **Product Name:** Acidophilus Vetose (Cultured Soya Milk). Vetose Nutritional Laboratories.
Manufacturer's Name: Vetose Nutritional Laboratories.
Manufacturer's Address: Pting Liang Road, Shanghai, China.
Date of Introduction: 1936 January.
New Product–Documentation: Raymond S. Moore. 1961. *China Doctor.* p. 182. "A special yogurtlike milk was praised by many; even non-Chinese began to drink it." Interviews with Harry W. Miller Jr. 1981-87. Note 1. This is the second earliest known commercial branded soymilk in East Asia. Note 2. This is the earliest known commercial soy product made with *Lactobacillus acidophilus*–which it features in the product name.

730. Kellogg, John Harvey. 1936. Re: Growing soybeans in Michigan and making condensed soy milk. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, Feb. 13. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** Dr. Kellogg thanks Morse for his letter or Feb. 7. "The 78-day bean which you sent me a number of years ago reaches the shell bean state in 60 days and matures in 78 to 80 days." "I am interested in what you say about variety 81,031 which scored one hundred. We will be glad to obtain a supply of this variety and as much as is available."

"I shall be glad to have your criticism of the condensed soy milk sent you.

"Thanking you for the valuable information and for your gracious assistance, I am, Sincerely yours."

Note 2. This is the earliest letter seen (Aug. 1999) of various letters exchanged between Dr. Kellogg and William Morse. Note that Morse apparently wrote Kellogg first on 7 Feb. 1936. Letter from Jennifer Jacobs at Bentley Historical Library. 1999. Sept. 8. She is unable to find a letter from Morse to Kellogg dated 7 Feb. 1936 in the Kellogg Papers at Bentley. Address: Miami, Florida.

731. *Good Health* (*Battle Creek, Michigan*). 1936. The world famine. 71(2):48-49. Feb.
• ***Summary:*** "For the four hundred millions of China and several other hundreds of millions in the Far East, that most marvelous of food plants, the soy bean, supplies an abundance of protein and fat of the finest quality, far superior to the proteins and fats of flesh meats, and wholly free from the loathsome parasites, trichinæ, tapeworms, etc., and the filthy colon germs which swarm in fresh meats of all sorts.

"From an economic standpoint, the soy bean offers not only a more than complete substitute for meats, but salvation from the great economic evils to which flesh eating inevitably leads, evils so mischievous that they threaten destruction to the race by making the world uninhabitable." "The soybean contains 40 per cent protein of higher quality than that of the choicest meats. Its easily soluble protein resembles that of milk, and is more easily and quickly digestible. The proteins of the soy bean are of the basic or alkali-ash sort, while those of eggs and meat are acid-ash and so tend to cause acidosis, an evil to which the physiologic chemists have for many years been calling attention. This makes the soy bean a curative food instead of a cause of disease.

"In the market one can buy protein in the form of soy beans at one cent a pound, whereas protein in the form of meat costs from $1.00 to $2.00 a pound"

The "soy bean also improves instead of impoverishing the soil. Its roots gather nitrogen from the air and so enrich the soil.

"The soy bean, which in the Orient fills in the diet the place of flesh, fish, fowl, eggs, milk, butter, and cheese, and suffices for infants as well as for adults, is beginning to receive some attention in this country. An excellent flour is now being made which, added to ordinary wheat flour, greatly improves the loaf in nutritive values, and at the same time improves its flavor and keeping properties.

"Condensed soy milk in tin cans is also now being made and various other most wholesome products, the use of which enables one, if he chooses to do so, to exclude all animal products from his dietary and not only without loss but with an actual gain."

732. *Good Health* (*Battle Creek, Michigan*). 1936. Increasing use of the soy bean. 71(2):50-51. Feb.
• ***Summary:*** "Henry Ford has aided in the development of the soy bean industry, having urged the planting as a new opportunity for farmers.

"Manchukuo still produces the world's largest crop of soy beans. The culture of this bean is spreading as people come to know its value for food and many other purposes. Various attempts have been made to grow them in England, Germany, and other parts of Europe with poor success. But the *London Times* records the harvesting of twenty acres of soy beans on the Fordson estate, near Chelmsford [England].

© Copyright Soyinfo Center 2014

Here Henry Ford has a farm of about two or three thousand acres. His direct interest is due to the fact that he uses this product in his automobile industry.

"Four years ago Dr. Kellogg discovered that milk made from the soy bean made a remarkable culture medium for protective bacteria or so-called 'friendly germs.' In soy milk more than twice the number of these germs can be made to grow than in cow's milk. Remarkable results have been obtained in cases of intestinal disorders through the use of this milk. The Canadian quintuplets are protected against bowel trouble by the constant use of soy acidophilus milk."

733. Bansei: New U.S. domestic soybean variety. Large-seeded and/or vegetable-type soybean. 1936. Seed color: Yellow (straw), hilum pale/colorless to light brown.
• ***Summary:*** Sources: Morse, W.J. 1936. Re: Chusei and Bansei soybean varieties, and making soy milk. Letter to Dr. John Harvey Kellogg, Miami Springs (Miami), Florida, March 7. "I have your letter of February 13... Concerning variety 81031, which I wrote you had given such good results in making a high quality milk, we have given the varietal name Bansei to this number. I think that we shall be able to furnish you with 4 or 6 pounds of seed and I feel that it should mature in ample time at Battle Creek."

Morse, W.J. 1936. "Re: Evaporated soymilk, soybean varieties, and green vegetable soybeans." Letter to Dr. John Harvey Kellogg, The Miami-Battle Creek, Miami Springs, Florida, March 26. 2 p. "I have your letter of March 9 and with reference to the Bansei soybean, I will say that we will try to spare you as many pounds as possible." There are no longer large sources of either the Chusei or Bansei soybean in this country at present... we obtained the seed from The Yamato Seed Co., Tokyo, Japan. The Bansei was obtained from them under the name *Bansei O Sayada Mame* [probably *Bansei O Saya Eda Mame*] and the Chusei under the name *Chusei O Saya Eda Mame.* Note 1. In Japanese, *Bansei* and *Chusei* mean "late grower or late development" and "medium grower or medium development" respectively. Interestingly, Morse (1938, p. 32) reported that both varieties mature in the same time–110 days. *O Saya* means "large pod." *Eda Mamé*–pronounced ay-dah-MAH-may–means "green vegetable soybean." Note 2. Kellogg apparently wrote Morse first on 9 March 1936 to ask about the Bansei soybean.

Morse, W.J. 1936. *Soybean introductions named in January 1936.* Washington, DC: USDA, Bureau of Plant Industry, Div. of Forage Crops and Diseases. 2 p. April 7. See p. 1. F.P.I. No. 81031. Name: Bansei. Seed color: Straw yellow. Maturity: 110 days. Use: Green vegetable and dry edible bean. States grown: Northern and North Central.

Morse, W.J. 1938. "Edible varieties of soybeans." *Proceedings of the American Soybean Assoc.* p. 30-33. A table (p. 32) shows: F.P.I. No.: 81031. Days to ripen: 110. Seed color: Straw yellow. Hilum: Pale. Seeds per lb: 1,936. Oil and protein content (moisture-free basis): 21.72% and 39.12%. Use: Dry edible or green vegetable.

Lloyd, J.W.; Burlison, W.L. 1939. "Eighteen varieties of edible soybeans: Their adaptability, acceptability, culture and characteristics." *Illinois Agric. Exp. Station, Bulletin* No. 453. p. 385-439. March. See p. 394-97, 413, 423.

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. "USDA soybean germplasm collection inventory." Vol. 1. INTSOY Series No. 30. p. 8-9. Bansei is in the USDA Germplasm Collection. Maturity group: II. Year named or released: 1936. Developer or sponsor: USDA. Literature: 07, 11. Source and other information: 'Banseiosayada Mame' from Sapporo, Japan, in 1929. Prior designation: PI 81031. Address: USA.

734. Morse, W.J. 1936. Re: Chusei and Bansei soybean varieties, and making soy milk. Letter to Dr. John Harvey Kellogg, Miami Springs (Miami), Florida, March 7. 1 p. Typed, with signature.
• ***Summary:*** "I have your letter of February 13 with regard to the variety of soybean which you have been increasing at Battle Creek [Michigan] for the past three or four years. The sample of beans was recently received from Battle Creek and in checking it over with our samples I find that it is identical with the type we are now calling Chusei. I may say that the seed is now being distributed under this varietal name.

"Concerning variety 81031, which I wrote you had given such good results in making a high quality milk, we have given the varietal name Bansei to this number. I think that we shall be able to furnish you with 4 or 6 pounds of seed and I feel that it should mature in ample time at Battle Creek. I take it that you wish this seed to be sent in your name at your Battle Creek address. Very truly yours, W.J. Morse, Senior Agronomist."

Note 1. This is the earliest document seen (June 2013) that mentions the soybean varieties Bansei or Chusei. Address: Senior Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, USDA, Washington, DC.

735. Kellogg, John Harvey. 1936. Re: Bansei soybean and making soy milk. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, March 9. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** Dr. Kellogg thanks Morse for his letter or March 7. "I am very glad to know about the Bansei bean. I shall be greatly pleased if you will send me as many pounds as you can of this seed and tell me if it is possible for me to get a larger quantity for planting this year.

"We are using very considerable quantities of soy beans for milk and at the rate it is increasing will soon be requiring about a ton a week.

"I am anxious to get started with your new bean as raw materials as soon as possible. I should also like to know whether the bean you call Chusei can be obtained in quantity for seed. I am hoping to plant two hundred acres of this bean

© Copyright Soyinfo Center 2014

this year to be used chiefly as a shell bean for canning. Can this be obtained in quantity either in this country or in Japan? Can the Bansei bean be obtained in Japan? I should also like to know if you can give me information about a bean which I am purchasing through a local agency here under the name of Tokyo. It comes from Norfolk here and I am informed that it is imported direct from Japan."

"I consider the soy bean one of the most remarkable of the world's food products and expect to make increasingly large use of it. I have been experimenting with it for many years, but have made rather slow progress because of the multiplicity of other matters requiring my attention. I think from now on I shall make much more rapid progress.

"Could you tell me if anyone has succeeded in making a satisfactory dry evaporated soy milk which will keep?

"Hoping I am not troubling you too much, I am

"Sincerely yours," Address: Miami, Florida.

736. Morse, W.J. 1936. Re: Evaporated soy milk, soybean varieties, and green vegetable soybeans. Letter to Dr. John Harvey Kellogg, The Miami-Battle Creek, Miami Springs (Miami), Florida, March 26. 2 p. Typed, with signature.
• ***Summary:*** "I have your letter of March 9 and with reference to the Bansei soybean, I will say that we will try to spare you as many pounds as possible." There are no longer large sources of either the Chusei or Bansei soybean in this country at present... we obtained the seed from The Yamato Seed Co., Tokyo, Japan. The Bansei was obtained from them under the name *Bansei O Sayada Mame* [probably *Bansei O Saya Eda Mame*] and the Chusei under the name *Chusei O Saya Eda Mame."*

Note: In Japanese, *Bansei* and *Chusei* mean "late grower or late development" and "medium grower or medium development" respectively. *O Saya* means "large pod." *Eda Mamé*–pronounced ay-dah-MAH-may–means "green vegetable soybean."

"The sample of seed which you enclosed is the Tokyo variety and has been grown in this country for many years. During the past two or three years it has increased to a considerable extent especially in North Carolina, Tennessee, and Mississippi. It is not imported from Japan. All of the seed which is in this country was grown in the states mentioned above. It may interest you to know that in North China and southern Manchuria this light, greenish yellow bean is used in the manufacture of bean milk and bean curd. I am quite sure that you will have no difficulty in obtaining almost any quantity of Tokyo through North Carolina growers and seed dealers... In North Carolina and Virginia you can obtain the Tokyo through the following: T.W. Wood & Sons, Richmond, Virginia, Geo. Tait & Sons, Norfolk, Virginia, The Buxton White Seed Co., Elizabeth City, North Carolina, and F.P. Latham, Belhaven, North Carolina."

"Mr. J.H. Strawser of the Washington Sanitarium, Takoma Park, Maryland, sent me one of the nicest samples of evaporated soy milk that I have ever seen... I understand that Dr. Miller, who is associated with the Missionary College and now stationed in China, has one or two factories producing this soy milk powder. While Mr. Strawser was experimenting with the milk I understood that the soy milk was evaporated through the regular process used in evaporating cow's milk."

Note: This is the earliest document seen (Aug. 2013) concerning the work of Dr. Harry Miller with soyfoods or soy milk.

"The Seaboard Airline Railway, at its experimental farm near Hamilton, North Carolina, has been testing some of our green vegetable soybean varieties. Last year they froze some of the beans and have been sending samples to various places. From all reports it is evident that the frozen bean is a most excellent food product."

Note: This is the earliest document seen (March 2001) concerning the work of a small Seventh-day Adventist food company (the Washington Sanitarium, Takoma Park, Maryland) with soyfoods. Address: Senior Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, USDA, Washington, DC.

737. Kellogg, John Harvey. 1936. Re: Soy Acidophilus Milk and the Dionne quintuplets. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, March 30. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** "We are having great success with our soy acidophilus milk. It cured the [Dionne] quintuplets of serious trouble and keeps them in good health. They have been using it regularly in their daily food for more than a year and a half. Dr. Dafoe writes me that he cannot get along without it. When he stops the use of it the bowels get bad and he has to resume its use at once. I shall be glad to have a liberal sample of this milk sent to you if you would like to try it."

"Sincerely yours,

"P.S. Dr. Miller of China is one of my old students. He sent me a sample of his soy milk powder. It was very fine in appearance, but had a rancid flavor...

"I shall be very glad indeed if you will let me have as much seed as you can of rapid growing vegetable varieties of soy beans. I am planting 150 acres this year, but will be glad to plant 50 more if I can get sufficient seed for the purpose." Address: Miami, Florida.

738. Battle Creek Food Co. 1936. Soy acidophilus milk. *Good Health* (*Battle Creek, Michigan*) 71(3):95. March. Ad.
• ***Summary:*** This is a full-page black-and-white ad for Soy Acidophilus Milk. Note 1. Throughout 1936 there are full-page ads for Soy Acidophilus Milk on the back inside cover of *Good Health.*

Note 2. This is the earliest document seen with the term "Soy acidophilus milk" in the title. Address: Battle Creek, Michigan.

739. **Product Name:** Soy Acidophilus Milk (Lactobacillus Acidophilus Cultured in Soy Milk. Renamed Soy Acidophilus by 1940).
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1936 March.
Ingredients: Soybeans, water, lactic acid cultures.
Wt/Vol., Packaging, Price: Glass bottle.
New Product–Documentation: A.A. Horvath. 1932. Some recent views about soya flour (pamphlet). "In a recent personal letter to the writer Dr. John Harvey Kellogg of the Battle Creek Sanitarium brings out the following interesting experience: 'We are making increasing use of the soy acidophilus with splendid results. I am sure it is very much superior to ordinary acidophilus milk as a means of changing the flora.'" Note: The product was probably not yet sold commercially.

John Harvey Kellogg. 1934. Method of making acidophilus milk [from soymilk]. U.S. Patent 1,982,994. Dec. 4. 2 p. Application filed 14 June 1933.

Henry M. Stegman. 1935. *Good Health* (Battle Creek, Michigan). "Benefits from acidophilus milk." "This soy acidophilus milk has been prepared and used at the Battle Creek Sanitarium [in Michigan] and the Miami-Battle Creek institution [in Florida], and elsewhere for nearly two years [i.e. since early 1933], and has shown itself to be greatly superior to other cultures."

Full-page ads in *Good Health.* 1936. March to December. In August a recipe for Soy Acidophilus Ice Cream was published. In liquid form the milk contained 3.6% protein and 1.5% fat. L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal.* June 25. p. 14. "Soy bean–The magic plant. Article XI." "Battle Creek Food Factory, Battle Creek, Michigan: Acidophilus, condensed, sweet." Photo of commercial soy products in William Morse's office. 1936. In a quart bottle with subtitle "A new and Highly Efficient Means of Changing the Intestinal Flora." Booklet. 1937. Soy Acidophilus Milk. March. 9 p.; Price List. 1940. 1 pint bottle. 6.25% soy solids.

USDA War Food Administration, Food Distribution Administration. Grain Products Branch. 1943. Dec. "Soya products distribution." p. 5. The company sells Soy Acidophilus, containing 6¼% soya. Distributed through health food stores.

Miller. 1943. Said that it was "6.25 soya and distributed through health food stores." Soybean Blue Book. 1947. p. 72. "Soy Acidophilus." Also listed in 1955. Price List. 1955.

Note: This is the second earliest known commercial soy product made with *Lactobacillus acidophilus*–which it features in the product name.

740. Beattie, W.R. 1936. Making and using peanut butter. *USDA Circular* No. 384. 13 p. March. [1 ref]

• ***Summary:*** Contents: Development of the peanut-butter industry. Commercial manufacture of peanut butter: The stock, factory and equipment, roasting, blanching, hand-picking, blending, grinding, bottling and packing. Home manufacture of peanut butter. Food value and ways of using peanut butter (11 recipes, prepared by the Bureau of Home Economics).

Concerning the origin and early history of peanut butter: "The commercial production of peanut butter has developed to large proportion in recent years. In the early days of its manufacture peanut butter was made in sanitariums [e.g., Battle Creek Sanitarium in Michigan] and used largely as a food for invalids, but its fine qualities and food value were soon appreciated, and it outgrew this limited use. At first peanut butter was manufactured in a small way by individuals and sold from house to house; then small factories sprang up, and peanut butter became an article on the grocers' shelves. Today there are a number of large and small factories turning out peanut butter and other peanut products in great volume... The quantity of peanuts now used annually in the manufacture of peanut butter is approximately 200,000,000 pounds of farmers' goods. More peanuts now go into peanut butter than any other one use."

Note 1. Note: No additional information is given concerning the early history of peanut butter. There is no mention of a physician in St. Louis, Missouri, who was reported by others to be the first to manufacture peanut butter commercially, and to recommend it for invalids because of its high nutritional value (as is implied by Woodruff 1973, p. 153).

Note 2. Supersedes USDA Bureau of Plant Industry, Circular 98, titled "Peanut butter," by W.R. Beattie, and USDA Department Circular 128, titled "The manufacture and use of peanut butter." Address: Senior Horticulturist, Div. of Fruit and Vegetable Crops and Diseases, Bureau of Plant Industry, USDA, Washington, DC.

741. *Good Health* (*Battle Creek, Michigan*). 1936. Change of habits necessary in gastric ulcer. 71(3):85-86. March.
• ***Summary:*** "Lacto-Dextrin and Soy Acidophilus Milk have been found wonderfully helpful in the treatment of gastric ulcer."

742. Lager, Mildred. 1936. The House of Better Living Catalog. Los Angeles, California: Published by the author. March. 14 p. March. 28 cm. Second expanded edition, March 1938.
• ***Summary:*** On the front cover is a large illustration of the exterior of the House of Better Living, and a 4-stanza poem about the House by Mildred Lager. Below the poem we read: "Catalog. The most unusual store in Southern California. Owned and operated by Mildred Lager, food economist, author, and radio lecturer."

The first section, titled "The origin of the House of

© Copyright Soyinfo Center 2014

Better Living!" (p. 1) begins: "Is it fate? Often the handicaps and obstacles that we have to overcome lead us into our life work, help us to find ourselves. A few years ago a young school teacher was forced to give up her chosen profession because of arthritis deformans. It was a severe obstacle to overcome, but it was that experience that led Mildred Lager into the study of foods and their relation to health, and led to the founding of the House of Better Living. No one *has* gained recognition as rapidly as Miss Lager. In a little over two years she has won her place among the 'leaders,' has received both national and international recognition, and has established the House of Better Living as an institution in Southern California... Her perfect radio voice reaches thousands who cannot attend her classes.

"Miss Lager is teaching the ounce of prevention, the health insurance that pays dividends in years of health and happiness. Her slogan is that Pure Air, Pure Water, Pure Food and Constructive Thought plus exercise and sunshine build health.

"The House of Better Living is more than a Health Food Store. It is a bureau of food information and a place and means where Miss Lager can conduct her classes free of charge–and *that* is her goal. Two years ago it seemed an impossibility–very few thought it would ever succeed. They did not know the sincerity and the spirit behind it... It is but two and a half years old. We cannot predict its future nor that of its charming founder–we can only wait and see, knowing that achievement and not time is the measure of success.–By one who has watched the growth from the start."

At the top of page 2 in large letters: "The House of Better Living offers you: 1. The best of natural foods at reasonable prices. 2. Free delivery of all $3.00 orders in Los Angeles. 3. Free cooking classes every Wednesday afternoon at 1:30. 4. Food classes Monday and Thursday afternoon at 1:30 (except during June, July and August). 5. Miss Lager's Radio talks every Monday, Tuesday, Wednesday and Thursday morning at 7:45 over KFAC."

Product categories and products mentioned include: Coffee substitutes (Soyco, Hollywood Cup, Breakfast Cup, Ficgo, Sipp). Broths (Vegebroth, Vegemineral Broth Concentrate, Hauser's Meatless Bouillon). Nut butters–Freshly ground (Soy Bean Butter, Almond butter, Cashew butter, peanut butter–dextrinized). Whole grain flour, meal, etc. (Soy Bean Flour, Bill Baker's Prepared Lima Bean Pancake or Waffle Flour, Bill Baker's Prepared Soy Bean Pancake or Waffle Flour {2 lb for $0.30}, whole wheat flour, wheat germ, bran, buckwheat flour, dextrinized flour, gluten flour, breakfast cereals–to cook {Cubbison's cracked wheat}). Ready to serve cereals (Soy bean breakfast food, wheat germ). Macaroni, noodles, etc. (Soy bean macaroni, garbanza shells). Legumes (soy bean {imported}, garbanza peas, natural brown rice, sesame seeds). Melba toast, crackers, cookies, etc. (Bill Baker's Soy Toast {$0.30/lb}, Cubbison's Melba Toast, Cubbison's Melbetts, Soy bean gluten cracker, Cubbison's whole wheat crackers, Cubbison's Whole Wheat Dunkeretts, Cubbison's wheat soda cracker, Cubbison's honey wheat cookies, Cubbison's Melba cookies, Soy bean wafers, soy bean macaroons, Bill Baker's 100% Soy Bean Fruit Cookies {$0.18/dozen}, Bill Baker's 100% Lima Bean Fruit Cookies {$0.18/dozen}, Olson's soy bean bread, sliced {$0.12}, Bill Baker's soy bean bread–unsliced {$0.16}, Bill Baker's Lima Bean Bread, unsliced {$0.16}). Natural aids (Agar, flaxseed, psyllium, Burbank kelp, kelp, Green kelp, Santay sea greens). Oils (Soy bean oil, sesame oil, Lindsay Cold Pressed California Oil). Meat substitutes (11 products, 5 with "Soy" in the name, such as Soyatose). Soy bean products (25 products! Makers incl. La Sierra, Loma Linda, etc.).

The 27 different soy products are: La Sierra Soy Beans, plain or with tomato sauce; Loma Linda Soy Beans, plain or with Proteena; Soy Beans, imported; Soy Beans, roasted; Soy Bean Loaf (meat substitute); Soy Bean Bologna; Soy Bean Spread; Soy Bean Butter (like peanut butter); Loma Linda Soy Mince Sandwich Spread; Soy Bean Sauce; Soy Bean Milk; Soy Bean Oil; Soy Bean Noodles, Macaroni, and Spaghetti; Soyco (Soy Coffee); Soy Bean Breakfast Food; Soy Bean Sprouts; Soy Bean Flour; Bill Baker's Prepared Soy Bean Pancake or Waffle Flour; Bill Baker's Soy Bean Bread; Olson Soy Bread (sliced); Bill Baker's Soy Toast; Bill Baker's Soy Bean Fruit Cookies; Soy Bean Macaroons; Soy Bean Wafers; Soy Bean Gluten Crackers.

Photos show: (1) A portrait of Mildred Lager smiling (p. 1). (2) Mildred conducting a free cooking class in her kitchen at The House of Better Living. Many men and women, all wearing hats, are seated around the perimeter of the kitchen (p. 6-7). (3) Packages of various "Bill Baker's Soy & Lima Bean Products" including Lime Bean Wafers, Pancake Waffle & Biscuit Lima-Bean "Neat Flour," Lima Bean Toast, Pancake Waffle & Biscuit Soya-Bean "Neat Flour," Lima Bean Bread, and Soy Bean Bread" (p. 10).

A small ad (3½ by 2¼ inches, p. 6) by the Cubbison Cracker Co. (3417-19 Pasadena Ave., Los Angeles, California) states: "Dextrinized and whole wheat products: Melba Toast, Melbetts, Cracked Wheat, Whole Wheat Crackers and Cookies." Note: This is the earliest document seen (June 2004) concerning the work of Sophie Cubbison with soyfoods.

A ¼-page ad (p. 12) titled "Hain 100% pure foods," describes Vege-Jell Puddings, Mal-Ba-Nuts (a powdered beverage), Potassium broth, and Col-Lax (whose ingredients are: Powdered psyllium, Powdered agar, and lactose). Address: 1207 West Sixth St., Los Angeles, California.

743. **Product Name:** Loma Linda Soy Beans (Plain Canned).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1936 March.

April. 4(4):25. "Seven Items of a Quality Line." Company listed as "Loma Linda Food Company, Inc., Loma Linda, California."

Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 52. "Loma Linda Foods: Soy Products–Soy Beans, Plain. $0.11."

The Loma Linda line: 35 selected recipes (booklet). 1944? Page 3. "Soy Beans: 'The value of the soy bean to the diabetic has long been accepted...' (Dr. Chas. E. Fearn of Chicago). The soy beans we use for canning are selected for their uniformly large size... They are thoroughly cooked under controlled pressure in the can until every one is tender. Some are canned plain (with and without salt), some with Tomato Juice and some with Proteena and Tomato Sauce. Purely vegetable. Alkaline." Wholesale price list. 1945. "Soy Beans (Glass or Canned)."

744. **Product Name:** Soyco (Coffee Substitute).
Manufacturer's Name: Unknown. Perhaps Carque.
Manufacturer's Address: Los Angeles, California?
Date of Introduction: 1936 March.
New Product–Documentation: House of Better Living Catalog. 1938. March. p. 4. Note: This product could be Soyco, a coffee substitute introduced by La Sierra Industries in 1929, and still made by them in 1936.

Talk with Ben Kahan of Kahan & Lessin. 1988. Sept. 24. He thinks this product was made by Carque, pronounced kar-KAY. See sheet he sent.

745. Morse, W.J. 1936. Re: Soy acidophilus milk and the Dionne quintuplets. Letter to Dr. John Harvey Kellogg, The Miami-Battle Creek, Miami Springs (Miami), Florida, April 4. 1 p. Typed, with signature.
• ***Summary:*** "I have your letter of March 30 and was very much interested in the use of your acidophilous [sic, acidophilus] milk by the quintuplets. It seems that Dr. Dafoe certainly should give a good recommendation for your product.

"About a year ago when you returned from Miami [Florida] you left at the Union Station about a half gallon of this acidophilous milk. I liked the product very much and found no difficulty at all in keeping it in the ice box. I should be glad to receive another sample from you.

"I presume that after May 1 you will be at Battle Creek. It will probably be some time in May before I shall know just what amount of seed of Bansei I shall have available. I am planning to send you all that we have left at that time." Address: Senior Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, USDA, Washington, DC.

746. Kellogg, John Harvey. 1936. Re: Soy acidophilus milk. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, April 11. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "I have your letter of April 4. I have some friends who are going from here to Washington about May 1st and will have them take along several bottles of soy acidophilus milk to hand out to you. It is becoming quite popular here. We have been using 30 to 40 gallons a day for several months. It is much more popular with our patrons than cow's milk."

747. Miller, Harry W.; Wen, C. Jean. 1936. Experimental nutrition studies of soymilk in human nutrition. *Chinese Medical Journal* 50(4):450-59. April. [15 ref]
• ***Summary:*** "Because of their small carbohydrate content soybean products have long been used as a diabetic food. Also hundreds of years ago, it was used in the form of soymilk, cheese, curd, various soy sauces, ferment products, bean sprouts, as salted roasted beans and as a coffee substitute. More recently it is used in ice-cream, ice-cream cones, in candies and confectionery, puddings, salad dressings, food drinks, breakfast-foods, etc., besides in the industries in making paints, linoleums, automobile parts, lacquers, celluloid substitute, glue, and vegetable casein. It is a valuable stock food, and in the human dietary the various soybean products not only give flavor and relish, but also supply a most valuable type of protein."

"The people in China use practically no dairy products and comparatively little meat, and yet have a well-balanced diet, which is obtained through the protective foods supplied them through the soybean. We have in China the common saying, '*Do-giang* [pinyin *doujiang* = soy milk] is the poor man's milk, *do-fuh* [*doufu* = tofu] is the poor man's meat.'"

"We have never observed soybean protein possessing an allergy in any single case. Recently a patient admitted to the sanitarium informed us that he could use neither wheat, eggs, nor milk. We placed him, therefore, on soybean protein as found in Vetose milk and soydophilus milk, and he got along remarkably well. We have never noted an instance where soybean has set up any reaction in the nature of skin eruptions, stomach or intestinal upsets" (p. 451-52).

"Much experimentation has been carried forward along the line of making palatable food products out of the soybean, of getting rid of the raw, beany, rather bitterish flavor in the uncooked or partially cooked bean. This objectionable beany taste has been shown by Schmalfuss and Treu [1927] to be a methyl-n-nonyl-ketone, which seems to be located in the outer layer of cotyledons.

"Since a process is now available for the removal of these ketone bodies immediately the possibilities loom before us of the use of soybean as an important element in the human dietary... we may have a true milk substitute.

"We have approached the formulae of cow's milk by the

© Copyright Soyinfo Center 2014

addition of a sufficient amount of carbohydrate in the form of a malt sugar and a little additional oil, together with vitamin C in the form of tomato juice, and by exposing this liquid to irradiation with ultra violet light to add vitamin D. Such milk can be and is being manufactured as a dried milk powder under the name of Vetose Soya Milk Powder with claims of nutritive value the equivalent of other prepared powdered milk food for infants."

"Our experimental work on infant feeding has been carried on over a period of more than two years, mostly in the Shanghai Sanitarium Clinic" (p. 454).

"In the Shanghai Sanitarium and Clinic, aside from the use of modified soya milk in the pediatrics department, the nurses and the helps have taken regularly the soya milk, with most satisfactory results. Our observations over this period of time lead us to believe that modified soya milk has every advantage over cow's milk; it is palatable and a liking for it is readily acquired. It is a complete food of very high nutritive value; it is readily digested, and free from all poisonous and deleterious substances. The standard formula used was protein 3.5%, fat 5%, carbohydrate 5.64%. The caloric value is a little higher than that of cow's milk, and will run 170 calories to the full glass" (p. 457).

Soya milk "can be used in cooking and baking; it makes delicious ice cream. At the same time it affords the advantages of being 100 per cent pure. Also the dread of so many diseases now known to be directly transferred from cows' milk, such as hoof and mouth diseases, undulant fever, typhoid fever, streptococcal infection, infection, dysentery, etc., is removed from users of soya milk.

"The new milk powder, which has now been used for upwards of a year, seems to be equal in quality with the freshly made soya milk. It is a little better tasting. Its advantage is that it can be transported to any place without deterioration, and can be freshly made up as required, and does not require refrigeration" (p. 457).

"We use a soydophilus made by inoculating sterilized soya milk with the acidophilus organisms." Soydophilus "creates an intestinal flora that overcomes intestinal autointoxication."

Note 1. This is the earliest English-language document seen (Aug. 2013) that contains the word "soymilk" spelled as one word, or that has the word "soymilk" in the title. However, the word "soymilk" does not appear in the text. Instead, the term "soya milk" is used at least 22 times and the term "soy milk" is used once. The term "modified soya milk" is used many times but the meaning of "modified" is never explained.

Note 2. This is the earliest document seen (Aug. 2013) that contains the word "Vetose" in connection with the work of Dr. Harry Miller with soyfoods. Address: M.D. (both), Shanghai Sanitarium and Pediatric Dep., Shanghai, China.

748. Kloss, Jethro. 1936. Re: Trip from Houston, Texas, to San Francisco. Letter to his daughter Promise Kloss, May 11. 1 p. Handwritten, with signature on letterhead. Facsimile printed in Back to Eden, 1981 ed. center insert section.
• ***Summary:*** This letter is of interest both for its contents–it shows a loving and caring father–and for its letterhead, which states in large letters: "Scientific Food & Benevolent Association." Below that, next to a photo of Kloss is typewritten: Jethro Kloss, President. Herbalist, Public Lecturer, Food Scientist and Demonstrator. Manufacturers, Jobbers, and Distributors. Home address: Takoma Park Station, Washington, D.C. A typed description of the Association continues at the bottom of the page: "Distributors of non-poisonous herbs for medicinal and culinary purposes. A very practical course in nursing, including hydrotherapy. Scientific feeding for every purpose. Unexcelled substitutes for meat, eggs, cow's milk and butter–cooking, canning, baking and health foods. How to live better on less money. A marvelous line of foods made from the soy bean, and their cultivation. Send for description of new book 'Back to Eden' (revised edition) revealing astounding truths on prevention of disease and revolutionary food and health methods not published before." Address: 913 Yale St., Houston, Texas.

749. Morse, W.J. 1936. Re: Bansei soybeans and acidophilus soybean milk. Letter to Dr. John Harvey Kellogg, Battle Creek Sanitarium, Battle Creek, Michigan, June 3. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Morse is sending Kellogg 12 pounds of Bansei soybeans, the type Morse found most promising for making soybean milk. "I wish to thank you for the bottle of Soy Acidophilus which one of your assistants brought to Washington a few weeks ago. I like this milk very much and am planning to use the acidophilus culture with some soybean milk." Address: Senior Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, USDA, Washington, DC.

750. Kellogg, John Harvey. 1936. Re: Growing soybeans in Michigan for used as a canned green vegetable. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, June 14. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "I have your letter of June 3. The seed has arrived and it has been planted and I hope it will mature in this climate.

"We are planting this year a hundred acres of soy beans of the 78-day variety. We expect to can a large part of those beans as shell beans. We shall let part of the crop ripen and may have some surplus as seed... Thanking you for your courtesy in sending us some more Bansei seed."

751. LeClerc, J.A. comp. 1936. Partial list of references on soybean milk. Washington, DC: Food Research Div., Bureau

© Copyright Soyinfo Center 2014

of Chemistry and Soils, USDA. 4 p. June 16. Unpublished manuscript. [50 ref]
• ***Summary:*** The 50 references are listed in chronological order, from Trimble (1896) to Castagnol (1934). Address: Food Research Div., Bureau of Chemistry & Soils, USDA, Washington, DC.

752. *Madison Survey* (*Madison, Tennessee*). 1936. Among the industries at Madison. 18(29):113-16. July 15.
• ***Summary:*** Madison stresses its industries not simply because they are a source of revenue for students. "If every student who enters this college were financially able to meet expenses with cash, still Madison would operate its industrial centers because they constitute one of the outstanding features of the educational system Madison fosters. Why? Madison is preparing men and women to fill places of responsibility in needy fields, in hard and trying places. It turns out to the world men and women capable of doing things worthwhile for the community in which they locate. Not all of these are by any means white-collar jobs. Labor itself is educational. Labor is needed to develop the whole man."

The Madison Printing Department prints all of the packages and labels for Madison Foods. Photos show the following products in paperboard boxes with labels: Date Stix, Fruit Stix, Breakfast Crisps, Bran Wafers, Thin-Things, Soy-Koff, Whole Wheat Wafers, and Minute Wheat. Labels for Vigorost and Kreme O'Soy [bread] are also pictured.

"One of the latest printing jobs is three thousand display units to accompany samples of Fruit Stix, Date Stix, Breakfast Crisps, and Soy-Koff."

"Kreme O'Soy Bread adds quality to every lunch and meal. You will enjoy its rich creamy nut-like flavor. Use it freely for toast, sandwiches, fillings, puddings, etc.

"Madison Kreme O'Soy Flour is used in this bread to reduce the starch content, to impart the creamy nut-like flavor, and to alkalinize the bread. Kreme O'Soy Flour is a rich food–a complete protein–containing only a trace of starch." Other products noted are Nut-Meat, Soy Beans with Tomato Sauce, and Soy Cheese.

753. Silver, Jack. 1936. Irvine to make Eastern tour for health promotion. *California Health News* (*Hollywood, California*) 4(14):1, 13. July 17.
• ***Summary:*** Clarke Irvine will address the national chiropractic convention in Indianapolis, Indiana, on Aug. 14. On the way, he plans to visit many friends and readers across America. He has invitations to visit the Battle Creek Sanitarium (in Michigan), Physical Culture Hotel, etc. The chiropractors first heard from Irvine last year at their national convention in Hollywood.

Note: A large portrait photo shows Clarke Irvine.

754. Webb, H.A. 1936. Review of the book *Food for Life*, by Frances Dittes. *Banner* (*Nashville, Tennessee*). July 26. Magazine Section Summarized in Madison Survey. March 3. 1937. p. 33-34. *
• ***Summary:*** "This book makes a real contribution to the literature of cookery and nutrition from at least two standpoints: First, it is written by a Southern author who knows the Southern taste in sickness and in health; second, it is the vegetarian school, whose life work consists in administering foods as a true medicine to those who seek for health." Address: Head of the Chemistry Dep., Peabody College.

755. **Product Name:** Green Shelled Soy Beans (Canned).
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1936 July.
Wt/Vol., Packaging, Price: 19 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal.* June 25. p. 14. "Soy bean–The magic plant. Article XI." "Battle Creek Food Factory, Battle Creek, Michigan: Green shelled soy beans (canned)."

Price List. 1937. Price List. 1940. Soy Beans, green. 19 oz. can. Distributed through health food stores. In tins.

USDA War Food Administration, Food Distribution Administration. Grain Products Branch. 1943. Dec. "Soya products distribution." p. 5. The company sells Green Soybeans in tins. Distributed through health food stores.

Note: This is the world's earliest known canned green vegetable soybean product.

756. **Product Name:** Soy Milk (Canned). Condensed and Canned by 1940. Brand-named Soygal by April 1942.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1936 July.
Wt/Vol., Packaging, Price: 10 oz can.
New Product–Documentation: L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal.* June 25. p. 14. "Soy bean–The magic plant. Article XI." "Battle Creek Food Factory, Battle Creek, Michigan: Milk (canned)."

Price List. 1940. 10 oz. can.

Good Health (Battle Creek, Michigan). 1942. April. p. 52-53. "Cow's milk a common cause of allergy." Soybean milk, now available under the commercial name of Soygal, is "wholly free from the unpleasant taste of the soybean."

757. *Good Health* (*Battle Creek, Michigan*). 1936. Soy beans versus beef. 71(7):210. July. Ad.
• ***Summary:*** This editorial states: "Soy bean protein has the advantage over animal proteins of all sorts that it has little tendency to decay."

© Copyright Soyinfo Center 2014

758. *Good Health* (*Battle Creek, Michigan*). 1936. Usefulness of the soy bean. 71(7):215-16. July.
• ***Summary:*** "The soy bean is not only an excellent but a very economical food. G.H. Banks, of the University of Arkansas College of Agriculture, tells that Henry T. Wallace, U.S. Secretary of Agriculture, once lived for six weeks on soy beans and corn meal, the cost of which was fifteen cents a week. Mr. Wallace was in college at the time. He carried on his regular school work and felt no bad physical effects from the diet."

"Mr. Banks, who is in charge of the Rice Experiment Station near Stuttgart, Arkansas, says it is wrong to speak of some varieties as "edible." Most of the field sorts are good to eat, those known as 'edible' being simply easier to prepare."

759. **Product Name:** Thin Things (Wafers made with soy flour).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1936 July.
Ingredients: Whole soy bean flour and wheat flour.
How Stored: Shelf stable.
New Product–Documentation: Madison Survey. 1936. July 15. p. 114. A photo shows a package of Thin-Things.

Madison Health Messenger. 1938. Spring. Page 4. "Thin-Things. Madison's new soy wafer for salads, soups, etc., is now on the market. The dainty one-bite size and delicate flavor make it especially desirable for guest dinners and luncheons. Thin-Things are made of whole soy bean flour and choice wheat flour and they do not contain soda or baking powder of any kind. 2–5 oz. packages 25 cents."

Madison Health Messenger. 1940. 2(3):5.

760. **Product Name:** Date Stix (Naturally sweet snack crackers made with soy flour).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1936 July.
Ingredients: Wheat flour, Kreme O'Soy Flour, dates, honey.
New Product–Documentation: Madison Survey. 1936. July 15. p. 115. Date Stix are mentioned.

Madison Survey. 1937. "The soy bean marches on." April 21. p. 59-60.

Madison Health Messenger. 1938. Spring. Page 4. "Date Stix. The wholesome blend of choice wheat flour, Kreme O'Soy Flour, dates, and honey combines several very nourishing foods into one irresistible delicacy. The flaky, appetizing biscuit holding the date filling makes Madison Date Stix and immediate for luncheons, dinners, parties, and school lunches. Children enjoy them with a glass of milk or crumbled in cream for dessert. When children ask for sweets, give them nature's best. 15 cents per package–6½ oz.

Madison Health Messenger. 1940. 2(3):5.

761. **Product Name:** Fruit Stix (Soy flour biscuit filled with figs, raisins, and dates).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1936 July.
Ingredients: Soy flour, figs, raisins, dates.
How Stored: Shelf stable.
New Product–Documentation: Madison Survey. 1936. July 15. p. 115. Fruit Stix are mentioned.

Madison Survey. 1937. "The soy bean marches on." April 21. p. 59-60.

Madison Health Messenger. 1938. Spring, p. 4. "Fruit Stix. A soy flour biscuit filled with choice figs, raisins, and dates. 15 cents per package–6½ oz." Madison Health Messenger. 1940. 2(3):5.

762. **Product Name:** Kreme O'Soy [sliced bread].
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1936 July.
Ingredients: Wheat flour, water, soy flour, sugar, shortening, salt, yeast, malt...
New Product–Documentation: Madison Survey. 1936. July 15, p. 114-15. "Kreme O'Soy Bread."

Walter M. Kollmorgen. 1943. Tennessee Planner. Sept/Oct. p. 16-17. A photo shows a package of Kreme O'Soy, a sliced bread. The ingredients (though hard to read) appear to be: "Wheat flour, water, soy flour, sugar, shortening, salt, yeast, malt..."

763. *Good Health* (*Battle Creek, Michigan*). 1936. Healthful recipes. 71(8):249. Aug.
• ***Summary:*** Contains recipes for: Baked soy bean sandwiches (using canned baked soy beans). "Soy acidophilus ice cream" (using 1½ Soy Acidophilus Milk, 2½ cups cream, various fruit juices, rinds, and grated pineapple).

Note. This is the earliest English-language document seen (Sept. 2013) that contains the term "soy acidophilus ice cream."

764. Kellogg, John Harvey. 1936. Regimen and technic for changing the intestinal flora. *Good Health* (*Battle Creek, Michigan*) 71(8):230-33. Aug.
• ***Summary:*** The author offers a four-step plan which "has been found efficient in the treatment of hundreds of cases requiring change of the intestinal flora." These include: "1. Liberal carbohydrate feeding (Lactose, Dextrin, Lacto-Dextrin). 2. Discarding of flesh meats (Combe) of all sorts. 3. Increasing the activity and efficiency of the colon so as to

© Copyright Soyinfo Center 2014

secure complete clearance of the intestinal tract at least once in twenty-four hours. 4. Liberal feeding of a potent culture of *L. acidophilus.*

In place of "animal proteins," one should use "milk and vegetable proteins." Note that "milk proteins are less putrescible than are flesh proteins, and besides are protected against putrefaction by the presence of lactose." "The peanut and the soy bean supply a high percentage of protein of most excellent quality... The soy bean provides a basic protein of high quality, and is rich in food minerals and vitamins and has the added advantage that it stimulates the development of the protective flora. This gives to the soy bean special value in efforts to change the flora by special feeding. All soy bean products are to be recommended, especially a milk prepared from this legume which closely resembles ordinary milk in appearance and composition."

Avoid all medical laxatives, which seriously interfere "with the effort to develop or implant a protective flora... Only purely physiologic means may be employed, such as liberal increase of bulkage (Kaba, psyllium seed, agar) and the enema."

765. **Product Name:** Roberts Soy-Wheat Macaroni.
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 430 St. Kilda Road, Melbourne, S.C.2, Victoria, Australia.
Date of Introduction: 1936 August.
How Stored: Shelf stable.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1936. Aug. 15. p. 8. "Look for the name on the packet. Health Brand (a logo illustration shows a stylized portrait of F.G. Roberts wearing a bow tie). 12 ozs. Nett. "Obtainable at all Health Centres." Note: It is not clear who manufactured this product, and where it was made.

Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1937. Sept/Oct. p. 34. "The perfectly balanced food. Made by and obtained at Roberts Health Services throughout the Commonwealth." Address: 40 Chapel St., St. Kilda. Same ad in Nov/Dec. 1937 issue, p. 14 and in the Christmas 1937 issue, p. 19 and 28. However on p. 28 we read: F.G. Roberts, N.D., D.O. [Doctor of Osteopathy], 430 St. Kilda Road, S.C.2.

Note: This is the earliest known commercial soy product made in Australia. In fact, F.G. Roberts Health Food Products, which made only vegetarian food products, launched the first twelve commercial soy products in Australia. The first soy product introduced by Sanitarium Health Food Co. in Australia was launched in 1954. It was named "Soya Beans in Tomato Sauce."

766. Battle Creek Food Co. 1936. Re: The Dionne quintuplets and soy acidophilus milk. Letter to Hon. David Croll, Minister of Public Affairs, Parliament Buildings, Toronto, Ontario, Canada, Sept. 17. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** "On inquiry of Dr. Allan Roy Dafoe you will learn that under his advice the quintuplets make daily use of soy acidophilus milk, a preparation which has cured them of bowel trouble and keeps them free from this distressing ailment. For many months, under instruction from Dr. John Harvey Kellogg, who gave us the formula for making soy acidophilus milk, we supplied the quintuplets with this preparation without charge and even paid the expense of transportation by parcel post. For several months we have been supplying it at a nominal cost. Dr. Dafoe has mentioned the use of acidophilus in papers published in medical journals and the same fact has been broadcast through the newspaper press."

"We are anxious that other infants, thousands of whom are dying of this same trouble every year, should have the benefit of this most efficient and practically unfailing remedy for this very common affection from which all bottle-fed babies are likely to suffer and with a mortality rate of ten times that of breast-fed infants.

"We are preparing to introduce this preparation to both the profession and the public end desire to refer to the experience of the quintuplets as evidence that the claims made for the preparation are valid.

"Will you kindly write us whether we will be expected to pay a royalty for mentioning the fact that soy acidophilus milk is used by the quintuplets and, if so, how much." Address: Battle Creek, Michigan.

767. Kellogg, John Harvey. 1936. Re: Soy acidophilus milk and the Dionne quintuplets. Letter to Dr. Allan Roy Dafoe, The Dionne Quintuplet Guardianship, Callander, ONT, Canada, Sept. 21. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** "We are seeing such wonderful results from the soy acidophilus milk that I feel the time has come when it should be placed before the public so that a larger number of people may benefit by it... this business of making soy acidophilus milk is a purely philanthropic effort. No one will make any money out of it. The patents have been turned over to the Race Betterment Foundation and any profit will be used for educational work along health lines, chiefly the support of Battle Creek College... The manufacture of soy acidophilus milk will never be a large business, but the manufacturers will, I am sure, be glad to pay a modest royalty for use of the pictures of the quints in selling the ideas to the public... There are parties waiting to undertake the manufacture and distribution of soy acidophilus here in the South. P.S. Admiral Byrd has been using this milk with great benefit. During his lecture tour..." Address: Miami, Florida.

768. *Good Health* (*Battle Creek, Michigan*). 1936. Soy milk versus cow's milk. 71(9):275. Sept.
• ***Summary:*** This editorial argues that soy milk is healthier and less subject to food-borne diseases than cow's milk. "The use of soy acidophilus milk is also recommended because it encourages the growth of *acidophilus,* the protective germ which stands guard in the intestine to prevent invasion by the disease-producing organisms."

769. *Good Health* (*Battle Creek, Michigan*). 1936. Heating milk prevents injury to persons sensitized to it. 71(9):280. Sept.
• ***Summary:*** "A better plan is to substitute milk prepared from the soy bean or cow's milk when the latter is found to disagree. Soy milk looks like cow's milk, has essentially the same nutritive value when dextrin or milk sugar is added, and when properly prepared, has an agreeable flavor which infants do not dislike.

"Infants also profit greatly by the use of cultured soy milk, known as Soy Acidophilus Milk."

"Soy milk may now be obtained in condensed form, put up in tins resembling various brands of condensed cow's milk. It is hoped that a good quality of powdered soy milk may be available in dried form."

770. Kellogg, John Harvey. 1936. How to change the intestinal flora: The use of enemas. *Good Health* (*Battle Creek, Michigan*) 71(9):268-70, 284-85. Sept.
• ***Summary:*** This is the third in a 4-part series of articles. Lactic acid, a chemical stimulant provided by Nature to encourage bowel action, is "produced by the action of the protective organism, *Lactobacillus bifidus acidophilus,* which, if present in adequate numbers (85-100 per cent of the bacteria found in the stools) will not only prevent the development of disease-producing germs, thus affording protection against colitis, appendicitis and other bowel troubles, but will secure in a normal colon evacuation after each meal of residues free from ill-smelling putrefaction products.

"Enemas of acidophilus cultures, especially of the soy acidophilus type, such as Soy Acidophilus Milk, are most effective, but ordinary sour milk or buttermilk enemas are useful...

"It is best to use in each enema a mixture of soy acidophilus culture with water, Nuflora and lemon juice or lactic acid... From two to three pints of Soy Acidophilus Milk should be used daily, with one or two ounces of Lacto-Dextrin for each pint of the culture."

For gas distention, use a pint of soy acidophilus milk with an ounce of dextrin and a pint of hot water (115° F). "*Soy acidophilus milk should be used regularly.* One or two pints a day is usually sufficient to keep the flora in good condition if the diet is right."

771. Loma Linda Foods. 1936. Soy milk (Ad). *House of Better Living* (*Newsletter, Los Angeles*) 3(10):4. Sept.
• ***Summary:*** "... with a pleasing taste, and full of nutrition, Soy Milk is one of several Loma Linda Soy Products." A logo, with "Loma Linda Foods" written on a black oval background, shows the company's name. Address: [California].

772. **Product Name:** Glantone.
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40a Chapel St., St. Kilda, Melbourne, Victoria, Australia.
Date of Introduction: 1936 September.
Wt/Vol., Packaging, Price: Price: 2/6 (Postage extra).
How Stored: Shelf stable.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1936. Sept. 15, p. 15. "Glantone–'Gland-tone' means perfect health." The ad features a stylized face of F.G. Roberts. "The Health Food of a Nation. F.G. Roberts' Health Food Products. 40a Chapel Street, St. Kilda." Another ad for Glantone is found in the July/Aug. 1937 issue, p. 36.

Note: This product contained no soy. But note that it was apparently manufactured at 40a Chapel St., a factory that F.G. Roberts would later own.

773. Van Gundy, Dorothea. 1936. Soy beans in the human diet. *Proceedings of the American Soybean Association* p. 22, 24. 16th annual meeting. Held 14-16 Sept. in Iowa.
• ***Summary:*** "The introduction of the Soy Bean into the human diet is no experiment, for it was introduced thousands of years ago to the teeming millions of China, and has been of great success. Careful examination shows that their diet to be well balanced.

"In the occidental countries the soy bean in the diet has been practically unknown until the last few years." This is largely because there is an oversupply of high-carbohydrate foods, while a "careful examination of the diets of a large percentage of the population will show a decided shortage in edible fats and complete proteins. This is due largely to the high price of meat, eggs, and milk. This shortage is supplied in the soy bean.

"There are several reasons why the Soy Bean should increase in popularity in the human diet. These are: 1. Nutritional qualities. 2. Versatility. 3. Economy."

"One of the most outstanding nutritional points in connection with the Soy bean is its high alkaline ash. When added to the diet it builds the alkaline reserve in a remarkable way, thus building the resistance to disease and infection.

"The Soy is unique from the standpoint of versatility, for it can be used in any of the courses in the menu from soup to nuts. It lends itself very easily to methods of preparation that cover up the strong bean flavor usually present. The

© Copyright Soyinfo Center 2014

Orientals have hundreds of ways to prepare the Soy bean and can produce almost any flavor of meat, fish or fowl with various soy products. With such a variety of ways to serve the Soy bean it may be introduced into the diet and used quite freely without becoming tiresome." Address: Manager, La Sierra Industries, Ontario, California.

774. Kellogg, John Harvey. 1936. Re: Soy beans, soy milk, and okara. Letter to Dr. A.A. Horvath at University of Delaware, Newark, Delaware, Oct. 5. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** "I have your letter of Sept. 24th. We have harvested and canned our shell beans and have about 250 bushels of seed of the 78-day variety of beans... It is an excellent green bean variety.

"I have been using the Tokyo bean for milk and find it very satisfactory. Do you know any other varieties of beans equal to it or better? I need a few tons more beans for milk before the new crop arrives, which I understand will be in about two months. I do not find the Manchu or the Dunfield as good for milk as the Tokyo. I find the Tokyo is out of the market. Can you give me any helpful information respecting other varieties that are still available?

"As regards to the effects of soy beans on laying hens, I have not the precise information I ought to have, but I can tell you this: I fed the hens with the residue left after making soy milk. They did not like it very well even when it was mixed with other foods. I used it as a substitute for meat meal and was very much disappointed with the results. The number of eggs began to fall off almost immediately, the chickens lost weight and though I soon discontinued the use of the soy bean they did not seem to recover, but continued to deteriorate. I left them in charge of an experienced poultryman who has hens of the same variety... They began to moult very early and 25 to 30 per cent of them died. It appeared as though feeding with soy residue produced a permanently damaging effect.

"This experience was certainly very disappointing because I thought the soy bean would certainly prove a complete substitute for meat. I even tried to encourage the chickens by feeding them Savita mixed with the residue. This seemed to help a little, but not very much. If you can give me any light on this problem I will be greatly obliged.

"Very truly yours,"

775. LeClerc, J.A. 1936. Partial list of manufacturers of soybean flour. Washington, DC: Food Research Div., Bureau of Chemistry and Soils, USDA. 1 p. Oct. 19. First ed, Oct. 1933. Unpublished manuscript.
• ***Summary:*** The following are listed: 1. Funk Brothers, Bloomington, Illinois. 2. A.E. Staley Manufacturing Co., Decatur, Illinois. 3. Shellabarger Grain Products Company, Decatur, Illinois. 4. Soya Millers, Inc., Seattle, Washington. 5. American Soya Products Corp., Evansville, Indiana. 6. Fearn Soya Food Products, 355 W. Ontario Street, Chicago, Illinois. 7. Hilkrest Health Products, 120 Carroll Ave., Takoma Park, Maryland. 17. The Wilbur-Gardner Company, Glendale, California. 18. General Soya Corp., 120 Broadway, New York, New York. 19. Soybean Products Company, 4900 W. Flournoy Street, Chicago, Illinois. 20. El Molino Mills, 5604 Valley Blvd., Los Angeles, California. 21. Mitchell Milling Co., 5613 Lexington Ave., Los Angeles, California.

Note: This is the earliest document seen (Sept. 2009) concerning El Molino Mills and soy. Address: Washington, DC.

776. Kellogg, John Harvey. 1936. Re: Bifidus acidophilus and Soy Acidophilus. Letter to Mr. John M. Lonsdale, 46 Westwood Ave., Altrincham, Cheshire, England, Oct. 31. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** "Yours of October 17 has reached me here at my winter headquarters [in Florida].

"I first obtained the organism bifidus acidophilus from Dr. Tissier, of the Pasteur Institute, in 1912, and have been making use of it ever since. A report from the laboratory that made the culture for me, a short time ago showed that between 1912 and 1935, we had received from the laboratory over 28,000 gallons of the culture.

"Dr. Tissier informed me that he could not make the organism grow in milk." Dr. Kellogg eventually succeeded in making it grow "in the whey of milk with the addition of peptone, and later a type of acidophilus was developed by making 25 or 30 transfers which grew quite well in milk.

"The trouble is, it seems to me, that the long process of adapting the organism to a cow's milk medium, denatures it so that it doesn't do so well... when attempts are made to reimplant it.

"The new type, Soy Acidophilus, is easily developed by planting the organism in soy milk under exacting laboratory conditions. It starts off a vigorous growth at once.

"The clinical results obtained by the use of the soy acidophilus type appear to be much better than those obtained from the dairy milk cultures, and the count is very much higher.

"It is easy to obtain cultures with a count of four or five billions per cc., which certainly is not often obtained with cow's milk." Address: [Miami, Florida].

777. Kellogg, John Harvey. 1936. Eating fruit before meals.

© Copyright Soyinfo Center 2014

Good Health (*Battle Creek, Michigan*) 71(10):302-03. Oct.
• ***Summary:*** Dr. Kellogg advocates eating thoroughly ripened fruits before meals. The *Lactobacillus bifidus-acidophilus* protects the digestive tract and maintains it in an acid state. If these bacilli are lost, they "may be restored by feeding an artificial culture, made by growing *Lactobacillus bifidus-acidophilus* in milk. Ordinary dairy milk is commonly employed, but recent experiments have shown that a milk prepared from the soy beans produced more vigorous and rapid-growing organisms. The latter culture is now available under the name of Soy Acidophilus Milk. The culture may be had, ready for use, or the milk may be prepared from materials which have been sterilized and assembled in readiness to be prepared at home.

"The writer has made extensive use of the banana in combination with Soy Acidophilus Milk and found this a most effective means of eliminating putrefactive bacteria and thus arresting the putrefactive process in the intestinal tract."

778. Stegman, Henry M. 1936. Hope for the farmer in the soy bean. *Good Health* (*Battle Creek, Michigan*) 71(10):297. Oct. [1 ref]
• ***Summary:*** "The soy bean promises to prove a great boon to the farmer in this country and to create numerous new industries which will relieve unemployment... It might also develop into one of our most valuable foodstuffs." Details are given on the extensive use of soybean protein and soybean oil in cars made by the Ford Motor Company. This is a summary of an article titled "The soybean points the way to agricultural recovery," by Dr. A.A. Horvath (*Scientific Monthly*, July, p. 63-69).

779. Kellogg, John Harvey. 1936. Soybeans as human food. *Nature's Path to Health* (*Melbourne, Australia*). Nov. 15. p. 9.
• ***Summary:*** Dr. Kellogg wrote an article and gave a speech on this subject in the USA in 1930-31. After summarizing the nutritional benefits of soybeans, he discusses a new subject. "The soy bean contains progestin, hormone of the human ovary–Aid in sterility seen. Dr. Willard Allen, biological chemist of the University of Rochester [New York], recently received an award for his discovery that the Soy Bean may be made to reproduce the action of the female reproductive gland. Dr. Allen's discovery was that the action of the corpus luteum of the human ovary, which plays an essential role in the process of reproduction, could be created chemically through the Soy Bean.

"By the use of an extract of pig's corpora lutea injected into sterilised rabbits, after fertilization, it was found that a reproductive process which would otherwise have been interrupted by sterilization, could be continued. In other words, the hormone Progestin, used in this manner would restore the normal reproductive process after an operation which ordinarily caused sterilization.

"After these experiments, the synthetic reproduction of the substance was worked out and the soy bean was found to be the basic necessity of artificial creation. This resulted in the isolation of the female hormone progestin, and on the basis of this discovery, the research was carried still further by Dr. Adolph Butenandt of Danzig [Germany], who announced that he had reached the point where the chemical formula of Progrestin could be stated.

"'Since the hormone plays such an important part in the reproduction, it will probably be found useful in treating sundry disorders in the child-bearing organs of the female,' Dr. Allen said.

"The best form in which the soy bean can be obtained is in the Soy Wheat Macaroni, a scientifically balanced food."

Note: At the end of this article is a short piece stating that Roberts and his organization have campaigned for many years to promote the use of the "Whole Meal Loaf [whole-wheat bread] in the face of severe opposition from vested interests, that have endeavoured to push the claims of the White Loaf." "The F.G. Roberts National Health Organisation is gratified to learn to-day, November 4th, the Commonwealth Advisory Council on Nutrition, tabled [presented] its second report in the House of Representatives, stating that 'Whole Meal Bread is definitely *superior* to White Bread as a Staple Food.'"

780. *Good Health* (*Battle Creek, Michigan*). 1936. The dangerous character of colon germs. 71(11):334-35. Nov.
• ***Summary:*** Doctor Tissier of the Pasteur Institute "made the great discovery that every nursing infant gets from its mother in the act of nursing, a powerful germ which, when properly encourages, is capable of driving out of the human intestine" trillions of unwanted, mischief-making germs. This good and powerful germ, called *"bifidus"* by Tissier and *"acidophilus"* by Morrow, makes harmless lactic acid–the acid of buttermilk, and thus protects the intestine against the germs which cause putrefaction and disease.

"Soy Acidophilus Milk, a superior and highly potent type of *acidophilus* discovered at the Battle Creek Sanitarium, and now available,... [is] perhaps the most effective means of combating mischievous colon germs which directly and indirectly are probably the most active of all causes of disease, senility and premature death." Address: M.D.

781. *Good Health* (*Battle Creek, Michigan*). 1936. The great future of the soy bean. 71(12):360. Dec. 28 cm.
• ***Summary:*** "The soy has many unusually excellent qualities, many of which are presented in a most interesting manner in *Time* [magazine], for October 12." Four long excerpted paragraphs follow.

"Food. Soy beans are ideal for diabetics because they contain little starch."

© Copyright Soyinfo Center 2014

782. *Good Health* (*Battle Creek, Michigan*). 1936. From the editor's pen: The quintuplets. 71(2):366. Dec.
• ***Summary:*** "The Soy Acidophilus Milk which the [Dionne] quintuplets take is given them to prevent the recurrence of the severe bowel infection which they suffered when four months old. They were relieved by the use of Soy Acidophilus Milk after other measures had failed. Whenever the use of this new and most potent type of acidophilus is discontinued, the bowel trouble quickly returns. By means of its regular use, the children are kept in excellent health."

There follows a summary of the use of acidophilus therapy as a curative agent, the work of Dr. Tissier of the Pasteur Institute, and the history of its use by the quintuplets.

Note: The editor is Dr. John Harvey Kellogg.

783. Kellogg, John Harvey. 1936. Metchnikoff's great discovery. *Good Health* (*Battle Creek, Michigan*) 71(12):380. Dec.
• ***Summary:*** "Prof. Metchnikoff and his assistants Tissier and Quinck, all of the Pasteur Institute of Paris [France], made nearly forty years ago, one of the most important discoveries ever made concerning the prevention and cure of digestive and many other disorders.

"Quinck suggested that the pernicious germs found in adult colons, which cause putrefaction, colitis, and appendicitis, and produce poisons which are the active or predisposing causes of many diseases, might be driven out by introducing a germ which would produce no poisons and do no harm.

"Metchnikoff adopted the suggestion and developed and exploited the idea, but failed of success because he selected the wrong germ, the *B. Bulgaricus,* which can not live in the colon.

"Prof. Tissier discovered a milk-souring germ (*bifidus-acidophilus*) which appears in the stools of infants soon after they begin to nurse, and drives out the putrefactive and other poison-forming germs with which the colons of infants become infected almost as soon as they are born.

"As early as 1912, Tissier's discovery was utilized in the United States in saving the life of an infant suffering from acute colitis, by changing the intestinal flora. Since that time the method has been employed in many thousands of cases by the use of milk cultures of the germ, and also by the use of Lacto-Dextrin, a special food which stimulates the growth of *B. Acidophilus* in a most remarkable manner.

"*B. Acidophilus,* or to be more exact the *Lactobacillus bifidus-acidophilus,* is a beneficent germ to which Nature has assigned the task of guarding the intestinal tract and protecting it from invasion and injury by the parasitic germs which cause putrefaction and produce virulent poisons and destructive inflammations... Bottle-fed infants who have never been breast-fed, as in the case of the famous [Dionne] quintuplets" lack the protective germs and thus are very subject to bowel troubles.

One easy way for people to change their "intestinal floras" is by the use of Soy Acidophilus Milk, which (because of recently perfected means) may now be made at home, and is thus within reach of everybody who needs it. Address: M.D.

784. Original Health Food Store. 1936. Soybean products (Ad). *Naturopath and Herald of Health* (*New York City*) 41(12):381. Dec.
• ***Summary:*** Down the left side of this 4.75 by 5½ inch ad is a list of soybean products by brand a price is also given for each: "BakerLust" brand: Soybean milk powder, plain or banana flavored, 14 oz, 1½ lb, or 5 lb. Soya bean vegetable soup powder, trial size, 14 oz, 1½ lb bag. Soy muffins, ½ dozen. Soy bean bread, 14 oz or 26 oz loaf. Soy beans–raw, per lb.

"Vita-Soy" brand: Soybean milk powder, 1 lb, 2 lb, 5 lb. Soya bean vegetable soup powder, ½ lb or 1 lb. Soya confection powder, ½ lb or 1 lb. Soya date sugar, 1 lb.

Madison brand: Soy fruit stix, 6½ oz. Soy date stix, 6½ oz. Soy koff, 12 oz.

Morey brand: Soy cocoa, 4 oz, 8 oz, or 16 oz cans.

Pfaffman brand: Soymac macaroni, 7 oz package. Soy noodles, 7 oz package.

Winroy brand: Soy nuts–roasted, 1½ oz, 8 oz, or 16 oz.

Coyle-Lawson brand: Soy malt–chocolated or plain, ½ lb.

Down the right hand side, under the title "Products of the marvelous soybean," is a brief description of each type of product. The first item, and that with by far the longest description, is "soybean milk powder."

Note 1. This is the earliest English-language document seen (Nov. 2009) that contains the word "BakerLust." It appears to be used as a brand name only for soy products.

Note 2. Benedict Lust apparently owned this store (See ad in the Feb. 1937 issue, p. 64). His brother, Louis Lust, owned a bakery (established in 1903) at Corner 105th St. and Park Ave., New York City. He baked wholegrain breads and related baked goods. Louis used (and may have coined) the brand name "BakerLust" to refer to products he made or sold.

Note 3. This ad also appears (with the same content but in a different form) in the Jan. 1937 edition of this magazine (p. 27), and of *Nature's Path* (New York City) (p. 38). It appeared in the same form in the July 1937 (p. 224) issue. Address: 343 Lexington Ave., New York City.

785. **Product Name:** Saucettes (Meatless Sausages).
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1936.
New Product–Documentation: Gray. 1936. All About the Soya Bean. p. 121.

787. **Product Name:** Soy-Koff (Alkaline Coffee Substitute. Renamed Zoy-Koff in about 1939) [Regular, or Fine Grinds].
Manufacturer's Name: Madison Foods (Renamed Nutrition International Corp. in about 1965).
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1936.
Ingredients: Soybeans, bran, brown sugar.
Wt/Vol., Packaging, Price: 12 oz box or 1 lb bag.
How Stored: Shelf stable.
Nutrition: 6 oz. liquid: Protein 0.8%, fat 0.0004%, carbohydrates 0.98%, ash 0.12%, calories 4.3/100 gm.
New Product–Documentation: Madison Survey. 1936. July 15. p. 115.

Address: George Peabody College for Teachers, Nashville, Tennessee.

789. Gray, George Douglas. 1936. All about the soya bean: In agriculture, industry and commerce. London: John Bale, Sons & Danielsson Ltd. ix + 144 p. Introduction by James L. North. Late curator, Royal Botanic Gardens, Regent's Park, London. Index. 28 cm. [19 ref]
• ***Summary:*** A comprehensive, early work on the soybean. Gray was a Scotch physician. Contents: 1. Introducing the soya bean. 2. The soya bean plant and its cultivation. 3. The soya bean as food: Dietetics, immature green beans, mature dried beans, soya bean coffee, soya bean chocolate, soya bean sprouts, soya bean milk, soya bean flour (incl. Berczeller flour, Soyvita bread made by Messrs. Wm. Beattie, Ltd., Glasgow), bean curd [tofu], soy (also called soya bean sauce, Chinese bean sauce, or shoyu), miso, fermented bean curd (p. 66-67). 4. Soya bean oil. 5. Soya bean trade. 6. The soya bean in agriculture.

Addenda: Soya bean products in the USA. Dieting and recipes. Statistics. India. Bibliography.

In the chapter on "Soya bean oil" we read (p. 75): "In England, the bean oil trade is carried on by the following firms:–The British Oil and Cake Mills Ltd., the ordinary shares of which are held by Lever Bros., Ltd., so that they are a branch of Unilever, Ltd.

"The Hull Oil Manufacturing Co., Ltd., Hull, now merged in the foregoing concern.

"The Premier Oil Extracting Mills, Ltd., Hull.

"Messrs. Wray Sanderson & Co., Hull.

"The Medina Refinery Ltd., Deptford, London.

"Messrs. J. Bibby & Sons Ltd., Liverpool.

"The Erith Oil Works Ltd., Erith" [Kent].

The first addendum, titled "Soybean products exhibited by the American Soybean Association" (at Washington, DC, p. 120-24) lists the following companies and each of the soy products that they manufacture: American Lecithin Corp. (Atlanta, Georgia), Archer-Daniels-Midland Co. (Milwaukee, Wisconsin), Armstrong Paint and Varnish Works (Chicago, Illinois), Battle Creek [Food] Factory (Battle Creek, Michigan), The Blanton Co. (St. Louis, Missouri), Cereo Co. (Tappan, New York), The Davies-Young Soap Co. (Dayton, Ohio), Detroit Graphite Co. (Detroit, Michigan), Eastern Health Food Stores Association (Washington, DC), Funk Brothers Seed Company (Bloomington, Illinois), Harshaw Essential Foods, Inc. (Cleveland, Ohio), Keystone Macaroni Mfg. Co. (Lebanon, Pennsylvania), Kloss, Jethro (Takoma Park, Maryland: Fresh [soybean] milk. Pumpkin pie [soybean milk and soybean flour]. Soybean cheese. Soybean bread [20% soybean flour]. Soybean buns. Soybean sprouts. Soybean cake), Laucks, I.F., Inc. (Bloomington, Illinois–home office, Seattle, Washington), Madison Food Company (Madison, Tennessee; Vigorost, Cheese [Tofu], Soybeans canned with Tomato, Soybeans canned plain, Dixie Fruit Crackers), Mead Johnson and Co. (Evansville, Indiana; Makes Sobee [Infant Formula]), Oriental Show-You Co. (Columbia City, Indiana), Paintcraft Co. (Galesburg, Illinois), Prince Macaroni Mfg. Co. (Boston, Massachusetts), Purina Mills (St. Louis, Missouri; makes Cresol disinfectant, Purina turkey and growing fattening chow, Purina lay chow, Purina egg chowder, Purina breeder egg chowder, Purina fitting chow, Purina rabbit chow, Purina chick Growena chow, Purina 34% cow chow, Purina chowder, Purina bulky cow chow, Purina 24% cow chow, Purina pig and hog chow, Protena all mash starting and growing food), Shellabarger Grain Products Company (Decatur, Illinois), Soyex Company, Inc. (Nutley, New Jersey), Staley Sales Corporation (Decatur, Illinois), The Stamford Rubber Supply Company (Stamford, Connecticut), Dr. Roy Monier, President, Board of Managers, State Hospitals (Jefferson City, Missouri), United Drug Company (Boston, Massachusetts), Vi-tone Company (Hamilton, Canada), Woolsey Paint and Color Co., C.A. (Jersey City, New Jersey), Bureau of Chemistry and Soils, Department

© Copyright Soyinfo Center 2014

of Agriculture (Washington, D.C.). Page 120 adds: "The exhibit also contained some 200 soybean products, mostly foods, brought from the Orient by Mr. W.J. Morse, Senior Agronomist, Department of Agriculture, Washington, DC, U.S.A." Note 1. Morse and P.H. Dorsett were in East Asia from 1929 to 1931, when they collected many samples of soybeans and soyfoods.

In the second addendum, recipes, the author notes that soy flour is widely used in diabetic diets. Two leading firms who make soy flour in England and who also incorporate it in various products are: Soya Foods, Ltd., Rickmansworth, Herts, and Dietetic Foods Ltd. 124 Victoria St., London, S.W. 1. "The former specialize in Soyolk which is flour prepared on the principles laid down by Professor Berczeller; it is a mealy powder, fatty to the touch. The latter firm are the sole distributors in Great Britain of the well-known 'Heudebert' Dietetic Food products, a French concern which makes different kinds of diabetic breads." The following recipes are then given; * = Calls for Soyolk soy flour: Soybeans, southern style. Soybean salad. Roasted soybeans [like dry-roasted peanuts]. Soybean croquettes. Soybean soufflé. Stuffing for baked fish*. White sponge pudding*. Shortbread*. Madeira cake*. Soya soup à la Reine (uses Heudebert soya flour). Soya chocolate (with soya flour). Soya vegetable soup (with soya flour). Soya bean sprout salad.

Note 2. This is the earliest English-language document seen (Jan. 2013) that uses the term "soya bean sprouts" to refer to these sprouts. Address: M.D. (Scotch physician) England. Late medical officer to H.B.M. Legation, Peking, China. Lieut.-Colonel, Retired.

790. Hagstotz, Gideon David. 1936. The Seventh-day Adventists in the British Isles, 1878-1933. Lincoln, Nebraska: Union College Press. 231 p. Index. 23 cm. [611 ref]

• ***Summary:*** Chapter 1 begins with a historical sketch of the early Seventh-day Adventist church in the United States, plus general organization, work and doctrine: 1831-1844–William Miller of Low Hampton, New York, delivers his famous prophetic lectures concerning Christ's return to earth in 1844 (based on Daniel 14 in the Bible). 1844–The "disappointment" when Christ fails to appear, and attempts to predict another date (based on Revelation 14:6-14). Ellen Harmon experiences her first "vision" at age 17. 1845 (about)–A new religious movement is started by Captain James Bates, James White, and Ellen G. White; they follow the Ten Commandments, start to keep the Sabbath on Saturday, and preach the word of God for the "cleansing of the sanctuary" in heaven.

1848 Oct. 30–Ellen Harmon and Elder James White (a Methodist) are married. 1849–A newspaper titled *Present Truth* is published in Middletown, Connecticut, largely under the aegis of James White. "Shortly after this time Mr. and Mrs. White moved their headquarters to Rochester, New York. 1855–They relocated in Battle Creek, Michigan, which later became the SDA denominational headquarters. 1860 Oct.–The name Seventh-day Adventists is adopted at a conference held in Battle Creek. 1863–There are now about 3,500 Seventh-day Adventists having about 125 churches. 1873–There are now about 5,875 Seventh-day Adventists. 1893–The number of the SDAs has increased to 37,404. 1903–The SDA denominational headquarters is moved to Washington, DC, from Battle Creek.

Chapter 2 is "Organization of the British Union Conference," and Chapter 10 is "Medical Work and Health Food Factory." A merged chronology follows: From 1878 "until 1 July 1902, when the British Union Conference came into existence, the General Conference of Seventh-day Adventists located at Battle Creek, Michigan, directly controlled the denominational mission program in the British Isles." The headquarters was in London.

1898–Definite denominational medical endeavors began when Dr. D.H. and Dr. Lauretta Kress arrived in England under the auspices of the General Conferences of SDAs.

1899–These physicians began to publish a magazine devoted to healthful living titled *Life and Health.* They also "started a small 'health home' in Dunedin, a country villa Meadville, near Redhill Surrey, which they reported full to capacity by November of the first year."

1899 (about, p. 146)–"The first venture at manufacturing health foods by the Seventh-day Adventists in England began in conjunction with the Sanitarium work of Dr. D.H. and Dr. Lauretta Kress near Redhill, Surrey. Here the International Health Association purchased Harley Mill, which it enlarged and called Salford Mill before starting production of health products. The management imported some of the machinery and purchased the remainder in England. The products resembled the noted Kellogg and Post health foods; in fact the association had procured the 'rights' to make Battle Creek foods in England.

"Early in 1900, just after the factory gave promise of developing into a profitable industry, fire destroyed the plant... With the undamaged machinery as a nucleus for a new start, the Association leased property in Birmingham [far to the northwest, between London and Manchester] the following November [1901] where it functioned as a stock holding company under British law. Unfavorable conditions in the form of high rent and improper location" led to "a financial loss of £1,500 at the end of the first year of operation." Thereafter "each year the plant showed a profit in spite of some competition created by substitutes for the commodities it produced."

In the spring of 1900, Dr. and Mrs. Kress had to leave England. But before they left, Dr. A.B. Olsen and his wife, also a physician, had arrived in England to replace them. The first magazine was discontinued.

1901 Oct.–A new health journal, *Good Health*, appears

© Copyright Soyinfo Center 2014

on the market thanks to a gift of $300 from Dr. J.H. Kellogg and $400 worth of advance subscriptions. By Feb. 1902 this periodical had reached a circulation of 30,000. Note: It advocated a vegetarian diet.

1902 Aug.–During the Bank Holiday the SDA food factory's products were served as refreshments at the Salvation Army gathering at the London Country Athletic Grounds, Herne Hill; they were widely praised.

1903 March–Dr. Olsen completes the purchase of a small hydropathic institution in Caterham, Surrey, 18 miles south of London. The new property is named Caterham Sanitarium and Surrey Hills Hydropathic. The Sanitarium as soon thriving.

1906–A company named the Seventh-day Adventist Union Ltd. was created at the annual meeting to care for SDA property and transact all legal business with dispatch. "After some negotiations the company purchased an estate known as The Stanboroughs for £8,250. This property, located near Watford, England, about 15 miles northwest of London, included fifty-five acres, a large residence and stables all surrounded by timber. Here the British Union Conference located its publishing plant, food factory, college, and sanitarium." In Dec. 1906, when the Union Conference gained possession of the property, the denominational headquarters was moved to here from London, where it had been located since 1877.

1907 Oct.–The SDA food factory closes in Birmingham and starts to operate at Watford, 15 miles northwest of London. From 1907 to 1914 the SDA health food factory liquidated a deficit of $7,000 and indicated a yearly profit of $3,000 to $400.

1908 Dec. 31–Organizations owned by the British Union Conference include "The International Health Association Limited, The Good Health Association Ltd., and Stanborough Park Training College..." (p. 28).

1913–The International Health Association recorded a net profit of $3,930. Then came World War I and hard times, but business continue to improve.

1918–By the end of this year "the factory could no longer supply the demand, although operating on a twenty-four hour schedule with forty employees." Assets totaled $28,800 whereas liabilities were only $5,400.

1926–The International Health Association is renamed Granose Foods Ltd. By year's end the company had no more liabilities.

Note 1. Seventh-day Adventists appear to have been the first to make health foods in the UK, starting in 1899. In 1896 or 1897 a vegetarian restaurant opened in a new building on Corporation Street in Birmingham. James Henry Cook was appointed the manager. The landlord asked the consortium of businessmen funding the restaurant if they would like to use the whole seven story building and convert the upper five stories into a hotel. They agreed to do so. Thus, in the summer of 1898, the Pitman Vegetarian Hotel, the first Vegetarian Hotel in England, opened in Birmingham, again with James Henry Cook appointed manager. In about 1902, James Henry Cook opened a health food store either in the hotel or nearby, and some time after that he began to manufacture health foods in Birmingham. The manufacturing company was initially named the Pitman Health Food Co., but in about 1929 it was renamed Vitaland. Unfortunately the last two dates are not known. (See Kathleen Keleny. 1996. *The First Century of Health Foods*).

Note 2. This book is very well documented with 515 footnotes and 96 bibliographical references from both primary and secondary sources. Gideon David Hagstotz was born in 1896. Address: PhD.

791. Richter, John T. 1936. Nature–The healer. As edited by Henry Winfred Splitter, M.A. (Univ. of Wisconsin). Los Angeles, California: Published by the authors. 433 + [6] p. Illust. Index. 21 cm.

• ***Summary:*** John T. Richter was born in 1864. He earned his Doctor of Chiropractic and Naturopathy in Minnesota, but he did not practice "since coming to California. The management of his restaurants and educational work connected with the live-food movement have demanded his entire time." This book is dedicated to "to humanity whom we serve."

Perhaps the most interesting part of this book is the Biography (on unnumbered pages at the front). "My father was a country physician of the conventional medical type. He also owned a drug store in the little North Dakota town of Fargo" in which I was raised. He wanted me to be a medical doctor, just as he was; but, as it happened I had worked as a young man, for nine years in his drug store, and had had plenty of experience in the compounding of inorganic and organic drugs. I had observed their effects on my father's patients. He decided to send me to the Rush Medical College in Chicago [Illinois], and he thought it was strange when I showed no desire to fulfill his wishes."

He did go to Chicago and earned some type of diploma from an unnamed "institute" that taught the "'movement-cure' in which the general theory and practice of vegetarianism of the cooked food type was incorporated.

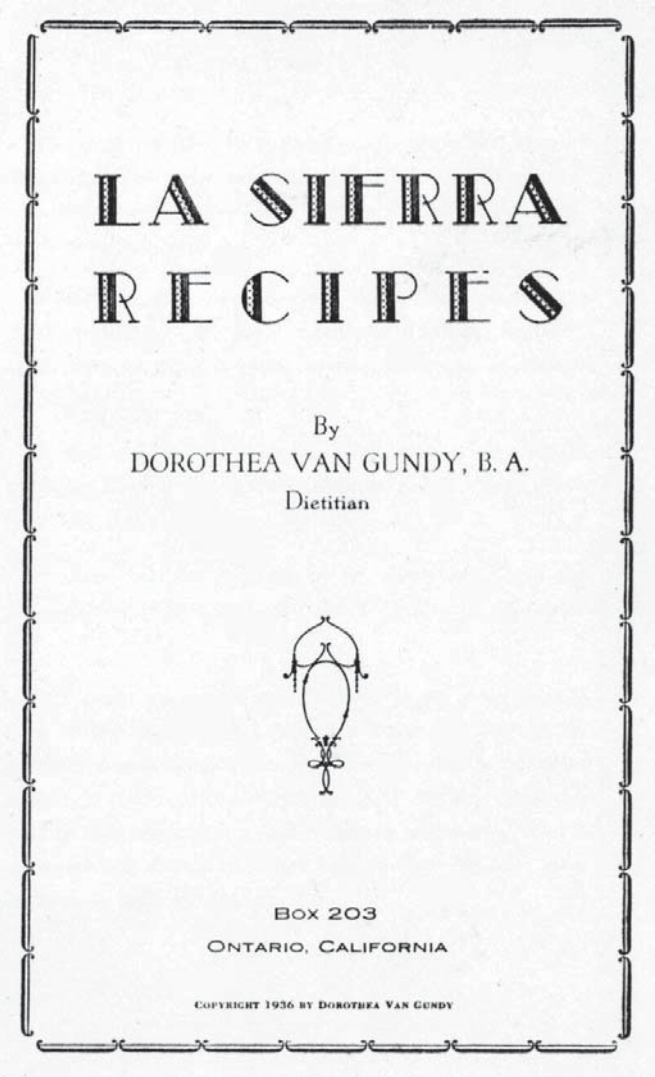
When he returned home, his father, upon seeing his degree said it was "quack." John drove with his father on rounds to see his patients. Some 20-30 were incurable charity patients. John offered to take all these from his father. Soon he had cured them all. "Notice all that all these cures were accomplished under the Battle Creek system of diet–cooked food vegetarianism, with a considerable amount of green vegetables and fruits. The results I had obtained were marvelous."

"After having lived for 15 years largely on a cooked-food diet (no meat, of course). I noticed that something was physically wrong with me. My kidneys were not functioning properly. I seemed to lack recuperative energy." He often

© Copyright Soyinfo Center 2014

felt tired. He then read an article in a naturopathic magazine "describing how a certain Dr. Lust had been invited by Dr. George Drew of Chicago to partake of an uncooked food dinner." He decided to give the new diet a trial. "Dr. Drew came to Minneapolis to teach me as well as the class I had organized for him." After 9 months he felt much better. Tests showed his blood had changed from acid to alkaline. His weight, which began at 145 pounds, dwindled to 123, but eventually returned to 145 plus a little more. "For 25 years now I have lived according to this [raw food] system." He was in his late 40s when he started. "Today, at age 72 (I was born in 1864), I can do more work, can do it more accurately, than I could when I was 35."

This book consists of a number of health conditions / problems, foods, and stimulants, arranged in alphabetical order, and his advice concerning each. For example: Abscesses, acidity, adenoids, adhesions, alcohol, aluminum, anæmia, apoplexy, appendicitis, appetite, arthritis, asthma, auto-intoxication, bacteria and germs, etc. Other interesting sections include drugs and drug poisoning, eggs (forbidden), fasting, food–cooked, meat, milk, patent foods, philosophy of live food, sex, tobacco, vaccination, vegetable and olive oils, and vegetables and legumes.



He repeatedly advises people to "eat natural foods" and to live naturally. Richter was opposed to alcoholic beverages, coffee, cooked foods, dairy products, meat, salt, sugar, tobacco, and vaccination. He advocated conservation of bodily energy through continence–except for the purpose of reproduction. A full page portrait photo (frontispiece) shows John T. Richter.

Note 1. The index is largely useless, since it simply lists health conditions in alphabetical order. Note 2. Despite the bibliography, this book contains relatively little information about John Richter's life. When and where did he earn his "Doctor of Chiropractic and Naturopathy"? How long did it take him to complete the course? When did he move to California (by 1917) and when did he start each of his living food Eutropheon restaurants there (by Sept. 1923)? When and where did he meet his wife (who was very active in his restaurants and educational work)? When and where were they married? Address: 2844 Avenel St., Los Angeles 26, California.

792. Rombauer, Irma S. 1936. The joy of cooking: A compilation of reliable recipes with a casual culinary chat. Indianapolis/New York: Bobbs-Merrill Co. v + 628 p. Illust. by Marion Rombauer Becker. 24 cm.

• ***Summary:*** This is the earliest known edition of *Joy* published by Bobbs-Merrill. Soy is not mentioned in the index; neither is "vegetarian"–although recipes for three "meatless" soups are given (p. 29-30). However soy sauce is used in: Chow mein with fried noodles (p. 96). Chicken chop suey (p. 96). Soy sauce is not mentioned as a seasoning for gravy, sauces, or soups–but Worcestershire sauce is (p. 248). Under "Soups" (p. 22) we read: "Canned bouillon and beef cubes are in general use, but Savita, a meatless Battle Creek product, is a better substitute..." The amount of meat and sugar used in this cookbook is surprising. Address: St. Louis, Missouri.

793. Van Gundy, Dorothea. 1936. La Sierra recipes. Campus and Maitland, Ontario, California: Published by the author. 47 p. 19 cm.

LA SIERRA
RECIPES

By
DOROTHEA VAN GUNDY, B. A.
Dietitian

BOX 203
ONTARIO, CALIFORNIA

COPYRIGHT 1936 BY DOROTHEA VAN GUNDY

• ***Summary:*** Most (but not all) of the recipes in this book call for soy-based ingredients. Contents: Dedication. "This book is lovingly dedicated to the memory of my father." Foreword: "Due to the increase of disease in the animal kingdom, the diet should be as free as possible from these elements, including meat, eggs, and milk." Approximate composition for La Sierra Products: Soy butter [soynut butter] (27.6% protein, 47.1% fats). Soy breakfast food. Soy flour. Cooked soy beans. Soy loaf. Milk. Bean sprouts. Soy cheese [tofu]. Soy spread. Soy bologna. Dry soy beans.

© Copyright Soyinfo Center 2014

1. The soy bean as a human food: Nutritional value, varieties of soy beans, flour, soy milk, soy milk from flour, soy milk from raw beans, soy cream (made by homogenizing / blending equal parts of soy milk and soy oil or other vegetable oil), soy cheese, soy bean sprouts, soy sauce.

2. Soups: Incl. Soyament bouillon. Many use Soyament (Soy Sauce), soy milk, or soy cream. 3. Entrees. Recipes incl. Soy croquettes (with Soy Bean Pulp and Smoein). Walnut Loaf (with Smoein and soy milk). Soy protose (with soy butter and Mamenoko flour). Gluten patties (with Smoein). Soy cheese with tomato sauce. Soy cheese croquettes. Soy cheese and Soyament sauce. Baked macaroni with La Sierra Vegetable Bologna. Soy loaf. Soy loaf a la king. Baked soy noodles. Chow mein (with La Sierra Soy Cheese). Lentil patties (with Smoein).

4. Sauces and gravies: Many use soy milk, Smoein, or soy sauce. 5. Vegetables. Incl. Creamed vegetables (with soy milk). 6. Salads and salad dressings. Soy recipes include: Carrot and soy cheese. Tomato and soy cheese. Pineapple and soy cheese. Stuffed celery (with soy cheese). Soy loaf salad. Cabbage and banana salad (with soy mayonnaise). Head lettuce (with soy butter dressing). Salad dressing (uses soy milk in place of eggs). Soy mayonnaise [Note: This is the earliest recipe seen for a soy mayonnaise]. Tomato mayonnaise (tomato juice beaten into soy mayonnaise). Thousand island dressing (with soy mayonnaise). Parsley and olive dressing (with soy mayonnaise; uses ¼ cup chopped olives, not olive oil). Soy cream dressing. Soy butter dressing [with soynut butter]. Cream golden dressing (with soy cream). French dressing (with soy oil or any vegetable oil).

7. Desserts. * = with soy milk. + = with soy cream. Cream rice pudding*. Rice pudding+. Blanc mange*+ [Blancmange]. Orange cream pudding+. Lemon fluff+. Fruit fluff+. Cream tapioca*+. Frozen pudding*+. Vanilla Ice Cream*+. Almond cream [Almond ice cream] (incl. 1 cup chopped almonds)*+. Strawberry sherbet+. Raspberry sherbet+. Butterscotch chiffon pie+. Lemon pie+. Banana cream pie*+. Pumpkin pie without eggs*. Soy pastry with soy flour. Soy cookies+.

8. Bread: Soy bread (with 4 cups entire wheat flour and 1 cup soy flour). Entire wheat bread (with 2 cups soy milk). Entire wheat sticks (with 3 parts wheat flour and 1 part soy flour). Corn meal crisps (with 4 parts corn meal, 3 parts wheat flour, and 1 part soy flour). Short cake (with 2 parts soy milk, 5 parts wheat flour, 1 part soy flour). Waffles (with 12 parts wheat flour, 2 parts soy flour, and 7 parts soy milk).

9. Sandwiches: Soy bean filling. Vegetable bologna. Soy delight filling (with soy[nut] butter). Soy cheese and raisin sandwiches. Soy butter (soynut butter thinned with tomato juice). Soy butter and honey. Soy cheese and olive [chopped green olives]. Soy spread [Made by La Sierra]. Sandwich salad (with many soy possibilities).

10. Beverages: "A very fine coffee substitute is made [by La Sierra] from the Soy Bean, and tastes remarkably like Coffee. It is particularly fine from an alkaline standpoint, and is particularly excellent to be used in connection with high alkaline diets." Soy-co (Beverage) Add 1 rounding teaspoon to 1 cup of water. "Percolate or boil until desired strength. Serve plain or with Soy Cream." Also delicious iced. Soy-co (Made with soy milk). Soy milk shake. Soy banana drink. Mamenoko drink (uses 3 tablespoons Mamenoko, which is processed soy flour). Soyament cocktail ("A very refreshing beverage may be made by using 1 to 2 tablespoons Soyament sauce to 1 cup of water").

11. Healthful confections: Beanut brittle (2 cups each Soy Beanuts and brown sugar). Victoria fudge (with "3/4 c Soy Milk").

Use of soy beans in the diet: Outline for 3 meals. Suggestion for 3 days' menus, using soy products.

La Sierra Industries manufactures the following 14 foods from soy beans: Canned soy beans, plain or with tomato sauce. Soy loaf. Soy vegetable bologna. Soy milk. Soy breakfast food. Soy butter [like peanut butter]. Soy-co (beverage) [coffee substitute]. Smoein (smoked meat flavor). Soy spread. Soy flour, raw and processed. Soy beanuts (parched soy beans).

Soyament brand bean sauce. This soya bean sauce is "prepared from soya beans by splitting up the bean protein by a special process which thoroughly decomposes it into Amino Acids. A number of Amino Acids, each possessing a sweet taste, is the most remarkable feature of the Soyament Sauce and makes it different from many of the so-called soy sauces... On sale at all grocery stores or write to Soya Bean Products Co., 3522 East Third St., Los Angeles."

In the section on "Soy milk" (p. 8) is a long quotation from Dr. [Walter] Siegmeister: "So well has the Soy bean served as a source of vegetable milk, that the records tend to show that it has proven superior to cow's milk in certain important respects. The most marked of these is the almost complete absence of rickets in China, which is quite probable in view of the fact that not only is the Soy bean rich in Vitamin D, but also in Calcium and Phosphorous, the chief requirements for healthy bone development."

Note: This is the earliest document seen (Dec. 2003) that mentions a soy-based shake. It is also the earliest English-language document seen (Dec. 2003) that uses the term "Milk Shake" to refer to a non-dairy soy milk shake or that contains the term "Soy Milk Shake" (p. 41). The recipe with that title states: "Soy Milk may be mixed with any of the fruit juices and beaten with a small amount of chipped ice. It fluffs up and is very palatable. Soy Milk and orange juice combine splendidly." Address: Dietitian, Box 203, Ontario, California.

794. Jones Grain Mill. 1936? Natural foods: Catalog, recipes, information. Los Angeles, California. 74 p. Undated. 22 cm. • ***Summary:*** On the cover is a white mill behind a mill wheel

(unrealistic) on a mill pond. Contents: Foreword. Health recipes: Cereals (incl. Soy bean or Mamenoke {Mamenoka, Mamenoko} breakfast cereal), breakfast cakes (incl. soy hot cakes with soy milk and Mamenoka flour, soy waffles, soy bean griddle cakes), desserts, breads (incl. soy bean flour gems, whole wheat bread), candies. Vital information: Vitamins and minerals essential to life.

Price list (prices are given for each item listed on pages 46-72): Alberty products, Alvita products, Battle Creek Sanitarium Health Foods [Michigan] (p. 47-48), beverages–coffee substitutes (Loma Linda Breakfast Cup, Soyco {soy bean coffee}, Javex {soy bean}, Carque's Soy Bean Coffee), books (by Dr. Benjamin Gayelord Hauser, Paul C. Bragg, Mrs. Alberty, Martin W. Pretorius, Otto Carque, Clark Irvine, Dr. Harry Finkel), Dr. Paul Bragg products, Jones Grain Mill Bakery (operated by Alberty Specialty Bakers), Burbank products, Carque's products, crackers and toast (Cubbison's bulk or packaged), honey, jams & jellies, juices (fruit & vegetable), KAL products, kelp products (products of the sea, incl. sea lettuce, dulse, Parkelp), Kovac products, Loma Linda Foods (Soy products: Soy beans–plain, tomato, or tomato and Proteena, Soy milk–8½ oz, No. 1, or No. 2, Soy Mince sandwich spread), macaroni & noodles (incl. soy bean macaroni, soy bean noodles), meat substitutes (incl. Simoein [Smoein], Soy loaf, Alfa Soy Spread, Soy Mince) McCollum products, maple syrup and candies, Martin Pretorius products, nuts and butters, Nature Ade products, Nutro Links (Santay, Swiss, Hauser), oils, olives, Radiance products, salts (vegetable, vegetized, and vegetablized), salad dressing and mayonnaise (made with lemon and vegetable oil), health sugars and sugar substitutes, seeds, soya bean products, teas.

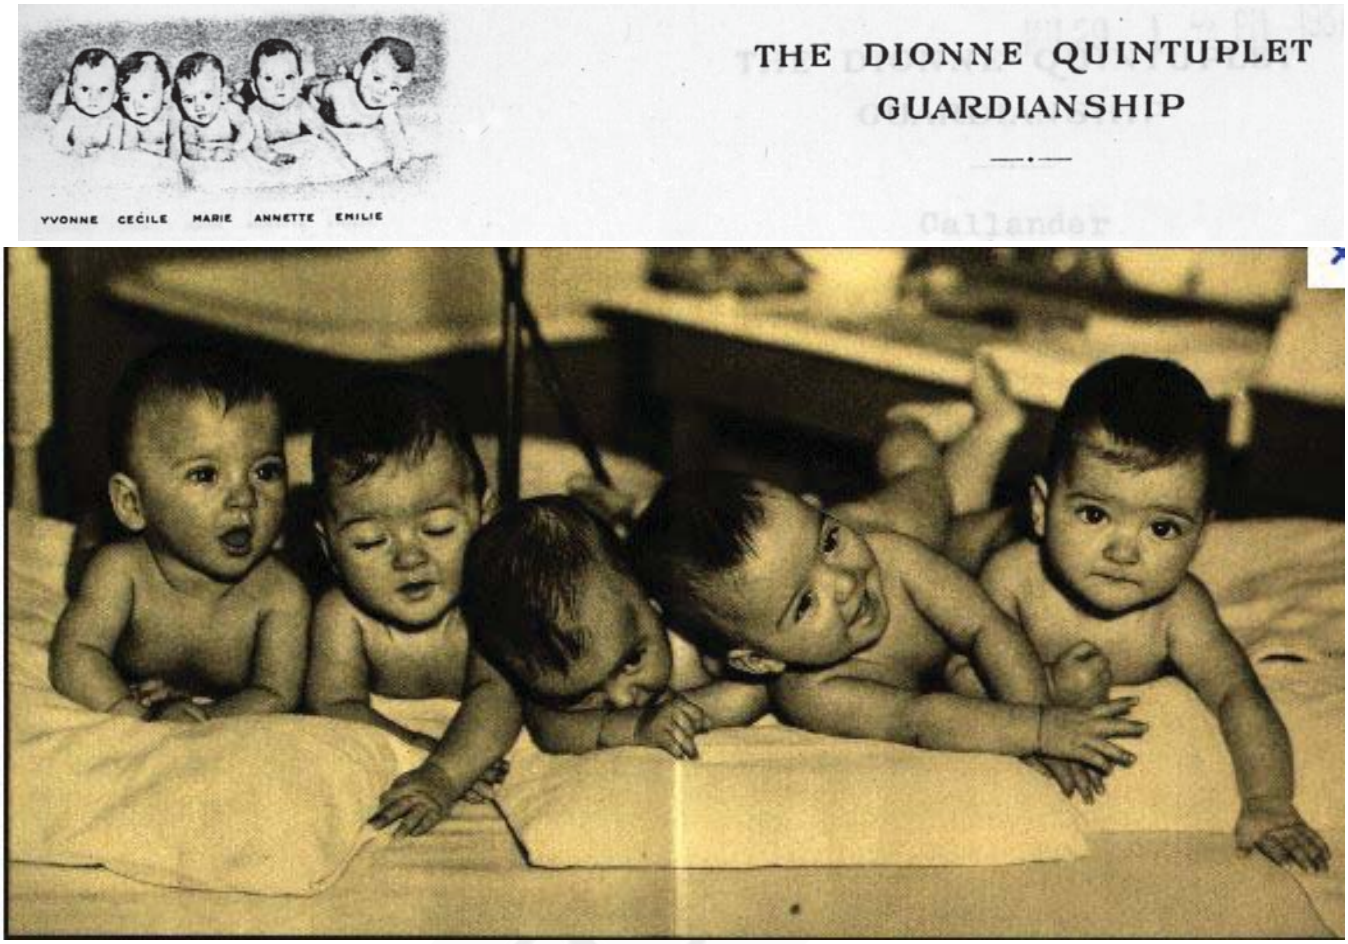
The price list of "Soya bean products" (p. 72) reads as follows: "Breakfast Cereal with Carob Flour ([and soya beans] tastes like Grape Nuts), pkg., 25¢. Breakfast Cereal (prepared [with soya beans]), pkg., 25¢. Soya bean flakes, pkg., 30¢. Soya bean grits, pkg., 25¢. Soya bean bread, lb. loaf, 14¢. Soya bean melba toast, lb., 30¢. Soya bean wafers, lb., 40¢. Soya bean cookies (sweetened with dextrose), doz., 15¢. Soya bean coffee cakes (sweetened with honey), each, 5¢. Soya beans cooked: Soya beans (plain cooked), No. 2 can, 13¢. Imported soya beans from Manchuria, lb., 10¢. Pre-cooked soya beans (easily prepared in 30 minutes), lb., 15¢. Soya beans with tomatoes (ready to serve), No. 2 can, 15¢. Cooked soya beans with Proteena, No. 2 can, 15¢. Other soya bean products: Non-fattening [sic] soya bean oil (for all cooking purposes), pint, 40¢. Soya bean coffee, lb., 25¢. Soya bean flour, lb., 10¢; 3 lbs., 25¢. Dextrinized soya bean flour, lb., 15¢. Soya bean milk flour, lb., 60¢. Soya bean candy (with pure chocolate and Dextrose), lb., 50¢. Soya bean sandwich spread, 25¢. Soy sauce, 20¢. Soya bean loaf, No. 2 can, 25¢. Soya bean milk, No. 2 can, 15¢. Soya bean cheese (made from soya bean milk), lb., 30¢. Soya bean mince, 8-oz. can, 25¢. Soya bean spaghetti, lb., 25¢. Soya bean macaroni, lb., 25¢. Soya bean noodles, lb., 25¢. Soy beverage (Cocoalette), 10¢.

Ads include: Hollywood Cup (p. 20). Otto Carque Co. (Glendale, California, p. 30). Loma Linda Foods (p. 33, sells soy wafers, three styles of soy beans, liquid soy milk, soy mince). Vita-Pekan (p. 46, formula includes soya bean as a major ingredient). Alberty dried brewers yeast (p. 50). Kovac Laboratories (p. 67). Cubbison (p. 73, incl. Soya Toast, Soya Cookies, Soya Gluten Crackers).

Note: This catalog was probably published in 1933, since the company's location in Beverly Hills is not mentioned; it opened in 1934. Moreover, the book titled *Vital Facts about Foods,* by Otto Carque was first published in 1933. Address: 322 So. Hill St. and 504 So. Broadway. Both: Los Angeles, California.

795. Dafoe, Allan Roy. 1937. Re: The Dionne quintuplets, dried soy bean milk, and soy acidophilus milk. Letter to Dr. John H. Kellogg, Miami-Battle Creek, Miami Springs, Florida, Jan. 4. 1 p. Typed, with signature on letterhead.
• ***Summary:*** See next page. Dr. Dafoe is the attending physician for the Dionne quintuplets. He thanks Dr. Kellogg for the shipment of fruit which arrived today. "Since writing you last you have also favored us with the dried soy bean milk and the gallon shipment of acidophilus, both of which, you may be sure, are appreciated."

Note: On the letterhead is a photo of the five babies with their names printed under each: Yvonne, Cecile, Marie, Annette, and Emilie [spelled Emelie by Feb. 23].



On Jan. 27 Dr. Dafoe writes Dr. Kellogg requesting that he double the amount of acidophilus sent each week. On the letter is written by hand: "1 case been shipped weekly for 6 months." Next to it is a stamp: "Approved–Jan. 29 1937. Credit Dept."

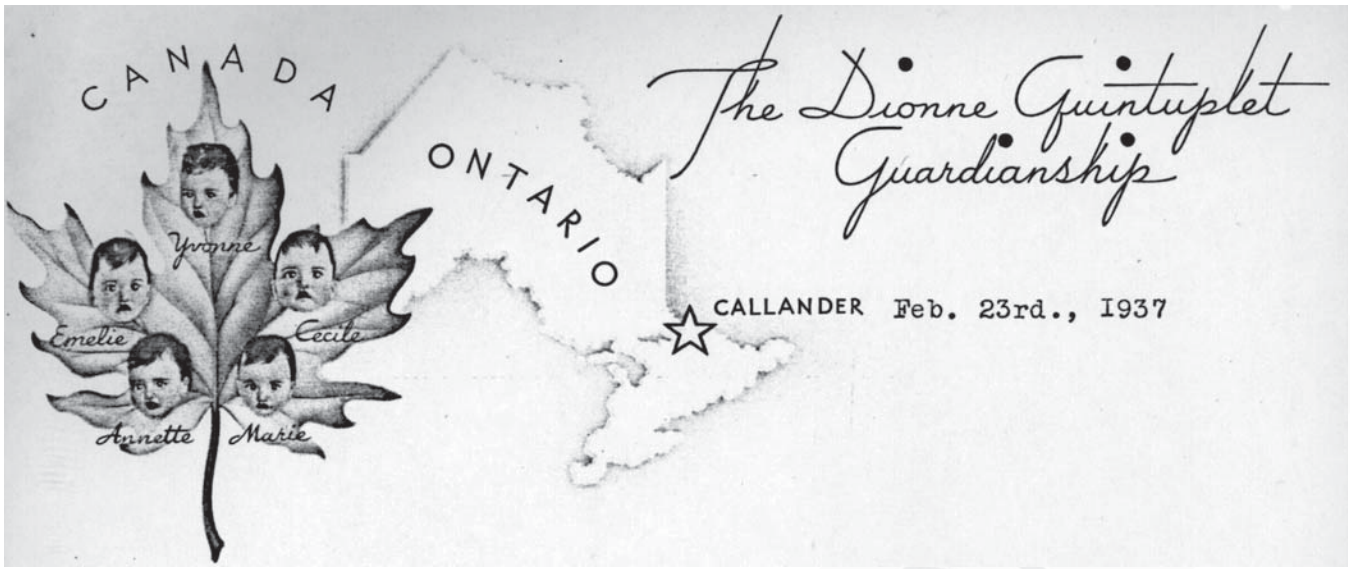
On Jan. 29 Dr. Kellogg writes that he is sending a number of special foods especially designed for infants, made by his Battle Creek Food Company in Michigan. One of these is made from the soy bean. "It may interest you to know that the specimen of soy acidophilus milk which I sent you is particularly rich in vitamins B and G, containing 50 units per 10 grams of vitamin B and 90 units of vitamin G." He then raises the idea of using a picture or pictures of the quintuplets in connection with the sale of these infant foods if is agreeable to the trustees of the Guardianship to do so.

In another letter of 29 Jan. 1937 to Hon. David Croll, Minister of Public Affairs, Parliament Buildings, Toronto, Ontario, Canada, he proposes the same idea, but now with a royalty payment: "We have an application from two other milk companies who desire to manufacture and distribute our soy acidophilus milk. We will be greatly pleased if you can see your way clear to quote us terms for a royalty arrangement." Address: The Dionne Quintuplet Guardianship, Callander, Ontario, Canada.

796. *Good Health* (*Battle Creek, Michigan*). 1937. Cow's

© Copyright Soyinfo Center 2014

milk harmful to both infants and adults. 72(1):22. Jan.
• ***Summary:*** "Allergic reaction, or sensitization, to cow's milk is most common in infants and young children but no age is exempt from it." And it is becoming more and more widespread, according to an article by Dr. Charles G. Kerley in the *New York State Journal of Medicine.* The allergy in children may take one of three forms: Shack, gastrointestinal symptoms, or skin reactions (eczema, urticaria, giant hives, etc.).



"The best plan for securing quick relief in these cases is to feed Malted Nuts or a vegetable milk prepared from the soy bean. Milk prepared from almonds or pecans may also be used successfully." Address: USDA, Washington, DC.

797. Kellogg, John Harvey. 1937. Re: Soy acidophilus milk, cottage cheese, and the Dionne Quintuplets. Letter to Dr. Allan Roy Dafoe, The Dionne Quintuplet Guardianship, Callander, ONT, Canada, Feb. 11. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** Dr. Kellogg is sending Dr. Dafoe a box of oranges and other fruits, plus a new table showing the vitamin content of different foods. "I am also sending you a package of soy acidophilus cheese which resembles cottage cheese in appearance. It is made from soy acidophilus milk in essentially the same manner in which cottage cheese is prepared. With the addition of thick cream, sweet or sour, and if desired, a little salt, it becomes as palatable as ordinary cottage cheese and has the advantage that it contains a high percentage of *Lactobacillus acidophilus.* A count made today (February 11) shows 250 billion to the gram. I thought the quintuplets might like this for a change.

"If you will consult the table you will see that the soy bean is a good source for vitamin B and also one of the best of all known vegetable sources for vitamin G. This gives an additional value to soy acidophilus milk and other soy bean preparations." Address: M.D., Battle Creek, Michigan.

798. Kellogg, John Harvey. 1937. Re: Dr. Tissier's bifidus culture and soy bean milk. Letter to Prof. A. Besredka, 25 Rue du Docteur Roux, Paris, France, Feb. 20. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** Prof. Besredka of the Pasteur Inst. is a world-famous bacteriologist. "I have been much interested in the work initiated by Metchnikoff in relation to changing the flora. I think I have made much more use of this principle than any other person. I obtained from Dr. Tissier a culture of his bifidus... I began quite extensive use of the culture in 1912, and between that time and 1935 used over a

© Copyright Soyinfo Center 2014

hundred thousand gallons of the culture in the treatment of my patients at the Battle Creek Sanitarium where we had annually about 12,000 patients until the late depression which cut down our patronage about one half, but it is coming back...

"I have found that the organism grows much more rapidly in a milk prepared from the soy bean than in cow's milk. It seems, in fact, to produce a new type. This new type, which we call Lactobacillus soy acidophilus, has been studied by a number of bacteriologists in this country. It occurred to me that perhaps you might be willing to make such a study for me." Address: Miami, Florida.

799. Moffatt, R. Gordon. 1937. Re: The Dionne quintuplets, meltose, and acidophilus cheese. Letter to Dr. John H. Kellogg, The Miami-Battle Creek, Miami, Florida, Feb. 23. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "In the absence of Dr. Dafoe, who has been a patient in the Toronto hospital the past two weeks, I am writing to acknowledge the receipt of your two letters of Feb. 11th and one of Feb. 17th. They will receive the Doctor's attention on his return home next week.

"Please let me acknowledge receipt, for the doctor, of the meltose, acidophilus cheese, and box of fruit which you kindly sent him recently."

"The quintuplets, fortunately, had only slight colds for a few days, from which they have now completely recovered.

Note: The Guardianship now has a new letterhead with the photo and name of each baby against the background of a maple leaf. Clockwise, their names are Yvonne, Cecile, Marie, Annette, and Emelie [formerly spelled "Emilie"]. Behind the Maple Leaf is a map of Ontario, Canada, showing the location of Callander. Address: Secretary to Dr. A.R. Dafoe, The Dionne Quintuplet Guardianship, Callander, Ontario, Canada.

800. *Nature's Path to Health* (*Melbourne, Australia*). 1937. Soy bean recipes. Jan/Feb. p. 11-12.

• ***Summary:*** "Soy Beans are among Nature's greatest gifts to mankind. It has constituted the chief source of protein food of hundreds of millions of Oriental people for over 4,000 years of recorded history and for centuries prior to that time. Soy Beans play a much greater role in the nutrition of these people than does wheat in our country. It was sown yearly with great ceremony by Emperors of China, and poets in the ages before the Christian Era extolled the virtues of the Soy Bean in its services to humanity.

"Weight for weight the protein yield from Soy Bean is approximately twice that of meat, four times that of eggs and cereals, five times that of bread, and twelve times that of milk. As compared with meat, Soy Bean is free from ingredients which form uric acid It is an energy producing food and it is also one of the cheapest foods." Describes how to soak and pressure cook soy beans, and to mash them to make Soy Bean pulp.

Gives recipes for: Baked beans. Soy beans southern style (seasoned with a dash of Marmite). Baked soy bean croquettes (with 2 tablespoons copha [vegetable shortening] and 3 cups Soy Bean pulp, cooked and ground). Soy bean loaf. Soy bean vegetable soup. Soy loaf (with eggs). Soy bean souffle. Salad.

Note: A 4-page illustrated brochure titled "Curative Exercises," published at about this time, is by Mrs. G.M. Roberts–Osteopath, Dietitian, and Curative Exercise Expert. Associate Principal of–Roberts Health Academy. Head Office: 284 Post Office Place, Melbourne.

A large chart published by Roberts in the late 1930s, titled "Food Combination Chart," shows that he was interested in combining foods in what many naturopaths considered good and bad combinations. Thus, protein foods (incl. beans and nuts) were a bad combination with cooked fruit and acid fruit, and a fair combination with starch

© Copyright Soyinfo Center 2014

(such as bread, rice, cereal grains, and potatoes). Address: Australia.

801. *Nature's Path to Health* (*Melbourne, Australia*). 1937. Directory of health aids. Jan/Feb. p. 25.
• ***Summary:*** This is a directory of F.G. Roberts' health stores, services, and clinics in Melbourne, Ballarat, Geelong, Adelaide, Cessnock, Bundaberg, Newcastle, Sydney, Toowoomba, Brisbane, Rockhampton, and Maryborough. A nurse, osteopath, or "consulting practitioner" is in attendance at many locations.

Roberts describes his own work and headquarters as follows: "Victoria. Home of the Nature Cure Movement. 430 St. Kilda Rd., Melbourne. Phone: Win. 4206. Treatments in harmony with Nature. Curative Dietetics, Osteopathy, Chiropractic, Hydrotherapy, Spinal Diagnosis, Iridiagnosis, Urinalysis, Diathermy, and Blood Washing, etc. All the latest methods of natural treatment obtainable. Experienced and qualified nurses in attendance. Herbal Foods, Herbal Pills, and All Natural Remedies Obtainable. F.G. Roberts, N.D., Principal, assisted by G.M. [Gladys Maud] Roberts and Staff."

Also in Melbourne are located (1) the Elmsdale Guest House at 428 St. Kilda Road. "Under the personal supervision of Mr. and Mrs. F.G. Roberts." Phone: Win. 4606; (2) F.G.R.'s Health Food Products, 40a Chapel St., E. St. Kilda. (Note: In Aug/Sept. 1933 Mr. W.H. Willson, a nature cure dentist, had his offices at 40 Chapel St.); and (3) Joyce's Health and Dining Service, 300 Little Collins St.

Harold S. Grimes, N.D., is in attendance at the Sydney location. The Brisbane shop and clinic is "Now under F. E. Roberts, Jr., N.D., Supervisor, who cordially invites you to Free Consultations on all your Health Problems."

Examples of names of other organizations listed are: "Roberts Health Service Pty. Ltd." (Ballarat, Victoria). "Health Centre and Clinic" (Chessnock). "Natural Health Store" (Bundaberg, Queensland), "Health Food Store and Milk Bar" (East Street).

A similar but revised directory is published in the 1 Aug. 1938 issue of this magazine, p. 46. Address: Australia.

802. Siegmeister, Walter. 1937. Dietary value of soybean milk in infant feeding. *Naturopath and Herald of Health* (*New York City*) 42(2):36, 55, 59. Feb.
• ***Summary:*** This article is largely composed of carefully cited quotations from many authoritative articles about the value of soybean milk in infant feeding when mother's milk is not available–starting with Ruhrah (1915, p. 502). "Since soy bean milk is deficient in milk sugar [lactose], as compared with human milk, [Dr. J.H.] Kellogg advises sweetening it with honey." Address: Dr.

803. *Madison Survey* (*Madison, Tennessee*). 1937. Experimental work with foods. 19(9):35-36. March 3.
• ***Summary:*** "Soy milk, fresh every day, is used in quantities by the institution. Soy milk in cans is on the market, its sale increasing continually as people become acquainted with the value of this product.

"Not only is Madison publishing the virtues of soy milk, but scientists in various places are advocating its use instead of dairy milk. Professor Madder of the University of Frankfurt, Germany, showed recently that infants fed on soybean milk are able to resist infection to a remarkable degree. This is attributed to the alkalinity of the soy milk, which increases the resistance of cell tissues.

"An experiment conducted in Cleveland, Ohio, in the feeding of over 200 infants on soy milk and gruel [with okara, probably], shows that the cellulose of soybean gruel relieves constipation. When soybean milk is used, the intestinal flora show a predominance of gram-positive organisms, thus resembling the stools of normal breast-fed babies."

804. *Madison Survey* (*Madison, Tennessee*). 1937. Home economics and nutrition courses. 19(9):33-34. March 3.
• ***Summary:*** In recent years, the college has provided liberally for science courses and "other departments for the education of workers in the Southland. But the Home Economics Department has been operating in temporary quarters, and with meager equipment, waiting for the hour to strike, for the opportune time to arrive for advancement." Now the time has come. Madison College is eminently fitted to operate a strong department in Diet and Nutrition. Its medical department, known as Madison Rural Sanitarium and Hospital, makes a specialty in its treatment of diet in disease. In its Food Manufacturing Department it is experimenting with foods and is placing on the market a variety of health products. Its experimental work with the soy bean has brought it into prominence in that field.

"Students in Diet and Nutrition have the privilege of practical demonstration and daily work in the Sanitarium diet kitchens and in the preparation and service of foods in the College Cafeteria. They are at work with foods in the Food Manufacturing Department, in the Cannery and Soy Milk departments, and it is from the college diet classes that the City Cafeteria draws its cooks and dietitians. Dr. Frances Dittes, who heads the college Department of Home Economics, has been Sanitarium dietitian for years. She is author of the cook book, to which you have been introduced, entitled "Food for Life.' Something of her equipment for her work both as teacher and writer is voiced in the review, of "Food for Life," written by Dr. H. A, Webb, head of the Department of Chemistry, Peabody College, for the Magazine Section of Nashville *Banner,* issue of July 26, 1936. He says: "'This book makes a real contribution to the literature of cookery and nutrition from at least two standpoints: First, it is written by a Southern author who knows the Southern taste in sickness and in health; second,

© Copyright Soyinfo Center 2014

it is the vegetarian school, whose life work consists in administering foods as a true medicine to those who seek for health.'

"By education, by close association with the Sanitarium staff of physicians in their care of patients, and by collaboration with Dr. Philip Chen of the College Department of Chemistry who is also chemist for the Food Manufacturing Department, Miss Dittes has a wide background for training dietitians and for leadership in the Department of Home Economics. Students otherwise qualified and who are interested in food work are unhesitatingly directed into this section of the college.

"It is in recognition of the wide field of usefulness open to those who are well trained in food preparation and food service, that Madison College is now preparing to equip new headquarters for this department of instruction, and solicits your cooperation."

805. Sutherland, E.A. 1937. Madison activities for nineteen hundred thirty-six. *Madison Survey* (*Madison, Tennessee*) 19(10):39. March 10.
• ***Summary:*** "Food factory: In point of equipment the farm is the second and the Food Factory is the third of the industries. [The sanitarium is first.] The present method of operation in the Food Factory is the work largely of E.M. Bisalski. Foods have been standardized and a more extensive program of advertising followed than ever before. During the year, Capt. C.D. Bush became manager of the factory, releasing Mr. Bisalski for field work. H.J. Miller carries the burden of manufacturing foods."

806. Kellogg, John Harvey. 1937. Re: Vitamin content of soy acidophilus milk, and the Dionne quintuplets. Letter to Dr. Allan Roy Dafoe, The Dionne Quintuplet Guardianship, Callander, ONT, Canada, March 26. 2 p.
• ***Summary:*** "I received a letter a few weeks ago from the secretary of the Nutrition Department of the American Public Health Association of which I have been a member for more than 50 years, asking me to prepare a paper for the next meeting which is to be held in October. I have chosen as my subject 'Some of the Health Values of the Soy Bean.' Thinking you might be interested in some of the facts which I have embodied in the paper in relation to soy acidophilus milk, I am enclosing a few sheets from a manuscript which I am preparing which will be published later.

"I was much gratified to learn from the unpublished data recently sent me by Dr. Munsell of the U.S. Department of Agriculture that soy acidophilus milk contains six times as much vitamin G (anti-pellagra) and more than twenty times as much vitamin B as does cow's milk. The addition of a thousand vitamin A units of plant origin to each half pint gives it greater potency in vitamin A than the best dairy milk, fully double, in fact. The addition of B-Lac or lactose gives it a very close resemblance to mother's milk in every particular with a few points of slight superiority."

807. Battle Creek Food Co. 1937. Soy acidophilus milk: A highly potent culture of a new type of Lactobacillus acidophilus for changing the intestinal flora. Battle Creek, Michigan. 9 p. March. 28 cm.
• ***Summary:*** Contents: Introduction (Bouchard of Paris, Herter of New York). Origin of the idea (Quinck, Metchnikoff, Tissier). Why *Bacillus Bulgaricus* failed (Rettger {of Yale} and others demonstrated "that this organism could not be implanted in the colon and that it rarely if ever survived in the alimentary tract at a level lower than the duodenum"). Discovery of *Lactobacillus acidophilus:* The natural protective organism of the intestinal tract (Dr. Tissier). The first therapeutic use of *Lactobacillus acidophilus* in the United States (by J.H. Kellogg using cultures obtained from the Pasteur Institute through Dr. Tissier. "It has proved itself of very great service in combating colitis and various forms of intestinal and digestive disorders... Our records show that between 1912 and the present time, our laboratories have supplied to hospitals and private physicians more than 1,500,000 quarter liters {250 ml}, the usual dose of whey milk cultures of acidophilus. It was not, however, until publication of papers by Rettger of Yale in 1922 and later that this remarkable was brought to the attention of the profession in this country").

Cruickshank's demonstration of change of the flora in vitro ("A few years later, Cruickshank of Aberdeen, Scotland, demonstrated experimentally that under proper lactose feeding, acidophilus will cause the rapid disappearance of... all putrefactive and pathogenic organisms in vitro").

The discovery of a new type of *Lactobacillus acidophilus*–soy acidophilus (At the bacteriological laboratory of Battle Creek College it was discovered "that when grown in soy milk, a new and more vigorous type of *Lactobacillus acidophilus* is produced. This new type has been studied by a number of able bacteriologists... all noted with surprise the extraordinarily rapid growth, the high count, and the very large size of the individual organisms...").

Soy acidophilus shows much higher counts than acidophilus milk (Powell found "an average of five times the number of viable organisms...").

The prophylactic and therapeutic value of soy acidophilus is well established. Soy acidophilus contrasted with dairy milk acidophilus (incl. two micro-photographs, showing the bacilli are twice as long–16 vs. 8 microns–when grown in milk prepared from the soy bean). Dairy milk not a good culture medium for acidophilus (Note: Leo Frederick Rettger, a bacteriologist at Yale from 1902 to 1942, was lead author of a book titled *Lactobacillus acidophilus and Its Therapeutic Applications*). Cow's milk a poor culture medium for acidophilus. The superior food value of soy acidophilus milk (A table compares the composition of Soy

© Copyright Soyinfo Center 2014

acidophilus milk, Cow's milk, and human milk. The soy has more protein, less fat, less carbohydrates than human milk, same calcium as human milk, more iron, more minerals, and fewer calories per ounce. The soy "is a basic ash product, and combats acidosis"). Vitamin contents. The energy value of soy acidophilus milk. Clinical results ("Since the discovery of the soy type of acidophilus in 1933, its clinical use has grown rapidly." Example of Dr. Dafoe and the Dionne quintuplets in Canada. Two roentgenogram photos of the colon).

How much to take ("For a three year old child a half glassful of soy acidophilus milk with a large spoonful of Lacto Dextrin, taken three times a day, will effect a rapid change of flora. A much larger amount may be taken without injury. We understand that Dr. Dafoe keeps the quintuplets in good health by giving them a glassful of soy acidophilus milk every afternoon and another half pint at or between the different meals. Very small doses, one or two teaspoonfuls, mixed with the regular feeding, may give excellent results in very young children. Dr. Dafoe began its use with the quintuplets with teaspoonful doses"). Address: Battle Creek, Michigan.

808. Kellogg, John Harvey. 1937. Re: Soy acidophilus milk. Letter to Dr. G. Efremoff, Totleben 2, Sofia VI, Bulgaria, April 8. 4 p. Typed, without signature (carbon copy).
• ***Summary:*** "I spend my winters now here in Florida on account of the more favorable weather. Here I do not take cold as I do at Battle Creek and consequently am able to do much more work. I do not stand the cold winters well because of weak lungs on account of tuberculosis which destroyed my left lung before I was 20 and left my respiratory organs in a susceptible state.

"I assure you I am most happy to know of the success which has attended your efforts to promulgate the ideals of biologic living in your country [Bulgaria]. You have certainly done a noble work. You will some time find yourself at the head of a great sanitarium.

"... Have you become acquainted with soy acidophilus milk and with methods of changing the intestinal flora? I am sending you with this a copy of a paper which you may publish in your journal if you wish. I am also sending you a couple of tubes of *Lactobacillus acidophilus* which I call soy acidophilus. You can make cultures of this and get a start in this same line if you wish. I have patented the product in this country,... It is really a wonderful product and proves of immense service in the treatment of all kinds of intestinal disease, particularly colitis, in which it is used by mouth and by enema. It needs to be taken in liberal doses two or three times a day and by enema, a half pint or so along with warm water and the juice of one or two lemons or a teaspoonful of lactic acid to each pint of water. It stimulates the colon to act and is wonderfully efficacious, clearing out the colon at once and planting the protective aciduric flora."

Dr. Dafoe is now feeding the Dionne quintuplets [in Callander, Ontario, Canada] about one pint each per day of soy acidophilus milk; Dr. Kellogg sends him 36 pints a week. "The Doctor sends me specimens for examination. We are keeping their acidophilus at 85 per cent of the intestinal flora." Address: Florida.

809. Karlick, Joseph R. 1937. Student activities at Madison. *Madison Survey* (*Madison, Tennessee*) 19(15):57-58. April 21.
• ***Summary:*** As part of the industries operated with student labor, Madison has a "900-acre farm which produces forage, grain, and garden crops, and orchard and vineyard trees.

"There is the program of food manufacturing in which students have an active part. Experimental and manufacturing work with the soy bean, making the flour, making the milk, and utilizing the by-products in other foods, has attracted the attention of the attention of the U.S. Department of Agriculture as well as firms in this country and abroad."

There is "a student publication called *The Peptimist Crier,* the object of which is to reflect on the spirit of the college. It provides a medium of expression for the students and a medium of exchange between the alumni and the present student body."

810. *Madison Survey* (*Madison, Tennessee*). 1937. The soy bean marches on. 19(15):59-60. April 21.
• ***Summary:*** "There is a constant hum of motors in our food factory these days to supply the orders resulting from Mr. Bisalski's recent trip to Knoxville [Tennessee]. Asheville [North Carolina], Washington [DC], Philadelphia, and New York. Since eight of the twelve items appearing in the Madison Foods price list contain soy beans, the value of the soy bean as a food is naturally emphasized in the sales program. Attractive window displays, featuring the soy bean as an ingredient of eight Madison Foods, have effectively stimulated sales... The constant increase of business, which is far above the normal curve, showing recovery from the depression, is evidence of the whole-hearted acceptance of soy bean foods by the public."

"In the May issue of *Popular Mechanics* five pages were devoted to a review of the soy bean since its introduction to the United States in 1804. At that time it was grown as a curiosity..."

"A soy bean article is not complete without a mention or a picture of Madison Foods. In *Popular Mechanics* one can see the Madison soy bean foods on display. In this picture Dr. W.J. Morse, of the United States Department of Agriculture, stands in front of several sections of display cases where only soy bean foods and other soy bean products appear.

"On the level of his left hand three Madison Food packages (Soy-Koff, Date Stix, Fruit Stix) stand like soldiers in the line of soy bean foods. Four shelves above can be

© Copyright Soyinfo Center 2014

singled out Vigorost, Soy Beans canned in Tomato Sauce, and one shelf below is Breakfast Crisps. Here then are seen all but two of the Madison Foods that are on display in Dr. Morse's rare collection. Soy Cheese and Kreme O'Soy Flour are there also, but they are blocked out with insertions of other types and pictures.

"For many years, Dr. Morse, who might rightfully be called the father of soy bean development in the United States, has been studying this interesting plant all over the world."

"Dr. Morse is a frequent visitor at Madison and likewise Mr. Bislaski is a frequent visitor to Dr. Morse's Washington headquarters."

811. Dittes, Frances L. 1937. Soybeans and human nutrition. *Health* (*Mountain View, California*) 4(4):18-19, 26. April. [3 ref]
• ***Summary:*** Discusses history of the soybean, food uses, nutritional value, recent scientific studies. Address: PhD, Dietitian, Madison College, Madison, Tennessee.

812. *Good Health* (*Battle Creek, Michigan*). 1937. The health question box: Thyroid disease. 72(4):122-23. April.
• ***Summary:*** "A recent analysis of soy bean milk shows that its composition closely resembles that of human milk, which differs considerably from that of dairy milk, containing much less lime [calcium] and more iron and sugar. Soy bean milk contains more than five times as much iron as does cow's milk and double as much as is found in human milk.

"Soy acidophilus milk, made and distributed by the Battle Creek Food Company and the Home Milk Producers Association, the largest milk company in Miami, Florida, is much richer in vitamins than cow's milk, containing double the quantity of vitamin A (2,000 units to the pint), six times as much vitamin G, and still a greater preponderance of vitamin B.

"Soy acidophilus milk has proven of great service to the quintuplets, who have used it continuously for more than two years, having been cured of a severe bowel infection from which they suffered when four months old. They have been kept in excellent health, free from bowel troubles, by its daily use. Each one of them takes a glassful of soy acidophilus milk every afternoon at four o'clock and uses an equal amount in connection with other meals." Address: M.D.

813. **Product Name:** Soy Acidophilus Milk (Lactobacillus Acidophilus Cultured in Soy Milk).
Manufacturer's Name: Home Milk Producers Association.
Manufacturer's Address: Miami, Florida.
Date of Introduction: 1937 April.
Ingredients: Soybeans, water, lactic acid cultures.
Wt/Vol., Packaging, Price: Glass bottle.
New Product–Documentation: *Good Health* (Battle Creek, Michigan). 1937. April. p. 122. "The health question box." Dr. John Harvey Kellogg is the developer of and creative force behind this product.

814. Loma Linda Food Company, Inc. 1937. Seven items of a quality line (Ad). *Health* (*Mountain View, California*) 4(4):25. April.
• ***Summary:*** The ad describes and a photo shows each package of Soy Mince Sandwich Spread, canned Soy Beans, Garbanzos, Syl-Dex Breakfast Wheat, Fruit Cereal, Date Sandwich, and Fruit Wafers. The company, which now makes 19 products (sold at health-food stores, markets, and groceries) is listed as "Loma Linda Food Company, Inc., Loma Linda, California." Address: Loma Linda, California.

815. **Product Name:** Kreme O'Soy Flour (Whole Soy Flour).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1937 April.
New Product–Documentation: *Madison Survey.* 1937. "The soy bean marches on." April 21. p. 59-60.

Madison Health Messenger. 1939. Sold in 2 lb. or 5 lb. bags.

816. Dimock, E.M. 1937. The prevention of constipation. *British Medical Journal* i(3982):906-09. May 1. [10 ref]
• ***Summary:*** "The progress of medicine is towards prevention. Yet constipation, one of the commonest ailments of civilization, receives only remedies. The present attitude of the medical profession towards constipation is deplorable. Students at many hospitals are brought up in an atmosphere where the indiscriminate use of purgatives is condoned." "Under the term 'purgative' I include aperients, salines, and all laxatives that are not purely mechanical... I believe that the frequent use of purgatives is responsible for numerous minor ailments, especially digestive disorders, headaches, and nervous irritability."

The author notes that "constipation is practically unknown among savage tribes." To cure it, he has used "diets with a high-fibre content, such as bran." "There is now ample experimental evidence that the laxative effect of vegetable foodstuffs depends on their 'fibre' content."

"Summary: The principle for the use of high-fibre diets for constipation has not been appreciated. High-fibre diets should be used for prevention and not for treatment. Investigations have shown that: (1) the laxative value of foodstuffs depends on the type of fibre contained therein; (2) the fibre of wheat bran is much more effective than that of fruit and vegetables; (3) no evidence of irritation of the alimentary tract by bran has been observed... One hundred and twenty-one patients with habitual constipation, 80 per cent. of the total, were treated with processed bran. The

© Copyright Soyinfo Center 2014

results in 110 cases of simple habitual constipation showed that: the treatment was successful in restoring normal bowel habits in 90 per cent. of the cases... The processed bran used in the investigations was Kellogg's All-Bran." Address: M.D., B.Ch.

817. Miller, Harry Willis. 1937. Process of making vegetable milk. *U.S. Patent* 2,078,962. May 4. 2 p. Application filed 3 Dec. 1935.

• ***Summary:*** This patent is "especially for the production of vegetable milk from the soya bean, the various steps of the process being physical and at no time chemical."

It has "been found of decided advantage to grind the soaked beans in a burr mill and during the grinding operation to constantly add a small stream of water to the beans. The beans should be ground to the finest possible state.

"During the grinding operation the water added is such as to result in the formation of about twenty gallons of pulp [okara] for twenty-five pounds of beans."

The saturated mass is added to boiling water in a "kettle and stirred or agitated while being heated to the boiling point, such boiling being continued until the pulp has lost its viscosity stickiness so that when separated the pulp comes out quite dry..."

"After the fluid has been heated to the boiling point it is then strained through a very fine straining cloth to separate cellular residue from the milk allowing only the food particles in solution to pass through. This straining operation is preferably facilitated by use of a centrifuge making 2,500 revolutions per minute."

To the hot milk are then added a cereal sugar (7 lb), a vegetable fat (7 lb) and salt (3 oz). The mixture is then reheated to the boiling point and during this heating and cooking the fluid is agitated very carefully until the entire taste of the milk is "changed from a beany flavor to what might be termed a 'nutty' flavor." After proper cooling, the milk is run through a colloid mill or homogenizer.

This improved process extracts from the soya bean approximately 85% of its protein and 70% of its fat, together with vitamins A, B, E, and G and the larger portion of the mineral ash. Address: Shanghai, China.

818. Kellogg, John Harvey. 1937. Re: Battle Creek Sanitarium, Battle Creek Food Company, and soy beans. Letter to Mr. E.C. Liebold, c/o Mr. Henry Ford, Dearborn, Michigan, May 10. 2 p. Typed, without signature (carbon copy).

• ***Summary:*** On 3 April 1937 Dr. Kellogg sent a Western Union telegram to Henry Ford requesting a brief interview. On May 5, E.G. Liebold, General Secretary to Henry Ford, wrote Kellogg (on "Henry Ford" letterhead, with signature) saying he regretted that Mr. Ford was away but that if Dr. Kellogg planned to come to Detroit, Liebold would be "be very glad to discuss the matter with you and submit it to Mr. Ford later on when he might be available."

Dr. Kellogg replied with this letter: "The bankers are making a very determined effort to get control of the Battle Creek Sanitarium... I will not surrender control or submit to any change of ideals or principles of the Sanitarium... I have begun at the bottom twice and can do it again if necessary, but Mr. Ford has shown so much interest in the food reform and race betterment work I am carrying on, I am anxious to have his advice before making a final decision if he is willing to give me a few moments.

"An attempt is being made by large financial interests to get possession of my food company [the Battle Creek Food Company].

"Incidentally, I might mention that I have made some discoveries in relation to the soy bean which I am sure Mr. Ford would like to know about. This relates to a preparation [soy acidophilus milk] by which I have been able to save the lives of the [Dionne] quintuplets, and I have also found it the most successful means yet discovered for combating old age processes. I will write Mr. Ford about this later if he as not time for a short interview some time within the next few days."

On May 12 Liebold replies that Mr. Ford has been away almost continuously for the past two weeks. Dr. Kellogg writes again on May 15 (see separate letter).

819. Kellogg, John Harvey. 1937. Re: Soy acidophilus milk. Letter to Mr. E.C. Liebold, c/o Mr. Henry Ford, Dearborn, Michigan, May 15. 2 p. Typed, without signature (carbon copy).

• ***Summary:*** "I know Mr. Ford must be very busy just now because of the labor agitation as well as the usual press of business, and as it will not be convenient for him to see me, I will postpone my visit to some future time. The information I wanted to give him about the soy bean is pretty well covered in a paper which I am sending herewith which sometime he may be glad to hear about.

"I find this Soy Acidophilus Milk extremely useful because of its rejuvenating effects. I am in my 86th year and am as hard at work as ever.

"If Mr. Ford wishes to try the Soy Acidophilus Milk, I shall be glad to order a case sent to him. We send three cases to the quintuplets every week. It keeps them free from bowel trouble which, because of the liver Dr. Dafoe insists on giving them, comes back as soon as they stop the use of the Soy Acidophilus Milk... It cured them of bowel trouble when they were four months old and they have been taking it ever since in gradually increasing quantities. They began with a teaspoonful at each feeding. Each one is now taking a pint a day."

820. Kellogg, John Harvey. 1937. Re: The Hay diet, and soy acidophilus milk. Letter to Admiral R.E. Byrd, 9 Brimmer Street, Boston, Massachusetts, May 16. 6 p. Typed, without

© Copyright Soyinfo Center 2014

signature (carbon copy).
• ***Summary:*** "You inquire with reference to the Hay diet and whether the soy acidophilus milk is a carbohydrate and whether it contains protein." The philosophy on which the Hay diet rests "that carbohydrates and proteins should not be eaten together is entirely unscientific..." A detailed analysis of this fallacy follows. The originator of this regimen was not Dr. Hay, but "a Dr. Tilden of Denver [Colorado] many years ago [20 years before Hay]. He was an advertising doctor and employed the late Elbert Hubbard, then a young reporter, as a publicity agent to create business."

"I hope that you are adhering closely to the biologic way and that you are prospering as a result. It is evident that your vital margin has become greatly reduced." A table (p. 4) compares the composition of soy acidophilus milk, cow's milk, and human milk. Soy acidophilus milk "has a little less carbohydrate that human milk, but it resembles human milk more closely than cow's milk and contains lactic acid, which of course is found in buttermilk but not in mother's milk or ordinary sweet dairy milk."

Mrs. Mary F. Henderson, author of the book titled "The Aristocracy of Health," has left a legacy to Battle Creek College. "I have set apart one hundred numbers to be assigned to persons of distinction who are nationally and internationally known as leaders in various lines of activity for the promotion of human welfare. I should like very much to put your name down as one of the first ten. I should be glad if you would nominate some prominent person who you know to be eligible to be one of the initial one hundred. There is no particular prestige connected with this initial enrollment, but I entertain the hope that Mrs. Henderson's dream that the Aristocracy of Health might prove to be the nucleus of a group of health minded individuals which might grow in time to be the beginning of a new and better human race through biologic living and eugenics may be realized..."

"P.S. It makes me very happy to know that my most distinguished patients, Admiral Byrd and the quintuplets, are profiting by keeping the interior department in fine condition by the use of soy acidophilus milk." Address: En route to Miami Springs, Florida.

821. Kellogg, John Harvey. 1937. Re: Sending soy acidophilus milk to Dale Carnegie. Letter to Food Company, Battle Creek, Michigan, June 17. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "Please send half a dozen bottles of soy acidophilus milk together with samples of our foods we send to doctors to Dale Carnegie, 27 Wendover Road, Forest Hills, New York, complimentary." Address: Battle Creek, Michigan.

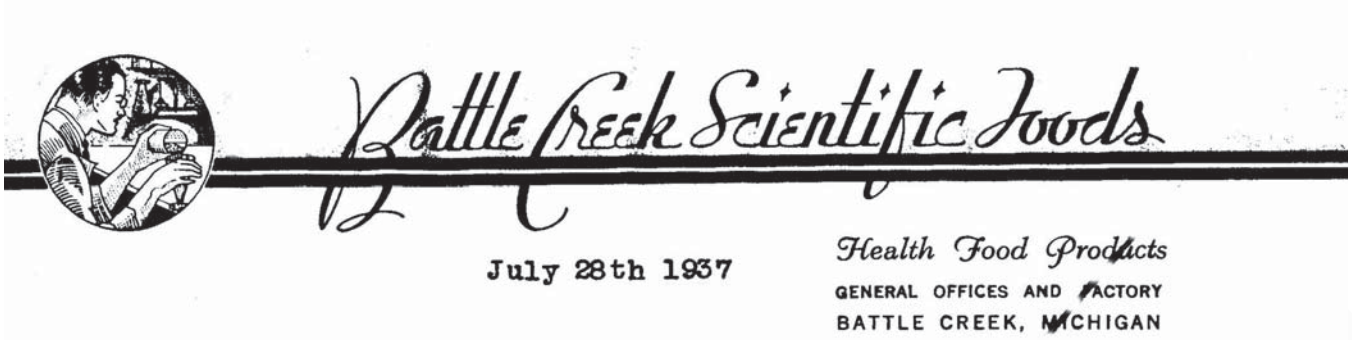
822. Carver, G.W. 1937. Re: Peanut milk. Letter to Mrs. L.C. Barnes, 459 Marlborough Road, Yonkers, New York, June 21. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "Dear Madam: Peanut milk is not on the market and is not being manufactured. I suggest that you get in touch with the Nashville Agricultural Normal Institute, Madison College, Madison, Tennessee. They manufacture many kinds of health foods from soybeans including soybean milk, which is similar in many respects to peanut milk. They make an excellent product."

John Ferrell, who located this document, adds (Dec. 1992). "Carver seemed to like Madison College. I've noted maybe six letters much like this one to people who enquired about soybeans." Address: Director, Research and Experiment Station [Tuskegee, Alabama].

823. Carver, G.W. 1937. Re: Soybean milk, peanut milk, and Madison College. Letter to Mr. N.A. Alexander, Harrison, New York, June 27. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "Dear Sir: Our station has never issued any publications on the soybean or peanut milk. I just received yesterday a can of chocolate milk and one that is of the same composition as cow's milk. Both are made by the Madison College, Madison, Tennessee. They are supreme authority on the use of the soybean, and it would be well for you to get their literature, as I do not know of an institution that is doing more remarkable things with the soybean along food lines as they are." Address: Director, Research and Experiment Station [Tuskegee, Alabama].

824. *Nature's Path to Health* (*Melbourne, Australia*). 1937. F.G. Roberts Health Food Products. May/June. p. 20-22.
• ***Summary:*** On page 20, a full-page black-and-white photo shows the front of Roberts Health Service, a health food store at Geelong. There are many boxed and canned products in the two large front windows. On page 21 is a photo of the interior of the Geelong store. Paul Smith has photos of similar stores at Ballarat, Fremantle, and Toowoomba.

On page 22 a full-page photo shows a "View of our main factory and store." This is a fairly small but neat red brick factory, with delivery trucks parked at the side and front.



Note 1. This, factory was located at 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia. Roberts' original factory, it remained virtually unchanged until 1954.

The inside rear cover of this issue states: "F.G. Roberts, N.D., F.S.D., Australia's leading naturopath. 430 St. Kilda Rd., Melbourne."

Note 2. Other issues of this magazine published in 1937 show health food stores that are part of the Roberts Health Service: Rockhampton (Jan/Feb. p. 19), Maryborough (March/April, p. 19), Newcastle "Health Academy" (March/April, p. 20). Address: Australia.

825. Radcliffe, Jack B. 1937. Soybean: The perfect protein.

© Copyright Soyinfo Center 2014

Nature's Path (*New York City*). June. p. 210.
• ***Summary:*** "Packed into the tiny soya bean is a wealth of nutrition; minerals, tiny vitamins, easily assimilated carbohydrates, and the greatest hoard of proteins that any food in the vegetable kingdom contains." Just imagine. "A vegetable product equal to most, and superior to some animal products in proteins, the body building element in food, without which there would be no life."

Unlike meat and fish, the soybean is one of those rare foods that alkalinize the body. Milk and butter made from soybeans are better than their dairy counterparts. Its oil is equal to the best grade of olive oil. It is the world's leading source of lecithin, and the source of protein-rich soy flour, soy sauce, roasted soybeans, vegetables, cheese, etc. Dr. Kellogg is making increasing use of "soy acidophilus" [a type of liquid fermented soy milk].

826. *California Health News* (*Hollywood, California*). 1937. See blue Hawaii. "Had a marvelous time." July 23. p. 9.
• ***Summary:*** "Singing the praises of Hawaii, Mildred Lager has just returned to her House of Better Living, 1207 W. Sixth, after a three-weeks trip."

"Her radio fame having preceded her, Miss Lager was invited to speak over KGU, NBC station where Skipper Irvine presented "Roaming in the South Seas" for two years... A delightful luncheon visit was with Mrs. Agnes B. Bonell, Battle Creek Health Food store, 183 S. King street, Honolulu... The trip to Hawaii was on the Lurline, return on the Malolo." A large portrait photo shows Mildred Lager.

827. Sadacca, Albert V. 1937. Re: Health addicts in California. Offer to distribute Fearn products in middle west. Letter to Dr. Charles E. Fearn, Fearn Soya Foods Co., 355 West Ontario St., Chicago, Illinois, July 28. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Dear Dr. Fearn: With much interest I digested your letter of July 27th. I do believe that it is a good move for you to go to California inasmuch as most of the health addicts are located there." The writer then offers to distribute Fearn products in Chicago and the "middle west," "either under our brand name or under our own."

Note: Battle Creek Scientific Foods is not connected in any way with Dr. John Harvey Kellogg or any other member of the Kellogg family. Across the bottom of the letterhead are printed six products made or distributed by the company, including one named "Soy-O." Address: Battle Creek Scientific Foods, Health Food Products, General Offices and Factory, Battle Creek, Michigan.

828. Kellogg, John Harvey. 1937. Re: Hydrolyzing soy protein. Letter to Dr. A.A. Horvath at University of Delaware, Agricultural Experiment Station, Aug. 10. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "Here I am with another inquiry.

"Can you tell me anything about the effect of hydrolyzing soy protein?

"Can you tell me whether hydrolyzing the glycinin of the soy bean will seriously affect the vitamins?

"I will be glad to have your paper with reference to the anti-hemorrhagic properties of the soy bean.

"Sincerely yours."

829. Horvath, A.A. 1937. Re: Hydrolysis of soybean protein. Letter to Dr. John Harvey Kellogg, The Battle Creek Sanitarium, Battle Creek, Michigan, Aug. 13. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "I have your letter of August 10-th with an inquiry regarding the hydrolising of soybean protein. As the hydrolysis of proteins of various nature for commercial purposes is usually done by acids under pressure at moderate heat, and since the Vitamins B-1 and B-2 are quite resistant to acids, one should not expect much destruction of these vitamins during such hydrolysis.

"I have been interested in the commercial angle of products of hydrolysis from soybean protein, and have done some work along lines of the manufacture of soy sauce and sodium glutamate by chemicals. If you feel that a closer cooperation between the Battle Creek Food Company [Battle Creek, Michigan] and myself would be profitable commercially, I would be glad to discuss it with you."

Horvath plans to drive to Ontario, Canada, with his family to present a paper. "On Sept. 14-th I could stop for a day or two at Battle Creek (with my family) to discuss soya matters with you." Address: Chemist, Univ. of Delaware,

© Copyright Soyinfo Center 2014

Agric. Exp. Station, Newark, Delaware.

830. Kellogg, John Harvey. 1937. Re: Soy beans. Letter to Dr. A.A. Horvath at University of Delaware, Agricultural Experiment Station, Aug. 13. 1 p. Typed, without signature (carbon copy).
• ***Summary:*** "If you are passing this way this summer by all means drop in for a chat about the soy bean. I am thoroughly convinced that it is the most wonderful food product grown and it must have been of immeasurable service to the Chinese."

831. *Washington Post.* 1937. Lowly soybean startles capital as exhibit illustrates varied uses. Aug. 18. p. 15.
• ***Summary:*** "The soybean, chameleon of agriculture, made its formal debut in Washington [DC] last night when an exhibit of its wonders, mounted in a Pennsylvania Railroad car, stopped for two hours in Union Station." It met with popular approval as shown by the continuous flow of visitors which filed through the car. The "spectators were all amazed to see one little bean pop up under so many different guises."

A series of charts showed how the U.S. soybean crop has developed from 5,000,000 bushels in 1925 to 37,000,000 in 1935 and about 20,000,000 more [i.e., 57,000,000 bushels] this year.

Describes many of the different ways that soybeans can be used. Handfuls of roasted salted soybeans, courtesy of the American Soybean Association, were served to visitors. They tasted like a cross between peanuts and almonds. Madison Agricultural College, a Seventh Day Adventist institution in Madison, Tennessee, has developed a "number of meat substitutes, including an enticing 'ham' loaf, and a coffee substitute.

A series of harvest scenes showed how harvesting methods have changed. "The biggest step forward was the perfection of the combine, the forerunner of which was developed in 1925 by the late Harvey Spaulding Clapp, son of the late Moses Edwin Clapp, of Minnesota. Clap grew soybeans on his Virginia estate, which used to be part of Mount Vernon. According to Russell G. East, general agricultural agent for the Pennsylvania Railroad and director of the exhibit, it was Clapp who conceived the idea of a machine which would beat the beans from the pods as the plants stood in the field." The plants are left standing and gradually turn to hay.

In 1804, the soybean was introduced to the United States from China, "where natives have grown it for roughly 5,000 years. Orientals use it solely for food. Soybean sauce is familiar to all lovers of Chinese dishes."

832. Kellogg, John Harvey. 1937. Re: The soybean is an excellent food. Soy products made by Battle Creek Food Company. Letter to Mr. Richard Haughton, Valley Mill Farm, Great Valley Mills, Paoli, Pennsylvania, Aug. 26. 3 p. Typed, with signature on letterhead.
• ***Summary:*** Mr. Haughton wrote Dr. Kellogg on Aug. 26 that "One of your patients at Battle Creek has advised me that we should look into Soy Bean as a food." It is said to be helpful for intestinal disorders.

Dr. Kellogg replies: "You have been correctly informed. The soybean is an exceedingly useful food and ought to be widely used. It is on the whole, I believe, the most remarkable and most useful of all food products...

"If you will address a letter to W.J. Morse, Bureau of Plant Introduction [sic, Plant Industry], U.S. Department of Agriculture, Washington D.C., you will obtain a large amount of literature about the soy bean which you will find very interesting.

"The Battle Creek Food Company makes a number of products from the soy bean, among which are soy gluten biscuit, which consists of equal parts of soy flour and wheat gluten. It is extremely toothsome and the most highly nourishing of all foodstuffs with which I am acquainted." Address: Florida.

833. Kellogg, John Harvey. 1937. Bran as a remedy for constipation. *Good Health* (*Battle Creek, Michigan*) 72(8):239-40. Aug. [1 ref]
• ***Summary:*** "There is perhaps no common remedy concerning the use of which there has been more controversy than respecting the use of bran in the treatment of constipation." This article is a summary of: Dimock, E.M. 1937. "The prevention of constipation." *British Medical Journal* May 1. p. 906-09–which concludes that bran should be the "mainstay" for treatment of constipation. Address: M.D.

834. Kellogg, John Harvey. 1937. Re: Dr. Henri Tissier and use of the bacillus bifidus for changing the intestinal flora. Letter to Mrs. Henri Tissier, The Pasteur Institute, Paris, France, Sept. 2. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** "Twenty-five years ago I had some correspondence with your husband... He sent me a culture of the bacillus bifidus which he had discovered in the stools of infants. A few years later I learned through an associate, Dr. Martin who visited your husband in Paris, that Dr. Tissier had begun using the bacillus bifidus as a means of changing the flora in the treatment of invalids. Dr. Tissier told me that he had succeeded in a few cases, one of whom was yourself, in making a complete change in the intestinal flora.

"I am preparing a paper to read before the American Public Health Association in which I mention Dr. Tissier's work. I would consider it a great favor if you will answer a few questions for me as I wish to make use of the data in making known in this country the fact that to Dr. Tissier rather than to Metchnikoff is due the credit for having devised a successful method of changing the intestinal flora. Dr. Tissier's discovery has been of very great service to

© Copyright Soyinfo Center 2014

me and I want to make the world acquainted with the great service which he rendered." Address: Florida.

835. Klix, Inc. 1937. Announces its organization to manufacture and promote Soy Bean Foods (Ad). *Proceedings of the American Soybean Association* p. 76.
• ***Summary:*** A one-fifth page ad. "Included in the personnel is Miss Dorothy Van Gundy and the Van Gundy family who for years have produced a complete line of Soy Bean Foods under the trade name of La Sierra Industries." Note: Klix is taking over La Sierra Industries after T.A. Van Gundy's death. Address: 108 West Second St., Los Angeles, California.

836. *Chicago J. of Commerce and La Salle Street Journal.* 1937. Ice cream, milk from soy beans: Tennessee scientists start new industry. Oct. 13. p. 9, col. 8.
• ***Summary:*** In a small group of buildings located a few miles from Nashville, a small group of chemical and agricultural scientists are doing "big things with the soy bean..."

It all started some 25 years ago when some agricultural chemists at the small, self-supporting the Nashville Agricultural Normal Institute started experimenting with the soy bean, then used mainly as forage.

Today, in a small group of buildings housing the 3-month old industry, E.M. Bisalski, his staff of assistants, and Dr. Philip Chen (a research chemist from China) are making "milk, meat, coffee, and automobile accessories from the vegetable."

Chen says there was soy bean milk in China 3,000 years ago, yet it has taken the scientists about 25 years to "neutralize the bean flavor and approximate that of the cow." Experiments in the institute laboratory showed that many generations of rats living exclusively on soy bean milk grew strong and produced prolific offspring. The scientists believe that the "bean milk can be produced more cheaply than dairy milk and that it can be produced under conditions of chemical sterility, almost germ free."

Having developed good milk, the group next "sought to compete with cattle as food producers in the form of beef.

"A product called soy-burger has been produced. It tastes like hamburger.

"The scientists have made ice cream and buttermilk and even chocolate flavored milk. They also have a cheese [probably tofu] which is said to be the closest thing to pure protein known to chemistry. It tastes like Swiss cheese but costs only a fraction as much."

Note: This is the earliest document seen (Jan. 2007) concerning a meatless burger made from soy. This is also the earliest English-language document seen (Jan. 2007) that contains the term "soy-burger."

837. Kellogg, John Harvey. 1937. Special health values of the soybean. Paper presented before the Section of Food and Nutrition at the American Public Health Assoc., 68th meeting. Oct. 5. 7 p. typescript. Reprinted in 1937 by Soya Foods Ltd., Rickmansworth, England. 6 p. [9 ref]
• ***Summary:*** This paper begins: "The rapid development of the production and use of the soybean (*Soja hispida*) in this country within the last quarter of a century, and the multitudinous uses to which it is being put, fully justify the name 'wonder bean', which it has been called by American writers, and the appellation, 'little honorable plant', by which it is known in China.

In South China, the soybean so completely replaces other sources of protein that there is no dairy industry, and meat, fish and even eggs, are very little used. The soybean is the chief source of protein for the common people and is referred to as 'the poor man's meat.'

"Studies of this most remarkable of food products, especially in the United States and Germany, have shown it to possess not only extraordinary nutrient properties, but also some highly important prophylactic and therapeutic values, knowledge of which ought to be popularized as rapidly and widely as possible.

"Although botanically classed with legumes, the soybean rather closely resembles the nut in its very low content of starch and high percentage of protein. It easily takes precedence over all other natural foodstuffs in the great percentage of protein which it contains, and protein of such superior quality that in animal feeding experiments it has proved itself to be capable of replacing proteins of all other sorts, even milk proteins. The soybean protein content is 40%, nearly twice that of average meat and four times that of eggs, three to four times that of wheat and other cereals, five to six times that of bread, twice that of lima and navy beans, walnuts, filberts and most other nuts. The protein of the soybean (glycinin) is of high quality, like that of milk, containing certain amino acids of which the proteins of nearly all other legumes and all cereals are deficient."

Contains a long discussion of soy acidophilus milk, changing the protective flora, and the experience of Dr. Dafoe with the Dionne quintuplets in Canada.

"Forty years ago, I was requested by Dr. Dabney, then Assistant Secretary of the United States Department of Agriculture, to prepare from plant sources a substitute for meat, and found in a combination of the gluten of wheat with peanuts a product having not only the essential nutrient values of meat, but a fairly close approximation in flavor and appearance. The soybean solves the problem so completely and so satisfactorily that with the proper development of its culture and use, there need be no fear of protein shortage and no need of a substitute. There is, indeed, evidence that Americans might profit greatly as the Chinese have by giving the soybean a large place in the national bill of fare.

"A few years ago (1923), Dr. Arthur Hunter, Chief Actuary of the New York Life Insurance Company, in an

© Copyright Soyinfo Center 2014

international study of blood pressures, found the systolic pressure of the average Chinaman to be ten points lower than that of the average American and gave conclusive evidence that the cause is to be found in the difference in the dietary habits of the Chinese and Americans. In concluding an address before the American Life Underwriter's Association, Dr. Hunter said, 'Taking the population of the United States as a whole, I believe that a better adjusted diet, with less animal food, would result in a lower blood pressure and in greater longevity with an equal ability to carry on their occupations.'

"In view of the facts cited in this paper, is it not reasonable to believe that the general use of the soybean in this country would tend to lessen the mortality rate from intestinal infections and many other acute and chronic disorders, and to increase individual life expectation?" Address: M.D., LL.D., F.A.C.S., Medical Director of the Battle Creek Sanitarium, Battle Creek, Michigan, and of the Miami-Battle Creek, Miami Springs, Florida.

838. **Product Name:** Soy-Burger. Renamed Soyburger or Soyburger Loaf in 1939 (Canned Meatless Loaf, Sandwich Spread, or Entree). Renamed Zoyburger in 1939.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1937 October.
Ingredients: Soybeans [actually okara], wheat gluten, raw peanut meal, tomato paste, vegetable seasonings.
Wt/Vol., Packaging, Price: No. 2 can, 20 oz.
How Stored: Shelf stable.
Nutrition: Protein 12.5%, fat 6.7%, carbohydrates 19.0%, ash 1.4%, calories 187/100 gm.
New Product–Documentation: *Chicago J. of Commerce.* 1937. "Ice cream, milk from soy beans: Tennessee scientists start new industry." Oct. 13. p. 9, col. 8. Having developed good milk, the group next "sought to compete with cattle as food producers in the form of beef. A product called soy-burger has been produced. It tastes like hamburger."

Madison Health Messenger. 1939. "Soyburger." Ad in House of Better Living. 1940. May. p. 4. "Soyburger."

Ad (2¼ by 3 inches) in *Nature's Path* (USA). 1941. July. p. 273. "A treat without meat." Soyburger is one of five basic food products made and sold by Madison Foods. Madison Health Messenger. V. 49-2. p. 5. Taylor. 1944. Soy Cook Book. p. 201.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Zoyburger contains 20.90% protein, 3.10% fat, and 11.85% carbohydrate.

Letter from Sam Yoshimura. 1981. March 19. Okara was used in the Madison Zoyburger exclusively. The product consisted of wheat gluten, okara, tomato paste and seasonings. It was a canned, meat loaf type of product.

Note: This is the earliest known vegetarian "burger" (with the word "Burger" or "Burgers" in the product name) made in the United States.

839. Morse, W.J. 1937. Green vegetable soy beans. *Good Health* (*Battle Creek, Michigan*) 72(10):299. Oct. Reprint of Morse 1935c.
• ***Summary:*** Reprinted from: *Proceedings of the American Soybean Assoc.* 1935, p. 44-45. This article was originally titled "Green Vegetable Soybeans." Address: USDA, Washington, DC.

840. *Nature's Path to Health* (*Melbourne, Australia*). 1937. Soy bean–The perfect protein. Sept/Oct. p. 34.
• ***Summary:*** "Packed into the tiny soya bean is a wealth of nutrition; minerals, tiny vitamins, easily assimilated carbohydrates, and the greatest hoard of proteins that any food in the vegetable kingdom contains. Think of it! A vegetable product equal to most, and superior to some animal products in proteins, the body building element in food, without which there would be no life. And this same Soya Bean, so rich in all the food essentials, produces an alkaline reaction in the body. It sounds almost unbelievable!

"The chief argument against a heavy meat diet is the acid reaction in the human system. So it is with all highly protein foods commonly used as meat substitutes–fish, eggs, etc.; but here is the most nearly perfect substitute for meat known to man, and it is one of the extremely rare foods which alkalinize the body."

"Milk and butter made from soya beans are richer and more satisfactory than dairy products. Its oil equals the best grade of olive oil."

"Lecithin, in which the soya bean is rich, is a nerve, brain, and sex building food. Calcium builds bone, teeth, finger nails and accessories.

"From the seed comes meal and oil. Out of the meal can be made a flour for use of infants, macaroni, breakfast foods, bread, cakes... From the dried beans come soya sauce, soups, roasted beans, vegetable, milk, liquid and powder, cheese, soy cultures that taste like buttermilk, beverages, confections and so-called candy.

"Another valuable property of the soy bean is its high alkalinity, which amounts to twenty-four times that of cow's milk. Concerning this point, Dr. Kellogg says: 'We are certainly eating too much meat and not enough alkaline products.' A meat diet is heavily charged with acids which lower the alkalinity of the blood and tissue fluids and tend to cause acidosis, thus inducing chronic fatigue, lowered resistance to disease, and setting up degenerative processes in the liver, kidneys, blood vessels and other parts of the body. More people die in this country from these causes than from any other." Address: Australia.

841. *Madison Survey* (*Madison, Tennessee*). 1937. Manufacture of foods. 19(42):167. Nov. 10.

• ***Summary:*** "Madison is giving a message of healthful living to the public, and in this program the food factory plays an important part. Among the products it is placing on the market are crackers of various composition; foods to use in place of meat, such as, Vigorost, Soy Cheese, Soybeans canned with Tomato; a beverage to take the place of coffee called Soy-Koff. Kreme O'Soy Milk, plain and chocolate, is also on the market in cans."

842. **Product Name:** Kreme O'Soy Milk (called Kreme-O-Soy in 1947) [Plain, or Chocolate].
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1937 November.
Ingredients: Fall, 1948: Soybeans, soy oil, dextrose, calcium phosphate, sodium chloride.
Wt/Vol., Packaging, Price: 15 oz, 19 oz, or 20 oz can.
How Stored: Shelf stable.
Nutrition: Protein 3.5%, fat 3.9%, carbohydrates 4.9%, ash 0.7%, calcium 0.34%, iron 4.4 mg/k.
New Product–Documentation: Madison Survey. 1937. Nov. 10. p. 167. "Kreme O'Soy Milk, plain and chocolate, is also on the market in cans."

Madison Health Messenger. 1938. "The only homogenized soymilk on the market to date."

Madison Health Messenger. 1948. Fall. p. 3. "A unique food developed." A black-and-white photo shows a can of Kreme O'Soy." A table compares the composition of Kreme O'Soy, human milk, and cow's milk. A list of ingredients is given on p. 4. Madison Health Messenger. 1949? V. 49-2. p. 5.

Shurtleff & Aoyagi. 1984. Soymilk Industry and Market. p. 25-26. "By May 1929 fresh soymilk and tofu were being served occasionally in the dining hall and sanitarium, and soymilk was used in place of water in some yeasted breads. Soymilk was first sold commercially in 1931 and canned in 1932. It became popular nationwide." Soybean Blue Book. 1947. p. 69. Sold in Chicago by Dietetic Supply House. Soybean Blue Book. 1950. p. 88. No brand name given. Soybean Blue Book. 1956. p. 100. "Kreme-O-Soy."

Note: This is earliest commercial soymilk product seen worldwide to be fortified with calcium. It is also the second earliest commercial soy product seen introduced by a Seventh-day Adventist company that contained chocolate.

843. *Nature's Path to Health* (*Melbourne, Australia*). 1937. Nutrition: Bernard Shaw, Gandhi, Henry Ford advocate soy beans and vegetarianism. Nov/Dec. p. 13-14.
• ***Summary:*** "In a recent visit to this country, Bernard Shaw was observed drinking a glass of milk. When questioned why he used milk, since he opposed exploitation of cows, Shaw replied that it was not cow's milk he used, but Soybean Milk. Bernard Shaw has been a vegetarian for a long time and has lately become interested in the Soybean.

"Gandhi becomes a champion of soybean–Abandoning his famous goat-milk, Gandhi, who is also a vegetarian, has become an advocate of soybean milk. Gandhi is a great believer in the soya bean. He thinks that soya milk will eventually replace the dairy product." A long article about the soya bean published in a recent issue of *Harijan* is quoted.

"Ford predicts vegetarian world. Dearborn, Michigan–Henry Ford, billionaire, automobile maker, has visioned a future world without ham sandwiches, juicy steaks, and chicken dinners, but with a worthy substitute produced by science from grains and vegetables... Ford is now 73 and is in excellent health."

"In a recent interview with newspaper men, Ford predicted: 'The farm animal will go, but the farm will become larger. The horse is dying out through the increased use of machines. The cow is losing its economic importance through the great advances in chemistry. The farmer of the future will grow vegetable foods instead of livestock.'

"According to Dr. Kellogg, a vegetarian diet is not new to Mr. Ford. For many years he has been practically a vegetarian. He owes to a vegetarian diet the health and vigor necessary to conduct successfully the gigantic industries his remarkable genius has created.

"Henry Ford, looking into the future, sees that the use of meat will have to be abandoned for economic reasons." Address: Australia.

844. *Nature's Path to Health* (*Melbourne, Australia*). 1937. The aims and objects of the F.G. Roberts Natural Health Organisation. Christmas.
• ***Summary:*** "1. To free humanity from the destructive influence of alcoholism, meat eating, tobacco habit, of drug poisoning, vaccination, surgical mutilation, vivisection, and other abuses practised in the name of science.

"2. To aim at returning to a natural way of living by the regulation of eating, drinking, breathing, bathing, dressing, working, resting and thinking; and establishing sexual and social relations on a normal and natural basis.

"3. To teach that the primary cause of disease is the violation of Nature's Laws, and that Nature Cure is a system of man building in harmony with the constructive principles in Nature on the physical and moral plane of being.

"4. To teach that Naturopathy presents man with the master key to all higher development on the mental, moral, and spiritual plane of being, and self-control of the physical body.

"5. To teach that Naturopathy selects and combines everything that is good in Dietetic Treatment, Hydrotherapy, Massage, Osteopathy, Chiropractic, Curative Gymnastics, and in Magnetic and Mental Therapeutics.

"6. Our Field.–The Universe is our school, Humanity out Text Book, and Nature our Instructor.

© Copyright Soyinfo Center 2014

"7. Our Creed.–We believe in the ultimate triumph of Truth over Error, or Harmony over Discord, of Love over Hate, of Purity over Vice, of Smiles over Tears, of Life over Darkness, of Life over Death."

Note: An undated leaflet (from about 1937) with almost the same title ("The aims and objects of Australia's National Health Organization") has ten aims and objectives; it adds: "4. By joining the Natural Health Club of your own city you are not only able to exchange with others your ideas and experiences but you enjoy benefits that repay many times the nominal membership fee.

"5. In Melbourne, club meetings are held every Tuesday evening at 8 p.m., at The Athenaeum Art Gallery Hall, 188 Collins Street, next to the Town Hall. This weekly programme consists of bright, uplifting community singing, guest speaker, social items, questions and discussion, friendly free health guidance, physical culture and dietetic demonstrations." Address: Australia.

845. **Product Name:** Soy-Bev (Tea or Coffee Substitute).
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 48 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1937 December.
Ingredients: Incl. roasted and ground soybeans, chicory.
Wt/Vol., Packaging, Price: Canned.
New Product–Documentation: Ads in *Nature's Path to Health* (*Melbourne, Australia*). 1937. Nov/Dec. p. 15 and 27. "A Delicious Beverage to take the place of Tea or Coffee. Made from the best Soya Beans. An F.G.R's Health Food Product." The address is given as 48 Chapel St., St. Kilda, Melbourne. But it is not clear what kind of facility was located at this address.

Ad in *Nature's Path to Health.* 1937. Christmas issue. p. 34. "Soy-Bev. The national nightcap. A Delicious Beverage to take the place of Tea or Coffee. Invigorating. Health giving. Blood purifying. Fortifies the system. A sure thing against insomnia. Made by F.G. Roberts & Sons. In the Health Food Factory. 48 Chapel St., St. Kilda, Melbourne. At all Health Centres. The new health beverage that everybody is drinking." See also smaller ad on p. 19.

Ad in *Nature's Path to Health.* 1938. Aug. 1. p. 40. "Soy-Bev. The ideal night-cap. Why upset your system by taking tea or coffee?" Made at 48 Chapel St., St. Kilda, Melbourne. An illustration shows a man and woman seated in chairs by their fireplace each enjoying a cup of Soy-Bev. Below this is a steaming cup of Soy-Bev–which looks like coffee.

Ad in *Nature's Path to Health.* 1946. Aug/Sept. p. 23. "Your best moment. When the drink is Soy-Bev or Soya-Choc. These are the nicest drinks. Freshly made from the choicest soya beans in our modern factory, St. Kilda, Melbourne. In Hygienic ½ lb. and 1 lb. Tins at all Health Centres Throughout Australia." This ad also appeared in the April/May 1949 issue (p. 8) of this magazine.

Note from Paul Smith of Soy Products of Australia (Pte.) Ltd. 1995. March 14. Paul thinks Soy-Bev was first introduced in about 1936-36. It was made with roasted soybeans and chicory, The product was discontinued in 1973.

846. **Product Name:** Soy Flakes.
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1937 December.
Ingredients: Soybeans.
How Stored: Shelf stable.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1937. Nov/Dec. p. 15. "Cooking eliminated! Now we have–Soy Flakes. The greatest things ever placed before health reformers. Gives to busy housewives the best food product ready to use. Soy bean has been welcomed by all vegetarians. Worry of preparation, waste of gas, labour in preparing. Soy-flakes large flakes of specially-prepared soy beans." Another ad is found in the Christmas 1937 issue, p. 12.

Note: This is the 2nd earliest English-language product or document seen (June 2013) that contains the term "Soy Flakes."

847. Abbott, George Knapp. 1937. High blood pressure: And degenerative diseases of the heart, blood vessels, and kidneys. 2nd ed. Takoma Park, Washington, DC, Peekskill, New York, and South Bend, Indiana: Review and Herald Publishing Assoc. 205 p. Illust. No index. 20 cm. [50+ ref]
• ***Summary:*** This book, by a Seventh-day Adventist physician, is an expanded version of the original 1927 edition. It is "the outgrowth of 34 years of medical and surgical practice,–institutional, where high blood pressure and degenerative diseases have been an ever-present problem..." The information about the soy bean and its use in rabbit feeding experiments is the same as in the 1927 edition. Address: A.B., M.D., F.A.C.S. [Former Medical Director of the Washington Sanitarium and Hospital, Washington, DC].

848. Comstock, Belle Jessie (Wood) (Mrs.). 1937. Three times a day. Takoma Park, Washington, DC, South Bend, Indiana, Peekskill, New York: Review and Herald Publishing Co. 96 p. Illust. No index. 20 cm.
• ***Summary:*** The author, whose name on the title page is written Belle Wood-Comstock, was born in 1880. Address: M.D., Asst. Prof. of Medicine (Nutrition and Endocrinology), White Memorial Hospital.

849. Battle Creek Food Co. 1937? Order form. Battle Creek, Michigan. Undated.

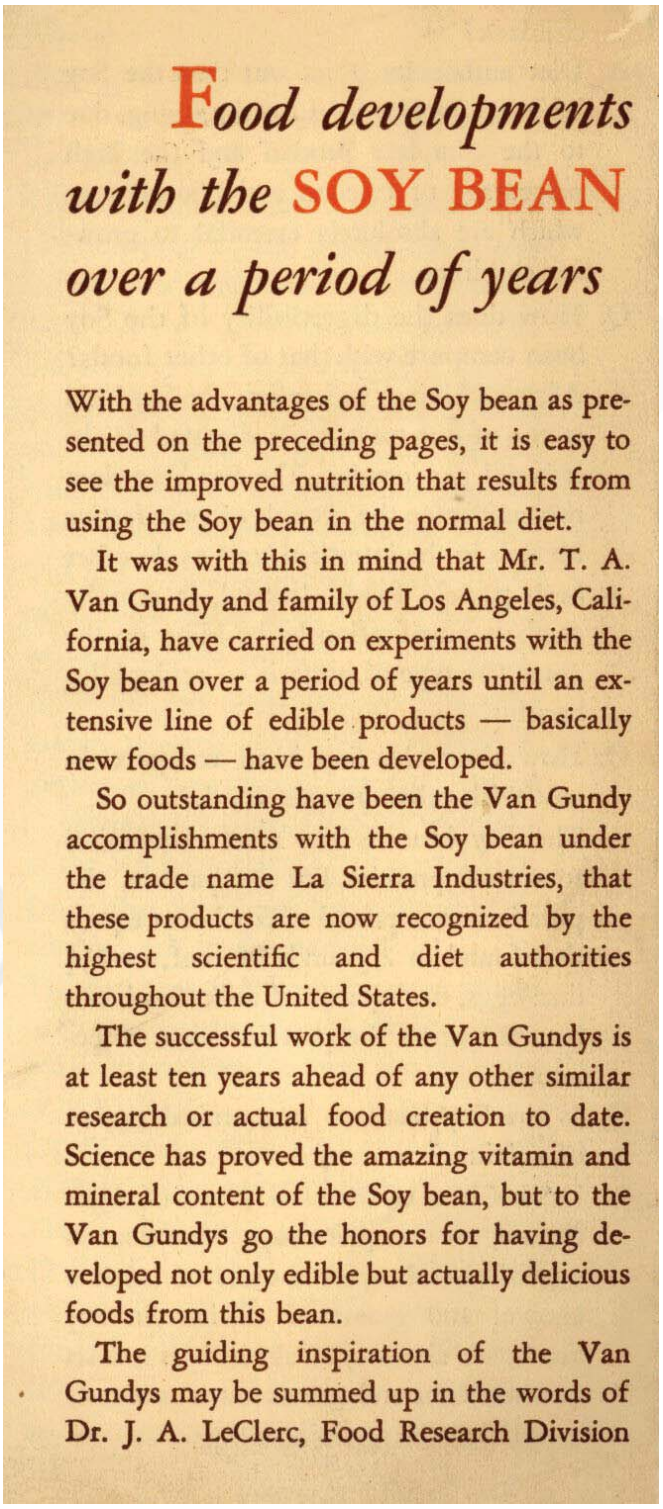
© Copyright Soyinfo Center 2014

• ***Summary:*** This list of 59 products and publications, with no title, date, company name or address, runs down the side of a carbon copy of a letter dictated by Dr. Kellogg to Dr. Allan Roy Dafoe on 19 April 1937. The products include foods, beverages, and publications. We are assuming that these are the products of Battle Creek Food Co. Of special interest are: Cooked bran. Fig bran cookies. Gluten flour. Gluten bread (baked). Gluten bread (canned). Gluten products. Malted nuts. Protose and Savita. Psylla. Psylla wafer. Psyllium seed. Savita yeast tablets. Soy acidophilus milk. Soy beans. Soy beans (green). Vegetable gelatin. Whole wheat flour. Whole wheat rusk. Address: Battle Creek, Michigan.

850. KLIX, Inc. 1937? Natural questions and astounding answers about the soy bean, Nature's alkaline food (Leaflet). Los Angeles, California. 4 panels each side. Each panel: 22 x 10 cm. Undated.

• ***Summary:*** Printed with orange and brown ink on light tan paper. The first four panels, titled "An enlightening digest of U.S. agricultural and health bulletins and conclusions of eminent dietary authorities concerning the soy bean," contain a series of questions and answers. The last three, titled "Food development of the Soy Bean over a period of years," state:

"With the advantages of the Soy bean as presented on the preceding pages, it is easy to see the improved nutrition that results from using the Soy bean in the normal diet.



"It was with this in mind that Mr. T.A. Van Gundy and family of Los Angeles, California, have carried on experiments with the Soy bean over a period of years until an extensive line of edible products–basically new foods–have been developed.

"So outstanding have been the Van Gundy accomplishments with the Soy bean under the trade name La Sierra Industries, that these products are now recognized by the highest scientific and diet authorities throughout the United States.

"The successful work of the Van Gundys is at least ten years ahead of any other similar research or actual food creation to date. Science has proved the amazing vitamin and mineral content of the Soy bean, but to the Van Gundys go the honors for having developed not only edible but actually delicious foods from this bean.

"The guiding inspiration of the Van Gundys may be summed up in the words of Dr. J.A. LeClerc, Food Research Division of Chemistry and Soils, U.S. Dept. of Agriculture: 'The Soy bean (which, of course, means the Soy bean and all of its products) contains a greater concentration of food elements, so necessary for human nutrition, than any other common food.'

"D.H. Garrison, M.D., of Clarksville, Georgia, addressing the Habersham County Medical Association, said: 'The Soy bean in America is bound to skyrocket its way into our homes, where at present seventy per cent of the food

Food developments with the SOY BEAN *over a period of years*

With the advantages of the Soy bean as presented on the preceding pages, it is easy to see the improved nutrition that results from using the Soy bean in the normal diet.

It was with this in mind that Mr. T. A. Van Gundy and family of Los Angeles, California, have carried on experiments with the Soy bean over a period of years until an extensive line of edible products — basically new foods — have been developed.

So outstanding have been the Van Gundy accomplishments with the Soy bean under the trade name La Sierra Industries, that these products are now recognized by the highest scientific and diet authorities throughout the United States.

The successful work of the Van Gundys is at least ten years ahead of any other similar research or actual food creation to date. Science has proved the amazing vitamin and mineral content of the Soy bean, but to the Van Gundys go the honors for having developed not only edible but actually delicious foods from this bean.

The guiding inspiration of the Van Gundys may be summed up in the words of Dr. J. A. LeClerc, Food Research Division

consumed is deficient or poor in mineral and vitamin content. With the addition of the Soy bean in its various forms, the protein will be more complete and of a better type; there will be a better quantity of fat containing Lecithin and Cephalin; the mineral part of the diet will be much higher, especially from a Calcium and Phosphorous standpoint; vitamins will be increased materially and the diet will be changed from the

© Copyright Soyinfo Center 2014

usual acid-ash diet to one of alkaline-ash.'

"Out of the enthusiasm of government authorities and the Van Gundy pioneering has been organized a company to greatly broaden the Van Gundy work. For the first time the American public will soon be presented with Soy bean foods of such generally liked character and flavor as to assure wide and enthusiastic acceptance.

"Organized by men of vision and broad national experience in the manufacturing, selling, merchandising and advertising of foods, KLIX, Inc., knows that in its hands is the basis of a new giant industry that will of necessity change (according to authorities) the dietary habits of our nation, if not a larger part of the world.

"KLIX, Inc., having taken over the entire Van Gundy laboratory, plant, formulas and goodwill, is not unmindful of its responsibility. That the Van Gundy family will continue research and development on a larger scale than ever before is assurance of the sincerity of purpose of the KLIX corporation.

"Already, KLIX, Inc., has perfected and will shortly market several food items of notable deliciousness. They are remarkable for their content of every nutritive element the human body needs *every day;* almost unbelievable in diet value when compared with generally similar foods that are sold in such enormous quantities to the American public.

"Packaged samples of these new KLIX products are now available at the company's offices. They will be offered to those who, after reading the informative digest on preceding pages, may be impressed with the vast manufacturing and sales possibilities of the Soy bean as a food–*The first basically new food in twenty-five years!*

"'Perfect food–that magical substance which renews strength and replenishes blood, bone and muscle.'" Address: Higgins Building, 108 West 2nd St., Los Angeles, California.

851. Deverall, Richard L.G. 1938. Life on the Madison campus. *Commonweal.* Jan. 6. *
• ***Summary:*** The author wrote this article following a visit to the Madison college campus. Address: Prof., Villanova College, Villanova, Pennsylvania.

852. Stegman, Henry M. 1938. Lessons from the quintuplets. *Good Health* (*Battle Creek, Michigan*) 73(2):57. Feb.
• ***Summary:*** "No other children, not even of royalty, have excited so much attention as the little Dionnes of Callander, Ontario. There are recorded sixty other instances of quintuplet births but in none of these did all the infants survive." They speak French.

"The quintuplets have been taking soy acidophilus milk since their fourth month, when they were attacked by a very severe form of bowel trouble, to which they were highly susceptible. Because they were not being breast-fed by their mother, they had never received the protective germ which infants normally receive in the act of nursing. They had been fed with mother's milk from their fourth day, but mother's milk does not contain the protective germ. This is derived from the outer surface of the breast in the act of nursing."

853. Lager, Mildred. 1938. The House of Better Living Catalog: Finer natural foods. Los Angeles, California: Published by the author. 36 p. March. 23 x 10 cm.
• ***Summary:*** The single most important document showing the creative development of commercial soyfoods in California in the late 1930s. This catalog contains a large section on Diabetic Foods, consisting mostly of soyfoods, and an even larger section titled "Soy Bean Products."

The Foreword (p. 1) begins: "The House of Better living is as unusual as its name. Its aim is to teach better living, and has made possible Mildred Lager's free educational program by radio and class work. Become a member of our ever-growing family. Secure one of our creed cards–Realize life can be a game and not a battle, and if you give to the world the best you have, the best will come back to you.

"The House of Better Living has grown in four years from what was called a brain storm to an institution. It is outstanding, unique, and built on the ideals of sincerity and service. It is teaching the ounce of prevention–the health insurance that pays dividends in years of health and happiness. It carries for you, Finer Natural Foods, selected by Mildred Lager."

A full page of delivery and order information (p. 2) shows that Mildred was shipping foods (such as California nuts and fruits, fresh and dried) all over the United States.

This catalog contains a total of 42 soyfood products, including 26 such products not found in the 1936 catalog. Soy (and other interesting) products are listed as follows (prices and weights are given for each): Beverages–Coffee substitutes: Radcliff's soy bean, Soy-Co. Other beverages: Dr. Fearn's Proteinized Cocoa, Radcliff's Malted Soya Milk, Radcliff's Soya Bean Cocolette, Soy-Malt (plain or chocolate). Sugars and syrups: Radcliff's Golden Soya Honey Spread (4-oz. glass). Natural sweets–Candies: Carque's health candies, bar, 5¢, Halvah bars, Sesame brittle, Soya candy sticks, 1¢ each, Soy milk "chocolate" bars, in Bavarian, cocoanut, mint, cherry, pineapple, and creme de mint flavors, Soy milk "chocolates," ½-lb. box or 1-lb. box, Soy chocolate, 1¢ square, ½-lb, 1 lb, 60¢, or bulk.

Desserts: Agar–Parfait mix, Agar–Hain Vege-Jell, Agar–Sanitarium vegetable gelatin. Diabetic foods: Gluten flour, Soy bean flour, 10¢ lb, Soy Bean Pancake and Waffle Flour (Bill Baker's Prepared; 2-lb. pkg. 30¢), Dr. Fearn's Soya Cereal, Dietetic Soyrina Cereal, Dr. Fearn's Soya-Date Breakfast Food, Battle Creek Dietetic Bran, Battle Creek toasted gluten bran flakes, Soy breakfast food, Cubbison's soy-gluten crackers, Soy-gluten wafers, Loma Linda soy bean wafers, Bill Baker's 100% soy-fruit slices, Bill Baker's soy bean bread, Olson's soy bread, Soy bean macaroni, spaghetti and noodles, Soy beans–imported, Soy

© Copyright Soyinfo Center 2014

beans–cracked, Soy beans–red, Soy beverages (without sweetening), Bill Baker's soy melba toast, Cubbison's soy melba toast.

Nut butters: Almond butter, Almond meal, Cashew butter, Peanut butter (dextrinized or raw), Pecan butter, Soy bean butter (lb or 8-oz. can). Whole grain flours, meals, etc.: Lima bean flour, Soy bean flour (1 lb, 3 lbs, or 10 lb), Soy bean pancake and waffle flour (Bill Baker's prepared), Soy bean pancake and waffle flour (Mrs. Hauser's), Whole wheat flour, wheat germ. Breakfast cereals (to be cooked): Mildred Lager's quick cooking cracked soybeans, Dr. Fearn's soya cereal, Dietetic Soyrina Cereal. Breakfast cereals (ready to eat): Battle Creek Zo, Dr. Fearn's soya-date breakfast food, Soya breakfast food, Bill Baker's 10% soya cereal. Melba toast, crackers, cookies: Cubbison's soy toast, Bill Baker's soy toast, Cubbison's Soy-Gluten crackers, Soy-gluten crackers, Loma Linda soy bean wafers, Cookies: Cubbison's soy cookies, Bill Baker's 100% soy fruit slices. Bread: Olson's soy bean bread (sliced loaf), Bill Baker's soy bean bread (unsliced loaf 16¢). Macaroni noodles: Soy bean macaroni, spaghetti and noodles. Legumes: Soy beans–imported, Soy beans–cracked, Soy beans–red. Meat substitutes: Nuteena (7 oz. can 15¢), Nut Meat, Nuttose (Battle Creek), Proteena, Protose, Soy bean butter (30¢ lb.), Soy mince sandwich spread, Soy bean spread, Soy bean ravioli (12¢ and 20¢ can).

Soy bean products (40 products; those mentioned above may be omitted here): Loma Linda soy beans (plain or tomato flavored, No. 1 can), Loma Linda soy beans with Proteena (No. 1 can), Dry soy beans (quick cooking red), Soy bean spread, Soya bean honey spread, Loma Linda soy mince sandwich spread, Soy bean sauce (5 oz for 18¢ or 2 oz bottle for 10¢), Soy bean oil (45¢ pint bottle), Soyco (Soy coffee), Soya bean milk powder, Milk of soya bean (6 oz or 12 oz can), Soy-Malt, Proteinized cocoa, Radcliff's 100% soya bean beverage (1 lb package), Cubbison's soy bean cookies, Cubbison soy-gluten crackers, La Sierra Soy breakfast cereal, Diamel Soyarina cereal, Diamel breakfast cereal. Salad dressings: Imitation Worcestershire sauce (Carque's, 5 oz bottle for 25¢). Powdered dry vegetables: Dulse, Dulse leaf, Irish moss, Kelp, Kelp–fancy, Sea lettuce (leaf or powdered), Soy-banana powder. Laxative foods: Agar, Psyllium, Swiss Kriss, Sym, Tam (laxative jam). Natural aids: Savita yeast tablets, Sesame seeds, Theradophilus (4 oz bottle 75¢, 8 oz bottle $1.25). Electric appliances: Electric juicers are not yet on the market. Index (p. 36).

There are ads for the following: Battle Creek Sanitarium Foods (p. 5; ask for literature). Ficgo coffee substitute (display ad, p. 6). Racliffe's Soya Products (p. 9, 21). Mildred Lager's quick cooking family (incl. cracked soy beans), Bill Baker's soy and lima bean products (photo display, p. 16). Therapy, Ltd.–Foods for Better Living (Theradophilus, soy bean milk, p. 19, 29).

A photo (p. 1) shows Mildred Lager.

Note. This is the earliest English-language document seen (Aug. 2013) that contains the term "soya bean beverage," which probably refers to powdered soya milk. Address: 1207 West Sixth St., Los Angeles, California.

854. *Madison Health Messenger* (*Madison, Tennessee*). 1938-1949. Serial/periodical. Madison, Tennessee: Madison Foods. Vol. 1, No. 1. Spring 1938. Frequency: Irregular.
• ***Summary:*** This interesting periodical began publication in the spring of 1938, with Edwin M. Bisalski as editor. Above the title is written: "Devoted to the protection of your health." Near the top left is a marble statue of a Greek discus thrower, and next to it a triangle on whose sides are written the words "Strength. Beauty. Efficiency." This is the best source of information on and photos of soyfoods at Madison from 1938 on. It also contained general information on diet and health. Unfortunately most issues are not dated. Vol. 2, No. 3 was published after March 1940–probably shortly after. Camp Meeting '41 was published after 31 May 1941. Campmeeting '42 was probably published after 31 May 1942. Vol. 7, No. 1 was published after 15 Aug. 1945. Vol. 49-3, which was probably published in 1949, is the last issue we have seen. Most issues contained 4-6 pages, each 8½ by 11 inches, and were filled with information about and photos of canned vegetarian foods (mostly soyfoods) made and sold by Madison Foods.

Andrews University (Berrien Springs, Michigan) has the following: v.2 (1939) 1. v.4 [1941] 2, 3, camp meeting. v.5 [1942] 2.

855. Kellogg, John Harvey. 1938. The constipation problem solved. *Good Health* (*Battle Creek, Michigan*) 73(5):138-39. May.
• ***Summary:*** "Constipation is a disorder of the colon. It is a disease little known among savages and wild animals, but very common among civilized people and domestic animals. The great number of remedies offered and the constant appearance of new ones are evidence of the baffling nature of the disorder and the eager search for better means of relief. No progress was made until the X-ray began to throw light upon the colon functions through the researches of Prof. Cannon of Harvard University [Massachusetts] on animals, Hurst of London, and the observations of Holzknecht of Vienna and Dr. James T. Case of the Battle Creek Sanitarium (Michigan)."

Scientists now know that the Nature intends for the colon to be cleared of its wastes every 24 hours. Thus after a meal today, the contents of the same meal from the previous day are evacuated.

It is "important to make a distinction between bulkage and roughage. It is essential that there should be a sufficient amount of indigestible and non-absorbable material to properly distend the intestine and to stimulate its muscles

© Copyright Soyinfo Center 2014

to activity, but it is not essential that this material should be coarse or capable of causing irritation."

To avoid constipation: Avoid hasty eating of meals. Chew your food well. Get adequate vitamin A. Get rid of parasitic bacteria which, by producing putrefaction, paralyze the colon by ingesting *Lactobacillus acidophilus.* Get adequate exercise accompanied by deep breathing. Keep good posture, especially when sitting. Avoid worry, fear, and depression. Address: M.D.

856. **Product Name:** Kreme O'Soy Crisps (Ready-to-Eat Breakfast Cereal. Renamed Wheatasoy in Jan. 1940).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1938 May.
Ingredients: Whole soy bean flour, whole wheat, malt.
Wt/Vol., Packaging, Price: 9 oz box.
How Stored: Shelf stable.
New Product–Documentation: Madison Health Messenger. 1938. Spring. Page 4. "Kreme O'Soy Crisps is a high quality breakfast cereal, ready to eat. The combination of whole soy bean flour, whole wheat, and malt presents a rich assortment of choice nutritional elements. A special malting and baking process makes it easy of digestion, which together with its being alkaline makes it a protective balanced breakfast food. 13 cents per package." A photo shows a young boy at the breakfast table (dressed in a white shirt and bow tie) eating "Breakfast Crisps."

Ad in *Nature's Path* (USA). 1939. Sept. p. 337. "Alkaline breakfast food: Kreme O'Soy Crisps." Madison Foods: "Devoted to the protection of your health."

857. *Madison Health Messenger* (*Madison, Tennessee*). 1938. Soy bean milk, coffee, meat, and cereal. 1(1):1, 4, 6. Spring.
• ***Summary:*** "More versatile than any other food is the soy bean. Previously used as stock feed, it has gradually won its way into many wholesome foods that are distinctly different, yet palatable and reasonable.

"Madison Foods, in conjunction with Madison College, has spent years in experimental research developing soy bean foods. Dr. Philip S. Chen, Professor of Chemistry at Madison College, a native of China who received his doctorate degree in chemistry at Michigan State College, together with Dr. Frances L. Dittes, Professor of Nutrition at Madison College, whose doctorate degree is also in the field of Chemistry and Nutrition, have successfully exploited the ancient bean, discovering its versatility as is evidenced by the possibilities

of its use as milk, coffee substitute, meat substitute, breakfast cereal, flour, etc."

Kreme O'Soy Milk is the only homogenized soy bean milk on the market to date; it is made of soy beans, added soy bean oil, dextrose, and organic calcium. Zoy-Koff is an alkaline coffee substitute made from soy beans and grains. Kreme O'Soy Crisps is Madison's new ready-to-eat alkaline breakfast cereal. It is made of whole soy bean flour, whole wheat, and malt.

Foods made by Madison Foods that contain soy as an ingredient, described in this first issue are: Soy-Koff (with photo of front of package in front of Mr. Hubert Henken, assistant production manager of Madison Foods, from Albia, Iowa, and a "strict vegetarian"). Thin Things (a new soy wafer). Date-Stix (a natural sweet, with Kreme O' Soy Flour). Fruit Stix (a soy flour biscuit). Breakfast Crisps / Kreme O'Soy Crisps (with photo of front of package). Soyburger Loaf. Soy Beans (in 5 oz, 14 oz and 30 oz cans, with tomato sauce or plain). Soy Cheese [Tofu]. Vigorost ("Madison's finest protein food representing the 'steak' of its variety." A photo shows Vigorost sliced and ready to serve on a platter). Kreme O'Soy Flour. Kreme O'Soy Milk.

Note: This is the earliest document seen (Jan. 2013) that contains the word "Soyburger" (spelled as one word, regardless of capitalization) or the term "Soyburger Loaf."

858. Melick, Weldon. 1938. Self-supporting college. *Reader's Digest.* May. p. 105-08.
• ***Summary:*** About Madison College in Tennessee. "In 1904 the Nashville Agricultural Normal Institute at Madison, Tennessee, consisted of 11 students and some dilapidated

© Copyright Soyinfo Center 2014

farm buildings on 400 acres of worn land purchased with the last cent of its founders–Dr. E.A. Sutherland and four other teachers. In addition, however, it had one invaluable asset: Dr. Sutherland's idea that a college education should be made available to any boy or girl willing to work for it."

Today "Madison's curriculum includes 27 campus industries, run by the students to support the college and themselves... 15 years of research in food chemistry have resulted in new food products too useful to confine to campus menus.

"Hence, Madison Foods–an industry that is largely responsible for making the soy bean appetizing to Americans. The school's food chemists, experimenting with 200 varieties of soy beans, eliminated objectionable taste and produced savory breakfast foods, bread, coffee substitute, condensed milk, and meat substitutes which look and taste like beef but are even more nutritious and digestible. Vigorost, made from soy loaf after the milk is extracted [i.e. okara], is featured by a cafeteria chain in New York City. More than $60,000 worth of Madison's packaged and canned foods was sold in 27 states last year, and the Institute runs its own health-food cafeterias in Nashville and Louisville.

"Madison Foods have developed soy milk until it is now not only cheaper than cow's milk but, on the authority of the American Medical Association, better for babies. Observers have come from Africa, India, and other countries where milch cows are scarce, to study the methods of Madison's soy bean 'dairy.'...

"With twice as many applicants as can be provided for, Madison as a rule accepts only those who could not otherwise arrange for a college education."

Note 1. As a result of this article, the school received nearly 5,000 inquiries concerning the school plus a flood of student applications. The next year was the highest in the history of the College with a total of 450 college students enrolled.

Note 2. This is the earliest article on soy seen (Aug. 2002) in *Reader's Digest* magazine.

859. Stegman, Henry M. 1938. Bread of soybean and wheat. *Good Health* (*Battle Creek, Michigan*) 73(5):137. May.
• ***Summary:*** Dr. G. Douglas Gray, a Scotch physician, argued recently in the *British Medical Journal* that British bread should be made from 20% soybean flour and 80% whole wheat flour. The mixture contains 60% more protein than ordinary bread. "The ash of the soybean is alkaline, which that of cereals is acid. The ash is also rich in phosphorus, calcium, and magnesium. This alkaline value aids in combating the fatigue of muscular exertion, and herein lies the ability of the Oriental to do a long day's work at small cost."

"The soybean flour commonly sold in England is made in accordance with the formula of Professor Berczeller, of Vienna [Austria]. In this process the objectionable flavor of the bean is removed by chemical solvents. This is objectionable for the reason that chemical solvents are likely to impair the nutrient qualities of the bean by removing useful elements. Processes devised and used in this country are not open to this objection, the use of chemical products being avoided."

860. Nelson, G.A. 1938. Re: Request to use Dr. Fearn's name on Vitona product labels. Letter to Dr. Charles E. Fearn, 355 West Ontario Street, Chicago, Illinois, June 11. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "Since writing you yesterday, your letter of June 6 addressed to the Giloma Research Laboratories has been turned over to me, inasmuch as I have the general management and control co-jointly with Doctor Proctor of the Vitona Health Products Incorporated. Your letters are always interesting for it is plainly evident that you are thinking along parallel lines with us. We have gone over the products you have sent us with a great deal of interest. We are quite convinced that you are manufacturing something of outstanding merit..." Vitona plans to work closely with the Medical profession and to establish a foundation–the Charitable Clinical Institution.

"A short time ago, Dr. [Keller] Beeson of the American Soy Bean Association recommended to us that we employ Miss Dorothea Van Gundy to take charge of our Dietetic Department under the direction of our President, Dr. F. Earle Brown. Although Miss Van Gundy was employed as a Dietitian for the largest Health Food Restaurant in California, she has resigned from that position as of the 25th, this month, and is joining our organization at that time. Miss Van Gundy brings with her all that we could expect, in addition to having the happy faculty and ability of being able to lecture–to write–and to handle radio programs."

Mr. Nelson then suggests to Dr. Fearn that Vitona would like, "out of respect for the work you have heretofore done, to incorporate your name on the products which are of your manufacture. The name of our product will be overprinted on the label." Vitona has decided to change the name of its bread to "Vitona Soy" from "Ches-Nu-Soy" thereby side stepping "coined" names.

"In the case of your products, taking the infant food as an example, or the cereal, we would simply overprint on your label, in the space for the name of the item–'Dr. Charles E. Fearn's Infant Food,' or in the case of the 'Soy-O,' 'Dr. Charles E. Fearn's Soybean Cereal,'"... or "on the back of the package state something along the order of: 'This cereal is specially prepared for Vitona Health Products Incorporated by Doctor Charles E. Fearn." Address: Vitona Health Food Products Inc. of California, 527 West 7th, Los Angeles. Phone: Tucker 1317.

861. *Buffalo Times* (*Buffalo, New York*). 1938. Learning to live (Photo caption). June 19.

© Copyright Soyinfo Center 2014

• ***Summary:*** A photo shows two young ladies at Madison College in Tennessee, each milking a cow, indoors, and seated on a wooden stool while she looks at a book balanced on her left knee and thigh. The caption reads: "Collegiate milkmaids, hard pressed for time, are memorizing poetry to the rhythm of milking cows before class time. Graduates of Madison College are encouraged to move to needy communities, there teach better ways of living, administer medical, health and cultural service in the way they learned at school."

There may also be a portrait photo of E.A. Sutherland, president of Madison College. He doesn't believe in debts, endowments, or "drives" for money.

862. *New York Times.* 1938. Self-help school: Madison College grows from its students' labor. June 19. p. 128.

• ***Summary:*** Madison is a self-help college, where students divide their time each day between 5 hours each of study and labor. There are 20 industries on campus. Each student is expected to earn at least half his expenses, which are calculated at $25/month for room, board, tuition, and laundry. In 1932 it attained recognition as a "senior college" and it presently has a student body of almost 350, from 40 states and 5 foreign countries. There are 4 large photos. One shows a student from Arkansas roasting soybeans in front of a large oven. This is "an industry in which the school has done pioneering work. Its chemists developed methods of using soybeans is a variety of food products." The stone science hall which was "designed and built entirely by students under the skilled supervision of their instructors, as were all of the more than 100 buildings on the college properties. A large part of the material was produced locally and even the roof tiles are of student manufacture."

863. *Good Health* (*Battle Creek, Michigan*). 1938. A special milk for bottle-fed babies. 73(6):179-80. June.

• ***Summary:*** This special milk is prepared from the soybean, which the Chinese call "the honorable bean" and which has "for thousands of years been found a perfect substitute for breast milk [sic] in the feeding of babies deprived of their natural food supply. Soybean milk looks like cow's milk, and tastes much like it, and is more easily digestible and richer in lime and iron, though in other respects much like dairy milk. The great virtue of soy milk is that it encourages the growth of the wonderful protective germ acidophilus with which every nursling is inoculated by contact with its mother's breast."

"Many foods discourage the growth of the acidophilus, especially greasy and fried foods, hamburger steak and sausage, as do also alcohol, tobacco and laxative drugs. Bread and milk, breakfast foods, bananas and fresh fruits and vegetables of all sorts encourage the growth of friendly germs, which differ from ordinary buttermilk germs chiefly in the fact that they are able to grow in the colon, whereas the buttermilk germs die at the level of the stomach because they cannot survive without oxygen, while acidophilus can obtain its oxygen from sugar of milk, dextrin and some other carbohydrates.

"One to three glassfuls of soy acidophilus milk taken daily will keep the colon free from offensive gases and foul odors, clear the skin and the tongue, sweeten the breath and promote better appetite and a sense of fitness to a remarkable and almost unbelievable degree. Every bottle-fed baby should receive a teaspoonful of soy acidophilus milk at each feeding as an almost certain protection against the bowel troubles of bottle-fed infants."

864. Sanford's Cafeteria. 1938. "World's most unique cafeteria!" ... Say previewers and you'll agree! (Ad). *Los Angeles Times.* July 26. p. 4.

• ***Summary:*** This big ad announces the grand opening of a healthy cafeteria on Tuesday, July 26. "Fully air-conditioned. We acknowledge with gratitude the co-operation of the firms listed below: Acidofilac–Radiance Products Co. Bragg Meal & California Mint Tea–Live Food Products Co. (Paul Bragg). Cocoanut Milk Powder & Cocolette–Radcliffe Products. Cottage cheese & buttermilk–Knudsen Creamery Co. Healthful Candies–Hassey Candy Co. KAL–The calcium phosphorus food–Makers of KAL. Mal-Ba-Nuts & vegetable juices–Hain Pure Food Co. Nuteena, Syl-Dex & Savorex–Loma Linda Food Co. Papaya & guava juice–Milo Frank. Soy milk powder–Viana (Malcolm McBride). Soy waffle flour & soy macaroni–Mrs. Hauser's Food Products Co. Swiss Kriss, Vitana, Staf & Juicex [electric juicer]–Modern Health Products Co. (Gayelord Hauser). Soyolate, The soy chocolate–Theo. Hollie Co. Theradophilus & Theradiet–Therapy, Ltd. Unsulphured figs & jumbo prunes–F.E. Hadley & Sons. Virgin olive, peanut & soy bean oils–Solar Food Products Co.

Keep fit by eating right. Modern cooking insures digestibility ("Either whole wheat and soy bean flours, vegetable shortening in baked goods–no cheap artificial substitutes Whatever!"). "Outstanding features to help you keep fit:" Cafeteria, Dietetic food store, bakery (using "whole wheat and soy bean flours"), health bar ("An exclusive feature of Sanfords. Fresh fruit and vegetable juices squeezed right before your eyes and concocted into tantalizing non-alcoholic cocktails that will send you along with a new spring in your step and sparkle in your eye"). "All employees required to pass a physical examination. Open every day of the year, 7 a.m. to 8 p.m." "Cooking that's kind to your stomach."

Photos show: (1) The inside of the cafeteria with white tablecloths. (2) Thirteen waitresses in uniform. (3) Bar stools around the health bar. (4) The dietetic food store.

Note: This is the earliest document seen (June 2006) that mentions the Juicex, an early electric juicer. Address: 720 South Hill St. [Los Angeles, California].

865. Chen, Philip S. 1938. The aristocrat among foods: The soybean. *Health* (*Mountain View, California*) 5(7):14-16. July. [4 ref]
Address: Ph.D.

866. Stegman, Henry M. 1938. Germany turns to the soybean. *Good Health* (*Battle Creek, Michigan*) 73(8):252. Aug.

867. *Good Health* (*Battle Creek, Michigan*). 1938. Colonic irrigation found beneficial. 73(9):280. Sept.
• ***Summary:*** In autointoxication of intestinal origin, colonic irrigation is far more effective than the ordinary enema. Patients with this disorder require a strictly antitoxic diet; that is, the avoidance of meats of all sorts. The food should be chewed carefully. "Acidophilus cultures, especially soy acidophilus, and Lacto-Dextrin should be used in sufficient quantities to change the intestinal flora; that is, to arrest putrefaction and produce non-odorous stools, with the absence of intestinal gas."

Note: This is the earliest English-language document seen (June 2003) that uses the term "colonic irrigation" to refer to a method for changing the intestinal flora.

868. Roosevelt, Eleanor. 1938. My day. *Syndicated Column.* Oct. 6.
• ***Summary:*** An article about Madison College in Tennessee, based on an interview with Dr. Floyd Bralliar. She stated that U.S. Secretary of State Cordell Hull had especially requested her to have the interview and to report on it. Since Dr. Bralliar had spent most of his life and labor on the Madison project, he was well able to impart to her its spirit, which she reflected in her praise. The article was syndicated in many newspapers nationwide by United Features Syndicate, Inc. It is reprinted near the back of the 1989 edition of *Madison–God's Beautiful Farm.*

A small portrait photo shows Eleanor Roosevelt.

869. **Product Name:** Soya Beans in Tomato (In glass jar. Canned by June 1940. Renamed The Versatile Soyabean in Tomato Sauce by 1953).
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1938 October.
Ingredients: Incl. soya beans, tomatoes.
Wt/Vol., Packaging, Price: 12 oz jar. Canned by June 1940.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1938. Oct. Half-page ad. "For your health's sake, eat Soya Beans in Tomato. The Protein food with the high Vitamin content, prepared under Hygienic conditions, hermetically sealed by F.G.R. Health Food Products (Registered), 40 Chapel Street, St. Kilda. Directions for use. Place jar in water and heat. To open, lever lid with coin. Obtainable from Roberts Health Centre, 284 Post Office Place, Melbourne, C.1. Phone: Central 3394." A photo shows the jar and label. At the bottom of the label is written: "Manufactured at 40a Chapel St., St. Kilda."

Ad in *Nature's Path to Health.* 1940. June. p. 26 "Just what you've waited for! Better health foods." An illustration (line drawing) shows the four canned products, with the Soy Bean & Tomato in the smallest can. Ad in NPH. 1940. July. p. 8. "Roberts' Better Nut Foods." An illustration (line drawing) shows the four canned products, with the Soy Bean & Tomato in the smallest can. Small ad in Aug. 1940 issue, p. 5. "Roberts' Soy Bean in Tomato." "Packed in a new style in tin in convenient sizes and sold at all Roberts' Health Food Shops throughout Australia."

Ad in *Nature's Path to Health.* 1940. Nov/Dec. p. 30. "Roberts' Soy Nut Recipes." Same line drawing as in July issue. "Supplies always available at the Roberts Health Food Shops Throughout Australia."

Letter (fax) from Paul Smith of Soy Products of Australia. 1995. March 14. From 1940 to 1954 these soybeans were contract canned outside the Roberts' plant. From 1954 to 1974 they were canned in house. The product had to be discontinued in 1974 due to falling sales, its high labor cost and low profitability, and the lack of capital to further automate the process. Long before 1954 the Sanitarium (Adventist) retail shops sold this product under the Roberts brand name. Sanitarium studied the product then introduced their own version of it as a logical extension of their extensive range of canned vegetarian "meat analog" type products. They had economies of scale which Soy Products of Australia lacked. As Sanitarium Sales increased, ours declined. Beans in Tomato were processed continuously

from 1940 to 1974 by SPA and previously under the F.G. Roberts brand.

870. **Product Name:** Roberts' Soy Nut Roast.
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1938 October.
Wt/Vol., Packaging, Price: Tin-plated steel can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1938. Oct. Rear cover (p. 50). A photo shows the label: "The ideal meat substitute. 10 ozs. Nett. Another Roberts 100% protective health food."

Note: The same page shows that Roberts also made a coconut ice cream named Robert's Cocoanut; it was apparently a non-dairy product.

871. Roberts, F.G. 1938. Naturopathy: Nature cure. *Nature's Path to Health* (*Melbourne, Australia*). Nov. 1. p. 12.
• ***Summary:*** A portrait photo shows F.G. Roberts, smiling and dressed in a bow tie. "Life is all law... All life, spiritual, mental and physical is as scientific and exact as chemistry and mathematics. Harmony through obedience is the key-note of all. When that is maintained on each plane of our being, gladly, faithfully maintained, then life is truly a song, one with the melodies of nature, one with the life of the birds, of the trees, of the grass and rain. All nature sings because it is obedient to the law within and in harmony with it. All law is alive..." Address: N.D., D.O., Australia.

872. *Post-Dispatch* (*St. Louis, Missouri*). 1938. Pictures. Nov. 6. *
• ***Summary:*** Photos show: (1) Aerial view of "Madison College, Tennessee. Its campus covers 700 acres." (2) "At one wing of the Madison College hospital, a student nurse wheels a patient past a pre-medical student, delivering a tray."

873. Hastings, Milo. 1938. A college that feeds itself. *Physical Culture*. Nov.
• ***Summary:*** About Madison College near Nashville, Tennessee. About 500 people now live on the campus, of which 300-350 are students. About 90% of the vegetables (including soybeans) consumed by all these people are grown by student labor. The college has its own mills for whole-grain products and its own bakery, "which also serves whole-wheat and soy-bean bread to over one hundred retail stores in the nearby city of Nashville."

"The address Madison College, Tennessee, has become familiar to patrons of health food stores as the place of origin of a distinctive line of products made from soy-beans." The reason for that grew out of an interesting combination of circumstances. First, the college was founded upon the idea that the "students should by their own labor produce as nearly as possible all their own food supply for a completely nourishing diet. Second: Madison College and Sanitarium are strictly vegetarian, and, as at the Battle Creek Sanitarium, the vegetarianism has been worked out as part of the school dietary as well as the sanitarium dietary. To students and patients alike the importance of proper food for the body is emphasized.

"Third: one phase of the work at Madison College has to do with the training of medical missionaries. That has not only brought to the teaching staff people who have had experience in the Orient, but has also brought students from those countries. (At present there are six Japanese and ten Chinese students.)

"Out of these circumstances came the development of a new line of foods which we may call the Americanization of the second most important food material in the Eastern world and the greatest of all vegetarian sources of protein–the soy-bean."

To Madison College, with its interest in perfecting a vegetarian diet, came Perry A. Webber, as professor of chemistry. He had taken his doctor's degree at Michigan State College after a fourteen years' residence in Japan. It was a happy combination of circumstances, and the American chemist, with his Japanese experience, set to work to Americanize the soy-bean as a source of human food.

"It also happened that one of Dr. Webber's Chinese friends, Philip S. Chen, was a fellow student of chemistry at Michigan State College, having come to America to study science. When he had completed his chemical work for a doctor's degree at Michigan, he entered Madison College as a special student to take up practice teaching in the Department of Chemistry under Dr. Webber. The two men, each with a knowledge of soy-beans as used in the Orient, now worked together as chemists in the American college.

"After two years of this cooperation Dr. Webber was called back to Japan to become the head of a school there. Dr. Chen then became the professor of Chemistry at Madison College and continued to work on soy-bean products."

Though Dr. Chen says soy-bean milk has been used in China for 3,000 years, the type made at Madison "is new because it is different and superior to the older forms of the Oriental product." It has been made "more acceptable to American tastes and to the more exacting demands of present-day nutritional science. This also applies to the substitutes for meat and the cheese products made from soy-beans, and to the use of soy-bean flour as an ingredient in bakery and cereal products. Today all this is of special interest to vegetarians and to those who follow the latest forms of health foods. These advances in food science will later become of far greater significance."

Dr. Frances L. Dittes, head of the Department of Nutrition, specializes in soybeans, "both in nutritional

© Copyright Soyinfo Center 2014

research and menu applications. Thus, the new food products developed from soy-beans, along of course with other vegetarian dishes, were worked out and tried out in the students' dining hall and also in the Madison Sanitarium. Patients cured at the sanitarium naturally wished to continue the use of the food products after returning home. This gave the nucleus of a health food manufacturing business.

"This, in turn, provided another campus industry for the work-your-way college, giving occupation for the students in which they could take an especial interest and pride, since the business grew out of the research work of the college and was closely tied in with both their agricultural and their health work."

Note: This article is reprinted near the back of the 1989 edition of *Madison–God's Beautiful Farm.*

874. *Post-Dispatch* (*St. Louis, Missouri*). 1938. A college supported by its own industry: Madison College, Tennessee–the country's most unusual educational institution. Dec. 7. Rotogravure section. p. 10-11. *

• ***Summary:*** This 2-page center spread is about Madison College in Tennessee, to which it brought much favorable publicity. Photos by Jack Schutz show: (1) Five women students with many Madison Foods packages. (2) Soy milk being made in the food plant. "Soy milk may be substituted for cow's milk by those who require a strictly vegetarian diet" [i.e., a vegan diet].

875. *Madison Health Messenger* (*Madison, Tennessee*). 1938. New variety soy beans. 1(3):1. Fall-winter.
• ***Summary:*** "A new variety of soy beans has been developed. They are much larger in size and quite irresistible as a vegetable food. Unlike other legumes, the soy bean contains practically no starch... Therefore it has proved to be a desirable food for diabetics."

"This new variety is available under the registered trade name of Kreme O'Soys, manufactured exclusively by Madison Foods. They are packed in the natural soy bean sauce [the cooking liquid] in hermetically sealed tins–ready to eat. 14 oz. can 15¢."

Note: These are large-seeded vegetable type soybeans.

876. *Madison Health Messenger* (*Madison, Tennessee*). 1938. Madison College stresses health. 1(3):1, 3, 5. Fall-winter. [5 ref]
• ***Summary:*** Cites and discusses the many nationwide publications in which the story of Madison College has been told. For example: *"Reader's Digest* published an article in the May issue entitled 'Self-Supporting College.'"

"Early in June the *New York Times* sent a photographer to Madison College to take pictures for their rotogravure section. These pictures appeared in the June 19 issue of the *New York Times.*

"Mahatma Gandhi reprinted the entire *Reader's Digest* article in his official organ the *Harijan,* in India."

"From the very beginning nearly 35 years ago, the importance of correct eating and health habits was emphasized... A vegetarian bill-of-fare was adopted and is adhered to strictly today."

• ***Summary:*** See next page. This is the earliest known list of foods made by Madison Foods. The name of each food that contains soy as an ingredient is preceded by an asterisk (*). The foods are divided into categories and the flavor, size and price of each size are given.

The categories are: Breakfast cereals. Beverages. Crackers. Canned protein foods. Flour.

The foods containing soy as an ingredient are: Kreme O'Soy Crisps. Soy-Koff. Kreme O'Soy Milk (plain and chocolate). Thin-Things. Fruit Stix. Date Stix. Soyburger Loaf. Vigorost (3 sizes of cans). Soy Cheese seasoned (3 sizes of cans). Soy Beans with Tomato (3 sizes of cans). Kreme O'Soys [whole soybeans]. Kreme O'Soy Flour.

878. **Product Name:** Soymilk.
Manufacturer's Name: Canton Mission School.
Manufacturer's Address: Canton, China.
Date of Introduction: 1938.

879. **Product Name:** Loma Linda Gluten Burger (with Soy Flour).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1938.
Ingredients: Incl. soy flour.
Wt/Vol., Packaging, Price: 14 oz, 28 oz, and 30 oz can (1971).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Note: This is the second earliest known vegetarian "burger" (with the word "Burger" or "Burgers" in the product name) made in the United States. It is also the earliest known product made by Loma Linda Foods that contains wheat gluten. Loma Linda Food Co. Price list. 1938.

Patricia H. Black and Ruth L. Carey. 1971. *Vegetarian Cookery.* 5 vols. This set of vegetarian cookbooks contains numerous recipes calling for "gluten burger" which is sold in 14 oz, 28 oz, and 30 oz cans.

880. **Product Name:** Soymilk, Tofu-Pimiento Spread, Okara Spread, and Gluten Cutlets.
Manufacturer's Name: Miller's Soy Foods.
Manufacturer's Address: Utica, New York. Washington, DC.
Date of Introduction: 1938.
Wt/Vol., Packaging, Price: Soymik: Bottled. Gluten products: Canned.
New Product–Documentation: Herbert P. Ford. 1958. *The Life Story of Dr. Harry W. Miller.* p. 131. "In 1939 Dr. Miller returned to the United States having been so thoroughly convinced of soy milk being destined to have world-wide acceptance... His son, Harry Willis Miller, Jr. had returned preceding his father and had started a small soy milk plant in Utica, New York, where he made and bottled soy milk and also made and canned some of the protein foods out of wheat gluten for which they had developed recipes. This plant was later moved to Mt. Vernon, Ohio, after they started the soybean plant at Mt. Vernon."

Interview with Willis Miller. 1981. After he returned to the USA from Shanghai, Willis started this company, named Miller's Soy Foods, in Utica, New York, in 1938. Later that year he moved it to Washington, D.C. and was successfully making and marketing canned soymilk, tofu used in a tofu-pimiento spread, okara spreads, and gluten cutlets. When Dr. Miller returned to the U.S. he suggested that he and his son go into business together. Willis liked the idea.

881. American Soy Bean Association. 1938. 16th annual meeting (leaflet). 1 p. Single sided. Undated.
• ***Summary:*** This leaflet indicates the location and menu for the 16th annual meeting of the American Soy Bean Association. The meeting was held in the Crystal Ballroom of Hotel Montrose, Cedar Rapids, Iowa. The menu included: "Salted soy nuts, cream of tomato soup, fruit cocktail, beef tenderloin steak, browned potatoes, string beans, soy Parkerhouse rolls, butter, apple, celery and egg salad, Vi-Tone ice cream, cake." The leaflet also lists the stores from which the soy products were purchased: "La Sierra Industries, Ontario, California; Madison Foods, Madison College, Tennessee; Petersen Bakery, Cedar Rapids, Iowa; Milqo Limited, Vi-Tone Company, Hamilton, Ontario, Canada; Hutchinson Ice Cream Company, Cedar Rapids, Iowa."

Note: The Vi-Tone Company of Canada made soymilk in malted and chocolate flavors. Ice cream was probably made from that soymilk for this occasion. We have no evidence that Vi-Tone ever made a commercial ice cream from their soymilk.

882. Anderson, Hans Steele. 1938. Science of food and cookery. 7th ed. Mountain View, California, Portland, Oregon, Cristobal, Canal Zone, and Omaha, Nebraska: Pacific Press Publishing Assoc. 297 p. Illust. 23 cm. [7 ref]
• ***Summary:*** Soybeans are discussed, with recipes, on pages 157-60. A recipe for making soy bean milk is given on p. 282; the remaining pulp is called "soy bean cake."

A 5th edition (same publisher, number of pages, and size) was published in 1929, and a 6th edition in 1932.

885. White, Ellen G. 1938. Counsels on diet and foods: A compilation from the writing of Ellen G. White by the Board of E.G. White Trustees. Takoma Park, DC: Review and Herald Publishing Assoc. 511 p. Index. 17 cm.
• ***Summary:*** The Foreword states: "Early in 1926 there was issued by the Loma Linda college press, a paper-bound volume entitled 'Testimony studies on diet and foods.' This was compiled by Dr. H.M. Walton from the writings of Mrs. E.G. White for use in the College of Medical Evangelists... The continued call for the book... justifies the issuance of this new and enlarged edition."

Quotations from previous writings by a founder of the Seventh-day Adventist faith are arranged by the following subjects: Reasons for reform. Diet and spirituality: The relation of diet to morals. Health reform and the third angel's message. The proper dietary: The original diet, the simple diet, the adequate diet, diet in various countries. Physiology of digestion. Improper eating a cause of disease. Overeating. Control of appetite. Regularity in eating: Number of meals, eating between meals. Fasting. Extremes in diet. Diet during pregnancy. Diet in childhood. Healthful cookery. Health foods and hygienic restaurants. Sanitarium dietary. Diet a rational remedy. Fruits, cereals, and vegetables: Fruits, grains, bread, vegetables. Desserts: Sugar, milk and sugar, pie, cake, pastry, puddings. Condiments, etc.: Spices and condiments, soda and baking powder, salt, pickles and vinegar. Fats: Butter, lard and grease, milk and cream, olives and olive oil. Proteins: Nuts and nut foods, eggs, cheese. Flesh meats (proteins continued): Progressive dietetic reform in Seventh-day Adventist institutions. Beverages: Water drinking, tea and coffee, cereal substitutes for tea and coffee, cider, fruit juice. Teaching health principles: Instruction to be given on health topics, how to present the principles of health reform, cooking schools. Appendix: Personal experience of Ellen G. White as a health reformer, a statement by James White relating to the teaching of health reform. General subject index.

Concerning the consumption of milk, dairy products, and eggs, Ellen G. White stated (year of quotation, number in book): "Fruits, grains, and vegetables, prepared in a simple way, free from spice and grease of all kinds, make, with milk or cream, the most healthful diet. They impart nourishment to the body, and give a power of endurance and a vigor of intellect that are not produced by a stimulating diet" (1890, #601).

"Some, in abstaining from milk, eggs, and butter, have failed to supply the system with proper nourishment, and as a consequence have become weak and unable to work. Thus health reform is brought into disrepute... The time will come when we may have to discard some of the articles of diet we now use, such as milk and cream and eggs; but it is not necessary to bring upon ourselves perplexity by premature and extreme restrictions. Wait until the circumstances demand it, and the Lord prepares the way for it" (1909, #602).

"Milk, eggs, and butter should not be classed with flesh meat. In some cases the use of eggs is beneficial. The time has not come to say that the use of milk and eggs should be wholly discarded. These are poor families whose diet consists largely of bread and milk...

"Let the diet reform be progressive. Let the people be taught how to prepare food without the use of milk or butter. Tell them that the time will soon come when there will be no safety in using eggs, milk, cream, or butter, because of wickedness among men" (1902, #603).

"If milk is to be used, it should be thoroughly sterilized; with this precaution, there is less danger of contracting disease from it" (1905, #607).

"We place no butter on our table. Our vegetables are generally cooked with milk or cream and made very palatable... We think a moderate amount of milk from a healthy cow is not objectionable" (1870, #611).

Concerning the idea that the strictest diet is not the best, especially for the poor, see White's letter of 1901, #612. She feels that all people should stop consuming flesh meats, tea and coffee, but that the subject of giving up milk, eggs, cream, and butter needs to be handled carefully, especially by poor families. "No extremes in health reform are to be advocated. The question of using milk and butter and eggs will work out its own problem."

"The health food business is in need of means and of the active cooperation of our people, that it may accomplish the work it ought to do. Its purpose is to supply the people with food which will take the place of flesh meat, and also milk and butter, which, on account of the diseases of cattle, are becoming more and more objectionable" (1900, #583).

"Large quantities of milk and sugar eaten together are injurious. They impart impurities to the system. Animals from which milk is obtained are not always healthy. They may be diseased... Could we know that animals were in perfect health, I would recommend that people eat flesh meats sooner than large quantities of milk and sugar" (1870, #533). Large amounts of milk and sugar "clog the system, irritate the digestive organs, and affect the brain" (1870, #534). "Especially harmful are the custards and puddings in which milk, eggs, and sugar are the chief ingredients" (1905, #536).

Concerning cheese (made by fermentation): "Cheese is

© Copyright Soyinfo Center 2014

still more objectionable [than butter]; it is wholly unfit for food" (1905, #633).

Other entries: Why use secondhand food? "The diet of the animals is vegetables and grains. Must the vegetables be animalized, must they be incorporated into the system of animals, before we get them? Must we obtain our vegetable diet by eating the flesh of dead creatures?" (1896, #703). Note: A revised edition was published in 1946.

886. Battle Creek Food Co. 1938? Overcoming intestinal poisons with soy acidophilus milk. Battle Creek, Michigan. 8 panels. Undated. 16 x 6 cm each. Front and back.

• ***Summary:*** Contents: Soy acidophilus milk changes the flora when other means fail. When the protective flora is lost. Why soy acidophilus succeeds. How to change the flora. Simple rules for changing the flora. Who should use soy acidophilus.

"The soy bean is rich in vitamin A, the growth-promoting vitamin which cereals lack, as do ordinary beans, and also the fertility vitamin E.

"Von Noorden, Neumann, and other eminent European physicians, highly recommend soy products in diabetes, as did the late Professor Dujardin-Beaumetz.

"Soy acidophilus milk contains only about one-third as much fat as does cow's milk, and its fat (lecithin) does not fatten [sic]. Soy acidophilus is thus especially valuable in cases of obesity. It may be freely used without increasing weight. This has been proven by experiments upon both animals and human beings. Rats do not gain in weight on a soy milk diet. On soy milk they reproduce freely, showing the presence of the fertility vitamin (Daniels and Hutton). On cow's milk they seldom reproduce and their young rarely survive.

"Soy acidophilus is especially recommended for persons who have failed in their efforts to change their flora by acidophilus milk, Lacto-Dextrin, or other means. The combined use of soy acidophilus and Lacto-Dextrin will, we believe, change the flora in every case in which they are faithfully and persistently used." Address: Battle Creek, Michigan.

887. Photographs of Madison College in Madison, Tennessee. 1938? Undated.

• ***Summary:*** See next two pages. These black-and-white prints were sent to Soyfoods Center in 1983 by Ed Bisalski. Most are pasted onto heavy brown cardstock paper in a 3-ring scrapbook, which has a neat, handwritten description of each photo in black ink.

The photos are: (a) A display of Madison Foods featuring Soy-Koff ("coffee flavor without coffee effects, alkaline," 20 cents for 25 cups), Kreme O'Soy Milk ("a pure tasty vegetable milk," plain or chocolate, homogenized, 15 cents or 25 cents) and Kreme'O-Soy Crisps (ready-to-eat, malted soy crumbles, 13 cents or 2 for 25 cents).

(b) "Madison Foods college industry. Bread molding. specializing in the manufacture of soy bean foods–bread, crackers, cereals, flour, cheese, milk, coffee substitute, canned soy beans, meat substitutes. Sold in 48 states–Health Food Stores, Department stores, Specialty Grocers, etc."

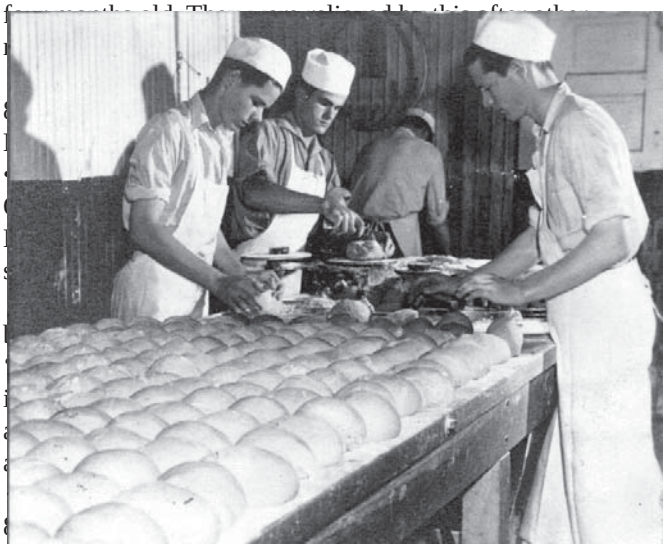
(c) Madison Foods plant.

(d) The 400-acre farm provides for the stock [animals], for the college kitchen, sanitarium kitchen, and campus store. A female student in the "Soy bean patch."

888. Stegman, Henry M. 1939. The soybean a blessing to mankind. *Good Health* (*Battle Creek, Michigan*) 74(1):11. Jan. [1 ref]

• ***Summary:*** "A promising field in this country is the employment of soybean milk for medicinal purposes. In the stomach this gives a very fine, flocculent precipitate instead of the large, tough curds of cow's milk. The period of stay in the stomach is thus made much shorter, and the peristaltic motion of the stomach is less and more coordinated. It also curdles at a lower acidity...

"The deficiency of the soybean ash in sodium and the large excess of potassium makes the food an important alkalinizing agent... The standard which gives milk an alkalinity of 0.5, places that of the soybean at 12...



"The soy acidophilus milk which the Dionne quintuplets take today is given them to prevent the recurrence of the severe bowel trouble infection which they suffered when

College and Sanitarium. 21(8):29-30. April 19.
• ***Summary:*** This article, appeared in *The Old Hickory News* (15 Dec. 1938), published in the city across the Cumberland River. It features the leading institutions and business concerns at Madison, and begins with some early history of "The Ferguson Farm, old and worn, stretching along the west bank of the Cumberland River at the neck of Neely's Bend, across from and some 12 miles distant from The Hermitage, renowned home of the great Tennessee President of the United States [Andrew Jackson], and ten miles from the heart of Nashville, was nothing more or less than another homestead that had been handed down from father to son for a century–nothing more until it fell into the hands of a group of educators... In 1904 the institution was chartered as Nashville Agricultural Normal Institute." Today it has an enrollment of 350 to 400 students.

"The commercial world probably knows the institution [Madison College] best through the department designated as Madison Foods whose products are handled by health food stores, the health food sections of department stores, specialty grocery stores, delicatessens and restaurants scattered the country over, including such firms as Gimbel Brothers, Milwaukee [Wisconsin]; Cobb, Bates and Yerxa, Boston [Massachusetts]; Martindale's, Philadelphia [Pennsylvania]; and similar well known firms from Michigan to Miami.

"The exploitation of the soybean, a unique health food enterprise, has given wide publicity both foreign and domestic, that without a question places Madison Foods as the outstanding pioneer in the United States in the development of the soybean. Articles concerning this industry have appeared in the *Chicago Journal of Commerce, Food Industries, The Reader's Digest, New York Times, The Los Angeles Herald and Examiner* (*California*), *The Globe and Mail* (*Toronto*), *Physical Culture Magazine,* and many others.

"A concrete fireproof addition to Madison Foods plant is part of the 1939 development plan which is consistent with the growth of the business which has shown an increase of 500 percent in five years. Among the early pledges of Madison Foods, dating back nearly 30 years, was its slogan, 'Devoted to the protection of your health,' symbol of the ideals of the founders."

Madison Sanitarium and Hospital is a 100-bed medical institution having six resident physicians.

891. Loma Linda Foods. 1939. Ruskets and Fruit Cereal (Ad). *Los Angeles Times.* April 28. p. B21.
• ***Summary:*** This small display ad shows photos of the packages of both breakfast cereals: Ruskets are crisp flaked wheat biscuits, and Fruit Cereal is crunchy.

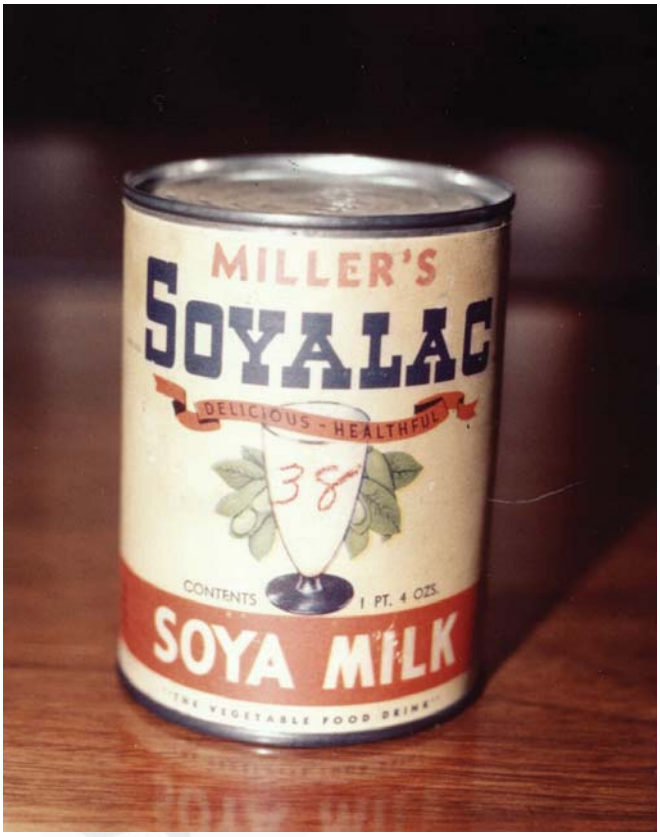
The adjacent ad is for Vegex, which began on the Pacific Coast in 1923. "It has a tasty meatlike flavor but is meat free." Vegex makes an instant bouillon high in B vitamins. Address: [California].

892. *Good Health* (*Battle Creek, Michigan*). 1939. About the use of the soybean. 74(6):178. June. [1 ref]

893. *Good Health* (*Battle Creek, Michigan*). 1939. Diet for duodenal ulcer. 74(7):216. July. [1 ref]
• ***Summary:*** "The dietary faults which produced the ulcer must be carefully avoided. Most important of all is thorough daily cleansing of the colon and suppression of putrefaction in the intestinal tract... The cure of the infection which gives rise to the ulcer is greatly facilitated by the use of cultures of the *Lactobacillus acidophilus.* Soy acidophilus culture is especially to be recommended because the protective organism grows with much greater vigor in milk prepared from the soybean than in ordinary dairy milk. For this reason it is a wise plan for a person who has once suffered from ulcer to discard meats of all kinds and make free use of the soybean."

894. *Good Health* (*Battle Creek, Michigan*). 1939. Green soybeans growing in favor. 74(7):219. July. [1 ref]
• ***Summary:*** Originally the soybean varieties planted in the United States "were best adapted for forage and for industrial uses, but the Federal authorities have been distributing seed for raising edible types. Tests of eighteen kinds of soybeans have been made at the University of Illinois Agricultural Experiment Station." Through the cooperation of many people, a large body of practical information has been gathered.

"To cook the green beans, add a cup of boiling water and three-quarters of a teaspoon of salt. Cover and cook for 10 minutes after boiling starts. Drain or season with butter or as desired.



"*The Vegetarian Messenger and Health Review* reports that the consumption of the soybean is increasing in Great Britain; the importation amounted to 98,916 tons in 1937...

© Copyright Soyinfo Center 2014

Germany, being highly scientific, has recognized very clearly the qualities of this crop and imported 591,376 tons in 1937... Russia has a soy institute in which the beans are converted into milk and milk products."

895. Loma Linda Foods. 1939. Start your day with Kris-Bits (Ad). *Health News* (*Hollywood, California*). Aug. 11. p. 8-9. • ***Summary:*** Crunchy. Combines corn, oats, and figs. Address: Arlington, Riverside [California].

896. **Product Name:** Miller's Soya Lac (Canned Liquid Soymilk Fortified with Vitamins and Minerals). Renamed SoyaLac by 1941.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: 13246 Wooster Rd., Mt. Vernon, Ohio.
Date of Introduction: 1939 September.
Wt/Vol., Packaging, Price: Canned liquid.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: International Nutrition Laboratory. 1940? "Miller's Soy Bean Foods." Undated 12-page leaflet. 1. Miller's Soya Lac: A liquid milk packed in 13 oz. and 30 oz cans. It is available in both natural and chocolate flavors.

Ad in *Soybean Digest.* 1941. Sept. p. 17. "New items for the table: Soy products by Miller." "SOYALAC: Spray-dried Infant Food–the perfect formula for the new-born infant–especially fine for malnutrition and allergic conditions."

USDA War Food Administration, Food Distribution Administration. Grain Products Branch. 1943. Dec. "Soya products distribution." p. 5. International Nutrition Laboratory / Miller's Soya Foods makes SoyaLac, Chocolate SoyaLac. "Distribution scattered throughout the United States by Health Stores."

Ad in *Soybean Digest.* 1944. Sept. p. 61. "Meet the Vegetable Cow." International Nutrition Laboratory now makes (1) Miller's Soyalac (powdered milk), plain, malted, or chocolate; and (2) Miller's Soyalac (soya milk), liquid, natural, or chocolate.

Ad in *Soybean Digest.* 1949. Sept. p. 89. Photos shows cans of Miller's Soyalac Soya Milk (All Purpose and Malt Flavor) and Infant Food.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name and address. Zip: 43050. Phone: 614-397-7077. Contact: Glen Blix & Charles D. Howes.

Shurtleff. 1981. Sept. Dr. Harry W. Miller: History of his work with soyfoods. Unpublished manuscript. "Dr. Miller's new plant at Mt. Vernon was completed in the fall of 1939 and the first products, canned liquid soymilk (made in a pressure cooker and fortified with vitamins and minerals) and malted soymilk (Soy-A-Malt) were available late that year. Pressure from the powerful U.S. dairy industry and the USDA convinced Miller not to call his product 'soymilk,' so he latinized the name to Soya Lac. This term was first used in late 1939 for Miller's first American soymilk; the spelling had been changed to the present one-word Soyalac by Sept. 1941. Powdered Soya Lac was first produced in 1940."

Shurtleff. 1981. Soyfoods. Winter. p. 31. "This liquid soymilk was generally considered to be better tasting and less prone to clog nipples than the various soy flour based products, although at least one series of tests showed it to have a significantly lower protein quality as measured by PER (Gyorgy 1962)."

Talk with Lillian Miller, wife of Clarence Miller, Dr. Miller's eldest son. 1994. March 28. The first soymilk Dr. Miller made in Ohio was a canned liquid soymilk for adults. He had to do additional detailed scientific experiments and get permission from the American Medical Association before he could start to make and sell an infant formula.

897. **Product Name:** Malto-Soy Drink (Tea or Coffee Substitute).
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1939 September.
Ingredients: Incl. roasted and ground soybeans, chicory.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1939. Sept. p. 20 and Oct.

© Copyright Soyinfo Center 2014

p. 13. "Malto-Soy Drink. The improved natural drink. Replace your tea and coffee with Malto-Soy Drink, the 100% Protective Drink. There is no better drink for your morning cup than Malto-Soy Drink. Ladies enjoy it for their afternoon refresher drink. Combine Malto-Soy Drink with wholemeal bread, Glumatose and cream. You will be delighted with the result.–Never be without Malto-Soy Drink. Obtainable at all F.G. Roberts' Health Food Stores."

Ad in *Nature's Path to Health.* 1940. Feb. p. 44. This ad for Malto-Soy Drink now uses the illustration formerly used with Soy-Bev. An illustration (line drawing) shows a man and woman seated in chairs by their fireplace each enjoying a cup of Malto-Soy Drink. Below this is a steaming cup of Malto-Soy Drink.

898. **Product Name:** Soy Milk Compound (Renamed Soy Compound in 1981).
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1939 September.
Ingredients: Incl. soybeans, lactose.
Wt/Vol., Packaging, Price: Tin-plated steel can.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1939. Sept. p. 27 and Oct. p. 13. "Soy Milk Compound. Contains natural lecithin and amino acids. This milk compound is a hormone building food and therefore can be used by children and adults with most beneficial results. Soy-Milk Compound is highly recommended for infant feeding. For those who cannot use cow's milk Soy-Milk Compound proves eminently satisfactory. Use Soy-Milk Compound daily either with hot or cold milk. Drink Soy-Milk Compound and strengthen the brain by Lecithin contained in this Defensive Food. Obtainable at all F.G. Roberts' Health Food Stores. Addresses, Page 47." Same ad in the following 1940 issues: Feb. p. 38, March p. 30, April p. 16.

Information brochure sent by Paul Smith of Soy Products of Australia. 1995. March 10. "Soy Products of Australia Pty. Ltd. evolved from F.G. Roberts' interest in using soy as an alternative to milk in treating allergy problems, particularly in children. The soy component of Soy Compound [soy flour] was imported between the 1930s and 1950s. Since 1954 Roberts' soy flours and grits have been manufactured in Australia from Australian grow soybeans... Soy Compound was formulated in the early 1930s as a result of F.G. Roberts' combined interest in the work of Dr. Harry Willis Miller with soy milk and children in China, during the 1920s and 1930s, and in treating cow's milk allergy problems–eczema, colic, mucus and related infection problems–particularly in children... Lactose is used in Soy Compound because it is a valuable, naturally occurring, complex carbohydrate present in the milks of all suckling mammals from human beings to whales and dolphins."

Note from Paul Smith of Soy Products of Australia (Pte.) Ltd. 1995. March 14. Paul thinks Soy Milk Compound was first introduced in about 1933-34.

899. *Good Health* (*Battle Creek, Michigan*). 1939. An error corrected–Soybean hulls not poisonous. 74(10):318. Oct. [1 ref]
• ***Summary:*** Mr. Herbert M. Purdy has called attention to an erroneous statement that appeared in the June number of *Good Health*, on page 178. Soybean meal or flour does not develop a toxic poison during grinding. Nor is there any problem with the use of soybeans with the hulls on.

"The Battle Creek Food Company report that although they have been making use of the soybean in the preparation of various foods, both with and without hulls, they have never encountered the slightest evidence that the hulls possess any injurious properties whatever. They simply consist of practically pure cellulose like the hulls of our common beans."

Note: This is the earliest English-language document seen (June 2013) that uses the term "soybean hulls" to refer to the hulls of soybeans.

900. *Health News* (*Hollywood, California*). 1939. Madison foods feast. 7(22):8. Nov. 24.
• ***Summary:*** "*Los Angeles*–E.M. Bisalski of Madison Foods [Tennessee] sponsored a big dinner for local dealers at Sanfords, November 14, featuring his company's products.

"The purpose was to introduce Milo Frank as California distributor of their foods.

"The turnout, large, enthusiastic, included about 100 dealers. The meal was delicious. Barney Edelman, Sanfords manager, was chairman.

"Bisalski praised local and national dealers' organizations, urged scientific food study, praised Edelman's cooperative attitude. Clarke Irvine, *Health News* publisher, and Mildred Lager, local dealers' president, also voiced optimism for progress through cooperation."

901. Ralphs Grocery Co. 1939. Ideas... and ideals! (Ad). *Los Angeles Times.* Dec. 16. p. 4.
• ***Summary:*** This full-page ad states across the top: "For 66 years Ralphs stores have been first to provide patrons with every worthwhile new idea, every advance in food merchandising, and for 66 years they have preserved the ideals of quality, service, and 'sells-for-less' prices!"

Part of the ad is for "Loma Linda Foods. Ovensweet Ruskets, 12-oz. pkg.–12½¢. Ovensweet Kris-bits, 13-oz. pkg.–14¢." Address: [California].

902. **Product Name:** Cheze-O-Soy (Seasoned Tofu. Sometimes Advertised as Soy Cheese, or spelled Chez-O-

© Copyright Soyinfo Center 2014

Soy or Ches-O-Zoy after 1953).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1939.
Ingredients: Coagulated soybean proteins, seasonings.
Wt/Vol., Packaging, Price: No. 2 can. 20 oz.
How Stored: Shelf stable.
Nutrition: Protein 26.7%, fat 10.8%, carbohydrates 0.12%, ash 0.71%, calories 204/100 gm.
New Product–Documentation: Ad in House of Better Living. 1940. May. p. 4. "Soy Cheese." Madison Health Messenger. V. 49-2. p. 5.

William C. Sandborn. 1953. The History of Madison College (PhD thesis, George Peabody College for Teachers, Tennessee). p. 124 states that Ches-O-Zoy is made at the Madison food factory.

Soybean Blue Book. 1954. p. 106. Spelled Chez-O-Soy from 1954 on. Address: Madison College, Tennessee. Also listed in 1965, but business name is now Nutrition International Corp, Box 415, Madison, TN 37115. Last listing was 1972. Letter from Sam Yoshimura. 1981. Feb. 20. Contained 26.7% protein.

Note: This is the earliest known seasoned or flavored tofu product sold in the Western world.

903. **Product Name:** Not-Meat (Smooth-Textured Loaf for Meatless Entrees or Sandwiches or Salads).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1939.
Ingredients: Whole peanut meal, soy flour, seasonings.
Wt/Vol., Packaging, Price: No. 2 can. 20 oz.
How Stored: Shelf stable.
Nutrition: Protein 13.4%, fat 19.2%, carbohydrates 5.4%, ash 2.1%, calories 248/100 gm.
New Product–Documentation: Madison Health Messenger. V. 49-2. p. 5.

Mildred Lager. 1940. Madison Health Messenger (Madison, Tennessee) 2(3):1-4. "Foods for summer health." Not-Meat is made with unroasted peanut meal and seasoning.

Ad (2¼ by 3 inches) in *Nature's Path* (USA). 1941. July. p. 273. "A treat without meat." Not-Meat is one of five basic food products made and sold by Madison Foods.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Not-Meat (Nutrition International Corporation)." They are: Peanuts, processed soybeans, yeast extract, salt, hydrolyzed vegetable protein. Note: By 1971 Nutrition International Corp. had become part of Worthington Foods. The plant at Madison had been closed in Aug. 1970.

904. **Product Name:** Stake-Lets (Meatless Meat Loaf in a Rich Meatlike Sauce) [Sliced, or Bite-Size].
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1939.
Ingredients: Gluten, soybeans, soy sauce, seasonings. In 1960 the ingredients were gluten, whole wheat, soy flour.
Wt/Vol., Packaging, Price: No. 2 can. 20 oz.
How Stored: Shelf stable.
Nutrition: Protein 18.2%, fat 4.3%, carbohydrates 2.1%, ash 0.5%, calories 120/100 gm.
New Product–Documentation: Ad (2¼ by 3 inches) in *Nature's Path* (USA). 1941. July. p. 273. "A treat without meat." Stake-Lets is one of five basic food products made and sold by Madison Foods.

Madison Health Messenger. V. 49-2. p. 5. Taylor. 1944. The Soy Cook Book. p. 201.

905. **Product Name:** Proast (Meatless Gluten-Based Meatloaf).
Manufacturer's Name: Special Foods, Inc. Renamed Worthington Foods, Inc. in Dec. 1945.
Manufacturer's Address: Worthington, Ohio.
Date of Introduction: 1939.
Wt/Vol., Packaging, Price: 8 oz, 17 oz, and 30 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Wholesale price list. 1941. Oct. 1. 8 oz retails for $0.20 and 30 oz for $0.55. This dark gluten-based meatloaf analogue, made with wheat gluten, peanuts, and a little defatted soy grits or flakes, resembled Battle Creek's Protose.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Proast contains 25.40% protein, 8.88% fat, and 9.28% carbohydrate. *Chopletter* (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Proast.

Note: This is the earliest known food product made by Special Foods, Inc. It is also their earliest known products that uses wheat gluten as a major ingredient or soy (soy flour) as a minor ingredient.

906. Early photographs related to the Quincy Soybean Products Co. in Quincy, Illinois (Overview). 1939. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** These photographs were sent to Soyfoods Center in Oct. 2005 by the Hal Jackson of Quincy, Illinois, and Adrienne Sinaiko (wife of Norman Rosen, of California).

(1) Aerial view of the 5-story Battle Creek Breakfast Food Co. and surrounding buildings (7 x 5 inches). The 7 cars parked on the street date the photo to the mid-1930s. No

908. Kloss, Jethro. 1939. Back to Eden: A book on herbal remedies for disease, and other natural methods of healing. 1st ed. [Washington, DC]: Published by the author. vii + 667 + [25] p. Illust. Portrait. Index. 21 cm.
• ***Summary:*** This treasury of herbal lore and vegan cookbook (it uses no dairy products or eggs, replacing them with soy products) is one of the most creative and original sources of early soyfoods recipes. Contents: Foreword. 1. Personal experiences. 2. Soil. 3. History of medicine. 4. Fresh air and exercise. 5. Fasting. 6. Effects of devitaminized, adulterated foods on the body. 7. Fruit diet. 8. Meat-eating. 9. Foods. 10. Diet. 11. Aluminum utensils. 12. Cooking under steam pressure. 13. Disease of animals. 14. History of water cure. 15. Water. 16. Water-effects and treatment. 17. Water-its effect in sickness. 18. Baths. 19. Compresses and fomentations. 20. Massage. 21. High enemas. 22. Nursing. 23. Fruits. 24. The eliminating diet. 25. Minerals found in the body. 26. Herbs. 27. Medical trees. 28. Tonics. 29. Herbs (Their description and use in treating disease). 30. Definitions of medicinal properties of herbs. 31. Herbs indicated for specific diseases. 32. Directions for use of non-poisonous herbs. 33. Treatment of disease. 34. Food preparations of various kinds. 35. Oranges. 36. Potatoes; gathering and preserving of herbs.

The Foreword states: “This book contains tried, safe, and inexpensive remedies for the prevention of disease and sickness, remedies which are the result of my own practical experience of nearly forty years.” “No matter how many germs get into the body, if the blood stream is clean and the blood corpuscles are in a healthy condition, you will be safe. Everyone comes in contact with many kinds of germ, but these organisms will not harm you or cause you sickness and death unless they have a place in which to propagate themselves.” Sickness and illness are “caused by violating the laws of nature and health. “If then they would resort to simple means and follow the basic laws of health that they have been neglecting–proper diet, use of pure water, fresh air, sunshine, rest, and nature’s remedies, herbs, etc., nature would restore the body to its original health.” “God has provided a remedy for every disease that might afflict us.” “The fundamental principle of true healing consists of a return to natural habits of living.”

Virtually all of the information on soybeans and soyfoods is in chapter 34, “Food Preparations of Various Kinds” (p. 582-633). First come two sections of text: “The nutritional value of the soybean” (p. 582-84; “Taken from an address delivered by Dr. J.A. LeClerc, before the annual meeting of the American Soybean Association. Sept. 15, 1936”). “Uses of the soybean for industrial purposes” (p. 585).

Then comes an introduction soy-related recipes (p. 585-87): “The knowledge of the value of the soybean here in America is one of the greatest things that was ever launched in the food line in the history of the nation, and at this time of great poverty [the Great Depression], want, and disease, it is the most important thing that could be given the people.” “Soybean milk can be made from soybeans at home for less than two cents a quart.” Soybean milk “is not only a good food, but a real medicine.” It is easily digested and highly alkaline. “I have experimented with soybeans for fifteen years [since about 1924] and have produced a fine, acceptable soybean milk as well as many other soybean products.” “I use soybeans in more than fifty dishes.”

Then come recipes (p. 587+): Soybean cheese (fermented soybean milk, peanut butter, and tomato puree, p. 587). Soybean cream cheese (from fermented soybean milk, p. 588). Nut cheese no. 1 (fermented soybean milk, peanut butter, and soybean butter {see p. 613}, p. 588). Nut cheese no. 2 (raw peanut butter, ground oatmeal flour, water and salt [no soy], p. 589). Nut milk (made with raw peanut butter and cow’s milk [no soy], p. 590). Canned soybeans (p. 592). Soybeans and rice (with sprouted soybeans). Baked beans with tomato sauce (incl. soybeans, p. 593; “Soybeans are, no doubt, the best of all beans, but the flavor is not as pleasant. This can be overcome by using various seasonings, such as tomato sauce, a little onion, and celery). Vegetable protein (wheat gluten seasoned with soy sauce, p. 597). Nut loaf (seasoned with soy sauce). Kloss’ granola (with soybean milk and soybean mash [okara], p. 599). Baked rice (natural brown rice baked in soybean milk, p. 600). Soybean coffee plus 2 recipes for Cereal coffee based on rye or wheat bran [real coffee with caffeine is not included]. Soybean broth (with soybean milk and oatmeal, p. 604-05). Oatmeal broth (with soybean milk). Soybean buttermilk (fermented, p. 605-06; “Buttermilk is an excellent article of diet for everyday use, but is especially beneficial in malnutrition, tuberculosis,

© Copyright Soyinfo Center 2014

toxic conditions, and intestinal infections. Soybean buttermilk has the advantage of producing an alkaline effect and is more nourishing than ordinary buttermilk. It is rich in minerals and very palatable. More nourishing than yogurt buttermilk used under various names."). Soybean cheese (fermented soybean milk, raw peanut butter, and tomato puree). Soybean cottage cheese (fermented soybean milk, p. 608). Soybeans and rice (with sprouted soybeans, p. 608-09). To sprout soybeans, lentils, or grains (p. 609). Soy patties (with soybean pulp [probably ground soybeans, not okara] and soy sauce). Gluten patties (seasoned with soy sauce, p. 610). Soybean loaf. Soybean cottage cheese loaf. Soybean milk. Soybean milk no. 2 (made from "soy meal, p. 611). How to curd [soybean] milk (p. 612). Soybean jelly (soybean milk jelled with agar-agar flakes and sweetened with malt sugar). Soybean butter (made with 1 cup water, 2 tablespoons soybean flour, and 2 cups soybean oil, p. 613). Soybean cream (blend rich soybean milk and soybean oil). Soybean ice cream (made with 2 quarts rich soybean milk, 2 lbs. malt sugar, ½ pint soybean butter or soybean mayonnaise, and 1 tbsp. agar-agar). The yolk of an egg (made with soybean flour, p. 614). Pancakes (with cornmeal and soybean mash [okara]). Tomato soup (with soybean flour, soybean flour, soymilk, and/or soy sauce, Savita, or Vegex, p. 618). Cream of tomato soup (with soybean milk, p. 620). Cream of celery soup. Cream of lentil soup. Vegetable oyster soup (with rich soy milk, p. 622). Eggplant soup (with soybean milk). Cream of spinach soup. Potato soup. Soybean gravy. French toast (made with soybean bread soaked in soybean milk, p. 624). Soy oil mayonnaise (with soy oil and finely ground soy flour, p. 628). Vanilla sauce (with soybean cream, p. 632). Vegetable gelatin (with agar-agar and soybean cream dressing, p. 632). Orange jelly (with soybean cream). Strawberry jelly (with soybean cream). Rice pudding (cooked in soy cream, p. 633). Cream tapioca (with soy cream and soybean milk). Soybean bread no. 1 (with whole wheat flour, soybean mash or soybean flour, p. 648). Soybean bread no. 2. Soybean buns or cinnamon rolls (with soybean meal, p. 650). Cornmeal gems (with soybean milk, p. 651). Oatmeal or soybean gems (with soybean meal). Soybean gems (with soybean mash [okara] out of which soybean milk has been washed, p. 652). Pones (with soybean milk). Beaten biscuit (with soybean milk). Unleavened pie crust (with soybean flour or mash, p. 655). Raised pie crust (p. 656). Soybean pumpkin pie (p. 656). Fig marmalade pie (with soybean milk, p. 657). Mashed potatoes (with rich soybean milk, p. 666).

This book does not call for the use of dairy milk or eggs. Concerning cow's milk, Kloss states (p. 75): "Cow's milk is not suited for human consumption. Half the invalids in the world suffer from dyspepsia, and milk should not be taken. Milk causes constipation, biliousness, coated tongue, headache, and these are the symptoms of intestinal auto-intoxication. Soybean milk and nut milks are excellent substitutes, and have practically the same analysis, and the danger of disease is removed." A recipe on page 614 uses a mixture of soybean flour and soya bean oil as a substitute for the yolk of an egg.

This book contains the same detailed information on the possible dangers of aluminum cooking utensils found in the 1935 edition.

Ads on unnumbered pages in the rear include: (1) Dominion Herbal College, Vancouver, BC, Canada. (2) "Horta" Pure Vegetable Extract. "Of strong aromatic meat flavor, though made from leguminous materials only." F. Behrend, Inc., New York, NY. Established 1886. (3) Old-fashioned Quaker mill. No. 4 Quaker City Mill. Ad: Enterprise No. 69, Hand Mill. A.W. Straub Co., Philadelphia, Pennsylvania. (4) Nature's Original Food Co., Falmouth, Virginia. "Nuts, grains, fruits and vegetables are Nature's original foods for men. Animal flesh has been substituted. If you want health, don't use it. "Try our [canned vegetarian] meats–see the difference." Meatose. Vegetose. To-Meta.

Note 1. This latter company was almost certainly founded and is owned by Jethro Kloss.

According to Doris Gardiner (Oct. 1990), the original book (of which she and her aunt each have copies) has a green hard cover. The first printing was probably done by a Mr. Brunck, who worked for the College Print Shop in Takoma Park, Maryland. She thinks Jethro self-published the book. He paid for the printing and sold the books himself. Jethro and his wife moved to Coalmont, Tennessee. There they lived with the Hiatt family, and Mr. Hyatt, owner of Longview Press (renamed The Message Press by 1964) became the book's first legitimate publisher. His wife died in 1944. Jethro died in 1946 at age 83. The page numbers from the 1939 edition are unchanged in later editions.

Note 2. This is the earliest English-language document seen (Oct. 2013) that uses the term "Soybean cream cheese" to refer to soy cream cheese.

Note 3. This is the earliest English-language document seen (June 2013) that uses the term "soybean mash" to refer to okara.

Note 4. This is the earliest English-language document seen (Oct. 2013) that contains the term "Soybean cottage cheese" or that has a recipe for it. Address: Washington, DC.

909. Kloss, Jethro. 1939. Constipation (Document part). In: Jethro Kloss. 1939. Back to Eden. Takoma Park, Maryland: Published by the author. 692 p. See p. 396, 604.
• ***Summary:*** "Constipation: Nearly the entire race is afflicted with constipation. Waste matter is left entirely too long in the human body.

"Causes: Wrong diet is the main cause. Eating foods that do not contain enough roughage or bulk and also foods which are devitalized; lack of muscular tone in the bowels; improper mastication of foods; meat diet; too many varieties of food at one meal; eating food that is too concentrated;

© Copyright Soyinfo Center 2014

using coffee, tea, and liquor of all kinds; irregular habits of attending to the calls of nature; sedentary life; and lack of exercise are other contributing factors to this almost universal ailment."

"Treatment: Regulate the diet." Take high enemas. Eat your food as dry as possible. Do not drink with meals; do your drinking one hour before or two hours after eating. Take plenty of exercise. The bowels should move 3 or 4 times a day. If food "stays too long in the colon, it kills the peristaltic action. Take Bran Water and Oatmeal Water (p. 604). Take herbal laxatives.

"Bran water: To two cups of bran, add one quart of water, let it stand overnight. In the morning strain through a fine sieve or cheese cloth. [This water is] To be used in any kind of soup stock, stew, or any breads in place of ordinary water." Address: Takoma Park, Maryland.

910. Matagrin, Am. 1939. Le soja et les industries du soja: Produits alimentaires, huile de soja, lécithine végétale, caséine végétale [Soya and soya industries: Food products, soy oil, vegetable lecithin, and vegetable casein (Continued–Document part II]. Paris: Gauthier-Villars. x + 390 p. 18 cm. [300 ref. Fre]

• ***Summary:*** Continued. The agricultural experiment stations and the scientific labs have played an important role in the U.S., also the farm equipment manufacturers.

The experiment stations in many states have helped the farmers to clarify cultural questions which greatly influence yields, preparation of the soil, type and proportion of fertilizer use, dates and methods of planting, how many seeds per acre, choice of varieties according to the climate and soil, role of the soybean in mixed cultures and in crop rotation, etc.

In this book, Matagrin always says "fèves de soja."

1936 listing of soyfoods firms (p. 27): Fearn Soya Foods Co., Chicago, Illinois. Soybean Health Prods Co. Oakland, California (tofu). Soyex Co. Nutley, New Jersey. La Sierra Industries, Ontario, California (soymilk). American Lecithin Co., Atlanta, Georgia. Ten soy flour companies (p. 29).

American Lecithin Co. in 1936 was in Atlanta, Georgia. From when to when was it in Illinois?

Soy in France (p. 36): Prof. Beille of Bordeaux published a good work on soy but it is no longer available. Also the books of Prof. Jumelle of Marseille on colonial crops and vegetable oils. Prof. R. Lepine of Lyon in 1919 in *Revue Scientifique,* wrote about soy culture in Algeria and the preparation of soymilk.

Mr. Rouest perfected again the selections of yellow or green varieties that he had undertaken from 1907, with success. Using American seeds, others who experimented were Messrs. Brioux at Rouen, Carle of Carbonniere in le Tarn, and Semichon at Carcassonne; he likewise cultivated it at l'Aude from 1918. A list of 42 of Rouest's varieties (chosen from 2,000 others) were given in Rouest's book *Le Soja Francaise* showing that he was more qualified than anyone to write a book of this tile. He pursued his cultures and selections in France from 1921-30, in the Caucasus from 1930 to 1935, and thus fulfilled the efforts started by the Society for Acclimatization and its successors. He worked with another apostle, Henry de Guerpel, and agronomist and mayor of Percy-en-Auge (Calvados), who developed and perfected during 5 years the culture of the best varieties of soybeans in the regions surrounding his country house at Plainville, near Mézidon. He did not only collaborate on the book with Rouest, but also published interesting articles in several reviews in France and the colonies. Also Mr. Denaiffe of Carignan (Ardennes), author of the esteemed book *Les Haricots,* did important culture work and provided information.

Today production of soybeans in France is no more than several thousand hectoliters of beans = several 100,000 liters. For forage, the crop / culture has developed only in North Africa. It was encouraged by Rouest and de Guerpel.

Caseo Sojaine's products were excellent but expensive.

The products of Heudebert (probably diabetic products made with soyflour?), were well known in England as in France (p. 39).

Since 1913 the oil mills of Marseille, France, have started to use soy oil (mainly for hydrogenation) and those of the north (mainly for manufacture of soft soaps).

Recently the foundation (at Chateauroux) of a Society of Friends, Producers and Technicians of Soja has been announced by M. Druel.

In England the fine botanist J.L. North tested with success 13 Manchurian soybean seeds in 1913 and in the third harvest expanded these to 12,000 seeds, which he sent in 1917 to a farm at Uxbridge in Middlesex and to the Ogilvie Farm in Essex. There was a remarkable harvest in 1921, followed by good development of the enterprise. It advanced thanks to Piper and Morse's 1923 book *The Soybean* which to told of American successes. North succeeded in 1928 in getting 20-80 pods per stalk. In 1921 North's work drew the attention of the Ford establishment in Boreham which was not able to obtain good yields with American soybeans but succeeded with North's. Today England cultivates soybeans on about 15 hectares and yields are 1,400 to 2,500 liters per ha.

In England. Lever Bros. are big users of soy oil in soap. The main oil mills using soybeans are J. Bibby and Sons in Liverpool, three others in Hull, one in Erith and one refinery on the outskirts of London. Huge amounts of soy oil and meal are imported by a subsidiary of Lever Bros.

Germany: The recent agreement between Germany and Japan foreseeing an exchange of arms, explosives, etc. in exchange for soybeans which can furnish explosives (for nitroglycerine, naturally) is a barter / swap (of cannons for soybeans) analogous to that with Manchuria in 1934. What is certain is that the agents of I.G. Farbenindustrie A.G.

© Copyright Soyinfo Center 2014

under the patronage of the Economic Federation of Central Europe has been enforcing for 3 years soybeans culture in the Balkans which trade voluntarily with Germany.

Spain was rich in other oil sources (mainly olive oil). so not pay much attention to soy.

Italy: In 1918 a trial by Prof. Borzi, on a parcel of 2.5 acres at the Colonial Garden in Palerme / Palermo gave a yield of 20 liters/ha. In 1918-20 at the Institute Bonafous in Turin, a scientific research center, did research on yellow soybeans. Then trials were done in Liguria, Lombardia and Capo d'Istria, and Palerme about 1920s–a total of a dozen localities. Retaking in 1922 these tests of 1884 in Piedmont, Prof. Tito Poggi seeded 8 parcels in Monferrat, then helped to popularize soybeans in Italy. By the mid-1920s soy flour was widely used in baking. In March 1926 a "Bread for ammunition = pagnotto di munizione" containing 10% soy flour was heartily welcomed by the garrison in Rome. Already an official tasting by Mussolini (of the bread by him?) has been commented upon by the Italian press. The success of the campaign to promote use of wheat limited, after that, the outlets for soy in human foods, but the oil remained widely used by industry and the cake for production of milk.

Bulgaria and Rumania were influenced by the example of the Ukraine = Podolie?

The grandeur and decadence of soja in Russia: The book by L. Rouest, who was director of the Soy Laboratory in the North Caucasus from 1930 to 1935, brings together, but in a somewhat dispersed way, a very instructive documentation on soya in Russia. He described the grandeur and decadence. Soya was cultivated, it seems, since the victory of the Tcherkesses? (p. 48) and the incursions in east Turkestan, about 1860, then introduced into the Ukraine and Bessarabia, either from the Caucasus or from Hungary in the following years. Finally better known when the construction of the Transsiberian railroad connected (*conduisit*) Russia and Manchuria (1896-1900) But the soybean could not fail to interest the higher government officials. Before the universal success of the soybean after World War I, it was seen not only as an interior resource but also as an export crop. However in 1931, of the 5,970,000 ha in Russia used to grow oilseeds, less than 1,100 were used to grow soybeans versus 5.2 million used for sunflowers, 300,000 for castor oil, 140,000 for sesame, 30,000 for peanuts, and 350,000 for others such as rapeseed. But the industry began to demand soybeans. A large furniture factory in Oklanskaia made glues of vegetable proteins. The oil was studied for use in soaps and paints. The famine which menaced the working population because the moujiks [muzhiks, mujiks], resisted the exploitation of the lands into collectives, was able to be prevented or delayed by the progress in the culture of soybeans. Also the 5-year plan foresaw the extension of this crop onto 3-5 million ha with harvests of at least 1,500 kg per ha. To guide the farmers and perfect management techniques, specialists were recruited and concessions were granted to Germany in diverse regions. For how would the USSR itself have harvested the 1935 crop of about one million quintals = 100,000 MT. The number is enormous by comparison with the rest of Europe. (Did the Soviets see themselves as pioneers of a revolutionary new crop?)

Here, according to the agronomist Rouest, are the causes of the Russian setback. 1. Negligence and ignorance of the Russian peasant. 2. Disadvantages of the communist regime, 3. The general ideological method, always little reconcilable with the needs of the changes and hazards of agriculture (e.g., research to find varieties permitting the use of large harvesters). 4. Poorly chosen cultural methods. 5. Use of most of the harvest for food. The best literature concerns the moujik [muzhik, mujik] peasants, and one long study of 1911, of which we have a copy, written by a Russian doctor,... Sowed in the black earth of the Caucasus and the Ukraine, these soybeans, said Rouest, evidently saved the lives of thousands of people... We have been told that the Russians are disgusted at the compulsory use of soybeans, result of unskilled cooks...? Address: France.

911. Ralphs Grocery Co. 1940. Nationally known products displayed in Ralphs mammoth free food show (Ad). *Los Angeles Times*. Jan. 26. p. B17.
• ***Summary:*** This full-page ad states across the top: "The following nationally known food products and manufacturers will be represented in the food show and demonstrations to be staged as a feature of the opening of Ralphs newest store at the corner of Exposition and Crenshaw Blvds..."

Includes: Battle Creek Health Foods... Cubbison's Cracker Co. Products... Ficgo [coffee substitute] Hollywood Cup Coffee... Loma Linda Foods Co. Address: [California].

912. Lager, Mildred. 1940. Healthful philosophy. *House of Better Living* (*Newsletter, Los Angeles*) 11(49):2. Jan.
• ***Summary:*** New items include "Canned Soy Cheese. Soyburger. Full line of Madison Foods."

"We carry liquefiers at four different prices: $29.95, $19.95, $14.95 and "13.95." Contains a recipe for Carrot soy milk. Ingredients: 1 cup carrot juice, add 1 tbsp. soy flour or milk powder, 1 tsp honey or plain Joyana.

"Liquefied foods have become popular with the new electric mixers. They are fine and a boon to the person with poor assimilation and digestion..." A number of combinations are given, all starting with fruit juice. "Soy flour or soy milk powder may be added to juice or broth for soy milk drinks." A portrait photo shows Mildred Lager.

Note 1. A section titled "Soyburgers" on p. 4 explains that the Soyburger and Canned Soy Cheese mentioned above are both made by Madison Foods of Tennessee. Separately, soy chocolate is mentioned.

Note 2. A small ad on p. 3 is for waffles: Soy wheat-wheat germ. Soy corn (contains no wheat). Address: 1207

West Sixth St., Los Angeles, California. Phone: MUtual 2085.

913. **Product Name:** Wheatasoy (Ready-to-Eat Breakfast Cereal). Formerly Kreme O'Soy Crisps.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1940 January.
Ingredients: Incl. whole wheat, soybeans, malt.
How Stored: Shelf stable.
New Product–Documentation: Ad in *Nature's Path* (USA). 1940. Jan. p. 19. "Alkaline breakfast food: Wheatasoy (Formerly Kreme O'Soy Crisps)." "Malted-Dextrinized. Combines the nourishment of whole wheat, soybeans and malt." "Madison Foods. Madison College, Tennessee. Devoted to the protection of your health."

914. Madison Foods. 1940. Free! $1,000.00 in valuable prizes (Ad). *Madison Health Messenger* (*Madison, Tennessee*) 2(3A):2. Undated.
• ***Summary:*** This ½-page ad contains a photo that shows the front panel of each of 13 products made by Madison College; a brief description of each food is also given.

The text above the ad reads: "Contest closes at 12 midnight, February 15, 1940–and here are the famous Madison Health Foods approved by he Madison Messenger."

Those not mentioned in the previous issue are Wheatasoy (a breakfast cereal). Soyburger (new name for Soyburger Loaf). Stake-Lets (a gluten-soy loaf).

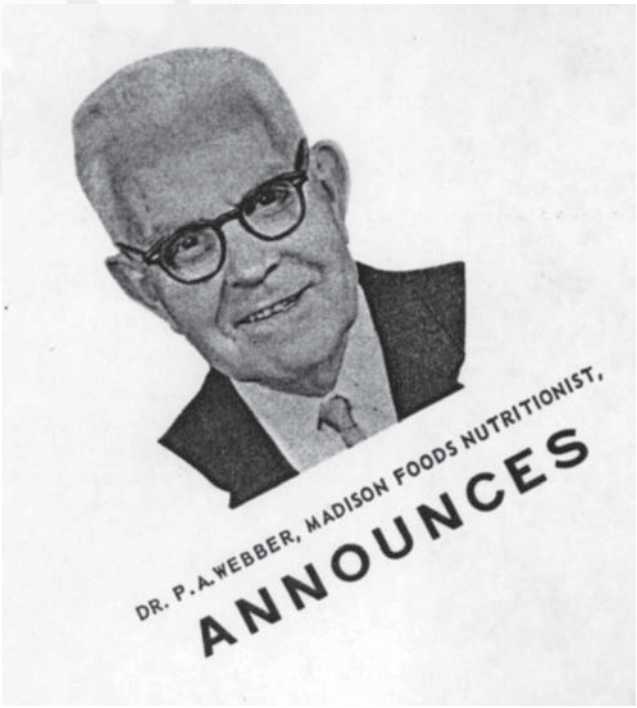
A price list, similar to but expanded from that in the last issue, appears on page 6. Address: Dept. HMH-1, Madison College, Tennessee.

915. Madison Foods. 1940. Valuable prizes: 3 Veg-O-Mat juice extractors. Retail price $99.50 each (Ad). *Madison*

© Copyright Soyinfo Center 2014

Health Messenger (*Madison, Tennessee*) 2(3A):3. Undated.
• ***Summary:*** This is a ¼-page ad for an early electric juicer. "No more laborious hand-grinding–no more dribbles of juice and waste of good fruit and vegetables. The Veg-O-Mat puts an end to the unsanitary, wasteful, and tedious old methods of juice extraction by hand. The Veg-O-Mat, a midget in size but a giant in power, comes in one compact unit which is easy to clean and economical to use. It employs the most advanced process of juice extraction, it thoroughly triturates every cell and fibre of the vegetable, and then subjects the pulp to a pressure of many tons. This insures that the juice will contain the most valuable minerals and vitamins, those found only in the interior of the fibre.

"Guaranteed for one year; 8 inches by 14 inches; has a capacity of sixteen to twenty pints per hour."



A photo shows a lady using the juicer in a kitchen. Address: Dept. HMH-1, Madison College, Tennessee.

916. **Product Name:** Soya Choc-Malt (Later Renamed Soya-Choc).
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1940 January.
Ingredients: Incl. water, soybeans.
Wt/Vol., Packaging, Price: Tin-plated steel can.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1940. Jan. p. 46. "Fresh from the Factory Soya Choc-Malt comes to you charged with Phosphorus, Calcium, Magnesium, Potassium, Iron. No better Food Drink has yet been made. Give it to your children and use it in the sick room and on your breakfast table regularly. Made from carefully selected ingredients this new Food Drink may be used by all persons of every age and position in life. Purchase your supplies at the Roberts Health Food Shops. Branches in every state." This same ad was published during 1940 in the following issues: Feb. p. 32, May p. 40, June p. 40.

917. Webber, P.A. 1940. Are soy beans a good food? *Madison Health Messenger* (*Madison, Tennessee*) 2(3A):1, 4. Undated.
• ***Summary:*** "There is probably no legume which has been more universally used, and justly so, than the soy bean. In the earliest Oriental records that go back to the beginning of the Historical Period its use is frequently mentioned. Today after thousands of years, in hundreds of recipes, it is finding its way into the daily dietary of upwards of half the population of The world.

"Only within the last few years has this interesting food received any emphasis in the Occident, but now it is at last receiving at least a part of the attention that it so much deserves. Methods for its use are daily being perfected and

presented to the people of Europe and America. United States government agencies and State Experiment stations are spending much time and money to bring this unique legume and its use to the attention of the people of the United States.

"Considerable research with experimental animals and humans has shown beyond a doubt its high value as

© Copyright Soyinfo Center 2014

a food. Its impressive chemical analysis 20% fat, 40% protein, 5% minerals, with its cheapness makes it one of the most economical and best sources of fat, protein, and mineral elements that can be found in any food. Combined daily in its various forms in the diet with plentiful supplies of vegetables, fruits, and grains, it contributes to a well-balanced ration providing adequate protein, fat, carbohydrate, minerals, and vitamins.

"Despite the above mentioned facts proven by many thousands of years of human experience and corroborated by the experimental evidence of scores of research laboratories, recently most adverse but unfortunate criticism has been published concerning the soy bean, attempting to lead the public to an unfavorable attitude toward this most useful food by cleverly covering the facts.

"Even the warmest enthusiast for this food would hardly think of it in terms of supplying all the needs of the human dietary. An All-Wise Providence has provided a great variety of foods, and nature indicates a generous and liberal intake from this bountiful supply. Far be it from those who know the nutritional values of the soy bean best, and are most vocal in its praise to divert attention in any way from any other worth-while food.

"We have been cited to the use of soy beans when fed to test animals, producing high blood pressure, indigestible wastes in the intestines, and albumin and casts appearing in the urine, showing kidney degeneration. It is unfortunate that along with this statement covering soy beans, it was not told the reader that excessive protein of whatever source in the diet, animal or vegetable in origin, will produce like results. This has been proven conclusively by Dr. Newburg of the University of Michigan Hospital and others. It would seem fair, to say the least, that the quantity of protein fed to these test animals would have been reported also, that the reader may know that the experiment was conducted to show what an 'excess' of soy bean protein would produce. In apprehension of this unscientific attempt calculated to mislead the reader, your attention is called to the word 'excess' which is the key to the whole situation. When too many soy beans are used over a long period of time these conditions may develop. This is true also of any of the rich protein foods such as meat, eggs, cheese, etc. Here as in other things the rule of moderation can be well taken. As yet soy beans are not being used extensively enough in the United States to be considered a cause for the alarming growth of high blood pressure, kidney degeneration, etc., so it is hardly fair to lay the blame of these prevalent conditions in Americans today on the humble soy bean. It is plain to even the unscientific mind that these conditions are being brought on, at least to some extent, by the excessive use of other high protein foods and habits that bring about general health degeneration.

"A clear statement of truth on this subject instead of a half truth would have given the reader the proper impression; but half truths seem to be in vogue today; nevertheless such methods of deception are most reprehensible, and call forth a statement of the whole truth as recognized scientists report it. In spite of what has been written to the contrary, briefly the following facts still remain:

"1. The soy bean has been used successfully for thousands of years in the dietary of hundreds of millions of human beings.

"2. It is a high protein food and along with other high protein foods should be eaten in moderation.

"3. It is one of the cheapest and best sources of complete protein, fat, minerals, and vitamin B-1.

"4. Its proper use is being encouraged by Federal and State Agencies.

"5. Scientific, experimental and clinical evidence show that when eaten in proper combination with other foods it provides a most valuable adjunct to the diet.

"6. Scientifically trained dietitians and other medical experts are increasing their use of the soy bean in diet therapy. For twenty-five years the famous Battle Creek Sanitarium has been serving soy bean foods in many ways.

"7. Many manufacturers of soy bean foods are properly representing their foods to the public and are producing fine tasty foods.

"8. The public need not 'beware' of soy beans any more than they would beware of an excess of any other kind of protein food provided for our nourishment.

"In conclusion I wish to assure the reader that my acquaintance with soy beans covers many years, sixteen of which were spent in the Orient where I had a first-hand opportunity to observe soy beans as they were used in the diets of hundreds of millions of people and certainly if soy beans were such a dangerous food there would be little of the population of China and Japan left, considering that they have been using soy beans for thousands of years; however, instead today they are growing in numbers faster than Americans. I have been using soy bean foods for nearly twenty-five years and none of the symptoms which were so misleadingly presented to the reader are present in my body.

"The reader's attention is cited [called] to thousands of pages of scientific literature found in any large public or other library, in corroboration of the above stated facts."

Note: two different issues of this periodical are shown to be Volume 2, No. 3. the earlier of these two, which we have decided to call 2(3A) was published after Sept. 1939 (see last page) and before 15 Feb. 1940. We have estimated the publication date to be Jan. 1940. the second of these two, which we have decided to call 2(3B) was published after March 1940 (see 1st page). We have estimated the publication date to be April. 1940–3 months later. Address: PhD, Head of Chemistry Dep., Madison College.

• ***Summary:*** "The most advanced work of actually introducing soy beans to the American consumer has been pioneered by our own group of health food manufacturers. Among the outstanding developments in this field has been the work done at Madison College, Tennessee."

919. *Madison Survey* (*Madison, Tennessee*). 1940. Rapid growth of Madison health food production and consumption. 22(5):17-19. March 13.
• ***Summary:*** "When, the last of November in the year just past, a carload of health foods started for the Pacific Coast–the first shipment of that size–it seemed that a decided step had been taken in the advancement of the health food industry. Milo Frank, Los Angeles, is jobber distributor for the South Pacific. He services 250 health stores in California. The North Pacific region, Western Canada, and Alaska are served by Western Natural Foods, Seattle [Washington].

"Coming east, we find Health Food Jobbers, Chicago [Illinois], serving metropolitan Chicago; Sherman Foods, serving metropolitan New York; and Modern Foods, Wollaston, Massachusetts, serving metropolitan Boston."

Madison Foods' products mentioned in this issue are: Nutmeat, Soy Beans, Soyburger, Soy Cheese, Soy-Koff, Vigorost, Wheatasoy.

Periodicals mentioned include: (1) *Health News Reporter,* winter issue, 1939-1940. (2) *Health Foods Retailing* (Chicago), edited and published by Lelord Kordel; it is a bi-monthly trade journal for the health food industry.

920. *Madison Survey* (*Madison, Tennessee*). 1940. Making a vegetarian dietary attractive. 22(5):18-19. March 13.
• ***Summary:*** Thirteen years ago, H.L. Nunn, President of Ninn-Bush Shoe Company, Milwaukee, was converted to vegetarianism after hearing a radio sermon which stated that "Bernard Shaw is a vegetarian because he dislikes the idea of killing creatures to live. Mr. Nunn to disliked the idea of taking life and decided to discard the use of flesh food. After a trial of six weeks, he began to search the libraries for literature on the subject," and found that he was in good company.

"Visiting guests often told Mr. Nunn that if anywhere they could get such food as he served in his own home, they, too, would become vegetarians." So he started a fine restaurant at the center of Milwaukee, Wisconsin, named Ambrosia House. "Miss Carolina Sweeney, Mr. Nunn's niece, a college graduate and a student of dietetics at Battle Creek College, is the manager... who is responsible for the famous foods of Ambrosia House."

"The food is of a home-cooked style, served in generous portions by young women of refinement."

922. *Madison Survey* (*Madison, Tennessee*). 1940. $1,000 prize contest. 22(5):20. March 13.

923. Webber, P.A. 1940. Are soy beans good food? *Bean-Bag* (*The*) (*Lansing, Michigan*) 22(7-10):9-10. March.
• ***Summary:*** From Madison Health Messenger (Madison College, Tennessee): "There is probably no legume that has been more universally used, and justly so, than the soy bean. In the earliest oriental records that go back to the beginning of the historical period, its use is frequently mentioned. Today after thousands of years in hundreds of recipes, it is finding its way into the daily dietary of upwards of half the population of the world.

"Only within the last few years has this interesting food received any emphasis in the occident but now it is at last receiving at least a part of the attention that it so much deserves. Methods for its use are daily being perfected and presented to the people of Europe and America. United States government agencies and state experiment stations are spending much time and money to bring this unique legume and its use to the attention of the people of the United States."

Consider the following facts: "1. The soy bean has been used successfully for thousands of years in the dietary of hundreds of millions of human beings.

"2. It is a high protein food and along with other high protein foods should be eaten in moderation.

"3. It is one of the cheapest and best sources of complete protein, fat, minerals, and vitamin B.

"4. Its proper use is being encouraged by federal and state agencies.

"5. Scientific experimental and clinical evidence show that when eaten in proper combination with other foods it provides a most valuable adjunct to the diet.

"6. Scientifically trained dietitians and other medical experts are increasing their use of the soy in diet therapy. For 25 years the famous Battle Creek sanitarium has been serving soy bean food in many ways.

"7. Many manufacturers of soy bean foods are properly representing their foods to the public and are producing fine tasty foods.

"8. The public need not 'beware' of soybeans any more than they would beware of an excess of any other kind of protein food provided for nourishment." Address: PhD, Head of Chemistry Dep., Madison College, Tennessee.

• ***Summary:*** Reprint of an article with the same author and title published in March 1940 in the *National Food Distributors' Journal* 14(4):5-6. Note: The author's name was spelled "De Weese" in the original article.

925. Lager, Mildred. 1940. Summer foods for health.

© Copyright Soyinfo Center 2014

Madison Health Messenger (*Madison, Tennessee*) 2(3B):1-4. Undated.

• ***Summary:*** A large photo shows Miss Lager, next to a KFAC microphone. For 6½ years she has been broadcasting over the radio four times a week on station KFAC is Los Angeles. "She is the founder of the House of Better Living, and a tireless worker for better living. Her weekly free classes draw hundreds of people for instruction in healthful cookery and healthful living."

She writes that now is a good time "to cut down on rich foods and the acid-forming foods, using instead the alkaline-forming foods and the bulk foods for the natural eliminative effects... With a liberal intake of the alkaline-forming foods, one may be assured of the natural alkalizers which neutralize body acids and in this way assist in the protection of health... Acid wastes produce fatigue; alkaline-forming foods neutralize the acid wastes to restore the normal body tone and stamina.

"The summer diet must necessarily contain adequate complete proteins, for protein foods are necessary for cell repair and growth... A lack of protein may cause retarded growth, lack of vigor, and poor appetite... The vegetable proteins are nuts, soy beans, legumes, and in general they are found in all vegetables. The proteins of nuts and soy beans are classed as complete proteins and are therefore especially desirable. The animal proteins are acid-forming, whereas the vegetable proteins are alkaline-forming. Animal proteins are also more putrefactive than vegetable proteins. The soy bean and nuts can be used in a great many tasty ways."

Among the many recipes for summer the following include soyfoods: Cocktails–Soy milk and carrot ("Soy milk is a fine, alkaline, soft food. Excellent for those with sore conditions of the digestive tube)." Protein salads–Soy bean salad. Soy cheese [tofu] tomato salad. Mock shrimp salad (with Zoyburger). Entrees–Soy cheese cutlets. Zoyburger and mushroom sauce. Mock turkey legs (with Vigorost as the main ingredient). Broiled Vigorost with ripe olive sauce. Platter of cold cuts (Vigorost and Zoyburger). Hot Zoyburger sandwich. Stake-Lets (canned) for picnic dinner. Alkaline breakfast food–Wheatasoy. Alkaline beverage–Zoy-Koff (coffee substitute). Soy bean milk (Kreme O'Soy). Complete protein foods: Zoyburger, Vigorost, Stake-Lets, Not-Meat (made with unroasted peanut meal and seasoning), Soy Cheese, and Soy Beans. A brief description, nutritional analysis, and price is given for each product. "None of the Madison Foods contain animal products." A portrait photo shows Mildred Lager next to a KFAC radio microphone. The caption states that for 6½ years Miss Lager been broadcasting over the radio in Los Angeles. "She is the founder of the House for Better Living, and a tireless worker for better living. Her weekly free classes draw hundreds of people for instruction in healthful cookery and healthful living. Miss Lager is the author of *Food Facts.*"

Note 1. This is the earliest document seen (June 2007) that mentions or gives a recipe for a soy-based meatless turkey. Vigorost, a meatless / vegetarian roast introduced by Madison Foods in 1932, used wheat gluten and tofu as its two main ingredients.

Note 2. This is the earliest English-language document seen (Jan. 2007) that contains the word "Zoyburger," an early, popular vegetarian burger in the United States.

Although this issue is not dated, it contains the reprint a current article published in March 1940.

926. **Product Name:** Kreme O'Soys [Plain].
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1940 April.
Wt/Vol., Packaging, Price: 14 oz can. Retails (by mail order) for $0.15.
New Product–Documentation: Madison Health Messenger. 1940. 2(3):5. "Large jumbo hand-packed soy beans, a new variety in a special soy sauce, await your trail in Kreme O'Soys. So completely different are these extra-large delicious soy beans that you will be surprised with this new flavor and another new food."

927. *Madison Health Messenger* (*Madison, Tennessee*). 1940. Price list [of products made by Madison Foods] (Ad). 2(3B):5. Undated.

• ***Summary:*** Breakfast cereal: Wheatasoy (9 oz).

Beverages: Zoy-Koff (No caffein [caffeine]; 12 oz.). Kreme O'Soy Milk (plain, liquid, 15 oz and 29 oz; chocolate, liquid, 29 oz). Crackers: Thin-Things ** (5 oz). Whole wheat wafers ** (5 oz). Bran wafers ** (6½ oz).

Canned protein foods (used in place of meat): Zoyburger (14 oz, 30 oz). Stake-Lets (14 oz, 30 oz). Not-Meat (5 oz, 14 oz, 30 oz). Vigorost (5 oz, 14 oz, 30 oz). Soy cheese [tofu] seasoned (5 oz, 14 oz, 30 oz). Soy Beans with Tomato (5 oz, 14 oz, 30 oz). Kreme O'Soys, plain (14 oz).

Flour: Kreme O'Soy Flour (2 lbs, 5 lbs).

Note: Asterisks in the printed list indicate that all products except Whole wheat wafers, bran wafers, and Not-Meat are "Soy Bean Foods." ** = Wheat germ added.

Although this issue is not dated, it contains the reprint of a current article published in March 1940.

928. Webber, P.A. 1940. A vegetarian college. *Madison Health Messenger* (*Madison, Tennessee*) 2(3B):1, 3. Undated.

• ***Summary:*** "For more than 35 years, Madison College, near Nashville, Tennessee, has been carrying on what might be called a 'long-time human experiment' in vegetarianism. From the very earliest days of the founding of the College to the present day, the diet has been strictly non-flesh with the use of a reasonable amount of milk and eggs. At present there are 450 students who largely work their way through

© Copyright Soyinfo Center 2014

school. The more than eighty buildings of the College and Sanitarium have been built through the years by students fed on a vegetarian diet." The 100 faculty members and administrative officers, and the 100 patients in the hospital "are, and have been for these many years, but human 'guinea pigs,' proving most conclusively the desirability of a flesh-less diet." Address: PhD, Prof. of Chemistry, Madison College.

929. Madison Foods. 1940. Satisfying meatless entrees (Ad). *House of Better Living* (*Newsletter, Los Angeles*) 11(53):4. May.
• ***Summary:*** "Soyburger. Stake-lets. Vigorost. Not-meat. Soy cheese [tofu]. These foods have been designed by a group of experts in the field of nutrition to adequately take the place of meat.

"Get a free copy of the *Madison Health Messenger,* for complete list of foods and recipes." Address: Madison College, Tennessee.

930. **Product Name:** Roberts' Soy Nut Brawn, Soy Nut Cheese.
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1940 May.
Wt/Vol., Packaging, Price: Tin-plated steel can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Article in *Nature's Path to Health* (*Melbourne, Australia*). 1940. May. Article in *Nature's Path to Health* (*Melbourne, Australia*). 1940. June. "Just what you have waited for! Better health foods." A large illustration (line drawing) shows the four canned products, with the Soy Nut Roast in the largest can (1 pound) and the Soy Bean & Tomato in the smallest. "Among the more recent additions to the many lines of food produced by F.G. Roberts is a line of Better Nut foods. Very shortly now this line of health foods will be available for the purchasers of Nut Foods in all the Roberts Health Food Shops, and later in other wide awake grocer shops."

Ad in *Nature's Path to Health.* 1940. July. p. 8. "Roberts' Better Nut Foods." The same line drawing described above is shown. The cheese, brawn, and roast are described briefly in non-specific terms. "Packed in three sizes: 16 oz., 8 oz., 4 oz." Ad in Aug. 1940 issue, p. 6. "Roberts' Better Nut Foods." A photo shows the cans. The same photo and a similar ad appeared in the May/June 1943 issue, p. 26, and the Oct/Nov. 1946 issue, p. 24. However in these last two issues, only Soy Nut Roast and Soy Nut Cheese are described in the ad text.

Ad in *Nature's Path to Health.* 1940. Nov/Dec. p. 30. "Roberts' Soy Nut Recipes." The same line drawing described above is shown. The following recipes are given: Quick cutlets (made with Soy Nut Roast). Tomato stew (made with Soy Nut Roast). Nutmeat mince (made with Soy Nut Roast). Roast soya nut cheese (made with Soya Nut Cheese, which is sold in ½-lb or 1-lb tins). "Supplies always available at the Roberts Health Food Shops Throughout Australia."

931. **Product Name:** Nut Bars–Chocolate Covered.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1940 June.
New Product–Documentation: Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 18. "Battle Creek Health Products: Confections–Nut Bars–Chocolate Covered. $0.10."

932. **Product Name:** Bran Gluten Flakes, Gluten Biscuit (40%), Gluten Biscuit (Pure), Gluten Bread.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1940 June.
New Product–Documentation: Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 18. "Battle Creek Health Products: Diabetic and Reducing Foods–Bran Gluten Flakes. $0.40. Gluten Biscuit (40%) $0.35. Gluten Biscuit (Pure) $0.45. Gluten Bread, 8 oz tin. $0.35."

933. **Product Name:** Lima Bean Flakes.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1940 June.
New Product–Documentation: Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 18. "Battle Creek Health Products: Diabetic and Reducing Foods–Lima Bean Flakes, 8 oz. $0.30."

934. Battle Creek Sanitarium. 1940. Battle Creek Sanitarium biologic regimen: Supper menu. Battle Creek, Michigan. 1 p. Front and back.
• ***Summary:*** A remarkable menu, decades ahead of its time. At the top of each printed menu is a space for the "Guest's name" and the dietitian. The date "Tuesday, June 25, 1940" is printed near the top of the menu, which is in the form of a table with 4 columns. Col. 1 are the menu items divided into main types: Relishes, soups, entrees, vegetables, salads, desserts, fruits, beverages, breads, miscellaneous. Col. 2 gives, for each menu item, the total calories per specified serving weight and the calories from protein, fat, and carbohydrates. Col. 3 gives the weight of 4 food minerals (calcium, phosphorus, iron, copper) per serving. Col 4. gives the units of vitamins (A, B, C, D, G) per serving.

Only vegetarian foods are offered. These include soy acidophilus [cultured soymilk], Soykee [soy coffee], Soy

bean bread, Soy gluten wafers, and Whole wheat toast melba.

The back is titled "Special features of The Battle Creek Sanitarium bill of fare." It was the "first to place upon its tables a bill of fare showing the energy values of each article of food served." "Dietetic supervision: Skilled dietitians cooperate with the physician in arranging the patient's bill of fare for each meal." Taboos: Tea and coffee. Wine, beer and all intoxicants. The cigar and cigarette; smoking on the premises is not permitted. Irritating condiments. An illustration shows the San. At the bottom: "Save your menus. Take them home for reference." Address: Battle Creek, Michigan.

935. **Product Name:** Soy Beans with Tomato.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1940 June.
New Product–Documentation: Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 52. "Loma Linda Foods: Soy Products–Soy Beans, with Tomato. $0.11. $0.08."

936. **Product Name:** Soy Beans with Proteena.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1940 June.
New Product–Documentation: Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 52. "Loma Linda Foods: Soy Products–Soy Beans, with Proteena. $0.14."

937. **Product Name:** Fruities, Fruit Wafers, Date Sandwiches.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1940 June.
New Product–Documentation: Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 52. "Loma Linda Foods: Soy Products–Fruities. $0.10. $0.15. Fruit Wafers. $0.10. $0.21. Date Sandwiches. $0.15." Note: It is not clear what soy ingredient is used in these products.

938. **Product Name:** Proteena [Smoked Flavor, or Mushrooms].
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1940 June.
New Product–Documentation: Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 52. "Loma Linda Foods: Vegetarian Meats. Proteena (Smoked Flavor). $0.15. $0.25. Proteena (Mushrooms). $0.17. $0.30."

939. **Product Name:** Gluten Steaks.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1940 June.
New Product–Documentation: Rosenberg's Original Health Food Store. 1940. Catalog of Health Foods... p. 52. "Loma Linda Foods: Vegetarian Meats. Gluten Steaks. $0.15. $0.35."

940. Rosenberg's Original Health Food Store and Whole Wheat Bakery. 1940. Catalog of health foods and manual of valuable health information. San Francisco, California. 76 p. Undated. Illust. 17 cm. Index
• ***Summary:*** Cover title: "Health from foods." Also on title page: "Eat to get well. Eat to keep well." "Where good health originates." "No branch stores." Contents: About your health, by Morris Rosenberg, president. Shop by mail. Parcel post scale. Eat to get well–Eat to keep well (rules and guidelines, p. 4). Vitamin chart (for each: Functions, results of deficiency, most reliable sources, p. 5-8). Biological chemistry of foods–Minerals (p. 9-10). List of products available, by product type, with weight and price. Incl. Soy bean bread, Soy toast, Soy bean wafers, Soy cookies (p. 12). Natural brown rice. Sun-dried, unsulphured California fruits. Salted nut meats (almonds, peanuts, cashews, pecans, p. 16), Nut butters (unroasted and unsalted: Almond butter, Nut cream butter {Carque}, Peanut butter, Cocoanut butter, Smucker's apple butter, Peanut oil (2 brands). Parkelp (minerals of the sea). Salt substitutes.

List of products available, by manufacturer or source, with weight and price. Incl. Battle Creek Health Products [Michigan] (p. 18-19): Beverages (SoyKee, Kaffir Tea), Gluten biscuit, Vegetable meats (Protose), Savita yeast, Psyllium seed. Cellu Dietetic Products: Canned vegetables (Soy bean oil, Soy bean spread, Soy flakes, Soy grits). Dia-Mel (dietetic food products): Gluten crackers, Soy-Rina cereal (to be cooked). Alberty Food Products: Cero-Fig coffee substitute. Modern Diet Products [Gayelord Hauser], incl. Juicex (electric juicing machine), and Fletcherizer (juicers). Radiance Health Products (Los Angeles, p. 30-31). Tam Products (Joyana, the remarkable soybean health drink, plain or chocolate flavor). McCollum Laboratory Products (Soy-A Granules–Soy breakfast food). Penna Soya Products (soy foods): Tenderized whole soybeans, Toasted soy flakes, Toasted soy nut butter (8 or 16 oz), Soy malt–chocolate flavor, Creamee Soy Best (soy milk powder). Mrs. Hauser's Soya Products: Hot cake and waffle mix, Pancake and muffin mix, Soya cereal. Hain's Products (Hain Pure Food Co.): Nature's Best Foods: Assorted candy bars, Fruit juices (6 types), Vegetable juices (7), Hollywood Foods (Meat substitutes: Protone-Soytone-Nutone, SoyBean with Tomato Sauce, SoyBeans T.S. & Protone, Soya sandwich spread), Nut butters (raw–Almond, cashew, pecan). Nut butters (roasted–Almond, cashew), Olive oil (California virgin). Hain's vitamins. Alvita Products. Live Food Products

Key to calories. The four types of foods: Regulatory, body-building, energizing, heating. Index.

On the rear cover is an ad for the Juicex ("makes fresh, pure, undiluted vegetable juices"–$49.50. A photo shows this modern-looking electric juicer. Fruits and vegetables as pushed–using a wooden pusher–into a small hopper on top. The juice runs out of a spigot into a glass) and Fletcherizer [electric blender] ("The new 1940 model has all the latest improvements in construction and appearance. It liquidizes, whips, mixes, and chops..." $14.95). Across bottom of ad: "See these products demonstrated at our store."

Note: This 1940 date, plus other internal evidence, gives us a good estimate for the date of this undated catalog. Address: 1120 Market St., San Francisco, California. Phone: MArket 3033.

941. Madison Foods. 1940. Satisfying meatless entrees (Ad). *Madison Health Messenger* (*Madison, Tennessee*) 3(1):3. Undated.
• ***Summary:*** See next pafe. A full-page ad. Note: On page 5 of this issue are many "Requested recipes" that call for Madison Foods. Address: Madison College, Madison, Tennessee.

942. LeClerc, J.A. 1940. Re: Manufacture of soy sauce. Letter to Dr. Harry W. Miller, International Nutrition Laboratory, P.O. Box 326, Mt. Vernon, Ohio, Aug. 19–in reply to inquiry. 2 p. Typed, without signature. [16 ref. Eng]
• ***Summary:*** "I was very glad to get your letter of August 12, and to learn that it will be possible to see you at Mount Vernon on the 23rd. I hope, of course, to see you also in Detroit at the meeting of the Soybean Convention."

In answer to Dr. Miller's request for information regarding the manufacture of soy sauce and its supplementation with "sodium glutamate," Dr. LeClerc encloses one bulletin from the Philippines, and cites 9 scientific articles, 15 U.S. patent numbers, and one British patent number.

The following are all interested in the manufacture of sodium glutamate: (1) Dr. W.O. Snelling, 110 South 13th Street, Allentown, Pennsylvania; (2) R.W. Greef, 10 Rockefeller Center, New York City; (3) Huron Milling Co., Harbor Beach, Michigan; and (4) Amino Products Company, Rossford, Ohio. Address: Senior Chemist, Food Research Unit, Agricultural Chemical Research Div., USDA Bureau of Chemistry and Soils, Washington, DC.

Satisfying MEATLESS ENTREES

A Madison FOOD

SO outstanding has been the development of Madison College and Madison Foods that *Reader's Digest*, the New York *Times*, Chicago *Journal of Commerce, Coronet, Physical Culture, Food Industries, Printers' Ink*, in all more than 400 newspapers and magazines in 37 countries, have published articles and pictures concerning the college and its products. In search of complete protein foods to take the place of meat, Madison College chemists sought to develop these foods from soy beans, peanuts, wheat gluten, and various vegetables. Thus the formulas of Zoyburger, Not-Meat, Vigorost, and Stake-lets have been designed by a group of experts in the field of nutrition to adequately take the place of meat.

Try This New Food

STAKE-LETS are the newest development of Madison Foods laboratories. Extensive experiments show that the combination of gluten and soy with a special meatlike sauce, an exclusive Madison formula, is superior in both flavor and texture to gluten itself. Already sliced in the can for your convenience with sauce. Dip in egg batter and crumb to serve as a Stake-let.

ZOYBURGER STEAK
with onions

Place half-inch slices of Zoyburger on well-greased pan, with desired amount of onions. Prepare to a medium brown on both sides. Salt to taste. Serve with onions as the meat portion of a dinner. Zoyburger Steak may be served without onions or by substituting mushroom sauce, Creole sauce, tomato sauce, gravy, etc. If a sauce is used, prepare it separately and place on top of Zoyburger Steak when served.

BROILED VIGOROST
with mushroom sauce

Cut Vigorost through center lengthwise, then crosswise, into half-inch slices. Arrange in greased baking pan. Put melted butter on top of each piece and broil until brown. When finished, arrange on serving platter, overlapping the slices. Garnish the edges with sliced tomatoes and crisp lettuce, and pour over the Broiled Vigorost a hot mushroom sauce. Serve with baked potatoes and garden peas. Zoyburger, Not-Meat, or Stake-lets may be used in this recipe in the place of Vigorost.

Fourteen - ounce can serves 5 with 2 pieces. 30-oz. can serves 8 with 2 large pieces.

BREADED CUTLETS — Dip half-inch slices of Not-Meat into beaten egg and crumb. Place a small chip of butter on each slice and salt. Prepare on top of stove or in oven in well-greased pan until brown. Serve with parsley garnish as the meat portion. Vigorost, Zoyburger, or Stake-lets may be used in the place of Not-Meat. Fourteen-ounce can makes 5 medium cutlets; 30-oz. can makes 8 large cutlets. Large cutlets may be sliced in two.

"Devoted to the protection of your HEALTH"

Madison Foods are available throughout the United States in stores specializing in natural foods.

Ad in *Soybean Digest.* 1944. Sept. p. 61. "Meet the Vegetable Cow." International Nutrition Laboratory now sells Miller's Giant Green Shelled Soya Beans.

Taylor. 1944. The Soy Cook Book. p. 201. "Canned Green Soybeans." Soya Blue Book. 1947. p. 69.

Shurtleff. 1981. Sept. Dr. Harry W. Miller: History of his work with soyfoods. Unpublished manuscript. Contrary to Dr. Miller's expectations, the American public was simply not ready for soymilk. "He decided that, in order for his business to survive, he would have to develop new products... With his typical boundless energy, Dr. Miller, now age 61, started by setting up a plant near the soy dairy to can fresh green soybeans of the tasty, large-seeded or vegetable type, which were grown on his farm. Partially because of the mushrooming growth of interest in soyfoods during World War II (due in part to rationing and high prices of meat, milk, eggs, and cheese), these found a ready market and became his most profitable product. By 1943 some 40,000 cases a year were being sold at supermarkets and health food stores around the Midwest."

Talk with Raymond C. Kraft. 1989. Oct. 24. He worked for Dr. Miller from Jan. to Sept. 1941. When he started, the company was canning green soybeans.

946. Miller, Harry W. 1940. The role of the soybean in human nutrition. *Proceedings of the American Soybean Association* p. 64-71. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan.
• ***Summary:*** "The interest in the soybean in America has largely centered around its industrial uses and animal feeding. Comparatively little interest has been manifest in its utilization in human nutrition. Whereas, in the Orient, where I have had opportunity to observe the various uses made of the soybean, at least 90 per cent of the local consumption is in human nutrition. The remainder is exported out of the country... I must admit that I feel that the soybean has suffered a setback by tremendously exaggerated statements made in its behalf that are misleading, and by the fact that the specimens of foods offered have so often been insipid, and poorly processed...

"There is one food that is utilized everywhere in China, and that is the soybean, for they have learned that they must have it in their diet to give them strength, and in order to promote growth. They have not understood its alkalinizing action, nor its biological value as a food, nor its mineral contents, nor its many other scientific and physiological values. However, they do know that when they are tired and need fatigue relief the soybean is the food. They realize that they soon tire on a rice, wheat or corn diet, and cannot maintain their daily round of duties unless they get a portion of soybean... The Chinese people also produce a record to the world on their great endurance during strenuous labor, as is seen in Coolie and agricultural workers...

"Paying the market prices for soya milk and also for other infant foods, in Shanghai, we made a comparative cost of food for a baby for its first five months, making an average of the cost per month. To provide the requisite amount of nutrition, if these babies were fed on fresh cow's milk bought on the Shanghai market the cost was $20.00 per month, Shanghai currency. If fed on canned milk, $16.50. If fed on the cheaper class of Shanghai dairy milk, $14.75. If fed on a milk that came from Holland, called Oster Milk, $12.00. If fed on S.M.A. or Lactogen, American prepared baby foods, the cost was $26.00 a month. Whereas these same babies could be cared for equally well on soy bean milk, at a cost of $5.00 a month." Address: M.D., International Nutrition Lab. [Mt. Vernon, Ohio].

947. *Good Health* (*Battle Creek, Michigan*). 1940. Food and the war. 75(9):125. Sept.
• ***Summary:*** "The soybean has come to have a prominent place in the military dietetics of Germany."

In the *British Medical Journal* "Dr. Josiah Oldfield (of England) urges the British to learn from Hitler and Mussolini about diet. In Germany the populace has been put on two or three meatless days a week. Italy has decreed that the

© Copyright Soyinfo Center 2014

wealthy shall live two or three days a week on the peasant diet of corn, oil, chestnuts, raisins, macaroni, maize porridge, milk and cheese." "The Indian armies in the World War [I] surprised Lord Roberts when they marched and fought better on vegetable foods than the English Tommies on a heavy meat ration."

948. *Ohio Farmer.* 1940. Now its soybean milk! This and other foods produced by new Ohio plant. 186(11):10. Nov. 30. Whole No. 4606.
• ***Summary:*** About the work of Dr. Harry W. Miller (of Ohio and China) with soymilk. Today, because of the Japanese invasion of Shanghai, there now stands in Mt. Vernon, Ohio, a plant producing soybean milk, powder, and a number of products from the edible soybean. The head of this company, International Nutrition Laboratory, is Dr. H.W. Miller, who was born in Miami County, Ohio, and educated as a surgeon. For many years he was head surgeon in an American mission hospital in China. During this time he saw the need for milk and other dairy products in China; they were unavailable to most people due to the high cost and short supply. So he and his associates started a plant in Shanghai for the production of soybean milk. In 1937, at the time of the Japanese invasion, they had 15 delivery boys going out each day on bicycles to deliver the soybean milk to thousands of customers.

When Japanese bombs destroyed the plant in 1937, Dr. Miller decided to relocate near Mt. Vernon, in Knox County, Ohio. He and his sons built the plant, and also designed and built much of the equipment in it. According to Dr. Miller, soybean milk "is more quickly assimilated by the body than animal milk, it gives a quick recovery from exhaustion and fatigue, and is especially desirable as a food for infants and invalids. The liquid and powdered soybean milk produced in this plant is sold to doctors and hospitals all over the United States..." The steps in the process are described. They also make Mien Jing, based on wheat gluten, to which are added fresh vegetables and soya sauce to make a nutritious food with a meat-like flavor.

"During the past summer this plant also packed a quantity of edible soybeans. These were canned, both as green beans, and dried beans with tomato sauce added. Another product is a soybean flour..."

Some of the edible soybeans used in this plant were grown on the farm run by Dr. Miller near Mt. Vernon and by farmers in the neighborhood. However it has been necessary to import a large portion of the soybeans from other states.

Dr. Miller's organization is presently establishing another plant for the production of soybean milk in the Philippines. Moreover, 2,000 pounds of powdered soybean milk were recently shipped to China from Mt. Vernon.

Photos show: (1) Dr. Harry Miller, seated at a desk in a coat and tie, examining samples of edible varieties of soybeans. (2) The plant of the International Nutrition Laboratory near Mt. Vernon, Ohio. (3) A worker inspecting a can of edible soybeans, which are packed in cans and labeled, ready to ship to all parts of the USA.

949. **Product Name:** Miller's Mien Jing. Renamed Savory Vegetable Cutlets. Renamed Miller's Vegetarian Cutlets by Sept. 1946, then Miller's Vegetarian Cutlets (Mien Jing) by Jan. 1946, and Miller's Vegetarian Gluten Cutlets by 1948.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1940 November.
Ingredients: Incl. wheat gluten and probably soy sauce.
Wt/Vol., Packaging, Price: Canned, No. 10, 30 oz. or 20 oz.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *Ohio Farmer.* 1940. Nov. 30. p. 10. "Now it's soybean milk!" At their plant in Mt. Vernon, Ohio, Dr. Miller and his sons make Mien Jing, based on the "gluten of wheat flour, to which is added fresh vegetables and soya sauce, making a nutritious food with a meat-like flavor."

International Nutrition Laboratory. 1940? "Miller's Soy Bean Foods." Undated 12-page leaflet. 4. Miller's Mien Jing: Wheat "gluten, or cereal protein, is the basic food element in Miller's Mien Jing. Mien Jing is the Oriental name meaning processed gluten. A high protein wheat flour is washed free of starch, and small slices of the remaining gluten are processed with fresh vegetables and soya sauce, making a highly nutritious food, quite meat-like in taste. This gluten food was first introduced into this country by us, and our Mien Jing, or gluten cutlets, has the genuine flavors that have popularized this food in the Orient... It requires only a little cooking to make Mien Jing into many savory dishes, such as stews, croquettes, entrees, and also Oriental dishes such as Chow Mien and Chop Suey."

Ad in *Soybean Digest.* 1942. Sept. p. 16. "Miller's Soya Products." Ad in *Soybean Digest.* 1944. Sept. p. 61. "Meet the Vegetable Cow." International Nutrition Laboratory now sells Miller's Vegetarian Cutlets in uniform slices or diced form. This popular product has a high protein value.

Ad in *Soybean Digest.* 1946. Sept. p. 79. "No meat?–Try Cutlets." A large photo shows the can of "Miller's Vegetarian Cutlets (*Mien Jing*). The front panel states: "Delicious when grilled or broiled. Protein food for meat pies, grills, chop suey." The ad text reads: "You may be one of those many folk who will consider Vegetarian Cutlets as a more satisfactory article of diet than fish, fowl, or meat. This tender meat-protein substitute is manufactured from a selected portion of the wheat [gluten], healthfully prepared and tastily flavored, providing a highly nutritious and tempting food for any meal. Cutlets are very low in starch, high in body building qualities, resemble meat in taste.

"Miller's Cutlets may be prepared and served in many ways–lightly grilled as they come from the can–dipped in

© Copyright Soyinfo Center 2014

egg and rolled in cracker crumbs, corn meal, or potato flour and browned–used in stews, pot pies, and chop suey. With these delicious cutlets a quick meal, balanced in protein, can readily be prepared.

"Miller's tenderized cutlets are packed in three sizes: No. 10, 30 ounce, 20 ounce. If your dealer does not have Miller's Cutlets, write for information."

Note: The Chinese name on the label probably indicates that Dr. Miller learned about this gluten-based product during his years as a physician in China, and that he was marketing it to Chinese-Americans (as well as Caucasians) in the USA.

Soybean Blue Book. 1948. p. 84.

Talk with Clarence Miller. 1986. The best seller at Mt. Vernon was Miller's Vegetarian Cutlets, a canned gluten entree, but they were not so profitable since they cost so much to make. 100 lb of flour yielded only 30 lb of gluten and 70 lb of starch. The latter was sold for wallpaper glue.

950. Lager, Mildred. 1940. Healthful philosophy. *House of Better Living* (*Newsletter, Los Angeles*) 12(59):2. Nov.
• ***Summary:*** "Try our new soy noodle, artichoke noodles, soy noodle quick soup..." "If you cannot tolerate milk, why not try soy milk? It comes in cans and can be used as regular milk. The Madison soy milk is homogenized, thick and creamy, with lots of food value. Comes plain or chocolate flavor." A portrait photo shows Mildred Lager.

Across the bottom of the page: "We serve fruit and vegetable juices–5¢ and 10¢ a glass. Try carrot and cocoanut."

Note: With this issue, the House of Better Living has a new address (3477 West Sixth St., Los Angeles) and phone number (EXposition 8144). It is still owned and operated by Mildred Lager. Address: 3477 West Sixth St., Los Angeles, California. Phone: EXposition 8144.

951. **Product Name:** Yum (Bologna-Like Canned Meatless Loaf with Tofu).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1940 November.
Ingredients: Soybeans, gluten, soy cheese [tofu], whole peanut meal, seasonings.
Wt/Vol., Packaging, Price: No. 2 can. 20 oz.
How Stored: Shelf stable.
Nutrition: Protein 19.1%, fat 11.1%, carbohydrates 11.5%, ash 2.5%, calories 221/100 gm.
New Product–Documentation: Ad (2¼ by 3 inches) in *Nature's Path* (USA). 1940. Nov. p. 428. "Yum, a new food." "For years Madison Laboratories have been experimenting with this new food to make it very tasty and yet being ever careful not to season it to the point of limiting its appeal to those who like the very spicy foods... Compounded from wheat gluten, soy beans, nut meal and vegetable seasonings, this new food... is right on the front row of body-building protein foods." Gives two recipes: Yum meatless balls. Breaded Yum cutlet. "Free: the *Madison Health Messenger* with new health news, soy bean information, new recipes, charts, etc. Obtain from your health food store or write to: Madison Foods, Madison College, Tennessee."

Madison Health Messenger. V. 49-2. p. 5. Can be used hot or cold. Taylor. 1944. The Soy Cook Book. p. 201.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Yum contains 16.00% protein, 5.20% fat, and 11.26% carbohydrate. Not listed in the 1965 *Diet Manual.*

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Yum (Madison)." The ingredients are now: Wheat protein [wheat gluten], processed soybean, peanuts, soya flour, rolled oats, soy sauce, vegetable oil, tomato puree, onions, yeast extract, salt, garlic, MSG, hydrolyzed vegetable protein, sage.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned product resembling cold cuts, made from wheat [protein] soy, and peanuts. It can also be used in salads or sandwiches. Now made by Worthington Foods.

952. **Product Name:** Soy Gluten Wafers (42% Soya).
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1940.
Wt/Vol., Packaging, Price: 3.5 oz.
How Stored: Shelf stable.
New Product–Documentation: Battle Creek Food Co. Price List. 1940. 3.5 oz. 42% soy. Distributed through health food stores.

USDA War Food Administration, Food Distribution Administration. Grain Products Branch. 1943. Dec. "Soya products distribution." p. 5. The company sells Soy Gluten Wafers, containing 42% soya (probably in the form of soy flour). Distributed through health food stores.

Taylor. 1944. Soy Cook Book. p. 200. "Savory crackers made with soy flour, low starch content." Soybean Blue Book. 1947. p. 70.

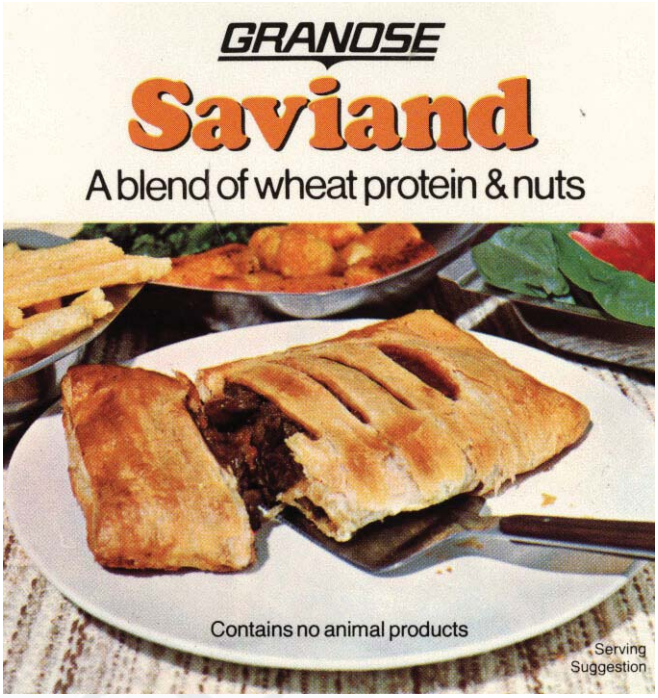
Administration. Grain Products Branch. 1943. Dec. "Soya products distribution." p. 5. The company sells Soykee, made of 100% soya. Distributed through health food stores.

Taylor. 1944. Soy Cook Book. p. 200.

954. **Product Name:** Soy Spread.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1940.
Wt/Vol., Packaging, Price: 8 oz can.
New Product–Documentation: Price List. 1940. 8 oz. can.

955. Battle Creek Food Company. 1940. Authorized dealer price list. Battle Creek, Michigan. 1 p. *
• ***Summary:*** Dr. John Harvey Kellogg was particularly interested in the nutritional use of the soybean in dietetic diets. In his 1940 price list, the following soy products are listed: Soy Beans, Cooked (10 oz cans). Soy Beans, Green (1 lb, 3 oz can). Soy Gluten Wafers (3½ oz). Soy Flour (1 lb or 4 lb). Soy Gluten Bread (in tin). Soy Kee (16 oz). Soy Milk, Condensed (10 oz tin). Soy Spread (8 oz). Address: Battle Creek, Michigan.



956. **Product Name:** Granose Protose (Formerly named Nutmeat).
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1940.
Ingredients: Wheat protein, cashew nuts, peanuts, wheat flour, soya flour, yeast, salt, hydrolised vegetable protein.
New Product–Documentation: Manufacturer's catalog. 1980. April.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1940. It has been discontinued.

957. **Product Name:** Granose Saviand (A Meatless Savoury).
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1940.
Ingredients: Wheat protein, cashew nuts, soya flour, yeast, salt, hydrolised vegetable protein, onion, caramel.
Wt/Vol., Packaging, Price: 284 gm (10 oz) can.
New Product–Documentation: *The British Vegetarian.* 1960. Sept/Oct. p. 249. Granose produces Saviand, containing wheat gluten, ground nuts, yeast extract, onion, and caramel.

Manufacturer's catalog. 1980. April. "A product similar to Protose but with the addition of onion flavouring."

Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose,

was introduced in 1940. Label. 1990. 8.5 by 3.75 inches. Orange, black, and yellow on white. Two color illustrations of a Savoury (like a U.S. turnover, with a crust) on a plate with a spatula underneath it. "A blend of wheat protein and nuts. Contains no animal products. Saviand is a delicious savoury which is ready to serve either cold with salads or hot in pies, hot pots, etc. Slice or dice it. Ingredients: Wheat protein, water, peanuts, soya flour, yeast, salt, hydrolysed vegetable protein, onion powder, caramel. Dietary analysis upon request." This canned product is similar to Spam or Nuttolene. It is not sold in the pastry crust.

958. **Product Name:** Miller's Soya Loaf (Meat Substitute).
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1940.
Ingredients: Incl. soy pulp [okara], gluten, and seasonings.
New Product–Documentation: International Nutrition Laboratory. 1940? "Miller's Soy Bean Foods." Undated 12-page leaflet. 6. Miller's Soya Loaf: "Made from especially selected high protein edible soya beans, low in fat and carbohydrates. This food will be found to be a very pleasing entree that can be served as it comes from the can, or made into appetizing roasts, pot-pies, sandwiches, and other meat substitute dishes."

Ad in *Soybean Digest.* 1942. Sept. p. 16. "Miller's Soya Products."

New Product–Documentation: International Nutrition Laboratory. 1940? "Miller's Soy Bean Foods." Undated 12-page leaflet. 8. Miller's Whole Soya Bean Flour: This flour "is not made from oil extracted 'bean cake,' but fresh selected edible soya beans are ground to produce this rich golden flour. Wheat flour is classed among the acid foods while soya bean flour is strongly alkaline... One part of Soya Flour will neutralize the acidity of four parts of wheat flour."

USDA War Food Administration, Food Distribution Administration. Grain Products Branch. 1943. Dec. "Soya products distribution." p. 5. International Nutrition Laboratory / Miller's Soya Foods sells Whole Soybean Flour. "Distribution scattered throughout the United States by Health Stores."

Ad in leaflet titled "The Story of Milk from the Soya Bean," by Harry W. Miller. 1944.

964. **Product Name:** Miller's Giant Soya Beans. Renamed Miller's Giant Select Soyabeans by 1948.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: P.O. Box 388, Mt. Vernon, Ohio.
Date of Introduction: 1940.
New Product–Documentation: International Nutrition Laboratory. 1940? "Miller's Soy Bean Foods." Undated 12-page leaflet. 10. Miller's Giant Soya Beans: These soy beans are high in protein (43.18%) and low in fat (18.7%). "Miller's soy beans are processed so that the nutlike flavor is brought out and they are rendered entirely digestible. The eating of the soy bean creates an alkaline reserve so necessary for the healthful functioning of the body."

Soybean Blue Book. 1948. p. 82. Not clear whether these are whole dry or green soybeans.

965. **Product Name:** Miller's Soy-A-Malt [Spray Dried: Natural Malt, or Chocolate flavors].
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1940.
Wt/Vol., Packaging, Price: 1 lb can.
How Stored: Shelf stable.
New Product–Documentation: International Nutrition Laboratory. 1940? "Miller's Soy Bean Foods." Undated 12-page leaflet. 2. Miller's Soy-A-Malt: A spray-dried powder available in both natural and chocolate flavors, packed in 1-pound cans, which make 1 gallon of "vegetable milk."

Ad in *Soybean Digest.* 1941. Sept. p. 17. "New items for the table: Soy products by Miller." "Soy-A-Malt: A delicious wholesome soy-malted milk–a pure vegetable beverage containing all and more of the food qualities of milk."

Ad in Leaflet titled "Optimal Nutrition in Infant Feeding." Undated. "Soy-A-Malt is put out under registered trade mark No. 390909 U.S. Patent Offices."

USDA War Food Administration, Food Distribution Administration. Grain Products Branch. 1943. Dec. "Soya products distribution." p. 5. International Nutrition Laboratory / Miller's Soya Foods makes SoyaLac, Chocolate SoyaLac, and Soy-A-Malt. "Distribution scattered throughout the United States by Health Stores."

966. **Product Name:** Miller's Soya Sauce (Importer-Marketer). Made in South China.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1940.
How Stored: Shelf stable.
New Product–Documentation: International Nutrition Laboratory. 1940? "Miller's Soy Bean Foods." Undated 12-page leaflet. 5. Miller's Soya Sauce: "Produced in South China where the finest soya sauce is made, insuring a pure and highly concentrated product. It should be used in flavoring all protein dishes where a meat-like flavor is desired."

967. **Product Name:** SoyaLac (Powdered Soymilk Infant Formula). Renamed Miller's Soyalac by Sept. 1944.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: 13246 Wooster Rd., Mt. Vernon, Ohio.
Date of Introduction: 1940.
Wt/Vol., Packaging, Price: Powdered.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in *Soybean Digest.* 1941. Sept. p. 17. "New items for the table: Soy products by Miller." "SOYALAC: Spray-dried Infant Food–the perfect formula for the new-born infant–especially fine for malnutrition and allergic conditions."

Ad in *Soybean Digest.* 1944. Sept. p. 61. "Meet the Vegetable Cow." International Nutrition Laboratory now makes (1) Miller's Soyalac (powdered milk), plain, malted, or chocolate; and (2) Miller's Soyalac (soya milk), liquid, natural, or chocolate.

Shurtleff. 1981. Sept. Dr. Harry W. Miller: History of his work with soyfoods. Unpublished manuscript. Powdered Soya Lac was first produced in 1940.

Talk with Lillian Miller, wife of Clarence Miller, Dr. Miller's eldest son. 1994. March 28. She thinks Dr. Miller's first soymilk infant formula was sold in powdered form. After introducing a liquid for adults, Dr. Miller built equipment that would spray dry the liquid.

968. **Product Name:** Miller's Soya Lac. Renamed Soyalac by 1952.
Manufacturer's Name: International Nutrition Products, Inc.
Manufacturer's Address: 41 Nagathan St., Manila, Philippines. Phone: 6-62-71.
Date of Introduction: 1940.
New Product–Documentation: Ad in *Manila Tribune.*

1941. Aug.

Ad in *A Half Century of Philippine Agriculture.* Manila, Philippines: Liwayway Publishing. p. 433. "Soyalac. The wonder vegetable milk. Processed by International Nutrition Products, Inc., 41 Nagathan St., Manila. Tel. 6-62-71. Note: This is the earliest reference seen for the company's name, address, and phone number. They could have been different in 1941. Note also that the product is now named Soyalac.

Shurtleff & Aoyagi. Soymilk Industry & Market. p. 106-07. Made at the first soymilk plant in the Philippines, set up by Dr. Harry Miller and Mr. Paul Sycip.

Note: This is the earliest known commercial soy product made in the Philippines.

969. White, Julius Gilbert. 1940. Abundant health: A digest of the "Learn-how-to-be-well" lectures. Madison College, Tennessee: Published by the author. ix + 317 p. Illust. 28 cm. [soy ref]

• ***Summary:*** Advocates vegetarian diet. Note that Madison College is a Seventh-day Adventist college and sanitarium. One section, titled "The Soy Bean–The Wonder Food," introduces the many benefits of soybeans, discusses their low cost, and describes (in fairly specific terms, but without recipes), how to use soybeans in baking, as cooked or canned beans, in commercial "meat substitutes," as soybean milk (good for those with allergies to cow's milk), as cheese (tofu), as greens (soybean sprouts), or in commercial "coffee substitutes." Note: The author lived 1878-1955. Address: Madison, Tennessee.

970. Glendale Sanitarium "vegetarian" cook book. 1940? Glendale, California: Glendale Sanitarium. 56 p. Undated. 21 cm.

• ***Summary:*** A full-page ad, facing the title page, states: "Twenty-eight acres–Spacious grounds. Quiet–Rest. Hospital service. Electrotherapy. Hydrotherapy. Medical care. Special diets. Sun baths. Massage. Fireproof building. Private rooms. Reasonable rates. For particulars write to Glendale Sanitarium and Hospital."

The Preface states: "Rational diet has long been a basic principle in the Sanitarium System of treatment so we are indeed happy to meet the need created by guests who have become acquainted with a palatable vegetarian diet and wish to continue it after leaving the institution. The recipes that we have compiled are representative of the food which makes up our daily menus."

Contents (called "Index"). Beverages. Cakes. Cake icings. Cooked cereals. Cooked fruits. Eggs. Entrees. Entrees, supper. Gravies and sauces. Hot breads. Memoranda: Description of nut foods and flavorings. Miscellaneous. Pies. Puddings. Pudding sauces. Salads. Salad dressings. Sandwiches. Soups. Toasts. Vegetables.

Soy-related recipes: Chow mein (with "¼ cup soy bean sauce," p. 19). Chop suey (with "Yong You or Soy bean sauce," p. 20). Tofu loaf (with "1 pound tofu," p. 23).

Proteena is called for in recipes on 8 different pages, Protose on 8 different pages, and Nuttose on 3 different pages, and Savita (a seasoning) on 13 different pages. Address: 1509 E. Wilson Ave., Glendale California.

971. International Nutrition Laboratory. 1940? Miller's soy bean foods (Brochure). Mt. Vernon, Ohio: International Nutrition Laboratory. 12 panels. Each panel: 19 x 10 cm. Undated.

• ***Summary:*** A description (probably written by Dr. Harry W. Miller) of each of the following foods is given: 1. Miller's Soya Lac: A liquid milk packed in 13 oz. and 30 oz cans. It is available in both natural and chocolate flavors. 2. Miller's Soy-A-Malt: A spray-dried powder available in both natural and chocolate flavors, packed in 1-pound cans, which make 1 gallon of "vegetable milk." 3. Miller's Soya Curd: "This delicate protein food is made by coagulating Miller's Soya Lac with lactic acid and then blending this soft curd with tomato puree, pimento and Soya Sauce. It is a pleasing protein addition to salads, or for spreading crackers and sandwiches."

4. Miller's Mien Jing: Wheat "gluten, or cereal protein, is the basic food element in Miller's Mien Jing. Mien Jing is the Oriental name meaning processed gluten. A high protein wheat flour is washed free of starch, and small slices of the remaining gluten are processed with fresh vegetables and soya sauce, making a highly nutritious food, quite meat-like in taste. This gluten food was first introduced into this country by us, and our Mien Jing, or gluten cutlets, has the genuine flavors that have popularized this food in the Orient... It requires only a little cooking to make Mien Jing into many savory dishes, such as stews, croquettes, entrees, and also Oriental dishes such as Chow Mien and Chop Suey."

5. Miller's Soya Sauce: "Produced in South China where the finest soya sauce is made, insuring a pure and highly concentrated product. It should be used in flavoring all protein dishes where a meat-like flavor is desired." 6. Miller's Soya Loaf: "Made from especially selected high protein edible soya beans, low in fat and carbohydrates. This food will be found to be a very pleasing entree that can be served as it comes from the can, or made into appetizing roasts, pot-pies, sandwiches, and other meat substitute dishes."

7. Miller's Soya Spread: This canned product can facilitate the making of tasty and nutritious sandwiches. 8. Miller's Whole Soya Bean Flour: This flour "is not made from oil extracted 'bean cake,' but fresh selected edible soya beans are ground to produce this rich golden flour. Wheat flour is classed among the acid foods while soya bean flour is strongly alkaline... One part of Soya Flour will neutralize the acidity of four parts of wheat flour." 9. Miller's Green Soya Beans: These delicious canned green beans "are an abundant

© Copyright Soyinfo Center 2014

source of Vitamins A, B, and G, and a splendid source of calcium, phosphorus and iron... rich in protein, they can be served just as they come from the can. They make a splendid addition to a vegetable salad. They combine well with many of the vegetables in cooking. Surprise your family and friends by serving this new food.

10. Miller's Giant Soya Beans: These soy beans are high in protein (43.18%) and low in fat (18.7%). "Miller's soy beans are processed so that the nutlike flavor is brought out and they are rendered entirely digestible. The eating of the soy bean creates an alkaline reserve so necessary for the healthful functioning of the body." 11. Miller's Soya Beans with Tomato Sauce: Edible soy beans are canned with tomato puree and malt. "This is truly a treat for the picnic lunch."

This brochure contains 8 recipes using Miller's products. Three panels discuss the "Dietetic advantages of the soy bean;" across the bottom is written in large letters "Alkalinize with Miller's Soy Bean Foods." These panels note of the soya bean: "So highly does it stand in the list of foods from the vegetable kingdom that the International Nutrition Laboratory is devoting 95% of its effort to the output of foods made from the soya bean." Edible Soy Beans are a remarkable food, a complete protein with adequate calcium for optimum metabolism, a ready alkalinizer, rich in Lecithin and Cephalin–the nerve foods, and "The only vegetable protein that is biologically able to substitute for animal protein... It is indeed unfortunate that so little interest has been aroused here in America in the culture of the so-called vegetable or edible type of soy beans... The International Nutrition Laboratory uses only these edible beans for canning and food manufacture.

"This institution now located at Mount Vernon, Ohio, first began its work in Shanghai, China, where extensive nutrition experiments were carried out in the feeding of infants, children and adults on soya milk. It operated a Soya Bean Dairy, providing daily milk distribution of plain and chocolate soya milk to thousands of persons. But as this plant was practically demolished during the recent war in the Orient, it was organized again in 1939 in Mount Vernon, Ohio as the International Nutrition Laboratory, and is producing from the edible soya bean all the valuable foods described in this folder."

Another panel describes the "Advantages of vegetable milk." Large letters across the bottom state: "Alkalinize with Miller's soy bean foods."

Note 1. This is the earliest document seen (April 2002) with the term "soy bean foods" in the title.

Note 2. This is the earliest document seen (Aug. 2013) that uses the term "Soy Lac" to refer to a soymilk. Address: Mt. Vernon, Ohio.

972. Madison Foods. 1940? Featuring Madison Foods Quartet (Leaflet). Madison, Tennessee. 1 p. Single sided. 28 cm. Undated.

• ***Summary:*** A photo shows cans of four products: Madison Burger–Vegetarian. Not-Meat. Cheze-O-Soy. And Dinner Morsels. Each appears to be dancing, with musical notes as its feet. Address: Madison, Tennessee.

973. **Product Name:** Soyagen (Soymilk for General Use) [Powdered, or Spray Dried].
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: 13246 Wooster Rd., Mt. Vernon, Ohio.
Date of Introduction: 1941 January.
New Product–Documentation: Raymond S. Moore. 1961. *China Doctor.* p. 185. After developing Soyalac, Dr. Miller developed a different product for adults, which he called Soyagen.

Talk with Raymond C. Kraft. 1989. Oct. 24. He worked for Dr. Miller from Jan. to Sept. 1941. When he started, he thinks he recalls that the company was making Soyagen in both liquid and powdered forms. Note: The year that this product was introduced and the manufacturer's name at that time are not certain.

974. Loma Linda University, School of Dietetics. 1941. Lesson outlines in nutrition & cookery. 1st ed. Loma Linda, California: Loma Linda University, School of Dietetics. 114 p. Jan. 20 cm.
• ***Summary:*** Contains recipes, including soy-related recipes. At this time, the School of Dietetics was part of the College of Medical Evangelists. Address: Loma Linda, California.

975. Holman, Ross L. 1941. Soybeans and college degrees. *Forward magazine* 60(5):5. Feb. 1.
• ***Summary:*** About Madison College, located near Nashville, Tennessee, and their work with soybeans and soyfoods. Reprinted in the *Madison Survey* of March 1983, p. 8.

Madison College has developed a large number of soybean food products and is selling them all over the United States "in such a volume as to net that institution a large amount of the revenue it needs to operate.

"In fact, Madison College is getting almost its entire support from its own 800-acre farm... Nearly all of its 400 students earn their tuition, board, clothes, and all personal expenses by growing these crops and preparing them for use.

"The most interesting of these processing plants is the soybean factory where these beans are manufactured into thirty different food products which, in addition to what are consumed at the college, bring the institution a revenue of $60,000 a year. Among these foods are meat, bread, cheese, breakfast foods, pork and bean products, sweet milk, buttermilk, and coffee... They say that such foods are more nourishing than the meat or vegetable products for which they are substituted.

"Take soybean milk, for instance. You can't tell it from any cow's milk you ever saw, except when you taste it. You

© Copyright Soyinfo Center 2014

may not like the taste, but many consumers prefer it to that drawn from a cow...

"The bread made from soys is baked in loaves of the same size and shape as bread from regular bakeries. This bread is sold in nearly all the grocery stores of Nashville and in other cities. All these soy foods are sold to grocery chains and are consumed from coast to coast...

"Madison College was started 37 years ago by Dr. E.A. Sutherland, who is still its president... The students have not only been working their way through college but have actually built, with their own hands, the 120 buildings in which the institution and its industries are operating. They not only process the soy foods and serve them to the patients of the sanitarium, but they also constructed the factory and sanitarium buildings in which these foods are made and consumed."

Note: Forward magazine is published weekly by the Board of Christian Education of the Presbyterian church, USA.

976. *Farmer's Digest* (*Ambler, Pennsylvania*). 1941. Soybean milk! 4(10):28-29. Feb.
• ***Summary:*** About the work of Dr. Harry W. Miller (of Ohio and China) with soymilk. This article is condensed from *The Ohio Farmer* (30 Nov. 1940, Cleveland, Ohio).

977. Grand Central Public Market. 1941. During Lenten season enjoy: Madison Foods. *Los Angeles Times*. March 7. p. A6.
• ***Summary:*** "Soyburger. Vigorost. Stakelets. Soy Cheese [tofu]. Nut Meat. Soy beans.

"Delicious foods that make Lent a season of real eating enjoyment... See them on display at Jones Grain Mill today!" Address: Between 3rd & 4th Streets, Broadway to Hill, Los Angeles.

978. Frank, Milo O. 1941. Just what is health food? *Health News* (*Hollywood, California*) 9(5):5, 9. March 14.
• ***Summary:*** "Two meanings are attached to 'health foods.' The wider includes all nutriment that the body can digest with benefit. The narrower refers to *selected products of high natural value* and to *supplements* prepared for specific purposes. But in every case, a real health food, is truly beneficial.

"On the distributor rests the duty of investigating every product to make certain that it meets this definition.

"Are you aware that the sugar problem is solved? The National Sugar Refining Co. has heard our demands and agrees that we must have what we want. Health shops are busy selling *Grans*, 'raw sugar at its best.' It's wholesome with natural cane juice..."

"Some firms have won such a reputation that the very *name* is a guarantee. One of these is the Pfaffman Co., Cleveland [Ohio]. They began in 1873 and in 1914 pioneered

health foods. From the start, they catered to those demanding utmost purity, served hospitals and other institutions where nutritive values are important. No one really knows how good macaroni can be unless familiar with their Soymac brand made of the highest quality durum wheat to which whole soybean flour has been added. And everybody likes their 'Kwik Soup'–even the sternest dieticians!"

"Also outstanding in the health field are the famous Madison products from Madison, Tennessee, delicious new soy foods and meat substitutes that accomplish more than arguing to produce enthusiastic vegetarians." Address: 2027 Hillhurst Ave., Los Angeles, California.

979. Madison Foods. 1941. A family of health foods: For the whole family (Ad). *Madison Health Messenger* (*Madison, Tennessee*). Campmeeting '41. p. 6. Undated.
• ***Summary:*** See next page. A full-page ad, with the best photos seen to date of the individual packages.

Note: On pages 2 and 4 are excerpts (indicated by paragraph number) from the very important book *Counsels on Diet and Foods*, a compilation from the writings of Ellen G. White. Address: Madison College, Madison, Tennessee.

980. Quivey, O.K. 1941. Soybean special ends three-state tour. *Soybean Digest.* April. p. 4, 10.

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

• ***Summary:*** "The Soybean Special, operated by the Baltimore and Ohio and Alton Railroads in cooperation with Ohio State University, Purdue University, the University of Illinois and The American Soybean Association, April 2 completed a 6-week's pilgrimage through the Corn Belt, operating 2 weeks in each of the states of Ohio, Indiana and Illinois."

"During its pilgrimage the Special made 51 stops and was visited by 19,558 people, or an average of 383 per stop." It contained a soybean exhibit car and two lecture cars.

A cooking school was conducted in the women's lecture and exhibit car by Aneta Beadle Vogler, former nutrition specialist of Purdue University, who was specially engaged by the railroad to preside over the women's lecture program. Assisted by Miss Mary Mowry, an Indiana 4-H Club girl, Mrs. Vogler gave a general discussion of soybean products in the diet, then demonstrated three specific recipes– soybean loaf, soybean muffins, and soy fudge. "These dishes, as they emerged hot from the gas range, were served to the women and high school Home-Ec girls in attendance. One thousand and twenty-three muffins were made and served in the women's car and hundreds of prizes Ä all soybean food products such as soy flour, canned green soybeans, soy pancake and muffin flour, roasted salty soys, etc. Ä were presented to women visitors during the tour of the Special.

Note: The meaning of the term "Canned Green Soybeans" is unclear. They were probably canned mature soybeans with green seed coats rather than canned green vegetable soybeans. Moreover, they were probably sold by International Nutritional Laboratory (Dr. Harry Miller) of Mt. Vernon, Ohio.

"One of the features of the Special was the sound picture 'The Story of the Soybean,' made by Erpi Studios in cooperation with Dr. W.L. Burlison, University of Illinois.

"The program of the Soybean Special was broadcast from aboard the train by four different radio stations, including WLW Cincinnati, CKYW Cincinnati [Ohio], WMBD Peoria [Illinois] and WDZ Tuscola [Illinois]. As a result, the four stations and the Agricultural Development Department of the Baltimore and Ohio Railroad have been deluged with postcard requests for more information regarding the soybean and particularly for copies of the B&O booklets 'Soybean Recipes' and 'That Magic Plant, the Soybean.'"

Photos show: (1) The staff of men and women seated

© Copyright Soyinfo Center 2014

alongside The Soybean Special; the name and title of each person is given. (2) The men's lecture car packed with people listening to a lecture by D.F. Beard titled "Fitting Soybeans into the Farming System." (3) The inside of the exhibit car, with many displays on the walls. Another photo (p. 10) shows Mrs. Vogler and Miss Mowry in action at the cooking school. Address: Agricultural Development Dep., Baltimore and Ohio Railroad.

981. **Product Name:** Stakelets (Vegetarian Beefsteak).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1941 May.
How Stored: Shelf stable.
New Product–Documentation: Ad in *Los Angeles Times.* 1941. March 7. p. A6. During Lenten season enjoy: Madison Foods. Includes "Stakelets."

982. Madison Foods. 1941. A treat without meat (Ad). *Nature's Path* (*New York City*). July. p. 273.
• ***Summary:*** "Steaming hot or cold, you may have delectable foods without using meat of any kind. From these five basic food [products]–Soyburger, Stake-Lets, Vigorost, Not-Meat, and Yum–dozen of tasty entrees may be served to the delight of the most fastidious guests. Duplicate your favorite meat dish... All five basic foods contain complete protein... All five of these foods are hermetically sealed in enameled cans. Prices range from 10¢ for a 5-ounce can to 50¢ for a 39-ounce can. Available at health food stores and health food departments.

"Free–new issue *Madison Health Messenger* with newest information about soy beans, recipes, etc. Copies available at health food stores." Address: Madison College, Tennessee.

983. *Manila Tribune* (*Philippines*). 1941. Soya-Lac Supplement (Ad). Aug. 16. *
• ***Summary:*** This full-page supplement, including a 5-column ad for Miller's Soya Lac, is devoted to the story of soya milk and the soya bean. The lead article states: "By unbiased laboratory analysis, soya milk has been found to be virtually identical to cow's milk in nutritional elements, and higher, in fact, in protein content." Paul Sycip, a soya milk chemist and a graduate of the University of the Philippines, recently returned from a tour of U.S. soya milk factories. He stayed most of the time with Dr. Harry W. Miller, owner of the patent on soya milk processing.

Another article quotes Rafael Alunan, Philippines Secretary of the Interior, as saying that "The National Land Settlement Administration is already committed to the growing of the soybean on a large scale in the Koronadal Valley and to making soybeans one of the major producing crops."

984. *Times* (*Morning ed.*) (*Chattanooga, Tennessee*). 1941. The lowly soybean rises. Aug. 29.
• ***Summary:*** "Most people don't know what soybean are. They associate them, rather loosely and vaguely, with cover crops on farm hillsides. Something cows eat, maybe. But the lowly soybean may hold the future of the world health in its little husk.

"Henry Ford has been experimenting with soybeans down on his Ways (Georgia) plantation for many years. He has grown a lot of soybeans and has turned them into plastic things. Mr Ford, it is said, drinks soybean milk. It is healthful.

"Over at the Madison (Tennessee) sanitarium they grow a lot of soybeans, too. The doctors at Madison have found out how to make the soybean look like beefsteak. It not only resembles steak, but it tastes like steak. The soybean is a fine source of protein. So is steak, but the soybean is said to have steak beaten for the most proteins. The Germans have been using the soybean in their blitzkrieg tactics. The Nazi soldiers have been partly on a soybean diet since the war began."

985. International Nutrition Laboratory. 1941. New items for the table: Soy products by Miller (Ad). *Soybean Digest.* Sept. p. 17.
• ***Summary:*** The three new soy products are: "Soy-A-Malt–A delicious wholesome soy-malted milk–a pure vegetable beverage containing all and more of the food qualities of milk."

"Canned Green Soybeans–Delicious creamed, buttered, or in soups and salads.

"Soyalac–Spray-dried Infant Food–the perfect formula for the newborn infant–especially fine for malnutrition and allergic conditions.

"Available in Health Food Stores everywhere or for further particulars regarding these Miller Soya Foods write International Nutrition Laboratory, Mount Vernon, Ohio."

Note: The meaning of the term "Canned Green Soybeans" is unclear. They were probably canned mature soybeans with green seed coats rather than canned green vegetable soybeans. Address: Mt. Vernon, Ohio.

986. **Product Name:** Miller's Soyalac Infant Food [Spray-Dried Powder, or Liquid].
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1941 September.
Wt/Vol., Packaging, Price: 1 lb can.
New Product–Documentation: Ad in Leaflet titled "Optimal Nutrition in Infant Feeding." Undated. The spray-dried product is packaged in 1-lb cans, "sealed in nitrogen gas to insure shelf wear, 24 cans to the case. It is sold from coast to coast, mainly through health food stores and

© Copyright Soyinfo Center 2014

druggists."

Ad in *Soybean Digest.* 1949. Sep. p. 89. "Soyalac: A Spray Dried Infant Food." A photo shows a can of the Infant Food

987. Special Foods Incorporated. 1941. Retail order blank. Worthington, Ohio. 1 p. Catalog. Oct. 1.
• ***Summary:*** See next page. Products include: E-Z-Lax (smooth bulk and lubrication for constipation). Beta Broth (Meat-like flavor–dissolves instantly). Tastex (Yeast extract–meat-like flavor). Spread (Tasty sandwich spread). Protein foods (used in place of meat): Choplets (Cutlets in 8 oz, 17 oz, or 30 oz), Proast (Dark, in 8 oz, 16 oz, or 30 oz), Numete (Light, in 8 oz, 16 oz, or 30 oz). Soy Beans with Tomato Sauce (17 oz or 30 oz). Soy Beans, Plain (17 oz or 30 oz).

Note 1. This is the earliest document seen (Nov. 2013) concerning Worthington Foods and soy.

Note 2. Worthington was named Special Foods from its founding in 1939 until it was incorporated as "Worthington Foods, Inc." in Dec. 1945. Address: Worthington, Ohio.

988. Ralphs Grocery Co. 1941. "68 years of progress." Celebrating the opening of Ralphs new store at 14049 Ventura Blvd. (corner Hazeltine) (Ad). *Los Angeles Times.* Oct. 25. p. 8.
• ***Summary:*** This full-page ad lists many products that will be on sale from Oct. 25th to 28. Part of the ad is for "Loma Linda. Ovensweet Ruskets, malted toasted whole wheat biscuit, 12-oz. pkg.–12¢. Ovensweet Kris-bits, 13-oz. pkg.–12½¢. Oven cooked wheat, 1-lb. Cello–12¢. 2-lb. Cello–20¢.

Another part is for "Cubbison's. Assorted toast, per pkg.–13¢. Vegetized wheat cookies, per pkg.–13¢. Assorted cookies, Honey macaroons, or Dunkerettes, per pkg.–8¢. Wheat soda crackers, per pkg.–9¢.

Also: "Ficgo coffee substitute. 1-lb. pkg. or Individual bags (25 to a pkg.)–each 25¢." Address: [California].

989. **Product Name:** Canned Soybeans (Plain, or with Tomato Sauce).
Manufacturer's Name: Special Foods, Inc. Renamed Worthington Foods, Inc. in Dec. 1945.
Manufacturer's Address: Worthington, Ohio.
Date of Introduction: 1941 October.
Wt/Vol., Packaging, Price: 17 oz and 30 oz can.
New Product–Documentation: Wholesale price list. 1941. Oct. 1. With tomato sauce: 17 oz retails for $0.20 and 30 oz for $0.35; Ad in Health magazine. 1947. 14(2):2. Feb. "Good Foods for Every Occasion." Interview with James Hagle? 1983. Sold in 17- or 30-oz. cans.

Note: This is the earliest known product made by Special Foods, Inc. that uses soy as a major ingredient.

990. **Product Name:** Tasty Sandwich Spread (Ground Cooked Soybeans with Chopped Olives).
Manufacturer's Name: Special Foods, Inc. Renamed Worthington Foods, Inc. in Dec. 1945.
Manufacturer's Address: Worthington, Ohio.
Date of Introduction: 1941 October.
Wt/Vol., Packaging, Price: 10 oz or 30 oz cans.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Wholesale price list. 1941. Oct. 1. 10 oz retails for $0.25 and 30 oz for $0.65.

Chopletter (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include "Sandwich Spread." Interview with James Hagle? 1983. Sold in 10 oz. cans.

991. **Product Name:** Choplets (Resembling Pork Chops).
Manufacturer's Name: Special Foods. Renamed Worthington Foods, Inc. in Dec. 1945.
Manufacturer's Address: Worthington, Ohio.
Date of Introduction: 1941 October.
Ingredients: In 1971: Wheat protein slices [wheat gluten] in broth consisting of extract of Brewer's yeast and vegetables, soy and other hydrolyzed vegetable proteins, mushroom broth, MSG, salt, dextrose, corn oil, caramel coloring.
Wt/Vol., Packaging, Price: 8 oz, 17 oz, and 30 oz can. 20 oz can retails for $2.75 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Wholesale price list. 1941. Oct. 1. 10 oz retails for $0.20 and 30 oz for $0.60; Ad by Worthington Foods, Inc. in *Health.* 1947. Feb. p. 2. "Good foods for every occasion." Choplets are mentioned.

Manual. 1st ed. p. 95. Chaplets + their liquid contain 15.62% protein, 0.56% fat, and 5.40% carbohydrate. *Chopletter* (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Choplets.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 161. Lists the ingredients in "Choplets (Worthington)."

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 175. The ingredients in "Choplets (Worthington)" are "wheat protein slices in a broth consisting of water, HVP, yeast extract, soy sauce, dextrose, L-lysine mono-hydrochloride, mushrooms, salt, corn oil, caramel color."

Interview with James Hagle? 1983. The name Choplets was suggested by Dr. George Harding's 11-year-old son. Choplets resembled Dr. Harry Miller's Cutlets. They were a unique best-seller into the 1960s.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27. Ingredients are the same as those listed below.

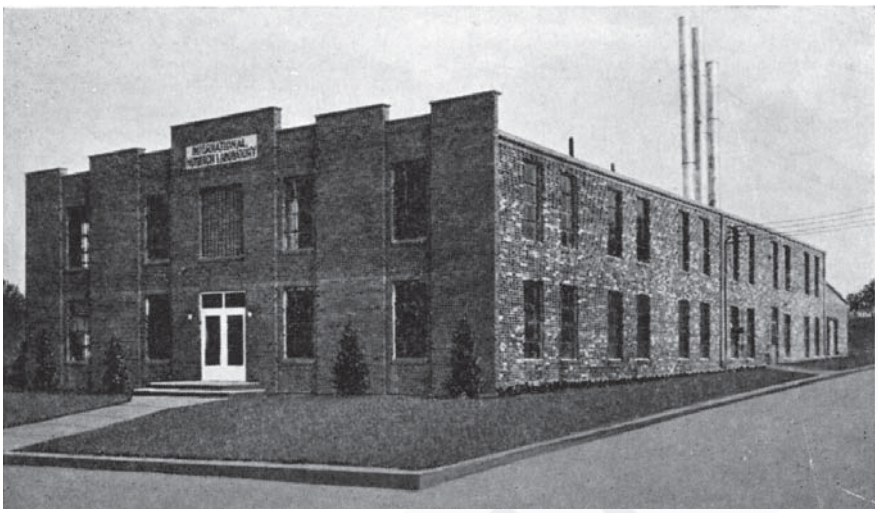
By July 1990 the product had been reformulated to include textured soy protein concentrates.

992. Prehn's Health Food Store. 1941. Headquarters for soybean products (Ad). *Soybean Digest.* Dec. p. 12.

• ***Summary:*** "Let us supply you with Soybean Foodstuffs. Choose from such a wide variety as Dr. Miller, Dr. Fearn, Madison College, Soy Good, Battle Creek, Happy Hour, Penna Soy, Mother's Choice, Veta-Roni, Loma Linda, Bill Baker, Mrs. Hauser.

"Write for a Price List. We ship to 44 states. Why not let us ship to you... Located on the campus of the University of Illinois one block east of the Old Agriculture Building." Address: 700½ South Goodwin St., Urbana, Illinois. Phone: 6-1691.

993. **Product Name:** Light Numete. **Manufacturer's Name:** Special Foods, Inc. Renamed Worthington Foods, Inc. in Dec. 1945. **Manufacturer's Address:** Worthington, Ohio. **Date of Introduction:** 1941. **Wt/Vol., Packaging, Price:** 8 oz, 17 oz, and 30 oz can. 19 oz can retails for $2.65 (7/90, California). **How Stored:** Shelf stable; refrigerate after opening. **New Product–Documentation:** Wholesale price list. 1941. Oct. 1. 8 oz retails for $0.20 and 30 oz for $0.55.



Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan. 7th ed.* Appendix A.6-27.

Product with Label purchased at Adventist Book Center in Pleasant Hill, California. 1990. July 19. 19 oz (538 gm) can. The ingredients for Numete ("Light" is not mentioned) are now: Water, peanuts, white corn flour, soy flour, salt, monosodium glutamate, niacinimide [niacinamide], iron (as ferrous sulfate), vitamin B-1 (thiamine mononitrate), vitamin B-6 (pyridoxine hydrochloride), vitamin B-2 (riboflavin), vitamin B-12.

994. White, Julius Gilbert. 1941. The animal kingdom, a reservoir of disease. Madison College, Tennessee: Published by the author. Distributed by Julius Gilbert White Publications, Madison College, Tennessee. 64 p. No index. 22 cm. [215 ref]

• ***Summary:*** The author is a teacher at Madison College, a Seventh-day Adventist college and sanitarium. He presents the potential dangers of eating animal products, thus implying his support for a vegetarian diet–such as that served at Madison College. The main diseases discussed that can be transmitted to humans include tuberculosis, brucellosis, Bang's disease, pullorum disease, and leukosis. Address: Madison, Tennessee.

997. Miller, Harry W. 1942. Answering America's protein problem! *Soybean Digest.* Jan. p. 6.

• ***Summary:*** "Editor's Note: Dr. Miller, whom we here introduce to the readers of The Soybean Digest, is a leader of the soybean food industry. President of the International Nutrition Laboratory, Mt. Vernon, Ohio, manufacturers of Miller's Soya Foods, he has had a most interesting career.

"Graduating in medicine in Chicago in 1902, he went to China the next year as a medical missionary under the Seventh-day Adventist board. He spent 8 years in the interior of China, and then was transferred to the superintendency of the Washington Sanitarium and Hospital, Tacoma Park, D.C., where he remained from 1913 to 1925.

"Returning to China in 1925, he established several medical centers in that country and in Japan, Korea, the Philippines and the Malay Peninsula.

"Becoming interested in dietary problems, because his specialty, goiter surgery, was directly concerned with a dietary deficiency condition, and because of the high Oriental mortality rate due to malnutrition, he began studying the food products which might ease the situation.

"This led him to the soybean, because, he observed, malnutrition was not nearly so acute in those sections in which the soybean was an article of diet.

"In 1936 Dr. Miller established a food plant in Shanghai from which he manufactured milk from the soybean. As he puts it: 'This work was nicely underway when the Japanese invasion of Shanghai resulted in the complete destruction of the plant, and after a year of waiting I again returned to America and established in Mt. Vernon the International Nutrition Laboratory where we have specialized on the processing of the soybean, not only studying varieties best suited for human food, but methods of preparing the bean and also developing processing equipment, that will give us a more satisfactory product."

"Dr. Miller has an interesting statement regarding the use of Soya Milk in infant feeding: 'In this country nearly a score of babies that we are in touch with have either been started on Soya Milk or have been transferred to it very shortly after birth, and the number of users of Soya Milk for infants are increasing very rapidly. Our results of feeding large numbers of babies and children are to be found in the National Medical Journal of China.'"

"Soybean foods for human consumption have to date been scarcely available in America, and the question arises: Why bother to supplement a dietary which is already so abundant?

"Still, it would seem strange it the raw material which has been a mainstay in the Oriental diet for so many centuries could not be utilized in the American diet. It can be!

"That part of the American diet most often lacking is

© Copyright Soyinfo Center 2014

protein. Most animal proteins are cumbered with toxins, and most vegetable proteins are inadequate for nutrition.

"Soybeans the Answer: The soybean provides the answer to the protein problem. With a protein content of more than 40 per cent, it is the best source of protein which we have. Its protein is biologically equal to that of meats and animal foods, and it has the advantage of being free from toxins.

"The effectiveness of the soybean is strikingly demonstrated in China. Where vegetable protein is abundantly supplied in the diet as in Manchuria, and in North China, we have a stalwart race of people. However, in South China where the major products are oil and sugar we see dwarfed bodies and it is a rare exception to find in the warm climate among oil and carbohydrate feeders a single well-developed individual." A photo shows "The International Nutrition Laboratories, Mt. Vernon, Ohio, home of 'Miller's Soya Foods.'" The building is large, and appears to be constructed from bricks. Address: M.D., International Nutrition Lab., Mt. Vernon, Ohio.

998. *Soybean Digest.* 1942. Manila paper praised milk from soybean. Feb. p. 7.
• ***Summary:*** On 16 Aug. 1941 the *Manila Tribune,* in the Philippines capital, published a "Soya-Lac Supplement" The full page, including a five-column advertisement for Miller's Soya Lac, is devoted to the story of soya milk and the soya bean. A nice photo shows Dr. Harry W. Miller.

999. Dies, Edward J. 1942. Soybeans: Gold from the soil. New York, NY: The Macmillan Co. 122 p. April. Index. 21 cm. Revised ed. March 1943. 122 p. Includes index, Illust., 22 cm. [205 ref]
• ***Summary:*** A landmark popular book and a good description of the pioneering period of soybean production and processing in the United States. Contents: 1. A certain man of science (William Morse and Dr. C.V. Piper). 2. Vignette from antiquity (how the soybean vine saved a caravan in China besieged by bandits). 3. Birth of an industry (U.S. soybean crushing). 4. The big drive starts (A.E. Staley, Glidden, Central Soya, Buckeye Cotton Oil Co., Drackett Co., ADM, Allied Mills, Ralston Purina, Spencer Kellogg and Sons, Swift & Co., Shellabarger Grain Products Co. Standard Soybean Mills, Iowa Milling Co.). 5. Breeding new types (Burlison, Hackleman). 6. Scientists commend product (oil and meal). 7. Lakes of oil. 8. In the field of industry (U.S. Regional Soybean Industrial Products Laboratory, and Henry Ford). 9. Listening post for soy (NRRL at Peoria). 10. Whims and price turmoil. 11. Milk for the tots of China (Dr. Harry Miller). 12. Soys in the home garden ("the vegetable soybean for table use," "garden varieties of soybeans," "green soybeans," "green vegetable soys," "vegetable type soybeans," "edible varieties"). 12. Americanizing soy foods (mainly about soy flour and improving its taste for use during World War II). 14. Little bean, what now? Appendix: Chronology of the soybean (27 entries). Bibliography. Dies was born in 1891.

Illustrations and diagrams show: (1) Principal centers of U.S. soybean production (p. 19, map). "Almost 90 per cent of all soybeans are harvested in Illinois, Iowa, Indiana, and Ohio. If three other states are included as shown on the map–Missouri, Michigan, and Virginia–the total is 97 per cent. (2) Principal centers of U.S. soybean processing (p. 20, map). Discs of different size show the various centers. Since Illinois produces 52% of the harvested soybeans, central Illinois is the center of soybean processing [crushing] in the USA. "Total processing capacity in late 1942 exceeded 100 million bushels for the regularly established soybean processing plants." (3) Diagram of uses of the soybean (p. 68).

Chapter 2, "Vignette from antiquity" begins: "Even when the Pyramids were being built, three hundred years before the Tower of Babel, and twelve centuries before Solomon fashioned his temple, the soybean was hoary with age. The earliest writings on the subject go back to the period of the Pyramids.

"But of the science of soybean growing you will find no recorded beginnings in the musty tones [sic, tomes] of oriental history. No book reveals the name of the inquisitive oriental who in the misty long ago began sowing the seeds, harvesting the beans, pounding them into a mash for cooking and eating, and probably boring his friends no end with tales of their merit. There is no record depicting this unsung hero's foresight in saving the seed of the magic plant against next year's hunger. Likely as not he was a crude dreamer who fumbled his hunches and accomplished little in a lifetime of wrestling with the problem of proper cultivation.

"Oriental literature of a later date contains much about the plant but of its origin as a food product again there are only legends.

"A choice vignette from antiquity on the initial use of soybeans runs something in this fashion. Long, long ago, far back in the dim past, a caravan pulled out of an eastern China town. It consisted of a number of merchants and their servants... The caravan was bound for a distant inland settlement intent upon disposing of its valuable wares." After trading in the north, the caravan headed home, "now laden with gold, silver, and choice furs received in payment for the merchandise. Suddenly at dusk on a day when the caravan was still far from home it was surrounded by bandits who had learned of the rich prize at hand. Merchants and servants took quick refuge in a rocky defile easy of defense. Here they were besieged day on day until their scanty provisions ran low and starvation seemed inevitable. At length a servant whispered to his master and pointed to a vinelike plant bearing some sort of legume. No one could recall having seen such a plant before but all were touched with the pinch of hunger. So with grave doubts the men pounded

© Copyright Soyinfo Center 2014

the beans into a thick flour, mixed it with water, and made coarse cakes. Upon these cakes the caravan survived, and with renewed strength fought off the foe until help arrived. And, so the legend goes, from that day forth the miracle bean became the staff of life in China." Note 1. This story of the caravan besieged by bandits in China is a longer and embellished version of the tale first dreamed up and told by H.W. Galley in *Soybean Digest* (Dec. 1940).

"True or false, the story has lived through the ages.

"For the first written record of the soybean one must turn to 'Materia Medica,' written by Emperor Shen-nung in 2838 B.C. It describes many plants of China including that of the soybean, but even the name is clouded with antiquity. In the early Chinese history the name 'Shi-yu' [sic] and the 'Ta-tou' were applied to the soybean. These names probably antedate the first authoritative records of the plant."

Dies then discusses Engelbert Kaempfer, Linnaeus, and Moench.

"Then in 1804 a Yankee Clipper ship in full sail glided down the coast of China searching for ports for a return cargo. Not sure of the length of the return journey, the captain ordered several bags of soybeans tossed into the hold as a reserve food supply. And thus did the first soybeans enter America. Little was done about the soybeans then. Note 2. This is the earliest document seen (June 2003) that further embellishes the myth of the "clipper ship" with phrases like "glided down the coast of China" or "ordered several bags of soybeans tossed into the hold"–all supposedly in connection with the introduction of the soybean to the United States. This is also the earliest document seen (Aug. 2000) that compares the age of the soybean with that of the pyramids (in Egypt; the oldest and largest was built for Khufu at Giza in the 26th century B.C.), the Tower of Babel (in Babylon [today's Iraq]), or Solomon's Temple (in today's Israel), arguing that the soybean was much older than all of them.

"James Mease of Pennsylvania first mentioned in American literature shortly after this importation that the soybean was adaptable to Pennsylvania and should be cultivated" (p. 9).

In Chapter 3 (p. 14) Dies notes: "The first soybeans processed in this country were imported from Manchuria in 1911 and sold to Herman Meyer who had a small crushing plant in Seattle, later called the Pacific Oil Mills. From the raw material he produced the two chief products–soybean oil meal for livestock feed and soybean oil, selling the latter locally for industrial use. The meal was advertised and sold as 'Proteina,' a high-protein feed. The venture did not last for any considerable period; a few years later Meyer passed away." Note 3. This is the earliest document seen (May 2010) that mentions Herman Meyer.

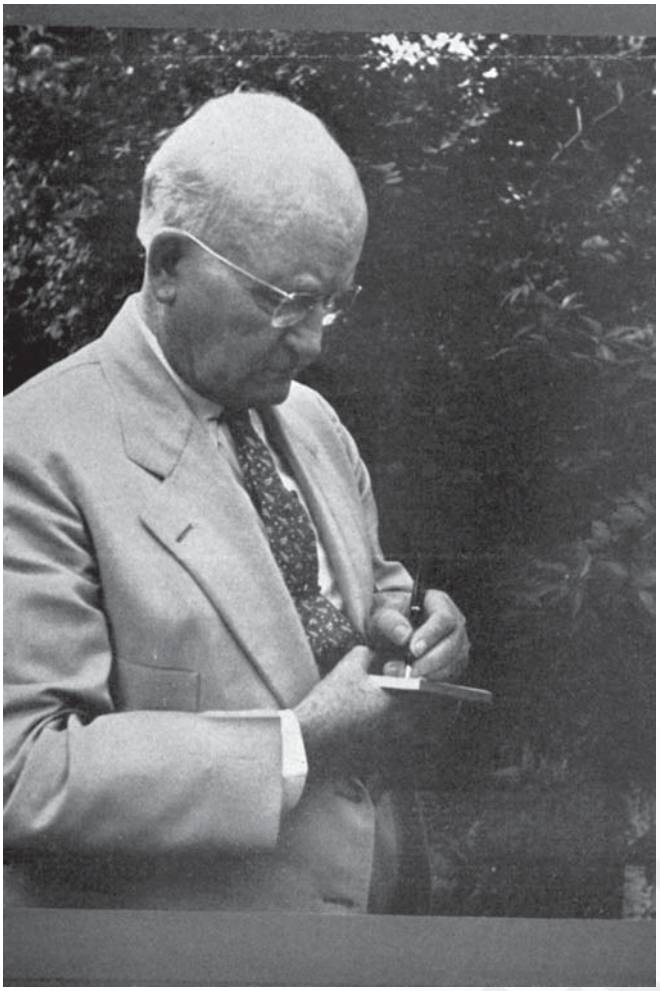
"Soybeans grown in this country were first processed by the Elizabeth City Oil and Fertilizer Company at Elizabeth City, North Carolina. W.T. Culpepper, now postmaster at Elizabeth City, was manager of the new mill, started in 1912. The first domestic soybeans were crushed for commercial purposes there in the late fall of 1915. It was a small operation." Note 4. This is the earliest document seen (May 2010) that mentions W.T. Culpepper.

"At that time, most of the soybeans were grown in North Carolina, and the Winterville Cotton Oil Company at Winterville, North Carolina, purchased expellers for processing purposes, and these operated on soybeans for a limited period. Still another mill, operated by Havens Oil Company at Washington, North Carolina, crushed thirty thousand bushels of beans as an experiment in 1916." Note 5. This is the earliest document seen (May 2010) that mentions the Winterville Cotton Oil Company.

"'My uncle, Jonathan Havens,' says J. Havens Moss, 'was the first to plant soybeans in this section, devoting considerable acreage to the mammoth yellow [Mammoth Yellow] type which grew and matured splendidly from the very start. Its value to the land was obvious'" (p. 14-15).

Note 6. On the first page of the copy owned by Soyfoods Center is a signed inscription, in dark blue ink, which reads: "With kind regards to Russell East, who has done much on behalf of the soybean–Edward Jerome Dies."

Note 7. Only minor changes were made on about 13 pages of the revised edition published in March 1943. None of the statistics in the many tables were been updated, and the bibliography was not changed. Address: USA.



1000. *Good Health* (*Battle Creek, Michigan*). 1942. Cow's milk a common cause of allergy. 77(4):52-53. April.
• ***Summary:*** In a group of children ranging in age up to 4 years, the causes of allergy were: milk 55%, eggs 40%, and wheat grains 40%.

"An effective remedy for milk allergy is to exchange cow's mild for an excellent milk prepared from the soybean which is now available under the commercial name of Soygal. This plant milk is the result of many years' research conducted in the food laboratories of The Battle Creek Food Company,..."

"Soygal, when examined by a government expert some months ago, was pronounced the first wholly satisfactory preparation of soy milk that he had ever examined, being wholly free from the unpleasant taste of the soybean."

1001. *Madison Health Messenger* (*Madison, Tennessee*). 1942. Dr. E.A. Sutherland, Health Educator. Campmeeting '42. p. 1-2.
• ***Summary:*** An excellent biography of the President of Madison College, with a large portrait photo. He was a student at Battle Creek College in Michigan, where he "earned a large portion of his school expenses by canvassing [selling Christian books door to door] during the vacation periods and by other work he could pick up. His student days were in the era of denominational controversy over health reform, and students took sides. Keen in their study of the

© Copyright Soyinfo Center 2014

Spirit of prophecy, Sutherland and his friend and roommate, Percy T. Magan, persuaded the college matron to give the fleshless diet advocates a vegetarian table. Thus began a many-sided career in the field of health education.

Walla Walla College was founded as a Seventh-day Adventist college in the state of Washington–a first in the northwestern United States. Edward Sutherland, still a young man and newly married, was chosen to be president of this pioneer effort. As a health reformer, he saw that students at Walla Walla College were served a fleshless [vegetarian] diet.

In 1897 he became president of Battle Creek College. He became a leader in a country life movement, which at the turn of the century resulted in the transfer of Battle Creek College to a beautiful 300-acre fruit farm on the banks of the St. Joe River; it was rechristened Emmanuel Missionary College (EMC [in Berrien Springs, Michigan]). "Here, the health principles were taught by precept and practice."

Then Madison College was founded. "At Madison, another and important step came with the purchase of what had once been the conference-operated food factory at Edgefield Junction [formerly operated by Jethro Kloss]. The wrecked structure was rebuilt on Madison College campus, where, with meager facilities but with the pioneer spirit of former years and the faith of a Joshua, Dr. E.A. Sutherland and Mother Druillard set the pace for a health food manufacturing center that today [as Madison Foods] is distributing its products in the 48 states of the Union and some places across the sea.

"Madison Foods has carried on experimental work in its laboratories, especially with that rich, Oriental legume, the soybean, that has given Madison preeminence in its use as a successor of animal flesh.

"For fifty years, Dr. Sutherland has pioneered a many-sided work of health. He has ventured often into untried fields." "In the field of health, he is recognized by many as the one who, in God's hand, is responsible for the restoration of health. Through fifty years of unremitting service, he has come forth still sturdy in health, largely because of a consistent practice of the great principles he so strongly advocated and with a buoyancy of spirit that still serves to stimulate faith in many a faltering mind. To many who know him intimately, he is a fine example of the results of wholehearted commitment to the great principles of Christian education, with all that term implies, together with a simple personal acquaintance with the Saviour that makes it possible for him to say under all circumstances, 'We know that all things work together for good to them that love God.'"

1002. Carver, G.W. 1942. Re: Soy bean milk and peanut milk. Letter to Mrs. Ruth Sheldon Knowles, Petroleum Specialist, U.S. Department of Interior, Washington, DC, June 6. 1 p. Typed, without signature (carbon copy). [1 ref]
• ***Summary:*** In a letter dated June 3, Mrs. Knowles said she had read that "peanut milk was being used in the Belgian Congo with great success." Dr. Edward A. Perk, Pediatrician in Chief at Johns-Hopkins Hospital wrote her, in reply to letter of inquiry, saying that he knew of no one there who was working to develop a peanut milk. "He said he thought the chances with soy bean would be much better and that soy bean milk had been used in China as a food for infants and is the basis for nonmilk formula for babies, like Sobee."

Mr. Carver replied: "My work with peanut milk, soy bean milk, and other vegetable emulsions have been tried out by me, and the two that interested me most are soy bean milk and peanut milk. Where ever peanuts can be raised, I recommend the use of peanut milk, and where soy beans can be successfully raised soy bean milk, as soy bean milk has reached a much higher commercial stage than peanut milk, of course, as it is much older in development.

"Madison College, Madison, Tennessee, can give you much information with reference to the soy bean milk, as they have quite a number of commercial products made from soy beans.

"There is much yet to be learned about peanut milk and its uses. Missionaries from Africa, besides individuals working in foreign fields have used peanut milk most

© Copyright Soyinfo Center 2014

successfully in their work, according to the letters that I have received from them." Address: [Tuskegee, Alabama].

1003. Webber, P.A. 1942. The soy bean as a food. *Madison Health Messenger* (*Madison, Tennessee*) 4(2):1, 5. Undated.

• ***Summary:*** A photo shows a dignified, white-haired man, apparently Dr. Perry Webber, working in the chemistry laboratory of which he is in charge. Address: PhD, Prof. of Chemistry, Madison College.

1004. *Madison Survey* (*Madison, Tennessee*). 1942. For several months the Food Factory remodeling project has been under way... 34(4):52. July 8.
• ***Summary:*** "... supervised by Professor William Sandborn, head of the Industrial Arts Department. Another sixty days should conclude this work, which means that the Factory has been enlarged and in many ways brought up to date to meet growing business demands." Note: Actually, a practically new structure was built.

1005. USDA Bureau of Plant Industry. Div. of Forage Crops and Diseases. 1942. Firms manufacturing or handling soybean food products. 3 p. July. Mimeographed unpublished manuscript.
• ***Summary:*** The companies are listed alphabetically by state, and within state by city. Numbered codes after each company, keyed to a list of 35 soyfood types in the back, explain which foods are made by each company. Unfortunately, it is not clear from this list which companies are manufacturers and which are "handlers" (retailers or distributors). California: Arlington (Loma Linda Foods), Berkeley (Golden Gate Food Products Co.), Glendale (Hygenic [Hygienic?] Food Co.), Los Angeles (El Molino Mills, Mrs. Hauser's Soya Foods Co. {4617 Melrose Ave.}, Kevo Co., Klein Soup Co.), San Francisco (Radcliffe Soya Products {146 Fillmore St.}), Santa Cruz (Daglish Health Food Service). Delaware: Milton (Draper Canning Co.). Illinois: Bloomington (Funk Bros. Seed Co.), Chicago (Allied Mills, Armour & Co., Dewey Food Products Inc., Dietetic Supply House, Durkee Famous Foods, Fearn Soya Foods Co. {355 W. Ontario St.}, Glidden Co., Great China Foods Co., Griffith Laboratories {1415 W. 37th St.; handles soy flour and grits}, John F. Jelke Co., Soybean Products Co. {210 N. Carpenter St.}, Swift & Co.), Decatur (Spencer Kellogg and Sons, A.E. Staley Manufacturing Co.), Elgin (B.S. Pearsall Butter Co.), Urbana (Prehn's Health Food Store). Oil. 30. Puffs. 31. Sauce. 32. Shortening. 33. Soups. 34. Soybeans. 35. Spreads–sandwich. 36. Toast."

Note: This is the earliest document seen (Nov. 2002) that mentions Griffith Laboratories. Address: Washington, DC.

1006. **Product Name:** Miller's Soya Milk [Liquid, or Powdered].
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1942 September.
New Product–Documentation: Ad in *Soybean Digest*. 1942. Sept. p. 16. "Miller's Soya Products." Soybean Blue Book. 1947. p. 72. Also listed in 1960, 1965.

1007. International Nutrition Laboratory. 1942. Miller's Soya Products (Ad). *Soybean Digest.* Sept. p. 16.
• ***Summary:*** This quarter-page black-and-white ad states: "The International Nutrition Laboratory are pioneers in soya bean processing of the choice edible varieties and of soya protein utilization in the human dietary. Our distinctive achievements are: 1. Flavor improvement. 2. Ready digestibility. 3. High protein yield. 4. Lower cost of man's protein dietary requirements.

"Send for catalogue of Miller's tasty soya foods including soya milk, liquid and powdered, delicious green soya beans, soya meat substitutes, such as Miller's savory vegetable cutlets, soya loaf, sandwich spread and soya cheese. Processed and packed by the International Nutrition Laboratory." Address: Mt. Vernon, Ohio.

1008. *Madison Health Messenger* (*Madison, Tennessee*). 1942. Soy bean exhibit at National Health Foods Convention. 4(4):3. Undated.
• ***Summary:*** See next page. "'The World of Tomorrow in Soybeans' was the theme of the Madison Foods exhibit at the National Health Foods Convention in New York City. A picture of this very beautiful exhibit is shown at the bottom of this page.

"Many new varieties of soybeans were shown to health food dealers from all over the United States, who saw for the first time at the National Health Foods Convention a comprehensive exhibit of various soybean products. There were small black soybeans, brown soybeans, green soybeans, yellow soybeans, of various sizes, shapes, and varieties. There were breakfast foods ready-to-eat and cooked. Other items in the exhibit consisted of soy flour, various kinds of soy oil, soy hydrogenated shortening, soy lecithin, stock feed, poultry feed, dog and cat foods; canned soybeans plain, canned soybeans in tomato sauce, meat substitutes, soy cheese, soy milk, soy albumin, soy bread, soy muffins, soy toast, soy coffee substitute, soy macaroni, soy noodles, soy sauce, linoleum, and plastics.

The exhibit was finished in an automobile lacquer with a photographic smear of soybeans covering the entire front of the exhibit around the display of sample bottles of various soybean products on the right wing of the exhibit, and the Madison Foods products on the left wing of the exhibit, the soybean smear was finished in a sepia tone to approximate the natural color of the soybean, and the lettering on the top of the exhibit was cut-out wood, raised letters, finished in automobile lacquer. It was one ot the most outstanding exhibits ever shown at a National Health Foods Convention from the standpoint of its educational value as well as its artistic layout and beautiful finish. Visitors to the exhibit were profuse in their commendatory comments of the exhibit, and E.M. Bisalski, Manager of Madison Foods, and Ulma Doyle Register, Chemist, were busy receiving visitors to the exhibit, who came from all parts of the forty-eight states to attend the National Health Foods Association Convention, Hotel McAlpin, New York City, August 26-29.

"Next year the convention will be held in Los Angeles, California, at approximately the same time."

1009. **Product Name:** Soy-Fruit & Nut Cereal (Ready to Eat).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, MI.
Date of Introduction: 1942.
Ingredients: Soybeans, bran (and other parts of wheat), figs, dates, salt, yeast, malt.
New Product–Documentation: Manufacturer's catalog. 1942. Sold in bulk; $0.20/lb.

1010. **Product Name:** ViM-eat Soy-Nut-Loaf (Vegetarian Meat).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, MI.
Date of Introduction: 1942.
Wt/Vol., Packaging, Price: 8- or 16-oz can.
New Product–Documentation: Manufacturer's catalog. 1942. In 8- or 16-oz cans. "Appeals to those who like the meat flavors. Soy-Nut-Loaf is a highly nutrient [sic] food, containing a complete protein. It can be prepared in many delicious ways: in stews, roasts, vegetable pies, hash, and sandwiches. It is also tasty just as it comes from the can." Recipes are given: Soy-Nut Steak with onions. Macaroni with Soy-Nut-Loaf. Savory Soy-Nut-Loaf.

1011. **Product Name:** Soy-Kawfee (Roasted Soybean Coffee).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1942.
Ingredients: Incl. soybeans, wheat bran, brown sugar.
New Product–Documentation: Manufacturer's catalog. 1942. Sold in bulk at $0.15/lb. "An alkaline food drink made from a blend of soybeans, wheat bran, and brown sugar, roasted to bring out a delightful flavor. A refreshing change from coffee, tea, and cocoa, and contains no harmful stimulants. Prepare the same as you do coffee, using approximately one tablespoon to each cup."

1012. **Product Name:** Flour: Entire Soy Bean (very fine) or Entire Soy Bean Wheat Mix (30-70).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1942.
New Product–Documentation: Manufacturer's catalog. 1942. Sold in bulk, $0.10 or $0.06 per pound, for one pound, respectively. "All our flours are made extremely fine (stone ground) from cleaned, whole grains. Nothing added and nothing taken away." Recipes are given for Soy Bread (incl. 1.33 cups Soy flour, 2 cups ViM-ilk, and 1 tablespoon Soy butter), and Whole Wheat Bread.

Note: This is the earliest English-language document seen (Nov. 2013) that uses the term "Flour: Entire Soy Bean"

© Copyright Soyinfo Center 2014

[Flour] to refer to whole soy flour.

1013. **Product Name:** Soy Beanswithtomatosauce (Soybeans with Tomato Sauce).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1942.
Wt/Vol., Packaging, Price: 8 oz can.
New Product–Documentation: Manufacturer's catalog. 192. 8 oz. can for $0.07 or 16 oz. can for $0.13. "Are prepared from choice soybeans grown on Butler's own mineralized farm. They are tasty, wholesome, and nutritious. The are strongly alkalin [sic, alkaline] and digest easily. The soybean contains a fine balance of practically all the minerals necessary for human nutrition. They are also the best source of protein in the vegetable kingdom." A recipe is given for Soybean Roast.

1014. **Product Name:** ViM-ilk (Soymilk).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1942.
Wt/Vol., Packaging, Price: 8 oz or 16 oz can.
New Product–Documentation: Manufacturer's catalog. 1942. 8 oz. can for $0.06 or 16 oz. can for $0.10. "Resembles cow's milk. May be used in same manner, and is preferred by many to an animal milk. ViM-ilk, as it comes from the can, is of the consistency of cream, therefore should be diluted about half with sold water for drinking. ViM-ilk is purely vegetable, therefore it is pure and wholesome. This product should be kept in a cool place, if possible, in a refrigerator, as the lecithin, which is in abundance in the soybean, may cause ViM-ilk to solidify if stored in normal temperature. After ViM-ilk has become solid or sour, a fine cheese can be made from it, the same as cottage cheese is made from cow's milk."

1015. **Product Name:** Soy-Nuts (also spelled Soy Nuts).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1942.
New Product–Documentation: Manufacturer's catalog. 1942. 2 oz. packet for $0.05 or 5 oz. packet for $0.10. "Selected, large, soybeans roasted and salted. Nice to eat out of hand like peanuts. You'll like their nutty flavor."

1016. **Product Name:** Soy-Wheat Cereal.
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1942.
Ingredients: Incl. soybeans and wheat.
New Product–Documentation: Manufacturer's catalog. 1942. "A specially prepared food composed of soybeans and wheat. It is very easy to digest, has a greatly reduced starch content, and a mild laxative action when eaten regularly. For each serving us ¼ cup of cereal to each cup of water that has been salted to taste. Boil twenty minutes and serve with cream in the usual way."

1017. **Product Name:** ViM-eat Soy-Nut-Cheese (Vegetarian Meat).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, MI.
Date of Introduction: 1942.
Wt/Vol., Packaging, Price: 8- or 16-oz can.
New Product–Documentation: Manufacturer's catalog. In 8- or 16-oz cans. "A highly nutritious food which can be used in a variety of palatable dishes. Rich in protein and fat. Easily digested." Two recipes are given, including Soy-Nut-Cheese croquettes.

1018. **Product Name:** Vegetable Chili Con Carne. Renamed Vegetarian Chili Con Carne by 1948.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: P.O. Box 388, Mt. Vernon, Ohio.
Date of Introduction: 1942.
Ingredients: Incl. wheat gluten.
Wt/Vol., Packaging, Price: 16 oz jar.
New Product–Documentation: Ad in Leaflet titled "Optimal Nutrition in Infant Feeding." Undated. "Rich in all-vegetable protein of soya beans and wheat gluten; processed in tasty sauce. 16-oz. jars." Soybean Blue Book. 1948. p. 82.

1019. **Product Name:** Vegetable Chop Suey. Renamed Vegetarian Chop Suey by 1948.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: P.O. Box 388, Mt. Vernon, Ohio.
Date of Introduction: 1942.
Ingredients: Incl. soya beans, wheat gluten, green fresh vegetables (soy sprouts).
Wt/Vol., Packaging, Price: 16 oz jar.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in Leaflet titled "Optimal Nutrition in Infant Feeding." Undated. "Soya beans, wheat gluten, green fresh vegetables."

International Nutrition Laboratory, dealer's order blank. 1946. Jan. "Chop Suey (Mein Jing) Vegetarian." 16 oz can.

Soybean Blue Book. 1948. p. 82. Note: The word "chop suey" was first used in English in 1888.

1020. Anderson, Hans Steele. 1942. Food therapy: Diet and the healing art. Fort Meade, Florida: The Anderson Publishing Company. 152 p. 23 cm.
• ***Summary:*** The author was born in 1877.

1021. Butler Food Co. 1942. Order blank. P.O. Box 4, Cedar Lake, Michigan. 1 p. Catalog. Undated (but date is written on by hand).
• ***Summary:*** The following soy products are listed: Cereals: Soy-fruit & nut cereal (ready to eat). Vegetarian Meats: ViM-eat soy-nut loaf, ViM-eat soy-nut cheese. Beverages: Soy-kawfee. Flour: Entire soybean (very fine) bulk, entire soybean wheat mix 30-70 bulk, soy beans with tomato sauce, ViM-ilk, and Soy-Nuts.

Note: This is the earliest document seen (March 2001) concerning Butler Food Co., Cedar Lake, Michigan. Address: Cedar Lake, Michigan. Phone: 128-F-21.

1022. Butler Food Products of Cedar Lake Academy. 1942. [Product descriptions and recipes]. P.O. Box 4, Cedar Lake, Michigan. 4 p. Catalog. Undated (but date is written on by hand).
• ***Summary:*** The company's products are listed, a brief description is given of each, and with many a recipe is also given, as follows: Cereals: Soy-fruit & nut cereal (ready to eat.). Soy-Wheat Cereal. Vim-eat Soy-Nut-Loaf. Soy-Nut-Cheese. Vim-Ex (a savory extract of dry yeast and vegetables). Soy Kawfee. Flour. Soybeans with tomato sauce. ViM-ilk. Soy Nuts. Address: Cedar Lake, Michigan. Phone: 128-F-21.

1023. Lager, Mildred. 1942. Soy bean recipes: 150 ways to use soy beans as meat, milk, cheese, & bread. Los Angeles, California: House of Better Living. 43 p. Index. 21 cm.
• ***Summary:*** Contents: History of the soy bean. Food value. Analysis. Comparison with other legumes. Ash analysis. Soy beans in low starch diet. Alkaline in ash. Recipes: Green beans. Dry beans. Meat substitutes. Soy milk. Soy cheese. Soy butter [soynut butter]. Salads. Salad dressings. Soy spreads. Soy cereal. Soy macaroni, spaghetti and noodles. Soy bread and muffins. Waffles and pancakes. Cakes and cookies. Candies. Beverages. Toasted soy beans. Bean sprouts.

"Alkaline in ash: Soy beans have one great advantage over many proteins especially the meat proteins, in that they are alkaline in their chemical reaction or ash. This applies to the soy bean itself and to the other 100% soy bean products. The alkalinity will naturally be less in products where soy beans are mixed with acid ash foods."

A small portrait photo (p. 1) shows Ms. Lager and notes: "I want to acknowledge the aid received from Madison College, Tennessee; Loma Linda Food Company, El Molino Mills, Penna Soya Products Company, and from the many friends who gave me suggestions and recipes." Address: 3477 West 6th St., Los Angeles, California.

1024. Lager, Mildred. 1942. Soy bean recipes: 150 ways to use soy beans as meat, milk, cheese, & bread. 2nd ed. Los Angeles, California: House of Better Living. 43 p. Index. 20 cm. Reprinted in 1943. *
• ***Summary:*** Contents: History of the soy bean. Food value. Analysis. Comparison with other legumes. Ash analysis. Soy beans in low starch diet. Alkaline ash. Recipes: Green beans. Dry beans. Meat substitutes. Soy milk. Soy cheese. Soy butter [soynut butter]. Salads. Salad dressings. Soy spreads. Soy cereal. Soy macaroni, spaghetti and noodles. Soy bread and muffins. Waffles and pancakes. Address: 3477 West 6th St., Los Angeles, California.

1025. White, Julius Gilbert. 1942. Abundant health: Expounding the Learn-how-to-be-well system of daily living. Madison College, Tennessee: Published by the author. xix + 378 p. See p. 298-303. Illust. Index. 24 cm. [50+* ref]
• ***Summary:*** The maintenance of physical and mental health can be achieved through a vegetarian diet and wholesome living. Interesting sections include: Denmark's food experiment under Dr. Hindhede during World War I (p. 144). Sixteen reasons for vegetarianism (p. 144-48). Note that Madison College is a Seventh-day Adventist college and sanitarium.

Soya is discussed on the following pages: Soy bean flour (p. 136). Soybeans and soybean products as a replacement for meat (p. 143-44). One section titled "The Soy Bean: The Wonder Food" (p. 298-303) discusses soybean sprouts, soybeans as coffee, soy "butter" (this product, similar in taste and texture to peanut butter, is now on the market), home-made soy butter homemade soy mayonnaise (made from the above soy butter), soy acidophilus milk (also often called soy buttermilk).

Recipe for home-made soy butter: 4 tablespoons of soy flour. 4 tablespoons of water. Mix well and cook four minutes or less. Add one cup soy bean oil and beat with a rotary beater till the oil disappears. If color is wanted add a little of some kind of butter color. Add a little salt to suit taste.

Note: This is the earliest document seen (Dec. 2012) that describes how to make soynut butter on a home or laboratory scale. Address: Madison, Tennessee.

1031. Madison Foods. 1943. Zoy-Koff: Coffee flavor without coffee after-effects (Ad). *Nature's Path* (*New York City*). June. p. 227.
• ***Summary:*** A similar ad appeared in the Feb. 1944 (p. 66) issue of this magazine. Address: Madison College, Tennessee.

1032. **Product Name:** Soya-Choc. Introduced in Jan. 1940 as Soya Choc-Malt.
Manufacturer's Name: Roberts (F.G.) Health Food Products.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1943 June.
Ingredients: Incl. water, soybeans.
Wt/Vol., Packaging, Price: Tin-plated steel can.
New Product–Documentation: Ad in *Nature's Path to Health* (*Melbourne, Australia*). 1943. May/June, p. 15. "Your best moment. When the drink is Soy-Bev or Soya-Choc. These are the nicest drinks. Freshly made from the choicest soya beans in our modern factory, St. Kilda, Melbourne. In Hygienic ½ lb. and 1 lb. Tins at all Health Centres Throughout Australia." An illustration shows a man and woman seated in chairs by their fireplace each enjoying a cup of Soy-Bev or Soya-Choc. Below this is a steaming cup of the hot beverage. This ad also appeared in the Feb/March 1946 issue (p. 25), the Aug/Sept. 1946 issue (p. 23), and the April/May 1949 issue (p. 8) of this magazine.

Note from Paul Smith of Soy Products of Australia (Pte.) Ltd. 1995. March 14. Soya-Choc = Soy Compound with added cocoa. Soya-Choc = Soya Choc-Malt of 1940. Paul thinks Soya-Choc was first introduced in about 1933 or 1934.

1033. Hodges, Leigh Mitchell. 1943. Are you neglecting the wonder bean? Wartime food economy underlines multiple soybean values for both consumers and millers. *American Miller.* Aug. p. 36, 38.
• ***Summary:*** Discusses the work of Clive McCay at Cornell University, the Soya Corporation of America which is milling soya flour by a new process in Hagerstown, Maryland, and Dr. Artemy Alexis Horvath, "who under a Rockefeller grant, spent eight years in the Peking Union Medical College studying the more than 5000 different varieties of soybean which have been developed in China."

"The German scientist, Furstenberg, had a gift of prophecy in 1917, when he visioned the soybeans as 'the plant that is going to revolutionize the nutrition of humanity.' At that time Germany was importing more of them than any other country, mostly from Manchuria. One of Hitler's first acts after coming to power was to plan a 2,000,000-ton

© Copyright Soyinfo Center 2014

soybean reserve. He also arranged for vast soy plantings in Rumania and other Balkan countries. Part of this huge reserve has been used in the making of explosives and other chemicals. But most of it has been milled into flour which has proved invaluable in piecing out insufficient supplies of animal foods."

A photo shows students at Madison College in Tennessee making tofu and other commercial soybean products for general sale to the public.

1035. International Nutrition Laboratory. 1943. Miller's soya foods (Ad). *Soybean Digest.* Sept. p. 35.

• ***Summary:*** "Miller's International Nutrition Laboratory are among the largest growers of the Edible Soya bean, as also processors of high protein yielding foods from the Soya Bean. They possess both Eye and Flavor Appeal. Miller's Laboratory is a demonstration that Soya Beans are a delicious food for humans.

"Miller's Soya Foods Include:

"1. Canned liquid Soya Milk.

"2. Spray dried Soya Milk Powder (natural, malted and chocolate flavors).

"3. Superb canned Giant Green Soya Beans.

"4. Delicious meat substitutes and extenders in appearance, and taste, like bologna, veal cutlets, etc.

"Price and detailed information supplied to interested individuals, address,..."

Note: This is the earliest English-language document seen (March 2003), published in the USA by a manufacturer of soybean foods, with the term "soya foods" in the title. Address: Box 326, Mt. Vernon, Ohio.

1036. Miller, Harry W. 1943. Soybeans and the Orient. *Soybean Digest.* Sept. p. 18, 44.

• ***Summary:*** "It was my privilege during 23 years of residence in the Orient to travel very extensively through the provinces of China, and to acquaint myself with all eastern Asia relative to soybean production. I found that while the central and northern provinces of China including Manchuria are the principal soybean producing areas of the Orient, that soybeans are widely used by all the groups of Orientals, save the Filipinos, and the Malays, and are universally used by the Chinese, and that wherever they emigrate in any part of the world, the one universal food of the Chinese is soybeans, and not rice, as so often claimed.

"There are millions of the Chinese who do not live in the rice producing territories. The Chinese and many of the Oriental people have come to understand by common

© Copyright Soyinfo Center 2014

experience rather than scientific deduction that soy protein is an essential to livelihood and cannot with safety he dispensed with from their diet. Wherever in Chinese occupied territories soil and climatic conditions are at all favorable to the production of soybeans, they will be found as one of the stable crops. However the yield in the tropical portions of China is rather small. They have depended on importing beans from Manchuria and northern China. The same is true of the South Sea Islands.

"Foundation: Much that we have learned concerning handling soybeans and preparing them into food materials we must credit to the knowledge gained through studies made and travels in the Orient, chiefly in China, Korea, and Japan. Like their handling of many other things, they have developed the soybean culture and processing up to a certain point and there they stand. We have built upon their foundation, and have carried research in the agricultural field, as also processing methods several steps farther, and have made soya food products not only better but far more digestible, and therefore nutritionally more available, and found out that the bean can be made tasty as well.

"You may ask how are the Oriental people using the soybean. There are many ways. If you were to visit the Chinese markets during the late summer and early autumn months you would be able to purchase shelled green soybeans. You would also be able to purchase the unshelled beans, that is in the pods just like you buy peas in the pod. Some people prefer to purchase them in the pods, cook them in the pods in salt water, and then squeeze out the beans and eat them from the pod. There have been no canning facilities available to the Chinese for any of their products in years past, and so the use of the green soybean is only seasonable. You might expect that since the Chinese have stone mills everywhere to grind their wheat and their corn into flour and meal that they would be grinding their soybeans into a flour. But soy flour is largely an Occidental product. It would be very difficult for you to pick up in any of the markets of China a pound of soy flour.

"Curd: The Chinese have learned through long experience that the greatest value nutritionally from the soybean is obtained through a water extraction of its protein. This milky liquid after it is strained is coagulated into a cheese [tofu]. Ninety percent and possibly even higher of the nutrition the Oriental obtains from the soybean is taken in the form of this cheese. Of course they have many ways of dealing with this soft gelatinous curd, which has a very high water content. They press it into cakes, about the thickness of a large slice of bread. This then is placed in a brine solution or other flavored liquid, and later sliced up like we at times dice cheese. Again it is pressed into thin sheets that are about a sixteenth of an inch in thickness. These are also diced up and eaten like a relish or a salad.

"Another common product is a thin semi-transparent sheet of protein [yuba] made by a slow heating vat filled with this soya milk. A heavy scum will come to the surface, which they lift off at intervals and suspend to dry. These sheets are later on used as food wrappers. They can use these sheets which are pure protein, like we can use cellophane sheets, but instead of wrapping parcels with them they stuff them with certain vegetables, imitating the body and legs of a fowl, or the form of a fish, or they can represent almost anything in the way of an animal, and by submitting them to a little baking, give the same nice brownish hue by the use of a little oil, so you could hardly tell whether you were eating actual turkey or an artificial one.

"When you go to the market where the soybean producer delivers his finished products, you will see a great variety of foods made from soybeans. As I say, you can buy the bean curd in squares, or you can buy the patties, or you can buy the thin sheets of soya cheese, or you can buy these large semi-transparent sheets of soya protein. These in turn can be incorporated into many tasty and highly nutritious dishes, by the skill and ingenuity of the cook, and has also the likeness of meat in flavor and appearance. Naturally nutritionally we know of the high value of these proteins for a proper substitute for meat, fish, fowl, eggs, and the protein of animal milk.

"Of course the Chinese have as one of their big industries the making of oil from the soybean, and that is true of the Koreans and the Japanese. They heat the bean, grind it, and put it into wooden presses and extract the oil by driving wedges into their oil presses, bringing a tremendous pressure to bear upon the roasted beans. This oil is all used for edible

© Copyright Soyinfo Center 2014

purposes.

"The residue of the bean cake contains about 6 percent of oil, and has been exported in recent years to great extent. But the Chinese have in certain localities ground it up and used the bean cake meal for food, although much has been used in China and exported for fertilizer.

"The soybean is also extensively sprouted, and these sprouts are used in their vegetable food mixtures and eaten as bean sprouts.

"I shall not attempt at all to discuss the varieties of soybeans found in the Orient. I have seen almost every color, every shape and size, running from a small shot sized bean to the large jumbo sizes, such as we have in our edible list. All the beans that I have seen that come from India have been of a very small size. When we buy beans in China we go to the market and ask for soya beans. If we are not satisfied with what they have we go to another shop, and see if we can find a bean of superior size and quality. We never purchase soybeans in China by name of any variety.

"As is well known, China and most parts of the Orient grow from two to three crops per annum on the same ground. In some areas when they harvest a rice crop they plant a soybean crop on the same soil. In other areas when they harvest a wheat crop they put in a crop of soybeans. We believe in many of our central states, and certainly this would be true of the southern portions of our central states, that it would be quite practical to harvest a crop of peas, and disk the land, and plant and harvest a crop of soybeans" (Continued).

1037. Miller, Harry W. 1943. Soybeans and the Orient (Continued–Document part II). *Soybean Digest.* Sept. p. 18, 44.

• ***Summary:*** In the non soya producing parts of the Orient the people for generations are particularly marked by their small physical development, and are quite a contrast to the Chinese people living in the soya producing areas, where the people for generations have had an adequate protein dietary. The average weight per individual of men and women living in northern China, where soybeans are eaten in sufficient amount, will he practically a third more than that of the inhabitants of certain races of the South Sea Islands, or Chinese in the southern tropical areas. There is a marked difference in stature also. On other occasions like this I have stressed the fact that the time will soon be here when we will come to regard the protein entity of the soybean as its greatest contribution to humanity. Even though these Oriental races have been using the soybean as a leading protein supplier of their dietary, when we view the needs nutritionally of the entire Asiatic races we find a lack of protein. They are getting oils and carbohydrates in sufficient amount, but these are only fuel foods and transitory. Protein is our chief nutritional requirement. It surpasses vitamins or minerals in importance.

"We make our growth out of protein. We maintain our stature on protein. We build up all our digestive secretions from protein. We supply all of our body regulators such as thyroid secretion, the pituitary secretion, and the adrenalin secretion from protein. Our nutrient body fluids such as our blood and lymph are chiefly protein liquids. Our body defenders which ward off the inroads of bacteria and disease, and which destroy contagion and enable us to recover from disease are all from protein. Therefore in common terms, our ability to work, to resist fatigue; in fact to live, is closely tied up with adequate protein supply.

"When we were in Dearborn [Michigan, as the guests of Henry Ford] three years ago we were shown wool being made from the soybean. Yes, we grow our hair from protein, the sheep grows his wool from protein. It is just a question of whether we synthetically do it by laboratory methods or whether we pass it through the animal laboratory, and get it in that way. The great difference is that there is a tremendous economic loss in utilizing an animal to produce our important protein requirements. For example an animal stores in its fixed tissues through growth only 1/12 of what it eats, and will throw down into secretions like milk, only 1/3 of the food value it eats.

"The Oriental populations are so enormous that they can't survive if they feed their valuable foodstuffs to the animals and endeavor to recover their food need from these animals. They are vegetarians from necessity and not from choice. Without huge importations the Orient must reserve the products the soil yields for humans and not for animals.

"There is no greater yielder of protein than the soybean.

"But will the people learn to like it? Such splendid beverages, such tasty foods are now available, and so readily could they be made available on large scale production that all except the extreme fastidious few can be made amply satisfied in getting their protein, the direct source of all protein. namely vegetation, king of which is the Soya Bean."

1038. *Battle Creek Enquirer and News* (*Michigan*). 1943. 'Peanut butter friendship' exists over 50-year period. Oct. 21.

• ***Summary:*** An eye-witness account which seems to support Dr. Kellogg's claim to the invention of peanut butter was given by Dr. Charles William Dabney of Cincinnati, Ohio. Dabney was the former president of the Universities of Cincinnati and Tennessee and an assistant secretary of agriculture under President Grover Cleveland from 1893 to 1896. In 1943, at the age of 85, Dabney provided this account of his collaboration with Dr. Kellogg in an interview: "Having heard of the fame of Dr. Kellogg's sanitarium, Dr. Dabney brought his wife here for treatment while he went on to Chicago [Illinois] to attend the World's Fair [Columbian Exposition of 1893]. That was back in 1893. Upon his return to the Sanitarium from the fair, Dr. Dabney met Dr. Kellogg for the first time. At that time, Dr. Kellogg was seeking a substitute for meat and, knowing that

© Copyright Soyinfo Center 2014

Dr. Dabney had been director of the agricultural experiment station of North Carolina at Raleigh from 1881 to 1887, inquired if he thought peanuts could be used.

"Dr. Dabney said he thought they could and sent to North Carolina for five bushels of peanuts which he and Dr. Kellogg used in creating peanut butter.

"'It was a simple job for us,' Dr. Dabney said. We just roasted the peanuts, pressed out the oil, added some cotton seed oil, sugar and salt–the result, peanut butter.'" Address: Battle Creek, Michigan.

1039. Kollmorgen, Walter M. 1943. The soybean goes to college. *Tennessee Planner* 4(1):15-20. Sept/Oct.
• ***Summary:*** The author was invited to lunch at Madison by E.M. Bisalksi, who is in charge of the food research and production program. The menu, typical of the meatless meals served on the campus, included: Meatless meat balls (Yum), fresh soymilk, Zoy-Koff (coffee substitute), margarine (75% soybean oil), and bread (made in part from soybean flour). "It should be noted that in the above menu animal foods and animal products are completely absent, with the exception of a small portion of cream used in the Zoy-Koff... Cans of Madison Foods substitutes for milk and meat carry the words "Contains no animal products." These food were not developed to stretch meat ration points during the war; some of them are nearly 20 years old.

Large photos on a 2-page spread show the following Madison products: Wheatasoy, Kreme O'Soy (sliced bread), Kreme O'Soy (canned soymilk), bottled soymilk, Yum, Zoyburger, Soy Cheese, Kreme O'Soy Butter Muffins, Stake-Lets, Not-Meat, Vigorost, and Zoy-Koff.

"Dr. Floyd Bralliar, Vice President of Madison College, has for years conducted experiments with soybean varieties. In this work he is closely associated with experts in the United States Department of Agriculture. Dr. Bralliar believes that Tennessee farmers can profitably devote more acreage to the soybean. He holds that canneries will do well to can more fresh soybeans..." Address: Research Director, Tennessee State Planning Commission.

1040. **Product Name:** Kreme O'Soy Butter Muffins.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1943 October.
Ingredients: Incl. Wheat flour, water, soy flour, sugar.
New Product–Documentation: Walter M. Kollmorgen. 1943. Tennessee Planner. Sept/Oct. p. 17. A photo shows a package labeled "Kreme O'Soy Butter Muffins: A New Taste Thrill."

1041. *RSLM* (*U.S. Regional Soybean Laboratory Mimeograph, Urbana, Illinois*). 1943. Edible soybean producers and distributors*. No. 101. Nov. 15. 3 p. Not for publication.
• ***Summary:*** Varieties: Aoda (5 producers and distributors). Bansei (19). Easycook (8). Emperor (2). Etum (4). Funk Delicious (3). Giant Green (4). Higan (1). Hokkaido (10). Imperial (1). Jogun (5). Kanro (1). Kanum (1). Rokusun (4). Sac (1). Sonsei [sic, Sousei] (4). Toku (1). Willomi (1).

Growers include: Associated Seed Growers, Inc., 301 Kentucky Ave., Indianapolis, Indiana or New Haven, Connecticut (handles Bansei {wholesale only}, Emperor, Giant Green, Jogun, Toku, and Willomi). 1043. Marentette, Charles. 1943. For 'grass eater,' Dr. Kellogg reckoned he did pretty well. *Battle Creek Enquirer and News* (*Michigan*). Dec. 15. p. 1. Wednesday.
• ***Summary:*** This article is part of a special reprint edition containing an excellent summary of the material concerning Dr. John Harvey Kellogg's life and death. "'They called me a "grass eater" back when I first got started teaching people about biologic living,' he explained. 'All of us, even those who believed as I did, were laughed at. But I guess we showed 'em.'" At age 91, clad only in white shorts and running shoes, he trotted back and forth across a backyard cinder footpath for news photographers. He said "'That's something I do every day in the year. It's the best exercise in the world. People don't exercise enough... You can't smoke and drink alcohol and expect to live a long life... I believe that man was intended to eat the plants and fruits and not the animals. Meat is bad for a human being. It clogs your colon, and eventually you'll be sick...

"I haven't touched meat for more than 75 years [i.e., since before 1868]. I don't smoke and I don't drink. Never have. I don't take patients at my Sanitarium unless they agree to abstain from eating flesh foods and from smoking and drinking, at least as long as they want me to help them." Address: Battle Creek, Michigan.

1044. Payne, Donald S. 1943. The story of soya products. In: U.S. Food Distribution Administration, War Food Administration, ed. 1943. Soybeans and Soya Products. Program for Meeting of Interdepartmental Nutrition Coordinating Committee. 25 p. See p. 8-19. Dec. 7. [5 ref]
• ***Summary:*** Contents: Introduction. Production and distribution. Soya flour and grits on the retail market. Soya in mixed foods. Information activity. Reference list of some of the materials available on soya products: Recipes and recipe leaflets, speeches, other (pamphlets, book chapter).

Soya flour and grits on the retail market include the following: A.E. Staley Manufacturing Co. of Decatur, Illinois, opened test markets early in June 1943 with 1- and 3 pound packages of Stoy, a low-fat expeller type of soya flour. Results were good. Complete national distribution of this product is expected by 1 March 1944.

At least two other large processor-distributors have also started on campaigns for nation-wide distribution. The Archer-Daniels-Midland Company has initiated the distribution of Viva Soy, a low-fat extraction-process type flour. The Glidden Company, Cleveland, Ohio, through Durkee Famous Foods, has recently introduced into test markets Durkee's Soya Bits (a low-fat expeller-type grit) and Durkee's Soyarich (a full-fat soya flour).

Other processor-distributors are The Central Soya Company, Decatur, Indiana, distributing Me-T-Soy, an extraction-type grit, and The Soya Corporation of America, introducing both a full-fat type flour and grit on the East Coast.

"Closely following the lead of these processor-distributors, private-label brand grocery houses started to package these products for retail distribution at popular prices. These have been very widely distributed. These are now packaged by G.L.F. Farm Products, Inc., Ithaca, New York, a 2-pound package of full-fat type soya flour and a 2-pound package of a toasted soya flake of the low-fat expeller-type.

The Vee-Bee Company of Chicago, Illinois, with its Vee-Bee brand soya flour and soya grits, and the P.D. Ridenour Company, Chicago, Illinois, with its Little Major brand soy flour of the low-fat extraction type, have both attained distribution of 1-pound packages through jobbers in 36 of the 48 states. "The H.D. Lee Company is distributing the Lee Brand soy flour and soya grits in 1-pound packages throughout Kansas, Oklahoma, Colorado, southern Nebraska, Arkansas, and Missouri.

"The Battle Creek Food Company, Battle Creek, Michigan, and The Walker Company, Chicago, Illinois, continue to market retail packages of full-fat soya flour in specialty stores throughout the Nation...

"In addition to those retail distributors, the following manufacturers sell [soy] four and grits in wholesale quantities to food manufacturers, restaurants, and institutions." Allied Mills, Inc. (Chicago, Illinois), Archer-Daniels-Midland Company (Minneapolis, Minnesota), Central Soya Company, Inc. (Fort Wayne, Indiana), Commander-Larabee Milling Company (Minneapolis, Minnesota), The Glidden Company (Chicago, Illinois), Procter & Gamble Company (Ivorydale, Ohio), Shellabarger Grain Company (Decatur, Illinois), Soya Corporation of America (Hagerstown, Maryland), Soya Products Company (New York, New York), Spencer Kellogg and Sons, Inc. (Decatur, Illinois), A.E. Staley Manufacturing Co. (Decatur, Illinois), Swift & Company (Champaign, Illinois).

Under "Soya in Mixed Foods" many companies that make foods such as pancake mixes, breakfast cereals, pasta, breads, crackers and cookies, candy bars, muffin mixes, dry soup mixes, etc. are listed, along with the brand name of the product and the area of distribution. "To mention a

© Copyright Soyinfo Center 2014

few others. The Atlantic Macaroni Company, New York City, the Mission Macaroni Company and the Golden Grain macaroni Company, both of Seattle, Washington, and Traficanti Brothers, Chicago, Illinois, also manufacture for local distribution a variety of products containing soya flour in amounts ranging from 10 to 15 percent." Soya products are used in only about 1% of frankfurters or sausages. "Roasted salted soybeans are about as common now as salted peanuts, but not many people realize that soya flour and grits are at present universally used in chocolate bars and any other candy. For further information on these uses I might refer you to the Curtis Candy Co., Chicago, Ill., or the Clark Candy Co., Pittsburgh, Pennsylvania...

"A large number of dry soup mix manufacturers are experimenting with soya flour and preparing products for domestic distribution. Soya flour and grits are now and will continue to be used extensively in foods prepared for lend-lease and relief feeding. Pea-soya soup, spinach-soya soup, cheese-soya sauce, oat-soya cereal, whole wheat-soya cereal, wheat-soya-egg macaroni and vegetable-cereal-soya stew mixes are being purchased in appreciable quantities... Pork-soya sausage links have been purchased in tremendous quantities under lend-lease...

"Nine coast-to-coast radio shows have featured the news of soya food products since June 1943. Over 15 prepared radio scripts and stories featuring soya have been distributed since May 1943." Address: Chief, Soya Products Section, Grain Products Branch, Food Distribution Administration, War Food Administration.

1045. USDA War Food Administration, Food Distribution Administration. Grain Products Branch. comp. 1943. Soya products distribution. Washington 25, DC. 5 p. Dec.
• ***Summary:*** Gives a partial list of companies that retail products containing soya, the names of the products distributed, and their areas of distribution. Address: Washington, DC.

1046. **Product Name:** Soy Protose (Meatless Potted Meat with 32% Soya).
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1943.
New Product–Documentation: USDA War Food Administration, Food Distribution Administration. Grain Products Branch. 1943. Dec. "Soya products distribution." p. 5. The company sells Soy Protose, containing 32% soya (it is not clear in what form). Distributed through health food stores.

Taylor. 1944. Soy Cook Book. p. 200. Soybean Blue Book. 1947. p. 71.

1047. **Product Name:** Loma Linda Proteina (Meat Analog).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1943.
New Product–Documentation: Wholesale price list. 1943.

1048. Year Book of the Seventh-day Adventist Denomination. 1943. Washington, DC: Review and Herald Publishing Assoc. 397 p. See p. 72, 292-93. Index. 20 cm.
• ***Summary:*** Partial contents: Institutions: Educational (p. 208-250). Publishing houses (p. 251-62). Periodicals issued (p. 263-76). Sanitariums (p. 277-88). Dispensaries and treatment rooms (p. 289-91). Food companies (p. 292-93).

The section titled "Food companies" includes: Boulder-Colorado Sanitarium Food Company (established 1895). Buenos Aires Food Company (Alimentos Granix, Sociedad Anonima, est. 1938 [Argentina]). Copenhagen Food Factory (Denmark). Food Factory "Pur Aliment" (Paris, France). German Health Food Factory (Hamburg; De-Vau-Ge Gesundkostwerk Vollmer & Lühr (formerly: Deutscher Verein für Gesundheitspflege Hamburg {e.V.})). Granose Foods, Ltd. (British Health Food Factory; Stanborough Park, Watford, Herts, England. Est. 1899). Gland Hygienic Food Factory (Fabrique de Produits Alimentaires Hygeniques "Phag," Gland, Switzerland. Est. 1896). Loma Linda Food Co. (Arlington, California. Incorporated 1935). Sanitarium Health Food Company (Head Office, "Mizpah," Fox Valley Road, Wahroonga, NSW, Australia).

"Wholesale food branches" (of Sanitarium Health Food Company, in Australia and New Zealand; each has a manager): Adelaide, South Australia–151 Gouger St. Brisbane, Queensland–Garrick St. Melbourne, Victoria–118 Union St., Windsor. Newcastle, New South Wales–Tudor St. (Hamilton). Papanui, New Zealand–P.O. Box 11. Perth, West Australia–240 Lake St. Sydney, New South Wales–Brown St. (Lewisham).

Cafes and retail food stores (in Australia and New Zealand; the first two have a manager): Auckland, New Zealand–174 Queen St. Brisbane, Queensland–138 Adelaide St. Camberwell, Victoria–791 Burke St. Christchurch, New Zealand–698 Colombe St. Dunedin, New Zealand–8 George St. Hobart, Tasmania–43 Elizabeth St. Laucestan, Tasmania–82 Charles St. Melbourne, Victoria–293 Little Collins St. Newcastle, New South Wales, 14 and 18 The Arcade. Perth, West Australia–757 Hay St. Sydney, New South Wales–13 Hunter St. Wellington, New Zealand–83 Willis St.

On p. 72 is a directory of in "Health food factories" in the Austral-Asian Union Conference. All but one have the same name: "Sanitarium Health Food Co." They are located at: (1) Cooranbong, NSW. (2) 62 Randolph St., Auckland, New Zealand. (3) Papanui, Christchurch, New Zealand. (4) Sanitarium Buyers and Packers, Sydney, NSW. (5) Warburton, Victoria. (6) Carmel, West Australia. (7) Brisbane, Queensland. (8) Adelaide, South Australia. (9) Lewisham, Sydney, NSW. "Sanitarium Health Food Co."

Address: Battle Creek, Michigan.

1049. Holt, Jane. 1944. News of food: Experts point out many advantages of adding soy beans to American diet. *New York Times.* Feb. 16. p. 20.
• ***Summary:*** Soy is a bean, and for many people "beans symbolize all that is humdrum in cookery." This may be one reason that some people have given soy beans a cool reception. As they struggle for recognition (with not much success), soy beans must confront the "natural suspicion with which people regard new foods and the resistance they show to efforts to 'reform' their eating habits." Another problem "may be the indifferent quality of some of the soy products that have been offered at retail and that have prejudiced customers."

"These explanations of why the bean is not more popular despite Federal and State campaigns urging its greater use were advanced yesterday by speakers at a luncheon given under the joint auspices of the New York State Emergency Food Commission and the Neighborhood Luncheon Club." The meeting took place at the Hotel Wellington, which has been exhibiting various soy products this week. Those now available in New York City stores include oil, flour, grits, sauce, etc.

Miss Adeline Hoffman, a nutritionist on the staff of the commission, gave an address in praise of soy beans; "she reminded her audience that they were an admirable stand-in for meat," and gave numerous reasons why.

Pre-cooked, canned whole soybeans are very convenient for the woman who doesn't like to spend much time in the kitchen. They can be "served cold in a salad or hot with seasonings, or they may be enhanced with a tomato sauce" or transformed into other dishes. One such product, sold under the trade name of "Miller" in a tin weighing 1 lb. 4 ounces, is available at Gimbels for 25 cents.

Another interesting and tasty product is soy macaroni, which is sold at Health Food Distributors, 123 East 34th St. A 7-ounce cellophane bag sells for 15 cents.

For more information on soy cookery and recipes, write to the commission's offices, 247 Park Ave., New York City 17.

Note: This is the earliest document seen (Sept. 2009) that discusses the slow acceptance of soy food products during World War II.

1050. **Product Name:** Battle Creek Soy Beans (Tender Casein?).
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1944 February.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Florence Paine. 1944. House Beautiful. Feb. p. 86. "I was skeptical about soy beans." Photo of a can and its label. Last word in subtitle is not clearly legible. The can appears white with black print and no illustrations.

1051. Madison Foods. 1944. Zoy-Koff: Restful sleep with Zoy-Koff's zestful flavor (Ad). *Nature's Path* (*New York City*). Feb. p. 66.
• ***Summary:*** "Prepare Zoy-Koff as you would coffee. Two grinds–Regular and fine. Available at health-food stores and specialty groceries. Devoted to the protection of your health." A photo shows the "new flavor-fresh package." A small illustration shows a woman sleeping soundly in bed. Address: Madison College, Tennessee.

1052. Paine, Florence. 1944. I was skeptical about soy beans. *House Beautiful* 86:33, 88, 97, 101, 104. Feb.
• ***Summary:*** The first page contains a large photo of a housewife standing by a table filled with commercial soy products including Soy-B-Prep, Battle Creek soy beans, Arcadia soya puffs, Golden wheat-soy mix for griddle cakes and waffles, Walker's soya sauce, Me-T-Soy extender, and Vivasoy (a high protein soya product). All are available from Kubie's Health Shop in New York City.

The article describes how to sprout soybeans at home and contains recipes for: Chopped bean sprouts with beef. Baked soy beans. Soybean perfection salad (with soybean sprouts). Tangy soy bean soup. Soya nut bread (with soy flour). Meatless chop suey (with soy sauce).

The author was originally turned off to soy after eating a "Soy Bean Loaf" at a vegetarian restaurant. "My shifting from soy-bean avoider to booster began last summer after attending a luncheon given [in New York] by Governor Dewey at which soy beans were fed to a critical and skeptical group in salads, souffles, bread, and as vegetables. The dishes really were delicious, and I could hardly wait to get home and do some experimenting myself. I have been trying them out ever since on my family and friends. I'll let you in on a secret, though. At first I made the mistake of telling my guests what they were being served. In nine cases out of ten they were anti-soy beans because of some previous experience, and so were antagonistic right away and I could seldom change their opinion. So I changed my tactics. I now wait until I get a favorable verdict before I make my announcement. The new system works like a charm."

1053. *Madison Survey* (*Madison, Tennessee*). 1944. Madison College. 26(8):29-30. April 26.

1054. *Business Week.* 1944. Soya Butter. July 22. p. 85-86.
• ***Summary:*** "'Soya Butter' is a new food spread formulated by Butler Food Products, Cedar Lake, Michigan, which is said to resemble dairy butter in 'taste and appearance... but which will not turn rancid.'... The process by which it is made consists of churning hardened soybean oil in soya milk and adding certain unspecified ingredients. The product

© Copyright Soyinfo Center 2014

is shipped in pint-sized cardboard containers or in 38-lb. fiberboard tubs."

1055. **Product Name:** Butler's Soya Butter (Non-Dairy Margarine made with Soybean Oil and Soy Milk).
Manufacturer's Name: Butler Food Products.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1944 August.
New Product–Documentation: *Business Week.* 1944. July 22. p. 85-86. "Soya Butter." *Soybean Digest.* 1944. Aug. p. 16. "What is Status of Soya Butter?" Ad in *Soybean Digest.* Sept. 1944. p. 11. "New foods from the wonder bean: Butler's Soya Butter."

Short in *Soybean Digest.* 1945. Feb. p. 22. "The *Detroit News* puns in headlines: 'Uses his bean to make butter: Spread it soya can forget about points,' which doubtless refers to the soya butter of Butler Food Products." Note: "Soya" is a pun on "so you." During World War II dairy butter was rationed and one needed points to buy it. *Soybean Digest.* 1945. May. p. 14. "Ohio Ruling on Soya Butter."

Note: This was the first all-soy margarine and the first non-dairy (vegan) margarine made in the USA. It appears to be related somehow to Shedd's Willow Run Margarine. There were conflicting state and federal regulations to whether the product was margarine or not. Finally in December 1945, at which time the company was manufacturing 100,000 units of soya butter a month, a federal judge in Detroit ruled that the product was oleomargarine as defined by the internal revenue code, and therefore subject to back taxes of 10 cents a pound on every pound made to date. The three-year battle and the ruling assessing an estimated $150,000 in back taxes drove the company out of business in 1946. In about 1950, while typing out an appeal to the government to reconsider his case, Butler suffered a fatal heart attack. Shortly after his death, the margarine law was changed and the tax (on other companies) removed.

1056. *Soybean Digest.* 1944. What is status of soya butter? Aug. p. 16.
• ***Summary:*** "Butler Food Products of Cedar Lake, Michigan, has obtained restraining orders which would prevent the Michigan State Department of Agriculture and the U.S. Collector of Internal Revenue from enforcing margarine regulations against the firm's product, 'Soya Butter.'

"The company advertises 'Soya Butter' as being an all-vegetable product, about 79 percent of it soy oil. H.L. Hoover, manager of the firm, claims the he is the victim of conflicting federal and state regulations, and that he cannot comply with one set of regulations without violating others."

1057. Butler Food Products. 1944. New foods from the wonder bean (Ad). *Soybean Digest.* Sept. p. 11.
• ***Summary:*** A full page ad. "Mean a greater demand for soybeans and high prices for soybean growers." "Butler's Soya Butter was developed to meet the specific need of those who have allergic reactions to dairy products and for those who wish to maintain a strictly vegetarian [vegan] diet. Only Butler's Soya Butter can fill the above specific need. Butler's Soya Butter is available only to Health Food Stores and other outlets catering to those whose diet requires specialty foods." Photos show cans of each of these five Butler products: Butler's Soya Cheese [tofu]. Butler's Vegeburger. Butler's Soya Nut-Loaf. Butler's Vegetarian Chops. Butler's Soya-Butter.

Note: This is the earliest English-language document seen (Jan. 2007) that uses the word "Vegeburger" to refer to a meatless / vegetarian burger. Address: Cedar Lake, Michigan.

1058. **Product Name:** Butler's Soynut Cheese.
Manufacturer's Name: Butler Food Products.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1944 September.
Wt/Vol., Packaging, Price: 1 lb can.
New Product–Documentation: Ad in *Soybean Digest.* Sept. p. 11. "New Foods from the Wonder Bean." Sold in 1-lb cans. Company founded in 1939 by Howard O. Butler.

1059. **Product Name:** Butler's Vegeburger.
Manufacturer's Name: Butler Food Products.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1944 September.
Wt/Vol., Packaging, Price: 1 lb can.
New Product–Documentation: Ad in *Soybean Digest.* 1944. Sept. p. 11. "New Foods from the Wonder Bean." Sold in 1-lb cans. Note: This is the earliest commercial food product seen that bears the name "Vegeburger."

1060. **Product Name:** Butler's Soya Nut-Loaf.
Manufacturer's Name: Butler Food Products.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1944 September.
Wt/Vol., Packaging, Price: 1 lb can.
New Product–Documentation: Ad in *Soybean Digest.* 1944. Sept. p. 11. "New Foods from the Wonder Bean." Sold in 1-lb cans.

1061. **Product Name:** Butler's Vegetarian Chops.
Manufacturer's Name: Butler Food Products.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1944 September.

© Copyright Soyinfo Center 2014

Wt/Vol., Packaging, Price: 1 lb can.
New Product–Documentation: Ad in *Soybean Digest.* 1944. Sept. p. 11. "New Foods from the Wonder Bean." Sold in 1-lb cans.

1062. International Nutrition Laboratory. 1944. Meet the vegetable cow (Ad). *Soybean Digest.* Sept. p. 61.
• ***Summary:*** A creative illustration shows the head of a cow made entirely from soya. The main part of the face is made from whole dry soybeans. The ears are made of soybean leaves. The horns, forelock, parts surrounding the eyes, nostrils, and mouth are made of soybeans in their pods.

The company now makes 8 commercial soy products: 1. Miller's Giant Green Shelled Soya Beans. 2. Miller's Soyalac (powdered milk), plain, malted, or chocolate. 3. Miller's Soyalac (soya milk), liquid, natural, or chocolate. 4. Miller's Vegetarian Cutlets in uniform slices or diced [made from wheat gluten]. 5. Miller's Soya Loaf. 6. Miller's Soya Spread. 7. Miller's Edible Soya Flour. 8. Miller's Edible Soya Beans.

A photo shows a 14 oz glass jar of Miller's Soya Spread, with some of it being spread, using a knife, on two slices of bread. It is a butter substitute and sandwich filling. Standing next to the jar is a small cartoon figure of man dressed like a chef or baker. The caption reads: "The Soybean Man says: 'There's nothing like it!'"

Note: This is the earliest document seen (June 2009) concerning the marketing of green vegetable soybeans. Address: Mt. Vernon, Ohio.

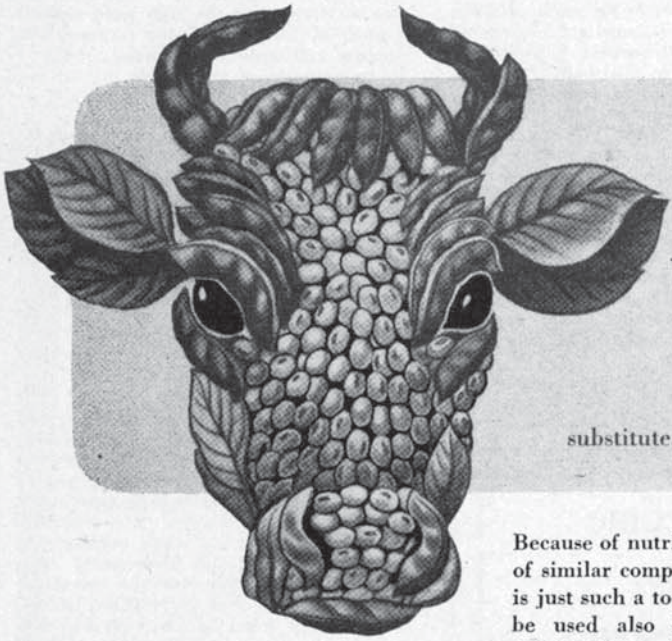
1063. Loma Linda Food Company. 1944. Re: Loma Linda Soy Milk. Letter to Mrs. Marie G. Thompson of Milwaukee, Wisconsin, Oct. 17. 2 p. Typed, without signature on letterhead.
• ***Summary:*** This letter is written on the company letterhead which contains an illustration (line drawing) of the new Arlington headquarters, and gives the address and phone number. Across the bottom is written: "Tasty. Wholesome. Nutritious." The author writes: "We are surely interested to know that you have had such good success in raising your baby entirely on Soy Milk and we trust that this good progress will continue. It encourages us to know that there are those who believe in the vegetarian regime and... are willing to demonstrate that babies can be raised on Soy Bean Milk. We are sending you with this letter a copy of our folder featuring Loma Linda Soy Milk. The Kreme O'Soy put up by Madison [Foods] is also a good product. They do not add Carotene [which Loma Linda does, to provide essential vitamin A].

"One of the largest children's hospitals in Los Angeles where they have many allergy cases is using our Soy Milk very extensively and has done so for a number of years." Address: Arlington, California. Phone: Riverside 9217.

1064. **Product Name:** Battle Creek Steaks, Battle Creek Skallops, and Meatless Wieners.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1944 October.
Ingredients: Skallops in 1971: Wheat protein [wheat gluten], water, salt.
New Product–Documentation: These three meat alternatives, introduced during the early 1940s, were made from varying combinations of nuts (mainly peanuts), wheat gluten, and natural flavorings. None of them contained any soya. Worthington Foods, Inc. 1960. Oct. 15. "Battle Creek Food Company, authorized dealer price list." "Vegetable Skallops" and "Vegetable Steaks, regular or small cuts" are listed. Note: This is the earliest commercial meat alternative seen which has a name clearly indicating that it is an alternative to fish, shellfish, or other seafood products.

Richard W. Schwarz. 1970. John Harvey Kellogg, M.D. p. 122. "The doctor's interest in new vegetarian meatlike protein foods continued active until shortly before his death. Among some of the more popular creations later developed in his laboratories were Protose, Battle Creek Steaks, and Battle Creek Skallops. Various combinations of nuts and wheat gluten composed the principal ingredients in the imitation meats."

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Skallops (Battle Creek–by Worthington)."



Letters from Charles R. MacIvor or Hendersonville, North Carolina. 1981. March 4 and April 28. Battle Creek Steaks and Battle Creek Skallops were launched sometime before 15 Oct. 1944, as they were listed in the 1944 dealer retail price list. Neither of these products contained any soya.

Talk with Allan Buller of Worthington Foods. 1994. July 14. Battle Creek Steaks was mainly a gluten product, which was part of the product line that Worthington took over in 1960.

1065. *Soybean Digest.* 1944. Grits and flakes from the industry: Loma Linda Food Co. and Vegemeats. Oct. p. 16.
• ***Summary:*** The Loma Linda Food Co. is now preparing for an advertising campaign to broaden acceptance of its Vegemeats line, made of soybeans and select grains. The company will try to reach consumers first, then food processors. "Vegemeats were first introduced to consumers at the Golden Gate International Exposition" [Feb. 1939 to Sept. 1940]. The company now offers "a complete line of Vegemeats, including 'steaks' and 'burger,' as well as Vegemeats for loaves, roasts, and spreads."

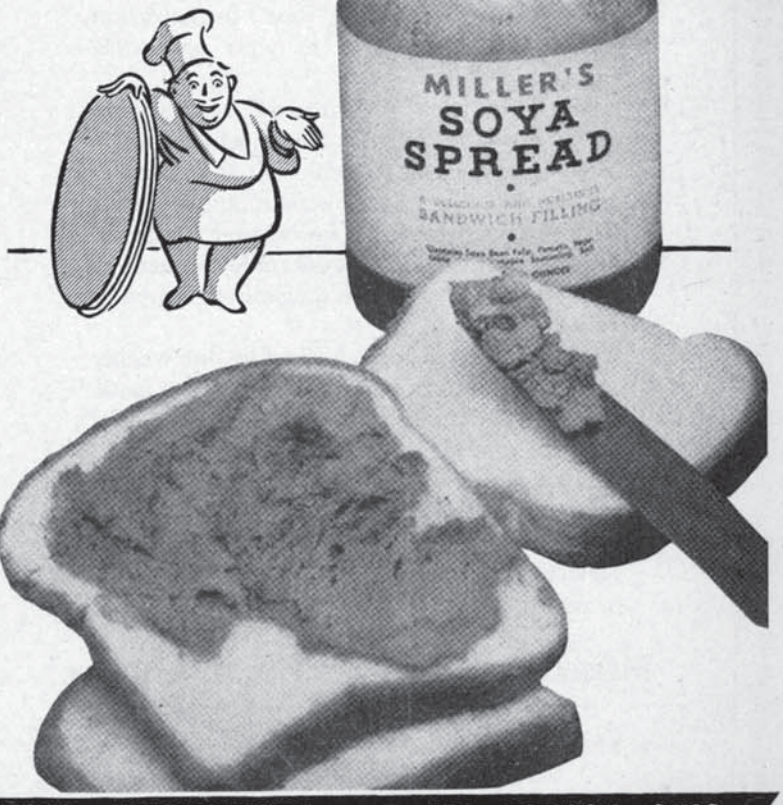
Meet the VEGETABLE COW



The Soybean produces a milk substitute, *Soyalac*,* and a butter substitute, *Soya Spread*.

Because of nutritional needs we should use butter or a tasty spread of similar composition on our bread. MILLER'S SOYA SPREAD is just such a toothsome spread for plain or toasted bread. It may be used also in various combinations for salads, sandwiches, entrees, omelets, croquettes, etc.

Miller's SOYA SPREAD comes in 14-ounce glass jars, and a trial purchase will convince you how little you miss butter when *Miller's* SOYA SPREAD is put on a cracker or slice of toast. Besides a high oil content, *Miller's* SOYA SPREAD, like *Miller's* popular VEGETARIAN CUTLETS, has a high protein value.

* Miller's milk substitute in powdered or liquid form.

THE SOYBEAN MAN SAYS:
"There's Nothing Like It!"

All Miller's products are distinctive and FIRST in quality. Here they are:

1. **Miller's Giant Green Shelled Soya Beans.**
2. **Miller's Soyalac (powdered milk), plain, malted, or chocolate.**
3. **Miller's Soyalac (soya milk), liquid, natural, or chocolate.**
4. **Miller's Vegetarian Cutlets in uniform slices or diced.**
5. **Miller's Soya Loaf.**
6. **Miller's Soya Spread.**
7. **Miller's Edible Soya Flour.**
8. **Miller's Edible Soya Beans.**

If your dealer does not stock *Miller's* foods—

• ***Summary:*** The names and addresses, of sources most readily available to the New York State trade, appear under the following headings: Soy flour and flakes: Manufacturers, wholesale distributors. Flour mixes for pancakes, muffins, etc. Dry soybeans: For cooking, for sprouting. Canned soybeans. Sprouted soybeans (LaChoy Food Products, Inc., Archbold, Ohio. Most Chinese restaurants).

Note: This is the earliest document seen (Jan. 2013) stating the LaChoy Food Products sells sprouted soybeans.

Macaroni, spaghetti, noodles (The Pfaffman Co., 6919 Lorain Ave., Cleveland, Ohio). Beverages. Bakery products: Soy bread, Soy cookies, crackers, wafers, etc. (Incl. Cubbison Cracker Co., 3407 Pasadena Ave., Los Angeles, California. Tom Soya Foods, Inc., P.O. Drawer 510, Williamsport, Pennsylvania). Breakfast cereals (Soyawheat, Soyawheat Co., Red Wing, Minnesota. Tom Soya Puffs and Exploded Soybeans, Tom Soya Foods, etc.).

Soybean curd [tofu] (International Nutrition Laboratory, P.O. Box 326, Mt. Vernon, Ohio). Meat-like products (The Battle Creek Food Co., Battle Creek, Michigan. Madison Foods, Madison College, Tennessee. Natural Health Products, 143 W. 41st St., New York, New York). Soups. Soy nuts (Dewey Food Products, Inc., 2251-3 N. Knox Ave., Chicago, Illinois. La Choy Food Products, Inc., Archbold, Ohio. Soybean Products Co., 9025 Monroe, Chicago, Illinois. Tom Soya Foods, Inc., etc. Vegetable Products Co., Rochester, New York). Spreads. Address: Vice-Chairman, Soybean Committee, Cornell Univ., New York.

1067. **Product Name:** Miller's Canned Baked Soybeans.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1944.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Taylor. 1944. The Soy Cook Book. p. 201.

1068. **Product Name:** Miller's Edible Soybeans (Whole Dry Soybeans for Home Cooking).
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1944.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Taylor. 1944. The Soy Cook Book. p. 201.

1069. **Product Name:** Loma Linda Soy Fortified Cereals.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce Place, Arlington, California. Phone: Riverside 9217.
Date of Introduction: 1944.
New Product–Documentation: Wholesale price list. 1944. The city where the company located is now named Arlington, California.

1070. Anderson, Hans Steele. 1944. The new food therapy: Diet and the healing art. Maitland, Florida: Printed by The Academy Press. 165 p. See p. 37-38, 64-66, 85-86, 89, 118-19. 23 cm.
• ***Summary:*** This is a rewritten and enlarged edition of the author's *Food Therapy: Diet and the Healing Art*, published in 1942. The author, apparently a Seventh-day Adventist, was born in 1877.

Pages 37-38 contain a discussion of soya bean products (including Soya Lac, which is alkaline in reaction, and is made by the International [Nutrition] Laboratory, Mt. Vernon, Ohio). There are home-scale recipes for: Soybean milk no. I (made from soybean flour). Soybean milk No. II (made from powdered soybean milk–Soya-Lac). Soy butter substitute No. I (made by blending soybean flour, soybean oil, and a few drops of dandelion butter color with a Dover beater). Soya bean butter substitute No. II (made by blending Soya-Lac powdered soybean milk with soybean oil; refrigerate). Soybean cheese, made by curding hot soybean milk with a little citric acid. "Season with rich soybean milk and salt as you would flavor ordinary cottage cheese and serve."

Pages 64-66 give nutritional information on soybeans and soy-products, and compare soybean milk with cow's milk. "As a source of wholesome food constituents, the soybean probably has no peer... Soya bean milk contains more food mineral and vitamins than cow's milk; is alkaline in reaction; has a greater proportion of calcium; and forms into smaller curds in the stomach. Soya milk, moreover, is far cheaper than cow's milk and may be prepared fresh as required, and can be seasoned to suit anyone's taste."

Other soy-related recipes include: Soybean-wheat muffins (p. 85-86). Use of soy bean flour in wholewheat bread (p. 89; it can be substituted for up to 25% of the wheat flour).

In the chapter titled "Diet and the healing art," under "Lecithin," pages 118-19 note that "there is a new food factor called lecithin which promises to become a factor of importance on account of its being essential for reconstruction and for the maintenance of vital organs, including the brain, nerve forces, heart and liver. Oil that is contained in the soybean is comparatively rich in lecithin and vitamin A and in this respect it is said to resemble butter. Cow's milk proves rather deficient in lecithin whereas soya milk is fairly rich in this essential constituent. Nutritional anemia which has been brought about through an exclusive use of cow's milk may be quickly eradicated by a liberal use of soybean milk."

1071. Miller, Harry W. 1944. The story of milk from the soya bean. Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. See p. 1-6.
• ***Summary:*** This rare and very interesting booklet was sent

to Soyfoods Center by Charles D. Howes of Mt. Vernon, Ohio, in Feb. 1979.

Contents: Full page photo of the "International Nutrition Laboratory established for processing soya bean foods, located at Mt. Vernon, Ohio. Foreword, by J.A. LeClerc, PhD, Formerly Senior Chemist of the USDA (Retired). March 5, 1944. The story of vegetable milk (Soyalac), by Harry W. Miller, M.D. Early trend, observations in China, back in America, the milk question, encouraged to produce a vegetable milk, further studies in China, the role of the International Nutrition Laboratory in America. Other products of the International Nutrition Laboratory.

"Foreword: The preparation of a palatable and appetite-appealing soya milk is proving a great boon to people allergic to cow's milk. It has been estimated that 20 to 25 per cent of our population are allergic to ordinary milk and many thousands of babies suffer from infantile eczema and other violent symptoms, whose condition clears up when transferred to soya milk feeding.

"Soya milk as prepared has approximately the same composition as cow's milk, except when soya milk is especially prepared for infants its formula simulates mother's milk. Soya milk contains more Vitamin B than cow's milk, and an equal quantity of Vitamin B-2. The valuable proteins found in soya milk contain all the Amino-acids known to be essential for growth. Preparations made from the soya bean are relatively rich in iron and copper, so that soya milk compares very favorably with animal milk as to its nutritional and biologic values.

"Soya milk has this further advantage that it does not endanger the user to disease producing germs.

"In view of the fact that there is not enough animal milk available in this country for the optimum nutrition of our population, also that it takes three years of care and feeding before a cow gives milk, that only a small percentage of the food consumed by the cow is returned in the form of milk, and further that the use of only ten million bushels or one twenty-fifth of our annual soy bean crop for conversion into soy bean milk, would supply a pint of milk every day to 8,000,000 people, at a cost less than that for cow's milk, and that soya milk is palatable, and especially acceptable by children, it would seem the sensible thing to encourage the preparation and consumption of soya milk on a large scale.

"The 'Story of Vegetable Milk' is most interesting to read. The successful preparation of an appetite-appealing soya milk, after years of experimentation by Dr. Harry W. Miller, now bids fair to become one of the most practical of modern food discoveries. Its use will not only be the means of saving thousands of children from unnecessary suffering and sickness but soya milk should prove a good substitute for cow's milk for those who are allergic to animal milk.

"It is my sincere wish that all who are fortunate enough to obtain a copy of Dr. Miller's "Story of Vegetable Milk," will study its contents and then pass it on to others, in order that in due time, millions of our people will have recognized the full nutritive value of this most excellent food product."– Signed, Joseph A. LeClerc, PhD.

"Early trend: Being the oldest of a family of five children, it fell to my lot to help Mother about the kitchen. She was well known for her sumptuous meals, and we always had many visitors at our house. Later as a part of the curriculum of the college which I attended was a course in cookery, and this stimulated my interest in knowing how good things were made as well as their food values. Then when I became a student of medicine we were introduced into a study of food preparation which in those days (1898) was rather unusual in the program of a medical school. This course only seemed to further whet up my interest in the study of foods and their preparation.

"Having to earn the resources for pursuing my medical education. I secured the position of guiding visiting groups through a food factory. As I explained the processes of manufacture, many questions were directed to me on all phases of nutrition as it relates to health and disease, and I took great interest as a guide to inform myself in every way available. I hungrily devoured literature on the subject and was fortunate in being under the tutorage [sic, tutelage] of the father of nutrition work in America, namely the late Dr. John Harvey Kellogg, to whom more credit belongs for furthering the selection, processing and sanitary packaging of breakfast foods than any other man. He was forty years ahead of the times in advocating the value of proper diet in relation to the cure of the sick, and so I have been able to grow up with the advance of nutrition work from its beginning and see the birth of the science of dietetics.

"Observations in China: In the autumn of 1903 my wife and I sailed as medical missionaries for interior China. After a stormy voyage, in which seasickness had deprived us of rations that were included in the price of our ticket, as well as several pounds of flesh, we arrived at the port of Kobe, Japan, where our colleagues, Dr. and Mrs. Lockwood, who preceded us one year, had a small sanitarium and had prepared a sumptuous meal for us. Half starved, we ate with great relish. One dish that was new to us especially attracted attention. It was a protein loaf made from the soy bean curd which was marketed under the name 'To Fu.'

"Arriving at the port of Shanghai, China, we went inland and took up our abode in the central part of the province of Honan, where we not only wore the Chinese costumes, including the queue, but our diet was from foods bought from the local markets, and consisted of only those edibles indigenous to China. Here again we were introduced to the soy bean, whose home is China, and which has been the great source of protein of the Chinese people for millenniums.

"The bean was grown abundantly in Honan, and in fact in all parts of North and Central China. Wherever the Chinese emigrate, they utilize this bean in many marvelous

© Copyright Soyinfo Center 2014

and tasty ways, mostly, however, in the form of cheese made by coagulating the milk with calcium sulphate. This curd is eaten in its soft state, or else pressed into little square cakes. The curd may be formed in sheets by pressing cloths. They also gather sheets of almost pure albumen [yuba] from a scum arising to the top of the soy milk on heating same. Accustomed to people chiefly drinking cow's milk, rather than making products from it, I questioned the Chinese why they did not use the soy milk. They said some of the aged with weak digestions do, but that the cheese was more popular, as they could combine it with other cooked foods. Still more did I wonder why, for the much undernourished infants of the Orient, they did not give them soy milk, containing as it does such important food entities as salts, vitamins, protein and oil in richer amounts than the bean curd and without the undesirable gypsum.

"Being engaged in language study and other mission responsibilities for several years I could do but little more than ponder over what I felt were great possibilities in soy milk for the people of China as well as other lands, were it scientifically studied.

"Another observation I made was that the people of North and Central China who were vegetable-protein eaters, getting especially soy bean rations, were a large and muscular people in comparison with those of the South, where rice was the food, and who used more meat in their diet. These results were later confirmed by experiments to show that the protein of the soy bean is one of the greatest body building foods known.

"Back in America: After eight years' service in China, I was compelled to return to America on account of illness contracted in interior China. When sufficiently recuperated, I was called to the position of medical superintendent and surgeon of the Washington Sanitarium and Hospital at the nation's capital. This again brought me in touch with important nutrition studies carried on at the government bureaus in Washington and also the work at Johns Hopkins University. We also had our own laboratory where we prepared several soy products and introduced many original dishes into our hospital dietary. The Washington Sanitarium was an institution whose dietary was of the lacto-vegetarian type" (Continued). Address: M.D., Mt. Vernon, Ohio.

1072. Miller, Harry W. 1944. The story of milk from the soya bean (Continued–Document part II). Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. See p. 6-11.
• ***Summary:*** Continued. "In order to get our protein supply, we went heavy on cow's milk and dairy products. In 1917 we received notice from the dairy which supplied us milk, that the government had requisitioned their entire milk supply to the Walter Reed Military Hospital, and we would have to look to other sources. We secured a large farm nearby and expended several thousand dollars buying the best registered cows we could secure. Our heavy investment necessitated that I should give some study to the dairy business. And, although I grew up on the farm and as a boy it fell to me to do the milking, which was usually accomplished in the barnyard or in the cow stable, my boyhood anxiety while milking was how best to save the milk from dirt contamination, in which we had many narrow escapes, and when none to successful we had to add an extra thickness to the strainer cloth. We knew nothing then of infected milk through disease of animals, or of milk as a carrier of infections and spreader of epidemics, of cow allergy, or that the milk contained toxins that came from certain feeds and pastures. My father being a school teacher, taught us, however, to try to keep flies out of the butter, and lids on the milk crocks while the cream was rising. From the day I began to milk cows I lost interest in drinking milk.

"The acquisition of this dairy by the Washington Sanitarium not only convinced me of the need of a substitute for animal milk, but my investigations into all phases of the care of a herd and its product, milk, served as a preparation for building up just such a product with nutritious properties equal to those of animal milk.

"The Milk Question: Among the several dairy publications studied, I was especially impressed with Dr. M.J. Rosenau's book on "The Milk Question," especially since he was recognized as America's foremost hygienist, being surgeon-general of the U.S. Public Health Service. Dr. Rosenau aimed in his book to inform the public of dangers in animal milk and the need of improved methods for caring for same. To start with, he calls attention to the following: The milk-giving animal may be suffering from serious disease or there may be contamination while milking, both from filth on the animal or from exhalations from diseased cows, from milkmen's unclean hands, dirty milk pails or strainer cloths, unclean holding receptacles, the fly menace, putrefactive changes in milk while standing in the sun or being hauled to the market, contamination from often repeated handling of milk, failure of pasteurization to make infected milk good and safe, and also the contamination of the infant nursing bottle. In his amazing statement of the high infant mortality through contamination of milk, he also enumerated numerous epidemics transmitted by milk infection, typhoid, scarlet fever, and other disease scourges. However. Dr. Rosenau's book was written too early to list undulant fever now known to be wholly contracted from infected animals.

"The results of these investigations led me to check our herd of carefully selected cows for tuberculosis, with the result that five of the finest milk cows reacted as tuberculosis infected animals, and the results were confirmed by specimens of infected glands taken from each animal. During these years of investigation and practical experience I became convinced of the following facts:

"1. That the cow's milk is a perfect food for the calf during its early period of development. The grown calf turns to other food later and the mammary secretion of the cow is

© Copyright Soyinfo Center 2014

for a short period. The calf has four stomachs and possesses enormous powers to digest the heavy curd of cow's milk. It should be kept in mind that each animal gives a milk most suitable for the nourishment of its own kind. A calf's growing conditions are different from the human, so that cow's milk is not suited by nature as a perfect food for man.

"2. Out of a mixture of milk from several cows you are almost certain to get strains of pathogenic germs, which are not always certain of destruction by Pasteurization temperatures. Only when Pasteurization temperatures are held at 154 degrees Fahr. for 30 minutes can its germicidal action be depended on.

"3. Tests made on 500 well people showed that 27 per cent gave evidence of allergy to cow's milk, of whom about one-fourth were severe reactors.

"4. Certain foods in the animal diet affect the character of the cow's milk.

"5. Cow's milk has six times the amount of calcium of human milk, but such salts are not so available to the human infant as the calcium of woman's milk.

"6. The casein or protein of cow's milk forms a tough curd in the infant's stomach, and since the infant's digestive organs are poorly developed, the casein is only partially available.

"7. Cow's milk is frequently constipating to both infants and adults and has a tendency to gas formation.

"8. Both vitamins and minerals are a variable item in cow's milk, depending on her diet. The cow borrows all she contributes in food values from vegetation. If what she eats does not have vitamins, her milk cannot contain same.

"9. Animal milk certainly has proven of value in the feeding of infants and children, still, because of certain lacks and dangers to be found in cow's milk, an effort to find a safer and more suitable substitute is justifiable.

"10. Deriving nourishment from cow's milk is an extravagant waste of food materials, since the cow returns but 12 per cent of her feed in milk and only 8 per cent of what she eats is stored as muscle tissue for beef.

"After all, the only perfect food for humans is woman's milk, and that only during the lactation period, as every animal gives a perfect milk to start off the nourishment of its kind. The reason goat's milk is better for infants, is that its offspring's growing needs more nearly parallel those of the human infant, whereas the milk of the large animals whose offspring make a very rapid growth are not so suitable for the human species without considerable modification. Thus extensive modification of cow's milk is required to make it suitable for infants, so that baby food manufacturers discard some of the fat, others modify the salts, still others soften the curd, and some replace the entire sugars; and to be sure of vitamins, they always have to be supplemented.

"So, we ask why not build up just the milk we want to start with, and this we have now accomplished. Nevertheless, cow's milk will still continue to occupy an important place in the American dietary, but let us not conclude it is indispensable, by any means. However, we are convinced that every process the cow uses to make milk could be duplicated in the laboratory as regards the transformation of food materials to become a part of our growth and energy needs. We have sugars even superior to animal lactose, vegetable oils with a less tendency to rancidity. Minerals, as also vitamins, are today added to food with greater certainty than depending on their existence in animal milk, and thus far there is no protein superior to that found in the soy bean, as it contains all the indispensable amidoacids [sic, amino acids] that constitute complete protein nutrition" Continued. Address: Mt. Vernon, Ohio.

1073. Miller, Harry W. 1944. The story of milk from the soya bean (Continued–Document part III). Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. See p. 12-18.
• ***Summary:*** Continued. "Encouraged to Produce a Vegetable Milk: Having arrived at these conclusions which were based on extensive feeding experiments, we set about to get milk from a vegetable cow. However, my colleagues shook their heads saying, 'You might make something that looks like milk, but will it have those living properties that fit the requirements of a growing life in the form of a human individual?' But I have only to remind them that in the early days we thought of vitamins as living principles that evaded analysis, causing reactions but perishing with attempts at investigation, subsequent years have erased this argument and we can now analyze vitamins as well as manufacture them, as they have a chemical formula.

"I could easily have become discouraged in trying to bring out a substitute for animal milk because of the well established dairy business in America where sixteen per cent of United States industry flourishes, except that all the while I had in mind the people of the Orient in behalf of whom I had dedicated my life for service as a young man. Millions die annually for the lack of a suitable balanced food beverage to take the place that animal milk occupies in the American dietary, and as many more suffer lifelong weakness and ills because of faulty nutrition, especially in the early years of life. I was also well aware that in America we have many who cannot take animal milk, either dislike it, are fearful of it, or are allergic to it, who are ill nourished for lack of a milk substitute. And even yet cow's milk is not available to all the inhabitants of the Americas.

"As I pondered over what a suitable milk food would mean to the Oriental races, where there was such a lack of that kind of food, I felt that humanity was throttled at its start. I was also aware of the dangers to health and life that lurk in the lacteal secretions of animals and the way milk is handled in dairy yielding countries. Consider also the economic food waste, in view of the enormous amount fed to animals and the little protein return. Think of what this well-processed vegetable protein would mean were it fed

© Copyright Soyinfo Center 2014

to the starving millions of this world. I determined to work out the problem of a vegetable milk. It occurred to me that if wool could be made direct from vegetable protein instead of feeding protein to the sheep, we could make milk without the digestive laboratory of the cow.

"I first investigated to see what had been accomplished, and discovered that two groups of child specialists, one in Baltimore, the other in Cleveland, had fed infants a gruel made from soy bean meal, and the reported results were very satisfactory. In America, all experimental feeding work was done with mixtures made from milling the soy bean into flour, although the fiber of the meal was a drawback. Yet because of the high nutritive value of soya protein and its alkalinizing properties, it possessed remarkable values as reported in infant feeding by these authorities.

"We made the acquaintance of two men prominent in soy bean work of the U.S. Department of Agriculture, Dr. W.J. Morse, Chief of the Soy Bean Division of the Department of Agriculture, and Dr. J.A. LeC1erc. Chief Senior Chemist of the Bureau. These men filled me with inspiration, enthusiasm and information. Throughout the succeeding years, we have had several interviews, and both of these men have made frequent visits to our Nutrition Laboratory at Mt. Vernon, Ohio.

"My preliminary studies made me aware that I would be confronted with many problems in producing from the soy bean an easily digested, tasty, wholesome milk that would meet a popular demand.

"My thirteen years spent at the nation's capital as surgeon and Medical Superintendent of the Washington Sanitarium and Hospital gave me a preliminary foundation in research methods for the years to follow in China. These years, from 1913 to 1925 were synchronous with the time of the beginning of modern dietetics. [Elmer] McCullum at Johns Hopkins University in Baltimore was neighbor to us, and he was actively pursuing the study of vitamins and their dietetic value. I was intimately acquainted with this pioneer worker and in fact at the Government Bureaus in Washington there was a great arousement on the importance of dietetics and cooking advances, to which work I had ready access, as well as utilizing the marvelous Surgeon General's and the Congressional Library facilities, seeking the latest publications on food, processing and nutritional work.

"It was during this year I published my first book entitled, *The Way to Health*, which has enjoyed a wide circulation.

"During all these studies, my thoughts were focused on the Soy Bean, the world's great protein yielder, and how to best utilize it, and incorporate it into the American dietary as a substitute for meat, fish, milk, eggs and cheese. Early and late we were running experiments at the little food plant we erected in connection with the Washington Sanitarium and Hospital. We realized that the large things in soy bean utilization in America, as also in the Orient, remained to be worked out in the future, and that our work was the first real effort to be recorded relative to a soy bean milk suitable for infant feeding and as a complete beverage milk.

"Further Studies in China: Finally in 1925 the opportunity came for me to return to China. My employing organization, the Seventh-day Adventist Church, sent me to establish a sanitarium at Shanghai. During the early years after my return to China, my time was fully occupied with medical and surgical work and the building of the Shanghai Sanitarium and Clinic, and assisting in the establishment of numerous other medical units in different parts of the Orient. However, simultaneous with this work, my son and I began to carry forward the assembly of a soy bean plant at the Shanghai Sanitarium. My work necessitated my return to America for a brief period about every two or three years and this gave me the chance to discuss my problems with chemists as well as investigate suitable processing machinery.

"In my contacts, while traveling in China. Korea and Japan, I discovered that a milky looking solution, a water extraction of soya protein, oil and its contained vitamins and minerals, had been tried out in infant feeding in some hospitals, in some instances with satisfactory results, but for the most part with quite disappointing results.

"The method used in its manufacture in most cases was to soak the beans, grind them in a stone mill with a stream of running water and this milky solution was filtered through a cotton cloth and then boiled, sugar added, and various flavors tried out to cover the beany taste, but flavor control was not possible by the strongest essences. As I examined this milk, it was apparent that something must be done to overcome the beany taste, and I concluded the reason the people were using bean curd rather than drinking the milk from which the curd was made, was that it tasted better after it was coagulated than before. Further, it needed to be farther processed to make it more digestible, and until we could add sugar and additional oil to it, we could not have a balanced milk as is found in human milk.

"Being familiar with the process of constituting cow's milk from skim milk powder, and sweet butter, through melting the butter, mixing it with the dissolved milk powder, and then homogenizing it, I concluded that we could do the same with this water-extracted solution from the hydrated soy bean.

"Since I knew that soy milk was a colloid liquid just the same as animal milk, and would hold a suspension of emulsified oil, I lost no time in getting a colloid mill that would do this same work, and could now constitute a liquid of any formula of protein, fat and sugar, so the resulting solution would be a colloid liquid as animal milk. Yet, I was far from having a milk that gave satisfactory results as to digestibility and could be borne by infants without too great looseness of the stools; and while you could sweeten it up so babies would take it, the older group would take a

© Copyright Soyinfo Center 2014

sip and turn it aside because of its bitter taste. To get rid of that beanish taste seemed far off, but to process it so that it could be more digestible, I thought was surely possible. Much work had been done at Ames, Iowa, in experimental animal feeding. Not only did these experiments show that thorough cooking under pressure of soy beans raised the availability of soy protein to 95 per cent absorption, but that weight and growth records in feeding of pigs and fowls were far superior to those of animals fed ordinary cooked beans, and thorough processing caused a disappearance of digestive disturbances."

Note. This is the earliest English-language document seen (Dec. 2013) that contains the word "beanish" or the term "beanish taste" used as the word "beany" or the term "beany taste" are used today (Continued). Address: Mt. Vernon, Ohio.

1074. Miller, Harry W. 1944. The story of milk from the soya bean (Continued–Document part IV). Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. See p. 18-23.
• ***Summary:*** Continued. "This coincided with work that I had done in which I discovered the fact that the more you process vegetable protein, the more digestible and available the protein becomes, while the contrary holds for animal proteins, which are less digestible when overcooked. Having proven that soy beans were improved in both taste and availability through thorough processing, we conducted extensive cooking tests to determine optimum temperatures and length of cooking required to give us the best flavor and to render the several soya products, including soya milk, most readily digestible and assimilable. In the feeding of infants, whereas simply boiling milk causes great looseness of the bowels, as soon as we processed at the correct temperature and determined the exact period of time in most cases even the premature and weakest infant could take the soya milk without this laxative effect. Occasionally an infant would still have too loose movements and the soya milk would have to be modified by adding the acidophilus organisms or a little boiled cow's milk. With the solving of many nutritional problems regarding soya rations, we began feeding it to the infants and children at the Shanghai Clinic, keeping careful records in each case. We had no difficulty in getting children to accept soya milk, even though it was not so tasty in those days as the soy milk we have now.

"I knew there were yet many factors that must be solved to accomplish in this vegetable milk all that is claimed for animal milk. For instance, we must correct the beany taste, then the milk must be capable of being made to formula, containing definite quantities of fat, sugar, protein, minerals and vitamins. It must remain a colloid liquid and be capable of spray-drying into a powder that completely reliquefies, also made as inexpensive as animal milk.

"All these I believed must and could be accomplished, just as we had already made the milk more digestible than animal milk. The first problem was that of flavor control. I had endeavored to educate my American friends to learn to like the natural bean taste, just as people have learned to like yeast, as later the soya taste will be as pleasant to them as to the Oriental people who do not care for the taste to be changed. But the result was that they would pick up a glass that looks like animal milk, smell of it and sip it and say, 'It does not taste like cow's milk.' To this I replied, 'No, it does not taste like cow's milk, nor goat's milk, nor horse's milk, nor human milk," but I assured them that an infant would as readily change from its mother's milk to soya milk flavor as to cow's milk flavor. When I insisted on their drinking a glass of it instead of smelling of it or sipping at it before they passed judgment on its taste, the results were much better. Still I concluded that it takes much more than mere proof that a thing is scientifically correct to put a food across. The food must have a taste appeal and I believed that this could be accomplished with soya milk. It is a fact that food we relish is the food that gets the most bountiful supply of our digestive secretions, for good flavors and odors are a stimulant to the organs of digestion.

"Returning to America, I addressed myself again to this problem of removing the beanish taste. I had previously filed application to the U.S. Patent Office for a patent for constituting a vegetable soy milk of any given formula. Through our research we had now found that which was responsible for the beanish taste and also what to do to debitter it. We were able to make a milk from the soy been that could not be detected as from the bean. I therefore appeared at Washington with my samples of debittered soy milk powder and canned liquid soy milk and accompanied by my attorney we went before the commissioner of patents. Never before was I put through such a grilling. One man had spent several months looking through all available literature to see if my claims were entirely original and others checked over to see that they were true, and then my finished products were examined by expert tasters. The commissioner assured me that there were already patents on making a vegetable milk out of the soy bean and that as far as he knew none had ever netted their originator very large returns. This was my opportunity, and I remarked, 'Yes, but you have no patent that gives a method for debittering the soy bean nor of constituting a milk from it of any given formula, and not one of those products is palatable.' He and his taster admitted having tasted many soy products, and this was the first time there had ever come to them a truly debittered soy milk.

"My lawyer assured me my case was won and in a short time I received word that the patent had been awarded me No. 2078962. This patent covered several processes original with us, as debittering, and thus making a usable milk; the special methods of cooking so as to make soy products readily digestible; the method of preserving the protein from spoiling whereby it could be bottled as liquid milk, tinned as condensed milk, or dried as powdered milk;

© Copyright Soyinfo Center 2014

also the method of incorporating through homogenization the food principle to any given formula, reinforced by both vitamins and minerals. It but remained for us to find suitable machinery and equipment for practically carrying out extensive production by means of the above patented processes, and since much of this was not available, we had to have some specially built. For many years we had made soya milk only for our Shanghai Sanitarium and Clinic, using a few small machines and cookers sufficient for our needs. Through this small unit we were able to carry on extensive feeding of infants and children as well as the sick patients, also expectant and nursing mothers. Remarkable results were obtained in feeding post-operative cases, as they could start nourishment with soya milk much earlier than with other foods without the usual gas complaints. Ulcer of the stomach people did exceptionally well, also sprue patients, those suffering from colitis, the several types of dysentery, and those with constipation. For diabetics and arthritis cases the results were most satisfactory. In meeting up with allergy, soy milk proved to be the one food we could always turn to in our dilemma of finding something to agree with those suffering from skin rashes, vomiting. diarrhea, nervous attacks, dyspepsia. etc.

"In order to meet a growing demand for soya milk, we shipped to China the essential machinery for the first soy bean milk factory. It was the first soy bean creamery ever established and equipped with laboratory and machinery to make canned milk, condensed milk and spray dried powered milk and vacuum packed bottled milk, with regular deliveries. Milk routes were established in all parts of Shanghai, and the production doubled each succeeding month. Three types of liquid milk were produced: natural soya milk, chocolate soya milk and acidophilus milk, packaged in pint and quart bottles. The price to the consumer was less than that of cow's milk in Shanghai, which thus made available a milk rich in food value for all members of families whose circumstances did not permit them to buy the more expensive animal milk. It was here demonstrated that soya milk in every way filled the average family requirement for a milk, and that in countries where the economic conditions make impracticable dairies, where stock feed is scarce and costly, the people may still have an equally suitable milk. We were able to bottle soya milk so that it would keep indefinitely without the need of refrigeration, and could be kept for a week or a month if necessary without spoiling. Thus we had a bottled milk and also a powdered milk that did not require refrigerators, and the expense of delivery was eliminated. Also, people were assured of a pure bacteria-free milk, one that would not give rise to intestinal disturbances in hot weather.

"Soyadophilus, a delicious sour milk made by growing the lactic acid organism in sterilized soya milk, had a remarkably large sale. In fact, cheese and numerous other preparations were made from our soya milk, while the powder afforded a convenient form in which to ship soya milk to western and northwestern China, where transportation rates were high. One pound of powder will make eight pounds, or four quarts of liquid soya milk" (Continued). Address: Mt. Vernon, Ohio.

1075. Miller, Harry W. 1944. The story of milk from the soya bean (Continued–Document part IV). Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. See p. 23-30.
• ***Summary:*** Continued. "Unfortunately, the war that broke out in Shanghai on August 13, 1937, put an end to this illustrious beginning of making a soya milk with the vegetable cow. The sales returns were just beginning to equal the cost of operation. As a consequence of the war, the fire and bombing destroyed more than a hundred thousand dollars, national currency, worth of property and equipment. However much valuable experience had been gained during this time through the feeding of infants and children and the dieting of special disease conditions. The results of this experience were published in the *China Medical Journal,* 1937. These results showed that soy bean milk was second only to mothers milk in the feeding of infants and children and has no equal in dieting cases of stomach acidity and other intestinal complaints. The high biologic value of its protein, the ease of its digestion and ready absorption, when combined with dextrose and maltose, yielded a food of tremendous value to the people of the Orient where the soy bean is indigenous. This brief experiment in conducting a soy bean dairy left a contribution far exceeding the losses sustained by fire and the bombs. For two years we had to turn largely aside from food manufacture. We were busy establishing and organizing a sanitarium at Hankow, China, known as the Wuhan Sanitarium and Hospital. This large institution was extensively used for the care of sick refugees and disabled and wounded soldiers up till October 25, 1938, when the Japanese army forces entered the Wuhan area. Three months later I, with a group of four other Americans, being among the first to evacuate from Central China, were granted transportation on a Japanese transport to Shanghai.

"The Role of the International Nutrition Laboratory in America: Back in America, my first thoughts were how most advantageously to follow up our food research work and lay hold upon the wealth of nutritional advance and the knowledge of food processing in the U.S.A. in perfecting processes developed in China. The need of the peoples of the Orient was uppermost in our mind and protein direct from vegetation seemed their only way out for adequate nutrition, the soy bean naturally being that source. We, therefore, secured land and erected a suitable building on a farm at the suburbs of Mt. Vernon, Ohio, as this was in the soy bean growing belt.

"No sooner did we start the foundation of the building than we began also to fabricate the equipment for carrying forward the processes already worked out for the

© Copyright Soyinfo Center 2014

manufacture of soya milk and subsidiary food products from the soy bean according to our more recent research. The farm gave me opportunity to grow several types of the edible soy beans. The edible soy beans differ widely from the field type beans grown so extensively in the United States. The field varieties are raised for hay or for ripened beans to be used by the oil refiners, the residual bean cake is sold for stock feed. A small part of the bean crop is used for flour. The edible beans are those varieties that are better flavored, easier to cook, make better flour and are such as can be shelled in the immature state for green pack tinned beans. There is as much difference in foods made from the edible beans and those made from the field soy beans as in the taste and quality of sweet corn and that of field corn. There are two belts in America for producing soy beans. Some varieties of soy beans mature in from 90 to 120 days and are suitable for planting in the northern belt which includes the states of Ohio, Indiana, Illinois, Michigan, Wisconsin and Iowa, and the beans requiring over 120 days to mature are grown in the southern belt including the states of North and South Carolina, Georgia, Arkansas, Texas and Missouri.

"Out of fourteen varieties of the edible beans planted on our farm, four outstanding varieties were selected, namely, Bansei, Aoda, Funk's Delicious and Hokkaido. These four mentioned in the order of their value were found best for green pack canning, also made the best quality flour and milk, and were found best for processing for other foods. From our southern soy bean station located in North Carolina, there were three varieties, namely, Rokusun, Tokyo and Woods Yellow, named in the order of their value for food processing, A very unique feature of our farm experiment work was the shelling of green soy beans, with the use of a Viner obtained from the Scott Viner Company of Columbus [Ohio]. Some 40,000 cases of these delicious beans were put up this season (1943). A single unit of these Viners is capable of shelling five tons of green beans in one day.

"Because of the limited production in America of these fine vegetable types of soy beans, we readily saw that we would have to run, as an important adjunct of the laboratory, a seed department, and an extensive agricultural program in raising this type of beans, and our methods in these lines have been perfected to overcome shattering, uneven ripening and other heretofore drawbacks to the raising of these splendid beans. We now have under cultivation annually several hundred acres of these large delicious edible soyas for green bean canning and for milk processing.

"Our factory, a newly built brick structure, lined with enameled tile, was completed in the autumn of 1939 and contains laboratory space, test kitchen space where soy milk and soy products are under continual tests for their combining properties in tasty recipes. This modern food factory has three large boilers for supplying steam pressure for processing, and contains specially constructed stainless steel cookers, vacuum pans, spray dryer, iron cow (homogenizer), grinder, centrifuges, sterilizers and other processing machinery. This is our first model plant where we have arranged the machinery in series so that the hydrated beans start at one end of the factory and come out a dehydrated complete milk powder at the other end, all ready for tinning in sanitary cans, and shipping.

"Nothing is perhaps more spectacular than to watch this milky bean juice being converted into a palatable, readily digestible milk, containing all the food essentials, with minerals and vitamins added and flowing from the iron cow in quantities as much as is often secured from the aggregate milkings of several hundreds of cows. It is truly a wonder, a colloid milk, bacteria free, being made in a sanitary laboratory.

"The splendid tasting and readily soluble powdered milk as it is now produced at the International Nutrition Laboratory came about only as a result of much effort and time in making many improvements and alterations of equipment from week to week. Dr. Weisner, of Ohio State University, did much valuable research work on the bacteriology of soy milk, and we are indebted to Dr. W.J. Morse for supplying seeds and much valuable information, and to Dr. LeClerc, senior chemist of the Government Department of Agriculture, for check-ups that assisted us in the standardization of our products.

"We were fortunate in being able to develop this milk in the Orient with a background of the Chinese experience with soy bean foods for ages and also have the benefit of scientific and technical expert help in the United States through the frequent visits I made to this country, and I feel profoundly grateful for the services of many of the leading nutrition experts as also the laboratory and engineer help to be found in Government Bureaus at Washington and at the Ohio State University. For vitamin assays, I am indebted to Dr. Howard J. Cannon, Director of the Laboratory of Vitamin Technology at Chicago. In the Orient we also had able laboratory help, and the feeding work was under our own supervision in Shanghai Sanitarium Clinic, a 200-bed hospital conducting a very large maternity and children's department.

"Soy beans can be grown in almost any country of the world and are capable of many methods of preparation. In Oriental countries we need to improve the preparation of soy bean foods to make them more digestible. In the Occident we have readily at hand the processing vats to thoroughly cook the beans, but to go over big, they must be made readily available and also palatable. The International Nutrition Laboratory, as its name indicates has been established to thoroughly process the bean and at the same time make it palatable so that its use can be universal. In warm climates or frigid areas nothing is more easy of digestion than the colloid liquid, soya milk.

"On several occasions we have gone out to lecture and give demonstration to clubs and to the annual meetings of the American Soy Bean Association. We have observed the

© Copyright Soyinfo Center 2014

textiles, fabrics and plastics made from soy bean protein with great admiration. At one meeting, wool was shown made from the soy bean and at another a cap, necktie, and many other articles we use" (Continued). Address: Mt. Vernon, Ohio.

1076. Miller, Harry W. 1944. The story of milk from the soya bean (Continued–Document part VI). Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. See p. 30-34.
• ***Summary:*** Continued. "After all, protein is an important component of our clothing and many articles we commonly use. The soy bean is nature's greatest protein yielder. From 35 to 52 per cent, or almost one-half the weight of the dried soy bean, is protein. Next in value is the oil. By way of comparison with navy beans, peas, lentils and lima beans, the soy bean has 300 per cent more protein and ten times as much oil content.

"In making up our dietary requirements, we pay eight times as much for our protein as we do for carbohydrates and three times as much for protein as we do for oil. This may impress the reader with the great economic wealth in the soy bean. Nitrogen or protein is of first importance to the growth and maintenance of the human race, as well as the entire animal kingdom. While mankind has often depended on the flesh and products of animals, such as milk and eggs, for this protein supply, the animals had to basically depend on vegetables for their nitrogen. It is only vegetation. that can utilize the nitrogen of the air and inorganic sources of nitrogen and place it in accessible form for animal life. For instance, we exhale every atom of nitrogen of the air that we inhale. None is utilized or stored in our tissues. Therefore, whether we drink animal milk, eat animal flesh, or take only vegetation, we get our edible protein solely from plant life, and there is no superiority in the animal stored protein, to that eaten by the animal and which is primarily available to the human from vegetation. So, as the sheep makes wool from the protein it eats, so the cow makes casein from the protein she eats. Unless the animal gets protein, there would be no wool or casein. But it is not necessary to use the animal digestive laboratories to make either wool or milk, for we can take the products the animal eats to make wool or milk by means of laboratory technique, and that under sanitary conditions.

"The chief and outstanding product of the International Nutrition Laboratory is soy milk, put out under the names of Soyalac and Soy-A-Malt, names having originated in the early days of our experimental work while pioneering in this field. Soy-A-Malt is put out under the registered trade mark No. 390909 U.S. Patent Offices and Soyalac registered trade mark is 389131 U.S. Patent Office.

"However, the Laboratory is concerned in making a large variety of foods from the soy bean and already has a score of such products on the market utilizing the entire bean, which is all valuable in human nutrition. Since milk has a wide variety of uses, we are making a beverage liquid Soyalac put up in tin cans, of 13 ozs. and 30 ozs. respectively. A chocolate flavored Soyalac is also put up in 13 oz. tins. A modified infant food powder, called Soyalac, is put up in one pound glass containers, which meets all the requirements of the growing infant from birth onward to the end of the nursing period, after which it is used to supplement the child's diet. This infant food has as its chief constituent vegetable oils homogenized, a combination of sugars including dextrose, maltose and dextrin, and supplemented by vitamin A and D with calcium, phosphorus and iron added. Hundreds of babies in America and other countries with allergy, weak digestion and intestinal disturbances, are now being most satisfactorily nourished by Soyalac, a complete infant food including all known requirements for infant nutrition.

"Miller's Soy-A-Malt is now a country-wide known beverage milk sold in either natural malt flavor or chocolate flavor and packed in one-pound, four-pound and twenty-pound containers, possessing all values of the soy bean nutritionally but without the bean flavor. Many who want a milk more nearly the animal milk flavor call for All Purpose Soyalac. This is packed in containers same as Soy-A-Malt, and can he used for cooking purposes as well as beverage the same as animal milk. Until we brought out these vegetable milks which are rapidly taking their place in the market beside cow's milk, soya milk was chiefly demanded for certain specific diseases such as correcting acid states, intestinal upsets, and for diabetics. The composition of all soya milk powders will be found on the labels as well as directions for using them.

"Frozen soya milk desserts and soya ice cream are now quite popular. Recipes are given for the home refrigerator.

"This little pamphlet concerns itself with the history of soya milk development rather than trying to cover the field of the International Nutrition Laboratory, for this soy food processing institution is the largest plant in the world devoting its entire efforts to human nutrition from the soy bean and for making meat substitutes. Foods that look like and taste like meat are made with high protein values. Our canned soya beans are among the most delightful and tasty vegetables. The soy bean is nature's highest protein yielder and the International Nutrition Laboratory engages in the manufacture of these fine protein foods from the edible varieties only.

"No claims are made that soya milk has yet been developed by us to its final possibilities, but at least these twenty-five years of painstaking study and experimentation has resulted in a food second to none as an essential to strong body building and health. So much progress has been made in changing the extracted milk liquid of the soy bean used for millenniums by the people of China for making cheese [tofu] into a complete food of inviting appearance and delicious taste, with food values the equivalent of either

© Copyright Soyinfo Center 2014

human or animal milk that we feel rewarded for the effort and expense. Our soy milk can be made into a sour milk resembling buttermilk, it can be made into a cheese, and this cheese can be treated so as to have the appearance and flavor of meat. We have not tried to enter into the comparative values of soya milk and cow's milk. There is much to be said regarding the value of soya milk and the story of Soya Milk would not be complete without a summary of the many virtues and nutritional values of soy food products. The soy bean, often called these days the 'wonder bean,' is just as wonderful as a food supplier as in the oil industry, or when used for plastics.

"The protein of the soy bean possesses all of the indispensable amidoacids [sic] and therefore is a complete dietary substitute for milk, eggs and meat, and stands as the only vegetable protein that is biologically equal to meat proteins. By our extraction process we are able to obtain 85 per cent of this edible protein in a soluble form that means that it is very readily digested. Truly, it is a wonder bean, for it does wonders in the nourishment of the well as also the sick. It is good for growth and excellent for body maintenance" (Continued). Address: Mt. Vernon, Ohio.

1077. Miller, Harry W. 1944. The story of milk from the soya bean (Continued–Document part VII). Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. See p. 34-37.
• ***Summary:*** Continued. "Let us notice the high points in favor of soya milk as manufactured by the Miller process at the International Nutrition Laboratory:

"1. The edible soy bean, which is the protein base of soy milk, is the richest source and unquestionably the highest type of protein known.

"2. Soyalac made by our modern equipment takes from the soy bean about 85 per cent of its protein content, 50 per cent of the oil and the major portion of the mineral and vitamin content, all of which is extracted in true colloid liquid form.

"3. Soya protein contains all the indispensable amido-acids that are of known value in human nutrition, and is biologically comparable to animal protein.

"4. Soyalac, as made by the International Nutrition Laboratory, supplies every purpose of animal milk for the new born, the growing child, for the adult, the pregnant or nursing mother, and in the dieting of special diseases.

"5. Soya milk, being first thoroughly debittered, is capable of affording all varieties of flavors by their addition, and its sweetness will depend on the amount of dilution added.

"6. It is hypoallergic and serves as a substitute protein diet to those of allergic tendencies.

"7. It has a definite standard formula which can always be maintained, for it is laboratory checked.

"8. It is free from pathogenic germs and other types of harmful bacteria.

"9. It is a definitely alkalinizing food of great value in treating arthritis or dieting acid or ulcer states, and serves as an ideal nonresidue diet of high nutrition value in intestinal disorders, particularly amoebic dysentery, sprue and colitis.

"10. Mixed with lactic acid bacillus or acidophilus cultures it makes a delicious sour milk drink and one of known therapeutic value in intestinal disturbances.

"11. Eight pounds of soy beans fed to a cow will produce a gallon of cow's milk, whereas the same eight pounds of beans by our process yields eight gallons of soya milk equivalent in value to cow's milk. In other words there is a great economic saving, not to consider perhaps other advantages in a vegetable milk.

"12. It is the only vegetable protein that is biologically equal to and may be substituted for animal milk, cheese, eggs, fish and meat in the human diet with safety, and mixes well with fruits and vegetables.

"13. All Miller's milks are richer in calcium than cow's milk and are vitamin D fortified.

"This little pamphlet on the Story of Soya Milk is issued by the International Nutrition Laboratory, Mt. Vernon, Ohio.

"Other Products of the International Nutrition Laboratory: The Vegetarian Cutlet is another of Miller's distinctive high protein foods. These are marketed as choice, uniform sliced cutlets for frying or broiling; or diced for use in roasts, chop suey, patties, croquettes, hash, or as meat extenders. Sold in small family size, or in large containers for hotels, restaurants and institutions.

"Miller's Canned Green Shelled Soya Beans are a treat. They contain the nutritious values of meat, fowl, eggs and milk. They are grown as choice edible beans, and canned just before ripening.

"Miller's Soya Spread not only takes the place of butter as a spread, being rich in fat as well as protein, and very pliable; but is also combined in many table recipes. It comes packed in 14-oz glass sealed jars.

"Miller's Soya Milk is packed in various formulas and different sized containers.

"Soya Malt, as a spray dried powder, either with a malt or chocolate flavor.

"Soyalac all purpose milk, for either a beverage or in cooking and baking.

"Soyalac Infant Food, a soluble milk powder, hypo-allergic, fortified as a complete vegetable milk.

"Soyalac Liquid Milk, in either natural or chocolate flavor.

"For descriptive material regarding other Miller Foods, such as Soya Loaf, Vegetable Cheese, Soya Flour, write to the manufacturers at Mt. Vernon, Ohio." Address: Mt. Vernon, Ohio.

author. xix + 437 p. Illust. 24 cm. [21+ ref]
• ***Summary:*** The maintenance of physical and mental health can be achieved through a vegetarian diet and wholesome living. Interesting sections include: Meat not necessary (p. 150-52; 13 quotes from authorities). Denmark's food experiment under Dr. Hindhede during World War I (p. 152-53). Sixteen reasons for vegetarianism (p. 153-). The animal kingdom a reservoir for disease (p. 165-). Note that Madison College is a Seventh-day Adventist college and sanitarium.

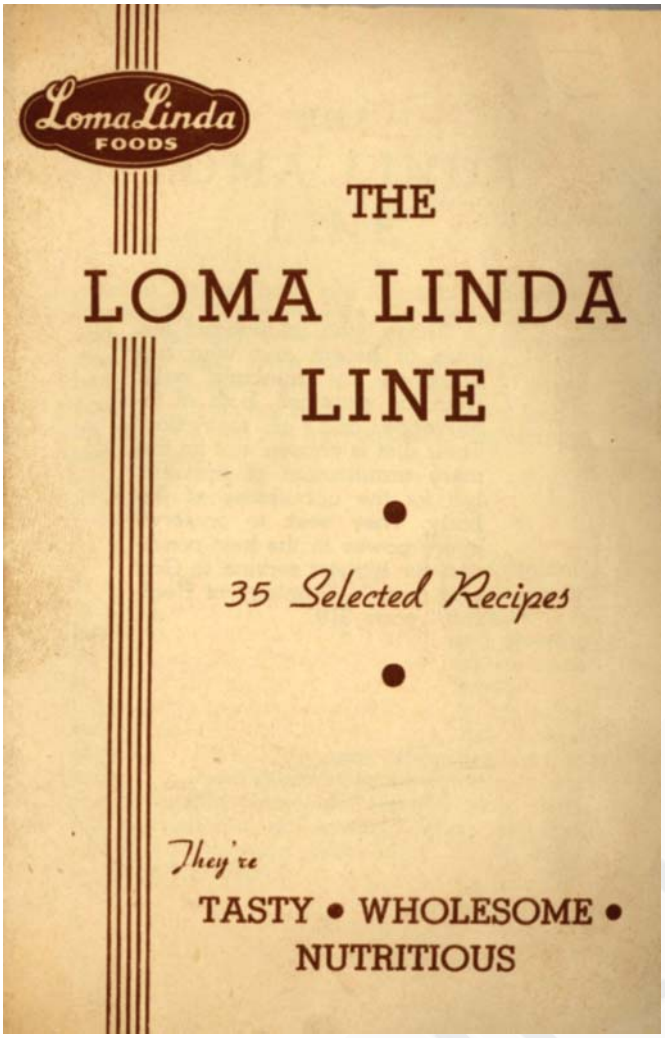
Soya is discussed on the following pages: Soybeans and soybean products as a replacement for meat (p. 151-52). One section titled "The Soybean: The Wonder Food" (p. 345-59) discusses many aspects of soybeans and how to use soybeans: In baking. In general cooking. As beans. As beans ready-cooked. As meat. As milk (gives 3 recipes for making soybean milk and ways for using "the pulp left after making milk"). As cream. As cheese ("A very satisfactory soybean cheese is now available in the health food stores. It has a texture something like cottage cheese..."). As butter. As oil. As home-made soy butter (made from 4 tablespoons each soy flour and water, 1 cup of oil, a little salt and butter color if desired). As home-made soy mayonnaise (based on the above home-made soy butter). As soy acidophilus milk (also often called soy buttermilk). As greens (soy sprouts). As soy sauce. As coffee. As substitute for egg white.

On page 389 begins a long treatise on the safety of aluminum in connection with cooking and foods, a subject which is causing much debate. Address: Madison, Tennessee.

1079. Gotham, Lucille J. 1944? Allergy to certain foods. *Madison Health Messenger* (*Madison, Tennessee*) 6(1):1-2. Undated.
• ***Summary:*** A reader writes to ask: "I am on a diet eliminating wheat, milk, and eggs. What products and foods can I substitute for them while I am experimenting?" The author answers: "Milk is the hardest problem. Through the years nut milks and soy milks have been developed, and they may be used in cooking in place of cow's milk, with satisfying results for almost everyone. They are also very nutritious. The soy milks are liquid or dry... If you make your own nut or soy milk you had better ask your physician about the advisability of adding some dicalcium phosphate with viosterol and some vitamin A. These additions will not change the flavor noticeably, and they will safeguard your health.

"You will like soy cheese in place of real cheese. Health food stores have these special foods." The following recipes are then given: Nut milk (almonds make the best milk). Soy milk (made from soy flour). Plantation cocktail (with soy milk). Creamy soup (with soy milk and Savita [a product made from brewer's yeast]). Soybean apple crisp (with soy flour). Soy cookies (with soy flour). Creamy rice pudding (with soybean milk). Soy piecrust (with soy flour). Corn soy mush (with soy flour). Mayonnaise (with soy flour). Address: Dietitian.

1080. **Product Name:** Miller's Veja Links (Meatless Wieners).
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1944?
Ingredients: Incl. seasoned okara or soy flour, and wheat gluten.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Herbert P. Ford. 1958. *The Life Story of Dr. Harry W. Miller.* p. 130-31. Dr. Miller developed a "vegetarian wiener" [Veja Links] containing raw vital wheat gluten, soy flour, seasonings, and flavors. He stuffed these into wiener casings, submitted them to a smoke house and to cooking, then peeled off the casings / skins and canned the wieners. He developed these at the Mt. Vernon slaughterhouse.



In the mid-1940s Dr. Miller developed Veja Links, the world's first meatless wiener or hot dog, made of seasoned okara and wheat gluten, packed in a sausage casing.

1081. **Product Name:** Savory Bits.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Arlington, Riverside, California.
Date of Introduction: 1944?
Ingredients: Incl. wheat flour, soy flour, Savorex.
Wt/Vol., Packaging, Price: -
How Stored: Shelf stable.
New Product–Documentation: The Loma Linda line: 35 selected recipes (booklet). 1944? Page 16. "Tasty wafers made from wheat and soy flours with a liberal addition of Savorex, the savory vitamin food flavor."
*

1082. Loma Linda Food Company, Inc. 1944? The Loma Linda line: 35 selected recipes. Arlington, Riverside, California. 16 p. Undated. 16 cm.
• ***Summary:*** This little undated booklet, bound with 2 staples, is printed with brown ink on tan paper. Front cover: "They're tasty. Wholesome, Nutritious." On the inside from cover is a quotation by Ellen G. White: "Those who understand the laws of health and who are governed by principle, will shun the extremes, both of indulgence and of restriction. Their diet is chosen not for the mere gratification of appetite, but for the upbuilding of the body. They seek to preserve every power in the best condition for the highest service to God and man" (Source: *Ministry of Healing*, p. 319).

Contents: Soy beans (canned; introduction + 4 recipes). Soy Mince sandwich spread (Specially ground soy bean with nuts, olives, tomatoes, and choice vegetable flavoring; 9 recipes). Garbanzos (canned, 4 recipes). Proteena (Plain or with smoke flavor) (A nut- and cereal combination with

© Copyright Soyinfo Center 2014

a meat-like texture, "yet contains no animal product"; 8 recipes). Nuteena (Makes tasty cutlets; 7 recipes). Savory lentils ("One of the latest additions to the Loma Linda line." Grown in Chile. Cooked, seasoned to impart a meat-like flavor, and canned. 2 recipes). Syl-Dex breakfast wheat (with dates and powdered psyllium, dextrinized). Oven-cooked wheat (dextrinized, 1 recipe). Fruit cereal. Breakfast cup (Made with soy beans, plus grains and figs. Alkaline beverage served like coffee). Fruities (bite-sized raisin-filled wafers). Fruit wafers. Date sandwich. Soy-Weet Wafers (with soy flour). Ruskets (Whole wheat with malt, sugar, and salt; dextrinized). Soy milk (canned). Savorex (yeast extract). Savory Bits (Wafers made from wheat and soy flours plus Savorex). Address: Arlington, Riverside, California.

1083. U.S. Regional Soybean Laboratory. 1945. Sources of edible soybeans. Urbana, Illinois. 3 p. Jan. 30.
• ***Summary:*** This 3-page table contains 4 columns: Varieties and sources, addresses, amount, and price. Varieties: Aoda (5 sources). Bansei (28). Easycook (2). Etum (3). Funk Delicious (5). Giant Green (2). Higan (2). Hokkaido (5). Imperial (1). Jogun (5). Kanro (2). Mendota (7). Rokusun (1). Sac (2). Sanga (1). Soncei [sic, Sousei] (1).

Growers include: Associated Seed Growers, Inc., 301 Kentucky Ave., Indianapolis, Indiana. E.F. Johnson, 1337 McCutcheon Ave., Richmond Heights, Missouri. Farmers Seed & Nursery Co., Faribault, Minnesota. Fred H. Scholl, Memphis, Tennessee. Holmes Seed Co., 224 Cleveland Ave., Canton, Ohio. International Nutrition Laboratory, Mt. Vernon, Ohio. LaChoy Food Products, Archbold, Ohio. L.L. Olds Seed Co., Madison, Wisconsin. G.G. McIlroy, Farm Management, Inc., Irwin, Ohio. Ray Monier, Carrollton, Missouri. Rufus Gillett, R.R. 2, Mazomanie, Wisconsin. Russell-Heckle Seed Co., 16 S. Trout Street, Memphis, Tennessee. J.A. Saltzer Seed Co., LaCrosse, Wisconsin. Strayer Seed Farms, Hudson, Iowa. T.W. Wood & Sons, 11 South 14th St., Richmond, Virginia. W. Atlee Burpee Co., Clinton, Iowa.

Footnote: *"This list is compiled for the convenience of those interested in edible soybeans. We recognize that it is not complete but does include all of those who have replied to our questionnaire. We make no statement as to the varietal purity or seed quality since we did not request producers to send in samples of the seed they had to sell. We will welcome names of any additional growers."

Note: This is the earliest document seen (July 2013) that mentions the soybean variety Sanga. Address: 178 Davenport Hall, Urbana, Illinois.

1084. Bowman, Ferne; Maharg, Leta; Mangel, Margaret; McDivitt, Maxine. 1945. Culinary preparation and use of soybeans and soybean flour. *Missouri Agricultural Experiment Station, Bulletin* No. 485. 28 p. Jan. [32 ref]
• ***Summary:*** Contents: Introduction (brief history of soybeans). Purpose of investigation. Nutritive value of soybeans: Protein, carbohydrate, fat, minerals, vitamin A, the B complex vitamins. The place of soybeans in American diets. Green soybeans (or immature soybeans). Soybean sprouts. Dry mature beans (pressure cooked at 15 pounds pressure). Three recipes. Soybean products as meat extenders. Four recipes. Soya flours: Full fat food flour, low fat food flour (expeller processed), low fat food flour (solvent extracted). Fifteen recipes. Pastry (1 recipe). Yeast breads (2 recipes for rolls).

Tables: (1) Amino acid content of soybean glycinin and milk casein (percentage). (2) Biological value of various proteins (raw vs. heated). (3) Iron availability of some common foods (percentage). (4) Vitamins (7 types) in edible varieties of soybeans (Aoda, Bansei, Green Giant, Hokkaido, Toku, Willomi). (5) Comparison of vitamins in meat, wheat, and mature soybeans. (6) Rating of nine "garden varieties of soybeans." (7) Comparative cooking qualities of 13 varieties of soybeans (mostly "vegetable types" but including two "field types"). (8) Analyses of 12 brands of soya flour and comparative weight per cup: Minimum fat flours–Mel

Worthington Foods, Inc. in Dec. 1945.
Manufacturer's Address: Worthington, Ohio.
Date of Introduction: 1945 February.
Ingredients: In 1975: Wheat protein, oats, soy grits, dehydrated onions, HVP, yeast extract, whole wheat flour, potato meal, corn oil, soy sauce, mushrooms, dextrose, L-lysine, monohydrochloride, salt, niacin, thiamin, iron, sage extract, vitamin B-6, riboflavin, vitamin B-12.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Note: This is the second earliest known vegetarian "burger" (with the word "Burger" or "Burgers" in the product name) made America.

Special Foods. 1945. Wholesale price list. Feb. 15. "Protein foods (Alternates for meat): Choplet-Burger. 1 lb. 14 oz. $5.60 doz."

Ad in *Health* magazine. 1947. Feb. p. 2. "Good foods for every occasion. A photo shows Choplet Burger and other early Worthington Foods' products.

Chopletter (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Choplet Burger.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Chopletburger contains 20.10% protein, 0.10% fat, and 10.99% carbohydrate. Not listed in 1965 *Diet Manual.*

Jimmie Joan Thurmon, compiler. 1969. Adventures in vegetarian cooking: Over 200 meatless main dish recipes. On pages 121-22 Choplet Burger, made by Worthington Foods, is listed under the category "Gluten Burgers."

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned steak or burger-like product based on wheat protein.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 175. The ingredients in "Choplet Burger (Worthington)" are listed.

Interview with James Hagle. 1983. The Choplet Burger was the company's first product and meat analog with soy as a main ingredient. Sold in 30 oz. cans it had a texture like hamburger. It could be shaped into patties and fried.

Worthington Foods. 1989. "The Tradition of Healthy Choices." April. A photo (p. 17) shows a can of "Choplet Burger." Though no details are given in the text, the product's famous predecessor, Choplets, are discussed in detail.

1088. *Business Week.* 1945. Is it oleo, or not? Soya butter subject to a jumble of conflicting rulings. April 21. p. 95-96.
• ***Summary:*** "Soya butter is bringing lots of business and plenty of grief to W.G. Barnard of Cleveland [Ohio], whose vegetarian Natural Foods Institute has developed a thriving business distributing this butter substitute.

"Margarine or not?: The Bureau of Internal Revenue has ruled that soya butter is oleomargarine, that Barnard must have a $480 wholesaler's license, a $48 retail license, and must collect a 10¢-a-pint tax from his customers. But the U.S. Food & Drug Administration holds that soya butter is not oleomargarine and that to label it as such would be misbranding, inviting penalties." The sole manufacturer of this product is Butler Food Products Co. of Cedar Lake, Michigan.

1089. *Soybean Digest.* 1945. Ohio ruling on soya butter. May. p. 14.
• ***Summary:*** "Federal Judge Robert N. Wilkin of Cleveland, Ohio, has ruled that the soya butter produced by Butler Foods products of Cedar Lakes, Michigan, is not taxable as margarine nor should it carry the margarine label...

"The Bureau of Internal Revenue has ruled that soya butter is margarine, subject to federal tax and license fees. But the Food and Drug Administration holds that the product is not margarine and to so label it would be misbranding."

1090. *Soybean Digest.* 1945. A.S.A. supports bill to define soya butter. June. p. 15.
• ***Summary:*** "The board of directors of the American Soybean Association has gone on record in support of a bill in Congress to define soya butter as being distinct from margarine.

"The bill would lift soya butter, an all vegetable product made from soy oil and other soybean derivatives with added carrot oil to give it a bright yellow color, out of an amazing tangle of federal and state rulings that have hampered or prevented its sale altogether.

"Manufactured by Butler Food Products of Cedar Lake, Michigan, soya butter is being sold in that state under a restraining order pending the outcome of a suit by Bureau of Internal Revenue to collect the 10 cents a pound federal tax levied on colored margarine. The manufacturer also has obtained a court order preventing enforcement of the state's margarine laws against soya butter."

1091. *Madison Survey* (*Madison, Tennessee*). 1945. Madison health foods. 27(16):63. Aug. 29.
• ***Summary:*** "A letter written some weeks ago from Addis Ababa, Ethiopia, by Mrs. Della Hansen, housekeeper in the Emperor's palace, addressed to Madison Foods, says:

"'His Majesty, the Emperor of Ethiopia, has seen your advertisement in *Life and Health,* and has asked me to write requesting a sample of each of your products.'

"Samples of Zoyburger, Yum, Vigorost, Soy Cheese [tofu], Stakelets, Not Meat, and Soy Koff were sent to the Emperor via the Ethiopian minister in Washington [DC].

"Never before in the history of the food manufacturing department of Madison has there been such evident interest

© Copyright Soyinfo Center 2014

in foods that meet the protein needs of the family dietary."

Note: This is the earliest document seen (Aug. 2009) concerning soybean products (canned meatlike products from Madison Foods) in Ethiopia. This document contains the earliest date seen for soybean products in Ethiopia (1945); soybeans as such had not yet been reported by that date.

1092. Arnold, Julean. 1945. Soy–China's Cinderella. *Soybean Digest.* Sept. p. 36-37, 69.

• ***Summary:*** In the summer of 1937 masses of Chinese refugees poured into Shanghai in frantic efforts to escape Japanese armed forces. The immediate problems were food and shelter. One relief agency, China Child Welfare, Inc., with which the author worked, helped to establish 220 refugee camps to accommodate 250,000 people. Since tofu is too concentrated for infants, the group turned to soybean milk. "Fortunately the Peking Union Medical College of the Rockefeller had several decades earlier carried on extensive research with the soybean under the direction of a Russian scientist Dr. A. A. Horvath. He became a great enthusiast on the nutritive properties of the soybean. He found that by adding a certain amount of calcium lactate, sodium chloride [table salt] and sugar to the soybean milk, it would be possible to produce a substitute for cow's milk, and at a fraction of the cost of cow's milk. Chinese trained under him carried on research experiments.

"Thus when we were interested in preparing a scientific, sanitary, and standardized soybean milk we looked for assistance to Doctors Ho and Tso who were trained at the P.U.M.C. but later came to Shanghai to join the Lester Institute where they continued their work on soybean nutritive products. So we impressed them into service. We also secured much aid from Dr. W.S. Fu, who supervised a Chinese children's hospital in Shanghai. He gave us accommodations for setting up a small plant for the manufacture of soybean milk in one of the court-yards of his hospital." A description of the equipment and process used is given. After boiling the soymilk for 20 minutes, calcium lactate, sodium chloride, and sugar were added. The soybean milk was served hot to the children in the camps. The plant was managed by Miss Nellie Lee, a Chinese who graduated from Mt. Holyoke College and had studied dietetics and social science.

After taking the milk from the soybean, there is a residue [okara] very rich in protein. We found by adding 40 percent coarsely ground wheat flour which is also plentiful in China, plus the other ingredients above mentioned, we could make a biscuit which when baked in an oven proved to be very palatable. It represented probably the greatest food value for the cost obtainable. A Chinese department store baked them for us. We distributed millions of them to the refugee camps.

"In order that our committee might take the fullest possible advantage of the very able assistance we received from Chinese scientists, doctors and others we organized the China Nutritional Aid Council with Chinese and American members for the express purpose of popularizing a properly prepared soybean milk and other soybean nutritional products." This council, backed by China Child Welfare, Inc. of New York, launched a campaign to share with people in other parts of China "the advantages of our experiences in providing soybean milk for from 25,000 to 37,000 children daily in the refugee camps in addition to several millions of soybean biscuits furnished the refugees."

"Another American medical missionary, Dr. H.W. Miller, went much further in his experiences with soybean milk products. He became so enthusiastic about their possibilities that he set up a modern plant in Shanghai for their manufacture, with facilities for producing qualities acceptable to those whose palates rebelled against the ordinary types of soybean milk."

After the Japanese bombing of Pearl Harbor, the China Nutritional Aid Council and its soymilk plant moved to Chung-king [or Ch'ung-ch'ing, a city in southern Szechuan province; the Kuomintang made it the political capital of China from Oct. 1938 until the end of World War II]. Nellie Lee has worked for 5 years "spreading the gospel of soybean milk for the great masses in that country."

"When John D. Rockefeller Jr. came to Peking about 25 years ago to dedicate the Peking Union Medical College of the Rockefeller Foundation, he told me that he found it harder to spend money than to make it." A large photo (p. 36) shows a Chinese mother feeding her children "soy milk and soy cakes at a food shop where highly nutritious foods are made and sold at cost prices."

Note 1. This is the earliest document seen (July 2012, one of two) that uses the word "Cinderella" in connection with the soybean. The author, however, does not elaborate on this idea. This is the earliest document seen (July 2012) with "Cinderella" in the title.

Note 2. In the winter of 1937 K.S. Lo of Hong Kong, age 27, happened to be in Shanghai on other business. There he attended a talk by Julean Arnold titled "Soya Bean: The Cow of China." This talk inspired Lo to establish the Hong Kong Soya Bean Products Co., Ltd. in March 1940. This company later made the world-famous Vitasoy soymilk. If the date and title of this talk are correct, this would be the earliest date seen (Aug. 2002) for the use of the term "Cow of China." Address: Berkeley, California.

1093. Butler Food Products. 1945. Nutritive value of the soybean (Ad). *Soybean Digest.* Sept. p. 58.

• ***Summary:*** The company's main product is Butler's Soya-Butter [a non-dairy margarine made from soy oil], which contains 97.2% fat, 1.8% carbohydrates, and 1% protein. "Non Fattening: The fat of soybeans is of a particular quality and it is not stored in the body as is animal fat, therefore you

may eat freely of Butler's Soya-Butter without the fear of putting on additional weight... No Contamination: There is no animal product of any kind in Butler's Soya-Butter..."

Other Butler Foods: Butler's Vegetarian Chops. Butler's Soya-Nut Loaf. Butler's Vegeburger. Butler's Meatlike. Butler's Soy-Nut-Cheese. A photo shows H.O. Butler. Address: Cedar Lake, Michigan.

1094. International Nutrition Laboratory. 1945. Soyalac (Ad). *Soybean Digest.* Sept. p. 40. [1 ref]
• ***Summary:*** This full-page ad is mainly for bottled "Soyalac: A spray dried infant food." It notes that this company also makes "* Miller's Soya-Malt. A malted soya milk mostly used as a beverage milk. * Miller's Chocolate Soya-Malt. Also a tasty beverage milk. * Miller's All-Purpose Soyalac. A natural soya milk for both beverage and cooking purposes. Packed in 1-lb., 4-lb., and 20-lb. containers." Three photos show 1-lb glass jars of "Soyalac: A spray dried infant food." On each jar is a photo of a seated baby. Address: Mt. Vernon, Ohio.

1095. *Madison Health Messenger* (*Madison, Tennessee*). 1945. Madison Foods–Madison College, Tennessee. 7(1):4. Undated.
• ***Summary:*** See page after next. A full-page photo shows the following canned products, with a brief description of each and the price: Stake-Lets (a combination of gluten and soy beans). Not-Meat (a meatless loaf for cutlets, roasts, patties, croquettes, salads, etc.). Yum (a mild Bologna flavor. Contains soy beans, wheat gluten, and seasonings). Zoyburger (excellent for sandwich spreads or served like a steak with onions). Vigoroast (a vegetable steak). Wheatasoy (an alkaline breakfast food, ready to eat. Contains rich grain malt, whole wheat, and soy-bean flour). Zoy-Koff (Prepare like coffee. No trace of caffeine. No nerve stimulants. Two grinds–regular and fine). Kreme O'Soy (a soy milk for those allergic to cow's milk and for special diets. A liquid not concentrated). Soy Cheese (soy curd (tofu) seasoned for croquettes, salads, sandwich spreads, etc.).

A separate photo across the top of page 1 of this issue shows a ground-level view of the "Madison College Campus, Home of Madison Foods."

1096. *Madison Survey* (*Madison, Tennessee*). 1945. Food-manufacturing industry. 27(19):76. Oct. 17.
• ***Summary:*** "Again Madison Foods has made a carload shipment of nearly 65,000 pounds to the Pacific Coast, to distributors in Los Angeles [California] and Seattle [Washington]. This car contained Zoy Koff, the cereal drink, 350 cases of Kreme O'Soy Milk, and 1,350 cases of the protein foods-Vigorost, Yum, Zoyburger, Not Meat, Stakelets, and Soy Cheese."

"It is now an established fact that we are not dependant on flesh foods for the protein content of the daily rations." After discussing an article about soybeans in *Reader's Digest* titled "How we can help feed Europe's hungry" (Sept. 1945, p. 50-52), the *Madison Survey* concludes: "Madison is fortunate at such a time as this to be able to manufacture and market products that are helping in the solution of the greatest food problem the world has known."

1097. Holman, Ross L. 1945. A chemurgic fantasy. *Yale Review* 35(2):282-91. Dec. Condensed as "New riches from farm synthetics" in Science Digest. 1945. 17:53-55. March.
• ***Summary:*** The farm chemurgic movement, started in 1934 to find industrial markets for surplus farm crops, has begun to grow. W.J. Hale is the founder of the present chemurgic movement. "There is no farm crop that the test tube has turned into more industrial products than soy beans. It is surprising to see what the soy bean can become in the hands of a chemical juggler. To offset war scarcities it can be processed into many things, from gunstocks for guns to a good substitute for butter; from vitamin K for our blood to a handkerchief for our tears.

"America's industrial pioneer number one with soy beans is Henry Ford. With a staff of chemists, a laboratory, and several thousand acres of soys he is turning these beans not only into a large variety of things to eat but into something to wear and ride, to keep the rain off and to doctor our liver troubles. We may recall how extravagant Ford sounded to us in the Twenties when he said that some day we would be able to dispense with the farm cow and drink synthetic milk [See *New York Tribune*, 9 Feb. 1921]. This fantastic prophecy made rich material for newspaper reporters and cartoonists. There were comic caricatures of a robot cow pouring out synthetic milk to be churned into a synthetic butter. Today reporters and cartoonists know that the joke has backfired. Ford's chemists have been getting milk from soy beans for years. The milk has been shown to have important food values. The list of Ford's soy foods includes meats, cheese, breakfast foods, macaroni, bread, crackers, sweet milk, buttermilk, and coffee."

Reichhold Chemical Corporation and one or two other companies are producing soy-bean rubber at the rate of 25,000 tons a year.

The author also discusses how Henry Ford uses soy beans to make synthetic wool. "Ford himself frequently wears a soy-bean suit, and experiments seem to prove that it can be manufactured at less cost than any other textile fiber. Two Japanese scientists processed a wool from soys before the war and insisted that wool for a whole suit of clothes could be manufactured for less than a dollar."

"The climax of Ford's pre-war chemurgic achievements was the manufacture of a car with a all-plastic body. The body, made largely of soys, was 1,000 pounds lighter than a similar car with a steel body... Just about the time it was ready to go into production Pearl Harbor stalled the manufacture of cars for the duration.

SOYALAC

★ A time-tested and medically approved nonallergic infant food.

Miller's Spray-Dried Soyalac is a soluble soya milk modified and reinforced with proper proportions of essential oils, carbohydrates, minerals, and all required vitamins except vitamin C.

While Soyalac is the distinctive Distinctive Values in Infant Feeding

and only soluble spray-dried, completely modified vegetable milk offered to replace either mother's or cow's milk, and intended for babies and children of early years, other types of spray-dried soya milk are available for general family use. All these contain the equivalent of cow's milk in food value and calcium.

★ **Miller's Soya-Malt.** A malted soya milk mostly used as a beverage milk.

★ **Miller's Chocolate Soya-Malt.** Also a tasty beverage milk.

★ **Miller's All-Purpose Soyalac.** A natural soya milk for both beverage and cooking purposes.

Packed in 1-lb., 4-lb., and 20-lb. containers. Priced on a level with cow's milk. If your druggist or health food store does not have Miller's Soyalac Infant Food, packed in 1-lb. glass jars, or other brands of Miller's Soya Milk, write to Box 388.

Rx NOTE TO PHYSICIANS: A manual on Soya Milk Infant Feeding is obtainable from the address below.

1. Ready preparation.
2. Easy digestion.
3. High protein availability.
4. A complete infant food requiring only the addition to the diet of vitamin C in form of orange or tomato juice.
5. Nonallergic; thus it can be substituted for cow's milk for children with eczema, regurgitation, dyspepsia, etc.
6. Nonconstipating.
7. Costs no more for baby's diet than prepared baby foods from animal milks.
8. Soya protein most readily assimilated. Since protein is the growing portion of the baby's diet, it is important that the child has the maximum intake it can utilize.

INTERNATIONAL NUTRITION LABORATORY · MT. VERNON, OHIO

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

"Madison College near Nashville, Tennessee, is an educational institution that has turned farm chemurgy into a bonanza... The chief crop handled here is the soy bean, which is manufactured into 30 foods ranging from meat to coffee." The students, working their way through college, make the foods and student nurses and boys taking pre-medical courses play a major role at the school's sanitarium, where "patients are nursed back to health on soy foods."

At Taftville, Connecticut, the National Dairy Products Corporation is now manufacturing 10 million pounds a year of Aralac, a wool-like fiber made from the casein in skim milk.

"America's pioneer chemurgist, who performed scientific miracles before chemurgy ever got its name, was the late Dr. George W. Carver, of Tuskegee Institute in Alabama. Dr. Carver's record of processing over 300 industrial products from the peanut and 120 from the sweet potato is too well known to need discussion here."

Note: This is the earliest document seen (April 2002) that mentions vitamin K in connection with soy.

1098. **Product Name:** Kellogg's Corn Soya Shreds (Breakfast Cereal). Renamed Kellogg's Corn-Soya by 1950.
Manufacturer's Name: Kellogg Company.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1945.
Ingredients: 70-80% yellow corn, 20-30% solvent extracted soybean flakes, sugar, salt, malt flavoring, vitamin B-1, niacinamide.
Wt/Vol., Packaging, Price: 7 oz. paperboard cereal box.
How Stored: Shelf stable.
Nutrition: 1 oz provides these percentages of the minimum daily adult requirements: Vitamin B-1 19%, riboflavin 3.2%, calcium 2.5%, phosphorus 6.9%, iron 18.4%. Plus 0.556 mg niacin and 5.10 gm protein (in Feb. 1951).
New Product–Documentation: See next page. Ad (full page). 1945. "Kellogg's Maizoy: Put it on your grocery list today. Kellogg's amazing new cereal." Below the large word "Maizoy" on the front of the 7-ounce box is written: "Toasted Shreds of Corn and Soya. Ribboned, milled corn and soy with sugar, salt and malt flavoring." "Brand-new!

Grand-new! Good-for-you!" A photo shows the front of the box. Note: The name Maizoy was used, starting in July 1944, only for test marketing in two U.S. towns.

Ad (full page). 1945. "Kellogg's Corn-Soya Shreds: Oh, what a wonderful breakfast. Dive into this crunchy cereal. Thrive on this extra nourishment." A photo shows the front of the box. An illustration shows a girl in pigtails holding a spoonful of the shredded cereal.

Ad (full page). 1945. "Kellogg's Corn-Soya Shreds: Another Kellogg triumph! We've found a perfect blending of flavor and nourishment." A photo shows the front of the box. An illustration shows a boy licking his lips and holding a spoonful of the shredded cereal. Ad (full page). 1945. "You've got a free treat coming. At last! a cereal made with Soya that's crisp, light, delicious." One illustration shows a postman delivering a small box to a smiling housewife. A second shows a smiling boy holding a bowl filled with the shredded cereal. A photo shows the front of a 7-ounce box of Kellogg's Corn-Soya Shreds. "Brand-new! Grand-new! Good-for-you!"

Ad (5½ by 8½ inches). 1945. "Brand-new! Grand-new! Good-for-you!" A photo shows a bowl of Corn-Soya

at last! a cereal made with SOYA

that's CRISP LIGHT DELICIOUS

Another Kellogg triumph! After 20 years of experiment, we think we've hit upon the perfect blending . . . corn, full of flavor and food energy . . . with soya, richer in body-building proteins than any cereal. Vitamins and minerals, too. Corn-Soya Shreds are crunchy, golden-toasted, tasty and crisp!

What's more, this new cereal is ready in an instant . . . no cooking, no pots or pans to clean. Get ready to smack your lips over a brand-new, wonderful flavor! Just pour these tempting shreds into bowls, serve with milk and sugar or fruit . . . you and your family will revel in their tasty goodness. Your grocer has Corn-Soya for you now in full-size, economical packages.

THE PROTEIN VALUE of one ounce (about ⅔ cup) of Corn-Soya Shreds with four ounces of milk equals that of one egg with three slices of bacon. Buy some today!

Brand-New! Grand-New! Good-For-You!

You've got a free treat coming

Your FREE sample package of Corn-Soya Shreds (enough for 4 servings) will be delivered to your door in a day or two. And . . . no matter what your experience with soya products has been before . . . YOU'RE IN FOR AN EXCITING SURPRISE! We're so proud of this new cereal that we're bringing it to you now, inviting you to try it at our expense . . . *and we think you'll love it!* It's gloriously delicious! It's extra nourishing! It stays crisp! See for yourself what a taste thrill a cereal made with soya can be.

Shreds topped with 5 strawberries. "Because soya is such a wonderfully nutritious food, hundreds of people have tried for many years to prepare it so you would really like it. And now, Kellogg's have done just that. Created a tantalizing new blend of corn and soya that combines crispness, flavor and nourishment in a way that's different from any cereal you ever tasted!"

Sales Card (5½ by 8½ inches). 1945. "Kellogg's special news flash. The brand-new, grand-new, good-for-you cereal is here!... Kellogg's Corn-Soya Shreds."

Sales Card (5½ by 8½ inches). 1945. "Kellogg's special news flash. Women say–'Give us more ready-to-eat foods.' Millions of women working during the war have learned the great value of ready-to-eat foods–and they want more of them. Kellogg's delicious new Corn-Soya Shreds meet this need."

Sales letter sent with samples. 1945. "There's never been a cereal like Corn-Soya Shreds before!" A photo shows a 7-ounce box of Kellogg's Corn-Soya Shreds which "are the triumphant result of 20 years of experiment to combine tip-top nourishment with exciting flavor and crispness! Nobody except Kellogg's ever dreamed of blending corn and soya, with their energy and protein–in a miraculous new way not found in any other cereal on the market.

"We're sending you this free sample because we sincerely feel that no matter what your experience with soya products has been in the past... you'll have a delightful surprise when you try Corn-Soya Shreds. Taste for yourself how wonderfully crisp and lively and delicious this new cereal really is!

"Your grocer has full-size packages ready for you and your family to enjoy."

Soybean Digest. 1946. June. p. 24. "Corn-Soya Shreds, made of ribbon milled corn and soya with sugar, salt and malt flavoring. The product is crisp and tastes like Corn Flakes, is packaged in Kellogg's usual red and green carton."

Penty. 1947. U.S. Patents 2,421,216 and 2,421,217. Describe process and product.

Soybean Digest. 1947. May. p. 28. "Corn-Soya Cereal" "Texas and Florida have been chosen as the starting points for an introductory campaign for W.K. Kellogg's new breakfast cereal, Corn-Soya, reports *Food Field Reporter.* Sampling, dealer service, and advertising are under way in the two areas. Previously tested markets were Harrisburg, Pennsylvania; Charlotte, North Carolina; Sioux City, Iowa; and Sacramento, California. The drives now under way in Texas and Florida are the beginning of the 'big push' to put Corn-Soya on a national distribution basis."

Soybean Digest. 1948. Aug. p. 33. "Nationwide sales: Kellogg's Corn-Soya Shreds." "Over the past 2 years 15 million samples have been distributed." A large illustration shows the front of the box.

Ad (full-page, color) in Life magazine. 1950. Oct. 16. p. 25. Sweetheart of a breakfast! Extra nourishing! Extra good! And the freshest Corn Flakes of all! (Ad). Shows a small package of Kellogg's Corn Soya in a 10-box variety pack of 7 cereal favorites.

Soybean Digest. 1950. Oct. p. 16-17. "Kellogg's Corn-Soya on Countless Tables." By 1945 a product was developed that passed all Kellogg's quality tests. "In the next 18 months it was subjected to sales testing in California and selected eastern markets. National distribution was completed in 1947." News release from Kellogg Co., Battle Creek, Michigan. 1950. "Facts about Kellogg's Corn Soya."

Soybean Blue Book. 1951. p. 90.

Ad (full-page, color) in Life magazine. 1951. Feb. 19. p. 60. "New protein food–helps you have a fine body!" A photo shows a box of "Kellogg's Corn Soya."

Rosenvold & Rosenvold. 1963. *Rx Recipes: A Manual of Healthful Cookery.* p. 148. Corn Soya Shreds are listed as a type of cereal containing soy, probably soy flour.

Robert Boyer. 1985. Reminiscences. p. 115. David Crippen recalls that Garry Moore, a popular entertainer for many years, was sponsored at one point by Kellogg's Corn Soya. He had a little jingle that he used to say: "Corn Soya, oh boya, how I enjoya, in the foya."

Letter (fax) from Rita Grandgenett of Kellogg Co. to Paul and Gail King of The Soy Fan Club's Drive-in. 2000. Oct. 20. This product was launched in 1945 and discontinued in 1959. Note: Thanks to the archives of the Kellogg Co. in Battle Creek, Michigan, for sending (Oct. 2001) copies of the many 1945 ads and sales sheets.

1099. **Product Name:** Loma Linda Soy Flour.
Manufacturer's Name: Loma Linda Food Co. (Marketer-Distributor).
Manufacturer's Address: 11503 Pierce Place, Arlington, California. Phone: Riverside 9217.
Date of Introduction: 1945.
New Product–Documentation: Wholesale price list. 1945. Today's Food. 1964. Autumn. p. 5. Wholesale price list. 1968. 16 oz. for $0.47 retail. Soybean Blue Book. 1949. p. 99. Loma Linda Food Co. in Arlington, California is a packer and distributor of soy flour.

1100. **Product Name:** Loma Linda Soy Sauce.
Manufacturer's Name: Loma Linda Food Co. (Marketer-Distributor).
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1945.
New Product–Documentation: Wholesale price list. 1945; Soybean Blue Book. 1949. p. 103. Also listed in 1955, 1960, 1970. They were not a manufacturer. Today's Food. 1964. Autumn. p. 5. Wholesale price list. 1968. Sold in 4 oz., pint, and gallon sizes.

1101. Lager, Mildred. 1945. The useful soybean: A plus

© Copyright Soyinfo Center 2014

factor in modern living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. Illust. General index. Index of recipes. 22 cm.

• ***Summary:*** One of the most important and innovative books on soyfoods ever written. Contents: Preface. 1. Agriculture's Cinderella: America discovers the soybean, our wonder beans, soy as a food in the United States, soy in rehabilitation food programs, soybeans as an emergency crop, soybean terminology. 2. World-wide use of soybeans: A real antique, monarch of Manchuria, soybeans in mechanized warfare–Germany, soybeans in other countries (USSR, Italy, Spain, Belgium, Holland, Norway, Denmark, Sweden, Great Britain, Canada), soybeans in Lend-Lease and United States Agricultural Marketing Administration, Food for Greece, soybeans and the Mexican Indian, soybeans in Hawaii (Mr. C.G. Lennox). 3. Soybeans and industry: The versatile soy, uses of soybean in industry, soybean paint (from soy oil, incl. Duco finishing), soybean protein (used in making plywood, plastics, water paints, paper sizing, leather finishes, and insecticide sprays), Henry Ford and soybeans, soybean glue (I.F. Laucks and the firms he has licensed turn out some 30,000 tons of soybean glue annually), rubber substitute (Norepol), paper industry (Glidden), plastics, soy-cotton helmets, firefighting compounds, lecithin, fertilizers. 4. Nutritional nuggets: Food value of soybeans and soy products (vegetable or edible types of soybeans, protein, fat & carbohydrate, minerals, vitamins, lecithin, alkaline ash, economy, exaggerated claims), principal uses of soybeans and soy products (meat substitutes, meat enrichers, fortifying foods with soy flour). 5. From soup to nuts: Green beans, dry beans, frozen beans, roasted soybeans, sprouted soybeans, the cow of China–soy milk, the meat without a bone–tofu or soy cheese, the little giant among protein foods–soy flour, soy grits, puffed grits, soy oil, miscellaneous soy products (soy butter [soynut butter, p. 99-100], sandwich spreads, malts, coffee substitutes, soy sauce, soy albumen–a new product, greatly improved during the past two years, is now used to "replace egg albumen in candy manufacture" [as in marshmallows]).

Note 1. This is the earliest English-language document seen (March 2001) that refers to tofu as 'the meat without a bone.' In 1938 Horvath called tofu 'the meat without the bones.' Note 2. This is the second earliest document seen (Aug. 2002) in which the soybean is called the "cow of China."

Note 3. This is the earliest English-language document seen (Aug. 2003) that uses the term "soy albumen" (or "soy albumens") to refer to isolated soy protein as a product.

6. The blazed trail: Introduction (history and pioneers), our tardy acceptance, food pioneers (health-food stores, Dr. W.D. Sansum of Santa Barbara and soy bread, allergy studies, vegetarians, Seventh-day Adventist food companies, meatlike products, Madison College of Tennessee, Loma Linda Food Co., the International Nutrition Laboratory and Dr. H.W. Miller, special dietary concerns and diabetic diets), establishing soybeans in the kitchen (The Edison Institute and Henry Ford, the USDA and the U.S. Bureau of Home Economics, the Agricultural Marketing Administration, U.S. railroads, the Soy Products Division of the Glidden Co., the Soy Flour Association). 7. The challenge of nutrition: The dangers of hidden hungers, nutrition and health, corrective nutrition, starch-restricted diets, meatless diets, allergy diets, bland diets, building diets, reducing diets, acidophilus culture, lecithin. 8. Our wonder crop: Jack and the beanstalk, early history, new varieties, aids to the industry (Regional Soybean Industrial Products Laboratory, American railroads, American Soybean Association, Fouts Brothers of Indiana, *Soybean Digest* and George Strayer in Hudson, Iowa, Soy Flour Association with Edward Kahl as first president, Soya Kitchen in Chicago (Illinois) opened in Jan. 1943, National Soybean Processors Assoc., National Farm Chemurgic Council), educational program, restrictive regulations. 9. Soybeans and the farmer: Varieties, sources of information, seeding and inoculating, harvesting, grading, soybean diseases, crop rotation, damaged beans. 10. Tomorrow: Acreage and production, soybeans on the farm, soybeans in nutrition, postwar industrial uses, future improvements. 11. A few suggestions for better living: Kitchen diplomacy, personal opinions, soybeans for everyone. Recipes: Green soybeans, dry soybeans, sprouted soybeans, roasted or toasted soybeans, meat-substitute dishes, soy-enriched meat dishes, soy noodles, macaroni, spaghetti, sauces and gravies, soups, salads, dressings, soy spreads, soy milk, tofu or soy cheese, soy butter, soy cereals, soy desserts, soy candies, soy beverages, soy-flour recipes, bread and muffins, pancakes and waffles, soy gluten recipes, baking-powder biscuits, pastry, cookies and doughnuts, cakes.

Contains recipes for "Soy milk molasses shake (p. 238). Soy puddings. Soy ice cream (p. 250; "Soy milk may be used in place of regular milk in ice-cream recipes... adding whipped cream"). Soy fruit ice cream. Soy chocolate dessert (Eggless) (p. 250-51). Soy shake "(p. 254, made in a "liquefier or mixer").

The story of Allied aid to Greece [p. 24-26] is one of the great mercy stories of World War II. Starting in March 1942, as many Greeks were starving, the first mercy ship sailed to Greece with food and medicine. Up to Nov. 1943, the United States through Lend-Lease sent 82 million pounds of food to Greece. A number of these foods (including soup powders, stew mixes, and spaghetti) were based on soy flour and grits, and specifically developed to suit Greek tastes.

Concerning Henry Ford (p. 35-38), his "first experiments were made in a laboratory in connection with the Edison Institute in 1930. In these experiments, several tons of wheat were used, also several thousand bushels of carrots; sunflower seeds, which have a high oil content; cabbages; onions; and cornstalks. It was not until December, 1931, after a long series of experiments with the soybean,

© Copyright Soyinfo Center 2014

that Mr. Ford and his chemists felt that they were at last approaching a solution to the problem of finding a basic farm material from which the ordinary farmer could develop a commercially profitable product."

Note 4. This is the earliest published English-language document seen (Sept. 2013) that uses the term "Soy ice cream" (p. 250).

Note 5. This is the earliest document seen (July 2007, one of two) that uses the word "Cinderella" in connection with the soybean. The author, however, does not elaborate on this idea.

Note 6. This is the earliest English-language document seen (Nov. 2013) that contains the term "soy-flour"–however it is used as an adjective. Address: Southern California.

1102. Lager, Mildred. 1945. Madison College (Document part). In: Mildred Lager. 1945. The Useful Soybean: A Plus Factor in Modern Living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. See p. 106-07.
• ***Summary:*** "There are several large and small Seventh-day Adventist food concerns in this country that manufacture a complete supply of soy products, most of which are cooked and ready to use.

"As pioneers, all these Adventist concerns have done considerable research on soybeans, and most of them employ chemists who have had firsthand experience with the beans in China. These men know the food value of the bean, what it has meant nutritionally elsewhere, and they strive to perfect formulas for well-balanced and complete vegetable protein foods to take the place of meat. Most of these concerns also manufacture soy milk, fortified to equal dairy milk in food value. Their meatlike products at first were for the use of their own people, their hospitals and institutions; but demands for vegetable protein have brought them into health-food stores and food specialty shops. Sales on these products have been steadily increasing with a rapid rise in the last 3 years, climaxed by meat and cheese rationing..."

"Perhaps the best known of the pioneer institutions is Madison College, Tennessee. It is doing an outstanding job in maintaining a self-supporting college and a sanitarium and in developing a complete line of soy products that are being sold on an international scale. Madison's curriculum includes 27 campus industries run by the students to support the college and themselves. A 900-acre college farm is operated entirely by student labor and is also self-supporting. The student canning factory was started when the college was in its infancy, almost forty years ago; and several years of research in food chemistry have resulted in many new products built around the soybean. Madison College is largely responsible for making soybeans appetizing. They have developed a soy milk that has received world recognition; observers have come from Africa, India, and other countries where milch cows are scarce, to study the methods of Madison's soybean dairy. They also make soy cheese [tofu] and several meat substitutes, as well as a soybean beverage. These foods are now well distributed over the United States and some foreign countries, including South Africa."

Note. This is the earliest English-language document seen (Aug. 2013) that uses the term "soybean beverage" to refer to soy milk. Address: Southern California.

1103. Lager, Mildred. 1945. Loma Linda Foods (Document part). In: Mildred Lager. 1945. The Useful Soybean: A Plus Factor in Modern Living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. See p. 107-08.
• ***Summary:*** "The Loma Linda Food Company of California was originally established to supply nutritious vegetarian foods to institutions and hospitals, but it soon outgrew that field. Its sales in the last 3 years has grown by leaps and bounds. The first 6 months of 1943 almost double 1942; and today the company has national distribution of a complete group of soy products including canned beans, soy milk, cheese, several meat substitutes, a soy coffeelike beverage, and soy-fortified cereals." Address: Southern California.

1104. Lager, Mildred. 1945. Preface (Document part). In: Mildred Lager. 1945. The Useful Soybean: A Plus Factor in Modern Living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. See p. vii-ix.
• ***Summary:*** "We of the occidental world are just discovering that soybeans are indeed nuggets of gold in our modern civilization. During the last twenty-five years [i.e., since 1920], they have mushroomed from an almost unknown forage crop to one of our most important cash crops, vital to the fields of agriculture, commerce, nutrition, and industry. Nutritionally soybeans have become a vital food for a world at war and a postwar world at peace. Industrially they are a challenge to the chemists' flasks and test tubes; for more than two hundred commercial products have been made from the little beans. Hence soybeans and soybean products are indeed destined to be a vital plus factor in our world of tomorrow.

"Food has always been my hobby. When Fate, that unseen hand that sometimes guides us to our rightful groove in life, gave me firsthand experience with the miracles of proper diet, teaching fundamental facts on nutrition became my goal. I have tried to pass on the message of better eating via the platform, the printed page, and the radio, and for the last dozen years have enjoyed the unusual opportunity of occupying a vantage point on a busy crossroad of nutrition. I have seen, too, the value of soybeans in the so-called 'corrective regime,' and it has convinced me of their rightful place in the average diet.

"I experimented with soy as a food, secured special soy products for special diets, made up recipes, and in my classes taught the cooking of soybeans when they were practically unknown, when soy was eaten because it was soy and regardless of taste or palatability. In 1942, when soybeans

© Copyright Soyinfo Center 2014

became prominent as a war emergency food, a collection of these recipes was published under the title of '150 Ways to Use Soybeans.'"

"Because my main interest in soybeans and soy products is nutritional, the purpose of this book is to help bridge the gap from the unusual to the usual. I have tried to present the story of Asia's ancient food in a true, authentic manner–to give credit where credit is due. I am not a vegetarian, not affiliated with any organization or group advocating a meatless diet. I believe that proper nutrition and common-sense living are man's best medicine."

"I want to acknowledge the material, encouragement, and help that I have received from the men and women of medicine, research, industry, and business as well as homemakers and friends. I am especially grateful to

1105. **Product Name:** Sovex.
Manufacturer's Name: Sovex Co?
Manufacturer's Address: Marin County, California.
Date of Introduction: 1945?
Ingredients: Incl. nutritional yeast and soy sauce.
How Stored: Shelf stable.
New Product–Documentation: Talk with Craig Klatt, manager of the Seventh-day Adventist Book Center in Pleasant Hill, California. 1990 July 19. The original Sovex product, which was in existence by 1945, was a seasoning based on hydrolyzed or autolyzed nutritional yeast made by a Mr. Sampson in his garage in Marin County, California, where Craig grew up. It was a paste sold in quart mayonnaise jars, and used more as a spread on bread than as a soup base. It was always based on nutritional yeast.

1106. International Nutrition Laboratory. 1946. Dealers order blank. P.O. Box 388, Mount Vernon, Ohio. 1 p. Catalog. Jan.
• ***Summary:*** Lists 14 Soyalac products (all-purpose in 4 sizes, malt flavor in 4 sizes, chocolate in 3 sizes, infant food, natural liquid, and chocolate liquid), Giant Green Soya Beans in 3 sizes, Giant Select Soya Beans, Soya Beans with Tomato Sauce in 2 sizes, Soya Spread, Chili Con Carne (Vegetarian; with wheat gluten, no soy), Chop Suey (Mein Jing, Vegetarian, with soy sprouts), Cutletburger (Vegetarian; with wheat gluten, no soy), and Cutlets (Vegetarian, 4 sizes, no soy). Address: Mount Vernon, Ohio.

1107. Marchbanks, Modane. 1946. Story of the peanut:

© Copyright Soyinfo Center 2014

Know your oilseeds. *Soybean Digest.* Jan. p. 11-13, 33.
• ***Summary:*** "Back in 1890, Dr. J.A. [sic, J.H.] Kellogg of the Battle Creek (Michigan) Sanitarium decided the dietetic values of peanuts for invalids could be increased by reducing them to a smooth paste. The result, of course, was peanut butter.

"At first the paste was made exclusively for ailing persons. But it was not long before it gained a wide reputation and acceptance. Today, scores of factories are devoted solely to making peanut butter" (p. 13).

"The peanut journeyed from its birthplace in South America through Europe and Africa before it reached North America." Peanuts were grown in South America long before Columbus sailed to America. When Spanish adventurers and conquerors landed in South America, they took home peanuts as part of their booty; soon the new plant was cultivated in Spain. When the Spaniards moved on to Africa, they took the peanut with them, and soon it was cultivated in Africa. Then when slave traders made their long voyages from Africa to North America, peanuts helped their shackled human cargo to survive the terrible voyage.

The first peanut market in the United States was established during the last century at Mill Swamp, Virginia, by one Lemuel Womble, who appears to have 'engaged in trading in' the peanut yield of a small number of farms–a few bushels–and shipping to Norfolk, Virginia.

"Not long afterward, Thomas Rowland, of Norfolk–'The Father of the Peanut Industry'–set up the reputedly first peanut business. The peanut developed into a sizable and growing industry during the Civil War, and boomed after it. The first real spurt seems to have been touched off by the taste Union soldiers developed for the Southern legume. They brought it back to their homes.

"In the 5 years preceding 1870, peanut production swelled as high as 300 percent, and it was given a further boost in 1870 when a man with a thick voice sold bags of peanuts at a circus staged by one P.T. Barnum. It was not long before the peanut was a favorite American delicacy, and the colorful street vendor was whistling his way to prosperity and tradition.

"Modern advance: However, on a relative basis, the industry was still small, held down by a lack of machinery for picking, cleaning, shelling. The inception of modern plants containing such equipment was the catapult that sent the industry toward its present heights.

"The first cleaning plant was built in 1876 in New York City, then the leading market, another rose in Norfolk the same year. By 1890, modern peanut-handling plants were not an uncommon sight. Mills were operating as far north as St. Louis [Missouri] and Cincinnati [Ohio]. The industry's most rapid growth was in Georgia, Texas, Alabama, and Florida.

"The boll weevil caused it.

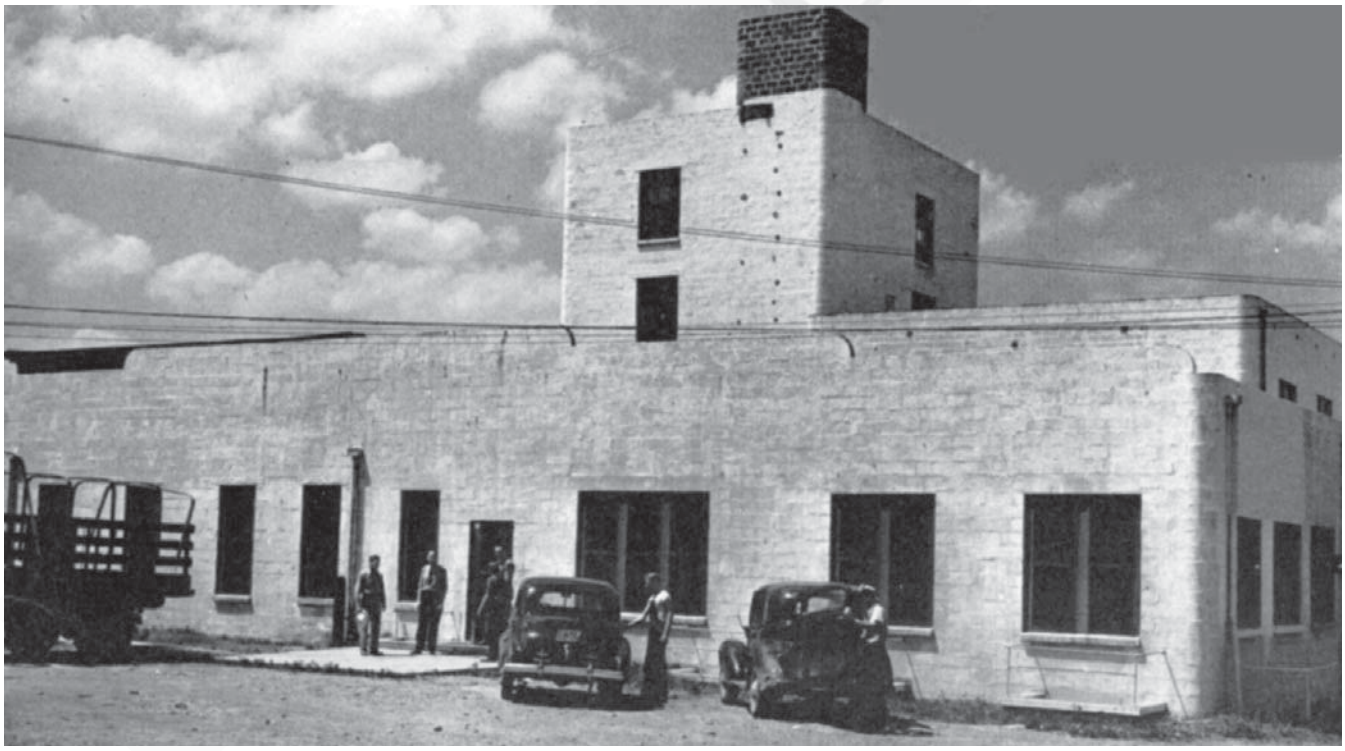
"In 1905, this pest, one of the few to which a monument has been erected with affection, destroyed so much cotton that all farm entries were in red. The farmers faced ruin. Peanuts promised a ready market at shelling and crushing mills and hog packing plants. They were a source of fine quality hay. The farmers turned to peanuts.

"Before World War I, peanut acreage had extended South and West. When that conflict began, there came a growing demand for vegetable oils–and acreage mushroomed. At that time there were no shelling plants in the GFA (Georgia- Florida- Alabama) area, and peanuts had to be crushed in the shell or shipped to the Virginia- Carolina district for shelling. Quickly, shelling and processing plants were built in the area–and have prospered since.

"The South's present 5 million peanut-growing acres yield some 2,500,000,000 pounds of peanuts a year.

"So vast did the industry beocme that in 1940 the men in it found it practical to create the National Peanut Council, Inc., which set out to better peanut products and the industry in general. The Council sponsors agricultural, nutritional and utilization research, and cooperates with all institutions engaged in research, among other activities."

Photos show: (1) Workers feeding vines into a peanut picker; nuts fall into a tub at the rear. (2) Miss Marchbanks. (3) A woman standing in experimental peanut plots. Address: National Peanut Council.



1108. *Soybean Digest.* 1946. Rules soya butter is oleomargarine. Jan. p. 33.
• ***Summary:*** Howard O. Butler, owner of Butler Food Products of Cedar Lake, Michigan, filed a petition for a permanent injunction to restrain the Bureau of Internal Revenue from assessing the federal margarine tax against soya butter. When the petition was denied in December 1945 by federal judge Edward J. Moinet of Detroit, the company had to stop making soya butter. Previously the U.S. Food and Drug Administration (FDA) had ruled that soya butter was not margarine and to so label it would be subject to penalties.

1109. *Madison Survey* (*Madison, Tennessee*). 1946. Fitting students to meet life's problems at Madison College: A training center for Christian self-supporting workers. 28(12):50-56. June 30.
• ***Summary:*** A good overview of Madison College ("Nashville Agricultural Normal Institute"), with 15 photos. One photo shows E.A. Sutherland, Dr. Perry Webber, and two other men (probably students) standing in a field of soybeans examining a soybean plant. The caption: "Madison's food manufacturing plant, utilizing vegetable protein as meat alternates, is an attractive phase of the industrial program of the college. In these times of flesh food shortage, men are learning that nature grows protein foods in the open field. One of the most promising of these is the soybean.

"Madison Foods, operated on the college campus, gives employment to students in training."

A second photo (p. 56) shows the food manufacturing plant, apparently under construction.

Note: This is the earliest English-language document seen (Nov. 2003) that contains the term "meat alternates" (or "meat alternate"–with any combination of quotation marks).

1110. *Soybean Digest.* 1946. Grits and flakes... from the world of soy: Recently introduced on test markets by the Kellogg Co., Battle Creek, Michigan, are Corn-Soya Shreds,... June. p. 24.
• ***Summary:*** "... made of ribbon-milled corn and soya with sugar, salt and malt flavoring. The product is crisp and tastes like corn flakes, is packaged in Kellogg's usual red and green carton."

1111. Worthington Foods, Inc. 1946. Dealer order blank. Worthington, Ohio. 1 p. Catalog. Aug. 1.
• ***Summary:*** See next page. Products include: Mung bean sprouts. Soy beans in tomato sauce. Beta Broth. Tastex. Tastex food yeast. Protein foods (Alternates for meat): Choplets (vegetable fillets packed in savory sauce). Choplet-Burger (vegetarian ground meat with a texture like hamburger). Proast and Numete (dark or light vegetable meatloaf). Soy sauce (table). Wheatlets (Delicious whole wheat cooked breakfast cereal). A fairly detailed description of each product is given. Address: Worthington, Ohio. Phone: 2-5359.

1112. McWethy, John A. 1946. Soybean success: War boom continues as many plants expand, bring out new products. Examples: Meat flavor, wool-like fibre, bottle cap adhesive, soymilk cheese. St. Louis meeting draws 400. *Wall Street Journal.* Aug. 31. p. 1.
• ***Summary:*** This article is about the 3-day meeting of the American Soybean Association in St. Louis, Missouri. The soybean industry thrived during the depression, more than doubled in size during World War II, and is now continuing to grow. The A.E. Staley Manufacturing Co., America's largest soybean processor, has just started construction of a new $1 million plant that will turn soybeans into monosodium glutamate (MSG), making one million pounds a year. MSG has been previously made on a small scale in the USA from wheat, but Staley's plant will be the first to make it on a large scale from soybeans.

The Drackett Co. in Cincinnati is putting the finishing touches on a commercial plant that will make a wool-like fibre from soybeans. Robert A. Boyer, the firm's research director, said the new fibre will be used mostly for blending with rayon. He thinks it may sell for less than wool.

ADM, one of America's four largest soybean processors, earlier this year completed a plant to make a "whipping agent" from the versatile soybean; it can replace egg albumin, which is much more expensive.

Dr. Harry W. Miller, president of the International Nutrition Laboratory (Mt. Vernon, Ohio), "started making soybean products in Shanghai, China, in 1935. Bombed out in 1937 by the Nips [Nipponese = Japanese], he came to this country and began making similar products here in 1939. Now his firm does a $500,000 a year business and could do a lot more if sugar and other ingredients used with soybeans were available." His most popular items are [soy] milk, cutlets, and canned green soybeans. He says the milk tastes "rather like malted milk and is especially good for infants and others allergic to animal milk. His company has also developed a cheese made from soymilk, a prepared mix for ice cream from the soymilk, and "albumen sheets" [yuba], which are very popular in China.

These sheets aren't much thicker than a piece of paper and are used in China to make the layers of a loaf filled with mushrooms. The Chinese also use soybeans [yuba] to make products that taste like both fish and chicken. In American kitchens, an excellent substitute for butter can be made "by combining soya oil, soya milk," carotene oil for color, and salt.

One big American breakfast cereal maker is said to be planning to introduce a "soya flake cereal soon, similar in appearance to cornflakes. Another may soon market a puffed soyabean cereal, a third may introduce a cooked cereal made from soybeans, oats and wheat."

General Mills is building a factory for producing a synthetic resin from soybeans–a product developed at the Northern Regional Research Laboratory in Peoria, Illinois. Dr. G.E. Hilbert, NRRL's director, says this new resin shows "considerable promise as a protective coating and as a heat-sealing and moisture-proofing agent.

During the past few years, soybean processors have been switching to the solvent extraction systems, from the expeller system, for obtaining oil from soybeans. Most newer plants use hexane solvent. The advantage of the solvent system is that it removes all but about half of one percent of the oil, compared with 3½% to 5% left in the meal when expellers are used. The meal currently sells for 3 cents/lb compared with 11.75 cents/lb for the oil.

NRRL has recently developed a process that uses alcohol instead of hexane. This yields superior "soyflour." Before the war, production of soyflour was 25 million lb/year; this year it is expected to top 400 million lb. Roth Products Corp. of Chicago has already used 6 million pounds of soyflour this year in its dehydrated soups, baked goods, pancake flour mixes, and sausage filler.

The soybean industry (especially the NRRL) is also working to make soybean oil more stable. It "has a tendency to develop a grassy or painty flavor on standing." A process obtained from Germany "goes a long way toward preventing the development of these objectionable flavors."

The Lincoln soybean variety, developed at the U.S. [Regional] Soybean Laboratory at Urbana, Illinois, and first made available to farmers during the war, is playing a major

WORTHINGTON FOODS:

Every one of the items offered under the Worthington label is guaranteed to be pure, wholesome, and of superior quality. Worthington Foods are famous for their distinctive taste appeal!

You can speak with confidence when you tell your customers, "There's worth in Worthington Foods"!

SOY BEANS IN TOMATO SAUCE:

Select quality soy beans, cooked and packed in delicious tomato sauce. Serve like baked beans. Excellent for either lunches or dinners.

BETA BROTH:

Instant broth at its finest! Full-bodied, meat-like flavor, but meat free. Made from Brewer's yeast and vegetable extract. It's granulated to dissolve instantly. Makes an excellent gravy stock!

TASTEX:

Tastex makes wonderful gravy, bouillon, soup. TASTEX keeps indefinitely without refrigeration, has a definite meatlike flavor, and is made in a concentrated paste form. It's rich in the Vitamin B complex. Economical!

TASTEX FOOD YEAST:

Many cooked dishes, as well as pastries and baked goods, can be enriched by adding a small amount of this pleasant tasting yeast. Contains all the natural B complex as found in yeast and averages 42-46% protein. Send for a sample.

CHOPLETS:

Delicious, high protein, vegetable fillets packed in savory sauce! Easily prepared in numerous ways and economical, too. They provide the sturdy main course which is so often lacking in vegetable plates. Recommended for meatless diets, Friday menus, Lenten dishes, vegetable plates, sandwiches. Choplets never fail to satisfy!

CHOPLET-BURGER:

This product answers the many calls for a vegetarian "ground meat." It's coarse in texture, like hamburger, and can be shaped into patties for frying. With the popular Choplet flavor and the convenient "burger" style, this item meets hearty approval of customers.

PROAST AND NUMETE:

For a delightful vegetable "meat loaf," your customers will appreciate Proast (dark) or Numete (light). Both are distinctive in flavor and rich in pure, nutritious protein. They are excellent sandwich fillers, or can be diced and used in salads.

SOY SAUCE:

The finest available soy sauce, packed attractively in a convenient table-size bottle.

WHEATLETS:

A toasted, whole wheat cereal which can be quickly cooked for a wholesome, healthful breakfast dish!

role in increasing yields. Today farmers in the corn belt are getting 25-30 bushels/acre with Lincoln, compared with only 15-16 bushels/acre in the early 1920s with varieties then available. Moreover, today's soybeans contain 20-21% oil compared with only 15-17% about 20-25 years ago.

1113. Miller, Harry W. 1946. Feeding the world with soya. *Soybean Digest.* Sept. p. 56, 58, 61.

• ***Summary:*** Soybean production has extended so rapidly during the past decade "into many corners of the world, that encouraging a worldwide dependence on it nutritionally may not seem presumptuous."

For years the world has been facing acute nutritional shortages, with millions of people either starving or half-starving. Even in peace time millions showed signs of being undernourished or died of malnutrition "because of the lack of satisfying portions of protein. There is no more weakening and disease inviting situation than that observed among people robbed of essential protein. It is the first requisite of nutrition." Protein is essential for growth, tissue repair, fortification of the body against bacterial invasion, and the maintenance of all organs of the body in harmonious balance and action.

"Loss of protein in the diet cannot be supplanted by either oils or starches, no matter in what abundance they may be found." "Well prepared soya foods" are an excellent source of protein in the diet. Soybean protein excels that of corn and wheat in both quantity and quality, and it is less expensive.

"Present prices of vegetable protein average about 40 cents a pound, oil 15 cents a pound, and starches or carbohydrates 5 cents a pound." These "figures give a nutritional value of $285 per acre for soybeans, while an acre of wheat will yield $132.75 and an acre of corn $201.25. Yet the yield of corn is almost double that of wheat or soybeans, so the premium crop for the farmer today is corn.

"Vegetable protein vs. animal protein: Vegetable protein (as from soybeans) is much less expensive than animal protein–such as meat, milk, or eggs. The reason for this becomes clear when we realize that animals live on feed consisting vegetable proteins." For example: "Taken on average, a cow will eat 800 pounds of food units in order to yield 100 pounds of nutritional units in the form of milk solids. To produce meat it requires between 1,100 and 1,200 pounds of feed to yield 100 pounds of tissue storage in the animal made available as food.

"I am going into these facts and figures somewhat to call attention to the economic losses in time of food scarcity in feeding the nutritious legumes and grains to livestock to get small nutritional returns."

"It is possible that these facts that I have given were in the mind of the Secretary of Agriculture when he issued a few months ago a request to the American people to send their wheat and corn to the starving people of other lands rather than feed them to pigs and cows and sheep of this country.

"Processed soya foods: In the third of the world's population not accustomed to soya foods there is a psychological prejudice to overcome. I am glad to say today it is solved.

"Many companies, recognizing the unpopularity of the word 'soya' worked on the plan of incorporating it into other foods, particularly soy flour used in various products in order to enrich and extend them. Defatted and whole soy flour has been incorporated with wheat flour by bakers and housewives into bread, biscuits, cookies, crackers and other bakery products such as cakes and pie crust. In 10 to 20 percent proportions, it has yielded improvement in quality and added to its nutritive value." Note: This is the earliest English-language document seen (Nov. 2013) that contains the term "whole soy flour."

"One of the latest breakfast foods, which bids fair to become one of the most popular, is made by a 50-50 combination of soy flakes and corn grits run through a shredder and toasted. Its crisp and nutty flavor recommends it as an appetizer as well as a decided improved nutrient. This cereal has nearly 20 percent protein.

"Soy flour has become very successful in the manufacture of noodles. It has been used as an extender for bologna, hamburgers, sausage and incorporated in a very large number of recipes for meat loaves. In all these instances a little soya adds better flavor and higher nutritive yield. For all of these products the ordinary field variety of the soybean can be readily used.

"It also can be announced today that the newer

© Copyright Soyinfo Center 2014

methods of manufacture and the better understanding of the utilization of the soybean enable us to adopt many of the field varieties into the edible group. In fact, most of the types of soybeans that have the white hilum can be readily utilized for edible purposes. It is commonly believed that further experimentation will enable soybean food producers to take the ordinary varieties of soybeans and make tasty foods very similar to those now processed from the edible group.

"Other foods: We have a still much larger list of foods that today are made directly from the soybean. In these the soybean must stand on its own merits and it has proved acceptable to 90 percent of people sampling it. The large edible soys are now becoming available the world over. The canned mature beans, when properly processed and flavored by a suitable vegetable bullion or with tomato sauce, are very acceptable. It must be remembered that soybeans contain three times the quantity of protein and nine times the amount of oil found in either peas, lima beans, lentils or the ordinary navy bean." Continued. Address: M.D.

1114. Miller, Harry W. 1946. Feeding the world with soya (Continued–Document part II). *Soybean Digest.* Sept. p. 56, 58, 61.

• ***Summary:*** Continued. "The green edible soybean offers an additional line for canneries and freezing plants packing peas, lima beans, corn and other vegetables. It also offers another tasty item to the cook to adorn the dinner plate.

"Green soybeans can be canned with exactly the same equipment that all canneries have and can be shelled with the same sheller that is used for peas. The canning season is not in conflict with that of any other product unless it be sweet corn. The varieties can be planted so that they will not seriously interfere with this product. There is nothing we can put into the cans exported to other countries and for the areas of large population of our own country that will give people greater returns nutritionally than the immature green soybean. It has a nutty flavor and does not in any way harbor the beany taste that lingers in the minds of some people who think of soy foods.

"Canned sprouts: Canneries could develop a very fine winter industry by canning soybean sprouts. Or the frozen food people could very well add a package of frozen soy sprouts to their lines. These could very nicely come into our markets as a fresh vegetable along with Brussels sprouts, lettuce and other raw foods, to be incorporated into salads and cooked dishes. The sprouting of the soybean again removes the characteristic taste and gives a nice vitamin-yielding food, along with its rich content of minerals. Any good field variety may be used for sprouting.

"There is much to be learned from the Orient regarding usages of soybeans in the diet, in the many forms in which they prepare them. They first make a water extraction of the protein, curdle it and make cheese [tofu]. With this bean they can make foods simulating milk, fish, fowl and meat in appearance and taste.

"Already, in this land hundreds of infants have been started from birth using modified soy milk. A very large group of others who are allergic to animal milk are substituting soy milk for the dairy milk. It is being made into varieties of delicious cheeses, and has possibilities in the cheese industry the equivalent of cow's milk curd. The lactic acid soy milk is the most pleasing beverage. The acidity of the milk covers wholly any semblance of the characteristic beany flavor.

"Albumen sheets: We now have albumen powder made from the soy extraction flakes utilized like egg powder by the big candy industry in ever increasing amounts. The soy albumen sheets [yuba], because of their labor and painstaking requirements, have not been made in this country as they are in China. However, we are finding ways of providing for their manufacture.

"A halt has been made on the production in Michigan of a competitive margarine called soy butter. Still, there is available to every housewife a method of making a butter with far less work than churning cow butter. Such a butter is made from soy oil and soy milk which is colored with carotene oil and salted to taste.

"Dry mature soybeans can be readily transported to any part of the world without requiring refrigerator space. They are a form of concentrated nutrition the world can easily be taught to use. Seventeen dollars worth of soybeans at 5 cents per pound will supply enough protein for a family of five for an entire year.

"In a paper such as this it would seem to be in place to give a few concrete suggestions on what might be done to help solve the world food shortage.

"1. Encourage more soybean production in America. This could be done if soybeans were given their proper economic value.

"2. Forward seed to various countries in the world, encouraging its production through helpful instructions in growing, processing and using. There are very limited areas where soybeans have proven entirely unsuccessful when given a fair trial.

"3. We should devote more time on experimental work in cooking and preparing the food and overcoming any objectionable features that seem to prevent its widespread use. The feeble efforts that have thus far been put forth have really done wonders in furthering the adoption of the soybean in the diet.

"In closing, allow me to say that with the present world yield of soybeans, if used exclusively to relieve human starvation, relief could come to all the destitute areas of the world." Address: M.D.

1115. Kellogg Company. 1946. Facts about Kellogg's Corn Soya: The brand new–grand new–good for you cereal (News release). Battle Creek, Michigan. 2 p. 22 cm.

© Copyright Soyinfo Center 2014

• ***Summary:*** This pioneering news release follows a question and answer format. What are Kellogg's Corn-Soya Shreds? Why are we putting this new cereal on the market? What have been the results of Taste Tests? Do Corn-Soya Shreds stay crisp? What are the keeping qualities of Corn-Soya? Is this new cereal satisfying? Is there anything special about the Corn-Soya carton? Will Corn-Soya be sampled? What advertising support will there be? Will Corn-Soya be a volume seller? Address: Battle Creek, Michigan.

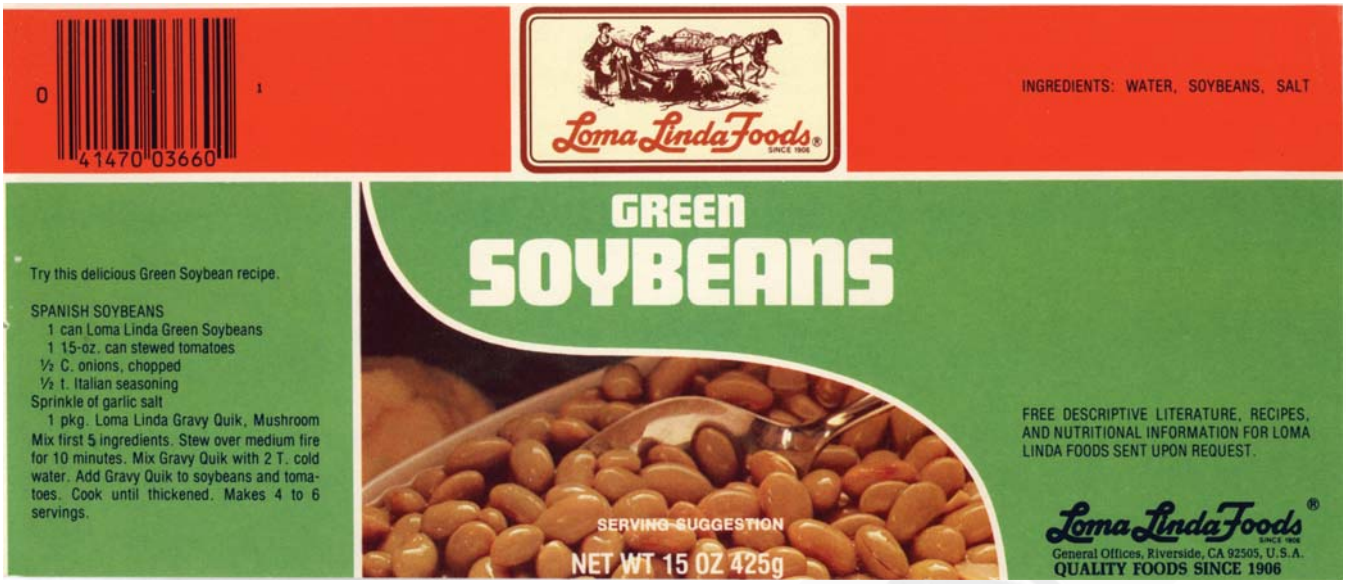
1116. **Product Name:** Soy Sauce.
Manufacturer's Name: Worthington Foods, Inc. (Marketer-Distributor).
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 2-2539.
Date of Introduction: 1946.
Wt/Vol., Packaging, Price: 4.5 oz glass dispenser.
New Product–Documentation: Wholesale price list. 1946. Aug. 1; Ad in Health Magazine. 1947. 14(2):2. Feb. "Good Foods for Every Occasion." Interview with James Hagle. 1981. Probably made by La Choy. Sold in 4.5 oz. table dispenser bottles.

1117. Worthington Foods, Inc. 1947. Good foods for every occasion (Ad). *Health* 14(2):2. Feb.
• ***Summary:*** Ad for Choplet Burger, Beta Broth, Soy Sauce, Soy Beans, Tastex, Choplets, Numete, Proast, Tastex food yeast. Photos show each package and ready-to-serve product. Address: Worthington, Ohio.

1118. *Soybean Blue Book.* 1947. Edible soybean growers and distributors. p. 89.
• ***Summary:*** In this section, published in the first issue of the *Soybean Blue Book,* the varieties grown are listed alphabetically. Under each variety is the name and address of the grower or distributor offering that variety. The edible soybean varieties are: Aoda (2 growers), Anwei (1), Bansei (28–by far the most popular), Chuku, Easycook, Emperor, Etum, Funk Delicious, Giant Green, Higan, Hokkaido, Imperial, Jogun, Kirin, Kanro, Mendota, Sac, Sanga (70210-1), and Willomi.

The companies growing these varieties include: Associated Seed Growers, Inc. [Asgrow] (New Haven, Connecticut; or Indianapolis, Indiana), Burpee (W. Atlee) Co. (Clinton, Ohio), International Nutrition Laboratory (Mt. Vernon, Ohio), LaChoy Food Products (Archbold, Ohio), Soybean Johnson (Richmond Heights, Missouri), Strayer Seed Farms (Hudson, Iowa), and Wood (T.W.) & Sons (Richmond, Virginia).

Note: This is the earliest document seen (May 2009) that mentions the soybean varieties Chuku or Kirin. Both came from LaChoy Food Products in Archbold, Ohio. Note: They could be "sprout types" and this could be further evidence that LaChoy grew and sold soybean sprouts–at least during World War II and the 1940s.



1119. Loma Linda Food Co. 1947. Hey kids! Get a plastic boomerang! (Ad). *Los Angeles Times.* April 28. p. B21.
• ***Summary:*** This large display ad shows a photo of the front of a box of Ruskets–Vitaminized whole wheat, flaked, toasted breakfast cereal, and a bowl of Ruskets with sliced bananas and milk. "The West's favorite cereal." "Hurry! Be the first in your neighborhood to get your own plastic boomerang." Address: Arlington, California.

1120. Penty, William P. Assignor to Kellogg Company. 1947. Process of making ready-to-eat food. *U.S. Patent* 2,421,216. May 27. 6 p. Application filed 11 June 1943. [9 ref]
• ***Summary:*** Kellogg Co., Battle Creek, Michigan, a corporation of Delaware. This product is a mixture of about 20-30% by weight of solvent extracted soybean flakes with 70-80% of yellow corn. The corn is first cooked alone, the cooking interrupted for introduction of the soybean flakes, and the mixture cooked further. The cooked corn-soybean mixture is shredded under pressure to produce a homogeneous product. The resulting shreds are then toasted to a brown and slightly puffed condition. The final product is highly palatable and nutritious. Address: Battle Creek, Michigan.

1121. Penty, William P. Assignor to Kellogg Company. 1947. Ready-to-eat food product. *U.S. Patent* 2,421,217. May 27. 3 p. Application filed 28 Oct. 1943. [8 ref]
• ***Summary:*** Describes a cooked, ready-to-eat breakfast cereal containing corn and defatted soy grits, meal, or flakes. Address: Battle Creek, Michigan.

1122. *Vegetarian Messenger and Health Review* (*Manchester, England*). 1947. The late Professor Irving Fisher. Aug. p. 154.
• ***Summary:*** Prof. Fisher was best known to the world as a brilliant economist, but he will be remembered by vegetarians for the endurance tests that he conducted in the early 1900s. The results of these tests were published in March 1907 under the title "The Influence of Flesh-eating on Endurance" in the *Yale Medical Journal.* Shortly after his appointment at Yale University, he acquired tuberculosis, which left him debilitated and able to work only a few hours each day. Although he consulted several leading American physicians, it was not until he visited Dr. John Harvey Kellogg (a vegetarian at Battle Creek Sanitarium in Michigan) that his condition was largely cured, giving him a busy and useful life for the next 50 years. This experience gave Prof. Fisher a special interest in natural methods of living, and he devoted much of his time to writing and lecturing on the subject, in addition to his duties as Professor of Political Economy.

1123. Gehrke, Charles; Weiser, Harry H. 1947. Comparative studies on the growth and biochemical activity features of microorganisms grown in cow's and soybean milk. *Food Research* 12(5):360-64. Oct. [3 ref]

• ***Summary:*** "The introduction of soybean milk to the American people has occurred within the past few years. Attempts are being made to manufacture this milk in the form of a powder; it has been used with good results in bread and cakes, in creaming vegetables, in custards, in chocolate or cocoa, and in several other food products as a substitute for cow's milk. The high nutritive value of soybean milk and its many potential uses indicate that this product will continue to rise in importance in the human diet."

A table (first published in 1937 by the Battle Creek Food Company, Battle Creek, Michigan) compares the composition of soybean milk and cow's milk. Soybean milk contains more protein and 5 times more iron, as well as only 38% as much fat but only 22% as much calcium (though it is comparable to the calcium content of human milk).

The soybean milk used was obtained from Dr. Harry Miller, Director of the International Nutrition Laboratory, Mt. Vernon, Ohio. The method used for the preparation of soybean litmus milk was similar to the method employed in the preparation of cow's litmus milk." Both kinds of milk were inoculated with the following bacteria: *Lactobacillus bulgaricus, Lactobacillus acidophilus, Streptococcus liquefaciens, Streptococcus lactis, Aerobacter aerogenes,* and *Escherichia coli.* During incubation, periodic measurements were made (for each bacterium) of pH, and the rate and extent of coagulation, reduction of litmus, acid production, and peptonization. A table shows the results.

"Soybean milk serves as a excellent culture medium for the propagation of the organisms studied." After 48 hours the pH for soybean milk was lower (more acidic) than that for cow's milk when cultured with the following organisms: *L. bulgaricus* (3.85 vs. 4.60 at 37ºC), *S. lactis* (4.13 vs. 4.30 at 21ºC), *A. aerogenes* (5.0 vs. 5.10 at 37ºC), *L. acidophilus* (3.60 vs. 4.10 at 37ºC). The cell size of *L. acidophilus* was larger in soybean milk than in cow's milk. "Growth of *L. bulgaricus* in soybean litmus milk showed that coagulation occurred more rapidly, whereas in litmus milk acid production and litmus reduction were more pronounced." Address: Dep. of Bacteriology, The Ohio State Univ., Columbus, Ohio.

1124. **Product Name:** Loma Linda Green Vegetable Soybeans (Canned).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce St., Riverside, California.
Date of Introduction: 1947.
Ingredients: Water, soybeans, salt.
Wt/Vol., Packaging, Price: 15 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: National Canners Association. 1947. Canners' Directory; Soybean Blue Book. 1948. p. 80. Soybean Blue Book. 1958. p. 82. "Loma Linda Food Co., Eastern Div. P.O. Box 388, Mt. Vernon, Ohio. Home Office, Arlington, California."

Today's Food (Loma Linda Foods, Arlington, California). 1960. Spring. p. 4. Loma Linda's commercial food products include: "Loma Linda Green Soy Beans."

Soybean Digest. 1969. Nov. "Canned green vegetable soybeans. 11503 Pierce St., Riverside, CA 92505."

Loma Linda Foods. 1979. "27 Meal-Maker Recipes." A color photo can of "Green Soybeans" and a recipe for using them appears on p. 14. Manufacturer's catalog. 1987, undated. "Provides an excellent source of protein right from the can or in a favorite recipe."

Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1947.

Talk with Ron McDermott of Worthington Foods.

© Copyright Soyinfo Center 2014

1998. Oct. 7. Ron worked for Loma Linda for many years and he is certain that from 1947 until several years before it was discontinued (probably in the late 1980s), this canned product was made with fresh green vegetable soybeans. A pea viner was used to harvest them. The soybeans were grown locally under contract. Ron remembers it as quite a good product, but the canning process gave it more of a canned pea flavor which was not a tasty as a fresh, uncanned product. Several years before the product was discontinued, the grower had some kind of problems–with the crop itself, or with equipment or yields–so for about 2 years Loma Linda had to make the product from dry, green-seeded soybeans. At that time, the name was changed to "Green Soybeans" and the ingredients to water, soybeans, salt (see red and green label).

1125. *St. Louis Globe-Democrat* (*Missouri*). 1948. $213,000 peanut crop had origin as slave food. March 1.
• ***Summary:*** Peanuts came to America in slave ships, but they originated in Peru. The conquistadores found the Incas munching on them between meals. The Spaniards took these peanuts in their treasure galleons back to Spain, where they flourished. Then they took them from Europe to Africa, where they became involved with the slave trade. "The slavers fed them to the natives because they were cheap and easy to grow. The natives called them 'goobers.' When the slavers crammed the natives into holds and began the long journey to America they used the peanuts as slave food. Upon landing, the slaves built crude cabins, and planted peanuts near their cabin doors. Gradually peanuts spread through the south and changed from a slave to a money crop. They continued as a southern specialty until the civil war."

"In the 1890s a doctor at Battle Creek, Michigan, named Kellogg thought peanuts possessed excellent dietary qualities for invalids. This was the fabulous era when corn was being flaked, and oats and other grains exploded into breakfast cereals. Kellogg crushed the nuts into a creamy mass and called it peanut butter. He said it was more easily digested by sick people this way."

The late Dr. George Washington Carver played a major role in the development of peanuts in America. "He perfected dozens of extracts from peanuts, including peanut coffee and peanut milk and cream. At one point in his career he experimented with peanut oil as a massage for after-treatment of infantile paralysis."

Peanuts are now a price-supported crop. Georgia is the largest peanut-producing state. Peanut yields are now decreasing because peanut farmers have used backward methods and not replenished the soil. Some authorities believe the soybean has come to the front because of these backward methods.

1126. Roberts, F.G. 1948. The return of the edible soya bean. *Nature's Path to Health* (*Melbourne, Australia*). Feb/March. p. 22.
• ***Summary:*** "The Soya Bean is a complete vegetable protein containing all the Amino acids in assimilable form; one pound of Soya Beans equals the protein value of two pounds of beef, which is much more expensive." Soybeans are an alkaline food with a wonderful chemical content.

"We are doing our best to encourage the growing of Soya Beans in Australia, we have promised the farmer a fair margin and we hope to distribute many tons of Grade 1 Soya Beans through our many branches, and other grades will be used for making Soya Flour, Soya Bean oil, Soy nut roast, Soy milk compound, Soya Bean and Soya Beans in Tomatoes."

Note: This is the first article about soy to appear in this periodical (published by F.G. Roberts and wife) since Aug. 1940, a gap of more than seven years. Hence use of the word "Return" in the title. Address: Reg. Dietitian, Australia.

1127. *Chopletter: The Magazine of Worthington Foods News and Views.* 1948-1969. Serial/periodical. Worthington, Ohio: Worthington Foods, Inc. Vol. 1, No. 1. April 1948. Quarterly.
• ***Summary:*** See next page. By April 1960 the circulation was about 65,000. Beneath the title on page 1 was written: "The Magazine of Worthington Foods News and Views." Worthington bills itself as "Makers of Famous Choplets." The editor is Opal Hoover Young. It is published quarterly. The last issue was March/April 1969. The title changed in May/June 1969 to *Tomorrow's Foods for Today's Homemaker.* Address: Worthington, Ohio.

1128. Gehrke, Charles W.; Weiser, Harry H. 1948. A comparative study of the biochemical activity of *Streptococcus lactis, S. citrovorus*, and *S. paracitrovorus* when grown in cow's milk and soybean milk. *J. of Dairy Science* 31(4):213-22. April. [17 ref]
• ***Summary:*** These three microorganisms are widely used to culture butter. "Soybean or vegetable milk is used extensively throughout Japan and China for infant feeding as well as for adults." The introduction of soybean milk to the American people has occurred only recently. Soybean milk has been manufactured in the form of a powder. It has been used with good results... especially in those countries that find it cheaper to use a vegetable milk... The development by butter organisms of diacetyl [which is partially responsible for the aroma of butter] and related compounds in vegetable milk and products made from it may be desirable from a commercial standpoint."

The butter cultures were obtained from the Department of Dairy Industry, Iowa State College, Ames. The soybean milk was obtained from Harry Miller, Director of the International Nutrition Laboratory, Mt. Vernon, Ohio. Cow's milk and soybean milk were inoculated and incubated, then measurements of the following were taken at regular intervals up to 216 hours: pH, titratable

acidity, volatile acidity, and Mg Ni salt. The production of acetylmethylcarbinol (AMC) and diacetyl in soybean milk by butter culture organisms was not evident until after an incubation period of 48 hours; however, upon incubation of cultured soybean milk for 168 to 216 hours, larger amounts of the flavor and aroma compounds were produced in soybean milk than in cow's milk. "The values obtained for the titratable acidity in cow's milk and cow's milk to which 0.15 per cent citric acid had been added were nearly twice as great as those secured for the soybean milk. Address: Dep. of Bacteriology, The Ohio State Univ., Columbus, Ohio.

1129. Miller, H.W. 1948. Survey of soy foods in East Asia. *Soybean Digest.* June. p. 22-23.
• ***Summary:*** The primary objective of Miller's company "was to develop a milk built up to formula for babies, children, and adults that could be utilized by Oriental populations where animal milk is not available, and which for economic reasons can never be a dependable source of food supplies for the masses.

"Before the war the Laboratory had branches both in Manila, Philippine Islands, and Shanghai, China. The war saw the plant in Shanghai completely demolished and the equipment destroyed. In Manila, the building was left, but all the equipment was removed. Therefore we have been busy since the end of hostilities in restoring these plants.

"In 1946 and 1947 and during this last January and February the writer made trips and spent time in connection with these institutions. I am glad to report that on my last visit to the Philippine Islands I was able to see the plant there start its operations. The machinery and equipment are practically restored.

"At the present time there are no soybeans under cultivation in the Philippine Islands... though certain parts are very well adapted to the growth of the southern type of soybeans.

"The Manila plant is interested in marketing bottled 'Soyalac' (soy milk) both in natural and chocolate flavors, and also in entering the production of soy ice cream–we are permitted to call it that in the Philippines.

"From Manila I went to Hongkong where 8 years ago a small company known as the Hongkong Milk Factory made a beginning in homogenizing a constituted soy milk. On this last trip to Hongkong, K.S. Lo, the manager, took me through their plant. He informed me that they are now serving to each of the school children a half-pint bottle of the soy milk, both in the natural and the chocolate flavors, at their noon lunch.

"The Hongkong Milk Factory is in reality a soybean dairy. As you view the equipment including the bottle filling machine and the refrigerating unit, you would not know you were not in an American dairy. Mr. Lo informed me that if they had refrigeration they could be putting this soy milk out in many of the other cities of China on a very large scale.

"The firm obtains it beans from China, mostly from the province of Chang Tung, though some come from Manchuria. The beans are not of a very fine quality."

At Shanghai there were two soybean enterprises that particularly attracted my attention. The one for which we helped secure the machinery and equipment is being run under the name of the International Nutrition Products Co., Ltd. It is to be run very much like the Manila plant in the manufacture of liquid soy milk. The company will develop along with it a soy margarine and soy spread in the form of a mayonnaise dressing.

"The other enterprise is being undertaken by the government. The Chinese Army Quartermaster Department has purchased a property where ice cream, dried eggs and butter, and also candy were made. This large property has a splendid group of buildings with refrigeration." Here the Chinese Army intends to run a "soybean factory and a vegetable dehydration plant.

"The Chinese Army has secured the help of my son, Harry Willis Miller, Jr. He is there at the present time erecting this plant. It is perhaps the largest soy protein processing plant we know of at present. The firm has bought equipment for large-scale production of a spray-dried soy milk powder. This is to be included in other rations of a dehydrated character for use of the Chinese Army."

In Japan, the author found the people to be "greatly undernourished, especially in regard to protein. Soybeans are scarcely to be had... Bean curd plants are all closed down... I know of nothing that the Japanese nation needs worse than soybeans... I found the Japanese people, even to the advisor to the Emperor, whom I met, pleading with us to establish a plant similar to that which we have in China and the Philippines. However we have no financial interest in those plants. They are carried on wholly by local capital. Our part is simply the 'know-how' in setting them up and transmitting the processes to them."

Note: This is the second earliest document seen that uses the term "soy foods" in the title. Address: International Nutrition Lab., Mt. Vernon, Ohio.

1130. *Soybean Digest.* 1948. Nationwide sales: Kellogg's Corn-Soya Shreds. Aug. p. 33.
• ***Summary:*** The caption reads: "Pictured above is the package of the newest cereal of the Kellogg Co., Battle Creek, Michigan. Kellogg's Corn-Soya Shreds have had splendid acceptance by consumers throughout the country. Over the past 2 years 15 million samples have been distributed, and the product has sold immediately on its taste. Most daily newspapers are now carrying advertisements on Corn-Soya, which has now achieved national distribution."

1131. Fairchild, David. 1948. Early experiences with the soybean. *Soybean Digest.* Nov. p. 14-15. [2 ref]
• ***Summary:*** "It was not until 1897 that I first saw soybeans

© Copyright Soyinfo Center 2014

growing... I found my friend Merton B. Waite had been trying to grow soybeans on his farm outside Washington [DC, in Maryland; see Fairchild, Oct. 1948], but with little success. They had been sent in by some American consul or missionary, I believe. At about the same time Dr. George T. Moore [who by 1903 was Physiologist in Charge of the Lab. of Plant Physiology, Bureau of Plant Industry, USDA, working on soybean root bacteria] in working on the root nodules of leguminous plants had discovered that the nodules contained bacteria. Waite and I talked over the matter of the failure of his soybeans and wondered if they might require special bacteria, so I wrote out to Japan and imported several pounds of soil from a soybean field.

"We made a little experiment, planting alternate rows of soybeans with and without the addition of this Tokyo soil. The effect of the imported soil was immediately apparent as the plants grown in it made a far better growth and had their roots covered with bacterial nodules, whereas the control were practically without any.

"Photographs had yet to come into any general use as records of agricultural experiments, but Waite had taken up photography as a hobby and made excellent photographs with his stand camera. So at harvest time he pulled up an equal number of soybean plants from the soil-treated rows and from the controls, and the only photographic record in existence of this little experiment (the first of its kind, I suppose, in the world) is this negative taken by Waite in the autumn of 1897.

"Although these experiments did not at the time lead to more extensive trials, they indicate the awakening of our interest in soybeans.

"In that fall of 1897 it was my privilege to organize the office of plant introduction in the Department of Agriculture. We began introducing a great number of different kinds of plants, among them, as I see from our inventories printed at the time, occasional small collections of soybeans from China and Japan. They were obtained mostly through correspondence with missionaries and consuls stationed there.

"At that time the Department had no testing ground near Washington where we could grow miscellaneous vegetables, including these soybean collections. It was not until several years had passed that facilities were provided on the so-called 'Potomac Flats' [in Washington, DC] and James H. Beattie, an enthusiastic young horticulturist, took over the planting of our introduced seeds.

"The soybeans did well and Beattie soon had on his hands a quantity of seeds. But we didn't know just what to do with these strange beans. When cooked in the way other beans were prepared they had a strange flavor that nobody seemed to like...

"It was not, I think, until the office of forage crop investigations was organized and C.V. Piper took charge that the soybean as a forage crop attracted attention and Beattie's experiments came to be looked upon as important. We planted larger patches of soybeans on a tract of land near Bethesda, MD...

"And then we ran into the difficulty of harvesting the soybeans. P.H. Dorsett of the office, one of the most ingenious and most indefatigable workers I have ever known, and his friend Rankin, who was running the little experimental farm, put their heads together and adapted a bean picker then in use–in California I think–and discovered that it was perfectly possible to harvest soybeans mechanically...

"I went out exploring again and my travels with Mr. Lathrop this time took me into the soybean fields of Japan. The tremendous importance of the crop as I saw it there made a great impression on me. Also the almost universal use of soy sauce, which Americans were just beginning to appreciate, fixed my interest...

"Dr. Yamei Kin, an extraordinary Chinese woman whose acquaintance I had made on the boat returning from Japan, made a visit to Washington and captivated us all by her enthusiasm over soybeans. She introduced us to 'tofu,' a delicate cheese which has not even yet attracted the attention it deserves from the American public.

"In 1903 A.J. Pieters came to me one day and told me of an amazing young Hollander who had been a gardener of the great geneticist, Hugo de Vries. He was then on his way back from a trip on foot to Mexico, and I wired him to come to Washington. For 13 years, as agricultural explorer of our office, Frank N. Meyer tramped from village to village over much of China. He gathered soybeans whenever he saw them, for he felt it was important to secure all the local varieties he could for our plant breeders before they should have disappeared as the result of the spread of standard varieties he thought was bound to come.

"The importance of getting as many as possible of these local varieties and these, or selections from them, form, I believe, the basis of the very extensive soybean breeding that has been done by the various plant breeders of America."

Note: According to Vivian Wiser of the USDA and to the Washington D.C. Historical Society (13 Feb. 1991; phone 301-785-2068, Mrs. Offut), in 1897 Merton Waite lived in downtown Washington, D.C. in a built-up area. There is no record of his owning a farm outside Washington D.C., but he may have owned the farm as a sort of summer home or he may possibly have worked with the group at the USDA farm at Somerset, Montgomery County, Maryland. He was a plant pathologist and physiologist, in charge of diseases of orchard fruit trees, especially pears and peaches. There is a collection of David Fairchild's materials at Coconut Grove. His personal residence, The Kampong near Coconut Grove, is still (as of 1998) well preserved and open to the public. Address: "The Kampong," Coconut Grove, Florida.

1948. King Cotton welcomes King Soybean: American soybean convention highlights. Fall. p. 1-2, 5-6.

• ***Summary:*** The American Soybean Association held its 28th annual convention on 13-15 Sept. 1948 in Memphis, Tennessee (on the banks of the Mississippi River in southwestern Tennessee) at the historic and famous Peabody Hotel. Nearly 1,000 people attended, representing 28 states and 9 foreign countries. Madison College is in Tennessee, so representatives attended.

Memphis became the largest spot cotton market in the world, the largest cotton seed products market in the USA, and (at one time) the largest mixed feed center. In 1884 the Memphis Merchants Exchange was organized.

"Early in the twentieth century, experiments were made in this market in the use of blackstrap molasses, then a worthless by-product, mixing it with alfalfa hay and grain. It proved to be an excellent animal feed and was placed on the market as commercial mixed feed. Memphis can probably claim the honor of originating the mixed feed business that was the forerunner of the scientifically prepared stock feeds that now comprises one of our nation's largest industries." The feed industry created an enormous demand for protein which was largely derived from cottonseed meal. That source, however, proved inadequate, and so 'Necessity being the mother of invention' the soybean was introduced into American agriculture and began to be produced in considerable quantities about 1920.

"Having about the same protein content as cottonseed meal it has practically doubled the supply of protein available for mixed animals feeds. Geographically Memphis is the center of the production of high protein vegetable meals. The crops of cottonseed and peanuts of the Mississippi Valley in the South, blend here with The soybean crops of the North Mississippi Valley states. Memphis, therefore, is the natural location for the world's only protein futures market. The price of cottonseed meal and soybean meal established by this open market is recognized throughout this country, as well as abroad, as the basis price for trading in both commodities.

"Barge lines on the Mississippi River now handle a vast tonnage of merchandise and bring millions of bushels of grain and soybeans to Memphis for distribution throughout the South and for export via barge to the Port of New Orleans. So important is the Port of Memphis that millions of dollars are being spent to improve and enlarge its facilities for handling an ever increasing tonnage while 'Old Man River He Just Keeps Rolling Along.'

"Convention highlights: The Soybean Conventioners were welcomed royally by Mayor Pleasants, President Williams of the Memphis Commercial Exchange, and the friendly staff of Peabody Hotel. Ladies of the Memphis Commercial Exchange entertained the ladies attending the convention and it seemed from the gardenia corsages given to all the ladies (100 attending) by the Memphis Commercial Exchange, the luncheons, parties, tours. and the annual banquet, planned for the guests, that King Cotton himself and all Memphis bent their efforts to make Kong Soybean their honored guest. The conventioners were profoundly impressed with the beautiful city of Memphis and its never-to-be-forgotten genuine warm hospitality. With every exhibit space in the large hall taken with interesting displays of soybean products, machinery, supplies, and technical services offered, it was obvious that the industry was well organized and integrated to meet the heavy demand put upon its young shoulders.

"Efficient President Walley and aggressive Secretary Strayer of the American Soybean Association gave every evidence of providing the unusual leadership required for the development of a national organization to serve the soybean industry in the United States.

"President Walley reported fresh from his summer stay in Europe where he studied conditions relating to the interest and needs of the people with respect to the potential possibilities of supplying soybeans to aid in the recovery program. He said in part, 'From The best available information, France could use oilseeds equivalent to at least 10 or 15 million bushels of soybeans per year at the present time... soybeans have become more popular and more appreciated by the French.' In Italy it is about the same story. 'I was particularly impressed with the fine work being done by CRALOG (Christian Relief Organizations Authorized to Operate in Germany), cooperating with German food manufacturers in preparing soybean products in the most palatable form.' Large quantities of soy flour are being flown to Berlin over the blockade. Belgium processors were pleased with the quality of America soybean varieties. 'In England I found many friends of soybeans and much progress has been made in the use of soy products in food.' 'One of the principal paint companies of England is very enthusiastic about the use of soybean oil in paint and is doing everything it can to encourage the growing of soybeans in South Africa in order to augment its needed supplies.'

"'... let us take the cost of protein for human consumption in Germany. At the time I was there 40 grams of protein purchased at the store in the form of full fat soy flakes cost only one-third to one-sixth as much as 40 grams of protein secured through any animal product and that cost was figured on the basis of soybeans being worth between $8 and $10 a bushel in Germany.' Here is a large fertile opportunity market that can mean much to the American soybean grower.

"'Gentlemen, in my opinion, this "cold war" is hotter than you think. Today national security is our most important business."

"'As producers of a potent weapon in that war [soybeans] let us carry on, keeping this in mind: a continued and assured production of soybeans in the United States can have much to do with the preservation of individual

© Copyright Soyinfo Center 2014

liberty here and abroad–a treasure more important than any immediate consideration of price or profit.'

"Two films, *Progress in Products*, the margarine film produced jointly by the American Soybean Association and the National Cotton Council, and the Allis-Chalmers film, *The Soybean Story,* were shown and, as you might surmise, Madison Foods comprised a part of the section of the story on the screen showing foods produced from soybeans.

Soybean milk experiment: Dr. Sasanka S. De of the Indian Institute of Science, Bangalore, India, and now a research fellow in the Department of Food Technology, Massachusetts Institute of Technology (MIT), reported on his experimental work with soybean milk. He found "that it was possible to prepare a fortified soya milk that would have a high supplementary value in the Indian diet comparable to that of cow's milk and without increasing the cost greatly... In the human experiments, nearly 6,500 infants, children and youth were used as subjects in Welfare Centers, Orphanages, and Schools."

"Visit to the world's largest cotton plantation: The last day of the conference was set aside for a field day in the rich Arkansas delta at the Arkansas Agricultural Experiment Station, Clarkedale, Arkansas, and at Wilson, Arkansas, to see the world's largest cotton plantation. In this rich northeastern section of Arkansas the flooding mighty 'Old Man River' deposited layer upon layer of black loam silt until it reached the incredible thickness of 1,200 feet (the average topsoil depth around the world is seven inches).

"At the Clarkedale experiment station the staff prepared test plots for this field day showing all the named commercial varieties of soybeans in the U.S. Flame weeding was also demonstrated..."

Over 500 guests attended the Soybean Banquet in the Ball Room of the Peabody Hotel. Madison Stakelets and Zoy-Koff were served. "Dr. Morse, father of the soybean, Chief Agronomist of the Department of Agriculture said, 'I always enjoy Madison Soybean Foods, especially Zoy-Koff for it takes the place of coffee which I do not use.' Dr. De of India, previously mentioned, said 'I liked your Stake-Lets very much and ate them with intense interest. Both the flavor and texture are so much like meat.'"

1133. *Madison Health Messenger* (*Madison, Tennessee*). 1948. Soybeans–A wonder food: Madison College works with the soybean. Fall. p. 1, 3-4.
• ***Summary:*** The soybean originated in China. However this "food of the ancients now seems destined to turn its antiquity into one of the most valuable foods in the modern world.

"The first actual mention in the literature of this wonder bean is recorded in Emperor Chen Nung's Materia Medica, written under date 3838 B.C. In the Legendary period of China the story of bandits attacking a merchant caravan has been handed down through generations in which it is said that the miracle wonder food, soybeans, were the lifesavers of some merchants, who, being surrounded and besieged by bandits until their own provisions were exhausted, noticed a vinelike plant bearing a legume which they had never seen before from which they made flour and baked cakes. Energized therewith, they fought off the enemy until help came. So the legend goes, soybeans became the staff-of-life in the great nation of China which still ranks first in population in all the world."

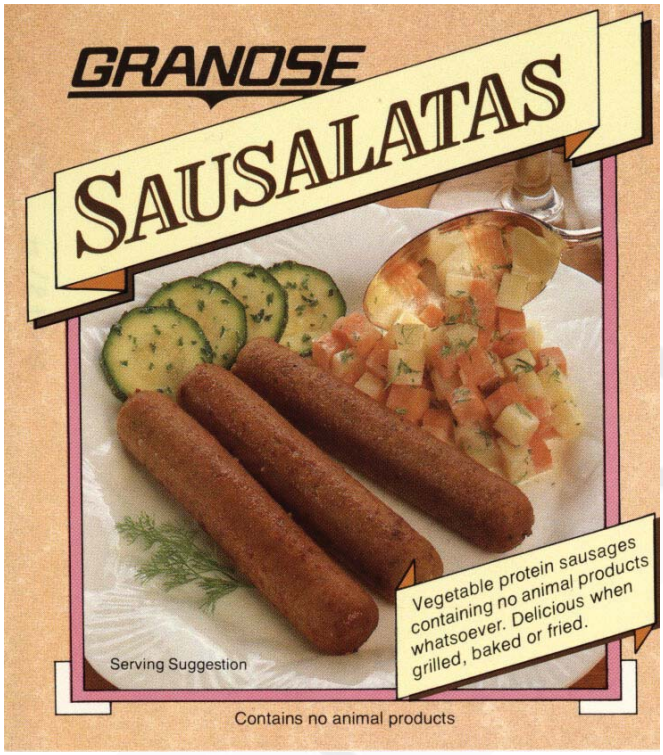
Soybean "oil is used extensively in Margarine in which it is used up to 80% in certain brands (Sure Good, sold by A. & P., and Nu-Maid, sold by Kroger)." Many brands of margarine contain 20-80% soybean oil.

Discusses the work of Henry Ford with soybeans and soyfoods. "His research staff made soybean milk and cheese, soybean-nuts, canned green soybeans, soybean sprouts, and a hundred other things."

"With the knowledge of widespread disease in the animals used for food by man, the founders of Madison College adopted a vegetarian diet supplemented with dairy products and eggs. For over 44 years this has been strictly adhered to in the food preparation for the students, faculty, workers, and patients at its 165 bed sanitarium and hospital... For over 30 years [since 1918 or before] Madison has been growing soybeans. They have occupied a place of prominence in its menus for many years." Then Madison began to manufacture soybean food for the public. More and large equipment was added. "In 1941 a new plant was started and today Madison Foods are produced in a fine daylight plant of modern design and construction..."

A list of Madison's foods is given, together with the weight of the can or bag in which each is sold: Kreme O'Soy, Zoy-Koff, Stake-Lets, Yum, Zoyburger, Vigorost, Not-Meat, Soy Cheese [Tofu].

1134. *Madison Health Messenger* (*Madison, Tennessee*). 1948. A unique food developed [Kreme O'Soy]. Fall. p. 3.
• ***Summary:*** "Realizing the need of a milk substitute for infants and adults who could not tolerate cow's milk, Madison turned to the soybean and made an emulsion so near in appearance that even the choosy cat drinks its and licks its chops. Manufactured exclusively by Madison Foods and sold under the registered trade name of Kreme O'Soy, this creamy homogenized emulsion of soluble soybean protein fortified with dextrose, calcium phosphate, and soybean oil, is compounded to take the place of human and animal milk in human nutrition.



"In thousands of cases Kreme O'Soy has been used to replace human and cow's milk in feeding infants, children, youth, and adults, and the infants develop normally, children make the usual gains, and adults maintain normal weight and health. It contains less calcium than cow's milk because the human organism requires less calcium than the calf for which the cow's milk is obviously intended. However it contains almost twice as much iron as cow's milk and forty times as

© Copyright Soyinfo Center 2014

much copper.

A black-and-white photo shows a can of Kreme O'Soy. The text reads: "A tasty milk-like drink. Homogenized. Shake well." Two large photos show healthy babies raised on Kreme O'Soy. A table compares the composition of Kreme O'Soy, human milk, and cow's milk. A list of ingredients is given on p. 4: Soybeans, soy oil, dextrose, calcium phosphate, and sodium chloride.

1135. **Product Name:** Granose Sausalatas (Meatless Sausages Canned in Brine) [Plain, or Smoked].
Manufacturer's Name: Granose Foods Ltd.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1948.
Wt/Vol., Packaging, Price: Can.

New Product–Documentation: *The British Vegetarian.* 1960. Sept/Oct. p. 249. Granose makes Sausalatas, which contain wheat protein, mixed nuts, rusk, wholemeal flour, vegetable oils, yeast extract, onion, and seasoning.

Manufacturer's catalog. 1980. April.

By 1980 the product had been reformulated to include textured soy flour.

1136. **Product Name:** Miller's Vegetarian Cutletburger [Regular, or Smokene Flavors].
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: P.O. Box 388, Mt. Vernon, Ohio.
Date of Introduction: 1948.
Ingredients: Incl. wheat gluten.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Soybean Blue Book. 1948. p. 84. Ad in *Soybean Digest.* 1949. Aug. "Miller's Cutletburger for Picnics, Too!" This canned product is sold in Regular and Smokene flavors. Note: The product is gluten-based. Smokene was apparently derived from T.A. Van Gundy's Smoein. This is the earliest document seen that mentions "Smokene."

1137. **Product Name:** Loma Linda Soyagen. Soy Beverage Powder for Adults [Liquid, or Powdered; All-Purpose/Plain, Malt, or Carob].
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce Place, Arlington, California. Phone: 714-687-7800 (3/88).
Date of Introduction: 1948.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
New Product–Documentation: Today's Food. 1964. Autumn. p. 5; All purpose or malt available. Today's Food. 1966. Carob flavor now available; Wholesale price list. 1968. Soyagen Liquid sold in 17 oz. and 30 oz. cans for $0.36 and $0.42 retail respectively. Powder sold in 1 lb or 4 lb cans for $1.05 or $3.61 retail respectively. Label for a can, 8 by 10 inches, color. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Vitamin & Mineral Fortified." Ad (full page, color) in Bestways. 1988. March. p. 11. "Soyagen. Good-tasting and so good for you too." Available in 3 flavors–All purpose; no-sucrose (with no cane or beet sugar), and carob. Photos show cans.

Burnett (1951, p. 998) notes that a 1948 label for liquid canned Soyagen, made by Loma Linda Food Co., gave the following composition: Water 88.6%, protein 3.03%, fat 3.48%, carbohydrates 4.53%, ash 0.36%. Vitamins (all in units per liquid quart): vitamin A 2000 USP, thiamine 500 mcg (micrograms), riboflavin 1000 mcg, vitamin D 500 USP. More sophisticated versions of the same product with the same name appeared in 1963 (All Purpose), 1965 (Carob flavor), and 1977 (Plain).

1138. Smith, Allan K. 1949. Oriental use of soybeans as food: Notes on Oriental farming practices. II. China. *Soybean Digest.* March. p. 26-28, 30, 32, 34.
• ***Summary:*** Contents: Soy sauce in China. Sweet flour paste–Tien Mien Chang [Chiang]. Soy or vegetable milk (incl. Willis Miller, yuba). Soybean curd or tofu (incl. use in Buddhist restaurants to look like meat, poultry, or fish dishes).

Soybean cheese [fermented tofu]. Fen-t'iao from mung beans (vermicelli). Fermented soybeans [fermented black soybeans] (made from small black soybeans). Vinegar fermentation process.

Concerning soy milk: "The Chinese National government has taken an active interest in soy milk for

© Copyright Soyinfo Center 2014

use by its army, Willis Miller, with offices and business connections in the Henningsen Produce Co. in the Dollar Building at 51 Canton Road, Shanghai, has just completed building a soy milk plant for the Chinese government. The process is patterned after that of the International Nutritional Laboratories [Dr. Harry W. Miller] at Mt. Vernon, Ohio, for making a powdered or spray-dried milk. Mr. Miller is also supervising the installation of a vegetable canning plant for the same purpose." Address: Northern Regional Research Lab., Peoria, Illinois.

1139. Manners, Marian. 1949. Day made better by good breakfast: Vigor for fatigue. *Los Angeles Times.* May 9. p. B4.
• ***Summary:*** Contains a recipe for Corn-soy nut bread (with 1 cup corn soy shreds, and ½ cup broken nuts).

Note: Kellogg's Corn Soya Shreds (a breakfast cereal) was launched in 1945.

1140. *Madison Health Messenger* (*Madison, Tennessee*). 1949. Summer foods for health. Vol. 49-2. p. 1-3. Undated.
• ***Summary:*** Note: This issue of the *Madison Health Messenger* is smaller than its predecessors–only 20 cm (vs. 28 cm) tall but still 6 pages. Some recipes are featured–as for Zoyburgers. New products include Yum (made from soybeans, gluten, and soy cheese [tofu]) and Bite-Size Stake-Lets (made from gluten and soybeans). A chemical analysis of 8 Madison products is given.

1141. **Product Name:** Miller's Vegetable Cheese.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: P.O. Box 388, Mt. Vernon, Ohio.
Date of Introduction: 1949 August.
New Product–Documentation: Ad in *Soybean Digest.* 1949. Aug. "Miller's Cutletburger for Picnics, Too!" A photo shows a can of Miller's Vegetable Cheese.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Vegetable Cheese (the brand "Miller's" is not shown) contains 11.50% protein, ?% fat, and 12.10% carbohydrate. Not listed in the 1965 *Diet Manual.*

1142. Madison Foods 1949. Madison Foods featured recipes (Leaflet). Madison College, Tennessee. 2 panels each side. Each panel: 22 x 14 cm. Undated.
• ***Summary:*** "For real eating pleasure–Nu-Steak–Vegetarian." On the cover is a photo of a table setting with roses in a vase, food on 3 plates, a napkin and glass. On page 2-3 are recipes for using Madison Foods, which include: Nu-Steak or Steak-Lets. Mock Chicken. Madison Burger. Not-Meat. Cheze-O-Soy (tofu). Zoyburger. On page 4 are descriptions of 11 Madison Foods Products" Zoy Koff, Nu-Steak, Madison Burge4, Mock Chicken (all gluten chunks), Sandwich Loaf, Stake-Lets, Cheze-O-Soy, Not-Meat (with

peanuts ground to a meal, soy grits, and seasoning), Yum, Zoyburger, and Vigorost.

A table gives a nutritional analysis of each.

1143. International Nutrition Laboratory, Inc. 1949. Milk-equivalent nutrition for the whole family: The only spray-dried soya milk (Ad). *Soybean Digest.* Sept. p. 89.
• ***Summary:*** See two pages after next. A 2/3-page vertical ad. A large photo near the top shows cans of Miller's Soyalac Soya Milk (Spray Dried) in All Purpose and Malt Flavors and a can of Soyalac Infant Food.

The text reads: "Scoring again, the Soybean brings everyone, everywhere a delicious, palatable drink equaling cow's milk in nourishing qualities. This spray-dried all-vegetable milk is Different from liquid soy milks and is the only one which has been granted a U.S. Patent. It is an excellent, non-allergic protein beverage for the entire family. Available in two distinct flavors to suit most tastes–All-Purpose and Malt Flavor."

Note: This is the earliest English-language document seen (Aug. 2013) that contains the term "protein beverage," which probably refers to soy milk.

"Miller's Soyalac is thoroughly processed by being atomized into a sterilized chamber resulting in a quickly soluble powdered milk. Best of all it is easily digested because it forms a soft, fine curd in the stomach which speeds up absorption, giving fast fatigue-relief.

"Infant Food–Choice of doctors who know! Non-allergic and quickly assimilated by the most sensitive baby's stomach, Soyalac Infant Food assures the baby of healthy growth and balanced development. It is vacuum-packed and fortified with essential elements and vitamins. Babies love it–and thrive on it!

For Real Eating Pleasure — NU-STEAK

Vegetarian

MADISON FOODS

Madison College, Tenn.

© Copyright Soyinfo Center 2014

DESCRIPTION— INGREDIENTS

ZOY-KOFF—A coffee alternate used in place of coffee. Contains no coffee—no nerve stimulants. Two grinds—regular and fine. Prepare like coffee. Ingredients—soybeans, bran and molasses. Packed in 1-lb. paper bags.

NU-STEAK—An all-gluten vegetarian steak. So easily prepared. Uniform in size. Special process makes it one of the best. You will be delighted with its texture and flavor. Ingredients —Wheat glutten in tastily seasoned broth.

MADISON BURGER—This tender burger textured product is already a favorite with many. Can be used to form the base for so many of the Vegetarian protein dishes. Make your own Meat Balls—vegetarian—easily prepared and economical. Ingredients—processed Wheat gluten ground to burger texture, tastily seasoned.

MOCK CHICKEN—These all-gluten chunks with a distinct seasoning will surprise you. Can be fixed in a variety of ways—see recipes on can label. Ingredients—Wheat gluten in seasoned sauce.

SANDWICH LOAF—A tasty loaf, easily sliced. Ideal for sandwiches. Ingredients—Wheat gluten, garbanzos and seasoning.

STAKE-LETS—A combination of wheat gluten, whole wheat and soy flour prepared in meat-like sauce. These vegetarian steaks, uniform in size, are easily prepared. Ingredients—Wheat gluten, whole wheat and soy flour and seasoning.

CHEZE-O-SOY—An excellent diabetic food, low in carbohydrates. Nice for sandwiches and salads. Ingredients—processed soy beans, nicely seasoned.

NOT-MEAT—A smooth-textured loaf. This is well liked by many. Ingredients—peanuts ground into meal, soy grits, and seasoning.

YUM ZOYBURGER VIGOROST. These three high-protein foods are excellent body builders. Each has its distinct flavor. A favorite with many for years. Can be prepared in many ways to simulate meat. Ingredients—Wheat gluten, processed soy beans, peanuts, garbanzos, and seasoning.

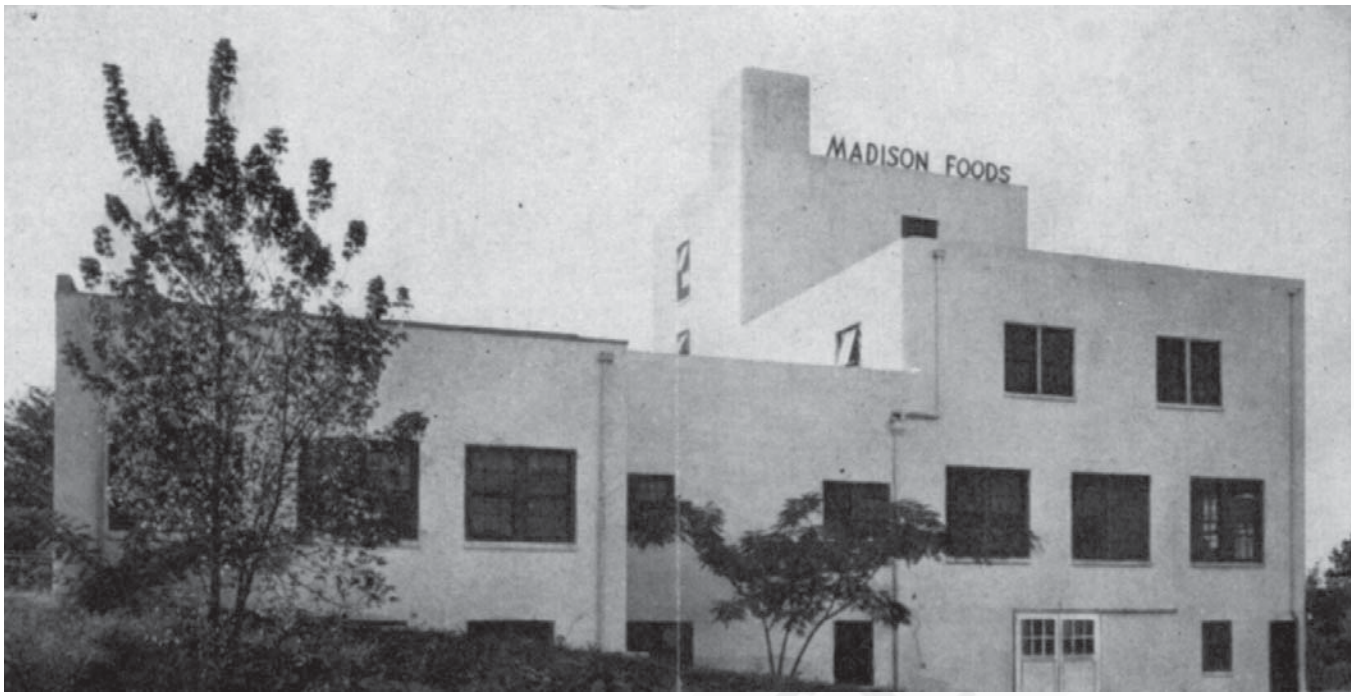
"Other Soya Bean Products we pack include: Green Soya Beans, Giant Select Soya Beans, Soya Beans in Tomato Sauce, Sandwich Spread and Vegetable Cheese."

A small illustration (line drawing) shows the outside of the plant in Mt. Vernon, Ohio. Address: Mt. Vernon, Ohio, Manila [Philippines], Shanghai [China].

1144. *Madison Health Messenger* (*Madison, Tennessee*). 1949. The story of Madison Foods. Vol. 49-3. p. 1-6. Undated.

• ***Summary:*** See next page. "Over 45 years ago [actually in 1904] a group of educators founded an institution in Madison, Tennessee, where special study was given to healthful living. They began by operating a school on a farm. Later a sanitarium was built. And, finally, a food production department was opened, now known as Madison Foods... People who came to the sanitarium were helped by the treatments and the plain wholesome food. However, because when they returned to their homes, they were unable to obtain some of the foods which proved helpful, many sent their orders to us for these foods. The popularity of the foods increased and now they are available in many stores throughout the 48 States."



"In 1941 a building program was started to completely rebuild the Madison Foods plant on the original site. Modern offices, adequate storage and shipping facilities, a five story production section, complete revamping of processing equipment, and a re-arrangement of the plant were realized step by step, and now the Madison Food plant, built of concrete, blocks, and steel, with tile and plastered interior, and a building of modern design for greater efficiency, stands as a monument to the devotion of its founders and the perseverance of those who carried the torch onward.

"A character builder: As part of the vocational training program at Madison College, Madison Foods is primarily concerned with building strong physical bodies and strong minds."

Photos show: (1) East side view of the new Madison Foods plant. (2) A can (with label) of Stake-Lets (the original gluten-soy product, a complete protein food, sold in 14, 20, and 30 oz sizes). (3) A young man standing next to a large autoclave used for cooking canned foods. (4) Four young ladies hand picking peanuts to insure quality. (5) Front view of the new Madison Foods plant ranging from 2 to 5 stories in height. (6) A can of Yum (14 oz, made with grains, legumes, and vegetables). (7) A young man operating an homogenizer that is homogenizing Kreme O'Soy. (8) A student operating a machine that is labeling cans.

Page 5 contains a description of the various products, with their ingredients, made by Madison Foods: Zoy-Koff–

an alkaline beverage used in place of coffee. Contains no coffee–no nerve stimulants. Two grinds–regular and fine. Prepare like coffee. Ingredients: Soybeans, bran, brown sugar. 1 lb bag.

Kreme O'Soy–a rich-bodied, homogenized soy beverage. May be used in place of milk. Ingredients: Soybeans, soy oil, dextrose, calcium phosphate, sodium chloride. 20 oz cans.

Zoyburger–excellent for sandwich spread, serve like steak with onions. Ingredients: Soybeans, gluten, raw peanut meal, vegetable seasonings. 14 & 20 oz cans.

Stake-Lets–a combination of gluten and soybeans sliced in meatlike sauce. Ingredients: Gluten, soybeans, soy sauce, seasonings. 14, 20 & 30 oz cans.

Not-Meat–a smooth-textured loaf for vegetable roasts, salads, sandwiches, etc. Ingredients: Whole peanut meal, soybeans, and seasonings. 14 & 20 oz cans.

Vigorost–a fibrous-textured vegetable steak used like meat. Also for sandwiches, salads, etc. Ingredients: Gluten, soy cheese, whole peanut meal, seasonings. 14 & 20 oz cans.

Yum–a mild bologna-like-flavored, meatless loaf, used hot or cold. Ingredients: Soybeans, gluten, soy cheese, whole peanut meal, seasonings.

Cheze-O-Soy–a curd made from soybean milk, to be used in salads, sandwiches, spaghetti, etc. Ingredients: Coagulated soybean proteins, seasonings. 14 & 20 oz cans.

Bite-Size Stake-Lets–gluten and soy bits in rich sauce simulating stewed bits of beef in rich gravy. A choice food. 20 oz cans.

"A statement of ingredients, use and recipes is on each package and can of Madison Foods."

1145. *Vegetarian News Digest* (*Los Angeles*). 1949. Vegetarian questionnaire. 1(10):14. Nov/Dec.
• ***Summary:*** Dr. M.G. Hardinge, assistant professor at the College of Medical Evangelists, Loma Linda, California, seeks vegetarians for his study.

1146. **Product Name:** Loma Linda Nuteena (Meatless Luncheon Loaf or Cold Cuts Prepared from Raw, Ground Peanut Butter and Soy Flour).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1949.
Ingredients: In 1971: Water, peanut meal, 100% wheat meal, soy flour, salt, yeast extract, onion, MSG, lepine, celery extractives.
Wt/Vol., Packaging, Price: 19 oz (538 gm) can.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: 1988: Per ½ inch slice (2.4 oz–67 gm): Calories 160, protein 8 gm, carbohydrate 5 gm, fat 12 gm, cholesterol 0 mg, sodium 120 mg, potassium 200 mg.
New Product–Documentation: Loma Linda University, School of Dietetics. 1949. *Lesson Outlines in Nutrition & Cookery.* 2nd ed. Mountain View, California: Pacific Press Publishing Assoc. p. 119. Gives the nutritional composition of the product.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Nuteena contains 11.99% protein, 13.85% fat, and 11.00% carbohydrate.

• ***Summary:*** "Foreword: The purpose of this little book is to serve as a guide in the study of simple facts about nutrition and healthful cookery, primarily prepared to be used in community nutrition classes." The guidelines, in outline format, are also helpful in teaching the principles of healthful vegetarian nutrition and cookery.

Also discusses: Soybeans as a good source of high quality protein (p. 29). The meatless diet: Meat is not a nutritional necessity, disadvantages of flesh foods (animals are diseased; rich in nitrogenous waste products, which kidneys must eliminate. These act as a stimulant; poor source of most vitamins and calcium; expensive), importance of knowing how to make proper substitution when discontinuing a meat diet, protein content of average servings of some [non-flesh] foods (including soybeans) (p. 31-33). Homemade Vegex (with ½ pint soya sauce, p. 113). Protein foods (gives the composition of soybeans, p. 118). Loma Linda Foods (nutritional composition of their commercial products; Vegemeat Burger, Vegemeat Steaks, Nuteena, Proteena, Peanut butter, Vegex; p. 119). Calcium content of foods (incl. turnip greens, mustard greens, soy bean curd, kale, dry soybeans; p. 120). Iron content of foods (incl. mustard greens, soybean curd). Address: Loma Linda, California.

1153. Stevens, Henry Bailey. 1949. The recovery of culture. Ashingdon & Rochford, England: C.W. Daniel Co.; New York, NY: Harper & Brothers. xvii + 247 p. Illust. 22 cm.
• ***Summary:*** A trailblazing work about factory farming, and a cultural and social history that explains how humans became a meat-eating and war-waging species. Also discusses the role of fruit in human culture, and fruitarianism, Swedenborg, Johnny Appleseed, Tolstoy, Richard Wagner, Albert Schweitzer, Shelley, Gandhi, Bernard Shaw, John Harvey Kellogg (p. 158-64). The author was born in 1891.

1154. *Soybean Digest.* 1950. Grits and flakes... from the world of soy: Kellogg Co., Battle Creek, Michigan, is plugging the protein content of its cereal, "Corn-Soya,"... April. p. 40.
• ***Summary:*** "... in an advertising campaign in national circulation magazines."

1155. Worthington Foods, Inc. 1950. Wholesale price list and order blank. Worthington, Ohio. 1 p. July 31.
• ***Summary:*** Products include: Beta Broth. Tastex. Soy sauce. Tastex food yeast. Lacto-psyllium. Protein foods (Alternates for meat): Soyloin Steaks. Meatless Wieners. Choplets. Choplet Burger. Proast. Numete. Veelets.

Worthington breading meal. Sav-Ree brown gravy. Honey bear peanut butter. Kel-jel.

Note: A wholesale price list dated 10 Dec. 1950 shows that Worthington was selling the following line of Miller's Foods products (purchased from Harry W. Miller of Mt. Vernon, Ohio): Miller's Cutlets, Miller's Cutlet Burger (regular and smoke flavors), Vegetable Stew.

Note: This is the English-language document seen (Jan. 2007) that contains the term "Cutlet Burger" (or "Cutlet Burgers"). Address: Worthington, Ohio.

1156. Kellogg Co. 1950. Sweetheart of a breakfast! Extra nourishing! Extra good! And the freshest Corn Flakes of all! (Ad). *Life.* Oct. 16. p. 25.
• ***Summary:*** See next page. This full-page color ad in prestigious *Life* magazine shows a large bowl of Kellogg's Corn Flakes, topped with grated coconut and a cherry. Above it is a small box of Kellogg's Corn Flakes. Behind that, in shades of tan, appears the head and shoulders of a lovely girl in a checkered bonnet standing in a field among ears of corn. Below the bowl, in the lower left corner, is a smiling man holding a variety pack–a choice of 7 favorite Kellogg's cereal in 10 small cartons. One of these is Kellogg's Corn Soya Shreds. Others include Rice Krispies, Shredded Wheat, and Pep.

Note: Thanks to Paul and Gail King of The Soy Fan Club's Drive-in for sending this attractive ad. Address: Battle Creek, Michigan.

1157. *Soybean Digest.* 1950. Kellogg's Corn-Soya on countless U.S. tables. Oct. p. 16-17.
• ***Summary:*** "Soy is now a valued ingredient in a surprising number of products. This article is the first in a series by the Soya Food Research Council."

The story of this breakfast cereal goes back some 35 years when W.K. Kellogg, a developer of food products, began studying the soybean firsthand in the Orient. "As he filled his notebooks, he also raked the broad stretches of China for different varieties of soybeans for experimental growing on the Kellogg farm." He later declared his cereal to be "richer in protein than any other well-known cereal."

By 1945 a product was developed that passed all Kellogg's quality tests. "In the next 18 months it was subjected to sales testing in California and selected eastern markets. National distribution was completed in 1947. To date Corn-Soya has earned itself a very loyal following with a fairly large percentage of American families."

Photos show: (1) A woman weighing cases of Kellogg's Corn-Soya Shreds on a roller conveyor before they leave the factory. (2) Shredding machines used in the Corn Soya processing line.

1158. *Madison Health Messenger* (*Madison, Tennessee*). 1950. List of Madison Foods. Vol. 50-1. p. 1. Undated.
• ***Summary:*** Eight products are listed. The Messenger has now shrunk to one side of a half sheet of paper. We can date this issue in two ways. In the upper right hand corner the following is typed: "You are cordially invited to attend the special demonstration of Madison Foods in the Cafeteria, Tuesday November 21, 11:45 to 6:30. Premiums will be on display and free samples will be offered." "Special premium offer on reverse side." These premiums are gifts that can be obtained for money + labels. For example an Eskimo Whiz-Mix blender ($39 value) is available for $17.50 + 24 labels.

Shake on . . . **shredded coconut**
Trimmings . . . **maraschino cherry**
or . . . **dab of jelly or jam**
P.S. *Nothing to cook and mighty nourishing!*

Save-you suggestion: A "breakfast supply shelf" in a handy location—to keep cereals, jams, canned juices, coffee together. Saves time and trit-trot!

• • •

Enjoys tour. Mrs. June Regnier of Salem, Mass. is a bacteriologist (and now the bride of a physician). After her trip through the Kellogg plant, she writes, "My, you people are perfect housekeepers . . . a spotless factory!"

• • •

No breakfast is no-go for losing weight, says *Reader's Digest* reporting on tests with women university students. And the *hidden hunger* caused by skipping breakfast causes tired mind, body and nerves. You look better and feel better on a nourishing breakfast!

• • •

Mother! On the breakfast table, set up a tray with sugar bowl, salt 'n' pepper, silver, paper napkins. Spin-the-tray service helps everybody help himself!

• • •

Tops for topping. "For an extra-crisp top, bake lots of Kellogg's Corn Flakes on Tuna-Mushroom Casserole! My 3 children love it!" suggests Mrs. Bernice L. Brecke of Minneapolis, Minn. P.S. Marvelous on macaroni-and-cheese or any creamy-type baked dish!

• • •

No duds in Kellogg's VARIETY PACK. Your pick of 7 real favorites! And 9 out of the 10 boxes are Kel-Bowl-Pacs, which kids love to eat out of!

• • •

"Signature" Silverware goes with her sterling! "Harmonizes so beautifully, I want *more!*" writes Mrs. Betty Seemann of Whittier, Calif.

BEGIN THIS LOVELY SET—
your initial on each piece!
Get 4 "Signature" teaspoons of heavy silverplate for only 75¢ and *white-star end* from Kellogg's VARIETY. Package-insert describes offer. With teaspoons, you get a list of matching pieces and prices. Start your set now!

Sing a song of breakfast,
Of corn and rice and wheat—
Crispy packs of nourishment,
And all so good to eat!

10-box choice of 7 cereal favorites

Kellogg's Mother knows Best!

It will be available after 1 Jan. 1951.

1159. *Soybean Digest.* 1950. Soy foods from a unique college [Madison]: This little Tennessee college has long been noted for its soy foods. Nov. p. 14-15.

• ***Summary:*** This is the second in a series of articles by the Soya Food Research Council. Photos show: (1) "Attractive packaging of soy foods which have been pioneered by Madison College." These include: Kreme O'Soy (sliced bread), Stake-Lets, Kreme O'Soy (canned soymilk), Cheeze-O-Soy, Zoy-Koff, Yum, Not-Meat, Zoyburger, Vigorost, Kreme O'Soy Muffins. (2) Dr. E.A. Sutherland, standing, writing in a notebook. (3) A young man operating an homogenizer that is homogenizing Kreme O'Soy.

"Down in Tennessee nearly a half century ago Dr. E.A. Sutherland was obsessed with an irrepressible idea. He believed that any boy or girl willing to work for a college education should not be denied the right. He set out to achieve that end and succeeded against overwhelming odds.

"Madison College, at that time styled Nashville Agricultural Normal Institute, had only these assets: 11 students, some tumbled down buildings, and 400 acres of tired, soil-depleted land. Those acres had been bought by Dr. Sutherland and a small group of teachers with their last dollars.

"Today Madison College at Madison, Tennessee, has 4O0 students from 40 odd states and many foreign lands. Without endowment, as such for operating expenses, it has poured almost a million dollars from its own earnings into buildings, lands and farm equipment. Down south it is referred to as 'the college with a soul.'

"Soy Spotlighted: Of course Madison College lacks some of the gay social activities and other distractions that drain time and energy of students in many big-name institutions of learning. But students at Madison enjoy life. They are a determined lot, dead set on acquiring an education. The curriculum includes a variety of campus industries, in which students cooperate to support the college and themselves. Soy has a spot-lighted place in the over-all program.

"Under the Madison plan as set up by Dr. Sutherland every student must work for at least half, and

© Copyright Soyinfo Center 2014

preferably all of his academic expenses. Two-thirds of the students enter the college with only the required fee of $50. They complete a 4-year college course for a B.S. degree and may graduate with the original deposit intact. In all that time the efficient hard-working student need receive no outside help. Moreover, he will leave the college well equipped to do more than a single job.

"Before launching his experiments at Madison, busy Dr. Sutherland had been president of two colleges. At the outset his chief problem was to provide an income for the new school. This he did by farming and establishing a sanitarium. This permitted the training of health workers as well as the care of ill students. To do the job right, he discovered, he should be fully qualified as a medical scientist. He had set a rugged course for his students–they work 5 hours and study 5 hours a day the year round–and he was even less considerate of his own schedule. On top of all other duties he studied medicine for 4 years at Vanderbilt University Medical School and the University of Tennessee Medical School and finally, at the age of 50, received his M.D. It is inspiring today to go through the Madison Rural Sanitarium and Hospital with its large staff of physicians, its patient capacity of 165 and its complete modern medical equipment. Much of the work of the institution is done by students who earn while they learn. The best hospitals snap up the graduate nurses. Many of its students have matriculated in medical schools, colleges and universities and have been awarded Baccalaureate, Masters, and Doctorate degrees.

"Of the foresighted Dr. Sutherland it has been said: 'In any field, in any land, he would have been a great success.'

"By Student Effort: His enthusiasm and determination were infectious. That helps explain how the many college and sanitarium buildings, cottages and dormitories on the 900-acre grounds have been built with students supplying much of the brawn and brain; how the biology class grows many of its excellent specimens; how physics students have built much of their own equipment; and why there are more student applicants than can be admitted.

"Madison is justly proud of its school farm, which is as important economically as its Sanitarium, with its sprawling acres of gardens, fruit trees, vineyards, its greenhouses of flowers for hospital rooms, and its fine dairy.

"Madison is also noted for its 27 years of practical research in special foods development. This research has distinguished the institution as a unique center and pioneer of soy food development primarily intended for human use.

"Long ago it became evident that the new foods being fashioned at Madison–where good health and strong bodies always have been a chief aim–were too useful to be confined to campus menus. Accordingly, Madison Foods was founded, and has grown steadily over the years.

"It came about in this way. Dr. Sutherland and his associates believed in a simple life. They were convinced that plain wholesome foods–such as whole wheat bread and whole grain cereals, fresh fruits and vegetables, nuts, dates, honey and soy protein–helped patients to early recovery and contributed to permanent good health. Many of these patients, after returning to their homes, ordered these foods in ever-increasing volume. Demand grew until it became necessary to put them into retail stores and now they may be purchased in all 48 states.

"Convinced long ago of the high nutritive value of soy protein, Madison food chemists experimented with more than 200 varieties of soybeans. They solved the taste factors, and went on with the creation of savory breakfast foods, bread, coffee substitutes, soy milk, various meat substitutes, and other products.

"Through measured scientific research they developed soy milk until now it is not only as economical as special formula cow's milk but, according to the American Medical Association Journal, better for some babies. From Africa, India, and other countries where dairy cows and cattle are scarce, observers have come to study the methods of Madison's soy milk 'dairy' and its 'vegetarian slaughter house.'

"Today many authorities believe that a properly prepared dry soy milk powder would help to solve the child feeding problems in protein-starved nations of the Orient and in Latin-American countries, and research to that end is in progress.

"More Frontiers: Food scientists at Madison, dipping deeper and deeper into the protein mysteries of the soybean, are convinced that new frontiers will be pierced, and that the astonishing progress already made is but a prelude to a much greater future.

"Meantime, 85-year-old Dr. Sutherland, the man who made a dream come true, has lightened his daily load, but still carries on many duties. He is president of the Layman Foundation, member of the board of directors of Madison College and of a half dozen other rural schools in the South which he was instrumental in developing.

"In Dixieland they say 'the college with a soul' is but the lengthened shadow of a great man, a man with the courage to fight for an ideal."

1160. **Product Name:** Lange's Chops.
Manufacturer's Name: Lange Foods.
Manufacturer's Address: Portland, Oregon.
Date of Introduction: 1950.
Ingredients: Incl. wheat gluten.
New Product–Documentation: Talk with Mr. Lange. 1981. This private company was in business from 1960 to 1968 in Portland, Oregon. Mr. Lange was a Seventh-day Adventist, and it was a one-man operation making Lange's Chops, Lange Breakfast Style Vegetable Links, and other gluten-based meatlike products, which contained little soy. In 1968 the food production business was sold to Cedar Lake, although it was still a wholesale food distributor in 1981.

© Copyright Soyinfo Center 2014

By 1971 the manufacturer of the former Lange products was "Nu Vita."

1161. **Product Name:** Wheat & Soy Muffin Mix.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1950.

1162. Kellogg Co. 1950. Kellogg's Corn Soya Shreds "for a fine body." Corn–For flavor and energy. Soya–For body-building protein (Leaflet). Battle Creek, Michigan. 2 p. 36 x 27 cm.

• ***Summary:*** This oversized leaflet follows a question and answer format as follows: (1) "How many years of research were spent on the Corn-Soya Shreds formula?" They began in 1930 and by 1941 a satisfactory product was formulated. Three years later the product was perfected.

(2) "How were Kellogg's Corn-Soya Shreds tested for consumer acceptance?" "In July 1944, a test campaign was carried on for nine months in four towns situated in various parts of the United States. In two of the towns the product was marketed under the name of Maizoy, and in the other two towns under Corn-Soya. This was done to determine which name was suitable and popular. Extensive research indicated that the name Corn-Soya was preferable."

(3) "When did Corn-Soya Shreds go into production?" In 1945. National marketing started in California and moved eastward, and in Florida, moving northward as permitted.

(4) "How was Corn-Soya introduced?" "Before Corn-Soya was introduced into a territory and shipments of the product were made into that area, a series of 'teaser' cards was mailed to the grocers in the region, preparing them for the new product. After the product was placed on the shelves of the retail stores, billboard, newspaper and radio spot advertising on Corn-Soya Shreds was released. In addition, Corn-Soya samples were sent by mail to all homes in the area. It took over a year to complete distribution from California to Michigan, and from Florida to the Mason-Dixon Line. National distribution was accomplished during the latter part of 1948."

(5) "What is the present position of Corn-Soya Shreds?" "Both the distribution in stores and the consumer acceptance throughout the nation on Corn-Soya are good..."

(6) "How are Corn-Soya Shreds made?" By "blending corn grits and soya flakes." "The mixture is combined with a special Kellogg malt flavoring, sugar and salt, and is cooked approximately an hour under steam pressure, then dried, and run through grooved rolls to form shreds. The shreds are toasted the same as flaked cereals."

(7) "How do Corn-Soya Shreds differ from other ready-to-eat cereals?" They offer unique flavor and nourishment, making them "the body-building cereal."

(8) "What are the nutritional values of Kellogg's Corn-Soya Shreds?" "They contain 18% protein–more than any other cereal. Protein is the building material needed for growth and replacement of human tissue. They are also restored to whole grain levels by the addition of Vitamin B_1 (thiamine), niacin and iron as recommended by the U.S. Official Nutrition Food Rules."

(9) "What are cookery uses for Corn-Soya?" They are "delicious as a cooking ingredient in meat loaves, muffins, cookies, candies, and cake toppings; sprinkled over casserole dishes; buttered and toasted to serve with chop suey or rabbits; or crushed into crumbs for coating fish, chops and croquettes."

(10) How are Corn-Soya Shreds advertised?" "By television, newspaper, and magazine, all of which are pointed to the consumer–selling Kellogg's Corn-Soya Shreds as 'the body-building' cereal. Also there are attractive display pieces to help achieve the greatest point-of-sale elevation in all stores." Photos show: (1) A 1950 package and bowl of Corn-Soya Shreds on a dining table. (2) A small 1946 package of Corn-Soya Shreds against a background of shreds. (3) Two machines that are Corn-Soya shredding mills; each is manned by a worker. In the right background is a dryer

© Copyright Soyinfo Center 2014

which dries the cooked material preparatory to shredding. (4) A man tending the control panel of the Corn-Soya toasting oven. (5) A woman standing by a roller conveyor and scale weighing cases of Corn-Soya.

Location: Archives, Kellogg USA Inc., Battle Creek, Michigan. Note: This is the earliest commercial soy product seen (Oct. 2001) that was advertised on television. Address: Battle Creek, Michigan.

1163. **Product Name:** Loma Linda Soyalac Infant Powder (Soy-Based Infant Formula).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1951 January.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
New Product–Documentation: H.F. Meyer. 1960. Infant foods and feeding practices. A photo (p. 82) shows this canned product. A photo of a baby's face appears on the front panel. See also p. 88 and 90. Page 121 gives a detailed analysis of the product. The powder, after being reconstituted, contains: Fat 3.2%, protein 2.85%, carbohydrates 5.4%. Calories per ounce: 18. Tablespoons per oz.: 4. Added vitamins and minerals: ferrous sulphate, calcium carbonate, dibasic calcium phosphate. Affected by terminal sterilization: No. How formulated or reconstituted: 1 vol. milk to 7 vols. water. Chemical definition and essential clinical uses: "Contains soya bean solids, dextrose, maltose, dextrins, sucrose, soya oil. A spray-dried soya food to serve the nutritional needs of the bottle-fed infant. Completely soluble and formulated to simulate human milk. Used for infants allergic to dairy milk." Meyer gives the manufacturer as International Nutrition Laboratories, but with two addresses: 11503 Pierce Place, Arlington, California, and Box 388, Mt. Vernon, Ohio.

1164. **Product Name:** Loma Linda Soyalac Infant Concentrate (Liquid Soy-Based Infant Formula).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1951 January.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: H.F. Meyer. 1960. Infant foods and feeding practices. A photo (p. 82) shows this canned product. A photo of a baby's face appears on the front panel. See also p. 88 and 90. Page 121 gives a detailed analysis of the product. The liquid concentrate, after being reconstituted, contains: Fat 4.0%, protein 2.05%, carbohydrates 6.0%. Calories per ounce: 20. Added vitamins and minerals per quart: vitamin B-12–2 micrograms, vitamin A–3,0000, vitamin D 400, salt, calcium gluconate, calcium hydroxide, ferrous sulphate. Affected by terminal sterilization: No. How formulated or reconstituted: 1 can milk to 1 can water. Chemical definition and essential clinical uses: "Similar to Soyalac Infant Powder but in liquid form." Meyer gives the manufacturer as International Nutrition Laboratories, but with two addresses: 11503 Pierce Place, Arlington, California, and Box 388, Mt. Vernon, Ohio.

1165. Kellogg Co. 1951. New protein food–helps you have a fine body! (Ad). *Life* 30(8):60. Feb. 19.
• ***Summary:*** See next page. This full-page color ad in prestigious *Life* magazine (circulation now over 5.2 million) shows a large bowl of Kellogg's Corn Soya, topped with whole strawberries and milk. Above it is a girl running so fast her hat is flying off. Below it a photo shows a box of the product. The text reads: "Kellogg's Corn Soya–more body-building protein than any other well-known cereal–hot or cold... And protein is what life is all about. Protein is the stuff that every living cell depends on. Protein that helps build fine bodies. And protein that government authorities say we don't get enough of at breakfast!" A table shows that a standard 1-ounce portion of this product, when served with 4 ounces (½ cup) milk or cream, provides 13.36% of the recommended daily allowance of protein for an average man (154 lb) or 15.58% of the protein RDA for an average woman (123 lb).

The front panel of the cereal box reads: "High protein–helps you have a fine body. Ribbon milled corn and soya, with sugar, salt and malt flavoring, vitamin B-1, niacinamide added. 1 oz provides these percentages of the minimum daily adult requirements: Vitamin B-1 19%, riboflavin 3.2%, calcium 2.5%, phosphorus 6.9%, iron 18.4%, 0.556 mg niacin and 5.10 gms. protein." Address: Battle Creek, Michigan.

1166. *Soybean Blue Book.* 1951. Soybean growers and distributors. p. 143.
• ***Summary:*** This half-page section is divided equally into "Vegetable soybean seed" (11 companies listed alphabetically by company name; after each company name are the names of the vegetable varieties offered) and "Soybean seed–wholesale" (9 companies listed alphabetically by state). The following companies are listed: (1) W. Atlee Burpee Co. (Clinton, Iowa; Bansei). (2) Holmes Seed Co. (Canton, Ohio; Bansei). (3) International Nutrition Laboratory (Mt. Vernon, Ohio; Aoda, Bansei). (4) Lewis Olmer (Carthage, Illinois; Bansei). (5) John A. Salzer Seed Co. (La Crosse, Wisconsin; Bansei). (6) Wm. G. Scarlett & Co. (Baltimore, Maryland; Edible Yellow). (7) Strayer Seed Farms (Hudson, Iowa; Bansei). (8) Raymond Vail (Syracuse, Indiana; Bansei). (9) Vaughan's Seed Store (Chicago, Illinois; Bansei). (10) Buxton White & Co. (Elizabeth City, North Carolina; Bansei). (11) T.W. Wood & Sons (11 S. 14th St., Richmond, Virginia; Early Woods Yellow, Laredo,

New Protein Food

—helps you have a fine body!

KELLOGG'S CORN SOYA—

more body-building protein than any other well-known cereal—hot or cold!

People tell us Corn-Soya is the most delicious cereal they ever ate. But there are other good-tasting cereals. Others that are rich in vitamins, minerals and energy value.

But not one—no other leading cereal—is so rich in protein. And protein is what life is all about. Protein is the stuff that every living cell depends on. Protein that helps build fine bodies. And . . . protein that government authorities say we don't get enough of at breakfast!

There are other good reasons why you should eat Corn-Soya. But do you need another?

BODY-BUILDING PROTEIN—RIGHT IN THE BREAKFAST BOWL!

Percentage of daily protein needs provided by a standard portion (1 ounce) of Kellogg's Corn-Soya when served with 4 ounces (½ cup) of milk or cream*

Average Man (154 lbs.)	13.36%	Child (78 lbs.—10-12 yrs.)	13.36%
Average Woman (123 lbs.)	15.58%	Child (58 lbs.—7-9 yrs.)	15.58%

*Recommended dietary allowance (revised 1948), National Research Council.

Silverware with your own initial!

Four initialed teaspoons for 75¢! See complete offer on Corn-Soya package.

© Copyright Soyinfo Center 2014

Mammoth Yellow, Mixed, Ogden, Pocahantas, S-100, Tokio, Virginia Brown, Wilson Black, and Wood's Late Yellow. Note that Wood & Sons offers by far the most varieties of vegetable soybeans).

The list of nine soybean seed wholesalers includes: (1) Robert L. Dortch Seed Farms (Scott, Arkansas): "State registered breeders." Dortch has a half-page ad titled "Soybean breeders" at the bottom of this page. (2) Jacob Hartz Seed Co. (Stuttgart, Arkansas): "Southern grown green and edible varieties for edible purposes." (3) Funk Bros. Seed Co. (Bloomington, Illinois): "Soybean seed." (4) J.A. McCarthy Seed Co. (Evansville, Indiana). (5) Farmer Seed & Nursery Co. (Faribault, Minnesota). (6) Cypress Land Farms Co. (Jaywye, Missouri). See ad p. 142. (7) Cypress Supply Co. (Portageville, Missouri). (8) Valley Farms (Merchants Exchange Bldg., St. Louis, Missouri). See ad p. 142. (9) T.W. Wood & Sons (Richmond, Virginia): "Breed, grow, distribute soybeans for seed and commercial use."

Note: This is the earliest document seen (Aug. 1999) that mentions the soybean variety Virginia Brown.

1167. Cooper, Lenna F.; Bryan, Mary deGarmo. 1951. Supplementing the school lunch. *J. of Home Economics* 43(5):355-56. May.

• ***Summary:*** The regular Type A lunch was supplemented by a soybean product, expeller-pressed Multi-Purpose Food, distributed by Meals for Millions Foundation of Los Angeles, California. The nutritive value of these fortified/enriched soybean grits is given. "It will be seen that 1 ounce of the soybean grits has a protein value of 12 grams, the equivalent in protein value of 1 3/4 cups of whole milk or two ounces of lean meat. The cost for expeller-processed and fortified soybean grits is about 2½ cents per ounce as compared with 8 cents for the equivalent in milk and 9 cents for the equivalent in raw beef. It will be noted also that by enrichment it contributes approximately one-sixth of the day's needs in calcium, iron, and important vitamins for a 12-year-old child.

"The product was used as an extender in meat loaves, hamburgers, soups, hot breads, and desserts." Address: 1. Consultant dietitian; 2. Prof. of Home Economics and Supervisor of Food Services, Teachers College, Columbia Univ., New York City.

1168. *Soybean Digest.* 1951. Accept "Soyalac" as infant food. July. p. 22.

• ***Summary:*** "'Soyalac,' a vegetable milk produced by the International Nutritional Laboratory, Mt. Vernon, Ohio, has been accepted as an infant food by the Council on Foods of the American Medical Association, Dr. H.W. Miller, the president announces.

"Miller began development of 'Soyalac' in China over 15 years ago. It is prepared from the valuable protein and oil of the soybean. Its carbohydrates are a combination of sugars and it is reinforced with minerals to build it up into infant food to care for nutrition problems from birth to weaning time.

"'In order to meet the requirements of the American Medical Association, a vast amount of experimental work was necessary, not only to produce feeding results with 'Soyalac' by leading child specialists, but to obtain records of the feeding of large groups of babies over a long period of time,' said Dr. Miller. 'These results were obtained in America, Japan, the Philippine Islands and China. 'Soyalac' was granted acceptance on the basis of its splendid record as a hypoallergic food.'

"International Nutrition Laboratory was recently purchased by Loma Linda food Co., Arlington, Calif., and is now being conducted as the latter firm's eastern division. Products manufactured by the Mt. Vernon plant will be almost exclusively derived from the soybean.

"The firm has set up the International Research Foundation in charge of Dr. Miller. The plan is to continue research into and investigation of soy products."

1169. Shopping Bag. 1951. Loma Linda Food sale (Ad). *Los Angeles Times.* Dec. 6. p. 20.

• ***Summary:*** Shopping Bag is a chain of "Busy, friendly food stores" in southern California. Part of this full-page ad is for Loma Linda food products. "Ruskets, 14-oz. package–17¢. Ruskets Flakes, 8-oz. package–16¢. Oven Cooked Wheat, 22-oz. package–29¢." Prices effective from Thursday, Dec. 6 to Saturday, Dec. 8. at all 17 Shopping Bag stores. Address: [California].

1170. *J. of the American Dietetic Association.* 1951. Editorial: 1951 Marjorie Hulsizer Copher Award goes to Lenna Frances Cooper. 27(12):1071. Dec.

• ***Summary:*** "'Lenna Frances Cooper is first in our hearts tonight. And as we survey the notable events in our profession's growth, inescapably she also assumes first place in our history. Undoubtedly it was she who originally proposed a national association of dietitians and followed through with that courage and drive which made it a reality. In this city of Cleveland on October 18, 1917, Lenna Cooper presided at the first national convention of dietitians and within two days she had calmly and determinedly whipped up a constitution and by-laws which served as swaddling clothes when the infant American Dietetic Association greeted a waiting world on Saturday, October 20, 1917.'"

"'Reams could be written of Miss Cooper's many achievements, within her beloved Association and in her own professional career. Popularly voted one of Michigan's ten most distinguished women of achievement (in science), she has received honorary degrees from Michigan State College and Drexel Institute. Although a prolific writer and author of numerous books–her best known is now in its twelfth edition and nationally and internationally accepted–

© Copyright Soyinfo Center 2014

perhaps the brightest star in her crown of fame represents her thousands of students. From Battle Creek College, where Miss Cooper organized and was the first Dean of the School of Home Economics, has come an amazingly capable and notable company of dietitians–a veritable `who's who` of distinguished women. And what is most striking of all, since this small college has long been closed, is the camaraderie so proudly evidenced by the alumnae.

"'It is my great privilege to confer on you, Miss Cooper, the highest honor our Association may grant, the 1951 Marjorie Hulsizer Copher Award.'"

Note: The award was present by Lillian Storms Coover, President.

1171. **Product Name:** Soy Flakes with Gluten.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1951.
New Product–Documentation: Soybean Blue Book. 1951. p. 94. In 2 lb and 5 lb bags.

1172. **Product Name:** Soyvita (Roasted Full-Fat Soya Flour).
Manufacturer's Name: F.G. Roberts' Health Foods.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1951.
Ingredients: Soybeans.
New Product–Documentation: *Soya Bluebook.* 1981. p. 62; 1987. p. 75. Enzyme active full fat flour for bakery industry; heat treated soy flour for use in cakes, biscuits, doughnuts, confectionery, pies, sausages, and hamburgers.

Letter from Paul Smith of Soy Products of Australia Pty. Ltd. 1981. "Vincent R. Smith was a soyfoods pioneer in Australia. In 1951-52 he began to manufacture Australia's first whole (full-fat) heat-treated (debittered) soy flour." In 1956 he founded Soy Products of Australia Pty. Ltd.

Letter from Paul Smith. 1995. March 14. "Soyvita has only ever been used as a tradename for debittered full fat soy flour since 1951. Initially it was made using imported soybeans, but from 1954 it was made from Australian-grown soybeans. The tradename 'Soybake' was used for the same product packaged under the H.J. Langdon's name and address from 1955 to mid-1991, when it was abandoned due to a rationalisation of packaging and product lines. H.J. Langdon now buys the product in the 'Soyvita' packaging."

Letter from Paul Smith. 1995. April 11. Soyvita has never been used as a brand name for the retail health food products. It has only ever been used for the commodity type product which has been sold under the name and address of Soy Products of Australia Pty. Ltd. since September 1957. Prior to that the "Soyvita" name was used with/under the F.G. Roberts company name and address. "Soyvita" was only available to commercial users, therefore there was no point or interest in advertising it in *Nature's Path to Health.*

1173. Hardinge, Mervyn G. 1951. A nutritional study of vegetarians and non-vegetarians. PhD thesis, Harvard University School of Medicine. *
• ***Summary:*** This landmark study, which led to numerous follow-up studies and publications, examined the dietary habits and nutritional status of lacto-ovo-vegetarians, pure vegetarians [vegans], and non-vegetarians, each divided into three groups: older adults, adolescents, and pregnant women.

The data presented in this paper represent partial fulfillment of the requirements for the degree of Doctor of Public Health at the Harvard School of Medicine.

Note: This is the earliest document seen (Dec. 2013) concerning original health-related or medical research by or on Seventh-day Adventists.

1174. **Product Name:** Loma Linda Vege-Chee (Canned Tofu. Spelled Vegechee in 1960 and VegeChee by 1964) [Plain, or Pimiento].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1951.
Wt/Vol., Packaging, Price: 16 oz can.
New Product–Documentation: 1938 Price List. "Vege Chee, plain or pimiento." Wholesale price list. 1951. "Vege-Chee." Soybean Blue Book. 1954. p. 106.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Vegechee contains 11.53% protein, 7.31% fat, and 3.31% carbohydrate.

Today's Food. 1964. Autumn. p. 5. "VegeChee."

Loma Linda Food Co. 1969. "Wholesale Price List." VegeChee is now sold in 16 oz cans, which retail for $0.52 each.

1175. Burnett, R.S. 1951. Soybean protein food products. In: K.S. Markley, ed. 1951. Soybeans and Soybean Products. Vol. II. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 949-1002. [125 ref]
• ***Summary:*** Contents: 1. Soybean flour, grits, and flakes: Introduction, early history, types of soybean flour–standard definitions, amount of soybean flour and related products produced, methods of manufacture, soybean flour in bread, soybean flour in other baked goods, soybean flour in the meat industry, soybean flakes in breakfast foods, soybean flakes and derived peptones as brewing adjuncts, miscellaneous uses of soybean flour. 2. Isolated and modified soybean proteins: Aerating agents for confections and related products, neutral spray-dried soybean protein [isolates], soybean protein in [whipped] toppings, soybean protein and flour in confections, soybean protein and flour in ice cream, soy sauce, monosodium glutamate from soybeans, soybean vegetable milk, tofu, miso, yuba, and other Oriental soybean

© Copyright Soyinfo Center 2014

foods (incl. natto and Hamanatto).

The soy flour industry in the U.S. has grown steadily in recent years. Deliveries of soy flour "from the years 1930 to 1940 averaged about 25 million pounds annually. The deliveries have increased considerably since 1940 partly as a result of an increase in domestic use and partly as a result of deliveries of soybean flour to various government agencies, largely for export. In 1941, Federal purchases amounted to about 10 million pounds of soybean flour. In 1943, the amount increased to 170 million pounds when large shipments were made to Great Britain and the U.S.S.R. under lend-lease. Purchases of soybean flour by the Federal government decreased for several years, but increased in 1946 to an estimated 200 million pounds under the UNRRA [United Nations Relief and Rehabilitation Administration] program. Total soybean flour deliveries for 1946 were approximately 380 million pounds. In the domestic market the bakery industry was the largest consumer. About 40% of the domestic sales of soybean flour were for bakery use. Since the Bureau of Animal Industry has legalized the use of soybean flour as a binder in meat products, about 20% of domestic sales are to the sausage industry. The balance is used in prepared dough mixes, macaroni, candy, and in institutional feeding.

"In 1947, domestic sales of soybean flour were over 60 million pounds. This amount, plus government purchases and exports, amounted to about 415 million pounds. Two-thirds or more of the present domestic consumption of soybean flour is by the bakery, meat processing, and pet foods industries."

Table 155 (p. 953) shows Bushels of soybeans used for U.S. soy flour production (1942-1947). In 1942-43, the amount of full-fat soy flour produced in the USA was roughly 40% of the amount of defatted. In 1944-45 it was about 49%, but thereafter the percentage dropped rapidly to only 5% in 1946-47.

Note: These statistics relate to Soya Corporation of America, Dr. Armand Burke, and Dr. A.A. Horvath.

Concerning soybean flakes and derived peptones as brewing adjuncts (p. 974-77): "Soybean flakes and grits have been employed by the brewing industry to improve the body and flavor of beer, to increase foam stability, and to stimulate yeast growth.

"Improvement in foam stability and flavor can also be attained by adding directly to the finished beer a hydrolyzed soybean protein which has been broken down to the peptone and proteose stage...

"The early history of the use of soybean products as whipping agents is of interest since this work stimulated the development of processes which eventually led to the production of the present soy albumens. In 1939, Watts and Ulrich pointed out that an active whipping substance could be prepared from solvent-extracted soybean flour in which the protein had not been heat denatured, by leaching it at the isoelectric point of the protein. This extract was found to whip more readily and to a much greater volume than suspensions of the original flour... The active principle in the whipping substance prepared by Watts and Ulrich was probably the nonprotein nitrogenous material present in the soybean flour which is soluble at the isoelectric point of the protein."

Tables show: (155) Soybeans used in the production of low-fat and full-fat flour and grits (1942-1947, 1,000 bushels). (156) Peroxide value of fat extracted from pastries stored at -17.8ºC. (0ºF.), containing different percentages of soybean flour for periods of 0-6 months. (157) Analysis of uncooked liverwurst emulsion and of processed (water-cooked) sausage containing added soybean flour and water. (158) Losses in cooking liverwurst containing added soybean flour and water. (159). Analysis of frankfurter emulsion and of smoked sausage made with 3.5% of various binders. (160) Losses in smoking frankfurters made with 3.5% of various binders and after consumer cooking. (161) Effect of the addition of soybean peptone on volume and life of foam on beer. (162) Composition and pH of soybean albumens. (163) Composition of ice creams containing soybean flour. (164) Comparison of soybean milk with cow milk. One sample of cow's milk is compared with 4 samples of soybean milk (probably Oriental) and 3 samples of modern U.S. soybean milk reconstituted (Soyalac for infants, all purpose Soyalac, Soyagen canned from Loma Linda Food Co., California).

Figures show: (199-201, p. 981) Comparison of whipping ability of egg albumen and soybean albumen in different proportions and combinations. (202) Flow sheet for the acid hydrolysis process used in making HVP soy sauce. Address: Protein By-Products Research, Research and Technical Div., Wilson & Co., Inc., Chicago, Illinois.

1176. Nichol, Francis David. 1951. Ellen G. White and her critics: an answer to the major charges that critics have brought against Mrs. Ellen G. White. Takoma Park, Washington, DC: Review & Herald Publishing Assoc. 703 p. See p. 370-72. Foreword by J.L. McElhany. 23 cm. *
• ***Summary:*** Ellen White, founder of the Seventh-day Adventists, expressed her views on vegetarianism after she was converted to this diet in 1864. See Bibliography p. 679-703.

1177. Nicolici, Dumitru. 1951. The original diet. New ed. 4th impression [printing]. Summer Hill, NSW, Australia: Printed by Religious Liberty Publishing Assoc. 151 p. Illust. 21 cm. [81* footnotes]
• ***Summary:*** Quoting extensively from Biblical scriptures and the writings of Ellen G. White, this Seventh-day Adventist book presents the principles of vegetarian nutrition, and gives details of the adverse effects on health and character from consumption of meat, dairy products, eggs, alcohol, spicy condiments, and stimulants of all kinds.

© Copyright Soyinfo Center 2014

Contains recipes for fruit, nut, grain, and vegetable dishes. The author was born in 1896.

Chapter 9, titled "Milk, Butter, Eggs & Cheese" is very critical of these products as foods, and suggests that they be dispensed with as soon as possible. "Thousands of infants die annually because of indigestion set up by the use of cow's milk." Cow's milk contains large numbers of germs, some of which produce diseases such as typhoid fever and tuberculosis. "Cheese must certainly be ruled off our tables as unfit for human food" since it contains large numbers of germs and microbes–"in every pound nearly twice as many as there are people upon the face of the earth."

Chapter 10, titled "The Soya Bean," provides an alternative to dairy products and meat. It begins: "The soybean has been referred to as the Wonder Food of the world... It is called the 'meat without bones.'" It is an "ideal source of protein." From soybeans can be made soya milk which is "entirely free from the disease germs that make milk a potential disease carrier." Soy-related recipes include: Mayonnaise without egg (p. 138). Soy-bean mayonnaise (with soy-bean milk, p. 138). Cooked dressing (with soy bean flour, p. 138). Soy-bean milk (p. 139). Baked soy-bean croquettes (with cooked, ground soybeans, p. 139).

1178. Pappas, B.B. 1951. A high protein food–the soybean. *Healthful Living* (*New York City*) 7:33-34.

• ***Summary:*** "The United States Department of Agriculture recognized its value and set up a separate Soy Bean Research Laboratory to find new dietary and industrial uses for this wonderful bean. It has now been proven that the protein of the soy bean can very well replace the protein of meat, eggs and dairy products, and many manufacturers have taken advantage of this knowledge to produce a fine group of soy bean foods. Today we have such foods as soy bean cookies, roasted soy beans (crunchy and delicious), soy bean milk powder, malt and soy drinks, soy flour, soy spaghetti, macaroni and noodles, soy bean bread, soya salad oil, soy sandwich spread, soy bean meat in cans, etc., etc. The number and variety of items now being made from the soy bean is extraordinary. The American people have come to a full realization of the value of this miraculous bean and are making it an integral part of their daily food.

"Soy bean cheese: The soy bean is used by the Chinese not only in place of milk but it is also made into cheese. Tofu, or soy bean cheese, is extensively used in China and has the advantage over cheese prepared from cow's milk in that it is not putrescent. This bean also serves as a substitute for eggs–containing as it does, protein and fat (including lecithin) equivalent to that supplied by the white and yolk of the egg. Kellogg says that Tofu omelette is more palatable and wholesome than an ordinary egg omelette.

"Most proteins are what is known as 'incomplete proteins' and therefore not capable of supporting life alone. The tests made by the United States Department of Agriculture show that soy bean protein appears to be as valuable as the casein in milk. Osborne and Mendel, two of the most famous investigators and research workers in nutrition in the world, show that the soy bean furnishes a 'complete protein' of high nutritive worth which may be used as a substitute for animal protein. This protein is highly digestible and has twice as much as meat, for example. The soy bean likewise has a high fat content but practically no starch.

"It resembles a nut more than a bean, and is superior to nuts as a protein because of its alkalinity. Most nuts are acid-forming.

"We have spoken of soy bean milk. This does not necessarily mean liquid milk, for a perfectly fine soy bean milk is made by mixing dry soy bean milk powder with water to get an excellent tasting beverage. This is superior to cow's milk because of its much greater capacity to counteract intestinal putrefaction. Soy bean milk is not only free from putrefactive bacteria but furthers the development of Bacillus Acidophilus which counteracts the putrefactive type of bacteria. It is certain that it will keep the intestinal tract of a child in a purer state than cow's milk.

"Please don't get the impression from this that soy bean powder is strictly an infant food. Far from it. That is only one of its many uses.

"Three thousand years before the Christian era millions of Chinese were living–and thriving–on a vegetarian diet that was based on the soy bean as its principal food. This miraculous oriental bean was used in place of meat, fowl, eggs, butter, cheese, fish and milk. Often in their long experience the Chinese were saved from starvation and extinction by the soy bean.

"Protein substitute: In the Orient the soy bean still replaces both the cow and the chicken, being used as a substitute for such proteins as milk, butter, cheese and eggs. As a matter of fact, a milk made from the soy bean is used for infant feeding because of its easy digestibility and its lack of putrefactive agencies. As the famous Rout said: 'The properties of soy bean milk and curd are similar to those of milk obtained from cows, and the action of the rennet, etc., is the same. Lactic ferments also act upon it in the same way, also the ferments of certain European cheeses. Throughout China, vegetable milk is extensively used for infant feeding, and is, bottled and delivered each day to regular customers. Investigators in America and Europe indicate that vegetable (soy bean) milk can be successfully used to replace cow's milk.

"A vitamin food: The soy bean is also high in alkalinity. The lima bean was considered a high alkaline food, or bean, but Becker has proved that the soy bean stands higher than all vegetables in this respect. The soy bean is also rich in Vitamin D, which is one of its many striking characteristics. Outside of egg yolk and cod liver oil very few foods have any of this valuable vitamin."

1179. Ray, Georges. 1951. Technologie laitière. 2e éd. [Dairy technology. 2nd ed.]. Paris: Ed. Dunod. vii + 743 p. See p. 703-09. Illust. Index. 25 cm. [Fre]

• ***Summary:*** The chapter on "Milk substitutes" (p. 696+) contains a subchapter titled "Soymilk (*Lait de soya*)" (p. 703-09), which has the following contents: Introduction. General rules to follow in the preparation of soymilk. The North Vietnamese (*Tonkinoise*) method. Method of preparation used in dairies in the Far East: Castagnol process. Modern methods for the preparation of soymilk. Composition of soymilk. Properties of soymilk. Fermented soymilk (using *Bacillus acidophilus*, British patent No. 441,574, 22 Jan. 1936). Concentrating / condensing and drying soymilk (including yuba). Soymilk curds (*Caillebotte de soya*). The future of soymilk.

Contains two full-page ads by Alfa-Laval for dairy milk equipment.

Vegetable milks have certain advantages over animal milks. They are easily made in a state of microbial purity, free of tuberculosis bacteria. Their casein precipitates more rapidly than that of cow's milk and does not coagulate in the same manner in the stomach. And it can be sold at a lower price. Later: It contains no cholesterol, and makes better use of world food supplies. Disadvantages: It has a lower calcium content and many Westerners prefer the flavor of animal milks.

Here is a quick review of the processes for making soymilk, described at length in a monograph (written under the direction of G. Ray) by D. Kaltenbach and J. Legros [1936]. Precise information about the soya industry is assembled is a more recent work by A. Matagrin. Soymilk pioneer in France were [Li Yu-ying], L. Rouest, and H. de Guerpel (p. 703).

The Castagnol process was developed by Ray at the agronomic research Institute in Indochina (p. 704).

Starting in 1910, a Franco-Chinese society was founded for the study of the utilization of artificial milk from the soybean. The experiments were abandoned in 1912. In 1916 Prof. O. Laxa of Prague recommended for making soymilk on a small scale. Note: It is not important (p. 705).

In London, before World War I, a synthetic milk syndicate launched a type of [soy] milk adapted to European tastes. It applied the process of F. Goessel [of Germany]; 100 liters of soymilk were obtained from 10 kg of ground soybeans, 5 gm of sodium phosphate, 2.4 kg of lactose [milk sugar], 2 kg of sesame oil, 6 gm of salt, and 60 gm of sodium bicarbonate [also known as baking soda or bicarbonate of soda]. Melhuish, an Englishman, patented a process for enriching the [soy] milk with various oils that did not change its taste. Some years after World War I, Bertrand received a patent for the manufacture of deodorized soymilk. Among the American processes are those of Horvath and Kloss (p. 705).

In Germany, the Soyama factory in Frankfort makes a fresh soymilk very similar to cow's milk but with a different flavor. A table shows the nutritional composition of three different types of milk. After standing, the cream of Soyama soymilk separated. This soymilk has a more neutral and softer flavor than that of cow's milk. Bread made with this soymilk is excellent. In 1932 the French engineer Max Adler patented a process for soymilk without the characteristic flavor and odor (p. 706).

In China during World War II, soymilk was used extensively in refugee camps and saved many lives, especially those of children (p. 708).

The Annamites are fond of soymilk during the hot season. Each morning soymilk merchants can be seen circulating through the streets of the native villages of Hanoi. The product is consumed sweetened or unsweetened, cooked with rice, or added to various soups (p. 708).

Fermented soymilk: John H. Kellogg received a British patent for acidophilus soymilk. No. 41,574. 22 Jan. 1936. Yuba is the concentrated film of dried soymilk lipo-proteins (p. 708).

In France, Rene Jarre is specializing in the preparation of soyfoods (*produits alimentaires à base de soja*). Monahan and Pope (1915) added to powdered soymilk malt, cacao and chocolate–U.S. patent 1,165,199 of 21 Dec. 1915 (p. 709).

The future of soymilk: The main challenge now is to find a way to deodorize soymilk. Note: And to remove the flatulence factors (p. 709). Address: Honorary Prof. (Tunis, Rennes, Grignon), former Head of Technical Services, International Institute of Agriculture, Rome (Ex-Chef du Service Tecnique, a l'Institut d'Agriculture de Rome).

1180. White, Julius Gilbert. 1951. Abundant health: Expounding the Learn-how-to-be-well system of daily living. 5th printing. Pine Mountain Valley, Georgia: Health and Character Education Institute. xix + 477 p. Illust. 24 cm. See p. 367-82. [25 ref]

• ***Summary:*** About vegetarianism, diet, and hygiene. Note that the author was formerly (for 11 years) head of the Lecture Bureau at Madison College, a Seventh-day Adventist college and sanitarium. A portrait photo (p. vi) shows Julius G. White.

One chapter titled "The soybean: The wonder food of the world" (p. 367-82) discusses (with some recipes) the nutritional value of soybeans, Soybean milk and the pulp left after making it, soy flour, whole soybeans, vegetable meat (meat substitutes), soybean cheese [tofu], home-made soy butter (made from 4 tablespoons each soy flour and water, 1 cup of oil, a little salt and butter color if desired), soy mayonnaise, soy acidophilus milk, soy sprouts, soy sauce, soy coffee, and soy protein substitute for egg-white.

Adventist, working toward a Harvard University degree in public health, found that vegetarians are as healthy as flesh-eaters.

1182. *Vegetarian News Digest* (*Los Angeles*). 1952. A vegetarian city! 2(8):36. Spring.
• ***Summary:*** Keene, Texas, populated solely by Seventh-day Adventists, is entirely vegetarian. Furthermore, the women wear no make-up, alcohol and tobacco are not sold, and there are no police, courts, or judges.

1183. *Soybean Digest.* 1952. Soya queen of 1952. Oct. p. 16.
• ***Summary:*** The first annual Soybean Festival at Gibson City, Illinois, on July 22-26, was very successful. There was a livestock tent, merchandise display, dog show, antique auto show, and a carnival. But the unusual feature was a tent designated Soybean Palace, which "had displays of foods made of soybean products. The food displays were furnished by Mrs. Tucker's Foods, Loma Linda Food Co., Madison Foods, and Chicago Dietetic Supply House.

"An elaborate display was provided by the National Soybean Crop Improvement Council. It was entitled, 'Research and the Miracle Bean.'

"The film, 'Soybeans, the Feature Story,' was shown each evening, and free literature on soybean production was available.

"A soybean queen was selected and a formal dance was given in her honor. She was Virginia McCormick, a senior in Gibson City Community High School. Old fashioned square dances were held two evenings."

Note: This is the earliest article seen with the word "queen" in the title in connection with soybeans or a soybean festival.

1184. Dunkel, Joan. 1952. The effect of vitamin B-12 on a certain vegetarian diet. *Walla Walla College Publications of the Department of Biological Sciences and the Biological Station* 1(4):59-64. Dec. 10. [18 ref]
• ***Summary:*** The introduction gives a brief history of the discovery of vitamin B-12 starting in July 1947. "Summary: A vegetarian diet [supplemented with vitamin B-12] has been developed which has produced five generations of rats, inferior to omnivores only in that their size was somewhat decreased. However, this diet was unable to sustain the animals beyond the seventh generation. Supplementing the diet with vitamin B-12, either oral or parenteral, did not result in any appreciable increase in the growth rate" (i.e. did not make the rats gain more weight in the same time). The five main ingredients in this diet were ground whole wheat (40%), rolled oats (10%), rye flour (10%), soy curd (10%), and brewer's yeast. This research was conducted in the physiology department of the College of Medical Evangelists, Loma Linda, California. Address: Walla Walla College, Washington.

1185. Miller, Harry W. 1952. Re: Infant feeding. Letter to Miss Dorothea VanGundy at 11784 Bonita Ave., Arlington, California, Dec. 14. 1 p. Typed, with signature. [1 ref]
• ***Summary:*** "Under separate cover I have mailed you a copy of the book 'Infant Feeding.' I am sure that you will be very interested in reading it through from cover to cover. It is written in very simple language and well within your vocabulary as a dietitian... It is a resume of the latest on infant feeding and familiarizes one with all of these various infants' foods. It also makes a very ready reference book in case any questions come up.

"I plan that you will have to do with a good deal of correspondence that comes in regarding infant feeding in the future... You will gradually get familiar with our Soyalac and its use... Of course, our scope of work goes way beyond infant feeding because we are working on the feeding of the masses of people, obtaining our nutrition from vegetable sources... Yours very sincerely, H.W. Miller, M.D., Research Director, International Nutrition Research Foundation."

Note 1. This letter is typed on the letterhead of the International Nutrition Laboratory, Inc. Above the Laboratory's name are printed: "Miller's Soya Foods. Soyalac–Sandwich Spread–Vegetable Cheese–Green Soya Beans–Cutletburger–Cutlets." Above that is hand-stamped: "International Nutrition Research Foundation, P.O. Box 388, Mt. Vernon, Ohio."

Note 2. In November 1952 Miss Dorothea Van Gundy began to work for Loma Linda Foods in Arlington, California, as a dietitian and food demonstrator. In August 1960 she was married (her first marriage) to Ed Jones, a health food salesman and distributor, who was 13 years older than she. Ed had previously been married to Mildred Lager. Address: M.D., International Nutrition Lab., Inc., P.O. Box 388, Mt. Vernon, Ohio. Phone: 1195.

1186. Battle Creek Food Co. 1952. Battle Creek Steaks: Get your proteins cheaper. Taste better than meat!! (Ad). *Diet Digest* (*Beverly Hills, California*) No. 42. Inside front cover.
• ***Summary:*** This full-page black-and-white ad shows illustrations of a can of "Battle Creek 'Steaks'–a vegetable product," and of a plate containing two of the steaks with a baked potato and vegetables. The text reads: "For nutrition and economy–steaks are unbeatable. New–tenderized. A tasty meat substitute. Used and recommended by the Battle Creek Sanitarium and the Miami Battle Creek Sanitarium" [Florida]. Address: Battle Creek 23, Michigan.

1187. Kordel, Lelord. 1952. Eat and grow younger. Cleveland and New York: World Publishing Co. 315 p. Index. 22 cm.
• ***Summary:*** The author's basic message: Eat more protein (especially complete proteins) and get plenty of vitamins and minerals. "One advantage of a high-protein diet is that

© Copyright Soyinfo Center 2014

you can eat less bulk, yet be well nourished..." There are no references and no "about the author" section. He is opposed to vegetarianism (high-starch dishes take the place of high-protein foods) which is a "fad" and believes (incorrectly) that vegetarians do not consume milk, dairy products or eggs (see p. 43-49, 114, 117, 120, 228, 261).

He mentions soybeans only in passing; they do not even appear in the index. For example: (1) The protein from lentils, legumes, soybeans and nuts is not complete and cannot counterbalance all the pure starches eaten to satisfy hunger (p. 43-44). (2) While soybeans, nuts, peas, and beans do contain protein, their protein content is "very low and incomplete when compared with meat, eggs, milk products and seed cereals" (p. 47). In a 4-page chart titled "Vegetable proteins" (p. 235-38) neither soybeans nor soyfood products are mentioned.

Contents: Part I: How to stay young. 1. Of course you want to stay young! 2. How old is "old"? 3. The secret of staying young. 4. Who is this fellow "protein"? 5. How much protein is "enough"? 6. "But I'm a vegetarian!" 7. Too much starch is dangerous. 8. These eight determine your age. 9. Six commandments for a long "young" life. 10. Seeds hold the germ of life: Millet, sunflower seeds, sesame seeds. 11. Best milks for humans. 12. Honey belongs on your table. 13. The sure way to good looks and charm. 14. Do your eyes look young? 15. Don't invite "old" hair and skin. 16. Your bones and muscles can be tattletales. 17. Your nerves must stay young, too. 18. Your blood can make you look younger. 19. Youth begins at breakfast. 20. What about food combinations? 21. Eating habits for longer life.

Part II: Your diet program. 22. Start now to eat and grow younger. 23. High-protein meats, poultry and fish. 24. Meat substitutes that are protein. 25. Egg and cheese dishes for every meal. 26. Eat plenty of seed cereals. 27. Salads are important. 28. Delicious baking with protein foods. 29. Sweets and treats that are "dividends."

Millet is the best of the seed cereals. Pythagoras praised its high nutritional value and advised his followers (all vegetarians) to adopt millet as the mainstay of their diets. Dr. John Harvey Kellogg said that millet is the only cereal capable of supporting life when used as the sole item in the diet. Millet is "a *safe* vegetable protein. Moreover it is almost a necessity in a vegetarian diet, because it can provide a *complete* protein without the need of eating a lot of bulk..." (p. 114-17).

Note: The popular website DrCoop.com lists Mr. Kordel (born in 1904) in its section on "Roots of modern food faddism." Court records state that he began producing and marketing supplements in 1941, operating under various trade names. In 1946 he was convicted of misbranding and fined $4,000. He had a brush with the Federal Trade Commission (FTC) in 1957 and two more with the FDA in 1961. In 1971 he was fined $10,000 and served one year in prison. Address: SC.D., author of *Health Through Nutrition*.

1188. Meyer, Herman Frederic. 1952. Essentials of infant feeding for physicians: A practical text for rapid reference. Springfield, Illinois: Charles C. Thomas. 252 p. Illust. 24 cm. [17 ref]

• ***Summary:*** Opposite the title page is a full-page photo showing many commercial milk products, both dairy and non-dairy, mostly canned. Soy-based Loma Linda Soyalac (made by International Nutrition Laboratory, Inc., Box 388, Mt. Vernon, Ohio; dry), Sobee (Mead Johnson Co.; dry), Mull-Soy (Borden; liquid), and Allerteen (Charles Kilgore Co.) are clearly visible. Pages 105-07 give details on each product and state that Allerteen (dry, made by Charles Kilgore Company of Yonkers 2, New York) is also soy based, while Almond-Lac (dry, made by Almond Lac Company of Chicago, Illinois) is based on almonds. Pages 124-26 describe Soyola and Protoban, both soy-based dietary supplements to infant feeding. Pages 196-97 give the prices of various infant food mixtures, including Sobee and Mull-Soy. Pages 231-32 contain a directory of proprietary infant food manufacturers, their products, and their addresses. Address: Assoc. Prof., Dep. of Pediatrics, Northwestern Univ. Medical School, Chicago, Illinois.

1189. Holman, Ross L. 1953. Utopia university. *Mechanix Illustrated.* May. p. 94-97. *

• ***Summary:*** About Madison College, located near Nashville, Tennessee. Contains at least six photos.

Note: "From its debut in 1928, it went through a number of permutations over the years, being called at various points in its life, *Home Mechanix, Modern Mechanics and Inventions, Modern Mechanix and Inventions, Modern Mechanix* and finally *Mechanix Illustrated"* (Source: Wikipedia at Mechanix Illustrated, Jan. 2013).

1190. Sandborn, William Cruzan. 1953. The history of Madison College. PhD Thesis, Dep. of Education, George Peabody College for Teachers, Nashville, Tennessee. 201 p. Aug. 28 cm. [75* ref]

• ***Summary:*** The first and perhaps the best, most detailed, and most objective history of the Nashville Agricultural Normal Institute (renamed Madison College in 1937), and of its food factory, both located in Madison (near Nashville), Tennessee. Madison, the only self-supporting college in America, was a remarkable experiment in education.

Contents: Summary. 1. From Battle Creek to Madison. 2. Years of faith, work, and frugality. 3. The school program. 4. Schools for men of the mountains. 5. The gospel of healthful living. 6. The A.B.C. of education. 7. The institutional plant. Appendix. Charter. Chronology. List of graduates. Bibliography.

The school land was located and the school founded in 1904 by Prof. E.A. Sutherland and P.T. Magan with the help of Mrs. Ellen G. White. The farm of 412 acres at Neely's

© Copyright Soyinfo Center 2014

Bend on the Cumberland River (known as the Nelson Place), was purchased in June 1904 from Mr. Ferguson for $12,723. In 1925 some 296 acres were added for a total of 708 acres. In its early years, Madison was neither a college nor a high school. "It was a special school [a normal school] organized for the purpose of training self-supporting missionary teachers and workers. The only entrance requirements were a mature mind and an intense interest in self-supporting missionary endeavor. The school was accredited as a high school in 1927 and as a junior college in 1928.

Prof. E.A. Sutherland had learned a great deal about health and sanitarium work from his contact with Dr. John Harvey Kellogg in Battle Creek, Michigan. A history of the Food Factory is given in a separate record.

Education: Ellen white believed and taught that agriculture should be basic to all other studies. The farm had a dairy (with 34 cows in 1930 and 115 in 1943; pasteurization of milk began in 1937), a fruit farm with over 3,000 apple and peach trees, and a poultry raising industry. "During the year 1937 the name of the school was changed from the Nashville Agricultural and [sic] Normal Institute to Madison College. This was the consequence of the school's obtaining a government post office which was called the Madison College Post Office, in order to avoid confusion with the village post office (p. 67). The years from 1930 to 1940 were the "Golden Age of Madison." The peak year for enrollment was 1940, with 458 students enrolled. The next decade might be termed the "Fateful Forties." The enrollment dropped during the period, reaching a low of 154 during the 1944-45 school year. In Feb. 1946 Dr. Sutherland resigned as president to accept another position. The school never had an organized athletic program.

Chronology: 1927–The school is accredited as a high school and in 1928 as a junior college. Efforts were made, without success, from 1929 to 1940 to have the school accredited as a senior college. 1930–C.H. Dye becomes sales manager for Madison Foods.

1932 July 27-Aug. 6–Health Institute held with J.G. White the leading speaker assisted by P.A. Webber.

1932 Aug. 1–Four students begin operating the Nashville Vegetarian Cafeteria on a project basis (Irma Rocke, Esther Sanford, Mrs. Karl Erickson, and Howard Davidson).

1935 Spring–*Food for Life*, by Francis Dittes, published.

1935 Sept. 15–Farewell for Dr. and Mrs. P.A. Webber who return to Japan. Address: George Peabody College for Teachers, Nashville, Tennessee.

1191. Sandborn, William Cruzan. 1953. History of the Madison Food Factory (Document part). In: W.C. Sandborn. 1953. PhD Thesis, Dep. of Education, George Peabody College for Teachers, Nashville, Tennessee. 201 p. See p. 123-27, 159. Aug. 28 cm. [1 ref]

• ***Summary:*** The Food Factory (formerly a "large flakefood factory" built at Edgefield, near what is now Edenwold) was purchased in 1917, dismantled, and in 1917-18 moved from Edgefield near Amqui, a nearby community, to its present location [Note: This food factory had formerly been operated by Jethro Kloss.] It began operation at Madison [Tennessee] in 1918 (p. 123; the 1918 date was verified by Elmer Bush who helped move the factory). Mr. and Mrs. Andrew Wheeler were in charge of the work, under the direction of Mrs. Druillard, who had had years of experience in other institutions. The principal foods manufactured are protein foods made from gluten, soy beans, and peanuts. "Some of the trade names today are Zoyburger, Yum, Mock Chicken, Nu-Steak, Not-Meat, Vigoroast, and Ches-O-Zoy. A cereal substitute for coffee is Zoy-Coff" [Zoy-Koff] (p. 124). The meatless protein foods serve as substitutes for meat in the diet of vegetarians. Both the College and the Sanitarium hold to a meatless diet. The College ran a successful vegetarian cafeteria in Nashville.

"Some of the men who played an important part in the later growth and development of the food factory were Joe Hansen, C.H. Dye, T.A. McFarland, Captain Calvin Bush, Edwin Bisalski, George Norris, Leslie Brooks, John Brownlee, H.M. Mathews and Frank Holland. Of this group, H.M. Mathews and John Brownlee played a very important part in experimentation and development of the foods. E.M. Bisalski was outstanding in the group as a promoter and sales-manager. It was during Mr. Bisalski's term as manager of the Food Factory that great expansion took place. A practically new plant, with one section four stories in height, was constructed in 1941. Shortly after, the sales began to drop off, and it has never been necessary to use the new building to its capacity. The Food Factory (now known as Madison Foods) is operating, on a much smaller scale than formerly, under the management of Mr. Frank Holland. The Madison Foods Company also operates a bakery, making whole wheat and soy bread. A daily bread route is served in Nashville.

"Another type of health work carried on by the Madison School was the operation of a treatment room and vegetarian cafeteria in Nashville, Tennessee. Workers drove back and forth each day from the School to Nashville to carry on the work. The work was started in 1917, in rented quarters. After five years, because of advancing rents, it was thought best to close down the work and build a new building on a permanent location at 151 Sixth Avenue, North. This was done at the end of the year 1922. The new location was occupied in the spring of 1923. [It opened on April 23.] A successful work was carried on in the new location for over a decade" (p. 125).

"The Food Factory was remodeled, in fact, practically a new structure was built, in 1942. The work actually started in November, 1941, and was completed in October, 1942. E.M. Bisalski was the prime mover in promoting the project, which cost between $30,000 and $40,000" (p. 159). Address:

1192. *Soybean Digest.* 1953. Market all new soy margarine [Willow Run]. Dec. p. 9.
• ***Summary:*** This product is made completely from the soybean (soybean oil and soy milk) except for added salt and vitamin A. Manufactured by Shedd-Bartush Foods, Inc. of Detroit, Michigan, it is "made for those who want a product free of cow's milk or other animal foods. The present Willow Run Margarine is the outgrowth of a product [Soya Butter, developed and sold by Butler Food Products of Cedar Lake, Michigan, and introduced in Aug. 1944] which at one time was made exclusively for sale in Michigan through health food stores. It was not shipped interstate because the then existing standard of identity for margarine made no provision for a margarine made with soybean milk in place of cow's milk.

"With the lifting of coloring restrictions from margarine, and the change in the standard of identity to allow the use of soy milk, Willow Run Soy Bean Spread Margarine came into being. It is shipped everywhere in the U.S. and the carton has been designed to comply with various state laws."

A photo shows a carton of "Willow Run Oleomargarine."

1193. **Product Name:** The Versatile Soyabean in Tomato Sauce.
Manufacturer's Name: F.G. Roberts' Health Foods.
Manufacturer's Address: 40 Chapel St., St. Kilda (a beach-side suburb of Melbourne), Victoria, Australia.
Date of Introduction: 1953.
Ingredients: Incl. soybeans, tomato sauce or puree.
Wt/Vol., Packaging, Price: Tin-plated steel can.
New Product–Documentation: Letter from Paul Smith of Soy Products of Australia Pty. Ltd. 1981. Vincent R. Smith was a soyfoods pioneer in Australia. From 1953-54 to 1974-75 he canned soybeans in tomato sauce or puree. In 1956 he founded Soy Products of Australia Pty. Ltd.

Talk with Paul Smith. 1995. Feb. 20. The soybeans were soaked overnight, then pre-cooked in a steam-jacketed vessel. Then the cooked beans and tomato puree were put in can, the can was lidded, then the whole can was autoclaved, then labeled. Sanitarium Foods took a keen interest in this product, then copied the product from F.G. Roberts' Health Foods. Paul remembers how his company used to supply the product to the many Sanitarium retail health food stores. His father had a little creamy white Ford panel van with green stripes on the sides. They used it to deliver their products to places like The Original Nature, the first vegetarian restaurant in Melbourne, down in the basement in Little Collins Street. The restaurant served salads and grated carrots, and fresh squeezed carrot and celery juice, and fruit juices. They also made and served vegetarian burgers.

1194. **Product Name:** Loma Linda Tender Rounds (Meatless), and Tender Bits (Fish-like).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1953.
Ingredients: In 1971: Wheat protein [wheat gluten], water, brown rice, vegetable oil, oat flour, soy flour, salt, yeast extract, MSG, onion powder, flavorings, lecithin, lysine.
Wt/Vol., Packaging, Price: 19 oz (1 lb 3 oz) can. Retails for $2.60 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Price list. 1953. "with soy."

Loma Linda Food Co. 1969. "Wholesale Price List." Tender Bits are now sold in 14 oz, 20 oz, and 50 oz cans.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Tender Bits (Loma Linda)."

Patricia H. Black and Ruth L. Carey. 1971. *Vegetarian Cookery.* 5 vols. This set of vegetarian cookbooks contains several recipes calling for "Tender Bits" which are sold in 20 oz cans.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. Tender Bits is a canned fish-like products based on spun soy protein fiber. Note that the product had been reformulated by 1973.

1195. **Product Name:** Loma Linda Linketts, Little Links, Big Franks (Meatless Hot Dogs).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1953.
New Product–Documentation: Price list. 1953. "with soy."

Today's Food (Loma Linda Foods, Arlington, California). 1960. Spring. p. 4. Linkettes are used in a recipe. Loma Linda Foods has recently switched from using vegetable shortening in this product to using liquid corn oil (p. 7).

By 1979 this product was reformulated with textured soy protein.

1196. **Product Name:** Loma Linda Redi-Burger (Meatless Hamburger).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1953.
New Product–Documentation: Price list. 1953. By 1979 this product was reformulated with textured soy protein.

1197. **Product Name:** Sovex.
Manufacturer's Name: Sovex Co?
Manufacturer's Address: Holly, Michigan.

© Copyright Soyinfo Center 2014

Date of Introduction: 1953.
Ingredients: Incl. nutritional yeast and soy sauce.
How Stored: Shelf stable.
New Product–Documentation: Talk with John Goodbrad, president of Sovex. 1980. Nov. 26. Sovex was founded in 1953 by the Hurlingers in Holly, Michigan. The company's original product was Sovex, a flavor concentrate paste, made from a mixture of brewer's yeast and soy sauce. In 1964 John bought the business [actually the formula and brand name] and moved it to Collegedale, Tennessee.

Note: This is the earliest solid record seen (March 2013) concerning Sovex.

1198. **Product Name:** Soymilk.
Manufacturer's Name: Taiwan Sanitarium.
Manufacturer's Address: Taiwan.
Date of Introduction: 1953.

1199. Kloss, Jethro. 1953. Back to Eden: A human interest story of health and restoration to be found in herb, root, and bark. 5th printing. Coalmont, Tennessee: Longview Publishing House. 671 + xiii p. Portrait. Illust. Index. 22 cm.
• ***Summary:*** A portrait photo of Jethro Kloss (wearing rimless glasses, a dark suit and white tie), first published in the *Washington Post* on 21 May 1933, appears as the frontispiece of this book (facing the title page). The copyright page states: "Copyright, 1939, by Jethro Kloss. All rights reserved. Fourth printing, 1952. Fifth printing, 1953, by permission of the legal heirs of Jethro Kloss, deceased."

The text is exactly the same and on exactly the same pages in this 1953 printing as it was in the original 1939 edition.

1200. Hardinge, Mervyn G.; Stare, Fredrick J. 1954. Nutritional studies of vegetarians. I. Nutritional, physical, and laboratory studies. *American J. of Clinical Nutrition* 2(2):73-82. March/April. [19 ref]
• ***Summary:*** "A comparative study of 112 vegetarian (incl. 86 lacto-ovo-vegetarians and 26 'pure' vegetarians) and 88 non-vegetarian adults, adolescents, and pregnant women is described. Most of the people studied were residents of Central and Southern California. They were "located through questionnaires circulated in commercial and sectarian magazines and among church and social groups." (Note: Thus many, but not all, were probably Seventh-day Adventists.) The results show that although the dietary intake of nutrients varied widely among individuals, the average intake of all groups, with the exception of the adolescent 'pure' vegetarian, approximated or exceeded the amounts recommended by the National Research Council. Non-vegetarian adolescents consumed significantly more protein than did lacto-ovo-vegetarian and 'pure' vegetarian adolescents. No evidence was obtained to indicate that a lacto-ovo-vegetarian diet failed to provide an adequate dietary for an expectant mother." The report concluded that it was actually quite difficult to eat a varied vegetarian diet that would not exceed protein requirements for the human body (p. 76).

Among the various groups studied, no significant differences in height, weight, blood pressure, childbirth, or hematological data were found. Pure vegetarians [vegans] weighed an average of 20 pounds less than lacto-ovo-vegetarians and non-vegetarians, despite similar caloric intakes and physical activity. Dietary intakes of all groups, except the adolescent pure vegetarians [vegans] approximated or exceeded the amounts recommended by the National Research Council.

The data presented in this paper represent partial fulfillment (by Hardinge) of the requirements for the degree of Doctor of Public Health at the Harvard School of Medicine. Address: 1. School of Medicine, College of Medical Evangelists, Loma Linda, California; 2. Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

1201. Hardinge, Mervyn G.; Stare, Fredrick J. 1954. Nutritional studies of vegetarians. II. Dietary and serum levels of cholesterol. *American J. of Clinical Nutrition* 2(2):83-88. March/April. [19 ref]
• ***Summary:*** The subjects studied were the same as in part I of this study. Dietary cholesterol intakes and serum cholesterol levels were highest in non-vegetarians and lowest in 'pure' vegetarians [vegans]. Address: 1. School of Medicine, College of Medical Evangelists, Loma Linda, California; 2. Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

1202. Boyer, Robert A. 1954. High protein food product and process for its preparation. *U.S. Patent* 2,682,466. June 29. 5 p. Application filed 6 May 1952. [6 ref]
• ***Summary:*** This landmark patent, which describes the preparation of textured foods from spun vegetable protein, started the spinning of soy protein filaments. The patent begins: "This invention relates to a food product and is a continuation-in-part of my copending application, Serial No. 118,445, filed September 28, 1949. In particular it relates to synthetic meat and to methods of producing synthetically foodstuffs which will have the flavor, coloring, taste and 'chewiness' of meat. By the term meat I mean to include not only the meat of mammals, but also the meat of fish, fowl, shell fish and crustaceans."

"The stumbling block up to this point has been in the reproduction of the texture and appearance of natural meat, the texture of course involving the factor of 'chewiness.' Vegetable chops using wheat gluten as a base have a certain amount of 'chewiness,' but they do not duplicate the fibrous character of meat; and they fail to give that satisfaction that comes from the breakdown in the mouth during the

© Copyright Soyinfo Center 2014

mastication of a piece of meat."

"Artificial textile fibers have been made synthetically from vegetable protein such as soy beans, corn, or peanut protein, as well as from animal proteins such as casein and keratin."

Filaments were prepared by dispersing the protein material, forcing the dispersion through a porous membrane such as a spinneret of the kind used in the production of rayon, coagulating the emerging streamlets in an acid bath, and stretching the oriented filaments to develop desired fiber strengths, each fiber commonly having an average thickness of about 20 micrometers / microns. One spinneret was capable for forming several thousand individual filaments or fibers which are very fine and which when taken together exist as a group having an overall diameter of perhaps one-quarter inch. "If a battery of spinnerets or dies as above outlined are provided, there will be a considerable number of bundles or groups of filaments which, when assembled together, may constitute what I have hereinafter called a 'tow' of filaments, which tow, depending upon the number of dies or spinnerets used, may be conveniently three to four inches in diameter."

The formed filaments are then placed in a salt solution to prevent them from dissolving. The pH of this solution is typically adjusted to be in the range of 5.6 to 6.4–the same as most meats. In this way a palatable food product can be produced without the use of binders or fats. The fibers are stretched in this salt bath using a take-away reel or godet wheel. "In practicing my invention with soy bean protein I have applied stretching tensions satisfactorily as high as 400%." To summarize: This is a process of preparing synthetic meat by preparing a quantity of filaments of protein material, such as "filaments of soy bean protein material." It is: "A meat-like product comprising oriented edible fibers" or "edible filaments."

Note 1. This is the earliest document seen (June 2013) concerning the spinning of soy protein isolates to make spun soy protein fibers for food use.

Note 2. This is the earliest English-language document seen (Nov. 2003) that contains the term "synthetic meat" (or "synthetic meats"–with any combination of quotation marks). The phrase "The process of preparing synthetic meat..." is used repeatedly in this patent.

Note 3. This is the earliest English-language document seen (June 2013) that uses the word "filaments" or the term "edible filaments" to refer to edible spun soy protein fibers.

Note 4. This is the earliest English-language document seen (June 2013) that uses the word "spinneret" (or "spinnerets") in connection with edible spun soy protein fibers.

Note 5. This is the earliest English-language document seen (June 2013) that uses the word "tow" (or "tows") in connection with edible spun soy protein fibers. The definition of a "tow" is given above.

Note 6. This is the earliest document seen (June 2013) concerning the etymology of textured soy protein isolates. Address: Cincinnati, Ohio.

1203. Van Gundy, Dorothea. 1954. Re: Mother broke her hip at age 81. Letter to "Dear Friends," July 6. 1 p. Typed, without signature.

• ***Summary:*** "It has been better than six months since we wrote last. So much has happened since that time, and you are such a large number that I just felt we should send out another bulletin to bring you up to date on the happenings of our clan. We have such a warm feeling inside when we think of you, our friends. How drab life would be without friends. We often think of you and remember you in our prayers.

"About a month ago Mother had the misfortune to fall on the living room floor and break a hip. We had surgery done–putting in a pin so she would not have the discomforts of a cast." Her hemoglobin before surgery was 100%. "Not bad for 81 years old."

"Since mother's accident we have moved next door to a larger house... We have had a wonderful young lady in our home this last year who has been accepted to Loma Linda for nurses' training this fall." Dorothea encloses a stamped addressed envelope encouraging family friends to help pay for the young lady's education.

"Aunty and Uncle Giddings are still going strong. They find it a little difficult to stay at home now as Uncle can no longer drive. Charlotte is fine. She and her family have recently moved to Idaho."

"May the Lord continue to bless you and guide you in all your comings and goings. With love." Address: 1176 Bonita Dr., Arlington, California.

1204. **Product Name:** Soy bread.
Manufacturer's Name: Hunza House (The).
Manufacturer's Address: 127 South Maple St. Escondido, California.
Date of Introduction: 1954 August.
How Stored: Shelf stable.
New Product–Documentation: Ad is *Let's Live.* 1954. Aug. p. 38. This ad (2¼ by 4 inches) states: "No white flour, white sugar, or preservatives of any kind used in our products. Obtainable in all Southern California health food stores."

On the same page (middle column) is a notice that H.E. Hicks has just been appointed general manager of the Pretoria Valley guest ranch, Escondido, California. "Hicks is prominent in the health field, formerly serving as western manager of the Butler Food Products Co. of Cedar Lake, Michigan. Just recently he was elected president of the Hunza Baking Corp., bakers of organic whole wheat and nutritional bread products, also of Escondido, and Hicks is national distributor and general sales manager of the Town Crier Co., of Vista, California, makers of soy lecithin and other health products."

1205. Worthington Foods, Inc. 1954. Wholesale price list and order blank. P.O. Box 190, Worthington, Ohio. 1 p. Nov. 15. • ***Summary:*** New products include: Soyamel–soy milk. Entree (in tomato sauce or mushroom gravy). Veja-links.

Note: This is the earliest English-language document seen (Aug. 2003) that uses the term "links" or "Veja-links" to refer to meatless soy sausages. Address: Worthington, Ohio. Phone: 2-5359.

1206. **Product Name:** Tofu.
Manufacturer's Name: Loma Linda Food Co. Eastern Div.
Manufacturer's Address: P.O. Box 388 (Wooster Road), Mount Vernon, Ohio.
Date of Introduction: 1954.
New Product–Documentation: Soybean Blue Book. 1954. p. 106. No brand name is given. Also listed in 1965.

1207. **Product Name:** Sanitarium Health Foods Soya Beans in Tomato Sauce.
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: Sydney, N.S.W., Australia.
Date of Introduction: 1954.
Ingredients: Soya beans, tomato, sucrose, salt, onion, paprika.
Wt/Vol., Packaging, Price: 430 gm can.
How Stored: Shelf stable.
New Product–Documentation: Letter from Sanitarium Health Food Co. 1981. Label. 1980, undated. "A delicious protein-rich vegetable." Two recipes on label. Recipe brochure. 1981, undated. "Imagination in cooking... with Sanitarium." Photos show: Canned Soya Beans in Tomato Sauce, Vegetarian Rediburger, Bologna, Tender Bits. Label. "Delicious protein-rich vegetable." Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1954. Ingredients now read: "Soya beans, sauce, water added."

Note: This is the earliest known commercial soy product made by Sanitarium Foods in Australia.

1208. **Product Name:** Soyamel (Powdered Soy Milk).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 2-2539.
Date of Introduction: 1954.
Wt/Vol., Packaging, Price: 1 lb can.
New Product–Documentation: Wholesale price list. 1954. Nov. 15.

Ad (1/3 page) in *Let's Live.* 1955. Jan. p. 7. "New. Better tasting, all-purpose, all-vegetable soy milk." A photo shows a can of "Worthington Soyamel–All purpose." "Mix and use like milk." The text continues: It "is the perfect 'food beverage' for everyone who prefers or needs an all vegetable milk. You'll like its clean, white appearance and its clean fresh flavor. Better tasting. Keeps longer. Improved mixing. Not only does Soyamel taste better but it also remains completely in solution after mixing. There is no disagreeable raw bean flavor! No separation of solids from liquid to be stirred up from the bottom of the bottle!" A proximate analysis is given. "One ounce of Soyamel powder makes one 8 oz glass of soy milk containing 132 calories. Ask for Soyamel at your local health food store."

Chopletter (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Soyamel.

1209. **Product Name:** Entree [in Tomato Sauce, or Mushroom Gravy].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 2-2539.
Date of Introduction: 1954.
Wt/Vol., Packaging, Price: 20 oz or 4.5 lb can.
New Product–Documentation: Wholesale price list. 1954. Nov. 15. Sold in 20 oz or 4.5 lb cans.

Chopletter (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Entree.

1210. **Product Name:** Veja-Links (New name for Meatless Wieners).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 2-2539.
Date of Introduction: 1954.
Wt/Vol., Packaging, Price: 19 oz can. Retails for $2.70 (7/90, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *Chopletter* (Worthington Foods, Ohio). 1960. "What you should know about Worthington Foods." April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Veja Links.

Soybean Blue Book. 1965. p. 1121.

Letter from Allan Buller. 1981. April 29. Made of wheat gluten with soy flour or grits to complement the former's very low quality protein and to work as a filling and binding agent.

1211. Vollmer, Marion W. 1954. Food: Health and efficiency. Lessons in nutrition and healthful food preparation. Prepared for use in Home health education classes under the direction of the Medical Dept. of the General Conference of Seventh-day Adventists. Nashville, Tennessee: Southern Publishing Assoc. 111 p. 24 cm.
• ***Summary:*** This Seventh-day Adventist book on vegetarian nutrition (with recipes) mentions soy in several places. To help make breakfast a hearty meal, waffles may be "reinforced with soy" (p. 19). When cooking processed breakfast cereals, "they can be made more nutritious by adding wheat germ, rice bran, soy flour, etc." Soybeans are given as the first example of a high-protein food that should be eaten daily (p. 26), and soybeans, soybean products, and gluten are listed as good sources of protein (p. 31). A table showing the protein content of common foods includes Soyalac (dry soy milk), meat substitutes (commercial gluten steaks, Proteena or dark meat substitutes, Nuteena or light-meat substitutes), and soybeans (p. 32).

The following recipes are given: Baked soybeans (p. 34). Gluten (how to prepare and serve at home, p. 35-36). Gluten, mushroom, and potato pot pie (p. 36). Holiday loaf (with Vegemeat Burger or other ground gluten, p. 37). Mushroom dressing with gluten slices (p. 37).

A second edition was published in 1964.

Address: USA.

1213. Crawford, R.E.; Bates, Floyd E. 1955. Until the day break: Obituary for Julius Gilbert White. *Southern Tidings.* March 30. p. 10.
• ***Summary:*** Julius Gilbert White was born in Jamaica, Vermont, on 23 Feb. 1878. He died on 3 March 1955, at age 77. On 28 July 1909 he was married to Alice Mabel Ware, who accompanied him in his work in China from 1916 to 1920. Sadly, his wife died on 19 Jan. 1922. Brother White collected and was very interested in the writings of Ellen G. White. He was especially interested in "the health phase of this message," and was "connected with the denominational health work in various capacities for approximately 40 years. He was a teacher in our medical school in Loma Linda, California, for five years prior to 1925, and later was engaged in institutional work and health lecturing under the sponsorship of Madison Sanitarium and other groups." He remarried on 10 Dec. 1942 to Jean Myrtle Aldeberg, who survives him.

repeal medical licensing laws in the 1830s and 1840s to allow complete freedom of medical practice, the rise of medical reform and popular sectarian movements, Elisha Perkins (1741-99), Samuel Thompson (1769-1843) and the Thomsonians / Botanics with materia medica, Samuel Hahnemann and homeopathy, rise of homeopathy in America from 1826, homeopaths and botanics are the two leading groups, reform movements and commutarian experiments, phrenology, Lorenzo and Orson Fowler).

2. A diet of 'bran bread' 1832-1837 (detailed biography of Sylvester Graham, temperance, first Graham boarding-house founded in New York in 1833, Dr. Reuben Mussey, chastity vs. sexual indulgence, Onanism, advocating a "purely vegetable diet," Treatise on Bread {1837} advocating unbolted wheat meal bread and "bran bread," bakers attack Graham, his obituary in *Boston Medical and Surgical Journal*).

3. The program of physical education 1832-1837 (detailed biography of Dr. William Andrus Alcott. Graduation from Yale [in Connecticut] as an M.D. in 1825; he wrote his graduation thesis on preventing pulmonary consumption. "It was Alcott's vegetarianism which first evoked hostile criticism. A Boston newspaper {Boston Recorder, 29 June 1838} stated: "That total abstinence from animal food is... demanded by the laws of our physical nature, is more than any man of sound mind will contend..." Prior to this his teachings had been virtually devoid of controversy. He was often at odds with the followers of Sylvester Graham and with the medical profession which was largely indifferent or even hostile to the progress of health reform. In 1835 he began publishing a periodical, the *Moral Reformer* to express his views on a comprehensive program for keeping good health, including disease prevention. He argued that a physicians role was to maintain health. Influence on Horace Mann).

4. The medical profession and personal hygiene 1835-1840 (Dr. Reuben Mussey of Dartmouth, Dr. Benjamin Rush (temperance and exercise), Dr. John C. Coffin, emphasis on hygienic reform, sectarian leader Sylvester Graham, Edward Hitchcock on diet (1831), Robley Dunglison (1798-1869), American Physiological Society (organized Feb. 1837 in Boston, Massachusetts; W.A. Alcott, president; major goals were attempting to enlist legislative action "in favor of the vegetable Graham system" and outlawing the use of medicines), phrenology, the Graham bran bread system, the second American Health Convention of 1839, Graham Journal of Health and Longevity (started 1837, edited by David Campbell), influence of Alcott vs. Graham, public ridicule, *American Vegetarian and Health Journal* (1853)).

5. Physiological reform 1837-1845 (Events at Oberlin College {Oberlin, Ohio}, David Campbell and S. Graham, biography of Isaac Jennings and Orthopathy, Mrs. Mary Gove (one of the first woman leaders of the health movement)).

6. The introduction of 'water cure' 1845-1850 (Priessnitz, Joel Shew, sitz baths, David Campbell, Mrs. Mary Gove, Fowlers & Wells, Orson Fowler, Samuel R. Wells, hydropathy, *Water-Cure Journal*, Dr. Russell Trall of New York {biography} and his synthesis).

7. The rise of the 'hygienic system' 1850-1860 (No. of water-cure houses rises from one in 1847 to 23 by 1851 to 62 by 1854, Dr. Conrad Wesselhoeft, *Green Mountain Spring*, New Lebanan Springs Water-Cure, David Campbell, Dr. Bedortha, Dr. James C. Jackson, Glenhaven and Dansville {from 1858; Livingston County, New York}, Dr. Russell Trall organizes American Anti-Tobacco Society of New York in April 1849, Rev. William Metcalfe of Philadelphia [Pennsylvania] and organization of the American Vegetarian Society in 1850, its history, public health and sanitary reform, Lemuel Shattuck, R.S. Houghton, Dr. J.C. Jackson and the National Health Convention {Dansville, Sept. 1859}, National Dress Reform Association, Miss Austin, Thomas Low Nichols).

8. The decline of the 'hygienic system' 1860-1875 (Death of Russell Trall severs one of last remaining links with an earlier generation of health reformers, effect of Civil War, Dr. James C. Jackson enters semi-retirement in 1871 at Dansville and dies in 1881, succeeded by his son Dr. James H. Jackson, need for American Health Reform Association, Dr. M.L. Holbrook, "as health reform became more prominently identified with physical culture, it gradually came to lose its identity as a system of medical practice," new discoveries in medical science by the 1870s, microorganisms, antisepsis and infection, the microscope, bacteriology, concept of immunity, reform in training procedures and licensing, reorganization of medical education from 1871 by president Eliot of Harvard, response of Botanics, Homeopaths, hygienists, three factors contributing to the decline of the health reform movement– economic weakness, the vogue of 'physical culture,' and the revival of scientific medicine, only the latter is decisive, health reform reduced to 'right living,' Dr. John Harvey Kellogg, hygiene movement lasted for 40 years, its legacy). 9. Aftermath; summary 1875-1880.

This is a good treatment of America's first health reform movement. Unfortunately, it has no index.

1215. *Madison Survey* (*Madison, Tennessee*). 1955. To the memory of Edward A. Sutherland–This issue of the Survey is affectionately dedicated. 36(7):1-8. July.

• ***Summary:*** Several inspiring tributes to the moving force behind Madison College for most of its early history. Page 7 contains a brief summary of his life. He was a doctor, a minister of the gospel, and above all a great educator. He was born on 3 March 1865 in a wagon train in Prairie du Chien, Wisconsin. He lived in Iowa as a young man and attended high school there. He graduated from Battle Creek College in the spring of 1890 with a bachelor's degree. That same

© Copyright Soyinfo Center 2014

year he married Sallie Bralliar, who died in 1953. In 1891 he was called to be head of the Bible department at Battle Creek College. He served as president of four colleges, including the new Walla Walla College in Washington from 1892 until Feb. 1897; Battle Creek College in Michigan from 1897. In 1901 he helped in moving Battle Creek College onto a beautiful farm in the countryside in Berrien Springs, Michigan. It was renamed Emmanuel Missionary College, and he continued as president until 1904; and Madison College from 1904 to 1946 when he was called to serve as secretary of the new denominational department known as the Association of Self-Supporting Institutions and the Commission on Rural Living. Having successfully accomplished this task, he returned to the campus at Madison that he loved.

In 1910 Dr. Sutherland and Dr. Magan began the study of medicine, earning their M.D. degrees in 1914.

He died on 20 June 1955 at the age of 90 years, 3 months, and 17 days.

Sandborn (1953, p. 23) states: "Professor Sutherland was also a reformer in certain respects concerning education and health. He had the tendency to push his reforms too rapidly and too independently and thus incurred the ill will of some denominational brethren. Three experiences might be considered examples of this. One was the instituting of a vegetarian diet in Battle Creek College, and another was the ploughing up of the Battle Creek Athletic field and planting it to vegetables. The third and probably most important was the moving of Battle Creek College out of the city onto a farm in Berrien County, Michigan."

1216. McLaughlin, Kathleen. 1955. Soy milk plant to aid Indonesia: Factory in Jogjakarta may build up nutritional values for all Southeast Asia. *New York Times.* Sept. 18. p. 21.

• ***Summary:*** Harry Miller, Jr., an American technician for the United Nations Food and Agriculture Organization, is supervising construction of a plant to produce soybean milk–in both liquid and powdered form, in Jogjakarta, Indonesia. The plant is expected to be in production by Feb. 1956, and by mid-year the dehydrated form should be available for domestic shipment.

More than 20 years ago, Mr. Miller's father, an American medical missionary in China, developed a good-tasting soybean milk there. By hard work, persistence, and ingenuity, he developed the equipment that is now being instaled in the Jogjakarta plant.

"By 1936, Dr. Miller had returned to Shanghai with his family, erected and equipped a factory, and was turning out 3,000 quarts of bottled soybean milk a day, at 7 cents (U.S.) a quart. Cow's milk cost 30 cents.

"Then the war with Japan erupted. In 1937, Japanese forces completely destroyed his plant and in 1938 the Millers left China for their home in the United States." In 1947 they returned briefly to China, then in 1948 they left again before the Communist advance.

Dr. Miller's patents have long since been relinquished to the public domain, with the exception of an interest retained in one soybean milk plant in California. As an F.A.O. expert, Harry Miller Jr. hopes to make his father's soymilk processing system as widely available as possible, especially in places like Indonesia, where it can offer the greatest benefits.

The United Nations Children's Fund [UNICEF], which has provided $350,000 worth of the Miller type equipment for the Jogjakarta plant, has agreed that half of the annual output of 600 tons of soybean milk, powdered or liquid, from this plant, will be distributed free of charge to Indonesians for the first 3 years.

1217. *J. of Agricultural and Food Chemistry.* 1955. Soy milk in Indonesia. 3(10):807. Oct.

• ***Summary:*** "A soybean milk plant is going up in Jogjakarta, Indonesia and should be in production by February. The product, already tested with mothers and children, is expected to get enthusiastic response. Not only is it palatable, but it is more easily assimilated by the underfed than is

© Copyright Soyinfo Center 2014

cow's milk. It is also higher in protein. The UN Children's Fund has furnished $350,000 worth of equipment for the 600 annual ton plant being built under direction of Harry Miller, FAO technician whose father, a medical missionary, developed the process."

Note: The soy milk is named Saridele.

1218. **Product Name:** Soy Flakes.
Manufacturer's Name: Battle Creek Food Co.
Manufacturer's Address: Battle Creek, Michigan.
Date of Introduction: 1955.
New Product–Documentation: Price List. 1955. 5 oz.

1219. Battle Creek Food Company. 1955. Authorized dealer price list. Battle Creek, Michigan. 1 p. *
• ***Summary:*** Compared to the 1940 price list, the number of soy products sold by the company has decreased to the following: Soy Acidophilus (pint bottle). Soy Flour (2 lb or 5 lb). Soy Flakes (5 oz). Address: Battle Creek, Michigan.

1220. **Product Name:** Soybake (Roasted Full-Fat Soya Flour).
Manufacturer's Name: H.J. Langdon. Made in Melbourne, Australia, by F.G. Roberts' Health Foods.
Manufacturer's Address: Australia.
Date of Introduction: 1955.
Ingredients: Soybeans.
New Product–Documentation: Letter from Paul Smith of Soy Products of Australia Pty. Ltd. 1995. March 14. "Soyvita has only ever been used as a tradename for debittered full fat soy flour since 1951. Initially it was made using imported soybeans, but from 1954 it was made from Australian-grown soybeans. The tradename 'Soybake' was used for the same product packaged under the H.J. Langdon's name and address from 1955 to mid-1991, when it was abandoned due to a rationalisation of packaging and product lines. H.J. Langdon now buys the product in the 'Soyvita' packaging."

1221. Lager, Mildred. 1955. How to use the soybean: A plus factor in modern nutrition. Burbank, California: Published by the author. Printed at La Sierra College Press, Arlington, California. 115 p. Index. 23 cm. Lay-flat comb bound.
• ***Summary:*** Contents: Preface. Nutritional nuggets–food value of soybeans. The versatile soybean. Soup to nuts–soybeans and soy products. Recipes: Green soybeans. Dry soybeans. Sprouted soybeans. Roasted or toasted soybeans. Meat-substitute dishes. Soy-enriched meat dishes. Soy noodles, macaroni, spaghetti. Sauces and gravies. Soups. Salads. Dressings. Soy spreads. Soy milk. Tofu or soy cheese. Soy butter (made from finely ground soybeans or soy flour, it may be raw or roasted, and resembles peanut butter; p. 73-74). Soy cereals. Soy desserts. Soy candies. Soy beverages. Soy-flour recipes. Breads and muffins. Pancakes and waffles. Soy gluten recipes. Baking-powder biscuits. Pastry. Cookies and doughnuts. Cakes. Contains 350 recipes.

A so-called "second edition" of this book was published in 1959, but it was identical to this first edition.

Ad in *Let's Live.* 1960. April. p. 39. Mildred Lager Publications [perhaps her home] is now located at 4118 Warner Blvd., Burbank, California. Mildred died in Aug. 1960. Address: Burbank, California.

1222. Battle Creek Food Co. 1955? Pointers: On Battle Creek Sanitarium health foods. Battle Creek, Michigan. 16 p. Undated. Illust. No index. 16 cm.
•

Summary: Contents: The story of Battle Creek Foods (The Battle Creek Food Company was established nearly 50 years ago). Agar–The laxative from the sea. Bran Biscuit–A crisp wafer. Dormi–Promotes sound, restful sleep (this is one of

© Copyright Soyinfo Center 2014

the newest Battle Creek Health Foods). Fig & Bran–The regulating breakfast food. Fig & Bran Cookies–Pure, tasty, wholesome. Food Ferrin–A pleasant way to get the iron you need. Battle Creek gluten products–for special diets (Toasted Bran Gluten Flakes, Gluten Bread, Gluten Meal, Sanitarium Gluten Flour, Pure Gluten Biscuit). Health Chocolates–Delicious health candy. Lacto-Dextrin–An internal cleansing food. Laxa–The laxative biscuit. Malted Nuts–A powdered nut milk (A "palatable vegetable substitute for cow's milk, it is a splendid food for babies and growing children"). Meltose–A syrup from grains ("It is a well-known fact that cane sugar does not agree with many persons." It may cause acid stomach. In appearance, Meltose "resembles strained honey"). Meltose sugar (a powdered form of Meltose; it is "much more easily assimilated than ordinary sugar, and is a better source of energy"). Minute Brew–A bracing cereal beverage ("resembles coffee but contains no caffeine"). Paralax with agar–An efficient regulator ("...a most effective remedy for constipation. No laxative drug of any kind has been added. A highly refined mineral oil using Agar as an emulsifying agent"). Paramels–The candy-like constipation remedy ("cubes of pure mineral oil... sweetened with Meltose sugar"). Protose–A vegetable meat that satisfies ("made entirely from nuts and grains"). Psylla (dark or white)–A seed that fights constipation [psyllium]. Sanitarium Cooked Bran–a bran cereal (serve with cream and sugar for constipation). Sanitarium Fig & Bran Flakes–A new flavor in breakfast flakes (Vitaminized, enriched with food iron and vitamin B; combines "Two of Nature's best laxative foods"). Savita–a rich, vitamin B flavoring extract ("concentrated yeast extract in paste form..." Rich in Vitamin B). Whole wheat flour–Stone ground. Cooked whole wheat–A ready-to-eat breakfast food. Zo–A Vitamin B breakfast food (crisp, crunchy). Sanitarium canned fruits and vegetables (in 20 oz cans). On the rear cover, with order form: Send for these valuable booklets free!: "Healthful Living." "Modern Health Recipes and Menus."

Note: This booklet was sent to Soyfoods Center by Chef Akasha Richmond (chef to the stars), of Los Angeles as a gift (Feb. 2004). Address: Battle Creek, Michigan.

1223. Cross, Leslie J. 1956. A Veganmilk Association. *Vegan* (*The*) (*England*) 9(8):2. Spring. [1 ref]

• ***Summary:*** "Provided sufficient support is forthcoming, an effort will be made as early in 1956 as possible to form an organization with the above suggested title, for the following purpose: To produce and make available to the general public in Great Britain a milk. the ingredients of which would be of plant origin; which would satisfy nutritional requirements; and which would be palatable, attractive, and simple to use for the purposes of which dairy milk s now used.
